## NOTES OF PROGRESS.

### August Excavation.

The grand total of excavation during the month of August was 3,252,506 cubic yards, all of which, except 100,035 cubic yards, was taken from the Canal prism. This is 83,666 cubic yards more than the highest previous record for excavation in the rainy season, that of July, 1908, and 227,764 cubic yards short of the highest record, that of March, 1908. There were 26 working days in August, the same number as in July. Of the grand total of August excavation 1,876,515 cubic yards were dry excavation and 1,375,991 by dredges.

The average rainfall in August for the territory in which excavation is in progress was 11.91 inches, as compared with 11.14 inches in the previous month, and with 12.27 inches in August, 1907.

In the Atlantic Division the excavation was 842,788 cubic yards, of which 130,263 cubic yards were taken from the locks' site at Gatun, 57,999 from the spillway, and 638,217 cubic yards by dredges. Compared with July, the steam shovel excavation was 32,303 cubic yards less, largely because excavation in the spillway of Gatun Dam is practically finished, and one shovel was taken off the work at Mindi, while the spoil tracks were being lowered. Of the total excavation by dredges 638,217 cubic yards were taken out of the Canal prism in Limon Bay, and this is the highest record ever made by the Colon dredges.

In the Central Division the excavation was 1,540,610 cubic yards, practically all of which was taken out by steam shovels. As compared with July, this is 73,528 cubic yards more. The old Culebra division is now Culebra section of the Central Division, and the amount excavated in this section was 1,171,927 cubic yards, 50,602 more than in July, 1908, and 385,061 cubic yards more than in August, 1907. In the old Chagres division, now Chagres section of the Central

Division, all previous records were broken by an excavation of 368,683 cubic yards.

All previous records were broken in the Pacific Division by an excavation of 869,108 cubic yards. Of this amount the dredges took out 737,774 cubic yards, while the dry excavation amounted to 131,334 cubic yards.

A detailed statement of the excavation in the three divisions follows:

### ATLANTIC DIVISION

Locality.	From Canal Prism	Outside Canal Prism	Total excavation
	cu. yds.	cu. yds.	cu. yds.
Dry excavation—			
Gatun spillway.....		57,999	57,999
Gatun locks.....	130,263		130,263
Mindi.....	16,309		16,309
Total.....	146,572	57,999	204,571
Wet excavation—			
Colon dredging.....	638,217		638,217
Total, wet and dry excavation.....	784,789	57,999	842,788

### CENTRAL DIVISION

All dry excavation—			
Chagres section.....	366,810	1,873	368,683
Culebra section.....	1,133,153	38,774	1,171,927
Total.....	1,499,963	40,647	1,540,610

### PACIFIC DIVISION

Dry excavation—			
Miraflores locks.....	91,065	375	91,440
Pedro Miguel locks.....	21,203	1,014	22,217
Cardenas Hill.....	17,677		17,677
Total.....	129,945	1,389	131,334
Wet excavation—			
La Boca.....	737,774		737,774
Total, wet and dry excavation.....	867,719	1,389	869,108

### TOTAL EXCAVATION, ENTIRE CANAL

Dry excavation.....	1,776,480	100,035	1,876,515
Wet excavation.....	1,375,991		1,375,991
Total.....	3,152,471	100,035	3,252,506

### Rainfall in August.

The rainfall for August, 1908, was not uniform over the Canal prism. The Atlantic Division had an excess of 1.15 inches over the average for the month. The Central Division had a decrease of 1.50 inches from the average for the month. The Pacific Division had an excess of 3.68 inches over the average for the month. At Alhajuela, on the upper Chagres, the excess over the monthly average was 2.85 inches. The rainfall at Bohio for the month was one of the heaviest recorded for August covering a period of 38 years. The previous records have been:

Cristobal.....August, 1883.....	25.43 inches
Cristobal.....August, 1890.....	20.51 inches
Cristobal.....August, 1894.....	23.03 inches
Gatun.....August, 1895.....	24.12 inches
Bohio.....August, 1897.....	25.20 inches
Bohio.....August, 1898.....	33.31 inches
Bohio.....August, 1901.....	24.25 inches
Bohio.....August, 1903.....	20.50 inches
Alhajuela.....August, 1905.....	26.10 inches

The rainfall at Bohio on August 7 was the heaviest for one shower recorded on the

Isthmus since the American occupation. Between 2.30 and 5.30 in the afternoon, 7.62 inches fell.

Maximum recorded during the month:

	Five min.	Ten min.	One hr.
Ancon, August 7.....	.64	1.20	2.89
La Boca, August 7.....	.63	1.24	3.28

### Contract for Gatun Cableways.

A contract for the cableways of the material and concrete handling plant for the Gatun Locks has been let to the Lidgerwood Manufacturing Company of New York, for \$309,000. This contract includes one single unloading cableway and two duplex unloading cableways for the docks, and four duplex cableways for the locks.

The lowest bid received was that of the Balance Cable Crane Company, which was informal, no bond having been given when the bid was made. The plant which the company offered did not comply with the specifications and was unsuited to the work.

The next lowest bidder was the New York Cableway and Engineering Company. Its lowest bid of \$277,800 offered motors for the important part of the work, which were evidently too weak. Another of its bids, \$299,975, remedied the defects in the lowest bid, as to the motors, but offered other parts of the mechanism which did not seem suitable for the work.

The S. Flory Manufacturing Company offered a bid of \$278,400, but the bid was somewhat irregular, in that the total figure did not agree with the total obtained by adding the different items, that total being \$295,340. But apart from this informality, certain parts of the mechanism were such that the guaranteed capacity of the unloading cableways was small as compared with the capacity of the mechanism guaranteed by other bidders, and to accept the bid would evidently have cost the Government more by reason of slow operation than it would to accept the bid of another bidder.

The most favorable bid offered for the

## NOTES OF PROGRESS.

(Continued)

Government was that of the Lidgerwood Manufacturing Company, at \$309,000. Upon the recommendation of a committee consisting of Lieut.-Col. H. F. Hodges, Maj. Wm. L. Sibert, and Mr. Geo. D. Brooke, it was determined to accept the last named bid.

**Mindi Work at Sea Level.**

Excavation at Mindi is down to sea level for practically the whole length of the channel. This work extends from the old French canal at Mile 5 through the Mindi hills, a distance of half a mile, and the channel will be 500 feet wide at grade. Most of the excavation is in argillaceous sandstone. Steam shovel work was begun there in July, 1907, and up to August 1, 560,474 cubic yards had been taken from the prism at this point. There yet remain to be excavated about 1,000,000 cubic yards. It was the original intention to take the excavation down to below sea level with steam shovels, breaking up the remaining rock with numerous blasts of dynamite and then taking the rock out with dipper dredges. This plan was adopted because it was not thought feasible to keep the excavation below sea level dry enough for steam shovels. Experience with the pumping at Santa Cruz and Matachin, where the work has advanced without interruption throughout the rainy season, has led to the decision to continue the steam shovel work at Mindi below sea level. With this end in view a sump is being dug at the north end of the cut and is already down 25 feet. Two old French 10-inch centrifugal pumps, belt-driven by two old French engines, have been installed and it is believed they will prove equal to every demand made by the rainy season and by seepage from the sea and the old French canal. A small stream of water is flowing into the sump at 16 feet below sea level, apparently from the sea, but it is not so large that any difficulty is anticipated in keeping the cut free from water from this source. A track for the dirt trains is being put in at sea level and a parallel track will shortly be put in at a lower level, so that the shovels will not be interrupted by the lowering of the tracks, made necessary by the progress of the excavation. Two steam shovels will be continued at the work for the present.

**Gatun Dam Work.**

The second experimental dam at Gatun has been finished and 85 inches of water has been turned on to the south, or upstream toe. This represents the 85-foot head against Gatun Dam, as the experimental dam is on a scale of 1 to 12. Sand was pumped into this dam from both the upstream and downstream toes, with the result that the finer particles of silt were deposited about halfway between the toes, forming a core of fine impervious material at the center of the dam. Although the experiment is not completed, the progress so far made shows that the seepage through this dam becomes regularly less as the water advances toward the center, until it is almost nothing at the core.

The borings on the site of the Dam are practically complete, and the test pit, which is down to 90 feet below sea level, will probably not be sunk to a much greater depth. The recent developments merely confirm

the conclusion based on investigations at an earlier period, that the foundation is satisfactory. A report in detail has been made to the Chief Engineer.

The second tier of the trestling has been completed along the rock ridge of the south toe of the Dam at elevation 45, and is rapidly being filled with rock from Bas Obispo, rock and earth from Mindi, and the excavation from the lock sites and the spillway. Excavation in the spillway has been completed and the shovels are now at work cleaning up.

**Topographic Map of Central Division.**

A base line 3,028 feet long has been accurately measured on level ground at Empire and monuments have been set at each end. Monuments have also been established for the summits of all hills within 4,000 feet of the Canal on each side between Bas Obispo and Pedro Miguel. These, together with the base line, will form a system of triangulation, and the correct altitude of each monument will be determined from levels run from existing monuments. Stadia surveys will then be tied onto the triangulation monuments and the Canal and Panama railroad lines, so that a correct contour and topographic map can be made of the territory surveyed. These surveys are being made at times when engineers are not busy with Canal work, so that no additional men are employed to do this work. The map will be started soon, and when completed will show the general topography, such as hills, streams, reservoirs, houses, Canal and railroad lines on a scale of one to five thousand.

**Cutting Into Banks at the Terminals.**

At both the Atlantic and Pacific ends of the Canal the dredges have begun to lessen the distance between the two oceans. In Limon Bay two dipper and two old French ladder dredges are working their way into the bank toward the Mindi Hills. They are excavating coral and blue rock to a depth of 20 feet. As the channel is being made through the dry land, the rock is blasted in advance, and up to the present no subaqueous blasting has been necessary. These dredges will be followed by the sea-going suction dredge *Ancon*, which will work in the mud below the rock strata, and carry the channel down to 40 feet.

At La Boca, the Pacific end of the Canal, ladder dredge No. 14, one of the old French dredges, has been moved to a point opposite the end of the Panama railroad wharf, and is at work on the west bank, opening a channel 14 feet deep at low tide. The sea-going ladder dredge *Gopher* is widening the first cut in the reef at the entrance to the harbor and when this work is finished will join dredge No. 14 in cutting the channel into the main land. The two will be followed by the sea-going suction dredge *Culebra*, which will lower their cut to a depth of 45 feet at mean tide.

**Fresh Fruit and Vegetables.**

After September 12, cold storage deliveries from New Orleans to the Subsistence Department on the Isthmus will be made every week instead of once in ten days, as heretofore. This saving of three days will make it possible to keep a better stock of fruits, and also to replenish the vegetable supply more frequently. The *Cartago*, which arrived

August 27, brought 30 boxes of lemons, 5 tons of onions, 100 bunches of leeks, 5 bushels of okra and 1,000 watermelons. The *Advance* which arrived August 29, brought one ton of lettuce, one ton of tomatoes, 20 bushels of cucumbers, 400 dozens of green corn, 2,000 cantaloupes, and 20 barrels of apples. There are due on September 2, one ton of lettuce, 100 bunches of celery, 20 tons of cabbage, 4 tons tomatoes, ½-ton carrots, 20 bushels cucumbers, 60 tons potatoes, ½-ton beets, ½-ton summer squash, 500 pounds cauliflower, 50 crates cantaloupes, 80 crates peaches, 20 barrels apples. There are due on September 8, one ton lettuce, 200 bunches celery, 20 bushels cucumbers, 25 dozen green corn, 100 pounds green lima beans, 15 crates cantaloupes and 50 crates peaches.

**Frogs, Switches and Switchstands.**

R. Budd, chief engineer, Panama railroad; A. S. Zinn, Resident Engineer, Central Division, and E. J. Banta, mechanical engineer, have been appointed a committee to prepare standard specifications for frogs, switches and switchstands. It is probable that two grades will be provided, the better grade for the Panama railroad main tracks and ballasted tracks of the Isthmian Canal Commission, and the second grade for side tracks and spurs on the Panama railroad and the temporary tracks on Canal work.

**Wreck at Gorgona.**

Engine 604, drawing a loaded train of Lidgerwood flats, ran into the rear of a train drawn by engine 206 at Gorgona at 4.20 o'clock on the afternoon of August 28. Engine 604 was thrown off the track and overturned and two cars were derailed. The engineer and fireman crawled out of the overturned locomotive unhurt, and no one was seriously injured in the wreck. One thousand five hundred dollars will cover the damage done to locomotive and cars. Although the loss is slight and the injuries almost negligible, this wreck is noteworthy because it is the first time in seven months that an engine of the Central Division has been overturned, on the main line, although dirt trains are run within sight of one another eight hours a day.

**Flood Stages in the Chagres.**

Maximum height of Chagres above low water for the week ending midnight, August 29, 1908:

	STATIONS.				
	Vieja.	Alhajuela.	Gambau.	Bohio.	Gatun.
Height of low water above mean sea level, feet.....	129	92	46	0	0
Maximum height above low water:					
Sunday, Aug. 23....	.69	1.88	2.25	6.05	2.40
Monday, Aug. 24....	.90	1.55	2.00	5.55	2.04
Tuesday, Aug. 25....	.85	1.80	2.30	5.50	2.50
Wedn'sday, Aug. 26....	.52	2.01	3.10	5.45	1.70
Thursday, Aug. 27....	.55	2.85	3.50	4.30	1.90
Friday, Aug. 28....	.80	1.69	2.75	6.60	1.90
Saturday, Aug. 29....	.72	.....	2.75	6.34	2.05

The work of stopping the crevices in the side hills in Comacho reservoir has been finished and the reservoir is now filling with water.

## HYDROPHOBIA.

**Recommendations of the Sanitary Department in Regard to It.**

Rabies or hydrophobia is a fatal infectious disease, transmitted by the bite of a rabid animal. It is most common among dogs, cats, cattle and horses, in the order named, although many other animals are liable to the disease, and when so diseased all may transmit it to man in biting. Precautions should be taken therefore against bites from any such animals.

When a dog is becoming rabid it is noticed by those who are familiar with him that his character has rather suddenly altered. A lively dog mopes and is depressed. A dull and quiet dog becomes restless or affectionate.

About 85 per cent of dogs developing rabies become restless, excited and more or less vicious and furious, their voice is altered and they sooner or later show some tendency to rush about tearing and biting whatever is in their way. They will bite their master or any other person and will bite and swallow pieces of wood, clothing, glass, nails, etc. During this stage the dog may travel long distances biting dogs and other animals and thus spreading the disease. Later the dog becomes paralyzed, the paralysis generally appearing first in one or both of the hind legs. The jaw drops, saliva drools from his mouth and his eyes are staring. He soon becomes quite exhausted from his fury and from the spasmodic contraction of muscles, becoming completely prostrated before death.

The remaining 15 per cent become paralyzed almost without any symptoms of excitement. These dogs creep into some dark corner and die in two or three days.

Rabies in the dog lasts usually four or five days, but the course of the disease may be as short as two or as long as ten days.

The period between the receipt of a bite and the development of symptoms in a dog is usually one to two months. The period may, however, be greatly prolonged, even to twelve months, so that the period of quarantine for dogs should be at least twelve months.

If a person is bitten by a dog that subsequently—within two or three days—develops symptoms of rabies, that person is in danger of contracting the disease, because a dog's saliva is virulent, *i. e.*, contains the virus of rabies two or three days before the symptoms of excitement, etc., appear.

The dog's saliva being virulent at this period and during the period of active symptoms, precautions should be taken to prevent saliva from the dog's tongue or mouth getting into a fresh cut or abrasion on one's hand or other exposed part.

Wounds made by rabid animals should be treated immediately by cleansing with very warm water, followed by careful cauterization with a hot iron or carbolic or nitric acid under the direction of a physician.

A person bitten by a rabid animal should immediately present himself for the Pasteur preventive treatment for hydrophobia, or make arrangements for taking the treatment in some one of the institutions in the United States. Any delay may be attended by the gravest danger.

A dog or other animal suspected of having rabies should, when it is possible, be closely

confined and kept under observation for ten days, because if rabid it will certainly die within this period.

All animals bitten by a dog suspected of having rabies should be confined until the results of microscopic examination of the dog's brain are known, when if negative, they may be released—if positive, destroyed or quarantined.

*It is of the greatest importance that all dogs suspected of being rabid and known to have bitten persons or animals should be confined and kept under observation; if that be impracticable the dogs should be killed, and their bodies sent immediately, or packed in ice and sent as soon as possible, for diagnosis to the Board of Health Laboratory, Ancon Hospital.*

*Under no circumstances should dogs or other animals, suspected of having rabies, be destroyed by burning or burial until it has been positively ascertained that no persons or animals have been bitten.*

When it is certainly known that the suspected dog or animal has not bitten persons or animals the dog or animal may be destroyed, preferably by burning and immediate burial.

Rabid dogs should not be shot through the head as that interferes with subsequent examination of the brain.

During the past ten months rabies has spread to several places in the Canal Zone, from Panama to Mount Hope, so that every one should regard stray dogs, cats and other animals with suspicion as possible conveyors of the rabid virus.

## LETTERS FROM THE LINE.

**Labor Day at Empire.**

THE CANAL RECORD:

The mechanics of Empire and the rest of the Zone respectfully invite all white employees of the Isthmian Canal Commission and Panama railroad to take part in the picnic and dance to be given at Empire September 7, 1908. A band will play good music day and night. Refreshments will be served all day long, some good speakers will speak briefly and to the point, and at night there will be a dance. The morning exercises will include a parade and athletic games, and in the afternoon a baseball game will be played between the boilermakers and machinists. Special trains will be arranged for to accommodate people from along the line who wish to stay for the dance. A ticket entitling the holder and his family, or his lady friends, to admission, both to the games and to the dance are being sold at \$2 gold a piece by the following committee: L. H. La Nove, R. W. Cook, H. Surtees, Chas. Poultney, G. M. Earle, Patrick Kelly, William Fox, J. W. Fein, all of Empire shops.

R. W. COOK,  
Secretary.

Empire, C. Z., August 28.

**A Masonic Stag Party.**

THE CANAL RECORD:

The Empire Masonic Club will hold a stag party and entertainment on September 9, at the new fraternal hall at Empire. The entertainment will consist of selections by local talent and after it is over a smoker will be held at which refreshments will be served. The entertainment will begin at 7.30 o'clock in the evening. Brothers let the good spirit move you. Don't fail to attend.

ENTERTAINMENT COMMITTEE.

Empire, C. Z., August 29.

## OFFICEHOLDERS AND POLITICS.

**Warning Against Political Assessments and Partisan Activity.**

At the request of the United States Civil Service Commission, publicity is given to the following abstract of a pamphlet published by that Commission relative to political assessments and the partisan activity of officeholders:

Persons in the employ of the United States Government while retaining the right to vote as they please and to express privately their opinion on political subjects shall take no active part in political management or political campaigns.

Employees of the Isthmian Canal Commission will be subject to discharge for political activity.

The following forms of activity have been held to be forbidden by the provisions of law:

Service on political committees; service as delegates to county, State, or district conventions of a political party, although it was understood that the employees were not "to take or use any political activity in going to these conventions, or otherwise violate the civil service rules;" continued political activity and leadership; the publication of a newspaper in the interests of a political party; holding office in a club which takes active part in political campaigns and management; the circulation of petitions having a political object; service as a commissioner of election in a community where it was notorious that a commissioner of election must be an active politician; accepting nomination for a political office with intention of resigning from competitive service if elected.

Existing laws in the United States provide as follows:

No person in public service is for that reason under any obligations to contribute to any political fund, or to tender any political service and will not be removed or otherwise prejudiced for refusing to do so. No person in said service has any right to use his official authority or influence to coerce the political action of any person or body.

No officer or employee of the United States Government shall discharge, promote or degrade, or in any manner change the official rank or compensation of any other officer or employee, or promise or threaten so to do, for giving or withholding or neglecting to make any contribution of money or other valuable thing for any political purpose.

No officer or employee of the United States Government shall directly or indirectly give or hand over to any other officer or employee any money or other valuable thing on account of or to be applied to the promotion of any political object whatever.

No person shall, in any place occupied in the discharge of official duties by any officer or employee of the United States Government, solicit in any manner whatever, or receive, any contribution of money or other thing of value for any political purpose whatever.

Any person who shall be guilty of violating any of the above provisions shall be guilty of a misdemeanor, and shall on conviction thereof be punished by a fine not exceeding \$5,000, or by imprisonment for a term not exceeding three years, or by such fine and imprisonment both, in the discretion of the court.

**Liquor Saloons Closed Labor Day.**

It is ordered and directed, by the Isthmian Canal Commission, that all saloons and public drinking places in the towns of Las Cascadas, Empire and Culebra, be closed, and that no liquor be sold by them between the hours of 12 m., Sunday, September 6, and 6 a. m., Tuesday, September 8, 1908.

GEO. W. GOETHALS,  
Chairman.

D. D. GAILLARD,  
WM. L. SIBERT,  
JO C. S. BLACKBURN,  
W. C. GORGAS,

Members of the Isthmian Canal Commission.

NOTE: Civil Engineer H. H. Rousseau and Mr. Jackson Smith, members of the Commission are absent in the United States.

Culebra, August 27, 1908.

The best record for excavation in one day in the Central Division during August was made August 28, when 60,210 cubic yards, car measurement, of rock and earth were taken out.

# RECORD OF EXCAVATION SINCE AMERICAN OCCUPATION. MONTHLY TOTALS BY CUBIC YARDS, PLACE MEASUREMENT.

## PORTO BELLO.

## Village, Quarry, and Crusher Plant.

Two million yards of crushed rock will be required for concrete in the locks at Gatun and the spillway in Gatun Dam. To supply this rock a quarry is being opened at Porto Bello, a harbor on the Caribbean Sea, eighteen miles east of Colon. Primarily the reason for selecting this place was that the rock here, a massive andesite, is well suited for concrete, while the quantity is practically unlimited, enough, in fact, not only for the works at Gatun, but also for a breakwater at the Atlantic entrance to the Canal, if it be deemed wise to build one. An exploration by means of borings justifies an estimate of 20,000,000 cubic yards of good rock. Other considerations were that it is within 25 miles of Gatun, nearer than any other suitable deposit, water transportation is cheap, the harbor at Porto Bello is unexcelled, and the rock can be sent from the quarry to the crusher, and from the crusher to the conveying system by gravity, and, therefore, the handling expense will be light.

Porto Bello proper is a native settlement of some four hundred people, located on a land-locked bay one and a half miles long and half a mile wide, and in Panamanian territory. A survey made in 1903 by a detail from the U. S. S. *Atlanta*, shows a depth of from 5 to 15 fathoms in practically all the harbor. Where the Commission dock has been built the water is from  $2\frac{1}{2}$  to 4 fathoms deep. From the sixteenth century until the building of the Panama railroad this was the Atlantic port for overland traffic across the Isthmus. The old pack trail joined the Cruces trail at Cruces, where also the water traffic up the Chagres from Fort Lorenzo was transhipped. Some ruined forts on both sides of the bay attest that the Spaniards at an early date thought the port well worth guarding. A more modern fortress on the south shore, next to the nativetown, bears the date 1756. Near this fort are three churches, one still in use and another bearing marks of recent construction. The third is a ruin, but not even the sight of pigs wandering contentedly around its courtyard can detract from the beauty of the loggia with its dozen arches.

The quarries are being opened on the hill that rises almost sheer from the water, on the north shore of the bay, well inside the harbor, and nearer the sea than the American settlement. At an elevation of 85 feet a 45-ton steam shovel is digging a terrace around the hill for the double track system to the crusher house. Excavation for the crusher plant, and grading for the railway track into the quarry is in progress. This shovel was lifted from sea level up an incline 120 feet long, on part of which the grade was 66 per cent. A track was laid up the hill, an anchorage or "dead man" was buried at the top of the incline, and a double cylinder, double drum hoisting engine of 30 rated horsepower, located at the foot of the hill, supplied the power, use being made of an eight-part tackle.

At an elevation of 260 feet above sea level a Decauville railroad is in operation, distributing material along the 3,500 feet of hillside that it is proposed to strip. Material is sent to the 260-foot level by a trolley, operated by a hoisting engine at the foot of the hill. Stripping will be done hydrau-

lically, and to this end a 10-inch hydraulic line has been run from elevation 4 to elevation 260, and 3,500 feet along the terrace at elevation 260. On the steep incline the pipe is anchored in concrete piers about 150 feet apart. A pump capable of delivering 1,500 gallons of water per minute against a total static and friction head of 460 feet has been installed on the shore, with an intake from the bay. Steam for this pump will be furnished by two boilers of 370 rated horsepower, now ready for operation.

From the quarry, running from elevation 85 to 260, rock will be delivered at the crusher plant at elevation 85. This plant will consist of two No. 9 and four No. 6 McCully crushers which are now on the ground ready for erection. A double transmitting pan-conveyor will take the crushed rock from the crusher to a hopper beneath the shipping bin located on the water line. This hopper empties into a double distributing bucket-conveyor which elevates the crushed stone and delivers it, by means of trippers, at the points desired in the bin. Foundations have been installed for the bin and coal bunkers. The stone bin will have a capacity of 2,400 cubic yards and the coal bunkers of 1,000 tons. From the bin the stone will be loaded by gravity onto the barges. Twelve barges and three tug boats will be employed in the service between Porto Bello and Cristobal. Each barge will carry 600 cubic yards of rock, and it is intended to deliver ultimately 2,400 cubic yards per day. Delivery will be begun by January 1, 1908.

At present the drilling is being done by Star drills, but as soon as one air compressor is installed, pneumatic drills will be used. A permanent 6-inch air line has been laid at elevation 260 to supply air to all parts of the quarry. A 2-inch water supply line is also being laid to elevation 288. Tanks with a capacity of 10,000 gallons will be erected at this elevation and kept filled by pumping from the water main. From these tanks the quarters above the reservoir level will be supplied by gravity, as will steam shovels and drills in the quarry from a line laid at elevation 260. A 25-ton derrick has been erected on the dock.

Between the hill in which the quarry is being opened and the hill that forms one side of the reservoir, is a shelf of land 2,000 feet long and only a few feet above the water.

On this shelf are located the docks, the boiler and engine house, shipping bins, coal bunkers, a machine shop, storehouse and other buildings that form the quarry plant. At a point where the shelf is a few hundred feet broad, the Commission village is located. Besides the manufacturing plant, it consists at present of six barracks for laborers, a mess kitchen for colored laborers, and a European laborers' mess, a type 5 hotel and bachelor quarters, a type 18 bachelor quarters, a tent hospital, and on a hill looking down on the village on one side and into the reservoir ravine on the other, four type 14 houses and three type 17 houses.

The population on August 15 was 612, of whom 8 were nonemployees. There are three families, 80 gold employees, 190 European laborers, 60 East Indians and 260 negro laborers.

Operations at the quarry had been in progress several months when the sanitation work was begun in January, 1908. Malaria of a virulent type had become recurrent. In

the week ending May 18, the number of malaria patients sent to the hospital was 9.9 per cent of the population, and in the week ended August 15, the percentage had dropped to 2.3. The type of malaria has become less severe and the number of recurrent cases is small. This improvement was brought about by establishing good latrines, piping water from a temporary reservoir in the hills and boiling it, cleaning the settlement of brush and using oil to prevent the breeding of malaria-carrying mosquitoes. A good sewer system has been installed and all of the buildings in use have already been connected with it.

To furnish a permanent supply of wholesome water a concrete dam of the gravity section type has been built across a mountain stream. This dam, 46 feet wide at the base, 258 feet long at the crest, and 77 feet high, crest 105 feet above sea level, foundations running down to elevation 28, and containing 5,052 cubic yards of concrete, was built in 37 days. The force engaged in its construction was divided into two sections of 50 men each, one section being at work in the sand and gravel pit loading cars, and the other in mixing and placing the concrete. The sand and gravel were dredged from the bay and pumped ashore to a bank. From here it was shoveled into Decauville cars and hauled up the tramway to a point above the mixing platform, the cars in trains of four or five being hauled by a hoisting engine stationed at the top. The gravel bank elevation was about +5, and the cars were dumped from elevation 110. From the dumping platform the material was shoveled over a 1-foot bulkhead on to a set of double screens arranged one above the other. The sand passed through the upper screen, and sand so fine as to be unsuitable for concrete work passed through the lower screen and was wasted down the hill. The gravel passed over the upper screen, and the materials were mixed in proper proportions on the mixing platform at elevation 88.5. A Chicago cube concrete mixer of two-thirds of a yard capacity was used. Water is supplied by gravity to all the buildings in the village except the family quarters located on a hill above the reservoir, which are supplied by pumping. The reservoir has a capacity of 27,000,000 gallons, and is now full of water.

## Examination for Examiner of Accounts.

The Isthmian Civil Service Board will hold in the office of the Chairman at Culebra, at 9 a. m., September 3 and 4, 1908, an examination for the position of Examiner of Accounts under the Interstate Commerce Commission, at salaries ranging from \$1,800 to \$3,000 per annum, and traveling expenses. This examination is open to citizens of the United States who have had high grade training and experience in railroad accounting. An advertisement containing a description of the examination and other information of interest to applicants has been posted in every post-office in the Canal Zone.

The printed application form can be had upon application to the Secretary of the Isthmian Civil Service Board, office of the Chairman, Culebra, Canal Zone.

A stack 100 feet high, 6 feet in diameter, made of 1-4 and 3-16-inch steel, was raised at the new air compressor plant at La Boca, August 27. It was built on the ground and raised in one piece.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

The Empire Woman's Club opened the season with a regular meeting on September 1. The line of work for the coming year has been divided into the following departments: Educational and philanthropic, with Mrs. A. Hillermen and Mrs. Ash as chairmen; home and social, Mrs. E. P. Worrall chairman, with Mrs. H. C. Ball assistant. The home and social department is large and has been divided into several subdepartments.

The meeting on Tuesday opened with a reading of the club creed, followed by a talk on extravagance versus economy, at the close of which there was an address by Mrs. Lorin C. Collins, president of the Zone Federation, who was the guest of honor. Several musical numbers were given. Subsequent meetings will be held every Tuesday at the clubhouse at 3 o'clock. The musical and literary department has charge of the meeting September 8, and the educational and philanthropic department on the 15th. A reception will probably be given to the returning president, Mrs. F. W. Miracle, on September 22.

The Las Cascadas Woman's Club has decided to hold its meetings at the residences of the members for the next three months, instead of taking a recess for that period, as was suggested. The meetings are much enjoyed and the interest in the club keeps up to the work. At the last session, held August 27, at the residence of Mrs. Charles Lingo, 19 members were present. The club greatly regrets the loss of its president, Mrs. O. G. Randall who has removed to Empire.

Work on the new church and lodge building is rapidly going forward and club women are anticipating pleasant quarters when it is completed. A committee of members of the club was asked to name a site for which they had preference and their choice was the site decided upon.

The Ancon Woman's Club holds its regular meeting Wednesday, September 2. The principal business will be the nominating of officers for the annual meeting, the first Wednesday in October.

The Culebra Woman's Club is scheduled to open its regular season on Thursday, September 3.

A dance, given by the nurses of Ancon Hospital in the "Anconita" Saturday night, August 29, was enjoyed by about 50 couples. The Ancon orchestra furnished music and refreshments were served.

The Tivoli Club will give a dance at the Hotel Tivoli, September 12, in honor of President-elect José Domingo de Obaldia and Mrs. Obaldia.

## Concert.

By the I. C. C. Band at the Hotel Tivoli, Ancon, Sunday, September 6, 1908, at 7.30 p. m.:

## PROGRAM.

- 1 March—*Salute to the Flag*.....Pierson
- 2 Selection—*The Grand Mogul*.....Lunders
- 3 Flower Song—*Delicia*.....Frantzen
- 4 Waltz—*Haunting Eyes*.....Tobani
- 5 Duet for Clarinets—*Nanine*.....Marsal
- MESSRS. GRAY AND HALE.
- 6 Selection—*Maritana*.....Wallace
- 7 a Caprice—*The Whistler and His Dog*.....Pryor
- 8 b Bolero—*Spanish Gaiety*.....Eno
- 9 Overture—*If I Were King*.....Adam
- 9 Descriptive—*A Hunting Scene*.....Bucalossi
- 10 March—*Arbitrator*.....Bagley

CHAS. E. JENNINGS, Musical Director.

A concert will be given at Gorgona, C. Z., on September 13.

## PERSONAL.

Commissioner H. H. Rousseau, accompanied by his wife and mother, are due to arrive on the *Alliance*, September 2. On the same ship are also Hiram J. Shifer and two daughters, and M. B. DePatron, Assistant to the Chairman.

Mr. George D. Brooke, Superintendent of Motive Power and Machinery, left on his vacation in the States on August 30.

Mr. Caleb M. Saville, assistant engineer, left on his vacation August 30. On his return Mr. Saville will be stationed at Culebra.

## Dedication of Chapel at Empire.

The dedication of the Commission Protestant chapel at Empire took place under the auspices of the Empire Christian League on Sunday, August 30, at 2.30 p. m., a Sunday school rally having been held on the morning of the same day. Both services were largely attended. Rev. J. H. Sobey, resident chaplain, was in immediate charge and visiting clergymen were Archdeacon Bryan and Rev. J. L. Wise. Among the speakers were Hon. H. A. Gudger, A. L. Stuntz, J. C. Forman and A. Bruce Minear. Musical selections were given by Mrs. Adolf Faure and the Lotus Glee Club. This is the fifth of the Commission "type church and lodge" buildings to be completed. The others are at Cristobal, Gorgona, Paraiso, and Culebra.

The Empire Christian League was organized in January, 1908. It is entirely undenominational and visiting ministers are privileged to conduct the services, in form as well as in doctrine, according to their own judgment and discretion, and at the close of any public service are permitted to gather the members of their own denomination together for any special ordinance of their faith. The resident chaplain officiates at all the services save one Sunday in the month, when a visitor is in charge. The Sunday school and Young People's Christian Union are under the supervision of the League, and all the literature provided in both is, as far as practicable, undenominational.

## Church at Culebra.

The corner stone of the Roman Catholic Church, built on ground donated by the Commission, was laid at Culebra, August 30, by the Bishop of Panama, assisted by Commission chaplain, Rev. Father Collins. Short addresses were made by the Bishop and by Father Collins, and music was furnished by the I. C. C. band.

## Atlantic Division Storehouses.

Two storehouses, 50 feet by 200 have been authorized for the Atlantic Division. One will be built at the dry dock in Cristobal and will be used for the storage of dredge parts and material for the ships and floating equipment on the Atlantic side. The other storehouse will be built alongside the docks at Gatun, where cement, stone, sand, and other material will be delivered for the Gatun Locks. Both these storehouses will be convenient to water and rail transportation.

On Saturday evening, September 5, the Pacific Masonic Club will give a smoker in the hall above the office of the Quartermaster's Department, Ancon. All American Masters of Corozal, La Boca, and Ancon are requested to be present.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

The Lotus Glee Club will give the following return recitals: September 5, Cristobal; September 7, Culebra; September 8, Gorgona.

## CRISTOBAL.

Basketball enthusiasm is again at a high pitch, and a local tournament is being organized preparatory to the development of a first team.

Mr. Geo. H. Wolbrecht gave another exhibition of chess playing on Monday night. He played twenty-four games during the evening, winning all excepting two, one a draw with Mr. E. M. Fechtig, and one in which he was beaten.

Mr. L. B. Cundiff, a physical director of several years' experience, has been secured to take up the work as assistant secretary in charge of the physical work at the Cristobal Y. M. C. A. Mr. Cundiff is expected to take up his work in a few days.

The orchestra from the steamship *Prinz August Wilhelm* gave a concert at the clubhouse last Monday night.

About six hundred circulars, containing a statement of the privileges offered by the Cristobal Y. M. C. A., were sent out this week to employees of the Commission who were not members. As a direct result, a considerable number of men have joined since receiving the circular.

## EMPIRE.

A class was organized August 25 to study mechanical drawing and mathematics. It started with a membership of twenty, with Mr. Hampton, of the Mechanical Division, as leader. All men of Empire, interested in this study, are invited to join the class. One result of the new class is an addition of eleven members to the Y. M. C. A.

Open house was kept Monday evening, August 31, when a program by local musicians, assisted by the Norcross orchestra, was given.

Thursday evening, September 3, the Lotus Glee Club of New York will entertain, and Friday a dual meet will be held between the boys of Corozal and Empire.

It is expected the duckpin tournament will close September 7. Ten men out of the 31 entered have played their share of games, and 710 games have been rolled. The high record has been broken again by L. A. Durand, with 118.

The tenpin high score last week was rolled by Perry Brown, who made nine strikes and two spares, his score being 253.

## I. O. R. M. Convention.

The eight tribes of Improved Order of Red Men will hold a convention in Colon on September 6, for the purpose of forming a Great Council of the Order on the Isthmus. A special train will leave Panama about 7 o'clock a. m., and will make stops of about one hour's duration at each of the stations along the line in which a tribe resides. All Red Men, their families, and all interested pale-faces are cordially invited to attend.

## Misdirected Letters.

## Division of Dead Letters.

Ancon, C. Z., September 2, 1908.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Adams, J. S.	Mannoni, L.
Barrett, Nelson M.	Merriett, Walter J.
Bell, Miss Alviria	Morse, I. V.
Bruck, Harry W.	Mullane, D.
Carson, Arthur (3)	Nalligan, Thomas
Clips, Sophia	Noland, C. P.
Dallow, Arthur	Pearson, Mr. and Mrs.
Fletcher, William	Herbert
Gibson, Loretta	Pfueger, E. B.
Golson, Miss C.	Phillip, Miss C.
Harrison, Miss Vera	Power, W. L.
Hopkins (6)	Sanderson, Frank E.
Lee, Mrs. Ernest E.	Simpson, Henry
Lund, Lars J.	Westberg, J. E.
Macfarlane, Mrs. T. W.	

The *Niara*, which arrived August 27, brought the following cargo for canal work: Seven hundred and fifty-one boiler tubes, 30 split switches, 20,000 cases 45 per cent dynamite, 905 steel bars and angles, 3,000 pairs angle plates, 2,631 rails, and 1,331 pieces castings.

The following were the arrivals and departures at the port of Ancon in the week ending August 28:

Arrivals—August 23, *Chile*, from Valparaiso.  
Departures—August 25, *Mapocho*, to Valparaiso;  
U. S. S. *Milwaukee*, to Annapolis; August 28, *Quito*, to Buenaventura.

## OFFICIAL CIRCULARS.

## Labor Day a Holiday.

CIRCULAR No. 198:

Labor Day, Monday, September 7, 1908, will be observed as a holiday throughout the Canal Zone, and, as far as possible, all work will be suspended on that day.

GEO. W. GOETHALS,  
Chairman.

Culebra, C. Z., August 27, 1908.

## Transfer of Duties—Disbursing Officer and Examiner of Accounts.

CIRCULAR No. 183H:

Effective October 1, 1908: With the approval of the Secretary of War, the following duties assigned by Executive Order dated August 15, 1907, to the Disbursing Officer on the Isthmus and the Examiner of Accounts, are hereby transferred as indicated below:

1. To the Chief Quartermaster is assigned the duty of keeping property accounts with the various officers upon the Isthmus charged with the custody and use of property. The Disbursing Officer is relieved of that duty, and the Examiner of Accounts is relieved of the duty of annually verifying property accounts by an inventory of all property.

2. The Chief Quartermaster is charged with the duty of receiving and examining returns of property in the custody of all officers on the Isthmus, and shall perform all duties concerning property accounts required by the Act of Congress of March 29, 1894, under such rules and regulations as may be approved by the Secretary of War, and perform such other duties relative to the property of the Commission as may be ordered by the Chairman.

3. The Disbursing Officer on the Isthmus shall be charged with the disbursement of the funds of the Commission upon pay-rolls and approved vouchers after examination by the Examiner of Accounts, and shall have access at all times to the books, papers and records of the Examiner's office. The accounts of the Disbursing Officer shall be sent to the Examiner of Accounts as soon after the close of each month as practicable, and after the administrative examination thereof by the Examiner, the latter officer shall forward them to the Auditor for the War Department.

4. The Disbursing Officer on the Isthmus shall collect accounts and claims due the Commission, upon their transmission to him by the Examiner, and such accounts and claims shall be sent by the several departments in which they originate to the Examiner. The Disbursing Officer shall receive, safely keep, pay over, and account for as required by law and regulations, all funds that may be collected by him or paid to him.

5. The Disbursing Officer on the Isthmus shall receive all issues of coupon books and meal tickets, subject to verification of numbers and values at the time of receipt by the Examiner, who shall charge the Disbursing Officer with the same. The Disbursing Officer shall forward such books and tickets to timekeepers and others, upon requisitions therefor approved by the Examiner, and under rules prescribed by the Chairman. The Disbursing Officer and timekeepers and others receiving such books and tickets shall account therefor monthly to the Examiner.

Other duties heretofore performed by the Disbursing Officer on the Isthmus, excepting the keeping of property accounts, are hereby transferred to the Examiner of Accounts.

GEO. W. GOETHALS,  
Chairman.

Culebra, C. Z., August 27, 1908.

## Transfer.

TO ALL CONCERNED: The following transfer is announced:

C. P. Allen, from District Quartermaster, La Boca, to District Quartermaster, Culebra.

W. H. South is appointed District Quartermaster, La Boca.

Effective September 8.

C. A. DEVOL,  
Chief Quartermaster.

Culebra, August 24, 1908.

## Abolition of Division of Material and Supplies.

CIRCULAR No. 246:

To All Employees of the Division of Material and Supplies: In accordance with Circular 183c, of August 14, 1908, issued by the Chairman and Chief Engineer, Isthmian Canal Commission, effective September 1, 1908, the Division of Material and Supplies will be abolished, and the duties pertaining thereto performed by the Quartermaster's Department of the Isthmian Canal Commission.

With the abolishing of the Division of Material and Supplies, and transferring the duties pertaining thereto to the Quartermaster's Department, I desire to thank the employees of this Division for the loyal

and faithful service and hearty cooperation with which they have performed their duties in handling the large amount of business for nearly three years, during which time I have been Chief of the Division, and request that they render to my successor, Maj. Devol, Chief Quartermaster, the same loyal and efficient service that they have rendered to me.

W. G. TUBBY,  
Chief, Division of Material and Supply.  
Cristobal, August 31, 1908.

## Acting Superintendent.

TO ALL CONCERNED:

During the absence of the Superintendent of Motive Power and Machinery, Mr. Earle J. Banta, in addition to his other duties as Mechanical Engineer, will assume general oversight over affairs in the Mechanical Division, and is given authority to sign pay-rolls, vouchers, etc.

GEO. D. BROOKLYN,  
Superintendent of Motive Power and Machinery.  
Approved:  
GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Proposals for Cross and Switch Ties.

Sealed proposals will be received at the office of W. G. Tubby, Purchasing Agent on the Isthmus, Cristobal, C. Z., up to 3.30 p. m., Wednesday, September 9, 1908, at which time they will be opened in public, for the sale to the Isthmian Canal Commission of forty thousand (40,000) first-class cross ties, four thousand (4,000) second-class cross ties, ten (10) sets of No. 7 switch ties, and ten (10) sets of No. 10 switch ties according to the following specifications:

1. The timber used shall be black or yellow Guaiacum, commonly called Guayacan or Lignum Vitae.

2. All ties shall be well and smoothly hewed out of straight-growing timber of specified dimensions and out of wind, sawed or square-cut ends, with straight and parallel faces. All ties shall have bark entirely removed when cut. Ties shall be free from splits, shakes, loose or decayed knots, or any other imperfections which may impair their strength or durability.

3. Except in pole ties with rounded sides, or in half-round ties, the width of face and thickness shall conform to sizes given in the table of dimensions below, but a variation of size will be permitted of one inch over in thickness, one inch over in width, and three inches over in length.

4. In pole ties with rounded sides, and in half-round ties, the width of face may be less than that given in the table of dimensions, but the least area of cross section shall not be less than the area corresponding to the tabular dimension, and in no case shall the width of face be less than six inches for first-class and five and one-half inches for second-class ties.

TABLE OF DIMENSIONS.

	Thickness by width of face	Length	Maximum variation from straight edge	
			Top and bottom	Sides
1st class...	6" x 8"	8'0"	1 1/2"	2"
2d class...	5 1/2" x 7"	7'9"	1"	3"

Delivery will be made on the docks at Cristobal or La Boca, C. Z., or within fifty feet of any track of the Panama railroad, not more than four feet above or four feet below grade, and ties will be inspected as they are unloaded on the dock or when loaded on cars. Delivery shall not begin later than October 1, 1908, and shall be completed by January 1, 1909. Bidders shall furnish a sample not less than five inches square and twelve inches long of the kind of wood they propose to furnish, and submit certified check, money order or cash in the amount of one hundred (100) dollars, U. S. currency, as evidence of responsibility and ability to carry out the provisions of the contract, and nine hundred (900) dollars, U. S. currency, additional at the time of execution of the contract. Bids shall be enclosed in sealed envelopes plainly marked "Proposals for Furnishing Guayacan Ties." The Commission reserves the right to reject any and all bids.

## CANAL DIRECTORY.

### ISTHMIAN CANAL COMMISSION.

Lieut.-Col. Geo. W. Goethals, U. S. A.,  
Culebra.  
Lieut.-Col. H. F. Hodges, U. S. A., (vice  
Jackson Smith, effective September 16, 1908).  
Culebra.  
Maj. D. D. Gaillard, U. S. A., Empire.  
Maj. Wm. L. Sibert, U. S. A., Gatun.  
Civil Engineer H. H. Rousseau, U. S. N.,  
Culebra.  
Mr. Jo C. S. Blackburn, Ancon.  
Col. W. C. Gorgas, U. S. A., Ancon.  
Mr. Jackson Smith, (resigned, effective Septem-  
ber 15, 1908).  
Mr. Joseph Bucklin Bishop,  
Secretary, Ancon.

### DEPARTMENTS.

#### Construction and Engineering.

Headquarters, Culebra.  
Lieut.-Col. Geo. W. Goethals, Chairman  
and Chief Engineer.  
M. B. DePatron, Assistant to the Chairman.  
W. H. May, Secretary to the Chairman.  
C. A. McIlvaine, Chief Clerk.  
A. B. Nichols, Office Engineer.  
Caleb M. Saville, Assistant Engineer.  
Lieut.-Col. H. F. Hodges, Assistant Chief  
Engineer.  
C. O. Carlson, Secretary.  
Edward Schildhauer, Electrical and Mechanical  
Engineer.  
L. D. Cornish, H. F. Tucker, Henry Goldmark  
and David Molitor, Designing Engineers.  
Civil Engineer H. H. Rousseau.  
J. C. Parsons, Secretary.

#### Central Division.

Headquarters, Empire.  
Maj. D. D. Gaillard, Division Engineer.  
A. E. Bronk, Chief Clerk.  
Louis K. Rourke, Assistant Division Engineer.  
A. S. Zinn, Resident Engineer.  
Mark W. Tenny, Assistant Engineer.  
R. W. Hebard, Assistant Engineer.  
W. L. Thompson, Assistant Engineer.  
Geo. H. Ruggles, Assistant Engineer.

#### Atlantic Division.

Headquarters, Gatun.  
Maj. Wm. L. Sibert, Division Engineer.  
R. M. Sands, Chief Clerk.  
Maj. Chester Harding, U. S. A., Assistant Divi-  
sion Engineer.  
Maj. Edgar Jadwin, U. S. A., Resident Engineer.  
Maj. J. P. Jervey, U. S. A., Assistant Engineer.  
Capt. G. M. Hoffman, U. S. A., Assistant En-  
gineer.  
Capt. Horton W. Stickle, U. S. A., Assistant En-  
gineer.  
R. B. Smith, Assistant Engineer.  
L. G. Thom, Assistant Engineer.  
F. C. Stanton, Assistant Engineer.

#### Pacific Division.

Headquarters, Corozal.  
S. B. Williamson, Acting Division Engineer.  
E. A. LeMay, Chief Clerk.  
W. G. Comber, Resident Engineer.  
G. B. Strickler, Resident Engineer.  
Wm. F. M. Acheson, Assistant Engineer.

#### Mechanical Division.

Headquarters, Culebra.  
Geo. D. Brooke, Superintendent of Motive  
Power and Machinery.  
F. W. Doty, Chief Clerk.  
Earl J. Banta, Mechanical Engineer.  
A. L. Robinson, Electrical Engineer.

#### Division of Meteorology & River Hydraulics

Headquarters, Ancon.  
R. M. Arango, Division Engineer.  
D. W. MacCormack, Chief Clerk.

#### Quartermaster's Department.

Headquarters, Culebra.  
Maj. C. A. Devo, U. S. A., Chief Quarter-  
master.  
C. H. Mann, Chief Clerk.  
Lieut. R. E. Wood, U. S. A., Assistant Chief  
Quartermaster.

#### Subsistence Department.

Headquarters, Culebra.  
Maj. Eugene T. Wilson, U. S. A., Subsistence  
Officer.  
W. F. Shipley, Chief Clerk.  
Maj. Wendell L. Simpson, U. S. A., Purchas-  
ing Agent, 24 State Street, N. Y. City

### Civil Administration.

Headquarters, Ancon.  
Jo C. S. Blackburn, Head of the Department.  
H. D. Reed, Executive Secretary, Ancon.  
G. A. Ninas, Chief Clerk, Ancon.  
Tom M. Cooke, Chief, Division of Posts, Cus-  
toms and Revenues, Ancon.  
Herman A. Gudgey, Deputy Collector, Ancon.  
E. Lewis Baker, Deputy Collector, Cristobal.  
George M. Shontz, Prosecuting Attorney, Ancon.  
George R. Shanton, Chief of Police, Ancon.  
D. E. McDonald, Chief Clerk.  
C. H. Weidman, Chief, Fire Department, Cris-  
tobal.  
Geo. L. Campen, Superintendent of Public  
Works, Ancon.  
C. R. Sargent, Chief Clerk.  
J. J. Reidy, Assistant Superintendent of Public  
Works, Cristobal.  
David C. O'Connor, Superintendent of Schools,  
Ancon.

### Canal Zone Judiciary.

Headquarters, Ancon.  
Supreme Court—Dr. F. Mutis Durán, Chief  
Justice.  
Walter Emery, Clerk, Ancon.  
H. A. Gudgey, Associate Justice, Empire.  
Lorin C. Collins, Associate Justice, Cristobal.  
Circuit Court, First Circuit—Dr. F. Mutis  
Durán, Judge, Ancon.  
Walter Emery, Circuit Court Clerk, Ancon.  
Circuit Court, Second Circuit—H. A. Gudgey,  
Judge, Empire.  
Elbert M. Goolsby, Circuit Court Clerk,  
Empire.  
Circuit Court, Third Circuit—Lorin C. Collins,  
Judge, Cristobal.  
Nelson R. Johnson, Circuit Court Clerk,  
Cristobal.  
M. C. Rerdell, Senior District Judge, Cristobal.  
S. E. Blackburn, District Judge, Ancon.  
Edgar S. Garrison, District Judge, Empire.  
J. B. March, District Judge, Gorgona.  
Thomas E. Brown, Jr., District Judge, Cristo-  
bal.

### Department of Law.

Headquarters, Washington, D. C..  
Richard Reid Rogers, General Counsel,  
Washington, D. C.

George M. Shontz, Attorney for Isthmian Canal  
Commission and Panama Railroad Company,  
Ancon.

George H. Bartholomew, Assistant Attorney  
for Isthmian Canal Commission and Panama  
Railroad Company, Ancon.  
Inocencio Galindo, Legal Adviser to the Isth-  
mian Canal Commission, Ancon.

### Department of Sanitation.

Headquarters, Ancon.  
Col. W. C. Gorgas, Chief Sanitary Officer.  
Maj. C. C. McCulloch, Jr., U. S. A., Executive Officer.  
Harry E. Bovay, Chief Clerk.

H. R. Carter, Director of Hospitals, Ancon.  
Surgeon, J. C. Perry, P. H. and M. H. S., Chief  
Quarantine Officer, Ancon.

Maj. John L. Phillips, U. S. A., Superintendent  
Ancon Hospital, Ancon.

Capt. Alexander Murray, U. S. A., Assistant to  
Superintendent.

J. F. Leys, U. S. N., Superintendent, Colon  
Hospital, Colon.

Capt. Robt. E. Noble, U. S. A., General In-  
spector, Ancon.

Surgeon Claude C. Pierce, P. H. and M. H. S.  
Quarantine Officer, Colon.

Dr. Fleetwood Gruver, P. H. and M. H. S., Quar-  
antine Officer, Panama.

Dr. John H. Purnell, Health Officer, Panama.  
Dr. M. E. Connor, Health Officer, Colon.

Joseph A. LePrince, Chief Sanitary Inspector,  
Ancon.

### Disbursements.

Headquarters, Empire.  
Edward J. Williams, Disbursing Officer.  
Wm. M. Wood, Assistant Disbursing Officer.

### Examination of Accounts.

Headquarters, Empire.  
W. W. Warwick, Examiner of Accounts.  
W. D. Mabry, Chief Clerk.

### Panama Railroad Company.

Headquarters, Colon.  
H. J. Slifer, Assistant to the President, and  
General Manager, Colon.  
W. G. Tucker, Secretary, Colon.

### Purchasing Department.

Headquarters, Washington, D. C..  
Capt. F. C. Boggs, U. S. A., General Pur-  
chasing Officer.  
C. E. Dole, Chief Clerk.  
F. C. Nordsick, Assistant Purchasing Agent, 24  
State street, New York City.  
S. E. Redfern, Assistant Purchasing Agent,  
Custom House, New Orleans, La.

### MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Pan-  
ama Railroad Steamship Company, of the Royal  
Mail Steam Packet Company, of the Hamburg-  
American Line, and of the United Fruit Company's  
Line, the Panama Railroad Company's dates being  
subject to change:

FROM COLON TO BARBADOS, CALLING AT TRINIDAD.  
Magdalena..... R. M. Tuesday..... Sept. 15  
Orinoco..... R. M. Tuesday..... Sept. 29

The Panama railroad steamships sail at 3 p. m.  
from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line  
sail from Colon at 1 p. m. via Kingston, Jamaica,  
for New York.

All Royal Mail steamers mentioned above leave early  
in the morning from Colon via Kingston, Jamaica,  
for New York. All mail and passengers should be  
on board early on day of sailing.

The steamers of the United Fruit Company's line  
sail from New Orleans at 11 a. m., and from Colon  
at 1.30 p. m., via Port Limon, for New Orleans. In  
addition to the above, the United Fruit Company  
dispatches a steamer about every ten days from  
Colon, via Bocas del Toro, for New Orleans.

Sailings of the French line (Cie. Générale Trans-  
atlantique) for Venezuelan ports, Martinique and  
Guadeloupe on the 3d and 20th of each month.

### Tug Service Porto Bello and Nombre de Dios.

Effective, August 6, 1908: The following is the  
schedule for tug service between Cristobal, Porto  
Bello and Nombre de Dios:

Sunday: Leave Cristobal 6.30 p. m. for Porto Bello  
only; returning same day.

Monday: Leave Cristobal after Train 2 for Porto  
Bello and Nombre de Dios; returning same day.

Tuesday: Leave Cristobal after Train 2 without  
tow, for Porto Bello only; returning, leave Porto  
Bello 2.15 p. m., without tow.

Wednesday: Leave Cristobal after Train 2 for  
Porto Bello and Nombre de Dios; returning same  
day.

Friday: Leave Cristobal after Train 2 for Porto  
Bello and Nombre de Dios; returning same day.

Saturday: Leave Cristobal after Train 2 for Porto  
Bello only; returning, leave Porto Bello 5.30 p. m.

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, SEPTEMBER 9, 1908.

No. 2.

## The Canal Record

Published weekly under the authority and supervision of the  
ISTHMIAN CANAL COMMISSION

"The Canal Record" is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the "gold" roll. Extra copies can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications

THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

## NOTES OF PROGRESS.

### President Roosevelt on Canal Work.

The letter of President Roosevelt, dated Oyster Bay, August 21, 1903, acknowledging the receipt of a report of the Special Commission which visited the Isthmus on May last, as published in THE CANAL RECORD of August 26, was incomplete. Two paragraphs were omitted from the text of the letter as it appeared in the cable dispatches to the Panama Star & Herald, from which THE CANAL RECORD quoted it.

These paragraphs are appended:

Meanwhile the treatment of hygienic conditions on the Isthmus has been such as to make it literally the model for all work of the kind in tropical countries. Five years ago the Isthmus of Panama was a byword of unhealthiness of the most deadly kind. At present the Canal Zone is one of the healthiest places on the globe and the work which is being prosecuted with such tremendous energy is being prosecuted under conditions so favorable to the health and well being of the workers that the mortality among them is abnormally small.

Finally, in addition to the extreme efficiency of the work under Colonel Goethals and his associates, and the extraordinary hygienic success achieved under Dr. Gorgas, there is the further and exceedingly gratifying fact that on the Isthmus the United States Government has been able to show itself a model employer. There are matters to correct, of course, as your report shows, but on the whole it is true that the United States Government is looking after the welfare, health and comfort of those working for it as no other government has ever done in work of like character.

### Conditions at Miraflores Locks' Site.

Work on the site of the Miraflores Locks and Dams has reached the point where the nature of the construction at this place when finished can be judged from the appearance of the excavation. Steam shovels and spoil trains are making rapid progress in taking out the earth that overlies the rock, and some rock is being excavated in and just below the forebay. On either side of the prism dykes are being built for the handling plant, and also to serve as a barrier behind which dredged material may be pumped. Excavation for the core for the Cocoli Dam is progressing satisfactorily.

The 20-inch suction dredge Sandpiper,

which began its trial at La Boca on August 25, was taken from that place the next day, and is now completing its trial in the Canal prism opposite Corozal. In about a month it will be taken up the Rio Grande, at high water, to the site of the locks at Miraflores. A dyke has been built across the southern end of the locks' site, where it is proposed to regulate the stage of the water within the basin where the dredge will work, thus keeping it as high as may be necessary.

The plan contemplates dredging about one million cubic yards from the locks' site, after which the basin will be unwatered and steam shovels set at work taking out the rock to the level required in each flight. About 500,000 cubic yards will be excavated from the north end of the locks' site by steam shovels during the time the dredging is in progress, after which approximately 1,250,000 cubic yards will remain to be excavated by steam shovels.

Between the locks' site and La Boca, clearing the prism is well advanced, and the steam shovel at work at Cardenas Hill is supplying material for the construction of the dyke between that point and the west dump of the abandoned Sosa-Corozal dam.

### Power Plant at Gatun.

A site has been determined upon for the power house at Gatun, north of the unloading docks and near the east diversion. The steam shovel now at work on the site of the docks will be moved this week to the power house site, and excavation for the foundations will begin at once. The power house will have a concrete foundation and basement, and the superstructure will be corrugated iron over a wood frame. It will be 150 feet long and 84 feet wide.

In the boiler room will be six 400-horsepower water-tube boilers of the Keeler type, equipped with induced draught fans in duplicate. Oil will be used as fuel. The engine room will contain three General Electric, Curtis, 1500-k. w., three-phase 25-cycle, base-condenser turbines, and a substation equipment of two 500-k. w. and one 300-k. w. rotary converters with the necessary auxiliary apparatus. A 20-ton 3-motor crane will run the length of the engine room.

This power plant will furnish the current for unloading at the docks, for the motors on the lock cableways, and for the cable road. It should not be confused with the hydraulic power plant that will furnish the power to operate Gatun Locks, although it will probably be maintained as an emergency plant after the Canal is completed.

### Quartermaster's Depot at Mount Hope.

It is estimated that the value of the stores turned over to the Quartermaster's Department by the old Division of Material and Supplies on September 1, is over \$3,000,000. A change in the method of handling supplies

is to be made by the Quartermaster's Department, to the extent that the Mount Hope storehouse will be made a Quartermaster's Depot. The machinery in the Lirio planing mill will be moved to Mount Hope, and the printing plant of the Isthmian Canal Commission, located in Panama, and that of the Panama Railroad Company, located at Cristobal, will be merged into one plant located at Mount Hope. All stationery supplies for the Commission and the railroad will be issued from the Mount Hope depot.

Captain Courtland Nixon, U. S. A., will be Depot Quartermaster at Mount Hope. He was born in Texas, July 10, 1874; was graduated from Princeton College in 1895, and commissioned a second lieutenant in the First Infantry in 1898. In 1899 he was promoted to first lieutenant, and in 1904 was made captain. He served two years in the Quartermaster's Department at San Francisco under Major Devol, and for the past two years has been stationed at the Philadelphia Depot.

### More Locomotives and Cars.

A contract to furnish ten 40-ton 6-wheel connected, saddle-tank locomotives for the work at Porto Bello has been awarded to H. J. Porter & Co., of Pittsburg, the lowest bidder. These engines are to be 3-foot, 6-inch gauge, with wheels 40 inches in diameter, cylinders 15 inches by 20 inches, tractive force 15,000 pounds, and boilers carrying 160 pounds pressure. They will operate from the quarry at Porto Bello to the crushers on a 2½ to 3 per cent grade, will run on a 20-degree construction track, and will haul about 600 yards of stone, weighing 2,900 pounds to a yard. They will be constructed along the latest designs for this class of engine, including an air brake rigging which will meet the interstate commerce regulations. Locomotives of this type are in general service in the States in similar classes of work.

A contract has also been let for fifty 6-yard, all metal dump cars, the lowest bidder being Vermile & Powers, of New York city. These cars are to be similar in construction to the 12-yard Oliver and Western dump cars now in use. The cars will be 15 feet long, 8 feet wide, equipped with Tower M. C. B. couplers and Westinghouse automatic air brakes. They will be of exceedingly strong construction, in order to stand the hard usage given cars on the Isthmus.

Bids have been asked for 200 dump cars similar in construction to the 12-yard Oliver and Western dump cars, now in service on the Isthmus.

### Galveston Cutter Made at Gorgona.

A Galveston cutter has been fitted on dredge No. 82, the 20-inch pipe-line suction dredge at work making the channel to

## NOTES OF PROGRESS.

(Continued)

the Gatun receiving docks. The new cutter is working well. Similar cutters were ordered in the States some time ago, but delay in receiving them was attended with so much loss in the dredging, that the Atlantic Division designed a cutter, and Gorgona foundry cast it in phosphor-bronze.

**A Month With the Dredges.**

Of the total of 3,252,506 cubic yards of material excavated in August, the dredges in the Atlantic and Pacific Division took out 1,375,991 cubic yards. A table is appended showing the work done by each dredge. It will be noticed that the total does not agree with that given above. This is because the excavation by a 20-inch suction dredge in the channel leading to the receiving dock at Gatun Locks, and that done by a 16-inch suction dredge at work in Folks River, making a fill for a corral, were not included in the excavation returns for Canal work in August.

Local conditions affect the results on the Pacific and Atlantic sides. At the Pacific end of the Canal the three dredges are working in good material and so near to the marine shops at La Boca that little time is lost in making repairs and taking the crews to and from work. The dredges in Limon Bay are some distance from their base of supplies, and repairing is a matter of some time. On the Atlantic end the material in which the dredges are at work is not difficult to handle, although probably not so easily excavated as that at the Pacific terminus.

For the sea-going suction dredges *Culebra* and *Ancon*, the measurements are scow or bin measurements, but for all other dredges the measurements are made in place, by soundings and cross sections.

**ATLANTIC DIVISION.**

Name and class of Dredge.	Excavation, Cu. yds.	Material.
<i>Ancon</i> (sea-going suction).	335,846	Earth.
No. 1 (French ladder)...	135,610	Earth.
No. 6 (French ladder)...	130,210	Earth.
<i>Mindi</i> (dipper).....	18,620	Rock.
<i>Chagres</i> (dipper).....	17,931	Rock and earth.
16-inch Suction.....	9,943	Earth.
No. 82 (20-inch suction).	51,505	Earth.

**PACIFIC DIVISION.**

<i>Culebra</i> (sea-going suction).	431,296	Mud.
<i>Gopher</i> (sea-going ladder, French).	161,538	Mud and coral rock.
No. 82 (French ladder)...	144,890	Mud.

**Machinery from Paraiso.**

Paraiso shops were closed August 15 and the machinery was distributed among other shops of the Commission. To supplement the articles on Isthmian Mechanical Shops that have been published in THE CANAL RECORD since July 8, a list of the machines added to the various shops is appended:

*Empire shops:* One saw table; one 12-inch lathe; one wood-boring machine, 24-inch; one 33-inch by 33-inch by 10-foot planer; two emery grinders; one 84-inch drill press; one 20-inch drill press; one Valley City grinder; one Manning, Maxwell and Moore tool grinder; one 18-inch engine lathe; one 8-inch LeBlonde engine lathe; one tool

grinder; one 24-inch shaper; one saw grinder, Higby; one twist drill grinder; one Oesterlein drill grinder; one grindstone, power; one 30-ton forcing press; one 16-inch horizontal boring machine; one pipe bending machine, 1/2-inch to 2-inch; one 6-inch pipe cutting and threading machine; one 12-inch pipe cutting and threading machine; one 60-inch Universal radial drill; one 26-inch sliding head drill press; one 4-inch turret lathe; one screw cutting lathe; one Schumacher, Boye and Emmes screw cutting lathe; one quick-change lathe; one tool-room engine lathe; one horizontal Higby machine cold saw; one 100-pound Bradley hammer, cushion helve; one vertical boring and turning mill.

*Pacific Division:* One sand dryer complete.

*Central Division:* One duplex pump, 12-inch by 8 1/4-inch by 10-inch.

*Las Cascadas:* One 46-inch sliding head drill press.

*Gorgona Shops:* One 18-inch LeBlonde engine lathe; one American type LeBlonde engine lathe; one triple gear lathe; one 48-inch rotary blower fan; one cross-compound air pump; one plate flanging clamp; one 48-inch splitting shears; one double punch and shear, 36-inch throat; one hand-power spurting shears, 36-inch; one double-head 2-inch bolt cutter; one Universal milling machine; one rotary beveling roll; one hand-power bending roll; one sheet folder, 3 feet 6 inches; one single frame drop steam hammer, Niles-Bement works; one engine, Marine upright 8-inch by 10-inch.

**Walking on Railroad Tracks.**

The following notice will be printed in English and several European languages and posted in labor camps, railroad stations and other places where it is likely to be read by people using the railroad tracks as a highway:

All persons are warned against walking on railroad tracks, except when it is necessary to do so in the discharge of their duties as employees of the Isthmian Canal Commission or Panama Railroad Company. When it is necessary for such persons to walk on tracks to perform their duties, they are urged to take the following precautions for their safety:

When walking on parallel double tracks take the track to your left, trains using the track will approach you from the front, whereas trains using the track to your right will approach you from behind and may run you down before you hear them.

When you see a train do not step from the track on which the train is approaching, to the other track, but step into the ditch at the side of the track. If you cross to the other track there is danger that you may be run down from behind by a train on that track, which you have not heard on account of the noise of the first train.

If the approaching train is a dirt train, stand as far back from the track as you can conveniently, to avoid injury by rock and earth falling from moving dirt trains.

A large proportion of the accidents occurring on the railroad tracks could be avoided if the persons who are obliged to walk on the tracks would adopt these simple precautions.

**Steamer "Sanidad."**

An old French steamer, known as water boat "No. 2," has been rebuilt at the La Boca shipways and, bearing the name *Sanidad*, is now ready for service. Unless the steamer *Riversdale*, which may be purchased by the Commission, is turned over to the Department of Sanitation, the *Sanidad* will be used in the service between Panama and Taboga sanitarium. The steamer is 90 feet long, 12 feet wide and draws 9 feet. Storage tanks in the hold have a capacity of 100

tons of water and the deck can accommodate 100 people. When the new boat is put in the Taboga service the *Petite Louise* will go out of commission.

**Fatal Wreck at Miraflores.**

Two French engines on the work at Miraflores, coupled together, fell off the east trestle crossing the Cocoli river on September 3. Rejelio Castillo, Juan Sanchez, and Coementi Gonzales were killed. Rivio Arios was severely injured and died before he reached the hospital.

The accident occurred at 11.06 o'clock in the morning when the men were going to meet the labor train at the lunch hour. As the track approaching the trestle is laid on a new fill, it is apparent from the evidence thus far gathered that the head engine upon approaching the rigid trestle structure, was derailed with a heavy drift to the left. Upon leaving the deck this engine struck one of the bents, knocking it down and pulling the other engine through the breach thus produced. The trestle withstood the wreck with comparatively slight injury.

**Village Improvements at Gatun.**

Work on the road from Gatun to Mount Hope is making satisfactory progress, and about four miles of the six proposed have already been graded. The whole road will be graded before the beginning of the dry season. Between the old village of Gatun and the new village the work of macadamizing is in progress. The main road will not be macadamized until crushed stone is received from Porto Bello.

A commissary of the type of that at Culebra has been authorized for Gatun, and will be built near the present station on the west side of the Panama railroad tracks. It will be 99 feet and 4 inches long and 59 feet and 4 inches wide, and will be provided with cold storage facilities. Alongside of the commissary building the Panama Railroad Company is preparing to build a new station.

On the hill near the water tank in Gatun, at one of the highest points in the village, a type chapel and lodge room is in process of construction. A new post-office will be begun shortly, and it is probable that it will be located alongside the church, or across the road from it.

**Rails for Gatun Handling Plant.**

Twenty-five thousand feet of 90-pound rails will be required for the tracks on which the cableway towers will run at Gatun Locks and the material-handling docks. Requisition has been made for this amount of track.

**Information Wanted.**

Information is desired by his relatives as to the whereabouts of G. M. Eichhorn, who was at one time engaged in business at Ancon. Any intelligence concerning him that is sent to the office of THE CANAL RECORD will be forwarded to his family in the States.

A party composed of the Resident Engineer, assistant engineers, and superintendents of construction of the Central Division, numbering twenty in all, made an inspection of the work of the Atlantic Division on Labor Day. At Gatun the Division Engineer and his assistants conducted the Central Division men over the dam, spillway, and lock works, and later entertained them at luncheon.

## HIGHEST STEAM SHOVEL RECORDS.

## Work of Shovels 256 and 115—Other Good Records in August.

Steam shovel No. 256, at work at Matachin, surpassed all excavation records made since the beginning of American control, by taking out 55,419 cubic yards of material in 25 days in August. Shovel No. 263, working in Culebra Cut has the second high record for the month, having excavated 32,979 cubic yards in Culebra District, in 16 days and 12,786 cubic yards in Empire District, in 10 days a total of 45,765 cubic yards of material in the 26 days. Shovel No. 115 at work at San Pablo, broke all records for shovels in the 70-ton class, excavating 22,028 cubic yards of earth and 20,333 cubic yards of rock, a total of 42,361 cubic yards for the 26 days. Other high records follow:

NOTE—Shovels in the one-hundred class are 75-ton Bucyrus and Model 60 Marions with dippers of a capacity of 2½ cubic yards. Shovels in the two-hundred class are 95-ton Bucyrus and Model 91 Marions with dippers of a capacity of 5 cubic yards. Shovels in the fifty-class are 45-ton shovels with dippers of a capacity of 1½ cubic yards. These shovels are under steam for eight hours per day, but are not actually worked during this entire period, time being lost by the necessity of moving the shovel forward, blasting stone too big for the shovel to handle, keeping the shovel supplied with cars, etc.

## IMPROVEMENTS ON FLAT CARS.

## Conditions on the Isthmus Have Suggested Departures.

Nowhere is equipment subjected to harder usage than on the Isthmus, and as a result many improvements have been made in steam shovels, cars, and other equipment to meet the unusual conditions. Cars used with the unloading plows are an instance. The 40-ton wooden flat car is used for heavy rock transportation, and carries about 18 yards of material. Eight hundred of these cars were furnished the Commission by the American Car and Foundry Company. They were built up of two 5-inch by 9-inch center sills, four 5-inch by 9-inch intermediate sills, and two 5-inch by 14-inch side sills, each about 40 feet long and of yellow pine. These sills, were floored over with 2¾-inch planks running transversely. The car is mounted on two simplex trucks with 5-inch by 9-inch journals, with steel bolsters, and braced with six long truss rods.

The first order of cars was equipped with one 3-foot gondola side, and one 1-foot removable side; but before the cars were put in service the Chief Engineer approved a suggestion that the 1-foot removable side be displaced by a side extension. This extension was carried on cast iron brackets bolted to the side sill, and it extended the car floor 15 inches. The utility of this change was immediately noticed in the increased capacity of the car, and in the dumping of material farther away from the trucks.

One of the largest items of upkeep on cars was the cost of renewing and repairing "aprons." Each of the flat cars carries at one end an apron 117½ inches long and 44 inches wide, made of ¾-inch sheet steel, and so hinged to the car that one edge of it rests on the next car, thus covering the space between the cars in the train and making it possible to run the unloading plow the full length of the train. These aprons were continually being torn off by the plows during the unloading operations at the dumps. This trouble has been obviated by a design of apron hinge and support which brings the apron slightly below the level of the car floor and little beyond the end of the

car. One end of the apron is supported by the forward car and the other rests on cast iron bracket supports bolted to the end sill of the car to which the apron is attached. The hinges were so designed that they offer no obstruction to the moving plow.

As the plow gives considerable side thrust on the gondola side of the car, a special design of high stake-pocket has been made to take up this strain and keep the sides vertical. This stake-pocket runs up on the side stakes about one foot above the sill and the thrust on the pocket is taken up by a 1-inch "U" bolt running diagonally down from the top of the pocket to the first intermediate sill. Further bracing has been added to bring the thrust on the lower part of the side sill, due to the push on the high side, across the car to the other sill.

A recent improvement is the addition of a "bull nose" to the end of a high side of the car. This "bull nose" is made of ¼-inch steel plate and is so shaped that it surrounds the entire end of the side, and guides the plow from car to car in the train. Before this device was put on the sides of the car it was not unusual for the unloading plow to batter and break the end of a side so badly that the car would be taken out of service for repairs.

## EXECUTIVE ORDER.

Under authority vested in me by law, it is ordered:

Section 344 of the Penal Code of the Canal Zone is amended to read as follows:

"Section 344. Grand larceny is punishable by imprisonment in the penitentiary not exceeding ten years."

THEODORE ROOSEVELT.

THE WHITE HOUSE,  
Washington, D. C., Aug. 14, 1908.

## OFFICIAL CIRCULARS.

## Requests for Transfer of Employees.

## CIRCULAR No. 199.

Effective September 1, 1908: Requests for the transfer of employees will be submitted to the Chairman for approval in the same manner as applications for increase of force or pay. All requests for transfers should show clearly to what vacancy in the authorized organization the employee transferred will be assigned.

GEO. W. GOETHALS,  
Chairman.

Culebra, C. Z., August 31, 1908.

## Acting Purchasing Agent.

## CIRCULAR No. 200.

Pending the appointment of a Purchasing Agent for the Canal Zone on the Isthmus, Lieut. R. E. Wood, Assistant Chief Quartermaster will, effective September 1, 1908, act in that capacity.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

Culebra, C. Z., September 1, 1908.

## Designing Engineers.

## TO ALL CONCERNED:

During the absence of Mr. L. D. Cornish, Mr. H. F. Tucker will be in charge of the force of Designing Engineers attached to the office of the Assistant Chief Engineer.

H. F. HODGES,  
Assistant Chief Engineer.

Culebra, C. Z., September 4, 1908.

## Division of Material and Supplies.

## CIRCULAR.

Lieut. R. E. Wood, Assistant Chief Quartermaster, will assume temporary charge of the general office of the Material and Supplies Division.

All correspondence formerly handled by this division will be addressed to the Assistant Chief Quartermaster at Cristobal, until further orders.

C. A. DEVOL,  
Chief Quartermaster.

Culebra, C. Z., September 1, 1908.

## UTILIZING OLD DREDGES.

## French Equipment to be Put in Service After Twenty Years of Idleness.

Two dredges that have been resting in the mud on the west bank of the Chagres River near Frijoles since the days of the old French Company are being floated, and in a few weeks will be at the Cristobal dry docks. Their machinery will be stripped and the parts put to use in repairing the French ladder dredges that are at work in the Canal prism in Limon Bay. The hulls will be patched up and used as barges in the service of the Atlantic Division.

These dredges are of the "ladder" type, and are twins. An endless chain of 19 buckets is drawn over a boom which projects from the bow and holds the buckets against the material to be excavated. The buckets dump the spoil into a hopper near the center of the hull, whence it runs out of a chute at the side into a tender. This chain of buckets, and the machinery to run it and to propel the dredge are mounted on a hull about 110 feet long by 28 feet wide, made of wrought iron, and fitted with coal bunkers, and quarters for a crew. Two large boilers and duplex, steeple compound engines furnish power for propelling the dredge and running the chain of buckets. A small boiler furnishes steam for the pumps and the winch engines. All the machinery is in good condition, because of careful oiling and painting before the dredges were abandoned. The cogs are little worn, the dipper lips still sharp, and in general the condition of the machinery indicates that the dredges were used but little by the French. On one of the castings of each engine is the legend:

FORGES ET CHANTIERS  
DE LA  
MEDITERRANEE  
HAVRE, 1884.

There is a reasonably authentic story that these two barges were brought to the Isthmus in 1885 and set up at Chagrecito, whence they were floated to their operating ground in the Chagres river near Frijoles. After a few weeks of work it was decided not to continue their use at that time, and one of them was set at work excavating a bay in the river bank in which both dredges could be anchored free from the dangers of sudden rises in the Chagres. The dredge which made the bay has for years had her nose against the side of the bank as though only resting over night in her work. Into this little bay the second dredge and two tenders were run, all of them to wait until the old French Company should need their services again.

In the more than 20 years since the dredges and their tenders were put on waiting orders the bay silted up until the hulls rested above the normal stage of the river during the rainy season. A bank of sand six feet high or more closed up the mouth of the bay, and when the work of reclaiming the dredges began four weeks ago, a tree 40 feet high was growing in this sand bank, barring the way between the dredges and the river.

To bring these dredges from their berths of silt into the channel of the Chagres, whence they may be floated to Cristobal, is the work assigned to a gang of 40 men. A channel 40 feet wide is being dug from the river to the dredges. Back of the place where the dredges lie is a little stream and this has been diverted so that it will find the river by

way of the dredges and the 40-foot channel. A pump with a capacity of 160 gallons a minute is being rigged up and four jets of water will be thrown by it onto the silt bed on which the dredges rest. This hydraulic power will wash out the old bay and deepen the channel to the river so that the dredges may be floated into the stream.

The tenders are fitted with a hopper to catch the spoil from the dredges, and with pumps to force it through a pipe line to the dump. It required two boats and two sets of machinery under the old dredging system to accomplish what is now done by a suction dredge. In the old dredges each bucket has a capacity of one-half of a yard and the continuous movement gives a high excavating efficiency. Working in mid in Limon Bay, dredges similar to these have taken out nearly 150,000 cubic yards in 26 days, about half the capacity of the 20-inch suction dredges. Still the cost of excavation with the old style dredge is three times as great as with the suction dredge.

One of the tenders is fitted with a single boiler, an engine for propulsion, and a pump for forcing out the spoil, while the other has two boilers, an engine and a pump. Cast into the framework of each engine are the words:

Société Anonyme Franco-Belge  
Pour la Construction  
de Machines et de Matériels de Chemin de Fer  
Paris  
Ateliers de la Croyere, Belgique  
Système Ch. Bourdon, Breveté S. C. D. C.  
No .... 1885.

A camp has been established on one of the dredges where the laborers will mess and sleep until the work is done.

In much the same position as the dredges near Frijoles are a ladder dredge, two suction dredges, two tenders and a barge at Chagrecito. They too were run into a bay made in the bank, and have silted up until they are 15 feet above the normal stage of the river in the rainy season. A gang is at work digging a channel from the river to the first of these dredges, the ladder dredge. The sluicing plan in use at Frijoles will be adopted unless it is found more practicable to slide the dredge on skids into the river. It is proposed to use the hull as a barge. The machinery has already been stripped.

Behind the ladder dredge and broadside to the river, with jungle on three sides and some bushes in front, are the suction dredges. Both hulls and machinery are in good condition and, although of an old type, they could be made serviceable if their use were deemed economical. The intake is 16 inches in diameter and is equipped with the French type of side cutter or agitator. The pump on each is a 16-inch split suction pump, belt-driven by an old French cross-compound engine. The hoist or swinging gear is operated by a series of drums on deck, driven by a duplex vertical engine. The tenders are of the type at Frijoles.

It has not yet been decided whether the suction dredges and tenders at Chagrecito are worth taking to the shops at Cristobal.

The old French dredges at Chagrecito, and all north of that point, have been assigned to the Atlantic Division, while those in the territory south of Chagrecito have been turned over to the Pacific Division. At present four of the old ladder dredges, that have been lying idle, south of Chagrecito, are being put to use, and out of

them one thoroughly good dredge is to be built.

When the old French company abandoned its work on the Isthmus, it left at La Boca a large amount of floating equipment, among which was the hull of a ladder dredge. It was in good condition when the Americans took control, but its value was doubtful and it was in the way, so it was taken to an unused part of the harbor and sunk. Later developments showed that it was still in the way, so it was raised and sunk in a different part of the harbor. Here, too, it was in the way, and it was towed out beyond the harbor bar and sunk in deep water. Now, the French ladder dredges having proved to be so much more effective than was at first believed possible, the thrice sunk hull has been raised again and is at the shipways at La Boca, being prepared for work. It has no old machinery in it to be taken out, and only a few of the plates need to be renewed. To get machinery and install it is all that needs to be done.

At San Pablo, near Barbacoas Bridge, on the south bank of the Chagres, is a dredge that has silted up, just as those at Frijoles and Chagrecito have. At Juan Grande, just north of Gorgona, is another dredge high up on the bank. Both these dredges can be seen from the Panama railroad. Back of Gorgona are two old dredges, also high on the river bank. No effort will be made to float these dredges. The Pacific Division is taking out the machinery and other parts and bringing them to La Boca, to be used in fitting up the old hull already mentioned, and in supplying parts to the dredges now in use. The machinery and parts are in good condition and can be utilized without change.

Two boilers from the dredges at Gorgona and one from that at Juan Grande are to be installed in the old hull. Two steeple compound engines, a deck winch, and a ladder boom from the dredges at Gorgona will also be utilized, and the 32 buckets will be collected from the four stripped dredges, unless it be decided to fit the dredge with close-connected buckets. It will cost between \$35,000 and \$40,000 to make this ladder dredge as good as new, and capable of taking out 180,000 cubic yards of material a month at from 7 to 10 cents a yard.

## UNCLAIMED PACKAGES.

The following is a list of packages that have been forwarded from New York to Isthmian Canal Commission and Panama railroad employes, and that are waiting to be claimed at the freight house at Colon. The owners of these packages will have to make application for free customs entry in connection with Circular No. 85, or in the alternative, pay duty to the Panama Government customs on the value of the contents of the packages, before delivery can be effected:

	Charges to collect.
Way-bill No. 165—Jas. Vaugher (or Vaughn), Culebra, 1 box, <i>ex Dunottar Castle</i> ; January 15, 1903.....	1.00
Way-bill No. 207—P. G. Baker, Colon, 1 case, <i>ex Panama</i> ; April 24, 1903.....	1.00
Way-bill No. 201—C. E. Weidman, Cristobal, 1 case hats, <i>ex Finance</i> ; April 9, 1903.....	1.00
Way-bill No. 111—S. G. M., Cristobal, 1 box hardware, <i>ex Advance</i> August 25, 1907.....	1.00
No. 7503—Jos. V. Sadler, Pedro Miguel, 1 parcel, <i>ex Finance</i> ; March 14, 1908..... prepaid	
No. 7321—J. M. Chumacero, Colon, 1 parcel, <i>ex Dunottar Castle</i> ; November 24, 1907.... prepaid	

## ISTHMIAN MECHANICAL SHOPS.

## VI.

## Marine Shops at La Boca.

Under every plan suggested for the Panama Canal, La Boca has been made the Pacific terminus. The old French company dredged a channel from deep water to where the wharves are now located, and from the wharves two miles up the valley of the Rio Grande. To do such work required considerable floating equipment, and to keep that equipment in repair the marine shops at La Boca were built. On the failure of the first French company the Panama Railroad Company bought the channel and dock, and in April, 1900, it rented the machine shop and shipways for 1 per cent of 50 per cent of their original cost. It also rented one Scotch ladder dredge and two Scotch clapets with which to keep open the channel to the docks. The shipways were rebuilt at a cost of \$14,000, the ladder dredge was repaired at a cost of \$39,000 and the clapets at a cost of \$12,000 and \$14,000 respectively.

Considering the period and the work that they were designed to do, the old French shops were well equipped. Their machinery consisted of three 36-inch lathes, one 12-inch lathe, one 8-inch lathe, one 16-foot pit lathe, one 10-inch shaper, one 12-inch slotter, one 12-inch planer, one 500-pound power hammer, one 6-foot radial drill, and two drill presses. The machine shops, carpenter shop, and tool room were all in one building. No new machinery was added by the Panama Railroad Company and the shops were operated as they were left by the French, under the Panama Railroad Company, until January 16, 1905, when the Division of Material and Supplies of the Isthmian Canal Commission took charge of them. In June, 1905, they were turned over to the Department of Construction and Engineering, being run under the Division Engineer at La Boca, and they are now in the La Boca residency of the Pacific Division, under the immediate charge of Superintendent James MacFarlane, who has been superintendent since the Panama Railroad Company assumed control in 1900.

In June, 1905, work was begun on a 40-foot by 100-foot addition to the original French shop, making it 200 feet long by 104 feet wide, and later a blacksmith shop, 40 feet by 50 feet, was added to the machine shop. The old French machinery was gradually retired and the present equipment consists entirely of up-to-date American machines and tools. In the machine shop are one 12-inch planer, one 24-inch planer, two 36-inch by 24-foot lathes, two 32-inch by 12-foot lathes, two 14-inch by 8-foot lathes, two 10-inch by 8-foot lathes, one 10-inch by 6-foot lathes, one 72-inch boring mill, one No. 3 Universal milling machine, one 21-inch shaper, one 14-inch shaper, one 18-inch slotter, one 12-inch slotter, one 6-foot radial drill, 5 small drills. In addition there are sundry pipe-cutting and grinding machines. All this machinery was bought with a view of adapting it especially to marine work. In the blacksmith shop are 8 forges and one 1100-pound steam hammer. The pattern shop is equipped with 1 band saw, 1 circular saw, and 1 small planer. A small foundry is run in connection with the machine shop, merely for the purpose of making small castings promptly. The cupola

has a capacity of one ton, and there are two furnaces for brass crucibles capable of holding 100 pounds of metal.

The Ancon machine and wood working shops, formerly maintained by the Division of Building Construction, have been abolished and the machinery will presently be installed at the La Boca shops. It consists of two circular saws, one band saw, and one planer for the wood shop, and two lathes and three drill presses for the machine shop.

At present the machinery in the machine shop is belt driven by a French compound engine, which takes steam from four French boilers. Plans have been approved for driving by electric motors, and two 75-horse power motors will be installed in a few weeks. The current will be furnished by the new power plant at La Boca. A 15-ton overhead crane, now in use, is to be fitted with electric power.

The shipways consist of two ways on which ships up to 400 tons may be hauled out, and are equipped with one set of bending rolls 10 feet long, four powerful punches, one 10-foot counter-sinking machine, one 6-foot radial drill, one 50-ton steam riveter, one long reach pneumatic riveter for smoke stacks and other pipes, one 24-inch by 24-inch sill dresser for carpenters' use. As far as possible all work is done by pneumatic tools, and in fact there is very little hand work. At present from 12 to 14 gangs of riveters and 6 to 8 gangs of drillers are at work on the various hulls being built, or rebuilt. Power for the shipways is furnished by two steeple compound engines left by the French, fed by two Scotch marine boilers taken out of an old French dredge and five French steam-drill boilers. The air compressor has a capacity of 1,500 feet of free air per minute. In about three weeks it will be abandoned, when the air line from the new electric power and air compressing plant will be in operation.

A gridiron capable of taking vessels of 3,000 tons is under construction and will be finished in about six months. A wharf 540 feet long is being built behind the machine shops, and a storeroom for dredge parts 500 feet by 100 feet has been authorized.

The yard equipment consists of one 20-ton Brown hoist, two 8-ton Appleby cranes and two French locomotives.

Both manufacturing and repairing are done at these shops. Repairs must be kept up on the floating equipment in the harbor, which consists of one sea-going suction dredge, one sea-going ladder dredge, one pipe-line suction dredge, a ladder dredge, a dipper dredge, three tug boats, six self-propelling barges (clapets), half a dozen smaller craft, and a dozen barges and lighters. A record of the more important manufacturing work done in the last eight years is pertinent, because it has all entered largely into the work of building the Canal. In the fiscal year 1908, ladder dredge "A-2," the one which the Panama Railroad Company bought from the French, was rebuilt. It has worked continuously for five years, with only one lay-off, and that of only forty days' duration. It is on the ways now undergoing extensive repairing that amounts almost to rebuilding. Twenty thousand dollars will be spent on this work, and the dredge will then be as serviceable as when it was first put in commission. In the year in which dredge "A-2" was first rebuilt,

the shops also rebuilt clapets No. 5 and No. 8, and the tug *Bolívar*. The following year three new lighters were rebuilt and several were repaired, and in 1903 several more lighters were repaired.

An old French crane boat, the *Parisien*, was rebuilt for the Isthmian Canal Commission in 1904 and fitted with the Clayton apparatus for fumigating ships. She was renamed the *Waller Reed*. About the same time the merchant ships on the Pacific making calls at Panama ports installed similar fumigating plants, and on this account the *Waller Reed* has been little used. She is still in service, however, and is equipped to assist in the quarantine against plague, yellow fever, or cholera, in case the emergency arises. Clapets No. 10 and No. 11 were rebuilt the following year.

Two steam launches left at Culebra by the French were rebuilt in 1906. They are the *Birdena* and the *Governor* and are now in service. Steam launch No. 26 was also rebuilt, as were Clapets Nos. 6, 7, 9 and 1.

Ladder dredge No. 14 was rebuilt in the fiscal year 1907 at a cost of \$28,000. It has been at work since last October and has already justified the rebuilding. In 1908 the sea-going ladder dredge *Gopher* was rebuilt and was put in commission last May. Most of the work on the pipe-line suction dredge *Sandpiper*, a description of which appeared in THE CANAL RECORD of August 26, was done in the year 1908. There are now under construction at the machine shop and ways six sand barges, three hopper barges, one submarine rock breaking machine. An old French ladder dredge is being rebuilt. The rebuilding of the *Sandidad* was also done in the fiscal year 1908.

The force engaged at the machine shops and shipways consists of 150 gold men and 650 silver men, and the amount of wages paid in the fiscal year 1908 was about \$400,000. In the same year material to the value of about \$306,500 was used.

## Examination for Clerk.

A local examination for the position of clerk in the service of the Isthmian Canal Commission will be held Sunday, September 13, 1908, in the hall of the Red Men at Culebra beginning at 9 a. m. Copies of the Manual of Examinations, containing all necessary information and sample questions, and copies of the prescribed application form, will be furnished upon written request by the Secretary of the Isthmian Civil Service Board, Office of the Chairman, Culebra, Canal Zone.

The examination is open to citizens of the United States between the ages of 20 and 45 years. Persons intending to enter the examination should file their applications at once, in order that requisition may be made for sufficient papers and other necessary arrangements completed by the Board of Examiners.

## Examination for Physician.

A local examination for the position of physician in the service of the Isthmian Canal Commission, entrance salary \$1,800 per annum, will be held October 14, 1908, the exact hour and place of the examination to be announced later. The Manual of Examinations, containing all necessary information and Application Form, may be obtained from the Secretary of the Isthmian Civil Service Board, office of the Chairman, Culebra, Canal Zone.

## LEVELING OF PRECISION.

## Mean Sea-Level as Determined on Data Available at This Time.

That there is no material difference between mean sea-level in the Pacific and the Atlantic oceans is one of the interesting facts developed by the leveling of precision recently done on the Isthmus. W. G. Comber, Resident Engineer at La Boca, in his report under date of August 25, gives details of the work and results. The descriptions of bench-marks will be published in separate form for distribution among the engineers. In his letter submitting the report, Mr. Comber recommends that some official be placed in charge of the bench-marks and be held responsible for their care and maintenance, so that in case it is necessary at any time to move a bench-mark the work may be done under the direction of this official, who will see to it that the elevation is preserved. In accordance with the recommendation C. M. Saville, assistant engineer, has been charged with this duty. The report follows:

The precise levelers, Messrs. Thomas and Wolbrecht, reported to me on their arrival from New York on June 2, and after a consultation in regard to methods and scope of work it was decided to get the value of mean tides on each side from the Division of Meteorology and River Hydraulics and use these values as zeros, working from each side. Mr. Wolbrecht was assigned to the Cristobal end of the work and Mr. Thomas to the La Boca side. In addition to the standard bench-marks made and placed purposely for this survey the levelers were instructed to connect with every permanent bench-mark adjacent to their line.

Field work was begun on June 7 on the Atlantic side, and June 8 on the Pacific side, and finished July 31, on both sides, two days of this time being devoted to the determination of instrumental constants.

Each party consisted of an observer, recorder, two rodmen, negro cook and six negro laborers for propelling the handcar, cutting of trochas, etc. Kern precise levels, with Kern & Fauth level tubes, were used. The usual methods of keeping backsights and foresights equal, and checking all lines by going over them in opposite directions, were followed. The instruments were disturbed by passing trains and blasting so frequently that, in order to insure good results, each reading was checked by changing the height of instruments and recording the second set of readings—the means of the two sets were taken and the stretch was checked in the opposite direction by the same methods.

On the line, Cristobal to San Pablo, Mr. Wolbrecht reports his main line of level as 23.3 miles, with 16 miles of side line. Side lines were run to determine the elevation of bench-marks along the relocated Panama railroad and above the level of Gatun Lake. On the main line 55 circuits were run, varying in length from 225 meters to 1,700 meters; the average discrepancy between the direct and reverse runs of these circuits was 1.25 millimeters, the greatest difference being 3.8 millimeters. The probable error of the last bench-mark for the above line was 4.06 millimeters, and the probable error for the entire distance is 0.66 millimeters per kilometer.

On the stretch leveled by Mr. Thomas, San Pablo to La Boca, the length of main line was 24.1 miles, the length of side line 18.6 miles. The probable error of the last bench-mark is 2.7 millimeters and the probable error per kilometer is 0.45 millimeters. The largest discrepancy on the main line between successive bench-marks was 2.8 millimeters.

Over the whole distance run, Cristobal to La Boca, standard bench-marks have been set, consisting of a concrete slab, 18 inches by 18 inches by 6 inches, with rounded corners, suitably lettered, with a copper or brass bolt set in the center of the concrete block, forming the point of elevation; block is buried about three feet in the ground with a 4-inch galvanized iron pipe centered over the bolt in the slab and projecting about 18 inches from the ground; the pipe is surmounted by a cast brass cap, suitably inscribed, with a projection rising from the center of same.

It is intended that all ordinary level elevations shall be taken from the top of this projection on the center of the cap, and in case greater accuracy is required, or if the pipe has been disturbed, that the cap shall be taken off and rod placed on bolt in tile; two special pipe wrenches are necessary in taking off the cap. All of these bench-marks, except where

in an inclosure, are inclosed with a wire fence painted white, with a sign warning against disturbance.

These bench-marks are placed in pairs across the Isthmus, the front one usually being near the Canal and the Panama railroad, the back one at some distance from the front one, and over the country to be covered by the Gatun Lake, above the 85-foot level and near the new Panama railroad. The front bench-marks are numbered 1, 2, 3, 4, etc., consecutively from Cristobal, and the back bench-marks are numbered 1a, 2a, 3a, 4a, etc., the number showing to which front bench-mark it belongs, the letter "A" indicating that it is a back bench-mark. Front bench-marks are about one mile apart. Two back bench-marks at San Pablo are omitted on account of uncertainty of location of the new Panama railroad.

All lines were run in accordance with practice of the U. S. Coast and Geodetic Survey, and of the Mississippi River Commission.

On investigation of the tide-gage records at Cristobal as furnished by the Department of Meteorology and River Hydraulics, it was found that a period of fifteen months only was available for determining the mean sea-level on each side; and on the La Boca side the Naos Island tide-gage records were absolutely useless on account of the impossibility of connecting the levels with this gage. On the completion of the breakwater, however, these records will become available.

As tidal oscillation is so small on the Atlantic side, and the mean of hourly readings from May, 1907, to August, 1908, was found to be only 0.02 feet higher than the former zero, or mean sea-level, but as the present tide staff gage was slightly in error and no record of the status of former ones used was available, it was decided not to change the zero, or mean sea-level now in use, until records of longer duration and more authentic value could be secured.

The old value therefore of bench-mark Spike, which is near the tide-gage, 6.21 feet, was adopted as an initial point in tabulating results. This bench-mark was found to agree within 0.003 foot with Municipal bench-mark No. 36, which latter is the basis of the old levels run in the neighborhood of Cristobal.

From bench-mark Bridge 12 (the new value of which agrees very closely with the former value) to the succeeding old bench-marks southward, a discrepancy of about 0.17 feet was observed between the old and new values, and in order to eliminate any doubt that might arise from this sudden divergence, the circuit from bench-mark Bridge 12 to Panama railroad bench-mark No. 9 was re-run at the conclusion of the work, and the precise level values verified. The levels in the center of the Isthmus, as shown by Panama railroad values, are about 0.304 feet in error.

The mean of hourly readings on the La Boca tide-gage, from August 1, 1907, to August 1, 1908, equals 0.547 feet, and the elevation of the zero of the gage, as shown by precise levels from Cristobal equals 0.174 feet, making the elevation of mean tide at La Boca, as determined by the year's tide-gage records, 0.721 feet.

I do not think it possible to arrive at a true determination of mean tide at La Boca, when we compare results from the tide-gage here. I give the monthly mean of hourly gage readings from July 1, 1907, to July 31, 1908:

July, 1907.....	+91	January, 1908.....	+18
August, 1907.....	+82	February, 1908.....	-11
September, 1907.....	+78	March, 1908.....	-12
October, 1907.....	+87	April, 1908.....	+18
November, 1907.....	+93	May, 1908.....	+64
December, 1907.....	+86	June, 1908.....	+80
		July, 1908.....	+73

You will see by the above table that the low means on the La Boca gage correspond to the dry months and the trade-wind season, and how much of the high means of the wet season are attributable to the Rio Grande water and how much to the trade winds are unknown quantities, but it certainly would seem to indicate that the results from the La Boca gage are worthless, except for local use, and that we must fall back on the Naos record when we can connect with the Naos gage on the new breakwater.

Taking the results of the dry season months, viz: January, February, March, and April, for 1908, we get a mean reading on the La Boca gage of +0.0325 feet instead of 0.547, the mean for the year; this would make the difference between the Atlantic and Pacific means, as determined by precise levels, 0.2065.

When we have arrived at an accurate mean for tidal elevations at this place I should consider that the proper method to treat the elevations would be to make an adjustment throughout the Isthmus, giving both elevations of mean sea-level the same value, viz: zero.

A table of descriptions and elevations, of both new and old bench-marks, connected with on this survey is appended, and a tabulation of final results to date is filed in this office.

## LETTERS FROM THE LINE.

## Privations in the Early Days.

THE CANAL RECORD:

A number of former employees of the Commission chanced to read, in your issue of July 29, or thereabouts, a letter from a Mr. Norman Winnie, recounting some of the hardships endured by the "Old Timers" who came to the Isthmus when he did. Some of us over here arrived on the Isthmus in the summer of 1904, and one of us lived at Culebra from August, 1904, to May, 1905, leaving there for Empire. We all remember when the tents, all of which had floors, were erected in Culebra, and Mr. Winnie's statement that he was obliged to "sleep on the ground" will hardly hold water. The Isthmus in 1904 and the early part of 1905 was hardly a paradise, but there were cots enough to go around, even if we had to use powder boxes for morris chairs. If any employe of the Commission slept on the ground, it was from choice, or because he was physically unable to reach his quarters—unless he was on one of the upper Chagres topography parties. What do some of the real "Old Timers," who remember the Culebra morris chairs and the first days of the Chapman mess, have to say about this?

W. I. BAUCUS,  
L. M. HUNTINGTON,  
H. B. HOWLAND.

Santiago de Cuba, August 20, 1908.

## Masonic Organizations.

THE CANAL RECORD:

I wish to call your attention to an inaccuracy under the heading of "Social Life of the Zone" in your issue of July 15, 1908, in which you speak of Masonic organizations on the Isthmus. Your statement that the longest established secret society on the Isthmus is the Sojourners' Lodge, A. F. and A. M. is correct so far as regular lodges existing at the present time is concerned. Your statement, however, that Masonic lodges and clubs have been organized since 1898 at Culebra, La Boca, Empire, and Paraiso, is incorrect, as no "lodge" of Masons exists at any of those places. Two "lodges," so called of Freemasons exist in the city of Panama, but Sojourners' Lodge has not received authority from the Grand Lodge, A. F. and A. M. of Scotland, from which it holds its charter, to recognize such bodies as regular lodges. We may, of course, receive such authority.

G. G. DEDGE.

Edinburgh, Scotland, August 10.

## An Ohio Club.

THE CANAL RECORD:

It is the desire of the Ohio Club to get in touch with all employes of the Isthmian Canal Commission and Panama railroad, whose homes are in Ohio. To this end I would be glad to have all such send me their names and Canal Zone address, as well as their address in the States.

S. D. ROPER,  
Secretary, Ohio Club.

Gorgona, C. Z., August 28.

Dr. J. Pelham Bates, of Ancon Hospital, left with his family for New Orleans on the *Parissima* September 8. They will take up permanent residence in Nashville, Tenn., where Dr. Bates has accepted a post in the medical department of Vanderbilt university.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

Preparations are in progress for the fall meeting of the Canal Zone Federation of Women's Clubs to be held at Gorgona on October 1. Nearly all the clubs along the line have elected their delegates, and the various committees are working on their reports. There will be but one session, in the afternoon, and that from a club point of view, promises to be a most interesting one. Reports of the delegates to the Boston biennial will be made, and the personal and close insight they will give into the work that other club women are doing will be most helpful. Although it has been organized only a few months, the Federation promises to be a strong factor during the coming year.

The Ancon Woman's Club held its regular meeting on Wednesday, September 2. Mrs. C. W. Boxer presided. The report of the educational department through Mrs. W. T. Dozier, acting chairman, shows that the interest in the meetings is well sustained. The department met at Mrs. Dozier's residence on Thursday, August 27, a large number being present. Readings from a work on early Isthmian history, music, and refreshments were features of the afternoon. The philanthropic department, under Mrs. R. W. Fenn, acting chairman, reported the new undertaking to be going on well. This is in connection with the night school for newsboys which is conducted by Mr. Ports of the Methodist church, Panama. One member of the department pledges herself to work one night in the week, the purpose being to provide games and other amusements for the boys. The boys are also being taught simple songs in English. A visit to the insane ward was arranged for this week.

The question of the library association was taken up for discussion, and the club pledges itself to furnish \$100 toward the fund. Committees were appointed for the purpose of personal solicitation for names for membership. All the members present expressed themselves greatly interested in the project, and every effort will be made to bring it to a successful issue. Nominations for officers were made.

St. Luke's Episcopal Sunday School, Ancon, held its annual excursion on Thursday, August 27. The party, which numbered about thirty-five, left La Boca on the *Bolivar* early in the morning for Taboga, where the day was spent on the beach and Morre Island. The summer residence of Mr. Peebles was placed at the disposal of the picnic-makers for the day, and the basket lunch was eaten there. A special train met the excursionists at La Boca and ran into Panama in time for the 5.30 train down the line.

Archdeacon Bryan is pending the week in Costa Rica, on business connected with his charge of that mission. Services at Ancon chapel were conducted on Sunday by Rev. Edward J. Cooper, rector of Christ Church, Colon.

The Culebra Woman's Club opened the season, on Thursday, September 3, the vice-president, Mrs. May Byran, presiding in the absence of the president. There was a small attendance, but the plans for work for the coming year were taken up with enthusiasm and interest. The plan for the study

of the Spanish countries will not be carried out, owing to the departure of the chairman who had the work in charge, but the club will take up a reading course which includes the study of England, Ireland, and Scotland. Books, papers, and all instructions regarding the course has been sent for. Many of the older members of the club have left the Isthmus, and efforts are now being made to interest newcomers.

The reciprocity committee of the Zone Federation held a meeting at the Hotel Tivoli, Ancon, on Monday, August 31. In the absence of the chairman, Mrs. C. Hanson, of Culebra, presided. Every effort is being made to make this one of the useful branches of federation work. Programs will be exchanged or outlined, papers and entertainments from other clubs will be provided as called for, and calendars for use as models for planning the work will be forwarded. A suggestion was made that study programs be exchanged among the clubs. Efforts will be made to secure the cooperation of the clubhouse libraries in this work. All letters of inquiry should be forwarded through the member of the local club representing the reciprocity committee.

The Las Cascadas club met on Thursday, September 3, at the residence of Mrs. E. J. Albrecht. The retiring president, Mrs. O. G. Randall, was in the chair. The resignation of the vice-president, Mrs. A. N. Naylor, was accepted, and Mrs. W. B. Green was elected to fill the vacancy. Mrs. W. D. Stanton, a former president, was reelected to that office in the place of Mrs. Randall. Delegates elected to the Federation meeting were: Mrs. F. W. Walraven, Mrs. W. B. Green, Mrs. E. J. Albrecht, and Mrs. W. D. Drysdale. The regular entertainment and visiting committees for the month were elected. The club will meet at the home of Mrs. J. E. Martin, September 10.

Owing to the illness in the family of the president, Mrs. F. R. Roberts, the Pedro Miguel club suspended its regular meeting last week.

The Paraiso club will resume its regular meeting this month.

The Gorgona Woman's Club gave an entertainment on Friday evening, September 4, about nineteen members, assisted by their friends, taking part. A parody on a woman's convention was given. Music was furnished by the Gorgona orchestra. The entertainment hall of the clubhouse was filled to its utmost capacity. This is the first entertainment that the Gorgona club has given for its own benefit, and the members greatly appreciate the efforts of all who assisted in the undertaking in any way. Several musical numbers were given during the latter part of the program.

The club met on Tuesday, September 8, for election of officers, this being an adjourned session of the meeting on Thursday, September 3. Regular meetings will be held on each alternate Thursday, beginning September 17. Although the club has been virtually in recess since the end of April, the summer has been a busy one. The committees appointed for the interim have worked without interruption; a large number of new members have been added. Called meetings have been frequent and well attended. Mrs. Guy Ament, of Texas, who has been the guest of her sister, Mrs. Frank Morrison, leaves for her home this month. Mrs. Ament

is a prominent club woman at home, and has done much to assist in furthering the welfare of the club during her short stay.

The Gorgona Dramatic Club gave its first performance, "A Fisherman's Luck," on Tuesday evening, September 1, at the club house. There was a large attendance, and the performance was greatly enjoyed. The company has been rehearsing the melodrama for the past month, under the direction of Mr. D. E. Hayes. The scenery and stage appointments were all that could be desired. At the close of the performance, the members of the company were entertained at supper by Mr. and Mrs. Arthur J. Sweet. It is possible that the play will be given at Empire later. The organization is to be a permanent one, and the members are looking forward to the preparation of new plays. All are much interested and enthusiastic about the work.

Labor Day was celebrated at Gorgona by a ball game in the morning between the married men and the bachelors.

The Tivoli Lawn Tennis Club has been organized by residents of Ancon. Permission has been asked to use the courts already laid out on the grounds of the Hotel Tivoli.

Friday, September 11, the Culebra Sunday school will entertain all the children of Culebra from 4 to 7 p. m., at the Commission chapel. Games will be played and a supper provided. Every boy and girl is invited.

## Concert.

By the I. C. C. Band at Gorgona, C. Z., Sunday, September 13, 1908, at 6 p. m.

## PROGRAM.

- 1 March—*Waldmere*.....Losey
- 2 Selection—*Merry Widow*.....Lenar
- 3 Tone poem—*Apple Blossoms*.....Roberts
- 4 Waltz—*Angel's Dream*.....Herman
- 5 Duet for Clarinets—*Nanine*.....Marsal
- MESSERS. GRAY AND HALE.
- 6 Selection—*Maritana*.....Wallace
- 7 Comic Tattoo—*The Musician's Strike*.....Fahrbach
- a Characteristic—*Dance of the Bumble Bees*.....Bagley
- 8 Schottische—*Let Me Be Your Lemon*.....Allen
- 9 Overture—*Sunshine and Showers*.....Flath
- 10 Galop—*On Horseback*.....Bendix

CHAS. E. JENNINGS, Musical Director.  
A concert will be given at Las Cascadas, C. Z., September 20.

## Misdirected Letters.

## LEGAL NOTICE.

United States )  
of America ) In the First Judicial Circuit.  
Canal Zone.

George Blake, Jamaican, died intestate July 15, 1907, leaving an estate, consisting of three houses in Pedro Miguel. The claimants for the estate have not proved that they are the legitimate heirs of the decedent, and the Collector of Revenues has filed a petition for escheat under Sections 779-781 of the Code of Civil Procedure.

Notice is hereby given to all concerned to appear at the court house in Ancon on October 5, 1908, at 9 o'clock a. m., to establish their claims to the said estate, or to show cause why the same should not escheat to the Canal Zone.

WALTER EMERY,  
Circuit Court Clerk.

## COMMISSARY DEPARTMENT.

## COMMISSARY PRICES

For week beginning September 9:

## FRESH MEATS, POULTRY AND COLD MEATS.

	Price.
Beef—Sirloin roast.....per lb	30
Rump roast.....per lb	30
Porterhouse.....per lb	30
Rib-roast, short cut (not under 3½ pounds).....per lb	24
Rib-roast, second cut (not under 3 pounds).....per lb	20
Chuck-roast (not under 3 pounds).....per lb	15
Soup.....per lb	9
Stew.....per lb	12
Corned.....per lb, 12, 14, 16	
Suet.....per lb	4
Steaks—Sirloin.....per lb	30
Porterhouse.....per lb	30
Rump.....per lb	30
Tenderloin.....per lb	30
Round.....per lb	24
Veal—Cutlets.....per lb	24
Short-cut chops.....per lb	24
Loin.....per lb	23
Entire forequarter (15 to 20 lbs).....per lb	11
For stewing.....per lb	11
Mutton—Entire forequarter (not under 10 pounds).....per lb	9
Short-cut chops.....per lb	20
Leg (8 to 10 pounds).....per lb	18
Lamb—For stewing.....per lb	10
Entire forequarter.....per lb	10
Chops.....per lb	30
Cut (6 to 8 pounds).....per lb	28
Pork—Cuts.....per lb	20

## Tug Service Porto Bello and Nombre de Dios.

Effective, August 6, 1908: The following is the schedule for tug service between Cristobal, Porto Bello and Nombre de Dios:

Sunday: Leave Cristobal 6.30 p. m. for Porto Bello only; returning same day.

Monday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Tuesday: Leave Cristobal after Train 2 without tow, for Porto Bello only; returning, leave Porto Bello 2.15 p. m., without tow.

Wednesday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Friday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Saturday: Leave Cristobal after Train 2 for Porto Bello only; returning, leave Porto Bello 5.30 p. m.

The following vessels arrived at or departed from the port of Ancon during the week ending September 4, 1908:

Arrivals—August 29, *Aysen*, from Valparaiso; August 30, *Newport* from San Francisco; August 30, *Santa Maria*, U. O. Co., from California.  
Departures—August 25, *Mapocho*, to Valparaiso; August 31, *Peru*, to San Francisco; September 1, *Chile* to Valparaiso, September 2, *Santa Maria*, to California.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

## FROM COLON TO BARRADOS, CALLING AT TRINIDAD.

Magdalena.....	R. M.....Tuesday.....	Sept. 15
Orinoco.....	R. M.....Tuesday.....	Sept. 29

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 11 a. m., and from Colon at 1.30 p. m., via Port Limon, for New Orleans. In addition to the above, the United Fruit Company dispatches a steamer about every ten days from Colon, via Bocas del Toro, for New Orleans.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 2d and 20th of each month.

## Flood Stages in the Chagres.

Maximum height of Chagres above low water for the week ending midnight, September 5, 1908:

# CANAL

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, SEPTEMBER 16, 1908.

No. 3.

## The Canal Record

Published weekly under the authority and supervision of the  
ISTHMIAN CANAL COMMISSION

*"The Canal Record" is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the "gold" roll. Extra copies can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

## NOTES OF PROGRESS.

### Four and a-Half Million Barrels of Cement

By circular No. 420, the Isthmian Canal Commission asked for bids for furnishing about 4,500,000 barrels of Portland cement, for use in the locks at Gatun, Pedro Miguel, and Miraflores. Of this amount, approximately one-half will be used at Gatun, one-sixth at Pedro Miguel, and one-third at Miraflores. Bids were opened on June 1. A large number of tenders were made, offering cement of American and foreign manufacture. The lowest bid was that of the Atlas Portland Cement Company. The prices were \$1.19 per barrel in wood, and \$1.60 per barrel in double bags of Osnaburg duck, these prices being for delivery at Jersey City or Hoboken, and a rebate of 8½ cents being allowed for each bag returned in good condition. The company also offered to deliver at the works at Northampton, Pa., the cement packed in bags or barrels, to be furnished by the Commission, at 65 cents per barrel. Award has been authorized to the Atlas Portland Cement Company, reserving to the Commission the right to elect the method of delivery under certain conditions to be specified in the contract. The delivery is to be at a minimum rate of 2,000 barrels and a maximum of 10,000 barrels per day, and will begin between May 1 and October 1, 1909, upon 90 days' notice to be given by the Commission.

The cement for the spillway in Gatun Dam will be furnished under this contract, but the delivery will begin December 1, 1908, and continue at the rate of 500 barrels per day, this date not affecting the date of beginning deliveries of the main amount under the contract. It is expected that about 80,000 barrels will be needed for the spillway.

### Completing Obispo Diversion.

It is the intention to have the Obispo Diversion, which diverts water from the east side of Culebra Cut, completed by the end of

the next dry season. The last big cut that will allow the water to enter the ravine leading to the Chagres River, is about three-quarters of a mile east of Haut Obispo, and will require an excavation of over 300,000 cubic yards. It is one of the most difficult pieces of work that any one of the construction superintendents of the Central Division has yet encountered. The most practical and economical way of removing the material will be decided in a few days. It is not the amount of excavation that makes the problem interesting so much as the steep grade and sharp curvature encountered in getting trains up to the site. It may be necessary to do no small amount of hand work before the steam shovels can begin excavating.

### Naos Island Breakwater.

In connection with the breakwater from East La Boca to Naos Island, at the Pacific entrance to the Canal, now in process of construction, it is interesting to record that a similar structure was provided for in the concessionary contract between the United States of Colombia and the Panama Railway Company made in 1867. Article 4 of that contract reads as follows:

The Company binds itself to extend the railroad on the Pacific side to the islands of Naos, Culebra, Perico and Flamingo, or other places in the bay where there may exist a permanent depth of water for large vessels.

In 1880 a new contract was formed by which the Panama Railway Company agreed to pay to the United States of Colombia the sum of \$10,000 a year for a period of thirty years as a penalty for not extending the road to the islands in the Pacific. In other words, the company agreed to pay \$300,000 for the abrogation of this contract during 30 years, at the expiration of which period the original contract was to be again in force. The penalty of \$10,000 a year was paid for 20 years or until 1900. In that year the Panama Railway Company, acting through Senor Don Jose Augustin Arango, as special representative, effected a new settlement with the Colombian Government, in accordance with which the original contract was abrogated for all time in consideration of the payment by the company of an additional sum of \$200,000, making the total amount which the company had paid for the non-completion of the railway to the islands in the Pacific \$400,000.

### Quartermaster's and Subsistence Department.

The clerical force of the old Division of Material and Supplies has been distributed among the offices of the Quartermaster's Department, the majority of the men being transferred to the office of the Chief Quartermaster in Culebra. The Culebra office will be maintained in the wing of the Administration building, formerly occupied by the

Department of Labor, Quarters and Subsistence.

The headquarters of the Subsistence Department were moved to Cristobal on September 15, and were established in the De Lesseps house, formerly occupied as offices by the Division of Material and Supplies.

### Rain Interferes with Steam Shovels.

The steady downfall of rain at Culebra, September 12 and 13, caused some delay in the work in the Culebra Cut. Between noon on September 12, and noon September 14, 4 93-100 inches of rain fell. At Cucaracha slide the loose dirt was washed down into the Cut until it overflowed the construction tracks and buried the trucks of three steam shovels. Men were immediately set at work excavating the shovels, and, barring further heavy rains, they will resume work on September 16, or the day following.

### Storage Magazines.

The final location for the 600,000-pound dynamite magazine about two miles up the Chagres River on the right bank, has been approved and over a mile of track leading to it is now completed. Work is being pushed rapidly to complete the track, so that the construction of the big magazine may be started by the middle of October. A magazine of like capacity is almost completed at Mindi, and work on the Cocoli magazine is making good progress. The opening of these magazines will relieve the situation in taking care of the great amount of dynamite which is being shipped to the Isthmus to aid in the excavation work.

### A Dump at Santa Cruz.

A dump ground capable of holding 3,000,000 cubic yards of spoil has been located north of Santa Cruz on the new line of the Panama railroad. It has the triple advantage of being a short haul from Culebra Cut, of aiding the Panama railroad in making a cut-off from the line as at present relocated, and relieving the main line of many of the trains hauling material to the big dump at Tabernilla. Several Central Division engineers, the superintendent of transportation, and one of the superintendents of construction went over the ground last week. The windings of the Chagres River form a peninsula at Santa Cruz, known as Point 1, and another at Matachin known as Point 2. In going around Point 2, the relocated line makes almost a semi-circle and then cuts across Point 1, onto the new Gamboa bridge. At this point the new line is built on trestles in several places, the total length of high trestles being over a mile. These trestles will be strengthened by some additional bracing to make them perfectly safe for dumping, and the wasting of spoil over them will then begin.

Meanwhile excavation at Matachin peninsula, Point 2, is making rapid progress and as soon as the part of the work that is to be

## NOTES OF PROGRESS.

(Continued)

done by steam shovels is completed, the Chagres will be turned through the new channel. This will leave all that part of the peninsula, around which the relocated line of the railroad runs, outside the course of the river. A cut-off line will then be built from a point about 1,000 feet north of Gamboa Bridge to connect with the long trestle on the other side of Point 2, forming a chord of what has been referred to as a semi-circle. The cut-off line will run over a trestle bridge, and as soon as the bridge is completed, dumping to make a fill will be begun. The trestle dump will be widened out making a regular dump ground. This plan for improving the alignment of the relocated railroad, relieving the main line of some of its traffic, and opening a short-haul dump for trains from the prism between Las Cascadas and Bas Obispo, was made by the old Chagres Division before the reorganization.

## A Month's Work in the Shops.

August was a typical month in the shops on the Isthmus, and the returns from the plants at Gorgona and Empire give a fair idea of the amount and kind of work done.

At Gorgona the manufacturing work included the retubing of the boiler for the pumping station at Gatun, the construction of a track shifter, of one 5-ton derrick, one unloader plow, three wings for spreaders, and structural iron for the jail at Porto Bello, the lodge hall at Las Cascadas, and the powder magazine at Encaracha. Repairs were made on 27 locomotives, and on 2,099 wooden flat cars, most of the wood-car repairing being done at this shop. In the wood shop, 236,774 feet of lumber were ripped and dressed. The cost of labor was \$78,676.94, and of material \$76,452.10. In the iron foundry 385,235 pounds of iron castings were turned out, with a labor cost of \$8,600.29, and an expenditure for material of \$4,548.17. The brass foundry turned out 38,171 pounds of brass castings at a labor cost of \$1,386.42, and an expenditure for material of \$5,444.32. In the shop the cost for labor for manufacturing was \$11,909.30, and for material \$18,578.86. The remainder of the labor and material accounts is charged against repairing.

General repairs are made at the Empire shops to steam shovels, and to the greater number of steel cars, although a large amount of manufacturing and other repairing is also done there. General repairs were made on 13 steam shovels, and the installation of a 400-k. w. unit in the electric light plant was begun. The cost of labor at Empire was \$81,053.07, and of material \$45,248.06.

## Keeping Public Order.

The August report of the Chief of Police shows that 488 people, representing forty-three countries, were arrested in the Canal Zone during that month. Seventy-five cases were tried in the courts, 15 of which were dismissed, 37 continued, and 23 in which convictions were procured. Of the 23 persons convicted, 11 were sentenced to the penitentiary, 3 to the common jail, and 9 to pay a fine. Seven of the penitentiary prisoners are serving sentences of a year, 3 sentences of 6 months, and 1 a sentence of 3 months, all at hard labor. Seven pris-

oners were discharged from the penitentiary. The prisoners in the penitentiary performed work valued at \$698.15, while those at the Gatun convict camp, who are working on the highway from Gatun to Mount Hope, performed service valued at \$1,125.10. The number of prisoners in the penitentiary on August 31 was 115.

Compared with June and July, there was a decided decrease in the number of arrests during August, the number during June having been 573, and during July 536. No cases of homicide or manslaughter occurred during August. A number of petty burglaries occurred, and the leader of the gang of burglars is now in custody. Six men were deported—two to Spain, and one each to Barbados, Chile and the United States.

There were 10 violent deaths requiring action by the coroner, 4 of which were due to drowning, 2 to railroad accidents, 1 to suicide, and 3 to accidental injuries.

## Excavation Equipment.

The first order for 40-ton flat cars given by the Isthmian Canal Commission for use in the Canal work was, as stated in THE CANAL RECORD of September 9, for 800 cars. This number, however, does not comprise all the 40-ton flat cars in use on the work, as enough have been added since the first order was given to bring the total number up to 1,778. The present car equipment of the Isthmian Canal Commission, which does not include the Panama Railroad Company, is as follows:

Forty-ton flats.....	1,778
Fifty-ton steel flats.....	500
Western dumps.....	599
Oliver dumps.....	500
Ingoldsby dumps.....	12
Goodwin dumps.....	12
Total.....	3,401

The hard usage that this equipment receives on the Isthmus is shown by the fact that in August 6,250 40-ton flat cars were repaired in the shops, an average of 3½ trips to the shop for each car. Of the 500 50-ton steel flat cars, 105 were repaired during the month. Repairs were also made in the shops to 2,011 Western dump cars, 1,194 Oliver dump cars, 22 Ingoldsby cars, and 11 Goodwin cars. The cost of shop repairs to cars in August was \$49,797.22.

Repairs amounting to \$1,011.85 were made on the nine track shifters owned by the Commission, \$666.73 on the 35 cranes, \$302.47 on the 18 pile drivers, and \$331.18 on the labor cars. The Commission also owns 30 unloaders, repairs to which in August amounted to \$6,006.31, and 23 spreaders, which were repaired at a cost of \$3,567.53.

Seventeen steam shovels were in the shops for general repairs at a cost of \$28,815.05. This does not take into account the repairs made in the field. The steam shovels owned by the Commission are divided as follows:

Forty-five-ton Bucyrus.....	10
Seventy-ton Bucyrus.....	35
Ninety-five-ton Bucyrus.....	32
Model 20, Marion.....	1
Model 60, Marion.....	7
Model 91, Marion.....	16

Total..... 101

The cost of repairs to 44 locomotives was \$34,509.55, of which \$10,498.37 was for running repairs. The locomotive equipment consists of the following:

French.....	124
D-cauville.....	9
Two-hundred class.....	100
Three-hundred class.....	40
Six-hundred class.....	20
Thirty-six-inch gauge.....	4

Total..... 297

## LETTERS FROM THE LINE.

## An Open Letter.

THE CANAL RECORD:

To the Former Employes of the Building Construction Division: As my connection with the Building Construction Division closes to-day, after three years of active service as head of the division, and as the business ties that have bound us together during this period are about to be severed, I desire, through the columns of the THE CANAL RECORD, to express to you, each one and all, my thanks for the uniform courtesy and respect with which you have treated me at all times.

To the former superintendents and general foremen on the work, I wish particularly to thank you for your promptness and efficiency in carrying out any orders or instructions I have given. The most of my life has been spent in associations and dealings with men of the class to which, I am proud to say, "you and I belong," and our service together has been uniformly pleasant and satisfactory.

To the clerical and office forces I wish to say, in addition to the above, in whatever station or position in life you or I may be in future, I can always refer with pleasure to the days and years we have spent together on the Isthmus.

Again, I thank you and wish you as large a measure of success as you justly merit and godspeed in whatever you undertake.

With best wishes for all, I am,

W. M. BELDING,  
Master Builder.

Culebra, September 9, 1908.

## Army and Navy Smoker.

THE CANAL RECORD:

The Gen. Henry W. Lawton Garrison, No. 40, and the Birt S. Sturtevant Garrison, No. 41, of the Regular Army and Navy Union of the U. S. A., will hold a smoker at the Imperial Hotel, Colon, Saturday, October 3, 1908, at 8.30 p. m.

A real "Army" meal will be served. Good speakers, singers, musicians and elocutionists will be present, and a good time is therefore promised. It is the desire of this organization to extend an invitation to all ex-soldiers, sailors, and marines on the Isthmus (who have served in the regulars) to be with us on this occasion, and in order that no one may be slighted, and that we may become better acquainted, it is requested that "all hands" send their names and addresses to William M. Ridpath, adjutant, Cristobal, C. Z., who will immediately forward invitations.

Very respectfully,

G. C. BRADFORD,  
Commander No. 40,

Cristobal, September 10, 1908.

## Steam Shovel Men.

All members of the International Brotherhood of Steam Shovel and Dredge Men are requested to attend a meeting to be held in the clubrooms at Bas Obispo, at 2 o'clock Sunday afternoon, September 20.

G. G. McNAMARA.

Louis Mickle died at Colon hospital September 8, from appendicitis. He was born in New York state 37 years ago, and had been on the Isthmus 2 years and 9 months, his place of residence being house No. 292, Cristobal. His wife survives him.

## EMPLOYEES INJURED ON ISTHMUS.

## Decision of Comptroller of the Treasury in Reference to Their Compensation.

It is held by the Comptroller of the United States Treasury that by the Act of Congress, effective August 1, 1908, all Isthmian Canal Commission regulations, providing for allowance of injury or meritorious sick leave, are revoked.

This Act grants to certain employees injured in the performance of their duties compensation as long as disabled, not exceeding one year, provided they are disabled for more than fifteen working days; and prohibits the payment for injury leave to employees who are disabled fifteen working days or less, or who do not come under the Act.

Injured employees, disabled for more than fifteen working days, in order to obtain payment for the period of absence from duty, must submit a claim for compensation to the Department of Commerce and Labor at Washington, D. C. This claim for compensation will be prepared for them by the Claim Officer, Administration Building, Culebra.

Injured employees who have lost fifteen working days should call on the Claim Officer at Culebra, and surgeons by whom they are treated will furnish railroad transportation for that purpose. If they are not able to travel to Culebra they should notify the Claim Officer of that fact in writing, showing the name of the hospital in which they are being treated, and the Claim Officer will call on them for the purpose of preparing their claim for compensation.

It must be understood that absolutely no payment can be made for time lost on account of injuries until authorization is received from the Department of Commerce and Labor, Washington, D. C.

GEO. W. GOETHALS,  
*Chairman and Chief Engineer.*

TREASURY DEPARTMENT,  
Washington, D. C., Sept. 1, 1908.  
TO THE CHAIRMAN OF THE ISTHMIAN CANAL COMMISSION:

Sir—I am in receipt of your letter of the 20th ultimo, in which you request my advance decision of the questions therein submitted. It reads:

"I have the honor to request your decision upon the questions herein stated, as to the legality of payment by the Commission of compensation to its employees in certain cases during the time they are unable to work on account of injury incurred in the performance of duty.

"The regulations adopted at the 129th meeting of the Commission held June 11, 1907, which regulations became effective July 1, 1907, provide as to employees other than laborers as follows:

"An employee may be granted, in the discretion of the head of the department in which employed, with the approval of the Chairman, leave on account of injury incurred in the performance of duty, not exceeding thirty days in any current year, while such employee is incapacitated from duty by reason of such injury. The amount of compensation to be paid an employee to whom leave is granted on account of injury will be calculated as provided for in case of sick leave. Leave on account of injury may be granted to an employee in addition to the sick leave above provided. Leave on account of injury shall not be cumulative, and payment for same will be made on the first pay-roll following its authorization. All employees, in case of illness or injury, will receive free medical care and attendance at the hospitals."

"The same regulations provide, as to all laborers on the Isthmus as follows:

"Laborers may be granted, in the discretion of the head of the department in which employed, with the approval of the Chairman, leave on account of injury incurred in the performance of duty, not exceeding

thirty days in any current year, while incapacitated for duty by reason of such injury. The amount of compensation in such cases shall be calculated on the basis of an eight-hour day. In case of illness or injury, laborers shall receive free medical care and attendance at the hospitals."

"Attention is also invited to the Act of Congress approved May 30, 1908 (35 Stat., 556), granting to certain classes of employees of the United States compensation for injuries sustained in the course of their employment. Sections 1, 7 and 8 of that Act provide:

"That when, on or after August first, nineteen hundred and eight, any person employed by the United States as an artisan or laborer in any of its manufacturing establishments, arsenals, or navy-yards or in the construction of river and harbor or fortification work, or in hazardous employment on construction work in the reclamation of arid lands, or the management and control of the same, or in hazardous employment under the Isthmian Canal Commission, is injured in the course of such employment, such employee shall be entitled to receive for one year thereafter, unless such employee, in the opinion of the Secretary of Commerce and Labor, be sooner able to resume work, the same pay as if he continued to be employed, such payment to be made under such regulations as the Secretary of Commerce and Labor may prescribe: *Provided*, That no compensation shall be paid under this Act where the injury is due to the negligence or misconduct of the employee injured, nor unless such injury shall continue for more than fifteen days. All questions of negligence or misconduct shall be determined by the Secretary of Commerce and Labor.

"Sec. 7. That the United States shall not exempt itself from liability under this Act by any contract, agreement, rule, or regulation, and any such contract, agreement, rule, or regulation shall be pro tanto void.

"Sec. 8. That all Acts or parts of Acts in conflict herewith or providing a different scale of compensation or otherwise regulating its payment are hereby repealed."

"There may be some question whether a particular employee, or class of employees, of the Commission are within the terms of this act of Congress and entitled to its benefits. Without discussing that question, it is to be noticed that the Act does not cover any case of injury under any circumstances unless the injury continue for more than fifteen days; that Section 7 makes void pro tanto any contract, agreement, rule, or regulation that exempts the United States from liability under this Act; and that Section 8 is but an affirmative statement of the effect this Act has upon prior conflicting Acts or parts of Acts.

"The Act being a beneficial one it has not seemed to me that it was intended to take away from an employee any contract right which he had to payment for time lost through injury incurred in the performance of duty; and therefore, that an employee who would be entitled to the benefits of the Act if his injury lasted more than fifteen days is also entitled to receive the benefits conferred upon him by his contract or the regulations of the Commission for the period of injury if it continue for only fifteen days or less; in other words, an employee coming within the terms of the Act would receive, under the Act, pay if the injury lasted sixteen days or more; while, if it lasted but fifteen days or less, he would be entitled to pay under the terms of his contract with the Commission.

"This view of the meaning of the law would not place such an employee in a worse position as to an injury lasting fifteen days or less than he was before the passage of the Act, nor in a worse position as to compensation for such injury than that occupied by the employees of the Commission who are not entitled to the benefits of the Act.

"It is also to be noticed that the Act provides that no compensation shall be paid under it where the injury is due to the negligence or misconduct of the employee injured, while the regulations of the Commission and its contracts of employment contain no such restrictions.

"Your decision is requested upon the following questions:

"1. Is the Isthmian Canal Commission authorized to pay to an employee who is entitled to the benefits of the Act of May 30, 1908, the compensation provided in his contract or the regulations of the Commission during the time he is incapacitated for work on account of injury incurred in the performance of duty, if the period for which he is so incapacitated is fifteen days or less?

"2. Is the Commission authorized to pay to an employee who is entitled to the benefits of the Act but is injured through his own negligence or misconduct, the compensation provided in his contract or the regulations of the Commission for the time he is incapacitated on account of the injury, whether the duration be more or less than fifteen days?

"3. Does the Act affect in any way the payment

of compensation for injury leave to those classes of officers and employees of the Commission who are not entitled to the benefits of the Act of May 30, 1908?

"There are many injury cases now arising. In order that cases now pending and others may be speedily disposed of and the employees receive such pay as is due, it is requested that your decision be rendered at the earliest possible date, and that it be sent to the Washington office of the Commission, so that your conclusions may be cabled to me."

## THE DECISION.

In the absence of Congressional enactment, the regulations of the Commission set out in your letter providing for leave with pay for thirty days or a fractional part thereof to employees of the Commission for injuries incurred in the line of duty; and thirty days leave or fractional part thereof with pay to laborers of the Commission for injuries incurred while in the performance of duty and while incapacitated for duty by reason of such injury not exceeding thirty days, were undoubtedly made with authority at the time they were made, considering the broad authority granted the President by the provisions of the original Spooner Act authorizing him to construct the Canal.

But when Congress stepped in and enacted, as it did, the Act of May 30, 1908 (35 Stat., 556), set out in your letter, providing just what kind of relief for personal injuries and exactly to whom and under what circumstances it should be given and included the employees of the Isthmian Canal Commission in such Act, I am forced to the conclusion that this enactment is exclusive, after it came into effect, and that it is no longer in the power of the Commission by regulations, past or present, to enlarge or diminish the provisions of that Act as to the relief extended to employees of this Commission for injuries received in the line of their said employment.

A different holding would be an attempt to broaden and modify an Act of Congress, and to make a discrimination in favor of a class, where Congress legislating concerning such class did not see fit to make such discrimination.

Congress has declared in unequivocal language that certain employees of the Canal Commission (and I think a broad and liberal construction should be given to the words defining the class embraced therein) injured in the course of their employment, shall be entitled to receive for one year thereafter, unless in the opinion of the Secretary of Commerce and Labor they shall be sooner able to resume work, the same pay as if they continued at work during such time, provided such compensation shall not be paid unless such injury is without the negligence or misconduct of such employee so injured, nor unless such injury shall continue for more than fifteen days, and that all questions of negligence or misconduct shall be determined by the Secretary of Commerce and Labor. It may be possible that Congress should have made an exception in favor of the employees of your Commission and granted them pay for less than fifteen days of injuries in line of duty, or when injured through their own fault or negligence, but it did not make such discrimination, but placed them on the same level with the artisans and laborers of other branches of the service engaged in hazardous undertakings.

If Congress made a mistake in this I can not correct its errors of omission by construction or interpretation. In my judg-

ment this Act of Congress suspended and made null all regulations giving to employees of the Government engaged in the service of the Canal Commission or elsewhere, other or different relief from that granted for injuries while in the line of duty. The regulations quoted by you do both and are, therefore, of no legal force or effect.

Entertaining the views I entertain as to the force and effect of the Act of Congress *supra*, I am constrained to answer your first two questions in the negative and your third in the affirmative.

Yours respectfully,

R. J. TRACEWELL,  
*Comptroller.*

#### Commission Action.

At a meeting of the Isthmian Canal Commission at Culebra on September 5, 1908, the following resolutions were adopted:

#### PAY OF ARMY, NAVY AND OTHER OFFICERS.

*Resolved*, That the resolution of the Commission, approved September 5, 1904, and embodied in Act No. 16 of the Laws of the Canal Zone, providing that officers of the Army and Navy, or of the Public Health and Marine Hospital Service, who may be assigned to duty under the Isthmian Canal Commission on the Isthmus, shall be paid from the Commission's appropriations additional compensation equal to 50% of their authorized pay and allowances, when on duty in the United States, be hereby revoked.

*Resolved further*, That, effective September 15, 1908, the compensation of officers of the Army and Navy, or of the Public Health and Marine Hospital Service, who are or may be ordered to duty under the Commission on the Isthmus, shall receive the compensation of the position to which they are assigned, the difference between their service pay, and such compensation to be paid from the Commission's appropriations, or they shall receive from such appropriations, in addition to their service pay, the increase authorized by law for service in the tropics.

#### MEDICAL TREATMENT OF EMPLOYEES.

*Resolved*, That paragraph 2, section A, of the regulations governing the treatment of persons by the physicians and in the hospitals of the Department of Sanitation, as adopted at the 124th meeting of the Isthmian Canal Commission, held at Culebra, April 24, 1907, and amended at the 126th meeting of the Isthmian Canal Commission, held at Culebra, May 21, 1907, be further amended to read as follows:

"A charge of \$1 shall be made for each visit by a physician of the Health Department to an employee at his home or quarters: *Provided*, that if he is unable to go to the dispensary, no charge shall be made for the first visit to such employee. Employees living with their families in Commission quarters who, in the opinion of the visiting physician, can not safely, or conveniently, report at the dispensary for treatment, shall, if they so desire, be treated at their homes without charge."

*Resolved*, That paragraph 4 of section D of the same regulations be amended to read as follows: "For the use of a private room a charge of \$2.50 shall be made, and for other special attention the charges shall be same as for an employee."

#### Reduced Rate on Hamburg-American Line.

The Colon agent of the Hamburg-American Line has been authorized to grant a reduction of 25 per cent to employees of the Isthmian Canal Commission traveling on vessels in the Atlas service. This rate will be granted to employees only on presentation of a letter signed by the Chief Quartermaster. The Atlas service includes vessels plying between New York and Colon.

Mr. S. G. Baker has been appointed Assistant Chief Clerk of the Atlantic Division, and will have charge of all property and material. Mr. Ben Jenkins has been appointed Acting Chief Timekeeper of the Atlantic Division during the absence of Mr. C. P. Shea, Chief Timekeeper.

## HEALTH REPORT FOR AUGUST.

### Steady Improvement During Four Years.

ANCON, C. Z., September 10, 1908.

COL. GEO. W. GOETHALS,

*Chairman Isthmian Canal Commission, Culebra.*

Sir—The report for the month of August shows that the health conditions on the Isthmus are satisfactory.

In August, 1905, we had on our rolls 5,269 whites, among whom we had 8 deaths, giving us a rate of 18.22 per thousand. In August, 1907, these figures were, respectively, 11,733, 17 and 17.38; in August, 1908, 12,607, 10 and 9.52.

This shows a steady improvement in the three years in the death rates of the whites. Taking the negro employees, we have for the same period—and considering the same figures—1905, 24,286 employees, 145 deaths, with an average per thousand for the month of 71.60; 1907, 27,710 employees, 76 deaths, and a rate of 31.76 per thousand; 1908, 31,618, 32 and 12.14. This improvement in the death rate of our negro employees is the most noteworthy in the report. In the three years the death rate among the negroes has dropped from 71.60 per thousand to 12.14 per thousand. The exceptionally high rate for 1906 was due to the fact that during August of this year we were at the height of a severe epidemic of pneumonia among our negro employees. Of the 145 deaths which occurred that month among our negro employees, 60 deaths were caused by pneumonia; among the 32 deaths among our negro employees in 1908, only 4 were due to pneumonia. Taking our total working force, and considering the month of August for the past four years, we have the following figures:

	Total Force.	Deaths.	Annual Rate
1905.....	10,687	32	35.93
1906.....	29,553	153	62.12
1907.....	40,443	93	27.59
1908.....	44,225	42	11.37

showing a decrease in our death rate from 35.93 in August, 1905, to 11.39 in August, 1908. Considering individual diseases, we had in our working force in August, 1906, 29 deaths from malaria; in August, 1907, 21 deaths, and in August, 1908, 9 deaths. The deaths from malaria in a force of 29,000 men in August, 1906, were more than three times as numerous as in a force of 44,000 men August, 1908. Taking the cases of malaria admitted to our hospitals from employees, we had, in August, 1907, 2,181; in August, 1908, 1,525. Malaria is probably the best measure of the efficacy of the sanitary measures taken, considering, from a malarial point of view, that the climatic conditions on the isthmus are about the same from year to year, and any marked improvement in the number of deaths and the number of cases is probably due directly to the preventive measures taken. This might not be equally true of the general death rate or the general sick rate. For example, the general death rate in 1906 among employees was almost doubled on account of the epidemic of pneumonia which prevailed at that time, but I doubt if our sanitary measures had much effect in the decrease in pneumonia, which has taken place since that time.

Considering typhoid fever in 1905 among employees, we had 9 deaths; in 1907, 7 deaths, and in 1908, no deaths. Considering dysentery, in 1906 we had 10 deaths; in 1907, 6 deaths, and in 1908, 2 deaths. The

sick rate is the best measure of the average effectiveness of the force, so far as they are affected by the health conditions. In 1906 we had among every thousand of our employees sick every day 42.67 men; in 1907, 29.02, and in 1908, 25.24. Judging by past experience, our sick rate will steadily decrease from the present time until May next.

There have been no cases of yellow fever or plague originating on the Isthmus in the past two years.

Among the 8,175 white Americans connected with the Isthmian Canal Commission, 2,869 of whom were women and children, there were only two deaths, one due to drowning and the other to childbirth—that is, not a single case of death from disease.

Very respectfully,

W. C. GORGAS,  
*Chief Sanitary Officer.*

### Yellow Fever and Plague Decreasing.

The Department of Sanitation reports that during August the quarantine imposed against ports in which yellow fever or plague prevail has been maintained, although improvement has occurred in a number of infected ports with which we have commercial relation. This has been noticeably so in Guayaquil, and for the first time since the commencement of plague in that port, no cases of death have been reported from this disease on the bills of health, for a period of two weeks. Very few cases of human plague are now occurring in that town, but rat infection still exists, so that it is too early to form a definite opinion as to whether the disease has been practically eradicated, or whether this is the quiescent stage, which is so common regarding this disease in infected ports.

An improvement has also taken place in Trinidad, and no human cases of plague have been reported for three or four weeks. However, rat infection presumably still exists, and as long as such remains the case, the protective measures are just as important as when human cases are occurring.

No new ports have been added to the list on account of the appearance of either yellow fever or plague.

### Improving Transportation from the Cut.

Work will begin at once on new track construction at Pedro Miguel. The new inclined track leading from Culebra Cut, near the Panama railroad bridge over the Canal at Paraiso, is partly completed and will be extended to the main line of the railroad about 1,000 feet north of the depot at Pedro Miguel. Immediately south of this a cross-over will be put in, the north point of which will be the beginning of a double track to the southward, extending it about half a mile further north than at present. A signal tower will be put in west of the track on the cross-over, and an interlocking switch system will be installed by which trains at this point will be controlled. As soon as this system is in operation, all the loads going south out of the Cut will be handled over this line, leaving the lock site entirely under the control of the Pacific Division. South bound trains from Culebra Cut now go out through the lock site. The change will facilitate the handling of trains at this point.

Excavation for the material-handling docks at Gatun is practically finished and the construction of the docks will be begun as soon as piles can be secured for the foundation.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

The Empire Woman's Club held its weekly meeting on Tuesday afternoon at 3 o'clock, when a program was given under the musical and literary department. Miss Lewis, of Camp Elliott, gave an informal talk on Paris, and its points of historic interest. Piano selections were given by Miss Wade, and songs by Miss Moulton. Tea was served at the tastefully decorated tables in one of the smaller rooms, and the social hour was much enjoyed. A number of guests from out of town were present.

Throughout the clubs there is a strong disposition to take up serious study, and programs are being outlined and work for the winter is being earnestly discussed.

Labor Day, September 7, was observed at Empire by athletic sports and games, speeches, and a public demonstration arranged by the mechanics. The observance commenced with a street parade headed by the official band. In the evening a dance was given at Kangaroo hall, which was largely attended.

The women residents of Gatun have formed a sewing circle which meets every Wednesday at the residence of one of the members for the purpose of making useful and fancy articles for a sale to be held within a few weeks, the proceeds to be devoted to philanthropic purposes. A small initiation fee and nominal weekly dues are charged, the money being used for the purchase of materials for the work. The circle commenced a few weeks ago with a membership of 22.

The Fortnightly Club at Gatun continues its dances which are enjoyable features of the social life of the community. The monthly dance is always well attended. A new dancing club has recently been organized with membership open to all residents of the town. Dances are given every Wednesday evening. The Young People's Christian League is an active part of the social life of Gatun. Its socials and meetings are always well attended.

The Gatun Woman's Club will resume its regular meetings in October. The regular sessions will be preceded by an open evening meeting to which all the residents will be invited. It is hoped that in this way interest in the club will be increased.

The Gorgona Woman's Club held its meeting for election of officers for the next six months on Tuesday, September 8, with the following result: President, Mrs. E. S. Calvit, re-elected; vice-president, Mrs. A. C. Everest; secretary, Mrs. R. E. Philipps; treasurer, Mrs. James Crockett. Mrs. L. F. La Rose was appointed press secretary. A committee was appointed to make arrangements for the coming Federation meeting, with Mrs. Frank Morrison as chairman.

The Gorgona Dramatic Company will give a performance of "A Fisherman's Luck" at the Empire clubhouse on Wednesday evening, September 16.

The Ancon Woman's Club will hold its regular meeting at the Tivoli hotel on Wednesday, September 16. Dr. Van Kueber will give an address on the San Blas Indians.

The Isthmian Dancing Club of Culebra gave its first dance at the clubhouse on Saturday evening, September 12. The club was organized September 8, with Mr. H. B.

Bains, Mr. F. B. Byram and Mr. L. Burns as officers. There is a membership of 45. A dance will be given monthly.

The Culebra Sunday school treat at the Commission Chapel on Friday, September 11, was the important event of the week to the juniors and their friends. The committee in charge of arrangements had decorated the rooms with giant ferns and tropical plants. Games began at 4 o'clock and continued until 6 when supper was served. The smaller children were conveyed to their homes in the Commission wagonette at 7 o'clock. Each child was presented with a souvenir of the occasion. About ninety were present.

The Culebra Sunday school was organized one year and a half ago and has a membership of over 100, including 15 teachers. The school holds its sessions at the Commission chapel every Sunday morning at 9.30 o'clock.

The Tivoli Club gave a dance in honor of President-elect Obaldia at the hotel on Saturday evening, September 12. The entrance hall was decorated with the Panamanian and American flags. Mr. and Mrs. Obaldia arrived at about 9 o'clock and dancing commenced shortly after. A supper was served at 10 o'clock. The official table, where the guests of honor and members of the Commission were seated was laid for 14. The table was banked with brilliant flowers and foliage from the hospital gardens.

## The Commission Band.

The Commission Band, which contributes largely to the social life of the Zone, has been organized since September, 1905. It owes its inception to a few public spirited men, who realized the value of such an organization, both as recreation for the members and as a source of pleasure to the public. With the cooperation of the Commission, which appropriated \$600, instruments and necessary equipment were secured, and the band soon attained sufficient proficiency to appear in public. The first organization consisted of a president, vice-president, secretary and treasurer, and director, and thirty-seven members, all employes of the Commission or the Panama railroad. Although the interest and enthusiasm of the members was kept up, it was nevertheless difficult to hold them together, there being little inducement to travel across the Isthmus for the necessary rehearsals after a hard day's work. On March 27, 1907, the Commission authorized the employment of a director at \$2,000 per year, a librarian at \$1,500, and thirty-five men at \$25 per month each.

The business of the organization is directed by a board of managers, consisting of a chairman and two other members, and a musical director and a librarian devote all their time to the band's interests. The office is at Cristobal, where the weekly rehearsals are held. There are forty members at present, eighteen different classes of Canal work being represented. All of the members are uniformed in khaki. The present appropriation for the maintenance of the band includes besides the allotment for salaries, an amount for the purchase of instruments, uniforms, and music. The band has a library worth nearly \$1,000, to which additions are constantly being made.

Bandstands have been erected at Hotel Tivoli at Ancon, at Paraiso, Culebra, Las

Cascadas, Gorgona, Bas Opispo, and Cristobal, and concerts are given at these places at least once a month.

Besides the official band there are private orchestras at Culebra, Gorgona, and Las Cascadas. These orchestras, which were organized for the purpose of playing at dances and other social functions, draw their members largely from the official band.

## PERSONAL.

Mr. W. G. Tubby, chief of the old Division of Material and Supplies, and Mrs. Tubby, left for the States on September 15, intending to visit Jamaica on the way. Mr. Tubby has been in the Canal service nearly three years without a vacation. He has 84 days' leave of absence, at the expiration of which his resignation will go into effect.

R. M. Arango, Division Engineer of the Division of Meteorology and River Hydraulics, has resigned his position on account of ill health, and at the expiration of 42 days' leave of absence will sever his connection with the service.

Mr. W. M. Belding, master builder, chief of the old division of building construction, went to Costa Rica for forty-two days on September 15, and on the expiration of his leave will submit his resignation.

Capt. Courtland Nixon, U. S. A., who is to be Depot Quartermaster at Mount Hope, sailed from New York on the *Colon*, September 10, and is due at Cristobal September 16.

Upon the recommendation of the American Consul General at Panama, Hon. Arnold Shanklin, Mr. C. E. Guyant has been appointed Deputy Consul General. Mr. Guyant was formerly employed in the division of municipal engineering.

Mrs. Geo. W. Goethals, accompanied by her son, Thomas Goethals, sailed for the States on September 14, on the *Finance*.

Among the arrivals on the *Esperanza*, which reached Colon September 11, were the wife, son and daughter of Maj. J. P. Jervey, of Gatun.

Mr. M. R. Currie has returned from his leave in the States, and has been appointed District Quartermaster at Bas Obispo.

## St. Mary's Church at Empire.

A contract has been let for the construction of the new Protestant Episcopal church at Empire, to be known as St. Mary's, and work will be begun at once. The building will be 64 feet long and 26 feet wide, and will seat about 200 people. It will be in the general style of commission buildings, will be located near the court house, and will be paid for by a private fund already raised by subscription.

On Sunday next, at 9.30 a. m., Father Collins will deliver an address in Ancon chapel on the "Church of the Holy Redeemer, Culebra," and at 2.30 p. m., he will deliver an address on the same subject in the hall above the East La Boca mess.

Miss Ethel Lokey and Mr. William E. Roessner were married in the reception hall of the nurses' quarters at Ancon on the evening of September 8, by the Rev. John S. Calm.

## PACIFIC ROCK EXCAVATION.

## Preparations Under Way Between La Boca and Miraflores.

Preparations for the rock excavation in the Canal between Miraflores and La Boca are well under way, although the mud that overlies the rock must be excavated by dredges before work can be begun on the rock. Borings are being made to determine the quantity and nature of the rock, a Lobnitz rock crusher is on the ways in process of construction, and a contract has been let for a submarine rock drill barge.

Borings now being made are in continuation of the exploration begun some time ago. The prism of the Canal between Miraflores and La Boca includes the old French canal, which was excavated as far as Corozal. In the channel of the French canal the borings are made from platforms, and even the holes that are sunk on the bank are being put down under very trying conditions, as at high tide the ground is covered with two feet, or more, of water, so that such work as is not done in the water itself is done in soft mud. The drills are sunk 5 feet below the full depth of the proposed channel, i. e., 50 feet below mean sea-level. Present indications are that the amount of rock to be removed is not so great as was originally believed. The suction dredge *Sandpiper* is at work in the prism at Corozal, taking earth off the rock strata, and the old French ladder dredge 14-A is doing similar work opposite the La Boca wharf.

The contract for the rock drill barge has been let to the Maryland Steel Company, who will deliver the barge and machinery, knocked down, on the Isthmus before the 1st of January, 1909. It will be erected at the marine shops at La Boca. The hull on which the drills will be mounted will be 112 feet long, with a 6-foot rake on each end, 36 feet wide, and 8 feet deep, built of steel and of specially heavy construction, in order that rock may be blasted under the barge without doing it any damage. There will be six transverse solid bulkheads and 2 longitudinal bulkheads. Two of the compartments formed by the bulkheads will be used as water tanks, and they will have a capacity of 18,000 gallons. Oil will be used as fuel, and 6 fuel oil tanks will be installed, each with a capacity of 240 barrels. The boiler and pumps will be erected in the side of the hull opposite that on which the drills will operate, and the water and oil storage tanks will be amidship, thus trimming the barge. The capacity of the boiler will be sufficient to supply without forcing 30 per cent more steam than is needed for running three Ingersoll-Sargent drills 6½ inches in diameter, one 5-k. w. electric light plant, and an 8-horse power deck pump. Three drill frames will be mounted on the hull, each moving freely along one face of the barge, allowing a total horizontal distance of 85 feet between the first and last drill holes. Each frame will carry a rock drill on a moving slide, running in vertical guides on the face of the frame; after the manner of a pile-driver. The floor is projected outboard about 4 feet, so that the drilling will be done over the edge of the barge. Each of the drills can bore six holes from one position of the barge; the number of holes that can be bored without shifting the position of the barge thus being eighteen.

A vertical hydraulic ram, located immedi-

ately back of the drill frames, will raise and lower each drill. These rams will have a capacity of 5,000 pounds, and will make a total free lift of 10 feet. A duplex, double-acting, hydraulic pump will supply water for working each ram, the capacity to be sufficient to lift the drill, with its ordinary load of 2,500 pounds, 10 feet in not more than 15 seconds. A recess will be made near each corner of the hull for timber spuds, 24 inches square and 60 feet long. These spuds will be operated by a compact reversible engine, designed to lift each spud by two pinions, acting in racking on opposite faces.

By the aid of this machine holes will be drilled in the rock to a depth of 50 feet, which is 5 feet below the depth required on the Pacific level of the Canal, and the rock will then be broken by dynamite into pieces small enough to be handled by dipper or ladder dredges.

The Lobnitz subaqueous rock breaker, which is on the ways, was shipped knocked down, from Renfrew, Scotland. The barge is of steel, 100 by 28 by 8 feet, with a recess in one end through which the ram or rock breaker works. The method of operation is to raise the heavy ram a given distance above the surface of the rock to be crushed and let it fall, much as a pile driver works. The ram is raised and dropped until the rock on which it is operating is penetrated to the required depth when the barge is moved to another spot and the operation repeated. The rams are 50 feet long, made of forged steel, and weigh 15 tons. On the lower end is fitted a point made of specially hardened steel. In certain kinds of rock the breaker has proved very successful, pulverizing it so well that it has been handled by dredges more rapidly than rock broken by blasting. The Lobnitz machine will supplement the work done by the rock drill barge and blasting.

## Empire Club House.

The duckpin tournament, that has been running for some six or eight weeks, closed on last Friday evening. The winners of the tournament will be published as soon as the committee turns in the report of the standings.

The Isthmian championship tenpin bowling tournament will be rolled on the Empire alleys Thanksgiving Day. Full particulars will be published later.

The Gorgona Dramatic Club will give the play "A Fisherman's Luck" in the Empire Y. M. C. A. hall on Wednesday evening, September 16. The Empire members welcome the club to Empire.

## OFFICIAL CIRCULAR.

## Lands Expropriated for Lakes.

CIRCULAR No. 47.

The following account is hereby created under General Account No. 1, "Classified Expenditures": 620. *Lands Expropriated for Lakes in Connection with Lock Canal.*

To this account will be charged all payments for lands acquired by the Commission which are to be flooded, including all expenses in connection with their purchase or expropriation.

EDWARD J. WILLIAMS,  
Disbursing Officer.

Approved:

GEO. W. GOETHALS  
Chairman.

Empire, C. Z., September 14, 1908.

## Misdirected Letters.

Division of Dead Letters.

Ancon, C. Z., September 16, 1908.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Ackley, Norman C.	Harding, C.
Clark, W. D.	Mahon, John
Cummings, Leraime	Runde, Richard
Dodge, Graham G.	Smallwood, W. P.
Drake, C. B.	Van Order, Capt. George
Fischer, Chas. J.	Valley, Alfred
Fitzgerald, James	Williams, Clarence
Hammer, H. H.	

## Concerts by the I. C. C. Band.

## LAS CASCADAS

Sunday, September 20, 1908, at 2.30 p. m.:

## PROGRAM.

| CHAS. E. JENNINGS, Musical Director.                   |            |

A concert will be given at the Hotel Tivoli, Sunday evening, October 4.

## STATEMENT OF CLASSIFIED EXPENDITURES TO JULY 31, 1908.

The following table shows expenditures for Canal work, classified monthly, since July 1, 1907. The figures give only expenditures which have been located. In addition, there have been some disbursements, such as purchasing material, etc., which it will not be possible to locate to a specified account until their use has been finally determined:

Period.	Civil Administration.	Sanitation	Construction and Engineering.	Municipal Improvements.	Plant Account.	Total.
Prior to July 1, 1907, .....	\$1,443,266.65	\$4,619,800.61	\$13,433,745.05	\$4,277,160.18	\$19,451,579.11	\$43,224,551.60

## COMMISSARY DEPARTMENT.

## COMMISSARY PRICES

For week beginning September 15:

## FRESH MEATS, POULTRY AND COLD MEATS.

	Price.
Beef—Sirloin roast.....per lb	30
Rump roast.....per lb	30
Porterhouse.....per lb	30
Rib-roast, short cut (not under 3½ pounds).....per lb	24
Rib-roast, second cut (not under 3 pounds).....per lb	20
Chuck-roast (not under 3 pounds).....per lb	15
Soup.....per lb	9
Stew.....per lb	12
Corned.....per lb, 12, 14, 16	4
Suet.....per lb	4
Steaks—Sirloin.....per lb	30
Porterhouse.....per lb	30
Rump.....per lb	30
Tenderloin.....per lb	30
Round.....per lb	24
Veal—Cutlets.....per lb	24
Short-cut chops.....per lb	24
Loins.....per lb	23
Entire forequarter (15 to 20 lbs).....per lb	11
For stewing.....per lb	11
Mutton—Entire forequarter (not under 10 pounds).....per lb	9
Short-cut chops.....per lb	20
Leg (8 to 10 pounds).....per lb	18
Lamb—For stewing.....per lb	10
Entire forequarter.....per lb	10
Chops.....per lb	30
Pork—Cuts.....per lb	20
Livers—Beef.....per lb	11
Sausage—Pork.....per lb	16
Sweet bread—Veal.....each	1.20
Beef.....each	25
Ox tongues.....each	90
Eggs, fresh.....dozen	34
Chickens—Dressed (milk-fed).....each	1.40
Large.....each	1.65
Capons.....each	2.40
Broilers.....each	60
Fowls, medium and large.....each, 80c, and 1.00	
Ducks, fatted (fancy).....each	1.10
Suckling pigs.....each	4.90
Turkeys.....per lb	30
Squabs.....each	45
Bacon—Strips.....per lb	23
English, breakfast sliced.....per lb	\$26
Ham—Sugar-cured, sliced.....per lb	\$25
One-half, for boiling.....per lb	\$20
Westphalia.....per lb	45
Ferris.....per lb	19
Beef, salt, family.....per lb	16
Salt pork.....per lb	13

## DAIRY PRODUCTS.

Butter—Prints, prime quality.....per lb	33
Cheese—Roquefort.....per lb	45
Neufchatel.....each	6
Young America.....per lb	22
Swiss.....per lb	33
Gouda.....per lb	34
Edam.....each	1.05
Camembert.....per lb	28
McLaren's.....jar	15
Piuxter's.....tin	22
French cheese in tins—Camembert, Roquefort, Brie, Neufchatel.....tin	20
Buttermilk.....quart	15

## VEGETABLES AND FRUITS.

Tomatoes.....per lb	6
Lettuce.....per lb	14
Cauliflower.....per lb	10
White potatoes.....per lb	3½
Sweet potatoes.....per lb	2½
Cabbage.....per lb	4
Onions.....per lb	3½
Cucumbers.....per lb	6
Turnips.....per lb	3
Beets.....per lb	3
Squash (summer).....per lb	3
Lima beans.....per lb	8
Celery.....bunch	15
Limes.....hundred	40
Lemons.....dozen	18
Oranges.....dozen	18
Grapefruit.....each	3
Cantaloupes.....each	10
Watermelons.....each	35
Grapes.....per lb	10
Apples.....per lb	5
Peaches.....per lb	15

§ Sold only from cold-storage and not from Commissaries.

## Tug Service Porto Bello and Nombre de Dios.

Effective, August 6, 1908: The following is the schedule for tug service between Cristobal, Porto Bello and Nombre de Dios:

Sunday: Leave Cristobal 6.30 p. m. for Porto Bello only; returning same day.

Monday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Tuesday: Leave Cristobal after Train 2 without tow, for Porto Bello only; returning, leave Porto Bello 2.15 p. m., without tow.

Wednesday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Friday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Saturday: Leave Cristobal after Train 2 for Porto Bello only; returning, leave Porto Bello 5.30 p. m.

Vessels arriving at and departing from the Port of Ancon during the week ending September 11 were: Arrivals—September 5, *Panama*, from Valparaiso; September 8, *San Jose*, from San Francisco; September 11, *Ecuador*, from Buenaventura.

Departures—September 8, *Aysen*, to Valparaiso; September 8, *Newport*, to San Francisco.

## LEGAL NOTICE.

United States }  
of America }  
Canal Zone. } In the First Judicial Circuit.

George Blake, Jaumein, died intestate July 15, 1907, leaving an estate, consisting of three houses in Pedro Miguel. The claimants for the estate have not proved that they are the legitimate heirs of the decedent, and the Collector of Revenues has filed a petition for escheat under Sections 779-781 of the Code of Civil Procedure.

Notice is hereby given to all concerned to appear at the court house in Ancon on October 5, 1908, at 9 o'clock a. m., to establish their claims to the said estate, or to show cause why the same should not escheat to the Canal Zone.

WALTER EMERY,  
Circuit Court Clerk.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's line, the Panama Railroad Company's dates being subject to change:

FROM COLON TO NEW ORLEANS VIA KINGSTON.

Tampican.....Leyland Line, Sunday.....Sept. 20

William Cliff.....Leyland Line, Tuesday.....Sept. 29

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 11 a. m., and from Colon at 1.30 p. m., via Port Limon, for New Orleans. In addition to the above, the United Fruit Company dispatches a steamer about every ten days from Colon, via Bocas del Toro, for New Orleans.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

### THE CANAL RECORD

Ancon, Canal Zone,

Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

## NOTES OF PROGRESS.

### Changes in Organization.

Official circulars published on other pages of this issue of THE CANAL RECORD, give the details of the assignment to duty of Commissioners Hodges and Rousseau, the appointment of Mr. S. B. Williamson, as Division Engineer of the Pacific Division, the division of work in the office of the Chairman and Chief Engineer, and the reorganization of property accounting.

### Chairman's Monthly Report.

The report of the Chairman of the Isthmian Canal Commission for August is published in other columns of this issue of THE CANAL RECORD. The work of reorganization was continued. A summary of the construction work done by the three construction divisions shows that the material excavated in August amounted to 3,318,691 cubic yards, of which 1,375,991 were taken from the Canal prism. Rock drilling to the amount of 312,326.60 feet was done; 19.58 miles of new track were laid, and 358.82 tons of explosives were used. The average number of laborers employed daily was 13,284. The rainfall in the Atlantic Division was 16.22 inches; Central Division 8.11 inches, and Pacific Division, 9.89 inches.

In the Atlantic Division there were removed on the Gatun Lock site and site of the Gatun Dam spillway 190,262 cubic yards; by dredges in Limon Bay, 638,217 cubic yards from the Canal prism; by a dredge at the site of the Gatun handling docks, 51,505 cubic yards, and by steam shovels at Mindi, 16,309 cubic yards. At Gatun Dam 26,953 cubic yards of material from the Locks' site were dumped in the Dam, 35,100 cubic yards of Bas Obispo rock were placed on the south toe, and 41,060 cubic yards of excavation from the spillway were dumped on the north toe.

The excavation in the Central Division amounted to 1,540,610 cubic yards, 1,010,457

cubic yards of which were rock. In the same territory in August, 1907, 783,173 cubic yards were removed. In August, 1907, however, the average number of steam shovels at work during the month was 39.90, while in August, 1908, the average number at work was 52.58. The rainfall in August, 1907, was about 3.13 inches greater than in the same month in 1908. The output per shovel per day was nearly 54 per cent greater than in the corresponding month in 1907.

In the Pacific Division, on the lock site at Pedro Miguel 22,217 cubic yards of material were excavated, and from the lock site at Miraflores 91,440 cubic yards. The excavation from the site of the Miraflores Dam amounted to 2,808 cubic yards, and from the prism at Cardenas Hill 17,667 cubic yards.

The dredging at La Boca amounted to 737,774 cubic yards. A force was engaged in cleaning the line of the Canal between La Boca and Miraflores. Borings are in progress to determine accurately the amount and character of the excavation between Miraflores and La Boca. A survey of the dredged channel was completed, and shows that the monthly estimates for dredging have been about 7.3 per cent greater than the amount determined by the survey. This difference is believed to be due largely to a refilling of the channel by cross currents.

In the Mechanical Division the work of installing fuel oil burning apparatus made satisfactory progress.

On the relocation of the Panama railroad 32,315 cubic yards of earth were excavated, and 75,462 cubic yards were placed in embankments. One thousand four hundred and thirty-three linear feet of permanent track were laid, making the total to date 40,745 feet.

Health conditions continued satisfactory during August.

### Miraflores Tunnel.

A retaining wall ten feet wide at the bottom and running down to four feet below the lowest point excavated has been built at the south portal of the Miraflores tunnel for the purpose of stopping the slide which has been threatening to close up the south entrance. The wall is 100 feet long and so located that it will become one side of the tunnel, which will thus be lengthened 100 feet. It is built of concrete reinforced with Ransom bars.

The slide, which was described in THE CANAL RECORD of August 12, has been moving southward from one-fourth inch to one-half inch every day during the last two weeks. It is believed that the retaining wall will check it sufficiently to prevent serious rupture of the timber lining in the earth section until the dry season, when the slide will probably stop of its own accord. The tunnel through the earth section will

then be enlarged to permit the construction of a sufficiently heavy concrete lining.

The work of putting concrete lining in the rock section, which is the northern two-thirds of the tunnel, is progressing rapidly, 125 linear feet having been completed up to September 12.

### Sending Money Home.

More money was sent to the United States from the Canal Zone in the form of money orders during August than in any month since the American occupation, the amount being \$328,786.38. The total amount of orders issued was \$448,218.75, of which orders payable in the Canal Zone amounted to \$119,432.37.

The largest previous month's business in money orders was in April, 1908, when \$445,981.26 worth was issued, of which \$320,750.36 was payable in the United States. All the orders payable in the United States were not destined for that country, because the European business is transacted through the New York post-office, but by far the greater amount of money sent in this way remains in the United States. The number of orders issued was 14,126, and the average value of each order was thus \$31.73. The fees collected amounted to \$1,822.06. The amount paid and repaid was \$116,932.43, and the total volume of the money order business was \$566,937.24.

In Cristobal, with a population of 3,558, there were issued 2,682 orders, amounting to \$87,698.49, an average of \$24.65 for each person. Of the total issued in Cristobal all but \$8,987.80 was payable in the United States. At Empire orders to the amount of \$59,209.34 were issued, all but \$16,534.62 of which were payable in the United States, the average amount per person being \$11.52. From Culebra orders amounting to \$40,301.36 were sent, the average per person being \$7.31. At Gorgona the orders amounted to \$49,482.58, the average per person being \$17.99. The average for the Zone was \$8.96 per person.

### Records for 70-ton Shovels.

The highest record yet made by a shovel in the 70-ton class was made in the month of August by shovel 102, which excavated 43,694 cubic yards of rock and 1,820 cubic yards of earth, a total of 45,514 cubic yards, from the Lock site at Gatun. The best record in the Central Division for shovels of this class was made in August by shovel 115, working at San Pablo, which took out 22,028 cubic yards of earth and 20,333 cubic yards of rock, a total of 42,361 cubic yards. Both of these shovels worked 26 days.

### Trial by Jury.

A reprieve of ninety days has been granted Joaquin Segrera, who was sentenced to be hanged on September 18, for the murder of

## NOTES OF PROGRESS.

(Continued)

Enrique Vega, near Matachin, on December 13, 1907. The reprieve is based entirely on the fact that Segrera was tried under section 171 of the Code of Criminal Procedure of the Canal Zone, by three judges, after motion for a jury trial had been denied him. The case of Adolphus Coulson, who was tried in the same way and sentenced to death, is now before the Supreme Court of the United States, on a writ of error involving the right to trial by jury of persons in the Canal Zone, who are charged with murder. Pending decision on this point, execution has been suspended. This point of trial by jury, it should be understood, is raised only with regard to capital crimes committed prior to February 6, 1908, on which date the President issued an order granting a trial by jury in all such cases.

## Draining Black Swamp.

Although the Black Swamp, where the Panama railroad crosses it at Ahorca Lagarto, is only 1,500 feet from the Chagres River by a direct line, the swamp is prevented from being drained directly by a ridge which rises abruptly between it and the river to a height of from fifteen to twenty feet.

Formerly the water which collects in this swamp flowed eastward under the railroad tracks to a shallow lake of large area, and finally drained back under the track and ran into the Chagres river at Bridges 26 and 27. From the point where Bridge 29 crosses the swamp to where the water flowed out at Bridge 26 it is four and one-half miles by

the water course, although only two miles by the railroad. At Bridge 29 the elevation of the swamp is 20 feet above sea-level, and at Bridge 28, one mile south of Lion Hill and three-quarters of a mile from Bridge 29, the elevation is 16 feet.

In order to shorten the distance and to facilitate the movement of the water a drainage ditch has been dug from Bridge 29 to Bridge 28 by a circuitous route, which makes the length of the ditch one and three-quarter miles. The water thus has three miles less distance than formerly to flow in order to reach the Chagres River. The channel was completed on September 8, and already the surface of the water has been lowered one and one-half feet. This relieves the swamp of an immense weight of water and will give greater security to the Panama railroad tracks. It is thought that by keeping the new ditch free of vegetation the flow will not be impeded, and the water may be lowered one foot more. To this end a flatboat is kept plying through the ditch, removing such obstructions as grow there, or float into it.

In digging this ditch two parties were sent out in flatboats, six men in a boat, one party beginning its work at Bridge 29 and the other at Bridge 28. It was necessary to cut through several ridges and to skirt the foot of one hill. The work included not only the excavation of a channel, but also the cutting of a way through the thick swamp growth. As it was impossible to run a line, the route was determined largely by the parties keeping in touch by shooting, and by shouting to one another. Each party aver-

aged 100 feet a day throughout the mile and a quarter of machete work and excavating.

The railway track through the swamp has always caused trouble in the wet season by settling, but on July 30, 1907, under the increased number of trains, and the additional weight of the fill for the second track, the settlement was the worst on record. Three hundred feet of double track embankment, with both tracks, sinking about twelve feet. Two pile drivers were used to drive a trestle across the break, and traffic was resumed on the morning of August 1, forty-two hours after the trouble occurred. On September 20 following, two hundred feet more of the track settled in the same manner immediately south of the first break, and was replaced with trestle after forty hour's interruption of traffic. This trestle, 500 feet long, known as Bridge 28½, has held up well, and has given no sign of weakness, but during the early part of the present wet season the embankment carrying the second main track settled considerably, farther south, for about 500 feet each side of Bridge 29. It was decided that, rather than to impose additional weight upon the swamp by placing ballast to raise this track, it would be advisable to operate a gauntlet over this stretch similar to that operated across Barbacoas Bridge, trains being controlled by automatic electric signals. This gauntlet track was completed and put into service on September 3.

While it is thought prudent to limit the speed of the trains to very slow movement across the Black Swamp, there is no danger to the safety of passengers.

## Stages of the Chagres.

Maximum height of Chagres above low water for the week ending midnight, September 19, 1908:

## LABOR FORCE AND QUARTERS.

The report of the Chief Quartermaster shows that there was a surplus of labor during the month of August, and that it became very difficult to place the incoming laborers. All recruiting has been suspended until further notice, and the services of one of the two labor agents, who have been operating in the West Indies, have been dispensed with, leaving only three labor agents in the employ of the Commission; one in the United States, one in Europe, and one in the West Indies. The total gold force at the end of August was 4,396, as compared with 4,477 at the end of July; there were 252 additions to the gold roll and 330 separations. The silver force increased in August, from 21,049 to 21,486; 616 contract laborers were received during the month, of whom 296 were West Indians and 320 were Europeans.

Commission quarters to the number of 1,296 were occupied by families of gold employes, while 3,433 gold employes occupied bachelor quarters. One thousand and thirty nine married quarters were occupied by West Indian laborers, while 7,363 West Indians occupied bachelor quarters. European laborers and their families occupied 318 married quarters, and bachelor quarters were occupied by 5,561 European laborers. At the end of August applications for family quarters for employes who entered the service after January 1, 1908, were on file, as follows: Cristobal, 60; Gatun, 21; Tabernilla, 1; Gorgona, 53; San Pablo, 8; Bas Obispo, 3; Las Cascadas, 14; Empire, 33; Culebra, none, all assigned; Paraiso, 6; Pedro Miguel, 11; Corozal, 13; Ancon, 15; La Boca, 20.

A statement of the force actually at work on August 31, 1908, follows:

## OFFICIAL CIRCULARS.

**Acting Chairman and Chief Engineer.**

CIRCULAR No. 208.

Lieut.-Col. H. F. Hodges will be in charge of the work as Acting Chairman and Chief Engineer during my absence. Effective September 22, 1908.

GEO. W. GOETHALS.

*Chairman and Chief Engineer.*

Culebra, September 21, 1908.

**Assignments to Duty.**

CIRCULAR No. 183 I.

Lieut.-Col. H. F. Hodges, Corps of Engineers, U. S. Army, is assigned to duty as Assistant Chief Engineer.

Civil Engineer H. H. Rousseau, U. S. Navy, is assigned to duty as Assistant to the Chief Engineer.

Mr. S. B. Williamson is appointed Division Engineer of the Pacific Division.

GEO. W. GOETHALS.

*Chairman and Chief Engineer.*

Culebra, C. Z., September 16, 1908.

**Division of Work—Office of the Chairman and Chief Engineer.**

CIRCULAR No. 183 J.

For the transaction of business in the Department of Construction and Engineering, the following divisions of the office are designated:

*First Division*, under Lieut.-Col. H. F. Hodges, U. S. Army, Assistant Chief Engineer: He will have charge of the design of locks, dams, regulating works and their accessories; and the forces engaged on such designs, including the mechanical and electrical engineer, will report to him direct. All papers relating to those works, including projects from division engineers, requisitions, specifications, bids, etc., for plant and material to be used in construction, will be referred to him for consideration and comment. He will exercise general supervision over the engineering work, and over the forces engaged thereon, with a view to securing uniform rates of pay for similar duties in the various construction divisions.

*Second Division*, under Civil Engineer H. H. Rousseau, U. S. Navy, Assistant to the Chief Engineer: He will exercise supervision over the Division of Motive Power and Machinery, and will have charge of—

1. Office drafting force, including the office engineer and the architect.
2. The preparation of estimates, of allotments of appropriated funds, and of statements of funds available.
3. The preparation and compilation of cost keeping and technical data.

All papers relating to the various machine shops of the Commission, including manufacturing orders, requisitions, specifications, bids, etc., to Building Construction and to Municipal Engineering will be referred to him for consideration and comment. In order to secure a uniform wage scale, all applications for authority for promotions and employments in the various machine shops will be referred to him for action.

*Third Division*, under Mr. C. M. Saville, Assistant Engineer: He will have charge of all matters referring to general surveys not properly belonging to any one division; of the collection and compilation of all data connected with meteorology and river hydraulics, and of such investigations, tests and experiments as may be assigned to him.

*Fourth Division*, under Mr. M. B. DePatron, Assistant to the Chairman: In addition to his other duties, he will have charge of the personnel records of the Commission and the Panama Railroad Commissary, and will act on all applications for leave of absence, sick leave, etc., and, except as designated elsewhere, on all applications for promotions and appointments, to see that such comply with the authorized positions and rates of pay. He will also exercise supervision over the clerical organizations on the Isthmus, with a view to securing uniformity in pay for similar clerical work.

All communications will be addressed to the Chief Engineer. The Chief Clerk, in addition to his other duties, will receive all official mail and, after having it recorded, will distribute it to the various assistants as outlined above.

The assistants will send direct to the Chief Engineer for final action all papers referred to them for consideration and comment.

GEO. W. GOETHALS.

*Chairman and Chief Engineer.*

Culebra, C. Z., September 18, 1908.

**Division of Meteorology and River Hydraulics.**

CIRCULAR No. 204.

During the absence on leave of Mr. Ricardo M. Arango, and until further notice, Civil Engineer H.

H. Rousseau, Assistant to the Chief Engineer, will perform the duties of Division Engineer of the Division of Meteorology and River Hydraulics.

GEO. W. GOETHALS.

*Chairman and Chief Engineer.*

Culebra, September 17, 1908.

**Headquarters of Subsistence Department.**

CIRCULAR No. 201.

The headquarters of the Subsistence Department of the Isthmian Canal Commission will, on September 16, 1908, be moved from Culebra, C. Z., to Cristobal, C. Z.

Hereafter all bills receivable, bills payable, and other correspondence pertaining to the Commissary Department, Panama Railroad, will be sent direct to the Subsistence Officer, Cristobal, Canal Zone.

GEO. W. GOETHALS.

*Chairman and Chief Engineer.*

Culebra, C. Z., September 15, 1908.

**Acting Division Engineer, Atlantic Division.**

CIRCULAR No. 207.

Maj. Chester Harding will, on his return from leave of absence, perform the duties of Acting Division Engineer of the Atlantic Division during the absence on leave of Maj. Wm. L. Sibert.

GEO. W. GOETHALS.

*Chairman and Chief Engineer.*

Culebra, September 21, 1908.

CIRCULAR.

During my absence on leave in the States Maj. J. P. Jervey will act as Division Engineer until the return of Maj. Chester Harding, Assistant Division Engineer, who, upon reporting for duty, will assume the duties and title of Acting Division Engineer.

WM. L. SIBERT.

*Division Engineer.*

Gatun, C. Z., September 17, 1908.

**Purchasing Agent on the Isthmus.**

CIRCULAR No. 205.

Effective this date: Capt. Courtland Nixon is appointed Purchasing Agent on the Isthmus, in addition to the other duties assigned him by the Chief Quartermaster.

GEO. W. GOETHALS.

*Chairman.*

Culebra, September 19, 1908.

**Acting Claim Officer.**

CIRCULAR No. 209.

During the absence on leave of Mr. Benj. L. Jacobson, effective September 23, 1908, Mr. Frank X. Ward will perform the duties of Claim Officer.

GEO. W. GOETHALS.

*Chairman.*

Culebra, September 21, 1908.

**Manufacture in Shops to Be Reduced.**

CIRCULAR No. 206.

For reasons of economy it is desired to reduce the manufacture of repair parts, castings, and other similar material, in the Commission shops on the Isthmus, to a minimum, and to make purchases in the United States whenever the necessities of the work will permit, exception being made only in cases where the circumstances clearly indicate the economy of doing the work on the Isthmus. Future needs should be anticipated as much as possible, and requests should be made on the Quartermaster's Department to keep up the stock of all articles regularly needed, the aim being to secure the greatest economy practicable.

Each department and division should exercise close supervision over its own manufacturing work in order to see whether same can be reduced. For manufacturing requests between departments and divisions, on Form No. 159, it shall be the duty of the department or division receiving such manufacturing request to make comparison of estimate of cost of manufacture on the Isthmus with cost of purchase in the United States, and, in cases where there is a material difference in favor of the latter procedure, to notify the department or division requesting the work of the results of this comparison, sending a copy of same to the Chief Engineer's office. Upon receipt of this information such action on the lines of economy will be taken by the department or division issuing the request as the circumstances indicate.

GEO. W. GOETHALS.

*Chairman and Chief Engineer.*

Culebra, September 18, 1908.

**Acting Surveying Officer.**

CIRCULAR No. 202.

Mr. H. S. Farish is appointed acting surveying officer, effective this date.

GEO. W. GOETHALS.

*Chairman.*

Culebra, C. Z., September 15, 1908.

**Local Purchases by Subsistence Officer**

CIRCULAR No. 203.

Subject to the approval of the Commission, Maj. Eugene T. Wilson, Subsistence Officer, is authorized to make daily local purchases for the hotels and mess houses in the open market without advertising, such purchases, singly, or in any one day, in no instance to exceed \$500 in value.

GEO. W. GOETHALS.

*Chairman.*

Culebra, C. Z., September 17, 1908.

**Acting Executive Secretary.**

CIRCULAR No. 80.

During the absence on leave of Mr. H. D. Reed, Executive Secretary, Mr. George A. Ninas is designated as Acting Executive Secretary.

JO C. S. BLACKBURN.

*Head of Department of Civil Administration.*

Ancon, September 18, 1908.

Approved:

GEO. W. GOETHALS.

*Chairman of the Commission.***Mail for Quartermaster's Department**

HEADS OF DEPARTMENTS AND DIVISIONS:

Effective September 16: Please send all mail formerly addressed to the Chief of Division of Material and Supplies, and latterly to the Assistant Chief Quartermaster, Cristobal, as follows:

Address all general correspondence relative to material to the Chief Quartermaster, Culebra.

All inquiries regarding material on order in the United States should be addressed to the Chief Quartermaster, Culebra.

Send all accomplished inspection calls and correspondence relating thereto to the Chief Quartermaster, Culebra.

Send all States' requisitions to Chief Quartermaster, Culebra.

Send all requisitions to be filled from stock at Mount Hope to the Depot Quartermaster, Mount Hope, and address all inquiries concerning such deliveries to the same place.

Return store invoices issued by the office of the Assistant Chief Quartermaster, Cristobal, to the Depot Quartermaster, Mount Hope, and so address all correspondence pertaining thereto.

Storekeepers will return all accomplished store invoices to the Depot Quartermaster, Cristobal.

Respectfully,

C. A. DEVOL.

*Chief Quartermaster.*

Culebra, C. Z., September 15, 1908.

**Personal.**

Lieut.-Col. Geo. W. Goethals sailed on the United Fruit steamer *Cartago* for New Orleans on Tuesday, September 22, for a visit of six weeks to the States.

Commissioner William L. Sibert sailed for the States on the *Esperanza*, September 18, on his regular leave of absence.

**Steamship Colon.**

The steamship *Colon* of the Panama Railway Steamship Line, arrived at Cristobal on Friday, September 18, two days late. She encountered a hurricane north of Watlings Island on Sunday, September 12, which continued for 30 hours. She lost one of her smokestacks, three life boats, and suffered other damage to her superstructure. Three seamen were asphyxiated by ammonia gas while making repairs to the cold storage plant. All necessary repairs were made in time for her to sail for the States on her scheduled time to-day.

Rev. Henry Collins, Commission chaplain, will speak in the Roman Catholic church at Gorgona at 9.30 o'clock Sunday morning, September 27, in the interest of the church of the Holy Redeemer, Culebra.

The regular dance of the Tivoli Club will be held at the Hotel Tivoli September 26.

## CANAL WORK FOR AUGUST.

Monthly Report of the Chairman to the Secretary of War.

Culebra, September 17, 1908.

The Honorable,

The Secretary of War,  
Washington, D. C.

Sir: I have the honor to submit the following report of operations on the Isthmus for the month of August, 1908:

The work of reorganization, as outlined in my report for July was continued. Effective August 1, the Division of Building Construction and the Division of Municipal Engineering were abolished, and the duties formerly performed by the divisions were assigned to the Atlantic, Central and Pacific Divisions in their respective territories.

Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central and Pacific Divisions during the month:

Item.	Unit.	Atlantic.	Central.	Pacific.	Total.
Steam shovel excavation—					
In prism.	cubic yards	204,571	1,499,963	129,945	1,834,479
Auxiliary.	cubic yards	3,318	40,647	2,808	46,773
Total.	cubic yards	207,889	1,540,610	132,753	1,881,252
Dredge excavation—					
In prism.	cubic yards	638,217		737,774	1,375,991
Auxiliary.	cubic yards	61,448			61,448
Total.	cubic yards	699,665			1,437,439
Total excavation.	cubic yards	907,554	1,540,610	870,527	3,318,691
Explosives used.	tons (2,240 lbs.)	30.61			38.82
Drilling.	feet	57,931.	322.21	6.00	358.22
Track removed.	miles		247.079	7.316.60	312.326.60
New track laid.	miles		7.07		7.07
Material placed in dams.	cubic yards	1.53	13.75		19.58
Rock crushed.	cubic yards	64,109.			64,109.
Cement used.	barrels		16,321.	950.	17,271.
Concrete placed.	cubic yards			97.	97.
New roads built.	miles		.38		110.
Water mains laid.	feet		4,241.	286.	4,527.
Open drains and ditches dug.	feet		1,513.	8,000.	9,513.
Sewers laid.	feet		8,110.	362.	1,875.
Daily average number of laborers.		2,378.		2,796.	13,284.
Rainfall.	inches	16.22	8.11	9.89	

## Atlantic Division.

## GATUN LOCKS.

Four steam shovels were at work on the Lock site during the month, and a total of 132,263 cubic yards of material were excavated. Of this material, 26,953 cubic yards were dumped in the Dam and 105,213 cubic yards outside of the Dam.

The position of the power house has been staked out, and the necessary triangulation work has been completed for locating the cement house dock.

## GATUN DAM.

Dredge No. 82 removed during the month from the channel way to the handling plant docks, 51,505 cubic yards. Thirty-five thousand one hundred cubic yards of Bas Obispo rock were placed on the south toe of the

Dam, and 41,060 cubic yards of material from the spillway were dumped on the north toe of the Dam.

## SPILLWAY.

Three steam shovels worked throughout the month on the spillway, and a total of 57,999 cubic yards was excavated.

## MINDI.

A total of 16,309 cubic yards was excavated from the Canal prism by the one steam shovel working there.

Five hundred and nineteen Oliver dump cars and 563 Western dump cars of material excavated from Mendi were dumped on the south toe of the Dam.

## PORTO BELLO.

Work was actively and satisfactorily carried on in preparation for the installation of the rock crushing and shipping plant.

## NOMBRE DE DIOS.

The investigations and surveys of sand deposits were completed and camp broken August 21.

## DREDGES.

Five dredges were at work during the month and excavated a total of 638,217 cubic yards.

## CRISTOBAL.

At the machine shop and drydock the usual general work was accomplished, including miscellaneous repairs to dredges, tugs and clapets. The installation of machinery in 20-inch pipe-line dredge No. 85 was 95 per cent completed at the end of the month. Work was completed riveting the hull of the stern wheel towboat, and all of the material on hand was erected.

The parties engaged in dismantling the old French dredges near Frijoles progressed rapidly during the month and the dredges are prepared to come out at the first high water.

## MUNICIPAL ENGINEERING.

One thousand four hundred feet of the Mount Hope-Gatun road, from the fire station at Gatun toward New Gatun, were macadamized during the month.

Other work, consisting of the maintenance of roads, installation of sewers and water pipes, was accomplished during the month.

## BUILDING CONSTRUCTION.

Twenty-one houses at Gatun, including the hotel, were screened during the month.

One type 14 house was completed, two more are 90 per cent completed, and three are 30 per cent completed.

The powder house at Mendi was completed, and work on the storage magazine at Mendi Hills was about 70 per cent completed. Work on this magazine is expected to be finished by September 25.

At Cristobal, six washhouses and closets at Folks River were completed. House No. 3 at Cristobal was demolished preparatory to the erection of a new house. Two type 14 houses are 85 per cent completed.

The storehouse for the Quartermaster's Department is 90 per cent completed, and the Cristobal jail is 85 per cent completed.

## Central Division.

During the month of August, the total amount of material excavated in the Central Division was 1,540,610 cubic yards, of which 530,153 cubic yards were classified as earth and 1,010,457 cubic yards as rock.

Of this quantity 1,534,498 cubic yards were

removed by steam shovels and 6,112 cubic yards from the quarry at the Bas Obispo rock crusher by hand.

The quantity of material removed from the Canal prism was 1,499,963 cubic yards, and in addition 38,774 cubic yards were removed from the Obispo Diversion and 1,873 cubic yards from new incline in Gorgona district.

The daily average number of steam shovels at work during the month was the same as for the month of July. The average number of steam shovels days was also the same.

For comparison with work done during the corresponding month of the previous year in the area embraced in the Central Division, the following table has been prepared:

Period.	Total amount of material excavated by steam shovels	Classification of material		Av. No. of steam shovels working during month	W'kg days in m'th	Av. amount excavated per steam shovel per 8-h d'y	Rainfall during month
		Rock	Earth				
1907, August.	cu. yds. 783,173	% 62	% 38	39.90	27	cu. yds. 726	ins. 11.24
1908, August.	1,534,498	66	34	52.58	26	1,123	8.11

From this table it will be noted that the amount of material excavated by steam shovels in the Central Division in August, 1908, was nearly double that removed from the same section of the Canal in August, 1907, but it should be remembered that at the latter date excavation had just been commenced in what is now the Chagres section of the Central Division, 1875 cubic yards having been excavated by steam shovels.

The average output per shovel per day was nearly 54 per cent greater in August, 1908, than in the corresponding month of the preceding year.

During the month the following drilling was accomplished.

By steam and air drills.....142,769 feet  
By well or churn drills..... 92,953 feet  
By hand drills..... 11,348 feet

A total of.....247,070 feet or 47.76 miles.

No channelers were in operation during the month.

The output of the Bas Obispo rock crusher for the month was 9,482 cubic yards, and of the Rio Grande crusher, 6,839 cubic yards.

During the month 13.75 miles of new track were laid and 7.07 miles of old track removed.

## Pacific Division.

## DISTRICT NO. 1—LOCKS AND DAMS.

**Excavation**—During the month 134,142 cubic yards of material were excavated, as follows: 22,217 cubic yards from the Pedro Miguel Lock site, 91,440 cubic yards from the Miraflores Lock site, 2,808 cubic yards from the west dam at Miraflores, and 17,666 cubic yards from the Canal prism at Cardenas Hill.

**General Remarks**—The dump west of the Pedro Miguel Lock site was extended so as to divert the Rio Grande from its natural bed through the Lock site to a channel about 800 feet west, originally excavated by the French. A dyke was also completed at the south end, in which a culvert was placed for drainage. The site is, therefore, fully protected from flood water.

Spur tracks from the main line into the Lock prism were begun and are well under

way. The object of these is to cut in two additional steam shovels.

At Miraflores, the greater portion of the material excavated was used in building embankments on both sides of the Lock site for the erection plant, forming toes for the west dam between which material will be pumped, and in building basins on the east side of the site into which the suction dredge will pump a portion of the material to be excavated.

Surveys and examinations, consisting of borings and test pits, were made at the proposed site for the power house, and the site for fuel oil tanks located and prepared.

The setting of machinery at the Cocoli shop and the erection of the power transmission line are in progress.

With the material excavated from the Canal prism at Cardenas Hill, a dyke is being built on the east side of the prism which will extend from Cardenas to Diablo, a distance of approximately 15,000 feet, and behind which the material dredged from the channel will be pumped.

#### DISTRICT NO. 2—DREDGING AND LA BOCA SHIPWAY.

**Dredging**—Three dredges have been operated during the month as follows:

Dredge	Type.	Cubic yards.		Remarks.
		In prim	Auxiliary	
Culebra	Suction	431,296	.....	Scow measurement
Gopher	Ladder	161,588	.....	Place measurement
No. 14.	Ladder	144,890	.....	Place measurement
Total.	.....	737,774	.....	

Extensive general and minor repairs were made to dredges, clapnets, barges, tugs, and other plant and equipment.

A force has been employed in clearing the line of the Canal over which the dredges will operate between La Boca and Miraflores. The amount of work accomplished during the past month is as follows: Clearing, piling, and burning brush over an area of 4,347,850 square feet; grubbing, piling and burning stumps over an area of 1,047,000 square feet; and blasting 17,100 stumps.

Borings are in progress to determine accurately the character and amount of excavation in the channel between Miraflores and La Boca.

A survey of the dredged channel was completed and the areas computed to obtain a check on the monthly progress reports. Following are the results obtained:

Summation of monthly estimates	
June 1, 1907, to September 1, 1908,	
(15 months) .....	6,548,600 cu. yds.
Estimates made from results of survey .....	6,067,752 cu. yds.

Shortage of place measurement, September 1, 1908..... 480,848 cu. yds.

The discrepancy is about 7.3 per cent, and is thought to be largely due to the refilling of the channel from cross currents, which has been previously estimated at from 600,000 to 1,000,000 cubic yards per annum. The discrepancy shown above amounts to 384,672 cubic yards per annum.

#### DISTRICT NO. 3—MUNICIPAL ENGINEERING AND BUILDINGS.

**Panama Improvements**—Work on avenue B extension was continued. The sewer and water installation and concrete curbs and gutters have been completed. At present this street is about 70 per cent completed.

The maintenance of roads, streets and sewers was continued during the month, and a number of minor items of construction

accomplished at the different stations in this division.

**Building Section**—A large amount of building work was accomplished during the month in the Pacific Division, including office buildings, quarters, mess halls, shops, and other buildings. Necessary repairs and maintenance of existing buildings were attended to.

#### MECHANICAL DIVISION.

The usual work was performed in this division in connection with the maintenance and operation of equipment, electrical work and manufacture of repair parts.

The following shows the progress made in the installation of tanks for the storage of fuel oil.

Rio Grande, 2500-bbl. tank.....	completed
Las Cascadas, secondary tank.....	33 per cent completed
Empire, 4000-bbl. tank.....	95 per cent completed
Empire, secondary tank.....	40 per cent completed
Bowling Green (Empire), 1000-bbl. tank.....	80 per cent completed
Gorgona, secondary tank.....	100 per cent completed
Miraflores, 4000-bbl. tank.....	5 per cent completed

The boiler plant at Las Cascadas air compressor is now burning fuel oil instead of coal.

#### Division of Meteorology and River Hydraulics.

The usual observations and measurements were continued during the month and no unusual meteorological conditions occurred.

#### Relocation of Panama Railroad.

#### CONNECTING TRACKS FROM OPERATED LINES.

Twelve hundred and seventy-eight linear feet of temporary track were recovered from Spur No. 2, at Gatun.

Seven hundred and forty-six linear feet of track were laid on Spur No. 7, at Caimito.

Five hundred and forty-eight linear feet of temporary track were recovered from Spur No. 15, at Gatun.

One hundred and twenty-five linear feet of trestle and 180 linear feet of temporary track were laid on Spur No 16, at south end of Miraflores tunnel.

#### GRADING.

<b>Excavation</b> —			
Total to date—		Total current month—	
Cu. yds.		Cu. yds.	
375,963 earth		22,781 earth	
69,990 loose rock		5,760 loose rock	
82,745 solid rock		3,774 solid rock	
528,698 total		32,315 total	
<b>Embankment</b> —			
Total to date—		Total current month—	
Cu. yds.		Cu. yds.	
595,974 from excavation		36,666 from excavation	
1,693,470 from Canal		38,796 from Canal	
2,289,444 total		75,462 total	

#### TRESTLES FOR FILLING.

Six hundred and ninety-five linear feet of trestle were driven from the relocated line near station 1090 opposite Mamei.

Seven hundred linear feet of trestle were driven on the relocated line near station 1190 opposite Juan Grande.

#### BRIDGES AND CULVERTS.

A 16-inch vetrifed clay pipe culvert 195 feet long was placed at station 1086—35 opposite Mamei, 18 cubic yards of concrete being used in foundation.

Thirty-two feet of galvanized iron pipe were placed at station 1195 and 142 feet of 36-inch galvanized iron pipe at station 1141—47 opposite Juan Grande, 50 cubic yards of concrete being used in foundation.

A 2 by 3 standard rail top box culvert was

placed at station 1091 opposite Mamei, 41.5 cubic yards of concrete being used.

#### MIRAFLORES TUNNEL.

One hundred and thirty cubic yards of concrete was placed in lining at north end of tunnel and 475 cubic yards of concrete at south end.

The hill has broken about 50 feet north of the crest and has moved to the south about three feet. The movement along the east side has been considerably more marked than along the west side, but the arch centers have moved more at the top than they have at either the east or west end. The movement has been more about 130 feet in from the south end than at any other place—for a stretch of 25 feet at this place the tunnel lining has moved enough to practically upset the arch centers, and the roof is supported by longitudinal pieces 12 by 12 under the key pieces of the arch, the longitudinal pieces being supported by posts. The break that shows on top is about 150 feet farther north than where the first disturbance is shown inside, indicating that the side hill is slipping on a rock surface which has a dip of about 45 degrees.

A concrete retaining wall 10 feet wide at the base and 100 feet long has been built and Bas Obispo rock back filling placed at the south end of the tunnel, at the toe of the slide, to check same. This wall is so located that it will become the east side of the tunnel lining, the tunnel being lengthened 100 feet by the building of this wall.

#### PERMANENT TRACKS.

Fourteen hundred and thirty-three linear feet of permanent track were laid this month, making a total of 40,745 feet to date.

#### GENERAL.

The force of laborers during the month averaged 894.

#### Quartermaster's Department.

There were received during the month 320 European laborers and 296 West Indians. There was a surplus of labor during the month, so that it became very difficult to place incoming laborers, and all recruiting has been ordered suspended until further notice.

The total additions to the gold force during the month were 252, and the total separations 330, so that the net separations were 78. The total gold force of the Commission at the end of August was 4,396, as compared with 4,447 at the end of July. There was a slight increase in the silver force, the total at the end of August having been 21,486, as compared with 21,049 at the end of July.

During the month of August preparations went forward for the taking over by the Quartermaster's Department of the Division of Material and Supplies, of certain work heretofore performed by the Sanitary Department, and for inaugurating a system of correct accounting for Commission property on the Isthmus. It is believed that by the end of September a practical and economical working basis will have been reached.

#### Subsistence Department.

The net profit in August for the operation of hotels and mess houses, not including the Tivoli Hotel, was \$3,889.55 as compared with a net loss in July of \$2,559.47, making a net gain over the previous month of \$6,449.02.

The operation expenses of the Hotel Tivoli

were \$19,157.21, and the revenue amounted to \$18,119.18, making a net loss of \$1,038.03.

#### Department of Civil Administration.

##### COURTS.

The Supreme Court was in session twice during the month. No criminal cases were filed. One was disposed of, and three criminal cases were pending at the end of the month.

In the circuit courts, eight civil cases and thirty-two criminal cases were heard and disposed of, and in the district courts twenty-three civil and four hundred and seventy-seven criminal cases were disposed of.

##### DIVISION OF REVENUES.

The general revenues of the Canal Zone for the month collected by this division amounted to \$11,047.11.

Thirteen vessels entered at and twelve cleared from the port of Ancon, and twenty-two vessels entered at and twenty-one cleared from the port of Cristobal.

##### DIVISION OF POLICE AND PRISONS.

During the month 488 arrests were made, as compared with 536 for July. No disturbances of a serious nature occurred during the month.

As Coroner of the Canal Zone, the Chief of Police investigated ten deaths; four of which were due to accidental drowning, two to railroad accidents and one to suicide.

##### DIVISION OF PUBLIC WORKS.

The usual business of this division was conducted during the month, including the installation of new connections, the issuance of permits for the installation of plumbing, the collection of water rents, and inspection of plumbing and sewers.

During the month 28,714,000 gallons of water were used in the city of Panama, and 27,335,671 gallons in the city of Colon.

##### DIVISION OF FIRE PROTECTION.

Seven fires were reported in the Canal Zone during the month, endangering property valued approximately \$110,500, the estimated actual loss being \$205.

##### DIVISION OF SCHOOLS.

No schools were opened during the month  
**Department of Sanitation.**

[The report in full of the Chief Sanitary Officer was published in THE CANAL RECORD of September 16.]

Respectfully,

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

##### Examination for Physician.

A local examination for the position of physician in the service of the Isthmian Canal Commission, entrance salary \$1,800 per annum, will be held October 14, 1908, at 9 a. m. in the office of the Chairman, Culebra. The Manual of Examinations, containing all necessary information and Application Form, may be obtained from the Secretary of the Isthmian Civil Service Board, office of the Chairman, Culebra, Canal Zone.

The burglar, who has been entering buildings in the Zone by cutting his way through the floors from underneath, was captured by the Canal Zone police on September 2, and on September 14 pleaded guilty in the circuit court at Ancon and was sentenced to one year in Culebra penitentiary.

All mail for the Acting Surveying Officer should be addressed in care of the Chief Quartermaster, Culebra, C. Z.

## PROPERTY ACCOUNTING.

### New Method Instituted by Quartermaster's Department.

OFFICE OF THE CHIEF QUARTERMASTER,  
ISTHMIAN CANAL COMMISSION,  
CULEBRA, CANAL ZONE, September 15, 1908.  
CIRCULAR NO. 1.

#### AUTHORITY.

Under authority of the Secretary of War, dated August 26, 1908, and in compliance with Circular No. 183H, of the Chairman of the Isthmian Canal Commission, dated August 27, 1908, the following instructions are published for the information and guidance of all concerned.

#### GENERAL INSTRUCTIONS.

1. Accountability and responsibility devolve upon any person to whom public property is entrusted and who is required to make returns therefor. Responsibility without accountability devolves upon one to whom such property is entrusted, but who is not required to make returns therefor. An accountable official is relieved from responsibility for property for which he holds a proper memorandum receipt. A responsible official is not relieved from responsibility for public property for which he has given a memorandum receipt until he has returned the property to the accountable official, or has secured memorandum receipt from his successor.

2. A transfer of public property involves a change of possession and accountability.

3. In ordinary cases of transfer, the transferring official will furnish the receiving official with combination form, invoices and receipts, which will be prepared in quintuplicate. Two invoices and two receipts will be forwarded to the receiving official, and one invoice retained by the invoicing official as a reference pending the return of receipts. The accountable official upon receipt and verification of the property will sign two receipts and return to the invoicing official, which will be his authority for dropping the property. The invoices will be retained by the official receiving the property, and will be disposed of as follows: one copy to accompany return at end of period, the other to be retained to support the official's retained papers. The receipt will be handled in a like manner by the official transferring the property. Invoice must invariably accompany property, and be forwarded the same day as property is shipped. In cases where complete transfer of property accountability occurs, and one accountable official is relieved by another, invoices and receipts will be required, but the official assuming charge will certify on his predecessor's final return that the property shown as remaining on hand has been received by him. In a case of this kind, the property shown as remaining on hand, on the return of the official being relieved, will be taken up on the return of his successor as voucher number one to his return.

4. When an official to whom property has been forwarded believes same to have miscarried he will promptly inform the shipper. If an official to whom public property has been transferred fails to receipt for it within a reasonable time, the invoicing official will report the fact to the head of his department or division. Should the matter not be adjusted prior to the semi-annual period, the invoicing official will take credit on his return and forward certified copies of all papers relating to the transaction, in support of the entry.

5. On receipt of public property by an official he will make a careful examination to ascertain its quality and condition. Should he discover defect or shortage he will apply for a survey to determine it and fix the responsibility. Should he consider the property unfit for use, he will submit a list of the property, in triplicate, on the prescribed form and request the action of a surveying official. The same rule will be observed in regard to property damaged or missing while in store.

6. The giving or taking of receipts in blank for public property is prohibited.

7. Public property will not be used, under any circumstances, for any private purpose whatsoever, unless so authorized by special authority from the Chairman and Chief Engineer.

8. Public property condemned and ordered sold will be disposed of for cash at auction, or to the highest bidder on sealed proposals, on due public notice, and in such market as the public interest may require. The official making the sale will suspend it when in his opinion better prices may be obtained. The auctioneer's certified detailed account of the sale, and the vouchers for the expenses attending it, will be reported on proper forms to the head of the department or division to which the property pertains, who will transmit the same to the Disbursing Officer. Two copies of the detailed account of the sale will be retained by the official accountable for the property sold; one copy will be forwarded with his return at the end of the period, the other will be filed with his retained return. All funds accruing from such sales will be immediately forwarded to the Disbursing Officer, accompanied by a statement showing date of the sale.

9. Public property which has been condemned, or the sale price of which has been reduced as the result of a survey or inspection, will not be purchased by any official who was responsible therefor at the time of the condemnation or reduction of price, nor by an official who bore any part in any such condemnation or reduction.

10. If any article of public property be lost or damaged by the neglect or fault of any employee, he shall

pay the value thereof, or the cost of repairs at such rates as may be determined by a survey of the property. If articles of public property are embezzled, or lost, or damaged through neglect, by an employee, the value of the damage as ascertained (and by a survey if necessary) shall be charged to him and set against any pay or money due him.

11. When information is received that property of the Isthmian Canal Commission is unlawfully in the possession of any person whomsoever, the Quartermaster or other proper official will promptly cause proceedings to be instituted and diligently prosecuted in the courts of the Canal Zone for the recovery of the property, and if the same has been stolen, for the arrest, trial, conviction and due punishment of the offender and his accomplices. Upon satisfactory information that such Isthmian Canal Commission property is unlawfully in the possession of any parties, is likely to be taken away, concealed, or otherwise disposed of before the necessary proceedings can be had in the courts of the Canal Zone for its recovery, any accountable official having knowledge of the same will at once cause the same to be seized and will hold it subject to any legal proceedings that may be instituted by other parties. Persons caught in the act of stealing public property will be summarily arrested by any employee of the Isthmian Canal Commission, and turned over to the proper authorities for trial.

12. All public property, whether paid for or not, must be accounted for on the proper returns. All public property unaccounted for when discovered by an accountable official will be taken up and the usual returns rendered therefor. Such property will be listed on the proper form, which will accompany the return.

13. An accountable official will have credit for an expenditure of property made in compliance with instructions from the head of his department or division, or other competent authority. If the expenditure is disallowed, it will be charged to the official who ordered the expenditure. Public property expended in the service of the Isthmian Canal Commission will be accounted for by the certificate of the responsible official. That is, the expenditure voucher will be signed by the official expending the supplies.

14. Should an accountable official of the Isthmian Canal Commission charged with public property fail to render the prescribed returns therefor within a reasonable time, or settlement of his accounts will be made by the Chief Quartermaster and the money value of the property with which he is charged will be reported against him to the Disbursing Officer for stoppage. In case there is not sufficient pay due him, action will be taken against his official bond to recover the amount charged in excess of pay due.

15. As soon as possible after the receipt of a return by the Chief Quartermaster, it will be examined in his office, and the official making the return will be notified of all errors and irregularities found therein and granted one month in which to make correction. Suspensions and disallowances will not be made on account of slight informalities which do not affect the validity of a voucher, but the official's attention may be called to them. Whenever the errors have been corrected or compensation has been made for deficient articles, and the action of the Chief Quartermaster is sustained or modified by the Chairman and Chief Engineer, the return will be regarded as settled and the official who rendered it will be notified accordingly.

#### SURVEYS ON PROPERTY.

Public property which has been damaged, or is unsuitable for the service, or evidence of property which has been lost, will be surveyed by a disinterested official appointed by the Chairman. The surveying official must fully investigate matters submitted to him. He will call for all evidence obtainable, and will not limit his inquiries to proofs or statements presented by parties in interest. He will rigidly scrutinize the evidence, especially in cases of alleged theft or embezzlement, and will not recommend the relief of officials or employees from responsibility unless fully satisfied that those charged with the care of property have performed their whole duty in regard to it. He should hear in person or by deposition all persons concerned in the subject matter before him.

The person responsible for public property to be surveyed will, in all cases, furnish the original certificates or affidavits, upon which he relies to be relieved from responsibility, together with the duly attested copies of such certificates or affidavits that are to accompany the report of survey. Whenever loss or destruction of, or damage to, public property, requiring the action of the surveying official, occurs, such action will be requested by the responsible official as soon as practicable, and in every case within thirty days after discovery of the loss, destruction, or damage, unless exceptional circumstances, which will be explained by the official's certificates, prevent such action within that period.

The surveying official can not condemn public property, his action being purely advisory. He will ascertain and report facts, submitting opinions and making recommendations upon questions of responsibility which may arise through accident, mistake, or neglect. This will include questions involving the character, amount and cause of damage or deficiency, and responsibility for such damage or deficiency; also inventories of property ordered to be abandoned. He will also verify discrepancies between invoices and the actual property transferred from one official to another, ascertaining definitely amounts received, for which receiving official must receipt and, as far as possible, where and how the discrepancy occurred.

The following classes of property may be destroyed by the surveying officer:

(a) Stores which have become so deteriorated as to endanger health or injure other stores.

(b) Unserviceable property of no salable value. Decision of the surveying officer will be final as to whether such property has salable value.

In case the invoice value of any article exceeds \$500, the approval of the Chairman will be obtained before the destruction of the property.

The surveying officer will certify that property has been destroyed in his presence. The certificate of the witnessing official that the property has been destroyed will be appended to the original report of the surveying officer.

The report of the surveying official will be prepared in triplicate, and will then be submitted to the Chief Quartermaster for the approval or disapproval of the Chairman. When approved by the Chairman, report of the surveying official becomes a proper voucher for the relief of an official for property accountability.

#### INVENTORIES OF PROPERTY.

All officials accountable or responsible for public property shall, prior to October 1, 1908, take such inventories of the property under their control as will insure the correct amount for a physical accounting being entered on their return of public property on October 1. Immediately after October 1, an official or officials as may be designated by the Chief Quartermaster and approved by the Chairman, will proceed to inventory various articles at random pertaining to accountability of public property on the Canal Zone. Wherever a test inventory of certain articles gives evidence of any improper record of initial accountability as of October 1 and subsequent transactions, the entire stock of property pertaining to the official in question will be inventoried.

#### EXPENDITURE OF PROPERTY.

A list of expendable property will be approved by the Chairman and published for the information of all concerned. Property so listed may be expended and dropped from the returns on certificate of the responsible official that the property has been expended in general work pertaining to the construction of the Isthmian Canal. (Segregated charge under proper account numbers pertains to the cost-keeping report.) All property expendable as well as non-expendable will be properly accounted for and carried on returns, while it remains in regularly organized storehouses, and until it has passed into the execution of the work.

#### PROPERTY RETURNS.

A property return on form as described under "Forms" will be rendered for all property on June 30 and December 31, of each year. A carbon will be inserted between original and duplicate, and one writing will cover both original and retained copy of this return. Entries will be made in indelible pencil, and not with typewriter, the latter process being slow and defeating the simplicity of the process. All entries appearing on this return to be covered by a voucher, unless otherwise provided, and such vouchers will be numbered consecutively throughout the period which the return covers. It is understood that these vouchers are to be numbered consecutively, regardless of whether they are invoices, receipts or expenditures. The return will be rendered to the Chief Quartermaster within twenty days after the period has expired for which it is rendered.

#### PRICE LIST.

An annual price list will be prepared by the Chief Quartermaster, printed, and issued to accountable officers prior to October 1, 1908. This price list will govern in the cost keeping account for all property for one year, or until such time as fluctuations in prices render corrections necessary. The prices of certain articles of very large consumption will be corrected as often as proper cost-keeping requires such action, and in all cases due notice will be sent to accountable officials. This price list, and amendments, will govern absolutely in all financial accounting pertaining to cost-keeping, surcharges, etc., and no prices will be shown on invoices.

#### INVOICES AND RECEIPTS.

All invoices and receipts will be sent from the invoicing official direct to the receiving official, no copy being furnished any other official. The combination blank, invoice and receipt, Form QMD 4, will be used in the transfer of all supplies.

#### REQUISITIONS.

Forms will be prepared in triplicate for all supplies required to be purchased in the United States or outside of the Canal Zone, articles to be arranged thereon alphabetically, the distinctive noun to appear first. One copy will be retained by the official preparing requisitions; two copies will be forwarded to the Chief Quartermaster, who will make proper deduction for stock on hand, and present them to the Chairman for approval. Upon approval, the Chief Quartermaster will prepare what is known as United States requisition, and forward to the General Purchasing Officer, Washington, D. C., for purchase; one copy of the requisition approved by the Chairman to remain in the office of the Chief Quartermaster, and one copy to be forwarded to the Mount Hope Depot for the information of the Depot Quartermaster.

What are known as local requisitions, or requisitions for supplies already on the Isthmus, will be sent direct from storehouses, District Quartermasters, or Division Engineers, to the Depot Quartermaster at Mount Hope, and filled without reference to the Chief Quartermaster.

Requisitions for subsistence stores will be sent direct to the Cristobal Commissary by Division Engineers and the Sanitary Department.

#### INSTRUCTIONS TO APPLY LOCALLY. STOREHOUSES.

**Mount Hope Storehouse.**—To be under the direction of the Depot Quartermaster, as directed by the Chief Quartermaster; to provide an initial accountability of all property received on the Isthmus, and to show in its records a physical accounting and initial value of all such property. Invoices from Mount Hope for property to fill requisitions will invariably be forwarded on the same date the property is shipped, or, in other words, accompany the property. Property arriving on the Isthmus consigned to the Depot Quartermaster, and which, from its nature or economy in transportation, requires inspection at points other than Mount Hope, will be forwarded to destination with inspection call, which will be issued from the office of the Chief Quartermaster. This property will then be promptly inspected by proper inspectors at destination, and the result of such inspection will be recorded on the inspection call, which will be returned to Chief Quartermaster. The Depot Quartermaster, Mount Hope, will be furnished with two copies of the bill and copy of the complete inspection call. He will then take up the bill on his property return, making proper pink slips for the Purchasing Officer, and invoice to the accountable official, who will have already rendered certificate of inspection.

This will also apply to medical stores and supplies for the Colon Medical Storehouse, where economy in transportation suggests delivery direct instead of through Mount Hope.

The Depot Quartermaster, Mount Hope, will be the Purchasing Officer of the Isthmian Canal Commission on the Isthmus, and all purchases of supplies will be made by him upon requisitions approved by the Chief Quartermaster.

All supplies purchased in the United States and received on the Isthmus, whether paid for or not, will be taken up by the Depot Quartermaster and accounted for on his property returns. All stores such as coal, sand, and miscellaneous supplies, purchased from the Panama railroad, will be covered by one blanket award at the end of the month to cover bill from Panama railroad to the Isthmian Canal Commission. Subsistence supplies will be billed direct to Division Engineers and Chief Sanitary Officer. This to apply in place of Disbursing office circular No. 8 and Material and Supplies circular No. 177.

In addition to the original and duplicate sheets on his returns, the Depot Quartermaster at Mount Hope will insert two pink slips in said returns, on which all articles purchased will be entered, separate sheets to be kept covering purchases in the United States and those made on the Isthmus. At the end of each month, these pink slips will be extracted, numbered serially at place arranged for on blank, and will be forwarded to the Chief Quartermaster, one copy for file in his office and one copy to be transmitted by the Chief Quartermaster to the Disbursing Officer, Washington, for purchases made in the United States and one copy for transmittal to the Disbursing Officer, Canal Zone, for purchases made on the Isthmus. In connection with bills covering purchases, either those made in the United States or on the Isthmus, the following information will be stated on the bills:

Date received..... By whom.....  
Date inspected..... By whom.....

Serial number on which this property was accounted for on property return for period ending..... Also certificate as to quantity and quality.

The Mount Hope storehouse will ultimately control the Lirio Planing mill, now located at Culebra, and the Stationer and Printer's plant, now located at Ancon. Both of these plants will be moved to the vicinity of Mount Hope Depot. All stationery will be carried in stock at Mount Hope Depot, and will be distributed for use with statement of cost for cost-keeping report, but will be expended at Mount Hope, and will not be taken up on the returns of any official. Blank forms will also be distributed in the same manner.

Stock report recorded on stock cards and closed every 15 days will be kept at Mount Hope Depot.

**Gorgona and Empire Storehouses.**—Gorgona and Empire storehouses will be operated under the direction of the Chief Quartermaster. They will carry a stock adequate for the wants of the Division of Motive Power and Machinery, and also for the local District Quartermasters and the Division Engineer. Issues on foreman's requisitions will continue as at present. Names of foremen authorized to sign such requisitions will be forwarded to the Chief Quartermaster by the responsible officials. A duplicate slip or carbon copy of each foreman's requisition as it is filled will be sent to the official responsible for the foreman's order. This will take the place of an abstract of each day's business previously furnished same official. Stock cards will be kept in these storehouses and closed every two weeks. On the 15th and last day of each month, a consolidated Expenditure Form, QMD-5, showing totals of all expendable stores furnished various officials, will be rendered. This will be a total consolidation of the slips already furnished, and will be signed by the responsible official, and returned to the storehouse. When so signed, it will be authority for dropping from the storehouse concerned all the property enumerated on the list. This form to be rendered in triplicate separately for each official, one copy to be retained by the official, one by the storehouse, and one copy forwarded to the Chief Quartermaster. Non-expendable property is-

sued on foreman's requisitions will be invoiced to the accountable official.

**Other Storehouses.**—Storehouses will be taken over and operated by the District Quartermasters at Gatun, San Pablo, Bas Obispo, Las Cascadas, Culebra, Paraiso, Pedro Miguel and Ancon. These storehouses will be operated under the same rules that apply at the Gorgona and Empire storehouses, supplying the wants of other officials as well as those of the District Quartermasters by whom they are maintained. In a few instances, where there is no regular storehouse in charge of the District Quartermaster, he will maintain a small storehouse for his own necessities, the accountability to be carried on his own return.

#### DIVISION ENGINEERS.

Each Division Engineer will render a return for all property for which he is accountable in his division. The return will be rendered on the form supplied by the Quartermaster's Department. The division engineers will arrange to keep such distribution record in their respective divisions as will give them adequate information as to the distribution of their accountability; it being understood that such a record is obtainable at all times upon which to check, by inventory, the Division Engineer's accountability at all points. This will be accomplished by a system of stock cards, the totals of which are transcribed to the return proper.

#### SUBSISTENCE DEPARTMENT.

One return on the prescribed form will be rendered by the Subsistence Officer for the entire property accountability in the Subsistence Department.

#### DIVISION OF MOTIVE POWER AND MACHINERY.

One return on the prescribed form will be rendered by the Superintendent for the entire property accountability in the Division of Motive Power and Machinery.

#### DEPARTMENT OF SANITATION.

One return on the prescribed form will be rendered by the Chief Sanitary Officer for the entire property accountability in the Department of Sanitation.

#### DEPARTMENT OF CIVIL ADMINISTRATION.

One return on the prescribed form will be rendered by the Head of the Department of Civil Administration for the entire property accountability in the Department of Civil Administration, except that contained in the Court Houses and in the new and old Administration Buildings, which will be rendered by District Quartermasters.

#### DISTRICT QUARTERMASTERS.

District Quartermasters, with the exceptions as noted herein, will be accountable and responsible for all property in their respective districts. All property not in their immediate possession, including that in public buildings, offices, houses, etc., will be carried on memorandum receipts. These memorandum receipts, when signed by the occupants, relieve the District Quartermaster from responsibility, but not from accountability. The District Quartermaster, when any chance necessitates a transfer of memorandum receipts from one responsible official or person to another, will at once have the memorandum receipt checked up, and the responsibility verified. This will be strictly enforced especially with regard to the occupants of all married quarters, and any shortage or damage therein, unless voluntarily paid for by the occupant, will be presented to the survey official.

The District Quartermaster's accountability in the respective districts is as follows:

**Cristobal.**—All furniture and I. C. C. property in quarters and in Q. M. storehouses. Q. M. corral and equipment. Property of the I. C. C. band. Property in pay office, Cristobal. Property in Y. M. C. A. clubhouse. All property carried by clerks of circuit court, District Judge and Associate Judge.

**Gatun.**—All furniture and other I. C. C. property in quarters and in Q. M. storehouses. Q. M. corral and equipment.

**Tabernilla.**—All furniture and other I. C. C. property in quarters and in Q. M. storehouses.

**San Pablo.**—All furniture and other I. C. C. property in quarters and in Q. M. storehouses.

**Gorgona.**—All furniture and other I. C. C. property in quarters and in Q. M. storehouses. Q. M. corral and equipment. Property in Y. M. C. A. clubhouse. Property carried by the District Judge.

**Bas Obispo.**—All furniture and other I. C. C. property in quarters and in Q. M. storehouses. Q. M. corral and equipment.

**Las Cascadas.**—All furniture and other I. C. C. property in quarters and in Q. M. storehouses. Q. M. corral and equipment.

**Empire.**—All furniture and other I. C. C. property in quarters and in Q. M. storehouses. Q. M. corral and equipment. All property carried by Associate Justice, Judge circuit court, clerk circuit court, and by District Judge. Y. M. C. A. clubhouse property. Furniture and office equipment in Disbursing office. Furniture and office equipment in office Examiner of Accounts. Property in use in truck garden.

**Culebra.**—All furniture and other I. C. C. property in quarters and in Q. M. storehouses. Q. M. corral and equipment. Y. M. C. A. clubhouse property. All furniture and office equipment in general offices.

**Paraiso.**—All furniture and other I. C. C. property in quarters and in Q. M. storehouses. Q. M. corral and equipment.

**Pedro Miguel.**—All furniture and other I. C. C. property in quarters and in Q. M. storehouses. Q. M. corral and equipment. Property in use in truck garden.

**Corozal.**—All furniture and other I. C. C. property

in quarters and in Q. M. storehouses. Q. M. corral and equipment. Property in use in truck garden.

Ancon—All furniture and other I. C. C. property in quarters and in Q. M. storehouses. This to include furniture in married and bachelor quarters in Ancon Hospital grounds. Q. M. corral and equipment. Property in use in truck garden. The furniture and office equipment of the general offices in the new and old Administration Buildings, Ancon and Panama. The furniture and office equipment of the offices and courts of the Circuit Judges, Clerk of the Circuit Court, Associate Justice, Clerk of the Associate Justice, and District Judge.

La Boca—All furniture and other I. C. C. property in quarters and in Q. M. storehouses.

Porto Bello—All furniture and other I. C. C. property in quarters and in Q. M. storehouses.

#### COST KEEPING.

On and after October 1, 1908, the material account current, now prepared monthly and furnished the Disbursing Officer, will be discontinued. In lieu thereof there will be furnished by the head of each division or department report on Form 132-CF, Abstract of Expenditures, showing the total cost of the operation, divided and separated into such account number as the Examiner of Accounts may from time to time require. One copy of this form to be sent to the Chairman, Isthmian Canal Commission, and one copy to the Examiner of Accounts.

This report will include all services and materials rendered or furnished the division or department submitting the report, and also the cost of the labor required in the operation of that division or department.

Manufactured articles, as at the Gorgona shops, Empire shops, Lirio planing mill, etc., will, upon completion, be disposed of as follows: At Gorgona and Empire, articles when completed, will be turned over to the storekeeper at Gorgona and Empire, respectively, with a bill showing cost, including surcharge. The article so manufactured will be taken up by the storekeeper, and its accountability on the Canal Zone initiated at that point. The storekeeper will then proceed to invoice it to the consignee, showing price on the invoice. Other products will be similarly treated at the Mount Hope Depot.

#### BLANK FORMS.

Blank forms are as follows:

- QMD-1—Requisition.
- QMD-2—United States Order.
- QMD-3—Inspection Call.
- QMD-4—Combination Invoice and Receipt.
- QMD-5—Abstract of Supplies Issued.
- QMD-6—Statement of Forage and Straw Issued.
- QMD-7—Front Cover to Property Return.
- QMD-7a—Back Cover to Property Return.
- QMD-7b—Original White Inside Sheet.
- QMD-7c—Duplicate Blue Inside Sheet.
- QMD-8—Front and Cover, Report of Purchases.
- QMD-8a—Back Cover, Report of Purchases.
- QMD-8b—Pink Slip, Purchase Voucher.

C. A. DEVOL,  
Chief Quartermaster.

Approved:

GEO. W. GOETHALS,  
Chairman.

#### Misdirected Letters.

Division of Dead Letters.

Ancon, C. Z., September 23, 1908.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be obtained on request of addressee:

Armish, L. D.	McArdle, Ellen S.
Barber, Lou	Neri, Louis
Coyne, R. J.	Peters, Calude
Duley, Joseph F.	Phelan, Joseph
Dodge, A. H.	Rice, H. N.
Hamlin, Harold E.	Richards, H. C.
Harwood, Robert	Ruedy, W. T.
Holbrook, F. W.	Sheridan, P. L.
Keeling, Mrs. James R.	Spence, Thos. H.
Lee, Daniel	Teran, Oscar
Melgord, J.	Wing, Joseph A.
Mills, J. S.	Woodrome, J. E.

The revenue collected by the Division of Posts, Customs and Revenues in the Canal Zone in August amounted to \$13,655.50. Of this amount the fees from money orders were \$1,822.06; distillation licenses, \$120.25; miscellaneous bills, \$1,358.18; district licenses, taxes, rents, etc., \$8,643.46; fines, costs, etc., in the district courts, \$1,711.55.

Mr. William H. Wagner, injured by a Panama railroad train near Gatun, died in the Gatun Hospital September 12. He was 38 years old and had lived on the Isthmus three years. He is survived by his wife.

Arrivals and departures at the port of Ancon during the week ending September 18, 1908:

Arrivals—September 12, *Limari*, from Valparaiso; September 17, *Acapulco*, from San Francisco.

Departures—September 14, *Panama*, to Valparaiso; September 16, *San Jose*, to San Francisco.

## COMMISSARY DEPARTMENT.

### COMMISSARY PRICES

For week beginning September 21:

#### FRESH MEATS, POULTRY AND COLD MEATS.

	Price.
Beef—Sirloin roast.....per lb	29
Rump roast.....per lb	29
Porterhouse.....per lb	29
Rib-roast, short cut (not under 3½ pounds).....per lb	23
Rib-roast, second cut (not under 3 pounds).....per lb	19

#### FROM COLON TO NEW ORLEANS VIA KINGSTON.

Tampican.....Leyland Line, Sunday.....Sept. 20	
William Cliff.....Leyland Line, Tuesday.....Sept. 29	

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 11 a. m., and from Colon at 1.30 p. m., via Port Limon, for New Orleans. In addition to the above, the United Fruit Company dispatches a steamer about every ten days from Colon, via Bocas del Toro, for New Orleans.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The steamship *Eastfields*, from Gulfport, is due on September 24 with 974 piles for use in the relocation of the Panama railroad, and 327 pieces of white oak lumber for the Mechanical Division

# CANAL

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, SEPTEMBER 30, 1908.

No. 5.

## The Canal Record

Published weekly under the authority and supervision of the  
ISTHMIAN CANAL COMMISSION

*"The Canal Record" is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the "gold" roll. Extra copies can be obtained from the news stands of the Panama Railroad Company for five cents each.*

### Address all Communications

#### THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

*No communication, either for publication or request for information, will receive attention unless signed with the full name and address of the writer.*

## NOTES OF PROGRESS.

### A Correction.

In the summary of the Chairman's report for the month of August, which appeared in THE CANAL RECORD of September 23, an error was made in giving the amount of excavation from the Canal prism. The amount given, 1,375,991 cubic yards, is the amount excavated by dredges, and to this should be added 1,834,479 cubic yards taken out by steam shovels, the total excavation from the prism being 3,210,470 cubic yards.

### Supplies for the Commissary.

Bids will be opened in New York within the next few days for food supplies for the Commissary up to January 1, 1909. The articles have been separated into classes; and on canned fruits and vegetables delivery is called for either at La Boca or at Colon, cost, insurance and freight to be paid by the contractor, with inspection at the point of origin. It is thought that low prices will be secured on the Pacific coast for canned fruits and vegetables, to be delivered at La Boca.

Washington has been eliminated as a point for opening bids for Commissary supplies on account of the lack of jobbers, and Chicago and St. Paul have been added, these being the milling and packing centers of the United States. The contracts call for delivery of packing-house products in car-load lots, cost, insurance and freight paid at Colon. It is thought that this arrangement will give cheaper prices on all packing-house products, as the manufacturer will be able to obtain the through export car-load rate from the point of origin.

On some other articles, which are semi-perishable, such as beans, peas, rice, etc., the contracts will provide for either La Boca or Colon delivery, with inspection as to quality, at the point of origin, and inspection on the Isthmus as to condition on arrival.

Proprietary articles handled by the Commissary have been taken out of the general classification and placed in a class by themselves, to be delivered at either New York or New Orleans. The lack of a fast express refrigerator service on the Pacific coast makes it impossible to procure fresh fruits and vegetables from California.

### Family Quarters at Camp Diablo.

Camp Diablo, on the line of the Panama railroad between Corozal and Panama, will become a family settlement of gold employes as soon as the remodeling can be done which will convert the nine laborers' barracks at that place into family quarters. The barracks are one-story buildings, 68 feet by 35 feet, and two apartments will be partitioned off in each. These apartments will be 35 feet by 34 feet, and will be divided into a living room, dining room, two bedrooms, kitchen, pantry, clothes closet, toilet, and bath. Each apartment will have a screened porch, the porches running across opposite ends of the building.

### Ancon Hill Reservoir.

The site selected for the million-gallon concrete reservoir on Ancon Hill is on that portion of the hill now occupied by the high pressure water tank. The primary purpose of the reservoir is as reserve fire protection for La Boca, Ancon, and Panama, but the plan which contemplates its construction also includes the installation of a new unit in the filter plant, which will give filtered water to the quarters at Ancon. Work will be begun as soon as reinforcing bars arrive on the Isthmus.

### Miraflores Tunnel.

Work will be discontinued on the earth section of Miraflores tunnel until the dry season. On the night of September 21 the section of the tunnel where the earth joins the rock, about 130 feet from the original south portal, and 230 feet from the portal as extended, caved in and approximately 3,000 cubic yards of earth now block that part of the tunnel. The heavy rains of the past two weeks have both loosened and added weight to the earth, and the side of the hill is cracking in a dozen places as the slide progresses.

In the rock section of the tunnel the concrete lining is about completed. The north portal will be extended 50 feet before the retaining wall for the approach is begun.

### Quartermaster's Price List.

The Chief Quartermaster wishes to announce that the publication of the price list for all stores and supplies in the Canal Zone has been delayed, owing to the lack of material in the printing offices at Panama and Cristobal. Every effort has been made to produce this price list on time, but it is now apparent that it will not be out by Oc-

tober 1. Therefore, the Depot Quartermaster at Mount Hope has been instructed to insert prices on invoices of all materials and supplies issued from that depot until the price list is finished.

### Dispensing With Paper Work.

In an effort to lessen the amount of clerical work involved in the promotion of employes of his department, the Chief Quartermaster, with the approval of the Chairman, has established a salary rating for the fifteen districts under his control. This rating provides for all employes under the district quartermasters, and is in effect an authorization to each district quartermaster, the total of which constitutes a flat rate for the monthly service in his district, beyond which the expenses of his district must not go. Changes in the salaries paid men on the gold roll will be referred, as heretofore, to the Chief Quartermaster for the approval of the Chairman, but all wages on the silver rolls, within the ratings prescribed, are subject to change by the district quartermasters.

Subject to the approval of the Chairman, an agreement has been made between the Chief Quartermaster and the Subsistence Officer by which a flat rate will be paid monthly by the Subsistence Department for all services rendered it under the headings of commissary, subsistence, and transportation. This will avoid the clerical work heretofore necessary in the monthly rendering of itemized bills and adjustment of accounts.

### Hotels and Messes.

On the recommendation of the Subsistence Officer, the Chairman has decided that Commission hotels shall hereafter be furnished by the Commission with fuel, light, fixtures, cookstoves, etc., which heretofore have been a charge against the meals. Fuel, light, and kitchen fixtures have been furnished with married quarters for some time past, and the new ruling is made to place the bachelors on an equal footing with the married men.

The European laborers' mess in process of construction at Pedro Miguel is being extended so that it will easily accommodate 450 men. It will be the largest mess on the Isthmus. The building will be one story in height, with ventilated roof, and of the type and construction of the Commission mess houses. A screened veranda will run across the front. It will be 121 feet long, 71 feet deep on one side where an extension is being made in the shape of an L, and 55 feet 4 inches deep on the other side. The dining room will extend across the front and will be 121 feet long and 30 feet 6 inches wide, and will also include the L, which will be 30 feet 6 inches by 34 feet. There will be 20 long tables, each accommodating twenty-four men without crowding. The back part of the building will be divided into a

## NOTES OF PROGRESS.

(Continued)

kitchen 56 feet by 18 feet, a cold storage space of 385 cubic feet, a storeroom, and a room and bath for the steward. The kitchen will be equipped with steam boilers and power-cooking machinery.

The mess hall for European laborers at Miraflores is to be refitted and used as a Commission hotel, and the hotel now used will be turned over to the Quartermaster's Department. A new mess hall for European laborers has been authorized.

In the messes for common laborers the rice and sugar components of the rations will be increased. Some temporary mess houses, under canvas, for a few of the common laborers' mess kitchens will be put up, and if they prove popular with the men it is possible that some permanent form of shelter will be provided. At present the common laborers take their food from the mess kitchen to their quarters, or elsewhere, no common mess hall being provided.

**Rain Causes Slides.**

Recent rains have caused several small land slides along the line of the Panama railroad. At Whitehouse yard the roadbed has shown a tendency to slide into the Camacho diversion, and the two 200-foot stretches of the embankment at this place will be ripped. A stretch 64 feet long has slipped so close to the northbound track that it has been deemed unsafe to use the track on this section of the road. A trestle will be built at this point under the northbound track, and will be reinforced by French rails, joining it with piles to be driven on the west side of the southbound track. At Empire and Paraiso small slides are being ripped.

**Old French Dynamite.**

A steam shovel at work digging rock in Peninsula 2, between Matachin and Gorgona, a few weeks ago lifted out a quantity of dynamite, which is described as having been "a bushel." The explosive was in sticks  $\frac{3}{4}$  of an inch in diameter, and 5 inches long, and the cartridges bore the trademark of a French manufacturer of dynamite, and a date, which appeared to be November 29, 1887. Unquestionably the dynamite was put in by the French and either failed to explode or was abandoned when the work ceased on that part of the old French canal. Although apparently in perfect condition, the dynamite could not be exploded.

**Hardwood Ties for Panama Railroad.**

A contract has been awarded to E. Clare & E. Clare, jr., of Panama, for \$54,995 worth of cross ties for use on the relocated Panama railroad. The ties must comply with the specifications published in recent issues of THE CANAL RECORD. They will be of black, or yellow guaiacum, commonly called guayacan or lignum vitæ. The successful bidders offered to deliver ties of the first-class for \$1.10 a piece, and ties of the second-class for \$1. The next lowest bidder offered ties at \$1.25 a piece.

The initial cost of these hardwood ties, as compared with the cost of ties purchased in the United States, is from 25 to 50 per cent greater, and for temporary work they might not be economical, but for use on the per-

manent line of the Panama railroad their economy is apparent when it is known they will last from four to five times as long as the ordinary tie. It is more expensive to lay a track with hardwood ties, because each tie must be bored in order that the spikes may be driven, but this added expense is also overcome by the greater length of time that the hardwood ties can be used.

**New Superintendent of Schools.**

Prof. Henry Lester Smith, the new Superintendent of Schools, arrived on the Isthmus on September 22, and has assumed charge of the Division of Schools.

Mr. Smith is a graduate of the Indiana State University, holding the degrees of A. B. and A. M. from that institution. He has been engaged in the teaching profession for the past ten years, and just prior to his coming to the Isthmus was Supervising Principal of one of the public school districts in the city of Indianapolis.

**Forage Requisition.**

Requisition has been made for 750 tons of hay and 450 tons of oats for use in the Isthmian Canal Commission corrals, this being the amount of forage required for a six months' period. The bids will be asked for six months in advance of the time of award, and timothy, wheat, or oat hay will be accepted. The long period given for submitting bids, and the option with regard to the kind of hay offered are an inducement to Pacific coast forage men to enter the competition. Delivery will be accepted either at Colon or La Boca.

**New Commissaries.**

New commissaries have been authorized for Pedro Miguel, Porto Bello, and Gatun. Those at Pedro Miguel and Gatun will be of standard type, but the Porto Bello commissary will be smaller. On account of the distance of Porto Bello from the cold storage plant and the bakery at Cristobal, a small refrigerator plant and bakery will be run in connection with the commissary.

**Cargo of Foodstuffs Condemned.**

Because of some doubt as to the extent to which the cargo of foodstuffs, carried by the steamship *Colon* on her recent stormy voyage, was rendered unfit for use, the whole cargo has been condemned, and none of it will be delivered. This action was taken immediately, and it has recently been confirmed by a report of one of the Commission chemists.

**Opening of Schools.**

H. L. Smith, Superintendent of Schools, has issued the following:

The schools of the Canal Zone will be opened at the places named below on Thursday, October 1, at 8 a. m. It is essential that all children be present on the first day, bringing with them the report cards issued to them at the close of school last June.

Schools for white children will be opened at the following places, in the buildings used for white schools last year: Ancon, Pedro Miguel, Paraiso, Culebra, Empire, Las Cascadas, Gorgona, Gatun, Cristobal, and Colon Beach.

Colored schools will be opened at the following places: La Boca, Las Sabannas, Paraiso, Culebra, Empire, Matachin, Cruces,

Gorgona, San Pablo, Tabernilla, Bohio, Mount Hope, Cristobal, and Pleya del Flor.

White children of school age living in towns in which no white schools are as yet established will be provided with free transportation to the most convenient white school already established. Responsibility, however, for the transportation of pupils on the trains of the Panama railroad will rest entirely with the parents. Parents to whom this paragraph applies should make request for transportation for their children to the Superintendent of Schools, Ancon, C. Z.

**Colon Arrives at New York.**

The steamship *Colon* which sailed from Cristobal on Wednesday, September 23, after undergoing temporary repairs of the damage she sustained in the hurricane on September 12, arrived safely at New York on the morning of September 29.

The electrical engineering department of the Panama railroad will be consolidated with the telephone and telegraph department on October 1. This change is made because the electric light plant on the beach at Colon has been consolidated with the plant run by the Subsistence Department at Cristobal.

A contract for 60,000 pounds of charcoal has been let to Marcio Blanco, of Panama, at \$1.25 per hundred pounds. This charcoal is made on the Isthmus, and must be from mangle wood or some wood of equal value in making charcoal.

**Stages of the Chagres.**

Maximum height of Chagres above low water for the week ending midnight, September 26, 1908:

## SAND FOR PACIFIC LOCKS.

## Deposits at Chamé—Methods for Handling and Transporting.

A million cubic yards of sand will be required for the concrete work at Miraflores Locks and Dams, and the locks at Pedro Miguel. Good sand is not found in many places on the Isthmus. The Atlantic Division will bring its supply for the work at Gatun from Nombre de Dios, a harbor thirty miles east of Colon, where a large deposit exists. To carry the amount needed at Miraflores and Pedro Miguel across the Isthmus would be more expensive than handling it by water on the Pacific side, and on this account it has been decided to tow it in barges from Chamé to La Boca and ship it from that point by railroad to Miraflores and Pedro Miguel. The sand deposits at Chorera, eighteen miles east of La Boca, were first considered, but an investigation showed that not enough could be supplied from that place, while the harbor, which is entered by a long narrow channel, made the problem of handling barges a very annoying one. In August, 1907, a preliminary investigation was made at Chamé, where the sand is abundant, sharp, clean, and of good quality, although not uniform. Three weeks ago a drill party was sent up from La Boca for the purpose of further investigation in order that all preliminary work may be done by the time the Pacific Division is ready to have material delivered.

Chamé is the name of a native village and a little bay, in Panamanian territory, about twenty miles west of La Boca. At this place a bar of sand projects from the mountainous coast forming a peninsula about five miles long and tapering from the shoreline, where it is half a mile wide, to a point, where it ends in Panama Bay. Chamé bay is well sheltered on two sides by the shore and the peninsula, and opposite the entrance, only a few miles to the eastward, is the island of Taboga. In the dry season the trade winds sweep over the bay, but leave the water in the lee of the peninsula little disturbed. The latest hydrographic survey was made over half a century ago by British hydrographers. Soundings made recently give a depth of from two to six fathoms of water within two hundred yards of the shore. The native village is situated near the hills, and there is a hamlet of twenty bamboo huts about a mile from the point. Close to this hamlet the Commission boring party has pitched its camp.

The whole peninsula is a sand spit overlying a bed of blue clay. In the report on the investigation made last year it was said:

At a distance of 9,000 feet from the point there is a mangrove swamp which extends over a mile beyond the 9000-foot point and is of very irregular outline. In this swamp, and where its tidal inlets join the bay, the blue clay underlying the sand comes to the surface. There is no trace of coral or any other rock. The formation seems to be simply a blanket of sand resting on blue clay. The surface of this clay dips as you proceed from the swamp towards the point and after one is within 6,000 feet of the point, borings 15 feet deep into the sand at both high and low tide, failed to reach the underlying clay.

It is estimated that between the point and the swamp there are approximately four million cubic yards of sand. The coarsest and better grade is that found on the beach, between high and low water. From this tidal belt, which is 200 yards wide, the sand for the Pacific locks and dams will be taken. Borings are being made along about

two miles of beach. Private land titles in Panama run only to the high water line and as the sand to be taken out is on land owned by the Panamanian Government no remuneration need be made for it.

It is proposed to take the sea-going ladder dredge *Gopher* off the work in the Canal prism at La Boca and send it up to Chamé, where it can work on the ocean side of the peninsula in the trade wind season, and inside in the rainy season. In this way the best sand from both sides of the peninsula can be obtained. This dredge can operate to a depth of 30 feet, and take out and dump on barges 2,500 cubic yards of sand a day. After the sand excavation is begun it is estimated that the *Gopher* will spend about one-third of its time at Chamé and two-thirds in the Canal prism near La Boca. In order that the excavation may not suffer by the withdrawal of the sea-going dredge, the old French ladder dredge, No. 21, is being rebuilt for the La Boca service.

The single screw tug *Katherine Moran*, now known as *Cocoli*, was purchased for use in this service, and the tug *La Boca* can also be used if necessary.

To act as a tender to the dredge at Chamé, in carrying supplies from La Boca and in hauling the barges from the dredge to a point where the tugs will take them in tow, the steam trawler *Riversdale* has been purchased.

Ten barges of 500 yards capacity each have been ordered, six of them are already on the Isthmus, and two of them are on the ways at La Boca.

A dock 800 feet long will be constructed at La Boca for the purpose of handling the sand. It will be taken from the barges and loaded on cars for delivery at the Locks' sites, where it will be stored until needed. The storage capacity at the Locks' sites is about 250,000 cubic yards.

## THE TOWING FLEETS.

## Tugs and Steamers for Service in Atlantic and Pacific Divisions.

The tug *M. E. Scully*, with a tow of two barges of coal, arrived at Cristobal a few weeks ago. The addition of this tug completes the Atlantic towing fleet, so far as present plans go. The fleet now consists of five tugs, and one stern-wheel steamboat on the ways. The tugs are in use in the Porto Bello and Nombre de Dios service and with the dredges in Limon Bay. On the Pacific side are two tugs and the steam trawler *Riversdale*, for use in the sand service and in towing at La Boca. A few facts about each boat follow:

## ATLANTIC DIVISION.

The *Galun*, formerly the *H. B. Chamberlain*, purchased from Dailey & Ivins, delivered at New York on June 1, 1906. Length over all, 102 feet; beam, 22 feet; depth of hold, 10 feet; draft, 9 feet; speed, 13 knots; bunker capacity, 90 tons; engines, 1500-horse power.

The *Porto Bello*, formerly the *Robert H. Smith*, purchased at Baltimore in September, 1907; built in 1906. Length over all, 126 feet, beam 23.5 feet; depth of hold, 18 feet; draft, 14 feet; speed, 10.5 knots.

The *Mariner*, purchased in United States, arrived at Cristobal April 2, 1908. Length over all, 113 feet; beam, 25.5 feet; depth of hold, 13.5 feet; draft, 12 feet.

The *Bohio*, formerly the *Jack Twoky*, pur-

chased of Lamberts Point Towboat Company, June 8, 1908. Length over all, 104 feet; beam, 21.5 feet; depth, 11.2 feet; draft, 11 feet.

The *M. E. Scully* was built in 1906 by John H. Dialogue & Co., Camden, N. J., and purchased by the Isthmian Canal Commission at Newport News, in July, 1908. It has a steel hull; gross tonnage, 272; one triple expansion engine, cylinders 14 by 24 by 40; stroke, 2 feet 6 inches; one boiler, 10 feet long, 180 inches diameter; steam, 187 pounds; length over all, 134 feet; beam, 25 feet; draft, 13 feet 6 inches.

The stern-wheel steamer is 108 feet 4 inches long, 20 feet 10 inches wide, 5 feet 3 inches deep, will draw 2 feet 8 inches and displace 100 tons. It will be driven by two tandem compound engines with cylinders 7 inches by 14 inches, stroke of 4 feet, pressure 180 pounds. This steamer will be used in towing in the old French Canal between Cristobal and the handling dock at Gatun.

## PACIFIC DIVISION.

The *La Boca* is 118 feet long, 23 feet wide and 12 feet 6 inches deep. On the upper deck is the pilot house, and back of it the captain's room. On the second deck is a deckhouse, made of 3-16-inch iron, containing quarters for the engineers and mates, and a kitchen and messroom. The quarters for the sailors are in the fore-castle. This tug has triple expansion surface-condensing engines, with one cylindrical return tubular boiler, and has 600 rated horse power. It is fitted with electric lights and searchlight. The *La Boca* was formerly the *E. G. Reynolds*, and was practically new when brought to the Isthmus in 1907.

The *Cocoli* is the rechristened *Katherine Moran*, which was built in 1904 at Philadelphia. She is 96 feet long, 23 feet wide and 12 feet 4 inches deep, and is of 213 tons register. She is built of steel, and is propelled by a single screw.

The *Riversdale* was built at Hull, England, in 1899, and is a single screw, one deck, two mast, ketch rigged ship; 102 feet long, 20 feet 6 inches broad, and 11 feet deep. One steel boiler of 160 pounds pressure, and three triple compound, 3-crank, inverted cylinder engines supply power. The indicated horse power is 300, and the rated speed 10 knots. The gross tonnage is 180.36 tons, and the registered tonnage 58.61 tons. The *Riversdale* came to Panama about five months ago, on her way to Cocos Island, where she was to hunt for treasure, said to be hidden there.

Two steam shovels, buried in the mud at the Cucaracha slide by the rain of September 14, were finally extricated September 21. Notwithstanding the loss of the work of these two shovels for the whole week, the excavation record for the Central Division, so far as car measurement may be relied upon, did not fall off.

Three type I7 quarters are being constructed at Corozal by contract. All material will be furnished by the Commission. These are the first houses of this type, one-family married quarters, to be constructed by contract. Advertisement will be made for proposals as soon as the location is determined and specifications prepared.

## SOCIAL LIFE OF THE ZONE.

### Meeting of Federation of Women's Clubs, Club Work and Other Features.

The third meeting of the Canal Zone Federation of Women's Clubs was held at Gorgona, September 28. Special cars attached to the rear of the trains from the terminals of the Panama railroad brought the delegates, who were met by the members of the entertaining club. At noon the various Federation committees had their sittings in the clubhouse, and at 1 o'clock a special lunch was served at the Commission hotel on decorated tables, fifty-three covers being laid.

The business meeting, which was held in the clubroom over the dining room, was called to order by the president, Mrs. Lorin C. Collins at 2 o'clock. Mrs. E. S. Calvit, president of the Gorgona club welcomed the delegates and visiting women. The regular reports were read and adopted. Owing to removals and resignations committee vacancies were filled as follows: Art and literature, Mrs. E. Lewis Baker; educational, Mrs. Louise Hanson; library extension, Mrs. Charles Boxer; nominating, Mrs. H. R. Trask.

Owing to the vacation period, there were few reports from the presidents. Two of the clubs outlined the work to be taken up for the coming year. The interesting reports were those of the delegates to the "biennial" held in Boston in June. The chairman of the delegation, Mrs. Thomas E. Brown, Jr., gave an admirable survey of the business sessions with excerpts from the addresses of the president and others. The social side of the convention was dealt with in the report by Mrs. E. E. Quimby, which was read, in the absence of the delegate, by Mrs. Boxer. At the conclusion of these reports votes of thanks were tendered to the delegates. A discussion of club work lead by Miss Beattie, Mrs. J. J. Jackson and Mrs. Hanson followed.

A discussion regarding transfer from one club to another and the regulation of dues in such event, resulted in a resolution that a member in good standing may transfer without further payment of dues until the annual meeting of the club into which she is transferred takes place. The design for a Federation badge was submitted, and one sent by Tiffany was selected. It consists of a shield-shaped pin, with a design of laurel leaves encircling it and the letters "C. Z. F." engraved in the center.

The Federation accepted the invitation of the Ancon Woman's Club to hold the January meeting with that organization. An invitation will be extended to Mrs. Philip N. Moore, president of the general Federation, to be the guest of the Federation for the convention.

The meeting authorized votes of thanks to the officials of the Panama railroad for their courtesy to the club women, and thanks were also extended to the entertaining club for its generous hospitality.

The social meeting was held in the entertainment hall of the clubhouse, which was beautifully decorated for the occasion. Refreshments were served at small tables, where the guests gathered informally. A large number of guests were present and the reception was marked by entire informality. Mrs. Adolph Faure gave a number of songs.

This meeting, although devoted to club matters and business, committee conferences

and reports, was one of the most satisfactory that the Federation has held. It demonstrated more forcibly than anything else has done the interest in the movement and the real club spirit that has awakened in the women of the Zone.

At the close of a recent meeting of the Gorgona Woman's Club the organization made a presentation of a set of souvenir spoons to the retiring secretary, Mrs. D. E. Hayes, in recognition of her faithful and self-sacrificing service during her term of office. The receipts from the recent entertainment given by the club amounted to over \$100.

The educational department of the Cristobal Woman's Club has organized a sewing class for young girls, which meets at the residence of the chairman, Mrs. E. P. Eppelsheimer. Practical sewing and needlework are taught. The class has at present 14 members, all of whom are enthusiastic about their work. At the close of the club year it is proposed to give an exhibition of the work. During the sewing there is reading, which is considered an important part of the class work.

The Cristobal club will resume its meetings the first Wednesday in October. The departments have been preparing their programs for the year. The art and literature, and educational departments have the year's work ready. The work of the philanthropy department is also well in hand.

The Pedro Miguel Woman's Club has resumed regular meetings, which are held at the residences of the different members. The opening session, at the home of the president, Mrs. Frank R. Roberts, on September 16, was well attended. The Pedro Miguel Social and Recreative Club has asked the woman's club to cooperate with them in the purchase of a piano for the club room, and in response to this request a social evening has been arranged for October 1. Home-made refreshments will be sold, and simple entertainments provided. The Woman's club will hold its annual meeting with election of officers October 5.

The Ancon Woman's Club met at the Hotel Tivoli on Wednesday, September 16, with an average attendance. The library committee reported through its chairman, Mrs. A. R. Bennet, the arrival of the books ordered. Through the courtesy of the Commission, these books were delivered free of all transportation charges. A special set of rules governing the library will be drawn up and presented by the chairman at the next meeting, at which time the regular librarian will be appointed. The work of soliciting names for the Ancon Library Association is going on through a committee with one of the club women as chairman. Extensive plans are being made for the furtherance of the movement. The annual meeting will be held October 7. Owing to the absence of Dr. Van Kueber from the city, the lecture on the San Blas Indians was not given, but it is expected that he will give it later.

The Gorgona club of the Daughters of Rebekah, the woman's auxiliary to the Independent Order of Odd Fellows, has been holding preparatory meetings for the completion of arrangements for the regular institution which will be held October 10, at Fraternity Hall, Gorgona. There are nine card members, and there are thirty-one applications for membership.

The regular meeting of Trinity Church

Woman's Guild, Culebra, will be held in the Commission Chapel, on Tuesday afternoon, October 6, at 3 o'clock.

## PERSONAL.

Among the arrivals from the States on the *Advance*, on September 22, were Maj. Chester Harding, Mrs. Harding and three children.

Among the passengers returning to the Isthmus on the *Allianca* on September 27 were Mrs. H. J. Slifer, two daughters and son, of Colon, and Dr. G. H. Crabtree and family, of Culebra.

Mr. Thomas L. Clear, of Chicago, formerly employed in the Washington office of the Isthmian Canal Commission, and more recently in the office of the Secretary of the Treasury, has been appointed Chief Clerk of the Division of Examiner of Accounts and has reported for duty on the Isthmus.

Messrs. W. P. Ramsey, W. S. Dewhurst, W. C. Elridge, J. S. Wilmeth, and F. B. Warwick, of Washington, are on the Isthmus representing the Treasury Department in the transfer of the accounts and funds from the Disbursing Officer to the Canal Zone Treasurer.

R. Yung has resigned as land agent of the Panama railroad, and since September 23, all land matters have been handled in the office of the General Manager, where the land business will be transacted from this time forth.

## Obituary.

Mr. Edwin Townsend, of St. Louis, Mo., died September 21, 1908, as a result of an accidental discharge of a rifle which he was cleaning in his room at Tabernilla, September 21, 1908. He was thirty-three years of age, and had been on the Isthmus nineteen months.

## Examination for Stenographer.

An examination for the position of stenographer in the service of the Isthmian Canal Commission will be held at Culebra, Canal Zone, in the office of the Chairman, on Sunday, October 25, beginning at 9 a. m. The application form and the pamphlet describing the examination may be had upon application to John K. Baxter, Secretary, Isthmian Civil Service Board, Culebra, Canal Zone.

## Information Wanted.

A letter addressed to Emile Napoleon by his sister, a nun in Jerusalem, is held at the office of the Chairman. This man was employed in the Department of Labor, Quarters and Subsistence up to September, 1906, but there is no record of his subsequent employment. Anyone who knows of his whereabouts should communicate with THE CANAL RECORD.

Rev. Henry Collins, Commission Chaplain, will speak in the Roman Catholic Church at Empire, at 9.30 o'clock, Sunday morning October 4, in the interest of the Church of the Holy Redeemer, Culebra.

LOST—In Panama Sunday, September 20, pair of gold-bowed spectacles. Name of makers, A. J. Lloyd & Co., Boston, Mass., on case. Reward for return to D. F. Pyne, Gatun, C. Z. Possibly lost on beach North of P. R. R. station.

## PREDICTING FRESHETS.

## System by Which Danger from Chagres Floods Is Anticipated.

The fact that most of the work from Matachin to Gatun, on the line of the Canal, is below high stages of the Chagres River has made necessary the construction of dykes, as described in THE CANAL RECORD of June 24, 1908. Since the dykes are not high enough to protect the low areas against extreme floods, the Division of Meteorology and River Hydraulics was instructed to institute a system of predicting high water in order that opportunity might be given to remove any machinery that seemed to be in danger. It was important not only to give warning of floods, but also to avoid giving false alarm that might cause expensive delays in the Canal work.

Were it possible to estimate from a storm's rainfall the height to be reached in the river channel, twenty-four hours' warning might be given, but so many conditions affect the relation between rainfall and run-off that only a rough approximation of the probable height of a freshet can be predicted from the previous rainfall.

The elements affecting the results are: The amount of rain, the rate of precipitation, the distribution of rain, the rate of run-off before the storm, and the previous degree of saturation of ground. It is clear that any system taking cognizance of all these elements must be complicated, even though the data were available to define them. The rainfall stations are not so located as to give a fair estimate of the rainfall over the whole basin, the area of the watershed is only approximately known, and there are no means at hand of tracing the path of a storm.

Frequently freshets come down the river without any previous warning in the shape of rainfall within the measured area; at other times what appears to be an alarming amount of rain will cause little or no rise in the river, showing that either the rain was above normal in the measured section and deficient in the unmeasured section, or that the ground was so dry as to absorb promptly the rain and retard its delivery to the river. The establishment of more rain gauges in the upper part of the valley would be a costly and impracticable undertaking, inasmuch as each would have to be connected with headquarters by telephone, and would result in little good, for whatever system is used must be based on past records, and by the time enough records were collected from the new gauges the need of this service would probably no longer exist.

In view of these facts it is clear that the only basis from which a prediction can be made is the river itself. The rate of travel of a freshet wave depends on the location of the heaviest rain. Frequently the rise commences simultaneously at all stations, at other times the rise begins later at the lower stations, but the crest always passes the upper stations first at various intervals as shown below, making it possible to pre-

dict high water at Gamboa, Bohio and Gatun several hours in advance.

STATION.	Hours since crest passed El Vigia.	Distance from sea (miles).
El Vigia.....	0	64
Alhajuela.....	2 to 4	54
Gamboa.....	5 to 7	43
Bohio.....	11 to 13	16
Gatun.....	17 to 19	4

It has been found that there are well defined relations between the rises at the several stations, as follows:

Gamboa rise=1.3 X Alhajuela rise.  
Bohio rise=1.35 X Alhajuela rise when Alhajuela is less than 12.5 feet.

Bohio rise=Alhajuela rise + 4 feet when Alhajuela is greater than 12.5 feet.

Bohio rise=Gamboa rise when Gamboa is less than 16.2 feet.

Bohio rise=0.8 X Gamboa rise + 4 feet when Gamboa is greater than 16.2 feet.

The values thus obtained give the number of feet the river will rise above the level at which it stood immediately preceding the rise, and to refer to mean sea-level it is necessary to add them to the height at that time. It is believed that these results are sufficiently accurate for the purpose desired, as it rarely happens that the error is more than two or three feet. Should the tributaries contribute an excessive amount of water the actual height will be greater than the predicted height. If, on the other hand, they are less than normal, the predicted height will be too large. The formulas given above represent mean conditions and it is sometimes possible to correct them by noting the distribution of rainfall.

The table below shows the heights, actual and predicted, at Alhajuela, Gamboa, and Bohio during freshets of 1904, 1905, 1906, 1907, and an idea of the accuracy of the method may be had therefrom. The El Vigia station has been established too recently to be of much service this year, so it is not included in the table. With the 1908 records this station will be of great service next year in lengthening the time of warning.

31	December 7, 1907.....	12.4	16.4	16.1	.....	0.3	17.0	16.7	.....	0.3	.....

It will be seen that, with the exception of Nos. 5 and 7 at Bohio, there are no errors large enough to be of much importance.

These two cases would not, in fact, have had errors so large as indicated in the table, for the Bohio prediction would have been corrected as the crest passed Gamboa, as follows in No. 5. The first prediction for Bohio is that the water will rise 10.1 feet. Later as the crest passes Gamboa, the first prediction is cancelled, and it is predicted that the rise at Bohio will equal the rise at Gamboa, 14 feet. The actual height finally reached is 16.4 feet, the predicted height being in error 2.4 feet.

The following table shows concisely the errors encountered in the use of the method just explained.

Predictions in error more than	GAMBOA.		BOHIO.	
	Num-ber.	Per cent of all freshets.	Num-ber.	Per cent of all freshets.
5 feet....	0	0	2	6.5 per cent
4 feet....	2	6.5 per cent	2	6.5 per cent
3 feet....	2	6.5 per cent	6	19.4 per cent
2 feet....	5	16.1 per cent	10	32.3 per cent
1 foot....	13	42.0 per cent	14	45.2 per cent
0 feet....	31	100.0 per cent	31	100.0 per cent

Having predicted the probable height of the river at the lower station it remains to determine at what hour the maximum will occur. The rate of travel of a freshet wave varies greatly even in those of the same magnitude. There seems, however, to be a relation between the duration of a rise at one station and that at another which relation permits the time of the maximum to be estimated.

Roughly  $\left\{ \begin{array}{l} \text{Gamboa duration} = 1.5 \times \text{Alhajuela duration.} \\ \text{Bohio duration} = 1.5 \times \text{Gamboa duration} \\ \quad = 2.25 \times \text{Alhajuela duration.} \end{array} \right.$

But the time of passage of crest is never less than 3 hours from Alhajuela to Gamboa and 5 hours from Gamboa to Bohio, and should the time intervals as calculated by the above formulas be less, 3 and 5 should be used instead. To get the probable time the maximum will occur at Gamboa, it is only necessary to add the calculated dura-

tion to the time the rise commenced at Gamboa.

The following brief example (Freshet No.

19, August 21-22, 1907) will perhaps make more clear the use of this method. The arithmetical processes are shown in parentheses, and are not included in the predicting message.

Phone message from Alhajuela at 8 p. m.:  
"River now 99.5. Crest. Rose from 94.1 since 5 p. m."

Phone message from Gamboa at 8 p. m.:  
"River now 50.5. Rising. Rose from 48.3 since 5 p. m."

Prediction at 8.10 p. m.:  
"RIVER WILL RISE AT GAMBOA (5.4X1.3) 7 FEET, REACHING STAGE (48.3+7.0) 55.3, AT ABOUT 11 P. M."

In predicting the time it was found that the calculated duration at Gamboa added to the time the rise began would make the crest less than three hours later than the crest at Alhajuela, so the calculated duration was rejected and the time of maximum was assumed as three hours later than Alhajuela. The actual rise at Gamboa was 8.6 feet, reaching stage 56.9 at midnight, the predicted height being 1.6 feet too low, and the predicted time of maximum one hour too soon. The effective time of warning was 2 hours and 50 minutes. For larger freshets the time of warning will be materially greater. Freshet No. 19 was not large enough to cause any damage.

At each station an electric gong, so adjusted as to sound whenever the river rises above a certain point, has been installed in the sleeping quarters of the observer. A continuous record of the river heights is kept by means of automatic registers and these curves afford very complete data, so far as the main stream is concerned, from which to study the freshets. The errors in results obtained by this system could be materially reduced were the tributaries to be observed. It is doubtful if the extra expense would be justified as it would very rarely happen that an error in prediction of three feet would have any effect on the precautionary measures.

The system herein described is largely a matter of experiment and some modification of the formulas used may result from further data. No literature on the subject in the English language was available. A paper in the "Annales des Ponts et Chaussées," of May, 1889, by M. Allard, a French engineer, was found and was of great assistance. His system is similar to the above, but more elaborate. By means of the heights of the various tributaries and the relations they had to each other, he was able to predict with surprising accuracy the flood heights of the River Seine at Paris.

#### Gold Hill and Balboa Hill

THE CANAL RECORD:

Will you kindly advise, either by letter or through the THE CANAL RECORD, the height of Balboa Hill, opposite Gorgona, and Gold Hill at Culebra, and what is the highest point in the Zone?

Very truly yours,

J. E. CRUTCHER.

Cristobal, September 11, 1908.

[According to recent surveys Gold Hill is 607 feet high. According to the map and profile prepared for the Panama railroad by George M. Totten, in 1855, based on the survey by Thomas Harrison, Crown surveyor of Jamaica, Balboa Hill (Cerro Grande) is 1,000 feet high. There is no map, or survey so far as is known, that gives information as to what is the highest point in the Zone].

## LETTERS FROM THE LINE.

### An Open Letter.

Ancon, September 22, 1908.

To the Employes of the Division of Meteorology and River Hydraulics:

Although, as far as you are personally concerned, I feel that it is unnecessary for me to express in words the high regard in which I hold each and everyone of you, for the loyal support I have received from you during the time I have been at the head of the Division of Meteorology and River Hydraulics, I deem it my duty to do so publicly, so that it may be known that whatever degree of success or efficiency the work under my charge has attained has been primarily due to the close unity existing between us and to the intelligence and faithfulness displayed by each of you in the work under your immediate care.

Of the heads of the three sections into which our work is divided, I must say that in all my engineering practice I have never found such loyalty, consistent support, interest in the work and desire to advance its progress, as they have shown me, entailing, consequently, the full confidence of our superiors in the work entrusted to our care. These faithful companions I shall always hold in my memory with respect and gratitude.

My interest in our work will not disappear with my separation from the service, and I feel confident that I will see by its continued success that you are rendering to my successor the same loyal support you have always given me.

I desire here to express my high appreciation of the moral support and encouragement I have always received from the Isthmian Canal Commission in the organization and execution of the work of this division; also of the kind and generous assistance rendered me by Gen. Henry L. Abbot during the entire time I have been in charge of this work.

In closing these lines, I must say that it has been most painful to me to be obliged, on account of my health, to sever my connection with the work of the Isthmian Canal Commission, a work in which I have spent my best energies, and in the ultimate success of which, under the American flag, my faith has never left me for a moment, even in the days of greatest doubt.

RICARDO M. ARANGO,  
Division Engineer.

### Civic Pride Hindrances.

THE CANAL RECORD:

At the conclusion of the work of the committee sent from the United States to report upon economic and social conditions existing in the Canal Zone, one of its members addressed a public gathering at the Commission clubhouse, Cristobal. In the course of his remarks he took occasion to remind the sojourners of the "Atlantic City," upon whom the Government of the United States is conferring many benefits in the way of homes and equipment and furnishings, that some little duty seemed but natural in return in the way of assuming civic pride, citing in particular the need of settees for the water front along Palm avenue. While there has been no concerted action

looking to the accomplishment of this suggestion, there are those among the Government's beneficiaries who are endeavoring to do their part toward making the city as attractive and beautiful as their individual efforts will bring about.

On five separate occasions the writer has planted a flower bed about the door yard of the quarters assigned him.

Thrice these flowers have been destroyed by goats that are allowed the privileges of "The Cabbage Patch," as the section has been designated.

Once a good soul, a lover of flowers who would embellish his own surroundings at little effort and expense, came to the flower bed in the dark hours of the night, carrying away with him every plant—root and branch.

The good soul who helped himself is more than welcome if he will only add something of grace to his heart, as it is hoped he may do in the way of adorning his flower garden.

Once the ants and goats together devastated the garden.

Thrice the goats have been reported to the Police Department.

These are serious hindrances to civic pride, not alone from a monetary standpoint, but they tend to take the vim out of one, especially when he has to tramp long miles after the beauties of the woods and swamps and cliffs.

The bed has again been planted. Now, how am I to depend upon results against such odds as ravenous goats, hoarding ants, and the dark man?

CIVIC PRIDE.

Cristobal, September 5, 1908.

### Empire Christian League,

TO ALL CONCERNED:

At the regular business meeting of the Empire Christian League the following action was taken and resolutions adopted:

*Whereas*, The people of Empire, realizing the necessity of having a church home, petitioned the Chairman and Chief Engineer of the Isthmian Canal Commission for the provision of same, therefore, be it

*Resolved*, That a vote of thanks be extended to the Chairman and Chief Engineer for the prompt action in and having erected such a building; therefore, be it further

*Resolved*, That copies of same be forwarded to the Chairman and Chief Engineer, THE CANAL RECORD, the press, and spread on the minutes of the League.

Very respectfully,

J. FORMAN, President,

F. W. CONNER, Secretary,

Committee on Resolutions.

EMPIRE, September 28, 1908.

### A Hose Company Race.

THE CANAL RECORD:

Gatun volunteer company, No. 1, of the Canal Zone Fire Department, challenges any volunteer company of the Zone to a "hub to hub" contest to be held at Cristobal. Arrangements relative to rules, date, prizes, etc., to be made by a committee representing contestants.

Kindly address all communications to

CHAS. WILLETT,

Foreman Gatun Volunteer Company,

Gatun, September 23, 1908.

## OFFICIAL CIRCULARS.

## Depot Quartermaster.

CULEBRA, September 18, 1908.

CIRCULAR No. 211.

Capt. Courtland Nixon, having reported for duty, is hereby assigned as Depot Quartermaster at Mount Hope, reporting to Maj. C. A. Devol, Chief Quartermaster.

GEO. W. GOETHALS,  
Chairman.

## Board of Survey and Appraisal Abolished.

CULEBRA, September 22, 1908.

CIRCULAR No. 210.

In accordance with the resolution adopted by the Commission at its 147th meeting, the Board of Survey and Appraisal is hereby abolished.

All records and unfinished business of the Board of Survey and Appraisal will be transferred to the Survey Officer for the Isthmian Canal Commission.

The duties of the Survey Officer will hereafter be performed in accordance with the provisions of Circular No. 1, Quartermaster's Department, and he will forward his reports direct to this office for action.

H. F. HODGES,  
Acting Chairman and Chief Engineer.

## Storehouses at La Boca and Cristobal.

CULEBRA, September 28, 1908.

CIRCULAR No. 212.

On October 1, 1908, the storehouse now operated by the Quartermaster's Department at La Boca will be turned over to the Division Engineer of the Pacific Division, with all supplies contained therein, and necessary forces.

Effective the same date: The storehouse operated by the Quartermaster's Department at the Dry Dock at Cristobal will be turned over to the Division Engineer of the Atlantic Division, with all supplies contained therein, and necessary forces.

H. F. HODGES,  
Acting Chairman and Chief Engineer.

## Telephone Calls, Chief Quartermaster's Office.

CULEBRA, September 22, 1908.

TO ALL CONCERNED:

You are informed that a private telephone switchboard has been installed in this office, connecting telephones as follows:

Maj. C. A. Devol, Chief Quartermaster.  
Lieut. R. E. Wood, Assistant Chief Quartermaster.  
C. H. Mann, Chief Clerk.

Max Dyer, in general charge of matters pertaining to material and supplies.

Harry Leonard, in charge of United States requisitions.

H. T. Bosse, Chief Timekeeper.

M. B. Huff, in charge of contract laborers' records and vouchers.

D. H. Beaman, in charge of property returns.

H. S. Farish, Acting Surveying Officer.

C. C. Cameron, Chief File Clerk

C. S. Todd, Accountant.

In calling the office of the Chief Quartermaster, after connection has been secured with operator of private switchboard, name of person with whom it is desired to speak should be given. If it is not known who has charge of the particular business regarding which call is made, the nature of the business should be stated to the operator, who will make the proper connection.

C. A. DEVOL,  
Chief Quartermaster.

## Examination of Accounts.

EMPIRE, September 22, 1908.

CIRCULAR No. 4.

The following instructions, in order to carry into effect the provisions of the Chairman's Circular No. 183H, of August 27, 1908, are issued for the information of all departments and divisions:

**Pay-rolls**—Pay-rolls for services rendered in the month of September will be sent to the Examiner of Accounts in the form they have heretofore been sent to the Disbursing Officer—that is, one copy of the time and pay-roll and one copy of the pay-roll, accompanied by the unsigned pay receipts. These papers should be sent on the first day of October, or as soon thereafter as practicable, and in no case later than the fifth. The Examiner of Accounts and Disbursing Officer will retain the pay receipts of each department and division until all pay receipts, including both gold and silver rolls of that department or division, are ready for issue.

Beginning with October 1, 1908, each time-keeping office will keep for its office record the present form of time and pay-roll, and will make an original and duplicate of the pay-roll. These original and dupli-

cate pay-rolls will, on November 1, 1908, and each month thereafter, be sent with the pay receipts, to the Examiner of Accounts.

**Bonds**—Beginning October 1, 1908, all surety bonds of employees of the Isthmian Canal Commission, except employees of the Department of Disbursements who handle money for which the Disbursing Officer is responsible, will run in favor of the United States. Such employees as timekeepers, custodian of coupon books for issue to employees, those bonded for the purpose of witnessing signatures to pay receipts, etc., will be transferred to the schedule bond in favor of the United States. This change from one bond to another will be made by the Examiner of Accounts, and no action on the part of other Departments or Divisions will be necessary. All records will be kept by the Examiner and all correspondence relating to this subject should be addressed to him. Subsequent to the above date, heads of Departments and Divisions should report at the close of each month all changes in the status or location of bonded employees, during the month, and in case of separations from the service should state whether or not the employee satisfactorily accounted for all money or property. Prompt advice should be given to the Examiner of any suspected irregularity or shortage in the accounts of any bonded employee. Application forms for employees whom it is desired to bond will be furnished by the Examiner on request.

**Coupon Books**—Timekeepers and others charged with the custody and issue of coupon books and meal tickets, will make requisition therefor upon the Examiner of Accounts. When the requisition has been entered and approved in the Examiner's office, it will be sent to the Disbursing Officer, who will issue the coupon books and meal tickets. As required by Circular No. 183H, paragraph 5, timekeepers and others receiving such books and tickets will render a monthly account therefor to the Examiner.

**Miscellaneous Reports**—The general books of the Commission will be kept in the Examiner's office, where all accounting work involving expenditures of money and the checking of reports, will be done. All reports affecting the accounts heretofore sent to the Disbursing Officer will be sent to the Examiner, and all correspondence had with the Examiner's office, except in the case of questions involving actual payments of accounts or the deposit of moneys belonging to the Commission.

**Bills Receivable**—As provided by Circular No. 183H, bills issued by all Departments and Divisions will be sent to the Examiner of Accounts. The list of such claims heretofore sent to the Examiner may be discontinued.

W. W. WARWICK,  
Examiner of Accounts.

Approved:  
GEO. W. GOETHALS,  
Chairman.

## Notice to P. R. R. Tenants, Colon, R. P.

COLON, September 22, 1908.

The Committee appointed by the Chairman of the Commission to consider the complaints made by the various lessees of lots in the city of Colon, will again resume their meetings on or about November 2. Due notice of the meeting will be issued.

H. J. SLIFER,  
General Manager.

## UNCLAIMED PACKAGES.

The following is a list of packages that have been forwarded from New York to Isthmian Canal Commission and Panama railroad employees, and that are waiting to be claimed at the freight house at Colon. The owners of these packages will have to make application for free customs entry in connection with Circular No. 85, or in the alternative, pay duty to the Panama Government customs on the value of the contents of the packages, before delivery can be effected:

No. 7232—J. W. Foulks, Colon, 1 parcel, ex *Dunottar Castle*; September 30, 1907 ..... prepaid  
No. 7622—Frederick White, Cristobal, 1 parcel, ex *Advance*; May 16, 1908 ..... prepaid  
No. 7564—Mayer Unterberg, Panama, 1 parcel, ex *Esperanza*; April 13, 1908 ..... prepaid  
No. 7723—W. D. Wallman (or Waltman), Cristobal, 1 parcel, ex *Panama*; July 9, 1908, prepaid  
No. 7762—Richard F. Bowly (or Boidebuy), Gorgona, 1 parcel, ex *Alliance*; August 9, 1908 ..... prepaid

Charges  
to collect.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

## REPORT FOR AUGUST, 1908.

Total membership.....	1,336
Total number of bowling games.....	4,943

## EMPIRE.

Empire defeated Gorgona at bowling on Saturday evening, September 19, on the Gorgona alleys with a score of 2 to 1. Pin fall—Empire, 854, 812, 875; Gorgona, 827, 827, 808.

The landscape gardener is engaged in beautifying the grounds about the clubhouse.

Fifty new books have just been ordered for the library and are expected to arrive in about three weeks. Alterations are being made in the office for the accommodation of the entire library which, when completed, will consist of about 1,000 volumes. The number now is 700.

## Concert by the I. C. C. Band.

## HOTEL TIVOLI, ANCON.

Sunday, October 4, 1908, at 7.30 p. m.

## PROGRAM.

1 March— <i>Santiago Flynn</i> .....	Morse
2 Overture— <i>Lustspiel</i> .....	Kelar Bela
3 Waltz— <i>Moonlight on the Hudson</i> .....	Herman
4— <i>U. S. Army Lancers</i> .....	Tobani
5 Medley Selection— <i>Geo. Washington, Jr.</i> .....	Cohan
6 Barytone Solo— <i>Let all Obey</i> .....	Leach

D. E. NORCROSS.

CHAS. E. JENNINGS, Musical Director.  
A concert will be given at Empire, C. Z., Sunday, October 11.

## Misdirected Letters.

## Division of Dead Letters.

Ancon, C. Z., September 30, 1908.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be obtained on request of addressee:

Bealler, Archie	McNulty, Louis
Bentley, E. A.	O'Dea, William
Bingham, J.	Robinson, A. L.
Daley, Tom	Roguesbert, Laurent
Davis, John S.	Root, William F. S.
Goulstone, Arthur	Rowe, A.
Hunt, Emma	Schroeder, H. F.
Lohing, J. G.	Sheakley, Fred E.
Mackie, Samuel	Wallace, Joe
Michelbaugh, Bernard	Waterworth, C. E.
Murling, Dan.	

## COMMISSARY DEPARTMENT.

## NOTICE.

CRISTOBAL, C. Z., September 29, 1908.

Effective October 1: All communications intended for either the Subsistence Department, I. C. C., or the Commissary Department, P. R. R., should be addressed to the Subsistence Officer, Cristobal, C. Z.

MAJ. EUGENE T. WILSON,  
Subsistence Officer.

## COMMISSARY PRICES

For week beginning September 29:

## FRESH MEATS.

	Price.
Mutton—Stewing.....per lb	6
Shoulder and neck (not under 6 pounds).....per lb	7
Entire forequarter (not under 10 pounds).....per lb	8
Leg (8 to 10 pounds).....per lb	16
Short-cut chops.....per lb	20
Lamb—Stewing.....per lb	6
Entire forequarter.....per lb	8
Leg (6 to 8 pounds).....per lb	27
Chops.....per lb	29
Veal—Stewing.....per lb	10
Entire forequarter (15 to 20 lbs).....per lb	11
Loins.....per lb	22
Short-cut chops.....per lb	23
Cutlets.....per lb	23
Pork—Cuts.....per lb	20
Beef—Suet.....per lb	4
Soup.....per lb	8
Stew.....per lb	12
Corned.....per lb, 12, 14, 16	16
Rib-roast, second cut (not under 3 pounds).....per lb	19
Rib-roast, short cut (not under 3½ pounds).....per lb	23
Sirloin roast.....per lb	29
Rump roast.....per lb	29
Porterhouse roast.....per lb	29
Steak, round.....per lb	23
Rib.....per lb	24
Sirloin.....per lb	29
Porterhouse.....per lb	29
Rump.....per lb	29
Tenderloin.....per lb	30

## MISCELLANEOUS.

Livers—Beef.....per lb	12½
Calf.....each	60
Sausage—Pork.....per lb	19
Frankfurter.....per lb	13
Leberwurst.....per lb	15
Bologna.....per lb	15
Sweet bread—Veal.....each	1.20
Beef.....per lb	25
Ox tongues.....each	90
Pigs' feet, pickled.....per lb	11
Pigs' tongues, pickled.....per lb	15
Eggs, fresh.....dozen	34

## POULTRY AND GAME.

Chickens—Dressed (milk-fed).....each	1.30
Large (milk-fed).....each	1.65
Capons.....each	2.40
Broilers.....each	60
Fowls, medium and large.....each, 80c. and 1.00	
Ducks, fatted (fancy).....each	1.10
Suckling pigs.....each	4.90
Turkeys.....per lb	30
Squabs.....each	45

## CURED AND PICKLED MEATS.

Bacon—Strips.....per lb	23
English, breakfast sliced.....per lb	\$26
Ham—Sugar-cured, sliced.....per lb	\$25
One-half, for boiling.....per lb	\$21
Westphalia.....per lb	45
Ferris.....per lb	20
Beef, salt, family.....per lb	16
Salt pork.....per lb	13

## DAIRY PRODUCTS.

Butter—Prints, prime quality.....per lb	33
Cheese—Roquefort.....per lb	45
Young America.....per lb	22
Swiss.....per lb	33
Edam.....each	1.05
Camembert.....per lb	28
McLaren's.....jar	15
Pinxter's.....tin	22
French cheese in tins—Camembert, Roquefort, Brie, Neufchatel.....tin	20
Buttermilk.....quart	15
Milk, Briarcliff.....quart	25

## VEGETABLES AND FRUITS.

Tomatoes (local only).....per lb	8
Lettuce.....per lb	14
White potatoes.....per lb	3½
Sweet potatoes.....per lb	2½
Cabbage.....per lb	4
Onions.....per lb	3½
Cucumbers.....per lb	6
Squash (summer).....per lb	3
Green corn.....dozen	26
Limes.....hundred	40
Lemons.....dozen	24
Oranges.....dozen	18
Cantaloupes.....each	10
Grapes.....per lb	10

§ Sold only from cold-storage and not from Commissaries

## NEW ARTICLES.

	Price.
Mats, cocoa, door, 22x36-inch.....each	\$2.00
Berry bowls, 8-inch.....each	25
Glasses, cocktail.....each	8
Plates, 7-inch.....each	12
Parasols.....each	1.50
Beds, iron, single, No. 365.....each	2.50
Beds, iron, double, No. 360.....each	3.50
Beds, iron, double, No. 295.....each	6.75
Shoes—Velour calf, Christy ties.....pair	5.50
Milwaukee kid, Eng. oxf.....pair	5.50
Glazed kid, bals.....pair	5.75
Pat. Cold Yale ties.....pair	6.00
Pat. calf pumps.....pair	5.50

## Soldiers, Sailors, and Marines.

All ex-soldiers, sailors, and marines, regulars and volunteers, now residing on the the Isthmus, are requested to send in their names, to be included in the roster, or directory of ex-service men on the Isthmus of Panama, which is being compiled by Birt S. Sturtevant Garrison, No. 41, Regular Army and Navy Union, U. S. A. Full name, date of enlistment, date of discharge, name of organization in which service was rendered, Isthmian address and home address should be furnished.

PAUL D. MAY, *Commander.*

Sojourners' Lodge, No. 874, A. F. and A. M., will meet at its hall in Colon, on Saturday, October 3, 1908, at 7.30 p. m., in ordinary communication. Masons in good standing are fraternally invited to be present.

The United Fruit Company's third new ship, *Heridia*, will arrive in Colon in time to sail for New Orleans on October 6, at 1.30 o'clock in the afternoon. The *Heridia* is a sister ship to the *Cartago* and *Parismina*, and is equipped with a modern wireless outfit.

A coal trestle is being constructed in the Panama railroad yard at Panama to aid in the rapid coaling of locomotives. Coal will be dumped from the cars through the trestle, and from the pile beneath the trestle will be loaded upon the tenders by a crane assigned to this work.

Trains on the Panama railroad will enter Gatun by the old line from Mundi, and will stop at the old station, for a few weeks, until the trestle on the relocated line has been filled. From the old station at Gatun trains will run on to the relocated line at the north end of the Gatuncillo fill by a cross-over track recently completed.

All but one mile of the roadbed on the relocation of the Panama railroad, between Barbacoas and Gamboa bridges, a distance of seven miles, has been completed, and trestles now being driven are rapidly closing up the gap. This section of the work has been done within a year by a comparatively small force of men.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's line, the Panama Railroad Company's dates being subject to change:

## FROM NEW YORK TO COLON.

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 11 a. m., and from Colon at 1.30 p. m., via Port Limon, for New Orleans. In addition to the above, the United Fruit Company dispatches a steamer about every ten days from Colon, via Boca del Toro, for New Orleans.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The following steamers have recently arrived at La Boca: September 19, *California*, from Valparaiso; September 20, *Onilo*, from Buenaventura; September 25, *San Juan*, from San Francisco. Departures were: September 19, *Ecuador*, for Buenaventura; September 22, *Limari*, for Valparaiso; September 26, *Acapulco*, for San Francisco.

Two turnstiles will be added to the two now provided at the Panama railroad station in Panama, as exits for first class passengers.

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, OCTOBER 7, 1908.

No. 6.

## The Canal Record

Published weekly under the authority and supervision of the  
ISTHMIAN CANAL COMMISSION

"The Canal Record" is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the "gold" roll. Extra copies can be obtained from the news stands of the Panama Railroad Company for five cents each

Address all Communications

THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

## NOTES OF PROGRESS.

### Canal Record Index.

An alphabetical index of Vol. I, of THE CANAL RECORD has been compiled and printed in form suitable for binding with the issues of the paper for the year. A limited number of copies is available for persons who desire to preserve THE RECORD in book form. Application, stating full name and position in the service, should be made at the office of THE CANAL RECORD.

### Lock Excavation Below Sea-level.

One of the shovels at work in the lock site at Gatun is below sea-level, making a cut at -6. This is in the lowest of the three locks. Little trouble has been experienced from seepage, and the 12-inch pump recently installed is able to keep the water below the point where it would interfere with the shovel. Two additional 12-inch pumps are at hand in case they are needed, as they probably will be later. The excavation in the lower locks will go down to -55.67. The excavation from the lock site is being used in the fill of the high trestle on the relocated line of the Panama railroad at Gatun.

### Chamé Sand Deposits.

Borings along the beach at Chamé are about half finished. Holes have been sunk along the inner side of the peninsula 1,000 feet apart and 50 feet below mean tide. At this depth the sand is apparently of the same grade as at the surface, and the amount that can be obtained at this place is, therefore, greater than was estimated. Borings are now being made along the outside shore of the peninsula.

### New Shovel Records.

The largest daily record for steam shovel excavation in the Central Division was made on September 30, when 52 shovels took out 63,418 cubic yards of material. The best previous record was made on July 9, when

55 shovels excavated 63,049 cubic yards. On September 28, shovel 209, working at Pedro Miguel, took out 3,100 cubic yards, which is the best record for a single shovel in 1908. The best record for a single shovel was made in 1907 by shovel 226, which took out 3,750 cubic yards on November 18.

### September Excavation.

The grand total of excavation during the month of September was 3,158,886 cubic yards. All of this except 69,035 cubic yards was taken from the Canal prism. This is 93,620 cubic yards less than the record for August, and 321,384 cubic yards less than the highest record, that of March, 1908. There were 25 working days in September, one less than in August, and one less than in March. Of the grand total of September excavation 1,374,856 cubic yards were taken out by dredges and the remainder was dry excavation. The average rainfall for September for the territory in which excavation is in progress was 9.72 inches, as compared with 11.91 inches in August.

The excavation for September, 1908, as compared with that for the same month in 1907, is over twice as large, while the rainfall in September, 1907, was 11.55. In making such a comparison, however, it should be borne in mind that the work has developed greatly all along the line within a year, and that in September, 1907, the excavation at the lock sites at Miraflores and Pedro Miguel had not been begun, while the sea-going suction dredge now at work on the Pacific end had not arrived on the Isthmus.

In the Atlantic Division the excavation was 802,878 cubic yards, of which 104,780 cubic yards were from the site of the locks, 32,112 cubic yards from the prism at Mindi, and 41,210 cubic yards from the spillway of Gatun Dam. The dredges working in the prism in Limon Bay took out 624,776 cubic yards.

In the Central Division the excavation was 1,459,808 cubic yards, of which all but 27,241 cubic yards was in the Canal prism. This excavation was entirely by steam shovels. As compared with August the excavation in the Central Division fell off 70,802 cubic yards, and as compared with July it was 2,726 yards larger. In the Culebra section, or Culebra Cut, the total excavation was 1,122,860 cubic yards, of which 27,241 cubic yards were from the Obispo Division, which is not in the Canal prism. On this section of the work the rainfall in September was slightly heavier than in August, and the record was also influenced by the temporary burying of three shovels at Cucaracha slide, and by the fact that the month was one working day shorter than the month of August. On the other hand, in spite of the heavier rainfall the dumps at both ends of the Cut were in unusually good condition, the experience of past rainy sea-

sons having been used to advantage in keeping up the tracks and handling the spoil.

In the Pacific Division all previous records were broken by an excavation of 886,200 cubic yards, all but 584 cubic yards of which was taken from the Canal prism. The dredges took out 750,080 cubic yards. The dry excavation amounted to 136,120 cubic yards.

A detailed statement of the excavation in the three divisions follows:

### ATLANTIC DIVISION.

Locality.	From Canal Prism	Outside Canal Prism	Total excavation
	cu. yds.	cu. yds.	cu. yds.
Dry excavation—			
Gatun spillway.....		41,210	41,210
Gatun Locks.....	104,780		104,780
Mindi.....	32,112		32,112
Total.....	136,892	41,210	178,102
Wet excavation—			
Colon dredging.....	624,776		624,776
Total wet and dry excavation.....	761,668	41,210	802,878

### CENTRAL DIVISION.

All dry excavation—			
Chagres section.....	346,948		346,948
Culebra section.....	1,095,619	27,241	1,122,860
Total.....	1,442,567	27,241	1,469,808

### PACIFIC DIVISION.

Dry excavation—			
Miraflores Locks.....	88,605	501	89,106
Pedro Miguel Locks....	28,750	83	28,833
Cardenas Hill.....	18,181		18,181
Total.....	135,536	584	136,120
Wet excavation—			
Pacific entrance.....	750,080		750,080
Total wet and dry excavation.....	885,616	584	886,200

### TOTAL EXCAVATION, ENTIRE CANAL.

Dry excavation.....	1,714,995	69,035	1,784,030
Wet excavation.....	1,374,856		1,374,856
Total.....	3,089,851	69,035	3,158,886

Mean rainfall along Canal (eleven stations), 9.72 inches.

Figures of monthly excavation are based upon telephone reports from the Division Engineers, and are subject to slight alterations when the official reports are received.

### Post-office at Miraflores.

A post-office was opened at Miraflores on October 1. It is a money order office and is located in a remodeled building near the railroad station. This addition brings the number of post-offices in the Canal Zone up to eighteen.

### La Boca Shipyards.

The old French ladder dredge *Mole*, formerly dredge A-2, was taken from the ways at La Boca, September 30, and within a week will resume work in the harbor. This is the dredge that worked five years without undergoing general repairs, and now that

## NOTES OF PROGRESS.

(Continued)

extensive repairs have been made it be believed to be in as good condition as ever.

The steam trawler *Riversdale* has been rechristened the *Chame*. She is undergoing repairs and being fitted with an oil tank and oil burning apparatus at the La Boca shipyards. A refrigerator plant will probably be installed before the ship is set at work as a tender in the Chamé sand service.

## September Rainfall for Two Years.

Stations—	Rainy days.	Total Sept., 1907.	Total Sept., 1908.	Station average for month.
<i>Atlantic Slope—</i>				
Cristobal.....	26	11.72	11.57	12.48
Brazos Brook.....	26	13.02	12.05	13.23

Porto Bello.....	22	.....	8.59	.....

## Clerical Work of Mechanical Division.

The keeping of "time," the records of labor distribution, and the work on distribution of charges for material in the Mechanical Division will be done hereafter at the shops instead of in the office at Culebra. Each master mechanic will make up the payroll for his shop. This involves the transfer of clerks heretofore employed at Culebra to the shops. The change is made in order that the clerical work involved in keeping these records may be consolidated in the shops, thereby giving the master mechanic a better grasp of the work entrusted to him.

## September with the Dredges.

The dredges at work in the Atlantic and Pacific Divisions excavated 1,437,885 cubic yards of earth and rock in September. This total does not agree with that given in the table of September excavation, 1,374,856, because the latter amount includes only excavation from the Canal prism, and does not take into consideration the 63,029 cubic yards excavated by suction dredge No. 82, and the 16-inch suction dredge in the Atlantic Division.

During the month dredge No. 83, which was undergoing repairs at the Cristobal drydock, was set at work and excavated 33,841 cubic yards. The dipper dredge *Chagres* made the remarkably high record of 25,179 cubic yards, working in rock in the prism on the shore of Limon Bay.

In the Pacific Division the dredging fleet was strengthened by the addition of the 20-inch suction dredge *Sandpiper*, and the dipper dredge. The *Sandpiper* was undergoing her first month's test, and the amount excavated is no indication of her capacity. All of the dredges in the Pacific Division, except the *Culebra*, are working inside the harbor. The sea-going ladder dredge *Gopher* struck a ledge of rock at elevation —26 during the last week of September.

The dipper dredge was set at work on September 16. All the other dredges worked the full month.

A statement of the amount and nature of material excavated by each dredge follows:

## ATLANTIC DIVISION.

Name and class of Dredge.	Excavation, Cu. yds.	Material.
Ancon (sea-going suction).	350,310	Earth.
No. 1 (French ladder)....	152,727	Earth.
No. 6 (French ladder)....	43,942	Earth and rock.
Mindi (dipper).....	18,777	Rock.
Chagres (dipper).....	25,179	Rock.
16-inch suction.....	14,055	Coral.
No. 82 (20-inch suction).....	48,974	Earth and rock.
No. 83 (20-inch suction).....	33,841	Earth.
Total.....	687,805	

## PACIFIC DIVISION.

Culebra (sea-going suction).	432,312	Earth.
Gopher (sea-going ladder, French).	138,757	Earth.
No. 14 (ladder, French).....	129,608	Earth.
Dipper.....	21,309	Earth.
Sandpiper (20-inch suction).	38,094	Earth.
Total.....	750,080	
Grand total.....	1,437,885	

## Canal Zone Schools.

A meeting of the teachers of the Canal Zone schools was held in the office of the Superintendent of Schools at Ancon on Tuesday, September 29. The white teachers met in the morning and the colored teachers in the afternoon. Matters in connection with the opening of the schools on October 1 were discussed and assignment of teachers made. The teachers in the white schools are as follows:

Ancon—Miss Catharine Bailey, principal, Miss Helen C. Danforth, and Mrs. Winifred C. Ewing.  
 Pedro Miguel—Mrs. W. E. Maxon.  
 Paraiso—Miss Margaret E. Kyle.  
 Culebra—Mrs. Mamie Miracle, principal, Mrs. C. H. Ellsworth, Miss Gertrude L. Bliss, and Miss Jessie S. Wilson.  
 Empire—Miss Jessie J. Heller, principal, Miss Ida Keys, and Mrs. Eugene G. Argraves.  
 Las Cascadas—Mrs. Fay Calvert Berry.  
 Gorgona—Mrs. Edith C. Bristol, principal, Miss Florence O'Connor, and Miss D. Vera Sabovich.  
 Gatun—Miss Ida Altstaetter, principal, and Mrs. A. B. Shippee.  
 Cristobal—Mrs. Edward J. Corcoran, principal, Miss Odina J. L. Frost, Miss Grace Varborough, and Miss Edith Slifer.  
 Colon Beach—Miss Margaret B. Slifer, principal, and Miss Cherry Robb.

Owing to the small number of children attending school at La Boca last year that school has been abolished and the children at La Boca will be transported to and from the school at Ancon in a wagonette.

On the opening day of school there were 43 teachers employed, 24 white and 19 colored. The number of children enrolled on the first day was 396 white and 264 colored. There is no available record of the first day's attendance for last year, but accord-

ing to a report made out shortly after the first week of school, there were enrolled 299 white children and 638 colored children. The white schools are opening this year, therefore, with an enrollment on the first day of 97 more than there had been enrolled by the end of the first week last year. The children of the colored schools are coming in slowly. From inquiries made on the second day the indication is that they will enter rapidly during the coming week.

High school work is being carried on at Cristobal and Culebra. At the latter place there are several high school pupils, and both first and second year work is being done.

## Depth of Water at Locks.

THE CANAL RECORD:

I would like to ask whether the difference between the specific gravity of salt water and that of fresh water will interfere with the passage through Sosa Lake of vessels which are loaded for salt water voyages?

J. M. GALLION.

Chicago, Ill., September 12, 1908.

[There will be no Sosa Lake, since under the change of plan, adopted in December, 1907, two of the locks at the Pacific end of the Canal will be placed at Miraflores instead of at La Boca. The channel from the Pacific to Miraflores Locks will be 45 feet deep below mean tide, and the channel at the Atlantic entrance to Gatun Locks will be 41 feet deep, below mean tide. This difference in the depth of water between the Atlantic and Pacific entrances is due to the difference in tidal oscillations in the two oceans.

The controlling element, so far as navigation is concerned, will not be the depth of water in Gatun Lake, or other body of water, but the depth over mitre sills of the locks. The depth over mitre sills of the locks was fixed by resolution of the Isthmian Canal Commission on November 20, 1905, afterward approved by the President, and is to be not less than 40 feet in salt and 41½ feet in fresh water. Consequently the difference in draft of vessels, due to the difference in specific gravity of fresh and salt water, will be provided for].

## New Observation Tower.

A new observation tower for the Division of Meteorology and River Hydraulics is being built in the rear of the new building of the Division at Ancon. The elevation of the ground at the base of the tower is 97 feet, and the platform is to be 50 feet above the ground, which will give an elevation of 147 feet above mean sea-level. The instruments, which will include an anemometer and a sunshine and cloud recorder, will be 18 feet above the platform, which will put them well above the roofs of the surrounding buildings. The advisability of having a time ball also is being considered.

## FROM TABERNILLA TO GAMBOA.

## Old Chagres Division Work Nearing Completion.

At the time of the organization of the Chagres Division, August 1, 1907, it was estimated that about twelve million cubic yards of material were to be excavated, of which 7,000,000 were to be by steam shovel and the remaining 5,000,000 cubic yards by suction dredge. This division extended from Gatun to the beginning of Culebra Cut at Bas Obispo.

A study of the maps available at that time showed that these quantities could be materially reduced. By December of 1907, the engineers were able to present a new plan of Canal location in which nearly the entire line from Gatun to Bas Obispo was changed, and by which, without increasing the curvature, a saving of 1,750,000 cubic yards would be made.

In the reorganization of July 1, 1908, the Tabernilla and Gorgona Districts of the Central Division were created to comprise that part of the old Chagres Division which extends from Tabernilla to the beginning of Culebra Cut. No work had been done on that part of the old Chagres Division extending from Tabernilla to Gatun, now included in the Atlantic Division.

The amount to be excavated in the Tabernilla and Gorgona Districts, including the work from Tabernilla to Gamboa, was estimated at 3,459,132 cubic yards and 2,965,309 cubic yards, respectively, to be taken out by steam shovels, and a total of 4,500,000 cubic yards by suction dredges in both districts. A careful estimate just completed gives the amount of material to be removed after September 1, 1908, as 8,033,684 cubic yards, of which 6,325,700 cubic yards are earth, 1,709,984 are rock, and 22,000 cubic yards have been added to allow for possible slides. The French excavated 2,538,265 cubic yards in this territory.

Work in the Tabernilla District was begun in September, 1907, and up to September 1, of this year, 1,585,816 cubic yards had been removed, the work therefore being 45 per cent completed. The present plant consists of five 70-ton Bucyrus shovels and two Model-91 Marion shovels. Both Belgian and American locomotives, and French and Oliver dump cars are used in hauling away the spoil. The shovels that are seen at work in front of the village of San Pablo are working at grade. At San Pablo the Canal is to be 800 feet in width, and it will embrace that part of the present roadbed of the Panama railroad lying between the post-office and a point about 750 feet south of the Panama railroad bridge spanning the old French canal. Before this section may be completed it will be necessary to throw the railroad line in toward the river so that it may lie clear of the prism, or to wait until the relocated line of the railroad from Barbacoas to Gamboa can be used.

The prosecution of the Caimito work developed a peculiar state of affairs. The present location of the Canal lies just south and clear of the old French canal at this point. It is estimated that the French excavated in one deep cut at this location 1,000,000 cubic yards of rock. In the work that has been going on the past year it has been found necessary to move several hundred thousand yards of this French exca-

vation, which had been dumped where the Canal prism is now located, and to dump it back into the old French canal cut, which incidentally made a very convenient dumping ground.

Between Caimito and Matachin the line of the Canal follows closely the Chagres River. In this territory some 4,500,000 cubic yards of material, practically all earth, are to be taken out. It is proposed to excavate this material by suction dredge, the work to be begun when the water in Gatun Lake reaches an elevation of approximately 55 feet. It is possible that the old French dredge now at Mamei may be overhauled, made into a hydraulic dredge, and used for a part of this work. Part of this section lies in the Tabernilla and part in the Gorgona districts.

The Gorgona District comprises also what is known as the Santa Cruz and Matachin work, the excavation to be made originally being 1,247,652 cubic yards and 1,717,657 cubic yards respectively. This work is at present about 35 per cent completed and should be finished before August, 1909.

The work in the Gorgona District is vitally concerned with the waters of the Chagres River, the grade of the Canal being lower than the river at its low water stage. Earth dams were constructed and two pumping plants were installed each consisting of two 10-inch centrifugal pumps, one plant being driven by compressed air and the other using steam. These pumps are operated after a heavy rain or during a rise of the river, and no trouble is experienced in keeping the low level drained. With the completion of the shovel excavation the river will be turned through the completed Canal, thus allowing the railroad to straighten its relocated line, and eliminate the tortuous curves lying in the first mile north of the Gamboa bridge.

## Official Addresses in the States.

The Washington office of the Isthmian Canal Commission requests that whenever officials of the Commission are in the States they notify that office of their address. At times the Washington office has occasion to communicate with such officials, and frequently mail is sent in care of that office, which can not be forwarded because of the lack of definite information as to addresses.

## Culebra Brake Service Discontinued

The Chief Quartermaster announces that the brake service at Culebra will be discontinued, effective Saturday, October 10, until further notice, owing to the necessity for making general repairs to the brake.

## Central Division Magazines.

A service magazine, with a capacity of a carload of dynamite, has been built on the east side of the Canal at Cucaracha. It is constructed of concrete blocks. The old storage magazine at Bas Obispo has been taken down and rebuilt at the end of Mamei dump, and is now in use. It has a capacity of 500,000 pounds, and is under the management of the Quartermaster's Department.

## Examination for Physician.

A local examination for the position of physician in the service of the Isthmian Canal Commission, entrance salary \$1,800 per annum, will be held October 14, 1908, at 9 a. m. in the office of the Chairman, Culebra.

The Manual of Examinations, containing all necessary information and Application Form, may be obtained from the Secretary of the Isthmian Civil Service Board, office of the Chairman, Culebra, Canal Zone.

## Stages of the Chagres.

Maximum height of Chagres above low water for the week ending midnight, October 3, 1908:

	STATIONS.				
	Vigia.	Alhajuela.	Gamboa.	Bohio.	Gatun.
Height of low water above mean sea level, feet.....	129	92	46	0	0

Maximum for week.....	7.55	6.25	9.60	13.75	5.84

Bids for the construction by contract of two type 17 houses, to be erected at Corozal, will be opened at the Mount Hope Depot on October 13. Plans may be procured at the Mount Hope Depot, or seen at the Office of the Chairman at Culebra.

## OFFICIAL CIRCULARS.

## Addition to Quartermaster Work.

CULEBRA, September 29, 1908.

CIRCULAR No. 183F-1.

Effective October 1, 1908: The work performed by the Quartermaster's Department under the provisions of Circular No. 183F, is extended to include the territories of Mount Hope and Cristobal.

H. F. HODGES,

Acting Chairman and Chief Engineer.

## Storehouse at Gatun.

CULEBRA, September 30, 1908.

CIRCULAR No. 213.

On October 1, 1908, the storehouse and lumber yard at Gatun, now operated by the Quartermaster's Department, will be transferred to the Division Engineer of the Atlantic Division, with all material and supplies on hand, and necessary forces.

H. F. HODGES,

Acting Chairman and Chief Engineer.

## Malingers to Be Dismissed.

CULEBRA, October 2, 1908.

CIRCULAR No. 214.

A number of cases of malingering have recently been reported. If any employee is too ill to work he is expected either to go to the hospital or to remain in quarters, except for such time as may be necessary to consult a physician or to go to a dispensary. In future, any employee found loafing or loitering on any day for which he presents a sick certificate will be dismissed from the service.

H. F. HODGES,

Acting Chairman.

## Acting Chief Clerk.

ANCON, September 29, 1908.

## HEADS OF DEPARTMENTS:

Effective this date: Mr. John S. Walker will act as Chief Clerk during the absence on leave of Mr. Harry E. Bovay.

By direction of the Chief Sanitary Officer.

C. C. McCULLOCH, JR.,  
Acting Executive Officer.

## NOTICE.

PANAMA RAILROAD COMPANY AND  
PANAMA RAILROAD STEAMSHIP LINE,  
COLON, R. P., October 2, 1908.

Gambling and other violations of the Panamanian laws on Panama Railroad leased property are prohibited.

HIRAM J. SLIFER,  
General Manager.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

The Gatun Woman's Club held its opening meeting on Friday, September 25, the president, Mrs. C. D. Corp, in the chair. The meeting was informal and was devoted to discussions of club work and the best means of accomplishing the aims of the organization. Owing to the number of club members removed from Gatun and the absence of others on vacation, it was decided to defer the annual meeting with election of officers until the first Friday in November. In the meantime, the organization will meet regularly.

The Gorgona Woman's Club held its regular meeting on Thursday, October 1, with the president in the chair. After a few informal remarks on items of interest from the recent Federation meeting, committees were appointed for the ensuing half year, as follows: Philanthropic, Mrs. F. Morrison, Mrs. J. Cockett, Mrs. Toberer; home, Mrs. Phillips, Mrs. Bergstrom, Mrs. Varen Kamp; music, Mrs. Swain, Mrs. Beatham, Mrs. Hudson; art, Mrs. Bromley, Mrs. Hinkle, Mrs. Sweet; literary, Mrs. Everist, Mrs. Texer, Mrs. Strock. Mrs. Ament, who sailed for the States on October 6, after a visit of two months with her sister, Mrs. Morrison, was given a rising vote of thanks for her assistance in club matters, and on Friday evening the club presented her with a centerpiece as a token of appreciation.

The monthly business meeting of the Las Cascadas Woman's Club was held at the residence of Mrs. J. P. Doyle, October 1. The committees appointed were: Social, Mrs. Albrecht, chairman, Mrs. Green, Mrs. Thompson, and Mrs. Grimison; visiting, Mrs. Doyle and Mrs. Hutton. The next meeting will be held October 8, at the residence of Mrs. Albrecht. The first anniversary of the organization of the Las Cascadas club will occur on October 17. The purposes of the club have been the promotion of social life, and municipal improvements, and the organization has been a factor in the community life that has been greatly appreciated. Several public improvements made in the town are due to the efforts and influence of the club. The division of the commissary for whites and negroes, better accommodations at the post-office, and improvement in the bridges and sidewalks being among them. The weekly social meetings tend to make life in the town pleasanter and to draw the women together. A sewing class has been started for young girls which meets regularly.

The Empire Woman's Club gave a reception to its president, Mrs. F. W. Miracle, on Tuesday, September 30, a large number of club members and guests attending. Refreshments were served by a committee at tables decorated with flowers and plants. Mrs. H. C. Ball presided at a short business meeting before the reception. Reports from the various Federation committees were read and a discussion on the subject of the reading course which the club expects to take up was held. A paper on the etiquette of Japanese tea was read by Mrs. J. H. Helmer, and violin and piano selections were given by the Misses Sophia and May Johnson. The president gave an account of her experience during the hurricane on the recent trip of the *Colon*.

The Culebra Woman's Club had a well at-

tended meeting on Thursday, October 1. Reports from the Federation meeting were rendered. Master Arthur Howard gave piano selections. There were several guests for the afternoon including Mrs. Frank Miracle of Empire.

Alfaretta Council No. 1, Degree of Pochantans, of the Improved Order of Red Men, will give a grand box social, followed by a dance and entertainment, Tuesday evening, October 13, at the Fraternal Hall, Culebra. All friends are cordially invited to be present.

The Paraiso Social Club gave a dance last week which was attended by a number of visitors from Pedro Miguel and Culebra.

The Pedro Miguel Woman's Club gave an entertainment on Thursday evening, October 1, for the purpose of assisting the Social and Recreative Club in the purchase of a piano. There was a good attendance and a pleasant evening was spent in games, dancing and other amusements. Home-made refreshments were sold. Mrs. H. C. Shick, secretary of the club from its organization, left Monday, October 5, to spend the winter in California. She expects to return to the Isthmus in the spring.

Mrs. Lorin C. Collins, president of the Canal Zone Federation of Women's Clubs and of the Cristobal Woman's Club, sailed on the *Alliance*, October 3, for a three months' visit to the United States. During her absence Mrs. E. Lewis Baker, vice-president, will preside at the meetings of the Cristobal club.

## Notice to Odd Fellows.

B. F. Sisson, District Deputy Grand Sire, I. O. O. F., will institute Isthmian Canal Rebekah Lodge No. 1 in the lodge hall at Gorgona, on Saturday evening, October 10, 1908. All members of the Rebekah degree on the Isthmus are requested to be present and any one who is eligible and wishes to become a member is invited to send in an application.

## Tivoli Club Notice.

The regular Tivoli Club dance will be given on Saturday evening, October 10, at Hotel Tivoli. Notice has been sent to each member.

As it is now generally known that the club dances are held on the second and fourth Saturday of each month, the secretary announces that no individual notices will be sent out in future except in case of special dances. A general notice will be printed in THE CANAL RECORD, and the daily newspapers.

## Ancon Library Association.

A meeting was held at Hotel Tivoli on the night of August 28, to form a library association in Ancon, notice of which had been given through THE CANAL RECORD.

It was the sense of the meeting that the interest in the library indicated by the attendance was not sufficient to justify a preliminary organization, and it was decided to canvass Ancon, La Boca and Corozal, and ascertain how many would be willing to become members of such an association and pay for the support of a reading room the sum of two dollars per year, payable semi-annually.

It is intended to have a circulating library of at least one thousand volumes, and all

current newspapers and periodicals on file in the reading room.

The association if formed has been promised by the Chairman of the Isthmian Canal Commission the use of the rooms formerly occupied by the Chief Sanitary Inspector, over the present offices of the District Quartermaster.

If a sufficient number of persons agree to become members, another meeting will be called, adequate notice of which will be given through THE CANAL RECORD, and an organization will be effected.

Any names sent to THE CANAL RECORD will be placed upon the list.

## PERSONAL.

W. G. Comber, resident engineer at La Boca, left on the *Heridia*, October 6, for Costa Rica, where he will spend his annual leave.

Capt. T. C. Lyster, Medical Corps, U. S. A., of Ancon Hospital, sailed for the States on the *Advance*, September 28, having been ordered to Washington for examination for promotion.

## Obituary.

Paul Vanderstop, of Chicago, Ill., died at Ancon Hospital on September 20, of malaria. He came to the Isthmus in February, 1907, and had been living recently at East La Boca. His brother, Peter Vanderstop, lives at 291 Reynolds street, Rochester, N. Y.

## Civic Pride Hindrances.

## THE CANAL RECORD:

The letter signed Civic Pride, which appeared in your issue of September 30, attracted my attention because of the apparent reflection it contained on the work of the Canal Zone police. The writer does the police department at Cristobal an injustice when he insinuates that little effort is made to keep stray animals off the streets and lawns of this village. It is not possible to keep the animals that stray from Colon into Cristobal entirely out of the American settlement, but an effort is made, and I believe it is attended with remarkable success, to impound such animals as soon as they are detected. In September, for instance, the police department at Cristobal impounded 7 horses, 2 mules, 4 goats, and 1 cow. I do not like to have Cristobal, or any part of it referred to as a "cabbage patch," because it is my home, and because civic pride can not be stimulated by the use of slurring epithets. Please publish this in justice to the police of Cristobal.

Respectfully,

A RESIDENT.

Cristobal, October 3, 1908.

## Misdirected Letters.

## Division of Dead Letters.

Ancon, C. Z., October 6, 1908.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be obtained on request of addressee:

Bowen, A. S.	Karsner, J. Walter
Brown, Geo. (Engineer)	Koch, Capt. F.
Dailey, John	Leach, Arthur
Delacroix, Clem	Locken, F. O.
Dickinson, Wm. F.	MacDevitt, John
Edwards, Howard	Maynard, Miss B. I.
Highme, H. D.	Neely, P. John
Graham, Mrs. W. H.	O'Brien, Mrs. N. O.
Holt, X. D.	Schultz, Walter
Howell Corporal	Swincham, Robt.
Irwin, Mrs. Don E.	Taylor, Mrs. Jennie
Jones, Parker A.	

Piles are being driven for the handling docks and cement storehouse at Gatun Locks.

## A MOSQUITO HUNT.

### How the Malaria Rate at Corozal Was Reduced.

During the latter part of June, the malaria rate at Corozal suddenly took a jump upward. No further indication was needed to assure the Department of Sanitation that the anopheles mosquito had found a new breeding place in that vicinity, undiscovered by the district inspector.

Unable to account for the rise, at his request a special inspector was sent to his assistance. The Chief Sanitary Inspector, not being satisfied with the report, sent out a second inspector, and finally a third. The recommendations of all were carried out, and the rate fell steadily, but not to the normal, and the returns for each week were regarded with dissatisfaction.

About the middle of August, the rate suddenly shot up higher than ever. Two inspectors were sent to the district inspector with orders that the three cover every foot of the ground. This was accomplished in two days by hard work and late hours. Two reported that the breeding place of the mosquitoes was 700 yards from the nearest camp, and the third inspector stated that the infection was from the aggregate of small breeding places in which the larvæ had since been destroyed by oilings. One of the characteristics of the anopheles mosquito is that it is not likely to fly at one time a distance of more than 200 yards from its breeding place, and that it is seldom found more than this distance from its home.

Comparatively little of the life-habit of the anopheles is accurately known, but the legitimate inference deducted from the known facts are sufficient to establish a working basis, viz:

(1) That the female anopheles has the hovering instinct for raising her family, analogous to the fish.

(2) That after her eggs are fertilized she is impelled to seek the blood of animals or human beings in order to develop her eggs to perfection.

(3) That after obtaining the necessary blood she seeks her own birth place to deposit her eggs.

Herein lies the weakness of the anopheles female of which man takes advantage. Her home ties hold her from any such migrations as the *Culex* often makes, and being fatally susceptible to the sunlight a clearing of all grass and brush for 200 yards from her home is sufficient to accomplish her destruction.

Hence the breeding place 700 yards distant could not be accepted, although it was destroyed as a precautionary measure. A third inspector was sent to Corozal, with orders not to consult with the others, but to remain there until he could positively locate the point of infection. He began by searching each building for adult anopheles. From the building in which he captured the greatest number he started early in the morning when the grass was wet and the mosquitoes were lying low. He followed a zigzag course, turning from point to point as he found the number lessening. This led him to a salt marsh 280 yards from the buildings. But anopheles do not breed in salt water, and moreover the edges of the swamp were well oiled where fresh water would collect and no larvæ were found. He kept on, and penetrating the jungle

300 yards, came upon a few larvæ and pupæ. The district inspector appeared on the opposite bank with a machete in hand, saying that he believed the breeding place was in the middle of the swamp, and that he had determined to go in. Go in he did, to his waist, in water and mire, laboriously cutting his way through the branches to the middle of the swamp, where he found the larvæ thick enough to blacken the comparatively fresh water. Half a mile away a culvert was found so obstructed that the salt water did not have free access to the swamp during high tide, and the outflow was blocked at low tide. In consequence of the heavy rains the salt marsh had been gradually converted into a fresh water marsh, and as it was filled with rank vegetation, the anopheles were provided an ideal place for life and breeding.

Planks were thrown out into the marsh, lanes were cut in the vegetation and the oilers were set at work. The number of adult anopheles found in the camps began to dwindle at once, and the malaria rate soon fell to normal.

This is only one instance of many similar ones, and it is cited to show the difficulties attending mosquito extermination and the maintenance of good health in the Canal Zone.

### Cost of Municipal Improvements.

Municipal improvements made by Americans in Panama, Colon and the Canal Zone, up to the close of the fiscal year 1908, cost \$5,770,750.87, distributed as follows:

Panama water works and sewers.....	\$853,849.23
Colon water works and sewers.....	601,043.91
Zone water works and sewers.....	2,358,840.44
Paving, Panama.....	489,007.77
Paving, Colon.....	293,231.26
Zone roadways.....	1,174,778.26
Total.....	\$5,770,750.87

The work done in the cities of Panama and Colon was in accordance with Article 7 of the Treaty between the United States and the Republic of Panama, in which the United States was given the right to construct, maintain, and operate "all works of sanitation, collection and disposition of sewage, and the distribution of water in the cities of Panama and Colon" as "may be necessary and convenient for the construction, maintenance, operation, sanitation, and protection" of the Panama Canal and Panama railroad. The municipal works in the cities of Colon and Panama are to be paid for, with interest, within the period of fifty years, by water and sewerage rates imposed and collected by the United States, and when paid for are to become the property of the Panamanian Government.

In the prosecution of this work the old Division of Municipal Engineering, from the time of its organization, July 19, 1904, up to the end of the fiscal year, had laid 60,469 feet of water pipe in the city of Panama, and 69,280 feet in the city of Colon. In Panama 67,925 feet of sewer were laid and in Colon 37,896 feet. The paving done in the city of Panama amounts to 66,365 square yards of brick, 19,116 square yards of concrete, 3,572 square yards of macadam, 51,401 linear feet of concrete curb. In Colon 62,621 square yards of macadam pavement, 6,410 square yards of brick, 41,267 linear feet of concrete curb, and 1,923 linear feet of basket gutter have been laid. Water for Colon is supplied by a Canal Zone reservoir

located at Brazos Brook, and for Panama from a reservoir in the Rio Grande valley, near Culebra. These reservoirs also supply the neighboring American settlements, and the settlements in the interior of the Zone are supplied by reservoirs at Empire and Gorgona, and by pumping stations.

In the Canal Zone nearly 98 per cent of all quarters constructed by the Commission, as well as office buildings and shops have been connected with the Zone sewer systems. At the close of the fiscal year, 217,975 feet of sewer had been laid and 2,162 house connections had been made; and 292,633 square yards of macadam road, 1,000 square yard of brick pavement, and 9,266 square yards of paths had been constructed in the Zone. The great majority of the road-building done thus far has been confined to the American settlements and has been made necessary by the construction of office buildings and quarters.

### Death of a Sailor.

Charles Rand, boatswain mate, first-class, United States Navy, acting chief boatswain mate on the U. S. S. *Buffalo*, died at Ancon hospital on September 30, 1908, of peritonitis, caused by a knife wound in the abdomen inflicted by a Panamanian. He was 34 years old and lived at Orange, N. J.; was serving his third enlistment in the Navy; had been a gun pointer on the U. S. S. *Raleigh* on a previous cruise, and had been given a good conduct medal for meritorious service. He was not of a quarrelsome disposition, and was considered by the officers of the *Buffalo* one of the most efficient and well behaved men aboard ship. His assailant has been arrested and is awaiting trial in Panama courts.

### Barbadian Found Dead.

Charles Best, a Barbadian negro employed by the Panama Railroad Company, was found dead in some bushes between the Insane Asylum and the railroad track at Ancon on the morning of September 23. His skull had been fractured and his throat cut. It is believed that he was murdered, and from the fact that his pockets were turned inside out, that the reason for the murder was robbery. Charles Samuels and Ruth White, both colored, have been arrested and are being held pending investigation.

A new yard for bad-order cars has been authorized for the Central Division and will be located at Pedro Miguel. At present the construction trains run back from the dumps and are held up on the main line until the "bad orders" are taken out. Three new tracks, two extensions, and several cross-overs will be added to the yard in order that delays consequent on using the main track may be avoided.

The Assistant Chief Engineer, the Division Engineer of the Central Division, and the Assistant to the Chief Engineer, have been appointed a committee to make recommendations with regard to the construction of a breakwater in Limon Bay for the harbor of Colon.

Three Lidgerwood unloaders, working on the La Boca dumps, unloaded 652 trains, in all 10,432 cars of 20 yards to a car in August. In the same period the four unloaders working at Tabernilla unloaded 1,199 trains of sixteen 20-yard cars.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

The standing of the bowling league to October 3 follows:

	Played	Won	Lost	Percent.
Empire.....	48	27	21	.545
Cristobal.....	48	27	21	.545
Culebra.....	42	18	28	.420
Gorgona.....	42	16	26	.372

## GORGONA.

Friday evening, October 2, the Gorgona Y. M. C. A. extended the privileges of "open house" to the people of Santa Cruz. A special feature of the evening was a kinetoscope entertainment. A special train conveyed the people to Gorgona and back home.

The Culebra bowlers visited Gorgona Saturday evening, October 3. The Gorgona team took three straight games.

An exciting ping pong tournament was a feature of last Saturday evening. There were ten entries; each man played each of the other the best three out of five sets.

Sunday afternoon, October 4, an "Association Sing" was held in the clubhouse.

## CRISTOBAL.

A new corduroy cover for the wrestling mat has been received, and wrestling practice will be engaged in every Friday night.

The Cristobal billiard and pool team will play at Gorgona on Saturday, October 10, and will play return games with the Gorgona team at the Cristobal clubhouse on Saturday, October 17.

Two moving picture entertainments were given during the past week.

The orchestra from the ship *Prinz August Wilhelm* will give a concert at the Cristobal clubhouse on Monday night, October 19.

The following schedule has been adopted for the boys' department:

Tuesdays—3.30 to 5 p. m., gymnasium and bowling.  
Thursdays—3.30 to 5 p. m., gymnasium and bowling.  
Saturdays—9 to 11 a. m., gymnasium and outdoor sports.

The reading room is opened to boys every day until 5 o'clock. Boys are not allowed in the building after 5 p. m., except to attend regular match games or other public entertainments.

The games bowled at Cristobal October 3, resulted as follows:

CRISTOBAL.				
	First	Second	Third	Average
Robertson.....	199	171	164	178
Thomas.....	173	112	....	142½

## Concert by the I. C. C. Band.

## EMPIRE. C. Z.

Sunday, October 11, 1908, at 2.30 p. m.

## PROGRAM.

- 1 March—*Washington Grays*.....Grafulla
- 2 Selection—*The Red Mill*.....Herbert
- 3 Waltz—*Pansies for Thought*.....Blyn
- 4 a Tone Poem—*Lilacs*.....Roberts
- 4 b Schottische—*Let Me Be Your Lemon*.....Allcu
- 5 Cornet Solo—*A Man, a Maid, a Moon, a Boat*.....Harris
- CHAS. E. JENNINGS.
- 6 Medley Selection—*Mills' Merry Melodies*.....Mills
- 7 Morceau—*Dawn of Love*.....Bendix
- 8 Overture—*If I Were King*.....Adam
- 9 Descriptive—*The Racket at Gilligan's*.....DeWitt
- Synopsis—The guests gather at Gilligan's; after their arrival Gilligan sings a song, which is followed by a country dance. The star singer then renders a touching ballad, after which the bagpipes strike up. "Are ye's all ready?" shouts Gilligan. "Yis." "Then fire away." A regular "welt the floor" and "slip" time follows. A sand jig comes next, and the festivities closed by all singing "Saint Patrick's Day in the Morning."
- 10 Galop—*Telemachus*.....Bennel

CHAS. E. JENNINGS, Musical Director.

A concert will be given at Paraiso, C. Z., Sunday, October 18.

## COMMISSARY DEPARTMENT.

## NOTICE.

CRISTOBAL, C. Z., September 29, 1908.

Effective October 1: All communications intended for either the Subsistence Department, I. C. C., or the Commissary Department, P. R. R., should be addressed to the Subsistence Officer, Cristobal, C. Z.

EUGENE T. WILSON,

Subsistence Officer

## COMMISSARY PRICES

For week beginning October 6:

## FRESH MEATS.

	Price.
Mutton—Stewing.....per lb	6
Shoulder and neck (not under 6 pounds).....per lb	7
Entire forequarter (not under 10 pounds).....per lb	8
Leg (8 to 10 pounds).....per lb	16
Short-cut chops.....per lb	20
Lamb—Stewing.....per lb	6
Entire forequarter.....per lb	8
Leg (6 to 8 pounds).....per lb	27
Chops.....per lb	29
Veal—Stewing.....per lb	10
Entire forequarter (15 to 20 lbs).....per lb	11
Loins.....per lb	22
Short-cut chops.....per lb	23
Cutlets.....per lb	23
Pork—Cuts.....per lb	20
Beef—Suet.....per lb	4
Soup.....per lb	8
Stew.....per lb	12
Corned.....per lb, 12, 14	16
Rib-roast, second cut (not under 3 pounds).....per lb	19
Rib-roast, short cut (not under 3½ pounds).....per lb	23
Sirloin roast.....per lb	29
Rump roast.....per lb	29
Porterhouse roast.....per lb	29
Steak, round.....per lb	23
Rib.....per lb	24
Sirloin.....per lb	29
Porterhouse.....per lb	29
Rump.....per lb	29
Tenderloin.....per lb	30
MISCELLANEOUS.	
Livers—Beef.....per lb	12½
Calif.....each	65
Sausage—Pork.....per lb	19
Frankfurter.....per lb	17
Leberwurst.....per lb	17
Bologna.....per lb	17
Sweet bread—Veal.....each	1.20
Beef.....per lb	25
Ox tongues.....each	90
Pigs' feet, pickled.....per lb	14
Pigs' tongues, pickled.....per lb	15
Eggs, fresh.....dozen	34
POULTRY AND GAME.	
Chickens—Dressed (milk-fed).....each	1.30
Large (milk-fed).....each	1.50
Capons.....each	2.40
Broilers.....each	60
Fowls, medium and large.....each, 80c, and 1.00	
Ducks, fatted (fancy).....each	1.10
Suckling pigs.....each	4.90
Turkeys.....per lb	30
Squabs.....each	45
CURED AND PICKLED MEATS.	
Bacon—Strips.....per lb	25
English, breakfast sliced.....per lb	\$26
Ham—Sugar-cured, sliced.....per lb	\$25
One-half, for boiling.....per lb	\$21
Westphalia.....per lb	45
Ferriss.....per lb	20
Beef, salt, family.....per lb	16
Salt pork.....per lb	13
DAIRY PRODUCTS.	
Butter—Prints, prime quality.....per lb	35
Cheese—Roquefort.....per lb	45
Neufchatel.....each	6
Young America.....per lb	22
Swiss.....per lb	33
Edam.....each	1.05
Camembert.....per lb	28
McLaren's.....jar	15
Pinxter's.....tin	22
French cheese in tins—Camembert, Roquefort, Brie, Neufchatel.....tin	20
Buttermilk.....quart	15
Milk, Briarcliff.....quart	25

## VEGETABLES AND FRUITS.

Tomatoes (local only).....per lb	8
Lettuce.....per lb	14
Cauliflower.....per lb	10
White potatoes.....per lb	3½
Sweet potatoes.....per lb	2½
Cabbage.....per lb	4
Onions.....per lb	3½
Cucumbers.....per lb	8
Parsnips.....per lb	3
Lima Beans.....per lb	8
Squash (summer).....per lb	3
Beets.....per lb	3
Celery.....bunch	18
Green corn.....dozen	36
Carrots.....per lb	3
Turnips.....per lb	2½
Onions (Spanish).....per lb	5
Limes.....hundred	40
Lemons.....dozen	24
Oranges.....dozen	18
Cantaloupes.....each	3
Grapes.....per lb	8
Peaches.....per lb	15
Pears.....per lb	8

\$ Sold only from cold-storage and not from Commissaries

## UNCLAIMED PACKAGES.

The following is a list of packages that have been forwarded from New York to Isthmian Canal Commission and Panama railroad employes, and that are waiting to be claimed at the freight house at Colon. The owners of these packages will have to make application for free customs entry in connection with Circular No. 85, or in the alternative, pay duty to the Panama Government customs on the value of the contents of the packages, before delivery can be effected:

- W. S. Clements, Colon, 1 box, *Advance*, July 6.  
J. F. Mentero, Panama, 2 cases instrument boxes *Alliance*, July 15.  
J. F. Dempsey, Colon, 1 box cloth, *Alliance*, July 15.  
J. R. Cocoran, Empire, 2 boxes leather, *Esperanza*, August 10; 2 crates bicycles, 1 case C material, 1 case oil stove, 1 case S dressing, *Finance*, August 14.  
S. Chennalloy, Colon, 1 parcel (No. 7656), *Advance*, June 10.  
C. Thomas, Cristobal, 1 parcel (No. 7778), *Esperanza*, August 18.  
J. B. Marsh, Gorgona, 1 seal press, *Colon*, August 23.  
A. W. Ingram, Colon, 1 bundle wall paper, *Finance*, September 8.  
H. H. Rickers, Camp Elliott, 1 box personal effects, *Esperanza*, September 11.  
Arthur F. Rex, Ancou, 1 box musical instruments, *Esperanza*, September 11.  
C. H. Hamy, Gorgona, 1 box musical instruments, *Esperanza*, September 11.  
Jas. A. Utis, Corozal, 1 box musical instruments, *Esperanza*, September 11.  
District Physician, San Pablo, 1 parcel (No. 7813), *Esperanza*, September 11.  
J. O. Gonzalez, Colon, 1 case hardware, *Colon*, September 18.

## Tug Service Porto Bello and Nombre de Dios.

Effective, August 6, 1908: The following is the schedule for tug service between Cristobal, Porto Bello and Nombre de Dios:

Sunday: Leave Cristobal 6.30 p. m. for Porto Bello only; returning same day.

Monday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Tuesday: Leave Cristobal after Train 2 without tow, for Porto Bello only; returning, leave Porto Bello 2.15 p. m., without tow.

Wednesday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Friday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Saturday: Leave Cristobal after Train 2 for Porto Bello only; returning, leave Porto Bello 5.30 p. m.

The following steamers have recently arrived at La Boca: September 27, *Tucapel*, from Valparaiso; September 28, *Guatemala*, from Valparaiso, and U. S. cruiser *Buffalo*, from the north. Departures were: September 26, *Acapulco*, to San Francisco; September 28, *California*, to Valparaiso; September 30, *Quito*, to Buenaventura.

## CANAL DIRECTORY.

### ISTHMIAN CANAL COMMISSION.

Lieut.-Col. Geo. W. Goethals, U. S. A., Culebra.  
 Lieut.-Col. H. F. Hodges, U. S. A., Culebra.  
 Maj. D. D. Gaillard, U. S. A., Empire.  
 Maj. Wm. L. Sibert, U. S. A., Gatun.  
 Civil Engineer H. H. Rousseau, U. S. N., Culebra.  
 Mr. Jo C. S. Blackburn, Ancon.  
 Col. W. C. Gorgas, U. S. A., Ancon.  
 Mr. Joseph Bucklin Bishop, Secretary, Ancon.

### DEPARTMENTS.

#### Construction and Engineering.

Headquarters, Culebra.  
 Lieut.-Col. Geo. W. Goethals, Chairman and Chief Engineer.  
 M. B. DePatron, Assistant to the Chairman.  
 W. H. May, Secretary to the Chairman.  
 C. A. McBaine, Chief Clerk.  
 Caleb M. Saville, Assistant Engineer.  
 Lieut.-Col. H. F. Hodges, Assistant Chief Engineer.  
 C. O. Carlson, Secretary.  
 Edward Schildhauer, Electrical and Mechanical Engineer.  
 L. D. Cornish, H. F. Tucker, Henry Goldmark and David Molitor, Designing Engineers.  
 Civil Engineer H. H. Rousseau, Assistant to the Chief Engineer.  
 J. C. Parsons, Secretary.  
 A. B. Nichols, Office Engineer.  
 P. O. Wright, Architect.

#### Central Division.

Headquarters, Empire.  
 Maj. D. D. Gaillard, Division Engineer.  
 A. E. Bronk, Chief Clerk.  
 Louis K. Rourke, Assistant Division Engineer.  
 A. S. Zinn, Resident Engineer.  
 Mark W. Tenny, Assistant Engineer.  
 R. W. Heberd, Assistant Engineer.  
 W. L. Thompson, Assistant Engineer.  
 Geo. H. Ruggles, Assistant Engineer.

#### Atlantic Division.

Headquarters, Gatun.  
 Maj. Wm. L. Sibert, Division Engineer.  
 R. M. Sands, Chief Clerk.  
 Maj. Chester Harding, U. S. A., Assistant Division Engineer.  
 Maj. Edgar Jedwin, U. S. A., Resident Engineer.  
 Maj. J. P. Jervey, U. S. A., Resident Engineer.  
 Capt. G. M. Hoffman, U. S. A., Assistant Engineer.  
 Capt. Horton W. Stickle, U. S. A., Assistant Engineer.  
 L. G. Thom, Assistant Engineer.  
 F. C. Stanton, Assistant Engineer.  
 R. B. Smith, Superintendent of Dredging.

#### Pacific Division.

Headquarters, Corozal.  
 S. B. Williamson, Division Engineer.  
 E. A. LeMay, Chief Clerk.  
 W. G. Comber, Resident Engineer.  
 G. B. Strickler, Resident Engineer.  
 Wm. F. M. Acheson, Assistant Engineer.  
 James MacFarlane, Superintendent of Dredging.

#### Mechanical Division.

Headquarters, Culebra.  
 Mr. Geo. D. Brooke, Superintendent of Motive Power and Machinery.  
 F. W. Doty, Chief Clerk.  
 Earle J. Banta, Mechanical Engineer.  
 A. L. Robinson, Electrical Engineer.

#### Division of Meteorology & River Hydraulics

Headquarters, Ancon.  
 Civil Engineer H. H. Rousseau, Acting Division Engineer.  
 D. W. MacCormack, Chief Clerk.

#### Quartermaster's.

Headquarters, Culebra.  
 Maj. C. A. Devol, U. S. A., Chief Quartermaster.  
 C. H. Mann, Chief Clerk.  
 Lieut. R. F. Wood, U. S. A., Assistant Chief Quartermaster.  
 Capt. Courtland Nixon, U. S. A., Depot Quartermaster, Mount Hope.  
 C. L. Parker, C. C. McColey, Inspectors.  
 H. S. Farish, Acting Survey Officer.

#### District Quartermasters.

Ira A. Miles, Cristobal.  
 R. R. Watson (acting), Gatun.  
 J. M. King, Tabernilla.  
 J. H. Humphreys, San Pablo.  
 R. C. Shady, Gorgona.  
 M. R. Currie, Bas Obispo.  
 D. J. Shannon, Las Cascadas.  
 J. B. Jeffries, Embire.  
 C. P. Allen, Culebra.  
 Harry Dundas (acting), Paraiso.  
 Otto Marstrand, Pedro Miguel.  
 A. R. Bennet, Corozal.  
 B. C. Poole, Ancon.  
 W. H. South, La Boca.  
 C. E. Heisey, Porto Bello.

#### Subsistence.

Headquarters, Cristobal.  
 Maj. Eugene T. Wilson, U. S. A., Subsistence Officer.  
 W. F. Shipley, Chief Clerk.

#### Civil Administration.

Headquarters, Ancon.  
 Jo C. S. Blackburn, Head of the Department.  
 H. D. Reed, Executive Secretary, Ancon.  
 G. A. Ninas, Chief Clerk, Ancon.  
 Tom M. Cooke, Chief, Division of Posts, Customs and Revenues, Ancon.  
 Herman A. Gudger, Deputy Collector, Ancon.  
 E. Lewis Baker, Deputy Collector, Cristobal.  
 George M. Shontz, Prosecuting Attorney, Ancon.  
 George R. Shanton, Chief of Police, Ancon.  
 D. E. McDonald, Chief Clerk.  
 C. E. Weidman, Chief, Fire Department, Cristobal.  
 Geo. L. Campen, Supt of Public Works, Ancon.  
 C. R. Sargent, Chief Clerk.  
 J. J. Reidy, Asst. Supt. Public Works, Cristobal.  
 H. L. Smith, Superintendent of Schools, Ancon.  
 H. A. A. Smith, Treasurer of Canal Zone, Empire.

#### Canal Zone Judiciary.

Headquarters, Ancon.  
 Supreme Court—Dr. F. Mutis Durán, Chief Justice.  
 Walter Emery, Clerk, Ancon.  
 H. A. Gdger, Associate Justice, Empire.  
 Lorin C. Collins, Associate Justice, Cristobal.  
 Circuit Court, First Circuit—Dr. F. Mutis Durán, Judge, Ancon.  
 Walter Emery, Clerk, Ancon.  
 Circuit Court, Second Circuit—H. A. Gdger, Judge, Empire.  
 Elbert M. Goolsby, Clerk, Empire.  
 Circuit Court, Third Circuit—Lorin C. Collins, Judge, Cristobal.  
 Nelson R. Johnson, Clerk, Cristobal.  
 M. C. Rendell, Senior District Judge, Cristobal.  
 S. E. Blackburn, District Judge, Ancon.  
 Edgar S. Garrison, District Judge, Empire.  
 J. B. March, District Judge, Gorgona.  
 Thomas E. Brown, Jr., District Judge, Cristobal.

#### Law.

Headquarters, Washington, D. C.,  
 Richard Reid Rogers, General Counsel, Washington, D. C.  
 George M. Shontz, Attorney for Isthmian Canal Commission and Panama Railroad Company, Ancon.  
 George H. Bartholomew, Assistant Attorney.

#### Sanitation.

Headquarters, Ancon.  
 Col. W. C. Gorgas, Chief Sanitary Officer.  
 Capt. Robert E. Noble, U. S. A., Executive Officer.  
 Harry E. Boyay, Chief Clerk.  
 H. R. Carter, Director of Hospitals, Ancon.  
 Surgeon, J. C. Perry, P. H. and M. H. S., Chief Quarantine Officer, Ancon.  
 Maj. John L. Phillips, U. S. A., Superintendent Ancon Hospital, Ancon.  
 Capt. Alexander Murray, U. S. A., Assistant to Superintendent.  
 Maj. C. C. McCulloch, Jr., U. S. A., General Inspector, Ancon.  
 J. F. Leys, U. S. N., Superintendent Colon Hospital, Colon.  
 Surgeon Claude C. Pierce, P. H. and M. H. S., Quarantine Officer, Colon.  
 Dr. Fleetwood Gruver, P. H. and M. H. S., Quarantine Officer, Panama.  
 Dr. John B. Purnell, Health Officer, Panama.  
 Dr. M. E. Connor, Health Officer, Colon.  
 Joseph A. LePrince, Chief Sanitary Inspector, Ancon.

#### Disbursements.

Headquarters, Empire.  
 Edward J. Williams, Disbursing Officer.  
 Wm. M. Wood, Assistant Disbursing Officer.

FROM COLON TO NEW ORLEANS VIA KINGSTON.	
Mediau.....	Leyland Line.....about Oct. 20
Mexican.....	Leyland Line.....about Oct. 31

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.  
 The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 11 a. m., and from Colon at 1.30 p. m., via Port Limon, for New Orleans. In addition to the above, the United Fruit Company dispatches a steamer about every ten days from Colon, via Bocas del Toro, for New Orleans.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

## NOTES OF PROGRESS.

### Work on the Pacific Locks.

The hill near the northern end of the lock site at Miraflores has entirely disappeared, the last cut of the steam shovels having brought it to the level of the remainder of the lock site. Four shovels are at work continuing the excavation, and the material taken out is placed in the dam across the Cocoli River, or in the dyke on the east side of the lock site. This dyke is being built to form basins into which material will be pumped later by dredges. The suction dredge *Sandpiper* has been moved to the south end of the lock site, and it is expected that dredging will be begun at this point in a few days.

At the site of the Pedro Miguel Locks the excavation in the north approach is down to grade 40, which is the depth required for this approach, and is practically finished. In the lock site proper, one of the shovels is making a cut at the 25-foot level, which is 15 feet above the grade required at this point. Another shovel is working on the 18-foot level, which is only 8 feet above the grade required. An additional shovel was set at work last week, and the force now consists of two 95-ton and one 75-ton shovels, served by five American locomotives and trains of Oliver and Western dump cars. The amount of material to be excavated from the lock site and approaches at Pedro Miguel has been estimated at 2,742,804 cubic yards, of which amount 1,593,553 cubic yards have already been excavated. The Central Division has excavated 1,517,804 cubic yards from the northern approach, and the Pacific Division, up to the first of October, had taken out 75,749 cubic yards from the lock site, and 11,177 cubic yards from the accessory works. The work in the lock site began in June, 1908.

The dyke from Diablo along the prism of the Canal to Miraflores, under construction

for the purpose of retaining the material dredged from the channel, is nearing completion. It runs along the east side of the prism to the lower end of the lock. Sand and stone will be transported from La Boca over a railroad line running upon the embankment originally built as the west toe of the Sosa-Coroza dam, to Diablo, and from Diablo over the Panama railroad tracks to Riley's spur, which leads into the Miraflores lock site at the south end, where the line will branch off on both sides of the lock site, until it reaches the northern end of the locks. From that point the road will run as a single track to Pedro Miguel. The storage bins for material will be located on the branches of the railroad track on both sides of the locks. A considerable amount of the excavation from the lock site at Pedro Miguel has been used in building the roadbed for this railroad, and a dump has been opened alongside the tracks in which all of the excavation can be deposited.

### The Canal Medals.

A ton of copper pipe collected from old French excavators and locomotives, some bronze bearings taken from cars, locomotives and excavators, and 200 pounds of tin found in one of the old French warehouses, have been collected and will be sent to the Philadelphia Mint, to be used in casting the bronze medals which are to be presented by the President to employes of the Commission, who have served two years or more on the Isthmus. It is expected that the medals will be ready for distribution early in 1909. The design of the medals and the method of their distribution have not yet been determined.

### Money Order Business.

The report of the Chief of the Division of Posts, Customs and Revenues for the month of September shows that 14,822 money orders, amounting to \$429,990.47, were issued, a decrease of \$18,228.28 from the amount reported for August, which was the largest month's business of record in the Zone, and amounted to \$448,218.75. Of the \$429,990.47 in September there was drawn in orders payable in the United States and elsewhere \$317,617.34, and in orders payable in the Canal Zone \$112,373.13. The fees collected amounted to \$1,826.03, and the amount paid and repaid was \$130,670.93.

The largest number of orders, 2,805, was issued at Cristobal, and amounted to \$32,646.51. Empire was second with 2,007 orders, amounting to \$55,912.31; Ancon was third in the number of orders issued, 1,503, but fourth in the amount, \$38,348.45; Gorgona was fourth in orders issued, with 1,433, and third in the amount, \$47,635.23; and Culebra fifth, with 1,307 orders, aggregating \$38,253.99. The average amount of all the orders issued was \$29.01. The largest aver-

age for a single post-office was at Paraiso, with 575 orders, amounting to \$19,750.35, an average of \$34.35 per order, and the smallest was at Bohio, where 42 orders were issued, aggregating \$865.14, an average of \$20.60.

A comparative statement of the money order business transacted at the Zone post-offices for the quarter ending September 30, 1907 and 1908 respectively, is as follows:

	Orders issued.	Amount.	Fees and Stamps.
Quarter ending September 30, 1908....	43,494	\$1,320,011.73	\$22,199.53
Quarter ending September 30, 1907....	32,191	992,086.14	20,228.17
Increase in 1908.....	11,303	\$327,925.59	\$1,971.36
Percentage of increase	35	33	9.75

### Office Building for Quartermaster's Depot.

A permanent office building for the Quartermaster's Depot at Mount Hope has been authorized. It will be 100 feet long by 75 feet wide, of the Commission style of architecture, and connected with the storehouse by a covered passageway. In the center of the roof will be a skylight and ventilator, 15 feet by 20 feet. A private office for the Depot Quartermaster, and a record room will be partitioned off in two corners of the building, and the remainder of the office will be a large open room.

### French and American Buildings.

An inventory of the buildings in the Canal Zone on August 1, 1908, shows that there were 3,338 of all kinds. When the Americans took possession of the effects of the old French company, 2,149 buildings of various kinds were included in the sale. Of this number it was found profitable to repair and use 1,536. Either because they were so badly out of repair that they were unsuited for any purpose or because they were in the way, 304 of the French buildings have been demolished. There remain unrepaired 337, some of which will be utilized, while others will probably be torn down. The Commission has constructed 1,494 buildings, so that there are now in use in the Canal Zone more old French buildings than American structures. This showing, however, is merely one of units. In general the buildings received from the French were small and ill-suited for other purposes than laborers' barracks, or storehouses. Some of them, however, were in good condition. Of the 91 buildings left by the French at Ancon, 88 were repaired, and some of them are serving as hospital wards. At La Boca 52 out of 65 were worth repairing; at Culebra, 87 out of 113; at Empire, 86 out of 92; at Cristobal, Colon, and Folks River, 159 out of 235.

The buildings constructed by the Americans, although less in number, are more commodious than those left by the French. The Americans have built 561 quarters for

## NOTES OF PROGRESS.

(Continued).

gold employes, 93 being of miscellaneous types. Bachelor quarters, with 1,424 rooms, 104 buildings in all, and 360 quarters capable of accommodating 848 families, comprise the bulk of the "gold" quarters. Many of the old French buildings have been turned into quarters for European and negro laborers, and in addition the Commission has built 192 quarters for silver employes. Of this number 141 are barracks for negro bachelors, and some of them will accommodate 80 laborers. There have been constructed 741 buildings for miscellaneous occupancy and use. This number includes Commission hotels, clubhouses, commissaries, lodge rooms and chapels, all municipal buildings, mess halls and mess kitchens, range closets, lavatories, wash houses, 34 office buildings, 75 hospital buildings, 57 shop buildings, and 88 buildings for storage purposes.

## Commission Dentists.

At a meeting of the Isthmian Canal Commission on April 27, 1908, the following action was taken:

The Sanitary Department is authorized to employ two competent dentists. These dentists shall be employes of the Commission, have all the privileges and allowances of an employe on the gold roll drawing \$1,800 a year, be furnished by the Commission with suitable instruments and office furniture, but shall receive no salary in money.

In return for these allowances said dentists shall be subject to all the rules and regulations of the Commission, and shall do dental work for employes of the Commission and the Panama railroad and their families at a tariff fixed by the Chief Sanitary Officer. The dentists shall furnish all necessary material for doing dental work, with the exceptions above mentioned.

In accordance with the above, two dentists have been appointed. One is Dr. J. E. Grant, who was graduated from the Louisville (Ky.) College of Dentistry several years ago, and who has been practicing his profession for the past year at Gorgona. He will be stationed there. The second is Dr. O. N. Ruben, who was graduated from the Atlanta (Ga.) Dental College in 1902, and practiced his profession for two years in Georgia. In 1904 he entered the Hospital Corps of the United States Army and served for several years as an assistant to the dental surgeons. Since he has been on the Isthmus he has practiced his profession in connection with his work in the dispensary at Empire. He will be stationed at Culebra.

## September Police Report.

The September report of the Chief of Police shows that 639 persons, representing 39 countries, were arrested in the Canal Zone during the month. This is an increase of 151 for the month, there having been 488 arrests in August. Of the 639 persons arrested, 599 were men, and 40 were women, and they were for 45 different offenses. They were divided among the towns of the Zone as follows: Ancon 32, Las Sabanas 2, La Boca 25, Corozal 13, Miraflores 10, Pedro Miguel 7, Paraiso 19, Culebra 64, Empire 87, Las Cascadas 75, Bas Obispo 13, Gorgona 98, San Pablo 16, Tabernilla 24, Bobio 6, Gatun 48, Cristobal 100.

Seventy-one cases were tried in the courts, 14 of which were dismissed, 47 continued, and 10 in which convictions were procured. Of the 10 persons convicted, 5 were fined and 5 sentenced to the penitentiary, 2 for

one year each, 1 for six months, 1 for sixty days, and 1 for thirty days. Eight convicts were discharged from the penitentiary during the month, leaving a total of 112 in the penitentiary on September 30. The number of district prisoners on the same date was 220. The value of the work performed by convicts on roads, etc., amounted to \$1,790.45. The total effective police force on September 30 was 144, and the pay roll amounted to \$17,773.11.

There were 18 violent deaths requiring action by the coroner during the month. Six of these deaths were caused by railroad accidents and 2 by drowning.

## Commission Action.

At the meeting of the Isthmian Canal Commission, held September 21, 1908, the following resolution was adopted:

*Resolved*, That except for causes manifestly beyond prevention by any action of the employe, no exception will be made to the rule embodied in the General Conditions of Employment adopted at the 129th meeting of the Commission, providing that employes not reporting for duty within fifteen days after expiration of leave will forfeit the right to pay for leave period. Employes are expected to report for duty on the expiration of their authorized leave, the additional fifteen days, return within which will preserve their right to pay during leave, being intended to cover all contingencies and not to be considered additional leave without pay.

The rule referred to in the above resolution is as follows:

Employes not reporting for duty within fifteen days after expiration of leave will forfeit the right to pay for leave period.

## Transfer of Allotments.

The division engineers have been informed that there will be no transfer of allotments between the three construction divisions of the Department of Construction and Engineering on account of work performed by one division for another. For work performed for the Department of Civil Administration and Sanitation the construction divisions will receive credit by transfer of appropriation. The construction divisions will not, however, receive credit for work performed for the Quartermaster's Department such as the construction of corrals, storehouses and roads, as all of this work is paid for from the appropriation for the Department of Construction and Engineering. In dividing equally between the three construction divisions and the Quartermaster's Department the funds available during the present fiscal year for building construction and municipal improvements, it was the intention that these allotments should fix the amount of work of this character to be performed by each division, and consequently no transfer of allotment can be made.

## Flag Stops for Sunday Night Train.

The General Manager of the Panama Railroad Company announces that beginning Sunday, October 11, train No. 30, which leaves Panama at 10 p. m., will stop at any station in the Zone upon request to conductor by a passenger holding a through ticket from Panama. Passengers boarding the train at a flag stop, holding tickets to a station that is not a scheduled stop, do so at their own risk as the train will stop at flag stations only for passengers from Panama.

## HEALTH REPORT FOR SEPTEMBER.

## Comparison for Three Years.

ANCON, C. Z., October 10, 1908.

To the Acting Chairman and Chief Engineer, Culebra, Canal Zone.

Sir—I herewith forward report of the Sanitary Department for the month of September.

The health conditions continue, I think, to be all that could be expected. I am disappointed that the sick rate had not begun to fall this September as it had done in all previous years. The rates for the past three years, comparing August and September, are as follows:

Month—	Force.	Constantly sick.	Rate per thousand.
1906—August.....	29,955	1,260	42.67
September.....	23,263	1,064	37.74
1907—August.....	40,443	1,174	29.02
September.....	41,062	1,141	27.78
1908—August.....	44,225	1,116	25.24
September.....	45,058	1,130	25.09

However we had the satisfaction of seeing from this table that the rate for this September is considerably less than the rate for the preceding September quoted. The sick rate for September, 1908, is nearly 12 per thousand less than the sick rate for September, 1906. This means, other conditions being the same, that we saved in September, 1908, over September, 1906, in our working force, 16,200 days of sickness.

Taking the death rate of our laboring force, the comparison is equally good:

Month—	Force.	Deaths.	Rate.
1905—September.....	19,685	65	33.52
1906—September.....	28,264	135	57.34
1907—September.....	41,062	98	28.63
1908—September.....	45,058	48	12.78

In our laboring force for the last six months the negro death rate has been almost as low, and in several months lower than the white. Up to three or four months ago the contrary had been the case, the negro death rate frequently being three or four times that of the whites.

During the past month the white death rate in our force was more than twice as great as that of the negroes. For some reason the whites seem very much more exposed to death by accident than do the negroes. Of the 19 deaths among the whites last month, 12 (more than half) were due to violence; of the 29 deaths among negroes, 5 were due to violence.

The death rates among the whites and negroes for the month of September for the past three years has been as follows:

Force.		Deaths.		Rates.	
White.	Colored.	White.	Colored.	White.	Colored.
5,603	22,661	7	128	15	67.81
11,662	29,400	25	73	25.72	29.79
12,370	32,688	19	29	18.43	10.65

In the three years, the negro death rate has fallen from 67 per thousand to 10 per thousand.

Upon the whole, in our present condition, I would consider the number of cases of malaria as the best index of the conditions of our sanitation. In August, we admitted to our hospitals, among employes, 1,525 cases of malaria; in September, 1,410; a satisfactory improvement for this time of the year. In September, 1907, we admitted in hospitals 1,811 cases of malaria among employes, showing this year an improvement of 401 cases, which indicates a considerable decrease in malaria cases during the year.

No case of yellow fever or bubonic plague has occurred in the Zone of the Canal within the past two years. Very respectfully,

W. C. GORGAS,  
Chief Sanitary Officer

## FATAL EXPLOSIONS OF DYNAMITE.

## Thirty Casualties in Two Accidents.

Twelve men are dead and eighteen are injured as a result of two explosions of dynamite that occurred on the Canal work last week. The first explosion was in Culebra Cut near Empire where five men were killed and eight injured, and the second was near Mindi where seven were killed, ten injured, and one is missing, but it is believed he became frightened and ran away.

The explosion in Culebra Cut occurred about 1.15 o'clock in the afternoon of October 8. Steam shovel 210 was making a cut through some material recently blasted and, it is believed, a shovel tooth struck the cap of an unexploded charge of dynamite. In the explosion David R. Davies, the steam shovel engineer, William Colburn, and Samuel Sobers, pitmen, were killed instantly. William Goodley, who was acting as crane-man, was so badly injured that he died shortly after the accident, and Joseph Carter, a laborer, died from his injuries on October 10. Samuel Goddard, Thomas Trotman, Walter Archer, Aubrey Lane, and Edward Clarke, pitmen; and Adolph Samuels, William Christian, and John Benjamin, laborers, were injured, but it is believed they will recover. All the dead and injured were negroes except the engineer and the crane-man.

David R. Davies was 32 years of age and unmarried. His home was in Girard, Ohio, and he had been working on the Canal since March 9, 1903. A brother, John L. Davies of Culebra, survives him.

William Goodley, the crane-man, was 21 years of age, unmarried, and had been living on the Isthmus since February 2, 1907. His home was at 2544 Hope street, Philadelphia, Pa., where his mother lives. His father, Robert L. Goodley, is an employe of the Commission and lives at Empire.

The explosion near Mindi occurred about 10.30 o'clock in the morning of October 10. The dredges that are making the channel from Limon Bay to Mindi have worked their way into the shore of the bay where the material encountered, blue mud and coral rock, is so hard that it must be blasted before it can be handled economically.

During the morning the blasting party had practically completed its work of preparing a blast of 24,650 pounds of 60 per cent dynamite. One hundred and fifty-four holes, 15-foot centers, 50 feet deep in sand and rock, covering an area of 150 by 200 feet, were almost ready when a thunder shower came up. The men were ordered away and remained until after the shower, when they returned to complete their work. No connection had been made with the battery, although all the holes but two had been connected with the main wires. Without any known cause the blast was exploded, and therefore it is ascribed to a bolt of lightning.

Six negroes, Edward Lord, John Cyrus, Charles Henry, Samuel Archer, Edward Price, and Herbert Sandiford, were killed almost instantly. Benjamin Prescott, also a negro laborer, died at Colon hospital on October 12. One negro laborer, Samuel Brewster, is missing, but it is believed he was uninjured. Two white men, H. T. McCrabbe and J. A. Clark, were injured, but not seriously. Mr. Clark was thrown some distance and his ankle was sprained. Brown Beckles, Garnet Graves, George Eason,

Wesley White, Augustine Murphy, Richard Inniss, Henry Best, and William Brewster, negro laborers, were also injured, but will probably recover.

The law providing compensation for employes injured in the service of the Commission was published in full in THE CANAL RECORD of June 17, from which the following extract is taken:

That when on or after August 1, 1903, any person in hazardous employment under the Isthmian Canal Commission is injured in the course of such employment, such employe shall be entitled to receive for one year thereafter, unless such employe, in the opinion of the Secretary of Commerce and Labor be sooner able to resume work, the same pay as if he continued to be employed, such payment to be made under such regulations, as the Secretary of Commerce and Labor may prescribe: Provided, That no compensation shall be paid under this Act where the injury is due to the negligence or misconduct of the employe injured, nor unless said injury shall continue for more than fifteen days. All questions of negligence or misconduct shall be determined by the Secretary of Commerce and Labor.

SEC. 2. That if any artisan or laborer so employed shall die during the said year by reason of such injury received in the course of such employment, leaving a widow, or a child or children under sixteen years of age, or a dependent parent, such widow and child or children and dependent parent shall be entitled to receive, in such portions and under such regulations as the Secretary of Commerce and Labor may prescribe, the same amount, for the remainder of the said year, that said artisan or laborer would be entitled to receive as pay if such employe were alive and continued to be employed: Provided, That if the widow shall die at any time during the said year her portion of said amount shall be added to the amount to be paid to the remaining beneficiaries under the provisions of the section, if there be any.

A decision of the Comptroller of the Treasury, published in THE CANAL RECORD of September 16, limits the benefit of this law to persons whose injuries "continue" fifteen days or more.

## Canal Zone Treasury.

The Canal Zone Treasury was separated from the Disbursing Office on October 1, and all revenues from the postal service, the courts and regular taxes, such as license, land rents, and building permits, are now paid into the Treasury. These revenues amount to about \$300,000 a year. Congress directed in the Sundry Civil Appropriation Act of May 27, 1903, that these revenues be expended as follows:

The revenues derived from the postal service to the maintenance of that service; the remaining revenues after setting aside a miscellaneous and contingent fund of ten thousand dollars, to the maintenance of the public school system in the Zone; to the construction and maintenance of public improvements within the Zone; to the maintenance of the administrative districts, including payment of salaries and wages incident thereto; to the maintenance of Canal Zone charity patients in the hospitals of the Isthmian Canal Commission, and to the maintenance of administrative district prisoners.

## Inspection by Newspaper Men.

The General Manager of the Panama railroad took a party of Isthmian newspaper men and the local correspondents of the Associated Press and United Press, on a tour of inspection of the Canal and railroad relocation work on October 11. On each of the three construction divisions an engineer acquainted with the various phases of the work joined the party and assisted in explaining the various features.

The steamship *Silvia*, from Baltimore, arrived at Colon October 7 with 1,000,000 pounds of dynamite; 300 tons of pipe and pipe fittings; 400 cases and 600 drums of gasoline; 1,200 tons of steel bars and plates; 350 kegs of track spikes; 36,577 pieces of drain tile, and an assorted cargo of furniture, oil and machinery.

## LETTERS FROM THE LINE.

(Communications to this column must be signed in each instance with the name and address of the writer.)

## Memorial Resolutions.

THE CANAL RECORD:

Will you kindly publish the following resolutions.

E. M. PULLEN,

President, Local No. 5, A. U. of S. S. & D.

Whereas, Our Heavenly Father has removed from our midst Brother David R. Davies; therefore be it

Resolved, That Panama Local, No 5, Associated Union of Steam Shovel and Dredgemen has lost from its ranks a most worthy brother, respected and loved by his acquaintances and friends, and whose sterling qualities and noble character have endeared him to every member of our order; and be it further

Resolved, That we extend our sincere and heartfelt sympathy to his sorrowing relatives in their hour of bereavement; and be it

Resolved, That a copy of these resolutions be spread upon the records of our order and copies sent to each of his relatives.

COMMITTEE ON RESOLUTIONS,

Associated Union of Steam Shovel and Dredgemen.

Culebra, October 11, 1903.

## Card of Thanks.

THE CANAL RECORD:

I wish to thank the steam shovel engineers and crane-men who participated in the funeral of my son on October 9.

R. L. GOODLEY.

Empire, C. Z., October 11, 1903.

## Notice to Steam Shovel Men.

THE CANAL RECORD:

President George Buchan, of Local No. 19, requests all members of the I. B. of S. S. and D. M. to attend a meeting on Sunday, October 18, at 2 p. m., at the Panazone, Panama.

S. I. LYONS,

Secretary-Treasurer.

Empire C. Z., October 5, 1903.

## Ohio Club.

THE CANAL RECORD:

A temporary organization for an Ohio Club at Empire has been effected, and a meeting to form a permanent organization is called for Friday, October 16, 1903, at the Commission Clubhouse, at 8 p. m. Buck-eyes turn out please.

J. P. MEAD,

Temporary Chairman.

Empire, C. Z., October 9, 1903.

## Notice to Kangaroos.

All Kangaroos in good standing desiring to become charter members Ancon Court, No. 7, are requested to meet on Sunday, October 18, at 1 p. m., in the hall over the office of the District Quartermaster in Ancon (near Hotel Tivoli), for the purpose of electing its officers. By order of

SAM. B. DANNIS.

## Where Is John Lomasney?

THE CANAL RECORD:

I want to know the whereabouts of John Lomasney, of New York city. When last heard from, one year ago, he was employed as a cook in the I. C. C. hotel in Empire. Will anyone, who may know of his whereabouts, communicate with the undersigned.

A. O'DONNELL.

Tabernilla, C. Z., October 6, 1903.

## THE WATER SUPPLY.

## Billion and a Half Gallons for the Dry Season.

Water is flowing over the spillway at Rio Grande and Carabali, two of the four reservoirs that supply most of the settlements in the Canal Zone. That at Brazos Brook is almost full; and the fourth, Camacho, already contains 130,000,000 gallons. Until the end of the rainy season the daily consumption will be much less than the amount collected by the almost daily rains. The amount of water actually impounded in the four big reservoirs at their capacity is 1,513,537,000 gallons, and the average daily consumption in the fiscal year 1908, was 1,249,625 gallons. These reservoirs will be full at the beginning of the dry season, and on the basis of daily consumption remaining the same as it was in 1908, the supply will be twice as great as the consumption.

Whenever the population is sufficient to justify or make necessary the maintenance of a reservoir, one has been built. The city of Panama and the group of American settlements near it, including Ancon, La Boca, East La Boca, Corozal, Miraflores, Pedro Miguel, Paraiso, and Culebra, are supplied from the Rio Grande reservoir, which is located between Culebra and Paraiso. Camacho reservoir, in the hills west of Empire, supplies Empire, Las Cascadas, and Bas Obispo. Carabali reservoir, near Gorgona, supplies Matachin, Bas Matachin, Gorgona, Juan Grande, and Mamei. From Mamei north to Gatun most of the Canal prism lies in Gatun Lake, and no American settlements of sufficient size to require a reservoir supply of water are located in this territory. Colon, Cristobal, and Mount Hope, are supplied from Brazos Brook reservoir. Other American settlements, such as San Pablo, Tabernilla, and Gatun, are supplied by water pumped from nearby streams.

The water in the reservoirs is drawn from territory carefully watched by inspectors, whose duty it is to see that the basin is kept clean. Vegetation is cut to the water's edge before the beginning of the rainy season, and a bacteriologist from the Bureau of Plant Industry in Washington keeps constant watch to discover evidences of infection and to anticipate any unpleasant odor, or taste, that might be given to the water by alga growth.

Rio Grande reservoir is a lake 65 acres in area, formed by building a dam across the mountain stream known as the Rio Grande. It has a drainage area of 2,015 acres and the surface of the water, when level with the spillway, is 238 feet above mean sea-level. Its storage capacity is 496,670,000 gallons, and the average daily consumption from this source in the fiscal year 1908 was 2,574,000 gallons. At the close of the dry season, when the water had reached its lowest level, on May 1, 1908, there remained in this reservoir 228,423,000 gallons of water, an amount sufficient for three months more had the supply not been replenished by the heavy rains from that time forth. Water from this reservoir is supplied by pumping to the higher levels in the villages of Culebra, Paraiso, Cucaracha, and

Ancon. A pressure filter located at Ancon filters the water that is supplied to the city of Panama, and an additional unit for this plant is contemplated in order that filtered water may be supplied to the American settlements at Ancon and La Boca.

Camacho reservoir is formed by impounding the Camacho River, the spillway of the dam being at an elevation of 365 feet above mean sea-level. The watershed from which the supply is collected, is 592 acres in area, and the area of the reservoir at the elevation of the spillway is 38.36 acres. The capacity at this elevation is 295,867,000 gallons, all but about 16,000,000 of which is available for distribution through the main which taps the reservoir at elevation 325. The annual consumption from this reservoir in 1908, was 131,765,000 gallons, and when the water was at its lowest point, at the close of the dry season, there remained a supply sufficient for 75 days. Water is supplied by gravity to all points except the higher levels of Empire, which are supplied by pumping.

Carabali is the smallest of the Zone reservoirs, its capacity being only 80,000,000 gallons. It is formed by a dam across Carabali River, and the spillway is at elevation 75.3. Its drainage area is 1,552 acres, and the area of the water at spillway elevation is 23 acres. It is adequate to supply the present demands, but the growth of Gorgona and the hamlets near it has been so great that an additional reservoir has been located in the valley immediately above the present reservoir at an elevation of 110 feet. The new reservoir, if constructed, will have a capacity of 153,000,000 gallons.

The reservoir which supplies Colon, Cristobal, and Mount Hope is located in the valley of Brazos Brook, near Mount Hope, at an elevation of 48.5 feet above mean sea-level. It has a drainage area of 640 acres and a lake area of 120 acres. The capacity is 641,000,000 gallons, and the consumption for the fiscal year 1908 was 457,544,000 gallons. Water from this reservoir is filtered before being delivered, and on account of the large amount of vegetable matter which it carries in suspension, it will be passed through a sedimentation basin before going to the filters.

At Tabernilla a pumping station is maintained, from which water taken from the Frijoles River, a hill-fed stream, is pumped to the hamlets between San Pablo and Frijoles. A distillation plant at the pumping station furnishes 1,000 gallons of distilled water daily to the American residents at Tabernilla, and the pumping station supplies in all 500,000 gallons each day. A similar pumping station near Gatun supplies that village with water taken from the Gatuncillo River, from which it is pumped to a tank located on one of the hills in the village.

For general purposes it is sufficient to say of the water that tests show it is healthful. For those who may inquire more deeply, the following chemical and bacteriological data show the differences in the chemical and bacterial content at the end of the wet and dry seasons. The data given for the end of the dry season 1908, are compiled from samples taken at Rio Grande, Camacho, and Carabali on May 20, and at Brazos Brook on May 21. The data for the end of the rainy season are for samples taken on

November 16, 1907, at Rio Grande, Camacho, and Brazos Brook, and on November 20, at Carabali.

## University Club Election.

The annual meeting for the election of officers of the University Club will be held in the clubhouse, Panama, on Sunday, October 18. The ballot box will be open from 9 a. m. to 3 p. m., Panama railroad time. On Saturday evening, October 17, a smoker will be given in the clubhouse, and a special train for the free use of members along the line of the Canal will leave Colon at 5.50 p. m., stopping at Gatun, Bohio, Tabernilla, San Pablo, Gorgona, Bas Obispo, Las Cascadas, Empire, Culebra, Pedro Miguel, Miraflores, and Corozal. This train will not return from Panama on Saturday night, inasmuch as the annual meeting occurs on the following day, and it is thought that members who attend the smoker will desire to remain over night in Panama.

## Commission Clubhouses.

On Tuesday evening, October 6, the Culebra indoor baseball and basketball teams visited Empire. Culebra won the baseball game, but Empire took the basketball by a score of 23 to 13. During the intermission gold medals were presented to the Empire basketball team of last season in honor of their winning the first championship of the Canal Zone. Members of the team were: G. M. MacAdam, captain; R. B. Potter, G. W. Lyon, O. J. Reech, J. M. LaRose and D. Fletcher.

Thursday evening, October 8, an association smoker was held at Gorgona. The program was made up of vocal and instrumental solos, selections by the orchestra, a boxing bout, wrestling bout, basketball game and a supper consisting of coffee, sandwiches, pie and cake.

Saturday evening, October 10, a billiard and pool team, consisting of five men from Cristobal, played a tournament with Gorgona's team. An interesting feature of the match was the close scores—81-100, 86-100, 97-100, 98-100. Cristobal won two out of three in pool; the teams broke even on billiards, each taking a game.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

Monday, October 12, was the first anniversary of the organization of the Canal Zone Federation of Women's Clubs, which was effected at the Hotel Tivoli. At that meeting delegates were present from seven of the eight clubs which had been organized at the different towns in the Zone, as were also a number of visitors. The organization was created under the direction of Miss Helen Varick Boswell, and some of the officers elected by the delegates are still holding office, notably the president, Mrs. Lorin C. Collins, and two vice-presidents, Mrs. W. C. Gorgas and Mrs. Chester Harding. A number of new officers have been elected, as many of the charter members have left the Isthmus. During the year the organization has been placed on a working basis and divided into departments for the unification of club effort.

Three meetings of the Federation have been held. The first was at Cristobal on January 4. The morning session was devoted to reports and general Federation business, and in the afternoon a social session was held with music and addresses, followed by a reception. The second meeting of the Federation was held at Empire on the invitation of the local Woman's Club on April 18. The business meeting was followed by a reception tendered to the honorary president, Mrs. George W. Goethals, at which more than 300 women were present. The third meeting was held on September 28, at Gorgona, and was attended by about 100 women, including guests.

The Federation includes at present eight clubs, Ancon, Pedro Miguel, Culebra, Empire, Las Cascadas, Gorgona, Gatun, and Cristobal, and has a total membership of about 500.

The Cristobal Woman's Club opened its regular session with a meeting on October 7, in the Commission clubhouse, with a good attendance. In the absence of the president the second vice-president, Mrs. Hiram J. Slifer, presided, and gave a short address of welcome to the members. Mrs. W. J. Rodman was elected treasurer, and seven new members were admitted. The report of the delegate to the biennial meeting in Boston was read by Mrs. Thomas E. Brown, Jr. At the close of the business meeting a concert program was given, in which Mrs. Frank Wright, Mrs. Frank Ulrich, Miss Anne Palmer, and Miss Ulrich took part. Tea was served and the social half hour was enjoyed by the members and their guests.

The Culebra Woman's Club announces the arrival of the books ordered for the course of study which is to be the winter's work. The course provides for a study of Continental countries, and England, Ireland, and Scotland. The next regular meeting of the club will take place on Thursday, October 15. It is desired that all members and prospective members who are interested in the course should be present to arrange the time of meeting and the work for the year.

The Isthmian Dancing Club of Culebra gave its regular monthly dance at the clubhouse on Saturday evening, October 10.

The wedding of Miss Mamie Calvit, daughter of the president of the Gorgona Woman's Club, to Mr. Theodore Sundquist took place at the residence of the bride's

parents on Wednesday evening, October 7, the ceremony being performed by the Rev. J. H. Sobey. A large number of guests were present. Mr. and Mrs. Sundquist will live at Gorgona.

The annual meeting of the Ancon Woman's Club was held at the Hotel Tivoli on Wednesday afternoon, October 7, when there was a large attendance. Among the important reports was that of the chairman of the library committee who placed the books in circulation. The books are exchangeable only on club days, and the usual fine of five cents a week will be imposed for the retention of a book over the period between the two meetings. Mrs. A. R. Bennett was appointed permanent chairman of the library committee, and Mrs. A. R. Stronp, assistant librarian. A standing rule will be adopted which will make the librarian a member of the governing board. The club library is small, but contains some of the most recent popular works of fiction, as well as a small selection of standard works. It is hoped that this department of the club will be increased as the year advances.

Interest in the election of officers for the year ran high and the voting by ballot resulted in the following selections: President, Mrs. C. C. McCulloch, Jr.; first vice-president, Mrs. H. R. Trask; second vice-president, Mrs. B. W. Payne; recording secretary, Mrs. Charles W. Boxer; corresponding secretary, Mrs. W. T. Dozier; treasurer, Mrs. R. W. Fenn. Meetings of the different departments for the purpose of electing their chairmen are being held and the governing board, which includes the officers, heads of departments and one director from each department, will meet before October 21 to arrange its work for the year. It has been decided to unite the educational and literary departments, at least during the first half of the year, and meetings of these combined departments will be held regularly.

The members of the Ancon Nurses' Library have decided to sell their books in favor of the projected Ancon Library Association, and the four hundred or more volumes of which it is composed will be sold at a private auction among the members of the hospital staff, and later will be open to outside purchasers.

Election of officers for the Pedro Miguel Woman's Club for the next six months was held at the meeting on October 7 at the club rooms. The following were elected: President, Mrs. A. L. Waters; secretary, Mrs. W. I. Barnes; treasurer, Mrs. W. J. Piper. During the meeting several matters of public importance were taken up for discussion. Twenty-five dollars was voted for the piano fund as a result of the recent entertainment. The meeting on Wednesday, October 14, will be entirely social, a reception being given to the retiring and to the newly elected officers.

A dance was given by the hospital staff at Colon Hospital on Friday evening, October 9, to which a number of residents of Cristobal were invited.

The Cristobal Bachelors' Club will give a dance at the Commission clubhouse on Saturday evening, October 17.

The Panama Railroad Company has completed the furnishing of its quarters for bachelor employes in Panama. The quarters will accommodate forty men.

## PERSONAL.

Surgeon H. R. Carter, P. H. and M. H. S., Director of Hospitals, accompanied by his wife and daughter, sailed from Colon on the *Heredia*, October 6, for a leave of absence of six weeks, to be spent in Costa Rica. During Dr. Carter's absence Maj. C. C. McCulloch, Jr., will act as Director of Hospitals.

Mr. Caleb M. Saville, assistant engineer, of Culebra, accompanied by his wife and son, returned to the Isthmus on the R. M. steamship *Atrato* on October 11.

Lieut. Frank O. Whitlock, 14th Cavalry, U. S. A., arrived on the *Esperanza* on October 8, and has been assigned to duty as assistant to the Subsistence Officer. Mr. Whitlock was graduated from the Military Academy at West Point in 1900, and since then has served at Columbus Barracks, in the Philippine Islands, and as an instructor at the Military Academy, where he has been since 1903. For a short time in 1905 he was assigned to duty on the Isthmus.

Mr. Henry Goldmark, designing engineer, and a force of ten assistants who have been transferred from the Washington office to Culebra, arrived on the *Esperanza* on October 8. They will be under the Direction of the Assistant Chief Engineer.

Mr. G. B. Strickler, Resident Engineer at Corozal, accompanied by Mrs. Strickler, sailed for the States on the *Finance*, October 8.

Among the passengers returning to the Isthmus on the *Esperanza*, which arrived at Cristobal on October 8, were: Maj. Edgar Jadwin and family of Gatun, A. B. Nichols of Culebra, Dr. Perry B. Preston of Paraiso, and Dr. Albert R. Warner of Colon Hospital.

Among the passengers on the *Cartago*, which arrived at Colon on October 8, from New Orleans, were: Dr. Robert E. Noble and wife, and Dr. James M. Melton of Ancon, and Mrs. A. S. Zinn and family of Empire.

## Obituary.

William J. McKee, of Paraiso, died at Ancon hospital on October 8, of pernicious malarial fever. He was a naturalized American citizen, having been born in Ireland in 1863, and had been on the Isthmus for four months. He was unmarried. His nearest relative was a brother, Robert McKee, who lives at Newcastle, England.

## Cristobal Union Sunday School.

The Cristobal Union Sunday School, which was organized about a year ago, was reorganized on Sunday, October 4, with the following officers: M. J. Stickel, acting superintendent; C. L. Van Zant, secretary; Miss Florence Fuller, Miss Goodrich, Mrs. M. C. Smith, Miss May Hammond, and Messrs. Riddle, Stickel and Judge Thomas E. Brown, Jr., teachers; Miss Louise Kurath, Mrs. Thomas E. Brown, Jr., Mrs. J. A. Smith and Mr. A. A. Simka, substitute teachers. The International lessons are used, and the school is intended for the benefit of all children not enrolled in other Sunday schools. The annual rally took place on October 10, when an address was made by Mrs. Hiram J. Slifer.

The steamship *Eastfield*, from Gulfport, arrived at Colon October 8 with 54,975 linear feet of piling and 167,009 feet of lumber.

## STEAM SHOVEL RECORDS.

## Work of the Shovels in September.

The steam shovels at work on the Canal excavated 1,714,995 cubic yards of material in September. A new record for excavation in one day was made on the last day of the month, when the 52 shovels at work in the Central Division took out 63,418 cubic yards, an average of 1,220 cubic yards per shovel. The high record for the month was made by shovel 217, at work in the Culebra District, which took out 52,892 cubic yards in 25 days, an average of 2,116 cubic yards a day. The best record for a shovel in the 70-ton class was made by shovel 102, which excavated 36,842 cubic yards of rock from the lock site at Gatun. Shovel 134 at work at the same place took out 35,560 cubic yards. Shovel 209, at work in the Central Division at Pedro Miguel, made the highest record for one day by excavating 3,100 cubic yards of soft rock on September 28.

Monthly records are computed by place measurement, while the daily records are based on car measurement. The best records for the month and for one day in each section of the work are shown below:

NOTE—Shovels in the one-hundred class are 75-ton Bucyrus and Model 60 Marions with dippers of a capacity of 2½ cubic yards. Shovels in the two-hundred class are 95-ton Bucyrus and Model 91 Marions with dippers of a capacity of 5 cubic yards. Shovels in the fifty-class are 45-ton shovels with dippers of a capacity of 1¾ cubic yards. These shovels are under steam for eight hours per day, but are not actually worked during this entire period, time being lost by the necessity of moving the shovel forward, blasting stone too big for the shovel to handle, keeping the shovel supplied with cars, etc.

## OFFICIAL CIRCULARS.

## Changes in Department of Civil Administration.

CULEBRA, C. Z., September 17, 1908.

Under authority of the Executive Order of the President of January 6, 1908, the Department of Revenues, in the Department of Civil Administration of the Isthmian Canal Commission, shall hereafter be known as the Division of Posts, Customs and Revenues of the Department of Civil Administration.

The fire department shall hereafter be known as the Division of Fire Protection of the Department of Civil Administration.

The Department of Police and Prisons shall hereafter be known as the Division of Police and Prisons of the Department of Civil Administration.

The title of the head of the Division of Fire Protection shall be Fire Chief.

Effective September 1, 1908.

GEO. W. GOETHALS,  
Chairman.Approved:  
LUKE E. WRIGHT,  
Secretary of War.

## Assistant Subsistence Officer.

CULEBRA, C. Z., October 8, 1908.

## CIRCULAR No. 216.

First Lieutenant Frank O. Whitlock, Fourteenth Cavalry, having reported for duty, in accordance with S. O. No. 208, current series from the War Department, is hereby appointed Assistant Subsistence Officer, reporting to Major E. T. Wilson, Subsistence Officer.

H. F. HODGES,  
Acting Chairman.

## Economy in Foundry Operation.

CULEBRA, C. Z., October 9, 1908.

## CIRCULAR No. 215.

Under present conditions of operating the foundry at Gorgona necessitating the use, in large part, of new pig iron, it will be more economical hereafter to purchase in the United States grate bars and similar small castings, the need for which can be anticipated. Requisitions should be prepared and forwarded to the Chief Quartermaster for from six months' to a year's supply of such castings as will be required. The foundry at Gorgona will turn out

only such of these castings as will be necessary to fill requirements until the receipt of castings on order.

H. F. HODGES,  
Acting Chairman and Chief Engineer.

## Correspondence on Requisitions.

CULEBRA, C. Z., October 10.

## CIRCULAR No. 217:

Whenever it becomes necessary for officials on the Isthmus to enter into correspondence relative to requisitions covering purchases in the United States such correspondence shall be conducted through the Chief Quartermaster, in order that proper records may be kept in his office, and the practice of corresponding with the General Purchasing Officer or contractors direct is prohibited. The Chief Quartermaster will also be furnished copies of all communications relating to purchases passing between the Chairman and the General Purchasing Officer direct.

H. F. HODGES,  
Acting Chairman.

## Transfers and Appointment of District Quartermasters.

CULEBRA, C. Z., October 6, 1908.

## TO ALL CONCERNED:

The following transfers and appointment are announced, effective October 10:

J. B. Jeffries, District Quartermaster at Empire, to District Quartermaster at Culebra.

C. P. Allen, District Quartermaster at Culebra, to District Quartermaster at Empire.

J. A. Simmons is appointed Assistant District Quartermaster at Culebra.

C. A. DEVOL,  
Chief Quartermaster.

## Auction of Public Animals.

## OFFICE OF THE CHIEF QUARTERMASER.

CULEBRA, C. Z., October 7, 1908.

Notice is hereby given that there will be sold at public auction at the Ancon corral, at 3 o'clock p. m., October 24, to the highest bidder, the following described public animals, which have been condemned and ordered sold:

Dark brown American mare mule, No. 280.  
Light bay American gelding mule, No. 279.  
Black American gelding mule, No. 240.  
Dark brown American mare mule, No. 321.  
Brown American mare mule, No. 281.  
Light brown American mare mule, No. 330.  
White native stallion, No. 93.  
Dun native stallion, No. 102.

## FROM COLON TO NEW ORLEANS VIA KINGSTON.

Medina.....Leyland Line	about Oct. 20
Mexican.....Leyland Line	about Oct. 31

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, calling at Puerto Barrios, and from Colon at 1.30 p. m. via Port Limon and Puerto Barrios, for New Orleans.

Sailings of the French line (Cie. Generale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

THE CANAL RECORD

Ancon, Canal Zone,

Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

## NOTES OF PROGRESS.

### Chairman's Monthly Report.

The report of the Acting Chairman of the Isthmian Canal Commission for September is published in other columns of this issue of THE CANAL RECORD. The work of reorganization was continued, and, effective September 1, the Division of Material and Supplies was merged with the Quartermaster's Department. A summary of the construction work done by three construction divisions shows that the material excavated in September amounted to 3,237,751 cubic yards, of which 1,789,348 were taken out by steam shovels, 1,437,885 by dredges, and 10,518 cubic yards by hand excavation. Of the 3,237,751 cubic yards 3,089,851 were removed from the Canal prism; 1,707,947 by steam shovels; 1,374,856 by dredges, and 7,048 by hand. The remaining 146,900 cubic yards were from accessory works. Rock drilling to the amount of 348,609.2 feet was done, 11.6 miles of old track were removed, and 7.18 miles of new track were laid, and 379.72 tons of explosives were used. The averaged number of laborers employed daily was 13,040. The rainfall in the Atlantic Division was 11.57 inches, in the Central Division, 9.75, and in the Pacific Division, 7.56 inches.

In the Atlantic Division there were removed from the site of the Gatun Locks and from the site of the spillway 153,194 cubic yards; by the dredges in Limon Bay, 624,776 cubic yards, all from the Canal prism; by the dredge at the site of the dock for the handling plant 48,974 cubic yards, and by steam shovels at Mindi 32,112 cubic yards. At Gatun Dam 42,857 cubic yards of Bas Obispo rock and 4,096 cubic yards of material from the spillway were dumped on the south toe of the dam, and 57,374 cubic yards from the spillway and Mindi were dumped

on the north toe. During the month 1,288 linear feet of trestle were constructed.

The excavation in the Central Division amounted to 1,476,323 cubic yards, of which 421,139 cubic yards were earth and 1,055,184 were rock. In the same territory in September, 1907, 773,095 cubic yards were removed. In September, 1907, however, the average number of steam shovels at work during the month was 39.91, while in September, 1908, the average number at work was 49.68. The rainfall in September, 1907, was 10.61, and in 1908, 9.75. The output per shovel per day in September, 1907, was 807 cubic yards, while in September, 1908, it was 1,180 cubic yards, an increase of 46 per cent.

In the Pacific Division, on the lock site at Pedro Miguel 28,833 cubic yards of material were excavated, and from the lock site at Miraflores 89,106 cubic yards. The excavation from the site of the Miraflores Dam amounted to 1,817 cubic yards, and from the prism at Cardenas Hill, 18,181 cubic yards. The dredging at La Boca amounted to 750,080 cubic yards, all from the Canal prism.

On the relocation of the Panama railroad 2,831 linear feet of permanent track were laid, making a total of 43,576 feet. The force of laborers during the month averaged 989.

In the Subsistence Department the net profit in September for the operation of hotels and mess halls, not including the Tivoli hotel, was \$9,535.20. The net loss on the Tivoli hotel was \$2,002.33, making a net profit for the Department of \$7,532.87.

The Division of Public Works of the Department of Civil Administration reported that during the month 30,052,000 gallons of water were used in the city of Panama, and 26,631,923 in the city of Colon. The health conditions continued to be satisfactory during September.

### Mindi Magazine.

The storage magazine for explosives at Mindi has been completed and the work of storing dynamite there has begun. The railroad from the main line of the Panama railroad to the magazine is being straightened and the old French tracks which were originally laid have been replaced by 70-pound steel rails.

The magazine is located one and one-half miles southeast of the Mindi spur, and is so surrounded by hills that an explosion would not seriously affect the nearby villages of Cristobal, Colon, Mount Hope, and Gatun. It is built into the hillside in such manner that at the back and sides it is surrounded by earth. Hollow concrete blocks 12 inches thick and bullet proof have been used for the walls, and the roof is composed of concrete reinforced with old Belgian rails and waterproofed. The magazine is 112 feet long, 48 feet wide, and 9 feet high inside.

The concrete roof keeps the interior dry and cool. Ventilation has been provided by air flues which open under the roof. Six hundred thousand pounds of dynamite can be stored in this building. Near the magazine, and yet so faraway that an explosion in one would not affect the other is a detonator house. It is 33 feet 6 inches long, 17 feet 3 inches wide, and 10 feet high inside. It also is built of concrete blocks and has a ceiling of reinforced concrete with a corrugated iron roof above it.

In the magazine reservation is a frame house for a watchman who will have charge of the station. A neutral zone, in which no shooting will be allowed, will probably be established.

### Unloading Dynamite.

The first shipment of dynamite under the contract for the fiscal year 1909 arrived at Cristobal on October 10, and was unloaded at Dock 14. It consisted of 1,000,000 pounds in 20,000 boxes of 50 pounds to a box. Every box was taken from the hold of the ship *Sylvia* by hand and sent down a skid to the wharf. Such care was taken in handling the explosives that only one of the 20,000 boxes was broken open.

### Dredging at Pacific Entrance.

Dredge No. 17, one of the old French ladder dredges, struck rock in the channel of the Canal at La Boca on the night of October 6. Before the dredgers realized the unexpected nature of the material they were handling, the end of the bucket ladder had been broken and the tumbler wheel lost. The disabled dredge was taken to the docks, where a new ladder was put in, and work in the channel was resumed just one week after the accident. Prompt repair and quick return to work were possible, because a ladder taken from one of the two old dredges at Gorgona was on the ground ready for such an emergency. The ladder of the second dredge at Gorgona is being taken down and will be brought to La Boca to be held in readiness as a "spare."

The Pacific dredging fleet has been considerably strengthened by the addition of the old French ladder dredge A-2, now known as the *Mole*, which was put back in commission a few days ago. The fleet now consists of three old French ladder dredges, one of them a sea-going dredge, one sea-going suction dredge, one 20-inch suction dredge, and a dipper dredge. It was hoped that this fleet would bring the monthly excavation for the Pacific dredges from its present point (about 750,000 cubic yards), up to a million cubic yards or over. This may be accomplished ultimately, but if present conditions continue and the dredges at La Boca are obliged to keep on scraping mud off the stratum of rock that underlies the channel of the old French canal, it is

## NOTES OF PROGRESS.

(Continued).

not likely that a new record will be made for some time to come.

The sea-going ladder dredge *Gopher* is working its way up the channel, making a cut 26 feet deep at mean tide. The cut will be continued to Corozal, thus giving access at low water to the Miraflores lock site. The sea-going suction dredge *Ancon* is dredging from the end of the La Boca wharf out to deep water, making a cut from — 26 to — 45.

Requisition has been made for four additional dump barges for use with the Pacific dredges. They will be of steel, 400 cubic yards capacity, and will be erected at the La Boca marine shops.

## Lands for Canal Purposes

The cases arising from the expropriation of Canal Zone property for Canal purposes have been settled in accordance with the decision of the Joint Commission published in THE CANAL RECORD of August 12, 1908. Deeds to the United States have been executed covering the lands in question. Formal possession of the hacienda Andrade at Gorgona was taken on October 17.

## Accidents at Gorgona Foundry.

The American Foundrymen's Association has reported the following accident statistics for Gorgona foundry during the year ended June 30, 1908: Total accidents 14; average

total number of employees, 100; number injured through their own fault, 12; number injured through the fault of co-employees, 2; number injured through burns, 13; number injured through bruises, 1. No deaths resulted from injuries sustained in the foundry.

## New Unloading Station for Oil Steamers.

An iron pontoon, 18 feet square, used by the French as a diving bell in building the foundations of the La Boca wharf, has been sunk 1,400 feet south of the wharf at La Boca, as an anchor for the end of the Union Oil Company's pipe line. The company's ships will unload their oil at this pontoon, whence it will be piped to the pumping station for delivery at various points along the Canal. At present the unloading intake of the Union Oil Company projects into the channel and is in the way of the dredging operations.

## New School Building at Corozal.

A school building for white children has been authorized for Corozal. It will be built by contract. The plans call for a building 53 feet by 66 feet over all, divided into two rooms each 35 by 37 feet; the ceiling to be 13 feet above the floor. Separate toilets for boys and girls will be built at opposite ends of the building. The construction will be of the Commission style, with a veranda running around the building.

## High Water in Limon Bay.

After the heavy storm that swept the Caribbean sea last week the water in Limon

Bay was very high. Thursday and Friday the waves were breaking on the beach road at Cristobal and Colon, notwithstanding that a stiff breeze was blowing from the south. At one place it was necessary for the Panama Railroad Company to dump two car loads of rock in order to keep its waterfront intact.

## Family Quarters.

When the family quarters authorized up to October 8 have been constructed, there will still be on the list of applicants 361 people eligible for quarters. Of these, 73 are on the 1907 list, and entitled to prior consideration. A statement of the conditions in each village follows:

VILLAGES.	Application on file as of September 1, 1908.			Accommodations available on completion of work authorized to Oct. 8, 1908.

## University Club Election.

At the annual meeting of the University Club, held on October 18, the following officers were elected: President, Arnold Shanklin; first vice-president, J. G. Holcombe; second vice-president, Ernesto Lefevre; treasurer, E. C. McFarland; secretary, J. E. Marsh; assistant secretary, R. G. Castel. Governors: Joseph Bucklin Bishop, Hiram J. Slifer, Malcolm Elliott, M. B. de Putron, A. S. Cooper, J. C. Perry, H. G. Prescott. Honorary president, Hon. José Domingo de Obaldia; honorary vice-president, Hon. Charles E. Magoon; honorary vice-president, Col. W. C. Gorgas.

## Cornerstone Laying at Empire.

The cornerstone of the new Episcopal St. Mary's Church, Empire, will be laid next Sunday afternoon, October 25, at 3 o'clock, by Lieut.-Col. H. F. Hodges, Acting Chairman and Chief Engineer of the Isthmian Canal Commission. The address will be made by Archdeacon Bryan. Music will be furnished by the Marine band of Camp Elliott. Invited officials, organizations, and guests will assemble at the court house in Empire at 2.30 p. m., and proceed to the site of the new church, where the ceremonies will take place. The public is cordially invited to attend.

The rock crusher and quarry at Rio Grande have been transferred from the Central Division to the Pacific Division. The maintenance of Rio Grande reservoir has also been transferred to the Pacific Division.

The old interlocking switch system at Miraflores has been replaced by a modern system which will go into operation October 22. The station will control seven switches.

The tug *La Boca* has been laid up for repairs after an unbroken year of work in the Pacific entrance to the Canal, and the *Cocoli* has been put back in commission.

## LABOR FORCE AND QUARTERS.

There were 346 additions to the Canal force and 392 separations in the month of September, a net decrease of 46. Of the separations 158 voluntarily left the service, 146

were discharged, 78 resigned, 2 were changed to a silver basis, 4 died, and 2 resigned. A statement of the force actually at work on September 30 follows:

DEPARTMENT.	Gold Men.	SILVER MEN.							Total Gold and Silver Men.
		Mon-thly.	Artisans.		European Laborers.		West Ind'n Laborers.		Total Silver.

## STATEMENT OF CLASSIFIED EXPENDITURES TO AUGUST 31, 1908.

The following table shows expenditures for Canal work, classified monthly, since July 1, 1907. The figures give only expenditures which have been located. In addition, there have been some disbursements, such as purchasing material, etc., which it will not be possible to locate to a specified account until their use has been finally determined:

Period.	Civil Administration.	Sanitation.	Construction and Engineering.	Municipal Improvements.	Plant Account.	Total.
Prior to July 1, 1907.....	\$1,446,287.74	\$4,626,716.39	\$13,445,607.23	\$4,282,865.16	\$19,483,757.66	\$43,285,234.18

## PANAMA RAILROAD QUARTERS.

## Improvements and Additions on Colon Beach.

Extensive repairs and additions are being made to the quarters provided by the Panama Railroad Company for its employes in Colon, and it is thought that by the beginning of the year 1909 the majority of the railroad colony will be occupying new or renovated quarters. For several years past the lack of buildings has been pronounced, and the throwing open of railroad quarters to employes of the Isthmian Canal Commission has made the building of new quarters a necessity. On September 1 there were on the waiting list 68 employes of the railroad company who could not be given quarters.

To those not familiar with the history of Colon, it may be illuminating to know that the city exists because the Panama Railroad Company, in 1850, decided to make Limon Bay the Atlantic terminus of the transcontinental line. Manzanillo Island was built up on a coral reef, and on the made and reclaimed land the general offices and terminal shops of the railroad were erected. The quarters for employes were built near the offices, and from a few straggling buildings they have increased, until a line of houses stretches along the north beach for a mile or more. The old shops of the Company were located where some new quarters are now being erected.

Washington House is the largest of the old quarters. It was built prior to 1861, and a third story has since been added to the original two-story building. The present structure is 173 feet long and 44 feet wide, and contains accommodations for fifty people, two in a room. Along the full length of the front of the house are two verandas, one on each floor, and from them one may look across a grass parkway, through palm trees, over Limon Bay, and beyond it to the Caribbean. There are few, if any, days on which a refreshing breeze does not blow in from the sea. The remodeling of Washington House has been confined to the interior. On the ground floor the dining-room has been made into one long room. The rooms on the west end, now occupied by the Washington Reading Room Club, are to be made into a private dining-room and a modern barber shop.

A modern kitchen has been built in the rear of the hotel. The floor is concrete, the roof is ventilated, and all the furniture is raised above the floor so that the kitchen can be flushed with a hose every day. A circulating coffee urn of three units, in which coffee is made with sterilized water, a 12-foot steam table, a 12-foot portable range, steam heated pots for stock and vegetables, a charcoal stove for broiling meats, an ice box for fish, a serving pantry, all arranged so that the waiters may fill their trays in regular succession, entering the kitchen by one door and leaving by another, and never doubling on their tracks, are the principal furnishings of the kitchen. There is also a steam and hot water dish-washing machine. Adjoining the kitchen is the ice box, specially constructed after the plan of the more recent of the line commissary coolers. It is filled once a week, has an ice capacity of eight tons and consumes five tons a week. In it a week's supply of meats and vegetables is kept at a temperature of from 46 to

50 degrees. A bit of sentiment connected with the a la carte meals is that all planked meats and fish are served on lignum vitae planks cut from ties used for half a century on the Panama railroad. Washington House serves 200 meals daily.

The house directly west of Washington House, known as the Bennington, is being remodeled. The ground floor will be divided into two one-family quarters, and the second floor into twelve rooms about 11 feet by 10 feet, arranged in suites with baths. Garfield House, which is east of Washington House is also to be remodeled, the work to be begun as soon as the present occupants move into the new building named Lincoln House. On each floor there will be six two-room, non-housekeeping suites with baths, each room to be about 13 feet square.

Lincoln House is nearing completion, and an effort is being made to have it ready for occupancy the first week in November. It fronts on E street, about three hundred yards from the beach, and although two new houses for married people are between it and the water, a glimpse of the sea may be had from the north veranda, and the breeze is almost unchecked. The house is of a special type, being really three oblong buildings with gable roofs, forming the front and sides of a large hall. This hall is 50 feet square, two stories high, is roofed with a skylight, and has a hardwood floor finished for dancing. Around three sides of this hall on the second floor runs a balcony, while the fourth side opens on to the ground floor and second story verandas. The house is two stories high, 125 feet long and 116 feet deep, and a screened veranda on each floor runs completely around it. In addition to living quarters for 80 men, the house will contain a billiard room, reading room, four drying rooms and four baths and toilet rooms.

Similar in type to Lincoln House, but smaller, will be McKinley House, which is in process of construction on E street, opposite Lincoln House. It will be 97½ feet long by 40 feet wide, two stories high, and will have screened verandas. On the ground floor will be six rooms, a reception room, and family quarters consisting of four rooms and a bath. A matron will occupy the family quarters. The second floor will contain twelve rooms, each 10 feet by 12 feet. It is intended for the woman employes.

Between the beach and the new quarters for men and women new family quarters are being constructed. One house, recently completed, is already occupied. It is a type C, two-story, four-family house, 69x57 feet. Each quarters contains three bedrooms, a parlor, dining-room, kitchen and bath. A type B house is nearing completion. It is also a two-story four-family house, and is 69 feet by 47 feet 4 inches. Each quarters consists of a parlor, dining-room, kitchen, two bedrooms and a bath. Two type D, four-family, two-story houses will complete the additions now authorized. These houses will be 68 by 36 feet, and each quarters will contain a parlor, dining-room, bedroom, kitchen and bath. This is the only type of house built by the Panama Railroad Company in which the stairways leading to the second floor are on the outside of the building. All the quarters have screened verandas.

For years before the American occupation

Washington House was the center of the social life of Colon, and it has continued to be so up to the present time. Now the center is about to change to Lincoln House. The old Washington Reading Room Club at a meeting held last week decided to transfer its books and billiard tables from Washington House to Lincoln House. The control of the dancing hall and social features at Lincoln House has been placed in the hands of an executive committee elected at that meeting and consisting of R. Budd, chairman; G. E. Geer, representing the general manager's office; P. T. Murphy, representing the married quarters on the beach and Washington Hotel; John Purdum, representing Lincoln House, and D. E. Richard, representing Garfield House. The officers elected are: H. J. Slifer, president; J. S. Stewart, vice-president; H. B. Warren, secretary, P. G. Hoyt, treasurer. Membership in the Washington Reading Room Club is not confined to employes of the Panama Railroad Company or of the Isthmian Canal Commission, and the dancing floor at Lincoln House may be used by all persons to whom the executive committee sees fit to assign it.

## Memorial Resolutions.

At a meeting of Culebra Lodge, No. 3, Knights of Pythias, October 14, 1908, the following resolutions were adopted:

*Resolved*, That as the great and all-merciful God has seen fit to remove from our midst our esteemed and honored brother, James H. Averill; and, while our loss has been great, we bow in accordance with His will, and look forward to the meeting in that world of everlasting sunshine, when we shall be once more together, never more to part, for we shall know each other there; be it further

*Resolved*, That we extend to his dear wife and little ones our sincere sympathy in this their great hour of sorrow; be it further

*Resolved*, That a copy of these resolutions be sent to his family; also to THE CANAL RECORD and press for publication, and to become part of the minutes of this lodge.

## Resolutions of Sympathy.

WHEREAS, Our Heavenly Father and Great Commander has removed from our midst Comrade Lewis B. Mickle; be it

*Resolved*, That the General Henry W. Lawton Garrison, No. 40, Regular Army and Navy Union of the U. S. A., has lost from its rank a most worthy comrade, whose excellent qualities and noble character have cemented the ties of fraternity and good fellowship with every member of our order; and be it further

*Resolved*, That a copy of these resolutions be spread upon the records of our Garrison, a copy sent to the National Commander of the Regular Army and Navy Union, Washington, D. C., and to the wife of our departed comrade, Mrs. Alzadia Grace Mickle, Germantown, Columbia County, N. Y.

By direction of the Garrison.

WM. M. RIDPATH,  
Adjutant and Quartermaster.

The three Lidgerwood unloaders at work on the La Boca dumps during September unloaded 11,293 cars of material brought from the Culebra Cut. As there are about 20 cubic yards on each car, this makes an aggregate of about 225,860 cubic yards added to the La Boca dumps during the month.

## CANAL WORK FOR SEPTEMBER.

Monthly Report of the Chairman to the Secretary of War.

CULEBRA, C. Z., October 17, 1908.

The Honorable  
The Secretary of War,  
Washington, D. C.

Sir: I have the honor to submit the following report of operations on the Isthmus for the month of September, 1908:

The work of reorganization as outlined in the report for July was continued. Effective September 1, the Division of Material and Supplies was merged with the Quartermaster's Department.

Department of Construction and Engineering

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central, and Pacific Divisions during the month:

Item.	Unit.	Atlantic.	Central.	Pacific.	Total.
<b>Steam Shovel Excavation—</b>					
In prism.....	Cubic yards.....	136,892	1,435,519	135,536	1,707,947
Auxiliary.....	Cubic yards.....	48,414	30,286	2,701	81,401
Total.....	Cubic yards.....	185,306	1,465,805	138,237	1,789,348
<b>Dredge Excavation—</b>					
In prism.....	Cubic yards.....	624,776		750,080	1,374,856
Auxiliary.....	Cubic yards.....	63,029			63,029
Total.....	Cubic yards.....	687,805		750,080	1,437,885
<b>Hand Excavation—</b>					
In prism.....	Cubic yards.....		7,048		7,048
Auxiliary.....	Cubic yards.....		3,470		3,470
Total.....	Cubic yards.....		10,518		10,518
Total excavation.....	Cubic yards.....	873,111	1,476,323	888,317	3,237,751
Explosives used.....	Tons (2240 lbs).....	43.36	324.65	11.71	379.72
Drilling.....	Feet.....	69,592	260,088	18,929.2	348,609.2
Track removed.....	Miles.....		11.6		11.6
New track laid.....	Miles.....	3.98		3.2	7.18
Material placed in dam.....	Cubic yards.....	37,369		1,985	39,354
Rock crushed.....	Cubic yards.....		16,555.5	988	17,543.5
Cement used.....	Barrels.....	2		200	202
Concrete placed.....	Cubic yards.....			145	145
New roads built.....	Miles.....		.586	.14	.726
Water mains laid.....	Feet.....	6,380	3,500	2,100	11,980
Sewers laid.....	Feet.....		5,033	765	5,798
Open drains and ditches dug.....	Feet.....		16,725	2,010	18,735
Daily average number of laborers.....		1,690	8,035	3,315	13,040
Rainfall.....	Inches.....	11.57	9.75	7.56	

Atlantic Division.

GATUN LOCKS.

During the month the total amount excavated from the lock site was 111,984 cubic yards, place measurement, of which 104,780 cubic yards were from the Canal prism, and 7,204 cubic yards from the site for the new powder-house.

Seepage tests were continued during the month in bore holes in and around the locks.

The power-house and storehouse were staked out.

GATUN DAM.

Dredge No 82 excavated 48,974 cubic yards of earth and soft rock from the slip leading to the proposed dock for the handling plant.

On the south toe of the dam 42,857 cubic yards of Bas Obispo rock and 4,096 cubic yards of material from the spillway were dumped. On the north toe of the dam 57,374 cubic yards of material from the spillway and Mindi were dumped.

During the month 1,288 linear feet of trestle were constructed.

SPILLWAY.

Three steam shovels worked on the spillway during the month, and removed a total of 41,210 cubic yards.

MINDI.

Two shovels were at work at Mindi dur-

ing the month, excavating a total of 32,112 cubic yards.

PORTO BELLO.

Work was actively pressed, consisting of preparing a site for the power-plant, current repairs to equipment, stripping the earth from the quarry, and various municipal and building work.

NOMBRE DE DIOS.

Investigations were made at Nombre de Dios by the Chief Engineer of the Republic of Panama and the Assistant Engineer at Cristobal, as a committee to consider a report upon the effect of removal of sand on the town of Nombre de Dios, and the value of the sand.

FLOATING EQUIPMENT.

The tug *Luckenbach* arrived on September 30 with rock barges 13 and 14. With the exception of the stern wheel tow-boat, all

cubic yards were classified as earth, and 1,055,184 cubic yards as rock.

Of this quantity 1,455,805 cubic yards were removed by steam shovels, 7,048 cubic yards by hand at the Bas Obispo quarry, and 3,470 cubic yards by hand at the new powder house site up the Chagres River.

The quantity of material removed from the Canal prism was 1,442,567 cubic yards, while 27,241 cubic yards were removed from the Obispo Diversion, and 6,515 cubic yards at the new powder house up the Chagres River.

The daily average number of steam shovels at work during the month was 49.68 as compared with 52.58 for the month of August.

For comparison with the work done during the corresponding month of the previous year, in the area embraced in the Central Division, the following table has been prepared:

Period.	Total amount of material excavated by steam shovels	Classification of material.		Av. No. of steam shovels working during month	Wkg days in month	Av. amount excavated per steam shovel per 8-h d'y
		Rock	Earth			
1907, Sept....	cu. yds. 773,095	cu. yds. 525,513	cu. yds. 247,582	39.91	24	807
1908, Sept....	1,465,805	1,048,136	417,669	49.68	25	1,180

Rainfall during the month: 1907, 10.61 inches; 1908, 9.75 inches.

The above table shows that the average output per shovel day was over 46 per cent greater in September, 1908, than in the corresponding month of the previous year.

The output of the Bas Obispo rock crusher for the month was 10,218½ cubic yards, and that of the Rio Grande crusher 6,337 cubic yards.

Pacific Division.

DISTRICT NO. 1—LOCKS AND DAMS.

The total excavation in this district during the month amounted to 138,237 cubic yards, as follows:

	Cubic yards.
From Pedro Miguel lock site .....	28,833
From Miraflores lock site .....	89,106
From west dam at Miraflores.....	1,817
From Canal prism at Cardenas Hill.....	18,181
Outside of Canal prism (on line to Miraflores spillway).....	300
	138,237

At Pedro Miguel the work is largely preparatory, and consists of excavating for tracks leading from the lock site to the dumps, and excavating for trenches for drainage purposes below the lock site. The dump tracks on the west side were extended to lead to the west dam. This work has heretofore been delayed on account of the 16-inch water main, the location of which was changed on the 24th of the month.

At Miraflores the excavated material was deposited as backfilling for the locks, and in the toe of the west dam.

DISTRICT NO. 2—DREDGING, AND LA BOCA SHIPWAY.

Five dredges have been operated during the month, as follows:

Dredge	Type.	Cubic yards.		Remarks.
		In pr'm	Auxil'y	
Culebra	Suction	432,312	.....	Scow measurement
Gopher	Ladder	138,757	.....	Place measurement
No. 14.	Ladder	129,608	.....	Place measurement
Dipper.	Dipper.	21,309	.....	Place measurement
Sand-piper	Suction	28,094	.....	Place measurement
Total.....		751,080	.....	

During the month, the total amount of material excavated in the Central Division was 1,476,323 cubic yards, of which 421,139

floating equipment for securing sand and stone is now in commission.

CRISTOBAL.

During the month seven dredges were operated, four being operated the entire month, and three a part of the month, excavating 624,776 cubic yards of material from the Canal prism. There were also dredged 14,055 cubic yards of loose coral for filling in the new corral site.

At the dry dock, various equipment was repaired, and work was continued on the assembling of the stern wheel towboat.

MUNICIPAL ENGINEERING.

A large amount of grading, road building, construction of sewers and water works was accomplished at Gatun and Cristobal. The maintenance of municipal improvements was also given the necessary attention.

BUILDING CONSTRUCTION.

Satisfactory progress was made on all buildings under construction.

The powder house at Mindi hills and the detonator house at that point were 90 per cent completed at the end of the month.

During the month the powder house at Mindi cut and the detonator house at the same point were completed.

Central Division.

Current repairs were made on dredges, claps, launches, tugs and barges, including also erection of new plant.

Additional borings are being taken at Chamé Point to determine the depth and amount of sand available. The borings have shown a good quality of sand for a depth of from 30 to 40 feet below low water.

A force has been employed during the month in clearing the Canal line, over which the dredges will operate between La Boca and Miraflores Locks.

#### DISTRICT NO. 3—MUNICIPAL ENGINEERING AND BUILDINGS.

The principal items of new construction accomplished in the District during the month are given in a table included in the foregoing part of this report. Roads, water-works and sewers, drains and other municipal improvements were maintained as usual.

#### Mechanical Division.

The usual work was performed in this Division in maintaining and operating equipment, electrical work, and the manufacture of repair parts and various material required in the construction of the Canal.

#### Division of Meteorology and River Hydraulics.

The usual observations and measurements were continued during the month.

#### Relocation of Panama Railroad.

Satisfactory progress was made in the construction of connecting tracks from the present operated line of the railroad, in grading, the construction of trestles for filling, and the construction of bridges and culverts.

On the night of September 21, the Miraflores tunnel caved in from station 116-95 to the south portal, completely blocking the bore of the tunnel for a distance of about 200 feet. A hole of about 360 cubic yards capacity opened up at the surface of the ground, about 130 feet north of the original location of the south portal. The hill showed a perpendicular drop of 20 feet at the line of cleavage, about 50 feet west of this hole. There are about 130,000 cubic yards of material in motion in a direction deflecting from the axis of the tunnel about 30 degrees in a southeasterly direction. The location of the south portal has been changed to 100 feet farther south, and the concrete side walls for this 100 feet have been finished to the springing line of the arch. Work was stopped on the south end on the 22d, as the arch might interfere with future excavation. Two hundred and forty linear feet of the concrete lining in the rock section was completed, 1,585 cubic yards of concrete being placed. The location of the north portal has been changed to 50 feet farther north.

During the month 2,831 linear feet of permanent track were laid on the relocated line, making a total of 43,576 feet to date.

The force of laborers during the month averaged 989 men.

#### Quartermaster's Department.

On September 1, the Division of Material and Supplies was merged with the Quartermaster's Department, and the executive office of that division, formerly located at Cristobal, has been moved to Culebra. The Mount Hope storehouse has been made the general depot in charge of the Depot Quartermaster, who will also have charge of the planing mill at present located at Culebra, and the Stationer and Printer's plant, now

located at Panama, both of which plants will be moved to Cristobal, where they will be directly under his supervision.

During September there was a decrease of over 1,500 in the number of West Indian laborers occupying Commission quarters as compared with the previous month. In January, of this year, with a West Indian force slightly smaller than in September, there were nearly 4,000 more West Indian laborers in quarters than in September. From the commencement of the work there has been a marked tendency on the part of West Indians, as soon as they become settled and familiar with conditions on the Isthmus, to leave Commission quarters and go to "the brush" or to independent quarters in the native villages. The unusually large movement in September is believed to have been due to the fact that during the month the rule that unattached West Indians who do not subsist at Commission kitchens cannot have accommodations in Commission barracks, was strictly enforced. It was thought that the strict enforcement of this rule would cause an increased patronage of the kitchens; on the contrary, the effect has been to cause numbers of the men to leave quarters.

The following is a comparative statement of the force actually at work on the last day of August and the last day of September:

	Gold Men.	SILVER MEN.								Total Gold and Silver.
		Mon-thly.	Artisans.		European Laborers.		West Ind'n Laborers.		Total Silver.	
			32c. & over.	26c.	40c.	32c.	26c.	20c.		
August.....	4 396	4,644	4,920	1,076	4,505	411	1,374	4,556	21,486	25,982
September.....	4,328	4,559	4,823	1,109	4,865	377	1,263	4,103	21,129	25,457

At the present time there is a surplus of labor on the Isthmus.

During the month the horticulturist of the Department distributed from the Ancon propagating garden to different points on the line 2,434 decorative and economic plants.

#### Subsistence Department.

The net profit in September for the operation of the hotels and mess halls, not including the Tivoli hotel, was \$9,535.20. The net loss on the Tivoli hotel was \$2,002.33, making a net profit for the Department of \$7,532.87.

The profits accumulating to the Subsistence Department to the present time will be used to counterbalance the loss which is ordinarily sustained during the winter months, when the price of such products as butter and eggs will be very high.

#### Department of Civil Administration.

##### COURTS.

In the Supreme Court, three cases were settled during September. One attorney was admitted.

In the circuit courts, seven civil cases and 18 criminal cases were disposed of, and in the district courts 33 civil and 553 criminal cases were disposed of.

##### ZONE TREASURY.

A Treasurer of the Canal Zone was appointed, to enter upon his duties on October 1, and on that date the moneys and accounts of the Zone Treasury in the hands of the Disbursing Officer (acting as Treasurer) will be transferred to the Treasurer of the Canal Zone.

##### DIVISION OF REVENUES.

The general revenues of the Canal Zone, collected by the Division of Revenues, amounted to \$10,538.54.

Eleven vessels entered at and eleven cleared from the port of Ancon, and sixteen vessels entered at and seventeen cleared from the port of Cristobal during the month.

#### DIVISION OF POLICE AND PRISONS.

During the month 639 arrests were made, as compared with 483 for August. This increased number of arrests is due principally to the arrest of 114 Italians on September 29, who had entered the Canal Zone and were occupying Commission quarters, although they were not employees. As Coroner of the Canal Zone, the Chief of Police investigated eighteen deaths. Of these six were due to railroad accidents, two to drowning and one to suicide.

#### DIVISION OF PUBLIC WORKS.

The usual business of this Division was conducted during the month, including the installation of new connections, the issuance of permits for the installation of plumbing, and the inspection of plumbing and sewers.

During the month 30,052,000 gallons of water were used in the city of Panama, and 25,631,923 gallons in the city of Colon.

#### DIVISION OF FIRE PROTECTION.

No loss from fire was sustained during the month.

#### DIVISION OF SCHOOLS.

During the month preparation was made

for the opening of the schools on October 1. Forty-two teachers were appointed, twenty-four of whom are white Americans, and eighteen colored West Indians.

#### Department of Sanitation.

[The substance of the report of this department was published in THE CANAL RECORD last week.]

Respectfully,

H. F. HODGES,  
Acting Chairman and Chief Engineer.

#### Soldiers, Sailors, and Marines.

All ex-soldiers, sailors, and marines, regulars and volunteers, now residing on the Isthmus, are requested to send in their names, to be included in the roster or directory of ex-service men on the Isthmus of Panama, which is being compiled by Birt S. Sturtevant Garrison, No. 41, Regular Army and Navy Union, U. S. A. Full name, Isthmian address, United States address, date of enlistment, date of discharge and rank, name of organization in which service was rendered and remarks in regard to any noteworthy event with which identified, should be furnished. All communications may be sent to the undersigned.

PAUL D. MAY, *Commander,*  
Culebra, Canal Zone.

#### JACKSON LEE HAMMOND.

Information is wanted in regard to Jackson Lee Hammond, of Jones county, North Carolina, who was in the employ of the Isthmian Canal Commission as late as March, 1908. His family have had no word from him since that time. Anyone having knowledge of him is requested to communicate with J. J. Gilbert, Matchin, C. Z.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

The Isthmian Canal Rebekah Lodge, No. 1, was instituted by B. R. Sisson, district deputy grand sire, in Fraternity hall, Gorgona, on Saturday evening, October 10. Thirty-one were initiated and the following officers were elected: Mrs. B. F. Henkle, noble grand, and Mrs. Henry Lotz, vice-grand. The members of the order are entering with enthusiasm into their work which they are prepared to take up at once. A part of the specific work of the order is the visiting of the sick and caring for the widows and orphans. Regular meetings will be scheduled at once and the lodge will probably be increased in numbers within a short time. On institution night refreshments were served and the social part of the evening was greatly enjoyed by the members and their guests.

The business meeting of the Gorgona Woman's Club was held on Thursday, October 15, when the organization of the departmental work was the main feature of the discussion. A circular letter has been sent out by the chairman of the educational committee of the Zone Federation which was presented for consideration at this meeting. It is the desire of this department to keep the clubs in touch for the purpose of working along the same lines, in study as well as in any public work that may be taken up. At a recent talk before the club the use of year books of other clubs was urged, and it is announced that a supply of such year books is in the hands of the reciprocity committee of the Federation and copies may be had upon application to the representative of the committee in each club. Postage both ways is to be paid by the club making requisition for the books, which must be returned within one month from the time requisition is made. The toys remaining from the 1907 Christmas celebration have been made over to the philanthropy committee for such disposition of them as it sees fit. Plans for the coming Christmas celebration are already in hand, and the woman's club, having taken the initiative, will ask the assistance of the Young Men's Christian Association and the Gorgona Sunday school.

The entertainment for the festival of All Hallow-e'en in Gorgona is being arranged by the Young Men's Christian Association. There will be an old fashioned dance, and an entertainment of unique character is promised. On election night, November 3, there will be an entertainment at the clubhouse, followed by a smoker.

The Las Cascadas Woman's Club had an unusually interesting meeting on Thursday, October 15, when Mrs. R. W. Fenn, of Panama, was the guest of honor and gave a talk on the work that is being done by the philanthropy department of the Ancon Woman's Club, of which she is chairman, and on the Leper colony at Palo Seco. Much of the attention of the department is devoted to the insane wards of the Ancon Hospital, and an exhibit of basket and needle work by the patients was a feature of the talk. The meeting was held at the residence of Mrs. W. B. Green. There was an unusually large attendance. The club will be entertained October 23 by Mrs. W. L. Thompson.

The Cristobal Woman's Club will hold its

regular meeting on Wednesday afternoon, October 21, the program being in charge of the home department. Mrs. Hiram J. Slifer, recently appointed chairman of that department, will make an address.

The Pedro Miguel Woman's Club enjoyed a social afternoon October 15, when a reception was given by the members to the out-going and in-coming presidents. Games were enjoyed and elaborate refreshments were served. The club presented Mrs. F. B. Roberts, the retiring president, with a souvenir spoon in token of appreciation of her work during the last year. A gift was also presented to Mrs. Livingston, an active member of the club, who is leaving for her home in Jamaica. The business meeting, October 21, will be held at the residence of the president, Mrs. F. W. Waters.

Social interest in Paraiso seems to be centered in the card club which meets regularly, the members greatly enjoying the diversion.

The Culebra Woman's Club will begin its regular study course at the next meeting, October 29. The club has met with a great loss in the death of the treasurer, Mrs. W. H. Bogart, which occurred at San Jose, Costa Rica, October 13. Mrs. Bogart had been an active member of the organization during the past year and was greatly interested in the work. Her death, due to gastritis, was sudden and quite unexpected.

The governing board of the Ancon Woman's Club held its first meeting at the residence of the president on Saturday, October 17. The work for the year was scheduled and committees appointed. The regular meetings of the club will be held as heretofore, on the first and third Wednesday of each month, and the departments will arrange their own meetings. The merging of the educational and literary departments will result in the organizing of study classes, and a magazine club is contemplated. The resignation of the chairman of the art department was tendered, but not accepted, and the department will take up the work as scheduled. This will include a study class, which will embrace a survey of Panamanian art, pottery, basketry, and architecture. The regular art section of the Ancon Woman's Club, incorporated into organization last year, will, it is believed, separate from the club, and an art league, to extend across the Isthmus, will be formed. The scope is too broad for such a movement to be confined within the limits of a single organization. The bazaar in aid of the library fund proposed by the home department, will be turned over to the club, and will be held early in December. The next regular meeting of the club will be at the Tivoli, October 21.

The members of the Woman's Guild of Trinity Church, Culebra, were entertained by the Guild of St. Luke's Church, Ancon, on Monday, October 19, the reception being given at the residence of the chaplain. St. Luke's Guild is contemplating a reception similar to the one given by the organization in February. The annual meeting, with election of officers, will take place November 2.

A new storehouse and spare-part warehouse for the Pacific dredging fleet is to be built at La Boca. It will be 50 feet by 100 feet and will be located on the water's edge in front of the machine shop.

## PERSONAL.

Dr. and Mrs. Lloyd Nolan, of Colon Hospital, sailed on the *Cartago* on October 13, for a six weeks' leave of absence to be spent in Costa Rica. Dr. G. H. Putney, of Cristobal, sailed on the *Esperanza* on the same date, for a vacation of six weeks in the States.

Among the passengers returning to the Isthmus on the *Allianca*, which arrived at Cristobal on Monday, October 19, were: L. K. Rourke and wife of Empire; George D. Brooke and wife, and L. D. Cornish of Culebra, and Lieut. Frederic Mears and family of Colon.

## Bas Obispo Sunday School.

A Sunday school with twenty-one members was organized on September 13, in the Bas Obispo club rooms, the membership having gradually increased since. On October 14 a very successful social and entertainment was given, about fifty people being present.

The school is now considering plans for an entertainment to raise a fund for a suitable instrument, either to purchase an organ or to assist the Bas Obispo Club in the purchase of a piano for the joint use of the two organizations.

## Culebra Bachelor Girls' Club.

Invitations are being issued by the Bachelor Girls' Club of Culebra, for their "Hallow-e'en" dance, to be held in the Y. M. C. A. hall, Thursday evening, October 29, at 8.15. It is the desire of the club that as many ladies as possible appear in fancy dress.

## Knights of Pythias Musicales

To all Knights of Pythias: You are invited to attend a musicale and entertainment to be given in K. of P. Lodge hall, Cristobal, on Saturday night, October 31, at 9 o'clock. Bring your ladies and friends.

O. C. KILCOUR,  
Acting K. of R. and S.

The regular Tivoli Club dance will be given on Saturday evening, October 24, at Hotel Tivoli.

## Concert by the I. C. C. Band.

## CULEBRA, C. Z.

Sunday, October 25, 1908, at 6.00 p. m.:

## PROGRAM.

- 1 March—*Waldmere*.....Losey
  - 2 Selection—*Mill's Merry Melodies*.....Mills
  - 3 *a—Pilgrim's Song of Hope*.....Batiste
  - 3 *b Schottische—When a Boy Says "Will You?"*.....Allen
  - 4 Serenade—*La Paloma*.....Xradier
  - 5 Selection—*The Sunny South*.....Lampe
  - 6 Intermezzo—*After Sunset*.....Pryor
  - 7 *a Medley March—I'm Afraid to Go Home in the Dark*.....Van Alstyne
  - 7 *b Characteristic—Ruralistic*.....Bagley
  - 8 Overture—*Four Ages of Man*.....Lachner
  - 9 Descriptive—*The Racket at Gilligan's*.....DeWitt
- Synopsis*—The guests gather at Gilligan's after their arrival Gilligan sings a song, which is followed by a country dance. The star singer then renders a touching ballad, after which the bagpipes strike up. "Are ye's all ready?" shouts Gilligan. "Yis." Then fire away. A regular "welt the floor" and "slip" time follows. A sand jig comes next, and the festivities close by all singing "Saint Patrick's Day in the Morning."

10 March—*Santiago Flynn*.....Morse

CHAS. E. JENNINGS, Musical Director.

A concert will be given at the Hotel Tivoli, Sunday, November 1.

The steamship *Thelma* sailed from Gulfport, Miss., on October 10, with a cargo of 1,232 piles for the Isthmian Canal Commission.

## COMPENSATION FOR INJURIES.

## Further Definition of Law by Comptroller of the Treasury.

The act of Congress providing compensation for injuries incurred by an artisan or laborer in hazardous employment under the Isthmian Canal Commission, as published in THE CANAL RECORD of June 17, 1908, and as defined by the decision of the Comptroller of the Treasury, published in the issue of September 16, has been further defined in the following decision:

WASHINGTON, D. C., Sept. 26, 1908.

The Chairman of the Isthmian Canal Commission.

Sir—I have received your letter of the 14th instant as follows:

I have the honor to acknowledge the receipt of your decision of September 1, 1908, in reference to the regulations of the Commission granting injury leave with pay to its employees, in connection with the provisions of the Act of Congress of May 30, 1908, (35 Stat., 556).

In view of the conclusions which you reached upon the quotation submitted in my letter of August 20, 1908, I request a decision upon other questions herein stated, brought to my attention by the Examiner of Accounts.

The contracts of employment with employees of the Commission on the Isthmus, and the regulations of the Commission, contain the following provisions as to sick leave with pay and hospital care and attendance. These regulations took effect July 1, 1907:

"To assist the Government in maintaining a skilled force on the Isthmus, all regular employees above the grade of laborer, unaccustomed to a tropical climate, may be granted fifteen days' sick leave with pay for each six months' service, on the certificate of an authorized physician in the service of the Department of Health of the Isthmian Canal Commission, that the employee has been unable to work on account of illness contracted through no fault of his own, or because of injury.

"This leave may be cumulative to an amount not exceeding thirty days, and payment for same shall be made the first pay period after the employee returns to duty; but no payment shall be made for time lost in excess of the sick leave due at the time of such illness or injury.

"All employees, in case of illness or injury, will receive free medical care and attendance at the hospitals.

"In case of illness or injury, laborers shall receive free medical care and attendance at the hospitals."

These provisions are separate and distinct from the injury leave referred to in your decision.

The questions upon which I now wish your decision are the following:

1. Is an employee of the Commission who comes within the class of employees included in the Act of May 30, 1908, entitled to receive under his contract of employment, and the regulations of the Commission, pay for absence, not exceeding thirty days, when such absence is caused by sickness resulting from an injury incurred in the performance of his duties?

2. Is an employee of the Commission who does not come within the class of employees included in the Act of May 30, 1908, entitled to receive, under his contract of employment, and the regulations of the Commission, pay for absence, not exceeding thirty days, when such absence is caused by sickness resulting from an injury incurred in the performance of his duties?

3. Is the Commission authorized to furnish an employee, who is in the class referred to in question No. 1, free medical care and attendance at the hospitals as provided in his contract and the regulations of the Commission?

4. Is the Commission authorized to furnish to an employee who is in the class referred to in question No. 2, free medical care and attendance at the hospitals as provided in his contract and the regulations of the Commission?

5. Is the Commission authorized to pay the compensation of an employee, who is in the class referred to in question No. 1, for a period of time after July 31, 1908, and within the limits of its regulations and contract with the employee, if the injury was incurred prior to August 1, 1908?

6. Is the Commission authorized to pay the compensation of an employee, who is in the class referred to in question No. 2, for a period of time after July 31, 1908, and within the limits of its regulations and contract with the employee, if the injury was incurred prior to August 1, 1908?

I request that your decision on these questions be

sent to the Washington office of the Commission, in order that the substance of it may be cabled to me here.

## THE DECISION.

I will answer your questions in the order stated.

In my decision of the 1st instant, upon your request of the 20th ultimo, the act of May 30, 1908 (35 Stat., 556), was construed as it applied to employees of the Isthmian Canal Commission. It was decided therein that:

"In the absence of Congressional enactment, the regulations of the Commission set out in your letter providing for the leave with pay for thirty days or a fractional part thereof to employees of the Commission for injuries incurred in the line of duty; and thirty days leave, or fractional part thereof, with pay to laborers of the Commission for injuries incurred while in the performance of duty and while incapacitated for duty by reason of such injury not exceeding thirty days, were undoubtedly made with authority at the time they were made, considering the broad authority granted the President by the provisions of the original Spooner Act, authorizing him to construct the Canal.

"But when Congress stepped in and enacted, as it did, the act of May 30, 1908, (35 Stat., 556) set out in your letter, providing just what kind of relief for personal injuries and exactly to whom and under what circumstances it should be given and included the employees of the Isthmian Canal Commission in such act, I am forced to the conclusion that the enactment is exclusive, after it came into effect, and that it is no longer in the power of the Commission by regulations, past or present, to enlarge or diminish the provisions of that act as to relief extended to employees of this Commission for injuries received in the line of their said employment.

"A different holding would be an attempt to broaden and modify an Act of Congress, and to make a discrimination in favor of a class, where Congress legislating concerning such class did not see fit to make such discrimination."

Your questions are answered as follows:

1. An employee who comes within the provisions of the Act of May 30, 1908, is not entitled to receive pay by virtue of the terms of his contract, but can only be paid under the terms and conditions and upon compliance with the Act of May 30, 1908. This question is therefore answered in the negative.

2. All regulations providing for payment to an employee not coming within the provisions of the Act of May 30, 1908, during absence on account of sickness resulting from injuries incurred in the performance of duty are unauthorized and of no effect since the passage of such act. Such an employee is not entitled to pay for and on account of absence occasioned as stated in this question.

3. The contingent benefit of hospital care and treatment furnished to an employee when authorized and contracted for as a part of the compensation for services rendered, is to be distinguished from the payments on account of injuries provided for in the Act of May 30, 1908. The hospital care and treatment is a payment for service already rendered, while the payment for injury is in the nature of damages for such injury and is governed by the Act of May 30, 1908.

The Commission is authorized to provide by contract for furnishing an employee such as is indicated in this question, free medical

care and hospital attendance as a part of his compensation for services rendered.

4. The answer to question 3 applies here, and for the same reason free medical care and attendance at hospitals may be provided as a part of the compensation for services rendered to the employee indicated in this question.

5. I am of the opinion that under the facts stated in this question, the rights of the employee to payment under his contract for an injury prior to August 1, 1908, for the period provided for in such contract, became vested at the time of the injury and that the right to payment thereunder is not affected by the Act of May 30, 1908.

The payment indicated in this question would therefore be authorized.

6. The answer to question 5 applies here and for the reasons therein given you would be authorized to make the payments indicated herein.

Congress has plenary power to regulate and control the compensation to be paid to employees of the Isthmian Canal Commission for services *in futuro* (*Crenshaw v. United States*, 134 U. S., 99), but it has no power to deprive an employee of the right to the compensation earned under his contract, or of a contingent benefit accrued prior to the passage of the act affecting such compensation as a part thereof.

The cases stated in questions 5 and 6 are, therefore, to be distinguished from the cases stated in questions 1 and 2, although each may arise under existing contracts.

This decision has been forwarded as requested to the Washington office.

Respectfully,

R. J. TRACEWELL,  
Comptroller.

## OFFICIAL CIRCULAR.

Division of Meteorology and River Hydraulics Abolished.

CULEBRA, C. Z., October 12, 1908.

CIRCULAR NO. 183K.

Effective this date: The Division of Meteorology and River Hydraulics is abolished, and the work heretofore performed by that division is placed in charge of Mr. C. M. Saville, Assistant Engineer. The records and office force will be transferred to the office of the Chairman.

H. F. HODGES,  
Acting Chairman and Chief Engineer.

## COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

## EMPIRE.

On Thursday evening, October 15, a pool and billiard tournament was started with thirty contestants in pool and ten in billiards. On the same evening a bowling tournament was opened with thirty-five contestants. Much interest is manifested in each of the tournaments.

Plans are now being perfected for a great time on election day, November 3. A regular voting system for the United States' presidential candidates will be entered into, which will give every man of Empire a chance to vote—not only for President, but for Mayor of Empire. The mayoralty candidate is intended to add to the entertainment feature of the evening, when it is expected that the election returns from the States will be received at intervals. Other features of entertainment will be an orchestra concert, vocal and instrumental selections, etc.

On Thanksgiving Day the 1908 Isthmian championship bowling tournament, single and double, will be rolled off on the Empire Y. M. C. A. alleys. Full particulars later.

Mr. John C. Watts is the new manager of the pool room.

An indoor baseball team was organized Saturday evening, and John McLeod was elected captain. Games are wanted, and a league is hoped for.

## COMMISSARY DEPARTMENT.

## ICE CREAM ON SUNDAYS.

Beginning Sunday, October 18, the commissary at Cristobal will sell ice cream in packages suitable for carrying home, which will enable patrons of the commissary to purchase ice cream on Sundays. This is an experiment at the Cristobal commissary. If it proves successful, the same plan will be extended to other commissaries.

## COMMISSARY PRICES

For week beginning October 20:

## FRESH MEATS.

	Price.
Mutton—Stewing.....per lb	6
Shoulder and neck (not under 6 pounds).....per lb	7
Entire forequarter (not under 10 pounds).....per lb	8
Leg (8 to 10 pounds).....per lb	16
Short-cut chops.....per lb	20
Lamb—Stewing.....per lb	6
Entire forequarter.....per lb	8
Leg (6 to 8 pounds).....per lb	27
Chops.....per lb	29

## FROM COLON TO NEW ORLEANS VIA KINGSTON.

Mexican.....	Leyland Line.....about Oct.	31
--------------	-----------------------------	----

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, calling at Puerto Barrios, and from Colon at 1.30 p. m. via Port Limon and Puerto Barrios, for New Orleans.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuela ports, Martinique and Guadeloupe on the 3d and 20th of each month.

# CANAL

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, OCTOBER 28, 1908.

No. 9.

## The Canal Record

Published weekly under the authority and supervision of the  
ISTHMIAN CANAL COMMISSION

*"The Canal Record" is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the "gold" roll. Extra copies can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

### THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

## NOTES OF PROGRESS.

### Ancon Reservoir.

The excavation for the new million-gallon reservoir on the east side of Ancon Hill is well under way. The inside dimensions of the reservoir will be 102 feet by 125 feet. It will have a concrete floor and reinforced concrete walls 13 feet high. A Decauville track is being laid up the hill from the road near the new Administration building, by which construction material will be taken to the reservoir.

### 313 Cars in 370 Minutes.

A record was made by shovel 253 at San Pablo on October 22, when 313 10-yard dump cars were loaded in 370 minutes, an average of one minute and eleven seconds per car. Assuming that the cars were loaded to their full capacity a cubic yard of material was placed on them every seven seconds. The only breaks in the day's work were occasioned by moving the shovel forward and cleaning the dipper.

### Improvements at Colon Hospital.

A concrete floor is being laid in the kitchen of Colon hospital and the interior is being rearranged. A new refrigerating building, one-story high, is in course of erection in the rear of the kitchen. Like the rest of the building to which it is attached it projects over the water of Limon Bay, on concrete piers resting on the coral reef. The floor will be of concrete, as will also be the floor of the veranda connecting the new building with the present one. A new pantry, with running water and a dumb waiter to connect with the dining room of the "gold" mess in the upper story, is also being built.

The entrance to the hospital grounds has been moved 125 feet to the west and a new macadam road 20 feet wide will extend from end to end of the premises, a distance of about 1,700 feet, and there will be a con-

crete sidewalk 5 feet wide on the south side of the road. The space between the road and the hospital buildings will be set in grass. House No. 18, a two-family house, has been removed from its old location between houses 17 and 19 to a new site back of house 47 near the new thoroughfare known as Coconut alley. The old private stable at the corner of Second street and Coconut alley will shortly be moved and the site graded and enclosed by the new fence which will surround the hospital grounds.

### Dredge at Nombre de Dios.

The 16-inch suction dredge, which made the fill for a corral on Folks River, and later underwent general repairs at Cristobal dry dock, was towed down the Atlantic coast last week to Nombre de Dios. The sand for the concrete work at Gatun is to be taken from this place, and the dredge will be used in pumping it from the banks into the scows. Nombre de Dios is in Panamanian territory, and an adjustment of the claims of the landholders to the sand that will be taken is in progress.

### New Railroad Station at Colon

A new station has been authorized at Colon for the Panama railroad, and the work of construction will begin in the near future. It will be located on Front street, opposite Eighth street, about half way between the present stations at Cristobal and Colon, both of which will be torn down as the new structure will be the union station for the two towns.

The building will be one-story high and constructed of concrete blocks. It will be 30 feet wide and 450 feet long and the station platform will extend from Seventh street to Eleventh street with numerous turnstiles for exits. The ticket office will be directly opposite Eighth street. The second-class waiting room and the baggage room will occupy the south half of the building. The first-class waiting room will be in the north half of the building, together with the office of the cable company. The carriage stand will be at the north end of the platform.

There are at present six tracks on the site of the proposed station, three of which will be taken up. Of the three tracks left two will be used for freight traffic to the railroad company's docks and one will be used for passenger trains, the latter to be enclosed by a fence from Seventh to Eleventh street.

### On the Obispo Diversion.

It has been decided to complete the work on the Obispo Diversion by putting three steam shovels on the last large cut. The track from the Canal prism opposite Buena Vista and Haut Obispo up to the summit of the divide is almost completed, and steam shovel work will probably begin on the last large cut within the next three weeks. Before the Diversion channel, which will drain the water from the east side of Culebra Cut into

the Chagres above Gamboa, is completed, a cut must be made through a ridge whose lowest point on the line of the diversion is 93 feet above the bottom of the proposed channel. It is estimated that 400,000 cubic yards must be excavated on the last mile of this drainage canal. An effort will be made to complete the work inside of eight months, or before the next rainy season is well begun.

### Contracts for Supplies.

Contracts will presently be offered for a six-months' supply of such articles and materials as have become standard in the Canal work. The method now in use is to ask bids for a supply of one or more articles when the need becomes apparent, and up to the present time this method has been the most practicable.

Since the work has settled into a routine, however, and the division engineers know from experience the quantity of supplies that will be needed for any specified time, the method used for years in the Army and Navy and in many private establishments, of contracting for a six-months' or a year's supply has become the more economical. It is thought that lower prices can be procured on large contracts than on small ones, and it is known that the new method will do away with the expense of frequent advertising and of considerable clerical work in the Washington office, and will insure prompt delivery.

At present, months frequently elapse between the time when a requisition is made for supplies and their delivery on the Isthmus. It is proposed to make contracts for delivery of supplies needed between January 1 and July 1, 1909, on condition that the Commission be allowed to take 25 per cent less than the amount contracted for or be furnished with 25 per cent more. Only a few months' supply will be carried on the Isthmus, as a cablegram to the States will procure delivery of any article at Colon in twenty days. A list of the standard supplies has been prepared by the Chief Quartermaster, and the division engineers are now preparing their estimates.

### Cristobal Cold Storage Plant

A new unit for the Cristobal cold storage plant has been authorized, and it will probably be installed within the next three months. It will have a compressing capacity of 150 tons, which, added to the present plant, will raise the capacity to 375 tons, and increase the efficiency 90 per cent. No increase in the size of the cold storage plant is contemplated at this time, the purpose of the new compressor being to relieve those now in service, and to act as auxiliary in case of a breakdown.

The Panama Railroad Company announces that its regular Sunday night train from Panama will leave at 10 o'clock according to schedule.

## THE ATLANTIC ENTRANCE.

### Progress of the Work from Gatun to Limon Bay.

From the veranda of the Atlantic Division office building at Gatun one can look down the line on which the ships will sail to the Gatun Locks from Limon Bay and can get an idea of what the Canal in this section will look like when completed. Where the line pierces the Mindi hills the cut has been completed to sea level, and the steam shovels are carrying the work below the level of the nearby water. Only a mile from where this cut is being made the Atlantic dredging fleet is carrying its channel into the land, the ladder and dipper dredges working near the shore, while the sea-going suction dredge *Ancon* is making a deep water channel out to the point where the bay merges into the sea.

From the appearance of the land bordering Limon Bay it might be inferred that the channel of the Canal lies through a swamp. The dredges have found it quite otherwise, for they are working in earth which, although only a few feet above mean sea-level is very firm. Underneath this earth at varying depths is a bed of blue rock, coming close to the surface in several places and in others lying ten feet or more below. The method of working in this material is to blast it with dynamite and then take it out by ladder and dipper dredge. A battery of nine Star drills precedes the dredges, keeping far enough in advance not to retard the work. The bottom of the Canal from the bay to Gatun Locks is to be forty-one feet below sea-level, and, as the surface of the ground is from one to five feet above sea-level, the holes for the dynamite are from 45 to 50 feet deep. They are sunk at 15-foot intervals in the form known by powder men as "staggered," and are not "sprung" before the charge of dynamite is put in. At present 60 per cent dynamite is being used and the charge varies according to the depth of the hole in rock, the object being to shatter the rock. There was some doubt as to whether the rock could be broken into pieces small enough for the dredges to handle, but so far this method has proved entirely successful. The channel has already been dug 1,000 feet into the bank the full width of 500 feet and the dredges are making a cut that varies in depth from 20 to 40 feet. All the ladder and dipper dredges are working in rock, and although some large pieces are brought up nothing has been encountered so far that the dredges can not handle.

Dredge *No. 6*, one of the old French ladder type, is working close to the bank. It is handling rock and the overlying strata of earth and is cutting to a depth of from 20 to 30 feet. The dipper dredge *Chagres* is doing the most interesting class of work, because it is taking rock up from 30 feet or more below sea-level. This dredge is capable of excavating to the full depth required, 41 feet, and up to the present time the rock encountered has been broken into sufficiently small pieces to be handled without much difficulty. The *Chagres* and dredge *No. 6* are the ones working farthest in toward land, following very closely on the heels of the powder men. As they advance they may strike harder rock and material more difficult to handle, so that the cost can not fairly be estimated, but at

present they are handling blue rock shattered by dynamite at a cost of only 80 cents a cubic yard.

Dredge *No. 85*, new 20-inch suction, is "trying out" in the prism a few hundred yards back of dredge *No. 6*, and is working in silt. As it has been at work only a few days and has not yet "found itself" no fair idea can be obtained of its probable efficiency. The end of the pipe line rests on a small island near the mainland, several hundred yards away from the line of the channel. Behind this dredge is the old French ladder dredge *No. 1*, and back of this the dipper dredge *Mindi*. The *Mindi* is working in coral which has been broken by exploding dynamite on the surface of the rock in the manner known to powdermen as "bulldozing."

The sea-going suction dredge *Ancon* returned to its work of making the channel out to deep water on October 21, after having been at the Cristobal dry dock 18 working days for general repairs. The 20-inch suction dredge *No. 83*, of this dredging fleet, is laid up for repairs and will probably not be in service again until January. A defective casting in the pump broke about the first of October and the dredge can not return to work until the manufacturer has replaced it. The dredging record of the Atlantic fleet will be greatly reduced this month because of the loss of 18 days by the *Ancon* and the total loss of the service of dredge *No. 83*.

### Waiting for High Water.

The two old French ladder dredges on the bank of the Cbagres at Frijoles, and the one at Chagrecito, have been lowered to the level of the water in the river and are waiting for a flood to carry them down to Cristobal dry dock. A hawser has been run from each dredge to trees on the opposite bank of the river so that they may be drawn into the stream at the first high water.

### St. Mary's Church at Empire.

The corner stone of St. Mary's Protestant Episcopal church in Empire was laid on Sunday afternoon, October 25, at 3 o'clock by Lieut.-Col. H. F. Hodges, U. S. A., Acting Chairman and Chief Engineer of the Isthmian Canal Commission. Archdeacon H. B. Bryan, one of the Commission chaplains, conducted the services, and the executive

committee was composed of J. E. E. Armstrong, secretary; A. S. Zinn, treasurer; E. B. Hartley, W. B. Dorsey, L. H. LeNoue, W. P. Neal.

The new church is to be 26 feet wide, 64 feet long, and to have a seating capacity of 200 people. It is located in the center of the village, near the court house, on ground assigned by the Commission. The money needed to build it has been raised by private subscription in the Canal Zone and in the States.

### March Examination for Clerk.

The Secretary of the Isthmian Civil Service Board has received the following letter from the President of the Civil Service Commission in Washington, under date of October 8, 1908:

Sir: The Commission is in receipt of your letter of September 23, and in reply you are advised that the rating of the March examination for Clerk in the Isthmian Canal Service will be completed within a day or two, and the applicants notified as promptly as possible.

The apparent delay in rating these papers is due to the very large number of applicants for all branches of the service during the winter and spring. At one time there were on hand for rating over 40,000 sets of examination papers, and with no corresponding increase in the force of examiners the Commission has been obliged to rate papers in the order required to meet the needs of the service. The surplus is being gradually reduced, and it is believed that within a short time the papers of all competitors in the recent examinations will be completed.

### Trains on November Third.

As November 3, Panama Independence Day, has been officially declared a holiday in the Canal Zone the Panama Railroad Company will operate a passenger train service on that day, approximately the same as was run on July 4, as published on page 344 of Volume I of THE CANAL RECORD, with the exception that transportation will be required on all trains.

The average number of employes in the Mechanical Division in September was 2,381, as compared with 2,388 in August, and the amount of the pay-roll was \$186,579.82, as compared with \$194,204.59 in August.

Lincoln House, the new quarters for the men employes of the Panama Railroad Company in Colon, will be opened the night of October 31 with a ball. The quarters are already occupied.

### VALUE OF FRENCH BUILDINGS.

A statement of the value of the buildings received from the new French Canal Company when the Americans took possession on May 4, 1904, is printed below. It is an estimate based on the appraised value of the buildings as received in 1904, plus the value of repairs, minus 10 per cent to cover depreciation.

In a statement prepared by the architect

of the Commission the number of buildings turned over by the French to the Americans is given as 2,149, of which 1,536 were in use on August 1, 1908. The estimate does not include the value of the Administration building in the city of Panama, formerly used as headquarters, nor the building also in the city of Panama, now used as the American legation.

	Present Value.	EXPENDED FOR REPAIRS.			Net value when received from French.
		Labor.	Material.	Total.	
1—Quarters, Gold.....	\$1,024,712.14	\$305,828.60	\$93,399.91	\$399,228.51	\$625,483.63

<b>Totals.....</b>	<b>\$2,771,658.85</b>	<b>\$659,568.08</b>	<b>\$232,886.97</b>	<b>\$892,455.05</b>	<b>\$1,879,203.80</b>

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

The Cristobal Woman's Club held its regular meeting at the Commission clubhouse on Wednesday afternoon, October 21, at 3 o'clock, the first vice-president, Mrs. E. Lewis Baker, in the chair. There was a short business meeting, at which the reports of the various departments were read. The meeting was then turned over to the home department, the chairman, Mrs. H. J. Slifer, reading a paper on essentials and non-essentials as related to the home and homemaker. The home department at its meetings during the season will consider a large number of practical subjects, including the making of tea and coffee, the evolution of the kitchen, a study of food values, and the esthetic side of home-making.

A question box was opened, the questions submitted being read from the chair, and included cooking, cleaning of curtains, destruction of insects and other tropical pests, and home decorations for Christmas. Replies were given to all of these from the floor. It is the intention of the department to reserve all the questions that are considered of general value and to publish them when a sufficient number have been obtained. Tea was served later, and the discussion of club work was carried on by the members informally during the social half hour.

The "Willing Workers," the title given to the sewing circle for young girls, which meets every Saturday from 3 to 5 at the home of the chairman of the educational department, has a membership of fifteen, the girls ranging from seven to fourteen years of age. The class is not confined to the children of club members, but is open to all young girls who are interested in learning to sew. The work at present is hand sewing, overcasting, hemming, and the more advanced girls have begun hemstitching. The work of the class is not entirely confined to sewing.

The scheduled meetings of the club for the season are as follows: Regular meetings, the first and third Wednesdays of each month; business meeting, every fourth Wednesday; home department, every second Monday; educational, every third Monday; art and literature, every fourth Monday. The philanthropy department has not yet arranged its meetings. The board of managers meet at the call of the president. The next meeting of the club will be the business meeting in the Commission clubhouse, on October 28, at 3 o'clock. The club is arranging to give its annual concert some time in January.

The Pedro Miguel Woman's Club met at the residence of the president, on Wednesday, October 21, when the following chairmen of committees were appointed to serve for the ensuing six months: Literature, Mrs. L. M. Vacher; home, Mrs. S. W. Jennings; social, Mrs. Mark White. The club gave a card party on Saturday evening, October 24, a small sum being charged to each player. Four prizes were given, the attendance was satisfactory and the evening was much enjoyed. Later a subscription dance will be given by the club. A play, in which Madams Waters, Vacher, White, and Barnes will appear, is being rehearsed. Further entertainment will be furnished by the Bachelors' Club, and preparation for a community

celebration of Christmas is under discussion. The Pedro Miguel Social and Recreative Club is arranging a Hallow-e'en party for the evening of October 31, and the Woman's Club has been asked to assist.

The members of the Gatun Woman's Club met informally on Friday afternoon, October 16, for a discussion of future plans. A study of Panama is contemplated.

The Ancon Woman's Club held its meeting, October 21, at Hotel Tivoli, the president, Mrs. C. C. McCulloch, Jr., in the chair. The literary and educational department has decided to take up the study of Italy and Greece as outlined by the Bay View reading course. Regular meetings will be arranged later. The art department will study the architecture, cathedrals, and ruins of Panama. The philanthropy department has arranged for monthly visits to the following institutions: Home for the Aged, Santa Tomas Hospital, and the San Blas Indian Industrial School in Panama; Ancon Hospital, and the leper colony at Palo Seco. Blank books are to be carried by each member on these visits, in which data regarding the institutions may be recorded and photographs kept for the individual interest. Special work is also planned for the leper colony at Christmas. The department work among the Panama bootblacks in the night school will be continued.

The program committee of the club met at the residence of the chairman, Mrs. R. E. Noble, on Friday afternoon, October 23, when the schedule for the year was made out. The literary and educational departments will meet at the residence of Mrs. H. C. Hanson, on Wednesday afternoon, October 28, at 3 o'clock; subjects, "Current Event" and "An Afternoon in Rome."

The Woman's Guild of St. Luke's Church will give a reception at Hotel Tivoli on Monday evening, November 2, from 8 to 10 o'clock, to which all members of the congregation of the Ancon Protestant chapel and residents of Ancon are cordially invited. The Guild's annual meeting will be held on the same day, at 3.30 in the afternoon, at the residence of Mrs. Bishop. A full number was present at the reception given by the Guild on Monday, October 19, the afternoon being greatly enjoyed by the members and their guests. The Guild is arranging for a sale of cakes, to take place at the residence of the chaplain later in the month.

The Chorus Club of Gorgona is rehearsing to give an Old Folks' concert early in November. This club, which was organized about two months ago, consists of about fifteen members of the Y. M. C. A. and their wives. Rehearsals are held in the Commission clubhouse every Monday evening, Mr. Jennings having charge of the work. The concert will consist of a program of old-fashioned songs, and will close with a medley of national songs and a tableau representing "Way Down Upon the Suwanee River."

The Gorgona Dancing Club gave a large dance recently and will give an old-fashioned dance and entertainment on All Hallow-e'en.

Celebration of Christmas is being arranged by the American residents of Cristobal and Colon, the initiative having been taken by the Y. M. C. A., Woman's Club, and the public schools. It is planned to outdo the observance of last Christmas, and to this end an early start has been made, in order

that such supplies as are necessary and are not available on the Isthmus may be purchased in the States.

The Wesleyan Methodist Missions in Panama, Colon, and Empire have been holding mission meetings during the past week, a missionary from Costa Rica having come to the Isthmus for the purpose. The meetings have been well attended. Work on the church in Panama has been resumed, and its completion is expected within a short time.

## Opening of Panama National Theater.

The new National Theater in the city of Panama was opened on the night of October 22, with a performance of "Aida" by the Lamhardi Opera Company. In the audience that filled the theater were officials of the Government of Panama, members of the diplomatic corps, members of the Isthmian Canal Commission and many Americans from various parts of the Canal Zone. The theater is in the new Government building which overlooks Panama Bay, and which contains also the Panama government offices.

## Personal.

Dr. A. B. Herrick and family and Judge S. E. Blackburn and family, of Ancon, sailed on the *Advance*, on October 19, for a visit of six weeks in the States.

Among the passengers returning to the Isthmus on the *Colon*, which arrived at Cristobal on October 23, were: G. B. Strickler, Resident Engineer at Corozal, and Dr. W. E. Deeks, of Ancon Hospital.

Maj. John L. Phillips and family, Judge H. A. Guder and family, H. D. Reed and wife and Miss Gorgas, of Ancon, and R. Budd, and H. L. Stuntz of Colon, are passengers on the *Esperanza*, due at Cristobal on October 28.

## Obituary.

Information has been received of the death at Washington, on October 19, 1908, of William C. Eldridge, assistant examiner of accounts of the Isthmian Canal Commission. Mr. Eldridge was appointed to that position on August 15, 1907, after about twenty years' service in the office of the Auditor for the War Department. He came to the Isthmus on official business on the 21st of last September, and returned to Washington on the *Finance*, sailing from Colon on October 8. He was taken sick on the way, and although his condition was not regarded as serious, he died four days after reaching home. No information has been received as to the cause of death.

Mr. Eldridge was exceptionally well fitted by experience for the duties of the office which he held. He was a faithful public servant and a man of excellent character.

R. I. Richards, a conductor on the construction line of the Central Division, died at his home in Great Valley, N. Y., on October 6. He was on his annual leave. Mr. Richards came to the Isthmus, October 16, 1906, and his last place of residence here was Pedro Miguel.

The remains of Samuel Brewster, the negro laborer who was reported missing after the dynamite explosion at Mindi on October 10, were found under some earth near the scene of the accident on October 14.

## TRANSPORTATION PROBLEM.

## Traffic Handled Daily Over Panama Railroad and on Construction Lines.

The following letter has been received from the Hon. George A. Loud, a Representative in Congress from Michigan:

I am very much interested in the work connected with the Canal, and I read every number of THE CANAL RECORD carefully as it comes to me each week.

There is one subject, it seems to me, it would be desirable to present to the readers of THE CANAL RECORD at your convenience, and that is an article pertaining to the amount of traffic handled over the Panama railroad. In giving some lectures upon the subject of the Panama Canal, one naturally refers to this being a very busy railroad, but just how busy it is, it is hard to show. There is a presumption that the material from the steam shovels, excavated in August (1,876,515 cubic yards,) would give a daily average of 72,173 cubic yards. On the further presumption of 20 cubic yards to the carload and 17 cars to the train, it would give a daily average of 212 trains of spoil. Whether all of this material comes out on the main line of the Panama railroad or not is a question, and if it does not all come out on the main line, then what is the average number of trains per day?

In addition to the trainloads of spoil from the Canal excavation handled by the Panama railroad, there will be the regular traffic of the railroad and the incidental traffic of the Canal, made up of passenger, freight, spoil, work, and special trains. In all, how many trains are handled over the Panama railroad each day? It is obvious, of course, that the spoil from the Canal going to the different dumping grounds all passes over the railroad at different points. Then, one would like to ask how many trains do pass over the railroad at any given point in the eight working hours when the Canal work is in progress; also what number pass over a given point in the full twenty-four hours of the day.

These may be impossible questions to supply answers to, but they may lay the groundwork for an interesting resume along this line, which would be of interest to readers away from the Canal Zone. If it is obtainable, the average carload or trainload in cubic yards should be given. I have noticed in previous numbers of THE CANAL RECORD some fragmentary notes along this line, but nothing which seems to meet the desire which I have for a full and complete statement or estimate.

Mr. H. J. Slifer, General Manager of the Panama railroad, supplies the following information with regard to the traffic on that line:

The train movement from the Canal work originates at three main outlets, viz: Pedro Miguel, Bridge 52, (near Bas Obispo), and Gatun, the Pacific Division dumps being located off the Panama railroad tracks at present. These trains are made up of sixteen 20-yard cars each, except the rock trains from Bas Obispo to Gatun, which haul from 20 to 24 cars per train.

The average train movement passing Miraflores in the 8-hour working day is as follows:

Loaded spoil trains, south.....	80
Empty spoil trains, north.....	80
Labor, work and other I. C. C., north.....	10
Labor, work and other I. C. C., south.....	10
P. R. R. passenger and freight trains, south	5
P. R. R. passenger and freight trains, north	5
Total.....	190
P. R. R. trains balance of the day of 24 hours .....	16
Grand total, 24 hours.....	206

The maximum train movement at Miraflores is 252 trains per day, all within 8 hours except 16 Panama railroad trains.

The average train movement between Bridge 52 and Tabernilla and Gatun is as follows for 8 hours:

I. C. C. loaded trains, north.....	56
I. C. C. empty trains, south.....	56
I. C. C. work, labor and others, south.....	16
I. C. C. work, labor and others, north.....	16
P. R. R. trains, north.....	5
P. R. R. trains, south.....	5
Total.....	154
P. R. R. trains balance of 24 hours.....	16
Grand total, 24 hours.....	170

The maximum train movement between the points named above is 220.

The average train movement between Mindi, Gatun and Tiger Hill is as follows for 8 hours:

I. C. C. loaded trains, south.....	24
I. C. C. empty trains, north.....	24
I. C. C. work, labor and others, south.....	4
I. C. C. work, labor and others, north.....	4
P. R. R. trains, north.....	5
P. R. R. trains, south.....	5
Total.....	66
P. R. R. trains balance of 24 hours.....	16
Grand total, 24 hours.....	82

The maximum train movement between the points named above is 102.

Thus it will be seen there is a total average train movement over the Panama railroad in 8 hours of 410 trains, or a total for 24 hours of 458 trains, and a maximum movement of 574 in 24 hours, practically all of which is over double track.

The average trainload is sixteen 20-yard cars. There are, however, a number of 12 and 19-yard cars and where the grades are steep, as at Spur No. 2, Gatun, the trainload is cut down to ten cars.

There are in use some small French dump cars, but these do not run out on the Panama railroad and are therefore no factor in the figures submitted.

By official order published in THE CANAL RECORD of July 8, 1908, the car measurement of material is now based on the following rating:

	Cu. Yds.
1,000 ft. of 16, 20-yard cars.....	20
Large Western dumps (20 yds.) .....	17
Small Western and Oliver dumps (12 yds.)	10
French dumps.....	5

Nearly all the spoil handled over the main line of the Panama railroad comes from Culebra Cut. An article "Transportation in Culebra Cut" was published in THE CANAL RECORD of August 12, 1908, which described conditions on an average day in the month of July, when the daily average of excavation was 55,427 cubic yards. This article, which filled almost a page is too long for citation here, but the following statement of the number of trains and amount of material sent over the Panama railroad tracks on an average day in July, is compiled from it:

North of summit near Culebra:	
58 trains of 16, 20-yard cars.....	18,560
15 trains of 25, 17-yard cars.....	6,375
15 trains of 15, 10-yard cars.....	2,250
South of summit near Culebra:	
50 trains of 16, 20-yard cars.....	16,000
6 trains of 30, 10-yard cars.....	1,800
Total.....	44,985

This statement is based on the average daily number of cars handled and the yardage is in car measurement, which is usually less than place measurement. This factor, with the additional one that the excavation

from the Obispo Diversion, about 1,000 cubic yards daily in July, does not go on to the Panama railroad, accounts for the apparent difference in the amount of material handled on the average day, which was 55,427 cubic yards place measurement, and only 44,985 cubic yards car measurement.

On an average day in September the excavation in the Central Division amounted to 58,632 cubic yards place measurement. The amount that went over the Panama railroad tracks was as follows:

North of Culebra:	Cu. Yds.
47½ trains of 16, 20-yard cars.....	15,200
5½ trains of 20, 17-yard cars.....	1,870
4 trains of 25, 17-yard cars.....	1,700
Total.....	18,770
South of Culebra:	
52½ trains of 16, 20-yards car....	16,800
Total.....	35,570

All the material handled does not go out on the main line of the Panama railroad. In September, of the 1,784,030 cubic yards of material handled by cars, that excavated from the lock sites at Miraflores and Pedro Miguel, on the Obispo Diversion, from the Canal prism at Matabachin, Santa Cruz, Caimito and San Pablo, and from the spillway at Gatun Dam, in all 551,519 cubic yards, was not handled on the Panama railroad tracks. At Miraflores the spoil is being used in the construction of dykes to hold dredged material and in the dam across Cocoli River. At Pedro Miguel Locks the material is dumped behind one of the hills alongside the lock site. The excavation from the Obispo Diversion is used in dykes on the Diversion channel. The dumps at Santa Cruz, Matabachin, Caimito, and San Pablo are adjacent to the work, and the excavation from the spillway at Gatun Dam is dumped on the toes of the dam.

In the first week in October the Central Division began to use the Gamboa-Juan Grande trestles on the relocated line of the Panama railroad as a dumping ground. The dumps at Gorgona and Mamei have been closed, so that the only spoil now hauled over the Panama railroad tracks north of Culebra is that used at Gatun Dam and wasted at Tabernilla and Culebra. The trains made up of 20-yard cars have been increased from 16 to 17 cars, and the average daily haul to Tabernilla in October is about 45 trains a day, a total of 15,300 cubic yards car measurement. The haul to Gatun continues as in September, namely, a daily average of four trains of twenty-five 17-yard cars. The trains to Gamboa dumps average ten a day, and are composed of 25 cars of 17 cubic yards capacity. By increasing the size of trains the number from the Central Division has been reduced by six trains daily.

## Sale of Commission Animals.

The first general sale of condemned horses and mules held by the Isthmian Canal Commission was conducted at the Ancon and Cristobal corrals on the afternoon of October 24. Six mules, two horses, five ponies and two colts at the Ancon corral, that had been condemned as unsuitable for use by the Commission, were sold at public auction to the highest bidder, the net proceeds being \$778. The highest price paid was \$100 for a mule, and the lowest was \$15 for a pony. Two colts sold for \$16 and \$26. Some of the animals offered at auction were withdrawn as the bids made were not high enough to justify their sale.

## COMPRESSED AIR.

## Its Uses in Canal Work—The Compressor Plants.

Compressed air is used in the Canal work as motive power in rock drilling and in running tools of various kinds in the shops. One big system supplies air for the drills in Culebra Cut, at Pedro Miguel Locks, and Miraflores Locks, for the large shops at Empire, and the field repair shops along the Cut. Several small plants are located at convenient points on the Isthmus. Local conditions that affect the air compressing are the high percentage of moisture in the atmosphere during eight months of the year, and the constantly high temperature.

## CULEBRA CUT SYSTEM.

The system that supplies air to the rock drills in Culebra Cut and to the shops at Empire extends from a point about 800 feet south of the Chagres River at Bas Obispo to the newly erected field machine shop at Miraflores Locks, a distance of approximately 13 miles. It parallels the Canal several hundred feet back from the slope line, out of danger from slides or blasting. The main line is made up of 38,800 feet of 10-inch pipe, 14,600 feet of 8-inch, 10,000 feet of 7-inch, and 4,000 feet of 6-inch pipe, a total of 67,400 feet of pipe. From the mains air is conveyed to various parts of the Cut by "leads," which aggregate over 34 miles, composed of 110,000 feet of 2-inch pipe, 5,000 feet of 2½-inch, 9,000 feet of 3-inch, 20,000 feet of 4-inch, 35,000 feet of 6-inch, 600 feet of 8-inch pipe.

Air for this system is supplied by compressors at Rio Grande, Empire, and Las Cascadas. The first plant started was that at Rio Grande on June 29, 1906, where two Rand-type, noncondensing compressors were installed. They have duplex steam cylinders, 18 inches in diameter, 24-inch stroke; air cylinders 18 and 29 inches in diameter, and 24-inch stroke, and the capacity of each compressor is 2,500 cubic feet of free air per minute. Steam was supplied from boilers taken from old dredges until the end of 1907, when new boilers, purchased in the States, were installed.

At the time the compressed air line along the Cut was begun, it had not been decided what type of canal would be built, and the locations of the plants were selected so that they would be adaptable to any type. While the Rio Grande plant was being built the main pipe-line was laid. Several months later work was begun on the Empire plant. Both the Rio Grande and Empire plants were completed before the Las Cascadas plant was begun. The line was extended along the Cut as far as Las Cascadas, and the demands on the system soon became so great that it was necessary not only to establish a plant at that place, but also to double the capacity of the Rio Grande and Empire plants.

At present the Culebra Cut system consists of three plants, each equipped with two Rand and two Laidlaw-Dunn-Gordon compressors, with a total maximum output of 1,800,000 cubic feet of free air per hour. During the month of September, 315,081,000 cubic feet of air were compressed at these three plants. In August the output totaled 328,988,000 cubic feet. To compress 1,000 cubic feet of free air to 105 pounds costs approximately 4.89 cents. The fixed charges per day for the three plants are \$65, and the cost per

day for coal is \$244. Oil-burning apparatus has been installed, and as soon as the plants begin to use oil as fuel the fixed charges per day will be reduced \$21 a day, and the fuel charge \$100 a day, making a total reduction of \$121 per day.

## LA BOCA PLANT.

The La Boca air compressor plant is run in connection with the electric light plant at that place. There are two Laidlaw-Dunn-Gordon cross-compound, condensing, rolling-mill frame, two-stage compressors, the first stage compressing the air from atmospheric pressure to a pressure of 27 pounds, the second stage from 27 to 100 pounds. The high pressure steam cylinders are 16 inches in diameter, and the low pressure 30 inches; the low pressure air cylinders 30 inches in diameter, and the high pressure 18 inches. The stroke of each is 36 inches. The valve gear on these compressors is different from that at Rio Grande, Empire, and Las Cascadas plants, those compressors having Meyer valves, while La Boca plant has a Corliss valve gear. The capacity of each compressor, when running at 75 revolutions per minute, with a guaranteed steam consumption of 14½ pounds per indicated horse power hour, when a 26-inch vacuum is carried, is 2,200 cubic feet of free air per minute. The air from the compressors is delivered into two air receivers, 60 inches in diameter by 14 feet long.

Previous to the installation of these compressors five Manning vertical boilers were used at the electric light plant, and it has been necessary to install in addition two Sterling type water-tube boilers of 234 boiler horse-power each, with superheaters, each superheater being capable of superheating steam 150 degrees at 150 pounds pressure. The steam header of these boilers has been connected with the steam main of the five Manning boilers, thereby making a total unit of seven boilers, although the Manning boilers will not be used in connection with the air compressor plant, except in cases of emergency. The boilers use crude oil as fuel, which is supplied from storage tanks located on a small hill in the rear of the plant. This is the only plant on the Isthmus using superheated steam.

An efficient open type feed water heater is installed at this plant. The exhaust from the compressors is connected with the exhaust line from the four electric units, one large Worthington surface condenser being used for the entire power plant. The compressors will be operated in conjunction with the electric light plant, no increase in force being necessary. It is expected that a very considerable reduction in cost of air over other plants on the Isthmus will be made because of the high efficiency of the machines and the saving in fixed charges on account of combining the compressor plant with the electric power plant.

Up to the present time there have been laid at La Boca one 8-inch air main 2,000 feet in length, one 6-inch branch 500 feet long, and two 4-inch branches containing 800 feet, or a total of 3,300 feet. The 8-inch main conveys the air to the top of Sosa Hill, where connections will be made to the quarry that is to be opened for the purpose of furnishing rock for the concrete work at Miraflores and Pedro Miguel. From this point a 6-inch main runs to the La Boca shipways

and shops, supplying air for the various pneumatic tools in use there.

At La Boca machine shop is a Chicago Pneumatic Tool Company compressor with a capacity of 1,200 cubic feet of free air a minute. This machine was installed before the large compressors at the La Boca power plant were erected and is now available for other service.

## PORTO BELLO.

At Porto Bello one Laidlaw-Dunn-Gordon air compressor, having a capacity of 2,200 cubic feet of free air per minute, and one Chicago Pneumatic Tool Company compressor, having a capacity of 1,200 cubic feet of free air per minute, are being erected. Both of these compressors are compound, condensing, two-stage. They are to be used in connection with the quarrying, which will be necessary to provide rock for the concrete for the locks and spillway at Gatun. Four Oswego-McNault water tube boilers are being installed, to furnish steam for the compressors and other equipment.

## IN THE SHOPS.

Empire shops, the shop at Pedro Miguel, and the field repair shops along Culebra Cut are supplied by the general air system that extends from Bas Obispo to Miraflores Locks. The shipways and machine shop at La Boca are supplied by the La Boca plant; and Gorgona shops, the dry dock and machine shop at Cristobal, and the Cristobal shops of the Panama Railroad Company are supplied by independent plants. The pneumatic tools used in the shops may be classed broadly as air drills, air hammers, and air hoists.

Pneumatic drills are used in tapping, reaming and drilling holes in steel and iron plates, boilers, structural steel, etc., and also in boring holes of various sizes in all kinds of wood. There are in use on the Isthmus the "Little Giant" drills of various sizes, the "Thor" drills, Cleveland rotary breast drills, "Haeseler" drills, and Ingersoll-Sergeant drills. These tools are so constructed as to drill with the smallest or largest drill now in use. In a recent test made at Gorgona shops, fifty-four holes 15-16 of an inch in diameter were drilled in 70 minutes through ¾-inch boiler plates. To accomplish this by hand would require not less than eight hours. There are in use at the Gorgona shops 27 of these drills, 28 at the Empire shops, 3 at the Las Cascadas engine house and shops, 3 at the Pedro Miguel engine house and shops, and 1 in the car repair shops at Buena Vista, also a large number at other shops and shipways on the Isthmus.

Pneumatic hammers are used for the purpose of driving rivets of all sizes, chipping and caulking seams in boilers, beading flues, chipping castings, etc. The steel parts of the Gamboa bridge were put together by the use of these hammers. Many thousand feet of suction-dredge pipe have been built at the Gorgona shops by the use of these hammers, and likewise they have been used to great advantage in the erection of fuel oil tanks and water tanks. The kinds and makes of these tools in use on the Isthmus include the "Thor" chipping and rivetting hammers, "Boyer" hammers, "Haeseler" chipping hammers, "Imperial," "Monarch" and "Cleveland." These hammers vary in size, and the number of strokes per minute runs

from 1,800 for the smallest to 620 for the largest hammers. At the Gorgona shops there are in use 48 of these air hammers, 25 at the Empire shops, 3 at Las Cascadas, 3 at Pedro Miguel, and 2 at the car repair shop at Buena Vista.

Pneumatic hoists are used in different departments of the shops at Gorgona and Empire in handling heavy materials, such as large castings, repair parts for steam shovels, machinery, etc. There are 16 motor-gear hoists and two straight-lift hoists in use at the Gorgona shop. At the Empire shops there are eight motor-gear hoists and 13 straight-lift hoists.

At the Gorgona shops there are two air compressors, one made by the Rand Drill Company, and the other by the Franklin Air Compressor Company. These compressors are used to furnish air for the variety of pneumatic tools used at the shops, and for air hoists. An old French traveling crane of twenty tons capacity has been equipped for some considerable time with air as its motive power.

The Rand compressor is noncondensing, with duplex steam cylinders, 2-stage air cylinders, and a capacity of 1,050 cubic feet of free air per minute. The steam cylinders are 14 inches in diameter, the high pressure air 13 inches, and the low pressure 22 inches. The air inlet valves are of the Corliss type, while the outlet are Poppet valves. The steam valves are of the Meyer type. The Franklin air compressor is noncondensing, with duplex steam cylinders, 2-stage, with a capacity of 930 cubic feet of free air per minute. The steam cylinders are 14 inches in diameter, high pressure air 13 inches, and low pressure 22 inches, stroke 16 inches. This compressor is also equipped with a Meyer valve gear on the steam cylinders. The air inlet and outlet valves are of the Poppet type.

At the Cristobal shops of the Panama railroad there are two Rand-type noncondensing, duplex steam cylinders, 2-stage air cylinder compressors, each having a capacity of 1,050 cubic feet of free air per minute. Steam cylinders are 14 inches in diameter, high pressure air 13 inches, low pressure 22 inches, stroke 20 inches. The Meyer type of valve is used on the steam cylinders. These compressors furnish air for the various pneumatic tools used in the machine and boiler shops.

At Cristobal dry dock and marine shops a compressor, with a capacity of 1,200 cubic feet of free air a minute, furnishes air for the pneumatic tools used on the ways, at the dock, in the yard, and in the shops.

#### Concert by the I. C. C. Band.

##### HOTEL TIVOLI, ANCON

Sunday, November 1, 1908, at 7.30 p. m.:

##### PROGRAM

- 1 March—*The Old Salt*.....Hildreth
- 2 Selection—*Mills' Merry Melodies*.....Mills
- 3 Intermezzo—*After Sunset*.....Pryor
- 4 Waltz—*Thousand and One Nights*.....Strauss
- 5 March Espagnole—*Sorella*.....Gallini
- 6 Potpourri—*The Sunny South*.....Lampe
- 7 (a Characteristic—*Ruralistic*.....Bagley
- 7 (b Schottische—*When a Boy Says "Will You?"*.....Allen
- 8 Overture—*Four Ages of Man*.....Lachner
- 9 Descriptive—*Cavalry Charge*.....Luders
- 10 March—*Iron Regiment*.....Marie

*Panamaian National Hymn.*

*Star Spangled Banner.*

CHAS. E. JENNINGS, Musical Director.

A concert will be given at Bas Obispo, C. Z., Sunday, November 8.

#### Dedication Ball at Las Cascadas.

THE CANAL RECORD:

All members of the following organizations and their families are cordially invited to attend the fraternal hall dedication ball to be given at Las Cascadas on October 31, at 8 p. m. No special trains will be run, but visiting guests, both married and bachelor, will be provided with quarters if they will notify the secretary not later than October 28.

Masons, Knights of Pythias, Red Men, Kangaroos, Engineers, and Conductors.

A. E. WEISS,

Secretary, Las Cascadas, C. Z.

#### Purchase of Cold Storage Articles.

In the following table the net weight of cold storage articles imported by the commissary department from September 2 to October 25 is shown, together with the amount imported weekly:

Article.	Total Amt. Pounds.	Amt. per wk. Pounds.
Beef, dressed, 800-pound hinds .....	88,356	11,045
Beef, dressed, 600-pound hinds.....	233,864	29,233
Beef, dressed, 600-pound fores.....	239,998	30,000
Veal, carcasses.....	37,347	4,840
Mutton, carcasses.....	27,730	3,720
Lamb, carcasses.....	7,110	920
Pork loins.....	15,438	2,000
Sirloin butts.....	30,929	4,005
Beef tenderloins.....	2,040	262
Calves' livers.....	503	65
Beef livers.....	3,796	490
Beef ribs.....	11,533	1,480
<i>Sausage—</i>		
Bologna.....	800	115
Frankfurter.....	1,300	100
Lieberwurst.....	400	52
Pork.....	4,625	600
<i>Poultry—</i>		
Broilers.....	3,247	420
Chickens, milk-fed.....	6,575	850
Fowl.....	25,690	3,330
<i>Dairy Products—</i>		
Butter, No. 2 prints.....	25,250	3,260
Butter, tub.....	6,044	780
Cheese, Camembert.....	50	8
Cheese, Gouda.....	628	81
Cheese, Italian.....	679	88
Cheese, Neufchatel.....	525	68
Cheese, Philadelphia Cream.....	204	27
Cheese, Roquefort.....	100	13
Cheese, Swiss.....	3,080	400
Cheese, Young America.....	8,152	1,030
Cream, 10-gal. tins.....gallons	1,600	270
Eggs.....dozen	68,500	8,900
Milk, 10-gal. tins.....gallons	6,300	815
Milk, quart-bottles.....quarts	1,500	192
Yeast.....pounds	2,800	362
<i>Fruits—</i>		
Apples.....	54,843	7,100
Cantaloupes.....	24,305	3,150
Grapes.....	24,918	3,230
Lemons.....	13,300	1,720
Peaches.....	26,621	3,460
Plums.....	1,900	246
Pears.....	8,850	1,440
Watermelons.....	32,950	4,250
<i>Vegetables—</i>		
Beans, Lima, green.....	1,622	210
Beets.....	11,039	1,470
Cabbage.....	154,944	20,100
Carrots.....	15,923	2,060
Cauliflower.....	4,082	530
Celery.....	11,760	1,520
Cucumbers.....	11,668	1,525
Corn, green.....	3,535	465
Lettuce.....	15,334	2,010
Onions.....	70,845	9,160
Parsnips.....	2,050	265
Potatoes.....	844,330	109,445
Squash.....	6,126	795
Tomatoes.....	36,876	4,750
Turnips.....	28,645	3,720
<i>Shellfish—</i>		
Oysters.....gallons	100	100

The steamship *Karen* sailed from Mobile, Ala., on October 15, with 703,000 feet B. M., of lumber, 60,000 feet of which is for stock, and the balance intended for car repairs at Gorgona.

#### OFFICIALS OF REPUBLIC OF PANAMA

President—J. D. de Obaldia.  
Secretary of Government and Justice—Ramón M. Valdés.

Assistant Secretary—Aizpurn Aizpurn.  
Secretary of Foreign Affairs—J. A. Arango.  
Assistant Secretary—J. M. Fernández.  
Secretary of Finance—Carlos A. Mendoza.  
Assistant Secretary—Rodolpho Chiari.  
Secretary of Public Works—J. E. Lefevre.  
Assistant Secretary—Juan Navarro D. (temporarily in charge of the Secretaryship).  
Secretary of Public Instruction—Eusebio A. Morales.  
Assistant Secretary—Angel M. Herrera (temporarily in charge of the Secretaryship).

#### Governors of Provinces.

Panamá—Pedro A. Díaz.  
Mayor (Alcalde)—Fabio Arosemena.  
Chief of Police—Leonidas Pretelt.  
Colon—Porfirio McLénde.  
Mayor (Alcalde)—Benigno Andrión.  
Chief of Police—Ricardo Arango.  
Bocas del Toro—Luis E. Alfaro.  
Veraguas—Adolfo J. Fábrega.  
Chiriquí—Antonio Anguizola.  
Los Santos—Mauricio Correa.  
Coclé—Eligio Ocaña F.

#### DIPLOMATIC CORPS.

##### Ministers Accredited to Panama.

United States—H. G. Squiers.  
George T. Weitzel, Secretary of Legation.  
Belgium—E. Pollet, residing in Guatemala.  
Brazil—Antonio da Fontana Xavier.  
A. J. de Amaral Murtinho, Secretary of Legation.  
Great Britain—Claude Coventry Mallet.  
Netherlands—J. H. Rens, residing in Caracas.  
Chargé d'Affaires.  
France—Henri Arthur Marie Barré-Ponsignon.  
Peru—Federico Alfonso Pezel.  
Alberto Bresani Rossel, Attaché.  
Nicaragua—Federico Boyd.

#### CONSULAR CORPS.

##### Consuls Residing at Panama.

United States—Arnold Shanklin, Consul-General (and in charge of interests of Greece and China).  
Felix Ehrman, Vice-Consul General.  
C. E. Guyant, Deputy Consul-General.  
Belgium—B. D. Fidanque, Consul.  
Morris B. Fidanque, in charge.  
Bolivia—Samuel Boyd, Consul-General.  
Brazil—Ramon Arias F., Consul.  
Chili—Antonio B. Agacio, Consul-General.  
Juan Ehrman, Vice-Consul.  
Costa Rica—Luis Uribe, Consul.  
Cuba—J. Gabriel Duque, Consul.  
Denmark—J. L. Maduro, Consul.  
Ecuador—Ramon Arias F., Consul.  
Pedro Arias F., Vice-Consul.  
France—Léon Hippeau, Vice-Consul.  
Germany—Arturo Kohpcke, Consul.  
Max Freundlich, in charge.  
Great Britain—F. W. Manners, Vice-Consul.  
E. S. Humber, Pro-Consul.  
Guatemala—José Fernando Arango, Consul-General.  
Italy—Arturo Kohpcke, Consul.  
Lodovico Delpanio, in charge.  
Mexico—Licenciado José Maria Aramendia, Consul.  
Baldomero Méndez, Vice-Consul.  
Netherlands—Dr. A. Jesurun, Jr., Consul.  
Nicaragua—Dr. Augusto S. Boyd, Vice-Consul.  
Norway—Edwin Hunter Melville, Vice-Consul.  
Peru—Alberto B. de Obarrio, Consular Agent.  
Salvador—Federico Boyd, Consul-General.  
Ernesto A. Boyd, Vice-Consul.  
San Domingo—Mauricio Fidanque, Consul.  
Spain—Juan Potous y Martinez, Consul.  
N. Perez-Petinto, Vice-Consul.  
Sweden—R. B. de St. Malo, Consul.  
Venezuela—Coronel S. McGill, Consul.

##### Consuls Residing at Colon.

United States—Dr. J. C. Kellogg, Consul.  
J. M. Hyatt, Vice-Consul.  
Belgium—C. H. R. Raven, Vice-Consul.  
Costa Rica—T. R. Cowan, Consul.  
Denmark and Santo Domingo—José Maria Fidanque, Vice-Consul.  
France—M. Léon Huttinot, Vice-Consul.  
Germany—L. Heuer, Vice-Consul.  
Great Britain—W. Andrews, Acting Vice-Consul.  
Italy—Alfonso Lomonaso, Consular Agent.  
Mexico—A. M. Rojas, Consul.  
Netherlands—E. J. Henriques, Consul.  
Nicaragua and Salvador—J. C. Stevenson, Consul.  
Norway—H. B. Parker, Consul.  
Peru—A. D. Abello, Vice-Consul.  
Spain—E. Bastar, Consul.

## OFFICIAL CIRCULARS.

## Panaman Independence Day.

CULEBRA, C. Z., October 21, 1908.

CIRCULAR No. 219.

Tuesday, November 3, 1908, the anniversary of the independence of the Republic of Panama, will be observed as a holiday in the Canal Zone. As far as possible, all public work will be suspended on that day.

H. F. HODGES,  
Acting Chairman.

## Leaves of Absence.

CULEBRA, C. Z., October 15, 1908.

TO THE HEADS OF DEPARTMENTS AND DIVISIONS:

This office has been requested, in numerous recent instances, to waive the rules covering leaves of absence, in favor of employees who have been misled by erroneous information given them by timekeepers, or subordinate officials, and have thus allowed their leave to become forfeited.

In future, no plea of ignorance of public rules, or of misunderstanding due to erroneous information, will be considered.

As far as may be practicable, the heads of departments and divisions will see that employees apply for their leave before it is forfeited, but this shall not relieve the individual employee of the responsibility of protecting his own interests.

Any case to which the application of the rules governing leaves of absence may not be perfectly clear, should be referred to this office for decision.

H. F. HODGES,  
Acting Chairman.

## Accounting of Fees by Notaries Public.

ANCON, C. Z., October 20, 1908.

CIRCULAR No. 82.

To all Notaries Public of the Canal Zone:

The following provisions of law respecting the accounting of fees collected by notaries public in the Canal Zone are brought to the attention of notaries for their information and guidance:

Sections 809 and 815 of the Code of Civil Procedure of the Canal Zone provide as follows:

SEC. 809. *Lawful to Demand Specific Fees Only.* It shall be lawful for the clerk of the Supreme Court, the clerks of the Circuit Courts, referees, and commissioners appointed by the Circuit Courts, bailiffs, marshals, district judges, notaries public, and other officers and persons hereinafter mentioned, together with their assistants and deputies, to demand, and receive, the hereinafter mentioned fees and no more; but all fees collected by officers drawing a regular salary or fixed compensation from the Government of the Canal Zone shall be paid into the treasury thereof.

SEC. 815. *Notaries Public.*—Notaries public shall receive the following fees only for their services:

For protesting bill or note for non-acceptance or non-payment and giving notice, seventy-five cents; for registering such protest and making record, twenty-five cents; for attesting letters of attorney with seal, twenty-five cents; for notarial affidavit to an account or other writing, with seal, twenty-five cents; for each oath or affirmation, with seal, twenty-five cents; for taking proof of debts to be sent abroad, twenty-five cents; for a certified copy of record and affidavit of its correctness, fifty cents; for writing depositions and affidavit, ten cents for each one hundred words; for taking proof or acknowledgment of any writing concerning real or personal estate and certificate thereof for each party, twenty-five cents.

Section 815 of the Code of Civil Procedure repeals Section 11 of Act No. 2 of the Laws of the Canal Zone, fixing fees to be charged by notaries public.

All notaries public who are regularly employed in the Department of Civil Administration, whether as circuit court clerks (ex-officio notaries public), district judges or in clerical capacities, must, under Section 809 quoted, account to the Canal Zone for all fees collected by them; notaries public who are employed in other departments of the Commission may retain fees collected by them subject to the provision of the following Executive Order:

WAR DEPARTMENT,  
WASHINGTON, January 3, 1905.

## ORDERS:

By direction of the President, the following order is issued for the information and guidance of all concerned:

It is hereby ordered that hereafter no officer, clerk, or employee in the executive service of the Government who is also a notary public, shall charge or receive any compensation whatever for performing any notarial act for an officer, clerk, or employee of the Government in his official capacity, or in any matter in which the Government is interested, or for any person when, in the case of such person, the act is performed during the hours of such notary's service to the Government. Disobedience of this order shall be ground for immediate dismissal from the service.

WM. H. TAFT,  
Secretary of War

WAR DEPARTMENT,  
WASHINGTON, April 3, 1905.

## ORDERS:

War Department orders of January 3, 1905, issued by direction of the President, prohibiting notarial charges by notaries public who are Government employees, is, by direction of the President, hereby amended by adding at the end thereof the following paragraph:

"This order shall not apply to oaths of disinterestedness, or other oaths required to be made by law, provided that the work in connection therewith is not performed during office hours."

WM. H. TAFT,  
Secretary of War

JO C. S. BLACKBURN,  
Head of Department of Civil Administration

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

The Y. M. C. A. has arranged to receive the election returns by cable on election night. These returns will be transmitted direct to the four clubhouses where they will be announced by bulletin and on a stereopticon screen as they are received. Interesting programs are being arranged by all the associations to occupy the early part of the evening and to fill in between bulletins until as late an hour as the interest warrants.

At Culebra there will be a smoker on the night of November 2, with suitable program, a feature of which will be the balloting for U. S. President and a Mayor of Culebra. On election night there will be moving pictures, the announcing of election returns and the counting of ballots cast on the previous night. On the evening of November 4, there will be a "social" with a program of monologues, sketches and music and the announcing of any final election results not received the night before. For refreshments, homemade cake will be provided by the ladies. The general public is invited to this gathering, as well as on election night.

At Empire, the polls at the clubhouse will be open on election day from 11 a. m. to 8 p. m., and every man in Empire is requested to cast his ballot for U. S. President and Mayor of Empire. The counting of these ballots will be a feature of the evening. The announcing of election returns will be interspersed with music by the Marine band from Camp Elliott. Both men and women are cordially invited.

At Gorgona the early part of election evening will be given to voting for U. S. President and Mayor of Gorgona. The town has been divided into three wards and there are four tickets in the field. Primaries will be held on the evening of October 31, and polls will be open from 6 to 11.30. An entertainment program of local talent is being arranged for part of election evening. Refreshments will include cakes furnished by the ladies. The public is invited.

At Cristobal there will be a band concert on the evening of November 2, and on election night the entertainment and excitement incident to receiving election returns will be supplemented by a program of local talent, as well as a local election. Further details will be made known to the people of Cristobal by special announcement. The general public is invited.

On the day following election bulletins will be posted in all the clubhouses announcing any election results which may not have been received the night before.

The standing of the bowling league on October 26 was as follows:

	Played.	Won.	Lost.	Per cent.
Empire.....	57	36	21	.632
Cristobal.....	57	35	22	.614
Culebra.....	51	20	31	.392
Gorgona.....	51	16	35	.314

## CULEBRA.

The indoor baseball team has recently won three games from Empire, the scores being 14 to 4, 17 to 8 and 28 to 13. The regular players on the team are George R. Herring, first base; Frank Roberts, second base; I. H. Fleischman, third base; Guy Ellis, catcher; E. C. Bath, pitcher; Willis Holstead (captain) left field; Albert Korsan, right field. The next game will be played at Cristobal on Wednesday,

day, October 28. Plans are being discussed for an inter-association league, to be started about November 15.

The work among the Juniors has been reorganized, and the regular practice afternoons will be Monday, Wednesday and Friday of each week. Baseball, basketball, and bowling will be special features in addition to the regular calisthenics. Athletic meets between the Juniors of the four associations on the Isthmus will be arranged during the dry season. On Saturday, October 31, the Culebra Juniors will go to Cristobal for an all-day meet with the Juniors there. Indoor baseball, bowling, high jump, sprint races and a relay race will be among the features of the day.

Attention is called to all those interested in photography that a dark-room has been provided in the Culebra clubhouse, and a club will be formed to promote interest in photography. Regular monthly exhibits of pictures will take place, and at the end of six months the member winning the highest number of votes will be awarded a suitable prize for his work.

Twenty-five names have been handed to the secretary by members who wish to join the Choral Club. An organization will be effected in the near future.

A tournament is in progress in both billiards and pool to decide on the players who will represent Culebra in the inter-association matches to begin November 7.

A clothes pressing club will be in operation by November 1.

## EMPIRE.

The medals for the winners in the recent duckpin tournament have arrived, and will be presented on the evening of November 3.

The Empire bowlers defeated the Gorgona team in three straight games Saturday, October 24, on the Gorgona alleys. As the Cristobal team lost one of its games to Culebra on the same evening, Empire is now in first place in the bowling league.

The standing of the pool tournament on October 24 was as follows:

	Played.	Won.	Lost.	Per cent.
Duff.....	8	8	0	1000
Moeller.....	11	9	2	.818
Ruch.....	17	13	4	.764
Pulsifer.....	8	6	2	.750

## GORGONA.

The gymnasium class has met five times since its reorganization with an average attendance of sixteen men.

Saturday evening, October 24, the Culebra basketball team defeated the Gorgona team at Gorgona by a score of 40 to 18. This was Gorgona's first game of the season.

An association "Sing" was held in the lobby on Sunday, October 25. A large crowd was present.

## CRISTOBAL.

The "try-out" for the billiard and pool team to represent Cristobal in the Isthmian league is now on.

The orchestra from the *Prinz Joachim* will give a concert on Monday, November 2.

A committee is promoting the organization of a dramatic club.

A vaudeville show of local talent is scheduled for Thanksgiving Eve.

Election night "open house" will be held until the returns are in—all night, if necessary.

The standing in the individual bowling tournament October 21 was as follows:

Names—	Played.	Won.	Lost.	Pinfalls.
Robertson.....	9	9	0	1,535
Morrill.....	9	8	1	1,329
Strong.....	6	5	1	980
Hembling.....	9	7	2	1,310
Gilmartin.....	9	7	2	1,476
Bullard.....	9	6	3	1,432
Scribner.....	9	5	4	1,434
E. Thomas.....	9	5	4	1,379
McKinley.....	9	4	5	1,259
Van Zant.....	9	4	5	1,223
Shipley.....	6	2	4	788
Burdge.....	9	3	6	1,262
Stickel.....	9	3	6	1,308
Moyer.....	9	1	8	1,088
Van Wagner.....	9	0	9	1,049
Hertel.....	9	0	9	948

The following steamers have recently arrived at La Boca: October 17, *Peru*, from Valparaiso; October 20, *Cecile*, from the north; October 22, *Quito*, from Guayaquil. Departures were: October 19, *Ecuador*, for Guayaquil; October 20, *Huasco*, for Valparaiso; October 23, *City of Sydney*, for San Francisco.

The steamship *Bertha* sailed from Gulfport, Miss., on October 15, with 610,000 feet B. M. of lumber and 193 piling. Five hundred and thirteen thousand feet of this lumber is for stock; the balance for car repairs at Gorgona. A portion of the piling is for the new Cristobal wharf and part for relocation work.

## COMMISSARY DEPARTMENT.

## VEGETABLES AND FRUITS.

As the fresh vegetable season in the States is over the Subsistence Department expects to receive few vegetables other than the staples from this time forth. A shipment of cranberries is expected on the *Esperanza*, which is due at Cristobal, October 28. Malaga grapes will be handled as long as they are in the market.

The hours during which the various commissaries are open for business are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

## COMMISSARY PRICES

For week beginning October 27:

## FRESH MEATS.

	Price.
Mutton—Stewing.....per lb	6
Shoulder and neck (not under 6 pounds).....per lb	7
Entire forequarter (not under 10 pounds).....per lb	8
Leg (8 to 10 pounds).....per lb	16
Short-cut chops.....per lb	22
Lamb—Stewing.....per lb	6
Entire forequarter.....per lb	8
Leg (6 to 8 pounds).....per lb	27
Chops.....per lb	29
Veal—Stewing.....per lb	10
Entire forequarter (15 to 20 lbs).....per lb	11
Loin for roasting.....per lb	21
Chops.....per lb	22
Pork—Cuts.....per lb	20
Beef—Suet.....per lb	4
Soup.....per lb	8
Stew.....per lb	12
Corned.....per lb, 12, 14, 16	
Pot roast (from sirloin butt).....per lb	17
Rib-roast, second cut (not under 3 pounds).....per lb	19
Rib-roast, short cut (not under 3½ pounds).....per lb	23
Sirloin roast.....per lb	29
Rump roast.....per lb	29
Porterhouse roast.....per lb	29
Steak, round.....per lb	23
Rib.....per lb	24
Sirloin.....per lb	29
Porterhouse.....per lb	29
Rump.....per lb	29
Tenderloin.....per lb	30

## MISCELLANEOUS.

Livers—Beef.....per lb	11½
Calf.....each	65
Sausage—Pork.....per lb	19
Leberwurst.....per lb	17
Sweet bread—Veal.....each	1.20
Ox tongues.....each	90
Eggs, fresh.....dozen	34

## POULTRY AND GAME.

Chickens—Capons.....each	2.40
Broilers.....each	60
Fowls, medium and large.....each, 80c, and 1.00	
Turkeys.....per lb	30
Squabs.....each	45
Suckling pigs (whole).....each	3.50
Suckling pigs (one-half).....each	1.75

## CURED AND PICKLED MEATS.

Bacon—Strips.....per lb	23
English, breakfast sliced.....per lb	26
Ham—Sugar-cured, sliced.....per lb	25
One-half, for boiling.....per lb	21
Ferris.....per lb	20
Beef, salt, family.....per lb	16
Salt pork.....per lb	13

## DAIRY PRODUCTS.

Butter—Prints, prime quality.....per lb	35
Cheese—Neufchatel.....each	6
Young America.....per lb	22
Swiss.....per lb	33
Edam.....each	1.05
McLaren's.....jar	15
Pinxter's.....tin	22
Philadelphia Cream.....each	22
French cheese in tins—Camenbert, Roquefort, Brie, Neufchatel.....tin	20

## VEGETABLES AND FRUITS.

Tomatoes (local only).....per lb	8
White potatoes.....per lb	3½
Sweet potatoes.....per lb	2½
Cabbage.....per lb	4
Onions.....per lb	3½
Cucumbers.....per lb	25
Squash (summer).....per lb	3
Beets.....per lb	3
Celery.....bunch	15
Carrots.....per lb	3
Turnips.....per lb	3
Lemons.....dozen	24

§ Sold only from cold-storage and not from Commissaries.

## NEW ARTICLES.

	Price.
Jams, assorted, fruit, California, 8-lb tins.....tin	63
Catsup, "Griffon," quarts.....bottle	28
Bonbons, chocolate, Cadbury's, ½s.....tin	25
Tobacco, "Steam Shovel".....pkge	7
Bowls, soup.....each	60
Boxes, bread, japanned—No. 5.....each	50
No. 4.....each	60
No. 3.....each	70
No. 2.....each	80
Shoes, molder's frep of.....pair	\$2.65
Buttons, pearl, 20-line.....dozen	5
Dresses, night.....each, \$1.35 to 1.95	
Chemises.....each, \$1 10 and 1.60	
Ink, Carter's, No. 85, 2-oz. Lottle.....bottle	5

## Rainfall, October 1 to 24, 1908, Inclusive.

## LEGAL NOTICE.

EMPIRE, C. Z., October 22, 1908.

To any and all persons who may have any claim or claims against the estate of Philip F. Kramer, deceased, who met his death at the town of Paraiso, Canal Zone, on December 17, 1907: You will present the same on or before the 1st day of December, 1908, to Theodore C. Hinckley, administrator of the estate of P. F. Kramer, Panama, Panama, or E. M. Goolsby, Clerk of the Circuit Court, Empire, Canal Zone, properly verified, or the same will be forever barred according to law.

THEO. C. HINCKLEY,  
Administrator.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

## FROM NEW YORK TO COLON.

## FROM COLON TO NEW ORLEANS VIA KINGSTON.

Mexican.....	Leyland Line	about Oct. 31
--------------	--------------	---------------

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, calling at Puerto Barrios, and from Colon at 1.30 p. m., via Port Limon and Puerto Barrios, for New Orleans.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The steamship *Cecile* arrived at La Boca on October 20, with 1,400,000 feet B. M., of lumber for the 15th mian Canal Commission.

Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

## NOTES OF PROGRESS.

### October Excavation.

The grand total of excavation during the month of October was 3,224,638 cubic yards, the highest record for rainy-season excavation. All of this except 111,075 cubic yards was taken from the Canal prism. This is 65,752 cubic yards more than the record for September, and 255,632 cubic yards less than the highest record, that of March, 1908. There were 27 working days in October, two more than in September and one more than in March. Of the grand total for October, 1,271,136 cubic yards were taken out by dredges, and the remainder was dry excavation. The average rainfall for October for the territory in which excavation is in progress was 10.51 inches, as compared with 9.72 inches in September.

The excavation for October, 1908, as compared with that for the same month in 1907, when the work was less thoroughly developed, was about 60 per cent greater. A comparison of the amounts excavated from the prism of the Canal in the months already referred to shows:

	Cubic yards.
October, 1907.....	1,844,471
March, 1908.....	3,205,076
September, 1908.....	3,059,851
October, 1908.....	3,113,563

In the Atlantic Division the October record was kept below that of the four preceding months by the loss of the services of the sea-going suction dredge *Ancon*, which was undergoing general repairs during 18 working days. The dredges took out 505,260 cubic yards, as compared with 624,776 cubic yards in September, 638,217 in August, which is the high record, and 625,497 in July. Of the dry excavation in this division, 155,142 cubic yards were taken from the Canal prism, 109,667 of which was from the lock site.

The Central Division broke all previous

records for excavation from the Canal prism. A comparison for the excavation in this territory, including Culebra Cut and the old Chagres Division, in the prism, shows:

	Cubic yards.
March, 1908.....	1,541,637
September, 1908.....	1,442,567
October, 1908.....	1,551,409

In the Culebra section, known as Culebra Cut, the excavation amounted to 1,168,281 cubic yards, of which 33,603 cubic yards were from the Obispo Diversion, and 8,180 cubic yards from accessory works at Pedro Miguel. The excavation in the Chagres section was 62,017 cubic yards greater than the best previous record, that of August.

All previous records in the territory of the Pacific Division were broken by an excavation of 903,436 cubic yards. This is 17,236 cubic yards greater than the previous high record, that of September. Of the total, the dredges took out 765,876 cubic yards, which is 17,405 cubic yards less than the record for March. One of the dredges was laid up a week for repairs, and during a part of the month the material was not so easily handled, as it had been in previous months. On the other hand, the fleet was strengthened by a new 20-inch suction dredge, which excavated 24,593 cubic yards from the lock site at Miraflores.

A detailed statement of the excavation in the three divisions follows:

### ATLANTIC DIVISION.

Locality.	From Canal Prism cu. yds.	Outside Canal Prism cu. yds.	Total excavation cu. yds.
<i>Dry excavation—</i>			
Gatun spillway.....	.....	44,397	44,397

Dry excavation.....	1,842,427	111,075	1,953,502
Wet excavation.....	1,271,136	.....	1,271,136
Total.....	3,113,563	111,075	3,224,638

Mean rainfall along Canal (eleven stations), 10.51 inches.

Figures of monthly excavation are based upon telephone reports from the Division Engineers, and are subject to slight alterations when the official reports are received.

### Vegetable and Flower Seeds.

The Isthmian Canal Commission has made arrangements with the Department of Agriculture at Washington to have a selected assortment of vegetable and flower seeds sent to the Isthmus. The shipment will consist of 500 packages of vegetable, and 250 packages of flower seed, each package containing five small packets of different varieties.

The seed is for free distribution in the Canal Zone and only seeds of plants that experience has shown to be suitable for cultivation on the Isthmus will be sent. They are expected to be shipped from the States the latter part of November. The distribution will be made by the horticulturist of the Commission, under the direction of the Chief Quartermaster.

### October Rainfall for Two Years.

At Tabernilla, on the 29th, 2.57 inches in one hour.  
At San Pablo, on the 29th, 3.10 inches in one hour.

### Small Slide at Whitehouse.

A small slide has developed on the east side of Culebra Cut opposite Whitehouse, and although it is giving no trouble at present it is believed that continuous rains would result in washing most of the material into the Cut. The amount of material affected is estimated at from fifty thousand to one hundred thousand cubic yards. The slide is similar to that at Culebra and not comparable in amount with the Cucaracha and Paraiso slides.

The highest average record for one day by the steam shovels of the Central Division was made on October 28, when 49 shovels excavated 62,396 cubic yards of material.

## CARE IN USE OF DYNAMITE.

## Meeting of Steam Shovel and Powder Men of Central Division.

Ninety steam shovel and powder men of the Central Division met the Division Engineer and Assistant Division Engineer in Kangaroos Hall, at Empire, Sunday afternoon, November 1, for the purpose of discussing what additional means may be taken to guard against danger in the handling and use of dynamite. The meeting was called at the request of some of the steam shovel men and was the immediate outcome of the explosion which occurred in the Cut, near Empire, on October 8. Fifteen of the men, representing both the powder men and steam shovel men, offered suggestions, all of which have been taken under advisement by the Division Engineer.

In opening the meeting the Division Engineer said that he wished to thank the men in his own behalf and that of the Assistant Division Engineer for the interest evinced by their presence. This interest he assured them was reciprocal, because careless handling of dynamite in the Cut is a menace not alone to the powder men and the steam shovel men and their helpers, but to everyone who works in the Cut. He urged upon them the need for cooperation in order to lessen the danger and assured them that the Isthmian Canal Commission and the Government consider the question of yardage a secondary one to that of the safety of the men.

The conditions on the Isthmus are peculiar; in the first place, because of the magnitude of the work necessitating the handling in the Central Division of 700,000 pounds of dynamite and the exploding of 260,088 feet of holes each month; in the second place, because the material being excavated is not uniform, and the powder man and steam shovel man find themselves handling the hardest rock one hour, while the next hour they are likely to be working in earth or clay. These conditions should be a reason for greater caution on the part of the men, and it is advisable, therefore, that each steam shovel man take it upon himself to examine closely the work he is called upon to do. No one knows better than the steam shovel men who are working in the Cut day after day, and have been working there for months and years, when it is advisable to slow down in the work of excavation in order to proceed with safety.

In addition to the precautions already taken, the Commission has cabled for fifteen galvanometers, to be used in testing the fuzes, and for forty-eight additional Star drills. The galvanometers, added to those already in use, will make the number twenty-five for the Central Division, and each powder man in the Cut will be supplied with one. It will be his duty to test each fuze before it is placed in the dynamite cartridge; to test it after the hole is loaded; and finally, when wires have been strung to the battery, to test the circuit again in order to see that the current will enter every fuze. This will insure against defective fuzes. In order to fire charges which may escape explosion when the current from the battery is turned on, holes will be drilled twelve feet apart, after the arrival of the extra drills, instead of twenty feet, as is usual

at present, and thus each hole will be so close to its neighbor that, even though one of them should not explode when the current is applied, the detonation from the nearby hole will set off the charge of dynamite. There is now under consideration a plan to have a high-power live wire strung along the edge of the Cut from Pedro Miguel to the Chagres River, from which leads will be run at regular intervals into the Cut for the purpose of furnishing current to be used in exploding fuzes. There are both advantages and disadvantages to be considered in connection with this plan, but neither cost nor convenience will be allowed to weigh against the installation of a high-power electric line, if it is decided that the safety of the men at work in the Cut would be increased by the use of such a current in exploding the dynamite.

But all the precaution that the Commission may take will be futile if the men themselves do not assist. No workman should do any work that he knows will prejudice the safety of himself or his fellow workmen, even if his refusal involves a disobedience of orders. The question of disobedience can be taken up with the Division Engineer or the Assistant Division Engineer, either at the office or when they are on the work, as they are every day. The question of discipline, important though it be, will always be held secondary to that of the safety of the men.

After the ideas condensed in the above had been presented to the men by the Division Engineer and the Assistant Division Engineer, the men were asked to give their views. It appeared that the action of the Commission in ordering galvanometers and more drills had anticipated the chief suggestions that the men had to make, and the matter of installing a high-power electric line for use in exploding the dynamite was received with favor. It was suggested that greater care be enjoined on the powder men in keeping their batteries dry, in accounting for all unused dynamite and fuzes, and in giving timely warning when a blast is about to be set off or dobbing is to be done. It is the custom of the pitmen to take refuge under the dump cars when a doby is about to be made, and attention was called to the carelessness of some of the train crews in not giving sufficient warning when a spoil train is about to start, so as to allow the men who have taken refuge under the cars to crawl out before the train starts. Steam shovel men were warned not to dig off dynamite and to take sufficient time to make sure that material in which they are working is free from unexploded charges. The men were told that their efforts to make big records should not be allowed to jeopardize their own safety and that of the men under them.

It was the consensus of opinion that the greatest danger run by the steam shovel men

and their helpers comes from the digging up of unexploded dynamite. It is almost impossible to keep count of the number of holes that explode in a charge of from twenty to fifty holes and the steam shovels not infrequently dig up dynamite that has not exploded. Some question was raised as to the quality of the dynamite, and this was answered by the statement that every shipment of dynamite received by the Commission under its new contract is tested by the United States Testing Bureau, and that it has been uniformly up to the standard contracted for. It is fresh, unlike some of the dynamite used in the Cut a year or more ago. Almost invariably the trouble lies in the fuzes, which are so constructed that the platinum bridge in them which completes the circuit is liable to be broken, and the fuze is thus prevented from exploding, with the result that the dynamite charge is not set off. The principal danger lies in the steam shovels digging into one of these fuzes and setting off the charge of dynamite. These fuzes are tested before they are shipped from the United States, and are tested again on reaching the Isthmus. Hereafter they will be tested three times before the exploding current is turned into them, and the number of misfires will thus be reduced to a minimum.

Most of the matters discussed have been treated in official circulars, talked over time and again, and have been incorporated in the rules for handling explosives. The men were assured, however, that all their suggestions will be taken up at once and that with their help the rules already laid down and those about to be made will be strictly enforced. Further meetings will be held whenever the men desire, and meanwhile, the men were requested to make known any complaints they might have individually to the Division Engineer or Assistant Division Engineer.

## Supplies for Pacific Fleet.

The Subsistence Department of the Isthmian Canal Commission has made arrangements with the United States Navy Department to supply 175,000 pounds of fresh meat, 150,000 pounds of potatoes, and 30,000 pounds of other fresh vegetables, to the vessels of the Pacific fleet that are expected to be at Panama between December 12 and 22.

## Negro Boy Drowned at Matachin.

Friday afternoon the ferry across the Chagres River at Matachin was overturned in midstream and four men and a boy on it were thrown into the water. The men reached shore safely, and one of them carried the boy with him. On reaching the bank, however, it was found that the boy had drowned. He was a negro messenger, named Maxile Benjamin, and was 14 years old.

## WEATHER CONDITIONS, CANAL ZONE, OCTOBER, 1908.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

The Culebra and Gatun Women's Clubs will meet on Thursday and Friday, November 5 and 6, respectively for the purpose of electing officers for the ensuing year.

The Cristobal Woman's Club held its regular business meeting on Wednesday, October 28, the preparation for the Christmas celebration being taken up. The art and literature department commenced Shakespeare's study at its regular meeting, Monday, October 26. The class was led by Mrs. Claude C. Pierce.

The Cristobal Juvenile Library was opened on Tuesday, October 20, under the auspices of the educational department of the Woman's Club. The one hundred and fifty volumes which are placed in the study of the Union Church building, comprise a selection of standard juvenile literature, and include also twelve volumes of Dickens' works and some of Irving, George Eliot and Charles Kingsley. The library is open on Tuesday and Friday afternoons from 3.30 to 5 o'clock; a member of the educational department being in charge during these hours. A deposit of 75 cents is required in order to take books from the building; this constitutes membership, and is returned on removal of the member or in case he wishes to discontinue using the library. The Juvenile Library is the result of the combined efforts of the school, the Union Church and the Woman's Club, an entertainment having been given last year by these three organizations for the purpose of raising funds.

Cristobal has two organized whist clubs among the women which meet on alternate Thursdays. Both of these are the outcome of the club organized in the Woman's Club last year for the purpose of raising funds to assist the philanthropy department in the work which it was desirous of taking up. There are about twelve members in each club.

The Union Church gave a dance and Hollow-e'en entertainment in the church building on Friday evening, October 30. The hall was decorated with palms and the evening was much enjoyed.

The staff of the Colon hospital gave a costume ball on the evening of All Hollow-e'en.

The Kangaroos gave a large Hollow-e'en dance at Paraiso on Saturday evening. A large number of people from the line were present.

The Ancon Woman's Club is making elaborate preparations for the bazaar which will be given the first week in December. It is proposed to hold the sale on two afternoons and evenings. Each department will be responsible for a booth, and there will be many outside attractions. It is intended that the sale shall include many practical and desirable articles for Christmas gifts. The educational and literary department of the club met on October 28, the afternoon being spent in study in preparation for the course on Italy and Greece. The department will meet on the second and fourth Wednesday of each month at the residence of the members. At the next meeting the epic poems of Greece and Rome and their mythology will be taken up.

The general programs of the club will be devoted exclusively to Panama, the next three meetings being scheduled as follows:

November 4, the San Blas Indians, program under the philanthropy department; November 18, a general survey of the history of Panama, under the philanthropy department; December 2, native dishes and how to prepare them, under the home department; an exhibit of native needlework and dress by the art department on the afternoon of December 16. The meetings will all begin promptly on time and will be held in the sun parlor of the Hotel Tivoli. By action of the executive board the club has donated a sum of money to the Palo Seco colony for the purchase of fireworks for the celebration of the national holidays this week.

The annual meeting of St. Luke's Guild took place on Monday afternoon at the residence of Mrs. Bishop in Ancon. The guild was organized on December 2, 1907, at the residence of Mrs. Fleetwood Gruver, with 16 charter members. Meetings are held at the residence of the members, by invitation, on the first and third Monday of each month. There is at present a membership of thirty-five, including the three classes, active, associate and honorary. Beside the regular work of the organization in the care of the chapel, the guild is prominent in organizing entertainments and social functions. Similar guilds are organized in connection with the Episcopal church in the Canal Zone in Culebra, Empire, and Cristobal.

A costume dance was given by the Bachelor Girls' Club of Culebra at the Commission clubhouse on Thursday evening, October 29. The hall was decorated in accordance with the custom on All Hallow-e'en, green and yellow being the colors, and "Jack o' Lanterns" served as lights. Programs and favors suitable to the occasion were distributed. Some of the costumes worn were: Indian Maid, Merry Widow, Dutch Peasant, French Maid, Spanish Dancer, Colonial Maid, College Girl, Martha Washington, Night, Dresden Girl, Fluffy Ruffles, Sweet Lavender, Twenty Centry Girl, Summer Girl, Flower Girls, and Dolly Varden.

A feature of the evening was the electrical arrangement, introducing the "Moonlight Waltz," the idea being original with the Bachelor Girls. The lights were extinguished with the exception of an electric motto draped in green, and a very tropical moon, which gave the desired effect. About 80 couples participated. Five matrons acted as chaperons. Visitors from other clubs were the guests of the evening.

The Bachelor Girls' Club was organized September 22, 1908, with a membership of twenty. The following are the officers: President, Miss Katherine Pender; vice-president, Miss Eileen Reidy; secretary, Miss Wilda Wickham; treasurer, Miss Katherine Griley. The object of the organization is to bring the bachelor girls of the Isthmus together in social functions. The club will give dances at holiday times.

The Las Cascadas Woman's Club met at the residence of the president on Thursday afternoon, October 29. Mrs. Thomas E. Brown, of Cristobal, was the guest for the afternoon, and the program consisted of reading the report of the Boston biennial. The club hopes to hold its next meeting in the new club room.

The date of the cake sale for St. Luke's Altar Guild, Ancon, has been put forward from November 14 to November 21. The

sale will be held at the home of Archdeacon Bryan. It will begin at 4 o'clock in the afternoon and continue into the night, or until all the cakes are sold.

## PERSONAL.

Mr. R. M. Arango, formerly head of the Division of Meteorology and River Hydraulics under the Isthmian Canal Commission, who has been appointed by President Obaldia Minister Plenipotentiary to the Court of St. James, sailed for England a few days ago.

Mr. Frederick Palmer, who holds high rank among American correspondents, and is also a successful writer of fiction, spent two days in the Canal Zone during the past week on his way from Central America to the States. He was returning from an extended trip through the Central American republics in search of information for a series of articles which he is about to write for the *Chicago Tribune*.

Mr. Benj. L. Jacobson, claim officer, has been transferred from the office of the Chairman at Culebra to the office of the Purchasing Officer at Washington.

Rev. John W. Holland has been appointed a chaplain in the service of the Commission. He will be stationed at Culebra.

Mr. R. M. Gamble, formerly acting quartermaster at Bas Obispo, has returned from his leave of absence and will be appointed District Quartermaster at Corozal.

## Death of Dr. John H. Purnell.

Ancon, C. Z., October 27, 1908.

The Chief Sanitary Officer announces with great regret, to the officials and employees of this Department, the death of Dr. John H. Purnell, Health Officer of Panama, Monday, October 26, 1908, while on vacation leave in the States.

Dr. Purnell has for many years been engaged in yellow fever work in the southern part of the United States. His work in Tennessee, Mississippi, Louisiana and Texas, in fighting this disease was notable. The experience and knowledge gained in that work made him a valuable assistant to the Chief Sanitary Officer.

Dr. Purnell was appointed a physician in this Department on April 26, 1905, and on June 16 of the same year he was appointed Health Officer of Panama, which position he filled until his death. Under Dr. Purnell, Panama was made a healthy city, and it was largely due to his efforts that yellow fever was finally stamped out. The ability and tact with which Dr. Purnell handled the difficult situation, and the results accomplished by him are worthy of all commendation.

The Department extends its sympathy to the family of Dr. Purnell.

W. C. GORGAS,  
Chief Sanitary Officer.

## Missing Men.

The American Consul General at Panama has been asked for information as to the whereabouts of the following men and will be glad to hear from anyone who can supply it:

John or Julius Hauseman or Houseman.

C. W. Fleck or Chester Wallace.

Dan or Daniel Brewer.

Edgar L. Rosselot.

Otis Eberhardt, formerly of Jacksonville, Florida.

## HOSTLING.

## Caring for the Locomotives After Their Day's Work.

At 5 o'clock in the afternoon the Isthmian Canal Commission engineer takes his train to the nearest siding, uncouples his locomotive from the string of loaded or empty cars, and runs the engine to the hostling yard. His dinner over, he goes to his quarters, and the following morning at 6.30 o'clock he is in the cab again. From the time the engineer leaves his locomotive at night until he takes the throttle again in the morning, the engine also is resting and preparing for the next day's work. Its food is two or three tons of coal, several barrels of water, and a few bushels of sand; and once in two weeks it is given a bath in the form of a "washout." The engineer calls his dinner and rest "recreation," and the recreation of his locomotive "hostling." Hostling is as essential to the engine as recreation is to the engineer.

Between fifty and sixty locomotives are hosted every night at Pedro Miguel. During the day screws have begun to show wear, a drawhead has weakened, a grate given out, lubricators and injectors, rod brasses, air brake equipment or trucks need repairing, the guides on the piston cross-head must be closed, or some other little weaknesses have developed in several of the engines; and those so affected are run into the shed, over the repair pit if necessary, and the machinist begins the repairs at once. The other engines are turned over to the six "gold" men known as "hostlers." These men have served as engineers and are now hostling, waiting a chance to take a regular run.

Each hostler takes four locomotives in one train and runs them to the coal chute, then to the sand chute, and then to the water pipe. This order may be changed as convenience dictates, but the process remains the same, and when the hostler leaves the engines they have a full store of coal, a tank full of water, and sand enough in the sand box to meet the next day's demands. Firemen then separate the cinders from the coal, dump them, and bank the fire. The oil cups are filled, the light repairs finished, and the locomotives cleaned, usually by midnight. After that the hostler's work is merely to visit each engine two or three times until 5 o'clock, and see that all is going well. Between 5 and 6 o'clock the fires are raked again, and when the engineer takes his locomotive at 6.30 o'clock the fire is bright, and the gauge registers from 120 to 150 pounds of steam.

Four engines are "washed out" every night, and an order is preserved so that each has a thorough cleaning once in fifteen days. Like the locomotives that need repairing, those to be washed out are separated from the rest early in the evening and hosted at once. They are then run over the cinder pit where the fires are dumped, and taken into the house where the steam and water are allowed to escape, while cold water is forced into the boilers and running out carries with it the loose matter that has collected during two weeks. All this takes from 5.30 o'clock in the evening until 2 o'clock the next morning, when the fires are started again, and at 6.30 the engines are ready for their work.

To one not accustomed to such work the

hostlers and their helpers moving in and out among the great engines, with the shadows deepened by an occasional headlight, the gleam from the cinder pit, or rays from the workmen's lanterns, make an eerie sight. Fifty locomotives manuever in files of four on only six tracks, and so close to one another that the trains almost touch, while half a hundred men hurry about among them. It looks like a mix-up and sounds like discord; but the engines start only on double signals, there are no collisions, accidents are few, the work moves swiftly.

At daybreak the result of it all is seen in the locomotives standing ready, like horses at the barrier. On the morning of October 29, at 6.30 o'clock 52 locomotives left the yard in nine minutes, and often the clearance is made in seven minutes. Between 6.30 and 6.41 o'clock two locomotives had left the yard, coupled to a train of sixteen 20-yard cars which had been left on the siding the night before, had stretched the unloader cable, and started to the La Boca dumps.

Many railroad men on the Isthmus are of the opinion that this daily performance at Pedro Miguel is quite unique in railroading. It is unique on the Canal work, however, only because it is the one place where so many locomotives are stationed over night. At Las Cascadas 35 engines are handled in the same way and at Empíre, Gorgona, and other points like work is done with the smaller number of locomotives hosted at those places. All the hostling for the Central Division is done by the Mechanical Division, and a statement of the work in September is as follows, the material charged to this account being for coal, oil, sand and waste:

COST OF OPERATING COAL CHUTES DURING THE MONTH OF SEPTEMBER, 1908.

LOCATION.	Coal.	Tons handled	Cost of operating	Cost of operation per ton of coal handled.
Las Cascadas	On bin... Delivered	2,769 2,769	..... .....	..... .....
Total .....		5,538	\$138.69	.0251
Pedro Miguel	On bin... Delivered	3,275 3,275	..... .....	..... .....
Total .....		6,550	\$270.88	.0414
Grand total.....		12,088	\$409.57	.0339

Las Cascadas—214 tons coal unloaded by hand account not received in hopper-bottom cars, additional expense incurred.....\$10.00  
Pedro Miguel—87 tons coal unloaded by hand account not received in hopper-bottom cars, additional expense incurred..... 4.00

STATEMENT SHOWING COST OF HOSTLING FOR THE MONTH OF SEPTEMBER, 1903.

LOCATION.	Number hosted.	Cost of hostling.	Average cost per engine.
Gorgona.....	688	\$-03.53	1.168
Santa Cruz.....	235	333.38	1.419
San Pablo.....	735	874.63	1.190
Tabernilla.....	420	371.17	.884
Empíre.....	638	1,376.45	2.157
Bas Obispo.....	130	412.90	3.176
La Boca.....	117	344.63	2.344
Las Cascadas.....	1,043	1,946.09	1.865
Pedro Miguel.....	1,574	3,169.18	2.013
Rio Grande.....	216	237.72	1.101
Total.....	5,826	\$9,869.68	1.694

The average number of men employed in hostling for the Central Division in September was—Gorgona, 16; Tabernilla, 6; Santa Cruz, 5; San Pablo, 15; Las Cascadas, 29; Empíre, 16; Rio Grande, 9; Bas Obispo, 5; Pedro Miguel, 47; La Boca, 4.

At Pedro Miguel the facilities for hostling are good, although not faultless. The track lay-out is well adapted to sending the locomotives out in a short time, but not to han-

dling them so easily on their return from work. Four tracks run through the engine house, which can accommodate twenty engines, and outside the house are one track and two leads to the yard. The cinder pit extends under two tracks between which is a depressed track on which the cinders are hauled out. Double tracks lead to the coal chute and one track runs up the incline. In the chute an engine run by compressed air furnishes the power for handling cars up the incline by cable. There are 24 pockets and the capacity is 120 tons. In the coal chute is a sand plant in which sea sand is dried, sifted, and lifted by air to the storage bin. An oil house is nearby.

The machine shop at Pedro Miguel is equipped to do any light repairing. The machinery consists of: One French blacksmith's fan, 20 inches in diameter; one 16-inch emery wheel—double; one 40-inch grind stone; one 48-inch grind stone; one combined wet and dry grinder, 12-inch table; one drill press, 16-inch table; one drill press 31-inch table; one old French drill press; one engine lathe, 18 by 60-inch; one La Blond lathe, 24 by 10-inch; one French shaper, 18-inch stroke; one American shaper, 24-inch stroke; one 2-horsepower air motor; one old French engine, cylinders 8 by 12-inch, used for power at shop; one old French pump 3½ by 4-inch, one pipe bending machine, bends pipe from ½-inch by 2-inch diameter; one pipe cutting and threading machine, (will handle pipe from 1 to 6-inches diameter); one pipe cutting and threading machine, (will handle pipe from 2½ to 12-inches diameter); one power hack saw, 5½-inch stroke; one old French punch and shear, 14-inch throat; one double head bolt cutter, ½-inch to 2 inch; one portable air-brake testing machine; one forcing press, 30 by 36-inch, capacity 30 tons; one vertical wood boring mill, ½-inch to 2-inch; one rip saw, table 3 feet 3 inches by 6 feet; one 2-cylinder air driven engine for coal hoist.

Las Cascadas yard is shorter than that at Pedro Miguel, and the double cinder pit is at one side the yard and nearer the engine house. There are five tracks through the house and one on each side. The capacity of the house is 30 engines. The coal and sand chutes are of the same type as at Pedro Miguel. The machine equipment is as follows: One 44-inch blacksmith's fan; one emery wheel and stand, 16-inch; one 48-inch grind stone; one French drill press, No. 9, 16-inch swing; one American upright drill press, 16-inch table; one American drill press, 18-inch table; one 16-inch Pratt & Whitney lathe; one 18-inch LaBlond engine lathe; one French shaper, 18-inch stroke; one French 2-cylinder vertical engine, used for power for shop; one 2-cylinder horizontal air engine, used for operating hoisting device at coal chute; one 2-cylinder air engine, to operate sand shaker; one Dean duplex pump, 10 by 6 by 12; one forcing press 30 by 36-inch, with a capacity of 30 tons.

Since October 1, no engines have been hosted at Rio Grande. At the smaller hostling stations the machinery equipment is small. Heavy repairs to locomotives are made at Gorgona.

The engines of the Pacific Division are hosted in the field at the Miraflores lock site, and those of the Atlantic Division are cared for at Gatun. In all there were 298 locomotives in the service of the Commission in September.

## ANGLICAN CHURCH ON ISTHMUS.

Established Here in 1883 for Benefit of Negroes.

Twenty-five years ago the Church of England was established on the Isthmus of Panama. The quarter centennial will be observed at Colon, Panama, and Gorgona in the week beginning November 22. On that day, at 3 p. m., in Christ Church, Colon, Rev. S. Purcell Hendrick, of Jamaica, for sixteen years pastor of the church, will preach the anniversary sermon. On November 24 he will preach at St. Andrew's Church, in Gorgona, and at 3 p. m. on October 29, in St. Paul's Church, Panama. A picnic for church members will be held at Gorgona on November 26, when the morning will be given over to entertainment of all kinds, and the afternoon to addresses and other formal exercises.

The distinction made between the Anglican Church (English) and the Protestant Episcopal Church (American) must be kept in mind in any clear conception of the anniversary about to be celebrated. The Anglican Church was a factor in canal work from 1883 until 1907, while the Protestant Episcopal Church began its work on the Isthmus in 1865, and resumed it in 1907. Christ Church in Colon was consecrated in 1865, with the idea that it would be the center of the religious life of the little colony of Americans collected there by the Panama Railroad Company. It is a handsome structure, built of stone, and cost \$75,000. Political reasons caused its practical abandonment after a few years, and it served variously as a barracks, a magazine and arsenal, and a storehouse, during the revolutions that vexed Colombia in the seventies. From 1865 until 1883 it was under the jurisdiction of the Protestant Episcopal Church.

When the French began their work on the Canal there was a large immigration of West Indians to the Isthmus. As most of the immigrants came from Jamaica and other British West Indian islands, there were many members of the Anglican Church among them. Not with any idea of proselyting, but to minister strictly to members of that church, the Anglican missions were established on the Isthmus. Speaking of the opening of the work, Rev. Mr. Hendrick says:

"We were warmly welcomed by both the French Canal Company and the Panama Railroad Company. The former provided us with camps at different centers of work along the route of the canal, and in one or two instances built churches for our use; and also contributed monthly a sum toward the maintenance of the work. The privilege to continue our work in these buildings at these places was conceded to us by the new Panama Canal Company, who were willing to recognize the necessity of the continuation of our work, but who did not find it possible to make any contribution toward its maintenance. The Panama Railroad Company very graciously allowed us the free and exclusive use of Christ Church, Colon, and supplied a furnished residence for the clergyman ministering therein. He was treated as a chaplain of the company in his official capacity, and was granted a monthly sum toward his stipend. He was also permitted, as well as others associated with him in the work, to travel on the road free of charge.

We were able in the course of years to establish missions at Mount Hope (then Monkey Hill), San Pablo, Gorgona, Bas Obispo, Las Cascadas, Culebra, and Paraiso, also opening a mission in the city of Panama. At these places day-schools for the education of the children of the laboring class were established, and were conducted by men trained for such work under government supervision in the Island of Jamaica, who also performed the duties of catechists or lay-readers at the said stations. These places are maintained partly by the voluntary contributions of people residing therein, and partly by a vote of money from our missionary society in England."

On account of the change of sovereignty in the Canal territory the Anglican Church turned its work over to the Protestant Episcopal Church, November 1, 1907. The primary reason for establishing the Church here in 1883 was to work among the West Indian laborers. No distinction between white and negro members was made, and the great majority of those who now attend the Episcopal Churches on the Isthmus are negro employees of the Commission. It is the belief of Archdeacon Henry B. Bryan that a majority of the 34,000 negroes in the Canal Zone were brought up under the influence of the Anglican Church, and therefore are nominally Episcopalians. The number of communicants is about one thousand. The schools for lay instruction were abandoned as soon as the Canal Zone public schools were opened, except the schools in Panama, Colon, Las Cascadas and Mount Hope, in which 260 pupils are enrolled.

There are now thirteen congregations of West Indians on the Isthmus: St. Paul's, Panama; St. Augustine's, Paraiso; St. Mark's, Culebra; St. Matthew's, Empire; St. Philip's, Las Cascadas; Ascension, Bas Obispo; St. Andrew's, Gorgona; St. Peter's, San Pablo; St. John's, Mount Hope; Christ, Colon, and missions at Guachapali, Pleya de Flor and La Boca.

Since the coming of Americans the work of the Church has been less closely confined to negroes. Five congregations for white people have been organized: Ancon, Culebra, Empire, Gorgona, and Cristobal.

It will be understood, of course, that religious work in the Canal Zone is not confined to any one sect. The Roman Catholics, Wesleyans, and Baptists have churches at various points in the Zone; and independent services are held in several of the Canal villages. There is no village along the line of the Canal where there is not at least one church, and in several of them there are two or three congregations.

### Rifle Range in Old French Spillway.

A rifle range for the use of the detachment of the United States Marine Corps stationed at Camp Elliott, has been laid off in the spillway dug by the French as part of their scheme for controlling the Chagres River by a dam at Gamboa. As laid off the range is only six hundred yards, but there is room for a longer one if it is desired. The old spillway channel is completely excavated so that there is a level stretch of land about 120 feet wide at bottom, a thousand yards long, and almost completely surrounded by hills. The location is northeast of Santa Cruz and easily accessible by a newly cut trail. The butts are being built in the side

of a hill 190 feet high and 70 feet above the bottom of the old spillway. Back of this hill the railroad track runs to the new storage magazine at Gamboa, but as the subgrade of the track is at 80 feet, and the whole hill is thus between the butts and the railroad, the proximity of the railroad was not considered of any moment in establishing the range.

### Women's Waiting Room, Cristobal.

A waiting room for women has been built at Cristobal, across the track, opposite the north end of the station platform. The building is one story high, 30 feet square, with a screened veranda, eight feet wide, entirely around it. The waiting room is 14 feet by 20 feet, with a toilet room attached.

### Card of Thanks.

Mrs. Ruth E. Averill together with her children, Glenn and Clara, and her brothers, Willis and Lewis Webster, wish to thank the Knights of Pythias, Odd Fellows, Masons, Association of Steam Shovel Men and their other friends for the many kindnesses shown them in their recent bereavement.

### Attention, Kangaroos.

All members of the Independent Order of Panamanian Kangaroos that are to compose the Ancon Court, No. 7, are earnestly requested to meet in the hall over the District Quartermaster's office in Ancon, near Hotel Tivoli, on Friday, November 6, at 7 p. m., sharp. This is a very important meeting, and all are urged to be present. By order of  
SAM B. DENNIS.

### Notice to Shovel Men.

All members of the I. B. of S. S. and D. M. are requested to attend a meeting in the I. C. C. hall, Empire, Sunday, November 8, at 2.30 p. m.  
S. I. LYONS.

### Concerts by the I. C. C. Band.

BAS OBISPO, C. Z.,

Sunday, November 8, 1908, at 2.30 p. m.:

#### PROGRAM.

- 1 March—Santiago Flynn.....Morse
- 2 Selection—Hits of the Day.....Remick
- 3 Waltz—Moonlight on the Hudson.....Tobani
- 4 { a Intermezzo—Ivanhoe.....Van Alstyne  
b Schottische—Let Me Be Your Lemon  
Coon.....Allen
- 5 Selection—The Soul Kiss.....Levi
- 6 Idyl—The Glow Worm.....Lincke
- 7 Popular March—Persian Lamb Rag.....Wenrich
- 8 Overture—Lustspiel.....Suppe
- 9 Patrol—American.....Meacham
- 10 Galop—Telemachus.....Bennett

CRISTOBAL, C. Z.,

On band stand near Clubhouse, Wednesday, November 11, 1908, at 8.15 p. m.:

#### PROGRAM.

- 1 March—Waldmere.....Losey
  - 2 Selection—Mill's Merry Melodies.....Mills
  - 3 Waltz—Thousand and One Nights.....Strauss
  - 4 { a Intermezzo—Napanee.....Williams  
b Schottische—When a Boy Says "Will You?".....Allen
  - 5 Potpourri—The Sunny South (by request).....Lampe
  - 6 Intermezzo—After Sunset.....Pryor
  - 7 Humoresque on The Merry Widow Waltz.....Bellstedt
- Introducing this popular melody from the opera "The Merry Widow," burlesqued in the following manner: 1. A little German band; 2. A flute solo with organ effect; 3. An amateur trombonist, who is willing to show what he can do if only requested to; 4. A street piano; 5. A la ragtime as played on a banjo; and finally—the result, the popularity of this melody has produced—a brainstorm.
- 8 Overture—Four Ages of Man.....Lachner
  - 9 Patrol—American.....Meacham
  - 10 March—Old Salt.....Hildreth
- CHAS. E. JENNINGS, Musical Director.

A concert will be given at Gorgona, C. Z., Sunday, November 15.

## COMMISSARY DEPARTMENT.

## TURKEYS, CRANBERRIES, OYSTERS.

The Subsistence Department has placed orders in the States for a supply of turkeys, cranberries and oysters to be delivered on the Isthmus before Thanksgiving Day. A large enough quantity of each has been ordered to supply all the Commission hotels, as well as families.

Within a few days cold storage supplies for Gatun, Gorgona, Empire, Culebra, Pedro Miguel, Ancon, and La Boca will be shipped from Cristobal on the freight train leaving at midnight instead of on the supply train leaving at 4.30 a. m. This arrangement will reduce the length of the supply train and will enable the department to deliver cold storage articles earlier in the morning on the Pacific side of the Isthmus.

## COMMISSARY PRICES

For week beginning November 3:

## FRESH MEATS.

	Price.
Mutton—Stewing.....per lb	6
Shoulder and neck (not under 6 pounds).....per lb	7
Entire forequarter (not under 10 pounds).....per lb	8
Leg (8 to 10 pounds).....per lb	16
Short-cut chops.....per lb	22
Lamb—Stewing.....per lb	6
Entire forequarter.....per lb	8
Leg (6 to 8 pounds).....per lb	27
Veal—Stewing.....per lb	10
Entire forequarter (15 to 20 lbs).....per lb	11
Loin for roasting.....per lb	21
Chops.....per lb	22
Beef—Suet.....per lb	4
Soup.....per lb	8
Stew.....per lb	12
Corned.....per lb., 12, 14, 16	
Pot roast (from sirloin butt).....per lb	17
Rib-roast, second cut (not under 3 pounds).....per lb	19
Rib-roast, short cut (not under 3½ pounds).....per lb	23
Sirloin roast.....per lb	29
Rump roast.....per lb	29
Porterhouse roast.....per lb	29
Steak, round.....per lb	23
Rib.....per lb	24
Sirloin.....per lb	29
Porterhouse.....per lb	29
Rump.....per lb	29
Tenderloin.....per lb	30

## MISCELLANEOUS.

Livers—Calf.....each	65
Sausage—Pork.....per lb	19
Leberwurst.....per lb	17
Sweet bread—Veal.....each	1.20
Ox tongues.....each	90
Pigs' tongues, pickled.....per lb	15
Eggs, fresh.....dozen	34

## POULTRY AND GAME.

Chickens—Capons.....each	2.40
Broilers.....each	60
Fowls, medium and large.....each, 80c, and 1.00	
Turkeys.....per lb	30
Squabs.....each	45
Suckling pigs (whole).....each	3.50
Suckling pigs (one-half).....each	1.75

## CURED AND PICKLED MEATS.

Bacon—Strips.....per lb	23
English, breakfast sliced.....per lb	\$26
Ham—Sugar-cured, sliced.....per lb	\$25
One-half, for boiling.....per lb	\$21
Ferris.....per lb	20
Beef, salt, family.....per lb	16
Salt pork.....per lb	13

## DAIRY PRODUCTS.

Cheese—Neufchatel.....each	6
Young America.....per lb	22
Swiss.....per lb	31
Edam.....each	1.05
McLaren's.....jar	15
Pinxter's.....tin	22
French cheese in tins—Camembert, Roquefort, Brie, Neufchatel.....tin	20

## VEGETABLES AND FRUITS.

Tomatoes (local only).....per lb	8
White potatoes.....per lb	3½
Sweet potatoes.....per lb	2½
Cabbage.....per lb	4
Onions.....per lb	3½
Cucumbers.....per lb	25
Beets.....per lb	5
Carrots.....per lb	5
Turnips.....per lb	5
Lemons.....dozen	24
Oranges.....dozen	18
Grapefruit.....each	3
Alligator pears.....each	5

§ Sold only from cold-storage and not from Commissaries.

## NEW ARTICLES.

	Price.
Cigarette paper, "La Croix".....book	2½
Viscol shoe dressing, ½-pint.....tin	25
Sticks, shaving, Pear's.....each	25
Pans, sauce, Berlin, No. 012.....each	80

## Stages of the Chagres.

Maximum height of Chagres above low water for the week ending midnight, October 31, 1908:

	Vigia.	Alhajuela.	Gaibon.	Behio.	Gatun (W. Diver'n).	Gatun (Canal).
Height of low water above mean sea level, feet.....	129	92	46	0	0	0
Maximum height above low water, feet:						
Sunday, Oct. 25.....	4.9	4.5	7.5	8.9	3.4	4.6
Monday, Oct. 26.....	9.2	7.2	10.4	11.7	4.9	6.5
Tuesday, Oct. 27.....	9.3	7.3	8.0	14.2	5.3	7.6
Wednesday, Oct. 28.....	8.4	7.3	10.5	14.3	6.5	8.6
Thursday, Oct. 29.....	4.6	4.2	9.2	14.9	5.8	7.9
Friday, Oct. 30.....	7.6	6.2	10.1	15.2	7.1	9.4
Saturday, Oct. 31.....	4.0	4.6	10.0	16.0	7.7	10.0
Maximum for week.....	9.3	7.3	10.5	16.0	7.7	10.0

## UNCLAIMED PACKAGES.

The following is a list of packages that have been forwarded from New York to Isthmian Canal Commission and Panama railroad employees, and that are waiting to be claimed at the freight house at Colon. The owners of these packages will have to make application for free customs entry in connection with Circular No. 85, or in the alternative, pay duty to the Panama Government customs on the value of the contents of the packages, before delivery can be effected:

W. S. Clements, Colon, 1 box, <i>Advance</i> ; July 6, 1908.	
J. F. Montero, Panama, 2 cases instrument boxes, <i>Allianca</i> ; July 15, 1908.	
J. F. Dempsey, Colon, 1 box cloth, <i>Allianca</i> ; July 15, 1908.	
S. Chenalloy, Colon, 1 parcel (No. 7656), <i>Advance</i> ; July 10, 1908.	
C. Thomas, Cristobal, 1 parcel (No. 7778), <i>Esperanza</i> ; August 18, 1908.	
A. Y. Iugram, Colon, 1 bundle wall paper, <i>Finance</i> ; September 8, 1908.	
J. O. Gonzalez, Colon, 1 case hardware, <i>Colon</i> ; September 18, 1908.	
G. H. Jack, Matadin, 1 case plaster paris, <i>Allianca</i> ; September 21, 1908.	
Hugh Crabtree, Las Cascadas, 1 parcel (No. 7848), <i>Allianca</i> ; September 21, 1908.	
Alex Sancloss, Ancon, 1 box E. ware, <i>Finance</i> ; September 26, 1908.	
J. W. Hughes, Cristobal, 5 barrels household goods, 1 crate sewing machine, <i>Finance</i> ; September 26, 1908.	
C. J. Geddes, Gatun, 1 parcel (No. 7862), <i>Finance</i> ; September 26, 1908.	
Haynes Clark, Empire, 1 box, <i>Advance</i> ; October 8, 1908.	
Mrs. Sam Chas. Lewis, Corozal, 1 box, <i>Advance</i> ; October 8, 1908.	
Isthmian Locomotive Engineers, Las Cascadas, 1 box photographs, <i>Advance</i> ; October 8, 1908.	
Mrs. J. K. Baxter, Culebra, 1 parcel (No. 7877), <i>Advance</i> ; October 8, 1908.	

## OFFICIAL CIRCULARS.

## Leaves of Absence.

[The following circular supersedes the circular with the same title, published on page 71 of the issue of THE CANAL RECORD for October 28, 1908.]

CULEBRA, C. Z., October 20, 1908.

CIRCULAR No. 215.

This office has been requested, in numerous recent instances, to waive the rules governing leaves of absence, in favor of employes who have been misled by erroneous information given them by timekeepers, or subordinate officials, and have thus allowed their leave to become forfeited.

To prevent the recurrence of similar misunderstandings, timekeepers and subordinate officials should be instructed to give no information to employes relative to their leave, and to take no action on applications for leave, but to forward all inquiries and applications to the administrative office of the department or division with such comment or recommendation as may be required.

Any case to which the application of the rules governing leaves of absence may not be perfectly clear, should be referred to this office for decision.

So far as may be practicable, the heads of departments and divisions will see that employes apply for their leave before it is forfeited. In future, no plea of ignorance of the published rules, or of misunderstanding due to erroneous information, will be considered.

This circular should be posted on all official bulletin boards and given the widest possible publicity.

H. F. HODGES,  
Acting Chairman

## Pay for November 3.

CULEBRA, C. Z., October 26, 1908.

TO ALL CONCERNED:

November 3, which is to be observed as a holiday in the Canal Zone, is not one of the holidays for which gratuity time is allowed under Circular No. 133, and time for that day will be allowed on the same basis as time for Sundays.

H. F. HODGES,  
Acting Chairman and Chief Engineer.

## LEGAL NOTICE.

EMPIRE, C. Z., October 22, 1908.

To any and all persons who may have any claim or claims against the estate of Philip F. Kramer, deceased, who met his death at the town of Paraiso, Canal Zone, on December 17, 1907: You will present the same on or before the 1st day of December, 1908, to Theodore C. Hinckley, administrator of the estate of P. F. Kramer, Panama, Panama, or E. M. Goolsby, Clerk of the Circuit Court, Empire, Canal Zone, properly verified, or the same will be forever barred according to law.

THEO. C. HINCKLEY,  
Administrator

## Misdirected Letters.

Division of Posts, Customs and Revenues,

Ancon, C. Z., October 31, 1908.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be obtained on request of addressee:

Atkins, John	Meyers, Arthur
Barnes, M. ad C	Moore, Wade H.
Barrett, Fred	McCaill, Dan
Barlow, Edward	McKaig, Mrs. M. E.
Blodgett, Glenn	McKay, Hugh
Coe, Capt. F. W.	Norman, Thos.
Davis, Mrs. D. R.	Pabst, Chas.
Deikman, O. H.	Page, C.
Drummond, J. H.	Patterson, Louis
Duncan, Geo. L.	Peck, W. D.
Elmngren, G.	Phillips, Frank
Emerck, Frank	Rath, Thomas J.
Emlaw, Florence	Rodgers, Viola
Forsyth, L. M.	Ryberg, Oscar
Galiger, Walter	Sullivan, W. F.
Gayer, Carl	Thomas, Gus
Gibson, W. C.	Thull, Peter
Gilman, Wm. F.	Torosian, David
Grauberg, Arthur	Varencamp, Fred
Hall, J. A.	Walker, Hector
Hallagan, Thomas	Walsh, Stephen
Harper, Archie	Wals on, W. H.
Klinger, G. R.	Ward R. G.
Laharty, Joe	Wilbur Ruth
Love, Chas. M.	Whitaker, W. R.
Lybrook, W. A.	Yount, Mrs. J. L.

The steamship *Nordstjernin* sailed from Baltimore, Md., on October 25, with a cargo of 23,784 feet B. M. lumber, 3,500 feet of culvert pipe, and ten 40-ton locomotives for the Isthmian Canal Commission.

The following steamers have recently arrived at La Boca: October 23, *Loa*, from Valparaiso; October 24, *City of Pava*, from San Francisco. Departures were: October 28, *Pera*, for Valparaiso; October 30, *Quito*, for Buenaventura.

THE CANAL RECORD

Ancon, Canal Zone,

Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

## NOTES OF PROGRESS.

### Dredging Curiosities.

The dipper dredge *Mole* is having an interesting experience in deepening the channel alongside the Panama Railroad Company's wharf. In one day last week the material taken from the bottom included, in addition to rock and silt, coffee, sugar, shoes, nails, boiler tubing, hemp and wire cable, canned goods, railroad rails, and a variety of other material that had been dropped into the water in the process of loading or unloading. As much of this material as could not be handled by the dredge was taken out by other methods and some of it is now stored on a lighter alongside the La Boca marine shop. The channel alongside the wharf will be deepened to—38.

Ladder dredge *No. 11* of the Pacific dredging fleet, which has been working on the west side of the Canal, opposite the La Boca marine shop, struck a ledge of rock at—17 last week and further dredging in that locality became impossible, as the rock was too hard to handle with a ladder dredge and was too near the surface at dead low water for the dredge to work over it. Dredge *No. 14* is now working on the east side of the Canal on the way to Miraflores.

### Work at Gatun Dam.

The rock toe at the upstream or south end of Gatun Dam is almost up to the elevation decided on, that is, 60 feet above sea level. The toe is constructed of Bas Obispo rock and runs gradually up to its highest point. It extends from the old line of the Panama railroad to the spillway. When completed the toe will be at an elevation of sixty feet along its entire length, that is, clear across the valley. This toe is not the dam proper, but is only a retaining wall for the dredged material which will form the dam. Beyond the spillway channel a dump has been

started along the west diversion of the Chagres River, extending from the line of the rock toe southward to the limit of the fill it is proposed to make on this toe. The toe can not be extended across the west diversion until the concrete work in the spillway is finished above the high water line of the river.

Spoil from the cut at Mindi is being dumped on the north toe of the dam, and this toe also is assuming something of the appearance it will have when completed. The dump will be extended clear across the valley and so far north that it will include the ground on which the Gatun Island hotel is located. Between these two toes, a distance of 1,700 feet, the hydraulic fill will be made, or, in other words, the dam proper will be located.

The unwatering of the old bed of the Chagres, between the two toes, is almost completed and it will be possible in a few weeks to begin the work of scraping the layer of silt from the bottom. The whole dam site will be cleared of the loose earth covering before the hydraulic fill is begun.

### Locomotives for Porto Bello.

Ten small locomotives for use in the stone quarries at Porto Bello arrived on the Isthmus last week and were loaded on barges, and have been towed to Porto Bello. They came from H. J. Porter & Co., of Pittsburg, and were sent to the Isthmus knocked down. They will be erected at Porto Bello. The locomotives are of the general type used in such service in the United States. They have a 3-foot 6-inch gauge, wheels 40 inches in diameter, cylinders 50 inches by 20 inches, and boilers carrying 160 pounds pressure. They will work from the quarry to the stone crusher, on a grade of from 2½ to 3 per cent on a 20-degree construction track. They are equipped with an air brake rigging. It is believed they will be in service by the middle of December.

### New Corozal Road.

Work on the new highway from Panama to Corozal is well under way. The road bed has been practically all graded, 12,000 cubic yards having been moved during October. The road leaves the Sabanas road about 4,000 feet (three quarters of a mile) from the Caledonia bridge, Panama, and the distance from the Sabanas road to Corozal station is 17,000 feet, about three and one quarter miles, making the distance from Caledonia bridge, Panama, to Corozal station almost exactly four miles. The governing grade is three per cent, with short stretches at a steeper grade at a few hills. The road-bed is 22 feet wide with a ditch 4 feet wide on each side, making the width of the right of way 30 feet.

The macadam section of the road will be 6 inches thick and 16 feet wide. Crushed

stone from Rio Grande is being used. It is delivered on the road by a spur track from the Panama railroad, at a point about one and a half miles from Corozal at the highest point on the road, thus giving the wagons distributing the stone a down hill haul in both directions. About 1,200 feet of stone have been spread and a steam roller will begin work this week. It is thought the road will be completed in a few months.

### October Record of Track Shifters.

The five track shifting machines in the Central Division during the month of October moved a total of 415,858 feet, or 78.8 miles of track. In the Tabernilla district track shifter No. 5 moved 110,200 feet or 20.9 miles, and No. 8 moved 70,064 feet or 13.3 miles. Track shifter No. 7 moved 121,076 feet in the Gorgona district and 4,158 feet in the Empire district, a total of 125,234 feet, or 23.7 miles. No. 9 shifted 39,212 feet of track on the Miraflores dumps and 6,388 feet in the Empire district, a total of 45,600 feet or 8.6 miles. No. 6 shifted 58,160 feet of track on the La Boca dumps and 6,600 feet in the Empire district, a total of 64,760 feet or 12.2 miles. Of the total of 415,858 feet of track shifted, 180,264 feet or 34.2 miles, were moved in the Tabernilla district, 121,076 feet, or 22.9 miles, in the Gorgona district; 17,146 feet or 3.2 miles in the Empire district; 39,212 feet or 7.4 miles on the Miraflores dumps, and 58,160 feet or 11 miles on the La Boca dumps.

### New Record for Ladder Dredges.

A new dredging record was established for ladder dredges in the month of October, when the ladder dredge *No. 1* of the Atlantic dredging fleet excavated 168,796 cubic yards of material. The best previous record for ladder dredges was made in March by the *Gopher* of the Pacific dredging fleet, which took out 168,375 cubic yards. *No. 1*, the dredge that now holds the record, was working during October in the channel in Limon Bay and the material handled was a mixture of mud and rock.

The grand total of material excavated by the dredges in October was below that of previous months owing to several of the dredges being laid up for repairs. A comparison shows:

	Cu. Yds.		Cu. Yds.
March.....	1,330,167	August.....	1,375,991
July.....	1,321,667	September.....	1,374,856
		October.....	1,271,135

This comparison does not take into consideration a certain amount of dredging done each month that is not counted as Canal excavation. For instance, in October, a 20-inch suction dredge working in the channel to the Gatun handling docks took out 57,638 cubic yards of material which was not counted in the total of Canal excavation. This performance is noteworthy because the

## NOTES OF PROGRESS.

(Continued).

dredge is handling a very hard clay which resists the Galveston cutter much as rubber would. The material is taken out in lumps as large as a man's fist, the character of the dredging being much more difficult than the dredge was designed to do. With this exception the dredges of the Atlantic Division were working in the Canal prism in Limon Bay, or in the channel already made in the shore of the bay. Ladder dredge No. 6 was taking out earth and rock, the dipper dredges *Chagres* and *Mindi*, were working in earth and rock, and the new 20-inch suction dredge, No. 85, was working in silt. The new suction dredge worked only the latter part of the month, and the sea-going suction dredge *Ancon* was laid up 18 working days for general repairs. The October records for the Atlantic Division follow:

DREDGE.	Cubic Yards.		
	Earth.	Rock.	Total.
Ladder, No. 1.....	168,796	.....	168,796
Ladder, No. 6.....	71,679	31,868	103,547
Dipper, Chagres.....	33,500	1,850	35,350
Dipper, Mindi.....	21,082	21,382	42,464
20-inch Suction, No. 82.....	57,638	.....	57,638
20-inch Suction, No. 85.....	26,403	.....	26,403
Sea-going Suction, Ancon.....	128,700	.....	128,700
Total.....	507,798	53,100	562,898

The Pacific dredging fleet was also hampered in its work by repairing to three of the dredges. The ladder dredge *Mole* did not begin work in October until the evening of the 19th. The ladder dredge No. 14 was laid up four days, and the dipper dredge, three days. The record follows:

DREDGE.	Cubic Yards.		
	Earth.	Rock.	Total.
Culebra.....	431,537	.....	431,537
Ladder, Gopher.....	103,514	(a)	103,514
Ladder, No. 14.....	not class.	not class.	89,391
Ladder, Mole.....	56,340	.....	56,340
Dipper.....	not class.	not class.	60,501 (b)
20-inch Suction, Sand-piper.....	24,593	.....	24,593
Total.....	.....	.....	765,876

(a) About 2 per cent of this material was rock.

(b) Three thousand six hundred yards of this were taken from outside the prism at the Panama Railroad Company's coal dock.

Accident to the *Cocoli*.

The tug *Cocoli* of the Pacific fleet struck a submerged pile in the harbor of La Boca, October 20. The pile jammed into the propeller and broke the shaft off close up to the wheel. The tug was towed to the beach at Flamenco Island where she was beached, the shaft taken out, and the hole plugged up. She was then brought to the machine shop where the shaft was welded and a spare wheel was put on.

## Preparing for Gatun Concrete Work.

A little below the line of the north toe of Gatun Dam a 20-inch suction dredges is making the channel to the site of the docks at which material for the locks will be stored and handled.

A few days ago the 16-inch suction dredge that had been used in the Colon district was taken to Nombre de Dios, where it is to be used for delivering sand to barges which will tow it to the concrete handling plant at Gatun. During a severe norther on Thursday night last the dredge was sunk in six feet of water. There is a good harbor at Nombre de Dios, but the dredge was not

working in a secure position. There has been fear of storms during the dry season, which come from the north and northeast, but the storm of Thursday night came from the northwest and was most unusual at this season.

Conditions at Porto Bello are such that rock can be delivered whenever it is wanted. In fact it is believed that the deliveries will begin about January 1, when it is proposed to start the concrete work in the spillway.

## Proposals for Corozal Schoolhouse.

Sealed proposals will be received at the office of the Purchasing Agent, Isthmian Canal Commission, Mount Hope, Canal Zone, until 11 a. m., Tuesday, November 17, 1903, when they will be publicly opened, for the erection by contract of a two room schoolhouse at Corozal, Canal Zone. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the architect, Culebra. A deposit of \$5 is required to insure their return.

Each bidder must accompany his proposal with a check, cash or money order for \$50, as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$250 conditioned upon the faithful performance of the contract.

The Commission reserves the right to reject any or all proposals or to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals.

## October Police Report.

The October report of the Chief of Police shows that 489 persons, representing 44 countries, were arrested in the Canal Zone during the month. This is a decrease of 150 for the month, there having been 639 arrests in September. Of the 489 persons arrested, 450 were men and 39 were women, and they were charged with 57 different offenses. They were divided among the towns of the Zone as follows: Ancon, 35; Las Sabanas, 3; La Boca, 27; Corozal, 12; Pedro Miguel, 8; Miraflores, 5; Paraiso, 23; Culebra, 41; Empire, 82; Las Cascadas, 15; Bas Obispo, 11; Gorgona, 63; San Pablo, 12; Tabernilla, 22; Frijoles, 2; Bohio, 5; Gatun, 37; Cristobal, 85. An outpost of the Tabernilla police station was established at Frijoles on October 1, and was made a separate station in charge of a first-class policeman on October 11. The total effective police force on October 31 was 162, and the pay roll amounted to \$22,235.59.

Sixty-seven cases were tried in the courts, 12 of which were dismissed, 43 continued, and 12 in which convictions were secured. Of the 12 persons convicted, 2 were fined, 1 received a jail sentence, 8 were sentenced to the penitentiary, for one year each, and one person forfeited his bail. Seven convicts were discharged from the penitentiary during the month, leaving a total of 113 in the penitentiary on October 31. The number of district prisoners on the same date was 129, a decrease of 91 for the month. The value of work performed by convicts on roads, etc., was \$1,949.80. There were 17 deaths by violence requiring action by the coroner during the month. Nine of these deaths were caused by explosions of dynamite, three by railroad accidents, and two by drowning.

## HEALTH REPORT FOR OCTOBER.

## Excellent Health Conditions.

ANCON, C. Z., November 10, 1903.

To the Acting Chairman and Chief Engineer, Isthmian Canal Commission, Culebra, Canal Zone.

Sir: I herewith forward the report of the Department of Sanitation for the month of October, 1903:

The health conditions upon the whole are, I think, most excellent, though the sick rate has not fallen this year as it has done in previous years. The rates for the past three years, comparing September and October, are as follows.

Month.	Force.	Constantly sick.	Rate per thousand.
1905—September.....	23,264	1,054	37.74
October.....	25,445	857	33.62
1907—September.....	41,062	1,141	27.78
October.....	41,113	1,105	26.90
1908—September.....	43,058	1,130	25.09
October.....	43,593	1,152	26.66

You will see from this table that both the number of sick and the rate is larger in October than in September. The reverse occurred in the preceding two years.

The death rate of the force makes a very good showing. The total rate from all causes being 12.93, but of this only 7.70 was due to disease. Comparing the four years as to the deaths due to disease, we have the following:

Month.	Force.	Deaths.	Rate.
1905—October.....	22,003	60	32.72
1906—October.....	25,445	90	42.44
1907—October.....	41,113	81	23.64
1908—October.....	43,593	28	7.70

That is, the death rate from disease in the force during the past October is just about one-sixth of what it was in 1906.

The malarial conditions, however, for October were not as good as in September, as the following table shows. This table is made up from employees admitted to hospitals:

Month.	Force.	No. of cases.	Rate per thousand.
1908—September.....	45,058	1,410	31.29
October.....	43,593	1,822	41.79

From this table you will see that with a smaller force we had 412 more cases of malaria in October than in September. Taking the past three years, and, considering October, we have the following:

Month.	Force.	No. of cases.	Rate per thousand.
1906—October.....	25,445	1,912	75.14
1907—October.....	41,113	1,596	38.81
1908—October.....	43,593	1,822	41.79

We have had no case of yellow fever since May, 1905, though it exists at several points north and south of us. There has been no case of bubonic plague since August, 1905, though it is occurring at Guayaquil on one side of us and at La Guayra on the other. We have had no case of small-pox within the past year.

Very respectfully yours,

W. C. GORGAS,  
Chief Sanitary Officer.

The Lobnitz subaqueous rock breaker, which is being erected at the La Boca marine shops, was launched at noon, November 5. The work of installing the boiler, engines, and ram is now in progress.

At Miraflores dumps in October the three Lidgerwood unloaders of the Central Division unloaded respectively, 181, 208, and 214 trains, a total of 603 trains, of seventeen 20-yard cars each. The material thus handled equals 205,020 yards car measurement.

## THANKSGIVING.

## The President's Proclamation.

*By the President of the United States of America: A Proclamation.*

Once again the season is at hand when, according to the ancient custom of our people, it becomes the duty of the President to appoint a day of prayer and of thanksgiving to God.

Year by year this nation grows in strength and worldly power. During the century and a quarter that has elapsed since our entry into the circle of independent peoples we have grown and prospered in material things to a degree never known before, and not now known in any other country. The thirteen colonies which struggled along the seacoast of the Atlantic and were hemmed in but a few miles west of tidewater by the Indian-haunted wilderness, have been transformed into the mightiest republic which the world has ever seen. Its dominions stretch across the continent from one to the other of the two greatest oceans, and it exercises dominion alike in the Arctic and tropic realms. The growth in wealth and population has surpassed even the growth in territory. Nowhere else in the world is the average of individual comfort and material well-being as high as in our fortunate land.

For the very reason that in material well-being we have thus abounded, we owe it to the Almighty to show equal progress in moral and spiritual things. With a nation, as with individuals who make up a nation, material well-being is an indispensable foundation. But the foundation avails nothing by itself. That life is wasted, and worse than wasted, which is spent in piling, heap upon heap, those things which minister merely to the pleasure of the body and to the power that rests only on wealth. Upon material well-being as a foundation must be raised the structure of the lofty life of the spirit if this nation is properly to fulfill its great mission and to accomplish all that we so ardently hope and desire. The things of the body are good; the things of the intellect better; but best of all are the things of the soul; for, in the nation, as in the individual, in the long run it is character that counts. Let us, therefore, as a people set our faces resolutely against evil, and with broad charity, with kindness and good will toward all men, but with unflinching determination to smite down wrong, strive with all the strength that is given us for righteousness in public and in private life.

Now, therefore, I, Theodore Roosevelt, President of the United States, do set apart Thursday, the 26th day of November next, as a day of general thanksgiving and prayer, and on that day I recommend that the people shall cease from their daily work, and, in their homes or in their churches, meet devoutly to thank the Almighty for the many and great blessings they have received in the past, and to pray that they may be given strength so to order their lives as to deserve a continuation of these blessings in the future.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this thirty-first day of October, in the year of our Lord

one thousand nine hundred and eight, and of the independence of the United States the one hundred and thirty-third.

THEODORE ROOSEVELT.

By the President:

*Alvey A. Alee, Acting Secretary of State.*

## Culebra Beached for Repairs.

While turning in the new channel at La Boca, about two months ago, the port propeller wheel of the dredge *Culebra* struck a reef, and three of the blades were broken. Since that time it has been working with the damaged wheel. As there is no dry dock on the Pacific side of the Isthmus large enough to dock a vessel of the size of the *Culebra* it was necessary to beach her in order to put on a new propeller wheel. This was done on Naos Island at high tide on the morning of November 8. The old wheel was taken off at low tide and a new wheel put on at the next low tide. The vessel was floated at high tide on Monday morning and resumed her work in the afternoon, after coal-ing at La Boca.

## Canal Zone Schools.

The second meeting of the teachers of the Canal Zone Public Schools was held in the Ancon school building, Saturday, November 7. There were present twenty-two white and twenty colored teachers, the teachers in the white schools meeting in the morning from 9 to 12 o'clock, and the teachers in the colored schools meeting in the afternoon from 2 to 5 o'clock.

According to the general plans for work in these meetings the first part of each session was devoted to a discussion of problems connected with schoolroom organization and class management, and the second part was given over to a discussion of the contents of the different subjects in the present curriculum and the methods of teaching them, special emphasis being placed upon the subject of reading. As a basis for the work of the second part of each session of the meetings, the teachers had prepared beforehand an assignment in "McMurray's Method of the Recitation" on the subject of reading. The larger part of the time was given to discussing those difficulties in reading which are peculiar to the schools of the Zone.

In the session for the white teachers, consideration was given to the monthly reports made out by the teachers, and to a method for avoiding the frequent loss in time to the children, consequent upon the numerous transfers that are made from school to school in the Zone.

In the meeting of the colored teachers most of the first part of the session was given over to a discussion of devices and methods for increasing the percentage of attendance and for avoiding the present great amount of tardiness.

The school for white children opened October 1, and the total attendance for the month of October, 22 school days, was as follows: Cristobal, 1,959; Empire, 1,498; Ancon, 1,405; Gorgona, 1,338; Culebra, 1,257; Las Cascadas, 934½; Colon Beach, 743½; Gatun, 598½; Pedro Miguel, 491; Paraiso, 461½. The daily average for the highest week's attendance for the combined schools was 509.

The schools for colored children also opened October 1, and the following was the total attendance for the month: Cristo-

bal, 2,317; Culebra, 2,044½; Empire, 2,054; Gorgona, 1,529½; Matadin, 1,362; Mount Hope, 975½; Paraiso, 898½; Bohio, 757; Tabernilla, 729; San Pablo, 578½; Playa de Flor, 550½; La Boca, 505½; Cruces, 527½; Las Sabanas, 265½. The daily average for the highest week's attendance for the combined schools was 785.

The average daily attendance for October, 1907, was: White children, 243; white and colored children combined, 880.

There are two high schools on the Zone, Culebra, with a class of 11, and Cristobal, with a class of 9. Of the 11 pupils at Culebra, 5 are from Empire, 3 from Ancon, 2 from Culebra, and 1 from Pedro Miguel. Of the 9 pupils at Cristobal, 3 are from Gorgona, 2 from Gatun, 2 from Cristobal, 1 from San Pablo, and 1 from Colon. In October, 1907, there were five pupils enrolled in the high school, and, at the close of October, 1908, there were 20 enrolled.

Owing to the unexpected increase in number of pupils, the shortage of high school text books, and the insufficient time in which to obtain teachers fitted for the work, the range of studies has been somewhat restricted. However, it has been arranged so that each pupil has four subjects not before studied.

## La Boca Outfall Sewer.

The outfall of the sewer at La Boca has been moved, as it was surrounded in its old location by the dumps at that place. A trench was dug under the railroad tracks to Panama Bay, the outfall pipe was laid in the bottom of the trench and covered with concrete, the concrete covering being used as the floor of an open culvert built in the same trench to which all the surface drainage in La Boca is carried, as the old French drains and those built by the Department of Sanitation are connected with the new outlet.

## Isthmian Baseball League.

A meeting of the Isthmian Baseball League was held at Empire on Sunday, November 9. It was decided to have a league of four teams, consisting of Ancon, Empire, Gorgona, and Motive Power and Machinery of Culebra. The league will open on the 20th of December, and the number of playing dates will be 30. The next meeting will be held in the office of the president of the league at Culebra on Sunday, November 15, and an election of officers will take place at that time.

## Indoor Baseball.

The I. O. R. H. indoor baseball team of Cristobal desires to arrange games with other indoor baseball teams on the Isthmus. The members, all of whom are under nineteen years of age, are: Sanford MacSparren, Harold Delevante, William Russell, George Smith, Ernest Wardeman, David Russell, and Andrew Cartwright. All communications should be sent to Harold Delevante, secretary and treasurer, care of R. M. S. P. Co., Colon.

The dipper dredge of the Pacific dredging fleet at La Boca has been taken off the work in the Canal prism and is dredging a channel at the new unloading dock for the ships of the Union Oil Company. The channel will be 600 feet long, 120 feet wide, and 38 feet deep at mean tide.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

The Hallow-e'en entertainment given October 31 by the Pedro Miguel Social and Recreation Club, assisted by the Woman's Club was one of the most enjoyable affairs that have been given in the club room. A number of guests from Paraiso and other points on the line were present. The club rooms were decorated with palms and bunting for the occasion. A program consisting of a little comedy by members of the Woman's Club, songs, recitations and other musical selections was given. Simple refreshments were served, and the evening ended with a dance.

The two clubs are combining again in the arrangements for a bazaar to be given in the club rooms, November 14. Fancy articles, suitable for Christmas gifts, cakes, and candies will be sold, other features will be a gipsy booth, weighing scales, and a special booth for children. The proceeds of the sale will be entirely devoted to the Christmas fund.

The Culebra Woman's Club held its regular meeting with election of officers on Thursday, November 5, when the following officers were elected: President, Mrs. E. M. Pullen, re-elected; vice-president, Mrs. W. P. Wheeler; secretary, Mrs. Wm. H. Bulter, re-elected; treasurer, Mrs. Robert Wheeler. These officers will serve for one year. The club has reduced its dues to one dollar a year. Entertainments will be organized from time to time in order to keep the treasury in a sound condition.

The study class began its work with 11 members, Mrs. Frank M. Miracle leading. Classes will begin at 4 o'clock on club days. The club meets on the first and third Thursday of each month, at 3 o'clock, beginning promptly. Mrs. E. M. Pullen, the president, is still away on her vacation, but is expected to return about the middle of the present month.

A box party and dance will be given by the Roman Catholic women of Culebra at the Commission clubhouse on Thursday evening, November 12, at 8 o'clock, for the benefit of the church of the Holy Redeemer, now in course of erection at Culebra.

On Tuesday evening, November 17, 1908, the degree team of Alfretta Council, No. 1, Degree of Pocahontas of Improved Order of Red Men, will give a homemade pie social, followed by a dance, in Fraternal Hall at Culebra. Friends are cordially invited, and a good time is assured.

The Cristobal Woman's Club held its regular literary meeting on Wednesday, November 4, the second vice-president in the chair. The reports of the different departments were read, and announcements made, the routine business being followed with a paper by Mrs. E. Lewis Baker, chairman of the art and literature department. A social half hour was enjoyed by the members at the close of the program. The meeting of the home department was held at the residence of the chairman, Mrs. H. J. Slifer, on Monday, November 9. The date of the next literary meeting is November 18, when the program, under the direction of the educational department, will consist of an address by the Superintendent of Schools, Prof. Henry Lester Smith. The address will be followed by a general discussion.

The department has extended a cordial invitation to all mothers who have children in the school to attend this meeting.

The Paraiso Woman's Club is to be reorganized. The women of the community have taken the matter up and it will probably be effected before the end of the month.

The Las Cascadas Woman's Club met at the residence of Mrs. C. F. Merry on Thursday afternoon, November 6. Committees for the month were appointed as follows: Entertainment, Mrs. Naylor, Mrs. Stanton, Mrs. Drysdale, Mrs. Bowers; visiting, Mrs. Decher, Mrs. Grimmison. The opening of the clubhouse will be marked by a dance or other entertainment, in charge of the committee for the month. It has been decided to suspend the regular meeting which falls on November 26, Thanksgiving Day. The club has sent for a number of the Shakespeare plays and will devote a part of the year to general reading.

The social societies represented at Las Cascadas, include the Masonic Club, Knights of Pythias, the Kangaroos, Brotherhood of Locomotive Engineers, the Order of Railway Conductors, the Men's Social Club, and the Woman's Club, and in addition a flourishing Union Sunday school.

The Ancon Woman's Club held its regular meeting on Wednesday, November 4, the president in the chair. The reports of the different heads of departments show that the club is doing good work. The philanthropy department reported its first regular visit, an inspection of the San Blas Indian Industrial School, made on Saturday morning, November 7. Nearly all the members of the department attended, and there were a few guests. The school is in charge of the Christian Brothers. The pupils, of whom there are 17, are given school training, instruction in manual work and athletic exercises.

The next visit of the philanthropy department will be to the home for aged men and women sometime within the month. The dates of the club bazaar have been placed for December 4 and 5, and the members are putting forth their best efforts toward the perfection of arrangements.

The Gatun Sunshine Club will hold a sale of fancy and useful articles suitable for Christmas gifts, on Monday evening, November 23, at the Commission hotel. Ice cream and homemade cake will be served and an entertainment will be given.

The Tivoli Club will give its regular semi-monthly dance on Saturday night, November 14, at the Hotel Tivoli, Ancon.

On Sunday morning at 11 o'clock, the Ven. Archdeacon Bryan will preach and celebrate Holy Communion in the Union church at Culebra. Services will also be held at 4 o'clock in the afternoon.

## Canal Zone Humane Society.

A meeting was held at the residence of the Ven. Archdeacon H. B. Bryan, Ancon, on Friday evening, November 7, for the formation of a humane society. The following officers were elected: President, Col. W. C. Gorgas; vice-president, Archdeacon Bryan; vice-president-at-large, Miss Beattie; secretary, Mr. Charles F. Fondy; treasurer, Mr. J. S. Fearon; directors, Mrs. H. B. Bryan, Mr. and Mrs. George Campen, Mr. Fondy, Archdeacon Bryan and others. The society will appoint secretaries and directors in the

towns in the Zone. Directors' meetings will be held monthly and the general society will meet once a year.

It is understood that the present Panaman administration is in sympathy with the movement and will give all the support and assistance necessary to carrying out the work.

## PERSONAL.

Maj. William L. Sibert and family, sailed from New York on the *Alliance* on November 7, due at Cristobal on November 13.

Mr. William Mitchell Bunker, who is a trustee of the Chamber of Commerce of San Francisco and the representative of that body at Washington during the sessions of Congress, accompanied by Mrs. Bunker, spent several days on the Isthmus during the past week. Mr. Bunker came to the Isthmus to present to the Isthmian Canal Commission the wishes of the merchants of San Francisco in regard to furnishing commissary supplies from California products.

A. S. Zinn, Resident Engineer at Empire, accompanied by his family, sailed on the *Parissina* on November 10, for a vacation of six weeks, to be spent in Costa Rica.

Mr. Edward Schildhauer, electrical and mechanical engineer, and Mrs. Schildhauer have returned to the Isthmus from Europe, where Mr. Schildhauer has been investigating the mechanism of locks on canals in Great Britain, Germany, the Netherlands, and Belgium.

## Missing Men.

Information is wanted in regard to William Storey, an American, who came to the Isthmus three or four years ago from Jamaica where he had resided for two years. Anyone having knowledge concerning him is requested to communicate with Frederick Escala, Cristobal, Canal Zone.

Information is wanted in regard to William or Wilhelm Ewald or Ewalt, who at one time was employed as a cook on the Isthmus. Anyone having knowledge of him will communicate with the American Consul-General, Panama.

## Ancon Amusement Association.

Arrangements have been made with the Lambardi Opera Company, now appearing at the National Theater of Panama, for tickets for members of the Ancon Amusement Association at two performances.

The funds in the treasury of the association make it possible to secure one ticket for each bachelor member and two tickets for each married member, for each of the two performances. Additional tickets for any member can be secured at the reduced rate of \$1.50 each.

The association will attend on Tuesday evening, November 17, *Faust*, and on Thursday evening, November 19, *Traviata*. The attention of members is called to the change in dates as given on the circulars sent to each member.

Members who wish to attend either one or both performances, should inform at once Mr. Tom M. Cook, Ancon, Canal Zone, of the number of tickets desired.

Tickets may be called for, or will be mailed if stamped addressed envelope is furnished, and will be issued in the order in which applications are received.

## CRUDE OIL AS FUEL.

## Delivery and Installations in the Canal Zone.

By the 1st of January, 1909, practically all of the stationary boilers in the service of the Isthmian Canal Commission will be using crude oil as fuel. It is estimated that the monthly consumption of oil at that time will have reached 24,080 barrels, and that the actual saving to the Commission by substituting oil for coal will be at least 65 per cent. Coal is now delivered on the Isthmus by the Panama Railroad Company for \$6.35 a ton, and in the fiscal year ended June 30, 1908, 31,292 tons of coal were used in the boilers in which oil is being used, those under the Mechanical Division. On a commercial basis a barrel of the oil delivered to the Commission will generate as much steam as a quarter ton of coal, and as the oil costs 90 cents a barrel, the saving from a fuel point alone will be 56 per cent. In addition to this the fixed expenses, such as wages of firemen, etc., are considerably less.

Oil is delivered on the Isthmus by the Union Oil Company of California, under a concession granted January 10, 1906, for the construction and operation of a pipe-line from the Pacific to the Atlantic side of the Isthmus over land owned by the United States and the Panama Railroad Company. This company had previously obtained, under date of October 30, 1905, a similar concession from the Government of Panama for the construction and maintenance of a pipe-line across the Isthmus for the purpose of conveying crude oil, and for the erection of pumping stations and storage tanks in the cities of Panama and Colon. The license granted by the Secretary of War is revocable at the will of the Government of the United States, and is conditioned upon the payment of \$500, United States currency, a month, beginning August 1, 1906, into the Canal Zone Treasury, the fund thus created to be set aside for the support of the public schools of the Canal Zone. It is further stipulated in the grant that, if desired, the Isthmian Canal Commission or the Panama Railroad Company may purchase crude oil from the Union Oil Company of California at 90 cents, United States currency, a barrel. In addition to the monthly payment of \$500 to the Treasury of the Canal Zone, the Union Oil Company also pays \$250 to the Government of Panama, and is subject to the usual Canal Zone taxes.

The oil delivered on the Isthmus comes from the Santa Maria fields in San Luis Obispo county, California.

Its consistency is about the same as water, and it can be transported in a pipe-line as readily. It is piped from the field in San Luis Obispo county to Port Harford, where it is pumped into the Union Oil Company's tank steamers, of which there are fourteen serving points in Oregon, Washington, Hawaii, Chile, and Guatemala, as well as Panama. Each ship has a capacity of about 52,000 barrels of 42 gallons to the barrel, and deliveries are made on the Isthmus whenever required. There are seven storage tanks in the Canal Zone, four at La Boca, at the Pacific entrance, and three at Mount Hope, near Colon. Each tank has a capacity of 37,500 barrels. An eighth tank

of like capacity formerly located at Mount Hope was destroyed by lightning on May 13, 1908.

The pipe-line through which the oil is pumped to the Atlantic side of the Isthmus follows the line of the Panama railroad, and is about 48 miles long. It is made of wrought steel pipe, 8 inches in diameter, and 5-16 of an inch thick, with gate valves at one-mile intervals, and without expansion joints. The pipe holds 15,000 barrels of oil. From sea-level to the summit near Culebra the total lift is about 225 feet, and the pumps are assisted by gravity from that point to the tanks at Mount Hope. At the summit the line runs along the edge of the Rio Grande reservoir, and at this point is encased in concrete, so that if the pipe should break the water would not be affected. It is tested to 800 pounds to the square inch, but a pressure of over 300 pounds is seldom used.

A Dow compound pump, driven by steam from boilers in which crude oil is used, furnishes the pressure to pump the oil across the Isthmus, and about 30 hours are consumed in the journey. The oil is so inelastic that it can be ascertained by the pulsation in the plant at La Boca at what moment the valve of the tank at Mount Hope has been closed. As the pipe is laid on the surface of the ground, it follows rather a serpentine course, and the many curves help to overcome the expansion due to the uniformly high temperature in Panama. The estimated investment of the Union Oil Company on the Isthmus in pipe-line and plant is \$1,000,000.

After some litigation, that followed immediately on the grant of the concession, had been disposed of the company was given 180 days in which to lay its pipe. This was at a time when the work involved not only engineering features but also those of providing subsistence and quarters for the men engaged. The laying of the pipe was begun in several places simultaneously, and a large force of men was kept constantly at work, so that the company was ready to deliver oil within the allotted time, although the line was not used throughout its entire length until November 14, 1907. For a time a section of the line from Mount Hope to Colon was used for delivering water to the latter place, pending the completion of the Commission's water line.

During the first months only a few hundred barrels of oil were taken by the Commission, and this was used in the campaign against mosquitoes. The purchases at no time have been more than 14,000 barrels a month.

On account of changes in the line of the Panama Railroad Company and in that of the Canal itself, the pipes have been shifted at many places and, according to the contract, all this work is done at the expense of the Union Oil Company.

At fifteen points on the Isthmus oil is now used as fuel and the installations will be continued until all the stationary boilers are equipped. The method of equipment at the different stations is as follows:

Six boilers are equipped for burning oil at the Cristobal ice plant. A brick arch is erected on the grates in each furnace and the grate bars are covered with broken brick. This arch and floor of broken brick form the combustion chamber into which the oil is discharged through a burner manufac-

tured at Cristobal shops. This plant like all others on the Isthmus, uses steam for spraying the oil. The burners are placed on the dead plate near the fire door.

At the Gatun pumping station two locomotive-type boilers have been equipped for using oil. Each fire box is fitted with a brick flash wall, the top of which extends to the bottom row of tubes. At this plant a patented burner is used for spraying the oil. The burner is placed in the ash door opening and tipped so that the flame will impinge on the flash wall near the tube sheet.

At the Mount Hope pumping station the W. N. Best burner is used on each of the two locomotive-type boilers. This plant is equipped in the same manner as at the Gatun pumping station.

At the Tabernilla pumping station two old French marine-type boilers are using oil as fuel. The flash wall is placed in the flue about four feet from the fire door, the lower half of this flue being covered with brick so that the gases will not impinge on the sheets until combustion has taken place.

At the Gorgona pumping station two marine-type boilers have been equipped for burning oil, although only one is used at a time. These boilers are equipped in practically the same manner as those at the Tabernilla pumping station.

At the Gorgona shops five horizontal return tubular boilers have been equipped for burning oil and the sixth one is nearly completed. Two of these boilers are equipped with a modification of the Warren burner and three with a modified Booth burner, each boiler using two burners. The burners are placed at an elevation midway between the ash and fire doors. The furnaces are equipped with hollow flash walls and two secondary floors so that all air required for combustion is first drawn into the heated flash wall and along the upper secondary floor, through which it passes through openings about one-half inch wide to the furnace, where ignition takes place.

The Las Cascadas air compressor plant is equipped in a manner similar to that of Gorgona, with the exception that the Booth type of burner is used under all of the boilers.

Six boilers are burning oil at Empire shops and six more are being equipped. The method of installation is similar to that at Las Cascadas and Gorgona, with the exception that all burners are of the W. N. Best type.

The Rio Grande air compressor plant has three boilers equipped for burning oil and the remaining three will be finished about November 15. The equipment at this plant is identical with that of Las Cascadas.

The Ancon pumping station has one vertical boiler burning oil at the present time, and two horizontal return tubular boilers are being equipped for that purpose. This plant has been experimenting with the Booth, Best, and Owens types of burners.

At the La Boca electric light plant seven boilers are equipped for fuel oil, five of which are of the Manning type and two of the Sterling type. Each of these boilers is using the W. N. Best type of burner. The fire boxes of the vertical boilers are lined with one course of brick to within about one foot of the lower tube sheet, and a checkered flash wall is placed at right angles to the burner about three-quarters of the diam-

eter of the boiler from the burner, the burner being placed in the ash door opening and the flame directed against the flash wall.

At the La Boca ship yards four French boilers of the marine type are using fuel oil and are equipped with several types of burners made at the La Boca shops. In these boilers no flash wall is made use of, the flame being allowed to extend the whole length of the furnace. Most of the floating equipment at the Pacific entrance, including dredges, clapsnets, tugs, and launches, are equipped with oil burner and storage tanks and are using oil.

The approximate amount of oil that will be used per month at the different plants on the Isthmus is as follows:

	<i>Barrels.</i>
Cristobal shops.....	650
Cristobal ice plant.....	3,900
Mount Hope pumping station.....	280
Gatun pumping station.....	600
Tabernilla pumping station.....	450
Gorgona pumping station.....	600
Gorgona shops.....	3,000
Las Cascadas air compressor plant.....	1,800
Empire pumping station.....	200
Empire shops.....	7,000
Ancon pumping station.....	1,100
La Boca shops and floating equipment.....	3,200
La Boca electric light plant.....	1,300
Total.....	24,080

The question of using oil as fuel in the locomotives at work on the Canal has been considered, but for the present it has not been thought wise to take up this experiment. The Panama Railroad Company has placed one order for twelve locomotives to be equipped with oil tanks and oil burning apparatus. It is expected the first delivery will be made in about a month.

#### Concert by the I. C. C. Band.

GORGONA, C. Z.

Sunday, November 15, 1903, at 6 p. m.

#### PROGRAM.

- 1 March—*Santiago Flynn*.....Morse
  - 2 Selection—*George Washington, Jr.*.....Cohan
  - 3 { a Popular March—*Persian Lamb Rag*.....Wenrich  
b Schottische—*When a Boy Says "I'll  
You?"*.....Allen
  - 4 Waltz—*Jolly Fellows*.....Vollstedt
  - 5 Clarinet Solo—*Southern Bells*.....Thornton
- JOHN GRAY
- 6 Selection—*Hits of the Day*.....Remick
  - 7 { a Intermezzo a la Rag—*Pickles and Peppers*.....Shepherd  
b Intermezzo a la Indian—*Peacock*.....Van Alstyne
  - 8 Overture—*Four Aces of Mau*.....Lachner
  - 9 Humoresque on *The Merry Widow*.....Waltz
- Introducing this popular melody from the opera "The Merry Widow," burlesqued in the following manner: 1. A little German band; 2. A flute solo with organ effect; 3. An amateur trombonist, who is willing to show what he can do if only requested to; 4. A street piano; 5. A la ragtime as played on a banjo; and finally—the result produced by the popularity of this melody—a brainstorm.
- 10 March—*Conde*.....Wettge

CHAS. E. JENNINGS, Musical Director.

A concert will be given at Empire, C. Z., Sunday, November 29.

In accordance with the advertisement of the General Manager of the Panama Railroad Company, offering several of the company's properties in Colon for lease, the old tenants of the properties have been given new leases.

The first installment of electrical machinery for the Gatun handling plant has arrived on the Isthmus. It is expected the plant will be in operation by July 1, 1909.

### "NO HELP WANTED."

#### Little Chance for New Men in the Canal Zone.

The primary reason why the sign "No Help Wanted" is displayed along the line of the Canal is that the work has passed its highest point, so far as the employment of men is concerned. The present tendency is not to employ more men, but to reduce the force, and this applies alike to clerical, artisan, and labor classes.

From this time forward the work in the Canal Zone will be confined largely to actual Canal building, that is, to excavation and dam and lock construction. Building and municipal work, erecting houses, installing water and sewer systems, and road making, have reached the stage where most of the expenditure from this time forth will be for maintenance. On this account the forces formerly engaged on municipal engineering and building have been reduced, and in consequence the services of a number of clerks, engineers, carpenters, plumbers, and other artisans have been dispensed with. Whenever possible the men whose services are not needed in one division of the work are employed on another, and this system of transferring members of the present force also reduces the number of positions open to new men.

The bulk of the manufacturing heretofore done in the shops is no longer necessary, because the heads of the various divisions of the work can now estimate, six months or more ahead of time, what spare parts will be needed, and material can be purchased in the States at a considerable saving in cost. On this account the mechanics and helpers heretofore engaged on manufacturing in the shops are facing a reduction in force, and a number of them have already been given free passage back to New York. This reduction, like the others, is in the interest of economy. It has the effect of making it almost impossible for mechanics not already in the employ of the Commission to find work on the Isthmus.

The demand for clerks has also ceased, for the number of men in this class of the service is greater than the number of positions, due to the abolition of three divisions, and the curtailment of work in the Mechanical Division. Therefore, the clerical force is being reduced, instead of being increased.

The work of laying concrete in the locks at Gatun and on the Pacific slope cannot begin until the completion of certain contracts for the supply of the plant needed to handle the material. These contracts will not be finished before next spring. This being the case there is no present object in pushing the work in Culebra Cut faster than it is now going, since at the present rate, the excavation there will be finished as soon as the locks and dams. The construction force is, therefore, at its maximum until the laying of concrete begins, when there will be a demand for men skilled in that work.

Finally, the "gold" employes on the Canal work are no longer a shifting force. The men who are here want to stay, both because they are interested in their work and like the country, and because the wage scale is higher than in the States. Thirteen hundred "gold" employes, out of the total of 4,328, have their families here, and are occupying Commission quarters. They form

a nucleus that not only is not anxious to leave, but is desirous of staying until the Canal is completed.

The problem of unskilled labor, at one time vexing because it was so difficult to procure men, has become a problem of how to keep the laborers already under contract employed. Common laborers are no longer asked to come to the Isthmus. They come of their own volition and apply for work.

A comparative statement of the gold and silver forces at work on the last days of June, July, August, and September is appended. The "gold" force includes all American clerks, artisans, and construction men, while the "silver" force includes laborers and negro artisans:

	Gold.	Silver.	Total.	Expenditures for salaries and wages for the month
June 30, 1908.....	4,587	20,991	25,578	\$1,515,602.15
July 31, 1908.....	4,477	21,049	25,526	\$1,407,660.17
Aug. 31, 1908.....	4,396	21,436	25,832	\$1,416,515.93
Sept. 30, 1908.....	4,328	21,129	25,457	\$1,499,213.26

This statement shows a steady decrease in the "gold" force. With regard to the "silver" force it does not give an adequate idea of the total number of laborers on the rolls of the Isthmian Canal Commission, because the labor force is never all at work at one time, whereas practically all the "gold" force is constantly at work. The decrease in the "gold" force has probably been more marked since October 1 than in any of the three previous months, owing to the reduction in the shops. Data for October has not yet been compiled.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

Election day and night, together with the night preceding, afforded much fun, excitement and recreation. Temporary telegraph offices had been installed in clubhouses on election night and, by direct cable service, election bulletins were received almost as soon as returns were known at New York. These bulletins were exhibited on stereopticon screens. A program of music, monologues, sketches, and general fun-making was carried out. The climax of interest and excitement was in the local municipal elections. Political rivalry was so strong and interest so keen that scarcely any Americans were attracted to Panama and Colon, notwithstanding that election day was a holiday, because of occurring on Independence Day of the Republic of Panama. A tally register count showed an attendance of more than 5,000 within the clubhouses during the day and night, besides there were several hundred persons who could not gain admission but who listened to campaign speeches delivered from the clubhouse steps.

A tally-register count of attendance in the four Commission clubhouses from October 25 to November 7 (both inclusive) was as follows:

OCTOBER 25-31.

	Total attendance.	Average per day.	High day.	Low day.
Culebra.....	2,371	339	648, Oct. 25	232, Oct. 27
Empire.....	2,657	380	512, Oct. 31	300, Oct. 30
Gorgona.....	2,056	294	529, Oct. 31	191, Oct. 27
Cristobal.....	2,799	400	502, Oct. 30	280, Oct. 26
Total.....	9,883	1,412	1,728, Oct. 31	1,066, Oct. 27

NOVEMBER 1-7.

	Total attendance.	Average per day.	High day.	Low day.
Culebra.....	3,342	477	806, Nov. 2	279, Nov. 6
Empire.....	3,937	562	1,399, Nov. 3	303, Nov. 6
Gorgona.....	2,743	392	871, Nov. 3	273, Nov. 4
Cristobal.....	5,065	724	2,007, Nov. 3	324, Nov. 6
Total.....	15,087	2,155	5,085, Nov. 3	1,192, Nov. 6

The Ernest Gamble Concert Party, who made themselves so popular by their entertainments in the clubhouses in December of last year, will visit the Isthmus again and will be accompanied by Miss Edith Harris Scott, contralto and reader. Other members of the company are Ernest Gamble, basso; Verno Leone Page, violinist; and Sam Lauberson, pianist. The company will appear at Cristobal, Saturday evening, November 14; Gorgona, the 15th; Culebra, the 16th, and Empire, the 19th.

The standing of the bowling league on November 9, was as follows:

	Played.	Won.	Lost.	Per cent.
Cristobal.....	63	39	24	.617
Empire.....	63	39	24	.617
Culebra.....	57	24	33	.421
Gorgona.....	57	18	39	.315

CRISTOBAL.

The result of the local election, held at the clubhouse on November 3, was a complete victory for the Panama Railroad ticket, all their candidates being elected.

The score of the games howled at Cristobal on Saturday evening, November 7, was as follows:

	First.	Second.	Third.
Cristobal.....	696	877	817
Empire.....	820	785	787

GORGONA.

Monday, November 2, the various political parties of Gorgona joined forces for the time being and pulled off a political rally that would have done justice to the States. After parading the streets they gathered at the clubhouse, and the various candidates were called upon for speeches. On Tuesday evening, November 3, a general election was held at the clubhouse. Dan Wright, Geo. Loughrey and Frank Lasker were elected aldermen, and William Witmer was chosen mayor. A smoker was a feature of the evening, while the returns were being received from the States by special wire.

Friday evening, November 6, the Gorgona Y. M. C. A. Dramatic Club held its first rehearsal of a new drama, which will be given to the public early in December.

Sunday afternoon, November 8, an informal "sing" was held at the clubhouse. A piano and

two vocal solos were special features of the service. Sunday evening, November 15, at 8.30 o'clock, the Gamble Concert Party will give a sacred concert at the clubhouse.

## CULEBRA.

In the local election held at Culebra, November 2, Mr. E. M. Pullen was elected mayor for the ensuing year, receiving 166 votes out of 260 polled. Mr. C. A. McIlvane was second with 81.

As a result of a caucus of representative citizens from the four wards of Culebra, held at the Y. M. C. A. on the evening of November 6, in response to the proclamation of the mayor, published November 3, nominations were made for the following officers of the municipal government: judge of the city court, district attorney, city clerk, sheriff of city court, city treasurer, coroner, councilmen. Further nominations for these offices will be received if accompanied by a petition signed by twenty-five voters. These petitions must be presented to Mr. W. H. Baxley, city clerk, pro tem., before 6 p. m., Wednesday, November 11. The election will be held November 13, from 7 to 9 p. m.

On Saturday, October 31, the boys' departments of the Cristobal and Culebra Y. M. C. A. held an all day meet at Cristobal. In the morning the 15-yard dash, running high jump, a basketball game and relay race were held; and following these events an indoor baseball game was played. In the afternoon two bowling matches were rolled, one of duck pins and the other with regular pins. The following is a summary of the events:

15-yard dash—First, Simms of Cristobal; second, Atkins of Culebra; third, Roe of Culebra.

High jump—First Simms, Cristobal; second, A. Lindersmith, Cristobal; third, Morris, Cristobal.

Relay race, won by Culebra

Baseball game, won by Culebra 18 to 16.

Duck pins, won by Culebra.

Regular pins, won by Culebra.

Total points scored, Cristobal 34; Culebra 52.

The Culebra Y. M. C. A. pool and billiard team defeated the Empire team, Saturday evening, November 7, four games to one. In billiards Tragsdorf defeated Housel 100 to 86. Strong defeated Elgard 100 to 93. In pool Fleischman defeated McKeever 100 to 69; Stevens defeated McIlroy 100 to 72. Chapple of Empire defeated McRaven of Culebra 100 to 32.

The Gorgona basket-ball team was defeated at Culebra by the score 29 to 19. Line up of Culebra—Rackle, captain; Cushing, Smith, Bath, King. Line up of Gorgona: Edson, Christ, Swinson, captain, Hennen and McCormick.

The score of the games bowled at Culebra on Saturday evening, November 7, was:

	First.	Second.	Third.
Culebra.....	803	822	751
Gorgona.....	772	783	780

## EMPIRE.

Open house was observed November 3, election day, and 1,398 people visited the clubhouse. The result of the election was as follows: For Mayor of Empire—Gorham, 141; Davies, 47; Rourke, 32; Hummer, 79; Warrick, 10; Perry Brown, 10; Williams, 7; Porter 5.

The Marine band furnished music which was appreciated by the large audience. Mrs. Gorham and Miss Hillerman gave a piano duet; Mr. Dohrman and Mr. Moore, a vocal duet; Mr. Gray, a back and wing dance; Mr. Jacobs, song and dance; Miss Clark, vocal selection. Refreshments were furnished by the ladies of Empire during the evening, Mrs. Johnson being chairman of the committee.

The two-men bowling tournament has begun and there is much interest, as one man must depend upon the good work of the other.

Arrangements are being made by the campaign committees for the inauguration which will be combined with a smoker given in the near future.

## Misdirected Letters.

Division of Posts, Customs and Revenues, Ancon, C. Z., November 10, 1908.

NOTE—Shovels in the one-hundred class are 75-ton Bucyrus and Model 60 Marion with dippers of a capacity of 2½ cubic yards. Shovels in the two-hundred class are 95-ton Bucyrus and Model 91 Marion with dippers of a capacity of 5 cubic yards. Shovels in the fifty-class are 45-ton shovels with dippers of a capacity of 1½ cubic yards. These shovels are under steam for eight hours per day, but are not actually worked during this entire period, time being lost by the necessity of moving the shovel forward, blasting stone too big for the shovel to handle, keeping the shovel supplied with cars, etc.

## COMMISSARY DEPARTMENT.

## COMMISSARY CORRESPONDENCE.

Patrons of the Commissary Department, when dealing with the Cristobal office, will address their individual orders, deposits, etc., to the Order Room, Commissary Department, Building No. 2, Cristobal.

Complaints should be made in separate letters and addressed to the Subsistence Officer, Building No. 2, Cristobal.

JOHN BURKE,  
Manager.

Approved:  
EUGENE T. WILSON,  
Subsistence Officer.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

## LEGAL NOTICES.

In re Estate of Anatole Laurence, Deceased.—To any and all persons having any claim or claims against the estate of Anatole Laurence, deceased, who died at Empire, Canal Zone, on the 18th day of September, 1908:

You are hereby notified to present your claims, duly verified, to Felix Laurence, administrator of said estate, or to the undersigned, on or before the 1st day of June, 1909, or your claims will be forever barred according to law.

Witness my hand, this 6th day of November, A. D. 1908.

E. M. GOOLSBY,

Clerk of the Circuit Court, Second Judicial Circuit, Canal Zone, of Empire.

EMPIRE, C. Z., October 22, 1908.

To any and all persons who may have any claim or claims against the estate of Philip F. Kramer, deceased, who met his death at the town of Paraiso, Canal Zone, on December 17, 1907: You will present the same on or before the 1st day of December, 1908, to Theodore C. Hinckley, administrator of the estate of P. F. Kramer, Panama, Panama, or E. M. Goolsby, Clerk of the Circuit Court, Empire, Canal Zone, properly verified, or the same will be forever barred according to law.

THEO. C. HINCKLEY,

Administrator.

EMPIRE, C. Z., November 2, 1908.

Estate of } Administration.  
Michael Doyle

All relatives of the late Michael Doyle, an American, who died intestate at Ancon Hospital on the 20th of July, 1908, are hereby requested to communicate with the Administrator of the estate. Also all persons owing the said estate will likewise communicate with the Administrator in order that a settlement may be effected; and all creditors of the estate must file their claims, properly verified, with the Administrator within six months, or the same will be barred.

F. H. SHEIBLEY,

Administrator.

## Tug Service Porto Bello and Nombre de Dios.

## FROM COLON TO NEW ORLEANS VIA KINGSTON.

Jamaican	Leyland Line	about Nov. 22
Antillian	Leyland Line	about Nov. 30

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, calling at Puerto Barrios, and from Colon at 1.30 p. m., via Port Limon and Puerto Barrios, for New Orleans.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The following steamers have recently arrived at La Boca: November 1, *Peru*, from San Francisco, and *Chile*, from Valparaiso; November 6, *Aysen*, from Valparaiso. Departures were: October 30, *Quito*, for Buenaventura; November 3, *Loa*, for Valparaiso; November 4, *City of Para*, for San Francisco.

A deep water channel is being dredged from the Panama railroad docks at La Boca to the marine shops, which are located on the Rio Grande. When it is completed the vessels at the Pacific entrance can run up to the shops at any stage of the water.

Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

## NOTES OF PROGRESS.

### Chairman's Monthly Report.

The report of the Acting Chairman of the Isthmian Canal Commission for October is published in other columns of this issue of THE CANAL RECORD. The work of reorganization was continued, and, effective October 12, the Division of Meteorology and River Hydraulics was abolished, the duties pertaining to that division being assigned to the Assistant Engineer in the office of the Chairman and Chief Engineer. The grand total of excavation for the month was 3,286,173 cubic yards. This includes 57,638 cubic yards of dredging in connection with the dock for the handling plant at Gatun and is outside of the excavation for actual Canal construction.

In the Atlantic Division 119,272 cubic yards of material were dumped on the south toe of Gatun dam, 35,989 cubic yards of this material being rock from Bas Obispo, and the remainder from the lock site, the spillway, and from Mindi. On the north toe of the dam 39,290 cubic yards of material from the spillway and Mindi were dumped. Dredging for sand was commenced at Nombre de Dios on October 27.

The excavation in the Central Division, which includes Culebra Cut, amounted to 1,598,981 cubic yards, of which 1,551,409 cubic yards were from the Canal prism. The average number of steam shovels at work in this division was 49.55 against 39.85 in October of last year. The output per shovel per day was 1,185 cubic yards against 800 cubic yards a year ago, an increase of 48 per cent.

The average number of laborers employed daily was 13,396; 392.323 tons of explosives were used, and 399,984.7 feet of rock drilling was accomplished.

The surplus of labor on the Isthmus continued. No laborers were imported during

the month, and none are being recruited at this time. The agent of the Commission for the recruiting of European laborers, with headquarters at Paris, has been withdrawn and arrangements have been made with the agents of the several steamship lines which have transported laborers to the Isthmus to act as recruiting agents for the Commission, in the event it should become necessary to secure additional Europeans. One of the recruiting agents in the West Indies has also been withdrawn.

During the month 181,331 meals were served at the various hotels. There has been a constant diminution in the meals served both in the Spanish messes and in the colored laborers' kitchens. The attendance at the messes has fallen from about 4,000 per day on August 1, to 3,400 per day on November 1, and the attendance at the kitchens has fallen from 6,000 a day on July 1, to 4,000 a day on November 1. It is estimated that there are about 7,000 laborers that do not eat at the kitchens or live in Commission quarters.

On the relocation of the Panama Railroad 3,831 linear feet of permanent track were laid, making a total of 47,407 feet. The force of laborers on this work during the month averaged 908.

The Division of Public Works of the Department of Civil Administration, reported that during the month 27,733,000 gallons of water were used in the city of Panama, and 22,063,125 gallons in the city of Colon. Health conditions continued to be satisfactory during October.

### Two Hundred Dump Cars.

A contract has been let to the Western Wheeled Scraper Company for 200 steel dump cars of 12 yards capacity. The first consignment will be delivered at Cristobal about January 1, and the contractor has agreed to finish the deliveries in March. Eight different firms submitted bids varying from \$900, for a car lighter than that called for in the specifications, to \$1,535. The contract was awarded at the rate of \$948 for each car, a total of \$189,600.

The car contracted for is of the gravity type, similar to the 300 Western dump cars and the 500 Oliver dump cars now in use on the Isthmus. Some of the bidders, including the successful one, sent engineers to the Isthmus to study the conditions peculiar to the work here and, as a result of their investigations and of suggestions made by the Commission, the new cars will be superior to those already in use, although the latter have been satisfactory. One of the chief difficulties in the dump cars in use is the failure of the side door, and in the cars now being built special attention is paid to the design of the door in order to obviate the difficulties at present experienced. The draft sills of the new cars have also been made

considerably heavier than those in the present cars. The improvements are simply those suggested by two and one-half years' experience with this type of cars on various parts of the work. The center sills and latch rigging have also been improved.

The new cars will be 21 feet over the striking plates, with inside dimensions 19 feet by 9 feet by 22½ inches. Their weight unloaded will be about 29,000 pounds. The clearance between the door and the floor when the car has been dumped will be 4 feet 8 inches. The cars will be delivered knocked down and will be erected on the Isthmus.

### Additional Cold Storage Unit.

Authority has been given for an additional unit at the cold storage plant at Cristobal, and specifications have been sent to the Purchasing Officer at New York for a 150-ton ammonia compressor and engine to be shipped to the Isthmus as soon as practicable. When the new unit is installed it will give a total capacity of 375 tons of refrigeration for the compressor plant.

One of the cooling rooms in the cold storage plant that heretofore has been kept at a temperature of 26 degrees Fahrenheit has been turned into a freezing room and will be kept at a temperature of 10 degrees Fahrenheit, which will keep meat in good condition for six months.

### Another French Dredge.

Dredge No. 21, an old French ladder dredge, was hauled on the shipways at the La Boca marine shops on Thursday, November 10, to be rehabilitated. This vessel was erected at the La Boca shops during the French régime, but never had any of her machinery installed, and is now back on the same ways from which she was launched about twenty years ago.

From the water line to the top of her tower the dredge is in good condition, and after a new bottom is put on she will be practically new. All the machinery to be put in is old French stock found on the Isthmus, and it is intended to install oil-burning apparatus under the boilers.

This is the fourth dredge of this type to be rebuilt at La Boca, and it is expected that the rebuilding will cost about \$40,000, while a new dredge of equal capacity would cost \$125,000.

### October Money Order Business.

The report of the Chief of the Division of Posts, Customs, and Revenues for the month of October shows that 14,472 money orders, amounting to \$441,783.30, were issued, an increase of \$11,792.83 over the amount reported for September. Of the \$441,783.30 in October, \$321,095.19 was in orders drawn payable in the United States and elsewhere, and \$120,688.11 in orders drawn payable in the Canal Zone. The fees collected amounted

## NOTES OF PROGRESS.

(Continued).

to \$1,815.37, and the amount paid and repaid was \$126,309.98.

The largest number of orders, 2,562, was issued at Cristobal, and amounted to \$69,405.41, an average of \$27.09 per order. Empire was second in the number of orders issued, 1,832, but was third in amount, \$55,249.34, making an average per order of \$30.16; Gorgona was third in the number of orders issued, 1,543, but was second in amount with \$58,956.54, an average per order of \$38.21, the highest average for any post office during the month. Ancon was fourth with the number of orders issued, 1,442, and sixth in amount, \$33,971.87, an average of \$23.56, the lowest average amount per order shown for the month. Culebra was fifth in orders issued, 1,270, but was fourth in amount, \$37,131.14, an average of \$29.24. Pedro Miguel was fifth in amount, having sold 969 orders, amounting to \$35,026.73, an average of \$36.15, the second highest average shown. The average of all the orders issued was \$30.53.

## New Gridiron at La Boca.

A new gridiron is under construction at the La Boca marine shops. It is 300 feet long, 50 feet wide, and when completed will accommodate a vessel the size of the suction dredge *Culebra*.

The foundations of the structure will be 44 concrete piers, placed 7 feet apart and extending the full width of the gridiron. The piers will rest on solid rock and a layer of mud and silt, from two to ten feet deep, is being removed from the site. As the variation in the tide on the Pacific side of the Isthmus is about 20 feet, the gridiron is so situated that a vessel, placed on it at high tide, will be entirely above water at low tide so that work can be done on the hull between tides. It is expected that the work will be finished in about three months.

## Commission Action.

At a meeting of the Isthmian Canal Commission on November 7, 1908, the following action was taken:

There being no provision in the General Conditions of Employment, adopted by the Commission at its 129th meeting, for the payment to the estate of an employee dying while on leave of absence the amount due for the period from the effective date of the employee's leave to the date of his death, and it being deemed desirable to provide for future cases of this character, it was

*Resolved*, That if an employee who has entered upon his leave of absence, with pay, dies while on such leave, his estate shall be paid the amount due him for the period from the effective date of his leave to the date of his death, both inclusive; *Provided*, that in case of the death of an employee before return from leave of absence and after expiration of the same, payment of salary accrued for the leave period may be made, with the approval of the Chairman.

## Additional Fire Alarm Boxes.

Additional boxes are being added to the fire alarm systems of several towns in the Zone. Fire boxes have recently been added to the Ancon system, making a total of 15 in that system. The new boxes have been located at the following points: Near house No. 137, Ancon; near house No. 22, East La Boca; between the La Boca commissary and the electric light plant; at the La Boca marine shops, and on the wharf at La Boca.

The latter box is connected with five auxiliary boxes located at convenient points on the wharf.

The Gorgona system has had two additional boxes put in, one near house No. 88 and one near house No. 161. This addition makes a total of eight boxes at Gorgona.

Four boxes will be added to the Cristobal system which will bring the total up to 14 fire alarm boxes. The new boxes will be placed between the bakery and the paint shop; at the Folks River labor camp; at the general offices of the Panama Railroad Company, and on the beach near the residence of Mr. R. Budd.

One additional box will shortly be put in at Empire, and will be located near the row of type 14 houses west of the Disbursing Office. This addition will make a total of 11 fire alarm boxes in the Empire system.

## Administration of Estates.

The estates of foreigners who die in the Canal Zone are administered by the consul of the country of which they were citizens or subjects. The estates of American employes of the Isthmian Canal Commission or of the Panama Railroad Company who die in the Zone, when such estates do not exceed \$500 in value, are administered by the Collector of Revenues of the Canal Zone. The laws of the Canal Zone provide for the judicial appointment of administrators, and that method of administration is generally resorted to in cases which do not come within the jurisdiction of foreign consuls or of the Collector of Revenues. But cases frequently arise which cannot be handled by consuls or by the Collector of Revenues, in which the property is of too small value to justify judicial administration, or there are no heirs or other persons to commence administration proceedings.

The Code of Civil Procedure of the Canal Zone provides that when a person dies intestate, owning property in the Zone, and leaving no heir or person legally entitled to

the property, the estate shall, after proper petition, notice, and hearing, escheat to the Canal Zone, and shall be administered upon by the Collector of Revenues, the proceeds to be used for the benefit of Zone schools.

The Head of the Department of Civil Administration has, at the suggestion of the Auditor of the Zone, taken the matter up, and all personal effects in the hands of Hospital Superintendents, the Chief of Police, or other persons, which it has been impossible to dispose of by any of the ordinary methods of administration, will be disposed of by the Collector of Revenues, under the law referred to, for the benefit of the Zone schools.

## Accident to Pay Car.

Isthmian Canal Commission pay car, No. 1, was wrecked at the Cut-off near the Gorgona shops on Saturday night, October 14, on its return trip to Empire after completing the monthly payment of employes. The ash-pan on Engine No. 57 dropped and threw the tender off the track. The caboose, immediately behind the engine, was thrown over the embankment and the pay car was tipped over on its side across the tracks, blocking both the north and southbound tracks. While the pay car was badly damaged no one was hurt and no money was lost. The accident occurred about 6.30 p. m. and by 10 o'clock the wreck was cleared.

## Lidgerwood Unloaders at La Boca.

The three Lidgerwood unloaders of the Central Division working on the La Boca dumps during the month of October unloaded 709 trains, composed of a total of 11,929 cars. Of this number, engine No. 226 unloaded 259 trains composed of 4,366 cars; engine No. 265 unloaded 238 trains with 3,994 cars and engine No. 264 unloaded 212 trains with 3,569 cars. As all the cars were 20-yard cars, the material unloaded represents about 238,580 cubic yards.

## LABOR FORCE FOR OCTOBER.

The report of the Chief Quartermaster for the month of October, shows that a total of 24,935 persons were actually employed on Canal work on October 31. Of this number 4,183 were "gold" employes, and 20,752 were "silver." The additions to the "gold" force during the month were 262, and the separations 402, making a reduction of 140. Of the additions to the "gold" roll, 82 people were employed in the United States, 160 employed or re-employed on the Isthmus, and 20 were transferred from the Panama Railroad Company. Of the 402 separations, 90 people voluntarily left the service, 244 were discharged, 55 resigned, 5 died, 3 were changed to a "silver" basis, and 5

were transferred to the Panama Railroad Company. The surplus of labor on the Isthmus continues and no laborers were imported during the month.

A statement of the occupants of Isthmian Canal Commission quarters during October, 1908, shows that among "gold" employes and their families, there were 4,706 men, 1,402 women, and 1,279 children occupying quarters. Among the European laborers, there were 5,337 men, 338 women, and 383 children occupying quarters, and of the West Indians there were 6,569 men, 1,032 women, and 1,077 children in quarters. A statement of the force actually at work on October 31, 1908, is as follows:

DEPARTMENT.	Gold Men.	SILVER MEN.								Total Gold and Silver Men.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

The Gorgona Woman's Club has the arrangements for the Christmas celebration well in hand. The Young Men's Christian Association, the Sunday school, and the teachers of the public school have been asked to cooperate with the club, and the combined organizations are planning to make the occasion a memorable one. The meetings of the philanthropy department are held at the home of the chairman for the purpose of making clothing for the Panaman newsboys. Donations of clothing have been received, and these will be put in order and distributed within a short time. The club has donated a sum of money to the leper colony at Palo Seco for the purchase of extra comforts for the inmates. The literary department is arranging for the study of Spanish and the history of Panama. The next meeting of the club will be in charge of the music department, Mrs. Beetham, chairman.

The Gorgona Chorus Club will give its Old Folks' Concert at the Commission clubhouse on Friday evening, November 20.

The newly instituted Rebekah lodge of Gorgona meets on the first and third Saturday of each month in Fraternity hall. A drill team has been formed, and practice by the team forms a part of each meeting. A number of applications for admission have been received, and the members are enthusiastic about the work.

A reception in honor of the newly appointed secretary of the Young Men's Christian Association, Mr. Guy P. Mitchell, has been arranged for Monday evening, November 23. A musical program will be given. The Woman's Club is cooperating with the Association in preparing the entertainment. Mr. Mitchell, who comes from Auburn, N. Y., arrived on the Isthmus on the *Allianca*, November 13.

The young girls of Gorgona meet at the Commission clubhouse on Thursday afternoon for instructions in bowling.

The Gatun Woman's Club held a meeting on Friday, November 13, at the home of the president, Mrs. C. D. Corp, for the election of officers, with the following result: President, Mrs. E. L. Bandy; vice-president, Mrs. O. Bromwell; secretary, Mrs. W. C. Story; treasurer, Mrs. L. A. Clark. These officers were elected for the term of three months, as there has been great difficulty in finding members who are willing to serve for a longer period, and it was decided to amend the by-laws of the club in order to meet existing conditions. A revision committee will also be appointed at the next meeting to draw up and present the required amendments. Chairmen of the different departments will be appointed at that time. Mrs. W. C. Story was appointed to represent the club at the meeting of the Sunday school committee, for the arrangement of the Christmas celebration. The club has a sewing class for young girls, which meets at the home of Mrs. Bandy on Saturday afternoon. There are at present ten members, and they are interested in their work. The domestic or philanthropy committee is engaged in some special sewing for charity. The hour of meeting of this committee has been changed from 2.30 to 3 p. m., and it is agreed to meet every Friday instead of semi-monthly as heretofore. The next meeting will be

held at the home of Mrs. W. C. Story, November 20.

A concert in aid of the organ expense fund of Christ Church, Colon, was given in the parish schoolroom on Tuesday evening, November 10, the program being rendered by Mrs. E. Lewis Baker, Mrs. Frank Ullrich, and the Messrs. Sales, Delgard, Doty and Cooper.

"Association Night" at the National Theater, Panama, Tuesday, November 10, was such a success that arrangements for a second similar night are under consideration. Nearly 400 Zone residents attended the performance.

Nearly 200 persons participated in the dance and social by the Culebra Roman Catholic Club at the clubhouse on Thursday, November 12, and it is estimated that the sum of over \$300 was raised toward the building fund of the Church of the Redeemer. Boxes filled with refreshments were auctioned off, some selling for \$14. An entrance fee was charged for the dancers, who took possession of the floor later in the evening. A special train was run from Las Cascadas, and there were present a number of guests from the Line.

The Las Cascadas Woman's Club met at the residence of Mrs. T. J. Grimmisen on Thursday afternoon. A committee of three was appointed to make arrangements for the Christmas celebration, which will be held in the new clubhouse.

The Empire Woman's Club met for the election of officers on Saturday, November 7. Mrs. E. H. Ash was elected president, Mrs. H. C. Ball, vice president, Mrs. P. Bell, secretary and Mrs. A. S. Zinn, treasurer. At a second meeting on Tuesday afternoon, November 17, the work for the coming season was planned and heads of departments appointed.

There was an unusually large attendance at the meeting of the Woman's Guild at St. Luke's Church, Ancon, at the Hotel Tivoli on Monday afternoon, November 16. The Ven. Archdeacon Purcell Hendricks, formerly Archdeacon of Panama and the adjacent countries, was the guest of the Guild and gave an address on the work of women in the church. The Guild will hold its sale of cakes at the residence of the chaplain on Saturday afternoon, November 21, from 4 to 9 o'clock. The proceeds of this sale will be devoted to the expenses of the Guild and the purchase of necessary fittings and furnishings for the new chapel which will be opened on Christmas Day. Arrangements for a suitable celebration of Thanksgiving are being made.

## Class in Shorthand.

Mr. William F. Bennyhoff has received permission from the Chairman of the Commission to give instruction in short hand and will organize a class for that purpose in the near future. Anyone wishing to join the class will be furnished full particulars by communicating with him, care of Department of Sanitation, Ancon, C. Z.

The two old French dredges that were found by the Americans on the banks of the Chagres at Frijoles have been floated into the river. One of them was taken out on November 11, and the other on November 15. They will be taken to the Cristobal dry dock.

## PERSONAL.

Lieut.-Col. Geo. W. Goethals returned to the Isthmus from the States on the *Prinz August Wilhelm* on November 16.

Mr. Herbert G. Squires, American Minister to Panama, accompanied by his family, sailed from New York on the *Colon* November 12, due at Cristobal, November 18.

Mr. W. G. Comber, Resident Engineer at La Boca, returned to the Isthmus on the *Heredia*, November 13.

## Missing Men.

Information is wanted in regard to Antonio Vila Tojo, who is said to have been employed by the Commission as a laborer at Tabernilla. He was last heard from by his relatives in March of this year. Anyone having knowledge concerning him is requested to communicate with M. B. DePatron, Assistant to the Chairman, Culebra, C. Z.

Information is also wanted in regard to the following men:

William E. Ridding, who is thought to be a foreman on the Isthmus.

Antonio P. de Treitas, who is said to have been a cook, and afterwards a painter at Ancon. His father in Trinidad last heard from him in September of this year.

Anyone having knowledge concerning either of these men is requested to communicate with THE CANAL RECORD, Ancon, C. Z.

## Sojourners' Lodge.

Sojourners' lodge, No. 874, A. F. and A. M., will meet on Saturday evening, November 21, 1908, in extraordinary communication. Work in the third degree. Master Masons in good standing fraternally invited to attend.

G. G. DEDGE, I. P. M.,  
Acting Secretary.

## Pacific Masonic Club.

There will be a meeting of the Pacific Masonic club in the lodge room, building No. 31, formerly occupied by Mr. Lipsett, on Saturday night, November 21.

The ancient order of humility will be conferred. This is strictly a Panamanian degree, and any member wishing to have same will please send his name to the secretary before Friday night.

There are several matters of importance coming up, and it is desired to have all members present.

H. A. GUDGER,  
President.

ROLLIN S. STILES,  
Secretary.

## Army and Navy Union Smoker.

Goethals Garrison, No. 106, Army and Navy Union, will give a smoker at the Empire hotel on Saturday, November 21, at 8.30 p. m. All army and navy men on the Isthmus, either regulars or volunteers, are invited and urged to attend.

HOMER BRETT,  
Committee.

## Knights of Columbus.

All third and fourth degree members of the Knights of Columbus are urgently requested to be present at an important meeting to be held in the I. C. C. lodge hall, Empire, on Sunday, November 22, 1908, at 2.30 p. m. Business relative to charter application and election of council officers.

J. L. KERR,  
President, K. of C. Club.

WILLIAM J. ERGENZINGER,  
Secretary-Treasurer, K. of C. Club.

## CANAL WORK FOR OCTOBER.

Monthly Report of the Acting Chairman to the Secretary of War.

CULEBRA, C. Z., November 14, 1908.

The Honorable the Secretary of War,  
Washington, D. C.

Sir: I have the honor to submit the following report of operations on the Isthmus for the month of October, 1908:

The work of reorganization was continued. Effective October 12, 1908, the Division of Meteorology and River Hydraulics was abolished, and the duties pertaining to that Division were assigned to the Assistant Engineer in charge of the Third Division in the office of the Chairman and Chief Engineer, the usual observations and measurements being continued under his supervision.

#### Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central, and Pacific Divisions during the month:

Item.	Unit.	Atlantic.	Central.	Pacific.	Total.
<b>Steam Shovel Excavation—</b>					
In prism.....	Cubic yards.....	155,142	1,540,417	139,206	1,834,765
Auxiliary.....	Cubic yards.....	61,819	45,471	2,248	109,538
Total.....	Cubic yards.....	216,961	1,585,888	141,454	1,944,303
<b>Dredge Excavation—</b>					
In prism.....	Cubic yards.....	505,260	.....	762,279	1,267,539
Auxiliary.....	Cubic yards.....	57,638	.....	3,600	61,238
Total.....	Cubic yards.....	562,898	.....	765,879	1,328,777
<b>Hand Excavation—</b>					
In prism.....	Cubic yards.....	.....	10,992	.....	10,992
Auxiliary.....	Cubic yards.....	.....	2,101	.....	2,101
Total.....	Cubic yards.....	.....	13,093	.....	13,093
Total excavation.....	Cubic yards.....	779,859	1,598,981	907,333	3,286,173
Explosives used.....	Tons (2240 lbs).....	48.783	327.75	15.79	392.323
Drilling.....	Feet.....	59,945	313,705	26,334.7	399,984.7
Track removed.....	Miles.....	.....	14.1	14.1	28.2
New track laid.....	Miles.....	3.32	15.7	2.88	21.90
Material placed in dam.....	Cubic yards.....	147,762	.....	2,038	149,800
Rock crushed.....	Cubic yards.....	.....	13,243.5	2,896	16,139.5
Cement used.....	Barrels.....	302	.....	336	638
Concrete placed.....	Cubic yards.....	219	.....	200	419
New roads built.....	Miles.....	0.459	1.48	0.50	2.439
Water mains laid.....	Feet.....	1,830	1,896	4,881	8,607
Sewers laid.....	Feet.....	2,400	1,740	6,640	10,780
Open drains and ditches dug.....	Feet.....	.....	16,563	58,978	75,541
Open drains and ditches cleaned.....	Feet.....	.....	.....	11,710	11,710
House connections made.....	Feet.....	.....	.....	3,602	3,602
Daily average number of laborers.....	.....	2,304	7,666	3,426	13,396
Rainfall.....	Inches.....	12.22	8.85	8.41	.....

#### Atlantic Division.

##### GATUN LOCKS.

During the month, the total amount excavated from the lock site was 127,089 cubic yards, of which 109,667 cubic yards were from the Canal prism, and 17,422 cubic yards were from the proposed site for the handling plant dock.

On October 20, pile driving was commenced at the north end of the unloading cableway dock. Preparations were also made during the month to start work on the cement shed dock.

##### GATUN DAM.

Dredge No. 82 excavated 57,638 cubic yards of material from the slip leading to the proposed docks for the handling plant.

On the south toe of the dam 119,272 cubic yards of material were dumped, having been brought from the following points in the amounts stated:

	Cubic Yards.
Bas Obispo.....	35,989
Lock site.....	44,033
Spillway.....	27,175
Mindi.....	12,075

On the north toe of the dam 39,290 cubic

yards of material from the spillway and Mindi were dumped.

##### SPILLWAY.

Three steam shovels worked on the spillway during the month, and removed a total of 44,397 cubic yards.

##### PORTO BELLO.

Work was actively continued, consisting of preparing a site for the power plant, stripping the earth from the quarry, and various municipal and building work.

##### NOMBRE DE DIOS.

Dredging was commenced October 27, at the entrance to the Fato River, a portion of the sand removed being used in brick work at Porto Bello.

##### CRISTOBAL.

During the month a boiler and air pump for the aeration of water supply were installed at the Brazos Brook reservoir, and the sheet piling in the dam was completed.

##### MUNICIPAL ENGINEERING.

A large amount of grading, road building, construction of sewers and water works was

at work during the month was 49.55 as compared with 49.68 for the month of September.

For comparison with the work done during the corresponding month of the previous year in the area embraced in the Central Division, the following table has been prepared:

Period.	Total amount of material excavated by steam shovels	Classification of material.		Av. No. of steam shovels working during month	W'kg days in month	Av. amount excavated per steam shovel per 8-h day
		Rock	Earth			
1907, Oct.....	cu. yds. 852,084	cu. yds. 565,803	cu. yds. 286,281	39.85	27	800
1908, Oct.....	1,585,888	1,018,357	567,531	49.55	27	1,185

Rainfall during the month: 1907, 13.95 inches; 1908, 8.85 inches.

The above table shows that the average output per shovel day was over 48 per cent greater in October, 1908, than in the corresponding month of the previous year.

The output of the Bas Obispo rock crusher for the month was 9,508½ cubic yards, and that of the Rio Grande crusher, to October 16, 3,735 cubic yards, on which date this crusher was transferred to the Pacific Division.

#### Pacific Division.

##### DISTRICT NO. 1—LOCKS AND DAMS.

The total excavation in this district during the month amounted to 166,047 cubic yards, as follows:

	Cubic Yards.
From Pedro Miguel Lock site.....	47,688
Accessory works at Pedro Miguel....	1,187
From Miraflores Lock site.....	71,201
Accessory works at Miraflores.....	839
From west dam at Miraflores.....	3,002
From Canal prism, south of lock site. 17,315	
Accessory to Canal prism.....	172
From Canal prism, south of lock, dredging.....	24,593

Total.....166,047

At Pedro Miguel, the track west of the lock site was extended to an intersection with the old location of the Panama Railroad, and raised within about six feet of the grade of the latter. This track will be used as a dump at the south end, its north end forming the toe of the west dam. The old bed of the Rio Grande River, at the south end of the lock site, was lowered for drainage purposes.

At Miraflores the excavated material was deposited as a backfilling for the locks and in the toes of the west dam. The suction dredge *Sandpiper* began the work of cutting a channel from the Rio Grande River into the lower end of the lock site.

Steam shovel work at Cardenas Hill is nearing completion, and will probably be finished during the month of November.

##### DISTRICT NO. 2—DREDGING, AND LA BOCA SHIPWAY.

Five dredges were in operation during the month as follows:

Dredge	Type.	Cubic yards.		Remarks.
		In pr'm	Auxil'y	
Culebra	Suction	431,537	.....	Scow measurement
Gopher	Ladder	103,517	.....	Place measurement
Mole...	Ladder	56,340	.....	Place measurement
No. 14..	Ladder	89,391	.....	Place measurement
Dipper.	Dipper.	56,901	3,600	Place measurement
Total.....		737,686	3,600	

Current repairs were made on dredges, clapets, launches, tugs and barges, including also erection of new plant.

The borings to determine the character

accomplished at Cristobal and Gatun. The maintenance of municipal improvements was also given necessary attention.

##### BUILDING CONSTRUCTION.

Satisfactory progress was made on all buildings under construction.

During the month the powder house at Mindi hills and the detonator house at that point were completed.

##### Central Division.

During the month the total amount of material excavated in the Central Division was 1,598,981 cubic yards, of which 569,632 cubic yards were classified as earth, and 1,029,349 cubic yards as rock.

Of this quantity, 1,585,888 cubic yards were removed by steam shovels, 10,992 cubic yards by hand at the Bas Obispo quarry, and 2,101 cubic yards by hand at the new powder house site up the Chagres River.

The quantity of material removed from the Canal prism was 1,551,409 cubic yards, while 33,603 cubic yards were removed from the Obispo Diversion, 8,180 yards in the Pedro Miguel yard, and 5,789 yards at the new powder house site.

The daily average number of steam shovels

and depth of sand at Chamé Point were completed.

The work of boring to determine the character of the material in the Canal prism between the Miraflores Locks and deep water was continued, as well as the work of clearing the Canal line over which the dredges will operate.

#### DISTRICT NO. 3—MUNICIPAL ENGINEERING AND BUILDINGS.

The principal items of new construction accomplished in this district during the month are included in a table given in the foregoing part of this report. Roads, water works and sewers, drains and other municipal improvements were maintained as usual.

The output of the Rio Grande rock crusher from October 16, on which date it was turned over from the Central Division, was 2,511 cubic yards.

#### Mechanical Division.

The usual work was performed in this division in maintaining and operating equipment, electrical work, and the manufacture of repair parts and various material required in the construction of the Canal.

#### Relocation of Panama Railroad.

Satisfactory progress was made in the construction of connecting tracks from the present operated line of the railroad, in grading, the construction of trestles for filling, and the construction of bridges and culverts.

In the Miraflores tunnel 935 cubic yards of concrete were placed in the lining in the rock section.

During the month, 3,831 linear feet of permanent track were laid on the relocated line, making a total of 47,407 feet to date.

The force of laborers during the month averaged 908 men.

#### Quartermaster's Department.

The surplus of labor on the Isthmus continued. No laborers were imported during the month, and none are being recruited at this time. The agent of the Commission for the recruiting of European laborers, with headquarters at Paris, has been withdrawn and arrangements have been made with the agents of the several steamship line which have transported laborers to the Isthmus to act as recruiting agents for the Commission, in the event it should become necessary to secure additional Europeans. One of the recruiting agents in the West Indies has also been withdrawn.

The additions to the gold force during the month were 262, and the separations 402; the net separations being 140. Of the additions, only 82 were of men employed in the United States, the remainder having been employments or re-employments on the Isthmus, or transfers from the Panama Railroad Company.

During the month a list of certain standard articles for supply on the Isthmus was prepared and submitted to the Division Engineers and the Division of Motive Power and Machinery for estimate as to quantities required for the six months ending June 30, 1909. This action was taken with a view to contracting for such articles, giving a minimum and maximum amount within which supplies can be ordered during the six months, thus reducing to a very considerable extent the amount of advertising now necessary by the Washington office.

An effort has also been made to standardize specifications on various articles on purchase requisitions to the United States.

It is hoped that within six months nearly all of the usual articles required can be purchased under requisitions standardized and to govern in all cases.

The only places at which there remain any considerable number of applications for family quarters, from applicants who entered the service prior to January 1, 1903, are as follows:

Empire.....	31
Gitun.....	37
Cristobal.....	70

A few employees who entered the service subsequent to January 1, have been assigned family quarters, but there are approximately 300 applications on file from employees of this class, which can not be met unless additional quarters are constructed.

#### Subsistence Department.

Careful statistics were compiled relating to the most important food components served at hotels, messes and kitchens. The average meat ration consumed per day at the hotels is 1.55 pounds; vegetables, one pound; and bread two-thirds of a pound. Since the vegetable season opened for produce of standard refrigeration, vegetables have been furnished to the hotels, messes and kitchens at merely the cost of handling them and without any profit to the commissary. The Spaniard consumes 1½ pounds of bread per day, the negro one pound, while in the white hotels the consumption has averaged but two-thirds of a pound.

During the month 181,331 meals were served at the various hotels. There has been a constant diminution in the number of rations served, both in the Spanish messes and in the colored laborers' kitchens. The attendance at the messes has fallen from about 4,000 per day, August 1, to 3,400 per day, November 1, while the attendance at the kitchens has fallen from 6,000 per day, July 1, to 4,000 per day, November 1. It is estimated there are about 7,000 unmarried colored laborers who do not eat in the kitchens or sleep in Commission quarters.

#### Department of Civil Administration.

Correspondence with the Foreign Office of the Republic of Panama during the month, in addition to the usual routine matters, included negotiations respecting the following subjects: The stationing of Zone police at Porto Bello, in the Republic of Panama; the withholding of clearance papers from small craft docking at the Panama Railroad Company's wharves at Colon and departing before payment of wharfage dues; the approval of the maps of the joint boundary survey of the Canal Zone, the action of the captain of the port of Colon in permitting, over the protest of the quarantine officer, the disembarkation of certain passengers aboard a vessel subject to quarantine, and the installation of water and sewer mains and construction of pavements upon certain streets in the city of Panama.

#### COURTS.

In the Supreme Court one civil case was settled during October, and one attorney was admitted.

In the circuit courts, 10 civil cases and 22 criminal cases were settled, and in the district courts 47 civil and 517 criminal cases were disposed of.

#### DIVISION OF REVENUES.

The general revenues of the Canal Zone collected by the Division of Revenues amounted to \$9,702.37.

Ten vessels entered at and fourteen cleared

from the port of Ancon, and fifteen vessels entered at and sixteen cleared from the port of Cristobal during the month.

#### DIVISION OF POLICE AND PRISONS.

During the month, 489 arrests were made, as compared with 639 for September.

As Coroner of the Canal Zone the Chief of Police investigated seventeen deaths.

#### DIVISION OF PUBLIC WORKS.

The usual business of this Division was conducted during the month, including the installation of new connections, the issuance of permits for installation of plumbing, and the inspection of plumbing and sewers.

In Panama, the collections on account of water rents for the quarter ended September 30, aggregated \$14,470.30, and in Colon the amount collected was \$14,646.85.

During the month 27,733,000 gallons of water were used in the city of Panama, and 22,063,125 gallons in the city of Colon.

#### DIVISION OF FIRE PROTECTION.

During the month, six fires occurred in the Canal Zone. While the value of the property endangered is estimated at \$55,000.00, the damage to the buildings was insignificant.

#### DIVISION OF SCHOOLS.

The Canal Zone schools were opened October 1. The teaching force consists of 23 Americans and 19 colored West Indians. The total enrollment in the white schools was 622, and the average daily attendance 493. In the colored schools, the total enrollment was 1,073, and the average daily attendance 695.

#### Department of Sanitation.

[The substance of the report of this department was published in THE CANAL RECORD last week.]

Respectfully,

H. F. HODGES,  
Acting Chairman and Chief Engineer.

#### Central Division October Shovel Record.

The high record for steam shovels during the month of October in the Central Division was made by shovel No. 230, at work in the Culebra district, which excavated 58,483 cubic yards in 27 days, an average of 2,166 cubic yards per day. Shovel No. 259, working 20 days in the Empire District and 7 days in the Culebra District, excavated 55,535 cubic yards, an average of 2,055 cubic yards per day. Both of these shovels break the high record formerly held by shovel No. 256.

#### LEGAL NOTICES.

*In re Estate of Anatole Laurence, Deceased*—To any and all persons having any claim or claims against the estate of Anatole Laurence, deceased, who died at Empire, Canal Zone, on the 18th day of September, 1905:

You are hereby notified to present your claims, duly verified, to Felix Laurence, administrator of said estate, or to the undersigned, on or before the 1st day of June, 1909, or your claims will be forever barred according to law.

Witness my hand, this 6th day of November, A. D. 1908.

E. M. GOOLSBY,  
Clerk of the Circuit Court, Second Judicial Circuit,  
Canal Zone, at Empire.

EMPIRE, C. Z., November 2, 1908.

*Estate of } Administration.*  
Michael Doyle }

All relatives of the late Michael Doyle, an American, who died intestate at Ancon Hospital on the 20th of July, 1908, are hereby requested to communicate with the Administrator of the estate. Also all persons owing the said estate will likewise communicate with the Administrator in order that a settlement may be effected; and all creditors of the estate must file their claims, properly verified, with the Administrator within six months, or the same will be barred.

F. H. SHEIBLEY,  
Administrator.

## OFFICIAL CIRCULARS.

## Holiday on Thanksgiving Day.

CULEBRA, C. Z., November 12, 1908.

CIRCULAR NO. 220.

Thanksgiving Day, Thursday, November 26, 1908, will be observed as a holiday in the Canal Zone, and as far as possible all public business will be suspended on that day.

H. F. HODGES,

Acting Chairman and Chief Engineer.

## Land Clerk, Panama Railroad.

PANAMA RAILROAD COMPANY,  
OFFICE OF THE GENERAL MANAGER,  
COLON, R. P., November 11, 1908.

CIRCULAR NO. 12.

*Heads of Departments*—Effective this date: Mr. A. A. Greenman is appointed land clerk in charge of land office matters, working under the supervision of, and reporting direct to the General Manager.

HIRAM J. SLIFER,

General Manager.

## Panama Railroad Company Land.

The following "Rules in connection with land matters of the Panama Railroad Company," became effective September 23, 1908, and are published for the benefit of all concerned. Copies of the circular printed in English, French, and Spanish, together with the proper blanks, may be secured from any agent of the company in the Canal Zone, from the cashier at Colon, and from the assistant cashier at Panama.

*Assignments*—Any parties desiring to occupy any portion of the lands of the Panama Railroad Company will fill out regular blanks, copies of which can be secured in the offices of the General Manager and cashier at Colon, assistant cashier at Panama, or from any of the station agents of the Panama Railroad Company.

The aforementioned blank, after being filled out will be sent direct to the office of the General Manager, when arrangements will be made to cover the necessary details. No one will be permitted to occupy any land of the Panama Railroad Company excepting under certain leases, agreements or written permissions. New occupation will not be allowed until application blank as aforesaid has been properly approved by the General Manager.

*Transfers*—Whenever any person holding property under either a lease, agreement or written permission, desires to transfer the property to another party, regular application will be required, and the party transferring the property will be expected to show that he is the proper person holding the lands. The party to whom the property is to be transferred will also be required to sign the application for the transfer, which, after being approved, will give the new party possession of the land under lease, agreement or written permission, for the unexpired term for which the former party held the property.

*Payments*—The acceptance of any moneys for the private use of any employee or agent of the Panama Railroad Company is forbidden.

No moneys will be expected or accepted by any employee of the Panama Railroad Company, or any other department, in connection with these applications for assignments or for transfers, and no agent or employee of the Panama Railroad will accept any moneys in connection with the land matters without giving a regular receipt which has been properly certified to by the auditor of the Panama Railroad.

All moneys for rentals or other purposes will be paid, at Colon, to the cashier's office; at Panama, to the assistant cashier's office. At all other points to the station agents of the Panama Railroad Company. All other parties are forbidden to receive any moneys in connection with land matters, and the present system of collecting rentals through collectors is herewith abandoned. Parties offering to pay money for rentals to the cashier, assistant cashier or station agents, will be required to identify themselves by presenting their old rent receipts, so that the various parties receiving money may know that proper parties are paying the rental.

The assistant cashier and the station agents will make daily reports to the cashier, who, in turn, will make consolidated report to the auditor's office. On the first of each month, the cashier will report all outstanding accounts in connection with land matters to the General Manager and the auditor.

*Staking Land*—After the application for assignment or transfer has been approved by the office of the General Manager, the lots will be staked out by the engineering department of the Panama Railroad. The chief engineer's office of the Panama Railroad will be divided into three departments, namely: Construction division, maintenance of way

division, and land division. The chief engineer will receive instructions direct from the General Manager for staking out property and giving grades to which height of building must be erected in accordance with municipal requirements and sanitary rules.

No moneys will be expected or allowed to be paid to any employee of the Panama Railroad for the engineering work that may be done in this connection.

*Leases, Agreements, and Written Permissions*—After the lots have been staked out and the lessee indicates by his action that it is his intention to occupy the lands as per his application, a regular formal lease agreement or written permission will be issued, signed by the General Manager, and rentals will commence from the first of the succeeding month after the papers have been executed by the General Manager. This paper will be delivered to the tenant by the cashier, assistant cashier, or one of the station agents. The tenant will be required to first sign all copies of the papers, and to pay the regular price, as shown, for the stamped paper on which it may be printed, but in doing so he will receive from the party delivering the lease, a properly authorized, certified "Bills Receivable" as shown in this circular. He will, at that time, also be required to pay the first month's rent, the receipt for which will be given to him on the "Rent Form Receipt" as previously shown. The cashier, assistant cashier, or station agent securing signatures to papers, will immediately forward the original to the General Manager's office and deliver the second (carbon) copy to the tenant.

*Cancellation of Privileges*—Tenants who neglect to pay their rentals will be notified through the Office of the General Manager, and if they continue to neglect paying their rentals they will be removed from the property by process of law.

*Legal Matters*—All legal questions that may arise will be handled direct between the General Manager and the legal department.

We hope to have the hearty co-operation of all tenants in connection with these arrangements, which we know will avoid a great deal of the present confusion and annoyance.

The office of the General Manager will be available at any time for any complaints that the tenants desire to make in connection with the questions of assignments, transfers or leases, or in fact, in connection with any subject affecting the land matters of the Panama Railroad Company.

HIRAM J. SLIFER,

General Manager.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

Total membership.....	1,298

## BOYS' DEPARTMENT (AGES 10-16).

Number of members.....	50
Number of afternoons open to boys.....	51
Total attendance.....	2,040
Attendance at gymnasium exercises.....	376

The Ernest Gamble Concert Party will give return entertainments as follows: Gorgona, Monday, November 23; Cristobal, Tuesday, November 24; Culebra, Wednesday, November 25; Empire, Thursday, November 26.

A championship bowling tournament in singles and doubles will be held at the Empire clubhouse on Thanksgiving Day, open to all members of the Y. M. C. A. An entry fee of \$1 gold per man will be charged for each event, and each entry must be approved by the secretary of the Y. M. C. A. of which the contestant is a member. The total pinfall for three games count in each event. The following are the prizes: Gold medal to the winner of the tournament in singles, a gold medal to each of the winners in the tournament of doubles; and a gold medal to the one making the highest individual score in the tournament. Silver medals will be presented to the men finishing second in both the singles and doubles, and bronze medals to the men finishing third in each tournament. A silver cup has been offered to be held as a permanent trophy by the association whose team makes the highest number of points in the tournament.

CULEBRA.

Great excitement prevailed at the mock municipal elections held Friday night. Three parties were in the field during the early part of the week, the People's, Conservatives, and Socialists, but on election day the People's and Socialist parties united. A parade, speeches, fireworks and music by the United States Marine Corps band wound up the active campaign. The following is a list of the successful candidates, all of whom were Conservatives except Aldermen Cushing and Bill: Judge, C. A. McIlvaine; prosecuting attorney, M. B. DePutron; city clerk, R. H. Adams; sheriff, G. M. Douglas; city treasurer, J. H. Flynn; coroner, T. E. Tragsdorf. Aldermen: Ward 1, J. H. Smith; ward 2, H. O. Hostetter; ward 3, S. E. Cushing; ward 4, H. E. Bain; councilmen at-large: Ward 1, W. P. Copeland; ward 2, W. B. Huff; ward 3, W. J. Brown.

At the pool and billiard contest, Saturday night, between Gorgona and Culebra, Culebra won four of five matches, by the following scores: Pool—Beaman, Culebra, 100; Pierson, Gorgona, 69; Stevens, Culebra, 100; Reicher, Gorgona, 74; Tribolet, Culebra, 75; Deverest, Gorgona, 100; Billiards: Floyd, Culebra, 100; Adams, Gorgona, 90; Doty, Culebra, 100; Barlow, Gorgona, 86.

EMPIRE.

The Empire bowling team which was tied with Cristobal for first place in the league, won three straight games from that team on Saturday evening, November 14. The scores were as follows: Empire—899, 833, 816; Cristobal—761, 751, 793.

Mr. Guy C. Mitchell, of Auburn, N. Y., arrived on the *Alliance*, November 13. He will be secretary of the Y. M. C. A. at the Gorgona clubhouse.

The Y. M. C. A. Choral Club will make its first appearance on Friday evening, November 20. The club has a membership of thirty-five, and will give an entertainment known as "An Old Folks' Concert." The program will consist of five choruses by the club, music by the orchestra, quartets, duets, solos, and readings.

## Misdirected Letters.

Division of Posts, Customs and Revenues,  
Ancon, C. Z., November 18, 1908.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be obtained on request of addressee:

Allison, W. W.	Mallenee, Wm. N.
Alwin, W. J.	McCafferty, John
Barnett, R. J.	Murray, Alex.
Barry, E. S.	Myke, John
Barth, G. H.	Noland, C. Powell, Jr.
Bozeman, W. J.	Orr, Wm. T.
Butler, Miss Macle	Palmer, A. M.
Davis, John M.	Potts, Frank A.
Delinois & Co., Charles	Reed, Geo. T.
Durham, Henry W.	Rouch, Mr.

The small plots of vacant ground near Pier 11 and around the cold storage plant, at Cristobal, have been seeded in grass and shrubbery has been planted in them.

## MONTHLY RECORDS IN THE ATLANTIC, CENTRAL, AND PACIFIC DIVISIONS

ATLANTIC DIVISION

CENTRAL DIVISION

\*After July 1, 1908, the old Chagres and Culebra divisions were consolidated in the Central Division. No separate record for steam shovels in the old divisions has been kept since that date. Figures for July and August under "Culebra Section" include work done in the whole Central Division.

Summary for the month of October, 1908:  
Average number of shovels at work, 65.20.  
Average output per shovel per day, 831 cubic yards.  
Average output per shovel per month, 22,440.  
The working day for steam shovels is eight hours.

## PEDRO MIGUEL LOCKS

MIRAFLORES LOCKS, DAMS AND SPILLWAYLA BOCA DISTRICT

Period	Average num- ber of shovels at work.	Number of working days in month.	Output per shovel (cu. yds.) per day.	Output per shovel (cu. yds.) per mo.	Rainfall (inches)
1908—					
March	1.00	20	176	12,360	0.0
April	1.00	25	452	11,300	0.7

## COMMISSARY DEPARTMENT.

## COMMISSARY CORRESPONDENCE.

Patrons of the Commissary Department, when dealing with the Cristobal office, will address their individual orders, deposits, etc., to the Order Room, Commissary Department, Building No. 2, Cristobal.

Complaints should be made in separate letters and addressed to the Subsistence Officer, Building No. 2, Cristobal.

JOHN BURKE,  
Manager.

Approved:  
EUGENE T. WILSON,  
Subsistence Officer.

## SUPPLY OF OYSTERS.

One thousand gallons of oysters have been ordered by the Subsistence Department. They will be sent to the Isthmus in partial shipments, and in such quantity that they can be served at all Commission hotels at least once a week.

Rolls, baked daily, are shipped from the bakery on the afternoon passenger train from Cristobal. They are delivered to the Commission hotels along the Line on the same evening, so that employes may be served with them the following morning for breakfast.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

## COMMISSARY PRICES

For week beginning November 16:

## FRESH MEATS.

	Price.
Mutton—Stewing.....per lb	6
Shoulder and neck (not under 6 pounds).....per lb	7
Entire forequarter (not under 10 pounds).....per lb	8
Leg (8 to 10 pounds).....per lb	16

## FROM COLON TO NEW ORLEANS VIA KINGSTON.

Jamaican.....Leyland Line, about.....Nov.	20
Antillan.....Leyland Line, about.....Nov.	30

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, calling at Puerto Barrios, and from Colon at 1.30 p. m. via Port Limon and Puerto Barrios, for New Orleans.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The following steamers have recently arrived at La Boca: November 7, *Barraouta* from Central America; November 8, *Salvadorian* cruiser, *Presidente* from Salvador; November 10, *Newport* from San Francisco; November 13, *Panama* from Valparaiso. Departures were: November 10, *Cecil* for southern ports; November 11, *Peru* for San Francisco, and *Chile* for Valparaiso.

## The Canal Record

Published weekly under the authority and supervision of the  
ISTHMIAN CANAL COMMISSION

"The Canal Record" is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the "gold" roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications

### THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

## NOTES OF PROGRESS.

### Vacations in Jamaica.

On recommendation of the Chief Sanitary Officer, the Chairman of the Isthmian Canal Commission has decided to include in the list of places where employes may take their annual leave, the parishes of Manchester, St. Anne and St. Andrew in Jamaica, as these parishes are above an altitude of 3,000 feet and will afford the change of climate required by Commission regulations.

### New Interlocking Switches.

A modern system of interlocking switches was put in operation at the Las Cascadas yard on Monday, November 23. The tower is at the north end of the railroad station, and the eight levers assembled there operate three switches, four signals and one derailling switch.

This improvement in the yard will enable empty trains, returning from the dump at Tabernilla, to be run into the Whitehouse yard without loss of time, as the switching will be done mechanically instead of by hand.

### Canal Medals.

The design for the medals which, in accordance with the proposals of President Roosevelt, are to be distributed to all employes of the Isthmian Canal Commission who have served two years or more on the Canal work, has been finished by Victor D. Brenner, the medalist in charge of the work, and he is now cutting the dies. The medal will be about an inch and a half in diameter, or the size of a Panama silver dollar, and will be struck in bronze. On the obverse there will be a portrait of President Roosevelt which was modelled by Mr. Brenner at Oyster Bay, in July last. It is a three-quarter view of Mr. Roosevelt, facing to the left. Around the border will be the inscription "For two years' continuous service on the Panama Canal."

The reverse of the medal bears a bird's-eye

view of the Culebra Cut, in the finished Canal, with steamers passing through, with Gold Hill to the left and Contractor's Hill to the right. Above the horizon, in incised letters, is inscribed, "The Land Divided, the World United," and around the rim, "Presented by the President of the United States." Below appears the shield of Panama and under it will be the name of the recipient on a name plate. Each medal will be numbered in a circle below the portrait, and will hang from a suspension bar. With each year's additional service on the Canal a bar will be added. It is expected that the medals will be awarded in December.

### Sunken French Dredge.

The sea-going ladder dredge *Gopher*, which is working its way up the Canal prism from La Boca toward Corozal, has encountered an old French ladder dredge of the Belgian type, which had been sunk at a point where the Rio Grande crosses the old French canal, about a mile above La Boca wharf. The dredge had apparently been turned over and sunk in the same position in which it had been at work as the side chains, stern chains and head chains were still fastened to their moorings. In addition to these, other chains, probably used for moorings, have been found at various points in and across the Canal prism, and a diver has been kept constantly at work for some time past in locating and making fast to them so that they could be taken up and a free passage made for the *Gopher*. Up to this time over 10,000 linear feet or nearly two miles of chain have been removed. This work has to be done in order to prevent the old chain from becoming entangled in the dredge machinery. The old dredge will have to be blown up by dynamite and removed by the wrecking barge.

### Boiler Equipment for Gatun and Miraflores.

The contract for twelve boilers with uptakes, breeching, and induced draft system, to be used in the power plants at Gatun Locks and Miraflores Locks was awarded, on September 27, to the D'Olier Engineering Company of Philadelphia. The equipment for each plant will include six boilers.

Each of the boilers specified has a nominal rating of 400-horsepower, is equipped with Foster superheaters, and will generate steam at 205 pounds absolute pressure, and 150 degrees Fahrenheit of superheat. The grate area will be 66½ square feet, and the furnace volume 400 cubic feet. The boilers are designed with a large combustion furnace for the use of oil as fuel, but they are also to be fitted with Ajax slaking grates in order that coal may be used if the emergency arises. The induced draft system includes fans of the Sturtevant Company's make, one fan to be driven by a vertical engine, and the other by an electric motor. A motor-

driven air compressor to furnish air for cleaning the generators and high tension electrical apparatus is also included in the contract. All the steam piping in the boiler room, two vertical boiler feed pumps, and a Cochraue open feed water heater will be part of the plant. The contractors have sublet the contract for the water tube boilers to the E. Keeler Company of Williamsport, Pa.

The power plant at Miraflores, for which six of the boilers are intended, will be the plant that will furnish the power in the construction of the locks and, after the completion of the Canal, for operating them in the emergency of the hydraulic plant giving out. At Gatun Locks the plant will furnish the power for unloading at the dock, for the motors on the lock cableways, and for the cable road which will be used in the construction of the locks, and it will probably be maintained as an emergency plant after the Canal is completed. The plant for operating the locks at Gatun will be a hydraulic power plant using water wasted from Gatun Lake.

### October Report of Quarters.

The report of the Chief Quartermaster for the month of October shows that among "gold" employes, 1,407 quarters, divided among 751 buildings, were occupied by married employes and their families, and that 3,294 bachelors lived in 1,950 rooms, in 179 buildings.

Among European (silver) employes, 335 quarters in 80 buildings were occupied by married European laborers and their families and 5,015 Europeans were in bachelors' quarters, divided among 135 rooms in 129 buildings.

The married West Indian laborers (silver employes) were living in 1,013 quarters divided among 231 buildings, and 5,545 West Indian bachelors lived in 247 rooms in 134 buildings.

### Work at La Boca.

The dredging for the basin at the new landing stage for oil ships at La Boca is completed, and the pipe and moorings have been placed in position. The pipe to the old landing stage is being taken up and the dredge *Mole* is making a deep water channel from the Canal prism to the marine shops. The pipe to the old landing stage crossed the ship channel to the marine shop and was only six feet below the surface of the water at low tide, thus preventing ships from reaching the shipyard except at high tide. When the new channel is completed ships will be able to go to the shipyard at any stage of the tide.

Five of the small boats in use with the dredging fleet at La Boca have had gasoline motors installed, three skiffs have had a 3-horsepower motor put in, and two whale

## NOTES OF PROGRESS.

(Continued).

boats, each 28 feet long, have had 8-horse-power motors installed. This will expedite work in the fleet, as the dredges are working too far apart to make rowing economical.

## Visit of the Pacific Fleet.

The First Squadron of the Pacific fleet under the command of Rear Admiral William T. Swinburne, will sail from Magdalena Bay, December 1, and should arrive at Panama, December 12. The squadron is divided into two divisions, each in command of a rear admiral, and is made up of the following armored cruisers:

*First Division—West Virginia* (flagship of Rear Admiral Swinburne), Capt. Alexander McCrackin; *Colorado*, Capt. Edmund B. Underwood; *Maryland*, Capt. Moses L. Wood; *Pennsylvania*, Capt. Frank A. Wilner.

*Second Division—Rear Admiral Uriel Sebree*, commanding; *Tennessee* (flagship of Rear Admiral Sebree), Capt. Bradley A. Fiske; *California*, Capt. Vincendon L. Cottman; *South Dakota*, Capt. Charles E. Fox; *Washington*, Capt. Austin M. Knight. The gunboat *Yorktown*, Commander James H. Glennon accompanies the squadron.

The fleet will be at anchor in Panama Bay from December 12 to December 22, when it will sail for Talcahuano, Chile, where it will remain from January 4 to January 14. From there it will go to Coquimbo, Chile, for five days, January 17 to January 22, and on January 27 it will arrive at Callao, Peru, where it will remain until February 10. On that date the fleet will sail for Panama where it is due February 22 and will remain here until March 4 when the squadron will sail for northern ports for target practice and maneuvers.

## Canal Zone Not Under U. S. Constitution.

The Supreme Court of the United States, on November 9, dismissed the appeal in the case of Adolphus Coulson, convicted of murder at Gorgona and sentenced to be hanged in January, 1907. In dismissing the appeal no written decision was rendered by the Court, but its action in effect confirms the decision of the Supreme Court of the Canal Zone.

Adolphus Coulson, a Barbadian negro, killed his wife at Gorgona in January, 1907. He was tried in February, 1907, in the Second Circuit Court, before Judge Gudger and Messrs. Johnson and Fagan, mayors of Empire and Gorgona, respectively, under the provisions governing trial in capital cases contained in the Code of Criminal Procedure of the Zone, adopted by the Canal Commission in 1904, and in force until February 6, 1908, when the Executive Order providing for jury trial in such cases was issued. On the trial of the case, Coulson's counsel asked for a jury, which was denied. The evidence of Coulson's guilt, introduced at the trial was conclusive. After his conviction the case was appealed to the Supreme Court of the Canal Zone.

The only question raised in that court was the defendant's right to trial by jury, under the Constitution of the United States; it was argued that the denial of trial by jury was in contravention of the provisions of the Fifth and Sixth Amendments of the Constitution, that no person shall be deprived of life, lib-

erty or property without due process of law, and that in all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury. The Supreme Court of the Zone, holding that legal proceedings according to the rules and forms established in the Canal Zone for the protection of private rights meet the Constitutional requirements of due process of law, after quoting from a decision of the Supreme Court of the United States, to the effect that "the Constitution is applicable to territories acquired by purchase or conquest only when and so far as Congress shall so direct," decided "that the Canal Zone is territory in the use and occupation of the United States of America, under its control, but not such territory that the Constitution would be legislative in, and of its own force carry its rights, privileges and limitations into."

Coulson, who was sentenced to be hanged on September 13, 1907, was, on August 30, 1907, reprieved pending the hearing and determination of the appeal in the United States Supreme Court. The date of his execution has not yet been fixed.

## First Execution in Canal Zone.

Hubert Stout, a Barbadian negro, was hanged at the Zone penitentiary at Culebra, on November 20. Stout was convicted in the Second Circuit Court, at Empire, on May 6, 1908, of the murder of Josephine Phillipe, also a Barbadian negro, at Gorgona, on March 7, 1903. He was tried by a jury, under the provisions of the Executive Order of February 6, 1908. (see THE CANAL RECORD of February 26), and the conviction and sentence of death were affirmed, on appeal, by the Supreme Court of the Zone.

Stout's execution was the first in the Canal Zone since the organization of the Zone government.

## The Cartago Ashore.

The United Fruit Company's steamer *Cartago*, one of the new boats of their fleet, which sailed from New Orleans on Saturday, November 14, went ashore on Utila Island off the coast of Honduras, about 110 miles from Puerto Barrios, on Thursday, November 19. The passengers are all safe and will be brought to Colon on the *Parismina*, which sailed from New Orleans on November 21, due at Colon, November 27. Wrecking vessels began work on November 23, and it is expected that the *Cartago* can be floated after her cargo and ballast have been removed.

## Experimental Ovens.

The Subsistence Department has ordered four ovens of different type for experimental purposes at Commission hotels. It is the intention to use them for baking rolls, biscuit and other forms of fresh bread, and after a series of tests the kind best adapted for service on the Isthmus will be adopted and a number purchased to supply all the Commission hotels in the Zone.

## Standard Specifications for Structural Steel.

The committee appointed by the Chief Engineer to prepare standard specifications which may be used to define the quality of material and of structural steel, with a view to secure uniformity in similar structures in the various divisions, has made its report. The preamble of the report discusses the subject under the headings "Loads," "Unit

Strains," "Material," "Shop Inspections," "Painting," and "General Requirements."

## Masonic Work in Colon.

## THE CANAL RECORD:

Sojourners' Lodge, No. 874, A. F. and A. M., holding of the grand lodge of Scotland, met Saturday evening, November 21, 1908, in extraordinary communication, in its hall at Fifth and Bolivar streets, Colon, and worked the third degree on four candidates, in the presence of fifty members representing the following jurisdictions; Scotland, England, Kansas, Rhode Island, Missouri, Pennsylvania, Iowa, Vermont, Louisiana, Minnesota, Georgia, Michigan, Massachusetts, Ohio, Washington, Illinois, and New York.

The degree was conferred by Right Worshipful Master Clinton G. Carty, assisted by Past Masters Ransom Stephens, (formerly assistant lecturer grand lodge of Kansas), Edmund W. Levy, England, and Graham G. DeEdge, Scotland. After work was completed, banquet was served in the Washington Hotel.

This lodge will meet in postponed ordinary communication, on Saturday, November 28, at 8 p. m., for ordinary business, including election of office bearers for the ensuing Masonic year. Sojourning Masons in good standing are fraternally invited to attend.

C. A. LESTER,

of Gate City Lodge, No. 522, Kansas City, Mo.  
Cristobal, Nov. 22, 1908.

## Pacific Masonic Club.

## THE CANAL RECORD:

At the meeting of the Pacific Masonic Club on November 21, ten members were initiated into the mysteries of the ancient order of humility. The charter for this order will be held open until January 1, 1909, after which it will be closed and a membership fee of \$1 charged, to be used for the benefit of the new library.

There will be a class of twenty, on Saturday, November 28, and any Master Mason wishing to receive this degree will please communicate with the secretary at the earliest possible date.

Masonic clubs on the Line who desire to have this work done by the Ancon team will please notify the secretary at least ten days in advance.

Master Masons who have not yet affiliated with the clubs are cordially invited to meet with us.

H. A. GUDGER, *President*.

ROLLIN S. STILES, *Secretary*.

Ancon, C. Z., Nov. 22, 1908.

A committee has been appointed by the Chairman to consider the advisability of discontinuing the use of the hotel and commissary coupon books and substituting a system that will require less bookkeeping than the present one.

LOST—Class-pin bearing letters "Clio" interwoven in a crescent set with small pearls. Reward will be paid for return of this pin to the office of THE CANAL RECORD.

LOST—A gold ring has been lost on the beach at Ancon Cove, Taboga Island. The finder will be rewarded by returning this ring to Frank Anderson, Gatun, Canal Zone.

FOUND—A lady's rain coat was found in the dressing room of Lincoln House, Colon, after the dance on October 31. A brass door key and handkerchief were in the pocket. The coat was apparently left by mistake in identification as a smaller rain coat is missing. If the lady who has the smaller coat will communicate with Mrs. W. T. Coburn, Ancon, an exchange will be made.

## DREDGING.

Work of the Sea-going Suction Dredges  
Ancon and Culebra.

The sea-going suction dredges *Ancon* and *Culebra* work twenty-four hours a day, six days a week, and the seventh day they spend not in rest, but in making ready for the six days to follow. In the making of the Canal each of them is doing the work of eight very good steam shovels and several dump trains, for an ordinary day's record is 15,000 cubic yards of material pumped from the prism. Each in itself epitomizes the whole great work, is a village like one of the Canal Zone settlements, for it is at once the place where men work, rest, eat, and sleep. Each of them has its quarters, mess halls, machine shop, power house, and tools for excavating; and the spirit of the men in each is like that of every Zone settlement—to make next week's work count for more than that of the week just passed. They are large ships, these dredges, 288 feet over all, 47½ foot beam, and 25 feet deep. They came to their work under their own steam from Chesapeake Bay, and one of them, the *Culebra*, made the long journey through the Strait of Magellan.

The *Ancon* is working in Limon Bay, from the point where the water is 45 feet deep, in toward the shore. She is making a channel 40 feet deep at mean sea-level, and 500 feet wide. Already 4,175,342 cubic yards of earth have been pumped into her mud bins and dropped out in deep water in the Caribbean Sea. A similar amount of work on land would make a big cut in a large hill, and people would see and comment on it. But the *Ancon* leaves no trail behind, no visible sign of the work, for the channel in Limon Bay does not show even at low water. Only the men on the ship, and the engineer who takes the cross section measurements, or an occasional leadman who casts just for curiosity, know that the channel is there, from one to thirty feet below the adjacent bottom.

It is a trifle different with the *Culebra*, which is dredging at the Pacific entrance in the Bay of Panama. One standing on the docks at La Boca, when the tide is low, can see the channel in which the *Culebra* is working, because the mud flits on either side rise above the water. The difference is only apparent, however, for the *Culebra*, also, is doing most of her work invisibly. In the ten months since she first lowered her suction pipes in the prism of the Canal she has excavated 3,852,794 cubic yards.

One night recently as the *Culebra* turned in the channel near the end of La Boca wharf she dropped her two suction pipes, one on either side the ship, into the mud of Panama Bay, started her 20-inch centrifugal pumps, and moved slowly down the prism of the Canal with two streams of mud rushing into each of her two big bins.

On the bridge, under the eye of the captain, two men turned the wheels that lowered the suction pipes or raised them as the contour of the bottom required. This is important work, for if the shoe at the end of the pipe rests too deep in the mud the pumps will not do their best work, while if it is raised a few inches too far above the bottom, little more than water will be poured into the mud bins. From habit the "pipe man" knows by the feel of his wheel and the

sound of the water falling into the bin, whether the shoe is in its proper position. Said one of them: "The man at the pipe makes the yardage."

In the kitchen the steward and his assistants were finishing their dinner work and preparing for breakfast. The crew works in four-hour watches, each shift being on duty two watches a day, and therefore the steward's work is continuous. He serves four meals a day—at 6 a. m., 12 noon, 6 p. m., and at midnight. Sixty men are not a big mess, but they don't all eat at one time. The food in the cabin is the same as that in the forecabin, and is much like the ordinary Commission hotel fare. "We don't handle yardage here," the steward said, "but the records wouldn't amount to much if the 'chow' gave out."

No one was at work in the ship's machine shop, but the tools were ready, and to begin repairs would be a matter of only a few minutes. In the pump room, on the third deck, the engines were turning with little or no noise, or at least no noise that could be distinguished in the rattle and clang of the two big pumps, as they drew up from the bay and forced toward the mud bins, mud, rock, chain, anything that could pass through the 6 by 9-inch holes of the dredge shoe. Below the pump room was another engine room where the twin screws of the ship are driven, and there, too, the noise of the pumps penetrated and subdued all other sounds. A young man with a wad of cotton waste in his hand, smiled knowingly: "A dredge is an engine and a pump. We are making the yardage right down here."

It is so warm in the stoke hole, that stokers often leave the ship the day they are hired, after only one visit to the boiler room. One hundred and thirty degrees is an ordinary temperature, and the conditions are much better since a new ventilator was installed some months ago. They are using coal on the *Culebra*, although most of the floating equipment at La Boca has oil installation. "Getting down to first principles," said the chief engineer, "these are the men that run the dredge."

Forty minutes after the ship had turned for her seaward run, the pumps were stopped, the suction pipes were raised, and the run to the dumping grounds was begun. The captain was overseeing the gauging of the mud in the forward bin. Each of the bins is 20 feet deep and their combined capacity is nominally 2,400 cubic yards of material. The soundings in three different parts of the bin showed 12 feet of solid material under the water, and the experience is that this is about the average. Sixty per cent of the bin capacity is counted as the yardage. It was suggested to the captain that his dredge was working very smoothly. "Yes," he said, "we made 431,537 yards in October. But then dredging is easy with a crew like mine. Not a loifer in the lot."

The mud flats half a mile or more from the channel is the place where the *Culebra* dumps her spoil. All the work is done by power. An engine turns the machinery that drops the bottom of each bin, letting the mud into the sea, and then closes the doors again. When the spoil is disposed of the ship turns back toward the docks, and half an hour later the pumps are started and the work of excavating is resumed. On an average the dredge makes 10 trips a day, exca-

vating over a distance of two miles, and on each trip she makes two furrows in the bottom of the bay, each five feet wide. It is not possible so to steer the ship that each successive furrow will join with its predecessor, but wave action and the cross cutting of the dredge tend to make the bottom level, wearing off the high ridges and filling in the valleys. In places the cut runs down to 50 feet below mean sea-level, 20 feet more than is necessary, but this can not be regulated easily, as dredging at its best is more or less blind. The result, however, will be a channel not less than 40 feet deep at mean tide, although in many places it may be deeper, as the *Culebra* can dredge 60 feet below her water line.

Nothing that is small enough to pass through the 6 by 9-inch holes in the shoe can escape the suction of the *Ancon* and *Culebra*. The most favorable material is gravel, because it lies loose on the bottom, and the most difficult is heavy clay or rock. Solid rock can not be excavated, but lumps almost as big as a man's head are carried through the pumps without harmful effects. Recently the *Culebra* drew ten fathoms of chain from the bottom of the bay and passed it through one of the centrifugal pumps into the bin, and that is probably the strangest performance in Isthmian dredging, for it is difficult to understand how so much chain could pass through the pumps without becoming entangled. Not long ago the *Ancon* lifted a cannon ball from the bottom of Limon Bay. Fish, eels, shells, and rock poured into the bins are so common that they no longer cause comment.

On Sunday morning the *Culebra* ties up at La Boca to make light repairs, to coal, and to give her crew a few hours shore leave. The *Ancon* ties up at Cristobal for like purposes. On Monday both of them are at work again, and until the following Sunday morning their engines never rest.

## Atlantic Division Steam Shovels.

The steam shovels of the Atlantic Division excavated 216,961 cubic yards in October. The best records for the month follow:

Shovel No.	CUBIC YARDS.			No. of days at work.
	Earth.	Rock.	Total.	
101 ....	4,280	17,290	21,570	26
133 ....	2,103	17,669	19,772	22
GATUN LOCKS.				
129 ....	5,285	29,223	35,113	27
134 ....	.....	34,731	34,731	27
SPILLWAY—GATUN DAM.				
135 ....	22,690	2,500	25,190	26

The best daily records were as follows:

Shovel No.	Location.	Date.	Character material excavated.	Cubic yds. excavated.
102	Gatun Locks.....	Oct. 20	Rock .....	1,883
129	Gatun Locks.....	Oct. 13	Rock .....	1,855
135	Gatun Locks.....	Oct. 8	Clay and rock..	1,800
119	Gatun spillway..	Oct. 20	Clay and rock..	1,220
133	Mindi .....	Oct. 19	Clay and rock..	1,592
101	Mindi .....	Oct. 30	Clay and rock..	1,417

The Panama Railroad Company will operate its regular Sunday schedule of passenger trains on November 26, Thanksgiving Day.

## SOCIAL LIFE OF THE ZONE.

### Women's Clubs and Other Features.

The Pedro Miguel Social Club and the Woman's Club combined to make the bazaar held at the Club rooms on Saturday evening, November 14, one of the most successful events ever given in the town. The rooms were decorated with palms and flags, and the several booths were made attractive with decorations of different colors. The candy booth, presided over and furnished by the president of the Woman's Club, was decorated with the club colors, royal purple and yellow. The red and cream of the Social Club were used in the decoration of the scales, and Mrs. Bitely and Mr. Kernealy were in charge. The fancy work booth was in red and white, with Mrs. Barnes and Mr. Hobby in charge. The prize offered for the most attractive decoration was awarded to this booth. A gypsy camp, with Mrs. Vacher as fortune teller; a fish pond, run by Mrs. Connell and Mr. Piper; grab bag for the children, Mrs. Roberts; and a wheel of fortune, operated by Mr. H. Henderson, were all attractive features. All the articles sold were donated by Pedro Miguel residents and the proceeds, \$243, have been divided between the Social Club and the Woman's Club and will be devoted to the children's Christmas festival. A special train from Paraiso brought a large crowd.

The Pedro Miguel Woman's Club met at the club room on Wednesday, November 18. In addition to regular business the arrangements for the Christmas celebration were advanced.

The literary meeting of the Cristobal Woman's Club was held November 18, and was well attended. Special invitations had been extended to the mothers having children in the Cristobal and Colon schools. An address was given by Prof. H. L. Smith, Superintendent of Schools, on child life and its nature and the responsibilities of the home and school in the training and developing of the young. At the close of the address those present were given an opportunity to meet the speaker in the half hour when refreshments were served by the social committee. On Monday, November 23, the Shakespeare study class met, "Macbeth" being the subject for the afternoon. The music study class takes up the subject of early operas and singers at its next meeting, December 14.

The reorganization of the Paraiso Woman's Club was affected on Thursday afternoon, November 19, ten charter members having enrolled. Women who were unable to be present at the first meeting have requested that the charter remain open until a future date. The chair was taken by Mrs. E. S. Waid, for the purpose of organization, and the following officers were elected: President, Mrs. E. B. Healy; vice-president, Mrs. McIntyre; secretary, Mrs. Wm. Downs; treasurer, Mrs. McLaughlin. The next meeting will be held on Thursday, December 3, when the organization will be completed and placed on a working basis.

The Ancon Woman's Club held its program meeting November 18, the guest of honor being Mr. Joseph Lefevre, Minister of Public Works, Republic of Panama, who gave an interesting survey of the history of Pan-

ama from the time of Columbus to the present day. There was a large attendance. The executive board held a called meeting the same day for the purpose of discussing bazaar matters. The sale will be open on the afternoons and evenings of December 4 and 5. All articles left over on the second evening will be sold at auction. Attractive booths are being arranged by the departments, and books, pictures, calendars and fancy articles will be sold. A Japanese tea room, a children's room, and a fortune teller are promised as special features. The regular meeting of the literary and educational department was held on Tuesday of this week instead of Wednesday as usual. The other departments have suspended meetings until after the bazaar. The next program meeting will be held December 2. The regular roll call will be answered with Indian legends. The club will issue its year book early next month.

The date of the January meeting of the Federation, which will be held in Ancon by invitation of the Ancon club, has not yet been fixed, but it will take place after the 15th of the month.

There was a large attendance at the meeting of the Las Cascadas Woman's Club, which was held at the residence of Mrs. F. S. Grosby, on November 19. It was a social meeting, and refreshments were served by the entertainment committee.

The cake sale, arranged by the Women's Guild, for the benefit of St. Luke's Church, Ancon, was held at the chaplain's house on afternoon and evening of November 20. The proceeds, about \$50, will be used to defray the expense of the Guild in the purchase of hangings and decorations for the new chapel, which, it is expected, will be open on Christmas Day.

Thanksgiving Day will be observed by special services at the Protestant chapel, Ancon Hospital, which will be suitably decorated for the occasion. Rt. Rev. Albion W. Knight, D. D., bishop of Cuba, who arrived on the Isthmus on November 23, for his second official visit, is expected to preach the sermon at the 9 o'clock service.

The Gatun Woman's Club at met the home of Mrs. W. C. Story, Friday, November 20, the president, Mrs. E. L. Bandy, in the chair. Nearly all the members of the club were present. The following chairmen of standing committees were appointed: Educational, Mrs. H. K. Higgins; domestic or philanthropy, Mrs. C. G. Carty; musical, Mrs. C. D. Corp. Mrs. Corp was also appointed chairman of the committee on the revision of by-laws, with Mrs. A. T. McCulloch, assistant. A calendar for the year, presented by a committee which included the president, was adopted by unanimous vote of the club. The schedule calls for a meeting on every Friday at 3 o'clock, in the following order: First Friday, business meeting; second, study, subject for the year, Panama; third, club program, furnished by the members; fourth, program, paper or address by an invited guest. The calendar is arranged up to May 1 and the programs will be varied and interesting. A year book containing all announcements will be issued shortly.

The sale of the Gatun "Sunshine" Club was held in the club room over the Commission hotel on Monday November 23.

The Christian Endeavor and other organ-

izations at Gatun are keeping up their interest well and add greatly to the life of the residents. The Christmas entertainment promises well. The teachers of the school have undertaken to drill the children for their share in the program.

The Wizard's Club will give a dance at the clubhouse, Empire, on Thanksgiving eve.

The program meeting of the Empire Woman's Club held on Tuesday, November 17 was well attended. The subjects chosen were as follows: "What I am thankful for in the Canal Zone," by the president. "The Spirit of Thanksgiving," by Mrs. H. C. Ball, and "The First Thanksgiving Proclamation." Musical numbers were given by Mrs. McIntyre and Mrs. F. M. Bell. The club will hold its meeting every alternate Thursday beginning with December 10, the next regular meeting.

## PERSONAL.

Commissioner Jo C. S. Blackburn, accompanied by Mrs. Blackburn, sailed for the States on the *Colon* on Wednesday, November 25, for eight weeks' leave of absence.

Col. W. C. Gorgas, of the Isthmian Canal Commission, accompanied by Mrs. Gorgas, Miss Gorgas, Miss Laura Carter, Miss Keene, of Philadelphia, and Judge Evans, of Cincinnati, sailed for Valparaiso, Chile, on the P. S. N. Co. steamship *Panama* from La Boca, on Monday, November 23. Col. Gorgas was appointed by the Secretary of State one of the ten delegates from the United States to the Pan-American Scientific Congress, which will meet at Santiago, Chile, on December 25. He will present a paper during the sessions of the Congress, on "The Control of Yellow Fever in the Tropics." Colonel Gorgas expects to return to the Isthmus on February 8. Dr. Pedro Obarrio, Superintendent of Santo Tomas Hospital, Panama, a delegate to the Congress from the Republic of Panama, also sailed on the same steamer with Colonel Gorgas.

Mr. F. G. Maltby, formerly in the Isthmian Canal service, is expected to arrive on the Isthmus November 30. He will have charge, for the contractors, of the construction of the handling plant at Gatun.

## Obituary.

Charles Vanne, of Baltimore, Md., died at Ancon Hospital on November 18. He came to the Isthmus about five years ago, was 62 years of age, unmarried, and was employed in the printing office of the Commission at Panama.

## Missing Man.

Mr. Brent Woodall, of Covington, Ky., secretary of the University of Cincinnati and nephew of Dr. C. W. Dabney, head of that institution, disappeared from his home on November 1, and it is believed that he came to the Isthmus. If he will call on J. W. Belt, Administration Building, Ancon, he will receive information which will be valuable to him.

The grading of the road for the highway to connect Corozal with Camp Diablo is nearly complete and plans are being prepared for an extension of the Panama-Corozal road toward Miraflores. Work will begin on the extension as soon as the plans are approved.

## CHAGRES RIVER TOPOGRAPHY.

## Survey Begun on the Basin Above Gamboa.

A topographical survey of the watershed of the Chagres River was begun on November 11, when a party of three engineers and fifteen laborers made a camp on the Chilibre River above Gamboa. The survey is undertaken to determine as accurately as necessary the drainage area of the river in order to estimate as closely as possible the water supply for Gatun Lake. It will be a traverse survey, and will be extended to the limits of the watershed. The watershed of the river above Gamboa will be surveyed first, and then the work will be extended to include all the streams in the Chagres basin below Gamboa, including the principal tributaries, the Rio Trinidad and Gatuncillo River.\*

In prosecuting the survey of the basin above Gamboa four parties will work along the river, two on each side, and will extend the lines from the river to the tops of the hills that bound the watershed. The survey will thus be completed in zones from the hills on the east to those on the west.

It is estimated that the length of the Chagres, from its mouth in the Caribbean Sea to its source in the mountains that skirt the shore of that sea, is 120 miles, and the area of the watershed is 1,200 miles. The basin above Gamboa, in which the surveys are now at work, is estimated as about 600 square miles in area. About fifteen miles in direct line above Gamboa, but twenty-five miles by the river, the Chagres branches into two smaller streams, the Chagres and the Pequeni. The point where these streams join is known as Dos Bocas (two mouths). The headwaters of the Chagres are in the hills that skirt the Caribbean Sea, and are probably about ten miles from the coast. Its course is southeast to its confluence with the Pequeni, and between its source in the hills and Dos Bocas the river receives several tributaries, of which the Indio, Feo, Limpio, Chico, Piedras, and Esperanza rivers are the chief. The Pequeni also rises in the hills on the Atlantic coast, and its course is almost due south to the mouth at Dos Bocas. Its principal tributary is the Boqueron. The old royal road from Porto Bello to Panama runs along the east banks of the Boqueron and Pequeni to a point near Dos Bocas, where it cuts across country to Panama. The cobble pavement can still be found in the jungle, although it is covered with rank vegetation, and large trees have grown up between the stones.

The Chagres falls 179 feet between Santa Barbara, three miles above Dos Bocas, on the upper Chagres, and Gamboa, a distance by water of about 28 miles. There are 35 small rapids between these two points, and the current is so strong throughout that upstream navigation is entirely by cayuco and pole. Between Alhajuela and Dos Bocas, and above Dos Bocas on the Chagres, the stream has cut its way through a plateau or a series of low hills, making for itself a cañon-like channel. In many places the

banks are rock palisades, cut into fanciful shapes at the base by the erratic river, here scarred from top to bottom by tiny waterfalls, there festooned with ferns and long grasses, the rank foliage brightened now and again with the purple or yellow of the trumpet vine, or an occasional orchid. It is possible to go thirty or forty miles up the Chagres above Dos Bocas by cayuco, but farther up navigation is unsatisfactory. A five days' journey up the Pequeni from Dos Bocas brings one to a series of rapids around which the cayuco must be carried, but beyond that the journey may be continued by boat three days longer.

Between Dos Bocas and Gamboa the most important tributaries of the Chagres are the Gatun,\* which flows in about nine miles above Gamboa, and the Chilibre, which joins the Chagres about five miles above Gamboa. Both of these rivers are small streams, draining small areas. It is along these affluents of the Chagres that the first surveys will be made. Hills, plateaus, and lowlands are comprised in the territory, and the land is so sparsely settled that the surveying parties will be supplied by cayuco on the Chagres and Pequeni rivers, as the country affords a bare living to the few negroes who inhabit it. It is a fertile region, but only a small part of it is under cultivation.

The survey now in progress will be the first complete one of the basin of the Chagres, although several have been made of portions of the basin, and under various auspices. In 1875, Commander E. P. Lull and Lieut. F. Collins, U. S. N., made a traverse survey along the Chagres from Gamboa to Las Campanas, between the present stations of Alhajuela and Vigia. They located a site for a dam which was to deflect the water of the Chagres into an aqueduct by which it would be carried to Gamboa to feed the upper level of a proposed lock canal. Previous to this the Colombian Government had made some surveys, the results of which were published in a map in 1864. Both the old and new French companies made surveys incident to their work of gaging the river. The Wyse map of 1885 contains the results of some of the surveys made by the old company. The results of the surveys made by the new company are embodied in the map which formed part of the property purchased by the United States in 1904. One of these maps gives the topography of the country up to the 60 meter (197-foot) contour.

In June, 1904, a survey of the whole Chagres basin was begun by the Isthmian Canal Commission. The valley above Gamboa was developed to the 200-foot contour, and this part of the work was finished in the summer of 1905. The basin below Gamboa was developed to the 100 foot contour, and this survey was finished in the summer of 1907. The survey above Gamboa included, in addition to topography, an investigation by borings of the Gamboa dam site, and on the site proposed for the diversion tunnel, which was to divert the water of the Chagres through Gatun River to the Gatuncillo. Two surveys recently attempted, but not finished, were undertaken to develop the upper Chagres basin. One of them was begun at Porto Bello, and the other developed a part of the watershed of the Esperanza River.

In connection with the topographical survey, the river gaging and rainfall work of

the Commission will be extended and completed. The data so far available are valuable, but not complete. They include the records of the old and new French companies, the records of the Isthmian Canal Commission since 1904, and the investigations by Gen. Harry L. Abbott and A. P. Davis, prior to the American occupation. The gaging station at Gamboa was established early in the French régime, but its records are complete only since 1892. The station at Alhajuela was opened on April 15, 1899, near the site chosen for the dam, which was part of the plan for controlling the Chagres and insuring a supply of water during the dry season. It is eleven miles by river from Gamboa and at elevation 92. The Commission has recently established a station at Vigia, 21 miles by river north of Gamboa, at elevation 129.

In the summer of 1899 rainfall and river gaging stations were established by the French company at Salamanca on the Rio Pequeni, 5.5 miles north of Dos Bocas at elevation 200; at Las Minas, on the Pequeni, 12 miles north northeast of Dos Bocas at elevation 250, and at Santa Barbara on the upper Chagres, three miles from Dos Bocas and at an elevation of 225. Rainfall stations were also opened on a hill between the Chigres and the Rio Feo, 4.5 miles north-east of Dos Bocas, at an elevation of 850 feet, and on a hill in the Rio Paente basin four miles southeast of Dos Bocas, at an elevation of 610 feet. All these stations, excepting that at Alhajuela, were abandoned after a few months and the records taken at them are therefore of very limited value.

## EXECUTIVE ORDER.

## Right of Appeal in Criminal Cases.

Under authority vested in me by law, it is ordered:

1. An appeal from the judgment of a district court of the Canal Zone may be taken by the defendant by giving notice in open court of his intention so to do at the time the judgment is rendered, or by filing with the court a written notice of appeal within five days thereafter. The appeal may thereupon be perfected by the defendant by filing with the district court or with the circuit court to which the appeal is taken, a bond in a sum fixed by the judge of said district court or the judge of said circuit court, but not exceeding two hundred and fifty dollars, and with one or more sufficient sureties approved by the court or clerk accepting the same, for his appearance and trial upon appeal in the circuit court: Provided, That if a money deposit be made in lieu of the bond, the amount to be deposited shall not exceed one-half of the sum required in the bond.

2. Sections 44, 45 and 46 of the Code of Criminal Procedure of the Canal Zone are hereby repealed.

THEODORE ROOSEVELT.

THE WHITE HOUSE,

November 7, 1908.

[No. 966.]

## A High Shovel Record.

On November 19, nine steam shovels of 95-ton class, working in the Empire District, Central Division, loaded 837 cars, containing 15,696 cubic yards of material, mostly rock that had been blasted. The average per shovel for this day was 1,744 cubic yards.

\*The river referred to as Gatuncillo is that which flows into the Chagres near Gatun, and when the Gatun River is spoken of the reference is to a small stream that flows into the Chagres between Gamboa and Alhajuela. These names have been used interchangeably by cartographers, and no little confusion has resulted.

## OFFICIAL CIRCULARS.

## Isthmian Purchasing Agent.

CULEBRA, C. Z., November 19, 1908.

CIRCULAR No. 221.

Effective this date: Major E. T. Wilson, in addition to his other duties, is appointed Purchasing Agent on the Isthmus for subsistence and commissary supplies.

GEO. W. GOETHALS,

*Chairman, Isthmian Canal Commission,  
President, Panama Railroad Company.*

## Regulations for Reimbursement Vouchers.

DEPARTMENT OF EXAMINATION OF ACCOUNTS,  
EMPIRE, C. Z., November 11, 1908.

CIRCULAR No. 5.

## TRAVELING EXPENSES.

Effective December 1, 1908: The following regulations will govern in the preparation and rendition of reimbursement vouchers covering additional expenses incurred by officers and employees of the Isthmian Canal Commission while traveling on official business, under proper orders, on the Isthmus. These regulations do not apply when the order requires travel which begins beyond or extends beyond the Isthmus.

1. Reimbursements for expenses incurred by an employee while on duty away from his official station will be allowed only when such expenses are in addition to the ordinary daily living expenses of the employee at home and necessitated by the performance of the duty required. No tips of any kind will be allowed while traveling on the Isthmus. Sunday expenses, on verbal orders, require specific explanation by officer directing such.

2. Expense accounts should be presented immediately after the close of each month and should cover all expenses for that month.

3. Accounts must be rendered on the regular form and the instructions on back of same must be followed. The form at present in use is X-51.

## REIMBURSEMENT FOR MEALS.

4. On account of the confusion resulting by reason of the different designations for the various meals, hereafter on reimbursement vouchers they will be described as "Morning Meal," "Noon Meal" and "Evening Meal."

5. In case of an employee who boards at an I. C. C. hotel when at his official station:

(a) If detailed to duty at a place where there is an I. C. C. hotel he is entitled to no reimbursement.

(b) If detailed to a place where no I. C. C. hotel is available he will be reimbursed for the actual cost of meals less 30 cents.

(c) The Tivoli Hotel is to be considered "accessible" to employees detailed to duty in the vicinity of Ancon and meals taken there will be at the regular hotel rates for employees of the Commission less 30 cents per meal. Such regular rates at present in effect at the Tivoli Hotel are as follow: 50 cents morning meal, 50 cents noon meal, \$1.00 evening meal, which allows reimbursement of 20 cents each for morning and noon meals and 70 cents for the evening meal.

(d) If while traveling in the city of Panama, claim for reimbursement for meals at more than the rate specified in the foregoing paragraph (5c) is made, the voucher must show specifically that the "service was rendered and the meal taken in the vicinity of the Old Administration Building."

6. In case of an employee who does not board at an I. C. C. hotel, but keeps house or boards at a monthly rate when at his official station:

(a) If detailed to duty where there is an I. C. C. hotel he is only entitled to reimbursement for 30 cents, or the price of a meal coupon.

(b) If detailed for duty at a place where no I. C. C. hotel is available or accessible he will be reimbursed for the actual and reasonable cost of his meals.

(c) The Tivoli Hotel is to be considered "accessible" to employees detailed to duty in the vicinity of Ancon and meals taken there will be at the regular hotel rates for employees of the Commission. Such regular rates at present in effect at the Tivoli Hotel are as follows: 50 cents morning meal, 50 cents noon meal, \$1.00 evening meal.

(d) If while traveling in the city of Panama, claim for reimbursement for meals at more than the rates specified in the foregoing paragraph (6c) is made, the voucher must show specifically that the "service was rendered and the meals taken in the vicinity of the Old Administration Building."

7. When it is necessary for employees to leave their regular stations prior to 7 a. m. for travel on special official business, allowance of 30 cents for the morning meal will be made for those who do not board at but are convenient to an I. C. C. hotel. At stations where there is no I. C. C. hotel or mess, the actual and reasonable cost of the morning meal will be allowed.

8. Employees who do not use hotel books for their

daily subsistence, and who are frequently detailed on official business away from their regular station may procure a sixteen-coupon meal book for use on such trips and thereby avoid the necessity of paying the cash rate of 50 cents per meal at the I. C. C. hotels and the disadvantage of being reimbursed for only 30 cents.

9. Meals in the cities of Colon and Cristobal are limited to 30 cents per meal. No reimbursement in excess of 30 cents will be made.

## TRANSPORTATION.

10. No transportation on the Panama railroad will be reimbursed, as amounts paid to the Panama railroad by the Commission cover both passenger and freight transportation.

11. Should it be necessary at any time for an employee of the Commission to pay for transportation either for himself, his assistants, or necessary equipment, while carrying out official orders, he should secure receipt of the agent to whom payment is made, and present claim for reimbursement to the Panama Railroad Company.

12. Cab fare must always be in accordance with tariff rate, and the form followed when rendering claim for reimbursement of same must conform to that given on the back of voucher form.

13. In Panama particular care must be exercised in giving the places between which transportation is furnished, because certain portions of Ancon and Panama are covered by regular tariff prescribed by the Alcalde of Panama. It is not sufficient to say "Panama railroad station to Administration Building," because there are two Administration Buildings—one at Ancon, and one, known as the Old Administration Building, in the city of Panama.

## SPECIAL REGULATIONS.

14. There are certain special regulations that will govern the expense accounts of policemen and others detailed to plain clothes duty. These men may be allowed the actual cost of meals taken, even though in excess of 30 cents and there is a Commission hotel accessible, provided in each case the voucher is accompanied by a special certificate stating "that to have availed themselves of the Commission rate would have revealed their identity and nullified efforts in investigations."

W. W. WARWICK,  
*Examiner of Accounts.*

Approved:

H. F. HODGES,

*Acting Chairman and Chief Engineer.*

## New Form of Meal Tickets.

DEPARTMENT OF EXAMINATION OF ACCOUNTS,  
EMPIRE, C. Z., November 19, 1908.

CIRCULAR No. 6.

Effective, December 1, 1908: The form of meal tickets now in use will be discontinued.

The following form of meal tickets are now on hand, and will be used effective with issues on the afternoon of Tuesday, December 1, 1908:

## 30-Cent Colored Laborers' Meal Tickets.

- 443-A.....Atlantic Division.
- 443-C.....Central Division.
- 443-M.....Mechanical Division.
- 443-P.....Pacific Division.
- 443-PR.....Panama Railroad.
- 443-Q.....Quartermaster's Department.
- 443-S.....Sanitary Department.
- 443-Misc.....Department

## 40-Cent European Laborers' Meal Tickets.

- 449-A.....Atlantic Division.
- 449-C.....Central Division.
- 449-M.....Mechanical Division.
- 449-P.....Pacific Division.
- 449-PR.....Panama Railroad.
- 449-Q.....Quartermaster's Department.
- 449-S.....Sanitary Department.
- 449-Misc.....Department.

These tickets are numbered consecutively for each department and will be furnished upon requisitions sent to the Examiner of Accounts, (as in the case of coupon books), upon form X-47. A supply of this form of requisition should be obtained from the Stationer and Printer.

Timekeepers will be charged with the value of all tickets furnished them and will render monthly stock report on form X-56, (now in press). Canceled tickets will be listed thereon and sent to the Examiner of Accounts with monthly stock report. The total number of tickets to account for, less stock on hand and canceled tickets, will represent the issues to laborers, for which deductions must appear on pay rolls.

In order to diminish the number of canceled tickets, the use of tickets punched in excess of the number required for the day, by punching the next succeeding date is authorized, it being understood that tickets are good for the last date punched. However,

tickets punched on the last day of the month in excess of the number required, must be handled as "canceled," as it is not desired to carry such tickets from one month to another.

Forms 448-Misc. and 449-Misc. are blank as to name of department or division, and should be used by any department or division that does not have a form for its special use. A rubber stamp should be used to indicate the issuing department or division. This form may also be used by the Quartermaster's Department for issue to laborers arriving on the Isthmus, to whom subsistence is furnished pending assignment to work. Such tickets will be stamped "Recruiting" and their value charged to the Quartermaster's Department.

W. W. WARWICK,  
*Examiner of Accounts.*

Approved:

GEO. W. GOETHALS,  
*Chairman and Chief Engineer.*

## LEGAL NOTICES.

*In re Estate of Anatole Laurence, Deceased.*—To any and all persons having any claim or claims against the estate of Anatole Laurence, deceased, who died at Empire, Canal Zone, on the 18th day of September, 1908:

You are hereby notified to present your claims, duly verified, to Felix Laurence, administrator of said estate, or to the undersigned, on or before the 1st day of June, 1909, or your claims will be forever barred according to law.

Witness my hand, this 6th day of November, A. D. 1908.

E. M. GOOLSBY,

*Clerk of the Circuit Court, Second Judicial Circuit,  
Canal Zone, at Empire.*

EMPIRE, C. Z., November 2, 1908.

Estate of } Administration.

Michael Doyle }  
All relatives of the late Michael Doyle, an American, who died intestate at Ancon Hospital on the 20th of July, 1908, are hereby requested to communicate with the Administrator of the estate. Also all persons owing the said estate will likewise communicate with the Administrator in order that a settlement may be effected; and all creditors of the estate must file their claims, properly verified, with the Administrator within six months, or the same will be barred.

F. H. SHEBLEY,  
*Administrator.*

United States of America, } In the First Judicial  
Canal Zone. } Circuit.

Frank Roch, American, died intestate on or about May 26, 1908, leaving an estate located at Ancon, Canal Zone, consisting of various personal belongings of little value, Isthmian Canal Commission pay certificates for \$250, and cash amounting to \$260.

James Tray, American, who resided at Ancon in the Canal Zone, died intestate on or about January 22, 1906, leaving an estate at Ancon, consisting of Isthmian Canal Commission pay certificate for \$110 Panama currency.

Louis M. Gilbert, alias Charles Gibson, American, who resided at Pedro Miguel, C. Z., died intestate on or about May 4, 1907, leaving an estate at Pedro Miguel, consisting of Isthmian Canal Commission pay certificate of the value of \$27.75 net, and \$1.50 cash.

Bartole Salcedo, a native of the Dutch West Indies, who resided at Ancon, C. Z., died intestate on or about June 29, 1907, leaving an estate at Ancon, consisting of Isthmian Canal Commission pay certificate for \$1.60 Panama currency.

Charles White, American (colored), who resided at Pedro Miguel, Canal Zone, died intestate on or about April 3, 1908, leaving an estate at Ancon, Canal Zone, consisting of \$5 U. S. Currency.

The Collector of Revenues has filed a petition for escheat in each of the above mentioned estates under section 779 of the Code of Civil Procedure.

Notice is hereby given to all concerned to appear at the courthouse in Ancon, Canal Zone, on January 13, 1909, at 9 o'clock a. m., to establish their claims to the said estates, or to show cause why the same should not escheat to the Canal Zone.

F. H. SHEBLEY,  
*Circuit Court Clerk Pro Tempore,  
Ancon, Canal Zone.*

## COMMISSION CLUB-HOUSES.

## Activities of the Young Men's Christian Association.

The standing of the bowling league on November 23, was as follows:

28, was as follows.				
	<i>Games Played.</i>	<i>Won.</i>	<i>Lost.</i>	<i>Percent.</i>
Empire.....	69	44	25	637
Cristobal .....	69	40	29	579
Culebra.....	60	25	35	416
Gorgona.....	60	20	40	333

## CRISTOBAL.

A walking contest from Panama to Colon has been organized and will be decided on Sunday, November 29. Twenty-five men from Cristobal have entered and other associations on the Isthmus have been invited to participate. Contestants will start from Panama early in the morning of the day mentioned.

A new term of educational classes will begin on Friday, November 27. Instruction in arithmetic, algebra, civil service examinations, mechanical drawing, first aid, and Spanish (beginning in advanced), will be given. The executive council has authorized the formation of classes to be composed of members and their families, which will afford an opportunity for ladies to take advantage of this instruction.

In the Boys' Department, eighteen boys are being instructed in exercises and indoor athletic games. They are divided in two teams—the "Coyotes" and "Jack Rabbits." The classes meet for instruction three times a week—on Tuesday and Thursday afternoons and on Saturday morning. A team will go to Culebra on Saturday, November 28, to meet the Juniors there at indoor baseball, athletic contest, and bowling.

## GORGONA.

The Choral Club gave an entertainment called "An Old Folks' Concert," at the clubhouse, Friday evening, November 20. The program consisted of music by the orchestra, singing and recitations. The club is composed of twenty-nine members and the costumes were of the style in vogue in 1849. Although this was the first appearance of the club, there was a large audience present. The next entertainment by the Club will be "A Trial by Jury." Mr. Charles E. Jennings is the musical instructor of the club.

A reception will be given on Wednesday evening, November 29, to welcome the new secretary at Gorgona, Mr. Guy C. Mitchell, of Auburn, N. Y. The Woman's Club of Gorgona will assist the members of the Y. M. C. A. at the reception.

Mr. Freeman, who has been in charge at Gorgona for the past few months, will assume his duties as traveling secretary with headquarters at Culebra.

## EMPIRE.

Empire defeated Gorgona in the pool tournament held at Empire on Saturday evening, November 21, by winning four of the five games played, three in pool and one at billiards.

The Empire indoor baseball team defeated the Cristobal team at Cristobal on Saturday evening, November 21 by a score of 23 to 13.

## COMMISSARY DEPARTMENT.

## NOTICE.

Cristobal, November 20, 1908.

This Department will be closed on Thursday, November 26, Thanksgiving Day. Patrons will guide themselves in placing their orders accordingly.

JOHN BURKE,  
Manager.

Approved:  
EUGENE T. WILSON,  
Subsistence Officer.

Patrons of the Commissary Department, when dealing with the Cristobal office, will address their individual orders, deposits, etc., to the Order Room, Commissary Department, Building No. 2, Cristobal.

Complaints should be made in separate letters and addressed to the Subsistence Officer, Building No. 2, Cristobal.

JOHN BURKE,  
Manager.

Approved:  
EUGENE T. WILSON,  
Subsistence Officer.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

## NOTES OF PROGRESS.

### Preparing for Concrete Work at Gatun Locks.

In the work preparatory to laying concrete at Gatun Locks the delivery of the handling plant is now the determining factor. Tracks are being laid for the unloading towers of the cableway system, which are expected on the Isthmus about December 15. The supply tunnels under the stone and sand piles have been started, and the excavation for the supply tunnel in the cement shed has been completed. Four pile drivers are at work on the foundations for the cement shed and dock. The dock will be 500 feet long and 140 feet wide. Part of the pile driving has been in material so hard that it has been necessary to shoe the piles with cast-iron points in order to penetrate it. The channel connecting the old French canal with the east diversion has been completed so that vessels drawing ten feet of water can tie up at the docks along the diversion. Dredge No. 82 was unable to excavate the rock on the bottom of the channel, and when it is necessary to deepen it to fifteen feet a dipper dredge will be set at the work.

### Small Slide at Porto Bello.

Excessive rains at Porto Bello have loosened the earth on the hillside above the power plant and the material has slid to the foot of the hill, forcing the two boilers out of their settings and shifting foundations that were ready for the installation of the air compressor and the engine. The slide has delayed the work a week, but not long enough to interfere with the delivery of stone for the Gatun spillway concrete work. In order to make a similar occurrence impossible, the earth will be washed off the hillside down to the rock face, leaving no material to slide.

### Gatun Storehouses.

The framework of the Atlantic Division storehouse at Gatun has been completed and

the roof is on. The building will be ready for use in a few days. Work has been finished on the temporary storehouse for electrical machinery at Gatun.

### November Excavation.

The grand total of excavation during the month of November was 2,920,494 cubic yards. All of this excepting 70,228 cubic yards was taken from the Canal prism. This is 304,144 cubic yards less than the record for October, and 559,776 cubic yards less than the highest record, that for March, 1908. There were 23 working days in November, four less than in October, and three less than in March. Of the grand total for November, 1,282,311 cubic yards were taken out by dredges and the remainder was dry excavation. The mean rainfall for November, for the territory in which excavation was in progress, was 11.66 inches, as compared with 10.51 inches in October.

The daily average of excavation in November was the highest ever made in the rainy season, but falls short of the daily average for March, the record dry month, by 6,878 cubic yards. A comparison with the output for November, 1907, when the daily average was 76,604 cubic yards, shows that the daily average of excavation in November, 1908, was 64 per cent greater. The daily average for each month since March follows:

	Cubic Yards.
November .....	126,978
October .....	119,431
September .....	126,355
August .....	125,096
July .....	121,878
June .....	117,704
May .....	108,157
April .....	131,844
March, (record month) .....	133,856

In the Atlantic Division the excavation from the site of the locks fell 26,140 cubic yards below that in the month of October, while the excavation from the cut at Mindi was 1,708 cubic yards greater than the October record. The excavation from the Gatun Dam spillway was 13,702 cubic yards less than in October. The excavation for the channel to the receiving docks at Gatun is not considered part of the Canal excavation, but is regarded as excavation on account of building. The dredges excavated 570,832 cubic yards as compared with 505,260 cubic yards in October, and with 638,217 cubic yards in August, which is the highest record for the Atlantic dredges. The daily average for the Atlantic dredges was therefore greater in November, when it amounted to 24,819 cubic yards, than in August, when it amounted to 24,547 cubic yards. The dipper dredge *Chagres* was out of service one week, undergoing repairs.

The highest record for one day was broken in the Central Division on November 30, when 67,130 cubic yards were taken out. The total excavation fell 240,015 cubic yards short of October and 265,934 cubic yards

short of the best dry season record, that of March. A comparison of the daily average for the three months shows:

	Cubic Yards.
March .....	62,496
October .....	59,221
November .....	59,085

This division includes the Culebra Cut and the excavation in the territory formerly called the Chagres Division.

The total excavation in the Pacific Division fell 74,145 cubic yards short of that for October, which was the highest record made in this division, but the daily average for November was 36,056 cubic yards, as compared with 33,460 for October. The daily average for the dredges in November was 30,934 cubic yards, as compared with 28,366 cubic yards in October.

A detailed statement of the excavation in the three divisions follows:

### ATLANTIC DIVISION.

Locality.	From Canal Prism	Outside Canal Prism	Total excavation
	cu. yds.	cu. yds.	cu. yds.
Dry excavation—			
Gatun spillway .....		30,695	30,695
Gatun Locks .....	83,527		83,527
Mindi .....	47,183		47,183
Total .....	130,710	30,695	161,405
Wet excavation—			
Colou dredging .....	570,832		570,832
Total wet and dry excavation .....	701,542	30,695	732,237

### CENTRAL DIVISION.

All dry excavation—			
Chagres section .....	336,390		336,390
Culebra section .....	985,302	37,274	1,022,576
Total .....	1,321,692	37,274	1,358,966

### PACIFIC DIVISION.

Dry excavation—			
Miraflores Locks .....	47,109	2,259	49,368
Pedro Miguel Locks .....	56,204		56,204
Cardenas Hill .....	12,240		12,240
Total .....	115,553	2,259	117,812
Wet excavation—

Miraflores Locks .....	55,123		55,123
Total .....	711,479		711,479
Total wet and dry excavation .....	827,032	2,259	829,291

### TOTAL EXCAVATION, ENTIRE CANAL.

Dry excavation .....	1,567,955	70,228	1,638,183
Wet excavation .....	1,282,311		1,282,311
Total .....	2,850,266	70,228	2,920,494

Mean rainfall along Canal (eleven stations), 11.66 inches.

Figures of monthly excavation are based upon telephone reports from the Division Engineers, and are subject to slight alterations when the official reports are received.

### Atlantic Dredges.

At the Atlantic entrance the dredges are continuing their excavation of rock blasted in the dry, and are constantly reducing the

## NOTES OF PROGRESS.

(Continued).

cost per cubic yard. The dipper dredge *Chagres* was laid up for general repairs last week, and the sea-going suction dredge *Ancon* lost one day while being fumigated after the death of one of the crew.

## Dredging in Gatun Locks.

Excavation on the site of the lower or north locks at Gatun will be done by the 20-inch suction dredge, No. 82. As soon as the dredge has completed the little that remains for it to do in the channel leading to the material docks, it will go down the east diversion channel and cut its way across to the site of the lower locks. It is estimated that the dredge will remove about 400,000 cubic yards. The rate of excavation can not be estimated until the material to be handled is known. Wash borings show that this material is earth, but it may be tough clay, like that which was encountered in the channel to the material docks, and in that event the dredge will not be able to work nearly so fast as it would in soft earth.

## New Corral at Colon.

On November 23, the new corral at Colon, built by the Panama Railroad Company, was opened to the public, and already a majority of the small stables in and about the city have been abandoned by the owners of horses for the new quarters. Out of 256 stalls provided in the new corral 220 have already been leased. The corral consists of stalls, coach sheds, cart yards, blacksmith shop, and stock yards. It is located on E street, and extends from Teuth street to Thirteenth street. When the lateral streets of the city shall have been opened it will be accessible by half a dozen highways from all parts of the town.

The stables consist of nine detached buildings, seven of them 24 feet wide and 135 feet long, and two of them 12 feet wide and 130 feet long. These buildings are separated from one another by macadamized alleys nine feet wide, and a macadam road 20 feet wide runs along the back. Each building is divided into a feed and harness locker room, 12 feet by 18 feet, stalls, and a cart yard or coach shed 45 feet long. The stalls are 4 feet 6 inches wide by 9 feet long, and they are arranged in two parallel lines with a feed passageway between them. They have plank floors, which drain into a concrete gutter. The corral is in charge of a corral-master, who is assisted by enough hostlers to keep the stables and the premises in a sanitary condition. Regular inspections are made by a veterinary surgeon. A stable for private stock is located near the public corral, and consists of feed and harness locker room and stalls for 20 horses. The stockyards consist of four pens 30 feet wide by 60 feet long, with a runway which extends from the line of the pens to the railroad siding that runs through E street.

## Suction Dredge at Nombre de Dios.

It has been ascertained that the machinery on the 16-inch dredge which sank at Nombre de Dios on November 5, has not been injured. An investigation is being made of the condition of the hull and, if it is not seriously injured, it will be raised. In case the hull is not raised the machinery will be

taken off and installed on a float in the harbor and used as originally intended in the sand excavation.

## Panama Trade Statistics.

Mr. Claude Coventry Mallet, British Minister to Panama, makes the following statement in regard to the trade and commerce of the Panama Republic in his annual report to his Government for the year 1907:

"Improvements—In commercial circles energies have been put forth in various directions; shops have been enlarged, and merchandise of more variety and better quality is kept in stock, for it is clearly recognized that the foundations of future prosperity are being gradually but surely laid now that the Republic, in consequence of the cessation (guaranteed by the United States Government) of civil discords, has entered upon a period in which industry and commerce will be free from the injurious effects of such disturbances; and such statistics as are available show a marked increase in importations and revenue.

"Imports Into the Republic—The value of British and foreign goods paying duty which have been introduced into the ports during the past two years is as follows:

From.	1906.	1907.
United States.....	£ 729,684	£ 1,039,392
United Kingdom.....	387,114	377,113
Germany.....	152,965	212,371
France.....	27,955	65,951
Spain.....	20,699	38,381
Italy.....		37,942
Belgium.....		29,953
British possessions.....		28,479
Other countries.....	154,201	92,247
Total.....	£ 1,472,619	£ 1,912,889

Increase in 1907.....£ 440,270

"Of the total imports in 1907, Panama city received £ 1,079,586, Colon, £ 619,381, and Bocas del Toro, £ 213,922. The total value of the imports into Panama city for 1903, the last year for which statistics are available for comparison, was £ 411,816, so that the increase in 1907 over that year was £ 667,770.

"Nevertheless, the merchants complain of bad times on account of the large quantities of goods imported and sold by the Canal Commission commissaries, and, while there is no doubt the sales are seriously reduced thereby, it is probable, in view of steadily increasing importations for consumption, that the cause is more likely to be found in the fact that local competition, through the establishment of new firms, has increased in greater proportion than the business done.

"The preceding figures do not include the material and equipment for Canal construction, or supplies for the commissaries, which bring no revenue to the Government of Panama, and therefore can not be strictly regarded as part of the regular trade of the country.

"Imports Into the Canal Zone—Imports of the value of £ 2,282,726 entered the Canal Zone without payment of duty in 1907, as compared to £ 1,616,157 in 1906."

## Highest Daily Excavation.

The best record for excavation in one day since the beginning of the canal work by the Americans was made in the Central Division on November 30, when 67,130 cubic yards of material, car measurement, were taken out by 53 steam shovels. This was an average of 1,256 cubic yards for each shovel.

## EXECUTIVE ORDER.

## Amendment to Civil-Service Rules.

Schedule A, section VIII, paragraph 1, of the civil-service rules is hereby amended by the addition of the following words at the end of the paragraph:

Unless he was classified by the Executive order of November 15, 1904, in a position which was then and is at the time of the proposed transfer in the competitive service.

As amended the paragraph will read as follows:

1. All officers and employes in the service of the Isthmian Canal Commission upon the Isthmus of Panama except those who are to perform the duties of clerk, bookkeeper, stenographer, typewriter, surgeon, physician, trained nurse, or draftsman. Appointments to clerical positions on the Isthmus of Panama paying less than \$75 in gold per month may be made without examination under the civil-service rules. No person appointed to the service on the Isthmus of Panama otherwise than through competitive examination or by transfer or promotion from a competitive position shall be transferred to a competitive position unless he was classified by the Executive order of November 15, 1904, in a position which was then and is at the time of the proposed transfer in the competitive service.

THEODORE ROOSEVELT.

THE WHITE HOUSE,

November 9, 1908.

[No. 967.]

## Minstrels at Camp Elliott.

On the evening of Thanksgiving Day the enlisted men of Camp Elliott gave a minstrel and vaudeville show in the new gymnasium building which they had converted into a theater for the occasion. Part 1 of the performance consisted of "Ye Soldier Boy Minstrels," composed of W. H. Westlake, interlocutor; *Bones*: Buck Brodie, W. W. Graff, J. W. Cotter, and J. Neough; *Tambos*: E. C. White, J. G. Harrigan, W. H. Taber, J. F. Womeldorf, endmen, and R. Collins, R. W. Allen, E. W. Osborn, A. E. Fields, H. Haven, W. Sippl, F. W. Carrington, F. C. Anderson, F. Barlow, and J. M. Johnson, middlemen. The musical numbers were much enjoyed. Part 2 was made up of vaudeville acts and three farces, "Down and Out," "The Lieutenant and the Girl," and "Room 44-45."

The committee on arrangements consisted of J. W. Cotter, E. Arnold, R. W. Perry, and W. H. Westlake, and the executive staff directly in charge of the performance were Ralph W. Perry, stage director; E. Arnold, musical director; P. C. Anderson, stage carpenter; E. Ream, stage electrician, J. W. Cotter, properties, and Newton G. Garret, chief usher. The scenery and effects were designed by R. W. Perry, and the stage was built by W. Carmichael. There were about five hundred people present and the entire performance was very successful.

## Isthmian Canal Rebekah Lodge, No. 1.

The meetings of the Isthmian Canal Rebekah Lodge, No. 1, will be held the first and third Saturday of every month, at 7.30 p. m. in Fraternity Hall at Gorgona.

## Joseph Doyle.

Joseph Doyle, civil engineer, late of Porto Bello, Panama, is requested to communicate with M. B. Sheridan, Empire, C. Z.

## LOSS OF THE FINANCE.

## P. R. R. Steamship Sunk Off New York Harbor.

The steamship *Finance* of the Panama Railroad Steamship Company's line, was run into off Sandy Hook on the morning of November 26, by the White Star steamer *Georgic*, and was sunk. The *Finance* was scheduled to leave New York on November 23, but was delayed in the harbor by a dense fog until the morning of November 26. The accident occurred about 8.20 o'clock. Henry Muller, an Isthmian Canal Commission conductor, Charles N. Schweinler, of the Canal Zone police, William Todd, third assistant engineer of the *Finance*, and Irene G. Campbell, a Jamaican woman, were drowned. All the other passengers and members of the crew were saved. The *Finance* carried 771 sacks of mail, of which 171 sacks were for delivery in the Canal Zone, 27 in Colon, 38 in Panama, 404 to the British Packet Agent, 116 for Salvador, 12 for Mexico, and three containing United States State Department dispatches, one each to Guayaquil, Quito, and Panama. It is expected that the greater part of the mail will be recovered. No further advices have been received, but full details are expected on the *Advance*, which was scheduled to sail from New York, on November 28.

The *Finance* was built in Chester, Pa., in 1882, was 295 feet long, 33.4 feet broad, 23.4 feet deep, had an indicated horsepower of 1,600, gross tonnage of 2,603 tons, and net tonnage of 1,649 tons. She was a single screw steamship, and carried a crew of 55 men. Under the provisions of the Sundry Civil Appropriation Act of May 27, 1908, the insurance of the ship was provided for as follows:

Sec. 2. The foregoing appropriations shall be available to reimburse the Panama Railroad Company for marine losses, or for losses due to destruction of or damage to its plant, equipment, or commissary supplies by fire: Provided, however, That upon this appropriation becoming effective the Panama Railroad Company shall cease to carry insurance against loss from causes covered by this appropriation.

Charles N. Schweinler was born January 10, 1876, in New York city, and reported for duty as a first class policeman on the Canal Zone December 20, 1907. He was stationed at Empire and was returning on the *Finance* from his first vacation in the States. His nearest surviving relative is an aunt, Miss K. Schreck, of 598 Madison street, Brooklyn, N. Y.

Henry Muller, was 32 years old, married, and up to May 11, 1908, had his family with him on the Isthmus, his home being at Las Cascadas. He was a resident of Newark, N. J. He arrived on the Isthmus, May 11, 1906, and immediately entered the service of the Isthmian Canal Commission as a conductor. His last employment was in the Central Division.

As the personnel files of the Panama Railroad Company are kept in the New York office no authentic information is available with regard to William D. Todd, the third assistant engineer of the *Finance*.

## Oil Supply for P. R. R. Locomotives.

An order has been placed by the Panama Railroad Company for a 50,000-gallon steel tank and a 30-foot tower to be erected at Cristobal. The tank will be used in supplying oil to the oil-burning locomotives, 12 of which have been ordered and are expected

on the Isthmus in February. The oil will be piped from the Union Oil Company's storage tanks at Mount Hope into the supply tank. This will be the only tank used by the Panama Railroad Company, as each locomotive will take enough oil at Cristobal for a round trip.

## The Work of the Culebra.

The work of the sea-going dredge *Culebra* is to make a channel 500 feet wide and 45 feet deep at mean tide at the Pacific entrance to the Canal from the wharf at La Boca out to deep water in Panama Bay, and farther inside if practicable. In the outside part of the channel the desired depth has been procured, and in some parts it has been dug five feet deeper than is necessary. This will probably fill from the slipping of the sides in the near future. Up to the present this outside channel has not been dredged to the full width. On the inside or La Boca end of the channel, where the *Culebra* is now working, from the La Boca wharf two miles out to sea, a depth of about 30 feet at mean tide, has been secured.

At its present work inside the dredge is taking and dumping sixteen loads of material each day of twenty-four hours, provided there are no running repairs to make. The amount of material being taken out each day is about 15,000 cubic yards. Each load is measured as taken by scow measurement, and the results are checked every four months by a cross-section measurement of the channel. It is deemed necessary to follow this plan of checking the bin measurement, because the dredging extends over such a large area that a slight difference in the depth would show quite a large difference in the yardage. The last cross-section check on the scow measurement shows a difference of about seven per cent, this shortage covering the whole new channel at La Boca, including the work performed by all the dredges, both ladder and suction. That is, the cross-section measurements show that the computation of yardage based on bin measurement for the *Culebra* and place measurement for other dredges was seven per cent less than the summation of monthly estimates. This is probably due to fill caused by tidal cross-currents.

The material being dredged by the *Cule-*

*bra* is probably 75 per cent clay, and great difficulty is sometimes experienced in dumping it from the hoppers as it is peculiarly tough and adhesive. Plans are being prepared with a view of driving two streams of water on to each hopper door, to facilitate the washing out of the material that is so difficult to dislodge.

As the capacity of the *Culebra* is about 2,400 cubic yards when the bins are entirely filled with solid material, and as the dredge is making 15,000 cubic yards a day in 16 loads, it follows that the amount of material carried out at each load is only about 39 per cent of the actual capacity of the dredge. This apparently light loading is necessary, because a large portion of the clay being excavated is so mixed with water that it does not settle readily, and after pumping a certain length of time, which has been determined in the Pacific Division to be about 40 minutes, it is not economical to pump longer. This shrinkage from what the dredge can actually contain is largely made up by the frequent trips.

## Entertainment for the Sailors.

The Young Men's Christian Association of the Canal Zone is planning to care for and entertain the sailors of the Pacific Fleet that will be at Panama from December 12 to 22. Arrangements have been made with the Canal Commission for the use of the vacant rooms in the old Canal Administration building in Panama. Several hundred cots will be furnished and there will be a restaurant with soft drinks, a money exchange, reading and writing rooms, and information bureau. The scheme is made possible by the assured support and cooperation of the Canal Commission, and the Panaman Government through its President, J. D. de Obaldia.

Mr. F. C. Freeman, traveling Secretary of Y. M. C. A., will be in direct charge of this special work and a citizens' committee will be organized for cooperation. As soon as this committee organization is effected further details of the plan will be made public.

Lost—On Tuesday morning between steam shovel No. 207 and steam shovel No. 260, one note book, and an ivory rule. Will finder please return same to the office of the Master Mechanic, Empire, or to their owner, Wm. G. Hull, Car Foreman, Cableway, Empire, C. Z.

## STATEMENT OF CLASSIFIED EXPENDITURES TO SEPTEMBER 30, 1908.

The following table shows expenditures for Canal work, classified monthly, since July 1, 1907. The figures give only expenditures which have been located. In addition, there have been some disbursements, such as purchasing material, etc., which it will not be possible to locate to a specified account until their use has been finally determined:

Period.	Civil Administration.	Sanitation.	Construction and Engineering.	Municipal Improvements.	Plant Account.	Total.
Prior to July 1, 1907. ....	\$1,445,104.99	\$4,623,853.39	\$13,406,940.25	\$4,281,656.69	\$19,278,425.34	\$43,035,980.66

## FACTS ABOUT GATUN DAM.

## The Foundation and the Methods of Its Construction.

A portion of the rock toe on the up-stream end of Gatun Dam sank about 20 feet on November 21. During several weeks prior to this date a slide under the high trestle of the relocated Panama railroad at Gatun made necessary the dumping of an additional quantity of rock before the roadbed was brought to grade. In the week of November 15, high water in the Chagres River flooded the tracks of the Panama railroad at Gatun. About the same time a rumor was circulated that the borings on the site of the Gatun Dam revealed the existence of a great lake beneath it. In order that all misapprehension and doubt as to the foundations of both the dams and the locks at Gatun may be dispelled, the following official statement of conditions there is published:

The purpose of the dam at Gatun is to impound the waters of the Chagres River and its tributaries in a lake that will be formed in the valley of the Chagres River. This dam will extend from the ridge of hills in the west across the valley to the ridge on the east, and will be about one and one-half miles long. At the extreme east end the locks are being built through a small hill on which the dam abuts. The dam itself is divided into two parts, one extending from the site of the locks to the spillway, the other extending from the spillway to the hills on the west. The spillway will be located through a small hill which rises in the middle of the site of the dam. The excavation for a temporary spillway 300 feet wide through which the flow of the Chagres will pass during construction has been completed, and concrete will be laid there early in January. There are three old channels running through the dam site, first, that of the Chagres River and the east diversion, which runs along the foot of the east hills; second, that of the old French canal which had been dug from Cristobal to a point near Bohio, and third, the west diversion channel, made by the French to keep the water of the Chagres from the excavation while they were digging the canal.

The plan for constructing the Gatun Dam is to pump sand and clay upon the site selected until a hill with top at reference 135 feet above sea level and 1,700 feet wide extends across the valley. This sand and clay have been found in large quantities down the valley of the Chagres River convenient to the site and have been proved by thorough test to be good material for an earthen dam. The dam will be made by suction dredges, which will pump the material mixed with water upon the site, and the water running off will leave a closely packed deposit of homogeneous material. For the purpose of adding weight to the dam and for the further purpose of keeping the material from sliding north and south, as a great mass of earth is likely to do, two walls or toes of rock are being built across the valley.

The north or downstream toe is composed of rock and earth taken from the cut at Mindi and from the site of the locks. The south or up-stream toe is composed of the hard rock taken from the cut at Bas Obispo

and of material excavated from the lock site and at Mindi. The ridge of Bas Obispo rock is 30 feet broad at the top, and when completed will be 60 feet high. It already has reached that height in one place and has a 1 to 1½ slope. Back of this ridge of rock, or up-stream, the excavation taken from the works at and near Gatun, and which is not needed in the north toe, will be dumped. This wall of rock and of mixed material forms the south or up-stream toe. Between the north and south walls, or toes, of the dam, three million cubic yards of the sand and clay from the valley of the Chagres River will be pumped. These toes are not part of the dam proper, but are merely built to hold the material of the hydraulic fill until the water has drained off, and to make unnecessary the greater fill that would be required if the material were allowed to seek its natural slope.

The rock wall of the south toe has been extended from the foot of the east hill to the spillway. This extension closed the old channel of the Chagres River and east diversion, and of the old French canal, and the water of the river found an outlet through the west diversion channel dug by the French. The old French canal crosses the Chagres River in five places between Gatun and Bohio and has become the channel through which a large part of the water of the Chagres River flows to Gatun. A short distance above the site of the dam the Gatuncillo River flows into the Chagres. The building of the toe forces the water from the Gatuncillo River and that which comes through the channel of the old French canal to seek an outlet at a right angle to its natural course, and in consequence each high water during the rainy season has flooded the flats south of Gatun, simply because the old French diversion channel is not large enough to carry off the water as rapidly as it comes down the valley. The high water in the week of November 15 merely repeated what had happened several times during the present rainy season, namely, flooded the flats south of Gatun, and, as the flood was unusually heavy, the water rose over the tracks of the old line of the Panama railroad. In some places it was eight inches above the tops of the rails.

Half way between the foot of the east hill and the spillway the old French canal channel runs through the dam site, but it has been closed by the construction of the south toe. The silt and soft mud that had collected in the bottom of this channel for the past twenty years was not removed when the construction of the toe was begun, and when the weight of the rock became great enough it displaced the soft bottom of the old channel and forced it up 200 feet north of the toe into the site of the dam. This was anticipated and desired. It is also anticipated that other parts of the toe may settle in the same way. The more they settle the firmer will be the foundation of the toe, for the result is simply what it would have been if a big trench had been dug across the valley down to the stratum of stiff clay which underlies the dam site, and had then been filled with stone. The work on the dam is not in any way interrupted by these small settlements. Rock will be dumped until the toe has reached the desired height of 60 feet, and each settling will only result in more rock being dumped

there until the solid foundation is reached and an equilibrium established.

The idea that there is a lake under the site of Gatun Dam probably originated from the fact that the borings made at close intervals all over the dam site discovered water in about 10 per cent of the holes sunk. The result of these borings was published in THE CANAL RECORD of September 2, 1908, and nothing has developed further. The report on these explorations, which will appear in the annual report of the Chairman and Chief Engineer to Congress, covers the matter thoroughly from a technical standpoint. Briefly it shows that water under pressure was found in several places under the dam site. The fact that there was no communication between the various holes shows beyond question that the water under the dam site is in pockets and is not a pool or lake, and the fact that the water was under pressure and rose in the test holes shows that it has no outlet. In addition to the borings two test pits were sunk 100 feet below sea-level and they merely confirmed what the borings had already shown, that the dam is being built on a very firm foundation of impervious clay.

What is true of the foundation of the dam is also true of the foundation of the locks. There is no question at all of its satisfactory character. The locks are being constructed in a series of three double locks, making a rise from sea-level to the 85-foot level of the Gatun Lake. Each lock is 1,000 feet long, 110 feet broad at the entrance, and 41½ feet deep in fresh water over the sills.

The excavation for the south or upper lock is practically completed, and the concrete work will be begun as soon as the power handling and mixing plants are delivered on the Isthmus, and can be put in running order. The excavation in the second and third locks involves the removal of 1,400,000 cubic yards of material by steam shovel and 400,000 cubic yards by suction dredge. The steam shovel work is already well advanced, and the dredging will be begun soon. The locks will be built entirely of concrete, forming a series of three water-tight boxes, each divided into two parts. Beneath the level of the floor of the upper and second locks a curtain wall will be sunk to a sufficient depth to keep out whatever water is now finding or is likely to find its outlet beneath the lock site. The excavation on the curtain walls will be begun in a few weeks. The plans for the locks have been completed in all but a few details. The stone and sand necessary can be delivered at the handling plant in Gatun as soon as they are required.

The slide on the relocated line of the Panama railroad at Gatun is similar to those which occurred at Cucaracha and at other points along Culebra Cut and at Miraflores tunnel. It is caused by the earth, which has become saturated from the excessive rains and has been burdened with the weight of the fill, sliding on the surface of the rock which underlies it. This slide has reached its angle of repose for the present, but it is expected that during the next rainy season, when the fill is continued to the 95 foot grade, the slide will begin again. More material will then be dumped into the depression and the filling will be continued until the material has reached its angle of repose, when no further trouble is anticipated.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

The music department of the Gorgona Woman's Club entertained the members on Thursday afternoon, November 24, with an interesting program, consisting of vocal and instrumental selections arranged under the direction of the chairman, Mrs. Beetham. There was a good attendance. A meeting called by the president was held earlier on the same day for the purpose of acting upon the resignation of the treasurer, Mrs. James Cockett. Mrs. Toherer was elected as her successor. The club presented the outgoing treasurer with a set of souvenir spoons as a token of appreciation of her faithful and untiring services. Mrs. Cockett left the Isthmus on Monday, November 30, for New York.

In order to facilitate the work of the local club with the Canal Zone Federation of Women's Clubs, the Gorgona Woman's Club has arranged to pay all expenses of the members of Federation committees or their representatives at all called meetings of the Federation. The club has also adopted the rule that all reports shall be presented in writing for the convenience of the recording secretary. The regular monthly meeting of the philanthropy department was held on December 2 at the home of the chairman. The next regular general meeting of the club will be held December 3. The club has under consideration an entertainment to be given sometime in January. Arrangements for the Christmas celebration are about completed, and the tree will be provided with presents for sixty children. There will be a program limited to forty minutes.

The Gorgona Dramatic Club is rehearsing for its next entertainment which will be given just before the holidays. A farce comedy, entitled "The Doctor," will be produced. The date will be announced later.

Thanksgiving Day was observed by special services at the chapels in Gorgona, Empire and other points in the Zone, including the colored missions, where the services, arranged by Protestant chaplains, were largely attended.

There was good attendance at the regular meeting of the study club, in connection with the Culebra Woman's Club, Thursday, November 19. The president of the club has returned and will preside at the meeting on December 4. The Woman's Guild holds its regular meetings the first and third Tuesday in the month at 4 o'clock.

The Ancon Woman's Club holds its regular meeting, December 3, the program being under the direction of the philanthropy department.

The Empire Woman's Club will hold its next meeting on December 10. The plan of work has not yet been determined upon, but it is expected that the outline will be given at this meeting. The Gamble Concert Company gave a concert at Empire on Thanksgiving evening, at which there was a large attendance.

Interest in the Cristobal Sunday school work is well sustained, the average attendance being 80, which is a large increase over last year. Mr. H. L. Stuntz is the superintendent and a number of teachers have volunteered their services. The development of the school has been remarkable. The pupils are arranging an entertainment for

the benefit of the colored Sunday schools of Christ Church and of the Wesleyan church, Colon, at Christmas, when they will contribute toys and suitable gifts.

The Paraiso Woman's Club, will hold its meetings on Thursday afternoon at 2.30. The members are taking up the work with interest. The chair appointed Miss Lulu Grobe, chairman of the entertainment committee at the organization meeting. Other appointments will follow, and the club will soon be on a good working basis.

The social meeting of the Pedro Miguel Woman's Club will be held at the clubroom on Wednesday December 3. There will be a special program.

The Canal Zone Christian Federation, founded September, 1908, has issued a printed copy of its constitution. The organization is purely nonsectarian, and all members of Christian religious bodies are eligible for membership upon election and payment of \$1 yearly. The executive committee, consisting of officers of the Federation, a member from each of the religious bodies in the Canal Zone, holds its meeting six times during the year, in September, November, January, March, May, and July. The first direct activity of the Federation is to secure the services of Dr. L. W. Munhall, of Germantown, Philadelphia, who will come to the Isthmus for the purpose of holding a series of evangelistic meetings during the month of January, and possibly longer. Dr. Munhall, who is one of the most distinguished evangelists in the States, especially as a speaker to men, will be accompanied by Prof. John Lowe, of Philadelphia, singer and leader, who will bring stereopticon views as a special attraction.

## Christmas Sale in Ancon.

The Ancon Woman's Club will hold a bazaar for the sale of Christmas articles in the building occupied by the District Quartermaster, on Friday and Saturday, December 4 and 5, beginning at 2 p. m. on each day. The sale will be open also in the evenings. On the second evening, it is proposed to auction off the remaining articles. A large variety of attractive articles will be displayed. A Japanese tea room, a booth containing home-made delicacies and a children's room are among the special features offered. There will be no admission fee and the public is cordially invited.

## New Concert Orchestra Company.

The Isthmian Canal Commission Concert Orchestra Company has recently been organized at Cristobal with Prof. J. J. Proschaska as musical director and Mrs. W. J. Donaldson associate director. The orchestra will be composed of a piano, first and second violins, cornet, clarinet, flute, trombone, cello, and drums. It is the intention of the company to give a series of entertainments in the Commission clubhouses. A concert was given at Culebra on November 29, and one will be given at Empire on December 7. Anyone wishing information in regard to the company may address either the director at Culebra or the associate director at Cristobal.

## Minstrels at Empire.

The second annual minstrel performance by the United States Marines, which proved such a success at their theater at Camp Elliott on Thanksgiving Day, will be repeated by request at Kangaroo Hall, Empire, Friday evening, December 11, 1908, under the auspices of Empire Court, I. O. P. K.

## PERSONAL.

Capt. G. M. Hoffman and Capt. Horton W. Stickel, assistant engineers of the Atlantic Division, are on their vacation in the States.

Mr. W. G. Tubby, former chief of the old division of Material and Supplies, is on the Isthmus in the interest of the Union Oil Company of California, of which he has been made Assistant to the President.

## Episcopal Church Notes.

The Rt. Rev. Albion W. Knight, bishop of Cuba, arrived on the Isthmus November 23, for his second official visitation. During the week confirmations were held at Christ Church, Colon; St. Andrew's, Gorgona; St. James's and St. Mary's, Empire; St. Mark's, Culebra; St. Phillip's, Las Cascadas; St. Luke's, Ancon; Grace Church, Cristobal, and the La Boca mission. Over 86 persons were confirmed.

The Rev. W. H. Decker of Scranton, Pa., has arrived on the Isthmus to take up his duties in connection with the Panama mission of the Protestant Episcopal Church of America. Mr. Decker will be stationed at Empire in charge of the church there and will also have charge of the churches in Gorgona and Culebra.

The week just past has been celebrated as the twenty-fifth anniversary of the establishment of the Anglican Church on the Isthmus, the history of which was given in THE CANAL RECORD of November 4. Rev. S. Purcell Hendricks, late archdeacon of Panama, who for 16 years was in charge of the work, was invited to come for the anniversary, and to preach the historic sermons. Services were held at Christ Church, Colon, on Sunday, November 22; at Gorgona on November 24; and at St. Paul's, Panama, on November 29, the bishop of Cuba being present on the latter occasion, and took part in the service. All the clergy of the Protestant Episcopal Church on the Isthmus were also present. The local choirs were augmented by those from the other parishes.

On Thanksgiving Day the anniversary picnic was held at Gorgona for the West Indians. Special trains were run from Colon and Panama and the picnic was attended by from 2,500 to 3,000 persons.

A reception in honor of Bishop Knight and the Rev. Mr. Decker was given by Archdeacon and Mrs. Bryan on Monday evening, November 30, at the residence of the chaplain at Ancon, to which the residents of Ancon, Corozal and La Boca were invited. Bishop Knight and Archdeacon Hendricks sailed for Kingston, Jamaica, on the R. M. S. P. *Atrato* on December 2.

## Missionary Tea.

There will be a missionary tea given under the auspices of the Woman's Foreign Missionary Society at the parsonage of the Methodist Church in Panama, on Thursday evening, December 10, to which all persons interested in this work are most cordially invited. Refreshments will be served at 6.30 o'clock. Price of supper, 15 cents gold.

## Brotherhood of Locomotive Engineers.

The regular meeting of Division 756, Brotherhood of Locomotive Engineers, will be held at Pedro Miguel, Sunday afternoon, December 5, at 1 o'clock. Important business will be transacted.

W. H. BUCKINS, F. A. E.

## OFFICIAL CIRCULARS.

## Surveying Officer.

CULEBRA, C. Z., November 23, 1908.

CIRCULAR No. 222.

Effective this date: Mr. H. S. Farish is appointed Surveying Officer.

GEO. W. GOETHALS,  
Chairman

## Transfer of Claim Officer.

CULEBRA, C. Z., November 23, 1908.

CIRCULAR No. 223.

By Circular No 195, a Claim Officer was appointed, with station in the office of the Chairman, for the purpose of administering the provisions of the Act of Congress, approved May 30, 1908, granting to persons employed by the Isthmian Canal Commission in hazardous employment the right to receive compensation for injuries sustained in the course of their employment.

Effective, December 1, 1908: The Claim Officer will be transferred to the office of the Examiner of Accounts, at Empire, and the duties devolving upon him, as set forth in Circular No. 195, will be performed under the direction of the Examiner of Accounts.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Vacation Leave.

CULEBRA, C. Z., November 27, 1908.

CIRCULAR No. 225.

It has been the practice, in computing vacation leave, to reckon authorized leave, without pay aggregating less than thirty days as service. This practice will be discontinued, and employees will be required in future to serve ten full months from the beginning of the service year, exclusive of authorized leave without pay, before entering upon their annual vacation leave.

GEO. W. GOETHALS,  
Chairman.

## Transportation for Commission Employees.

CULEBRA, C. Z., November 28, 1908.

CIRCULAR No. 224.

Commencing January 1, 1909, the following forms of transportation on the Panama railroad will be issued by the Commission:

## SIXTY-TRIP TICKETS.

Will be issued, as heretofore, to I. C. C. employees who are compelled to make frequent trips on official business. This form of transportation will also be issued to school children residing at points where proper school facilities are not available, and to members of the I. C. C. band for use in attending regular band meetings and rehearsals.

## EMPLOYEES' OFFICIAL BUSINESS TRIP-TICKETS.

This is a new form which will be issued to I. C. C. employees for use on official business. Also to patients traveling to and from Zone hospitals and Taboga Sanitarium. This ticket is similar to, and will supersede Form A. 1. 74, now in use, except that it will be printed on red paper, and space will be provided for stating the nature of business on which employee is traveling, which must appear on every ticket issued. Under no circumstances must this ticket be issued for other than the purposes stated above. Supply will be furnished your department, with instructions for use, as soon as received from the States.

## EMPLOYEES' TWENTY-FOUR TRIP-TICKETS.

This is also a new form which is now being printed. Each employee on the gold roll will be furnished a book containing twenty-four single trip coupons, covering his monthly allowance of transportation for the year. This ticket will be similar in form to the present Sixty Trip-Ticket, and the following instructions for use will appear on cover:

"Employees will fill in on coupon stations between which it is desired to travel. Coupons must be signed in the presence of conductor, who will note that signature of holder corresponds with that on cover. Conductors will not accept detached coupons. Coupons will not be accepted unless presented during the month stamped on ticket.

"This transportation is issued for the personal use of the employee whose name appears within. Upon termination of employee's service with the Commission, this book, with unused coupons, must be surrendered to timekeeper before receiving pay check.

"Any attempt to misuse this transportation will result in immediate dismissal from the service."

The granting of this transportation must not be considered a vested right, and the Commission reserves the right to cancel same at any time. In view of the penalty for misuse of this ticket, employees are

warned against any attempt to transfer or otherwise dispose of same.

A supply of "Requests for Employees' 24-Trip Ticket Books," Form 188-C. E., will be forwarded to you under separate cover. Upon receipt of same, kindly submit at once, in duplicate, a list of all employees on the gold roll in your department. Tickets will then be issued direct from this office and forwarded to you for distribution prior to January 1. Each book contains a form of receipt, which must be signed by employee and forwarded at once to this office.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Transportation on Freight Trains.

PANAMA RAILROAD COMPANY,  
OFFICE OF THE GENERAL MANAGER,  
COLON, R. P., November 25, 1908.

## TO ALL CONCERNED.

On and after December 1, 1908, no permission will be granted to anyone to ride on freight trains, excepting such as may be arranged for through the Heads of Departments of the Isthmian Canal Commission.

HIRSH J. SLIPER,  
General Manager.

## Sale of Unclaimed Packages.

In order to recover its freight and storage charges, the Panama railroad will dispose of the accumulation of "over" and "unclaimed" shipments now in its possession, by public auction, Monday, December 28, 1908, at 9 a. m. Sale to be held on Dock No. 11, Cristobal, Canal Zone.

The items to be sold consist of a miscellaneous assortment of wines, liquors, household goods, building material, stationery, groceries, dry goods, machinery, and merchandise general, all of which has been held six months and over in an effort to locate owners.

## LEGAL NOTICES.

In re Estate of Anatole Laurence, Deceased.—To any and all persons having any claim or claims against the estate of Anatole Laurence, deceased, who died at Empire, Canal Zone, on the 18th day of September, 1908:

You are hereby notified to present your claims, duly verified, to Felix Laurence, administrator of said estate, or to the undersigned, on or before the 1st day of June, 1909, or your claims will be forever barred according to law.

Witness my hand, this 6th day of November, A. D. 1908.

E. M. GOOLSBY.

Clerk of the Circuit Court, Second Judicial Circuit,  
Canal Zone, at Empire.

EMPIRE, C. Z., November 2, 1908.

Estate of )  
Michael Doyle ) Administration.

All relatives of the late Michael Doyle, an American, who died intestate at Ancon Hospital on the 20th of July, 1908, are hereby requested to communicate with the Administrator of the estate. Also all persons owing the said estate will likewise communicate with the Administrator in order that a settlement may be effected; and all creditors of the estate must file their claims, properly verified, with the Administrator within six months, or the same will be barred.

F. H. SHEBLEY,  
Administrator.

United States of America, ) In the First Judicial  
Canal Zone. ) Circuit.

Frank Roch, American, died intestate on or about May 26, 1908, leaving an estate located at Ancon, Canal Zone, consisting of various personal belongings of little value, Isthmian Canal Commission pay certificates for \$250, and cash amounting to \$260.

James Tray, American, who resided at Ancon in the Canal Zone, died intestate on or about January 22, 1906, leaving an estate at Ancon, consisting of Isthmian Canal Commission pay certificate for \$110 Panama currency.

Louis M. Gilbert, alias Charles Gibson, American, who resided at Pedro Miguel, C. Z., died intestate on or about May 4, 1907, leaving an estate at Pedro Miguel, consisting of Isthmian Canal Commission pay certificate of the value of \$27.75 net, and \$1.50 cash.

Bartolo Salecido, a native of the Dutch West Indies, who resided at Ancon, C. Z., died intestate on or about June 29, 1907, leaving an estate at Ancon, consisting of Isthmian Canal Commission pay certificate for \$1.60 Panama currency.

Charles White, American (colored), who resided at Pedro Miguel, Canal Zone, died intestate on or about April 3, 1908, leaving an estate at Ancon, Canal Zone, consisting of \$5 U. S. Currency.

The Collector of Revenues has filed a petition for escheat in each of the above mentioned estates under section 779 of the Code of Civil Procedure.

Notice is hereby given to all concerned to appear at the courthouse in Ancon, Canal Zone, on January 18, 1909, at 9 o'clock a. m., to establish their claims to the said estates, or to show cause why the same should not escheat to the Canal Zone.

F. H. SHEBLEY,  
Circuit Court Clerk Pro Tempore,  
Ancon, Canal Zone.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

The official score of the 1908 bowling tournament for the Canal Zone championship held at Empire on Thanksgiving Day, November 26, follows:

		SINGLES			
		Scores.			Total
Name.	Residence.	1st.	2d.	3d.

Gorgona	Hinkley	130	133	146	409
	Driscoll	165	173	127	465

Empire won two firsts and one second, which equal 13 points. Cristobal won one second and two thirds, which equal 5 points.

## EMPIRE.

Empire defeated Gorgona at indoor baseball on Saturday evening, November 28, by a score of 62 to 22.

Empire defeated Cristobal in the pool and billiard tournament on Saturday evening, November 28, 4 to 0.

## CULEBRA.

The boys from Cristobal defeated the Culebra boys in a return athletic meet, held at the latter place on Saturday, November 28. The following is a summary of the events:

Fifteen-yard dash—First, Atkins of Culebra; second, Sims of Cristobal; third, Roe of Culebra.

Running high jump—First, Sims of Cristobal; second, Turner of Cristobal; third, Vard of Cristobal.

Hustle ball relay race—Won by Culebra.

Baseball game—Won by Cristobal by the score of 19 to 12.

Bowling matches: Duck pins—Won by Culebra, with first, second and third in high scores. Large pins—Won by Cristobal, with first in high score and tie for second, Culebra taking third place. The result was a victory for Cristobal with a total of 48½ points to Culebra's 37½.

At the first rehearsal of the mixed chorus under the leadership of Mr. C. E. Jennings there were thirty people present. Rehearsals are in progress for an entertainment to be given in the near future.

## CRISTOBAL.

Judge Thos. E. Brown, Jr., has been elected chairman of the Y. M. C. A. executive council, vice Mr. W. G. Tubby, resigned. The executive council has authorized the taking of heart and lung test for all men taking gymnasium work or recreative games.

Committees representing the Woman's Club, Public Schools, Union Church, Episcopal Church, and Y. M. C. A. have been appointed and are preparing for a community Christmas celebration, to be given at the clubhouse.

A pennant has been adopted for the Cristobal Y. M. C. A., and a full supply is expected about Christmas time. The words, "Y. M. C. A. Cristobal, Canal Zone," in orange, will be inscribed on a black field.

A baseball field is being laid off in the space back of the clubhouse for the junior members. A cinder track and other features for outdoor athletics will be worked out for the dry season.

Mr. Thomas Poulson was the only contestant to complete the walk across the Isthmus. His time was thirteen hours, of which one and one-half hours were spent in rest, making the actual walking time eleven and one-half hours for forty-eight miles of railroad ties.

## COMMISSARY DEPARTMENT

## NOTICE.

Patrons of the Commissary Department, when dealing with the Cristobal office, will address their individual orders, deposits, etc., to the Order Room, Commissary Department, Building No. 2, Cristobal.

Complaints should be made in separate letters and addressed to the Subsistence Officer, Building No. 2, Cristobal.

JOHN BURKE,  
Manager.

Approved:  
EUGENE T. WILSON,  
Subsistence Officer

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

## Concert by the I. C. C. Band.

## HOTEL TIVOLI, ANCON.

Sunday, December 6, 1908, at 7.30 p. m.:

## PROGRAM

1 March— <i>Cot. Estey</i> .....	Bagley
2 Selection— <i>The Red Mill</i> .....	Herbert
3 (a) Intermezzo— <i>Rainbow</i> .....	Wenrich
(b) Popular march— <i>Prussian Lamb Rag</i> .....	Wenrich
4 Moreau— <i>After Sunset</i> .....	Pryor
5 Solo for Trombone— <i>Rocked in the Cradle of the Deep</i> .....	Knight
(Five Trombones in Unison.)	
6 Selection— <i>Hits of the Day</i> .....	Remick
(a) Mazurka— <i>Heather Bells</i> .....	Losey
(b) Tone poem— <i>Lilacs</i> .....	Roberts
8 Overture— <i>Beautiful Galatia</i> .....	Suppe
9 Humoresque on <i>The Merry Widow</i> .....	Haltz
Introducing this popular melody from the opera "The Merry Widow," burlesqued in the following manner: 1. A little German band; 2. A flute solo with organ effect; 3. An amateur trombonist, who is willing to show what he can do if only requested to; 4. A street piano; 5. A ragtime as played on a banjo; and finally—the result, the popularity of this melody has produced—a brainstorm.	
10 March— <i>Flag of Victory</i> .....	Von Blon

CHAS. E. JENNINGS, Musical Director.

The next concert will be given at Porto Bello, Sunday, December 13.

# CANAL

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, DECEMBER 9, 1908.

No. 15.

## The Canal Record

Published weekly under the authority and supervision of the  
ISTHMIAN CANAL COMMISSION

"The Canal Record" is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the "gold" roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications

### THE CANAL RECORD

Ancon, Canal Zone,

Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

## NOTES OF PROGRESS.

### Extending Electric Lighting System.

Within the next few days every village and hamlet on the Canal Zone between La Boca and Gorgona will be lighted by electric lights. A 400 k. w. generator, direct connected with a horizontal cross compound engine, running at 150 revolutions per minute, has been added to the equipment at the Empire power plant, making the extension of the present line possible. All the work of wiring the various villages and camps not yet supplied with the current has been completed and electricity will be furnished as soon as the new generator is in perfect running order. The number of lights that have been added to the circuit is 1,185, distributed as follows:

Camp Chagres, 80; Haut Obispo, 75; Santa Cruz, 200; Matachin, 100; Miraflores, 130; Pedro Miguel, 150; Rio Grande, 100; Cucaracha, 75; Cocoli shops, 100; Cunette, 75; miscellaneous, 100. The lights between Matachin and Gorgona are supplied as heretofore from the Gorgona power house.

### Recovered from the Jungle.

The three ladder dredges left by the old French company on the banks of the Chagres near Frijoles, two at Frijoles and one at Chagrecito, have been floated down the river and will be utilized in the work of the Atlantic Division. It has been decided to use the hull of one of them as the float for a clam shell dredge that will presently be set at work at Nombre de Dios in the loading of sand. What disposal will be made of the other two is not determined, but one of the hulls may be used as the hull of a suction dredge for excavating in the lowland between the Mindi cut and Gatun Locks.

The often repeated marvel of excellent condition of machinery in the French equipment, is repeated in the case of these dredges. The engines are said to be in almost perfect condition, twenty or more

rainy seasons not having penetrated the heavy coating of paint which the caretakers put on the machinery when they abandoned the dredges to the jungle. In many places the hulls show the effects of the weather, but they also are in such preservation as to make it highly profitable to repair them.

On the banks alongside the dredges were four tenders and two old suction dredges. They are worthless for the purposes for which they were intended, but the hulls are in good condition, and an effort is being made to get them into the river. A gang of men is at work at Frijoles and Chagrecito lowering them to the level of the river on the chance that there may be a flood in the Chagres, big enough to float them, before the end of the rainy season. Most of the machinery in the dredges and their tenders can be utilized.

### November Record of Track Shifters.

The six track shifting machines in the Central Division moved a total of 333,378 feet, or 129.2 miles of track during November. In the Tabernilla district track shifter No. 5 moved 95,100 feet, or 35.9 miles, and No. 6 moved 37,735 or 14.6 miles, a total for the district of 132,835 feet, or 51.5 miles. In the Gorgona district, No. 7 moved 74,900 feet, or 29.1 miles and No. 1 moved 11,985 feet, or 4.6 miles, a total of 86,883 feet, or 33.7 miles. In the Pedro Miguel district track shifter No. 9 moved 56,954 feet, or 22.1 miles, and No. 2 moved 56,706 feet, or 21.9 miles, a total of 113,660 feet, or 44 miles.

### Panama Railroad Relocation Work.

Preparations are being made to push the work on the relocation of the Panama railroad as soon as the dry season opens. This work may be divided into three parts, that from Gatun to Gamboa, from Gamboa to Pedro Miguel, and from Pedro Miguel to Panama. Between Gamboa and Pedro Miguel the line will run on the east berm of the Canal at elevation 95, and the road can not be completed there until the construction work in the Cut has been further developed. From Pedro Miguel to Panama the track is already laid to the end of Miraflores tunnel, leaving only a short stretch to be built. A force of 200 men will be at work during the dry season on the Miraflores end.

Most of the work of the coming season will be done on the stretch between Gatun and a point on the relocated line opposite San Pablo. From the point opposite San Pablo to Gamboa Bridge the track has already been laid over a series of high trestles which are being filled by spoil from Culebra Cut. No work has been done between San Pablo and Gatun. Early in January two steam shovels and a pile driver, and a force of 700 men will be set at work on the Gatun end and will work up the Gatuncillo Valley. In the Gatuncillo Valley the work is almost wholly

along the side of the hills. A pioneer steam shovel will be sent through to excavate for a track, and will be followed by another which, in almost all cases, will complete the excavation back to the slope. The material to be handled is earth and rock. A few short trestles will be built across gullies. It is anticipated that the roadbed can be completed three miles up the valley by the beginning of the rainy season of 1909.

From San Pablo to the point where the line will turn west in the Gatuncillo Valley the construction is across the drainage system of the Chagres basin, and therefore consists of alternating cuts and fills. The larger part of the excavation will be rock and some of it will be heavy steam shovel work. It is thought that by the beginning of the next rainy season four miles of this part of the line will be finished. This will extend the track on the south end of the relocation as far north as Tabernilla. Two steam shovels and a pile driver will be used in this work and 500 laborers will be employed.

### Dredging in November.

In November the dredging fleets of the Atlantic and Pacific Divisions excavated a total of 1,334,577 cubic yards, of which amount 1,179,921 cubic yards were taken from the Canal prism. Three 20-inch pipe line suction dredges, two sea-going suction dredges, three dipper dredges, and five ladder dredges were at work during the month.

In the Atlantic Division the total amount excavated was 623,098 cubic yards, of which 570,832 cubic yards were taken from the Canal prism. Of the 52,266 cubic yards excavated outside of the Canal prism, the dipper dredge *Chagres* took out 5,850 cubic yards at one of the piers in Cristobal, and the 20-inch pipe line suction dredge, No. 82, excavated 46,416 cubic yards in the channel at Gatun leading from the old French canal to the site of the unloading docks. During the month the dipper dredge *Chagres* was out of service one week while undergoing repairs, and the suction dredge *Ancon* lost one day while being fumigated. The record of the Atlantic dredges follows:

DREDGES.	Cubic Yards.		
	Earth.	Rock.	Total.
20-inch suction, No. 82	46,416	.....	46,416
20-inch suction, No. 85.	60,928	.....	60,928
Ladder, No. 1.....	116,025	.....	116,025
Ladder, No. 6.....	17,659	33,630	51,299
Dipper, Chagres.....	11,804	3,317	15,121
Dipper, Mindi.....	45,825	5,000	50,825
Sea-going suction, Ancon.....	282,484	.....	282,484
Total.....	581,151	41,947	623,098

The total excavation by the dredges of the Pacific Division was 711,479 cubic yards, of which amount 609,039 cubic yards were taken from the Canal prism. All of the dredges were working at the Pacific entrance excepting the 20-inch suction dredge *Sandpiper*,

## NOTES OF PROGRESS.

(Continued).

which is excavating in the site of the lower locks at Miraflores. The record of the Pacific dredges follows:

DREDGES.	Cubic Yards.		
	In prism.	Outside prism.	Total.
Dipper Dredge.....	26,368	15,735	42,103
Ladder, Mole.....	31,595	86,655	118,250
Ladder, Gopher.....	87,342	.....	87,342
Ladder, No. 14.....	67,192	.....	67,192
Sea-going suction, Culebra.....	341,469	.....	341,469
20-inch suction, Sand-piper.....	55,123	.....	55,123
Total for month.....	609,089	102,390	*711,479

\*About 1 per cent. of this was rock.

## Lidgerwood Unloaders in November.

The seven Lidgerwood unloaders in the Central Division during the month of November unloaded a total of 1,666 trains, composed of a total of 28,475 cars. Of this number, 574 trains composed of 10,311 cars, were unloaded by the three unloaders at the La Boca dump, and 1,092 trains, composed of 18,164 cars were unloaded by the four unloaders at Tabernilla. As all the cars were of 20-yard capacity, the material unloaded represented about 569,500 cubic yards.

Sinking of the *Finance*.

In addition to the facts printed in THE CANAL RECORD of December 2, the New York newspapers of November 27 and 28 contain details of the sinking of the Panama railroad steamship *Finance*, which are corroborated by passengers on the ship who have since arrived on the Isthmus. The fog in which the *Finance* began her voyage to Cristobal was the heaviest in a quarter of a century, and the ship anchored three times between the dock and Sandy Hook. When the fog showed a rift about 8.30 o'clock on the morning of November 26 the *Finance* was in the main ship channel about three miles east of the Sandy Hook Lightship, and one mile off shore. She was started ahead at quarter speed, with her whistle sounding. At the time there were twenty-two ocean liners at anchor off Sandy Hook or slowly picking their way toward the harbor. A few minutes after the *Finance* got under way, the *Georgic*, a White Star freighter, came out of the fog bank, on a course at right angles to that of the Panama boat. Both vessels stopped their engines, and the *Finance* backed. The *Georgic* rammed the *Finance* in the port side amidships, and fifteen minutes later the Panama railroad boat had sunk on even keel with only her superstructure out of water. Excellent discipline prevailed among the crew and passengers, and a single tendency to a stampede among the crew was checked by Capt. Mowbray, who directed the work of rescue with a revolver in his hand.

Immediately after the collision the ammonia tank in the hold exploded and William D. Todd, the third assistant engineer, was almost suffocated by the gas. He rushed on deck, jumped overboard, and was not seen again. Henry Muller, the Isthmian Canal Commission conductor, was drowned while swimming about the boat. Irene Campbell, the 14-year-old negro girl, clung to the rail of the boat and two men could not unloose her hold, although they tried

until the rising water drove them back from the rail. Particulars are lacking as to the cause of the death of Charles W. Schweinler.

After the passengers had been saved Capt. Mowbray, refusing offers of rescue, returned to the bridge and stayed there until the ship went down. Unless heavy seas prevent the wrecking work the ship will be saved.

## November Police Report.

The November report of the Chief of Police shows that 477 persons, representing 44 nationalities, were arrested in the Canal Zone during the month. This is a decrease of 12 for the month, there having been 489 arrest in October. Of the 477 persons arrested 450 were men and 27 were women, and they were charged with 52 different offenses. They were divided among the towns of the Zone as follows: Ancon, 30; Las Sabanas, 1; La Boca, 24; Corozal, 2; Miraflores, 17; Pedro Miguel, 10; Paraiso, 28; Culebra, 38; Empire, 49; Las Cascadas, 16; Bas Obispo, 16; Gorgona, 53; San Pablo, 17; Tabernilla, 22; Bohio, 7; Gatun, 50; Cristobal, 97.

The total effective police force on November 30 was 164, and the pay roll amounted to \$19,532.10.

One hundred and twenty-two cases were tried in the courts, 21 of which were dismissed, 86 continued, 14 in which convictions were secured, and one in which bail was forfeited. Of the 14 persons convicted, 5 were fined, 1 received a jail sentence, and 8 were sentenced to the penitentiary. Three convicts were discharged from the penitentiary during the month, leaving a total of 117 in the penitentiary on November 30. The number of district prisoners on the same date was 191, an increase of 62 for the month. The value of work performed by the convicts on roads, etc., amounted to \$1,740.75.

There were 11 deaths by violence, requiring action by the coroner, during the month. Six of these deaths were caused by drowning and two by railroad accidents.

## Teachers' Meeting.

The third teachers' meeting of the year was held in the Ancon school building December 5, the white teachers meeting in the morning, from 8.30 to 11.30, and the colored teachers meeting in the afternoon, from 1.30 to 4.30.

The work done in each meeting was a continuation of the work outlined for the year and begun at the November meeting. The subject taken up for discussion at last Saturday's meeting was oral and written compositions in the grades with special emphasis placed upon the primary grades where the difficulties of the work are greatest.

Mimeograph copies of imaginary lessons in composition work throughout the grades were placed in the hands of the teachers for reference in illustrating the practical application of the principles of composition teach-

ing under discussion. As a guide for the discussion of the principles underlying the method of instruction in the different subjects of the curriculum, McMurray's Method of the Recitation was used.

A part of the morning meeting was given over to a study under Mr. W. L. Perry of the route of the Canal and of some of the principal features of the canal construction. This study was the beginning of a series of similar studies designed to get before the teachers facts concerning the geography, history, sanitation, etc., of this particular locality. An excellent opportunity exists here for the school children to learn, as they could not possibly learn in the States, about construction work, transportation, the Army, Navy, and various industries. As a basis for this work Mr. A. B. Nichols has furnished maps of the canal line for each school. Mr. Perry, who made the maps, interpreted them so that the teaching in the schools can be made more effective. The next teachers' meeting will be held soon after the holidays'.

## Ancon Library Association.

A meeting will be held at the Tivoli Hotel on Monday evening, December 14, at 8 o'clock, for the purpose of forming the organization of the Ancon Library Association. About one hundred and fifty pledges of membership have been secured from persons at Ancon, La Boca and Corozal, and funds have been collected by the ladies sufficient to insure a satisfactory beginning. A constitution will be adopted, and officers will be elected. Those who signed the pledges, and all other persons interested in the association, are urged to be present.

## Isthmian Baseball League

At a meeting of the Isthmian baseball league held at Culebra on Friday, November 22, the following officers were elected: Lieut.-Col. Geo. W. Goethals, president; H. H. Rousseau, vice-president, and W. M. Wood, secretary and Treasurer.

## A PICTURE HISTORY.

## Official Photographs Showing Progress of Canal Work.

In a portfolio in the administration office at Culebra is a photograph showing six old French excavators at work in Culebra Cut in December, 1904. These land ladder dredges with an endless chain of dippers carried earth and rock from the Cut on one side and dropped them into a hopper whence they fell into dump cars on the other side. In another portfolio is a series of pictures showing the same location, between Contractor's Hill and Gold Hill, in June, 1908. These photographs mark the present limits of a series showing the progress that has been made in Culebra Cut since the beginning of the American occupation. This series is only one part of the picture history that is being compiled by the official photographer, and that, if continued until the Canal is completed, will furnish one of the most interesting and authentic accounts of the way in which the work was done.

At present there are five hundred pictures in the portfolios, and in addition to these the official photographer has many negatives which almost complete the record, some extending back to the time when the old and new French companies were at work. The negatives which tell of the work of the French are not in good condition, because of improper keeping, and have the appearance of having been poor plates from the beginning. From these two facts it is believed that they form the remnant of a larger collection, and that the good plates were probably preserved in the home office of the company. Pictures in the *Bulletin du Canal Interocéanique*, published by the old French company, add color to this belief. It is only a supposition, but, if it is true, no doubt a good collection of prints from these old plates will ultimately form a part of the picture history of the Canal. Many pictures taken since the beginning of the American occupation, in May, 1904, are also missing, both prints and plates, and when collected these will be an important addition to those already on file.

The picture story of Culebra Cut runs farther back in point of time than that of any other part of the work, because it was in this section that the new French company continued excavation almost up to the day when the Americans took charge of the French machinery and employes, but the record is no less complete for the work in the Atlantic and Pacific Divisions, where operations were begun at a later date.

The Colon dredges, old French equipment in the marine graveyard of Folks River, and the work in the cut at Mindi all are represented in one or more pictures. The suction dredge *Ancon* coaling at Cristobal harbor soon after her arrival on the Isthmus in August, 1907; the 16-inch suction dredge at work in the Chagres River in September, 1907; the old and the new dry dock at Cristobal, and the dry dock in course of construction, are a few of the pictures typical of the work in progress at the Atlantic entrance.

There appears to be no picture of the Chagres Valley at Gatun before operations were begun there. The first photograph shows the site already cleared of jungle growth, and with some work in progress. In point of time the old village of Gatun in November, 1906, is the first of the Gatun series. A picture taken August 10, 1907, shows the closing of the Chagres River on the south toe of the dam, and one taken on the 2d of December following, shows the work on the toe already begun. On January

30, 1908, and again on May 22, of the same year, the official photographer climbed the water tower at Gatun and took a series of pictures that show in panorama the surrounding country, from the jungle on the south, over the site of the dam and the locks to the village, and as background for all, the hills on the west side of the valley and a glimpse northward of the ocean where the dredges are working in the shore of Limon Bay. There are many nearer views of the work, some showing the channel cut for the locks, some the excavation of the spillway, almost completed, and others, parts of the village at various dates. Completing the Gatun series are a number of pictures showing the harbor and village at Porto Bello, where the stone for the concrete of the spillway and locks is being quarried.

Work in the old Chagres Division began in August, 1907, and before it had advanced far, pictures of the conditions at San Pablo, Matichin, and Santa Cruz were taken. Photographs of the hills at San Pablo before they were removed, blasts of dynamite, the shovels working at grade, and the hills almost leveled, tell the story on that part of the Canal. On December 28, 1907, a picture was taken of the cut at Matichin, and a panoramic photograph taken in June, 1908, shows clearly how much was accomplished in six months.

Culebra Cut is represented by scores of photographs, many series showing great contrasts. Those showing conditions between Gold Hill and Contractor's Hill in 1904, and in 1908, have for their main features the two high hills and a deep trench between them. The great amount of work the French did appears very distinctly, but only a close inspection shows what the Americans have already accomplished, because one is likely to consider only the depth of the channel, and not give credit for the widening of the Cut since 1904. The views at Bas Obispo, Las Cascadas, and Empire show more clearly how the work is advancing, for at these places what has been done by the Americans has changed the whole aspect of the channel.

There are pictures of the lock site at Miraflores when the brush only had been cleared away, of the very beginning of the excavation work, the shovels tearing away the hill in the center of the site, and finally of the present condition, a long, broad channel, in place of the hill. Views of the lock site at Pedro Miguel, of the abandoned Sosa-Corozal dam, and the dredges at work in the Pacific entrance, tell the story of the excavation in the Pacific Division.

Not the least interesting chapter in this picture story is that which tells how the work has been prosecuted at various times, by showing the tools that were used. Photographs of the self-propelling cranes with which the French used to lift spoil from the cut to the banks, of the excavators at work and abandoned, of the little wooden dump cars, the five-yard iron dumps, the Decauville cars and engines, and the Belgian locomotives, show with what implements the work was carried on by the French. To understand the significance of these pictures one must turn to those showing the present equipment. Instead of excavators, there are 45, 70 and 95-ton steam shovels; ten and twenty-yard cars in the place of the five-yard and three-quarter-yard cars of the French period, and locomotives twice the size and several times the tractive power of the engines used by the French.

The picture, already referred to, showing the old excavators at work in Culebra Cut, is the first of a series that tells of the im-

provement in equipment since 1904. In the cut at Bas Obispo in September, 1907, the little Decauville dump cars were still in use; in 1906 the old French locomotives were hauling old French dump cars and new 10-yard cars from the Cut, and photographs taken only a few months ago at San Pablo and a few weeks ago at Miraflores show old French rolling stock still in use. In short, the pictures show that the introduction of new equipment was gradual, and that while waiting for it, that left by the French was used. The unloaders at work on the dumps at Tabernilla and La Boca, the spreaders leveling the unloaded spoil, and track shifters lifting and placing track, these and other machines are pictured as part of the equipment introduced by the Americans. The suction and dipper dredges now working at either entrance to the Canal, are part of the new equipment, but the Scotch ladder dredges that are making such good records were brought to the Isthmus by the French and rebuilt by the Americans.

Much has been said about the slides that have retarded the work, and this story also the pictures tell. One photograph shows conditions in the Cut after the flood of December 3, 1905. It gives an idea of the torrential rains that saturate the earth and cause it to slide on the rock bottom. Another photograph shows the Cut at Cucaracha after the slide of October 5, 1907, with steam shovels partly buried in the mud, the railroad tracks covered, and the break in the side of the hill from which the earth slid into the Cut. On October 25 the removing of the slide was well begun; on December 5 the edge of the material had been crowded back so that the construction tracks were cleared; on March 5, 1908, there was apparently little earth yet to be removed, and on June 20 the slide was cleared away. Three hundred thousand yards of material were deposited in the Cut by this one slide, and yet how small an incident in the great work this most troublesome of the slides was is shown by the scores of pictures taken during this period, telling of unabated activity all along the line. A similar series of pictures shows the Paraiso and Culebra slides at various stages. Akin to the slides was the settling of the Panama railroad tracks in Black Swamp on September 20, 1907, and this, too, is pictured in one of the portfolios.

The story of municipal improvements is told in part in three different portfolios. Most of this work is only indirectly connected with that of the Canal construction, and yet it was vital as a precaution against disease. So far as the Canal Zone is concerned the pictures deal principally with the four large sources of water supply—Brazos Brook, Carabali, Comacho, and Río Grande reservoirs. It was in the cities of Panama and Colon that most of the municipal improvements were made. The streets of these cities in 1904 and 1905, and again in 1907 and 1908 are photographed. None of the "Before and after taking" pictures of the newspapers show greater contrasts.

The human side of the great task is revealed in the photographs of quarters, hotels, mess houses, clubs, and hospitals, and in pictures of the men who do the work. No class is neglected. West Indians, Europeans, and Americans alike, are represented. The interiors and exteriors of the homes they live in, the places where they eat, the buildings assigned for recreation, churches, and lodge rooms, baseball grounds—all phases of Canal Zone life have a place in this picture story of the Panama Canal.

## SOCIAL LIFE OF THE ZONE.

**Women's Clubs and Other Features.**

The sale held recently by the Sunshine Club of Gatun was well patronized, and the members feel gratified at the results of their few months' work. The five booths in the hall over the Commission hotel contained attractive displays of fancy articles and home baked delicacies. A doll, a cake and a sofa pillow were sold by raffle. The club originally was formed for the purpose of sewing for patrons, the proceeds of the sales to be devoted to charity, but the past few months have been given to making articles for the sale. A number of articles made to order were displayed. The proceeds of the sale will go to the New York Sunshine Society.

The Gatun Woman's Club held its regular meeting on Friday, December 4, at the home of Mrs. C. G. Carty, when the program for the study meeting of this week was mapped out. The class will finish the geography of the Isthmus, and then proceed with the history.

The new Commission chapel at Las Cascadas was dedicated November 29, at 2.30 o'clock in the afternoon. The superintendent of the Sunday school, Mr. A. C. Stowe, and the secretary, Mr. W. G. Thompson, were in charge of the arrangements. Rev. J. W. Holland, Commission chaplain at Culebra, delivered the address and the Rev. Mr. Smith, of Panama, made the dedicatory prayer. Special music was provided, solos, being sung by Mrs. W. J. Thompson and Mr. Holland.

The Thanksgiving services in the Commission chapel, Culebra, were conducted by the Rev. J. W. Holland who read the President's Proclamation and preached a sermon appropriate to the day. On the same day an important mission service was held at Frijoles in connection with the reopening of the chapel building, after a considerable time spent in making repairs and improvements. The services were conducted by the Revs. S. Moss Loveridge of Culebra, J. H. Sobey of Empire, and M. Britton King of Panama.

The ladies of Alfretta will give a dance at the Commission clubhouse, Culebra, on Wednesday evening, December 16, to which the public is invited. The proceeds will be donated to the Y. M. C. A. for the Christmas tree.

A basket picnic will be given by Alfretta council, No. 1, Daughters of Pocahontas, at Taboga Island on New Year's Day. Train will leave Colon at 6.45 a. m., and the boat will leave the American wharf at 8.30 a. m. Tickets are \$1 (gold) and can be purchased at the wharf and on the train.

The meeting of the Pedro Miguel Woman's Club held December 2 was well attended. A program in charge of the literary department was given, consisting of recitations by Mrs. A. L. Waters, Mrs. L. M. Vacher, a short paper on phrenology by Mrs. E. M. Wales, and a report of club work and federation effort, dealing especially with the papers read at the Boston biennial. This was followed by a general discussion in which all the members took part. The social committee served refreshments, consisting of salad, sandwiches and coffee, cakes and sweets, the guests being seated at small decorated tables. The president of the club, Mrs. Waters, has issued invitations for a reception to be given to Mrs. F. W. Roberts,

the former president, on Thursday, December 10. Mrs. Roberts will move to Aucon during the present month.

The Ancon Woman's Club held its regular meeting on Wednesday, December 2, the program being under the philanthropy department. A paper on the recent expeditions of the Austrian scientist, Dr. A. B. Von Teuber to the San Blas Indian territory was read by Dr. R. W. Nauss. There was a large attendance. The social committee, consisting of Mrs. W. T. Dozier and Mrs. R. S. Stiles introduced the guests and served tea. The executive board held its regular monthly meeting at the Hotel Tivoli, on Monday, December 7.

The Woman's Guild held its meeting at the Tivoli on December 7, at 3.30, the guests of Mrs. Frank I. McAllister, of Las Cascadas, and Mrs. W. J. Smith, of Gorgona, both members of the Guild.

The Christmas sale held by the Ancon Woman's Club on December 4 and 5 was a gratifying success. The rooms over the District Quartermaster's office were decorated with flags, bunting, and palms by the decorating committee. The booths of the different departments were placed in the large room, and refreshments were served in the small rooms adjoining. It is estimated that between 500 and 600 people visited the sale. At the close of the second evening all the articles remaining were auctioned off to the highest bidder. The exact amount realized by the sale is not known, but the committee on finance announces that the expectations of the managers were more than realized. A meeting of the executive board has been called for Wednesday, December 9, when a report of all the committees will be submitted.

The Cristobal Woman's Club held a short business meeting November 27. Reports from the different departments were read. The calendar committee reported that the calendar for the year has been sent to the States to be printed. Mrs. Edward Beverly was elected first director of the philanthropy department, Mrs. Thomas E. Brown, Jr., chairman. The literary meeting was held December 2, the second vice-president, Mrs. H. J. Slifer, presided, and introduced Mr. M. J. Stickel, secretary of the Cristobal Young Men's Christian Association, who gave an address on "The Man Down and Out," being a survey of what the Association has done in Chicago. The meeting closed with the usual social half hour. The literary department will be entertained by the second director, Mrs. C. C. Pierce, December 21. Papers will be read on Shakespeare plays by Mrs. Albert Herman, Mrs. Frances Colip and Mrs. Frederic Mears. Mrs. Colip will entertain the home department December 14, when Mrs. Ralph Budd and Mrs. Charles Owens will talk on "A Cup of Tea" and "A Cup of Coffee."

The business meeting of the Las Cascadas Woman's Club was held on December 4 in the new hall. The Shakespeare reading course was begun, "The Tempest," being the play taken. The committees for the month were appointed as follows: entertainment, Mrs. C. F. Merry, chairman, Mrs. J. G. Williamson, Mrs. C. M. Decker, Mrs. H. H. Boylan; visiting, Mrs. F. S. Crosby, and Mrs. F. S. Dorson.

The Tivoli Club will hold its regular dance at the Hotel Tivoli, the night of December 12. In the event of the arrival of the Pacific squadron of the U. S. Navy on that date, the officers will be invited to attend the dance.

## PERSONAL.

Mr. Henry V. Garland, Superintendent of Palo Seco Leper Colony on Panama Bay, returned to the Isthmus on the *Advance* on December 5, after an absence of 132 days. Mr. Garland's home is in New Zealand, and he has been entirely around the world since leaving the Isthmus, on July 26. He went to New Zealand via New York, Suez Canal, Ceylon, and Australia, and while in Ceylon visited the leper colony on that island. His return was made via the Fiji Islands, Honolulu, Vancouver, and New York.

**Obituary.**

William Beale died at Colon Hospital December 1, after six days' illness. He was 59 years of age, and had been on the Isthmus three years. He is survived by his wife, who is living at Woodstown, N. J.

Mrs. F. E. Shuck, wife of F. E. Shuck of Gatun, died at Colon Hospital on November 24. She was born in Michigan 32 years ago and had resided on the Isthmus for two months.

**Resolutions of Sympathy.**

Lock City Lodge, K. of P., No. 5, of Gatun, has adopted the following minute:

WHEREAS, The Supreme Ruler of the Universe has removed from our midst Mrs. Grace Andrus Shuck, beloved wife of Brother Frank E. Shuck, who departed this life November 24, 1908; and

WHEREAS, By this act Brother Shuck has lost a true, devoted and loving wife, the community, a lady of culture, refinement and the highest traits of character, whom to know was to love; therefore, be it

*Resolved*, That we, his brothers of Lock City Lodge, No. 5, Knights of Pythias, desire to express our great sense of bereavement at her untimely end, and our sincere sympathy to Brother Shuck and to her parents in this, their dark hour of sorrow; and be it further

*Resolved*, That a copy of these resolutions be spread upon the minutes of Lock City Lodge, No. 5, Knights of Pythias, and that a copy be furnished Brother Shuck, and a copy also sent to THE CANAL RECORD for publication.

W. E. BARROW,  
T. H. LOCKHART,  
F. A. SHEPARD,  
*Committee.*

**Missing Men.**

Information is wanted in regard to the following men:

Angel Sanchez y Sanchez alias Francisco Alvarez, who was last heard from at his home in Madrid, Spain, in May, 1907. He is about 38 years old, of low stature, black hair, thick mustache, and is somewhat lame.

Fred. C. Peters, who was employed as a steam shovel craneman in the Gatun Dam Division, and who resigned on June 10, 1908.

Anyone having knowledge of these men is asked to communicate with M. B. DePatron, Assistant to the Chairman, Culebra, C. Z.

Mr. Murphy, an electrical engineer, formerly of Richfield Springs, New York, will learn something to his interest by addressing at once Frank A. Beach, Gatun, C. Z.

Tests of fats and oils for use in lubricating Canal Zone machinery are being conducted at Empire.

## FIRE PROTECTION.

**No Insurance Makes Thorough System Necessary.**

Ten and a quarter million dollars have been spent by the United States in buildings in the Canal Zone. This amount takes no account of the value of the buildings purchased from the French, both in the Canal Zone and the Republic of Panama, nor the value of the property in all the buildings, including the large amount of stores. These buildings are scattered along a line 50 miles in length, and no insurance is carried on them. In fact the only guarantee against fire is in the precautionary measures taken, and in the fire department, which has companies in every large village.

A report recently made places the number of buildings owned by the Isthmian Canal Commission at 3,338. With but a few exceptions these are frame buildings and of very light construction. Precautions against fire are taken from the beginning, for no building is erected within 30 feet of a one-story building, or within 50 feet of a two-story building; the setting of the stove is directed, and the electric wiring is carefully inspected by the electrician of the Fire Department. Frequent inspection is made of all buildings by a paid fireman, and in public service buildings, such as commissaries, hotels, and clubhouses the inspection is made at least three times a week. In addition, the occupants of buildings are forbidden to allow waste or any inflammable material to collect in or near buildings, or to store oil in large quantities, and the regulations are strictly enforced by the employees of the Quartermaster's Department, the police, and the members of the fire companies. Other precautionary measures include a water supply under good pressure; the placing of chemical fire extinguishers, and of standpipes and hose in all big buildings, especially in buildings some distance from the fire company stations, and the instruction of janitors and other custodians in the handling of the fire hose and extinguishers.

Weather conditions during eight months of the year, from May to January, are favorable to fire protection as heavy showers are of almost daily occurrence in every part of the Canal Zone. In the other four months however, there is little rain, and the frame buildings become very dry. Notwithstanding this difference fires are no more frequent in the dry than in the rainy season, so well are the precautionary rules enforced. In fact, practically all fires in the Canal Zone have originated inside the buildings.

On December 1, 1905, the personnel of the Canal Zone Fire Department consisted of one man who had been employed as chief of the department and who had just arrived at Cristobal. The equipment consisted of 195 three-gallon chemical fire extinguishers in the storehouse. The villages along the line of the Canal were entirely without protection from fire, although millions of dollars had been expended in buildings and material. On the 1st of December, 1908, the personnel of the department consisted of 49 paid firemen, and 226 volunteers. The equipment included over 40,000 feet of hose, 1,428 fire extinguishers, steam fire engine, hook and ladder truck, chemical engine with two 45-gallon tanks, seven hose wagons, with

a capacity of 1,000 feet of hose each, and 17 volunteer hand hose reels, each with a capacity of 500 feet of hose.

At first the department consisted entirely of volunteers, excepting the administrative force, which included the Chief and his clerical assistants. In 1905 volunteer companies were organized, two at Cristobal, two at Gorgona, two at Empire, two at Culebra, two at La Boca, two at Ancon, and one at Pedro Miguel. The following year companies were organized at Tabernilla, Gatun, Paraiso, and Corozal, and in 1903 at San Pablo, Porto Bello, and Bas Obispo. At the present time the department is composed of six paid companies, and 17 volunteer companies captained and drilled by a paid fireman, who also has charge of the fire station. The first company to be placed on a paid basis was that at Cristobal which was changed from a volunteer to a paid organization in November, 1905. In February, 1907, a paid company of four men was installed at Ancon, and in April, 1908 a company of four men each was installed at Gorgona, Empire, Culebra, and Ancon, respectively.

The wages of the paid firemen are \$100 a month for the first six months of service and \$125 thereafter. As compared with wages for similar work in the States this amount has not been sufficient to induce many qualified men to make application for the position, and there has even been some difficulty in keeping the places filled. The volunteers are paid \$1 an hour for their services when called to a fire, are paid for the time lost from their work while on duty at a fire or drill, and are given one pass a month in addition to their regular monthly pass on the Panama railroad to any point along the line.

The first company organized was that at Cristobal. On December 27, 1905, an order was placed for the following equipment: One steam fire engine, with spiral water tube boiler, capable of delivering 600 gallons of water a minute under 200 pounds pressure through a 1½-inch nozzle, with all parts that are touched in the pumping of salt water made of the best bronze; one 4-wheel chemical engine with two horizontal cylinders of a capacity of 45 gallons each, two horse hitch; one truss hook and ladder, extension not over 41 feet, with small ladders; one 2-horse hose wagon, and 2,500 feet of 2½-inch rubber-lined woven fire hose with cotton jacket, tested to 400 pounds, in 50-foot sections; and two 5-gallon chemical extinguishers. All this equipment, with the necessary fittings, was intended for the Cristobal company and is now in use there. The fire station house was completed in July, 1905. It includes quarters for the men, and is modern in all its appointments.

The company is made up of one captain, one lieutenant, one engineer, thirteen firemen and one clerk, all of whom are paid and who are relieved from duty one day in fifteen. In addition to the equipment at the station the tug *Cristobal*, owned by the Panama Railroad Company, is equipped with two pumps, each capable of delivering 750 gallons of water a minute, with two turret nozzles, and four hose connections. The fire alarm system extends throughout Cristobal and to points in Colon convenient to property of the United States and the Panama Railroad Company. It is a modern Gamewell system and has connections with the Mount Hope pumping station

and the Cristobal electric light plant. In all there are 14 boxes in the two cities.

At the time the equipment was ordered for Cristobal an order was also placed for 15 two-wheel hose carts with a capacity of 500 feet of 2½-inch hose each and wheels 5 feet high. This equipment arrived in the summer of 1905 and was distributed along the line of the Canal to the hose companies already organized; one at Corozal, two at Empire, two at Culebra, two at Ancon, one at Miraflores, one at Pedro Miguel, two at Gorgona, two at La Boca, and two at Cristobal. In April, 1905, 250 three-gallon chemical extinguishers arrived, and in June 250 more were distributed. In September, 1907, 500 additional chemical extinguishers arrived and in April, 1908, two new hose wagons for Ancon, and one each for Culebra, Empire, and Gorgona were added to the equipment.

A summary of the fire-fighting facilities along the line follows:

**Mount Hope**—At this place a fireman is stationed who constantly patrols the storehouse, and there are a hose reel, 500 feet of hose, and 20 chemical extinguishers. The Cristobal company can make the run to the storehouse and have water on the buildings in 6½ minutes.

**Gatun**—Volunteer company with one paid fireman, hose reel and 500 feet of hose; hose reel and 250 feet of hose at the camp near the hospital, and 94 fire extinguishers.

**Tabernilla**—Volunteer company and one paid fireman, hose reel and 500 feet of hose, small reel and 250 feet of hose, and 39 chemical extinguishers. The paid fireman has charge also of the San Pablo station.

**San Pablo**—Volunteer company, hose reel and 300 feet of hose, 20 chemical extinguishers, and 13 extinguishers in Caimito Malato.

**Gorgona**—One paid company of four men and two volunteer companies, one at the shops and one in the village proper; equipment includes one hose wagon with 1,000 feet of hose, and the Gamewell fire alarm system with eight boxes, with connections in the shops, and 153 chemical extinguishers.

**Bas Obispo**—Volunteer company, hose cart and 500 feet of hose, and 45 chemical extinguishers.

**Camp Elliott**—Volunteer company of the marines, hose cart with 500 feet of hose and 16 chemical extinguishers.

**Las Cascadas**—One hose company with one paid fireman, a reel with 500 feet of hose, a small reel with 300 feet of hose, and 100 chemical extinguishers.

**Empire and Culebra**—The paid fire company at Empire consists of four men, and is backed up by a volunteer company composed chiefly of men in the Empire shops. A Gamewell alarm system, which connects with Culebra, one hose wagon with 1,000 feet of hose and 144 chemical extinguishers, distributed where they are most likely to be needed, form the equipment. The Culebra company is of the same size and is also assisted by a volunteer company. It likewise has a hose wagon with 1,000 feet of hose, and 143 extinguishers are distributed throughout the village.

**Paraiso**—One volunteer company and one paid fireman, hose reel with 500 feet of hose, and 58 chemical extinguishers.

**Pedro Miguel**—Volunteer company with one paid fireman, hose reel with 500 feet of hose, and 44 chemical extinguishers.

**Miraflores**—At present the only protection at Miraflores consists of 15 chemical extin-

guishers, but it is planned to revive a volunteer company organized there at one time, as its services may now be needed, since the growth of the settlement has become rapid and is assured.

**Corozal**—Volunteer company, hose reel with 500 feet of hose, hose reel with 300 feet of hose, and 37 chemical extinguishers.

**Camp Diablo** (near Corozal)—Hose reel with 300 feet of hose, and four extinguishers.

**La Boca**—Two volunteer companies, one composed of white men and one composed of negroes; each company has a hose cart and 500 feet of hose, and there are 75 extinguishers distributed in appropriate places. The floating equipment in the harbor, the docks, and the machine shops and shipways are given additional protection by the Panama Railroad Company's tug *Bolivar*, which is equipped with a turret nozzle and a pump that will deliver 750 gallons of water a minute. There is a paid fireman at this station, and the alarm system extends from Ancon to La Boca. Ancon company, No. 2, responds to all alarms at La Boca, East La Boca, and from the docks.

**Ancon**—There are two paid companies of four men each; and a negro volunteer company in the corral. The equipment consists of a hose wagon for each station, 2,000 feet of hose and 169 extinguishers distributed throughout various parts of the colony. A Gamewell system of 15 boxes connects all parts of Ancon and extends to La Boca and to Commission and railroad property in Panama.

In addition to the companies along the Line, a volunteer company with one paid man has been organized at Porto Bello, where there is a hose reel with 300 feet of hose and 24 fire extinguishers. At the new quarantine station on Culebra Island 300 feet of hose and 9 chemical extinguishers have been placed; at Taboga Sanitarium, 600 feet of hose, and 4 chemical extinguishers, and at Palo Seco Leper Colony, 10 chemical extinguishers.

The efficiency of the paid department has been tested several times by fires in Colon. On February 24, 1907, fourteen buildings on the block bounded by Fourth, Fifth and D streets and Hudson alley in Colon, were destroyed by fire. The fire was under control in two hours and was extinguished in three and one-half hours, although it had gained great headway before the companies arrived. On December 10, 1907, the Hotel Central on Front street, corner of Seventh, in Colon, was destroyed with a loss of \$15,000. The house adjoining was partially destroyed, but all other buildings threatened were saved. On April 28, 1907, the Wesleyan schoolhouse and two small dwellings were destroyed by fire with a loss of \$10,000. In all three of these fires the Cristobal department assisted the volunteer department of Colon which was poorly equipped to fight against fire in frame buildings or that had already gained headway. The small loss in each case was due in great measure to the prompt arrival and systematic work of the Cristobal company.

On the morning of April 1, 1907, a big storehouse at Mount Hope caught fire. The road to Mount Hope at that time was not completed so that it was necessary to take the apparatus to the fire on flat cars and 15 minutes were consumed in getting the train ready. In addition to the fact that the company did not arrive at the scene until twenty-four minutes after it was summoned, the water pressure was very poor, yet half of the storehouse was saved and the total loss was only \$100,000.

On March 26, 1907, the Ancon department made a run to Cathedral square in Panama

and had water on a fire in a house fronting the plaza in less than eight minutes.

Opportunity has not been wanting for the volunteers to show their mettle. The I. C. C. hotel at Empire was burned on the morning of July 9, 1907. The fire caught in a store house beneath the hotel and the alarm was sounded at 4.40 o'clock. The volunteer company located nearest to the hotel had two streams of water on the fire within five minutes. The building was destroyed with a loss of \$16,500, but the prompt and effective work of the department saved adjoining buildings, one of which was only ten feet in the rear of the hotel. Two fires at Gorgona in 1907 tested the efficiency of that department. One of them was in the municipal building and was discovered at 2.05 o'clock in the afternoon of January 4. In four minutes the paid fireman and volunteer companies of that place were pouring water on the fire and the flames were confined to two rooms. No adjoining structures were injured. Out of a possible loss of \$2,000 only \$500 worth of damage was done. At 5.40 o'clock in the afternoon of July 23, 1907, a type 14 house in Gorgona caught fire and was destroyed with a loss of \$5,500. The two adjoining buildings were only slightly damaged. At the time the above fires occurred only one paid fireman was stationed at each of these points.

A misunderstanding prevented effective work at a fire in some houses owned by the Panama Railroad Company in Panama on September 29, 1907. As a result it has been agreed between the two Governments that all Canal Commission and Panama railroad buildings in Panama and Colon are included within the districts of the Ancon and Cristobal regular companies, respectively. In the event of fire in either of those cities, unless the captain of the regular company has definite information that Canal Commission or railroad property is not in danger, he will take his company into the city. After arriving in the city, if it appears that Canal Commission or Panama railroad property is not in danger, he will take no part in fighting the fire unless requested to do so by the Chief of the Panama or Colon Fire Departments as the case may be, or the Alcalde of the city. In the event Canal Commission or railroad property is in danger, or the captain is requested by the Chief of the Panama or Colon departments or the Alcalde to take part in fighting the fire, he will assist in the work, but under the direction of the Chief of the Panama or Colon Departments. If the fire occurs in a Canal Commission or railroad building, he will assume complete charge of the work of fighting it.

On the occasion of the visit of the President of the United States to the Canal Zone in 1906, the fire department at Cristobal gave an exhibition run. Four minutes after the alarm was given, the fire department had made the run from the engine house to the passenger station in Colon, had attached hose to nine two-way hydrants on Front street, and had 18 streams, 65 feet high, playing on the buildings. As a result of the exhibition the following letter was sent to the Chief of Department:

DEPARTMENT OF  
CONSTRUCTION AND ENGINEERING.  
CULEBRA, November 19, 1906.

Mr. C. E. Weidman, Chief, Fire Department, Cristobal.

Sir—President Roosevelt was very much impressed by the practical test made by our fire department at Colon, on Saturday.

He directs me to convey to you, and through you to the department, his thanks for affording to him an opportunity to witness such a display.

I may add on my own behalf that there are few towns of a much larger size in the United States that could even approximate such results.

Truly yours,

JNO. F. STEVENS,  
Chief Engineer.

## NOVEMBER STEAM SHOVEL RECORD.

In November the steam shovels at work on Canal excavation took out 1,638,183 cubic yards of earth and rock, all but 70,228 cubic yards of which was taken from the prism.

A new record for excavation in one day was made on the last day of the month, when the 53 shovels at work in the Central Division took out 67,130 cubic yards.

The high record for the month was made by shovel 262, at work in the Bas Obispo District, which took out 44,768 cubic yards in 23 days. The best record for a shovel in the 70-ton class was made by shovel 104, working in the Gorgona District, which took out 31,799 cubic yards in 23 days.

Shovel 262 at work in the Bas Obispo District, made the highest record for one day by excavating 2,851 cubic yards of rock on November 11. The records follow:

## FRATERNAL SOCIETY NOTICES.

## Sojourners' Lodge.

Sojourners' lodge, No. 874, A. F. and A. M., will meet Saturday evening, December 12, at 7.30 o'clock, at its hall in Colon, in regular stated communication (postponed). Masons in good standing are fraternally invited to attend.

G. G. DEDGE, *Acting Secretary.*

## Pacific Masonic Club.

The regular meeting of the Pacific Masonic Club will be held on Saturday evening, December 12. The degree of the Ancient Order of Humility will be conferred at this meeting.

R. S. STILES, *Secretary.*

## Paraiso Sojourners' Club

A meeting of the Paraiso Sojourners' Club will be held on Wednesday evening, December 16. Business of special importance will come before the meeting, including the semi-annual election of officers. All members who possibly can do so are urged to attend.

W. J. VANNAH, *Secretary.*

## Woodmen of the World.

A new camp, Woodmen of the World, has been organized at Empire, Canal Zone, designated as Panama Camp, No. 1, and all "Choppers" who have their membership in the States are cordially invited to come over on the first and third Saturday nights of each month (our regular meeting nights,) and be with us. Place of meeting—new I. C. C. lodge hall, just south of Y. M. C. A. building.

Visitors will be provided accommodations if the clerk is notified in advance.

WALTER T. GREENE,  
*Consul Commander.*

C. L. WHITAKER, *Clerk.*

## Entertainment at Paraiso.

The Improved Order of Red Men, Chiriqui Tribe, No. 1, will meet at their wigwam at 7.30, Saturday evening, December 12, when they will immediately adjourn to attend in a body the entertainment to be given by Aztec Tribe, No. 4, at their wigwam, at Paraiso. All members and their paleface friends are invited to attend.

## Minstrels at Empire

The date for the performance to be given by the U. S. Marine Minstrels at Kangaroo Hall, Empire, under the auspices of Empire Court of I. O. P. K., on December 11, has been changed to Tuesday evening, December 15.

## Gorgona Athletic Park Association.

A meeting of the stockholders of the Gorgona Athletic Park Association is called for Sunday, December 13, at 9.00 o'clock a. m., at the Gorgona hotel (upstairs), for the purpose of electing new officers and the transaction of other necessary business.

A game of baseball will be played at the Plaza de Bomberos No. 2, Colon, on Sunday morning, December 13, between teams from the Panama railroad "Material Stores" and "General Offices."

A golf club has been organized at Culebra, and work is now in progress laying out a course between the Panama railroad and the Administration building.

## OFFICIAL CIRCULARS.

## Preference to Porto Ricans.

CULEBRA, C. Z., November 23, 1908.

## HEADS OF DEPARTMENTS AND DIVISIONS:

It is ordered that, in the event of any reduction in force of employees on the gold and silver rolls, citizens of Porto Rico shall be accorded preference over aliens.

GEO. W. GOETHALS,  
*Chairman.*

## Transfer of District Quartermasters.

CULEBRA, C. Z., December 4, 1908.

## TO WHOM CONCERNED:

Effective December 7: The following transfers of District Quartermasters are announced:

D. J. Shannon, from Las Cascadas to San Pablo  
J. H. Humphreys, from San Pablo to Las Cascadas

Respectfully,  
C. A. DEVOL,  
*Chief Quartermaster.*

## Commissary Coupon Books.

DEPARTMENT OF EXAMINATION OF ACCOUNTS.  
EMPIRE, C. Z., December 7, 1908.

## CIRCULAR No. 7.

*Heads of Departments and Divisions*—Attention is invited to the large number of commissary coupon books returned to this office as undelivered, after having been filled out, signed and witnessed by the timekeeper for some employee and for which deduction has been made on the pay roll, and the amount remitted to the Panama Railroad Company.

Such a practice of completing books before delivery requires that the book be cancelled and bill issued against the railroad company to recover the amount, which must then be held for refund to the employee on individual voucher if application is made therefor.

Please instruct timekeepers that every effort must be made to deliver coupon books that have been applied for, and in no case should a book be signed until the employee is present to receive it.

Deductions must not be made on the pay roll for an undelivered book. If delivery can not be effected before deduction sheets and pay rolls are made up, the book should be cancelled.

W. W. WARWICK,  
*Examiner of Accounts.*

## Approved:

GEO. W. GOETHALS,  
*Chairman and Chief Engineer.*

## LEGAL NOTICES.

United States of America, } In the First Judicial  
Canal Zone. } Circuit.

Raimundo Sander, a Colombian, who resided in the Canal Zone, died intestate on or about the 10th day of October, 1905, leaving an estate at Ancon, consisting of \$7.20 Panamanian currency and personal belongings of little value.

Castis Lephdales, a Greek, who resided in the Canal Zone, died intestate on or about the 16th day of May, 1907, leaving an estate at Ancon, consisting of 50 francs, French gold.

Pedro Juan, presumably a Greek, who resided at La Boca, Canal Zone, died intestate on or about the 3d day of October, 1907, leaving an estate at La Boca consisting of \$70 U. S. Currency and \$10 Panamanian currency.

Kurilla Stevan, nationality unknown, who resided in the Canal Zone, died intestate on or about the 4th day of April, 1908, leaving an estate at Ancon consisting of \$1.60 Panamanian currency, 10 cents U. S. Currency, and one Chilean coin of small denomination.

Lucas Alvarez, Chilean, died intestate in the Canal Zone on or about the 20th day of June, 1908, leaving an estate at Ancon consisting of personal belongings of little value and \$48.50 U. S. Currency.

The Collector of Customs has filed a petition for escheat in each of the above mentioned estates under Section 779 of the Code of Civil Procedure.

Notice is hereby given to all concerned to appear at the courthouse in Ancon, C. Z., on February 1, 1909, at 9 o'clock a. m., to establish their claims to the estates, or to show cause why the same should not escheat to the Canal Zone.

F. H. SHEIBLEY,  
*Circuit Court Clerk Pro Tempore,*  
Ancon, Canal Zone.

United States of America, } In the First Judicial  
Canal Zone. } Circuit.

Frank Roch, American, died intestate on or about May 26, 1908, leaving an estate located at Ancon, Canal Zone, consisting of various personal belongings of little value, Isthmian Canal Commission pay certificates for \$250, and cash amounting to \$260.

James Tray, American, who resided at Ancon in the Canal Zone, died intestate on or about January 22, 1906, leaving an estate at Ancon, consisting of Isthmian Canal Commission pay certificate for \$110 Panamanian currency.

Louis M. Gilbert, alias Charles Gibson, American, who resided at Pedro Miguel, C. Z., died intestate on

or about May 4, 1907, leaving an estate at Pedro Miguel, consisting of Isthmian Canal Commission pay certificate of the value of \$27.75 net, and \$1.50 cash.

Bartole Salcedo, a native of the Dutch West Indies, who resided at Ancon, C. Z., died intestate on or about June 29, 1907, leaving an estate at Ancon, consisting of Isthmian Canal Commission pay certificate for \$1.60 Panamanian currency.

Charles White, American (colored), who resided at Pedro Miguel, Canal Zone, died intestate on or about April 3, 1908, leaving an estate at Ancon, Canal Zone, consisting of \$5 U. S. Currency.

The Collector of Revenues has filed a petition for escheat in each of the above mentioned estates under section 779 of the Code of Civil Procedure.

Notice is hereby given to all concerned to appear at the courthouse in Ancon, Canal Zone, on January 18, 1909, at 9 o'clock a. m., to establish their claims to the said estates, or to show cause why the same should not escheat to the Canal Zone.

F. H. SHEIBLEY,  
*Circuit Court Clerk Pro Tempore,*  
Ancon, Canal Zone.

ANCON, CANAL ZONE, November 23, 1908.

Estate of }  
Fletcher E. Joyner. } Administration.

Any and all persons owing the estate of Fletcher E. Joyner, deceased, who died at Ancon, Canal Zone, on the 21st day of October, 1908, are hereby requested to communicate with the administrator of said estate in order that a settlement may be effected. And all persons having any claim or claims against said estate must present the same, duly verified, to the administrator within six months, otherwise said claims will be forever barred according to law.

All communications with reference to the estate should be addressed to Empire, Canal Zone.

F. H. SHEIBLEY,  
*Administrator.*

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

Miss Annie S. Peck, the noted mountain climber, spent a few days on the Isthmus en route from Peru to New York and while here she gave lectures in the Commission clubhouses as follows: Culebra, December 7; Gorgona, December 8; Cristobal, December 9; Empire, December 10. Miss Peck's lectures are descriptive of Peru and Bolivia. During her recent trip in South America she climbed Mount Huascarán, the summit of which had never before been reached.

The Martha Alexander Recital Company, from the States, will give performances in the clubhouses as follows: Cristobal, December 12; Culebra, December 14; Gorgona, December 15; Empire, December 16. The company is composed of Martha Alexander, violinist; Maud Higby, soprano-accompanist, and Edith Hale, reader and whistler. Miss Alexander, leader of the company, visited the Isthmus in August, 1907 and was the first violinist brought from the States to play in the clubhouses.

The final standing of the players in the local individual bowling tournament recently held at Cristobal was as follows:

Name.	Played.	Won.	Lost.	Pts.	Pmfall.	Avg.
Gilmartin.....	45	38	7	844	8,044	178.8
Bullard.....	45	32	13	711	7,080	157.3

## Concert by the I. C. C. Band.

## PORTO BELLO.

Sunday, December 13, 1908, at 2.30 p. m.:

## PROGRAM.

- 1 March—Santiago Flynn.....Morse
- 2 Selection—Mill's Merry Melodies.....Vi Is
- 3 Waltz—Idle Hours.....Wood
- 4 { a Intermezzo—Rainbow.....Wenrich  
b Schottische—When a Roy Says "Will You?".....Allen
- 5 Medley Selection—The Sunny South.....Lampe
- 6 Tone poem—Apple Blossoms.....Roberts
- 7 Caprice—The Whistler and His Dog.....Pryor
- 8 Overture—Lustspiel.....Kelt-Bla
- 9 Humoresque on The Merry Widow Waltz—Bilsted

Introducing this popular melody from the opera "The Merry Widow" hurled in the following manner: 1. A little German band; 2. A flute solo with organ effect; 3. An amateur trombonist, who is willing to show what he can do if only requested to; 4. A street pino; 5. A ragtime as played on a banjo; and finally—the result, the popularity of this melody has produced—a brainstorm.

10 Galop—Telemachus.....Bennett  
CHAS. E. JENNINGS, *Musical Director.*

The next concert will be given at Las Cascadas, Sunday, December 20.

## COMMISSARY DEPARTMENT

## NOTICE.

Patrons of the Commissary Department, when dealing with the Cristobal office, will address their individual orders, deposits, etc., to the Order Room, Commissary Department, Building No. 2, Cristobal.

Complaints should be made in separate letters and addressed to the Subsistence Officer, Building No. 2, Cristobal.

JOHN BURKE,  
Manager.

Approved:  
EUGENE T. WILSON,  
Subsistence Officer.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

## COMMISSARY PRICES

For week beginning December 8:  
FRESH MEATS.

	Price.
Mutton—Stewing.....per lb	6
Shoulder and neck (not under 6 pounds).....per lb	7
Entire forequarter (not under 10 pounds).....per lb	9
Leg (8 to 10 pounds).....per lb	16
Short-cut chops.....per lb	22
Lamb—Stewing.....per lb	6
Entire forequarter.....per lb	8
Leg (6 to 8 pounds).....per lb	27
Chops.....per lb	29
Veal—Stewing.....per lb	10
Entire forequarter (15 to 20 lbs).....per lb	11

## COLON TO BARBADOS, CALLING AT TRINIDAD.

Atrato.....	R. M. Tuesday	Dec. 22
Trent.....	R. M. Tuesday	Jan. 5

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, calling at Puerto Barrios, and from Colon at 1.30 p. m. via Port Limon and Puerto Barrios, for New Orleans.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The next sailing of the Leyland Line for New Orleans via Kingston, Jan., will be the steamship *William Cliff* on or about the 22d inst.

The steamship *Mapocho* from Valparaiso, arrived at La Boca on December 2. Recent departures from La Boca have been as follows: December 1—*Quita* for Buenaventura; *Limari* for Valparaiso; *San Jose* for Sao Francisco.

## Misdirected Letters.

Division of Posts, Customs and Revenues,

Ancon, C. Z., December 10, 1908.

Henkle, Mrs. Bertha E.	Swain, J. M.
Knight, Mrs. Herma	

# CANAL

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, DECEMBER 16, 1908.

No. 16.

## The Canal Record

Published weekly under the authority and supervision of the  
ISTHMIAN CANAL COMMISSION

"The Canal Record" is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the "gold" roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications

### THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

## NOTES OF PROGRESS.

### Longevity Pay and Canal Medals.

Under the rules adopted by the Commission only citizens of the United States are entitled to receive either longevity pay or the Canal Medal. An employee of foreign birth who claims either longevity pay or the Canal Medal will be required to prove citizenship by submitting the original or a certified copy of his final certificate of naturalization, or else similar evidence of the naturalization of his father during his own minority. American employees of foreign birth, who expect to earn longevity pay or the Canal Medal, may avoid delay by submitting this evidence of naturalization in advance to the Assistant to the Chairman, who will enter the facts in the official record, and return to the employee the evidence submitted. Employees who have not their naturalization papers with them on the Isthmus, should procure them without delay, in order that their citizenship may be recorded.

This record of citizenship may also be of benefit to an employee in the event of his separation from the service and subsequent application for reinstatement.

### November Money Order Business.

The report of the Chief of the Division of Posts, Customs, and Revenues for the month of November shows that 14,623 money orders, amounting to \$418,543.77, were issued, a decrease of \$23,239.53 over the amount reported for October. Of the \$418,543.77 in November, \$307,216.25 was in orders drawn payable in the United States and elsewhere, and \$111,327.52 in orders drawn payable in the Canal Zone. The fees collected amounted to \$1,759.99, and the amount paid and repaid, \$106,476.19.

The largest number of orders, 2,721, was issued at Cristobal, and amounted to \$73,031.82. Empire was second with 1,909 orders, aggregating \$55,016.30. Ancon was third in number of orders issued, 1,437, but

was fourth in amount, \$31,903.33. Gorgona was fourth in the number of orders issued, 1,430, but third in amount, \$48,921.57. Culebra was fifth, with 1,294 orders, amounting to \$31,214.28. Of the amount payable in the United States, Cristobal was first with \$63,245.73; Empire was second with \$40,814.37, and Gorgona third, with \$36,548.65. In orders payable in the Canal Zone, Empire was first, with \$14,201.93; Gorgona second, with \$12,372.92; and Pedro Miguel was third, with \$11,301.80. In the amount paid and repaid Empire was first, with \$14,173.14; Cristobal second, with \$13,563.42, and Gorgona third, with \$12,604.65.

The average of all the orders issued was \$28.62, the highest being at Pedro Miguel, where 797 orders, aggregating \$28,619.35 were issued, an average of \$35.91, and the lowest was at Ancon, where the orders issued averaged \$22.20.

### Filtered Water at Colon.

The filtration plant at Mount Hope is now in operation and filtered water has been supplied to Colon, Cristobal and Mount Hope since December 1. A hoiler and air pump have been installed at the Brazos Brook reservoir from which an air pipe runs to the bottom of the gate house and discharges air into the water through a perforated grid, so that all the water supply from Brazos Brook reservoir is aerated in the gate house. This improvement has removed the disagreeable taste and odor which have been noticeable in the water from the reservoir at certain times of the year. The same system was installed at the Rio Grande reservoir in October, 1907, and has given excellent results.

### Comparison of Cost.

The Mechanical Division of the Isthmian Canal Commission has recently manufactured a number of side doors for 12-yard steel dump cars, and has thus been enabled to compare the cost of manufacture on the Isthmus with the cost of purchase in the United States, for the same article.

The material and labor on six of these car doors, including all overhead and indirect charges of manufacture on the Isthmus, show a maximum cost of \$36.91 each. The cost of fifty of the same doors, purchased in the United States and delivered on the Isthmus, was \$55 each, or nearly double the cost of those manufactured on the Isthmus.

### Improvements at Colon Hospital.

Improvements at Colon Hospital grounds are nearing completion. The macadam road and five-foot concrete walk through the grounds are completed, as is a ten-foot concrete sidewalk on the east side of Coconut alley, from the entrance of the hospital grounds to Second street, Colon. All the low places in the grounds are being filled to an average height of about four feet above

high water throughout the greater part of the premises. About 1,200 cubic yards of material, from Mindi, will be used in this work. The lawn in front of the married quarters is being graded and young cocoanut palms set out along the roads and sidewalks.

### Ships for Isthmian Service.

A cablegram from Washington states that the steamships *Shawmut* and *Tremont* will be purchased for \$1,157,000, delivered at Seattle about January 1, 1909. If delivery is desired at New York \$56,000 must be added to the purchase price. These ships will be placed in the Panama Railroad Company's steamship service between Cristobal and New York. They are owned by the Boston Steamship Company and have recently been laid up after several years of service in the trade between Puget Sound, and Japan and China.

The Sundry Civil Appropriation Act of May 27, 1908, makes an appropriation:

\*\*\*\*\* To enable the Secretary of War to purchase for the Panama Railroad Company two steamships of American register each to be of not less than nine thousand gross registered tonnage and at a cost of not to exceed one million five hundred and fifty thousand dollars, said ships to be controlled and operated by said Panama Railroad Company in like manner as other ships of said Company, including the transportation of supplies, equipment and material for use in the construction of the Panama Canal and the transportation of officers and employees of the Panama Canal Commission: Provided, That when said ships are no longer required for use as aforesaid in the transportation of supplies, equipment and material for construction of the Panama Canal the same shall be transferred to the Secretary of the Navy for use as colliers or other auxiliary vessels belonging to the Navy.

The vessels were inspected by a board of naval officers and found to come up to the requirements as to tonnage, and adaptability to the service of the Panama Railroad Steamship Line and as colliers or auxiliary naval vessels. Two inspectors from the Panama Railroad Steamship Company also examined the boats with regard to their cargo space and availability for the Colon-New York service. It is probable some repairs and changes will be made before they are put in service.

The *Tremont* is a steel twin-screw steamship of 9,606 gross and 6,195 net tons, and was built by the Maryland Steel Company at Sparrows Point, Md., in 1902. It is 489.5 feet long, 58 feet in breadth, and 28.9 feet deep; is fitted with Maryland Steel Company boilers and engines, with six triple expansion cylinders, 23½ inch, 39¼ inch, and 63 inch, with a 45 inch stroke. It has an indicated horsepower of 4,000 and carries a crew of 64 men. The home port is Boston, Mass. The *Shawmut* is a twin ship with the *Tremont* except that it carries a crew of 74 men and has an indicated horsepower of 5,424.

If the ships are purchased at Seattle they will probably carry lumber from Puget

## NOTES OF PROGRESS.

(Continued).

Sound to La Boca, and then proceed around South America by way of the Straits of Magellan.

## Finance May Not Be Saved.

Recent advices from the States are to the effect that it may not prove profitable to raise the *Finance*, the Panama Railroad Company's ship which went down in the entrance to New York harbor on November 26. The ship sank and now lies on the north side of the main ship channel, about one mile N.  $\frac{1}{2}$  E. from Sandy Hook beacon very close to red buoy No. 4, and just south of where the swash channel enters the main ship channel.

The loss of the *Finance* made a gap in the schedule of the Panama line, which it was believed could be filled by chartering another steamer. Efforts to do this or to procure an Army or Navy transport have failed, and the schedule of the Panama line will therefore be maintained by the four ships in service. By hurrying the loading and unloading of these ships in New York and Cristobal, the time they spend in port will be shortened. The *Advance* will sail from New York December 21, instead of on December 24; the *Alliance* on December 26, instead of December 29; and the *Colon* on January 2 instead of January 4. Changes to agree with these will also be made in the sailings from Cristobal. Little difficulty is anticipated in keeping up the cold storage service for the Subsistence Department as extra space has been procured on the Royal Mail Steam Packet line.

## Visit of the Pacific Fleet.

The First Squadron of the Pacific Fleet, United States Navy, in command of Rear Admiral William T. Swinburne, arrived in Panama Bay at noon on Sunday, December 13. The Gunboat *Yorktown* arrived on the afternoon of December 11 and H. M. S. *Shearwater*, Commander C. W. G. Crawford, arrived on the afternoon of December 13, making ten war vessels, nine American and one English, at anchor in the harbor.

A committee of citizens of Panama has raised a fund to entertain the men of the fleet while they are ashore. The Old Administration building in Panama has been turned over to the Committee by the Isthmian Canal Commission and the welfare of the men is in charge of the Y. M. C. A., a secretary being on duty in the building at all times.

About three hundred cots have been placed in the upper floor of the building and a reading room has been fitted up on the same floor. In the second story, directly at the head of the stairs is the office of the secretary in charge, and a substation of the Ancon post-office is across the hall. On this floor are also a kitchen and mess room where coffee, sandwiches, pie and other light refreshments may be had at cost. It is anticipated that, beginning December 15, about 800 sailors will be ashore every day. The Panama Railroad Company has extended the courtesy of free transportation on any of its passenger trains to any man in the uniform of the Navy, and an observation car will be provided on the rear of each passenger train for the exclusive use of the men of the fleet.

The officers of the Pacific Fleet will be entertained at a subscription dance given by the Americans of the Isthmus at the Hotel Tivoli on the night of December 18, and at a reception in their honor at the University Club in Panama the night of December 19.

Excursions to and from the Pacific Fleet will be run from the La Boca wharf every day during the stay of the fleet, beginning December 15, by the tugs *Bolivar* and *Birdena*, leaving the wharf at 9 a. m. and 2 p. m. each day and returning at 11.30 a. m. and 4.30 p. m. respectively. These excursions, up to the carrying limit of the boats, are free to all gold employes and families of the Isthmian Canal Commission and Panama Railroad Company on presentation of proper pass, which may be secured upon application, properly approved by immediate superior, of Mr. W. G. Comber, Resident Engineer, Pacific Division, at La Boca. These passes will also entitle holders to admission to La Boca wharf. Saturday, December 19, will be reserved for white school children of the Zone and guardians.

The squadron is made up of the following armored cruisers:

*First Division—West Virginia* (flagship of Rear Admiral Swinburne), Capt. Alexander McCrackin; *Colorado*, Capt. Edmund B. Underwood; *Maryland*, Capt. Moses L. Wood; *Pennsylvania*, Capt. Frank A. Wilner.

*Second Division—Rear Admiral Uriel Sebree*, commanding; *Tennessee* (flagship of Rear Admiral Sebree), Capt. Bradley A. Fiske; *California*, Capt. Vincendon L. Cottman; *South Dakota*, Capt. James T. Smith; *Washington*, Capt. Austin M. Knight. The gunboat *Yorktown*, Commander James H. Glennon, accompanies the squadron.

The fleet will be in Panama Bay until December 22, when it will sail for Talcahuano, Chile.

The Panama Railroad Company will furnish the vessels of the Pacific Fleet with 5,000 tons of coal, of which about 2,500 tons were afloat on lighters when the fleet arrived and the balance was in cars ready to be loaded into lighters.

## LABOR FORCE FOR NOVEMBER.

The report of the Chief Quartermaster for the month of November shows that 23,964 persons were actually employed on Canal work on November 30. Of this number 4,161 were "gold" employes and 19,803 were "silver." The additions to the "gold" force during the month were 202, and the separations 314, making a reduction of 112. Of the additions to the "gold" roll, 38 people were employed in the United States, 156 employed or reemployed on the Isthmus, and 8 were transferred from the Panama Railroad Company. Of the 314 separations 81 people voluntarily left the service, 145 were discharged, 43 resigned, 1 died, 34 were changed to a silver basis, 3 were transferred

## HEALTH REPORT FOR NOVEMBER.

## Conditions Continue Excellent.

ANCON, C. Z., December 9, 1903.

To the Chairman Isthmian Canal Commission, Colón, C. Z.

Sir—I have the honor to forward herewith the report of the Department of Sanitation for the month of November, 1903:

The health conditions of the Zone remain excellent, the sick rate for the month of November being 27.16 per thousand.

The death rate for employes shows a decrease of 1.43 per thousand over October of this year, and comparing with November of last year, a decrease of 9.16 per thousand. The total number of deaths among employes during the month was 40, thirty-one of which were from natural causes and nine from violence. Dividing the whites and blacks, the death rates of the two races are as follows:

Color.	Disease.	Violence.	Total.
White .....	8.51	2.34	11.35
Black .....	9.09	2.43	11.57
Total .....	8.92	2.58	11.50

The death rate for the total population shows a decided improvement over October, it being 4.02 per thousand less during November than in October of this year. Comparing November of this year with November of 1902, the annual death rates for the total population are 23.71 and 23.85, respectively, which show a decided improvement in the health conditions of the Isthmus as a whole.

The total number of malarial cases admitted to hospitals during November shows a decided drop over the number of cases admitted during October. This reduction has occurred during November in each of the preceding years, and has averaged 25 per cent.

There has been no case of yellow fever since May, 1905, nor has there been a case of bubonic plague since August, 1905, though yellow fever and bubonic plague exist on both the Atlantic and Pacific coasts, within three days' sail of the ports of Panama and Colón.

Respectfully,

R. E. NOBLE,

Acting Chief Sanitary Officer.

## CANAL ZONE SCHOOLS.

## Reorganization of the High Schools—Physical Development of the Pupils.

In his report for November, the Superintendent of Public Schools discusses, in addition to other school matters, the reorganization of the high schools, the grading of the pupils, and the physical condition of the children in the Canal Zone schools.

A medical inspection of the schools has been provided for, and after January 1, 1909, the local district physician in each village will inspect the pupils, and advise the teachers as to what physical exercises should be given in order to correct conditions that can be remedied in that way. It has been noticed that the children in the Canal Zone have more eye trouble than in similar schools in the States, and that the percentage of curvature of the spine is greater. The tendency for pupils to become stoop shouldered is also very marked. These observations have determined the school authorities to take measurements, of which a permanent record will be kept, with a view to working out physical culture exercises calculated to correct these particular tendencies. In this work the first efforts will be made at Cristobal, where one of the teachers is a graduate of a normal school of gymnastics, and last year had charge of the physical culture work for the first and second grades of the schools in Indianapolis, Ind. The physical director of the Y. M. C. A. in Cristobal has also offered to help in devising exercises that will be suitable for children in this climate.

There are two high schools in the Canal Zone, one at Culebra and one at Cristobal, and both of them were reorganized in November, when two new teachers arrived on the Isthmus. One of these teachers, who comes from the high school at Sandusky, Ohio, has been given charge of the greater part of the high school work at Culebra, while a teacher from the Las Cascadas school has been transferred to Cristobal as an assistant in both grade and high school work at that place. The present arrangement at the high schools provides for an increase in the length of the recitation periods, and for an addition of subjects which could not be given before. With an additional teacher at Culebra it has been possible to hold the high school in the afternoon as well as in the morning, thus giving the pupils the advantage of an additional study period in school under direction of the teachers. The subjects as offered in the two high schools at present are as follows:

Culebra—First year subjects offered: Algebra, botany, English, German, Latin and Spanish; second year subjects offered: Algebra, English, German, geometry, general history and Latin; third year subjects offered, Latin and French.

Cristobal—First year subjects offered: Algebra, English, history, Latin and Spanish; second year subjects offered, Algebra, English, German and Latin.

The normal number of subjects to be carried by each high school pupil is four, but in case of first and second year pupils who have received excellent marks in their studies during the previous two months permission may be given to carry an additional subject. All the first year pupils take English, algebra and botany, and for their fourth subject they have chosen among Latin, German and Spanish. Many desire to continue in the

high school the Spanish they have commenced in the grades, and some prefer to take Latin because the schools they are preparing to enter require that language. At the beginning of the year there were no Latin books on the Isthmus, but there were some German books, and a few of the pupils took up German in preference to Latin because they could do so without delay. These conditions account for the seemingly large prominence of the languages in the first grade.

The present curriculum for the primary and grammar schools follows: Arithmetic, calisthenics, drawing, English composition, grammar, geography, history, music, physiology, reading, Spanish, spelling, and writing.

Additions were made to the libraries of three schools on the Isthmus during November. When the schools closed last year entertainments were given by the teachers and pupils at Ancon and Empire from which each school realized approximately \$100 dollars to be invested in books. These books reached the Isthmus during the month and are now in use in the respective schools. A large addition was made to the library in the Culebra school for white children by a gift from Mrs. May M. Childs, of Washington, D. C., who recently visited the Isthmus and became interested in the Culebra school.

During the month additions were authorized to the colored school at Cristobal and to the white school at Gorgona. Work was begun on the school building at Corozal. Petitions were received for the establishment of a school for colored children at Frijoles and for a school for white children at Tabernailla. The total enrollment in November was 1,877, of whom 654 were white children and 1,223 colored children. The average daily attend-

ance was 534 white children and 733 colored children. In October the total enrollment was 1,695, of whom 622 were white children.

## Murder Near Culebra.

Manuel Lopez, a Spanish laborer, was found dead at Rio Grande, a laborers' encampment near Culebra, on the morning of December 13. He had been stabbed in the heart. Dienicio Nunez was arrested on the morning of December 14 at Mount Hope, and is now in jail awaiting trial for the murder.

## Misdirected Letters.

Division of Posts, Customs and Revenues,  
Ancon, C. Z., December 16, 1908.

The following insignificantly addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Alexander, J.	Hoziea, Charles P.
Allison, Charlie	Jones, M. K.
Bamfield, Frank Drayton	Kittel, Charles
Bates, A. R.	Knight, E. L.
Benson, Aaron	Lake, Caddy
Blackburn, H.	Lindsay, R. E.

Henshaw, W. F.	

A telegraph station has been opened at Cucaracha, in order to facilitate the handling of trains in Culebra Cut.

## BASEBALL SEASON TICKETS AND OFFICIAL SCHEDULE, 1908 AND 1909.

\*The baseball associations which control the three parks at which the thirty games of the Isthmian Baseball League will be played during the coming season have provided for an advance sale of season tickets, the prices of which will be as follows: Boxes (four seats), \$40; single seats, \$10; grand stand, single seats, \$7.50; bleacher, single seats, \$4.

The holder of an entire box has the privilege of having two additional chairs placed in the box, making six in all, for the accom-

modation of friends who may be admitted on payment of the price of a grand stand seat. This advance sale of season tickets is to provide a fund which will guarantee to each club a certain amount of money for each game played, no matter how small the attendance. The amount guaranteed depends entirely upon the number of season tickets sold, and every one interested is requested to purchase season tickets before the opening of the season on December 20.

The official schedule of games to be played is as follows:

DATE.	Ancon Park.	Empire Park.	Gorgona Park.
December 20.....	Ancon-Empire.....		Gorgona-M. P. & M.

## SOCIAL LIFE OF THE ZONE.

**Women's Clubs and Other Features.**

The Empire Woman's Club held its meeting on December 10, the president in the chair. There was a good attendance. The important feature of the afternoon was the presentation and adoption of a program for the meetings up to June, 1909. The schedule provides for eleven meetings which will be held on the first and third Thursday of each month, at 2.30 p. m. The first meeting in each month will be devoted to business and study, the club having decided to take up the study of Panama, its history and people, art, and other topics of general interest. In connection with this some excursions will probably be made to points of historic interest. The second meeting in each month will be social in character and a program will be provided for each meeting. Arrangements for three special programs were made: On February 18 there will be patriotic papers in honor of Washington's birthday; on March 17 a program consisting of Irish songs and legends will be given, and on April 1 the regular business meeting will be suspended in favor of a social afternoon, when a short paper on the origin of April Fools' Day and some of the customs will be given. Several outside papers of special interest will be arranged for. A committee to arrange the study course with Mrs. H. C. Ball chairman was appointed. The classes will begin at the first meeting in January, which will be on the 7th.

The Woman's Club will unite with the Christian League, the Sunday school and the Young Men's Christian Association for the Christmas celebration. The next meeting of the club will be held December 22 in place of the regular date which falls on Christmas Eve.

Four large Christmas trees have been ordered for the Zone clubhouses, and the celebrations, for which elaborate preparations are being made, will take place on Christmas Eve. The Ancon Sunday school which has had a considerable increase in membership during the past few months, will have its celebration in the chapel in the bachelors' quarters, Ancon hospital, on the afternoon of Monday, December 28.

The executive board of the Ancon Woman's Club met at the residence of the president on Wednesday afternoon, December 9. There was a full attendance. The proceeds of the Christmas sale held on December 4 and 5, amounted to nearly three hundred dollars. The next meeting of the club, December 16, is in charge of the art department, Mrs. R. W. Fenn, acting chairman. A paper on Panamanian dress and needlework will be given. The chairman of the department, Madame Le Prince is expected to arrive on the Isthmus before the end of the month. The literary and educational departments have suspended meetings for the remainder of the month. The next meeting will be at the residence of Mrs. George L. Campen, on January 13, when the study course of Italy and Greece will be resumed.

The Paraiso Woman's Club met on Thursday, December 10, the president, Mrs. E. B. Healy, in the chair. Several new members were admitted and the charter closed with fourteen members. The constitution was read by the president and adopted. It was decided that the meetings shall consist of a

short business session, and that the balance of the afternoons shall be devoted to such social diversions as the members desire, music, cards or a light program. This arrangement will be observed for the present. There is much enthusiasm among the members, and the club exhibits a live spirit.

The philanthropy department of the Canal Zone Federation of Women's Clubs has raised a fund, through its representatives in the local Woman's Clubs, for a Christmas box to be presented to the patients of the leper colony at Palo Seco. The response from the organizations has been unanimous and generous. It is arranged that individual gifts shall be sent to each one of the patients.

The Las Cascadas Woman's Club enjoyed a social meeting in the new hall on Thursday, December 10. The meeting scheduled for December 24 will be suspended.

The Gatun Woman's Club had a specially interesting meeting at the home of the treasurer, Mrs. A. L. Clark, when the hostess read a paper on "The Philippine Islands," which gave a historic survey of the islands and a glimpse of life in Manila. The speaker wore the native dress of the Filipino woman used on state occasions, and a club member wore the every-day dress of the native woman. The native dress of the men was also exhibited, and samples of needlework and cloth of the fiber of pineapple woven by the women on rough looms were shown.

There was a good attendance at the called meeting of the Culebra Woman's Club on Saturday afternoon, December 12. The object of the meeting was to take action on the resignation of the president. The resignation was accepted and Mrs. W. P. Wheeler was elected to fill the office by unanimous vote.

It was also voted to dispense with the office of treasurer, and Mrs. W. H. Butler will combine the duties of that office with those of the secretary, as the club is small and the meetings are mainly devoted to study. It was decided that meetings should be held, for the present, at the homes of the members and an invitation was accepted to meet with the president, Mrs. Wheeler, House 160, Culebra, on Thursday, December 17. The club voted a sum of money from the treasury toward the Christmas celebration and another sum for specific philanthropic purposes. The meeting adjourned and refreshments were served by the hostess.

The Pedro Miguel Woman's Club held a business meeting on Wednesday, December 9. The social meeting under the direction of the home department was held December 16. The president gave a reception in honor of Mrs. Frank W. Roberts on Thursday afternoon, December 10, and Mrs. Roberts gave a farewell entertainment to her friends on Tuesday, December 8. On both occasions guests from Paraiso, Culebra and other points on the Line were present.

**Christmas Gifts for Palo Seco.****THE CANAL RECORD:**

Christmas is almost here and I take the liberty to presume that there are, among the readers of THE CANAL RECORD, numbers of people who will be glad to contribute toward the enjoyment of the patients at the Palo Seco Leper Asylum at this season.

Among the patients are two boys of 15, one of 9, and two girls about 13. Of 16 other patients, five are women.

Packages may be addressed to "Superintendent, Palo Seco Leper Asylum, Palo Seco, C. Z., care Director of Hospitals, Ancon."

H. V. GARLAND,  
*Superintendent.*

**Empire Christian League.**

At the business meeting of the Empire Christian League held December 3, 1908, the following officers were elected for the ensuing six months: J. C. Forman, president; R. R. Rainwater, first vice-president; W. O. Johnson, second vice-president; W. N. Windes, corresponding and recording secretary; E. P. Beck, financial secretary and treasurer.

The League was organized January, 1903, and since that time its membership list has increased more than two-fold. The interest manifested by each member has likewise increased.

The following services are provided for by the League each week. Sunday services: Sunday school, 10.00 a. m.; preaching by various chaplains, 11.00 a. m.; young people's union meeting, 7.00 p. m.; preaching by various chaplains, 7.45 p. m.; Wednesday evening; prayer and song service, 7.45 p. m.

On the third Thursday evening of each month a business meeting and social is held. A cordial invitation is extended to everyone to attend the services.

**Notice to Shovel Men.**

All members of the I. B. of S. S. D. M. are requested to attend a special meeting in I. C. C. Lodge Hall, Empire, Sunday, December 20, at 2.30 p. m.

S. I. LYONS, *Secretary.*

**Brotherhood of Locomotive Engineers.**

The regular meeting of Division 756, Brotherhood of Locomotive Engineers will be held at Las Cascadas, Sunday, December 20, at 1 p. m. Important business.

W. H. BUCKIUS, *F. A. E. Div. 756.*

**Pacific Masonic Club.**

The Pacific Masonic Club conferred the Degree of the Ancient Order of Humility on several candidates Saturday, December 12.

On Saturday, December 19, they will have about ten candidates, that number being all that can be initiated in one evening.

Master Masons sojourning on the Isthmus are invited to meet with the Club.

R. S. STILES,  
*Secretary.*

**Obituary.**

J. Inguard Miller of Fort Dodge, Iowa, died at Colon Hospital on December 11. He was 21 years of age and had been on the Isthmus four months. His father, John Miller lives at Gatun, C. Z.

**Missing Man.**

Information is wanted in regard to Walter Steinert, a German-American, who was last heard from (apparently from one to two years ago) at Las Cascadas, Canal Zone. Anyone having knowledge concerning him is requested to communicate with M. B. DePutron, Assistant to the Chairman, Culebra, C. Z.

The lessees of Panama railroad property in Colon are signing their leases as rapidly as they can put their buildings in the condition required by the Department of Sanitation.

## PREMATURE EXPLOSION.

**Nineteen Dead and Many Injured in Cut at Bas Obispo.**

Nineteen men are dead, about forty are more or less injured, and a few are missing as a result of the premature explosion of dynamite in the Cut at Bas Obispo on the morning of December 12.

Up to noon December 15 the dead were: *Americans*—3:

J. J. Korp, steam shovel engineer, check 58490.

J. J. Reidy, powderman, check 76738.

J. L. Hummer, steam shovel craneman, check 22475.

*Spaniards*—3:

Eliodoro Sanchez, laborer, check 10567.

Manuel Masquera, laborer, check 7937.

One unknown, probably a Costa Rican.

*Negroes*—13:

At Bas Obispo—

John Brown (Barbadian), check number unknown.

Wilfred Harrison (Jamaican), check number unknown.

Emmanuel Pinnock, check 69510.

Benjamin Lee, check 67419.

At Ancon—

Charles Sylvester, native of Trinidad, check 51702.

Simeon Christopher.

Thomas Adams, Antigua.

Joshua Steele, Barbadian, check 23646.

Five unidentified.

The two following are reported missing and the Police Department is counting them as among the unidentified bodies:

Reginald Norris, check 69539.

James F. Harding, check 58142.

Following is a list of patients received at Ancon Hospital by special train:

Arthur Bassett, American, foreman; lacerated wound of scalp, burn right hand; condition not serious.

S. C. Cole, American, foreman; compound fracture right ankle, fracture left thigh, lacerated wound of left forearm; injuries serious.

Benj. Diaz, check 59335; dislocation left hip, lacerated wounds of scalp and chin, multiple contusions, fracture fifth, sixth and seventh ribs left side, Pott's fracture right ankle; condition critical.

Antonio Montero, check 8506, multiple lacerated wounds of chest, face and extremities, lacerated wound left knee joint, broken nose.

Henry Allen, multiple contusions, slight. Simeon Osborn, fracture of spine, fracture left thigh.

Henry Joseph (Joseph Ellis), compound fracture right thigh, head injuries.

James Greenidge, lacerations of face and right ankle.

Gamaliel Paine, multiple contusions.

Joseph Edmond, compound fracture left thigh.

Joseph Eidol, lacerated scalp wound, multiple contusions.

Howard Douglas, lacerated head and chin.

Joseph Bashell, lacerations of scalp and left forearm.

Joseph Holder, lacerations of scalp and lower jaw.

Alton Combs, dislocation right knee, lacerated scalp, punctured wound right thumb, left thigh, lacerated right orbit, fractured

right thigh, and compound fracture right orbit.

William Richards, simple fracture right femur.

John Patrick, multiple scalp wounds.

William Ephriam, head injury, semi-comatose.

Theophilus Simeon, slight contusions.

George Cole, dislocated right knee, lacerated left eye.

Enri Vidal, contusion right foot.

Jacob Roltz, burns both arms and hands.

Nathaniel Perryman, contusions scalp and face.

James Thomas, strained right wrist and forearm, contused right biceps.

There were a number of others marked for hospital at Bas Obispo, probably 15 or 16, who did not go to hospital, but returned to the Dispensary for treatment.

There were held at Bas Obispo in sick camp two Americans, five Spaniards, and three negroes as follows:

C. W. Hayden, steam shovel engineer, check 22414.

W. G. Bell, powder foreman, check 55485.

Bonifacio Torracillo, Spanish laborer, check 8741.

Juan Piscal, Spanish laborer, check 8132.

Antonia Predia, Spanish laborer, check 7925.

Juan Vegas, Spanish laborer, check lost.

Jose Gomes, Spanish laborer, check lost.

Thomas Illow, colored laborer, check 55491.

Samuel Johnson, colored laborer, check 77135.

Gillow Gill, colored laborer, check 11454.

Hayden was afterwards sent to Ancon Hospital and his condition is not considered serious.

A late report from Ancon Hospital gives the following patients at that institution as in critical condition:

George Cole, black.

C. S. Cole, American.

Benj. Diaz, Spaniard.

Alton Combs, black.

Simeon Osborn, black.

Henry Joseph, black.

Joseph Eidol, black.

It will be extremely difficult if not impossible to determine exactly the names of all the laborers who were killed, as some of them are so disfigured that identification is impossible.

The accident occurred at 11.10 o'clock when the men were leaving for their noon-day meal. Fifty-two holes had been loaded. The cause of the explosion can only be conjectured. It was intended to set off a blast of 53 holes containing 44,000 pounds of 45 per cent. dynamite shortly after 5 o'clock on the afternoon of the 12th. The last of the holes sprung had been cooling for at least two days before the dynamite was placed in them. The charges had been tamped in and fuzes set in all but one of the holes. One gang was tamping the last hole, and the powder foreman, Benjamin H. Cole, was personally supervising the work. A negro who was sitting on the ground beside the hole directing the movement of the wooden tamping stick, was almost buried by the explosion, but was uninjured. Mr. Cole was seriously injured, but was able to make a statement immediately after the accident.

He said that the explosion did not begin in the hole where the tamping was being done; that none of the holes had been wired, and that he could give no reason for the premature blast.

The charges were to have been set off by electric current, supplied from the Empire power plant. The wires had not been strung, no two of the holes had been joined, as the firing is now done in parallel and not in series, and furthermore the dynamos at Empire were out of service at the time the accident occurred. It was a clear day and there was no lightning to which the explosion could be ascribed.

Men who were in the Cut at the time, and who were uninjured, one of whom was the Assistant Superintendent of Construction in the Bas Obispo District, say that there were two distinct explosions, one at the north end of the section that had been loaded, and another at the south end. So distinct were these explosions that the Assistant Superintendent of Construction had time to run from a point several yards away to shovel 261, and take refuge in the dipper. Heavy rock fell all around the steam shovel, wrecking the shovel and killing the crew.

The part of the Cut that had been loaded for the blast was the west bank, and the holes extended a distance of about two hundred yards along the Cut going down 50 feet through solid rock. Below the level of the rock it was proposed to displace, four steam shovel cuts had been made at varying depths, one of them being almost at grade. The explosion threw a mass of rock, which is estimated at 55,000 to 60,000 cubic yards, onto these lower levels, completely filling the lowest three cuts, and piling the rock from 20 to 30 feet high over the lowest channel. It is believed that several laborers were walking through the lower levels when the explosion occurred, and, if this is so, bodies of men now missing may be found somewhere under the pile of rock. Steam shovels are working day and night to remove this mass of rock, but it is certain that no one who was caught beneath it will be found alive.

Within ten minutes after the explosion, physicians from Bas Obispo were on the scene and within half an hour all the injured were being cared for in the field hospital at that place. A special train brought them to Ancon hospital two hours later, where necessary operations were performed. The hospital corps of marines at Camp Elliott was on the scene of the accident within five minutes after the explosion.

From the beginning of the work care has been enjoined on powder men and all employees who work with or near powder. This injunction has been emphasized in a circular issued by the Commission and posted in conspicuous places, at meetings of men who work in the Cut, and by constant reminders by superintendents of construction, engineers, and a representative of the Du Pont Powder Company detailed by the powder contractor for that purpose.

Since an explosion at Empire recently, work has been in progress installing a wire along the Cut through which a current of large amperage is sent to be used in exploding the fuzes. The method of exploding in series has been abandoned whenever more than 12 holes are fired, and a greater num-

ber of holes are now exploded in parallel, thus making it improbable that unexploded charges will be left after blasts to menace the lives of the men who excavate in the wake of the powder men. Each powder gang is composed of several laborers under the direction of an American foreman who has had long experience in the handling of powder, and who has no other duty than to see that the work is done carefully and properly.

In the year drawing to a close there have been six accidental explosions of dynamite on the Canal work which have proved fatal to one or more people. In the same time one million charges have been exploded, one-third of which were in holes and the remainder dobe shots.

As soon as the extent of the accident had been ascertained the Washington office was directed to notify the relatives of the Americans who were killed and injured. The following telegrams were then exchanged:

WASHINGTON, D. C., Dec. 12-13, 1908.

Geo. W. Goethals, Chairman, Panama Canal Commission, Culebra.

Deeply concerned to hear of accident. The Red Cross Society expresses much sympathy and is prepared to furnish financial assistance for relief if you deem it necessary. Answer. TAFT.

CULEBRA, C. Z., December 14, 1908.

Boggs, Washington:

(The following is for W. H. Taft:)

We greatly appreciate your kind message, and the offer of the Red Cross Society. No financial assistance necessary, and Commission hospitals fully equipped to care for injured. GOETHALS.

#### Pacific Division Steam Shovels.

The steam shovels of the Pacific Division excavated 115,553 cubic yards from the Canal prism in November. The best records for the month follow:

##### PEDRO MIGUEL LOCKS.

Shovel No.	CUBIC YARDS.			No. of days at work.
	Earth.	Rock.	Total.	
222 ....	5,328	21,312	26,640	23

##### MIKAFLORES LOCKS.

153 ....	12,175	5,217	17,392	23
114 ....	12,032	5,170	17,202	23
50 ....	8,740	3,745	12,485	23

##### CARDENAS HILL.

157 ....	12,240		12,240	23
----------	--------	--	--------	----

The best daily records were as follows:

Shovel No.	Location.	Date.	Character material excavated.	Cubic yds. excavated.
222	P. Miguel Locks.	Nov. 18	Rock and earth	2,079
153	Miraflores Locks.	Nov. 28	Earth	1,670
115	Miraflores Locks.	Nov. 17	Earth	1,610
157	Cardenas Hill	Nov. 7	Earth	860

#### Gun Club.

A number of old trap shooters on the Isthmus desire to form a gun club. All persons interested are asked to communicate with D. H. McCullough, care of Examiner of Accounts. If the number is sufficient to warrant it a set of traps and supply of pigeons will be purchased.

## DEFICIENCY ESTIMATES.

### A Total of \$5,458,000 Requested—Approved by the Secretary of War.

The following is the full text of the Chairman's letter to the Secretary of War, estimating the amount of money necessary to supply urgent deficiencies in the appropriation for Canal construction for the fiscal year ending June 30, 1909. These estimates have been approved by the Secretary of War:

CULEBRA, C. Z., November 30, 1908.

The Honorable the Secretary of War,  
Washington, D. C.

Sir—I have the honor to request that the enclosed estimates be transmitted to Congress with a view to including them in the Act making appropriations to supply urgent deficiencies in the appropriations for the construction of the Isthmian Canal, for the fiscal year ending June 30, 1909. The estimates comprise the following:

DEPARTMENT OF CONSTRUCTION AND ENGINEERING.  
Pay of officers and employees on the Isthmus, other than skilled and unskilled labor... \$500,000  
Skilled and unskilled labor... 2,458,000  
For purchase and delivery of material, supplies and equipment... 2,400,000

Total..... \$5,458,000

By divisions these deficiency estimates are as follows:

Central Division.....\$1,150,000  
Pacific Division.....802,000  
Atlantic Division.....3,451,000  
Office, Chief Engineer.....55,000

Total.....\$5,458,000

The above funds are necessary in order to carry on the work at the present rate for the balance of this fiscal year and the excess over current appropriations has arisen from the following causes:

First—Additional expenditures due to increased output over that which was estimated in November, 1907, and changes in work, resulting from changes in plans. This applies particularly to the deficiency estimates of the Central and Pacific Divisions.

Second—Work now considered necessary, which was not included in last year's estimates. This applies particularly to the item for general surveys in the office of the Chief Engineer, and also to the Atlantic Division.

Third—Estimates for the Atlantic Division, supplementary to those which were submitted to Congress at its last session and which are now found to be inadequate. This is explained in detail hereinafter.

So far as relative importance of work covered by the above deficiencies is concerned: if these estimates should not be acted on favorably the result would be, except in regard to the Atlantic Division, to retard the progress of the work to a greater or less degree. In regard to the Atlantic Division, however, if the funds requested should not become available this fiscal year, the work of the Division in connection with the construction of Gatun Locks and Dam, will be very seriously and injuriously hampered. Moreover, the estimates which have been submitted for the fiscal year 1909-10 do not include the items for which the deficiencies are now requested and, therefore, the deficiencies this year can not be paid from next year's appropriations without lessening next year's work.

Deficiency estimates for last fiscal year were submitted to Congress in December, 1907, amounting to \$11,000,000, as follows:

Skilled and unskilled labor.....\$4,900,000  
Material and supplies.....5,100,000  
Relocation of Panama railroad.....1,000,000

Total.....\$11,000,000

The estimated output for the last eight months of last fiscal year—November 1, 1907, to June 30, 1908, on which these estimates were based—was as follows:

Cubic yards.

Culebra and Chagres Divisions.....8,400,000  
Colon dredging.....4,325,000  
La Boca dredging.....4,000,000

Total.....16,725,000

In line with these estimates, Congress made deficiency appropriation for the Department of Construction and Engineering for the year 1907-08, under Act approved February 15, 1908, as follows:

Officers and employees.....\$210,700  
Skilled and unskilled labor.....5,536,300  
Material, supplies and equipment.....6,085,700  
Miscellaneous.....157,700

Total.....\$11,990,400

This was \$536,300 additional for labor and \$985,700 additional for supplies and equipment, as compared with the estimates submitted.

The actual output of the Department of Excavation

and Dredging for the eight months ended June 30, 1908, was as follows:

	Cubic yards.
Culebra and Chagres Divisions.....	8,920,000
Colon dredging.....	4,415,000
La Boca Dredging.....	4,541,000
Total.....	17,876,000

This is 1,151,000 cubic yards more than was estimated. During the same period the excavation performed by the Department of Lock and Dam Construction was 2,622,000 cubic yards, of which 2,233,000 cubic yards were taken from Gatun Locks and spillway and the balance from the Pacific Locks.

#### CENTRAL DIVISION

As submitted to you, last year, the original estimate of the Central Division (which includes the old Culebra and Chagres Divisions) for salaries and wages of officers and employees and skilled and unskilled labor, for the present fiscal year, was about \$6,465,000. This was based upon an annual output of 12,000,000 cubic yards of material excavated. The appropriation for the Central Division was \$5,371,000. A reduction of seven million dollars was made by Congress in the general item for skilled and unskilled labor. At the present rate the output will be about 50 per cent. greater than was estimated, or 18,000,000 cubic yards for this fiscal year. In order to carry on the work a deficiency appropriation of \$1,150,000 will be required, of which \$194,000 will be for officers and employees, and \$956,000 for skilled and unskilled labor. This deficiency, added to the present appropriation, exceeds the original estimate for a 12,000,000 cubic yard annual output by scarcely \$56,000.

#### PACIFIC DIVISION

Since the estimates for the present fiscal year, covering work in the present Pacific Division, were submitted, the La Boca locks have been moved to Miraflores, which has enabled work to be started in the channel between La Boca and Miraflores, which work was not contemplated at the time the estimate was made, and to put into operation, as well as making necessary, additional plant covered by the estimate given herewith:

Item.	Officers and employees.	Skilled and unskilled labor.	Material, supplies and equipment.
First District: Pedro Miguel Lock and dam, Miraflores Locks and dams and quarries:			
100 dump cars.....			\$120,000
2 dump scows.....		\$16,000	42,500
Second District: Dredging, Marine shops and sand:			
Operation 1 additional ladder dredge.....	\$10,000	40,000	25,000
Operation 1 additional tug.....	3,200	7,500	2,500
Operation 1 additional clasp.....	6,500	11,500	4,000
Operation rock breaker 6 months.....		4,000	3,500
Clearing Canal axis and borings.....	2,000	31,000	32,000
Removing wrecks from channel.....	8,000	72,000	20,000
Enlarging shipways.....		7,000	10,800
Purchase and repairs steamer <i>Riversdale</i> .....		3,000	16,500
Construction new wharf.....	1,800	16,000	42,000
Drill barge.....		10,000	50,000
Pile driver.....		3,000	8,200
Rock breaker.....		5,000	37,000
Repairs, 1 additional dredge.....		20,000	20,000
Repairs, 1 additional clasp.....		8,000	7,000
Two dump scows.....		10,000	42,500
Gridiron at shipways.....			5,000
Six new boilers for clasp and dredges.....			18,000
Totals.....	\$31,500	\$264,000	\$506,500

Total deficiency for Pacific Division..... \$302,000

#### ATLANTIC DIVISION.

Estimates originally submitted to you, in August, 1907, for Canal construction work proper, now included in the Atlantic Division, for the fiscal year 1907-08 were approximately as follows:

Colon dredging.....\$ 934,550  
Gatun Locks.....2,227,503.44  
Gatun Dam.....965,277

Total.....\$4,081,677

The appropriation bill, as passed, carried funds which were allotted to the Atlantic Division as follows:

Colon dredging.....\$ 859,027.82  
Gatun Locks.....2,227,503.44  
Gatun Dam.....932,523.30

Total.....\$4,019,054.56

The appropriation practically equaled the estimate. These estimates were made nearly a year and a half ago. In the interval, the work has developed and conditions have changed, and the Division Engineer

of the Atlantic Division now reports that these estimates are insufficient; that they were based on incorrect ideas as to the plant that would have to be paid from appropriations for the fiscal year 1907-08; and, also that additional work is now under way which was not contemplated when the estimates were originally submitted.

A comparison in detail between the funds appropriated for the Atlantic Division, for the present fiscal year, and the present requirements of the Atlantic Division is given as follows:

## ATLANTIC DIVISION.

Funds appropriated for 1908-09, (appropriation practically equal to the estimates which were prepared in July, 1907).

Items.	Officers and employees	Skilled and unskilled labor.	Material and supplies.	Total.
Dredging.....	\$84,736	\$395,249	\$379,043	\$859,028
Gatun Locks.....	162,950	395,977	1,668,576	2,227,503
Gatun Dam.....	89,295	363,515	479,713	932,523
Total.....	336,981	1,154,741	2,527,332	4,019,054

(Note—There was no separate estimate for Porto Bello work.)

## ESTIMATED REQUIREMENTS FOR 1908-09. ESTIMATED NOVEMBER, 1908.

Dredging.....	\$239,376	\$902,204	\$879,377	\$2,020,957
Gatun Locks.....	131,000	452,000	1,805,620	2,388,620
Porto Bello.....	114,382	369,537	1,065,534	1,549,452
Gatun Dam.....	214,030	652,000	645,160	1,511,190
Total.....	698,788	2,375,741	4,395,690	7,470,119
Deficiencies.....	\$361,777	\$1,221,000	\$1,868,358	\$3,451,135

For officers and employees and skilled and unskilled labor, the estimated deficiency is \$1,582,777. The operation of an additional pipe-line dredge for eight months and the operation of three steam shovels at Mindi for twelve months, instead of two shovels for eight months, as planned, will require, for salaries and labor, about \$250,000. In addition, the appropriation for skilled and unskilled labor was about \$250,000 less than the estimate for the present fiscal year. The balance of the deficiency under these two heads, amounting to approximately one million dollars, is required to cover a larger force than was estimated for, especially at Porto Bello and Nombre de Dios, where operations connected with getting out broken stone and sand for concrete, will soon be under way on a large scale.

With reference to the deficiency for material, supplies and equipment:

The original estimates for the year 1907-08, for the Atlantic Division were \$2,356,950. The present estimates are as follows:

Plant for securing delivery of sand, stone and cement at Gatun.....	\$530,244
Nombre de Dios.....	52,720
Porto Bello.....	263,529
Gatun Locks' plant, including power house.....	1,220,120
Plant for Gatun Dam.....	240,810
Plant for dredging, Colon Division.....	184,707
Total.....	\$2,491,940

The estimate submitted in August, 1907, for plant was as follows:

Gatun Locks.....	\$702,010
Gatun Dam.....	64,500
Colon dredging.....	

Total.....	\$766,510
Deficiency for plant Atlantic Division.....	\$1,725,420

The same appropriation includes material and supplies necessary for the Atlantic Division, including the maintenance and repair of new and existing plant. As estimated in November, 1903, the requirements for the present fiscal year for material and supplies are as follows:

Colon dredging.....	\$651,000
Gatun Dam.....	404,350
Gatun Locks.....	585,500
Porto Bello and Nombre de Dios.....	262,810

Total.....	\$1,903,760
------------	-------------

The estimates submitted for material in August, 1907, were as follows:

Colon dredging.....	\$354,700
Gatun Dam.....	383,200
Gatun Locks, (including Porto Bello).....	852,540

Total.....	\$1,590,440
------------	-------------

Excess of estimate of November, 1908, for material and supplies over estimate of August, 1907.....

Excess requirements for plant over previous estimate.....

Total estimated deficiency for material, supplies and equipment for Atlantic Division for present fiscal year.....	2,038,740
--	-----------

The appropriation for the present fiscal year for the Atlantic Division was approximately \$175,000 above the original estimates. The net deficiency, therefore, under material, supplies and plant, for the Atlantic Division is about \$1,863,740. The total deficiency for the Atlantic Division is \$3,451,000.

In order to obtain a clearer understanding as to how the present situation as regards deficiency in the Atlantic Division arose, reference should be made to the estimates for the year 1907-08, prepared in September, 1906, and contained in the minutes of the Isthmian Canal Commission, pages 1492, and following.

Prior to April 1, 1907, little or no construction work had been done in what is now the Atlantic Division, and, except for dredging, little or no plant for its work had been purchased or appropriated.

An examination of the estimates for the fiscal year 1907-08 will show that practically nothing was included therein, in the way of plant necessary for lock and dam construction, except four suction pipe-line dredges and a few dump barges.

In addition, at the close of the fiscal year ended June 30, 1907, a deficiency in skilled and unskilled labor and material and supplies, in the department of construction and engineering, was only averted by drawing on the appropriation for the next fiscal year, *i. e.*, 1907-08.

When the regular estimates for the fiscal year 1908-09 were submitted and gone over at the hearings held at Culebra in November, 1907, inquiry was made of the Head of Department of Lock and Dam Construction whether the erecting plant for the Gatun Locks and Dams, vessels required for transporting material for the locks, and the rock crushing plant at Porto Bello had already been appropriated for. Through a misunderstanding as to what the previous appropriations had included, the Congressional Committee was assured that this plant had been appropriated for and that it would not be necessary to defray the cost of same out of the appropriations for 1908-09. As stated above, reference to the appropriations previously made fails to show that this provision had been made.

The result, therefore, is that the regular appropriation for this year did not include estimates for plant for the Atlantic Division, except the few items specified, amounting to about \$766,000, whereas the present estimated cost of plant required runs up to nearly \$2,500,000.

The deficiency appropriation, approved February 15, 1903, for the year 1907-08, was based on the requirements as submitted by the different departments and divisions in November, 1907, and the deficiency estimate submitted by the department of lock and dam construction made no provision for this plant, for the same reason, *viz.*, it was then understood that the appropriation available at that time were sufficient for the purpose.

This omission in the regular estimates, and appropriation for this fiscal year for material, supplies and plant, must, therefore, be corrected at once by a deficiency appropriation.

## OFFICE OF CHIEF ENGINEER—GENERAL SURVEYS AND EXPERIMENTAL WORK.

Under the reorganization effected in September, 1903, work in connection with general surveys, not closely allied with construction work in any one division, as well as experimental work and special technical investigations, was placed in the office of the Chief Engineer, under an assistant engineer, who also had transferred to him the work of the old division of meteorology and river hydraulics, which division was abolished. To carry on this new division of work a deficiency appropriation will be required for such work as is not at present covered by existing appropriations. For all meteorology and river hydraulic work, the appropriation available at the present time is sufficient.

The deficiency thus submitted for general surveys is as follows:

Officers and employees.....	\$13,000
Skilled and unskilled labor.....	17,000
Material and supplies.....	25,000

Total.....	\$55,000
------------	----------

At the time the estimates were submitted in August, 1907, it was assumed that data was available from existing surveys that would enable the drainage area of Gatun Lake and the rivers flowing into it to be closely ascertained. After these surveys had been mapped and compared it was found that valuable and essential data in connection with the hydraulics of Gatun Lake and its tributaries were missing and should be supplied as quickly as possible. A careful search should also be undertaken along the borders of Gatun Lake to discover if any low saddles exist which would effect the seepage from the Lake.

The above estimate covers the cost of field parties and office force to undertake this work.

A summary of the foregoing deficiency estimate for the fiscal year, 1908-09, is as follows:

Division.	Officers and employees	Skilled and unskilled labor.	Material and supplies.	Total
Central.....	\$194,000	\$956,000		\$1,150,000
Pacific.....	31,500	264,000	\$96,500	80,000
Atlantic.....	361,500	1,221,000	1,863,500	3,451,000
Office, Chief Engineer.....	13,000	17,000	25,000	55,000
Total.....	600,000	2,458,000	2,401,000	5,459,000

A comparison of estimates submitted to Congress for the present fiscal year, in December, 1907, with the appropriations made by Act approved May 27, 1908, for the department of construction and engineering is as follows. It will be noted that there has been deducted from the appropriation for material, supplies and equipment \$1,550,000, for two steamships, which item was not in the estimates.

## DEPARTMENT OF CONSTRUCTION AND ENGINEERING FOR FISCAL YEAR 1908-09.

Item.	Estimate submitted December, 1907.	Appropriation May 27, 1908.
Officers and employees, on the Isthmus.....	\$3,541,959	\$3,400,000
Skilled and unskilled labor.....	12,688,436	8,400,000
Material, supplies and equipment.....	10,310,780	11,250,000
Miscellaneous Expenditures.....	476,000	400,000
Total.....	\$27,017,175	\$23,450,000

The appropriations for the present fiscal year for the above work are, therefore, \$3,567,175 less than the estimates. It is, therefore, seen that Congress appropriated about \$4,500,000 less than was estimated for skilled and unskilled labor, whereas only about \$2,500,000 additional is now being requested, and under material, supplies and equipment, Congress appropriated about one million dollars more than was estimated for the same items and in addition thereto \$2,400,000 is now necessary. It might also be noted that the total deficiency, now requested, added to the appropriations made last May, exceeds the estimates submitted last December, for the same items, by \$1,890,825.

The present situation is that work is being performed and expenditures made from appropriations at a rate which will require all of the foregoing deficiency appropriation, during the present fiscal year, unless the present rate at which work is being done shall be reduced. If it is to be reduced to keep with in the present appropriations, it is important that I should have information of this decision as quickly as possible. In anticipation, however, of your approval of the deficiency estimates submitted herewith, I would strongly recommend against any let-up, or lessening of speed, and respectfully request your approval of continuing work at the present rate, while the deficiency estimates are being considered by Congress.

Very respectfully,  
GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Concert by the I. C. C. Band.

LAS CASCADAS, C. Z.

Sunday, December 20, 1908, at 2.30 p. m.:

## PROGRAM.

- 1 March—Boys of the Militia.....Boehnlein
- 2 Selection—Mill's Merry Melodies.....Mills
- 3 Waltz—Alicia.....Bennett
- 4 a Intermezzo—Javanhoe.....Van Alstyne  
b Schottische—When a Boy Says "I Will Love You?".....Allen
- 5 Selection—The Red Mill.....Herbert
- 6 Moreau—Dawn of Love.....Bendix
- 7 Caprice—The Whistler and His Dog.....Pryor

By request.

- 8 Overture—Beautiful Galatea.....Suppe
- 9 Descriptive—The Cavalry Charge.....Luders
- 10 March—I'm Afraid to Come Home in the Dark.....Van Alstyne

CHAS. E. JENNINGS, Musical Director.

The next concert will be given at Culebra, Sunday, December 27.

Lost—On Tuesday evening, December 8, between police station, Ancon, and house 87, (rear of Hotel Tivoli) pair of cuffs with plain gold sleeve-links. Liberal reward if returned to office of District Sanitary Inspector, Ancon.

## OFFICIAL CIRCULAR.

## Typewriter Repairs.

CULEBRA, C. Z., December 9, 1908.

TO HEADS OF DEPARTMENTS AND DIVISIONS:

On December 7, the typewriter repair work was transferred to Gorgona shops and will be handled hereafter under the jurisdiction of the Master Mechanic at that point in connection with the other instrument repair shop work.

All requests for typewriter repairs should be handled in the same manner as the repairs to instruments and the charges for same will be handled on the monthly blanket orders of those having such orders with us, but when typewriters are sent to the shops for repairs by any division or department that has no monthly orders with us, same should be covered by request on Form C. E. 159, requesting the necessary repairs.

The typewriter repair man will continue to make trips around to the different offices along the line and his time while on this work will be divided among the offices he visits on the basis of the amount of time he spends at each, which will be shown by his work reports that will be signed by each office.

All typewriters sent to the shops for repairs should be sent to Mr. E. C. Cummings, Master Mechanic, Gorgona, C. Z., but the request C. E. 159 covering the repairs should come to this office, as is done in requesting other work.

GEO. D. BROOKE,  
Supt. M. P. and M.

Approved:  
GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## LEGAL NOTICES.

ANCON, CANAL ZONE, November 28, 1908.

Estate of  
Fletcher E. Joyner. } Administration.

Any and all persons owing the estate of Fletcher E. Joyner, deceased, who died at Ancon, Canal Zone, on the 21st day of October, 1908, are hereby requested to communicate with the administrator of said estate in order that a settlement may be effected. And all persons having any claim or claims against said estate must present the same, duly verified, to the administrator within six months, otherwise said claims will be forever barred according to law.

All communications with reference to the estate should be addressed to Empire, Canal Zone.

F. H. SHEBLEY,  
Administrator.

United States of America } In the First Judicial  
Canal Zone. } Circuit.

Raimundo Sander, a Colombian, who resided in the Canal Zone, died intestate on or about the 10th day of October, 1908, leaving an estate at Ancon consisting of \$7.20 Panamanian currency and personal belongings of little value.

Castis Lephakes, a Greek, who resided in the Canal Zone, died intestate on or about the 16th day of May, 1907, leaving an estate at Ancon, consisting of 50 francs, French gold.

Pedro Juan, presumably a Greek, who resided at La Boca, Canal Zone, died intestate on or about the 3d day of October, 1907, leaving an estate at La Boca consisting of \$70 U. S. Currency and \$10 Panamanian currency.

Kurilla Stevan, nationality unknown, who resided in the Canal Zone, died intestate on or about the 4th day of April, 1908, leaving an estate at Ancon consisting of \$1.60 Panamanian currency, 10 cents U. S. Currency, and one Chilean coin of small denomination.

Lucas Alvarez, Chilean, died intestate in the Canal Zone on or about the 20th day of June, 1908, leaving an estate at Ancon consisting of personal belongings of little value and \$18.50 U. S. Currency.

The Collector of Customs has filed a petition for escheat in each of the above mentioned estates under Section 779 of the Code of Civil Procedure.

Notice is hereby given to all concerned to appear at the courthouse in Ancon, C. Z., on February 1, 1909, at 9 o'clock a. m., to establish their claims to the estates, or to show cause why the same should not escheat to the Canal Zone.

F. H. SHEBLEY,  
Circuit Court Clerk Pro Tempore,  
Ancon, Canal Zone.

United States of America, } In the First Judicial  
Canal Zone. } Circuit.

Frank Roch, American, died intestate on or about May 26, 1908, leaving an estate located at Ancon, Canal Zone, consisting of various personal belongings of little value, Isthmian Canal Commission pay certificates for \$250, and cash amounting to \$260.

James Tray, American, who resided at Ancon in the Canal Zone, died intestate on or about January 22, 1906, leaving an estate at Ancon, consisting of Isthmian Canal Commission pay certificate for \$110 Panamanian currency.

Louis M. Gilbert, alias Charles Gibson, American, who resided at Pedro Miguel, C. Z., died intestate on or about May 4, 1907, leaving an estate at Pedro Miguel, consisting of Isthmian Canal Commission pay certificate of the value of \$27.75 net, and \$1.50 cash.

Bartolo Salcedo, a native of the Dutch West Indies,

who resided at Ancon, C. Z., died intestate on or about June 29, 1907, leaving an estate at Ancon, consisting of Isthmian Canal Commission pay certificate for \$1.60 Panamanian currency.

Charles White, American (colored), who resided at Pedro Miguel, Canal Zone, died intestate on or about April 3, 1908, leaving an estate at Ancon, Canal Zone, consisting of \$5 U. S. Currency.

The Collector of Revenues has filed a petition for escheat in each of the above mentioned estates under Section 779 of the Code of Civil Procedure.

Notice is hereby given to all concerned to appear at the courthouse in Ancon, Canal Zone, on January, 18, 1909, at 9 o'clock a. m., to establish their claims to the said estates, or to show cause why the same should not escheat to the Canal Zone.

F. H. SHEBLEY,  
Circuit Court Clerk Pro Tempore,  
Ancon, Canal Zone.

## PROPOSALS FOR FOOD SUPPLIES.

PANAMA RAILROAD COMPANY,  
COMMISSARY DEPARTMENT,  
COLON, R. P., December 5, 1908.

Sealed proposals will be received by the Manager of the Commissary Department of the Panama railroad, at Cristobal, C. Z., until 12 o'clock noon, December 20, 1908, for furnishing 400 cases of tomatoes, six 1-gallon tins to the case. Deliveries to be made in equal installments at equidistant periods of two weeks each, the first delivery to be made on or about January 1, 1909, with the right reserved on the part of the Panama railroad to increase or decrease the quantity 50 per cent for any fortnightly delivery.

The successful bidder will be required to furnish ample bond that he will make deliveries within the time and in quantities required in the contract.

The Panama railroad reserves the right to accept or reject any and all bids.

EUGENE T. WILSON,  
Subsistence Officer.

PANAMA RAILROAD COMPANY,  
COMMISSARY DEPARTMENT,  
COLON, R. P., December 5, 1908.

Sealed proposals will be received by the Manager of the Commissary Department of the Panama railroad, at Cristobal, C. Z., until 12 o'clock noon, December 20, 1908, for furnishing 75 barrels red kidney beans, each barrel to contain about 230 pounds, beans to be choice, strictly hand picked, of the latest crop.

Deliveries to be made in equal installments at equidistant periods of two weeks each, the first delivery to be made on or about January 1, 1909, with the right reserved on the part of the Panama railroad to increase or decrease the quantity 50 per cent for any fortnightly delivery.

The successful bidder will be required to furnish ample bond that he will make deliveries within the time and in quantities required in the contract.

The Panama railroad reserves the right to accept or reject any and all bids.

EUGENE T. WILSON,  
Subsistence Officer.

PANAMA RAILROAD COMPANY,  
COMMISSARY DEPARTMENT,  
COLON, R. P., December 5, 1908.

Sealed proposals will be received by the Manager of the Commissary Department of the Panama railroad, at Cristobal, C. Z., until 12 o'clock noon, December 20, 1908, for furnishing 4,050 barrels of flour, each barrel to contain 196 pounds net.

Deliveries to be made in equal installments at equidistant periods of two weeks each, the first delivery to be made on or about January 1, 1909, with the right reserved on the part of the Panama railroad to increase or decrease the quantity 50 per cent for any fortnightly delivery.

The successful bidder will be required to furnish ample bond that he will make deliveries within the time and in quantities required in the contract.

The Panama railroad reserves the right to accept or reject any and all bids.

EUGENE T. WILSON,  
Subsistence Officer.

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, DECEMBER 23, 1908.

No. 17.

## The Canal Record

Published weekly under the authority and supervision of the  
ISTHMIAN CANAL COMMISSION

"The Canal Record" is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the "gold" roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications

### THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

## NOTES OF PROGRESS.

### President on the Canal.

In his annual message to Congress President Roosevelt says:

"The work on the Panama Canal is being done with a speed, efficiency and entire devotion to duty, which make it a model for all work of the kind. No task of such magnitude has ever before been undertaken by any nation; and no task of the kind has ever been better performed. The men on the Isthmus, from Col. Goethals and his fellow Commissioners through the entire list of employes who are faithfully doing their duty, have won their right to the ungrudging respect and gratitude of the American people."

### Prosaic Facts.

The industrious sensation-mongers of the daily press have been busy the past week with the Gatun Dam. One headline reads: "Chagres River is Plunging Through 60-foot Gap in Isthmian Wall. Engineers Face Problem."

In contrast with this lurid picture we venture to present the prosaic facts. These are in substance that the Gatun Dam itself is not yet built. As the photograph in this issue shows, preliminary excavation for the spillway is well advanced. Besides this, the rock excavated from the Gatun Lock site has been dumped in a long pile along the south or landward side of the dam site. This rock pile will serve as a protection to the dam itself from floods in the Chagres during construction and will help to shield it from wave action and to support the slope on the lake side after completion. These rocks have been simply dumped in a pile at random and left to settle through the mud to a solid bearing. The recent heavy rainfall on the Isthmus—28 inches in a single month—with resulting high water in the Chagres has softened the mud under this rock pile and consequently the settlement during re-

cent weeks has been considerable. The more it settles, the more rock from the Gatun Lock pits can be disposed of on this pile.

The American public has vastly more need to worry over the slough of sensational yellow journalism into which its daily newspapers are sinking than over any sinking of the much maligned Gatun Dam.—*Engineering News, December 3.*

### Chairman's Monthly Report.

The report of the Chairman of the Isthmian Canal Commission for November is published in other columns of this issue of THE CANAL RECORD. The grand total of excavation for the month was 2,987,230 cubic yards, of which 1,645,113 cubic yards were removed by steam shovels, 1,334,577 cubic yards by dredges, and 7,540 cubic yards by hand excavation. This includes 46,416 cubic yards excavated by dredge No. 82 in the channel to the docks of the handling plant at Gatun, which is outside of the excavation for actual Canal construction.

In the Atlantic Division 113,747 cubic yards of rock were dumped on the toes of Gatun Dam, 81,356 on the south toe and 32,391 cubic yards on the north toe.

The excavation in the Central Division, which includes Culebra Cut, amounted to 1,360,586 cubic yards, of which 1,321,692 cubic yards were taken from the Canal prism. The average number of steam shovels at work in this division was 50.91 as compared with 44.83 in November of last year. The output per shovel per day was 1,157 cubic yards, as compared with 773 cubic yards a year ago, an increase of 49 per cent.

In the Pacific Division the clearing of the site of the proposed temporary diversion of the Cocoli River was begun, as was also the excavation for the power house. The steam shovel work at Cardenas Hill was completed and the steam shovel removed.

The average daily number of laborers actually employed in Canal work was 13,705. There were 238.47 tons of explosives used and 355,176.9 feet of rock drilling was accomplished.

On the relocation of the Panama railroad, 51,800 cubic yards were excavated and 222,600 cubic yards were placed in embankment, making up to the present time a total of 559,829 cubic yards of excavation, and 2,834,970 cubic yards of embankment. Six thousand and fifty-nine feet of permanent track were laid, making a total of 53,466 feet. The force of laborers employed on this work during the month averaged 985 men daily.

The surplus of labor on the Isthmus continues. No laborers were recruited during the month, November being the third consecutive month in which there was no necessity for the recruiting of labor. Conditions continue to be such that more laborers than are necessary for the work can be obtained on the Isthmus. There has been a

noticeable tendency on the part of West Indian laborers to leave Commission quarters for quarters in the native villages and in the jungle. Three thousand three hundred and twenty-one more West Indians were living in the "bush" on November 1, 1908, than on November 1, 1907. Of the 24,169 West Indians in the employ of the Commission on November 1, 1908, 7,569 were living in quarters furnished by the Commission or Panama Railroad Company and 16,600 were not in quarters. This condition has certain objectionable features, but it is without doubt a fact that the settling of West Indians in private quarters where they are under less restraint and can live in their accustomed manner, makes for stability in the force.

During the month the operations of the Subsistence Department show a small profit, while the loss on the Hotel Tivoli has fallen to \$118.23.

The general revenues of the Canal Zone collected during November amounted to \$10,244.15, as compared with \$9,702.37 collected in October.

Health conditions were reported as excellent during November.

### A Correction.

In the letter of the Chairman of the Isthmian Canal Commission to the Secretary of War concerning the deficiency appropriation, which was published in THE CANAL RECORD of last week, there was a misleading typographical error. In the second column of the letter as published, under the caption "Central Division," the sentence "A reduction of seven million dollars was made by Congress in the general item for skilled and unskilled labor," should read, "A reduction of several millions," etc.

### The Bas Obispo Explosion.

The number of persons known to have been killed in the explosion of December 12 in the Cut at Bas Obispo is twenty-two. On December 17 the body of Domingo Perez, a Spanish foreman, was taken from the mass of rock which was thrown into the Cut by the premature blast, and on December 18, the body of a negro water boy, Benjamin Nourse, was removed. On December 21, the body of Stanley Howell, a negro laborer was taken out. Steam shovels are still at work, and it is believed that more bodies will be found. Of the seven men reported in a critical condition on December 15, Simon C. Cole, the American foreman, is doing well, but is not out of danger. In the first reports of the explosion the name of the American foreman who was so seriously injured, was given as Benjamin H. Cole, but it later was found that the foreman injured was Simon C. Cole. George Cole, a negro laborer, is very much better. Benjamin Diaz, a Spanish laborer, is convalescent. Alton Combs, a negro laborer, is out of dan-

## NOTES OF PROGRESS.

(Continued).

ger. Simeon Osborn and Henry Joseph, negro laborers, are still very ill, but will probably recover. Joseph Eidol, a negro laborer, is convalescent.

Nothing has developed to determine the cause of the explosion. On the other hand nothing has been discovered that would shake the opinion that it was entirely accidental, and was in no way due to negligence. In the excavation in the Cut it has been necessary at various times in the past to blow off the whole side of a hill. This has been done in several places between Paraiso and Bas Obispo, and the explosion of December 12 was the last of these large blasts that it will be necessary to make.

## Bachelors Cost Less.

Bachelor labor on the Isthmus costs less than that of married people, according to data compiled by the Quartermaster's Department. This cost takes into consideration the quarters assigned to employees, and allowances for fuel, light, water, care of grounds, and janitor service. There are 1,402 American families, and 3,394 single Americans; 1,013 West Indian families and 5,546 single West Indians; 235 European families, and 5,015 single Europeans in Commission quarters. Approximately 23,000 West Indians, working for the Commission, furnish their own quarters in native towns or "in the bush," preferring the consequent independence to free quarters furnished by the Commission. On the basis of an American family living in a type 14 house, which is the type of married quarters in most general use, and of a single employe living in a type 18 house, which is the type of bachelor quarters in most general use, a comparison is made as follows:

PLANT.	Married.		Single.
Quarters.....	\$1,800		\$500
Furniture.....	140		25
Total .....	1,940		525
MONTHLY COST OF ALLOWANCES.	Married.		Single.
Fuel (coal \$2.80, delivery 70 cents, kindling 80 cents).....	\$4.30		
Light.....	4.20		\$0.30
Water.....	1.80		.45
Distilled water.....	.50		.10
Care of grounds, removal of garbage.....	1.20		.15
Janitor service.....			1.25
Total .....	12.00		2.25

Assuming a six years' service, a married employe may be said to represent an expenditure of \$3,000, and a single employe \$750. There is a surplus of bachelor quarters on the Isthmus, due to marriage and to the migratory nature of the bachelor population. The demand for married quarters is so great that bachelor quarters are being converted into homes for families.

## Highest Daily Excavation.

The best daily record of excavation for steam shovels since American occupation was made on Friday, December 18, when fifty shovels in the Central Division excavated 70,087 cubic yards, an average of 1,402 cubic yards per shovel, and of 175 cubic yards per hour. These shovels are under steam for eight hours per day, but are not actually at work during this entire period, time being

lost by the necessity of moving the shovel forward, blasting stone too big for the shovel to handle, keeping the shovel supplied with cars, etc. For time actually at work an average of 259 cubic yards per shovel per hour was made.

This amount of material, 70,087 cubic yards, made a total of 4,804 carloads, divided among 2,064 Lidgerwood flat cars, 201 large Western dump cars, and 2,539 small Western and Oliver dump cars. One hundred and seventy locomotives were used on the Central Division in handling these cars, divided as follows: Serving shovels, 119, handling spreaders, 11; handling unloaders, 11; handling track shifters, 6; switching, 10; labor trains, 2; miscellaneous, 11.

## Mr. Taft to Visit the Isthmus.

Mr. Taft, the President-elect, is contemplating a visit to the Isthmus about February 1. The time has not been fixed definitely, but it is thought that he will sail on the cruiser *Charleston* some time toward the end of January. He will come for no especial purpose, but in accordance with his avowed intention of inspecting the Canal once a year while he is in public office.

## Visit of Congressmen.

The House Committee on Interstate and Foreign Commerce may decide to visit the Isthmus and inspect the work of the Canal during the holiday recess of Congress. They may leave the States about December 26, and remain five days upon the Isthmus. Following are the members of the Committee:

WILLIAM P. HEPBURN, of Iowa.  
JAMES S. SHERMAN, of New York.  
IRVING P. WANGER, of Pennsylvania.  
JAMES R. MANN, of Illinois.  
WILLIAM C. LOVERING, of Massachusetts.  
FREDERICK C. STEVENS, of Minnesota.  
JOHN J. ESCH, of Wisconsin.  
FRANCIS W. CUSHMAN, of Washington.  
CHARLES E. TOWNSEND, of Michigan.  
JAMES KENNEDY, of Ohio.  
JOSEPH R. KNOWLAND, of California.  
WILLIAM P. HUBBARD, of West Virginia.  
ROBERT C. DAVEY, of Louisiana.  
WILLIAM C. ADAMSON, of Georgia.  
WILLIAM H. RYAN, of New York.  
WILLIAM RICHARDSON, of Alabama.  
CHARLES L. BARTLETT, of Georgia.  
GORDON RUSSELL, of Texas.

## Distribution of Seed.

In the issue of THE CANAL RECORD for November 4, 1908, it was stated that a supply of flower and vegetable seeds would be sent to the Quartermaster's Department of the Isthmian Canal Commission by the United States Department of Agriculture for free distribution on the Isthmus.

Many applications for seeds have been received at the office of the Chief Quartermaster, but the supply has not yet arrived on the Isthmus. All applications are placed on file for attention at the proper time. In the meanwhile, it is not practicable to acknowledge receipt of each application.

## Injured Canal Employees.

Mr. Munn, of Illinois, introduced in the House of Representatives, on December 7, the following bill, which was referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress Assembled,* That nothing contained in the Act of May 30, 1908, en-

titled "An Act granting to certain employees of the United States the right to receive from it compensation for injuries sustained in the course of their employment," shall prevent the Isthmian Canal Commission, under rules to be fixed by the Commission, from granting to its injured employees, whether engaged in hazardous employment or otherwise, leave of absence with pay for time necessarily lost as a result of injuries received in the course of employment, not exceeding in the aggregate thirty days per annum: Provided, however, That compensation paid to such injured employees under such regulations shall be deducted from any compensation which such employees may be entitled to receive under the terms of the said Act.

## Quartermaster's Allotments.

The following statement shows the amounts expended in November by the various districts, storehouses, etc., of the Quartermaster's Department, the amounts allotted, and the saving or excess with reference to the allotments:

Districts, etc.	Allotment.	Expenditure.	Saving.
Porto Bello.....	\$2,069.30	\$1,360.74	\$708.56
Cristobal.....	10,808.89	9,014.00	1,794.89
Gatun.....	7,460.46	7,091.11	369.35
Tabernilla.....	2,501.34	2,168.05	333.29
San Pablo.....	2,037.20	1,696.06	341.14

Culebra office.....		8,673.33	
Lirio Mill.....		3,250.17	
Printing plant.....		3,611.66	
Total pay roll.....		126,639.49	
Net saving.....			9,909.60

\*In excess of allotment.

## Commission Dentistry.

The following fees will be charged by the dentists in the employ of the Commission, at Empire and Gorgona, who will be ready to do business as soon as their offices are completed:

Professional visits.....	\$2.00
Divitalizing nerve and removing same.....	2.00
Treatment of alveolar abscess, sterilizing roots and filling roots, each treatment.....	50
Fillings of porcelain.....	55.00 to 15.00
Fillings of gold.....	2.00 to 8.00
Fillings of amalgam.....	1.00 to 3.00
Fillings of cement.....	1.00
Fillings of gutta percha.....	1.00
Cleaning teeth, removal of calculus, treatment of pyorhoes and diseases of the oral cavity generally, each setting.....	50 cents to 2.00
Extraction of tooth.....	50
Anesthetics (local).....	(extra) 50
Gas.....	(extra) 3.00
Full artificial dentures (or plate) vulcanite (each).....	\$10.00 to 20.00
Full artificial dentures (or plate) gold (each).....	75.00
Lower dentures, cast metal base.....	10.00
Partial dentures at comparative rates; base plate and one tooth.....	5.00
Crown work (each crown) incisors and bicuspid.....	7.50
Crown work (each crown) molars.....	10.00
Bridge work (bridge attachments are considered as teeth) per tooth, incisors and bicuspid.....	7.50
Bridge work (bridge attachments are considered as teeth) per tooth, molars.....	10.00

The Navy transport *Solace* arrived in the harbor of Panama on December 16, on her way to the Atlantic coast via the Strait of Magellan.

## HANDLING OF EXPLOSIVES.

## Demonstrations to Powder Men—Appointment of Supervisor—Revised Rules.

The principles of exploding dynamite by means of electricity were explained to the powdermen of the Central Division at the office of the Division Engineer at Empire on Sunday morning, December 20. Immediately after the explosion in the Cut near Empire on October 8, due, it was believed, to a steam shovel having run into an unexploded charge, it was decided to adopt the method of exploding charges of more than a dozen holes by means of a high amperage current supplied from the Empire electric plant. A number of experiments showed that the method formerly in use, that of detonating the fuses by a low amperage current sent from a small battery through a number of holes wired in series, is not sure, and that the method of detonating by a high amperage current, the holes being wired in parallel, is sure to explode every hole in a charge. Since then the use of the latter method has been extended throughout the Cut. The Electrical Engineer of the Mechanical Division, who had charge of the experiments, explained the working of both systems to the powdermen, illustrating his explanation with diagrams and by actual tests with fuses, using both the small field battery and the high amperage current. The Division Engineer and Assistant Division Engineer followed the Electrical Engineer, and urged caution on the part of the powdermen.

It was announced that Mr. E. D. Knobel had been appointed Inspector of Blasting for the Central Division. His duty will be simply to inspect the powder work from Pedro Miguel to San Pablo, and wherever negligence is detected to report it.

## GENERAL SUPERVISION OF EXPLOSIVES.

Thomas C. Atterbury, formerly general foreman in charge of explosives in the Central Division, has been appointed supervisor of explosives and transferred to the Quartermaster's Department. His duties will extend to all departments on the Isthmus in which explosives are handled or used. He will have charge of the unloading of explosives from the ships at Cristobal, and the loading on the special powder trains, which he will accompany to the storage magazines where he will direct the storing. When not occupied in the loading, transportation, or issuing of explosives, he will inspect the storage magazines and service magazines; will see to it that the precautions for storage are observed, and will keep a check on the quantity of explosives on hand. The detail of a man to have general supervision over the handling of explosives from the time they leave the ships until they are issued for service is in accordance with a recommendation made on November 7.

The amount of dynamite contracted for delivery during the present fiscal year is 11,283,400 pounds, and deliveries are being made at the rate of about 1,000,000 pounds a month. In addition to this, nearly 600,000 feet of electric fuses, 1,542,800 feet of triple tape fuse, and 634,100 blasting caps have been contracted for and will be delivered in connection with the dynamite. The storage magazine in the hills near the Chagres River opposite Cruces is practically finished. It has a capacity of 600,000 pounds of dynamite, as has the storage magazine recently completed near Mindi.

Service magazines are maintained by the Division Engineers at various points along the work. The value of blasting material purchased between May 4, 1904, and November 12, 1908, is as follows:

1904.....	\$92,627.71
1905.....	67,577.38
1906.....	171,301.06
1907.....	385,065.22
1908.....	1,008,137.02
Total.....	\$1,724,808.39

## RULES OF HANDLING.

Precautions to be observed in the storage, transportation, handling, and use of explosives on all work under the control of the Isthmian Canal Commission were reiterated under date of December 15, 1908, as follows:

## STORAGE OF EXPLOSIVES.

1. Explosives will be stored in dry, well ventilated magazines, known respectively as storage magazines and service magazines, those of the former class being controlled and operated by the Quartermaster's Department, and of the latter class by the Division Engineers in the Department of Construction and Engineering. Storage magazines contain the reserve supply which is issued from time to time to the service magazines. From the latter is drawn the supply for daily use in the mining operations.

2. Under no circumstances must blasting caps or electric fuses be stored in the same building with other explosives, nor during transportation must they be carried together.

3. The grounds in the vicinity of all magazines will be kept free of weeds and grass, and in such condition as to avoid all danger of fire from sparks which may fall in the vicinity.

4. In both storage and service magazines the boxes containing explosives shall be turned once every two weeks, care being taken to so arrange the boxes that the lettering on all boxes shall be erect at one turning and inverted on the next turning. A record shall be kept in each magazine showing the dates on which the boxes were turned.

5. There shall be kept in each magazine a thermometer of standard rating, which will be so located as to show about the average temperature of the magazine at any one time, and which shall be read during the hottest part of the day at least two days in every week, and a record of the dates and readings shall be kept permanently posted in each magazine, and a copy of same furnished monthly by each Division Engineer, to the Chairman and Chief Engineer, Isthmian Canal Commission.

6. The firing of any pistol, rifle or shotgun in the general vicinity of magazines is strictly prohibited, and watchmen will report to the Division Engineer all persons guilty of violation of this rule.

7. All employees engaged in working in storage, service or exploder magazines must, while so engaged, wear shoes or slippers with hemp, felt or straw soles, which will be provided for this purpose by the various Division Engineers, and habitually kept, when not in use, in the magazine.

8. Smoking and the carrying or use of matches within or in the near vicinity of all magazines is strictly forbidden, and the same prohibition will be rigidly enforced in the case of all persons engaged in transporting, handling, or using explosives or detonators.

## TRANSPORTING EXPLOSIVES.

1. In the distribution of explosives from the storage magazines to the service magazines it is desirable, whenever practicable, to use the same crews in order that the personnel can be properly instructed in their duties.

2. In transporting explosives from the storage magazines to the service magazines covered cars will always be used, and every precaution taken to reduce the risk of explosion from sparks or cinders.

## HANDLING AND USE OF EXPLOSIVES.

1. Every precaution must be taken during loading operations to avoid accidental explosions, due to falling sparks and cinders from locomotives and steam shovels, and under no circumstances must explosives or detonators be allowed to lie uncovered and exposed to this danger.

2. Explosives and detonators must not be carried, or placed together, before being used.

3. Dynamite issued from the service magazines, and not needed for immediate use, will be kept in locked wooden boxes which shall be painted red, and shall be placed in such positions as to minimize the risk from train wrecks and falling debris.

4. Primers after being made up should be kept in a portable metal box with a hinged cover, painted red, and should not be stored close to the dynamite even while loading holes.

5. In preparing primers care should be observed not to apply violence to the filling where the wires enter the cap, or in forcibly separating the two wires, since the waterproof qualities of the exploder depend in a great measure on keeping this portion intact.

6. Under no circumstances shall dynamite cartridges be kept in tool boxes nor must dynamite be left over night or holidays, except under lock and key.

7. Employees are prohibited from attempting to remove blasting caps from boxes by inserting wire nails or any sharp instruments; from carrying detonators in their pockets; from tapping or otherwise investigating a detonator; from withdrawing a wire from an electric fuse, or from attempting to tighten a cap around fuse by biting it with the teeth.

8. Holes must not be loaded immediately after springing, and in cases where there is any doubt as to the temperature of the holes, some metal object like a chain, rod or pipe should be allowed to remain in the hole for twelve to fifteen minutes. Upon withdrawing this metal object from the hole and carefully feeling it throughout its entire length, it can readily be determined whether or not the temperature at any point is unduly high.

9. Maximum thermometers may also be used, but they possess the disadvantage of showing the temperature only in the particular place to which they are lowered.

10. Tamping must never be done with iron or steel bars or tools or tripod rammers. Use should be made only of pine or fir rods and under no circumstance must a primer be forced into a hole.

11. The explosive must not be rammed forcibly, but must be pressed gently and firmly into place.

12. Holes must not be fired without ample warning, and until every one is beyond the danger zone, or protected from falling debris. Any supply of explosives in the vicinity must also be protected from danger from this source.

13. Employees engaged in making up primers must be located at a safe distance from working parties and from equipment.

14. Powder foremen must exercise every care to see that every piece of paper or other inflammable material is removed from the vicinity of the locality where dynamite is placed during loading operations.

15. Undue haste must not be used in seeking the cause of a misfire, and ample time must be allowed before the misfire is approached. When a shot has missed fire, no attempt must be made to drill, bore, or pick out the shot, but the situation must be met by drilling and charging another hole not less than three feet from the missed hole.

16. Blasting machines should be inspected periodically by a competent electrical engineer for the purpose of ascertaining their ability to fire an exploder through a given resistance.

17. Not more than twelve holes must be fired by a blasting machine at one time, and these holes must always be wired in series.

18. Before being placed in the primers, each electric fuse must be tested by the small detector galvanometer.

19. At places where a live wire adjacent to the cut is available, and where more than twelve holes are to be fired at a time, the live wire must always be used.

20. Not more than fifty holes must be fired at one time by use of the live wire, and these holes must always be wired in parallel under the supervision of a competent blasting wireman.

21. Every powderman will be provided with a small detector galvanometer with which he shall see that every fuse, which is to be placed in a loaded hole, is tested before the primer is made up. Each hole after being loaded, will also be tested with this galvanometer, and the entire series of holes to be fired at one shot will be tested in like manner, after the wiring is completed and just before the holes are fired, care being taken when the galvanometer test is made to see that no working parties or unauthorized persons are within the danger limit.

22. Every Superintendent and Assistant Superintendent of Construction, every general foreman and every powderman will be furnished with a copy of these instructions of suitable size to be carried in the pocket, and must familiarize himself perfectly with the precautions to be observed in reference to the transportation, handling and use of explosives on his work.

23. Any disregard or infractions of these rules will result in the immediate dismissal of the responsible party.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

Lost—On passenger train leaving Colon at 7 p. m., Sunday, December 13, a package containing a pair of khaki trousers with a commissary and hotel coupon book in the pockets. The finder is requested to communicate with A. E. Lawson, check No. 68,536, Las Cascadas, C. Z.

## CANAL WORK FOR NOVEMBER.

Monthly Report of the Chairman to the Secretary of War.

CULEBRA, C. Z., Dec. 15, 1908.

The Honorable the Secretary of War,  
Washington, D. C.

Sir: I have the honor to submit the following report of operations on the Isthmus for the month of November, 1908:

Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central, and Pacific Divisions during the month:

Item.	Unit.	Atlantic.	Central.	Pacific.	Total.
<b>Steam Shovel Excavation—</b>					
In prism.....	Cubic yards.....	130,710	1,316,992	115,553	1,561,255
Auxiliary.....	Cubic yards.....	39,983	38,054	5,821	83,858
Total.....	Cubic yards.....	170,693	1,353,046	121,374	1,645,113
<b>Dredge Excavation—</b>					
In prism.....	Cubic yards.....	570,832	.....	609,089	1,179,921
Auxiliary.....	Cubic yards.....	52,266	.....	102,390	154,656
Total.....	Cubic yards.....	623,098	.....	711,479	1,334,577
<b>Hand Excavation—</b>					
In prism.....	Cubic yards.....	.....	5,920	.....	5,920
Auxiliary.....	Cubic yards.....	.....	1,620	.....	1,620
Total.....	Cubic yards.....	.....	7,540	.....	7,540
Total excavation.....	Cubic yards.....	793,791	1,360,586	832,853	2,987,230
Explosives used.....	Tons (2240 lbs).....	46.05	177.47	14.95	238.47
Drilling.....	Feet.....	58,245	271,236	25,695.9	355,176.9
New track laid.....	Miles.....	1.3	10.6	3.7	15.06
Track removed.....	Miles.....	8.6	.....	.....	8.6
Material placed in dams.....	Cubic yards.....	113,747	.....	10,270	124,017
Rock crushed.....	Cubic yards.....	.....	5,080	3,236	8,316
Cement used.....	Barrels.....	490	.....	168.5	658.5
Concrete placed.....	Cubic yards.....	340	.....	47	387
New roads laid.....	Miles.....	0.18	22	0.6	28.78
Water mains laid.....	Feet.....	933	.....	801	1,739
Sewers laid.....	Feet.....	3,700	894	750	5,344
Open drains and ditches dug.....	Feet.....	950	34,212	142,638	177,800
Daily average number of laborers.....	.....	2,817	7,603	3,280	13,705
Rainfall.....	Inches.....	21.37	4.46	8.65	.....

## Atlantic Division.

## GATUN LOCKS.

**Unloading Cableway Dock**—The pile driving for this dock is 28 per cent completed, and the decking 5 per cent completed.

**Dredge No. 82** excavated 46,416 cubic yards of clay from the slip leading to the docks of the rock handling plant.

**Cement Shed Dock**—The pile driving for the foundation of this dock is approximately 19 per cent completed.

**Unloading Head Tower Tracks**—The pile foundations for the forward tracks of these towers were completed; 175 piles were driven and 75 bents capped. This work is 95 per cent completed.

**Storage Pile Tunnels**—Excavation on the open cuts for these tunnels was commenced November 9, and 2,825 cubic yards of earth and 25 cubic yards of rock have been removed. This excavation is 40 per cent completed.

**Power House**—The excavation for the Gatun power house has been completed so far as the steam shovel work is concerned. A temporary storehouse for cement and machinery has been erected at the power house site, and a track laid leading thereto.

**Towboat**—The stern wheel towboat is practically completed, and will undertake her trial trip in the near future.

## GATUN DAM.

During the month 61 piles, or 195 linear feet of trestle, were driven on the south toe of the dam. On the south toe of the dam

81,356 cubic yards of material were dumped, and 32,391 cubic yards on the north toe.

## SPILLWAY.

A total of 34,751 cubic yards was excavated from the spillway site, and 149 piles were driven on the spillway dock site.

## HARBOR AND CHANNEL SECTION.

The total amount of material removed from the Canal prism was 618,015 cubic yards, of which 47,183 cubic yards were excavated by steam shovels and 570,832 cubic yards by dredges.

At the close of the month, 40 feet of water could be carried from 0 to Mile 2, plus 4,380 feet; 30 feet to Mile 3, plus 300 feet; 20 feet to Mile 3, plus 4,235 feet; and 14 feet to Mile 4, plus 4,380 feet, the end of the cut.

were removed by steam shovels, 780 cubic yards by crane with a crab dipper, 5,920 cubic yards by hand at the Bas Obispo quarry, 933 cubic yards by hand at the new powder house site up the Chagres River, and 687 cubic yards by hand for tracks at Tabernilla.

The quantity of material removed from the Canal prism was 1,321,692 cubic yards, while 37,274 cubic yards were removed from the Obispo Diversion, 687 cubic yards for Tabernilla tracks, and 933 cubic yards at the new powder house site.

The daily average number of steam shovels at work during the month was 50.91, as compared with 49.55 for the month of October.

For comparison with the work done during the corresponding month of the previous year in the area embraced in the Central Division, the following table has been prepared:

Period.	Total amount of material excavated by steam shovels	Classification of material.		Av. No. of steam shovels working during month	W'kg days in month	Av. amount excavated per shovel per 8-hour day.
	cu. yds.	Rock	Earth			cu yds
1907.	.....	.....	.....	.....	.....	.....
Nov.....	832,136	567,754	264,382	44.83	24	773
1908.	.....	.....	.....	.....	.....	.....
Nov.....	1,352,266	927,994	424,272	50.91	23	1,157

Rainfall during the month: 1907, 10.40 inches; 1908, 4.46 inches.

The above table shows that the average output per shovel per day was over 49 per cent greater in November, 1908, than in the corresponding month of the previous year.

In building construction work, two new type 17 buildings were completed by this Division, and one type lodge hall by contract, and turned over to the Quartermaster's Department. Work was in progress upon seventeen new buildings, which were not completed during the month. Twenty-two buildings were completely rescreened and thirteen partly rescreened. Eleven repair jobs, other than rescreening, were completed, and twenty repair jobs to buildings were partly completed.

## Pacific Division.

## DISTRICT NO. 1—LOCKS AND DAMS.

At Pedro Miguel the track rest of the lock site was raised, providing a toe for the west dam. A portion of the site of the west dam was cleared, and a large percentage of the lumber required for trestles delivered and unloaded at the site.

At Miraflores, in addition to continuing the excavation, clearing the site of the proposed temporary diversion of the Cocoli river was begun, as was also the excavation for the power house. The dredge *Sandpiper* continued the work of cutting the channel from the Rio Grande to the lock site. The steam shovel work at Cardenas Hill was completed and the steam shovel removed.

## DISTRICT NO. 2—DREDGING, AND LA BOCA SHIPWAY.

Five dredges were in operation during the month, as follows:

Dredge	Type.	Cubic yards.		Remarks.
		In pr'm	Auxil'y	
Culebra	Suction	341,469	.....	Scow measurement
Gopher	Ladder	87,342	.....	Place measurement
Mole..	Ladder	31,595	86,655	Place measurement
No. 14..	Ladder	67,192	.....	Place measurement
Dipper.	Dipper.	26,368	15,735	Place measurement
Total.....	.....	553,966	102,390	.....

**Central Division.**  
During the month of November, the total amount of material excavated in the Central Division was 1,360,586 cubic yards, of which 426,165 cubic yards were classified as earth and 934,421 cubic yards as rock.

Of this quantity, 1,352,266 cubic yards

The usual work of maintenance and repairs was accomplished at the shipway.

Borings to ascertain the nature of the material in the channel between La Boca and Miraflores Lock site are nearing completion.

In addition, borings were made along the shipyard frontage, with a view to establishing a new wharf.

Two gangs have been engaged during the month in clearing the Canal prism over which the dredges will have to operate.

#### DISTRICT NO. 3.

A large number of items of building and material construction and maintenance were accomplished during the month, including the operation of the filtration plant, La Boca quarry, Rio Grande quarry, the construction of the reservoir on Ancon Hill, bridge and road work, sanitary ditching and construction of drains, and other minor items.

#### Mechanical Division.

The usual work of this Division was performed.

#### Relocation of Panama Railroad.

During the month 51,800 cubic yards of excavation was accomplished on the relocated line, and 222,600 cubic yards of embankment. This makes a total of 559,829 cubic yards of excavation completed to the present time, and 2,834,970 cubic yards of embankment.

The work of constructing trestles for filling bridges and culverts was continued.

Work on the Miraflores tunnel has not been resumed owing to the wet weather, but it will be resumed as soon as the rainy season is over.

During the month 6 059 feet of permanent track was laid, making a total to date of 53,466 feet.

The force of laborers during the month averaged 985 men daily.

#### Quartermaster's Division.

The total additions to the gold force were 202, and the total separations 314, making the net separations 112. Of the additions, only 38 were of men employed in the United States.

No laborers were recruited during the month, November being the third consecutive month in which there was no necessity for the recruiting of labor. Conditions continued to be such that more laborers than are necessary for the work can be obtained on the Isthmus.

There has been a noticeable tendency on the part of West Indian laborers to leave Commission quarters and house themselves in private quarters in the native villages and in the jungle, as shown by the following table of comparison:

	No. of West Indians actually at work.	No. of same employed by the Commission.	No. in Comm. and P. R. R. quarters.	No. not in Comm. or P. R. R. quarters.
1907—				
November 1.....	20,655	25,199	11,920	13,279
1908—				
November 1.....	19,811	24,169	7,569	16,601
October 1.....	19,932	24,317	7,889	16,423
September 1.....	21,122	25,768	9,434	16,334

From the above it will be seen that 3,321 more West Indians were living "in the bush" on November 1, 1908, than on November 1, the year previous.

This movement of West Indian laborers to independent quarters continues, 345 having

left Commission quarters in November. This condition has certain objectionable features, the principal one appearing to be that laborers in independent quarters are more exposed to malarial infection, but it is without doubt a fact that the settling of West Indians in private quarters, where they are under less restraint and can live in their accustomed manner, makes for stability in the force.

#### Subsistence Department.

During the month the operations of the Subsistence Department show a small profit, while the loss on the Tivoli Hotel has fallen to \$118 23. It is expected that the Tivoli Hotel during December will show a good profit.

#### Department of Civil Administration.

##### COURTS.

The Supreme Court was not in session during the month.

In the circuit courts 11 civil cases and 25 criminal cases were settled, and in the district courts 68 civil and 472 criminal cases were disposed of.

#### DIVISION OF REVENUES.

The general revenues of the Canal Zone, collected by this Division in November, amounted to \$10,244.15, as compared with \$3,702.37 collected in October.

Fifteen vessels entered at and thirteen cleared from the port of Ancon, and fifteen vessels entered at and fourteen cleared from the port of Cristobal during the month.

#### DIVISION OF POLICE AND PRISONS.

The number of arrests during November was 477, as compared with 489 for October.

As Coroner of the Canal Zone, the Chief of Police investigated 11 deaths, 2 of which were due to railroad accidents and 6 to accidental drowning.

Habert Stout, a Barbadian negro, who was convicted on May 6, 1903, of a murder at Gorgona on March 7, 1903, was hanged at the Canal Zone penitentiary at Culebra on November 20. This was the first legal execution in the Canal Zone since the American occupation.

#### DIVISION OF PUBLIC WORKS.

The usual business of this Division, including the installation of new connections, the issuance of permits for the installation of plumbing, the inspection of plumbing and sewers, the collection of water rents, and the operation of public slaughter houses and markets, was continued during the month.

In the city of Panama 28,919,000 gallons of water were used, and in the city of Colon 12,489,750 gallons were used.

#### DIVISION OF FIRE PROTECTION.

No serious fires occurred during the month, the total estimated damage being only \$10.

#### DIVISION OF SCHOOLS.

The total enrollment in the white schools was 654, and the average daily attendance was 534. In the colored schools the total enrollment was 1,223, and the average daily attendance 733.

#### Department of Sanitation.

[The substance of the report of this department was published in THE CANAL RECORD last week.]

GEO. W. GOETHALS,

Chairman and Chief Engineer.

The following steamers have recently arrived at La Boca: December 13, First Squadron United States Pacific Fleet, (eight armored cruisers) from northern ports; December 15, *Hornet*, from Seattle, Wash.; December 16, *Ecuador*, from Buenaventura, and United States Navy transport *Salace*, from Northern ports; December 18, *Indiana*, from San Francisco.

## OFFICIAL CIRCULARS

### Limits of Atlantic and Central Divisions.

CULEBRA, C. Z., December 12, 1908.

#### CIRCULAR NO. 183L.

Effective this date: The limits of the Atlantic Division and Central Division as prescribed in Circulars Nos. 153 and 183A, are changed as follows:

The Atlantic Division will embrace all territory north of the south end of Gatun Dam, in which work of the Department of Construction and Engineering is being performed.

The Central Division will embrace all territory between Pedro Miguel and the south end of Gatun Dam, in which work of the Department of Construction and Engineering is being performed.

The Division Engineer of the Atlantic Division will transfer to the Division Engineer of the Central Division the field maps and technical data relating to the work contemplated in the territory placed under the Central Division in accordance herewith. The Division Engineers will also arrange such transfer of force as may be necessary.

GEO. W. GOETHALS,

Chairman and Chief Engineer.

### Holiday on Christmas and New Year

CULEBRA, C. Z., December 22, 1908.

#### CIRCULAR NO. 226.

Christmas Day, Friday, December 25, 1908, and New Year's Day, January 1, 1909, will be observed as holidays in the Canal Zone, and as far as possible all public business will be suspended on those days.

GEO. W. GOETHALS,

Chairman and Chief Engineer.

### Bills for Services and Material.

CULEBRA, C. Z., December 11, 1908.

#### TO HEADS OF ALL DEPARTMENTS:

Please send all bills for services performed for, or material delivered to, any of the Divisions of the Department of Civil Administration or the Government of the Canal Zone, to the Head of the Department of Civil Administration at Ancon for accomplishment. These papers should not be forwarded to division heads.

Respectfully,

GEO. W. GOETHALS,  
Chairman.

### Concert by the I. C. C. Band.

CULEBRA, C. Z.,

Sunday, December 27, 1908, at 6.00 p. m.:

#### PROGRAM.

- 1 March—*K of P*.....Williams
- 2 *Waltz—Love's Loyalty*.....Tanner
- 3 *Idyl—The Glow Worm*.....Lincke
- 4 *Intermezzo—Rainbow*.....Wenrich
- 5 Solo for Trombone—*Rucked in the Cradle of the Deep*.....Knight  
(Five trombones in unison)
- 6 Medley Selections—*Hits of the Day*.....Remick
- 7 *Patrol—American*.....Mecham
- 8 *Overture—Beautiful Galatea*.....Suppe
- 9 Humoresque on *The Merry Widow Waltz*.....Belstedt

Introducing this popular melody from the opera "The Merry Widow," burlesqued in the following manner: 1. A little German band; 2. A flute solo with organ effect; 3. An amateur trombonist, who is willing to show what he can do if only requested to; 4. A street piano; 5. A la ragaime as played on a banjo; and finally—the result, the popularity of this melody has produced a brainstorm.

- 10 Galop—*Telenachus*.....Bennett

CHAS. E. JENNINGS, Musical Director.

The next concert will be given at Hotel Tivoli, Sunday, January 3, 1909.

### Misdirected Letters.

Division of Posts, Customs and Revenues,

Ancon, C. Z., December 23, 1908.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Bergentlich, Alex & Bros. Lunsbury, L. L.  
Borg, H. J. Miller, Mrs. I. B.  
Burge, Leroy E. Muirhead, J. H. H.—2  
Conner, F. W. Mullen, H. E.  
Cummings, L. B. Murphy, Mrs. J.  
Dickerson, Mrs. L. E. Palmer, Mrs. A. M.  
Diebert, Geo. S. Perry, A. H.  
Eason, J. D. Pixley, Edwin C.  
Eden, Herbert L. Rucines, S.  
Erdman, Roger Robles, T. D.  
Hanson, Mrs. H. C. Rich, O. J.  
Hoffman, V. P. Scott, Edgar  
Holmes, E. S. Jr.—2 Stradish, Frank C.  
Hoobler, Allison C. Wales, Claude  
Kiplinger, John B. White, Walter J.  
Lewis, Mrs. Annie

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

The Ancon Woman's Club met on December 16, at the Hotel Tivoli, the president in the chair. During the short business session the club voted as Christmas donations the sum of \$10 to the Home for the Aged, Panama, and \$5 to the library fund in connection with the Wesleyan Methodist church in Panama, Rev. M. Britton King, pastor. Mr. King is establishing this library for the benefit of the West Indian members of his congregation.

The program for the afternoon consisted of an address on Panamanian dress and needlework, given by Mrs. R. W. Fenn. Specimens of needlework done by native women were shown. Mrs. Reed, Mrs. Orenstein, and Mrs. Green were the members of the social committee for the afternoon. The philanthropy department visited the Home for the Aged on Friday afternoon, December 18.

The Pedro Miguel Woman's Club had a good attendance at the meeting on Wednesday, December 16, when a program in charge of the home department was given. Recitations, quotations and short papers formed the entertainment. The club will hold its social meetings at the residences of the members on alternate Wednesdays. These meetings will be devoted to cards and other amusements. An entertainment to raise funds for the benefit of the club will be given early in the year. The Christmas celebration will be unusually elaborate this year. The tree and program, concluding with the presentation of gifts to the children, will be held early in the evening, after which there will be a banquet for the older people, followed by a dance.

Christmas services will be held as usual in the Culebra penitentiary when the Rev. J. W. Holland will deliver an address. Arrangements have been made for services also in the prison hospital. Ice cream and cakes will be served to the inmates of both institutions on Christmas Day.

The Cristobal Union Church and Sunday school will hold special services on Sunday, December 27, when Mr. Holland will preach a sermon on the "Three Christmas S's." Following this service there will be a meeting of all those interested in the Union Church to decide upon the preparation for the coming of the pastor.

The Gorgona Dramatic Club presented the farce comedy, "The Doctor," to a large audience at the Commission clubhouse on Saturday evening, December 19. In response to a request from the residents of Gatun, the club will repeat the performance on Thursday evening, January 7. Arrangements will be made for a special train from Gatun to Gorgona and return.

The Cristobal Woman's Club held a short business meeting on December 16, the first vice-president, Mrs. E. Lewis Baker, in the chair. Announcements of the coming meetings were made. The home department will hold its meeting in January at the residence of Mrs. Charles Carter, Colon Beach. The club will hold a Christmas reception, December 23, in the clubhouse concert hall. The program will be in charge of Miss Mary Slifer and Miss Ellis. After the business meeting Miss J. Macklin Beattie gave an informal address on "Christmas Customs in Germany."

The art and literature department met for the regular Shakespeare study at the residence of Mrs. Frederic Mears, Colon Beach, on Monday, December 21, when papers were given by Mrs. Mears, Mrs. Herman, Mrs. Ponton and Mrs. Colip. Rehearsals for the annual concert of the club which is to be given in January are in progress.

On Saturday afternoon, December 19, there was a meeting of the board of directors of the Canal Zone Federation of Women's Clubs. Beside the presiding officer, Mrs. E. Lewis Baker, there were present, the recording secretary, Mrs. F. Miracle; the corresponding secretary, Mrs. Frederic Mears; the Federation secretary, Mrs. Thomas E. Brown, Jr.; the auditor, Mrs. J. C. Barnett, and the chairman of the advisory committee, Miss J. Macklin Beattie, and the president of the Ancon Woman's Club, Mrs. C. C. McCulloch, who was invited to be present at the meeting. At the close of a short business meeting, the board adjourned for an informal discussion in regard to the convention of the Federation which is to be held in Ancon the last week in January. Owing to the absence of the president of the Federation the date has not yet been fixed, but will be published in THE CANAL RECORD when decided upon. There will be two sessions of the convention, a business meeting at 9.30 in the morning and a social meeting at 2.30 in the afternoon when addresses and a musical program will be given.

The following announcement is made to the Zone clubs in regard to the Federation pins: Members who wish to order the pin, which is a Tiffany design in dull gold with palm leaves of green enamel, will kindly notify the chairman of the committee, Mrs. Thomas E. Brown, Jr., Cristobal, through their club secretary, as it is desired to send in the order for the pins with as little delay as possible.

## Episcopal Church Services.

The following announcement for Episcopal church services is made:

St. Luke's Church, Ancon Hospital Chapel: Christmas Day, 10 a. m., divine service, followed by holy communion. On Monday, December 26, in the old chapel, house 51, at 3 p. m. the Sunday school children will have their Christmas tree and distribution of presents. The parents and friends of the children are cordially invited to be present.

Beginning with Christmas Day, services will be held in the new chapel just inside Ancon Hospital gate. On Sunday, January 3, at 10 a. m., the dedication of the new chapel will take place. The public is invited.

Services on Christmas Day: St. Mark's, Culebra, celebration of the holy communion, 7.30 a. m. St. Mary's, Empire, morning prayer with sermon, 11.30. Services at the colored chapel, Empire, at 9.00 a. m., Rev. W. H. Decker, chaplain.

## Singing Club.

It is desired to organize a singing club in Ancon, and an invitation is extended to residents of Ancon and La Boca who have taken part in any amateur production, either singing or speaking, to send their names to the undersigned. The club will be regularly organized and be governed by a set of rules which it is believed will conduce to united and satisfactory work.

W. F. BENNVHOF, Ancon.

## PERSONAL.

Mr. H. A. A. Smith, Treasurer of the Canal Zone, accompanied by his family, and Dr. J. D. Brooks, of Ancon hospital, were passengers on the *Allianca*, which sailed from Cristobal on December 16.

Mr. A. S. Zinn, Resident Engineer at Empire, returned to the Isthmus on the *Parismina*, on December 18.

Dr. J. C. Perry, Chief Quarantine Officer, sailed on the *Parismina*, on December 22, for a six weeks' leave of absence in the States.

Mr. and Mrs. P. S. McCormick, of Colon, returned to the Isthmus on the *Parismina*, after a visit to their home in New Orleans.

## Obituary.

G. H. Harper died at Ancon Hospital on December 18. He was 28 years of age and lived at Gorgona.

Patrick J. Curtin died at Gorgona on December 19. He was born in Roanoke, Va., was 48 years of age, had been on the Isthmus 21 months, and lived at Santa Cruz. Mr. Curtin was a widower and his nearest relative is his daughter, Mary Z. Curtin, who lives at Nazareth, Ky.

## Methodist Episcopal Church.

The services at the Methodist Episcopal Church in Panama are being well attended by residents of Ancon and La Boca. The pastor, Rev. Mr. Gray, and wife have displayed a most kindly interest and cordiality and the people attending the services have received much benefit therefrom. It is hoped that the people will more largely attend the service Sunday morning at 10 o'clock, Panama railroad time, and particularly are the people from the Line who are in Panama on Sunday invited. Immediately after the church service on December 13, a Sunday school was organized.

## Independent Order of Odd Fellows.

Cristobal Lodge, No. 2, will hold its next regular meeting, in the I. C. C. Lodge Hall at Cristobal, on Monday, December 28, at 7.30 p. m., when the election of officers for the next term will take place. All third degree members are earnestly requested to be present.

FRANK J. JURY,

Secretary.

## Notice to Kangaroos.

All Kangaroos at Cristobal, Colon, and Porto Bello, who have signed application for, and are interested in forming a Court at Cristobal, please meet at Lodge Hall, Cristobal, on Sunday, December 27, at 2 p. m., for the purpose of perfecting an organization.

J. K. GIBSON,

Chairman of Committee.

## Tivoli Club Dance.

The Tivoli Club will give its next dance at the Hotel Tivoli on Thursday evening, December 31, New Year's Eve, instead of on Saturday, December 26.

Three hundred box cars ordered by the Panama Railroad Company have arrived on the Isthmus in two shipments. Each car is 48 feet long, of 60,000 pounds capacity, and is equipped with Westinghouse air brakes, and climax couplers. The cars came to the Isthmus knocked down and will be erected at the Panama railroad shops in Cristobal.

## RESOLUTIONS OF SYMPATHY.

Jas. L. Hummer.

At a meeting of the Empire Court of Panamanian Kangaroos, held at Empire, December 12, 1908, the following resolutions of sympathy were adopted, and in honor of the memory of the departed brother the court adjourned:

WHEREAS, Our late brother, Jas. L. Hummer, of Brooklyn, N. Y., lost his life in the recent dreadful disaster at Bas Obispo; be it resolved,

First—That in the death of Brother Hummer, the Independent Order of Panamanian Kangaroos has lost a most worthy member; one who, because of his rectitude of life, his sterling integrity and his general comradeship, had won the confidence and respect of a host of friends both in and out of the order.

Second—That we recognize the truth that he gave his life not in vain. It needs be that every great enterprise must have its tribute of human life, and Brother Hummer's life was given as part of the price his country must pay for the greatest achievement of the century. Peace hath her victims, as well as her victories, no less than war.

Third—That the members of this Independent Order of Panamanian Kangaroos extend their heartfelt condolence to the relatives of our deceased brother, with assurance that we truly sympathize with them in their great loss.

Fourth—That a copy hereof be transmitted to the mother, to whose heart bereaved of a beloved son we understand how feeble are words to carry consolation or to silence her grief; also to the brother, a member of this order, loved by one and all.

Fifth—That THE CANAL RECORD, *Star and Herald*, and *New Orleans Picayune* be furnished a copy of these resolutions for publication.

R. M. DAVIES, E. W. STOLBERG, H. E. PICKEN,  
Committee.

Panama Local, No. 19, I. B. S. S. and D. M., has adopted the following resolutions:

WHEREAS, It has pleased Almighty God to remove from our midst our beloved brother, J. L. Hummer, who departed this life December 12, 1908:

WHEREAS, By this act we have lost a true, devoted and fellow brother, refined in the highest traits of character, whom to know was to love; therefore be it

Resolved, That we, his brothers of Panama Local, No. 19, of the International Brotherhood of Steam Shovel and Dredge Men, desire to express our sense of bereavement at his untimely death and our sincere sympathy to his family in this their dark hour of sorrow; be it further

Resolved, That a copy of these resolutions be spread upon the minutes of Local No. 19, and a copy be furnished his family, and that a copy be also furnished THE CANAL RECORD and *Steam Shovel and Dredge* for publication.

S. I. LYONS, H. E. WHYTE, J. I. MAJOR,  
Committee.

Empire, C. Z., December 21, 1908

John J. Korp.

A memorial service in honor of John J. Korp, the steam shovel man killed in the Bas Obispo explosion, was held in the Catholic Church at Empire, Sunday afternoon, December 20, under the auspices of the Knights of Columbus. Rev. Father Collins, Commission Chaplain at Culebra conducted the service. The following resolutions were adopted:

WHEREAS, Our Divine Lord, in His infinite wisdom, has seen fit to call from our midst our beloved Brother John J. Korp; be it

Resolved, That the Panama council of the Knights of Columbus has been deprived of a loyal and faithful member, whose qualities of heart and of mind may ever be an inspiration to his brothers; be it further

Resolved, That the church has lost a staunch and earnest worker. Heaven, indeed, has been made richer, and the earth poorer by our bereavement; and be it further

Resolved, That a copy of these resolutions be entered on the records of Panama council and a copy sent to the bereaved family of our departed Brother.

LOUIS K. ROURE, DAVID F. RABBITT, JOHN A. DALEY, Committee.

All the ships of the Pacific Squadron except the *Colorado* sailed on December 22 for Talcahuano, Chile.

## COMMISSION CLUBHOUSES.

## EMPIRE.

There was received recently at the Empire Y. M. C. A. a silver loving cup presented by The Brunswick Bulke-Collider Co. of New York to the Empire bowling team which won the championship in the Thanksgiving tournament, winning 13 out of 18 possible points.

A farewell reception was given to Mr. and Mrs. McTyler at the clubhouse on Friday evening, December 18, at which a set of Satsuma ware and Canton linen doilies were presented to them. Vocal and instrumental music was rendered by Mrs. Faure and Mrs. Shivers and addresses were made by Mr. Perry Brown, C. M. Gifford, assistant secretary, W. O. Johnson, chairman of the council, W. W. Warwick, Rev. J. A. Sobey, and Rev. W. H. Decker.

Empire defeated Cristobal three games in the pool tournament on Saturday night, which gives Empire the championship.

A bowling team made up of married men went to Cristobal on Saturday night and won two out of three games. It was the first of a series games.

New suits have arrived for the basket ball and baseball teams.

A wrestling mat, 20 by 20, has arrived, and a class will be formed as there is a demand for this sport.

## CULEBRA.

A Christmas tree for all the children of Culebra will be given at the Commission clubhouse on Christmas Eve by the Culebra Sunday school, assisted by the Woman's club and the Y. M. C. A. Santa Claus will be present and will give each child a present. The program will be rendered by the children. The public is cordially invited.

## Sale of Unclaimed Packages.

In order to recover its freight and storage charges, the Panama railroad will dispose of the accumulation of "over" and "unclaimed" shipments now in its possession by public auction, Monday, December 28, 1908, at 9 a. m. Sale to be held at Dock No. 11, Cristobal, Canal Zone.

The items to be sold consist of a miscellaneous assortment of wines, liquors, household goods, building material, stationery, groceries, dry goods, machinery, and merchandise general, all of which has been held six months and over in an effort to locate owner.

## LEGAL NOTICES.

ANCON, CANAL ZONE, November 28, 1908.

Estate of  
Fletcher E. Joyner. Administration.

Any and all persons owing the estate of Fletcher E. Joyner, deceased, who died at Ancon, Canal Zone, on the 21st day of October, 1908, are hereby requested to communicate with the administrator of said estate in order that a settlement may be effected. And all persons having any claim or claims against said estate must present the same, duly verified, to the administrator within six months, otherwise said claims will be forever barred according to law.

All communications with reference to the estate should be addressed to Empire, Canal Zone.

F. H. SHEIDLEY,  
Administrator.

United States of America, )  
Canal Zone, ) First Judicial Circuit.

Notice is given to all concerned to appear at the court house in Ancon, Canal Zone, on or before February 18, 1909, at 9 o'clock, a. m., to claim the following named estates, which the Collector of Revenues seeks to have escheated to the Government of the Canal Zone:

Oscar Olson, a Swede, resident of La Boca, died May 21, 1907, leaving \$1.10 silver

Peter Gross, resident of Panama, died July 9, 1905, leaving \$6.35 silver

WALTER EMERY,  
Circuit Court Clerk.

United States of America, )  
Canal Zone, ) In the First Judicial Circuit

Raimundo Sanderil, a Colombian, who resided in the Canal Zone, died intestate on or about the 10th day of October, 1905, leaving an estate at Ancon consisting of \$7.20 Panamanian currency and personal belongings of little value.

Castis Lephadakes, a Greek, who resided in the Canal Zone, died intestate on or about the 16th day of May, 1907, leaving an estate at Ancon, consisting of 50 francs, French gold.

Pedro Juan, presumably a Greek, who resided at La Boca, Canal Zone, died intestate on or about the 3d day of October, 1907, leaving an estate at La Boca consisting of \$70 U. S. Currency and \$10 Panamanian currency.

Kurilla Stevan, nationality unknown, who resided in the Canal Zone, died intestate on or about the 4th day of April, 1908, leaving an estate at Ancon consisting of \$1.60 Panamanian currency, 10 cents U. S. Currency, and one Chilean coin of small denomination.

Lucas Alvarez, Chilean, died intestate in the Canal Zone on or about the 20th day of June, 1908, leaving an estate at Ancon consisting of personal belongings of little value and \$8.50 U. S. Currency.

The Collector of Customs has filed a petition for escheat in each of the above mentioned estates under Section 779 of the Code of Civil Procedure.

Notice is hereby given to all concerned to appear at the courthouse in Ancon, C. Z., on February 1, 1909, at 9 o'clock, a. m., to establish their claims to the estates, or to show cause why the same should not escheat to the Canal Zone.

F. H. SHEIDLEY,  
Circuit Court Clerk Pro Tempore,  
Ancon, Canal Zone

## Tug Service Porto Bello and Nombre de Dios.

Effective, August 6, 1908: The following is the schedule for tug service between Cristobal, Porto Bello and Nombre de Dios:

Sunday: Leave Cristobal 6.30 p. m. for Porto Bello only; returning same day.

Monday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Tuesday: Leave Cristobal after Train 2 without tow, for Porto Bello only; returning, leave Porto Bello 2.15 p. m., without tow.

Wednesday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Friday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Saturday: Leave Cristobal after Train 2 for Porto Bello only; returning, leave Porto Bello 5.30 p. m.

Between July 1 and December 1 of the present year, \$3,779,779.64 worth of supplies was ordered from the United States or purchased on the Isthmus for the Department of Construction and Engineering. Of this amount \$481,488.66 worth was purchased on the Isthmus.

A motor-driven churn has been installed at the cold storage plant of the Commissary Department at Cristobal. It will be used in making butter from milk that turns sour in transit from New York. The butter made will be used in the bakery and the bitter-milk will be sold.

## COMMISSARY DEPARTMENT

## THE CHRISTMAS DINNER.

The steamship *Panama*, which arrived at Cristobal, on December 19, brought 1,000 dressed chickens, 200 of which are broilers, 900 dressed turkeys, and 200 dressed ducks for the commissary.

In response to a demand from the Americans resident in the Canal Zone for such Christmas gifts for children as cannot be obtained on the Isthmus, the Panama railroad commissary has procured a limited supply of toys from the States, and they are on sale at the Cristobal commissary.

The steamship *Atrato* of the Royal Mail Steam Packet Company, which arrived at Colon on December 19, brought 1,000 quarters of beef and 20 tons of frozen fresh pork for the Subsistence Department. Four hundred quarters of the beef and 19 tons of the pork were delivered to the Pacific Fleet at anchor in Panama Bay.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, DECEMBER 30, 1908.

No. 18.

## The Canal Record

Published weekly under the authority and supervision of the  
ISTHMIAN CANAL COMMISSION

"The Canal Record" is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the "gold" roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

### Address all Communications

#### THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

### NOTES OF PROGRESS.

#### The Bas Obispo Explosion.

The number of persons known to have been killed by the explosion in the Cut at Bas Obispo on December 12, is 23. Henry Joseph, a Barbadian, one of those seriously injured, died at Ancon Hospital, on December 22. All the other patients at Ancon Hospital, who were injured by the explosion, are reported as out of danger. No bodies have been found at the scene of the explosion since December 21.

#### Cardenas Hill Gone.

A small hill that stood in the prism of the Canal at Corozal, known as Cardenas Hill, has been excavated to the level of the low land in that vicinity. Work was begun in March, and when the last shovelful was taken out in November, 137,275 cubic yards had been excavated. This was the only hill between Miraflores and the Pacific entrance that stood in the line of the Canal, and the prism is now ready for the dredges. The steam shovel that did the work at Cardenas Hill has been taken to Miraflores Lock site, where it is being held in reserve.

#### Panama Railroad Relocation.

Work has been begun on a spur track, 1½ miles long, which will run from Frijoles up the valley of the Frijolita River to the relocated line of the Panama railroad. This road is being built in order that work on the relocated line between Gatun and Juan Grande may be begun at the end of the wet season in both directions from the middle as well as from both ends. As the relocated line runs across the watershed the work is a succession of cuts and fills. A Model-20 Marion steam shovel will be taken in over the spur line, and will be used with narrow gauge equipment. It will make a thorough cut at grade, and will load material directly onto the cars, without the necessity of making a pioneer cut and handling the material twice. Two gangs of 75 men are now at work clear-

ing the right of way through the jungle, making a path from 100 to 200 feet wide. With the beginning of the dry season a force of 500 men, including grading and culvert gangs, and the crews of a steam shovel and a pile driver, will be set at work, and will operate in two sections, one toward Gatun and the other toward Juan Grande. This will bring the force employed on the relocated line up to about 2,000 men. The work is being pushed in order that it may be finished before the water in Gatun Lake overflows the present line.

#### New Supply of Gravel.

The old gravel pit on the banks of the Chagres River at Gorgona has been abandoned, and a new pit is being opened near the baseball park. Over 200,000 cubic yards of gravel have been taken from the old pit and used as ballast or in making concrete. Good gravel is very scarce in the Canal Zone.

#### Commissary Sales and Purchases.

Sales at the Panama Railroad Commissary for the fiscal year 1908, amounted to \$3,793,597.99, an average of \$316,133.17 a month. The supplies were distributed all along the line of the Canal and reached the majority of the 50,000 people inhabiting the Canal Zone. The privileges of the Commissary are limited to United States and Panama Railroad employees. A classified statement of the sales follows:

I. C. C. hotels and messes.....	\$1,375,256.52
Various Depts. P. R. R. Co.....	71,739.82
P. R. R. Steamship line.....	5,410.51
I. C. C. hospitals and Sanitary Dept.....	226,185.00
Various I. C. C. Depts.....	87,034.71
Cash sales (principally to U. S. ships).....	7,854.73
Personal accounts.....	84,397.72
Coupon sales.....	1,864,457.22
Supplies used from Stock Account "Expense Accts.".....	71,231.71
Total.....	\$4,793,597.99
Average per month.....	\$316,133.17

A statement of the principal articles purchased for the Commissary Department in the fiscal year, showing the amount and value, follows:

Fresh meats, 5,199,672 pounds.....	\$383,045.46
Poultry, 337,523 pounds.....	68,632.10
Vegetables, 3,068,456 pounds.....	89,954.13
Butter, 258,427 pounds.....	83,486.29
Potatoes, 4,953,282 pounds.....	94,154.77
Eggs, 373,440 dozen.....	87,959.02
Flour, 24,505 barrels.....	139,921.06
Tohacco.....	117,907.87

#### The Finance Abandoned.

Advices from New York are to the effect that the steamer *Finance* of the Panama Railroad Steamship Company's line, which sank in New York harbor on the morning of November 26, has been abandoned, the wrecking company not deeming it profitable to continue the work of salvage. In addition to the mail which was taken from the hold, the treasure on board and 363

packages of merchandise were saved. The ship has shifted its position, and the bow, which was formerly four feet above water, is now submerged. Arrangements are being made to have the hull destroyed as a danger to navigation.

#### Employment of Panamans.

Cable advice has been received at the office of the Commission at Culebra that the Executive Order of February 8, 1908, restricting the employment of skilled laborers, clerks, and other gold employees of the Commission to American citizens, except where American labor is not available, has been amended, by direction of the President, to include citizens of the Republic of Panama among those who may be employed on the gold roll. The necessary orders will be issued as soon as official advice is received by mail confirming the cablegram.

#### Grass for Feed.

Although the principal reason for cutting grass around the Canal Zone settlements is to prevent the breeding of mosquitoes and thus keep malaria in check, the Quartermaster's Department has begun to use this grass as feed instead of drying and burning it, as heretofore. During the month of November the use of this grass in the five districts of Ancon, La Boca, Pedro Miguel, Culebra and Empire, resulted in the saving of 20,000 pounds of hay. The plan of feeding the grass to public animals will be extended to all districts where corrals are maintained.

#### Horsepower of Isthmian Boilers.

An estimate has been made by the boiler inspection service of the horsepower of the stationary, locomotive, and marine boilers in use on the Canal work and Panama railroad. It is based on the assumption that 12 square feet of heating surface represent one horsepower for stationary and marine boilers, and 10 square feet for locomotive and steam shovel boilers. On this basis the total horsepower of Isthmian Canal Commission and Panama Railroad Company's boilers in use on the Isthmus is 71,739. A summary of the stationary and marine boilers in the various divisions follows:

	No. of Boilers.	H. P.
Atlantic Division.....	85	5,417
Central Division.....	92	2,155
Pacific Division.....	82	3,497
Panama Railroad.....	59	1,157
Mechanical Division.....	57	7,862
Subsistence Department.....	17	1,015
Quartermaster's Department.....	15	313
Sanitary Department.....	5	88
Civil Administration.....	3	64
Total.....	415	21,168

The boilers with a capacity of 100 horsepower or over, that have been tested by the boiler inspection service of the Isthmian Canal Commission and Panama Railroad Company, are:

*Atlantic*—Mount Hope pumping station,

## NOTES OF PROGRESS.

(Continued).

two of 105 horsepower, one of 100 horsepower; Porto Bello power plant, four of 135 horsepower each; tugs—*Gatun*, 163; *Marianer*, 155; *Scully*, 139; *Porto Bello*, 151; machine shop at Cristobal, two, 144 each; suction dredge No. 85, two, 110 each; suction dredge *Ancon*, four 200 each; suction dredge No. 83, two, 110 each.

*Central*—Cuciracha pumping station, two of 100 each; Bas Obispo crusher, two of 110 each; Paraiso machine shop, one of 107.

*Pacific*—Ancon pumping station, two of 100 each, two of 107 each, one of 105; dredge *Sandpiper*, two of 110 each; tug *Cocoli*, one of 143; dredge *Culebra*, four of 200 each; Ancon planing mill, one of 103.

*Mechanical*—La Boca electric light plant, five of 160 each and two of 242 each; Gorgona shops, six of 200 each; Las Cascadas air compressor plant, six of 200 each; Rio Grande air compressor plant, six of 200 each; Empire air compressor plant, twelve of 200 each.

*Panama Railroad*—Cristobal machine shops, four of 107 each; Panama docks, two of 161 each.

*Subsistence Department*—Cristobal ice plant, six of 150 each.

The number of steam shovel boilers and their horsepower, on the basis of 10 square feet of heating surface to one horsepower, follows:

	No. of Shovels.				Horsepower.	
	Atlantic.	Central.	Pacific.	P. R. R.	Each.	Total.
45-ton .....	2	6	1	1	24	240
70-ton .....	11	24	5	2	28.5	1117
95-ton .....	1	45	2	.....	82.9	3,979
Vertical boiler.....	.....	.....	.....	1	24.6	246
Total .....	14	75	8	4	.....	5,440.6

The horsepower of locomotives is so variable that their effective force is usually spoken of in terms of tractive power. An estimate was made, however, on the basis of one horsepower to 10 square feet of heating surface. The total thus estimated for all the locomotives (345) in the Canal and Panama railroad service is 45,131 horsepower.

## Visiting Congressmen.

Among the passengers on the *Advance*, which docked at Cristobal on December 29, were the following Representatives in Congress:

C. A. Lindberg, of Minnesota; V. Murdock, of Kansas; A. J. Gronna, of North Dakota; G. M. Haugen, of Iowa; C. A. Kennedy, of Iowa. These Congressmen are not connected with committees having in charge matters relating to the Canal. They visit the Isthmus in order to make a personal inspection of Canal work, and will return to the States on January 2.

Reservations were made on the *Alliance*, which is due at Cristobal, January 2, for the following Representatives in Congress and persons accompanying them:

W. P. Hepburn, wife and daughter; James S. Sherman and Richard Sherman; I. P. Wanger; James R. Mann, William C. Lovering; F. C. Stevens and wife; John J. Esch and son, Paul Esch; E. A. Morse and wife; F. W. Cushman and wife; C. E. Townsend

and wife; E. C. Ellis and wife; James Kennedy, wife and daughter; J. R. Knowland and three persons; W. P. Hubbard and two daughters; W. C. Adamson; W. H. Ryan, wife and sister; William Richardson and two daughters; C. L. Bartlett and wife; Gordon Lee and wife; Gordon Russell; W. B. McKinley; G. A. Bartlett. All the Representatives named, excepting Messrs. Morse, Ellis, Lee, McKinley, and G. A. Bartlett, are members of the House Committee on Interstate and Foreign Commerce. The *Alliance* left New York December 26, and put into Charleston, S. C., on December 28, where the Congressional party went on board. It is expected the party will return to New York on the *Alliance*, which is scheduled to leave Cristobal on January 8.

## Government Employees in Panama.

The President of the United States sent the following message to Congress on December 8, and with accompanying papers it was referred to Committees of each branch, and ordered printed:

To the Senate and House of Representatives:

I transmit herewith the report of the special commission appointed by me to investigate conditions of labor and housing of government employees on the Isthmus of Panama. The commission made careful and extended inspection of the workshops and living quarters of the employees and conferred with representatives from all classes of workmen employed by the Isthmian Canal Commission and the Panama railroad. After a thorough investigation the commission states that "The general sentiment of the workers was expressed in the words of a mechanic in one of the conferences which we held with representatives of different trades: 'We want it understood that we are American citizens and that we are proud to have a share in this great work. We believe the Government is treating us right, and we are as much interested to see this thing a success as anyone.' This spirit of loyalty and interest in the work was evinced on many occasions and should be accounted an asset of the highest value to the Government in the accomplishment of its colossal task. The American people are entitled to just pride in the standard set by their Government for the treatment of the workers and the loyal service which has been the appropriate result."

The commission expresses the hope that "the liberal and progressive policy adopted in civil administration, in education, and in the care and treatment of employees of all races will be maintained and that progress and improvement will be the watchword to the end." I am glad that the official reports previously received are confirmed by these unprejudiced investigators.

The commission submitted valuable recommendations regarding minor defects of the service. Such of these as come under executive authority I have ordered put into effect as far as possible. But I would call the attention of the Congress to the recommendation that the liberal housing policy of the administration be continued as an essential condition of the industrial efficiency of the employees.

I especially urge your favorable consideration of the recommendation to make a more liberal provision for employees permanently disabled in work on the Isthmian Canal. In the event of permanent disablement those engaged in this great national enterprise should receive as generous treatment as is accorded to those who have been disabled in the defense of their country. After faithful and hazardous service these workers should not, when disabled, become public charges in almshouses or burdens upon relatives unable to provide for their support.

THEODORE ROOSEVELT.

The White House, December 8, 1903.

## Reunion.

THE CANAL RECORD:

There is a movement on foot to have a reunion of those employees who sailed from New Orleans for the Isthmus on November 25, 1905. Will those in favor of the reunion communicate with the undersigned offering suggestions regarding the event. It has been suggested that a picnic be held at Porto Bello on February 22. Let's hear from you.

E. L. BROWN, Pedro Miguel, C. Z.

## OFFICIAL CIRCULARS.

## Official Business Trip Tickets.

CULEBRA, C. Z., December 23, 1903.

## HEADS OF DEPARTMENTS AND DIVISIONS:

Owing to unavoidable delay in the delivery of Employees' Official Business Trip Tickets from the States, it will be impossible to put this form of Transportation into effect on January 1, as stated in Circular No. 224, issued under date of November 23.

You are therefore, authorized to continue, until further notice, the issuance of Form A. I. 74, for use on official business only. Under no circumstances must this form be issued for monthly allowance passes after December 31, and passes issued for that purpose between now and the end of the year must be made to expire on that date.

It is anticipated that the Employees' Official Business Trip Tickets will be received from the States within the next week or ten days, and you will be promptly supplied upon receipt of same.

GEO. W. GOETHALS,

Chairman and Chief Engineer.

## Rules for Lay-Over Time.

CULEBRA, C. Z., December 22, 1903.

## CIRCULAR No. 223.

In order to provide a uniform method in each of the Construction Divisions for the allowance of lay-over time to employees considered as construction trainmen, to steam shovel engineers, crane men, and firemen, the following rules effective January 1, 1904, are published for the information and guidance of all concerned.

The following employees are considered as construction trainmen:

Truck shifter engineers,  
Wrecker engineers, (to include locomotive crane operators engaged in wrecking or repair work),  
Lidgerwood unloader engineers,  
Pile driver engineers,  
Trainmen,  
Flagmen,  
Conductors,  
Locomotive engineers.

Lay-over time for these employees shall be computed by minutes for all time worked over nine hours per day for regular working days. For Sundays and holidays, the actual time worked shall be computed by minutes and allowed as lay-over time.

Steam shovel engineers, crane men and firemen shall be allowed lay-over time for all time worked over eight hours per day for regular working days, the same to be computed by minutes. For Sundays and holidays lay-over time shall be computed by minutes for the actual time worked whether in operating or repairing shovels.

All lay-over days shall be computed on an eight hour basis.

Sundays and holidays included in any lay-over period shall be counted as lay-over days.

No overtime will be allowed unless approved by proper authority designated by the respective Division Engineer.

GEO. W. GOETHALS,

Chairman and Chief Engineer.

## Accountable Officer.

CULEBRA, C. Z., December 23, 1903.

## CIRCULAR No. 227.

Mr. C. M. Saville, Assistant Engineer, is designated as an accountable officer, and will approve all requisitions and invoices for material used by, and services performed for the Third Division, office of the Chief Engineer.

GEO. W. GOETHALS,

Chairman and Chief Engineer.

## Concert by the I. C. C. Band.

HOTEL TIVOLI, ANCON, C. Z.,

Sunday, January 3, 1904, at 7.30 p. m.:

## PROGRAM.

- 1 March—*Rays of the Militia*.....Boehnlein
- 2 Selection—*The Three Twins*.....Hoschna
- 3 Waltz—*Alicia*.....Bennett
- 4 a Intermezzo—*Ruralistic*.....Bagley
- 4 b Anvil Chorus from *Il Trovatore*.....Verdi
- 5 Solo for Cornet—*A Dream*.....Bartlett
- CHAS. E. JENNINGS.
- 6 Medley Selection—*Songs from Home*.....Mills
- 7 Idyl—*The Glow Worm*.....Lüncke
- 8 Overture—*Opheus in der Unterwelt*.....Offenbach
- 9 Patrol—*American*.....McEacham
- 10 March—*The New Colonial*.....Hall

CHAS. E. JENNINGS, Musical Director.

The next concert will be given at Cristobal, Wednesday, January 13, 1904.

## SUBSISTENCE PROBLEMS.

## Statements of the Chief Subsistence Officer in Regard to Them.

In a report to the Chairman of the Isthmian Canal Commission, under date of November 11, the Chief Subsistence Officer made the following statements in regard to the operations of the Commission hotels and messes:

Careful statistics have been compiled in this office for the last two months showing the relative values of the most important food components for hotels, messes, and kitchens. The following table shows the value, subject to discount, of the various items consumed in the Isthmian Canal Commission hotels during the month of October:

Sun-dries.....	\$10,877.05
Fresh vegetables.....	5,058.79
Beef.....	4,012.00
Ice.....	2,281.00
Veal.....	1,775.96
Mutton.....	780.46
Pies and cakes.....	660.03
Assorted fresh meats.....	5,685.56
Eggs.....	4,208.18
Butter.....	2,355.72
Salt meats.....	2,123.94
Bread.....	1,610.92
Ice cream.....	772.11

The item of assorted fresh meats includes fresh fish, pork, liver, poultry, and all other fresh meats not enumerated.

It will be seen that an excellent, well varied meat ration has been provided. Although the price of meat is about four times that of vegetables, the cost of vegetables on the average exceeds that of beef, and I have noted that those hotels which fed closest to the average ration, as shown in the above table, have given the best satisfaction.

It will also be noted that eggs cost as much as beef and mutton combined, and will cost more as there has been an advance in the price of eggs of 20 per cent in the last week in New York, and cable quotations on butter indicate an advance of approximately 25 per cent.

The average meat ration consumed was 1.56 pounds, vegetables 1 pound, and bread  $\frac{2}{3}$  pound. When we reflect that we fought the Civil War on one pound of meat and the Spanish War on a pound and a quarter, the fact that this is an extraordinarily high ration is very striking. Such a large consumption of meat and other nitrogenous substances cannot fail to have its effect upon the constitution of the men here in the tropics.

Since the season opened for vegetables that stand refrigeration well, they have been furnished to the hotels, messes, and kitchens at merely the cost of handling them and without any profit to the Commissary whatever. It is due to this fact and to the increased discounts that a very satisfactory ration has been provided at an exceedingly small cost.

The Spaniard consumes  $1\frac{1}{4}$  pounds of bread a day, and demands it; the negro 1 pound, while in the hotels the consumption has been on the average of but  $\frac{2}{3}$  pound. It is seen also that the native American gets his mechanical energy out of the meats in the tropics as well as in the Temperate Zone, while the more sensible European and West Indian derives his from the carbohydrates, like the starches and sugars. Since they do not put as much work upon their digestive apparatus and kidneys, their resisting power to the climate is very much greater.

The following table shows the relative number of breakfasts, dinners, and suppers

served at the various Isthmian Canal Commission hotels during the month of October, for which coupons were received as payment. The first column gives the relative percentage of breakfasts to suppers:

	Per cent breakfasts to suppers.	Breakfast.	Dinner.	Supper.	Total.
Empire.....	71	7,331	8,340	9,916	25,617
Cristobal.....	51	4,735	8,574	9,517	22,856
Gorgona.....	76	6,767	7,703	8,835	23,365
Culebra.....	41	3,915	6,199	9,625	19,769
Gatun, No. 1.....	82	4,644	5,201	5,624	15,359
La Boca.....	74	4,140	3,800	4,138	11,998
Pedro Miguel.....	108	3,673	2,447	3,379	9,499
San Pablo.....	120	3,259	2,668	2,725	8,652
Las Cascadas.....	65	1,975	2,585	3,033	7,564
Corozal.....	80	2,023	1,890	2,552	6,445
Porto Bello.....	83	1,711	2,204	2,055	5,980
Paraiso.....	75	1,493	2,139	1,979	5,611
Bas Obispo.....	67	1,250	2,124	1,895	5,269
Tabernilla.....	60	1,143	1,987	1,755	4,915
Santa Cruz.....	74	1,080	1,976	1,453	4,509
Miraflores.....	85	422	1,448	496	2,366
Gatun, No. 2.....	90	29	76	32	137
Total.....	69	47,590	61,252	69,181	178,023
Plus meals served for cash.....					3,308
Total number meals served during October.....					181,331

Total number meals served during October..... 181,331

It is a fact that very nearly all of the employees of the Canal, who patronize the hotels at all, are present at supper. This is so, largely because it is the best meal, and also because a great many go without their dinner and a few without breakfast and dinner, except some crackers or similar food eaten in their rooms.

	Number of Meals.	Cost of Supplies.	Expenses.	Supplies per Meal.	Service per Meal.	Total Cost per Meal.
March.....	208,426	\$50,045.71	\$17,079.23	24.01	7.714	31.725
April.....	203,801	47,877.89	16,342.69	23.49	8.019	31.511
May.....	205,968	51,008.33	17,247.83	24.77	8.37	33.14
June.....	199,910	45,705.04	16,676.57	22.86	8.34	31.204
July.....	194,370	46,188.00	17,074.07	23.76	8.78	32.53
August.....	188,091	42,742.94	13,771.61	22.72	7.33	30.05
September.....	181,956	39,630.57	12,074.82	21.80	6.60	28.40
October.....	181,331	37,456.05	11,901.64	20.66	6.56	27.22

On the average, 69 per cent of the men who eat supper also eat breakfast in the hotels and 31 per cent do not. The figures for Culebra are very striking. There are very few "cantinas" at Culebra convenient for employees and only 41 per cent of the patrons for supper eat breakfast, and 59 per cent apparently either get no breakfast or get it in a "cantina." I think 50 per cent would be a safe estimate of the number of men in Culebra who do not eat any breakfast at all. The relative proportion of the dinners to suppers is also lower in Culebra than at any other place along the Line; but 65 per cent of the patrons who eat supper there get their dinner at the hotel.

This hotel must maintain a service and an equipment to provide for its largest meal, supper, or for 28,875 meals per month, and it actually received revenue for but 19,769 meals, a difference of 9,106, the revenue for which, at 30 cents per meal, amounts to \$2,731.80. I think this is a fair estimate of the food value that is being transferred from the man who eats three meals a day to the irregular or casual attendant.

At the following points, in or near the Cut, the noon meal is the largest, the percentage of dinners to suppers being as follows: Paraiso, 108; Bas Obispo, 112; Tabernilla, 112; Santa Cruz, 135; Miraflores, 290.

It is seen that it is necessary to maintain at Miraflores an organization of three times the regular number of resident patrons, and at Santa Cruz about 35 per cent larger.

At Pedro Miguel, San Pablo, and Corozal hotels the noon meal is the smallest of the day, the percentage of dinners to suppers being as follows: Pedro Miguel, 72; San Pablo, 98; Corozal, 75.

On the whole, this Department is maintaining an equipment and a force to serve 210,846 meals per month without the addition of one cent of expense, and is actually receiving revenue from but 181,331 meals, a difference of 29,515 meals, for which the revenue, at 30 cents a meal, would be \$8,854.50.

The total food cost of the hotels for the month of October was \$37,456.05, and if we could derive an additional revenue of \$8,854.50, which is 23½ per cent of the total food cost, a sufficient amount could be spent for high priced cooks and for a very much more extensive and varied bill of fare.

In the United States proper a hotel man who maintains a force 25 per cent in excess of his business is on the high road to bankruptcy, and this condition alone on the Isthmus shows at once why a thousand and one things cannot be done here that can be done in the United States proper. For this condition the patrons of the hotels have no one to blame but themselves, except at those points where employees must eat their dinner away from home.

The following table shows the relative monthly operations of the hotels from March, 1908, to October, inclusive:

	Number of Meals.	Cost of Supplies.	Expenses.	Supplies per Meal.	Service per Meal.	Total Cost per Meal.
March.....	208,426	\$50,045.71	\$17,079.23	24.01	7.714	31.725
April.....	203,801	47,877.89	16,342.69	23.49	8.019	31.511
May.....	205,968	51,008.33	17,247.83	24.77	8.37	33.14
June.....	199,910	45,705.04	16,676.57	22.86	8.34	31.204
July.....	194,370	46,188.00	17,074.07	23.76	8.78	32.53
August.....	188,091	42,742.94	13,771.61	22.72	7.33	30.05
September.....	181,956	39,630.57	12,074.82	21.80	6.60	28.40
October.....	181,331	37,456.05	11,901.64	20.66	6.56	27.22

It will be observed that there has been a continuous falling off in the patronage from May to September, which now seems about fixed at approximately 180,000 meals per month.

The decrease in monthly expense of October over July is \$5,172.43. The report shows that the net profit in the Line hotels during the month was \$5,041.45.

The following table shows the hotel operations, by months, for the first four months of the present fiscal year:

July, loss.....	\$4,950.84
August, loss.....	106.89
September, gain.....	\$2,881.44
October, gain.....	5,041.45
	7,922.89

Leaving a net profit in the hotel account.... \$2,865.16

The accumulated profit in the hotel account is \$2,865.16. When we remember that the total cost of the operation of the hotels is \$1,650 per day, it will be seen that this profit account of four months will not last quite two days.

There has been a constant diminution in the number of rations served both in the Spanish messes and in the colored laborers' kitchens. The attendance in the messes has been falling off from about 4,000 per day the 1st of August to 3,400 the 1st of November. The kitchens have been falling off from 6,000 the 1st of July to 4,000 the 1st of November.

I should say there are about 7,000 colored laborers, who are not married and who are not eating in the kitchens or sleeping in the Government quarters.

## SOCIAL LIFE OF THE ZONE.

### Christmas Celebrations and Other Features.

Public celebrations of Christmas took place at many places in the Canal Zone on Thursday evening, December 24. It is estimated that nearly one thousand American children participated and were presented with gifts. Almost every form of organized social life in the Zone took an active part in the preparations for the entertainments. Christmas trees, which were held on Christmas Eve, were afterward donated to smaller organizations and to the West Indian Sunday schools, to be used later in the week. The public school and Sunday school children took an active part in the program, throughout the Zone.

The tree and entertainment at the Cristobal clubhouse were held on Christmas Eve at 8 o'clock. The program consisted of a Christmas cantata, "What Happened to Santa," given by about 100 school children. The distribution of nuts, candy and fruits followed, and light refreshments were served. The tree with its ornaments was presented to Christ Church Sunday school for their entertainment, which was held in the parish school room on December 28. The children of the Union Sunday school presented toys and other gifts to the West Indian children of this Sunday school for the occasion.

The staff of Colon Hospital celebrated Christmas, beginning with breakfast in the mess hall at 8 o'clock, all the members of the resident families and the doctors and nurses being present. Dinner was at 6 in the evening, and the Christmas tree with the distribution of presents followed. Invitations had been sent out for a dance which began at 9 o'clock. There was a large attendance of friends from Cristobal and from along the Line.

The Washington Reading Club, Colon, gave a dance at Lincoln House on Christmas Eve, over 100 guests being present.

Gatun held its Christmas tree and entertainment on Christmas Eve in the club room over the mess hall. A program of songs and drills by the school children was given. A fish pond containing fruits and bags of candy was a feature. About 80 children were present. The Gatun's Woman's Club contributed the candy and had charge of the refreshments. The club also made gifts of linen scrap books and toys to about 45 children in the Spanish camp. A Christmas box, containing material for dresses and other suitable gifts, including toys for the children, was sent by the club to the patients at the leper colony at Palo Seco.

The Las Cascadas Sunshine Club (the girls' sewing club) sent a Christmas box to the headquarters of the international society, containing towels for the blind babies' branch, and gifts, which were to be forwarded by the society. The club meets every Friday afternoon after school hours, and has 15 members.

At Las Cascadas the Woman's Club and the Sunday school had charge of the entertainment. Gifts were distributed to every child in the town. The securing of funds for the entertainment was in the hands of the Woman's Club, and the response throughout the community was most generous. The Sunday school had charge of the entertain-

ment and a program of songs, recitations and drills was given by the children. Nearly every one of the 45 members of the school took part in the program. A silver star for regular attendance at Sunday school for three months was presented. Ninety children received gifts from the tree, some of these having been donated by the Sunday school.

The entertainment at Empire was held in the Commission clubhouse on Christmas Eve. There was a large tree, and gifts were distributed to about 140 children. A program, consisting of songs, recitations, and drills, was given by the public school children. The Sunday school, the Woman's Club, and the Young Men's Christian Association contributed toward the entertainment, and a generous subscription was given by the residents of the town.

The regular monthly dance of the Wizards was held at Empire on Saturday evening, December 26.

The Christmas entertainment at Bas Obispo was enjoyed by a large number of residents of the town. The hall over the mess room was decorated with bunting and palms, and the tree and fireplace on the stage were lighted with electricity. The program consisted of songs and duets by members of the marine minstrels and Mrs. Keiser, of Ancon, and concluded with the singing of "The Star Spangled Banner" by the children. Gifts were distributed to 27 children, and the bachelors were also remembered.

The attendance at the Gorgona Christmas entertainment was very large. An orange tree decorated and lighted with electric lights was the center of attraction. Gifts for the children were brought by the parents, and fruits and sweets were distributed to all present. The Woman's Club, the Sunday school and the Young Men's Christian Association had charge of the arrangements and the members of the community had been most generous in their donations for the occasion. One hundred and sixty children were present and received gifts. The program consisted of religious exercises, recitations, and songs by the school children.

On Christmas night the Odd Fellows and Rebekah lodge, at Gorgona, held their tree and entertainment for the members of the order and their families in Fraternity hall. After an interesting program the distribution of gifts to 50 children took place, and refreshments were served.

The Gorgona Dancing Club will give a farewell Leap Year dance at the Commission clubhouse on New Year's Eve.

At Paraiso about 60 children were entertained on Christmas Eve. There was a tree, distribution of gifts and sweets. The program consisted of a Mother Goose cantata given by children in costumes with a chorus of boys and one of girls. The Sunday school had charge of the arrangements and the entertainment was given in the chapel.

The nurses at Ancon Hospital gave a Christmas party and tree on Christmas Eve at their quarters, a large number of Ancon residents being present. On Christmas afternoon they entertained about 40 children at the tree. On Monday, St. Luke's Sunday school had its Christmas entertainment in the old chapel. After the service of evening prayer, there was an address by the

chaplain, Archdeacon Bryan, and distribution of gifts, 40 children being presented with some little remembrance and sweets, and prizes for catechism, recitation and for attendance were awarded by the chaplain. The tree which had been donated by the nurses of the hospital, was decorated and hung with gifts by the members of the Woman's Guild and was afterward sent to St. Paul's Church, Panama, where the Sunday school had its Christmas entertainment later in the week.

The Gorgona Woman's Club held a called meeting for the transaction of unfinished business on Tuesday, December 29. The next meeting of the club will take place on Thursday, January 7. Election of officers for the next six months will take place at the first meeting in February.

The Ancon Woman's Club will hold its regular meeting at the Hotel Tivoli on January 6, at 3 o'clock in the afternoon.

There was a large attendance of club members and guests at the Christmas reception given by the Cristobal Woman's Club on Wednesday afternoon, December 23. Mrs. Hiram J. Slifer presided, and introduced her daughter, Miss Mary Slifer, and Miss Isabella Ellis, students of the Emerson School of Oratory, Boston. The young ladies, who gave several recitations and readings, were assisted by Mrs. Otis Biddle, Mrs. Frank Wright and Mrs. Frank Ullrich. The club concert will take place in the clubhouse on the evening of January 6.

The Paraiso Woman's Club had a good attendance at the meeting on December 24, the president being in the chair. There were several new members elected. The meeting on January 7, will be of a social character, there being a program arranged. The club members are especially invited to be present.

The Culebra Woman's Club announces that the meetings of the organization will be held at the clubhouse on the afternoon of the first and third Thursday of each month at 3 o'clock. The study class is in progress, and the members are greatly interested in their work. The club will hold an election of officers at the meeting in the club rooms on January 7.

The Gatun Woman's Club held its regular meeting December 18, at the home of Mrs. McCulloch, when the first study of the geography of the Isthmus was taken up.

### Pacific Masonic Club.

There will be a regular meeting of the Pacific Masonic Club on Saturday, January 2, 1909, at 8 p. m. The semiannual election of officers will take place, and all members are urgently requested to be present. The degree of ancient order of humility will be conferred on waiting candidates. All Master Masons are cordially invited.

### Dedication of Ancon Protestant Chapel.

The Ancon Protestant Chapel will be dedicated next Sunday morning, January 3, at 10 o'clock. A special program of music, under direction of Mr. W. H. Dozier and Mrs. H. R. Trask, will be rendered, and addresses will be made by Judge H. A. Gudger and the chaplain, Archdeacon Bryan. The public is cordially invited to attend.

### Episcopal Church Services.

Rev. Wm. H. Decker will conduct Episcopal Church services in the chapel at Culebra on Sunday, January 3, at 11 a. m. and at St. Mary's, Empire, at 7.45 p. m.

## VISIT OF THE PACIFIC FLEET.

## Entertainment of the Sailors.

As announced in THE CANAL RECORD of December 2 and 16, the Young Men's Christian Association of the Canal Zone conducted a headquarters for the sailors of the Pacific Fleet during their stay at Panama, from December 13 to 22. The Citizens' Committee, Alcalde Fabio Arosemena, chairman, had subscribed a fund of about \$1,700 to defray the expenses of the headquarters in the Old Administration Building, Panama.

On the arrival of the Fleet, the sailors were supplied with a pamphlet containing useful information about the city and the Canal. During the stay of the Fleet each sailor was given one shore leave, from 8 a. m. to 6 p. m. This constituted an average of about 1,200 officers and men on shore each day for seven days. The attendance at the Y. M. C. A. headquarters averaged about 1,200 per day, counting duplicate visits. About 500 men were served each day at the cafe and ice cream parlor, and about 2,800 letters and 3,500 post cards were mailed at the branch post-office during the seven days.

Office and living accommodations were afforded the chief of patrol and his staff of about 60 men. A temporary wireless station on top of the building enabled officers on shore to keep in communication with their ships. The Panama Railroad Company extended the courtesy of free transportation to all sailors, and not only attached observation cars to all regular trains for the use of officers, but ran a sailors' excursion across the Isthmus and return each day.

On the Fleet's departure a considerable quantity of ice cream was on hand, which was served at an "open house" to all orphans, bootblacks, and poor children of the city, and to the boys of the San Blas Indian School.

Before the Fleet's departure, Admiral Swinburne addressed letters of appreciation to the Chairman of the Canal Commission, the Citizens' Committee, and the Young Men's Christian Association. A copy of the letter to the Chairman is appended:

PANAMA, R. P., December 21, 1908.

Lieut.-Col. Geo. W. Goethals, Chairman and Chief Engineer, Culebra, C. Z.

My Dear Sir—I desire to extend to you, and through you to the officials and employees of the Isthmian Canal Commission, my heartiest thanks for the kind and generous welcome extended to the officers and men of the Pacific Fleet now in the harbor of Panama, and for the many favors and courtesies extended to them.

I am indeed greatly pleased with the treatment received by the enlisted men while on shore, and with the manner in which they were entertained; every provision being made, and every facility offered by the Panama Railroad Company and the officials of the Canal Commission to enable these men to see, under the most favorable conditions, this gigantic engineering problem now under construction. This has been greatly appreciated by both officers and men and will add greatly to the contentment of the personnel.

Again thanking you, and with best wishes

for your success, and with the compliments of the season, I am, sincerely yours,

W. T. SWINBURNE,

Rear Admiral, U. S. Navy, Commander-in-Chief U. S. Pacific Fleet.

## PERSONAL.

Hon. Arnold Shanklin, American Consul General to Panama, has been appointed Consul General at the City of Mexico, and expects to sail for his new post early in January.

Capt. R. Murray Rumsey, R. N., arrived at Colon on the R. M. S. *Tagus*, on December 28, and will be a guest of Dr. J. F. Leys, at Colon Hospital until January 19. Capt. Rumsey was harbor-master at Hong Kong in April, 1898, when Commodore Dewey's Squadron called, coaled ship, and sailed, just previous to the battle of Manila Bay on May 1.

Mr. M. J. Stickel, secretary of the Y. M. C. A. at Cristobal, and Miss Bessie E. Russell, of Colon Hospital, were married at Cristobal on Tuesday, December 29. Mr. and Mrs. Stickel sailed on the *Heredia* on the same day, for a three weeks' vacation in Costa Rica, and on their return they will reside in Cristobal.

## Obituary.

Mr. Amos B. House died at Colon Hospital December 27, 1908. He was 40 years of age and had been on the Isthmus two months, living at Gatun. He is survived by his wife, Mrs. Hulda House of St. Louis, Mo.

## Missing Men.

Information is wanted in regard to the following men:

Sanborn Backus, who was employed as drill runner and machinist, from December, 1905, to May, 1908, when he was discharged on account of reduction of force. Mr. Backus' relatives have had no news from him since the date of his dismissal from the service of the Commission.

Howard B. Delaigne, who was employed by the Commission in various capacities from May, 1905, until September, 1908, when he was discharged, on account of reduction of force, from the position of foreman in the Atlantic Division. His relatives in the United States have not heard from him since the date of his discharge.

Any one having knowledge concerning these men is requested to communicate with M. B. De Putron, Assistant to the Chairman, Culebra, C. Z.

Information is wanted also in regard to Joseph Keenan. Any one having knowledge concerning him is requested to communicate with John L. Gallagher, No. 62 McLain avenue, Pittsburg, Pa.

## Commission Dentists.

Dr. O. M. Ruben, district dentist, has opened an office at Culebra, in building No. 114, opposite the Administration Building. The office of Dr. J. E. Grant, district dentist at Gorgona, will be ready for use in the near future. A list of the fees charged by the dentists to employees of the Commission was published in last week's issue of THE CANAL RECORD.

## Tivoli Club Dance.

The Tivoli Club will give its next dance at Hotel Tivoli on Thursday evening, December 31, New Year's Eve.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

The entertainment halls in the clubhouses have recently been furnished with new pianos. The old pianos have been removed to the reception lobbies for general use.

Rev. Frank M. Bristol, D. D., Bishop of the Methodist Episcopal Church, will cross the Isthmus the first week in January, en route to South America and will lecture on "Brains" at Empire on Monday, January 4, and at Cristobal on Tuesday the 5th. For the accommodation of the Culebra people who wish to hear Bishop Bristol lecture, a special train will leave Culebra for Empire at 7:45 Monday evening.

Maj. Charles Lynch, Medical Corps, United States Army, will visit the Isthmus as a representative of the American National Red Cross Society and will give "First Aid" lectures in the clubhouses as follows: Culebra, Wednesday, January 6; Cristobal, Thursday, January 7; Empire, Friday, January 8; Gorgona, Saturday, January 9. Major Lynch is the author of the Red Cross text book "First Aid and Relief of Columns," and has been engaged in lecturing and organizing first aid reliefs. Major Lynch will be accompanied by Maj. C. A. Devo, Chief Quartermaster, who will supplement Major Lynch's lectures by a statement concerning the work of the Red Cross. If the suggestion meets with ready response, an effort will be made during the visit of Major Lynch to organize a Panama branch of the American National Red Cross.

## EMPIRE.

In the junior duck pin tournament the winners were as follows: Class A, James Wade, first; Victor Johnson, second; Owen Picken, third. Class B, Joseph Fein, first; Harold Van Ostrand, second; Victor Picken, third. Medals will be given them.

## CRISTOBAL.

A duck pin tournament for singles and doubles, open to all of the associations on the Isthmus, is to be held on the Cristobal alleys on New Year's Day. Suitable trophies will be awarded.

## Misdirected Letters.

Division of Posts, Customs and Revenues,

Ancón, C. Z., December 26, 1908.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Afams, C. W.	Julian, Chas.

\*After July 1, 1908, the old Chagres and Culebra divisions were consolidated in the Central Division. No separate record for steam shovels in the old divisions has been kept since that date. Figures for months after June under "Culebra Section" include work done in the whole Central Division.

Summary for the month of November, 1908:  
Average number of shovels at work, 65.48.  
Average output per shovel per day, 1.056 cubic yards.  
Average output per shovel per month, 24,507 cu. yds.  
The working day for steam shovels is eight hours.

## LEGAL NOTICES.

United States of America, } First Judicial Circuit,  
Canal Zone.

Notice is given to all concerned to appear at the court house in Ancon, Canal Zone, on or before February 18, 1909, at 9 o'clock, a. m., to claim the following named estates, which the Collector of Revenues seeks to have escheated to the Government of the Canal Zone:

Oscar Olson, a Swede, resident of La Boca, died May 24, 1907, leaving \$10 silver.

Peter Gross, resident of Panama, died July 9, 1905, leaving \$6.35 silver.

WALTER EMERY,  
Circuit Court Clerk.

United States of America, } In the First Judicial  
Canal Zone. Circuit.

Raimundo Saenderal, a Colombian, who resided in the Canal Zone, died intestate on or about the 10th day of October, 1905, leaving an estate at Ancon consisting of \$7.20 Panamanian currency and personal belongings of little value.

Castis Lepidakis, a Greek, who resided in the Canal Zone, died intestate on or about the 16th day of May, 1907, leaving an estate at Ancon, consisting of 50 francs, French gold.

Pedro Juan, presumably a Greek, who resided at La Boca, Canal Zone, died intestate on or about the 3d day of October, 1907, leaving an estate at La Boca consisting of \$70 U. S. Currency and \$10 Panamanian currency.

Kurilla Stevan, nationality unknown, who resided in the Canal Zone, died intestate on or about the 4th day of April, 1907, leaving an estate at Ancon consisting of \$1.60 Panamanian currency, 10 cents U. S. Currency, and one Chilean coin of small denomination.

Lucas Alvarez, Chilean, died intestate in the Canal Zone on or about the 20th day of June, 1908, leaving an estate at Ancon consisting of personal belongings of little value and \$48.50 U. S. Currency.

The Collector of Customs has filed a petition for escheat in each of the above mentioned estates under Section 779 of the Code of Civil Procedure.

Notice is hereby given to all concerned to appear at the court house in Ancon, C. Z., on February 1, 1909, at 9 o'clock a. m., to establish their claims to the estates, or to show cause why the same should not escheat to the Canal Zone.

F. H. SHEARLEY,  
Circuit Court Clerk Pro Tempore,  
Ancon, Canal Zone.

United States of America, } In the Third Judicial  
Canal Zone. Circuit, Cristobal.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 576 hectares of the lands known as "Palo Morqueta and Matias" situated in the Canal Zone, near the villages or hamlets of Lion Hill and Tiger Hill, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$5,760; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

NELSON R. JOHNSON,  
Clerk of the Circuit Court, Third Judicial Circuit,  
Cristobal, Canal Zone.

In the Circuit Court, Second Judicial Circuit, Canal Zone. Empire, December 26, 1908.

To any and all persons interested:

You are required to enter your appearance in the clerk's office in the above named court at Empire in the said Canal Zone on the 6th day of April, 1909; and to answer the petition of Tom M. Cooke, Collector of Revenues, acting under Section 779, Code of Civil Procedure, stating that each of the deceased persons named below died intestate, leaving property in the Canal Zone, and that no heirs have appeared to claim the same; and asking that a day be fixed for inquiries to ascertain whether said estates escheat to the Government of the Canal Zone:

(1) Joseph P. Roche, San Pablo, died on or about May 22, 1905, leaving about 50 acres of growing bananas and personal property at Frijoles and San Pablo.

(2) John J. Farrill, Empire, died on or about July 24, 1905, leaving a pay certificate for \$20 and cash 70 cents at Empire.

(3) George L. Walker, Empire, died on or about September 21, 1906, leaving Isthmian Canal Commission pay certificate for \$2.50, cash \$1.40, and personal belongings of little value.

(4) Luchin Short, Empire, died on or about March 8, 1905, leaving Isthmian Canal Commission pay certificate for \$2.25 United States currency and personal belongings of little value at Empire.

(5) Unknown man (white), killed on or about Au-

gust 4, 1905, by Panama railroad passenger train south of Matachin, leaving \$32 Panamanian currency. In the hands of the Treasurer of the Canal Zone at Empire.

(6) Unknown man (white), found dead in Las Sabanas on or about January 7, 1908, leaving \$2.75 United States currency and ten cents in Panamanian currency. In the hands of the Treasurer of the Canal Zone at Empire.

(7) Unknown man, skeleton found on or about July 8, 1908, in the woods near Gorgona water shed, leaving \$3.25 Panamanian currency, two keys, one French corner coin, one signet ring, and one pocket knife. In the hands of Treasurer of the Canal Zone at Empire.

(8) Unknown man (Indian), killed by a Panama railroad train near Mount Hope, leaving \$6.00 Panamanian currency, one silk handkerchief, a silver watch, and leather chain and key. In the hands of Treasurer of Canal Zone at Empire.

(9) Unknown man, killed by a passenger train near Cozcol on or about June 3, 1906, leaving \$1.70 United States currency, and \$1 Panamanian currency. In the hands of Treasurer of Canal Zone at Empire.

(10) Jean B. Stone, Empire, died on or about March 17, 1903, leaving cash \$260.35 United States currency and \$156.50 deposited with the International Banking Corporation, and varied personal effects at Empire.

(11) Joseph Almun, resident at Culebra, died on or about July 20, 1905, leaving \$22 United States currency and \$2 Panamanian currency.

By order of the Court. E. M. GORDON,  
Circuit Court Clerk.

United States of America, } In the Third Judicial  
Canal Zone. Circuit, Cristobal.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of .48 hectares of the lands known as "Calle Bruji" situated in the Canal Zone, near the villages or hamlets of Lion Hill and Tiger Hill, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$2,480; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

NELSON R. JOHNSON,  
Clerk of the Circuit Court, Third Judicial Circuit,  
Cristobal, Canal Zone.

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, JANUARY 6, 1909.

No. 19.

## The Canal Record

Published weekly under the authority and supervision of the  
ISTHMIAN CANAL COMMISSION

"The Canal Record" is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the "gold" roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

### THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

## NOTES OF PROGRESS.

### Canal Excavation to Date.

The grand total of excavation at all points on the Line of the Canal, from the day on which the Americans took control, May 4, 1904, down to the close of 1908, is 59,773,179 cubic yards. The yearly output has been as follows:

May 4 to December 31, 1904.....	243,472
January 1 to December 31, 1905.....	1,799,227
January 1 to December 31, 1906.....	4,948,497
January 1 to December 31, 1907.....	15,765,290
January 1 to December 31, 1908.....	37,016,693

Total under American control..... 59,773,179

It will be seen from this table that all but about 2,000,000 cubic yards of the grand total has been removed during the past three years, and that all but about 7,000,000 cubic yards has been removed during the past two years. The monthly average for 1905, the first complete calendar year of work, was 149,935 cubic yards; for 1906, it was 412,375 cubic yards; for 1907, it was 1,313,774 cubic yards; and for 1908, it was 3,084,724 cubic yards.

Appended are totals for each month during 1908:

	Cu. yds.		Cu. yds.
January.....	2,709,613	August.....	3,252,506
February.....	2,927,126	September.....	3,158,886
March.....	3,487,287	October.....	3,190,147
April.....	3,296,097	November.....	2,815,042
May.....	2,702,897	December.....	3,261,673
June.....	3,059,069		
July.....	3,156,350	Total.....	37,016,693

The rainy season began in May, 1908, and continued through December, the rainfall being the heaviest in May and averaging about ten inches for May, June, July, August, September, October, November, and December. It will be seen by the monthly totals that during this period the excavation fell below 3,000,000 cubic yards in only two months, May and November. While it fell off in May below the April total a new record was established for rainy season work. The decline in November was due primarily to a reduction in the number of working days, there being only twenty-three during that

month. The average monthly output during the rainy season was substantially the same as the monthly average for the whole year, which shows that the heavy rains are no longer a serious obstacle to the progress of the work.

### Unit Costs of Canal Work.

Three tables are published on page 149 of this issue of THE CANAL RECORD, which contain information not hitherto available. The first classifies by departments the expenditures made from appropriations for all Canal work, down to October 1, 1908. The second shows the expenditures made by the Department of Construction and Engineering, including "Work," "Plant," and "General Administration." The third gives the unit costs of actual Canal construction, divided into three periods. It shows that dry excavation for the first quarter of the present fiscal year cost 63 cents per cubic yard for direct charges, and 12 cents per cubic yard for general administration, making a total of 75 cents. Dredging cost 9 cents per cubic yard for direct charges, and 2 cents per cubic yard for general administration. The average cost per cubic yard for excavation was 40 cents for the direct charges, and 8 cents for general administration, making a total of 48 cents as against an average cost of 57 cents for these two items for the last fiscal year, a reduction of about 15 per cent.

### December Excavation.

The grand total of excavation during the month of December was 3,261,673 cubic yards. All of this amount excepting 117,726 cubic yards was taken from the Canal prism. It is 341,179 cubic yards greater than the November output, and only 218,597 cubic yards less than the highest record, that of March, 1908. There were 26 working days in December, three more than in November, and the same number as in March. Of the grand total for December, 1,363,953 cubic yards were taken out by dredges and the remainder was dry excavation. The mean rainfall for December for the territory in which excavation was in progress was 5.93 inches, as compared with 11.66 inches in November.

In the Atlantic Division the total excavation was 858,724 cubic yards, which is 126,487 cubic yards greater than that of November. Of this amount, 170,537 cubic yards were taken out by steam shovels and 688,187 cubic yards by dredges. This is an increase over November of 9,132 cubic yards in steam shovel work, and 117,355 cubic yards by the dredges. The two steam shovels working in the cut at Mindi, at 14 feet below sea-level, took out 62,253 cubic yards of rock in December, the best monthly record yet made by two shovels.

The total excavation in the Central Division was 1,593,994 cubic yards. Of this

amount, 1,143,237 cubic yards were taken from the Culebra Cut, 383,948 from the Canal prism elsewhere than in the Culebra Cut, and 66,809 cubic yards from the Obispo Diversion which is outside of the Canal prism. The best daily record of excavation for steam shovels since American occupation was made in this division on Friday, December 18, when 50 shovels excavated 70,087 cubic yards, which is 2,957 cubic yards higher than the record made on November 30, when 53 shovels removed 67,130 cubic yards.

In the Pacific Division the total excavation was 808,955 cubic yards, which is 20,336 cubic yards short of the excavation in November. Of this amount, which was all from the Canal prism, 133,189 cubic yards were taken out by steam shovels and 675,766 by dredges. A detailed statement of excavation in the three divisions follows:

### ATLANTIC DIVISION.

Locality.	From Canal Prism cu. yds.	Outside Canal Prism cu. yds.	Total excavation cu. yds.
Dry excavation—			
Gatun spillway.....		42,334	42,334
Gatun Locks.....	65,950		65,950
Mindi.....	62,253		62,253
Total.....	128,203	42,334	170,537
Wet excavation—			
Colon dredging.....	679,604	8,583	688,187
Total wet and dry excavation.....	807,807	50,917	858,724

### CENTRAL DIVISION.

All dry excavation—			
Chagres section.....	383,948		383,948
Culebra section.....	1,143,237	66,809	1,210,046
Total.....	1,527,185	66,809	1,593,994

### PACIFIC DIVISION.

Dry excavation—			
Miraflores Locks.....	65,416		65,416
Pedro Miguel Locks.....	65,578		65,578
Cardenas Hill.....	2,195		2,195
Total.....	133,189		133,189
Wet excavation—			
Pacific entrance.....	675,766		675,766
Total wet and dry excavation.....	808,955		808,955

### TOTAL EXCAVATION, ENTIRE CANAL.

Dry excavation.....	1,788,577	109,143	1,897,720
Wet excavation.....	1,335,370	8,583	1,343,953
Total.....	3,123,947	117,726	3,241,673

Mean rainfall along Canal (eleven stations), 5.93 inches.

Figures of monthly excavation are based upon telephone reports from the Division Engineers, and are subject to slight alterations when the official reports are received.

### Dynamite Explosions.

While exploding a charge in the toe of the slope in the Canal prism at Matachin on the morning of January 4, a single charge of dynamite set off five holes that had been

loaded about three months before and had not been exploded. Seven men were injured, but none of them seriously.

No further deaths have resulted during the past week from the explosion at Bas Obispo on December 12, nor have any more bodies been found in the Cut. The number of those known to be dead is 23.

#### December Rainfall for Two Years.

Stations—	1907.	1908.	Average No. since sta. estab'd. of rainy days.

#### Rainfall of December 29.

An excessive local rainfall occurred on December 29, and affected slightly the work in all three of the construction divisions.

At Pedro Miguel 3.94 inches fell in two hours, 2.09 inches in one hour, .59 inches in 10 minutes, .32 inches in 5 minutes. At Bas Obispo 2.15 inches fell in two hours, 1.77 inches in one hour, .50 inches in 10 minutes, .27 inches in 5 minutes. From 1 to 3 p. m. the following amounts registered at other stations:

Inches.	Inches.
Cristobal..... 0.01	Culebra..... 0.39
Gatun..... 0.12	Ancon..... 0.01
Tabernilla..... 0.10	Alhajuela..... 0.43
San Pablo..... 0.43	Vigia..... 0.16
The total amount for the 24 hours ending at 5 p. m. was:	
Inches.	Inches.
Pedro Miguel..... 4.05	San Pablo..... 0.43
Bas Obispo..... 2.50	Culebra..... 0.54
Cristobal..... 0.05	Ancon..... 0.06
Gatun..... 0.12	Alhajuela..... 0.83
Tabernilla..... 0.20	Vigia..... 0.17

#### Mr. Taft's Visit.

According to the latest program for the visit of Mr. Taft, President-elect, to the Isthmus, he will sail from Charleston, S. C., on January 27. He will be accompanied by six engineers, Arthur P. Davis, chief engineer of the U. S. Reclamation Service, John R. Freeman of Providence, R. I., Allan Hazen of New York, Isham Randolph of Chicago, James Schuyler of Los Angeles, and Frederick P. Stearns of Boston. Of these gentlemen, Messrs. Randolph and Stearns were members of the International Board of Consulting Engineers and reported in favor of the lock canal now in process of construction; Messrs. Freeman and Stearns came to the Isthmus in company with Alfred Noble, chief engineer of the Pennsylvania Railroad, in April, 1907, with Secretary Taft, and inspected the sites of the dam and locks at Gatun at that time, pronouncing them satisfactory; Messrs. Davis, Hazen and Schuyler, like the others who accompany them, are high authorities on dam construction and all questions of hydraulic engineering.

The party will come on the two armored cruisers *Montana* and *North Carolina* and is expected to arrive on the Isthmus about the first of February. The length of the visit is not fixed.

## PACIFIC LOCKS AND DAMS.

### Status of the Work at Miraflores and at Pedro Miguel.

Ships passing through the Canal from the Atlantic to the Pacific side will be lowered from the 85-foot level of Gatun Lake and Culebra Cut to sea-level by a single flight of twin locks at Pedro Miguel and a double flight of twin locks at Miraflores. The point at which the 30-foot drop at Pedro Miguel will be made is 10.5 miles from the end of the Canal in the deep water of Panama Bay. At this point the valley of the Rio Grande is about half a mile wide and is enclosed on either side by hills. The plan involves extending the east wing wall at the north end, the beginning of the lock, to the hill on the east, and the building of a dam from the west wall of the lock to the hill on the west side, a distance of 1,400 feet. This dam is being built of earth with a clay core and rock toes. It will be 40 feet wide at the top at elevation 107, and have slopes of 4 to 1.

Excavation at Pedro Miguel is about two-thirds done. The excavation for the north approach, or fore bay, which is on the level of Culebra Cut, was carried down to grade 40 by the Culebra Division, which had removed 1,071,696 cubic yards up to June 30, 1908, completing this part of the work. In June, 1908, the Pacific Division began excavating for the lock proper. This excavation will go down to elevation 5, allowing room for the concrete floor, the surface of which will be 10 feet above sea-level.

At the end of the calendar year, 1908, 244,416 cubic yards had been taken from the lock chamber and the gate recesses, three shovels are working at grade 22, and one is working in the east gate recess at grade 40.

A large part of the material taken from the lock site is hauled over a construction track, that has been laid on the west slope of the hill through which the lock site extends, and is being dumped on the site of the west dam. A clearing has been made for the core of the dam and filling is being done on either side of this clearing. The plan of canal on which the new French Canal Company was working included two locks at Pedro Miguel, and to that end the Rio Grande was diverted from its course through the lock site, and made to run parallel to the site, behind the hill which will form the west side of the locks. This diversion channel dug by the French is now serving the purpose for which it was made, and is also taking the drainage from the south slope of Culebra Cut. The west dam will close this channel, and, therefore, the dam cannot be completed until work in the lock chamber has reached such a point that the river may be turned into the Canal prism.

The Pedro Miguel Locks will consist of two parallel chambers of concrete each 1,000 feet long, 110 feet wide, and with not less than 43½ feet of water over the sills. The gates will be of the mitre type. They will be operated by electricity from the hydraulic power plant at Miraflores. About 800,000 barrels of Portland cement will be used in the concrete work of the lock chamber and the approaches, and over 800,000 cubic yards of concrete will be laid. If the construction of the handling plant for the concrete is

completed by the time specified in the bids now under consideration, the laying of concrete will be begun in August, 1909. The plant at Pedro Miguel will consist of two cantilever cranes operating over the rock and sand storage piles thus supplying the concrete mixers with material, and four cranes—two in each chamber—for placing the concrete and handling the forms. The mixed concrete will be transported from the mixers to the chamber cranes by means of narrow gauge trains.

From the south end of the Pedro Miguel Locks to the north end of the Miraflores Locks is a distance of 1.6 miles. Excavation in this part of the channel will go down to grade 10, and as the prism lies in the Rio Grande valley it will be necessary to remove only 1,100,000 cubic yards of material. The channel will be 45 feet deep, and 500 feet wide and will run through a lake formed by the water held back by the dams at Miraflores. This lake will extend across the valley to the 55-foot contour and will be about 1.5 square miles in area.

From the Pedro Miguel-Miraflores Lake ships will be dropped from elevation 55 to sea-level by means of two flights of locks. The point where the first drop will be made is about 8½ miles from deep water in Panama Bay, and the first lock, with the sill of the approach at +13, will let ships down about midway between the 55-foot level and sea-level and the second lock will complete the drop.

The locks at Miraflores will be of the same size and construction as those at Pedro Miguel, the only difference being that there will be a double step at Miraflores, instead of but one step as at Pedro Miguel. These locks also are being built in the valley of the Rio Grande, but as the bottoms will be at 20 feet and 52 feet, respectively, below sea-level the amount of excavation for each pair of locks is considerably greater than at Pedro Miguel.

The valley at this point is wider than at Pedro Miguel and the dams that will hold back the water will therefore be longer. The east dam, which will run from the upper end of the locks to Miraflores Hill, will be 800 feet long and will be built of concrete. Nearly 200,000 cubic yards of excavation will be necessary in preparing the foundation, and it is estimated that 63,500 cubic yards of concrete will be used in the construction. The spillway for the lake will be in this dam, and the water wasting through it into the Rio Grande valley will furnish power for the electric plant.

The Cocoli River crosses the lock site and runs into the Rio Grande. Thus the Cocoli valley opens directly into the Miraflores Lock site. To keep the water of the lake from running into this valley and also to divert the Cocoli from the lock site, an earthen dam is being built on the west side of the lock site and parallel to it, closing up the mouth of the Cocoli valley. Over 600,000 cubic yards of earth will be deposited in this dam and a large amount of material will also be deposited between the dam and the locks. A channel is being dug behind the west hill at Miraflores to divert the Cocoli River into the channel of the Rio Grande. The mouth of the Cocoli valley is practically closed, and the work on the dam and back filling on the west side of the lock site is making rapid progress.

## THE WORK AT GATUN.

### Construction of the Dam Begun—Progress on Locks and Spillway.

The building of the Gatun Dam was begun on December 24, when the 20-inch suction dredge, No. 82, was set at work pumping sandy clay from a point 2,000 feet north of the dam site into the channel of the old French canal. The part of the dam on which the fill is in progress is that embraced between the lock site, on the east slope of the Chagres valley at Gatun, and the hill through which the spillway is being built, known as Gatun Island. From the hills on the east to those on the west the dam will be about 1½ miles long; the space between the rock toes is 1,200 feet in width; the top of the dam, according to present plans, will be at 135 feet above sea-level, and the lowest level of the water impounded in Gatun Lake will be at 85 feet.

A toe of Bas Obispo rock has been built from a point near the lock site to the spillway on the south side, and a similar toe has been built on the north side, the distance between the two toes being 1,200 feet. Suitable material pumped into the space between these two toes will form the dam. In the course of a month dredge No. 83, will be set at work and later the dredge that is working on the north lock site will be used in dam construction. Each of these dredges, pumping such material as is required for the dam, should be able to deliver 150,000 cubic yards a month, or over 5,000,000 cubic yards a year. The total fill to be made is about 21,000,000 cubic yards.

Before the dam material is pumped onto the site the surface soil is removed. In the channel of the old French canal, where the fill is being made, the surface soil was washed down until a suitable foundation for the hydraulic material was procured. A steam shovel is at work excavating the top soil in a strip 600 feet wide running across the valley, and the vegetation will be removed from all the area between the toes of the dam. Two 10-inch centrifugal pumps, driven by old French engines, are at work unwatering the old French channel while the filling is in progress.

Last week 1,300,000 b. m. feet of sheet piling arrived on the Isthmus, and part of it has been delivered at Gatun. This piling is to be driven down into impermeable material clear across the valley along the axis of the dam, thus forming a watertight core below the bottom of the hydraulic fill.

The part of the dam that will extend from the west wall of the spillway to the hill on the west side of the valley, cannot be built until the Chagres River, which now runs through a diversion channel between the spillway and the hills, has been turned through the spillway, and this will not be done until the concrete work in the spillway has been completed above the high water line. Meanwhile, a trestle is being built across the spillway from the east side in order that the north toe may be extended as far as the diversion channel. The building of the toe on either side of the diversion channel will be continued, and a gap broad enough for the river to pass through will be left, to be filled up as soon as the river is diverted into the spillway.

#### THE SPILLWAY.

The spillway extends through a small hill

that rises in the middle of the dam site. Excavation for the north section is practically completed, only a few more days for work remaining for the two steam shovels now operating there. The work of lining the channel with concrete will be begun in February. Only that part between the north toe and the point where the regulating works will be located, a channel 1,200 feet long and 300 feet wide, will be lined during the present dry season. The heavier masonry will begin at the regulating works and extend south, forming part of the spillway channel and the entrance to it. Concrete work in the spillway will involve the laying of over 250,000 cubic yards of concrete, and will extend over a period of three years. In the part of the channel that will be lined this season the floor will be four feet thick and the walls will extend 20 feet above the surface of the floor. The west wall will be built first, after which the floor and east wall will be constructed. Each wall will be eight feet thick at the top of the floor, and on the back will rise in four steps to a thickness of three feet at the top. The face will be on a 1 to 10 slope. Ninety thousand cubic yards are to be laid in this section, and it is expected that the work will be done at the rate of 500 cubic yards a day. The forms have already been built, and they provide for the laying of concrete in monoliths 40 feet long by 20 feet wide. The heaviest pieces of the forms for the walls weigh 4,800 pounds and will be handled by a locomotive crane operating in the spillway on tracks parallel to the sides.

The concrete handling and mixing plant for the spillway is distinct from the plant which is being built for the locks. A dock has been erected on the old French canal just south of the south toe. Cement, sand, and rock will be delivered alongside it in barges towed up from Cristobal. The first shipment of cement has arrived, and shipments of 2,000 barrels will be made from the States at intervals of five days during the progress of the work. A locomotive crane operating along the front of the dock will handle the cement from the boats to the storage sheds and, by means of a clam shell bucket, will likewise unload the sand and rock. Cars on a belt line railway running beneath the dock will be filled by gravity with sand, cement, and rock in succession, and when loaded they will be pulled by cable up an incline 24 feet high to a platform above the mixers. Two mixers with a capacity of two cubic yards each, driven by an old French engine which will develop 75 horsepower, will mix the materials. From the mixers the concrete will be dumped into two 2-yard buckets equipped with bottom dumps, and carried on flat cars built especially for that purpose. These cars will run over a railroad 4,000 feet long to the spillway, where the buckets will be lifted from the cars by a locomotive crane, and the material will be placed. There will be two tracks between the mixing plant and the spillway, one on which the loaded cars will run to the forms and the other for taking back the "empties." Five hundred cubic yards of concrete will be handled each day.

#### GATUN LOCKS.

At the end of the year 1908 the amount of material that had been excavated from the site of the locks at Gatun was 2,789,734 cubic yards, and the excavation is more than half

done. The work was begun in October, 1906, and for the three months of that year it amounted to 26,628 cubic yards. In 1907 the excavation was 1,107,559 cubic yards, and in 1908 it amounted to 1,655,547 cubic yards. Up to the present time all the work has been done by steam shovels. Dredge No. 85, one of the 20-inch suction dredges, is now cutting its way into the site of the north or lowest locks, and it will take about 400,000 cubic yards from this chamber. Excavation in the south or upper chamber is practically completed.

Work on the plant for handling materials, mixing and placing concrete is making rapid progress. At the powerhouse site the excavation for the intake tunnel is finished, and the work of laying concrete will begin next week. The steel work for the floor of the turbine room has been delivered, and part of the electrical machinery is on the ground.

About 2,250,000 barrels of cement will be used in the concrete work for the locks, and about 2,000,000 cubic yards of concrete will be laid. Stone for the concrete will be quarried and crushed at Forto Bello, a harbor on the Caribbean about fifteen miles east of Colon, and will be towed in barges to Cristobal, thence up the old French canal to the docks now in process of construction at Gatun. Sand will be carried from a village a few miles east of Porto Bello and delivered in the same manner at Gatun. Cement will be delivered at New York harbor by the contractor and brought to the Isthmus in ships owned by the Panama Railroad Company. It will be carried in lighters to the Gatun docks.

The materials will be handled from the barges at the docks and delivered at storage bins by cableways. From the bins the sand, rock, and cement will be run by gravity into electric cars which will convey them to the mixers. The concrete will be dropped from the mixers into cars in which it will be delivered at various points along the lock site. Cableways stretching across the lock chambers will then lift the concrete from the cars and deliver it at the points desired. It is believed that the handling plant will be ready for work by July 1 of the present year. The plant at Porto Bello will be ready to supply crushed stone in a few weeks, the sand service can be begun at any time, and the cement deliveries will be begun at any time after May 1 that the Commission may desire.

#### Cable Across the Isthmus.

The South American Cable Company is laying a submarine cable 1 5-16 inches in diameter from Colon to Panama. The cable will run parallel to the old line of the Panama railroad from Colon to Barbacoas and will then parallel the relocated line to the point where it runs onto the present line, between Miraflores and Corozal. From Gatun to Barbacoas the cable will run through Gatun Lake. From Barbacoas to Panama it will run overland and will be buried alongside the railroad tracks. The first section was laid on January 3, and is 22 miles long. All the work will be done on Sundays, and it is believed that it will be finished by the end of January.

#### Tivoli Club Dance.

The regular dance of the Tivoli Club will be given at Hotel Tivoli on the evening of January 9.

## COST OF CANAL CONSTRUCTION

TABLE No. 1—"CLASSIFIED" EXPENDITURES FROM MAY 4, 1904, TO OCTOBER 1, 1903.

The total classified expenditures from appropriations for Canal construction, amounted in round numbers, up to October 1, 1903, to \$83,275,000. "Classified" expenditures do not include the following: Advances to Panama railroad, (amounting to nearly \$5,000,000); purchase of Panama railroad stock; services rendered and material sold to individuals and companies (amounting to about \$2,500,000); and all material and supplies on hand not drawn from store.

Table No. 1 divides this total sum into 17 items, and into three periods, which are: May 4, 1904, to July 1, 1907; July 1, 1907, to July 1, 1908; and July 1, 1908, to October 1, 1908.

The items show separately, the expenditures for the Departments of "Civil Administration," "Sanitation," and "Construction and Engineering;" for buildings pertaining to the above departments; for "Military Protection;" for Construction and Maintenance of Water Works, Sewers and Roads, called "Municipal Improvements;" for "Lands purchased and expropriated;" and for expenditures in connection with the Panama railroad, which do not include loans to the Panama Railroad Company from the United States Treasury, secured by interest-bearing notes.

	May 4, 1904, to July 1, 1907.	July 1, 1907, to July 1, 1908.	July 1, 1908, to October 1, 1908.	May 4, 1904, to October 1, 1908.
(1) Department of Civil Administration.....	\$1,445,000	\$704,000	\$232,000	\$2,381,000
(2) Department of Sanitation.....	4,624,000	2,300,000	474,000	7,408,000
(3) Department of Construction and Engineering.....	20,643,000	24,210,000	6,659,000	\$1,511,000
(4) Buildings for Department of Construction and Engineering, including quarters.....	6,374,000	1,924,000	282,000	8,580,000
(5) Buildings for Department of Civil Administration.....	83,000	220,000	33,000	336,000
(6) Buildings for Department of Sanitation.....	\$65,000	305,000	58,000	1,228,000
(7) Buildings for Military Protection.....	30,000	34,000	.....	64,000

(12) Docks and Wharves leased to Panama Railroad Company.....	403,000	100,000	11,000	514,000
(13) Municipal improvements for the benefit of the cities of Panama and Colon, to be repaid to the United States.....	2,015,000	234,000	32,000	2,281,000
(14) Municipal improvements for the benefit of the Canal Zone settlements, paid from Congressional appropriations.....	2,059,000	1,453,000	179,000	3,701,000
(15) Lands purchased and expropriated.....	59,000	.....	38,000	97,000
(16) Buildings, tools and machinery, Cristobal shops, leased to the Panama Railroad Company.....	170,000	4,000	.....	174,000
(17) Locomotives, cars, and equipment, loaned to and used by the Panama Railroad Company.....	588,000	22,000	.....	610,000
<b>Totals.....</b>	<b>\$41,898,000</b>	<b>\$33,188,000</b>	<b>\$8,189,000</b>	<b>\$83,275,000</b>

TABLE No. 2—EXPENDITURES OF DEPARTMENT OF CONSTRUCTION AND ENGINEERING.

Table No. 2 exhibits the total expenditures of the Department of Construction and Engineering (Item No. 3, Table No. 1), divided by periods into expenditures for "Work," "Plant," and "General Administration;" amounting in round numbers to \$51,512,000, up to October 1, 1903.

"Work" includes all direct charges, and all indirect charges not included under "General Administration."

"Plant" represents the total plant purchased to October, 1903.

"General Administration" includes the expenses of the Office of the Chief Engineer; the Disbursing Officer; the Examiner of Accounts; the Secretary of the Commission; the Chief Quartermaster's Department; the Meteorological and River Hydraulic Service; and the V. M. C. A. work in the Commission clubhouses; and also the cost of general surveys, and of transportation of the employes of the Commission on the Isthmus by the Panama Railroad Company, and expenses of telephone and telegraph service.

	Work.	Plant.	General Administration.	Total.
May 4, 1904, to July 1, 1907.....	\$12,322,000	\$7,236,000	\$1,085,000	\$20,643,000

July 1, 1908, to October 1, 1908.....	3,981,000	1,879,000	799,000	6,659,000
<b>Total, May 4, 1904, to October 1, 1908.....</b>	<b>\$29,798,000</b>	<b>\$16,736,000</b>	<b>\$4,978,000</b>	<b>\$51,512,000</b>

TABLE No. 3—TOTAL EXPENDITURES AND UNIT COSTS OF WORK—DEPT OF CONSTRUCTION AND ENGINEERING.

Table No. 3 shows the expenditures for the Department of Construction and Engineering under the general items of "Work," "Plant," and "General Administration," divided into the three periods. It also gives the excavation, both wet and dry, the yardage and unit costs, and a complete comparison of these costs. These figures show that there has been a constant reduction in unit costs. They show that dry excavation, for the first quarter of the present fiscal year, cost 64 cents per cubic yard for direct charges, and 12 cents per cubic yard for general administration, making a total of 76 cents. During cost 9 cents per cubic yard for direct charges, and 2 cents per cubic yard for general administration. The average cost per cubic yard for excavation was 10 cents for the direct charges, and 5 cents for general administration, making a total of 15 cents as against an average cost of 57 cents for these two items for the last fiscal year, a reduction of about 15 per cent.

The expenditures for work other than excavation reported on the same table, comprise the following:

Sundry preparatory and construction work pertaining to the locks and dams at Gatun, and on the Pacific slope, consisting of special surveys and borings; the shutting out and pumping out of old channels; the construction of trestles for filling of toe-walls and other purposes; the filling of the toe-walls; the construction of the railroad tracks necessary for the above named purposes, and work in connection with the rock-crushing, receiving and handling plant for Gatun locks.

	May 4, 1904, to July 1, 1907.			July 1, 1907, to July 1, 1908.			July 1, 1908, to October 1, 1908.			May 4, 1904, to October 1, 1908.

## THE COAL TRAIN.

### Method of Supplying Steam Shovels in Culebra Cut.

On the last day in November the steam shovels of the Central Division took out 67, - 130 cubic yards of rock and earth, and thus established the best record, up to that time, for excavation in a single day. Many factors entered into the making of that record—the enthusiasm of the shovel and train crews, the smooth working of the shovels and spoil trains, freedom from accidents, the quality of the material handled, and other elements of seemingly small importance or of dull routine. Of the last named kind was the coal supply.

The evening before the record was made two trains ran into the Cut, and when they returned before daylight the next morning the bins of all the shovels were full of coal. One of these trains went out from Pedro Miguel, and supplied the shovels between that point and Culebra. The other was made up at the Lirio coal pile, between Culebra and Empire, where a gang of West Indian negroes had been at work since morning shoveling soft coal onto eight 20-yard cars. It ran onto the incline into the Cut at Empire, where it waited until the 5 o'clock whistle blew and the work train ahead cleared the track. Four cars were then switched from the back of the train and placed in front of the engine, so that the shifting in the Cut could be done from both ends. The crew was made up of two conductors, one for each end of the train, two flagmen, two brakemen, the engineer, the fireman, and two negro laborers for each car.

"Spotting a shovel" is running the train alongside and leaving a car there. The track layout in the Cut is favorable for systematic "spotting." It is easy for the coal train to run up to a shovel and drop a car from either front or rear and return to the main track without covering much distance in the shift. When the car is left at the shovel two laborers are on it, and their work then begins. If the loading track is near the shovel, as it is in the beginning of a cut, it is possible to throw the coal from the car into the bin. Ordinarily a plank must be run out from the shovel to the car, and the man who watches on the shovel all night brings out a wheelbarrow, which the laborers fill with coal. The coal is then wheeled down the plank to the shovel, and this proceeding is repeated until two or three tons of coal have been piled in the bin.

While the laborers were coaling the first shovel on the night referred to the train had run to various part of the work and left seven cars alongside as many shovels, all along the Cut, from Empire to Bas Obispo. Eighteen shovels were supplied by this one train, with an amount of coal varying from 40 to 50 tons. Six nights a week for 52 weeks, rainy season and dry, this work goes on, for the shovels must have coal.

While the first eight shovels to be "spotted" were being coaled, the engine tied up at Bas Obispo, and the white men of the crew picked their way by the light of a lantern up the rocky side of the Cut, and walked over to the Commission hotel for dinner. After dinner the "spotting" was repeated, but this time more slowly, for care must be

used in threading the web of tracks in the dark.

Effort is made to have the tracks in the Cut clear of spoil trains before the locomotives are sent home at night, but this sometimes fails, and when it does the coal train must shift 17 loaded 20-yard cars away from the shovels, so that a coal car may be run alongside. Just at dark the shovel that was working at grade near Bas Obispo was "spotted," and at midnight the train ran up to a shovel which was making a cut for a track on the top of the bank, 100 feet above grade. From Bas Obispo to Culebra, on both sides and in the middle of the Cut, on every level where a shovel was at work, and at the field repair shops on the banks, the coal train made its calls. At midnight the last "spot" had been made. The cars, some of them still half full of coal, were collected and at 2 o'clock on the morning of the record-breaking day, the train was run alongside the Lirio coal pile, ready for the loading gang to resume its work.

### Visit of Congressmen.

The Congressional party, consisting of nine members of the Committee on Interstate and Foreign Commerce of the House of Representatives, eight other members of the House, and several friends, arrived at Cristobal on the *Alliance* on Saturday, January 2. They were met on the wharf by the Isthmian Canal Commission with the Chairman at its head and were brought by special train directly to Panama and taken to the Hotel Tivoli, where they will remain during their stay. The personnel of the party is as follows:

Members of the Committee on Interstate and Foreign Commerce—

W. P. HEPBURN of Iowa.  
F. C. STEVENS of Minnesota.  
J. J. ESCH of Wisconsin.  
F. W. CUSHMAN of Washington.  
JAMES KENNEDY of Ohio.  
J. R. KNOWLAND of California.  
W. P. HUBBARD of West Virginia.  
WILLIAM RICHARDSON of Alabama.  
C. L. BARTLETT of Georgia.  
J. F. Bryan Clerk of Committee.

The Representatives who are not members of the committee are—

G. A. BARTLETT of Nevada.  
J. P. CONNOR of Iowa.  
E. C. ELLIS of Missouri.  
W. E. HUMPHREYS of Washington.  
GORDON LEE of Georgia.  
G. A. LOUD of Michigan.  
E. A. MORSE of Wisconsin.  
D. E. MCKINLAY of California.

Among the persons with the Congressional party are: R. U. Sherman, son of the Vice President-elect; Richard Reid Rogers, General Counsel of the Isthmian Canal Commission; Ray L. Smith of the Washington office of the Commission. Several of the Congressmen have their wives and other members of their families with them.

On Sunday morning a large number of the party were taken on an excursion to Taboga Island on the tug *Bolivar*, leaving La Boca about 10 o'clock and returning about 5 in the evening. On Monday morning the entire party was taken across the Isthmus by special train and the day was spent in visiting points of interest at Cristobal and making a thorough inspection of the sites of the locks, dam and spillway at Gatun, returning to the Hotel Tivoli for the night. On Tuesday an inspection of Culebra Cut was made, a train with an observation car attached, being run through the Cut for that purpose.

### Criticism of Gatun Dam.

[Engineering News, December 24.]

We believe we speak advisedly in saying that not one of the published criticisms of the Gatun Dam which have appeared in the newspapers of late have brought forward a single technical fact or argument worth the attention of the engineering profession. It is not difficult, either, to find the inspiration for most of these widely published statements. One of the most pretensions of these prophets of evil, for example, is a French engineer who had his own pet plan for building the Canal. He wanted to transform the Culebra Cut into a lake and excavate it by dredging under water with Lobnitz chisels instead of in the dry. He submitted his fantastic plan to the International Board of Consulting Engineers, which was, of course, compelled to turn it down; and of course the French engineer has lost no opportunity to criticize Panama methods since. There are other critics of Panama who have likewise had pet plans for carrying out the work which have not been adopted, and who have spared no pains since in criticizing the work which is being done there.

We believe that if right standards of professional ethics prevailed, such practices would meet with general condemnation among engineers. In a paper at the Mechanical Engineer's meeting this month on the relations of the engineers to the public, the idea was put forward that it is the duty of the engineering profession to see that the public is properly informed on public questions in which engineering is involved.

It may be too much to hope for this advanced position at present; but it is surely the duty of engineers to refrain from circulating misinformation and misleading the public on engineering questions.

Of course it is not uncommon for inventors, whose schemes are turned down by a concern, to seek revenge by public criticisms; but any man aspiring to the title of engineer ought to be above such practices. Particularly is this the case where an engineer acquires reputation, so that his name carries weight with the public. Such an engineer ought to be particularly careful in his public utterances not to mislead the public in any way.

And if an individual engineer should be careful of his public utterances, much more should an engineering society. It is idle to say that the common disclaimer of responsibility for statements made in papers and discussions before the society really absolves it from responsibility. Actually the society is just as responsible for its publications and for the good or harm they may do as is the editor of a journal.

A remarkable illustration of what may result from carelessness as to obligations of this sort is a paper widely circulated last week by the American Institute of Mining Engineers. The paper advocates a change to a sea-level canal at Panama and advocates it on the ground that the author of the paper has invented some excavating machinery which he believes would so revolutionize the work at Panama that a sea-level Canal could be dug inside of two years.

It is a standing rule with reputable engineering journals of good standing not to print descriptions of new inventions until they are actually built or tested. In this paper, however, published under the auspices of a national engineering society, seven different new machines and methods of excavation are described, not one of which has ever been built or even reduced to working drawings. It is a long road from the first crude ideas of the inventor to actual practical use in engineering work. Would a mining company, after spending millions in the development of a huge ore deposit by shafts and tunnels, under advice of the best engineers, suddenly abandon the whole and adopt stripping merely because an inventor brought them some sketches of a new type of steam shovel? It would be vastly absurd for the United States to change the type of canal at Panama because of some undeveloped inventions in excavating machinery.

If the American Institute of Mining Engineers values its reputation as a serious professional society, it ought to promptly withdraw the paper referred to and undo, so far as possible, the harm it has done in misleading the public.

It is not at all difficult, as we have shown above, to account for the alarmist reports concerning the Panama plans and work. Besides the interviews given out by the disgruntled ones, whose ideas did not prevail, we have the undoubted fact that the newspapers give large space to every scare story from Panama and practically ignore statements of responsible engineers giving the real truth. The settling of the waste rock dumped in the mud in the old French canal channel along the south toe of the dam has been magnified into a disaster of ominous portent to the whole work. Stories concerning it have been published in ten thousand newspapers, while hardly one has published the real truth—that the settlement of the rock was expected to occur and saved the needless expense of dredging out the layer of soft mud before dumping the rock.

Of course the Administration has to recognize the effect of such stories upon the popular mind; and it has been decided to send down to Panama with President-elect Taft, a party of well-known engineers who will inspect the entire work and advise the Government whether the present plans and methods being pursued are sound and safe in every particular.

## OFFICIAL CIRCULARS.

## New Monthly Schedule of Pay Car.

EMPIRE, C. Z., December 31, 1908.  
TWELFTH.

Leave Empire at 7.30 a. m.  
East La Boca dumps, 8.10 to 9, 10 a. m.  
Corozal, 9.25 to 10.30 a. m.  
Miraflores—East side, 10.45 to 11 a. m.  
Miraflores—West side, 11 a. m. to 12 m.  
Pedro Miguel 12 m. to 1.30 p. m.  
Through Cut, Paraiso to Cucaracha incline, 1.30 to 3.30 p. m.  
Cucaracha shops, 3.30 to 4 p. m.  
Rio Grande, 4 to 4.30 p. m.

## THIRTEENTH.

Leave Empire at 7.30 a. m.  
Lario shops, 7.30 to 7.45 a. m.  
Culebra, 7.45 to 8 a. m.  
Through Cut, Cucaracha to Las Cascadas, 8 to 11 a. m.  
Las Cascadas Round House, 11 a. m. to 1 p. m.  
Through Cut north to Bas Obispo (lower level) 1 to 3.30 p. m.  
Las Cascadas shops, 3.45 to 4 p. m.  
Empire shops and Empire 4.30 p. m.

## FOURTEENTH.

Leave Empire at 7.30 a. m.  
Enter Cut at Bridge 53, running over high line, paying Santa Cruz and P. R. R. relocation dumps, 7.45 to 9.15 a. m.  
Matachin, 9.30 to 10 a. m.  
Gorgona shops and Gorgona, 10.30 a. m. to 1 p. m.  
Caimito, 1.30 to 3.30 p. m.  
San Pablo, 3.30 to 5 p. m.

## FIFTEENTH.

Leave Empire at 7 a. m.  
Mindi, 8.15 to 9 a. m.  
Lock site, 9.15 to 10.15 a. m.  
Spillway, 10.30 a. m. to 12 m.  
Bobio, 1 to 2 p. m.  
Tabernilla, 2.30 to 4 p. m.  
When one of above days falls on Sunday payment will be made on the same schedule as for a week day.

EDWARD J. WILLIAMS,  
Disbursing Officer.

Approved:  
GEO. W. GOETHALS, Chairman.

## Advance Payments for Ice.

COMMISSARY DEPARTMENT,  
CRISTOBAL, C. Z., December 26, 1908.

## TO ALL CONCERNED:

With the approval of the Chairman, on and after January 1, 1909, the sale of ice to individuals on charge accounts will be discontinued and deposits must be made in advance to secure shipment by all individuals who now have the privilege of charge accounts. Remittances may be made at sender's risk in cash, coupon books, post-office money orders, personal checks on local banks or banks in New York City, and should be addressed to the Deposit Clerk, Commissary Department, Building No. 2, Cristobal. Checks and money orders should be made payable to the Panama Railroad Company.

Purchasers are requested to make their first remittance to cover the estimated supply for at least forty days, and thereafter for a monthly supply from the first to the last day of a calendar month. In case of departure from the Isthmus, the amount on deposit to cover undelivered portion of orders will be refunded.

JOHN BURKE, Manager.

Approved:  
EUGENE T. WILSON, Subsistence Officer.

## Employees' Twenty-four Trip Tickets.

CULEBRA, C. Z., December 31, 1908.  
HEADS OF DEPARTMENTS AND DIVISIONS:

In accordance with list submitted by you, I am forwarding to-day, under separate cover, Employees' Twenty-four Trip Tickets, for distribution among the gold employees in your department.

Please see that the receipt form on first page of ticket is signed by employee upon delivery of ticket and forwarded at once to this office.

In event that any employees in your department have severed their connection with the Commission, or have been transferred to another department, subsequent to submitting list, tickets issued to them must be returned for cancellation, and in the case of transfers, request should be made for new ticket on Form 188 C. E. by the head of department to which employee has been transferred.

In the case of future transfers between the various departments and divisions under the Department of Construction and Engineering, employee may be allowed to retain the ticket originally issued to him. This does not apply, however, to transfers between the Department of Construction and Engineering,

Civil Administration and Sanitation. In the latter case, ticket should be taken up by the head of department to which employee is transferred and request made for new ticket, in order that the transportation may be charged to the proper department.

All undelivered tickets should be reported to this office, stating reason for nondelivery, such as "on leave of absence," etc.

Lost tickets must be reported at once to this office, in order that bulletin may be issued. If not found within 30 days, new ticket will be issued upon regular request.

Timekeepers issuing pay checks should be furnished a list of lost tickets, in order that the rule requiring the surrender of ticket upon termination of service may be waived.

Coupons may be filled out before entering train, but must be signed in the presence of conductor, and employees should be instructed to provide themselves with pencil for that purpose, in order to avoid delay in the collection of coupons.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## LEGAL NOTICES.

United States of America, } First Judicial Circuit.  
Canal Zone.

Notice is given to all concerned to appear at the court house in Ancon, Canal Zone, on or before February 18, 1909, at 9 o'clock, a. m., to claim the following named estates, which the Collector of Revenues seeks to have escheated to the Government of the Canal Zone:

Oscar Olson, a Swede, resident of La Boca, died May 24, 1907, leaving \$1.10 silver.

Peter Gross, resident of Panama, died July 9, 1905, leaving \$6.35 silver.

WALTER EMERY,  
Circuit Court Clerk.

United States of America, } In the Third Judicial  
Canal Zone. Circuit, Cristobal.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 576 hectares of the lands known as "Palo Horqueta and Matias" situated in the Canal Zone, near the villages or hamlets of Lion Hill and Tiger Hill, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$5,760; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

NELSON R. JOHNSON,

Clerk of the Circuit Court, Third Judicial Circuit,  
Cristobal, Canal Zone.

In the Circuit Court, Second Judicial Circuit, Canal Zone. Empire, December 26, 1908.

To any and all persons interested:

You are required to enter your appearance in the clerk's office in the above named court at Empire in the said Canal Zone on the 6th day of April, 1909; and to answer the petition of Tom M. Cooke, Collector of Revenues acting under Section 779, Code of Civil Procedure, stating that each of the deceased persons named below died intestate, leaving property in the Canal Zone, and that no heirs have appeared to claim the same; and asking that a day be fixed for inquiries to ascertain whether said estates escheat to the Government of the Canal Zone:

(1) Joseph P. Roche, San Pablo, died on or about May 22, 1903, leaving about 50 acres of growing bananas and personal property at Frijoles and San Pablo;

(2) John J. Farrill, Empire, died on or about July 24, 1905, leaving a pay certificate for \$20 and cash 70 cents at Empire;

(3) George L. Walker, Empire, died on or about September 21, 1906, leaving Isthmian Canal Commission pay certificate for \$92.50, cash \$1.40, and personal belongings of little value;

(4) Laughlin Short, Empire, died on or about March 8, 1905, leaving Isthmian Canal Commission pay certificate for \$2.25 United States currency and personal belongings of little value at Empire;

(5) Unknown man (white), killed on or about August 4, 1905, by Panama railroad passenger train south of Matachin, leaving \$32 Panamanian currency. In the hands of the Treasurer of the Canal Zone at Empire;

(6) Unknown man (white), found dead in Las Salinas on or about January 7, 1908, leaving \$6.5 United States currency and ten cents in Panamanian currency. In the hands of the Treasurer of the Canal Zone at Empire;

(7) Unknown man, skeleton found on or about July 8, 1908, in the woods near Gorgona water shed, leaving \$4.25 Panamanian currency, two keys, one French copper coin, one signet ring, and one pocket knife. In the hands of Treasurer of the Canal Zone at Empire;

(8) Unknown man (Indian), killed by a Panama railroad train near Mount Hope, leaving \$6.20 Panamanian currency, one silk handkerchief, a silver watch, and leather chain and key. In the hands of Treasurer of Canal Zone at Empire.

(9) Unknown man, killed by a passenger train

near Corozal on or about June 3, 1906, leaving \$1.70 United States currency, and \$1 Panamanian currency. In the hands of Treasurer of Canal Zone at Empire;

(10) Jean B. Stone, Empire, died on or about March 17, 1903, leaving cash \$160.35 United States currency and \$156.50 deposited with the International Banking Corporation, and varied personal effects at Empire;

(11) Joseph Allman, resided at Culebra, died on or about July 20, 1905, leaving \$22 United States currency and \$2 Panamanian currency.

By order of the Court.

E. M. GOOLSBY,  
Circuit Court Clerk.

United States of America, } In the Third Judicial  
Canal Zone. Circuit, Cristobal.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 143 hectares of the lands known as "Calle Bruja" situated in the Canal Zone, near the villages or hamlets of Lion Hill and Tiger Hill, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$2,480; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

NELSON R. JOHNSON,

Clerk of the Circuit Court, Third Judicial Circuit,  
Cristobal, Canal Zone.

United States of America, } Circuit Court Second  
Canal Zone. Judicial Circuit.

United States of America,

Plaintiff, vs.

Mrs. Lacroisada and husband, Manuel Corrales, Carlos Corrales et al. Defendants.

Summons for Relief.

To Mrs. Lacroisada and husband, Manuel Corrales, and Carlos Corrales:

You are required to enter your appearance in the Clerk's office of the above-named court at Empire in the said Canal Zone within forty days after the next publication of this notice, which shall be at the next regular session of said court after the expiration of said forty days; and to answer the complaint of the plaintiff, a copy of which has been mailed to your last known place of residence.

If you fail to appear within the time aforesaid the plaintiff will take judgment against you by default and demand from the said court the relief applied for in said complaint.

Witness the Honorable H. A. Gudgey, Judge of said Circuit this 23d day of December, 1908.

E. M. GOOLSBY,  
Circuit Court Clerk.

## Stages of the Chagres.

Maximum height of Chagres above low water for the week ending midnight, January 2, 1909:

## RESOLUTIONS OF SYMPATHY.

John J. Korp.

Panama Local, No. 19, I. B. S. S. and D. M., has adopted the following resolutions:

WHEREAS, It has pleased Almighty God to remove from our midst our beloved brother, John J. Korp, who departed this life December 12, 1903:

WHEREAS, By this act we have lost a true, devoted and fellow brother, refined in the highest traits of character, whom to know was to love; therefore be it

*Resolved*, That we, his brothers of Panama Local, No. 19, International Brotherhood of Steam Shovel and Dredge Men, desire to express our sense of bereavement at his untimely death and our sincere sympathy to his family in this their dark hour of sorrow; be it further

*Resolved*, That a copy of these resolutions be spread upon the minutes of Local No. 19, and a copy be furnished his family, and that a copy be also furnished THE CANAL RECORD and Steam Shovel and Dredge for publication.

S. I. LYONS, II. E. WHYDE, J. I. MAJOR,  
Committee.

Henry Muller.

At a recent meeting of the Order of Isthmian Conductors held at Las Cascadas the following resolutions were adopted:

WHEREAS, We have learned of the sad intelligence, through Brother John F. McGovern, of the death of our worthy brother, Henry Muller, who lost his life, by drowning, on the ill-fated steamer *Finance*; therefore be it

*Resolved*, By the Order of Isthmian Conductors, That we have lost a worthy brother, and his family a kind loving father and husband; and be it

*Resolved*, That our banner be draped for three regular meetings of this lodge, while we mourn his untimely taking away; and be it further

*Resolved*, That a copy of these resolutions be spread on our minutes, and that a copy of the resolutions be sent to his bereaved family at Newark, N. J., and published in THE CANAL RECORD.

C. C. BARNETT, Committee.

Mrs. Frank E. Shuck.

The following resolutions of sympathy were adopted by Court No. 6, I. O. P. K., at their regular meeting on December 17, 1903:

WHEREAS, The Supreme Being has in His infinite wisdom seen fit to remove from our midst Grace Andrus Shuck, beloved wife of Frank E. Shuck; and

WHEREAS, We feel that Brother Shuck has lost a loving helpmate, her parents an affectionate daughter, and the community a valuable resident; be it now

*Resolved*, That we extend to Brother Shuck our sincere sympathy in this his hour of bereavement, and to her parents our feeling of deep regret at her untimely end; and be it further

*Resolved*, That an engrossed copy of these resolutions be presented to Brother Shuck, a copy sent to THE CANAL RECORD for publication, and that they be spread upon the minutes of this meeting.

HOWARD CLARK, FREDERICK SHORT, HARRY A. PORTER, Committee.  
Gatin, C. Z., December 17, 1903.

## Women's Clubs Meetings.

The Culebra Woman's Club will meet in the club house on Thursday afternoon, January 7. A full attendance is desired. Owing to a misunderstanding it was stated in these columns last week that the Culebra club would hold an election of officers at this meeting. This was an error as the President, Mrs. W. P. Wheeler and Secretary Mrs. W. H. Butler, will continue to

hold office until the regular election in the spring.

The meeting of the Ancon Woman's Club, on Wednesday, January 6, will be the regular business session. The social meeting, January 20, is in charge of the home department, and a lecture on the "Fruits of the Isthmus" will be given by the Commission horticulturist, Mr. Henry F. Schultz.

The Paraiso Woman's Club held its regular meeting on Thursday, December 31, the president in the chair. A number of new members were admitted and the club has now a membership of twenty. A meeting with a program of special interest to women interested in club work, will be held at the club room at 2.30 p. m. on January 7. All women in Paraiso are invited to attend.

## Changes in Judiciary.

H. A. Gudger, Associate Justice of the Supreme Court of the Canal Zone, has been appointed by the President, Chief Justice of that Court to succeed Dr. F. Mutis Durán, whose term of office expired January 4.

Wesley M. Owen of LeRoy, Ill., formerly city attorney of LeRoy and a member of the Illinois legislature, has been appointed Associate Justice of the Supreme Court of the Canal Zone, to succeed Justice Gudger.

## Box Social and Dance.

A box social and dance will be given at Las Cascadas on Friday evening, January 15, for the benefit of the Roman Catholic Church at Culebra. A special train will be run from both Gorgona and Culebra, leaving each station at 7.30 p. m. Everyone is invited to attend, and ladies are asked to bring boxes. The grand march will start at 8 p. m.

## Missing Men.

Information is wanted in regard to H. E. W. Quiney, who was employed by the Commission as steward, from August 10, 1907, to October 21, 1907.

Information is also wanted in regard to Louis Goldman, who was discharged from the position of yard clerk in the Central Division on April 6, 1908.

Any one having knowledge concerning either of these men is requested to communicate with M. B. DePutron, Assistant to the Chairman, Culebra, C. Z.

Information is wanted in regard to B. A. Hoffmann of New Braunfels, Tex., who was formerly employed as an engineer at the cold storage plant at Cristobal. Any one having knowledge concerning him is requested to communicate with H. V. Schumann, New Braunfels, Tex.

## Independent Order of Odd Fellows.

Installation of officers of Cristobal lodge, No. 2, I. O. O. F., for the ensuing term will take place at the meeting to be held in the I. C. C. lodge hall, Cristobal, Monday, January 11, at 7.30 p. m. All Odd Fellows of the third degree are earnestly requested to attend.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

## NEW YORK TO COLON.

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, JANUARY 13, 1909.

No. 20.

## The Canal Record

Published weekly under the authority and supervision of the  
ISTHMIAN CANAL COMMISSION

"The Canal Record" is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the "gold" roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications

THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

### NOTES OF PROGRESS.

John F. Stevens on the Gatun Dam.

[Letter in the Engineering News, Dec. 31]

The thanks of the engineering profession of the United States are due to *Engineering News* for the editorial comments which appeared in your issue of December 24, on the recent outbreak of yellow journalism in regard to the Gatun dam. It is high time some recognized, qualified, standard authority on engineering questions took up the matter.

This is merely an individual expression, which may be justified by the writer's former connection with the work, by which he can justly be considered to be as well qualified to judge as to the actual conditions, as are some of the "eminent engineers" who are being so widely quoted.

If there have been any lingering doubts in the minds of any engineers as to the practicability of the plans for the Gatun dam, a study of Mr. Saville's report should dispel them. The report is a masterpiece, but will be entirely thrown away on the class of people who are, for reasons entirely apart from the merits of the case, making these attacks.

You are entirely correct in your suggestion that the long down-stream toe of the dam, as planned by the engineers, was a concession to prejudice. So was at least 25 feet in the height of the proposed dam. And the writer had intended, at the proper time, to have taken up the question of a reduction in the cross section before actual construction had begun. It is certain, had private enterprise been financing the work that a less massive structure would have been considered absolutely safe.

The animus of the attack on the canal work lies deeper than any alleged fears as to the practicability of the proposed dam or locks. A recent suggestion in the newspaper which is at the head and front of the agitation, to the effect that "had not the

whole work better be dropped and the money already spent be charged up to profit and loss," is very suggestive. Once such action was taken, the Nicaraguan scheme would come to the front backed again by all the powerful influences which before tried to foist it upon the American people for reasons not hard to understand.

The question of the advisability of building an Interoceanic Canal has nothing whatever to do with the matter. The people have decided they want the canal and they are ready to pay for it. The choice of its location has been wisely made, and the work properly planned. It is in competent hands, and is being executed with a rapidity that surprises even its friends. And the thing to do is to extend to Col. Goethals and his assistants all the encouragement and moral help possible, which the importance of the work demands. And the engineering world will have every reason to be proud of the result when it is an accomplished fact.

JOHN F. STEVENS.

New Haven, Conn., Dec. 26, 1908.

#### Sub-Aqueous Rock Excavation.

The material for the drill barge to be used in sub-aqueous rock excavation in the Canal between La Boca and Miraflores has arrived on the Isthmus. The purpose of the drill barge is to sink holes in which dynamite can be exploded, shattering the rock into pieces suitable for dredging with dipper or ladder dredges. As the clearing of mud from the rock in the channel between La Boca and Miraflores was begun only recently the barge will not be needed for several months.

The Lybuitz sub-aqueous rock breaker is making ready for its ten-day trial in the prism of the Canal at La Boca.

#### Horses and Mules in Canal Work.

Only 558 horses and mules are used on the Canal Zone in the service of the Isthmian Canal Commission. They are used chiefly in short hauling, on road work, making deliveries, collecting garbage, and in other sanitary and municipal work. The animals are cared for by the Quartermaster's Department which maintains 12 corrals for that purpose.

The amount of money paid for live stock from May 4, 1904, to November, 1908, was \$115,034, and corral supplies were purchased in the following amounts:

1904 (from May 4).....	\$ 6,150.00
1905 .....	112,332.89
1906 .....	97,211.14
1907 .....	88,820.27
1908 (to Nov. 12) .....	110,413.19
	\$414,927.49

Forage is contracted for in six months' supplies, and the recent proposals were so worded that supplies may be delivered either from the Pacific or Atlantic and Gulf coasts. Heretofore most of the forage has come by way of New Orleans. A warehouse to hold a six months' supply has been built

at Mount Hope. A noteworthy economy has recently been effected by the feeding of grass cut for sanitary reasons.

Where stable room is available animals owned by private persons are cared for at \$9 a month for a pony, and \$14 a month for an American horse. In December 104 of these horses were cared for in the Commission corrals.

#### Distribution of Seed.

Two hundred and fifty packages of vegetable seed, each containing five varieties, and 500 packages of flower seed, in two assortments of five varieties each, have recently been received by the Quartermaster's Department from the United States Department of Agriculture, for free distribution to the "gold" employees in the Canal Zone. Employees desiring to obtain seed, who have not already made application, should do so at once, in writing, to the Chief Quartermaster, at Culebra, stating the kind and quantity of seed desired. Applications will be filled in the order in which they are received.

#### Mount Hope Printing Plant.

Plans have been approved for a printing plant building to be erected at Mount Hope, in which the printing and stationery work of the Commission and the Panama Railroad Company on the Isthmus will be done. The building will be erected north of the Mount Hope Depot office, will be 195 feet 8 inches in length and 60 feet in width, and will have two wings. The height from the floor to the eaves will be 16 feet. The roof will be of corrugated iron, with a ventilator running the full length and with two skylights, each 6 feet wide, also running the length of the building on either side of the ventilators. The floors will be of pine laid on concrete, excepting in the toilet and engine rooms, where the concrete will not be covered.

Across the north end of the building will be an office 60 feet long and 20 feet wide, separated from the remainder of the main building with a railing three feet high. The entrance to the building will be so arranged that employees and others must pass in front of the office in entering the building. The remainder of the building will consist of one room, a portion of which will be used as a packing and shipping room, part as a composing room and bindery, and part as a press room. The foundations of the building will be made with a view to the placing of two Optimum presses, Nos. 5 and 6 respectively; 1 pony cylinder press; 18 job presses; 2 cutting machines; 3 ruling machines, and 1 folding machine. The part assigned for a press room is 60 feet 4 inches long, and 60 feet wide, and the composing room, bindery, and packing and shipping room will be enlarged or contracted in accordance with the demands made upon these departments.

Around two sides and the office end of the

## NOTES OF PROGRESS.

(Continued.)

part assigned for the composing room, bindery, and packing and shipping rooms a gallery, 9 feet wide, will be built, which will be used for storage space.

On the east side of the main building and at the north end, a wing will be built for use as a receiving and shipping room. It will be 60 feet 8 inches long, 26 feet wide, and will have a 4-foot concrete platform running out to a railroad siding. In this wing will also be toilet rooms for the office employes and for women. At the south end will be a wing 14 feet long and 51 feet 5 inches wide. It will be divided into a toilet room for "silver" employes, a room for the manufacture of rubber stamps, an engine room, and a stereotyping room.

**Cost of Equipment.**

From the beginning of the Canal work to November 12, 1908, \$10,792,429.79 was spent on floating equipment, and rolling stock and machinery. A statement by the Chief Quartermaster showing the amount spent each year follows:

<i>Floating Equipment—</i>			
1904.....	\$1,657.39		
1905.....	85,976.00		
1906.....	1,423,457.88		
1907.....	422,165.68		
1908.....	1,241,203.76	\$3,174,460.71	
<i>Rolling Stock and Machinery—</i>			
1904.....	585,150.00		
1905.....	3,142,874.00		
1906.....	1,989,606.00		
1907.....	1,127,332.00		
1908.....	773,007.08	7,617,969.08	
		\$10,792,429.79	

**December Record of Track Shifters.**

The six track shifting machines in the Central Division moved a total of 510,568 feet, or 96.7 miles of track during December. In the Tabernilla District track shifter No. 5 moved 100,703 feet, or 19.1 miles. At San Pablo and Caimito shifter No. 6 moved 62,546 feet, or 11.8 miles. At Gorgona and Matalcín No. 7 moved 139,697 feet, or 26.5 miles. At Santa Cruz, No. 1 moved 57,392 feet, or 10.9 miles. At Miraflores No. 8 moved 64,880 feet, or 12.3 miles, and at La Boca track shifter No. 2 moved 85,350 feet or 16.2 miles.

**Dynamite Explosion at Paraiso.**

An explosion of dynamite occurred in Culebra Cut near Paraiso, on Sunday morning, January 10, in which two men were killed and 10 were injured. Saturday evening a blast had been set off in the east hill along the the Cut and Sunday morning a powder gang was set at work under the direction of the Superintendent of Construction, Joseph Little, breaking the rock into pieces small enough to be handled by a steam shovel. This was done by exploding dynamite on the surface of the rock in a manner known to the powder men as "dobeying." Shortly after 9 o'clock a "dobey" of 14 shots was prepared and 13 of the charges were exploded. Thinking that all the charges had been exploded the men went back to where the blast had been set off. Two of them, John Moore and Michael Lee, negroes, were standing over the unexploded charge when it exploded. They were killed.

Joseph Little, Superintendent of Construction, in the Culebra district, was seriously

injured. His skull was fractured, but he was operated on at Ancon hospital, and it is believed that he will recover.

Antonio Delgado, Bolivian; Jesus Cabrera, Spaniard; Elton Hinds, Barbadian; and Job Joseph, Grenadian, are injured, but not dangerously so.

Three other men were taken to Ancon hospital but their injuries are not serious. The other men injured sustained only cuts and slight bruises.

**Visit of the Congressmen.**

The members of the House Committee on Interstate and Foreign Commerce, and other members of the Congressional party that arrived on the *Allianca* on January 2, returned to the States on January 8. The inspection of Canal work was finished on January 5. Wednesday evening, a smoker was given by the Kangaroos, at Empire, and some members of the party were entertained at dinner at the American Legation. Thursday night a reception was given at the American Legation.

Wednesday morning, afternoon, and night, and Thursday morning and afternoon, the committee held hearings in the President's suite at the Hotel Tivoli. On Wednesday, Major Sibert and Major Harding gave testimony on the foundations of the dam and locks at Gatun; Colonel Hodges, on the subject of lock gates and lock construction; Mr. Rousseau, on the dimensions of naval vessels as related to the size of the locks; Major Gaillard, on Canal excavation with special reference to the Central Division; Chief Justice Gudger, on the judicial system of the Canal Zone; Col. Tom M. Cooke, on the question of leased lands in the Canal Zone; Major Wilson, Chief Subsistence Officer, on all questions relating to the Subsistence Department, including the Commissary.

On Thursday morning Joseph Bucklin Bishop, Secretary of the Commission, testified in relation to the hearing of complaints of employes, to the publication and distribution of THE CANAL RECORD, and to other matters in his department; Major Devol, testified in relation to the Quartermaster's Department, of which he is head. The final session of the Committee on Thursday afternoon was given up entirely to hearing Colonel Goethals, Chairman and Chief Engineer, who testified on the entire work of the Canal and on the subject of Zone Government.

**Teachers' Meeting.**

The fourth teachers' meeting of the present school year was held in the Ancon school building on January 9, the white teachers meeting in the morning from 8 to 11, and the colored teachers in the afternoon from 1 to 4. Mr. Luis Amenabar of Coquimbo, Chile, was a visitor at the morning meeting. He is on his return to Chile after a visit to the United States where he has been inspecting the public school system and expects to visit some of the schools in the Zone while he is on the Isthmus. After a discussion of the method and benefits of the proposed medical inspection the work of the meeting was a continuation of the work begun the previous month in regard to the method of developing efficiency in oral and written composition. There was a short discussion of the report made by the instructor of Helen Keller as to how Miss Keller learned the significance

and use of language. This report throws light on the natural way of acquiring language.

In the afternoon meeting the following resolutions of sympathy were adopted:

WHEREAS, It has pleased Almighty God, the Sovereign Ruler of the Universe, to call from this world the soul of our dear brother, Stephen Parker Dale, who labored as school teacher and catechist at Mount Hope, for a period of three years; also as one of the teachers of the Cristobal colored school for a period of one year, and who was always of a quiet and genial disposition, and whose death is deeply lamented, be it

*Resolved*, That we, the colored teachers, and the Superintendent of the Canal Zone Free Public Schools, sincerely condole with the family and relatives of the said brother, Stephen Parker Dale, in their sad and irreparable loss, and he it further

*Resolved*, That a copy of these resolutions be entered on the minutes of this meeting, a copy be sent for publication in the columns of THE CANAL RECORD, The Chronicle, and The Independent, and a copy be sent to the bereaved family.

**Injured Canal Employees.**

The bill introduced in the House of Representatives by Mr. Mann of Illinois, providing compensation for injured employes on the Isthmian Canal, which was published in full in THE CANAL RECORD of December 23, has been reported back to the House from the committee with recommendation that it be passed. In returning the bill to the House the committee made the following report:

The act of the last session of Congress, approved May 30, 1908, entitled "An act granting to certain employes of the United States the right to receive from it compensation for injuries sustained in the course of their employment," was specifically made applicable to persons engaged "in hazardous employment under the Isthmian Canal Commission." That act provided for no compensation for injuries to an employe unless said injury shall continue for more than fifteen days. It also forbade any compensation where the accident was due to negligence on the part of the employe injured.

Prior to the passage of the act the Isthmian Canal Commission, under its practice, continued the pay of employes injured in the regular performance of their duties, regardless of the character of the employment, unless the injury was due to gross negligence on the part of the employe. So far, then, as temporary injuries of employes under the Isthmian Canal Commission are concerned, the act does not operate to the benefit of the injured employes, but to their detriment. As the Government in the construction of the Isthmian Canal is engaged much upon the same basis as an ordinary contractor in making arrangements with employes for work, it is considered desirable that the Isthmian Canal Commission may, through its own rules and regulations, provide that employes injured without gross negligence in the regular performance of their duties be retained on the pay roll whether they are detained from labor less than fifteen days or not.

The proposed bill authorizes the Isthmian Canal Commission, under rules to be fixed by it, to grant leave of absence to employes with pay for time necessarily lost as the result of injuries received in the course of employment, not exceeding in the aggregate thirty days per annum. The passage of this bill is urged by the Isthmian Canal Commission and also by the employes of the Government working on the Canal. The bill was prepared by the general counsel of the Isthmian Canal Commission, who appeared before the committee and presented the reasons for its enactment.

**Commission Action.**

At a meeting of the Isthmian Canal Commission on December 24, 1908, the following action was taken:

*Resolved*, That for all employes appointed on and after January 1, 1909, the Government rate of transportation on the steamers of the Panama Railroad Steamship Line, allowed employes and dependent members of their families, shall be thirty dollars. Such transportation shall be granted in accordance with the rules prescribed by the Chairman.

The office of District Dental Surgeon, James Grant, was opened for business at Gorgona on Monday, January 11.

## DECEMBER HEALTH REPORT.

## Improvement in Sick Rate.

ANCON, C. Z., Jan. 9, 1908.

To the Chairman Isthmian Canal Commission, Culbra, C. Z.

Sir: I forward herewith, report of the Department of Sanitation for the month of December, 1908.

The sick rate for December shows a slight improvement over November, it being 25.95 per thousand, as compared with 27.16 per thousand for November.

The death rate for December shows a considerable increase over November. This is mainly due to the fact that the deaths from violence during December show the largest in the history of the work on the Isthmus, being 48.6 per cent of the total number of deaths. Eliminating the deaths from violence, the death rate shows a great improvement over the same period of last year; in December, 1907, there being 56 deaths from disease, with a ratio of 14.69 per thousand, per annum, while in December, 1908, there were but 44 deaths from disease, with a ratio of 12.81 per thousand, per annum.

The malarial cases show a diminution of 214 cases over the previous month; the death rate from this disease remaining practically the same.

The death rate of the Canal Zone, from all causes shows a considerable difference, in favor of the Zone, over Panamanian territory. The Panamanian territory, (Panama and Colon) with a population of 54,472, shows a total of 151 deaths, with a ratio of 33.28 per thousand per annum, while the Canal Zone, with a population of 71,707, shows 124 deaths, with a ratio of 20.75 per thousand per annum.

The rate for the Zone is for both employes and non-employes.

There have been no cases of yellow fever, smallpox or plague upon the Zone, or in Panama or Colon.

A small epidemic of smallpox has been reported from the country tributary to San Carlos, a small town in Panamanian territory, about 50 miles from Panama City. No spread of the disease from its present location is anticipated.

Very respectfully,

R. E. NOBLE,

Acting Chief Sanitary Officer.

## Gatun Dam Facts Perverted.

It seems to be the fate of every great national enterprise undertaken by the United States to be assailed by a more or less numerous and always vociferous, crowd of detractors and prophets of disaster. Such has been, and evidently will continue to be, the fate of the Panama Canal. The latest evidence of this was the altogether misleading statement that the settlement of a small section of the Gatun dam proved that the site for the dam was unstable, and that the structure when completed, must inevitably cave in and let loose the waters of the great Gatun Lake.

From the newspaper point of view, this item, as cabled from Panama, was a most attractive piece of sensationalism; and one of the leading New York dailies has not hesitated to exploit the incident, with all those refinements of the art which are so well understood and remorselessly practised to-day. Interviews were sought with engi-

neers who were known to be opposed to the present lock-and-lake plan of construction as adopted by the Government, and their lurid predictions of what would happen, if the canal were completed along the present lines, were spread upon many a page of the journal in question.

Now, the *Scientific American* is in a position to assure its readers that this subsidence of a small portion of the dam is a matter of no significance whatever, and gives not the slightest reason to suppose that the dam when raised to its full height will not be perfectly stable.—*Scientific American*, Dec. 26, 1908.

## EXECUTIVE ORDERS.

## Appointment of Justices.

Under authority vested in me by law, and until otherwise provided by law or ordered, H. A. Gudger is appointed Chief Justice of the Supreme Court of the Canal Zone, at a salary of six thousand five hundred dollars per annum.

Effective January 4, 1909.

THEODORE ROOSEVELT.

THE WHITE HOUSE,

December 23, 1908.

[No. 996.]

Under authority vested in me by law, and until otherwise provided by law or ordered, Wesley M. Owen, is appointed an Associate Justice of the Supreme Court of the Canal Zone, at a salary of six thousand dollars per annum.

Effective January 4, 1909.

THEODORE ROOSEVELT.

THE WHITE HOUSE,

December 23, 1908.

[No. 997.]

## Improving Panama Railroad.

It has been decided to straighten the line of the Panama railroad between Corozal and Panama. In the 6,000 feet from Corozal to the La Boca "Y" there are at present five curves. The reconstruction which will begin immediately, will eliminate three curves, will reduce the sharp curve at Camp Diablo from 9 to 4 degrees, and will take out a total of 110 degrees of curvature, at the same time making the line 100 feet shorter and giving good vision at all points. The economy in operation which the new line will effect has been computed as justifying a capitalization of \$56,000 at 4 per cent and the work will cost only \$36,000. This is on the permanent line.

## Twenty-Fourth Victim of Bas Obispo Explosion.

Simeon Osborn of Deersland, St. Michael's, Barbados, who was injured in the dynamite explosion at Bas Obispo, on December 12, sustaining a fracture of the spine and a fracture of the left thigh, died at Ancon Hospital on January 8. He was 23 years of age, unmarried, and had resided on the Isthmus four years. His death is the twenty-fourth resulting from the Bas Obispo explosion.

The sea-going suction dredge *Culebra* has been beached at Perico Island and is undergoing general overhauling. It has been in service without extensive repairs for a year. From 15 to 20 days will be consumed in the overhauling and repainting.

## DECEMBER DREDGING.

## Wet Excavation in December—New Record for Pipe Line-Suction Dredges.

The total amount excavated by the dredges in December was 1,466,755 cubic yards. Of this amount, only 1,438,323 cubic yards are included in the official figures of Canal excavation. The first statement of dredging in the Pacific Division gave the amount excavated as 675,766 cubic yards, but later returns show that the amount excavated actually was 750,136 cubic yards.

In the Atlantic Division the dredges at work in the entrance at Limon Bay are striking harder material as they advance, and it is believed that they will be unable to make such good records in the future as they have been making in the past few months. The sea-going suction dredge *Ancon* will soon leave the outer channel and begin work in the harder material inside the coral reef. Excavating harder material and making longer runs will probably reduce her output.

Dredge No. 85, in the nineteen days that it was working in the prism in Limon Bay, excavated 119,000 cubic yards, an average of 6,263 cubic yards a day. It was excavating in favorable material. This is the best record so far made on the Canal work for a dredge of this type—20-inch pipe-line suction. This dredge is now working its way into the chamber for the south or lower locks at Gatun, to excavate 400,000 cubic yards. In this work it excavated 18,934 cubic yards before the close of the month.

The dredges of the Atlantic Division made the following records in December:

DREDGES.	Cubic Yards.		
	Earth.	Rock.	Total.
20-inch suction, No. 82.	28,432		28,432
20-inch suction, No. 85.	137,934		137,934
Sea-going suction, <i>Ancon</i> .....	315,250		315,250
Ladder, No. 1.....	113,501		143,501
Ladder, No. 6.....	29,259	20,432	49,691
Dipper, Mindi.....	30,235	11,576	41,811
Total.....	684,611	32,008	716,619

The records of the dredges in the Pacific Division were as follows:

DREDGES.	Cubic Yards.		
	In prism.	Outside prism.	Total.
Dipper Dredge.....	51,980		51,980
Ladder, Mole.....	3,560	105,870	109,430
Ladder, Gopher.....	114,962		114,962
Ladder, No. 14.....	58,132		58,132
Sea-going suction, <i>Culebra</i> .....	357,801		357,801
20-inch suction, Sand-piper.....	57,831		57,831
Total for month.....	644,266	105,870	750,136

The sea-going suction dredge *Culebra* was working in the outside channel at La Boca and was excavating mud and a small amount of rock. The sea-going dredge *Gopher* excavated in the outside channel and also in the channel above the La Boca wharf, the material being principally mud. The ladder dredge *Mole* was at work in the channel and in deepening the approach to the shipways. In the channel to the shipways the excavation amounted to 105,870 cubic yards. Ladder dredge No. 14 and the dipper dredge were working in the Canal channel above the wharf. The dipper dredge was excavating both mud and rock.

## SOCIAL LIFE OF THE ZONE.

### Meeting of Canal Zone Federation of Women's Clubs.

Arrangements for the January meeting of the Canal Zone Federation of Women's Clubs have been completed. The president, Mrs. Lorin C. Collins sailed from New York January 8, on the *Panama*, accompanied by Mrs. John D. Sherman, secretary of the General Federation of Women's Clubs, who is coming in order to be present at the convention.

The meeting will take place at the Hotel Tivoli, Ancon, on January 30, beginning with a business session at 9.30 a. m. Details in regard to the transportation of delegates and other club members will be given as soon as they are determined upon. Each club is entitled to a representation of four delegates and alternates, and all women who are interested in the woman's movement are urged to be present at the meetings. The social session in the afternoon will be of special interest. Preparations have been made by the entertaining club to provide for the comfort of the visiting women during the day.

The president of the General Federation of Women's Clubs in the United States, Mrs. Philip North Moore, has accepted the invitation of the Zone Federation to be present at the January convention, as the guest of the Canal Zone Federation of Women's Clubs. She will arrive on the Isthmus on January 26. Mrs. Moore has been associated with public work in her home city, St. Louis, Mo., since 1890. She is actively interested in the St. Louis Training School for Nurses, and is a member of the board of directors and chairman of District Nurse work, in which she has been actively interested since its inception. She is vice-president of the St. Louis School of Philanthropy, and is a charter member of the Wednesday Club of that city, having been president and director from 1892 to 1896. Her interest in music led her to become one of the principals in the formation of the Musical Club, and she is also interested in the St. Louis Symphony Society. Mrs. Moore is one of the three alumnae trustees of Vassar College, from which institution she was graduated in 1873, and has served two terms as president of the National Association of Collegiate Alumnae. She was at one time president of the Missouri State Federation of Women's Clubs. Her association with the General Federation is of long standing. She was corresponding secretary for four years, treasurer for two years, and first vice-president for four years. At the biennial convention held in Boston in June, 1908, she was elected president of that organization. Mrs. Moore has travelled extensively both in the United States and in Europe. She will be accompanied on her visit to the Isthmus by her daughter who is a student at Vassar College.

Another visitor who will be present at the convention in January, as the guest of the President of the Zone Federation, is Mrs. John Dickenson Sherman of Chicago. Mrs. Sherman has served since 1902 as recording secretary of the General Federation, and is now second vice-president. She is a member of the faculty of the John Marshall Law School in Chicago where she gives instruction in parliamentary law. She is parliamentarian of the Illinois State Federation and is often

called to act in that capacity in various state and national organizations. Her book on parliamentary law has reached its fifth edition and is the adopted authority in many organizations.

The Ancon Woman's Club entertained the women of the Congressional party at the meeting on January 6. It was the regular quarterly business meeting of the club. The visitors having expressed their interest in the work of the Zone clubs and wishing to know something of what is being done, the regular business was transacted without deviation from the usual routine. The president gave a short address of welcome and outlined briefly the aims and efforts of the club and this was followed by the reports of chairmen of departments. Songs were interspersed by Mrs. Frank M. Roberts of Pedro Miguel and Mrs. Charles W. Boxer of Ancon with Mrs. Orenstein at the piano. In addition there was a five-minute talk on the history of the organization of the Zone clubs and their general purpose. The program was followed by a short recess during which refreshments were served by the social committee. Just before 4 o'clock the visiting ladies were obliged to take their leave in order to attend a reception which was given at that hour by the President of the Republic of Panama and Mrs. Obaldia.

The club resumed its business meeting when matters of importance were presented. An effort is being made to secure permanent quarters for the club and the committee made a favorable report on the work that has been done in this direction. It is hoped to have provision made for the club library, and special equipment for the art classes which are to be organized in connection with the art department. A meeting in the interest of this department was held at the home of the chairman, Mrs. R. W. Fenn, on Saturday afternoon, January 9. The home department announced its program meeting for January 20, also programs arranged for later meetings, one of which will be on "Native dishes and how to prepare them." The educational and literary departments announce their meetings for the next four weeks as follows: January 13 at the residence of Mrs. George L. Campen, a review of the history of Rome, religions of early Romans, and other subjects; January 27, the social life of ancient Rome; February 9, the greatest romance of ancient Rome, and February 24, Rome's bequest to modern times. At each of these meetings there is a fifteen-minute drill in parliamentary law. The philanthropy department continues its monthly excursions to the various institutions in Panama. Letters of thanks and acknowledgment of gifts from the superintendent of the Palo Seco leper colony and from individual inmates of the home for the aged were read by the chairman.

The Paraiso Woman's Club entertained the women of the community at a reception on Thursday afternoon, January 7, there being about 60 guests present. The club rooms were decorated with palms and bunting and cut flowers. A mixed program was given, consisting of piano solos by Mrs. Montgomery, Miss Margaret Penman, Miss Maisie Blount, and Miss Bertha McCombs; songs by Mrs. Wm. Lowe and a recitation by Mrs. L. M. Vacher, and an informal talk on the clubs on the Isthmus. Refreshments, ice cream and cakes were

served at small decorated tables. Miss Lulu Grobe was chairman of the committee on arrangements and a large number of club members acted as her assistants. Guests from Pedro Miguel and Las Cascadas were present.

The Cristobal Woman's Club gave its annual complimentary concert in the clubhouse on Wednesday evening, January 6, before a well filled house. On the program were Mrs. E. Lewis Baker, Mrs. Otis Biddel, and Mr. Muller with songs; Mrs. Frank Ullrich piano, Miss Ruby Delgarde, violin. The Cecilian chorus, consisting of club members, was heard for the first time in three numbers and a trio of Italian musicians gave several selections on stringed instruments.

The Gorgona Dramatic Club repeated its performance of the comedy "The Doctor" on Thursday evening, January 7, before an audience of the residents of Gatun, San Pablo and Tabernilla which overflowed the entertainment hall of the Commission clubhouse at Gorgona. The farce was received with interest and amusement. At the close of the performance the guests from the Line gave an expression of their appreciation and enjoyment by hearty applause and a vote of thanks. The performance was entirely complimentary to out of town visitors, although a small number of Gorgona residents were also present. The dramatic club, which is a permanent organization, has under preparation a rural drama entitled "Down in Maine."

The Gorgona Woman's Club has preparations under way for an entertainment to be given about the end of February.

The Las Cascadas Woman's Club held its semi-annual election of officers on January 7, with the following result: President, Mrs. J. E. Martin; first-vice president, Mrs. F. L. Crosby; second vice-president, Mrs. T. G. Williamson; secretary, Mrs. W. D. Stanton; treasurer, Mrs. H. H. Doylan. The entertainment committee appointed for the current month is Mrs. A. N. Naylor, Mrs. D. Watts, Mrs. T. J. Grimmison, and Mrs. F. L. Crosby; visiting, Mrs. T. G. Williamson, and Mrs. Charles R. Lingo. Delegates to the Federation meeting were elected and the usual business disposed of.

The Pedro Miguel club held its business meeting on Wednesday, January 6. Arrangements for an entertainment will be made shortly. The social meetings are well attended. On the evening of January 20 Mr. J. W. Holland will give an entertainment consisting of monologues and impersonations in the club rooms, one-half the proceeds of which will be donated to the Woman's club.

### Evangelistic Meetings.

The executive committee of the Canal Zone Christian Federation held its meeting on Sunday afternoon, January 3, at Empire, where final arrangements were made for the Munhall evangelistic meetings which began in the Commission chapel in Empire on Sunday, January 10. Dr. L. W. Munhall, with his "gospel singer," John J. Lowe, arrived Friday, January 8, on the *Colon*, and will remain on the Isthmus about six weeks. He will hold services in Empire, Gorgona, Culebra, Cristobal, Gatun, Las Cascadas and, if time permits, in several other towns. Dr. Munhall is a well known evangelist, and a very forceful speaker.

## LABOR PROBLEMS.

## Laborers Who Prefer "The Bush" to Commission Quarters.

Supplementing the statements of the Chief Subsistence Officer published in THE CANAL RECORD of December 30, 1908, in regard to the operations of the Commission hotels and messes, the following comments by the Chief Quartermaster are published:

The following statistics in regard to the situation as it presents itself at the present time are furnished, including both Isthmian Canal Commission and Panama railroad employees:

	No. of West Indians actually at work.	No. of same employed by the Commission.	No. in Comm'n. and P. R. quarters.	No. not in Comm'n. or P. R. quarters.
1907—				
November 1.....	20,655	25,199	11,920	13,279
1908—				
November 1.....	19,811	21,164	7,569	16,600
October 1.....	19,932	21,317	7,889	16,428
September 1.....	21,122	25,768	9,434	16,334

From the above it will be seen that 3,321 more West Indians were living in the "bush" on November 1, 1908, than on November 1, the year previous. Should the present rate of transfer from Isthmian Canal Commission houses to villages continue, there would be no West Indians in Commission houses at the end of two years. This of course is taking an extreme view of the matter, but it must be admitted that at the present time a population of 16,600 West Indian employees living outside of Commission houses enters into the problem of sanitation.

It is believed that the existing conditions result from the evident preference of the West Indian for a home of his own, no matter how crude and unsanitary. This is not unnatural, viewed from a broad standpoint, and the West Indian is only following the instinct inherent in all classes of people for domestic life.

There are three viewpoints of this matter—that of the Sanitary Department, that of the Quartermaster's Department, and that of the Subsistence Department.

**Sanitary Department**—Sanitary regulations were promulgated as early as January 25, 1905, under Ordinance 1. The gist of the rules governing the inhabitants of villages is found in the "Notice to Owners and Tenants," posted in the villages, and which is as follows:

Within 24 hours you are required to remove and bury all bottles, tin cans and such useless articles lying around your premises as will hold water; also to burn all paper and old clothing scattered about.

You are further warned to keep said premises in a sanitary condition at all times, and never to allow the above-mentioned articles to accumulate on said premises.

Disregard of this notice will be considered a violation of sanitary regulations, and will be dealt with according to the laws of the Zone.

The difficulty presented here would appear to lie in the enforcement of rules, rather than in their formulation. The population is widely scattered and strict enforcement of compliance with rules would of necessity require house to house visits at very frequent intervals, and insistence on obedience.

**Quartermaster's Department**—This deals with the subject of labor and quarters. Adequate quarters are available for this class of labor, and the continued movement to the "bush" only vacates quarters, creating no difficulty. It has been authoritatively stated that the physical condition of laborers subsisting outside of Isthmian Canal Commission kitchens and messes, is not on a par with that of those subsisting in the kitchens and messes. How much this actually re-

duces effectiveness in the performance of work is not known, perhaps not to a very great extent. This was undoubtedly true two years ago, or even a year ago, but it is doubtful whether it is entirely applicable at the present date. Branch commissaries are established at practically every point in the Zone, and all laborers have access to them. Foodstuffs in the outside markets are considerably cheaper, facilities for housing the laborers outside are better, and a large proportion of the West Indians have brought their women over, and are better cared for than they were at home.

A very decided advantage is presented to the Quartermaster's Department from a stable population reducing almost entirely the necessity for any recruiting. There has been allotted for the current fiscal year \$288,604.68 under "Incidental Expenses," the major item being for recruiting. There has been expended during the four months ended October 31, for recruiting only \$57,387.07, of which \$40,097.06 has been collected, leaving only \$17,290.01 as the actual expenditure. Under date of November 7, 1908, the Acting Chairman was informed by this office that there will probably remain \$188,604.68 unexpended from this appropriation at the end of the fiscal year; this with the request to divert \$40,000 to other purposes.

The appropriation, therefore, for one year, will probably cover two years or more. This is a very decided reduction in expenses. Another advantage of a permanent force in the Canal Zone is that the men became accustomed to the work, fitted into certain places—or in other words, localized, creating a much more efficient force than would a shifting population to and from the West Indies.

**Subsistence Department**—The matter pertaining to the Subsistence Department are presented by letter from the Subsistence Officer under date of November 16, 1908, who states:

The attendance in the messes has been falling off from about 4,000 per day the first of August to 3,400 the first of November; the kitchens have been falling off from 6,000 the first of July to 4,000 the first of November.

Under date of September 2, 1908, the Chairman issued instructions that previous instructions from this office requiring that all West Indians show a meal check before they were provided with sleeping quarters, should be rigidly enforced—this with a view to compelling the laborers to eat at the kitchens. It was thought at the time that the enforcement of this order would have the effect of increasing the patronage of the kitchens by about 1,000. The results show it had the opposite effect. As soon as it was enforced, about 1,600 of the laborers went into the "bush" altogether, neither eating nor sleeping in Commission houses. It is believed from the report of the Subsistence Officer that a method of feeding West Indians by sale from the commissaries instead of by messes, can be met, if it is definitely understood that such action is sanctioned.

In conclusion, it is my belief that the only real difficulty presented is that pertaining to the Sanitary Department. The Quartermaster's Department and the Subsistence Department can arrange the quarters and food to fit the circumstances. I am also of the opinion that the time to prevent the West Indians living in the "bush," has passed. The situation is not theoretical, but an accomplished fact, and it must be dealt with as such. It is not believed that some 16,000 laborers could be driven from their homes into Commission quarters without labor trouble serious enough to interfere with the construction of the Canal.

In his report for November, the Chief Quartermaster states that 345 additional West Indians left Commission quarters dur-

ing the month, and presumably have moved to native villages or the "bush." Notwithstanding this continued movement the number of cases of malaria among employees admitted to the hospitals has decreased and was lower in November than in any month since August, although the total force has remained practically stationary. The number of cases of malaria among employees admitted to the hospital in August, September, October, and November, of this year, and 1907, was as follows:

Month.	1907.	1908.
August.....	2,181	1,525
September.....	1,811	1,410
October.....	1,596	1,822
November.....	943	1,086

These figures show that the present measures of sanitation extended to the native settlements and to the inhabitants in the "bush" are proving effective in controlling malaria there.

## PERSONAL.

Commissioner Jo C. S. Blackburn and family, Judge L. C. Collins and family, and Judge Wesley M. Owen, are passengers on the *Panama*, due at Cristobal on January 14.

Capt. Geo. M. Hoffman and family of Gatun, returned to the Isthmus on the *Colon* on January 8.

## Obituary.

Bert Gamble, 35 years old, of Pittsburg, Pa., died at Colon Hospital on January 1. He had lived on the Isthmus for three years and eight months. Mr. Gamble was unmarried and his nearest relative is his brother, J. A. Gamble, who resides at 316 East 31st street, Chicago, Ill.

J. H. Petry, an American, 61 years old, died at Ancon hospital on January 5. He had been on the Isthmus for three years; was married, and his widow lives at Empire, C. Z.

## Missing Man.

Information is wanted in regard to Herman H. Dell, who voluntarily resigned from the position of seaman in the Atlantic Division on June 15, 1908. Anyone having knowledge concerning him is requested to communicate with Mr. J. A. Moore, care of Panama Railroad Company, Ancon, C. Z.

## Red Cross Society.

All persons desirous of becoming members of the Canal Zone branch of the International Red Cross Society are requested to send their names to Maj. C. A. Devol at Culebra, at once, in order that an organization may be perfected before the arrival of Mr. Taft, who is expected the latter part of this month. Sixty persons have already signified their intention of becoming members.

## Religious Services at Las Cascadas.

Religious services will be held in the Commission chapel at Las Cascadas every Sunday afternoon at three o'clock. Rev. John W. Holland, Commission chaplain at Culebra, will be the regular preacher.

A requisition has been made for 1,000 tons of open hearth steel rails to be used on the relocation of the Panama railroad. This amount will lay ten miles of tracks, and will furnish about a six months' supply to the construction gangs.

## LETTERS FROM THE LINE.

(Communications to this column must be signed in each instance with the name and address of the writer.)

## Medal Service.

THE CANAL RECORD:

Would be very grateful for information as to whether I am entitled to a medal under the following conditions: Entered the service of the Panama railroad on the Isthmus, January, 1907, silver roll; gold roll October 1907; transferred to Electrical Department Isthmian Canal Commission, July, 1908; service has been continuous. No doubt this same condition applies to a number of employees who would be glad to know if their silver service is to count.

## AMERICAN CITIZEN.

[Continuous service on either the gold or the silver roll or on both will count].

## To Attend Inauguration.

THE CANAL RECORD:

Lieut.-Col. Goethals has authorized the use of your columns for the furthering of a scheme to have the Canal workers represented at the inauguration of President Taft.

It is hoped that during their stay at Washington they will be taken care of by the Inaugural Committee. They will take their leave at that time and after the inauguration will be at liberty to go to their homes or wherever they wish.

It is desired to have all classes and occupations represented, but those who have had service in the Army or who have attended military colleges will be given preference.

Any one interested should communicate with the undersigned, stating age, position, date next leave is due, and service with any military or semi-military organization.

PERCY T. SEALY,

Chief Elec., P. R. R. Mfg. Plant, Cristobal.

Cristobal, C. Z., December 14, 1908.

## Card of Thanks.

THE CANAL RECORD:

I wish to express my heartfelt gratitude and thanks to all of my friends and brethren of the different fraternities, who rendered me so much comfort and sympathy in my sad bereavement, and also for the beautiful floral offerings.

FRANK E. SHUCK.

Gatun, C. Z., December 30, 1908.

## Gatun Court No. 6, I. O. P. K.

The following officers were chosen at the first annual election of Gatun Court No. 6, I. O. P. K., on December 31, 1908: Judge, S. B. Adkins; prosecuting attorney, W. H. Hausel; defending attorney, C. O. Hobson; chaplain, E. F. Braun; comptroller, C. P. Shea; sheriff, R. E. Hopkins; clerk, F. E. Shuck; inner guard, R. G. Henning; deputy sheriff, C. R. Hughes; delegates to supreme court, G. P. Ball, H. A. Porter, and G. C. Peterson; supreme jurors, G. P. Ball and L. P. Stanley.

## Notice to Shovel Men.

The regular meeting of the I. B. of S. S. and D. M. will be held in the I. C. C. lodge hall, Empire, on Sunday, January 17, at 2.30 p. m.

## Brotherhood of Locomotive Engineers.

Regular meeting of Division 756, Brotherhood of Locomotive Engineers will be held at Las Cascadas on Sunday, January 17, at 1 p. m.

## In Favor of the Commissaries.

CRISTOBAL, C. Z., Jan. 4, 1909.

THE CANAL RECORD:

At a mass meeting held in Cristobal, Saturday evening, January 2, it was resolved that a copy of the appended resolution be submitted to the President of the United States, the Secretary of War, the Isthmian Canal Commission, to all employees of the Isthmian Canal Commission and Panama railroad on the Canal Zone, and to THE CANAL RECORD.

S. C. POTTS,

Secretary.

WHEREAS, It has come to our notice that certain bankers and business men established in the cities of Colon and Panama, in the Republic of Panama, are circulating for signature a memorial addressed to the President of the United States, in which memorial it is asked, among other things:

(1) That the commissary stores should import only such articles as are authorized to be sold in post offices in the United States;

(2) That the Commissary stores should sell merchandise only to the employees of the United States and should supply only victuals to the employees of the Panama railroad;

(3) That the Isthmian Canal Commission should not be permitted, directly or through the Panama Railroad Company to enter into competition with native enterprises; and

WHEREAS, It is apparent that if the prayer of such memorial were granted by the President and Congress of the United States, there would ensue a great curtailment of the commissary privileges now enjoyed by the Americans resident in the Canal Zone; and

WHEREAS, It is apparent that the request "That the Isthmian Canal Commission should not be permitted, directly or through the Panama Railroad Company to enter into competition with native enterprises," is intended to accomplish the discontinuance of the operation by the Commissary of the laundry, the bakery, and other similar departments of the Commissary; and

WHEREAS, Past and present experience leads the American employees of the Isthmian Canal Commission and the Panama Railroad Company to the conclusion that the operation of all the various departments of the Commissary, without any curtailment is essential to their continued physical well being, happiness and efficiency, and that the proposals of the Panama merchants are made solely with a view to the enrichment of such merchants at the expense and to the detriment of the employees of the Isthmian Canal Commission and Panama Railroad Company; and

WHEREAS, The employees of the Panama Railroad Company are an inherent and essential portion of the organization used for the construction of the Canal; and

WHEREAS, The Commissary Department is an institution in the nature of a co-operative mercantile establishment rather than a governmentally-owned concern, its shareholders being the employees of the Isthmian Canal Commission and Panama Railroad Company; such shareholders by their purchases from the Commissary; paying all the expenses of operation, including the construction of plant; Now, therefore, be it

Resolved, By the employees of the Isthmian Canal Commission and the Panama Railroad Company, resident in Colon and Cristobal, that we respectfully protest against any action on the part of the Government of the United States or the Isthmian Canal Commission which will result in curtailing in any degree the Commissary privileges now enjoyed by us, and be it further

Resolved, That all employees of the Isthmian Canal Commission and Panama Railroad Company be communicated with, to the end that there may be made a united protest against the proposals of the merchants and bankers of the Republic of Panama, and be it further

Resolved, That a copy of these resolutions be forwarded to the President of the United States, the Secretary of War, the Isthmian Canal Commission and the Congressional Committee now visiting the Isthmus of Panama.

DR. M. E. CONNOR, I. C. C. Health Officer, Colon and Cristobal.

W. O. ADAMS, I. C. C. Dry Dock.

E. L. HUBBARD, P. R. R. Storekeeper.

I. A. GILES, I. C. C. District Quartermaster.

DR. LLOYD NOLAN, I. C. C. Surg., Colon Hospital.

LOUIS LOEFFLER, Clerk, P. R. R. Commissary Dept.

M. F. SWAN, Clerk, I. C. C. Subsistence Dept.

M. E. ENGLANDER, P. R. R. Locomotive Engineer.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

Appended is the score made in the duck pin tournament for singles and doubles held at the Commission clubhouse at Cristobal between the four Young Men's Christian Associations on the Isthmus on January 1, 1909:

SINGLES.		
Association	Name of Contestant.	Total.
Culebra	Oliver, gold medal.	284
Cristobal	Morrill, silver medal.	282
Empire	Short, bronze.	278
Empire	Thatcher	274
Empire	Huson	266
Cristobal	Louch	266
Cristobal	Burdge	265
Empire	Durand	264
Cristobal	Birte	263
Empire	Gorham	257
Cristobal	Simka	256
Gorgona	Davis	249
Empire	Schmahl	241
Cristobal	McCormack	237
Empire	Gustavson	236
Culebra	Vogel	234
Empire	Bardelson	234
Cristobal	Robertson	225
Gorgona	Weiser	219
DOUBLES.		
Empire	Huson, gold medal.	316
	Gorham, gold medal.	260
Cristobal	Birte, silver medal.	284
	Louch, silver medal.	282
Culebra	Vogel, bronze medal.	288
	Oliver, bronze medal.	246
Empire	Gustavson	248
	Durand	275
Gorgona	Weiser	241
	Davis	264
Empire	Schmahl	245
	Thatcher	249
Gorgona	King	251

## OFFICIAL CIRCULARS.

## Employment of Panamanians.

CULEBRA, C. Z., January 4, 1909.

## CIRCULAR No. 230

The following Executive Order of the Acting Secretary of War is published for the information and guidance of all concerned:

## EXECUTIVE ORDER.

By authority of the President it is ordered:

That the Executive Order of February 5, 1908, restricting the personnel of gold employees to American citizens be amended to read as follows:

On and after this date, the employment by the Isthmian Canal Commission of skilled laborers, clerks, and all others who have heretofore been known as gold employees of the Commission shall be restricted to American citizens and citizens of Panama, except where American or Panamanian labor of service of the character required is not available.

Foreign employees now upon the pay-rolls of the Commission shall not be affected by this order, save that in the event of any reduction of force preference shall be accorded American citizens and citizens of Panama.

ROBERT SHAW OLIVER,  
Acting Secretary of War.

## WAR DEPARTMENT.

Washington, D. C., December 23, 1908.

GEO. W. GOETHALS,  
Chairman.

## Checks on New York Sub-Treasury.

DISBURSING DEPARTMENT,  
EMPIRE, January 8, 1909.

## CIRCULAR No. 48.

In future, when an employee on the gold roll desires to send money to the States, a Disbursing Officer's check on the Sub-treasury, New York, will be given for the entire net amount due for the month in question, upon proper request being made upon this office, this check being given as stated only for use in sending money away from the Isthmus and not for use here.

A list of checks desired should be given in a letter addressed to this office and attached to the pay roll. Requests otherwise received will not be honored.

EDWARD J. WILLIAMS,  
Disbursing Officer.

Approved:

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Quartermaster's Department Changes.

CULEBRA, C. Z., January 4, 1909.

## TO WHOM CONCERNED:

Effective this date: The Ancon and La Boca Districts of the Quartermaster's Department are consolidated, and placed in charge of Mr. B. C. Poole, District Quartermaster, with headquarters at Ancon.

Effective this date: The San Pablo and Tabernilla Districts of the Quartermaster's Department are consolidated, and placed in charge of Mr. J. H. Humphrey, District Quartermaster, with headquarters at Tabernilla.

C. A. DEVOL,  
Chief Quartermaster.

## LEGAL NOTICES.

In the Circuit Court, Second Judicial Circuit, Canal Zone, Empire, December 26, 1908.

To any and all persons interested:

You are required to enter your appearance in the clerk's office in the above named court at Empire in the said Canal Zone on the 6th day of April, 1909; and to answer the petition of Tom M. Cooke, Collector of Revenues, acting under Section 779, Code of Civil Procedure, stating that each of the deceased persons named below died intestate, leaving property in the Canal Zone, and that no heirs have appeared to claim the same; and asking that a day be fixed for inquiries to ascertain whether said estates escheat to the Government of the Canal Zone:

(1) Joseph P. Roche, San Pablo, died on or about May 22, 1908, leaving about 50 acres of growing bananas and personal property at Frijoles and San Pablo;

(2) John J. Farrill, Empire, died on or about July 24, 1905, leaving a pay certificate for \$20 and cash 70 cents at Empire;

(3) George L. Walker, Empire, died on or about September 21, 1906, leaving Isthmian Canal Commission pay certificate for \$92.50, cash \$1.40, and personal belongings of little value;

(4) Lauchlin Short, Empire, died on or about March 8, 1905, leaving Isthmian Canal Commission pay certificate for \$2.25 United States currency and personal belongings of little value at Empire;

(5) Unknown man (white), killed on or about August 4, 1905, by Panama railroad passenger train south of Natachin, leaving \$32 Panamanian currency. In the hands of the Treasurer of the Canal Zone at Empire;

(6) Unknown man (white), found dead in Los Abanicos on or about January 7, 1908, leaving \$5.25 United States currency and ten cents in Panamanian currency. In the hands of the Treasurer of the Canal Zone at Empire;

(7) Unknown man, skeleton found on or about July 8, 1908, in the woods near Gorgona water shed, leaving \$3.25 Panamanian currency, two keys, one French copper coin, one signet ring, and one pocket knife. In the hands of Treasurer of the Canal Zone at Empire;

(8) Unknown man (Indian), killed by a Panama railroad train near Mount Hope, leaving \$6.20 Panamanian currency, one silk handkerchief, a silver watch, and leather chain and key. In the hands of Treasurer of Canal Zone at Empire.

(9) Unknown man, killed by a passenger train near Corozal on or about June 3, 1906, leaving \$1.70 United States currency, and \$1 Panamanian currency. In the hands of Treasurer of Canal Zone at Empire;

(10) Jean B. Stone, Empire, died on or about March 17, 1908, leaving cash \$760.35 United States currency and \$156.50 deposited with the International Bank of Corporation, and varied personal effects at Empire;

(11) Joseph Allman, resided at Culebra, died on or about July 20, 1905, leaving \$22 United States currency and \$2 Panamanian currency.

By order of the Court

E. M. GOOLSBY,  
Circuit Court Clerk.

United States of America, / First Judicial Circuit.  
Canal Zone.

Notice is given to all concerned to appear at the court house in Ancon, Canal Zone, on or before February 18, 1909, at 9 o'clock, a. m., to claim the following named estates, which the Collector of Revenues seeks to have escheated to the Government of the Canal Zone:

Oscar Olson, a Swede, resident of La Boca, died May 24, 1907, leaving \$1.10 silver.

Peter Gross, resident of Panama, died July 9, 1905, leaving \$5.35 silver.

WALTER EMERY,  
Circuit Court Clerk.

United States of America, / In the Third Judicial  
Canal Zone. Circuit, Cristobal.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 576 hectares of the Lands known as "Palo Horqueta and Matias" situated in the Canal Zone, near the villages or hamlets of Lion Hill and Tiger Hill, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$5,760; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been heretofore filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

NELSON R. JOHNSON,  
Clerk of the Circuit Court, Third Judicial Circuit,  
Cristobal, Canal Zone.

United States of America, / In the Third Judicial  
Canal Zone. Circuit, Cristobal.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 248 hectares of the Lands known as "Calle Bruja" situated in the Canal Zone, near the villages or hamlets of Lion Hill and Tiger Hill, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$2,480; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been heretofore filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

NELSON R. JOHNSON,

Clerk of the Circuit Court, Third Judicial Circuit,  
Cristobal, Canal Zone.

United States of America, / Circuit Court Second  
Canal Zone. Judicial Circuit.

United States of America, /  
Plaintiff, vs. / Summons for Relief.  
Mrs. Lacroisada and husband, Manuel Corrales, Carlos Corrales et al. Defendants.

To Mrs. Lacroisada and husband, Manuel Corrales, and Carlos Corrales:

You are required to enter your appearance in the Clerk's office of the above-named court at Empire in the said Canal Zone within forty days after the last publication of this notice, which shall be at the next regular session of said court after the expiration of said forty days; and to answer the complaint of the plaintiff, a copy of which has been mailed to your last known place of residence.

If you fail to appear within the time aforesaid, the plaintiff will take judgment against you by default and demand from the said court the relief applied for in said complaint.

Witness the Honorable H. A. Gudgeon, Judge of said Circuit this 22d day of December, 1908.

E. M. GOOLSBY,  
Circuit Court Clerk.

## DECEMBER SHOVEL RECORDS.

A new record for excavation in one day was made on December 18, 1908, when the 50 shovels at work in the Central Division took out 70,087 cubic yards.

The high record for the month was made by shovel 207 at work in the Empire District, which took out 50,411 cubic yards in 26 days. The best record for shovels in the 70-ton class was made by shovel 108, working in Bas Obispo District, which took out 35,754 cubic yards in 25 days.

Shovel 207, at work in Empire District, made the highest record for one day by excavating 3,005 cubic yards of rock on December 28.

The shovels in the cut at Mundi broke all previous records for that part of the work.

## COMMISSARY DEPARTMENT.

## Laundry Claims.

Hereafter laundry claims or articles claimed to have been damaged in the laundry will not be accepted by commissary storekeepers. All such claims must be sent to the Subsistence Officer, Cristobal. Damaged articles returned will be at owner's risk, all expressage or postage must be prepaid, and all packages should be shipped to the P. R. R. Laundry, Cristobal. In case credit is allowed the commissary department will refund shipping charges.

JOHN BURKE, Manager.

Approved:

EUGENE T. WILSON, Subsistence Officer.

## Deposits for Bread and Ice.

CRISTOBAL, C. Z., December 26, 1908.

CIRCULAR No. 11551.

To all concerned: 1. Effective January 1, 1909: It will be required that persons having ice or bread accounts must have on January 27, and on the 27th day of each month thereafter, sufficient funds to cover their ice and bread bills during the succeeding month. The only exceptions to this rule will be in cases of people returning from vacation, transferred from one place to another, or leaving or entering the service. New accounts will be opened only when sufficient funds have been deposited to cover deliveries during the calendar month in which the account may be opened.

2. On and after January 1, 1909, funds deposited to secure shipment of bread and ice will not be transferred to any other account and used to pay for cold storage supplies, groceries, etc.

3. After January 1, no deposits will be accepted to cover deliveries of bread where purchasers are located at the following points: Gatun, Tabernilla, Gorgona, Bas Obispo, Las Cascadas, Empire, Culebra, Rio Grande, Paraiso, Pedro Miguel, La Boca, and Porto Bello, unless remittance is accompanied by sufficient funds to pay for extra cost of invoicing, billing and shipping, which has been fixed at five cents per day in addition to cost of bread. This rule is made necessary by the fact that we are delivering bread from Cristobal to 85 families located at points where there are Commissaries and where a delivery service is maintained. As this delivery service is very expensive, it is desired that it be employed to its fullest capacity, and the whole lot plant be placed out of competition with the retail store.

Arrangements have been made so that local Commissaries will carry no stale bread in stock.

JOHN BURKE, Manager.

Approved:

EUGENE T. WILSON, Subsistence Officer.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, JANUARY 20, 1909.

No. 21.

## The Canal Record

Published weekly under the authority and supervision of the  
ISTHMIAN CANAL COMMISSION

*"The Canal Record" is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the "gold" roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Lighting Cristobal-Colon Harbor.

Six new automatic gas buoys are being placed in the harbor of Colon and Cristobal to mark the channel of the Canal as it has been dredged from deep water to the shores. Three buoys of this type, which will give light for three months without recharging, have been in use in the harbor for a year. The new buoys when charged to their full capacity with calcium carbide will remain lighted six months without recharging.

#### Piles Preserved by Water.

The 20-inch pipe-line suction dredge that worked its way from the old French canal into the prism of the new Canal at the north end of the Gatun lock site, made a cut through the old line of the Panama railroad. It encountered piles that were completely rotted down to sea-level, but below sea-level they were as full of pitch and as sound as when they were driven sixty years ago. The excavation shows that the original line of the railroad was built over the lowlands between Colon and Gatun on a trestle which later was filled.

#### Atlantic Division Sand Service.

At Nombre de Dios, the dipper dredge recently taken to that port from Cristobal has made a bay for itself entirely sheltered from the sea, and is in a position to load sand on barges at any time required. The plan for the sand service at this place was to take the material and load it upon barges by means of a clam-shell dredge, and to use a 16-inch suction dredge as an auxiliary. This plan has not been changed, although the sinking recently of the suction dredge necessitated the aid of the dipper dredge in opening up the sand pit. The pump of the suction dredge will be installed on a hull of one of the dredges recently brought down the Chagres from Chagrecito. The machinery for a clam-shell dredge has been contracted for,

and on its arrival will be installed on the hull of another old French ladder dredge recently brought down from Frijoles. The barges for use in this service are ready, and 12 towing machines have been ordered. The stern-wheel steamer, which is to tow barges from Cristobal to Gatun, was launched recently and is being tried out in the old French channel at the dry dock.

#### December Money Order Business.

During the month of December, 1908, the sixteen post-offices in the Canal Zone at which money order business is done, sold 16,931 money orders, aggregating \$432,487.97, an increase of \$13,944.20 over the amount reported for November. Of the \$432,487.97 in December, \$328,143.30 was in orders drawn payable in the United States and elsewhere, and \$104,344.67 in orders drawn payable in the Canal Zone. The fees collected amounted to \$1,895.11, and the amount paid and repaid \$124,755.87.

The largest number of orders, 3,135 was issued at Cristobal, and amounted to \$83,085.20. Ancon was second, with 2,502 orders, aggregating \$48,303.97. Empire was third, with 1,955 orders, amounting to \$44,057.26. Of the amount payable in the United States, Cristobal was first, with \$69,916.92; Ancon second, with \$43,066.19, and Empire third, with \$35,259.71. In orders payable in the Canal Zone, Cristobal was first, with \$13,168.28; Gorgona was second, with \$11,131.17, and Pedro Miguel third with \$9,984. In the amount paid and repaid Cristobal was first, with \$20,923.57; Empire second, with \$13,357.28, and Gorgona third, with \$13,337.15.

The average of all the orders issued was \$25.54, the highest being at La Boca where 660 orders, aggregating \$21,602.49, were sold, an average of \$32.73, and the lowest was at Ancon where the orders issued averaged \$19.31.

#### Freight Carrying Equipment Increased.

On December 9, 1908, the Panama railroad shops at Cristobal began work setting up three hundred, 60000-pound box cars, which had arrived on the Isthmus from the States, knocked down. Last week the last of the cars were painted and all of them are now in service. The work involved unloading the trucks and the bundles of lumber for the bodies, assembling the parts, and putting the superstructure together. The new cars, have been numbered from 6001 up, to indicate that they are 60000-pound cars. All cars that are turned out by the shops hereafter will be numbered in a "thousand" series, the first figure of which will indicate the capacity of the car. The freight car equipment of the Panama railroad now includes:

Box cars—80,000-pound, 480; 60000-pound, 300; 50000-pound, 54; 24000-pound, 462;

fast freight cars fitted with signal attachment and brake rigging for passenger service, 13; 70000-pound refrigerator cars, 18; stock cars, 16; specie cars, 2.

Other cars—New cabooses, 12; old cabooses, 12; 80000-pound Rodger ballast cars for coal and gravel service, 100; 80000-pound coal cars, 15; 24000-pound coal cars, 83; old flat cars, 34; construction cars, 24.

#### Dredge for Atlantic Division.

The three old ladder dredges that were pulled off the banks of the Chagres River near Frijoles during the last weeks of the rainy season are at Cristobal dry dock. One of them is in the dry dock where the machinery has been stripped from the hull, and the hull itself is undergoing repairs. Another is alongside the wharf and the machinery is being taken from it also. The hull of one of these dredges will be used as the float for a clam-shell dredge, and the other as the hull of a suction dredge. The third of the old dredges is in such good condition that it will be repaired and put to work in the Canal prism. Its machinery consists of two Scotch marine boilers and two steeple compound engines, 28 half-yard buckets, and the usual equipment for a ladder or elevator dredge. It is estimated that about \$10,000 will be spent in putting it in condition.

Two old French suction dredges and five old barges taken from the same berths are now in the river, ready to be floated to the dry dock.

#### Engineering, Building Construction, and Municipal Improvement Inspection.

A report has been made on engineering and building construction inspection by a committee appointed for that purpose, and has been approved by the Chairman and Chief Engineer. No changes are recommended in the methods now in use in the Canal Zone. The land owned by the Panama Railroad Company will be staked out by its forces, and that owned by the Isthmian Canal Commission will be staked out by the employees of the Commission. New village plats will be prepared by the organization owning the land, and will be submitted to the Department of Sanitation, and to the municipal and public works officials of the Commission. The sanitary and building construction inspection will be done by the Department of Sanitation.

All work of staking out lots and grades in the city of Colon will be done by the Panama Railroad Company. The Atlantic Division will prepare maps to show the lines and grades of all streets in the city of Colon as now established, and after they have been approved by the Chief Engineer of the Panama Government these maps will be turned over to the Panama Railroad Company.

In the city of Panama the Panama Railroad Company will stake out lots and grades

## NOTES OF PROGRESS.

(Continued.)

on its own lands, and all other engineering work will be done by the Chief Engineer of the Panaman Government. The Pacific Division will prepare maps showing lines and grades of the entire city of Panama, which will be submitted to the Chief Engineer of the Panaman Government for his approval.

Street improvements between curbs in Panama will be carried on as at present by the Pacific Division, according to the lines and grades previously established, and repairs and maintenance will be handled by the Division of Public Works. The construction of sidewalks in both cities will remain as at present, in the hands of the municipal governments, with the understanding that all the space between the curb line and the building line be provided with a permanent concrete sidewalk with a slope of not less than one-third of an inch to the foot.

The inspection of the construction of buildings in the city of Colon and on Panama railroad property in the city of Panama is transferred to the Panama Railroad Company, and committees have been appointed to draw up new rules for sanitation and building construction. The inspection of the construction of buildings in the city of Panama on ground not owned by the Panama Railroad Company is placed under the Chief Engineer of the Panaman Government.

## Railroad and Steamship Business.

Passengers to the number of 1,385,645 were carried by the Panama railroad in the year ending June 30, 1908, of which number, 479,586 were first-class passengers. This was an increase of 57.05 per cent over the total number of passengers carried in 1907. Earnings from passenger traffic increased 61.32 per cent over 1907, the gross revenue from this source being \$526,846.86. The average receipt per passenger for first-class through passengers was \$4.54, and for local passengers 52 cents. The average receipt per passenger for second-class through passengers was \$4.27, and for local passengers 28 cents. The revenue received from the through passengers decreased 15.61 per cent, and the number of such passengers decreased 21.70 per cent, as compared with the year 1907. The increase in the number of local passengers was 57.73 per cent, and in the revenue from this source 69.47 per cent.

The earnings of the Panama Railroad Steamship Line were \$1,458,554.28, a decrease of 6.56 per cent, as compared with 1907. The freight traffic decreased 14,823 tons, or 6.90 per cent, and the revenue from this source decreased 8.46 per cent. The number of passengers carried was 342 less than in 1907, a decrease of 2.42 per cent, and the earnings on this account were 8.51 per cent less than in 1907. The Company maintained three boats of its own and two chartered boats in its service. In the chartered boats, 116,694 tons were carried and in the company's own boats 83,353 tons were carried. This is a decrease of 14,823 tons from the year 1907. The steamship line was run at a net loss for the year of \$179,810.67, as compared with a profit for the previous year of \$158,562.95. The loss was due principally to the chartering of the *Dunottar Castle* and *Esperanza* during the rebuilding of the

*Allianca* and the repairing of the *Colon* and *Panama*, to the low competitive rates, and to the insufficiency of cargoes on north-bound voyages without a proportionate decrease in the expense for labor.

## Lidgerwood Unloaders in December.

The eleven Lidgerwood unloaders in the Central Division during the month of December unloaded a total of 2,821 trains composed of a total of 49,113 cars. Of this number, 1,367 trains composed of 23,249 cars were unloaded by the five unloaders at Tabernilla; 725 trains, composed of 12,750 cars, were unloaded by the three unloaders at the Miraflores dumps, and 729 trains, composed of 13,114 cars, were unloaded by three unloaders at La Boca. As all the cars were of 20-yard capacity the material unloaded represented about 982,260 cubic yards. In addition, there were 2,638 Western dump cars, containing about 44,000 cubic yards of material, unloaded at the La Boca dumps during the month.

## Mount Hope Corral and Forage Warehouse.

The Commission corral at Mount Hope is nearing completion. In addition to the stables there are seven buildings, an office, hospital, harness shop, wagon shed, cart shed, paint and blacksmith shop, and a forage warehouse. All the buildings except the forage warehouse are located east of the Panama railroad tracks and north of the Mount Hope Depot on land made by pumping coral sand from Folks River. This land has dried out and, having been drained, is well adapted for the purpose.

The stables are 187 feet 10 inches long, 68 feet wide, 11 feet 10 inches under the eaves, and will have 112 stalls. The building is divided into four equal parts by a driveway 14 feet wide running from end to end through the center, and a passageway 11 feet wide running through the center from side to side. A concrete walk 8 feet wide runs around the stables and the stalls, and the stalls and walk drain into a covered concrete gutter. A concrete floor 4 inches thick underlies the whole stable excepting the driveway, which is macadamized. The driveway from end to end through the center divides the stable into two parts, each part consisting of two parallel rows of stalls, the heads of which look out into a feed passageway while the backs open into the driveway. At the end of each feed passageway is a feed room 27 feet long and 22 feet 10 inches wide. Each stall is 10 feet 6 inches long, 5 feet 6 inches wide, floored with 2-inch plank over the concrete, and drains into the concrete gutter at the end. The manger has a hay trough and oats box.

The hospital stable will be 88 feet 10 inches long, 11 feet wide, and will contain 16 stalls, each 5 feet 6 inches wide, and 10 feet 6 inches long, and will have a 2-inch plank floor over the concrete. It will drain into a gutter at the rear, and in other respects will be like the stalls in the stables proper.

The wagon shed is 208 feet long, and 19 feet 6 inches wide; the cart shed, 272 feet long, and 19 feet 6 inches wide; the paint and blacksmith shop, 64 feet 6 inches long, and 30 feet 6 inches wide, and the harness repair shop, 30 feet long, and 20 feet wide.

The office building will be in the style of Commission houses, and will have an office 16 by 12 feet, a bedroom of the same size,

a toilet room with bath, a front veranda, and a back porch.

The forage warehouse is ready to receive supplies. It is built on high ground southwest of the Mount Hope Depot, as it was feared that the filled in ground on which the corral is built might not be dry enough for a storage place for forage. The warehouse is 198 feet 8 inches long, and 19 feet 4 inches wide. The roof is of corrugated iron and the floor is made of cast iron plates left on the Isthmus by the French. The building has a ventilator at the peak of the roof and also has an open space between the sides and the roof. A six months' supply of forage for Commission animals will be stored here and will be issued to the corrals along the Line as needed.

## Public and Panama Railroad Lands.

Of the 448.47 square miles of territory in the Canal Zone, 244.03 square miles are available for leasing by the Government under the law which permits the Secretary of War to lease public lands for a period less than five years, on leases revocable at the will of the Government. The Panama Railroad Company owns 68.12 square miles of the land in the Canal Zone, and the remaining 136.32 square miles are owned by private persons.

The annual statement of the Collector of Revenues showing the land leases in force June 30, 1908, gives the number of leases under the Isthmian Canal Commission as 1,081. Of these 878 are for building lots, 9 are for buildings, and 194 are held for agricultural purposes. The land held for agricultural purposes aggregates 1,458 acres. The rent collected in the fiscal year was \$17,436.76, as compared with \$7,974.78 in the fiscal year 1907. The rental charge for agricultural lands is \$3 per hectare, or \$1.21 per acre per annum. Building lots in towns are rented at from 5 cents to 30 cents per square meter per annum. A statement of the leases in effect at the end of the past three fiscal years and in 1905 follows:

	1905*	1906	1907	1908
Agriculture.	376	121	83	194
Building....	441	405	479	878
Collections..	\$86,871.53	\$9,255.13	\$7,974.78	\$17,436.76

\*On September 30, 1905.

†Period January 21 to September 30, 1905.

The 68.12 square miles of land in the Zone owned by the Panama Railroad Company are divided into that used for railroad purposes and that available for rental. The land available for lease is divided into lots, and rent was collected from 1,900 of these lots in the fiscal year 1903. The lots are distributed as follows:

Place.	Lots.	Place.	Lots.
Colon.....	754	Empire.....	473
Folks River.....	38	Culebra.....	67
Gatun.....	143	Panama.....	367
Bohio.....	11	Scattering.....	10
Frijoles.....	37		

## Injured Canal Employees.

The bill introduced in the House of Representatives by Mr. Mann of Illinois, providing compensation for injured employees on the Isthmian Canal, which was published in full in THE CANAL RECORD of December 23, was passed by the House on January 5, 1909. It was introduced in the Senate on January 6, and was referred to the Committee on Inter-oceanic Canals.

## SCREENING EXPENDITURES.

Total Cost from May, 1904, to October, 1908, about \$619,000.

In the effort to protect its employes against malarial and yellow fever infection by preventing *anopheles* and *stegomyia* mosquitoes from entering the houses, the Isthmian Canal Commission has expended, since the beginning of canal operations in May, 1904, until September 30, 1908, approximately \$619,000. This amount includes not only the wire, but all extra wood work, painting, and labor required on account of the screening and a large allowance for brass screen, which has proved defective or which has been unsuitable to the Isthmian climate.

The screening used by the Commission has been principally of two kinds: bronze wire, containing from 80 to 90 per cent copper, and brass wire, containing from 62 to 66 per cent copper. The brass wire has not proved satisfactory.

The amount of screening used during this period was 666,975 square yards, at a cost for the wire of \$255,714, averaging 38.34 cents per square yard. Of this amount 266,667 yards were brass wire, costing \$98,645, an average of 36.99 cents per square yard.

The brass screening was ordered between April and December, 1906, because the initial cost was less than that of copper wire, and was used until the supply was exhausted. It has been found that the brass wire is unsuitable for use on the Isthmus, and that a portion of it has failed on account of being defective, and a portion from injury received in the Mount Hope storehouse fire. A large amount of this screening was damaged in the fire, but it was deemed advisable to use it because of the scarcity of screening material on the Isthmus at that time. Since the fact was established that brass wire was not suitable for use on the Isthmus, none but bronze screening, containing about 90 per cent copper, has been ordered.

It is estimated that the cost of copper wire screening is \$1.05 per square yard in place. This figure covers all extra wood work, as supports for the screening, the painting, labor, and all charges of every nature.

In order to obtain the proper protection it has been found advisable to screen the veranda instead of the openings. This method furnishes protection to persons using the verandas, and also reduces the number of exits to a minimum, thereby increasing the efficiency of the screening.

On account of the great number of doors and windows required in the buildings the expense for screening the verandas is very little more than for screening the openings. The estimated expense on a type 14 house for screening the openings is \$400, and for screening the verandas \$421.

The general principles and details of screening were published in THE CANAL RECORD of January 8, 1908.

## Cement Purchased.

At the close of the calendar year 1908, there had been purchased for Canal work 183,730 barrels of cement. In addition to this amount, 20,000 barrels had been ordered, the contract having been let to the Alpha Portland Cement Company at \$23,150. Up to the present time cement has been used in comparatively small quantities and principally for municipal and sanitary work, in building foundations, lining bath rooms,

and in making concrete blocks for building purposes. The cement to be used in the concrete work at the Gatun Locks and Dam and at the Pacific locks and dams has been contracted for in a single order, about 4,500,000 barrels. Delivery has already been begun on the 80,000 barrels that will be required for the Gatun spillway. A statement of the cement purchased from May 4, 1904, to the end of the calendar year 1908, follows:

1904.....	2,600 barrels....	\$4,490.00
1905.....	39,500 barrels....	63,360.00
1906.....	47,350 barrels....	87,967.00
1907.....	53,000 barrels....	102,045.00
1908.....	41,280 barrels....	66,048.90
Total.....	183,730 barrels....	\$323,910.90

## Instruction by Employes Restricted.

The following letter has been received by the Chairman of the Commission and is published for the information and guidance of employes:

UNITED STATES CIVIL SERVICE COMMISSION,  
WASHINGTON, D. C., January 5, 1909.

*Isthmian Canal Commission, Washington, D. C.*

Gentlemen: The Commission advises you that it is in receipt of information from time to time that certain employes in the Executive civil service are engaged in instructing applicants for civil service examinations in violation of the Executive Order of October 13, 1905, which reads as follows:

"No officer or employe of the Government shall directly or indirectly instruct or be concerned in any manner in the instruction of any person or class of persons, with a view to their special preparation for the examinations of the United States Civil Service Commission. The fact that any officer or employe is found so engaged shall be considered sufficient cause for his removal from the service."

In some cases it is found that the persons concerned were ignorant of the existence of the order quoted above. It is therefore requested that this order be promulgated to all employes of the Isthmian Canal Commission. By direction of the Commission.

Very respectfully,

JOHN C. BLACK, President.

## December Police Report.

The December report of the Chief of Police shows that 507 persons, representing 43 nationalities, were arrested in the Canal Zone during the month. This is an increase of 30 for the month, there having been 477 arrests in November. Of the 507 persons arrested, 458 were men and 49 were women, and they were charged with 56 different offenses. They were divided among the towns of the Zone as follows: Ancon, 28; Las Sabanas, 3; La Boca, 36; Corozal, 3; Miraflores, 5; Pedro Miguel, 35; Paraiso, 20; Culebra, 26; Empire, 83; Las Cascadas, 21; Bas Obispo, 10; Gorgona, 60; San Pablo, 19; Tabernilla, 25; Bohio, 9; Gatun, 42; Cristobal, 82. The total effective police force on December 31 was 168, and the pay roll amounted to \$20,220.96.

One hundred and fifty-one cases were tried in the courts, 18 of which were dismissed, 104 continued, 28 in which convictions were secured, and one case in which bail was forfeited. Of the 28 persons convicted, 5 were fined, 1 received a jail sentence, 2 received a jail sentence and a fine, 18 were sentenced to the penitentiary, and in 2 cases sentence was suspended. Fourteen convicts were discharged from the penitentiary during the month, leaving a total of 122 in the penitentiary on December 31. The number of district prisoners on the same date was 161, a decrease of 30 for the month. The value of work performed by the convicts on roads, etc., amounted to \$2,163.70.

There were 27 deaths by violence requiring

action by the Coroner during December. Six of these deaths were caused by railroad accidents, 2 by drowning, and 18 by the dynamite explosion at Bas Obispo on December 12. The total number of deaths in December resulting from this explosion was 23, but only 18 required action by the coroner.

## Improvements at Cristobal Marine Shops.

A new boiler house has been completed at Cristobal marine shops, which will increase the capacity of the boiler department to about 30 per cent.

A new storehouse, 200 feet by 50 feet, is under construction. It is being built on piles along the French canal, and will be accessible both by rail and water.

## Notice to Knights of Pythias.

A meeting will be held in the Ancon lodge room (the old mechanical building) on Thursday night, January 21, at 7.30 p. m. for the purpose of arranging for the installation of the lodge of Knights of Pythias in Ancon. All interested are urged to attend.

## Tivoli Club Dance.

The Tivoli Club will give its next dance at Hotel Tivoli on Saturday evening, January 23.

## Stages of the Chagres.

Maximum height of Chagres above low water for the week ending midnight, January 16, 1909:

	STATIONS.					
	Vigia.	Alhajuela.	Gamboa.	Bohio.	Gatun (Canal).	Gatun (W. Diver'n

In the assignment of Isthmian Canal Commission quarters in Cristobal and Colon the employes of the Commission in the "1907 class" will be assigned quarters until the list for that year is exhausted before any employe of the Panama Railroad Company will be given consideration.

## SOCIAL LIFE OF THE ZONE.

### Women's Clubs and Other Features.

At a meeting of the executive board of the Cristobal Woman's Club on the morning of January 13, it was announced that the regular meeting would be held January 23, and that Mrs. A. O. Herman would entertain the art and literary department at her home on January 25. A resolution was adopted extending the sympathy of the board to Mrs. Thomas E. Brown, Jr., chairman of the philanthropy department, who is seriously ill.

Mrs. Charles Carter entertained the home department of the Cristobal Woman's Club on January 11.

The year book of the Cristobal Woman's Club is in circulation.

Studies and select readings bearing on the history of Panama occupied the attention of the members of the Gatun Woman's Club at the meeting held at the home of Mrs. H. K. Higgins on January 15. On January 27 (Wednesday instead of Friday) the club will meet at the home of Mrs. A. M. McCulloch, when Mrs. R. W. Fenn will speak on Panama pottery, baskets, and needlework. Each member of the club may invite a guest.

The Gorgona Woman's Club is represented in the Federation committees as follows: Home, Mrs. Torberer; music, Mrs. Beetham; education, Mrs. McFarland. The election of officers will take place in March instead of in February, as heretofore announced.

At the meeting of the Empire Woman's Club, January 7, Mrs. H. C. Ball read a paper on the history of Panama which was discussed by the other members. Piano solos were given by Mrs. Hillerman. The resignation of the secretary was presented, but action was deferred.

The Culebra Woman's Club will hold its regular meeting on January 21.

The rooms over the office of the District Quartermaster in Ancon have been assigned for the use of the Ancon Woman's Club. Suitable furniture has been provided, and reading and writing rooms for members of the club will be opened. The meetings of the club and its department, and of the art classes soon to be organized will be held there.

The educational department of the Ancon Woman's Club met at the home of Mrs. George Campen on January 13. This department will ask the club for a small fund with which to purchase books to be used in its study work. Mrs. Storla was elected chairman of the department, vice Mrs. H. C. Hanson, who has resigned.

The morning session of the Federation meeting, which will be held at the Hotel Tivoli on January 30, will begin at 10 o'clock. The various committees will thus have ample time for their meetings before the sessions open. Transportation to and from Panama will be given on special cars attached to the trains leaving Colon at 4.35 and 10.30 o'clock in the morning, and returning leaving Panama at 5.30 in the afternoon. Each club member will be given a card entitling her to transportation.

J. W. Holland, monologist and impersonator, gave an entertainment at the club rooms at Gatun on the night of January 15.

The Paraiso Woman's Club had a large attendance at its regular meeting, January 14, at the home of Mrs. A. N. Naylor, chairman of the entertainment committee. The

meeting took the form of a reception to the outgoing and incoming presidents, Mrs. N. D. Stanton and Mrs. J. E. Martin, respectively. A gift of linen was presented to Mrs. Stanton in the name of the club by Mrs. O. G. Randall. At the close of the meeting tea was served in the dining room which was decorated with palms and cut flowers.

### Canal Zone Branch American Red Cross Society.

At a meeting held at the Hotel Tivoli on Sunday, January 17, the Canal Zone branch of the American Red Cross Society was formally organized, and about 125 names were enrolled. Maj. C. A. Devol was elected president; Miss J. Macklin Beattie, secretary, and Mr. H. D. Reed, treasurer. A committee, consisting of Dr. H. R. Carter, Mr. B. C. Poole, and Miss Genevieve Russell, was appointed to prepare by-laws, to be submitted to the society. A second committee, consisting of Mr. A. Bruce Minear, Dr. A. J. Orenstein, Miss G. M. LePrince, Mrs. L. C. Collins and Mr. W. N. Pettit, was appointed to secure additional members and to suggest means of securing funds. It is expected that 500 members will be secured.

All persons who desire to become members are requested to send their names, accompanied by \$1, membership dues, to Mr. H. D. Reed, treasurer, Ancon, Canal Zone.

### Celebration of One Hundredth Anniversary of Lincoln's Birth.

All who are interested in the celebration of the one hundredth anniversary of the birth of Abraham Lincoln are cordially invited to meet at the Circuit Court house in Empire at 3.30 p. m., on Sunday, January 24, when preliminary steps will be taken and committees appointed for the purpose of properly celebrating the event. Any and all citizens of the Canal Zone are invited to be present.

### Empire Gun and Rifle Club.

At a meeting held at the District Court room, Empire, on January 8, 1909, preliminary steps were taken toward the organization of a club to be known as the Empire Gun and Rifle Club. All residents of Empire interested in revolver, rifle, or trap shooting are requested to send their names to either Mack B. Henry, or Edward N. Jerry, Empire, C. Z.

### Pacific Masonic Club.

A regular meeting of the Pacific Masonic Club will be held Saturday evening, January 23. Installation of officers will take place, and all members are urgently requested to be present. Initiation in A. O. O. H. All American Masons, sojourning on the Isthmus, are cordially invited.

### Concert by the I. C. C. Band.

EMPIRE, C. Z.,  
Sunday, January 24, 1909, at 6 p. m.  
PROGRAM.

- 1 March—*Col. Estey*.....Bagley
- 2 Selection—*A Knight for a Day*.....Hubbell
- 3 Waltz—*Autumn Smiles*.....Bagley

CHAS. E. JENNINGS, Musical Director.  
The next concert will be given at Hotel Tivoli, Ancon, C. Z., Sunday, February 7, 1909.

## COMMISSION CLUBHOUSES.

### Activities of the Young Men's Christian Association.

#### CULEBRA.

A local league of four teams has been playing a series of indoor base-ball games at Culebra, the last game having been played Saturday evening. Messrs. Roberts, Kirk, Rackle and Holstead have been acting as captains of the teams. Kirk and Roberts each having won 5 and lost one, the tie to be played off in the near future. Great interest has been manifested in these games and they have done much to aid in the formation of a first-class representative team.

The I. C. C. orchestra gave the monthly concert Monday evening in the library, and a good sized crowd thoroughly enjoyed the selections. These concerts are becoming more and more popular. They are given once a month without any admission fee.

An outing for the juniors of the four associations is being planned for the latter part of the month, and will probably be a trip to Fort Loreuzo and up the Chagres River.

## PROPOSALS FOR BUILDINGS.

### Contract Post-Office, Gatun.

Sealed proposals will be received at the office of the Depot Quartermaster, Isthmian Canal Commission, Mount Hope, Canal Zone, until 11 a. m., Saturday, January 30, 1909, when they will be publicly opened, for the erection by contract of a post-office at Gatun, Canal Zone. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Architect, Culebra. A deposit of \$5 is required to insure their return.

Each bidder must accompany his proposal with a check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$250 conditioned upon the faithful performance of the contract.

The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals.

### Contract Schoolhouse, Tabernilla.

Sealed proposals will be received at the office of the Depot Quartermaster, Isthmian Canal Commission, Mount Hope, Canal Zone, until 11 a. m., Saturday, January 30, 1909, when they will be publicly opened, for the erection by contract of a one room schoolhouse at Tabernilla, Canal Zone. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Architect, Culebra. A deposit of \$5 is required to insure their return.

Each bidder must accompany his proposal with a check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$200 conditioned upon the faithful performance of the contract.

The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals.

### Misdirected Letters.

Division of Posts, Customs and Revenues,  
Ancon, C. Z., January 20, 1909

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts and may be secured on request of addressee:

## OFFICIAL CIRCULARS.

## Wage Classification of Silver Employees.

CULEBRA, C. Z., December 30, 1908.

## CIRCULAR No. 229.

The tables given hereafter, showing ratings and rates of pay for employees on the "silver roll," Isthmian Canal Commission, effective on and after February 1, 1909, have been prepared with a view to limiting the rates of pay for "silver" employees, both hourly and monthly, and to securing uniformity in pay in the different departments and divisions for the same class of work. No attempt has been made to make any radical revision of, or reduction in, the number of ratings between the minimum and maximum limits fixed.

The following are the standard rates: Per hour, silver, 10 cents, 14 cents, 20 cents, 26 cents, 32 cents, 40 cents, and 50 cents. In addition to these seven standard silver hourly rates of pay, two special rates—64 cents and 88 cents, silver, per hour—have been established as described hereinafter. No other hourly rates will be paid.

For monthly silver employees, the maximum rate of pay, per month, is \$150, silver, except for the special ratings shown hereafter, which are applicable only to other than West Indian skilled and unskilled labor. Monthly silver rates of pay shall not in general exceed the pay which would be received for the number of hours worked at the hourly rate of pay established for that kind of work. The monthly silver roll is intended to cover employees whose hours of work are more or less irregular and consequently who would receive overtime, and whose time would be difficult to check up without special provision. It is desired that wherever practicable, an hourly rate be applied in preference to a monthly rate. The following table shows the corresponding monthly amount, at the different standard hourly rates of pay, based on eight, nine, ten, and twelve hours of work per day:

Standard rates per hr.	Monthly pay (silver) equivalent to different hourly rates. Sundays not included.			
Silver.	8 hours daily, 204 hours per month.	9 hours daily, 230 hours per month.	10 hours daily, 255 hours per month.	12 hours daily, 306 hours per month.
10 cents.....	\$20.40	\$23.00	\$25.50	\$30.60
14 cents.....	28.56	32.00	35.70	42.84
20 cents.....	40.80	46.00	51.00	61.20
26 cents.....	53.04	59.80	66.30	79.56
32 cents.....	65.28	73.60	81.60	97.92
40 cents.....	81.60	92.00	102.00	122.40
50 cents.....	102.00	115.00	127.50	153.00
64 cents.....	130.56	147.20	163.20	195.84
88 cents.....	179.52	202.40	224.40	260.28

No rating, in addition to those given in the tables below, shall be established until after same has been approved by the Chairman, and his approval shall likewise be necessary for any new rates of pay under any rating.

While the standard hourly rates of pay carry with them standard designations, such as Boy "A," Laborer "A," Laborer "B," etc., it is not intended that this should necessarily change the designations carried at the present time by employees, which more particularly fix the character of their work. For instance, while a trackman, receiving 26 cents, silver, an hour, is a Laborer "B," his designation on the pay-rolls should not be Laborer "B" but Trackman "B." Likewise a carpenter at 50 cents, silver, per hour, would be designated Carpenter "B." The rates of pay of all laborers—"A," "B," "C," and "D"—employed as trackmen, axemen, dumpmen, etc., should be fixed in accordance with the rules specified below under each of the standard ratings. For instance, Trackman "A" and Trackman "B" would be the standard rates for all trackmen except Europeans, and Trackman "C" and Trackman "D" would be the standard rates for European trackmen.

The standard rates of hourly pay, for silver employees, and description of duties, are as follows:

BOY "A," TEN CENTS (SILVER) PER HOUR.

*Water-shop Messenger*—This rating is for the lighter and easier work. It is intended that all boys shall be taken on at this rating, and not promoted until qualified and required to perform work of Boy "B."

BOY "B," FOURTEEN CENTS (SILVER) PER HOUR.

*Water-shop Messenger*—This rating is for heavier and harder work. In addition to boys, it may be filled by men who have been injured in the service of the Commission, when the grade of work which they are capable of performing does not entitle them to be taken on at the next higher rating.

LABORER "A," TWENTY CENTS (SILVER) PER HOUR.

This is the standard rating for all common labor except European and should not be exceeded except

for work out of the ordinary or where specified below. Men who have been injured in the Commission service performing the work of Boy "A" or Boy "B" may be rated Laborer "A," provided the circumstances in each particular case render same desirable or necessary. Other men performing work of Boy "A" or Boy "B" should be graded Laborer "A," unless boys cannot be obtained who can perform the work satisfactorily. Boys performing the work of Boy "A" or Boy "B" cannot be rated Laborer "A." Laborers performing work in this rating of a particular kind, such as track work, shall be known as Trackman "A," etc.

LABORER "B," TWENTY-SIX CENTS (SILVER) PER HOUR.

This rating is intended to include common labor, except European, on work requiring more intelligence and effort than Laborer "A," or where the liability of injury to health, from accident or otherwise, is greater. Length of service, however satisfactory, does not entitle Laborer "A," while performing work of that grade, to promotion to Laborer "B." Laborers performing duties of helpers to shop and other mechanics, such as carpenters, etc., shall be known and graded as Carpenter Helper "B," etc.

LABORER "C," ARTISAN "C"—THIRTY-TWO CENTS (SILVER) PER HOUR.

This rating shall be applied to:

1. Laborer "C," which is intended to include common labor, except European, on work involving greatest effort and responsibility this class of employee is able to perform, as well as the greatest liability of injury to health, by accident, or otherwise. This rate shall also be standard for noncontract European and other white common labor.

2. Artisan "C," which shall be the standard rate of pay for shop, building construction and other mechanics and artisans, who shall be known as Machinist "C," etc.

LABORER "D," ARTISAN "D"—FORTY CENTS (SILVER) PER HOUR.

This rating shall be applied to:

1. Laborer "D," which is intended to cover European contract labor. It may also be applied to such European noncontract labor, on responsible work as may be found worthy of same, after not less than six months' continuous service.

2. Artisan "D," which shall be applied to such shop and other mechanics and artisans, the quantity and quality of whose work is above the average and whose length of satisfactory service in Grade "C" renders them worthy of promotion.

ARTISAN "E"—FIFTY CENTS (SILVER) PER HOUR.

This shall be the highest regular hourly rate of pay for silver employees and shall be applied only to those employees, the quality and quantity of whose work is most satisfactory. When this wage schedule goes into effect (February 1, 1909), all silver employees at present getting 50 cents silver and over, per hour, shall be re-rated to Grade "E," at 50 cents, silver, per hour, unless they are eligible for the special Grade "F" and "G" below.

ARTISANS "F"—SIXTY-FOUR CENTS (SILVER) PER HOUR—(SPECIAL).

This is a special grade established to cover (1) such employees as are now carried on the rolls at rates in excess of 50 cents, silver, per hour, in the following trades only, who, in the opinion of the Head of Department or Division, cannot be reduced to grade "E" at 50 cents, silver, per hour, without detriment to the work or injustice to the employee: blacksmiths, boiler-maker, boiler-scaler, coppersmith, machinist, pipefitter, planing-mill hand, and shipwright. All such shall hereafter be rated Artisans "F," at 64 cents, silver, per hour, and all others now on the rolls shall be reduced to grade "E" at 50 cents, silver, per hour; (2) for such American citizens on the silver roll as are now or may hereafter be employed, the value of whose services properly classes them in this grade; (3) any special cases which may be approved by the Chairman, after having been recommended to him in a special letter. This third class is intended to cover, only, a situation or circumstances which cannot be anticipated at the present time.

No new employee and no employee receiving at present less than 64 cents silver, an hour, shall hereafter be given Grade "F," unless he comes under (2) or (3) above. American citizens in Grade "F" shall be entitled to the same benefits of longevity, under this schedule, as they now receive.

ARTISAN "G," EIGHTY-EIGHT CENTS (SILVER) PER HOUR (SPECIAL).

This is a special grade established to cover:

(1) Such employees as are now carried on the rolls at rates in excess of 50 cents, silver, per hour, in the following trades only, who in the opinion of the Head of the Department or Division cannot be reduced to Grade "E" or "F," without detriment to the work or injustice to the employee: blacksmith,

boiler-maker, car repairer, caulker, coppersmith, diver, lineman, machinist, moulder, pipefitter, planing-mill hand, shipwright, wireman. All such shall hereafter be rated Artisans "G," at 88 cents, silver, per hour, and all others now on the roll shall be reduced to Grade "E," at 50 cents, silver, per hour, or Grade "F," at 64 cents, silver, per hour; (2) for such American citizens on the silver roll as are now or may hereafter be employed, the value of whose services properly classes them in this grade; (3) any special cases which may be approved by the Chairman, after having been recommended to him in a special letter. This third class is intended only to cover a situation or circumstances which cannot be anticipated at the present time.

No new employee, and no employee receiving at present less than 88 cents silver, per hour, shall be given Grade "G," unless he comes under (2) or (3) above. American citizens in Grade "G" shall be entitled to the same benefits of longevity as they now receive.

\*After July 1, 1908, the old Chagres and Culebra divisions were consolidated in the Central Division. No separate record for steam shovels in the old divisions has been kept since that date. Figures for months after June under "Culebra Section" include work done in the whole Central Division.

Summary for the month of December, 1908:

Average number of shovels at work, 72.99.

Average output per shovel per day, 1,000 cubic yards.

Average output per shovel per month, 29,000 cu. yds.

The working day for steam shovels is eight hours.

## COMMISSARY DEPARTMENT.

The hours during which commissaries are open are as follows:  
Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.  
All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

## COMMISSARY PRICES

For week beginning January 19:

## FRESH MEATS.

	Price.
Mutton—Stewing.....per lb	6
Shoulder and neck (not under 6 pounds).....per lb	7
Entire forequarter (not under 10 pounds).....per lb	9
Leg (8 to 10 pounds).....per lb	16
Short-cut chops.....per lb	22
Lamb—Stewing.....per lb	6
Entire forequarter.....per lb	9
Leg (6 to 8 pounds).....per lb	27
Chops.....per lb	29
Veal—Stewing.....per lb	10
Entire forequarters (15 to 20 lbs.).....per lb	11
Loin for roasting.....per lb	21
Chops.....per lb	22
Cutlets.....per lb	26
Pork—Cuts.....per lb	20
Beef—Suet.....per lb	4
Soup.....per lb	8
Stew.....per lb	12
Corned.....per lb, 12, 14, 16	16
Pot roast (from sirloin butt).....per lb	17
Rib-roast, second cut (not under 3 pounds).....per lb	19
Rib-roast, short cut (not under 3½ pounds).....per lb	23
Sirloin roast.....per lb	29
Rump roast.....per lb	29
Porterhouse roast.....per lb	29
Steak, round.....per lb	23
Rib.....per lb	24
Sirloin.....per lb	29
Porterhouse.....per lb	29
Rump.....per lb	29
Tenderloin.....per lb	30

## MISCELLANEOUS.

Livers—Beef.....per lb	11½
Calf.....each	65
Sausage—Pork.....per lb	18
Bologna.....per lb	17
Frankfurter.....per lb	17
Leberwurst.....per lb	17
Sweet bread—Veal.....each	1.20
Sweet bread—Beef.....per lb	30
Ox tongues.....each	1.00
Pigs' feet, pickled.....per lb	14
tongues, pickled.....per lb	16
Eggs, fresh.....dozen	50
Oysters, 1 gallon kegs.....keg	1.00

## POULTRY AND GAME

Chickens—Fancy Roasting.....1.20 and 1.40	
Fowls.....each	75
Broilers.....each	75
Squabs.....each	45
Catons.....each	2.40

Cabbage.....per lb	5
Onions.....per lb	4
Yams.....per lb	3½
Turnips.....per lb	3½
Carrots.....per lb	4

Beets.....per lb	5
Lemons.....dozen	24
Oranges.....dozen	12
Apples.....per lb	6
Grapes.....per lb	20
Grapefruit.....each	3½
Tangerines.....each	1½
Limes.....hundred	60
Cranberries.....per lb	17
Pineapples.....each	15

§ Sold only from cold-storage and not from Commissaries.

## LEGAL NOTICES.

In the Circuit Court, Second Judicial Circuit, Canal Zone, Empire, December 26, 1908.

To you and all persons interested:

You are required to enter your appearance in the clerk's office in the above named court at Empire in the said Canal Zone on the 6th day of April, 1909; and to answer the petition of Tom M. Cooke, Collector of Revenues, acting under Section 779, Code of Civil Procedure, stating that each of the deceased persons named below died intestate, leaving property in the Canal Zone, and that no heirs have appeared to claim the same; and asking that a day be fixed for inquisitions to ascertain whether said estates escheat to the Government of the Canal Zone:

(1) Joseph P. Roche, San Pablo, died on or about May 22, 1908, leaving about 50 acres of growing bananas and personal property at Frijoles and San Pablo;

(2) John J. Farrill, Empire, died on or about July 24, 1905, leaving a pay certificate for \$20 and cash 70 cents at Empire;

(3) George L. Walker, Empire, died on or about September 21, 1906, leaving Isthmian Canal Commission pay certificate for \$92.50, cash \$1.40, and personal belongings of little value;

(4) Lauchlin Short, Empire, died on or about March 8, 1905, leaving Isthmian Canal Commission pay certificate for \$2.25 United States currency and personal belongings of little value at Empire;

(5) Unknown man (white), killed on or about August 4, 1905, by Panama railroad passenger train south of Matabachin, leaving \$32 Panamanian currency. In the hands of the Treasurer of the Canal Zone at Empire;

(6) Unknown man (white), found dead in Las Sabanas on or about January 7, 1908, leaving \$625 United States currency and ten cents in Panamanian currency. In the hands of the Treasurer of the Canal Zone at Empire;

(7) Unknown man, skeleton found on or about July 8, 1903, in the woods near Gorgona water shed, leaving \$3.25 Panamanian currency, two keys, one French copper coin, one signet ring, and one pocket knife. In the hands of Treasurer of the Canal Zone at Empire;

(8) Unknown man (Indian), killed by a Panama railroad train near Mount Hope, leaving \$6.20 Panamanian currency, one silk handkerchief, a silver watch, and leather chain and key. In the hands of Treasurer of Canal Zone at Empire.

(9) Unknown man, killed by a passenger train near Corozal on or about June 3, 1906, leaving \$1.70 United States currency, and \$1 Panamanian currency. In the hands of Treasurer of Canal Zone at Empire;

(10) Jean B. Stone, Empire, died on or about March 17, 1908, leaving cash \$160.35 United States currency and \$156.50 deposited with the International Banking Corporation, and varied personal effects at Empire;

(11) Joseph Allman, resided at Culebra, died on or about July 20, 1905, leaving \$22 United States currency and \$2 Panamanian currency.

By order of the Court.

E. M. GOOLSBY,  
Circuit Court Clerk.

United States of America, }  
Canal Zone, }  
United States of America, }  
Plaintiff, vs. }  
Mrs. Lacroisada and husband, }  
Manuel Corrales, }  
Carlos Corrales et al. }  
Defendants. }  
Summons for Relief.

To Mrs. Lacroisada and husband, Manuel Corrales, and Carlos Corrales:

You are required to enter your appearance in the Clerk's office of the above-named court at Empire in the said Canal Zone within forty days after the last publication of this notice, which shall be at the next regular session of said court after the expiration of said forty days; and to answer the complaint of the plaintiff, a copy of which has been mailed to your last known place of residence.

If you fail to appear within the time aforesaid, the plaintiff will take judgment against you by default and demand from the said court the relief applied for in said complaint.

Witness the Honorable H. A. Gudger, Judge of said Circuit this 22d day of December, 1908.

E. M. GOOLSBY,  
Circuit Court Clerk.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, calling at Puerto Barrios, and from Colon at 1.30 p. m., via Port Limon and Puerto Barrios, for New Orleans.

Sailings of the French line (Cie. Generale Trans atlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The next sailing of the Leyland Line for New Orleans via Kingston, Jan., will be the steamship *Median* on or about February 2. The *Tampican* has been ordered to proceed to Galveston instead of New Orleans.

Since the beginning of the fiscal year the Panama railroad shops at Cristobal have done all the repair work for the railroad, and in addition have erected three 20-ton coaling cranes, 8 refrigerator cars, one 15-ton coaling crane, and three hundred 60000-pound box cars.

THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

### NOTES OF PROGRESS.

#### Chairman's Monthly Report.

The report of the Chairman of the Isthmian Canal Commission for December is published in other columns of this issue of THE CANAL RECORD. The grand total of excavation for the month was 3,315,867 cubic yards, of which 1,897,720 cubic yards were removed by steam shovels, and 1,418,147 cubic yards by dredges. This total of 3,315,867 cubic yards is 54,194 cubic yards greater than that stated in the issue of THE CANAL RECORD of January 6, which was based upon telephone reports from the Division Engineers that have since been corrected to the present figures. The corrected figures for December make a grand total of excavation for the calendar year 1908, of 37,070,887 cubic yards instead of 37,016,693, as given in THE CANAL RECORD of January 6, which makes a monthly average of 3,089,240 cubic yards for 1908, instead of 3,084,724.

During the month 115,730 cubic yards of material were dumped on the toes of Gatun Dam, 73,897 cubic yards on the south toe, and 41,833 cubic yards on the north toe.

The average daily number of laborers actually employed in Canal work was 13,694. There were 380 43-ton of explosives used, and 416,978 feet of rock drilling was accomplished.

On the relocation of the Panama railroad, 63,478 cubic yards were excavated, and 188,724 cubic yards were placed in embankment, making, up to the present time, a total of 723,307 cubic yards of excavation and 3,023,694 cubic yards of embankment. During the month 3,820 linear feet of permanent track were laid, making a total of 57,286 feet. The force of laborers employed on this work during the month averaged 1,095 men daily.

Very few "gold" men were employed in the United States during December. Practically no laborers have been recruited since August, 1908, the force having reached a condition where all demands for laborers

are easily supplied from those already here or those who come to the Isthmus of their own accord. This is a noteworthy change from former conditions. Between January 1 and December 31, 1907, 8,875 West Indian laborers were recruited, an average of 739 per month, and the cost of their transportation was approximately \$88,750. During the same period there were recruited 7,469 European laborers, or an average of 622 per month. During the six months, from December 1, 1906, to May 31, 1907, it was necessary to recruit 14,000 laborers from Europe and the West Indies in order to increase the silver force by 4,500 men. Thus, in a period of six months, when no epidemic prevailed and there were no particularly unfavorable conditions on the Isthmus, 9,500 laborers deserted the work.

There was an increase in the number of rations served to Spanish laborers during the month of December, and also an increase in the number of meals served in the Commission hotels. The decrease in the attendance at the laborers' kitchens still continues. During the past two months the number of men leaving the kitchens has averaged about 200 per month.

The general revenues of the Canal Zone collected during December amounted to \$14,990.74, as compared with \$10,244.15 collected in November.

#### Expenditures for Rails, Ties, and Fastenings.

The total expenditures for rails, ties and fastenings, made by the Commission, exclusive of the second main track, Panama railroad, and for the relocation of the Panama railroad, are as follows:

From inception of work to June 30, 1907..	\$990,570.75
From July 1, 1907, to June 30, 1908.....	1,069,108.16
From July 1, 1908, to September 30, 1908..	139,671.67
Total to September 30, 1908.....	\$2,199,350.58

#### New Station at Gatun.

A concrete station on the permanent line of the Panama railroad at Gatun is nearing completion. It is of a type adapted to the climate of the Isthmus where the equable temperature makes outdoor waiting facilities desirable all the year around. A long platform of concrete, covered with a sheet iron roof, is divided in the center by a ticket office and news stand into two parts, one for first-class and one for second-class passengers. Each part will be provided with seats. At the south end of the platform is a two-story building of concrete blocks. The ground floor will be used for the safekeeping of baggage and express matter, and room is provided for the telegraph office.

The second floor is partitioned into six rooms, a screened veranda, toilet and bath rooms, and will be fitted up as living quarters for the agent and his family. Along

the front of the waiting platform and the building is a concrete walk extending to the tracks, and running to a concrete stairway by which passengers will mount to the highway that runs through the village. As the railroad cuts through one of the hills on which Gatun is built, the highway crosses the tracks on a bridge, avoiding a grade crossing.

#### Mr. Taft's Visit.

Mr. Taft, President-elect, accompanied by Mrs. Taft, his private secretary, and seven civil engineers, sailed from Charleston, S. C., on the armored cruiser *North Carolina* on Monday, January 25, for Colon, where they are expected to arrive Friday next. The seven civil engineers, who are coming for the purpose of examining the Canal work are: Frederick P. Stearns, John R. Freeman, A. P. Davis, J. D. Schnyler, Allen Hazen, Isham Randolph, and C. F. Allen. Mr. and Mrs. Taft will be the guests of Col. Goethals at Culebra, and the engineers will be the guests of various members of the Commission at Culebra and Gatun.

#### Rock for Pacific Locks and Dams.

Rock for the concrete work in the locks and dams at Miraflores and the locks at Pedro Miguel will be quarried from the south slope of Ancon Hill. A steam shovel and a force of men are at work grading for a track from the railroad at East La Boca up to the site of the proposed crusher plant back of "La Folie Dinger," the quarantine detention station. The quarry will be opened at 180 feet above sea-level and will extend up the hill to elevation 375, covering the east side of the hill back of the quarantine station, as far as necessary in order to procure the amount of rock needed—between 1,500,000 and 2,000,000 cubic yards. The rock will be transported from the quarry to the crushers by trains, and the preparatory work is advancing at a rate that justifies the expectation that crushed rock can be delivered during August, when it is proposed to begin the laying of concrete at Pedro Miguel.

The crusher plant will consist of one large and four auxiliary crushers. The large crusher will take pieces of rock as large as 36 by 36 inches as they come from the quarry and reduce them to five inches or less. This crusher can handle 400 cubic yards of rock an hour. Such rock as comes from the quarry in pieces that will pass through a 5-inch ring, and the product of the big crusher, will be conveyed by gravity to the four auxiliary crushers, where it will be broken into pieces that will pass through a 2½-inch ring. From the auxiliary crushers the rock will be conveyed to cars on the siding now in process of construction whence it will be hauled to the works at Miraflores and Pedro Miguel. Power for running the crushers will be supplied from the electric power house at Miraflores,

## NOTES OF PROGRESS.

(Continued.)

which will be in operation before the concrete laying at Pedro Miguel is begun.

Bids for the crusher plant and auxiliary machinery have been approved, and the contract will be let in a few days.

**Handling Plants for Pacific Locks.**

The contract for the material and concrete handling plants for Miraflores and Pedro Miguel locks has been let to the Wellman-Seaver-Morgan Company of Cleveland, Ohio, for \$294,328, with a provision that a change may be made in the berm cranes on payment of \$14,200. The contract includes eight cantilever cranes erected and ready to operate, with a guarantee that 100 cubic yards of concrete can be handled each hour. It includes also, the motors necessary for operating the cranes, and all electric connections complete, excepting feeder and trolley wires which will be furnished by the Commission.

Four of the cranes will operate on the berms of the Miraflores locks and four in the lock chambers. The plant at Miraflores is to have the sand and rock dumped in piles the whole length of the lock site, and to this end a trestle will be built on either side of the site and parallel to it, on one side of which rock will be dumped while sand will be stored on the other side. Each berm crane is equipped on the end toward the storage piles with a grab bucket which will take the sand and stone from the respective piles and deliver them into a hopper above the mixer. The mixer, although not a part of the crane contract, will be erected on the tower of the crane beneath the power control house. From the hopper above the mixer the rock and sand will pass through a measuring hopper and then into the mixer. Cement will be delivered to a storage platform erected on the tower of each berm crane, whence a conveyor will take it to the measuring bin floor and a cross conveyor will carry it to any position desired. From the mixer the concrete will be delivered into buckets and will then be handled by the end of the berm crane that extends over the lock chamber, which will deliver it either at the side wall or onto a platform attached to the chamber cranes. The berm cranes can also handle material excavated from the side walls and deposit it in cars on the berm.

The chamber cranes will receive the concrete deposited on the platform by the berm cranes, pick up the buckets and deliver the material to one-half the middle wall. They will also handle all the forms. Although the berm and chamber cranes overlap, their height is such that their arms will pass over or under each other, according to the location where they are working.

Each berm crane will be equipped with four motors, two on each cantilever end, one for hoisting and one for trolleying. One of the hoist motors is provided with friction clutches and gears for moving the crane along its track. Both berm and chamber cranes will move laterally. Each chamber crane will be equipped with four motors, two for controlling and two for hoisting, and will be supplied with an extra motor for moving it along its track.

The contract is entered into with the un-

derstanding that a change can be made in the berm cranes by substituting a derrick boom for the cantilever that extends over the lock site.

The part of the handling plant that is to be used at Pedro Miguel is to be erected first. This consists of two berm cranes and two chamber cranes which, at the completion of the Pedro Miguel locks, will be moved to Miraflores. The layout at Pedro Miguel is such that the berm cranes will be used at the north end of the locks over the storage piles and only in handling material from the piles to the mixers and in delivering concrete into cars, in which it will be hauled to the chamber cranes.

Power for operating the cranes will be furnished from the Miraflores power plant now in process of erection.

**Grievances of Conductors.**

The Special Board, appointed by the Chairman of the Isthmian Canal Commission, to investigate certain grievances of railway conductors, will hold its next hearing at the Administration Building, Ancon, on Sunday, February 7, at 9.30 a. m. All conductors in the Isthmian Canal Commission and Panama railroad service, who have grievances of any kind or who desire to give testimony, and who have not yet testified before the Board, are requested to be present at that time. A round-trip pass over the Panama railroad will be sent to those who desire to attend and who forward their addresses to the Chairman of the Board, Joseph Bucklin Bishop, Ancon.

**Civil Service Examination.**

A Civil Service Examination, for the position of Superintendent of Construction, Supervising Architect's Office, Treasury Department, will be held in the office of the Chairman, February 4 to 5. Applicants must have had at least five years' practical experience in building construction, either as superintendent proper, contractor, architect, or engineer, and must establish this experience prior to being admitted to the examination. The initial salary of this position is \$2,000 per annum. A description of the examination, and a copy of the application form, may be obtained from the Secretary of the Isthmian Civil Service Board, office of the Chairman, Culebra, C. Z.

**New Chief of Police.**

Capt. George R. Shanton has resigned as Chief of Police of the Canal Zone to become Chief of Police of Porto Rico, with headquarters at San Juan. He has been at the head of the Zone police force since May 4, 1904. Mr. Grosvenor A. Porter, who is to succeed Capt. Shanton, and First Lieut. Charles W. Barber, Second Infantry, U. S. A., who is to be first lieutenant of police, arrived on the *Allianca* on January 26. Mr. Porter is the son of a Confederate blockade runner, was a member of the Rough Riders during the Spanish war, has served as a United States Marshal in Indian Territory, and when appointed to his present position was an assistant to a special agent in the Bureau of Indian Affairs.

**Coal Sales.**

The amount of coal sold on the Isthmus by the Panama Railroad Company in the fiscal year 1908 was 368,331 tons, as compared with 203,451 tons in 1907. Of the to-

tal for 1908, the Isthmian Canal Commission purchased 262,375 tons; the Panama Railroad Company used 54,344 tons; steamship lines 41,524 tons, and 10,088 tons were sold to other customers. In 1907 the Isthmian Canal Commission purchased 116,586 tons; the Panama Railroad Company, 41,883; steamship lines 37,887 tons, and 7,085 tons were sold to other customers.

**A Canal Zone Family.**

The average Isthmian Canal Commission family consists of a husband, wife, and one child, according to figures presented in the report of the Chief Quartermaster for December, in which the number of occupants of married quarters is given:

	Men.	Women.	Children.	Total.
American.....	1,416	1,458	1,398	4,272
European laborers.....	317	333	397	1,047
Negro laborers.....	1,018	1,024	1,014	3,056
Total.....	2,751	2,815	2,809	8,375

The married population of the Canal Zone consists very largely of those who have been married only recently. One-third of the American employes on the Isthmus are occupying married quarters.

**Where Honor Is Due.**

The Resident Engineer at La Boca sends the following letter, under date of January 20, to THE CANAL RECORD for publication:

The tug *La Boca* has been engaged for the past week in carrying workmen back and forth from the dredge *Culebra*, which is on the beach at Perico Island. She stops in safe anchorage off the island, and the workmen are conveyed by gasoline boats to the shore.

This morning while the gasoline boat, containing about thirty-two men, was proceeding from the tug to the shore (at about six miles an hour), for some reason the helmsman pushed the rudder hard over, which caused a sharp deflection in the course and threw overboard two men who were sitting on the thwarts. One of them could swim, but the other, Robert Dean, Scotch, a boil-maker, went to the bottom and was rescued only by the heroism of Fitz Wiltshire, colored, Grenadian, who dived and brought Dean to the surface. Robert Mellon, American, a caulker, jumped from the *La Boca* and assisted Wiltshire in putting Dean on the gasoline boat.

**Centenary of Lincoln's Birth.**

A meeting was held in the Circuit Court room at Empire on January 24, to take preliminary steps for the celebration on the Isthmus of the 100th anniversary of the birth of Abraham Lincoln. The following officers were elected: Col. Geo. W. Goethals, chairman; Judge H. A. Gudger, vice-chairman; E. M. Goolsby, secretary.

Various committees were appointed and the meeting adjourned to reconvene at the same place on Sunday, January 31, at 3 p. m. All persons interested are requested to be present at that time.

Dr. L. W. Munhall, the evangelist from the States, will begin evangelistic meetings at the Commission chapel, Culebra, on Thursday evening, January 28, at 7.45. The meetings are undenominational, and will continue for one week. All persons are cordially invited to attend.

## RED CROSS.

## Outline of the Work It Proposes to Do—Membership Rolls Open.

The relief work and responsibilities of the American National Red Cross Society have been classified into war relief, emergency relief, and international relief, and study and preparation for each class of work are carried on under the direction of the Central Committee.

The work of the newly organized Canal Zone Branch falls entirely in the department of emergency relief, and in turn may be divided into three classes: First, first aid to the injured; second, relief of special cases of destitution pertaining to the exigencies of the service here; third, general relief work pertaining to disasters such as the accident at Bas Obispo, or conditions that might result from a general conflagration on the Isthmus.

*First Aid to the Injured*—Inquiry has arisen as to the necessity for such work, owing to the fact that the Sanitation Department of the Isthmian Canal Commission has a complete and effective organization on the Canal Zone. The president of the American National Red Cross is President-elect of the United States, and as such will be Commander-in-chief of the Army and Navy. The executive committee includes Maj.-Gen. Robert M. O'Reilly, ex-Surgeon-General, U. S. A., and Medical Director John C. Wise, U. S. N., and the Board of Consultation also includes the Surgeon-General of the Army and the Surgeon-General of the Navy. The history of military operations and great disasters shows conclusively that the Army, Navy and Red Cross each has its work to perform, and that such work is harmoniously carried on with a complete understanding and cooperation in all departments. This was demonstrated in the earthquake and fire at San Francisco, where 300,000 people were taken care of, principally by the Army and the Red Cross—many Army officers becoming members of the Red Cross, and all working harmoniously to obtain the general end of organized relief.

Maj. Chas. W. Lynch, Medical Corps, U. S. A., has published an American National Red Cross Text-Book—"How to Prevent Accidents and What to Do for Injuries and Emergencies." In the preface to this work, General O'Reilly concludes as follows:

Army conditions emphasize the necessity for the creation of organizations in order that first aid may be given with maximum efficiency, and there are many situations in civil life, such as vast concourses of people, great fires, railroad disasters, etc., which equally demand first aid organizations instead of individuals who, however well taught they may be, must, under such circumstances, work at cross purposes unless they are united into a disciplined body in which the special duties of each are carefully defined.

In view of these facts, it is believed that this book will serve to fill a place of its own in the ever-increasing movement for the relief of human suffering.

The very thorough instructions in this book could be made a subject of study by members of the Police Department, Fire Department, and perhaps others, under the supervision of the district physicians of the Canal Zone. The cooperation of the Chief Sanitary Officer and of the head of the department of Civil Administration will be sought in carrying out this plan.

*Relief in Special Cases of Destitution*—There has already been presented to the Red Cross a special case in Cristobal, the relief of which has been under consideration by

the Chairman of the Commission and subordinate officers for some months. It has been ascertained that there is no legal way by which monetary relief can be afforded from funds appropriated for the construction of the Canal. Therefore, such cases must be otherwise taken care of. The builders of the Canal form one large local organization, and the community of interests involved precludes that any case of suffering or destitution be allowed to remain unassisted. The case at Cristobal may be followed by others, and the local organization of the Red Cross should be in financial condition to take care of such cases.

*General Relief Work Pertaining to Disasters*—It is hoped that no general relief on account of a great catastrophe on the Canal Zone will ever be necessary. The history of great undertakings, however, leads to the belief that it is better to be prepared in a measure than to be entirely unprepared. The Red Cross on the Canal Zone should be an effective organization so that if it should ever be called upon it could throw its entire strength into the work that presents itself.

It is especially desired to have all who wish to become members enrolled before the arrival of Mr. Taft. To this end they are requested to send their names with the membership dues, one dollar, to the Treasurer, Mr. H. D. Reed, Ancon, C. Z.

## In Defense of the Commissaries.

Largely attended meetings of the employees of the Isthmian Canal Commission and Panama railroad were held at Cristobal, Gatun, Tabernilla, San Pablo, Gorgona, Bas Obispo, Las Cascadas, Empire, Culebra, Paraiso, Pedro Miguel, Corozal, Ancon, and La Boca, on the night of January 20, at which resolutions were adopted requesting the Senate not to ratify the treaty recently concluded between the United States and Panama, because in the opinion of the petitioners, the treaty threatens the commissary system in the Canal Zone. On January 22, the following cablegram was sent:

CRISTOBAL, C. Z., January 22, 1908.

*President United States Senate:* American citizens, fourteen towns, Canal Zone, in mass meetings, twentieth, protest against Article 3, Treaty proposed between United States and Panama as interfering with commissary privileges. Petitions mailed you. Unanimous opinion Americans cannot live here, and irreparable injury to work if privileges are jeopardized or revoked.

CONNOR, Chairman, Joint Committee.

A cablegram was also sent from Culebra giving the text of the resolutions passed at that place.

The resolutions passed at the Ancon meeting are typical, and are as follows:

WHEREAS, It has come to our attention that a treaty has been proposed between the United States and the Republic of Panama, and that said treaty is now in the hands of the Senate Committee on Foreign Relations; and

WHEREAS, Article III of said treaty recites that all differences that may arise between the Republic of Panama and the United States shall be submitted to a board of arbitration for final decision; and

WHEREAS, We fear the wording of said treaty means that the ends sought to be obtained by the Republic of Panama relate to the curtailment of privileges granted us through Article XIII of the treaty between the two Republics, in which it is allowed that all articles necessary and convenient for the employees and their families may be imported duty free; and

WHEREAS, We contend that we are now sufficiently taxed for our food and wearing apparel, which tax or surcharge embraces the amount necessary for cost of purchase, transportation, storage and distribution; and

WHEREAS, We are only temporarily domiciled on

the Isthmus of Panama and are entitled, under the existing treaty, to receive such articles as may be necessary and convenient for our comfort and welfare without the payment of additional duties, or being curtailed in this privilege in any way; now therefore be it

*Resolved*, That we urgently protest against the ratification of this, if it does, or any treaty that will take away from us any rights or in any manner jeopardize our welfare or the welfare of the work in which we are engaged; and be it further

*Resolved*, That we recognize in this proposed treaty the influence set forth in a memorial addressed to the President of the United States by the merchants of Panama under date of December 30, 1908; and be it further

*Resolved*, That we respectfully petition the Hon. W. H. Taft, who will soon be on the Isthmus and who is to be our next President, to discontinuance and deny any petition, from any source whatever, that may reflect such consequences as may be anticipated if the commissary privileges we now enjoy are in any measure curtailed; and be it further

*Resolved*, That a text of this protest be cabled to the Senate Committee on Foreign Relations in Washington.

G. M. SHONTZ, W. E. RUSSELL, P. KUEHNLENG,  
Committee.

## PROPOSALS FOR BUILDINGS.

## Contract Post-Office, Gatun, C. Z.

Sealed proposals will be received at the office of the Depot Quartermaster, Isthmian Canal Commission, Mount Hope, Canal Zone, until 11 a. m., Saturday, January 30, 1909, when they will be publicly opened, for the erection by contract of a post-office at Gatun, Canal Zone. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Depot Quartermaster, Mount Hope. A deposit of \$5 is required to insure their return.

Each bidder must accompany his proposal with a check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$250 conditioned upon the faithful performance of the contract.

The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals.

Approved:

GEO. W. GOETHALS, Chairman.

## Contract One-Room Schoolhouse, Tabernilla, C. Z.

Sealed proposals will be received at the office of the Depot Quartermaster, Isthmian Canal Commission, Mount Hope, Canal Zone, until 11 a. m., Saturday, January 30, 1909, when they will be publicly opened, for the erection by contract of a one room schoolhouse at Tabernilla, Canal Zone. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Depot Quartermaster, Mount Hope. A deposit of \$5 is required to insure their return.

Each bidder must accompany his proposal with a check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$200 conditioned upon the faithful performance of the contract.

The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals.

Approved:

GEO. W. GOETHALS, Chairman.

## Misdirected Letters.

Division of Posts, Customs and Revenues,  
Ancon, C. Z., January 27, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Arden, Oliver (letter and	Moore, Bismark
pkg.)	Morrissey, R. L.
Arlington, Mrs. Vivian	Morse, Mr. (pkg.)
Caldwell, Richard L.	Morton, George

Lumby, T. L.	Wheeler, Wm. P.

## CANAL WORK FOR DECEMBER.

Monthly Report of the Chairman to the Secretary of War.

CULEBRA, C. Z., Jan. 13, 1909.

The Honorable the Secretary of War,  
Washington, D. C.

Sir: I have the honor to submit the following report of operations on the Isthmus for the month of December, 1908:

Effective December 12, the limits of the Atlantic and Central Divisions were changed as follows:

The Atlantic Division to embrace all territory north of the south end of Gatun Dam.

The Central Division to embrace all territory between the south end of Gatun Dam and Pedro Miguel.

#### Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central, and Pacific Divisions during the month:

Item.	Unit.	Atlantic.	Central.	Pacific.	Total.
<b>Steam Shovel Excavation—</b>					
In prism.....	Cubic yards.....	128,203	1,527,185	133,189	1,788,577
Auxiliary.....	Cubic yards.....	42,334	66,809	.....	109,143
Total.....	Cubic yards.....	170,537	1,593,994	133,189	1,897,720
<b>Dredge Excavation—</b>					
In prism.....	Cubic yards.....	679,604	.....	729,960	1,409,564
Auxiliary.....	Cubic yards.....	8,583	.....	.....	8,583
Total.....	Cubic yards.....	688,187	.....	729,960	1,418,147
Total excavation.....	Cubic yards.....	858,724	1,593,994	863,149	3,315,867
Explosives used.....	Tons (2240 lbs)	37.09	322.49	20.85	380.43
Rock drilling.....	Feet.....	57,838	327,679	31,461	416,978
New track laid.....	Miles.....	1.37	10.3	3.16	14.83
Track removed.....	Miles.....	.....	10.5	.....	10.5
Material placed in dams.....	Cubic yards.....	115,730	5,925	88,818	210,473

Rainfall.....	Inches.....	7.94	5.09	10.27	.....

#### Atlantic Division.

##### GATUN LOCKS.

**Unloading Cableway Dock**—The pile driving for this dock is 68 per cent completed, and the docking 22 per cent completed.

**Cement Shed Dock**—The material along the face of the dock was blasted, preparatory to using the dipper dredge. Pile driving for the foundations of the dock is 77 per cent completed.

**Unloading Head Tower Tracks**—The pile foundations for the forward tracks of these towers were completed for a distance of 300 feet and are now ready for the rails. The roadbed for the back track was completed to subgrade.

**Storage Pile Tunnels**—Excavation in the open cuts of these tunnels was continued, 2,764 cubic yards of earth and 80 cubic yards of rock being removed during the month. The framing for the timber work was commenced.

**Power House**—The excavation for the intake tunnel of the Gatun power house was commenced, and the crossing for this tunnel under the Panama railroad was completed. A portion of the electric machinery has been received.

##### GATUN DAM.

During the month 115 piles or 269 linear feet of trestle were driven on the south toe of the dam. On the south toe of the dam

73,897 cubic yards of material were dumped, and 41,833 cubic yards on the north toe.

Investigation for material for the dam was started toward the close of the month at a point south of the dam axis.

Dredge No. 82 excavated 26,432 cubic yards of sand and clay for accessory work.

#### HARBOR AND CHANNEL SECTION.

In the dry excavation below sea-level two 70-ton shovels removed 62,253 cubic yards of material from the Canal prism, and 651,704 cubic yards of material were removed by five dredges. The dredge *Ancon* also removed 27,900 cubic yards of material from below grade. At the close of the month 40 feet of water could be carried from 0 to Mile 2 + 3,800 feet, 30 feet to Mile 3 + 400 feet, 20 feet to Mile 3 + 4,600 feet, and 13 feet to Mile 4 + 4,480 feet, the end of the cut.

#### PORTO BELLO.

Work was continued on the power plant site and quarry, as well as stripping operations and general preparatory work.

and 1,070,813 cubic yards as rock. Of this quantity 1,596,695 cubic yards were removed by steam shovels and 1,273 cubic yards by hand for tracks at Tabernilla. The quantity of material removed from the Canal prism was 1,527,185 cubic yards, while 66,809 cubic yards were removed from the Obispo Diversion, 1,273 cubic yards for Tabernilla tracks, 2,281 cubic yards for levee work at Matachin, and 420 cubic yards in casting over above grade. The daily number of steam shovels at work during the month was 50.73 as compared with 50.91 for the month of November.

For comparison with the work done during the corresponding month of the previous year in the area embraced in the Central Division, the following table has been prepared:

Period.	Total amount of material excavated by steam shovels	Classification of material.		Av. No. of steam shovels working during month	W'kg days in month	Av. amount excavated per shovel per 8-hour day.
		Rock	Earth			
1907, Dec. ....	cu. yds. 1,116,895	cu. yds. 489,462	cu. yds. 627,433	48.44	25	cu yds 922
1908, Dec. ....	1,596,695	1,070,813	525,882	50.73	26	1,210

Rainfall at Empi: 1907, 1.47 ins.; 1908, 5.09 ins.

The above table shows that the average output per shovel day was over 39 per cent greater in December, 1908, than in the corresponding month of the previous year.

During the month 29,611 cubic yards of material excavated from the Cut were transported to the relocation of the Panama railroad in the vicinity of Caimito and dumped as filling in the embankment for the new roadbed; also 30,633 cubic yards for similar work in the vicinity of Gamboa. During the month 5,925 cubic yards of rock from Bas Obispo were transported to Gatun, a distance of 23 miles, and dumped on the toe of the dam.

In building construction work five new buildings were completed during the month, four of which were turned over to the Quartermaster's Department and one to the Mechanical Division. Twenty-seven buildings were rescreened, and seventeen other repair jobs were completed.

#### Pacific Division.

##### DISTRICT NO. 1—LOCKS AND DAMS.

The approach to the storage trestle at Pedro Miguel was finally located. The clearing and stripping for the core of the west dam was continued, and the sump pit at the lower end of the lock site was completed, a 12-inch pump being installed. Excavation of the east gate recess down to elevation +40 was begun, and was well advanced at the close of the month.

At Miraflores the excavation for the upper lock was continued, and tracks were laid for the work of the proposed temporary diversion of the Cocoli River. During the month the orange peel derrick was moved south of the Cocoli River to excavate for the west dam core, where it is proposed to put in a concrete core wall. The grading for the power house and powder magazine was nearly completed. The dredge *Sandpiper* cut through the dike at the south end of the lock site and began the work of excavating in the lock chamber.

At the proposed Ancon quarry the prelim-

#### NOMBRE DE DIOS.

Work was continued on the dam to provide a water supply. Stripping operations were continued over the area from which sand is to be dredged, and sand can now be supplied by the use of the dipper dredge.

#### DRY DOCK AND MARINE SHOPS.

The stern-wheel towboat *Exotic* was completed and put in condition, and an old French dredge was dismantled preparatory to its being remodeled into a clam shell dredge for the work at Nombre de Dios.

#### MUNICIPAL ENGINEERING AND BUILDING CONSTRUCTION

A large amount of grading, road building, construction of sewers and water works was accomplished during the month. The maintenance of municipal improvements was also given the necessary attention. Satisfactory progress was made on all buildings under construction. The Atlantic Division storehouse at Gatun was completed during the month. At the close of the month the forage warehouse at Mount Hope was practically completed, and the office of the Depot Quartermaster was 90 per cent completed.

#### Central Division.

During the month of December the total amount of material excavated in the Central Division was 1,597,968 cubic yards, of which 527,155 cubic yards were classified as earth

inary work of boring and digging test pits was continued during the month.

#### DISTRICT NO. 2—DREDGING, AND LA BOCA SHIPWAYS.

Five dredges were in operation during the month, as follows:

Dredge	Type.	Cubic yards.		Remarks.
		In p'm	Auxil'y	
Culebra	Suction	357,801	.....	Scow measurement
Gopher	Ladder	114,962	.....	Place measurement
Mole...	Ladder	3,360	105,870	Place measurement
No. 14...	Ladder	58,132	.....	Place measurement
Dipper.	Dipper.	51,980	.....	
Total.	.....	536,433	105,870	

The usual work of maintenance and repairs was accomplished at the shipways. During the month the borings to ascertain the nature of the material in the channel between La Boca and Miraflores lock site were completed from the mouth of the Rio Grande to Cardenas Hill. Two gangs were engaged during the month in clearing the Canal prism, the work consisting of blasting stumps and piling, and burning same.

#### DISTRICT NO. 3.

A large number of items of building and municipal construction and maintenance were accomplished during the month, including the operation of the filtration plant. The La Boca and Rio Grande quarries were operated, and bridge and road work, sanitary ditching and construction of drains and other minor items were accomplished.

#### Mechanical Division.

The usual work of this Division was performed.

#### Relocation of Panama Railroad.

During the month 63,478 cubic yards of excavation were accomplished on the relocated line, and 188,724 cubic yards of embankment. At the end of the month a total of 723,307 cubic yards of excavation had been accomplished, and 3,023,694 cubic yards of embankment. The work of constructing trestles for filling, bridges, and culverts was continued. Work on the Miraflores tunnel was resumed, and an 8x10 drift was bored 100 feet into the 250-foot earth section at the south end, which remains to be excavated. During the month 3,820 linear feet of permanent track were laid, making a total at the end of the month of 57,286 feet. The force of laborers during the month averaged 1,095 men daily.

#### Quartermaster's Department.

During the month very few employments were made of gold men in the United States. While there were the usual number of changes in the personnel, most of the additions consisted of employments or re-employments on the Isthmus.

Practically no laborers have been recruited since August, 1908, nor is there any present necessity for recruitment, the force having reached the stable condition where all demands for labor are easily supplied from laborers already here, or those who have come to the Isthmus of their own accord.

In comparison with present conditions it is interesting to note that from January 1 to December 31, 1907, 8,875 West Indian laborers were recruited, being an average of 739 per month, and the cost of their transportation alone was approximately \$88,750. During the same period there were recruited 7,467 European laborers, or an average of 622 per month. During one period of six months, from December 1, 1906, to May 31,

1907, it was necessary to recruit 14,000 laborers from Europe and the West Indies in order to increase the silver force by 4,500 men. Thus, in a period of six months, when no epidemic prevailed and there was no particularly unfavorable condition on the Isthmus, 9,500 laborers deserted the work.

#### Subsistence Department.

During the month there was an increase in the number of rations served to Spanish laborers, and likewise an increase in the number of meals served at the hotels. A decrease in the attendance at the kitchens still continues. During the past two months the number of men leaving the kitchens has averaged about 200 per month.

#### Department of Civil Administration.

##### COURTS.

The Supreme Court was not in session during the month.

In the Circuit Courts 32 civil and 52 criminal cases were settled, and in the District Courts 55 civil cases and 482 criminal cases were disposed of.

##### DIVISION OF REVENUES.

The general revenues of the Canal Zone, collected by this Division in December, amounted to \$14,990.74, as compared with \$10,244.15 collected in November.

Twenty-five vessels entered at and 22 cleared from the port of Ancon, and 15 vessels entered at and the same number cleared from the port of Cristobal during the month.

##### DIVISION OF POLICE AND PRISONS.

The number of arrests during December was 507, as compared with 477 for November. There were 161 prisoners confined in the jails at the close of the month. Nineteen convicts began penitentiary sentences during the month, 12 were discharged at the expiration of their sentences, one died, one was pardoned, and on December 31, there were 122 convicts confined in the penitentiary.

As Coroner of the Canal Zone, the Chief of Police investigated 27 deaths, 6 of which were due to railroad accidents, and 18 to dynamite explosions.

##### DIVISION OF PUBLIC WORKS.

The usual business of this Division, including the installation of new connections, the issuance of permits for the installation of plumbing, the inspection of plumbing and sewers, the collection of water rents, and the operation of public slaughter houses and markets, was continued during the month. In the city of Panama 28,592,000 gallons of water were used, and in the city of Colon 21,085,125 gallons were used.

##### DIVISION OF FIRE PROTECTION.

No serious fires occurred during the month, the total estimated damage being only \$40.

##### DIVISION OF SCHOOLS.

On account of the Christmas holidays, the schools were closed December 18, to reopen January 6. The total enrollment in the white schools was 638, and the average daily attendance was 556. In the colored schools the total enrollment was 1,178, and the average daily attendance 763.

##### Department of Sanitation.

[The substance of the report of this department was published in THE CANAL RECORD of January 13, 1909.]

Respectfully,

GEO. W. GOETHALS,  
Chairman.

## EXECUTIVE ORDER.

### Railway Safety Appliances Law Extended to the Canal Zone.

Under authority vested in me by law, it is ordered:

1. The requirements of the Act of Congress, relating to the use on trains of certain described and approved driving wheel and train brakes, couplers, handholds, and drawbars of required height for freight cars, approved March 2, 1893 (contained in 27 Statutes at Large, page 531), and known as "An Act to promote the safety of employes and travelers upon railroads by compelling common carriers engaged in interstate commerce to equip their cars with automatic couplers and continuous brakes and their locomotives with driving-wheel brakes, and for other purposes," as amended by an Act approved April 1, 1896 (contained in 29 Statutes at Large, page 85), and as amended by an Act approved March 2, 1903 (contained in 32 Statutes at Large, page 943), shall be extended to apply to that zone in the Republic of Panama mentioned and described in section 2 of the Act of Congress, dated June 28, 1902, and entitled "An Act to provide for the construction of a canal connecting the waters of the Atlantic and Pacific oceans," and commonly known as the "Canal Zone."

2. The various appliances for the protection of trainmen on freight train cars, with reference to running boards, ladders, sill steps, roof handholds, and the position of brake shafts, as designated in the existing standards of the Master Car Builders' Association in the United States, shall be used by all carriers in the aforementioned Canal Zone.

3. The equipment and appliances required to be used in sections 1 and 2 of this order shall be constantly and at all times maintained in good and working order, by any and all railroads engaged in the business of a common carrier and operating in the aforementioned Canal Zone.

4. In particular, sections 1, 2, and 3 of this order shall be carefully observed and obeyed by the Panama railroad, a carrier operating in the said Canal Zone.

5. All railroads operated and cars used by the Government of the United States within navy yards, arsenals, military reservations, government wharves, and any and all other territories under the jurisdiction of the United States, shall be equipped with the safety appliances required in the Safety Appliance Acts mentioned and described in section 1 of this order; and in the codes of rules mentioned and described in section 2 of this order; and said equipment and appliances shall at all times be maintained in good and working order.

6. This order shall take effect not later than six months from the date of the promulgation thereof.

THEODORE ROOSEVELT.

THE WHITE HOUSE, January 6, 1909.

[No. 1002.]

The gross earnings of the Panama Railroad Company in the fiscal year 1908 were \$5,999,992.07, as compared with \$5,199,810.69 in 1907. The operating expenses were \$4,469,507.71, as compared with \$3,610,874.30 in 1907. Earnings over operating expenses in 1908 were \$1,530,484.36, a decrease of \$58,452.03 from 1907.

## SOCIAL LIFE OF THE ZONE.

## Library at Ancon—Women's Clubs Meetings.

The important business of the meeting of the Ancon Woman's Club on January 20, was the announcement that the papers pertaining to the proposed Ancon Library Association had been returned to the club for such action as it thought proper, as the time did not seem suitable for taking further action outside the organization. The members took the matter up for discussion and it was voted that the money already pledged for the library should be given to the purchase of new books and the further development of the club library. For the benefit of the community, especially of the bachelors, the club will open this library to non-members on subscription of \$3 a year. This will enable the committee to hold in hand a library fund and furnish a small number of magazines and suitable reading matter for the tables.

The program was in the hands of the home department. Mr. H. F. Schultz, read a paper on "The Cultivation and Economic Uses of Casava." As illustrations Mr. Schultz had a well grown casava tree in the club rooms and specimens of the roots and starch were also shown. Tea was served.

The rooms assigned the Ancon Woman's Club, above the office of the District Quartermaster at Ancon, have been decorated. The windows are fitted with dark green curtains, dark rugs have been placed on the floors, and the book shelves are already in place. China and linen have been purchased, and a number of gifts have been presented, notably plants, vases and linens.

The business meeting of the Cristobal Woman's Club was held on Wednesday, January 20. The art and literature department was entertained January 25, at the home of Mrs. A. O. Herman, a paper on "Shylock" being read by Mrs. H. J. Slifer. The club year books have been received and distributed among the members. On January 27, at 3 o'clock, the club will give a reception in the club house, in honor of Mrs. Philip North Moore and Mrs. John Dickinson Sherman, president and vice-president of the General Federation of Women's Clubs. An invitation is extended to the members of the clubs in the Zone for the occasion.

An innovation in the regular meetings of the Las Cascadas Woman's Club was made on January 21, when the members adjourned in a body to Empire to meet at the residence of the founder and former president of the club, Mrs. O. G. Randall.

There was an unusually large attendance at the business meeting of the Pedro Miguel Woman's Club on January 20. Arrangements were completed for the entertainment to be given by Mr. J. W. Holland, on February 12. Tickets may be purchased from the club members, the price of admission having been placed at 50 cents for adults and 25 cents for children. A special train will be run from Paraiso for the occasion. Announcement was made that the Social and Recreative Club is arranging to give an evening of tableaux in February. At the close of the business meeting refreshments were served, the president being hostess for the day.

The following program has been issued by the Empire Woman's Club for the meet-

ings covering the next four weeks: January 21, "History of Panama," Mrs. H. C. Ball, music; February 4, "Government of Panama," Mrs. A. Hillerman; February 18, the home department, and Washington's Birthday program refreshments; March 4, "Fruits of the Isthmus," Mr. H. F. Schultz; March 16, "Native Panamanian Needlework," Mrs. R. W. Penn, special feature, loan exhibit of native articles by the members.

The Gorgona Dramatic Club gave a performance of "The Doctor" before a full house at the Empire clubhouse on Tuesday evening, January 19.

The business session of the Federation of Women's Clubs will be held in the Ancon Woman's Club rooms, over the office of the District Quartermaster, instead of at Hotel Tivoli, as previously arranged. Meetings of Federation committees may be held in the club rooms between the hours of 8 and 10 o'clock, the hour of the morning session having been placed at 10 o'clock.

The Gatun Woman's Club held its regular meeting on January 22, at the home of Mrs. E. G. Bath. The afternoon was devoted to home topics, including "Home duties" and "Cookery," followed with a discussion of the suffrage question. Mrs. E. S. Waid, former president of the Paraiso Woman's Club, was elected to membership.

The Paraiso Woman's Club had a short business session on Thursday, January 21, followed by a social hour. Several new members were admitted.

A meeting of the Canal Zone Humane Society has been arranged to take place on Friday afternoon, January 29, at the residence of Archdeacon Bryan, Ancon.

## PERSONAL.

Mrs. George W. Goethals, Mrs. H. F. Hodges, and Mrs. S. B. Williamson were passengers on the *Prinz Joachim*, which arrived at Colon on January 24.

Col. W. C. Gorgas of the Isthmian Canal Commission, accompanied by Mrs. Gorgas, Miss Gorgas, Miss Laura Carter, Miss Keene and Judge Evans, returned to the Isthmus on the P. S. N. Co's. steamship *Limari* on January 26, from Santiago, Chili.

Justice Owen, of the Second Judicial District, wishes to have it known that he has opened an office in the Court-house at Empire, and will be in it from 7 a. m. to 6 p. m. each day.

## Missing Man.

Information is wanted in regard to Jose Garcia, who was employed as fireman on the dredge *Culebra* at La Boca, from March 1 to April 22, 1908. His relatives have not heard from him since the date of his discharge.

Any one having knowledge concerning him is requested to communicate with M. B. De Putron, Assistant to the Chairman, Culebra.

Mr. Howard B. Delaigne, concerning whom information was requested in THE CANAL RECORD of December 30, 1908, writes from Washington, D. C., that he is now a telegraph editor on the Washington Post.

## Vacations in Jamaica.

Employees of the Commission, who desire information concerning Jamaica as a health and holiday resort may procure it at the British Legation, Panama.

## LETTERS FROM THE LINE.

(Communications to this column must be signed in each instance with the name and address of the writer.)

## To Attend Inauguration.

CULEBRA, C. Z., January 24, 1909.

THE CANAL RECORD:

Arrangements are nearing completion for the representatives of the Isthmian Canal Commission and the Panama Railroad Company to participate in the inaugural ceremonies in Washington on March 4. While a large number of applications are on file it is the desire of the committee to hear from at least 100 more men who have vacations due on or about that time, and who can be granted leave at that time without it interfering with their work.

The entire matter will be submitted to President-elect Taft on his arrival in the Zone. Colonel Goethals has consented to ask the proper authorities for free transportation for the detachment, on a naval vessel, as soon as the list of men to go has been approved by the heads of departments concerned, and Mr. Taft has approved the plans in detail. The inaugural committee will be asked to defray expenses during the stay in Washington.

Those who wish to go should communicate with P. T. Sealey, Culebra, stating position they hold, department, date next leave is due, and whether or not they have had military service.

PERCY T. SEALEY, G. C. BRADFORD,  
Committee.

## Isthmian Baseball League.

EMPIRE, C. Z., Jan. 19, 1909.

THE CANAL RECORD:

The executive committee of the Isthmian Baseball League, at its meeting on Sunday last, instructed the secretary of the League to notify the president of each association and staff of umpires as follows:

The Isthmian Baseball League is playing under the rules of the National League. The umpire has charge of and is responsible for the proper conduct of the game to which he is assigned, and will be expected to rigidly enforce discipline with a view to having an orderly, sportsmanlike game promptly played. An infraction of the rule in the way of a player (other than captain of a team) addressing an umpire in regard to a decision, or obscene or profane language by any player, will meet with prompt benching of the player at fault and the facts will be reported promptly, in writing, by the umpire to the secretary of the League, and by him placed before the executive committee for such further action, if any, as it may deem necessary. Any additional discipline found necessary will be administered at the discretion of the committee by benching the offender anywhere from two to ten additional games.

The cooperation of each and every person connected with the national game is requested toward securing square, manly and clean sport, otherwise the game will deservedly fall into disrepute and cease to be the means of wholesome recreation now afforded the Americans on the Isthmus.

W. M. WOOD,  
Secretary Isthmian Baseball League.

## Resolutions of Sympathy.

At a recent meeting of Incas Tribe No. 6, I. O. R. M. of Gatun, the following resolutions were adopted:

WHEREAS, The Great Spirit in His infinite wisdom and power, has on the 1st day of January, 1909, called from the hunting ground of his brothers, to the happy hunting grounds of the Beautiful Beyond, our beloved and esteemed brother, Bert Gamble,

Resolved, That we have lost an honest and faithful chief whom to know was to love and respect.

Resolved, That we, his brother Red Men, hereby express our sense of bereavement and extend our heartfelt sympathy to his relatives and friends.

Resolved, That a copy of these resolutions be spread on the minutes of Incas Tribe, a copy sent to his nearest relatives, and a copy sent to THE CANAL RECORD and the Red Men's official journal for publication.

R. G. HENNING, H. M. McDONALD,  
Committee.

## OFFICIAL CIRCULARS.

## Only Qualified Crews on Main P. R. R. Line.

CULEBRA, C. Z., January 22, 1909.

Maj. D. D. Gaillard, Division Engineer, Central Division, Empire, C. Z.

Maj. Wm. L. Sibert, Division Engineer, Atlantic Division, Gatun, C. Z.

Mr. S. B. Williamson, Division Engineer, Pacific Division, Corozal, C. Z.

Mr. H. J. Styer, General Manager, Panama Railroad Company, Colon, R. P.

Sirs: To correct a misunderstanding which seems to have arisen, it is hereby directed that no train engine shall be operated on the main line of the Panama railroad, either within or outside of yard limits, unless handled by a qualified crew.

Respectfully,

GEO. W. GOETHALS,  
Chairman Isthmian Canal Commission,  
and President Panama Railroad Company.

## Lost or Destroyed Property.

CULEBRA, C. Z., January 12, 1909.

## TO ALL CONCERNED:

Attached is a sample copy of Form 197-ACE and 197-BCE (insert sheets), which should be used for survey on lost or destroyed property. These forms supersede Form A 179, and any supply of the latter you may have on hand should be destroyed. Forms 197-ACE and 197-BCE (insert sheets) can be secured from the Stationer and Printer on requisition.

GEO. W. GOETHALS, Chairman.

## Wage Classification of Silver Employees.

CULEBRA, C. Z., January 20, 1909.

## CIRCULAR No. 229B.

The following additions to Circular No. 229, Pay Schedule for Employees on the "Silver" Roll, are hereby approved:

	Monthly rate, silver.
Engineers, claret—	
Chief Engineer, day.....	\$150.00
Chief Engineer, night.....	160.00
Second Engineer, day.....	125.00
Second Engineer, night.....	135.00
Carpenter.....	100.00
Splicer, cable.....	160.00

The above rates are only for employees on work connected with claps and dredges whose hours are longer than the regular hours for artisans.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Transportation from Cristobal to New York.

CULEBRA, C. Z., January 23, 1909.

## CIRCULAR No. 175A.

Transportation from Cristobal to New York on steamers of the Panama Railroad Company will be granted hereafter to employees upon the termination of their service, as follows:

## FREE TRANSPORTATION.

To employees appointed in the United States who resign or are discharged after two years' continuous service; to employees appointed in the United States whose employment is terminated by the Commission after less than two years' service for any reason other than inefficiency or misconduct; and to American employees appointed on the Isthmus who are discharged at the recommendation of a medical examining board.

## TWENTY-DOLLAR RATE.

To employees appointed in the United States prior to January 1, 1909, who resign after serving more than six months but less than two years, and to employees appointed on the Isthmus prior to January 1, 1909, who resign or are discharged after two years' continuous service, or whose services are terminated by the Commission after less than two years' service for any reason other than inefficiency or misconduct.

## THIRTY-DOLLAR RATE.

To employees appointed after December 31, 1908, separated from the service under circumstances identical with those described in the preceding paragraph.

## FORTY-FIVE-DOLLAR RATE.

To employees appointed on the Isthmus who resign or are discharged after serving more than six months but less than two years.

## TEN-DOLLAR STEERAGE RATE.

To all employees who may apply for it.

Employees entitled to free transportation to New York may be granted instead free transportation to

New Orleans, if they so desire, or free transportation to San Francisco, provided they originally sailed from that port.

Employees originally appointed in the United States who resign or are discharged and are subsequently re-employed on the Isthmus will be granted no transportation privileges other than those accorded employees originally appointed on the Isthmus.

No special rates will be granted employees who fail to apply for transportation within thirty days after the termination of their employment.

GEO. W. GOETHALS, Chairman.

## Applications for Family Quarters.

CULEBRA, C. Z., January 18, 1909.

DISTRICT QUARTERMASTERS: A number of instances have recently been noted of applications for family quarters having been filed at points at which early assignments would be made, without the intention of permanently occupying the quarters, but with a view to securing, by transfer after assignment, precedence at the legitimate stations.

In the future you will carefully consider all applications filed with you, or transferred to you, and if you have reason to believe any application is made for the purpose referred to, you will forward same to this office with statement of the facts, for decision as to its acceptance. This applies also to any application already on file, regarding which you have doubt.

C. A. DEVOL, Chief Quartermaster.

## Quartermaster's Department Changes.

CULEBRA, C. Z., January 20, 1909.

## TO ALL CONCERNED:

Effective February 1, the following transfers of District Quartermasters are announced:

C. E. Heisey, from Porto Bello to Bas Obispo.

M. R. Currie, from Bas Obispo to Porto Bello.

C. A. DEVOL, Chief Quartermaster.

## New Style Brass Check for Contract Laborers.

DEPARTMENT OF EXAMINATION OF ACCOUNTS.

EMPIRE, C. Z., January 19, 1909.

## CIRCULAR No. 8.

To all Timekeepers—During January a new style brass check will be substituted for the star contract checks now in use, and each contract laborer will receive a new check of the same number as the star check he now holds.

In order that the exchange may be made without confusion you will furnish this office with a list of all contract laborers, showing their names and check numbers, separated by gangs, giving the gang number and the foreman's name in every instance. Time inspectors will be assigned to assist you in making up these lists, and blanks for compiling this information are enclosed herewith.

Lists must be made on January 20 from the odd day time books, and only contract laborers who are timed for the 19th should be included thereon. This will avoid the possibility of having two divisions ask for the same check. The lists of names and numbers must be made up with the utmost care and forwarded to this office not later than January 21.

New checks will be sorted in accordance with the lists furnished and sent to the proper time office. Timekeepers, accompanied by Time Inspectors, will deliver the new checks to, and take up the star contract checks from, every contract laborer who is at work on January 25, using great care to see that the number of the new check corresponds to the number of the one taken up. If it is impossible to cover the entire work on the 25th the gangs not visited on the 25th will be reached on the 26th. Every effort must be made to reach all gangs within the two days.

After every gang has been visited and contract checks exchanged, the star contract checks taken up, together with the undelivered new checks, will be forwarded to this office with the lists of names and numbers, which lists must be checked off by the Time Inspector as delivery is made.

All star checks (contract) appearing on the work after the first delivery of the new series will be exchanged by a representative of this office, after the laborer has been properly identified.

W. W. WARWICK, Examiner of Accounts.

Approved:

GEO. W. GOETHALS,

Chairman and Chief Engineer.

The following steamers have recently arrived at La Boca: January 17, *Ecuador*, from Buenaventura; January 19, *Panama*, from Valparaiso; January 20, *City of Panama* from Central American ports; January 22, *Newport*, from San Francisco. Departures were: January 20, French Cruiser *Catinal*, for Southern ports; January 21, *Aysen*, for Valparaiso; January 22, *Perru*, for San Francisco.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

Twelve thousand feet of moving picture films have been purchased by the Y. M. C. A. for use in the Commission clubhouses and at other towns in the Zone where suitable rooms can be secured. Some of the films have been successfully shown at Gatun and Camp Elliott, and arrangements are being made for exhibitions at other towns where there are no clubhouses. A nominal charge for admission will be made in order to defray the actual cost of each entertainment.

CULEBRA.

The Prochaska orchestra gave a concert at the clubhouse on Monday evening, January 18.

The Gorgona Dramatic Club gave a performance of "The Doctor" at the Culebra clubhouse on Tuesday evening, January 19, which was enjoyed by a large audience.

The standing in the local "duck pin" tournament which closed last week was as follows: Fusner, first; Palmer, second, and highest score; Oliver third, and highest average. So much interest was manifested in this tournament that one for two-men teams from the different departments at Culebra is being arranged.

## Sale of Public Animals.

Notice is hereby given that there will be sold at public auction, at Gatun Police Station, at 2 p. m., on February 4, 1909, the following described public animals:

One Gray Native Stallion, No. 34.

One Buckskin Native Gelding, No. 37.

These animals may be seen at the Gatun Police Station. Further particulars may be obtained from the Chief of Police, Ancon, C. Z.

GEO. R. SHANTON, Chief of Police.

## Stages of the Chagres.

Maximum height of Chagres above low water for the week ending midnight, January 23, 1909:

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, calling at Puerto Barrios, and from Colon at 1.30 p. m., via Port Limon and Puerto Barrios, for New Orleans.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.  
The next sailing of the Leyland Line for New Orleans via Kingston, Ja., will be the steamship *Median* on or about February 2. The *Tampican* has been ordered to proceed to Galveston instead of New Orleans.

Ancon, Canal Zone,  
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

## NOTES OF PROGRESS.

### Heavy January Rainfall.

The rainfall last month was heavier than for any January since American occupation. The average at fifteen stations along the line of the Canal was 4.37 inches. In 1908, in the same territory, it was 1.19; in 1907 it was 0.87, and in 1906 it was 1.04. The general January average for the same territory since records have been kept was 2.32. It was heaviest at Cristobal, where it reached 10.61 inches. This has been exceeded at Cristobal only twice since the rain gauge was established in 1871. In that year the January fall was 15.42 inches, and in 1902 it was 19.20 inches. At Gatun this year it was 7.17 inches, and at Bohio 7.29 inches.

### January Excavation.

The grand total of excavation during the month of January was 2,924,551 cubic yards. All of this amount except 154,919 cubic yards was taken from the Canal prism. It is 391,316 cubic yards less than the December output. There were 25 working days in January, one less than in December. Of the grand total for January, 1,815,874 cubic yards were taken out by steam shovels and 1,108,677 by dredges. The mean rainfall for January in the territory in which excavation was in progress was 4.39 inches, as compared with 5.93 inches in December, and was the heaviest January rainfall since American occupation.

In the Atlantic Division the total excavation was 751,965 cubic yards, which is 106,759 cubic yards less than that of December. Of this amount 133,872 cubic yards were taken out by steam shovels and 618,093 cubic yards by dredges.

The total excavation in the Central Division was 1,539,648 cubic yards, which is 54,346 cubic yards less than the December output. Of this amount 1,257,945 cubic

yards were taken from the Culebra Cut, 195,008 cubic yards from the Canal prism elsewhere than in the Cut, and 86,695 cubic yards from the Obispo Diversion which is outside the Canal prism.

In the Pacific Division the total excavation was 632,938 cubic yards, which is 230,211 cubic yards less than that for December. The decrease in this division was caused by the dredge *Culebra* being out of commission for 18 working days, while being overhauled. Of the 632,938 cubic yards, 142,354 cubic yards were taken out by steam shovels and 490,584 cubic yards by dredges. The detailed statement of excavation in the three divisions follows:

### ATLANTIC DIVISION.

### High Water Interferes with Canal Work.

The recent freshets in the Chagres River caused a temporary disturbance of the work on that portion of the Central Division between Bas Obispo and Matachin. At 6.30 a. m., on the morning of January 29, notice was received at the office of the Division Engineer that an excessive rise could be expected in the Chagres River, and at 11 p. m., the same day the river reached its maximum height of 66 feet above sea-level at the Gamboa bridge. This is one foot

above the natural barrier which protects the work from the waters of the river, and the back water in the Bas Obispo River, caused by the freshet, put four steam shovels in the cut at Bas Obispo temporarily out of commission.

The Chagres River north of Bas Obispo follows a course like the letter "S." The Canal prism crosses the peninsulas formed by the bends of the river, known respectively as Point No. 1 and Point No. 2. In the excavation of the Canal prism, barriers of earth had been left on each bank of the river at each crossing in order to protect the work, and had been left at a sufficient height to guard against an ordinary freshet. At Santa Cruz (Point No. 1), the barrier at the north end of the excavation gave way at 3.20 p. m., and the cut was flooded. There were three steam shovels at elevation 40, which had been taken out before the barrier gave way, but four others were temporarily put out of commission. By working until 12 o'clock on the night of January 29 both barriers at Matachin (Point No. 2) were saved and the work was not hindered with the exception of one steam shovel, which at the maximum rise was under 19 feet of water. If the north barrier at Santa Cruz had not given way, thus relieving the pressure of the river against the south barrier at Matachin, it is very doubtful if that barrier could have been saved.

At Matachin the river flowed through the cut temporarily putting out of commission four steam shovels, but these were at work again at noon on January 30. Of the shovels mentioned as having been put out of commission all but three went to work on Monday, February 1.

### Unusual Freshet in Chagres River.

During January the water in the Chagres River reached a higher level than it had touched at any time during the previous year. This very unusual freshet began at 2 a. m. on January 27, at Vigia, and continued until noon on January 30, when the crest passed Gatun. It was divided into three distinct waves. The depressions between the three crests, or highest points of the rises, are plainly visible on the freshet curves drawn for Vigia, Alhajuela, and Gamboa, but at Bohio and Gatun there was practically no fall of the river between the rises, and on the curve for these points it appears as one continuous freshet.

The following table gives the history of this freshet, and comparisons between it and those of the past wet season, as well as those of record in January of past years. It will be noted, from this table, that seven freshets exceeding 56 feet above mean sea-level at Gamboa have occurred in January during the last twenty-six years; that the last one exceeded all previous January freshets, and also that, coming as it did in the so-called dry

## NOTES OF PROGRESS.

(Continued.)

season, it yet exceeded all freshets of the 1908 rainy season.

Summary of rises at Gamboa exceeding 19 feet above low water since May 1, 1908:

## Visit of Mr. Taft and Engineers

Mr. Taft, President-elect, with Mrs. Taft and the seven civil engineers who came to the Isthmus to investigate the Canal work, arrived at Colon about 10 o'clock on Friday morning, January 29. They were met in the harbor by Colonel Goethals and the Isthmian Canal Commission and were taken on a special train to Culebra.

On arriving at Culebra Mr. and Mrs. Taft were greeted by the American Minister, Mr. Squiers, and Mrs. Squiers and members of President Obaldia's cabinet.

On Saturday morning Mr. Taft took a special train to Panama and made a call upon President Obaldia. He returned to the Hotel Tivoli for luncheon, and in the afternoon attended a meeting of the Canal Zone Federation of Women's Clubs, delivering a brief address. On Sunday Mr. and Mrs. Taft were "at home" in the afternoon at the residence of Colonel Goethals in Culebra, and received a large number of callers from all parts of the Zone. On Monday morning Mr. and Mrs. Taft, accompanied by the visiting engineers, Colonel and Mrs. Goethals, members of the Isthmian Canal Commission, and a few guests, were taken by a special train over the line of the Canal, passing through the Culebra Cut. In the afternoon Mr. Taft went by special train to Panama and called upon ex-President Amador. On Tuesday morning, accompanied by Mrs. Taft, Colonel Goethals and the visiting engineers, Mr. Taft went to Gatun and spent the morning inspecting the lock

and dam sites, and in the afternoon on their way back from Gatun the party visited the dumps at Tabernilla, witnessing the operation of the Lidgerwood car unloaders, track shifters and spreaders. In the evening he attended a dinner given in his honor at the American Legation in Panama.

The visiting engineers spent Saturday morning in examining the lock and dam sites at Miraflores, going in the afternoon to La Boca, where they inspected the Pacific entrance to the Canal. On Sunday they spent the entire day at Gatun, going over the lock and dam sites, the spillway and the other phases of the work. After accompanying Mr. Taft through the Cut in the forenoon of Monday, the engineers spent the afternoon in examining the slides at Cncaracha, Paraiso, and Culebra.

## Grievances of Conductors.

The Special Board, appointed by the Chairman of the Isthmian Canal Commission, to investigate certain grievances of railway conductors, will hold its next hearing at the Administration Building, Ancon, on Sunday, February 7, at 9.30 a. m. All conductors in the Isthmian Canal Commission and Panama railroad service, who have grievances of any kind or who desire to give testimony, and who have not yet testified before the Board, are requested to be present at that time. A round-trip pass over the Panama railroad will be sent to those who desire to attend and who forward their addresses to the Chairman of the Board, Joseph Bucklin Bishop, Ancon.

## Lincoln Centennial League.

An adjourned meeting of the Lincoln Centennial League was held at the court house at Empire on Sunday at 3 p. m. for the purpose of making further arrangements for the celebration of the hundredth anniversary of the birth of Abraham Lincoln.

It was determined to have the celebration at Empire on Sunday, the 14th instant, commencing at 11 a. m. The committee expect to arrange for special trains from Panama and Colon to transport free of charge persons attending the celebration. Ladies are specially invited.

A feature of the day will be a basket lunch, and families are requested to bring with them a sufficient amount not only for themselves but enough for a few extra persons. Bands have been engaged, the marines will be present under arms, all the societies of the Zone have been invited, and there will be a grand parade from 11 a. m. to 12 m. From 12 to 1.15 p. m. there will be addresses by persons to be selected by the committee composed of Major Devol, and Messrs. E. M. Robinson and Louis K. Rourke.

For the purpose of defraying expenses a committee composed of Mr. Edward J. Williams as chairman has been appointed. There will be another meeting of the League

at 3 p. m. on Sunday, the 7th instant, in the court house at Empire, to which all persons interested are invited.

## Orator for the Lincoln Centenary.

EMPIRE, C. Z., January 30, 1909.

## THE CANAL RECORD:

Will you allow me to suggest through the columns of THE CANAL RECORD that the most suitable orator at the proposed celebration of the one hundredth anniversary of the birth of Abraham Lincoln is the Hon. Wesley M. Owen, the newly appointed Supreme Court Justice in the Canal Zone. Judge Owen comes from Illinois, which was Lincoln's state, and it is quite fitting, therefore, that he be selected as the orator of the day. Furthermore, he is a newcomer on the Isthmus and is said to possess unusual oratorical gifts, and it will be a good opportunity for the people of the Zone to hear him.

ILLINOISAN.

## Hotel Tivoli Rule for Employees.

The manager of the Hotel Tivoli wishes to call the attention of all Isthmian Canal Commission and Panama railroad employees to the following rule, which became effective January 1, 1908, and is still in force at the Hotel Tivoli:

"Open accounts will not be permitted. Guests are required to pay their bills upon leaving.

"Accounts of transient employees unpaid at the time of leaving will be made up at the nonemployees' transient rate and sent immediately to the Disbursing Officer."

## Vacations in Jamaica.

Employees of the Commission, who desire information concerning Jamaica as a health and holiday resort may procure it by calling at the British Legation, Panama, between 9 and 11 a. m. and 2 and 4 p. m.

## Brotherhood of Locomotive Engineers.

The regular meeting of Division No. 756, Brotherhood of Locomotive Engineers, will be held at Pedro Miguel, C. Z., on Sunday, February 7, at 1 p. m.

## GATUN TO BAS OBISPO.

## Excavation to Be Done in the Area of the Great Lake.

The Central Division has begun work on the section of the Canal between San Pablo and Gatun, which up to this time has been touched only in the course of surveys and investigations. Work is now in actual progress on every part of the Canal in which excavating is to be done.

In the territory between Gatun and the beginning of the Cut at Bas Obispo (Miles 9 to 31.5, where Gatun Lake will be), there remained to be excavated on January 1 only 7,146,970 cubic yards of material, located as follows:

Location.	Cu. Yds.
Between Gatun and Tabernilla.....	687,800
Tabernilla (estimated, San Pablo to Chagrecito).....	1,001,136
San Pablo.....	178,710
Caimito.....	907,092
Between Caimito and Point 2 at Gorgona....	2,989,164
Matachin.....	573,931
Santa Cruz.....	809,137
Total.....	7,146,970

## GATUN TO TABERNILLA.

Between Gatun and Tabernilla the work consists of excavating a number of small knolls that rise above the bottom of the Canal (40 feet above sea-level), and clearing a 1000-foot ship channel. The clearing is done principally by native laborers using the machete, and the material cut will be burned. The work at Gatun is in such condition that it is planned to have 10 feet of water in Gatun Lake next rainy season, which will begin in May. In anticipation of this an anchorage basin at Gatun, of about 2½ square miles, and also the 1000-foot channel, will be cleared and grubbed. The 1000-foot channel will be cleared below elevation 15 feet above sea-level, amounting to about 600 acres, this dry season. In addition, there are 900 acres to clear above elevation 15, between San Pablo and Gatun for a 1000-foot channel.

The excavation work in this section consists of a number of small "hand jobs" near Bohio, amounting in all to about 175,000 cubic yards, and 412,000 cubic yards at Buena Vista, which will be taken out by steam shovels. Excavation and clearing have been started at Bohio, where a gang of about 200 men are working. The old French canal is partly excavated up to this place, 17 miles from deep water (—45 feet) in Limon Bay. Two old cranes are standing in the channel, and near them are the buckets in which material was lifted from the channel to the dump cars. A large amount of old rail and dozens of 5-yard and Decanville dump cars complete the equipment with which, it is apparent, the old French company carried on the work. Two ledges of rock rise above the 40-foot level, and between these the spoil from the French canal was dumped. These ledges and a few feet off the top of the old dump constitute the excavation on which work is in progress. A few hundred feet east of the old canal is a diversion channel, and into this channel and the canal the rock and earth that rise above grade 40 are dumped. The old Decanville equipment is used, and the longest haul is about 300 feet. It is expected that the hand excavation will be completed this year.

## TABERNILLA, SAN PABLO AND CAIMITO.

From Tabernilla to Mile 27.5, between Mamei and Juan Grande, the channel is to

be 800 feet wide, and from that point to Bas Obispo, near the beginning of Culebra Cut, it will be 500 feet wide. During the first week of the new year the steam shovels were taken from the excavation at San Pablo and set at work at Cano River, about opposite Tabernilla. The material to be taken out at this point by steam shovels amounts to about 500,000 cubic yards. The remainder will probably be dredged. One steam shovel is making a cut along the edge of the river and casting over into the stream, and another is making a pioneer cut through the center of the ridge. The equipment includes that formerly in use at San Pablo, including three steam shovels, three American locomotives, and a sufficient number of 10-yard Oliver dump cars.

When work was begun at San Pablo in August, 1907, two hills stood in the prism of the Canal, and the amount of material to be excavated was 1,379,639 cubic yards. Along the foot of the hills the French had taken out a large amount of earth in working on the channel for their canal. This excavation is used in the 800-foot channel of the present Canal. The work at San Pablo was finished at the end of 1908, up to the point where further excavating would infringe on the roadbed of the Panama railroad. There remains to be excavated 178,810 cubic yards, but this work cannot be done until the railroad track is shifted.

At Caimito the character of the work is similar to that at San Pablo, which is only a few hundred yards east, across the Chagres. One hill, 150 feet high, stood in the prism, and it was necessary to excavate the side of another hill. Here, too, the French had done some work, but the channel of their canal falls outside the present prism, and a considerable quantity of material wasted by them from their excavation is now being thrown back into the old channel. The French canal at this point afforded a convenient dumping place, with a short haul. When the work was begun here in September, 1907, the amount of material to be excavated was 2,078,569 cubic yards, and there remained to be excavated on January 1, 1909, only 907,092 cubic yards, practically all of which will be used to fill the Panama railroad trestles. Four steam shovels are on this work, and grade has been reached in several places.

The work at San Pablo and Caimito was begun in August, 1907, and 2,381,670 cubic yards have been removed since that time. On January 1, 1909, there remained to be excavated 178,710 cubic yards at San Pablo and 907,092 cubic yards at Caimito.

## CAIMITO TO BAS OBISPO.

No excavation or clearing has been done between Caimito and Matachin peninsula, known as "Point 2." In this territory the excavation consists principally of cutting through eight peninsulas formed by the sinuous course of the Chagres River. The material is chiefly earth. At "Point 3" there are about 830,000 cubic yards, of which only about 7,500 yards are rock, and this probably will be taken out by steam shovels as soon as the work at "Point 2" is finished. When the Chagres is diverted through the completed channel at "Point 2," a low trestle will be driven across the original channel of the river, just east of the prism, to connect "Point 3" with "Point 2," so

that the material from "Point 3" can be hauled south over this bridge and wasted along the old abandoned channel east of "Point 2." This will make a short haul for all material from "Point 3." A large amount of excavation done by the French is utilized here also, as the Canal follows the line of the French canal. It is likely that a suction dredge will be used on the remainder of the excavation in this section, and that no attempt will be made to remove the material until the water in Gatun Lake is at an elevation of about 55 feet.

Shovels are working in the bottom of the Canal (40 feet above sea-level) at Matachin peninsula "Point 2." Several shovel cuts have been made at grade, and it is expected that the work will be finished by the beginning of the next rainy season, about May 1. Originally the excavation to be done in this part of the work was 1,717,657 cubic yards, and of that amount there remained 573,931 cubic yards on January 1. The equipment consists of two model-91 Marion steam shovels, one 95-ton Bucyrus steam shovel, two 70-ton Bucyrus steam shovels, eight American locomotives, two Belgian locomotives, one old Panama railroad locomotive, 141 Oliver 10-yard dump cars, one spreader, and one track shifter.

In carrying on the excavation at Matachin, and likewise at Santa Cruz, it was necessary to build a dyke across either end of the channel to keep out the water of the Chagres River, which in flood rises as high as 35 feet above low water at this point. Surface and seepage water is pumped out. A steam shovel is now removing the dyke at the north end of the cut. At the beginning of the next rainy season the dyke at the south end of the cut will have been removed and the river will then be turned through the completed channel. The grade of the Canal is lower than that of the river at its low water stage.

The Santa Cruz work "Point 1" is similar to that at Matachin. The excavation at grade is below the low-water level of the river, and the channel is kept dry by dykes at either end of the cut and by pumping. The amount to be excavated here was originally 1,247,652 cubic yards, and on January 1, 1909, there remained 809,137 cubic yards. It is expected that the channel at this point will be finished by the 1st of August, 1909, when the river will be turned through the cut. The equipment at Santa Cruz consists of: Four 70-ton Bucyrus shovels, three American locomotives, two Rogers' locomotives, seven Belgian locomotives, seventy-nine Oliver 12-yard dump cars, one spreader, one track shifter, and one pile driver.

The work at Matachin was begun in December, 1907, and at Santa Cruz in January, 1908, and since then 1,583,243 cubic yards have been removed at these points. On January 1, 1909, there remained to be excavated 573,931 cubic yards at Matachin, and 809,137 cubic yards at Santa Cruz.

The ships owned by the Panama Railroad Steamship Company made 32 round trips, and the ships chartered by the company made 36 between Cristobal and New York in the year 1908, a total of 68, as compared with 74 in 1907. In 1908, 13,816 passengers were carried at an average fare of \$26.28, as compared with 14,158 passengers carried in 1907 at an average fare of \$28.01.

## CANAL ZONE FEDERATION.

## Fourth Convention of Women's Clubs—Mr. Taft's Speech.

The Canal Zone Federation of Women's Clubs held its fourth convention at Ancon on Saturday, January 30, the business session being held in the morning in the rooms of the Ancon Woman's Club, and the reception at Hotel Tivoli in the afternoon at 2.30 o'clock in the ball room, which had been especially decorated and arranged for the occasion.

On the platform at the afternoon session were the President-elect and Mrs. Taft, Mrs. George W. Goethals, the president and vice-president of the General Federation of Women's Clubs, the president and officers of the Canal Zone Federation and Mrs. Squiers, wife of the American minister to Panama.

Introduced by the president of the Canal Zone Federation as the patron and friend of the Women's Clubs in the Zone and the one who made their organization possible, Mr. Taft made the following speech:

*"Ladies of the Women's Clubs on the Isthmus*—I know you do not expect any lengthy remarks from me, and if you do you will certainly be disappointed.

"It is a great pleasure for me to be here with Mrs. Taft, to express the sympathy that we both feel in Women's Clubs everywhere, but especially on the Isthmus and in the Zone. The problem of the construction of the Canal involves the presence of a great many people who while here are to be away from home, and in order to make it possible to secure the presence of those persons necessary in the construction it is the duty of the Government to make life here as bearable and tolerable as possible. Now, the Americans, who are largely to construct the Canal, are a gregarious people. They are a people who believe in society and association, and a people who without association and without society are not apt to enjoy life, who are apt to become morbid, and those who are morbid and lonely and do not enjoy life never accomplish much in life, and certainly do not make the best agents for such a great work as the construction of the Canal. For that reason the organization of clubs, the construction of this hotel, the building of churches, and everything that the Government may possibly do to make life enjoyable here, and to bring people together, the Government has a right to do and has a duty to do. Americans do not lack initiative. American women do not lack initiative. I am able to say that from first hand—close association with the sex; and the organization of clubs of course is one of the first instruments by which society and intelligent association can be promoted.

"The objects of Woman's Clubs are various, but the first object is that women should get together and talk. I know that there is a good deal of jocose, clumsy humor directed against the gossip of Women's Clubs by men. My experience with men is that they are just about as gossipy as women, only that they are a little more careful to conceal their like of it. That is all. What the woman learns at the Club or at the Federation or at the tea is all extracted from her by her husband when she comes home, and as possibly it does not lose in the telling, the husbands have the advantage in what they hear.

"Ladies, I wish for your association all the

good fortune possible—all the prosperity possible. I congratulate you on having developed to such an important stage as to call for a visit from the representatives of Women's Clubs in the United States. I congratulate you on their coming, and I hope that this particular meeting will be productive of good. I congratulate you as citizens of the United States resident on the Isthmus, upon the very great progress which is being made on the Canal, and the fact that we can now look forward with some definiteness to a completion of the great work; and when it is completed, every one who has had any connection with it may take to himself or herself a great deal of credit in having participated in the great constructive work of the nineteenth and twentieth centuries."

The address was received with enthusiasm.

The remainder of the afternoon program consisted of selections by the Cecelian choruses of the Cristobal Club, with Mrs. Frank Ullrich at the piano, songs by Mrs. E. Lewis Baker and Miss Harriet Cooke, and addresses by Mrs. Phillip North Moore and Mrs. John Dickinson Sherman, respectively president and vice-president of the General Federation of Women's Clubs.

At the close of the addresses a reception to the visiting women was held, refreshments being served by the Ancon club. About 250 women were present.

Mrs. Moore and Mrs. Sherman will remain on the Isthmus for a short time in order to visit the local clubs, and thus acquaint themselves better with conditions here.

The business meeting in the morning was preceded by a meeting of the Federation Board, when unfinished and financial business was disposed of. There were about 80 women present. Each club had a full representation of delegates, besides a large number of club women. The address of welcome made by the president of the Ancon Woman's Club was warmly received. The occasion was one of peculiar gratification to the club, as it was able to throw open the well appointed club rooms to its guests. The reports of the Federation officers followed the reading of the minutes. The corresponding secretary read letters of greeting from the Texas Federation and from Miss Helen Varick Boswell, organizer of the Zone clubs.

The reports of the presidents of the Woman's Clubs at Ancon, Pedro Miguel, Paraiso, Culebra, Empire, Las Cascadas, Gorgona, Gatun, and Cristobal, were especially interesting and were followed with close attention.

The Canal Zone Federation is divided into four committees, education, home, art, and literature. Owing to changes in the personnel and other circumstances the work of these committees has not been as effective as could be desired, but it is hoped that this difficulty will be obviated and that the Federation committees will become as strong and united as those of the individual clubs. The strongest committee is the philanthropic which, in operation with the clubs, has done splendid work, under the chairmanship of Mrs. Thomas W. Brown, jr.

The reciprocity committee has circulated year books and Club calendars, assisted in arranging programs and outlining work and furnishes a list of speakers and lecturers available for the Club. Much good work has been done by this committee, but it is thought that its usefulness can be increased

by correspondence with similar committees with Women's Clubs in the States. Interest in the study of native birds will be aroused by a list of publications on the birds of Panama, sent by Mr. John F. Ferry, of the Field Columbian Museum, Chicago.

The educational question was taken up when a resolution was presented to make an effort to have instruction given in the public schools of the Zone on the poisonous nature and evil effects of alcohol and cigarettes. The resolution was unanimously adopted.

During the session the president of the General Federation took part in the discussions, dwelling with special interest on the educational question, the cooperation of the home and school, and in the library. Mrs. Sherman also took part, and followed the proceedings with much interest. The formation of an active committee for library extension was effected, the chairman of the educational department of each club to be members of the committee. Traveling libraries were suggested, and traveling art galleries were also spoken of as possible additions.

The formation of a committee for the study of plant life on the Isthmus was one of the important acts of the meeting. This committee will have in its work the cooperation of Dr. Charles F. Millspaugh, curator of botany in the Field Museum, who will take charge of the specimens sent to him, and have them classified and written up. Each club will have representation. The committee will work under the title "The Botanical Committee of the Canal Zone Federation."

Thanks were extended to the Chairman of the Isthmian Canal Commission, the General Manager of the Panama railroad, for courtesies, and to the Ancon Woman's Club for entertainment. An invitation for the Federation to meet at Cristobal in April was accepted. Before the close of the business session the Ancon Woman's Club presented special souvenir copies of their Year Book to the guests and to the president of the Federation.

## PERSONAL.

Dr. J. C. Perry, Chief Quarantine Officer, returned to the Isthmus, February 2, on the *Colon*, after a six weeks' leave of absence in the States.

## Missing Man.

Information is wanted in regard to Edward H. O'Neill, who is thought to be on the Isthmus. Anyone having knowledge concerning him is requested to communicate with his daughter, Miss Belle A. O'Neill, 3176 Almond street, Philadelphia, Pa.

## Resolution of Sympathy.

WHEREAS, It has pleased Almighty God to remove from our midst Brother C. A. Cristy, of Barton, Ohio, formerly of Empire, C. Z., on December 8, 1908, in whom we have lost a worthy brother and the bereaved family a kind husband and a loving father; therefore, he is,

*Resolved*, That we, his brothers of Empire Lodge, No. 2, K. of P., desire to express our sympathy to his loved ones in this their hour of affliction; and furthermore he is

*Resolved*, That our charter be draped in mourning for thirty days and a copy of these resolutions be spread on our minutes, one copy sent to the bereaved family, and one copy to THE CANAL RECORD for publication.

P. F. MAHER, S. A. BENNINGER, W. T. KIMBERLEY, Committee.

## PORT OF LA BOCA.

## Handling Facilities and Extent of the Trade.

La Boca is the Pacific terminal of the Panama railroad, the point where the Rio Grande flows into Panama Bay, where the French began the Pacific terminal for the Panama Canal, and where the present Canal is to end. It is the only port on the Pacific side between Callao and Salina Cruz in which deep draught vessels can unload at a wharf. In the fiscal year 1908 there were handled at the Panama railroad docks at La Boca 387,618 tons of merchandise carried in 181 vessels.

When it went into the hands of a receiver in 1889 the old French company had already done a great amount of work on a channel from deep water in Panama Bay to Corozal. Several Scotch ladder dredges had been employed, three of which are still in use. To keep the dredging fleet in repair a machine shop was built at the mouth of the Rio Grande and docks were erected. La Boca (the mouth) is the village that grew up around the shops and docks. It had a population of 1,544 on June 23, 1903. The harbor in front of the city of Panama is so shallow that the rocks near the shoals are bare at low tide, and vessels must discharge their cargo onto lighters, so that practically all the imports and exports on the Pacific side are handled at La Boca, which is about two miles distant from the city.

In the concessionary contract made between the United States of Colombia and the Panama Railroad Company in 1864, the company bound itself "to extend the railroad on the Pacific side to the islands of Naos, Culebra, Perico, and Flamingo, or other places in the bay where there may exist a permanent depth of water for large vessels." By another contract entered into in 1880 the company agreed to pay \$10,000 a year during thirty years, in lieu of the extension, or until the extension was made. In order to do away with the expense and inconvenience of lighterage, as well as to fulfill the spirit of its contract, the railroad company entered into a contract with the new French company in 1896 to build a pier at La Boca, alongside the deep-water channel which the French were dredging. In his annual report for 1898 the president of the railroad spoke of the work as follows:

Continued progress was made during the year in completing the new terminal port and pier at La Boca, in the Bay of Panama, which, as now almost finished, consist of a magnificent pier, 1,000 feet long, 50 feet wide, constructed of 24 solid cement piers founded on bedrock, shedded its entire length, with five large steam hoisting cranes and one 15-ton derrick crane, with which to discharge or load three large ships at one time.

Basins have been excavated alongside the pier of sufficient size to allow a free movement of vessels of 3,000-ton capacity, and to allow such vessels to be safely berthed there at all stages of a tide, which has an average rise and fall of 21 feet. Cargo will be rapidly transferred directly to and from cars on the pier, which is connected by branch road with the main line. On the pier and main line adjoining there have been newly constructed and installed an ample train yard, water plant for pier and ships, electric light plant, treasure vault, telephone and telegraph lines, truck scale and engine shed, and office building.

The pier was first used in 1899. In the same year the harbor was charted, and the Colombian Government, on the payment of \$200,000, in addition to \$200,000 already paid, accepted La Boca as the place referred to in the contract of 1867, "where there

exists a permanent depth of water for large vessels." On October 15, 1900, the railroad company assumed charge of the excavation in the basin of evolution, and in the same year leased the machine shop from the new French company. On January 1, 1901, all the work had been completed and the port was declared open to commerce.

A contract was entered into with the French Canal Company in 1901 for the use of La Boca as a terminal of the railroad until 1956, and also for the use of the dredges, clapsnets, and other materials. In short the village and its properties passed from the hands of the Panama Canal Company to those of the Panama Railroad Company. Contracts were made in 1902 with the Pacific Mail Steamship Company for a monopoly of the trade north of Panama, and with the Pacific Steam Navigation Company and the Cia Sud Americana de Vapores for the monopoly of the trade south of Panama.

These were the principal factors in the growth of La Boca up to the time of the American occupation in 1904. Since then the dredging in the harbor has been continued, the docks and machine shops have been enlarged, a new electric and air compressing plant has been installed, and the storage and pumping plant of the Union Oil Company has been erected.

Two years ago the docks at La Boca were enlarged, and at present they are 2,000 feet long and 80 feet wide in platform space, in addition to two railroad tracks. All the merchandise dock is under cover. The least depth of water alongside at low tide is 24 feet 6 inches. Five ships of from 3,000 to 5,000 tons can tie up at the docks at one time, and there are lighterage facilities for unloading additional ships in the harbor. At the extreme end of the docks is a 16-ton crane and along the front of the wharf are ten 1½ ton and eight 4-ton movable cranes, all run by electricity. The small cranes were designed by a French engineer and are peculiarly adapted to this port where there is a difference of 21 feet between high and low water. The lumber dock is large enough to make it practicable to unload 150,000 feet a day, but ships for La Boca should be prepared to handle lumber or piling with their own gear, as the cranes on the docks will not handle them to advantage. Coal chutes, with a capacity of 1,000 tons a day, are located alongside the lumber dock. The Panama Railroad Company has 10 cargo lighters, with a total capacity of 3,000 tons, four coal lighters of 200 tons capacity each, and a tug boat in the La Boca port service. The company has under consideration the construction of a 1,000-foot extension to the dock. In a few months the old channel made by the French will be closed and the new American channel will be in use.

The trade through La Boca, and therefore from the west coast of North and South America, across the Isthmus of Panama, is confined almost exclusively to ships of the Pacific Mail Steamship Company, an American line; the Pacific Steam Navigation Company, a British line; and the Cia Sud Americana de Vapores, a Chilean company. The contracts by which these companies gained a practical monopoly of the west coast trade were annulled in June, 1905. The Pacific Mail Company has a ship in and out of La Boca every nine days, which takes

from 26 to 30 days to make its voyage between San Francisco and Panama, making calls en route at nine ports in Central America and four in Mexico. It has nine ships in the regular service, and in the coffee season three more are added.

The ships of the Chilean company and the Pacific Steam Navigation Company arrive at and leave La Boca on alternate weeks. They make the round trip in about 72 days, and en route call at ten ports in Chile, nine in Peru, and one in Ecuador. Each company has nine boats in the service. Two vessels of the Pacific Steam Navigation Company are kept in a two-weekly coasting service as far south as Guayaquil. One steamer sailing every ten days serves the ports of the Republic of Panama west of La Boca. Its principal freight is cattle, which are put overboard close to the beach at Panama. The merchandise is discharged onto lighters. The Kosmos line boats (German) call at La Boca, but have no regular schedule. The longest boat ever entering the port, a ship 460 feet long, was one of this line.

La Boca is known officially as the port of Ancon. Under Executive Order of June 24, 1904, the ports of Ancon and Cristobal were declared open to the commerce of the world. This executive order provided for duties on importations into the Canal Zone to be levied in conformity with such duties as Congress imposed upon foreign merchandise imported into the United States. This order, however, was never put into effect in so far as the collection of duties was concerned. Under dates of December 3 and 6, 1904, Executive Orders known as the "Taft Agreement," were issued, which define the ports of the Canal Zone. From July, 1904, up to the present time vessels have freely entered and cleared at the ports of the Canal Zone under the jurisdiction of the Canal Zone customs authorities, and in accordance with the "Taft Agreement" all duties have been paid to the authorities of the Republic of Panama.

The following is a statement of the vessels entering and clearing at the port of Ancon, C. Z., from July 1, 1904, to June 30, 1908:

Nationality.	Class.	No. entering.	Tonnage.	No. clearing.	Tonnage.
American....	Steam..	246	502,673	247	505,221
American....	Sail....	2	1,927	2	1,927
British.....	Steam..	198	290,465	196	287,366
Chilean.....	Steam..	104	174,017	104	173,904
German.....	Steam..	39	105,263	39	106,263
Norwegian..	Steam..	4	9,894	4	9,894
Italian.....	Steam..	1	2,700	1	2,700
Total.....		594	1,087,939	593	1,087,275

Vessels in port from 1907 .....	4
Tonnage in port from 1907.....	7,747
Vessels remaining in port June 30, 1908 .....	5
Tonnage remaining in port June 30, 1908.....	7,653

The movement of passengers and cargo between July 1, 1904, and June 30, 1908, was as follows:

Tons of cargo arriving, in transit.....	447,948
Tons of cargo departing, in transit.....	690,678
Tons of cargo arriving, local.....	48,882
Tons of cargo departing, local.....	1,686
Passengers arriving, cabin.....	10,698
Passengers arriving, steerage.....	11,526
Passengers departing, cabin.....	10,266
Passengers departing, steerage.....	9,363

The number of vessels handled at the Panama railroad docks at La Boca and Panama in the fiscal year 1908 was 181, which is 21 more than in the preceding fiscal year.

The tonnage of merchandise handled in the years 1907 and 1908 was as follows:

Years.	TONS.		
	Received.	Despatched.	Total
1908.....	183,430	204,188	387,618
1907.....	126,033	193,344	319,377
Inc. over 1907.	57,397	10,844	68,241

The amount of merchandise handled through the port, in 1907 and 1908, showing the origin and destination, is as follows:

Year.	SAN FRANCISCO.		MEXICO.	
	To.	From.	To.	From.
	Tons.	Tons.	Tons.	Tons.
1908.....	23,070	15,785	11,820	3,891

1908.....	54,329	57,522	119,809	72,210
1907.....	59,714	40,286	95,209	66,741

The total of cargoes received and despatched in 1890, 1895, 1900, 1905, and 1908 is shown in the following table:

Years.	TONS.		
	Received.	Despatched.	Total.
1890.....	77,782	118,865	196,647
1895.....	116,745	132,994	249,739
1900.....	195,889	115,423	311,312
1905.....	125,630	175,138	300,768
1908.....	183,430	204,188	387,618

The principal articles handled through the port of La Boca are coffee from Central America, hides and skins from South America, sugar from Peru, ore and bar copper from Peru, wine and treasure. A large lumber trade has been built up with Puget Sound since the beginning of construction work on the Canal by the Americans.

#### Repairs to the Culebra.

The sea-going suction dredge *Culebra*, which was beached at Perico Island on January 7, was put in service again on January 28, having lost in the meantime eighteen working days. As this dredge has been excavating over 350,000 cubic yards of material from the Pacific entrance to the Canal each month, the dredging record of the Pacific Division in January has been greatly reduced by the time lost by the *Culebra*. The hull has been patched, the machinery repaired, and the vessel has undergone a general overhauling.

#### Knights of Pythias.

A meeting for the nomination of officers for Ancon lodge, Knights of Pythias, will be held in their lodge room on Thursday night, February 4, at 7.30 p. m. All interested are requested to be present at the meeting.

#### Improved Order of Red Men.

Incas Tribe No. 6, I. O. R. M., of Gatun, will meet in council on February 6, 1909, at which important business will be transacted. There will be an entertainment after the meeting. All members are earnestly requested to attend.

The outing to Fort Lorenzo which was planned for Saturday, January 31, for the junior members of the four Young Men's Christian Associations on the Isthmus was postponed until Saturday, February 13, because of the high water in the Chagres River.

## COMMISSION CLUBHOUSES.

### Activities of the Young Men's Christian Association.

#### EMPIRE.

The Gorgona Dramatic Club presented "The Doctor," Monday, January 25, to a crowded house.

The date for the performance to be given by the Y. M. C. A. minstrel troupe is February 25.

A duck pin contest was bowled on the Empire alleys on Wednesday, January 27, between Culebra and Empire. The score was Empire, 3; Culebra, 0.

A class in beginners' Spanish was organized on Thursday, January 28, to be opened for both men and women. The course will consist of twenty-five lessons, two lessons to be given each week.

An Isthmian championship bowling match on Thursday, January 28, was rolled at the clubhouse between the Empire Y. M. C. A. 1908 champion team, and a picked team from Panama and along the Line. The Y. M. C. A. team captured the match by taking three straight games from the visitors.

The Isthmian duck pin tournament began at Empire on Saturday, January 30, when the Empire team beat the Gorgona team two out of three games.

#### CRISTOBAL.

The entertainment on Saturday night by the Gorgona Dramatic Club was the first amateur theatrical performance that has been presented here.

A new map of Costa Rica, issued by the Bureau of American Republics, has been put up in the game room of the clubhouse.

### Isthmian Baseball League.

Scores, January 31, 1909.

At Empire Park—Empire, 5; Gorgona, 1.

At Ancon Park—M. P. & M., 2; Ancon, 0.

Standing of the League, February 1, 1909.

	Played.	Won.	Lost.	Per Cent.
Empire.....	6	6	0	1000
M. P. & M.....	7	5	2	714
Gorgona.....	7	2	5	286
Ancon.....	6	0	6	000

### Misdirected Letters.

Division of Posts, Customs and Revenues,

Ancon, C. Z., February 3, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Barker, Cecil	Hadley, William
Blackman, Donald	Harrison, S. H.
Brady, Lorry	Kendall, Mrs. Charles
Brook, Frederick (pkg.)	Lawton, James
Brown, John	Park, Lerroy
Cummings, Joseph	Rader, John M.
Golden, J. P.	Rivanaugh, Lancelot
Groves, Mrs. Richard	Van Dine, Paul Biddle
Westberg, Mrs. J. E.	

### Coal Consumed by Steam Shovels.

In the year, ended June 30, 1908, the following amounts of coal were supplied to steam shovels on the Canal work:

	Pounds.
Colon Division.....	1,848,925
Gatun Locks.....	8,983,060
Gatun Dam and Spillway.....	4,097,999
Chagres Division.....	10,633,669
Culebra Division.....	75,922,000
Pedro Miguel Locks (one month).....	71,769
Miraflores Locks (six months).....	2,636,827

### Entertainment at Empire.

Mr. Thomas Elmore Rucey, humorist, will give an entertainment at Kangaroo Hall, Empire, on Thursday evening, February 11, for the benefit of St. Mary's Protestant Episcopal Church at Empire. The admission will be fifty cents gold. Every one is cordially invited to attend.

### South Carolina Club.

COROZAL, C. Z., January 25, 1909,

THE CANAL RECORD:

All South Carolinians on the Isthmus are requested to send their names and addresses to either one of the undersigned, as steps are being taken to organize the "South Carolina Club." Should a sufficient number of names come in a meeting will be called in the near future at Hotel Tivoli, for the purpose of organization.

W. E. RUSSELL, Ancon, C. Z.

H. C. DEW, Gorgona, C. Z.

## OFFICIAL CIRCULARS.

### Vacation Leave.

CULEBRA, C. Z., January 25, 1909.

CIRCULAR No. 225 (Revised.)

Circular 275 is hereby cancelled and the following is issued in its stead:

Before an employee is granted vacation leave in any service year, he will be required to complete ten months' actual service exclusive of authorized leave of absence without pay, or absence on account of suspension from duty.

Heads of Departments or Divisions may permit an employee to absent himself from his duties for not more than one day, and such absence need not be reported to this office, but any authorized absence for two or more consecutive days should be reported to this office and covered by special order as leave without pay. Absence without permission for two or more consecutive days, unless subsequently covered by a sick certificate, or satisfactorily explained and covered by special order as leave without pay, should be punished by suspension or discharge.

GEO. W. GOETHALS, Chairman.

### First Lieutenant, Canal Zone Police.

CULEBRA, C. Z., January 23, 1909.

CIRCULAR No. 231.

First Lieut. Charles W. Barber, 2d Infantry, having reported for duty in accordance with S. O. No. 297, War Department, Washington, December 22, 1908, is hereby assigned to duty as First Lieutenant, Canal Zone Police, relieving First Lieut. John B. Barnes, 5th Infantry.

GEO. W. GOETHALS, Chairman.

### Baggage Allowance.

CULEBRA, C. Z., February 2, 1909.

HEADS OF DEPARTMENTS AND DIVISIONS:

I give below a table showing the baggage allowance on I. C. C. forms of transportation:

Form.	Allowance Pounds.	Per lb. excess.
First-class half-rate.....	250	1 cent
Second-class half-rate.....	None	
First-class official business trip.....	250	1 cent
Second-class official business trip.....	None	
Sixty-trip ticket.....	250	1 cent
Employees' 24-trip ticket.....	250	1 cent

By direction of the Chairman.

M. B. DEPUTRON, Assistant to the Chairman.

### Requisitions for Coupon Books.

ISTHMIAN CANAL COMMISSION,  
DEPARTMENT OF DISBURSEMENTS.  
EMPIRE, C. Z., January 30, 1909.

TO ALL CONCERNED:

On account of the delay in making requisitions for commissary and hotel coupon books and meal tickets until the first part of each month unnecessary congestion of orders with attendant delay for all concerned is caused.

In future, all persons responsible for the issuance of coupon books or meal tickets are requested to send in their requisitions to the Disbursing Officer (through the Examiner of Accounts) on or about the 25th of each month to cover their requirements for the next month. These requisitions will be filled but not sent out from the Disbursing Office until the first of each month, thus overcoming the necessity for taking up and caring for a large stock when the offices at interest may be illly equipped therefor, as well as assuring the receipt of the necessary books and tickets prior to the 5th of the month, when they should be ready for issuance to employees.

Compliance with the above request will, it is believed, be found to the advantage of all concerned.

EDWARD J. WILLIAMS, Disbursing Officer.

### Ancon Laundry Baskets.

ANCON, C. Z., January 26, 1909.

TO ALL CONCERNED:

In order to locate missing laundry baskets belonging to the Ancon Hospital laundry, it is requested that you return at once any you may have, marking same "Superintendent Ancon Hospital, Ancon, C. Z."

JOHN L. PHILLIPS, Superintendent.

### Sale of Public Animals.

Notice is hereby given that there will be sold at public auction, at Gatun Police Station, at 2 p. m., on February 4, 1909, the following described public animals:

One Gray Native Stallion, No. 34.

One Buckskin Native Gelding, No. 37.

These animals may be seen at the Gatun Police Station. Further particulars may be obtained from the Chief of Police, Ancon, C. Z.

GEO. R. SHANTON, Chief of Police.

## COMMISSARY DEPARTMENT.

## ADVANCE PAYMENTS FOR ICE.

CRISTOBAL, C. Z., January 20, 1909.

TO ALL CONCERNED:

The notice published in THE CANAL RECORD, issue of December 26, relative to advance payments for ice is being misconstrued by a number of the employees.

This notice did not contemplate the settling in advance for ice, in cash, by any persons but those having *authorized personal charge accounts*.

Persons who have not authority for charge accounts, and who have heretofore secured ice only by deposits of coupons in advance will continue to secure their ice from the Commissary Department in the same manner. It is not intended that such employees will settle in any other way than by the remittance of coupons.

JOHN BURKE, *Manager*.

Approved:

EUGENE T. WILSON, *Subsistence Officer*.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

## COMMISSARY PRICES

For week beginning February 1:

## FRESH MEATS.

	Price.
Mutton—Stewing.....per lb	7
Shoulder, neck trimmed off, (4 pounds and over).....per lb	10
Entire forequarter (not trimmed), 10 pounds and over.....per lb	9
Leg (8 to 10 pounds).....per lb	19

Magdalena.....R-M.....Tuesday.....Feb. 2	
Orinoco.....R-M.....Tuesday.....Feb. 16	
Atrato.....R-M.....Tuesday.....Mar. 2	
Trent.....R-M.....Tuesday.....Mar. 16	

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, calling at Puerto Barrios, and from Colon at 1.30 p. m., via Port Limon and Puerto Barrios, for New Orleans.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The next sailing of the Leyland Line for New Orleans via Kingston, Ja., will be the steamship *Median* on or about February 2. The *Tampicon* has been ordered to proceed to Galveston instead of New Orleans.

## Concert by the I. C. C. Band.

HOTEL TIVOLI, ANCON, C. Z., Sunday, February 7, 1909, at 7.30 p. m.

## PROGRAM

1 March—Our Director.....Bigelow	
2 Selection—A Knight for a Day.....Hubbell	
3 a Two Step—Hoop-o-Kack.....Allen	
3 b Characteristics—John Chinaman.....Fessler	
4 Air et Varie—Austrian Hymn.....Godfrey	
5 A Southern Pastime—Moonlight in Dixie.....Clement	
6 Reminiscences of Scotland.....Godfrey	
7 Descriptive—The Forge in the Forest.....Michaelis	
Adagio, Night; Adagio lento, Morning; Allegro, v. vice, By the Brook; Adagio, Morning Prayer; Allegretto, At Work at the Forge.....Thomas	
8 Overture—Raymond.....Eilenberg	
9 Patrol—March Turque.....Holzman	
10 March—Old Faithful.....Holzman	

CHAS. E. JENNINGS, *Musical Director*.  
The next concert will be given at Bas Obispo, C. Z., Sunday, February 14, 1909.

The following steamers have recently arrived at La Boca: January 25, *Actec* from Central America; January 26, *Limari*, from Valparaiso; January 29, *Quito*, from Buenaventura.

# CANAL

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, FEBRUARY 10, 1909.

No. 24.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

### THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Widening the Cut.

The Chairman of the Isthmian Canal Commission has received the following authorization:

THE WHITE HOUSE,  
WASHINGTON, October 23, 1908.

*Memorandum to the Secretary of War:*

With reference to our conversation concerning the widening of the Panama Canal through Culebra Cut so as to make the minimum width three hundred feet at the bottom, I confirm my verbal statement and authorize the widening of four and one-half miles of Culebra Cut from 200 to 300 feet at the bottom. THEODORE ROOSEVELT.

This change will make the entire Canal through the nine miles of the Culebra Cut, from Bas Obispo to Pedro Miguel Locks, 300 feet wide at the bottom. It calls for an additional excavation of 12,997,000 cubic yards, and an additional expense of about \$14,000,000.

The new excavation will not materially change the line of the Canal, the additional amount being removed about equally from each side of the former center line except at two points: Between Las Cascadas and Empire the increased excavation will nearly all be taken from the west side in order to avoid interference with the Obispo Diversion; from Enterprise to Paraiso it will nearly all be taken from the east side, cutting out a small angle in the old line opposite Cucaracha. An average cross-section shows that the Canal will be 300 feet wide at the bottom with nearly perpendicular sides to an elevation of 95 feet above sea-level, at which elevation a berm 40 feet wide will be excavated on each side of the Canal and the slope above that elevation will be suitable to the material through which the excavation runs.

Under the original plan the width of the Canal from Bas Obispo to a point opposite the south end of Las Cascadas was to be

300 feet at the bottom. From that point to Paraiso it was to be 200 feet at the bottom. It is the latter section which is to be widened to 300 feet. This makes 300 feet at the bottom the minimum width at any point throughout the Canal. The Atlantic and Pacific entrances are to be 500 feet in width at the bottom and through Gatun Lake, and the small lake at Miraflores, the width of the channel will vary from 500 to 1,000 feet.

#### Canal Work and Cost.

Final estimates have been prepared of the amount of work that will have to be done to complete the Canal. These show that when Americans took possession there was required for the construction of the canal as at present planned, a total excavation of 174,666,595 cubic yards. Of this amount, there had been excavated at the end of January last, 62,751,924 cubic yards, or a little more than one-third, leaving 111,904,671 cubic yards still to be removed.

The estimate of total excavation made by the minority members of the International Board of Consulting Engineers, authors of the lock canal under construction, was 103,795,000 cubic yards. The increase over this estimate is due in part to changes in details of the plan which call for a larger excavation.

There will also be required under the present plan, 29,387,000 cubic yards of filling for locks and dams, which is about 7,000,000 cubic yards less than the amount estimated by the minority members. There will also be required 5,015,400 cubic yards of concrete, an excess of 2,000,000 cubic yards over the estimate of the minority members.

The total cost of the Canal, excluding the \$40,000,000 paid to the French company and the \$10,000,000 paid to the Republic of Panama, is estimated at \$297,766,000.

A detailed analysis of the distribution of the excavation and other work throughout the various divisions will be published in a subsequent issue of THE CANAL RECORD.

#### Highest Daily Record of Excavation.

The best daily record of excavation for steam shovels since American occupation was made on Friday, February 5, when 56 shovels in the Central Division removed 73,442 cubic yards, an average of 1,311 cubic yards per shovel. Of this amount 17 shovels in the Empire District excavated 26,004 cubic yards, an average of 1,530 cubic yards.

This is the highest daily record that has been made, the highest previous daily record was made on December 18, when 50 steam shovels in the Central Division excavated 70,087 cubic yards, an average of 1,402 cubic yards per shovel. These shovels are under steam for eight hours per day, but are not actually at work during the entire period, time being lost by the necessity of moving

the shovels forward, blasting stone too big for the shovel to handle, keeping the shovels supplied with cars, etc.

#### Mr. Taft and the Engineers.

Mr. Taft, accompanied by the visiting engineers went to La Boca on Wednesday morning, February 3, and inspected the Canal entrance, machine shops and shipways at that point, practically completing their inspection of Canal work. On Friday evening they attended a ball in the new National Theater in Panama, given in honor of Mr. and Mrs. Taft by the Government of the Republic of Panama. On Sunday afternoon they sailed for New Orleans accompanied by Lieut.-Col. Goethals.

#### Canal Medals.

One thousand pounds of old French scrap have been forwarded to the Director of the United States Mint at Philadelphia by the Chief Quartermaster of the Isthmian Canal Commission to be used in making Canal Medals. Up to January 1, 1909, about 2,400 medals have been earned, and it is estimated that the number of medals to be earned in the future will aggregate about 500 per annum. A partial list of Isthmian Canal Commission employees who are entitled to Medals is published on another page of this issue of THE CANAL RECORD. The continuation of this list, together with a list of Panama railroad employees, will be published in subsequent issues.

In the distribution of the medals the following method will probably be observed: Medals which have been earned by persons no longer connected with the Commission or Panama Railroad Company will be distributed from the Washington office of the Commission; medals earned by employees who have died subsequently will be delivered to their heirs, and medals earned by present employees will be distributed from Culebra.

#### Highway from Empire to Las Cascadas.

A highway has been authorized from Empire to Las Cascadas. When finally completed it will run from the railroad station at Empire, about 30 feet from and on the west side of the Panama railroad until it passes Whitehouse where a detour will be made, back from the railroad, in order to cross the hills in that vicinity until it joins the road already built near the corral at Las Cascadas. In order to avoid moving a number of houses in the native town at Empire that are near the Panama railroad, a temporary road will be built on an offset that will follow the street of the native town to the north end of the village, making the total length of the road 12,160 feet. It will be built entirely by convict labor, and about 100 convicts are now at work upon it.

It is estimated that it will be necessary to make 14,300 cubic yards of embankment,

## NOTES OF PROGRESS.

(Continued.)

and 8,670 cubic yards of material will have to be excavated; 5,600 feet B. M. of lumber will be used in the construction of bridges; and 300 linear feet of 18-inch pipe will be used for culverts. The maximum grade on the road will be 5 per cent, and the macadam portion will be 14 feet wide, 3,152 cubic yards of crushed rock being used for that purpose.

## Ancon-La Boca Road Closed.

The portion of the Ancon-La Boca highway between Ancon cemetery and East La Boca will be closed to the public on and after Friday, February 12. The quarry from which stone for the locks at Pedro Miguel and Miraflores will be taken is located adjacent to the road, and work at the quarry has reached the point where it is necessary to close the road to avoid accidents to passers-by.

## Record of January Rainfall.

The appended table shows the mean, maximum, and minimum rainfall for the month of January on the Isthmus of Panama during period stations have been in operation:

Stations.	Length of records, years.	Mean. Inches.	Maximum. Yr. Ins.	Minimum. Yr. Ins.	Amount, 1909.
Cristobal	39	4.16	1902.19.20	1888...63	10.61

## January Police Report

The January report of the Chief of the Division of Police and Prisons shows that 524 persons, representing 43 nationalities, were arrested in the Canal Zone during the month. This is an increase of 17 for the month, there having been 507 arrests in December. Of the 524 persons arrested, 461 were men and 63 were women, and they were charged with 52 different offenses. They were divided among the towns of the Zone as follows: Ancon, 24; Las Sabanas, 5; La Boca, 29; Corozal, 7; Miraflores, 19; Pedro Miguel, 22; Paraiso, 16; Culebra, 39; Empire, 77; Las Cascadas, 6; Bas Obispo, 24; Gorgona, 69; San Pablo, 10; Tabernilla, 30; Bohio, 8; Gatun, 71; and Cristobal, 68. The total effective police force on January 1 was 188, and the pay roll amounted to \$20,886.16.

One hundred and nineteen cases were tried in the Circuit Courts, 18 of which were dismissed, 81 continued, 18 in which convictions were secured, and 2 cases in which bail was forfeited. Of the 18 persons convicted, 4 were fined, 2 received a jail sentence, 2 received a jail sentence and a fine, 9 were sentenced to the penitentiary, and 1 case in which sentence was suspended. Seven convicts were discharged from the penitentiary during the month, leaving a

total of 124 in the penitentiary on January 31. The number of district prisoners on the same date was 138, a decrease of 23 for the month. The value of work performed by the convicts on roads, etc., amounted to \$1,890.60. There were 10 deaths by violence requiring action by the coroner in January. Three of these deaths were caused by dynamite explosions, two by railroad accidents, and two by drowning.

## January Record for Track Shifters.

The seven track shifting machines in the Central Division moved a total of 527,171 feet, or 99.8 miles of track during January. In the Tabernilla District track shifter No. 5 moved 116,800 feet, or 22.1 miles. At San Pablo and Caimito, shifter No. 6 moved 67,340 feet, or 12.7 miles. At Gorgona and Matachin, No. 7 moved 65,282 feet, or 12.3 miles, and No. 9 also moved at Matachin

46,885 feet, or 8.9 miles. At Santa Cruz, No. 1 moved 88,006 feet, or 16.7 miles. At Miraflores No. 8 moved 53,299 feet, or 10.1 miles, and at La Boca, shifter No. 2 moved 89,559 feet, or 17 miles.

The dredge *Mindi* has been brought from the Atlantic entrance of the Canal at Mindi to Gatun, where it is excavating a slip at the handling plant dock for the barges that will bring cement, rock and sand for the locks. It is estimated that about 90,000 cubic yards will have to be removed at this point.

The plan for representatives of the Isthmian Canal Commission and Panama Railroad to attend the inauguration of Mr. Taft has been abandoned as arrangements for transporting the party to Washington and caring for them while there could not be made.

## LABOR FORCE FOR DECEMBER.

The report of the Chief Quartermaster for the month of December shows that the number of Isthmian Canal Commission employees actually at work on December 31, was 24,417, of whom 4,275 were "gold" employees, and the remainder were on the "silver" or labor roll. The Panama railroad force was 5,342, and the Panama railroad commissary force numbered 749. Thus the total number of persons at work on the Canal and railroad on the last day of December was 30,508. During the month 166 people were added to the "gold" roll and there were 228 separations, the net decrease in the force being 62. No laborers were imported, as

the supply on the Isthmus is in excess of the demand.

The number of family quarters occupied by "gold" employees was 1,417, and the occupants numbered 4,272; bachelor quarters by "gold" employees, 2,093, and the occupants numbered 3,289. The family quarters occupied by West Indians numbered 956, and the occupants 3,056; bachelor quarters, 242; number of occupants, 4,870. The family quarters occupied by European laborers numbered 304, and the occupants 1,047; bachelor quarters, 131; number of occupants 5,466.

A statement of the force actually at work on December 31, 1908, follows:

DEPARTMENT.	Gold Men.	SILVER MEN.								Total Gold and Silver Men.

## STATEMENT OF CLASSIFIED EXPENDITURES TO OCTOBER 31, 1908.

The following table shows expenditures for Canal work, classified monthly, since July 1, 1907. The figures give only expenditures which have been located. In addition, there have been some disbursements, such as purchasing material, etc., which it will not be possible to locate to a specified account until their use has been finally determined:

Period.	Civil Administration.	Sanitation.	Construction and Engineering.	Municipal Improvements.	Plant Account.	Total.
Prior to July 1, 1907.	\$1,446,706.01	\$4,642,891.37	\$13,427,622.65	\$4,296,728.36	\$19,283,286.52	\$43,097,234.91

## RULES GOVERNING AWARD OF CANAL MEDALS.

## List of Employees of the Isthmian Canal Commission Who Are Entitled to Receive Medals.

A partial list of employees of the Isthmian Canal Commission and of the Panama Railroad Company, arranged in chronological order, who have earned the Canal Medal by completing two years' continuous service on the Isthmus, is published herewith, and the names of the others will follow in subsequent issues of THE CANAL RECORD, in order that any errors which may have occurred in the compilation of the list may be detected and corrected before the medals are distributed.

The fundamental rules governing the award of the Medal are contained in a resolution adopted by the Commission at its 143d meeting, and are in substance as follows:

1. American citizens alone shall be eligible for medals, and for naturalized aliens medal service shall be reckoned from the date on which citizenship was acquired.

2. Employees of the Isthmian Canal Commission and of the Panama Railroad Company shall be equally eligible for the medal, but service prior to May 4, 1904, the date of the American occupation of the Canal Zone, shall not be considered.

3. Medals shall be numbered consecutively, in the order in which they were earned.

4. Continuous service on the Isthmus alone shall count for medal longevity.

5. Service shall have been satisfactory.

6. For each two years' additional service a bar will be awarded, to be attached to the Medal.

These rules have been interpreted and applied as follows:

1. In numbering the Medals the order of precedence of employees whose medal service began on the same date shall be determined by lot.

2. Service on the silver roll shall count equally with service on the gold roll.

3. Authorized leave will be considered equivalent to service.

4. For employees appointed in the United States medal service shall be reckoned from the date of arrival on the Isthmus.

5. It will be considered that any person retained in the employ of the Commission or the railroad for two consecutive years has rendered satisfactory service during that period, although he may have been discharged subsequently for misconduct or incompetency.

All communications relating to corrections in the medal list should be addressed to the Chairman, Culebra, Canal Zone.

## SPEECH OF MR. TAFT.

### His Views on Red Cross, Y. M. C. A., and Canal Work.

The Canal Zone Branch of the American National Red Cross gave a reception in honor of Mr. Taft, National President of the organization, and Mrs. Taft at the Commission clubhouse, in Culebra, on Wednesday evening, February 3. The large attendance made it necessary to arrange a temporary auditorium in the open space before the clubhouse, where more than twelve hundred persons from all points in the Canal Zone were seated. On the platform were the guests of honor, Lieut.-Col. and Mrs. Geo. W. Goethals, Mrs. H. F. Hodges, Mrs. C. A. Devol, and the president and officers of the Red Cross. Just back of the official party a group of young girls in Red Cross uniform were stationed. Mr. Taft delivered his address from the steps of the clubhouse, devoting the larger portion of it to the Red Cross work. He then spoke briefly in commendation of the work of the Y. M. C. A. on the Isthmus, and closed with a strong approval of the Canal work in general. The full address is appended:

#### RED CROSS.

*Ladies and Gentlemen*—I did not come here exactly to organize a Red Cross, or to make an out-of-door speech. I have been engaged in that business for about three months, and I thought I had served such an apprenticeship that I might be excused. But when you are dealing with the head of the Quartermaster's Department, you have to be careful, because he has a good deal of power, and you do not know what he may lead you into. I was told that it would be gratifying to a few people if I would come to a meeting of the Red Cross. I had assumed that the Red Cross here embraced possibly a committee of twenty or thirty people whom it would be delightful to meet and association with whom would not require a speech, but, instead of that, I come before this formidable audience to say something on behalf of the Red Cross, or rather to explain to you why you are members of the Red Cross. It reminds me very forcibly of another meeting which I had the honor of addressing in what is called the Marble Chamber in Ayuntamiento or Government building at Manila. There, too, was organized a very important branch of the Red Cross, and it was a very short time after its organization that it began to be useful, in the sensible and economical expenditure of money to aid persons in misfortune.

You doubtless know the origin of the association. It probably grew out of the suggestion of the Sanitary Commission in the Civil War, but it was organized by a Swiss gentleman, and began its life in Switzerland. In our country it has had a somewhat checkered career. Within the last four years, however, it has been reorganized, and under the inspiration of the enthusiasm of the clear-headed executive ability of Miss Mabel Boardman of Washington, the society has assumed its useful functions, has become very much larger than ever before, and is now a most useful instrument in the distribution of a nation's charity in the way in which charitable funds should be distributed.

Other countries are able to maintain a Red Cross in a way which it seems impossible

for the people of the United States to maintain it. In Japan the Red Cross has a membership of over 2,000,000 persons. In Russia I think the membership exceeds a million and a half; in Italy the membership runs up into millions; so in France and so in Germany; and each association has a large permanent fund arising from the annual payment of dues by this large membership. But in America the humdrum way of contributing 50 cents or a dollar apiece does not appeal to the millions, and membership with us in the States is comparatively limited; and yet there is not a population anywhere in the world that responds as quickly and as generously to a call to aid our fellowman as the American people. Therefore, we need to have a city shaken-down or burned down in order to help along the Red Cross. It was not until San Francisco was nearly wiped off the map that we understood how much charity, how much generosity there was in the heart of the American people that could respond to a call in behalf of those in sorrow and misfortune. We raised through the Red Cross alone upwards of \$4,000,000—Major Devol could give you the figures more nearly than I—in order to help out that stricken city.

The difficulty we got into in San Francisco was this: That the money came in in such quantities that we had more than we needed, but we were not very old in the business, and we had not provided with reference to those contributions that if the object for which the contributions were made was satisfied by less than the total of the contributions, we might appropriate what remained to other similar objects; because if we had done so we should have had upwards of \$1,000,000 for our permanent foundation, or what we call our "emergency fund," upon which to call the minute that the cable or the telegraph says that somebody is in trouble and needs immediate assistance. Now we know better, and we have passed a by-law, of which we advised the public, and which will permit us to appropriate to other similar purposes what is left from sums called out from the American public through the Red Cross to aid a stricken people, so that we can appropriate what is left.

Now, the immediate object of the Red Cross was really not for purposes of aiding the unfortunate in times of peace. It was to ameliorate, to mitigate the dreadful sorrows and misfortunes that follow war, and that is why I suppose the War Department has been called upon to play so prominent a part in the present organization. Miss Boardman assured me that she wanted the Secretary of War as a figurehead and she hoped therefore that I would act as President. I am fairly good as a figurehead, and so I accepted, and then San Francisco was shaken and burned down, and I found that there are some things more than a mere figurehead involved in the presidency of the association; but it did conduce to satisfactory operation to have the War Department and the Red Cross united. It did so, because we were able to avail ourselves of the services of such a man as Major Devol. Now, Major Devol does not deserve this—I mean by his treatment of me, but I am going to tell you the truth about it. I am not going to revile him, but I am going to heap coals of fire on his head, by saying

that no man could have done the work he did to organize the charitable forces called upon to save San Francisco, no man except with his experience and with his ability could have done what he did, and when he summoned me here to speak in behalf of the Red Cross, in view of the request of a man who had done so much in the cause of humanity, I did not have the heart to refuse.

What we are particularly concerned about, as you may suppose from what I have said, is the organization of the getting together of a large permanent fund. "He gives twice who gives quickly," and if we have a million dollars out of which we can send to a stricken city \$100,000 by cable, with an agency there to distribute it, we can do a great deal more than with a million dollars two weeks later.

We have had some difficulty with our San Francisco friends. I suppose it is natural. I presume any people stricken as they have been would be anxious to have as large a fund as possible devoted to the restoration of their city. These funds, however, were given really to aid them in an emergency. They were not given to build up their charitable institutions anew, because they naturally would be built out of the taxable resources of the city; but they are inclined to hold us to turn over all the funds to establish an old ladies' home and other institutions, of a character most noteworthy, but that do not come within the range of ordinary Red Cross contributions. We have assumed, therefore, to transfer from that fund upwards of \$50,000 to aid the Italian sufferers in the late earthquake, and some question has been raised as to our legal right to do so; but I am inclined to think that our friends in California will agree that the nature of the crisis and emergency in Italy was so like that in California that to devote it to aiding the people in southern Italy, under the circumstances, was a better satisfaction of the purpose for which the funds were really given than to aid in the construction of permanent charities, like orphan asylums and old ladies' homes, and that sort of thing, in San Francisco—not that they are not excellent institutions, but I do not think they come quite within the intent of the people who made the contributions.

It is possible that in the Zone you do not need a Red Cross association quite as much as in other parts of the United States, for I like to call this a part of the United States, because you have a very complete hospital system and a very complete sanitary system. We are trying, so far as those of us who are at all responsible for appropriations, to make them large enough to keep down all the mosquitoes and keep everybody in health, and save you from any disaster. Of course you have such dreadful disasters as that which occurred a short time ago through an explosion, but necessarily it is the business of the Government to look after those who suffer in that kind of a way, and I trust—indeed I know—that everything was done at that time that could have been done to relieve the sufferers. The question as to compensation for loss of life is one that addresses itself to Congress, and on which I have already expressed myself in a recommendation to the President and two Congresses, and I shall say nothing more on that subject, because I am not here to discuss this except to say that ultimately I believe the Government will come to the view that it ought to be just

as much responsible for the loss of life through negligence or other cause which may make a private employer responsible—just as much responsible as the private employer and to the same extent.

I am glad to know that your membership is so large—900 members as I am told. I believe that that is as large as the membership of a number of States in the Union, showing not only the enterprise but I may say, the well-to-do character of the residents of the Zone. I hope that your society will organize with a set purpose to do good, that you will provide nurses and that you will hold yourself as an active, useful branch of the Red Cross. The object is one, the importance of which cannot be exaggerated, because everyone knows the feeling of helplessness that you have when you hear of a heartrending disaster, whether it be in China, in Spain, in Italy, in Germany or at home—the helplessness that you feel with reference to doing anything that shall aid those who have your deep sympathy and profound commiseration. Now, the Red Cross is for the purpose of enabling you to help every one the world round who is entitled to your sympathy, and who may call upon you, simply on the ground of humanity. Mrs. Taft told me that I could not talk more than ten minutes about Red Cross matters, and that it was not fair to ask a number of people to come out this evening only to hear a ten minutes' talk. I suggested to her that probably that they would rather hear a man talk ten minutes than longer, but I said to her that if the Red Cross did not furnish the subject, I could, perhaps, enlarge it by discussing either politics or the Canal Zone, the construction of the Canal or the Young Men's Christian Association; and now that I have got you here, and there is no other speaker, and you have deliberately come into this trap, I am going to talk about all those subjects.

#### WORK OF Y. M. C. A.

First, the Young Men's Christian Association. You have, I think, four clubs, and you need four more. This place and every place where I have gone in the Zone convinces me that there is nothing better adapted to carrying out the legitimate purposes of the Government in this Zone, in the construction of the Canal, to bring it about by contented people, than the establishment of clubs like this under whose eaves we now stand, and if I can have any influence in the next administration, I am going to see to it that four clubs on the Isthmus are added. I know something about the usefulness of an institution that presents these characteristics of a Christian home, a place where one can pursue rational amusements in the Tropics, a place which without such an organization generally offers no amusements of a rational character in our quiet and leisure hours. We know it in Manila; we know the value of such a club, because there the poor American merchants, and they are very poor, raised a fund of some \$60,000 in ten days in order to meet the conditions of a contribution of a somewhat larger amount in order to attract a Young Men's Christian Association there. The opportunity offered to the young men and women, to the families and children, to come under this roof every night of the week, and here read the newspapers, play games of all sorts, is an

opportunity that elevates a community, or to put it in a different way, that prevents many a poor fellow who wants to do right, from going down the pathway to degradation. We have had it save many a young man in the Philippines, and I have no doubt that here it accomplishes even a wider purpose in reconciling to the conditions of the Isthmus a great many persons, who might not become morally degraded, but who would become so dissatisfied and who would get into such condition of mind with reference to the whole affair that they would cease to be useful citizens of the community and certainly cease to be useful as employees of the Government working on this great constructive work of the century. So much for the Young Men's Christian Association, which I cannot pass without approval every time I have an opportunity to speak of it.

#### CANAL WORK.

And now I want to come to the work of the Canal itself, and to speak of one or two features that doubtless have impressed themselves on you, certainly they have impressed themselves on me, being one of those responsible in the past and likely to be in the future for the conduct of the work. Where you have a work in which the public is intensely interested, situated two thousand miles from the Bowery, the opportunity for sensational stories, for imaginative misrepresentation, for plain common lying without being found out, is very great indeed, and offers a temptation to those who would sell their wares to the newspapers, to convey a great many erroneous impressions to the public of the United States; but I beg you to believe that as this work has gone on, that opportunity has grown less and less and the public of the United States are much less easily hoodwinked to-day than they ever were before as to the conditions that prevail in the Zone and the carrying on of the work; and I want to impress upon you, my friends, not to get excited when you get cablegrams.

Do not get excited over statements that may come to you here that there is excitement in the United States that is going to lead to a change of policy and to a withholding of appropriations, to investigations into mares' nests of huge proportion, and to the turning down of the entire Canal project. That, to speak shortly, is not possible. The people of the United States are determined to have this Canal built. They are willing to spend the money to build it. They believe in the men who are engaged in building it. They have had (here a man in the crowd said "Give us more of that, Mr. President). There used to be a judge in my early day in Cincinnati who said to a man who was arguing a case: "You have stated that argument twice. Now, do not go on a third time." The man said, "Your honor, I want to make myself clear." The judge said, "Down in my country they say that if you have a good judge you can state a proposition to him so that he can take it in in one statement. If he is a little dull it may take two, but when you state it three times to a judge in my country he takes it as an intimation that he is a damned fool."

Therefore, I am only going to repeat this twice, that the people of the United States are not excited by the communications to the newspapers and headlines in the newspapers

with reference to the falling down of the Gatun Dam, or the complete subsidence of the Canal out of sight, or anything of that sort. Congress knows the temper of the people. Congress is willing and is going to appropriate the money as rapidly as it can be expended here economically, and this work is going on with all the energy possible, and with confidence on the part of the people of the United States that on January 1, 1915, if not before, the battleships of the American fleet can pass through this Canal from one ocean to the other. This has been my fifth visit here, one each year, and it has been a source of the utmost satisfaction to come here and find this work so well organized, going on with so much enthusiasm on the part of everyone no matter how humble the position he fills, and with the confidence that if you will only let him alone and give him the right support, this work will go on to successful completion. That is the spirit that I like to find, and I do find it here. The engineers who have come with me all have been impressed with the volume of the work that is being done, and with the fact that the whole Isthmus is instinct with something like electricity that is carrying on the work, and I want to congratulate you all on being instruments for the completion of the greatest constructive work of two centuries and of being instruments of the greatest country of the globe in carrying on this great work.

At the close of Mr. Taft's speech a call was made for Colonel Goethals, and the Chief Engineer responded with a reiteration of the emphatic assertion made by Mr. Taft, that on January 1, 1915, the ships would be going through the Panama Canal, which was received with enthusiastic applause.

The reception followed in the hall of the building, the president of the Canal Zone Branch presenting the members. Refreshments were served by a corps of young women in Red Cross uniform. The clubhouse was brilliantly lighted and decorated for the occasion with palms and flags, among which the emblem of the Red Cross showed conspicuously.

Wednesday, February 10, will be observed throughout the Zone towns, where local committees are organized, as Red Cross Day. Each committee is expected to organize an entertainment or sale for the purpose of raising money for the emergency fund.

#### Sojourners' Lodge Anniversary Dance.

COLON, R. P., February 5, 1909.

#### THE CANAL RECORD:

In celebration of the eleventh anniversary of the founding of the lodge, the members of Sojourners' Lodge, No. 874, A. F. and A. M., will give a dance, Saturday evening, February 13, 1909, at Lincoln House, Colon, R. P., and fraternally invite masters, craftsmen and apprentices, in good standing, to attend with their wives, daughters, sisters or sweethearts.

A special train will be run to Panama after the dance, leaving Colon at 1 o'clock a. m. Sunday, February 14, on which transportation will not be required. Extra coaches will be provided on train from Panama Saturday evening, in which, however, regular forms of transportation must be provided by the passengers.

G. G. DEDGE, P. M., Secretary.

## SOCIAL LIFE OF THE ZONE.

### Women's Clubs and Other Features

The regular meeting of the Ancon Woman's Club was held in the club rooms on Wednesday February 3, the guest of honor being Mrs. Philip North Moore, president of the General Federation, who gave an informal address on club work and local conditions. She urged the members to come into closer touch with the work of the General Federation, through its bureaus and committees. An open discussion followed in which all the members present took part. Several guests from the line were present, including the president of the Empire Woman's Club. Refreshments were served at the close of the meeting.

The Ancon Club is arranging to give a subscription dance before the end of the month. The president of the Club has received notification of her election, by the board of managers, to the office of third vice-president of the Zone Federation.

The resignation of the president of the Pedro Miguel Woman's Club was acted on at the regular meeting, February 4, and Mrs. W. P. Piper was elected to fill the vacancy.

The Gatun Woman's Club held a special meeting at the home of the president, February 2, the meeting having been called for the purpose of electing officers for the next three months. The following were elected: President, Mrs. E. L. Bandy, re-elected; vice-president, Mrs. O. L. Brownell, re-elected; secretary, Mrs. A. P. McCulloch; treasurer, Mrs. Lorin A. Clark, re-elected. The following chairmen of committees were appointed: Music and literature, Mrs. C. D. Corp; educational, Mrs. H. K. Higgins; philanthropy, Mrs. C. G. Carty; refreshments, Mrs. E. G. Bath. Mrs. William L. Sibert, Mrs. Charles Stoddard, and Mrs. H. A. Carcend were elected to membership, and Mrs. Chester Harding, the first president of the Club, was made an honorary member. The president of the General Federation paid a visit to the Club on Friday, February 5, the meeting being held at the home of Mrs. W. L. Sibert. Mrs. John Dickinson Sherman, vice-president of the General Federation, was also present. In accordance with the desire of the president the regular business of the Club was transacted. The question of club rooms and of a public library for the town, were taken up for discussion. Reports of the committees in their work during the past few months were also given by request. Mrs. Sherman made an address on parliamentary law, which was followed by a practical drill, all the members and guests taking part.

The members of the Sunshine Club had been invited to meet the Club after the business meeting, and the president of the General Federation reserved her address until the arrival of the guests. The president spoke on club work in the States and elsewhere. Mrs. Moore is acquainting herself with the conditions that prevail among the Clubs in the Zone, and her visits are regarded as a special privilege, the members feeling that they are thus brought into closer relations with the General Federation in the States.

The Las Cascadas Woman's Club held its regular business meeting February 4 in the lodge hall. Mrs. H. H. Boylau, Mrs. W. D.

Drysdale, Mrs. W. D. Stanton, and Mrs. J. P. Doyle were appointed the refreshment committee for the month, and Mrs. C. W. Decker, and Mrs. W. G. Thompson, the visiting committee. The report of the Federation meeting in Ancon was read by the delegate. The Club has accepted an invitation to join with the Gorgona Woman's Club in the reception in honor of the national president on February 11.

The regular literary meeting of the Cristobal Woman's Club was held on February 3, the president in the chair. Mrs. John Keefe read a paper on the "Evolution of the Kitchen." Mrs. Charles Owens entertained the home department on Monday, February 8. The art and literary department will meet on February 28, with Mrs. C. C. Pierce, and a paper on "Julius Caesar" will be read. On February 10 the regular meeting of the Club will take place. Mrs. John Dickinson Sherman will talk on Club work in the United States, and the parliamentary laws governing the Clubs belonging to the General Federation. The executive board will meet February 10, before the regular meeting, when a recording secretary will be elected to fill the vacancy left by the resignation of the present officer. A dramatic club has been formed in the art and literary department under the direction of Mrs. C. C. Pierce.

The Woman's Guild of St. Luke's Church, Ancon, will hold its meetings during the Lenten season every Monday, instead of twice a month. These meetings will be held at the residence of the chaplain from three to five o'clock. The work will consist of sewing for specific charities. The next meeting will be held at the residence of Mrs. H. D. Reed, Ancon, on Monday, February 15, at the usual hour, 3.30 p. m.

A dance was given Saturday evening, February 6, at Lincoln House, Colon, by the Washington Reading Room Club. There were over 200 people in attendance, among whom were a number of officers and men from the cruisers *Montana* and *North Carolina*.

### Pythian Sisters.

Canal Zone Temple, No. 1, Pythian Sisters holds its regular meetings on the first and third Wednesday of each month at 7.30 o'clock in the evening. Pythian sisters on the Isthmus are cordially invited to attend, and those wishing further particulars should address the Mistress of Records and Correspondence Mrs. Anna Maher, Empire, C. Z.

### Pacific Masonic Club.

A regular meeting of the Pacific Masonic Club will be held on Saturday night, February 13. It is desired that all members be present as final arrangements will be made for the club to participate in the Lincoln centenary celebration. The entertainment committee have an important announcement to make in regard to a picnic to be held soon at Ft. Lorenzo. C. C. JACKSON, Secretary.

### Cristobal Dramatic Club.

The Cristobal Dramatic Club has been organized with the following officers: Honorary president, Mrs. Lorin C. Collins; honorary vice-presidents, Mrs. Hiram J. Slifer, Mrs. Thomas E. Brown, Jr., Mrs. John Burke, Mrs. Courtland Nixon, Mrs. J. A. Smith.

President, H. de L. McKinley; vice-presi-

dent, C. S. McCollum; secretary and treasurer, M. J. Stickel; director, W. N. Chandler.

Executive committee to consist, in addition to the above officers, of Mrs. Garnet Mitchell, Miss Edith Slifer, Mrs. James Burke, Mr. J. G. Barber, Mr. Thomas Ophiplant.

The club will present Gillett's play, "All the Comforts of Home" in the near future. It will be given in behalf of the Red Cross.

### Musicales at Culebra.

The Union Christian League of Culebra will give a musicale on Tuesday evening, February 16, in the Commission Chapel. The program will consist of readings, orchestra selections, flute, vocal and piano solos, and duets. The Culebra public is cordially invited, and an invitation has also been extended to the Union Christian League of Empire.

### Lincoln Centenary.

The committee on the celebration of the one hundredth anniversary of the birth of Abraham Lincoln met at Empire on Sunday afternoon last, and arranged for the celebration to occur on the 14th instant, and adopted the following program:

11 A. M.—Grand parade, headed by the Marine Band and 100 marines under arms, together with the various societies on the Isthmus and individual citizens.

12 M.—Addresses by Hon. Jo. C. S. Blackburn, Chief Justice H. A. Gudger and Judge Thomas E. Brown, Jr.

A basket lunch will be served at 1.30 p. m., and ladies are especially urged to furnish lunch for the occasion.

The court house and Y. M. C. A. rooms and the clubhouse will be open for the use of visitors. The court room is assigned specially for the benefit of the ladies who attend the exercises.

### Hotel Tivoli Rule for Employees.

The manager of the Hotel Tivoli wishes to call the attention of all Isthmian Canal Commission and Panama railroad employees to the following rule, which became effective January 1, 1908, and is still in force at the Hotel Tivoli:

"Open accounts will not be permitted. Guests are required to pay their bills upon leaving.

"Accounts of transient employees unpaid at the time of leaving will be made up at the nonemployees' transient rate and sent immediately to the Disbursing Officer."

### Tivoli Club Dance.

The Tivoli Club will give its next dance at Hotel Tivoli on Saturday evening, February 13.

### Tug Service Porto Bello and Nombre de Dios.

Effective, August 6, 1908: The following is the schedule for tug service between Cristobal, Porto Bello and Nombre de Dios:

Sunday: Leave Cristobal 6.30 p. m. for Porto Bello only; returning same day.

Monday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Tuesday: Leave Cristobal after Train 2 without tow. for Porto Bello only; returning, leave Porto Bello 2.15 p. m., without tow.

Wednesday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Friday: Leave Cristobal after Train 2 for Porto Bello and Nombre de Dios; returning same day.

Saturday: Leave Cristobal after Train 2 for Porto Bello only; returning, leave Porto Bello 5.30 p. m.

## LETTERS FROM THE LINE.

(Communications to this column must be signed in each instance with the name and address of the writer.)

## Are Bachelors Worth Less?

EMPIRE, C. Z., January 25, 1909.

THE CANAL RECORD:

Will you give me space in THE CANAL RECORD to call attention to a serious lack in the article "Bachelors Cost Less" that appeared in the issue of December 23. The article should have stated "Bachelors cost less, but are also worth less." One of the indispensable features of a competent working force is stability, and that can be procured only by having a colony on the Isthmus, in which there is a generous sprinkling of families. Bachelors having no ties to keep them here can pack their tooth brush and a clean collar any week and go back to the States or where they will. It was the knowledge of this that made the Government provide so generously for its married employes. In such a big organization as we have on the Isthmus it is necessary to have men capable of assuming great responsibilities. Can such men be found among a class that has so far neglected their responsibilities as to remain bachelors? For minor clerical work or as laborers bachelors are good enough, especially when they are directed by responsible married men. But only married men are competent to direct work or to undertake work requiring force of character and the steadiness that comes from broad responsibility.

No, Mr. Editor, the statement of the Quartermaster does not tell the whole truth. Base metals cost less than gold. Fortunately there are opportunities in the Canal Zone for bachelors to be transmuted. If they are wise they will get out of the class whose greatest recommendation is that "it costs less."

ANTONIO FALVO.

## Vacations.

THE CANAL RECORD:

As the subject of vacations must always be more or less interesting to Canal workers, perhaps the writer will be pardoned for submitting a word in this connection. As your correspondent understands it ten months of satisfactory service must be to an employee's credit before he is entitled to leave with pay, which leave must be taken within the ensuing four calendar months. Thus, if an employee has received an appointment in mid-winter his leave becomes available and must be taken within a period that always spells inclement weather in nearly every State in the Union. And this arrangement applies not only to his first leave, but to every subsequent leave that may be granted.

Perhaps a radical change of climate does not militate against an employee's physical well-being, but it surely does against his bank account. Duck trousers and Panama hats are very unfashionable in many States during the months of November, December, January, and February. Family and friends at home expect those up from the Isthmus to be attired in a manner that will not provoke ridicule or call for apology, and the result is that those on leave must purchase a complete and expensive wardrobe that cannot possibly be of use for more than a very short period. To men with families this is a serious matter. To all who are desirous of making even a little accumulative progress it is at least interesting.

If we had eight optional months to choose

from, or if in deference to seniority of one year, for instance, an employee was allowed more optional months in choosing the time for his second vacation, the problem would be solved. There may be substantial reasons why the Commission could not acquiesce in such an arrangement as this, but if it could be brought about the writer thinks it would be an innovation devoutly to be wished.

X. Y. Z.

[The opinion that the Winter is the most undesirable season for a vacation in the United States, is shared by nearly all Americans on the Isthmus. If there were no restrictions, probably 90 per cent of all American employes would elect to take their annual leave in the six months from May to October, inclusive. This would result in a serious depletion of working forces during those months and a corresponding surplus during the Winter. To carry on the work with economy, and without interruption, it is necessary that approximately the same force be maintained from month to month. This can only be effected by distributing vacations evenly throughout the entire year.]

## Vacation Pay.

EMPIRE, C. Z., February 1, 1909.

THE CANAL RECORD:

Will you please tell me in THE CANAL RECORD if or how an American on the gold roll who is hired on the Isthmus can resign and draw his pay in the States?

Does he have to work the entire two years or including vacation?

Can he resign in the States while on vacation or should he resign before his vacation is taken, saying he wishes to resign at end of vacation, at time of making application for vacation?

J. B. RICHARDS.

[An employee may be paid in the United States for the period of his final vacation, minus seven days, if he has served two years including this and previous vacation periods. His resignation may be submitted either before he enters on his leave or later, as may be most convenient.]

## OFFICIAL CIRCULARS.

## Acting Chairman and Chief Engineer.

CULEBRA, C. Z., February 5, 1909.

CIRCULAR NO. 232.

During my absence from the Isthmus, Lieut.-Col. H. F. Hodges will be in charge of the work as Acting Chairman and Chief Engineer, effective February 7, 1909.

GEO. W. GOETHALS,

Chairman and Chief Engineer.

## Pay Rolls in U. S. Currency.

CULEBRA, C. Z., February 6, 1909.

CIRCULAR NO. 233.

The following resolution was adopted at the meeting of the Isthmian Canal Commission held January 27, 1909:

"Resolved, That, effective April 1, 1909, the amounts on all pay rolls and accounts of the Isthmian Canal Commission shall be stated in United States currency, but nothing herein shall in any way affect the payment of laborers and others in the currency of the Republic of Panama, as heretofore."

All time books, pay rolls, pay receipts and accounts, and papers pertaining thereto, for any month prior to April, 1909, will be stated as heretofore—that is, in gold or silver.

All time books, pay rolls, pay receipts and accounts, and papers pertaining thereto, for the month of April, 1909, and subsequent months, will be stated according to the gold standard.

Subsequent to the effective date of this circular, separate time and pay rolls will be made up as heretofore for "gold employes" and "silver employes."

Until new pay receipts are provided for employes on silver rolls, the present silver pay receipts will be used in payment of employes on such rolls, but pay receipts which relate to pay rolls stated according to

the gold standard will have printed across the face the words, "Amount stated in United States currency." The stock of silver pay receipts on hand will be so marked and be ready for issue on requisition on April 15, 1909.

Time vouchers issued to employes or the silver rolls for services rendered on and after April 1, 1909, will have printed or stamped across the face, "Amount stated in United States currency."

Rate cards with new table for computing the wages of hourly men have been prepared and will be furnished on requisition made upon the Depot Quartermaster at Mount Hope.

Circular 229 will be construed by taking one-half of the rates therein stated, and disregarding the word "silver" at the top of the money columns and wherever it is used to denote a currency other than that of the United States.

Heads of Departments and Divisions will provide all forms and make all arrangements for the necessary changes in their respective Departments and Divisions.

GEO. W. GOETHALS,

Chairman and Chief Engineer.

## Acting Chief of Police.

ANCON, C. Z., February 5, 1909.

CIRCULAR NO. 83.

Grosvenor A. Porter is, effective February 6, 1909 assigned to duty as Acting Chief of Police of the Canal Zone.

JO. C. S. BLACKBURN,

Head of Department of Civil Administration.

## Accounts of Third Division, Chief Engineer's Office.

DEPARTMENT OF EXAMINATION OF ACCOUNTS.

EMPIRE, C. Z., February 4, 1909.

CIRCULAR NO. 9.

The following accounts are hereby created to cover expenses of the Third Division, Chief Engineer's Office, formerly the Division of Meteorology and River Hydraulics:

## 541—HYDROGRAPHY.

To this account will be charged all expenses for salaries and wages and material and supplies incurred in direct connection with hydrographic work; one-fifth of the salaries of the Assistant Engineer and his clerical force, and one-fifth of his office expenses.

## 542—METEOROLOGY.

To this account will be charged all expenses for salaries and wages and material and supplies incurred in direct connection with meteorological work; one-fifth of the salaries of the Assistant Engineer and his clerical force, and one-fifth of his office expenses.

## 543—CHAGRES RIVER SURVEY.

To this account will be charged all expenses for salaries and wages and material and supplies incurred in direct connection with the Chagres River Survey; one-fifth of the salaries of the Assistant Engineer and his clerical force, and one-fifth of his office expenses.

## 544—TESTS AND EXPERIMENTS.

To this account will be charged all expenses for salaries and wages and material and supplies incurred in direct connection with tests and experiments; one-fifth of the salaries of the Assistant Engineer and his clerical force, and one-fifth of his office expenses.

## 545—EXPLORATIONS AND SPECIAL INVESTIGATIONS.

To this account will be charged all expenses for salaries and wages and material and supplies incurred in direct connection with explorations and special investigations; one-fifth of the salaries of the Assistant Engineer and his clerical force, and one-fifth of his office expenses.

W. W. WARWICK, Examiner of Accounts.

Approved:

GEO. W. GOETHALS,

Chairman and Chief Engineer.

## Isthmian Baseball League.

Scores, February 7, 1909.

At Gorgona Park—Empire, 2; Gorgona, 1.

At Ancon Park—M. P. & M., 6; Ancon, 4.

Standing of the League, February 8, 1909.

	Played.	Won.	Lost.	Per Cent.
Empire.....	7	7	0	1000
M. P. & M.....	8	6	2	.750
Gorgona.....	8	2	6	.250
Ancon.....	7	0	7	.000

To be played February 14, 1909.

At Empire Park—Empire vs. Ancon.

At Gorgona Park—Gorgona vs. M. P. & M.

The following steamers have recently arrived at La Boca: January 31, Yacht *Alcedo*, from Philadelphia; February 1, *San Jose*, from San Francisco; February 2, *California*, from Valparaiso. Departures were: February 1, *Newport* for San Francisco; February 3, *Aztec* for Central American ports; February 4, *Limari* for Valparaiso.

## COMMISSARY DEPARTMENT.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

## COMMISSARY PRICES

For week beginning February 9:

FRESH MEATS.		Price.
Mutton—Stewing.....	per lb	7
Shoulder, neck trimmed off, (4 pounds and over).....	per lb	10

## COLON TO BARBADOS, CALLING AT TRINIDAD.

Orinoco.....	R-M..... Tuesday.....	Feb. 16
Atrato.....	R-M..... Tuesday.....	Mar. 2
Trent.....	R-M..... Tuesday.....	Mar. 16

The Panama railroad steamships sail at 3 p. m.  
from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line  
sail from Colon at 1 p. m. via Kingston, Jamaica,  
for New York.

All Royal Mail steamers mentioned above leave early  
in the morning from Colon via Kingston, Jamaica,  
for New York. All mail and passengers should be  
on board early on day of sailing.

The steamers of the United Fruit Company's line  
sail from New Orleans at 10 a. m. for Colon, calling  
at Puerto Barrios, and from Colon at 1.30 p. m., via  
Port Limon and Puerto Barrios, for New Orleans.

Sailings of the French line (Cie. Générale Trans  
atlantique) for Venezuelan ports, Martinique and  
Guadeloupe on the 3d and 20th of each month.

The next sailing of the Leyland Line for New  
Orleans via Kingston, Ja., will be as follows: Steam-  
ship Mercian about February 23; steamship Mem-  
phian about March 6.

## Misdirected Letters.

Division of Posts, Customs and Revenues,

Ancon, C. Z., February 10, 1909.

The following insufficiently addressed letters, origi-  
nating in the United States and its possessions, have  
been received in the office of the Director of Posts,  
and may be secured on request of addressee:

Archer, Mrs. E.	Hartman, Will S.
Bell, Orville	Heckmann, J. L.
Billings, Harry	Kluttz, H. C.
Bodel, Mrs. Robert	Lahat, Jack
Bullard, Chester	Lincoln, Mrs. Franklin

Harrison, Miss Rachel	Wilson, Albert S.

# CANAL

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, FEBRUARY 17, 1909.

No. 25.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

### THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

*No communication, either for publication or request of information, will receive attention unless signed with the full name and address of the writer.*

## NOTES OF PROGRESS.

### First Vessels in Canal Entrance.

Five miles of the Canal were thrown open to navigation on February 1, when two steamships of the Pacific Mail Line, an American Company, were allowed to pass through the channel from La Boca wharf to deep water in the bay of Panama. No official notice was taken of the event and, indeed, the only Isthmian Canal Commission officials on board the first ships to use the channel, were the Resident Engineer at La Boca, two of his assistants and representatives of the Customs and Quarantine services. The Steamship *Newport*, under command of Captain Russell, the oldest captain in the West Coast trade, was the first ship to use the passage, as it steamed through on its way to San Francisco. A short time afterward the *San Jose*, under command of Captain Thompson, the youngest skipper of the Pacific Mail Line, came through on its journey from San Francisco, and tied up at the La Boca dock. Both ships were dressed for the occasion and were saluted throughout the five miles of their journey through the new channel by all the other vessels in the harbor.

Prior to the opening of the new channel, which is at the Pacific terminus to the Panama Canal, ships entered and left La Boca by means of a channel originally started by the French and completed and kept in condition by the Panama Railroad Company. The old French channel, as it is known, will be closed in the course of a few weeks by the breakwater that is reaching out from the mainland at La Boca to Naos Island. This breakwater is formed of rock and earth excavated from Culebra Cut.

The Canal is not completed even for the five miles that are now in use, but a depth of 30 feet at mean tide has been reached in the shoalest part of the channel, which has been excavated to a width of 400 feet for the first mile, and 500 feet for the remaining

four miles. Most of the channel has been excavated to a depth of 50 feet at mean tide. The greater part of the dredging necessary to make this channel has been done by the sea-going suction dredge *Culebra*, and the old French ladder dredge *Gopher*, and both of these dredges are continuing the work.

Although the channel had been deep enough for navigation for several days before it was actually opened, no vessels were allowed to pass through it, because the men who are doing the work wished that American ships should be the first vessels to use it.

### Highest Daily Excavation.

The best daily record of excavation for steam shovels since American occupation was made on Wednesday, February 10, when 58 shovels in the Central Division removed 76,438 cubic yards of material, an average of 1,318 cubic yards per shovel. Of this amount, seven shovels in the Tabernilla District excavated 11,040 cubic yards, an average of 1,577 cubic yards per shovel. The highest previous daily record was made on February 5, when 56 shovels in the Central Division removed 73,442 cubic yards, an average of 1,311 cubic yards per shovel. These shovels are under steam for eight hours per day, but are not actually at work during this entire period, time being lost by the necessity of moving the shovel forward, blasting stone too big for the shovels to handle, and keeping the shovels supplied with cars, etc. On February 10, the 58 shovels were under steam a total of 464 shovel-hours and were actually digging 311.55 shovel-hours.

The 76,438 cubic yards removed were loaded on 2,223 Lidgerwood flat cars, 264 large Western dump cars, and 2,749 small Western and Oliver dump cars, a total of 5,236 carloads. The material was transported an average distance of about 11 miles, and 411 train-loads were dumped during the day.

### Improvements in Subsistence Department.

The Subsistence Department is making improvements at various places in the Zone. The bakery at Cristobal is being remodeled and a new concrete floor in place of wood is being laid on the second floor. A new roll machine has been installed and the entire machinery of the bakery re-arranged. An order has been sent to the States for two modern ovens for baking French and Vienna bread. It is expected that they will be in use at the Cristobal bakery by April 1. A portable baking oven 9½ by 11½ feet for the Hotel Tivoli is on the Isthmus and will be installed immediately. Four other experimental ovens for the larger Line hotels are expected shortly. Four coffee urns of the most modern pattern are also on the Isthmus and are a part of 12 urns that have been ordered for use in the Line hotels. The old coffee urns will be repaired and remodeled

and installed in the larger laborers' messes and kitchens. Plans are complete for a new commissary at Gatun and the erection of the building will begin at once. It will be two stories high with the retail store on the second floor and the lower floor will be used as a storeroom by the Commissary and Subsistence Department. The Cristobal commissary has been remodeled. The boot and shoe department and the dry goods are upstairs, and the lower floor has been divided in the middle by an aisle. The manager's office is also located on the first floor. The north end of the building is for "gold" employes, and the south end for "silver" employes.

### Rock Excavation at Corozal.

Work has been begun on a clam-shell dredge which will be one of two dredges of this type to be used in excavating a diversion channel which will take the drainage of the Rio Grande valley from the diversion near the Miraflores lock site to a point near Camp Diablo, where it will enter the present channel of the Rio Grande. The diversion channel will be a ditch about a mile and one-half long and as a piece of excavation is not of much importance. It is part of the preparatory work necessary before the rock excavation south of the Miraflores lock site can be undertaken.

The present plan for excavating in the prism south of the Miraflores lock site and north of the end of the old French canal is to throw a dyke across the valley, which will keep tide water from flowing into this part of the prism, and to divert the river and surface water through the channel referred to above. The earth will be dredged from the section between the lock site and the dyke, and steam shovels will then be put in to take out the rock down to 45 feet below sea level. This method will do away with the more expensive subaqueous rock excavation for this section of the Canal.

### January Money Order Business.

During the month of January, 1909, the sixteen post-offices in the Canal Zone at which money order business is done, sold 14,464 money orders, aggregating \$409,240.04, a decrease of \$23,247.92 from the amount reported for December. Of the \$409,240.04 in January, \$288,507.33 was drawn in orders payable in the United States and elsewhere, and \$120,732.71 in orders drawn payable in the Canal Zone. The fees collected amounted to \$1,724.42, and the amount paid and repaid was \$108,382.20.

In the number of orders drawn, Cristobal was first with 2,730, Empire second with 1,720, and Ancon third with 1,476. In the amount issued, Cristobal was first with \$70,102.71, Empire second with \$47,287.65, and Gorgona third with \$45,157.39. Of the amount payable in the United States, Cris-

Panama railroad force, 5,650; Panama railroad commissary force, 743.

## LIST OF EMPLOYEES WHO ARE ENTITLED TO CANAL MEDALS.

The publication of names of employees of the Isthmian Canal Commission and Panama Railroad Company who are entitled to receive Canal Medals, which was begun in THE CANAL RECORD of February 10, is continued in this issue. The names thus far published are those of employees of the Isthmian Canal Commission. When all these have been given the names of employees of the Panama Railroad Company will follow. Address communications relating to corrections in Medal list to Assistant to the Chairman, Culebra, C. Z.

## ESTIMATES OF CANAL WORK.

Comparative Figures of the Board of Consulting Engineers, 1906, and the Isthmian Canal Commission, 1908.

An analysis of the differences between the amount of work necessary for the construction of the Canal, as estimated by the Board of Consulting Engineers in February, 1906, and the estimates made by the Isthmian Canal Commission in December, 1908, is appended. The increase in work necessary to carry out the present plans, as compared with the plans of the minority of the Board of Consulting Engineers in 1906, is a little over 50 per cent. The estimate made by the Commission in December, 1908, is subject to any changes that may be made as a result of the recommendations of the Consulting Engineers who accompanied President-elect Taft on his recent inspection of the Canal work. The figures are for the period, May 4, 1904, to the completion of the Canal.

The estimate of December, 1908, is larger than that of the Board in the following items:

Excavation	Cubic Yards
From prism.....	66,329,217
From diversions.....	250,000
From locks.....	3,894,763
At dams.....	397,615
Total.....	70,871,595
Back filling.....	289,000
Concrete.....	2,015,000

The estimate of December, 1908, is smaller than that of the Board in the following item:

Filling dams, cubic yards.....	8,898,000
--------------------------------	-----------

In making its estimate, the Board was obliged to adopt typical sections for the prism of the canal with certain standard slopes for silt, earth, and rock. It has since been found by experience that in many places flatter slopes, and consequently larger quantities, are necessary.

Material changes in the project have also been found advisable, and have been made. They have resulted in a large increase in the work to be performed. The resulting differences in the quantities are as follows:

Increased Excavation for Prism:	Cubic Yards.
From widening channel from 500 feet to 1,000 feet for a distance of 4,000 feet north of Gatun Locks, to afford a basin for vessels passing through the Canal.....	3,786,137
Dredging necessary to maintain channel in Limon Bay prior to completion of Canal.....	6,500,000
Change of line at Mindi, and flattening of slopes—Atlantic Division.....	5,588,988
Increase of bottom width in Culebra Cut from 200 feet to 300 feet for 4.7 miles.....	13,000,000
Allowance for flattening of slopes, and for slides, Central Division.....	7,929,493
Change of alignment and widening of bottom from 300 feet to 500 feet in Panama Bay; and changes in prism by reason of moving the locks from La Boca to Miraflores.....	29,524,599
Total.....	66,329,217
Increased excavation for Diversions.....	250,000
Increased excavation for locks:	
From enlarging lock chambers from 95 by 900 feet to 110 by 1,000 feet and making deeper foundations.....	3,894,763
Increased excavation for dams:	
For sheet piling and curtain walls at spillway.....	397,615
Grand total increase in all excavation.....	70,871,595

Increased Back Filling:	
From lengthening locks and changing location of locks at Pacific end of Canal.....	289,000
Increased Concrete:	
From increase in size of lock chambers from 95 feet by 900 feet to 110 feet by 1,000 feet, deeper foundations and curtain walls.....	2,015,000
Changes for Fill for Dams:	
Increase for Gatun Dam.....	3,200,000
Decrease from changing location of the dams at the Pacific end of the Canal.....	12,098,000
Net decrease of.....	8,893,000

A comparison of the quantities estimated for each Division and each class of work by the Board of Consulting Engineers in 1906, and the Isthmian Canal

Commission in December, 1908, together with the percentages of increase and decrease, is given in the following table:

CLASS OF WORK.	Minority Report 1906.	I. C. C. Estimate December 1908.	Per cent of increase.
<b>EXCAVATION.</b>			
Prism—			
Atlantic Division.....	20,330,000	36,205,125	78
Central Division.....	67,615,000	88,544,493	31

Pacific Division.....	50,000		....
Total.....	50,000	268,500	437
Spillway—			
Atlantic Division.....	189,000		....
Total concrete.....	3,000,000	5,015,400	67

(a) Expenditure for concrete estimated for in minority, but quantities not given.

\* Decrease from minority.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

The Boys' Department of the four Young Men's Christian Associations in the Zone had an excursion to Fort Lorenzo on Saturday, February 13. Transportation to Gatun was furnished by the Panama Railroad and launches from Gatun to Fort Lorenzo and return, by the Atlantic Division. Fifty-two boys made the trip, four from Gatun, ten from Cristobal, twelve from Gorgona, twelve from Empire, and ten from Culebra. Lunch was eaten on the banks of the Chagres near the mouth of the River, after which a complete examination of the old Spanish fort was made. On their return to Gatun in the afternoon about two hours were spent in going over the site of the locks and dam.

## CULEBRA.

A smoker for members of the Y. M. C. A. will be held on Friday evening, February 19. A good program has been arranged. The medals won in the recent duck pin and billiard tournaments will be presented at the smoker.

Any social club which desires to make use of the moving picture films in the possession of the Y. M. C. A. can make arrangements to do so by communicating with the Secretary of the Y. M. C. A., Culebra.

## CRISTOBAL.

An exhibition game of duck pins was played on Thursday night, February 11, between the "First Team" and "All Stars" resulting in a victory for the latter team by a score of 2 to 1.

The following entertainments are scheduled: Thursday, February 13, Musical, under the auspices of Christ Church, Colon; Saturday, February 20, Dance, under auspices of the Bachelors' Club; Monday, February 22, Moving pictures, illustrating the book of Ben Hur.

## JANUARY SHOVEL RECORDS.

In January the steam shovels at work on Canal excavation removed 1,815,874 cubic yards of material, all but 110,147 cubic yards of which was taken from the Canal prism.

The high record for the month was made by shovel No. 216 (90-ton shovel), at work in the Empire district, which took out 44,225 cubic yards, all but 64 cubic yards of which was rock, in 25 working days, an average of 1,769 cubic yards per day. The best record for shovels in the 70-ton class was made by shovel No. 112, working in the lock site at Gatun, which removed 36,126 cubic yards in 25 days, an average of 1,445 cubic yards per day.

FOUND—A small diamond horseshoe stick-piu, recently found in the vicinity of Gatun, has been turned over to the Chief of Police, Police Headquarters, Ancon, Canal Zone. Owner can obtain same by applying at Police Headquarters and properly identifying it. No charges.

## RED CROSS.

## Notice to Members of the Canal Zone Branch.

It is desired to complete the organization of the Canal Zone Branch of the American National Red Cross, and to take up all unfinished business at meetings to be held on February 21 and February 28.

The American National Red Cross is organized as a corporation pursuant to Act of Congress approved January 5, 1905. One of the provisions of the Act is as follows:

"It shall be the duty of the central committee to organize with as little delay as possible, State and Territorial societies, including the District of Columbia, under such rules as the said committee may prescribe."

The rules for State and Territorial societies are published in a pamphlet called "Regulations for Branch Societies of the American National Red Cross."

Under Article 1, the following appears:

"Each society shall elect by ballot from its members a president, vice-president, secretary and treasurer, and such other officers as the branch society may deem wise to elect, who shall hold office for one year, or until their successors are duly elected and qualified. They shall also elect by ballot an executive committee of five members, of which number the president *ex-officio*, shall be one, to serve for one year, or until their successors are duly elected and qualified."

Under the above, it is in order for the Canal Zone Branch to elect a vice-president, and five members of an executive committee.

Article 2 provides:

"Branch societies may at their discretion create such subdivisions in different parts of the State or Territory as may be considered advisable in furtherance of the work of the society, such subdivisions to be presided over by a chairman, and to be under the general control and direction of the State or Territorial Society."

For convenience of administration, it is suggested that the subdivisions of the Canal Zone Branch be localized as are the Quartermaster's Department Districts, and that there be in each subdivision a chairman and treasurer and such executive committee as may be best adapted to the size and needs of the subdivision, the chairman, treasurer and executive committee to act in all matters pertaining to Red Cross work in their subdivisions, including increase of membership, raising funds, etc., and make recommendations in all cases that may come up for relief.

A complete set of regulations will be obtained for distribution, also blank forms for vouchers. The rules and regulations provide for audit of all accounts by a disbursing officer of the War Department. It is suggested that the Examiner of Accounts of the Isthmian Canal Commission act as auditor for the Canal Zone Branch.

Article 10 of the regulations states:

"The president shall appoint a finance committee of not less than four persons, who shall serve until their successors are appointed. It shall be the duty of the finance committee to attend to the collection of money and material for the benefit of the society."

Inasmuch as the collection of funds is to be handled by a committee in the various subdivisions, it is thought a finance com-

mittee will not be necessary in the Canal Zone Branch.

Under section 5 of the Act mentioned herein, the following is quoted:

"Fifth—And to continue and carry on a system of national and international relief in time of peace, and apply the same in mitigating the suffering caused by pestilence, famine, fire, floods, and other great calamities, and to devise and carry on measures for preventing the same."

It is believed that as the construction of the Canal is a great national undertaking, suffers from various causes during the construction work, can be relieved singly under the terms of the Act, instead of waiting for any one national calamity.

It is believed that matters pertaining to the Canal Zone Branch can be best handled by delegates rather than by an attempt to assemble the 1,200 members now enrolled. It is therefore requested that the local subdivisions proceed on Sunday, the 21st instant, to select delegates in numbers equal to ten per cent of the total membership in the subdivisions, and that these delegates be instructed in all matters pertaining to the subjects mentioned herein, or other subjects that may be deemed pertinent. The temporary committees now acting will be advised of the number of delegates to be elected from each subdivision, and will give notice of the hour and place of each meeting. The delegates to be so selected are requested to report at a meeting of the Canal Zone Branch to be held at the Tivoli Hotel, Ancon, at 3 p. m., Sunday, the 28th instant.

The following is a synopsis of subjects to be discussed at the meetings to be held February 21 and 28:

Method of voting at meetings of the Canal Zone Branch, by delegates or otherwise; election of vice-president and executive committee of five; administration of subdivisions as outlined; scope of authority; publishing regulations and blanks for distribution; auditor for accounts; finance committee, is it necessary? discussion and adoption of by-laws; organization of a committee to institute a First Aid Course in the Canal Zone; date before which dues must be paid; discussion of Section 5 of the Act of Congress, and definite outline of special cases that are to be cared for from funds of the Red Cross; whether it would be best to have funds raised by various means kept separate from the regular funds obtained by membership dues.

C. A. DEVOL, *President.*

## SALE OF REAL PROPERTY.

By virtue of a decree of foreclosure of real property, to me directed from the Circuit Court in and for the Second Judicial Circuit, Canal Zone, in favor of Pascal Canavaggio against A. Rome, I shall sell at public auction, to the highest bidder for cash, at the east door of the court house of the Circuit Court, in the city of Empire, Canal Zone, on the 4th day of March, 1909, at three o'clock in the afternoon of said day, the following described property, situated in the city of Empire, Canal Zone, and more particularly described as follows: A certain three-story frame building, together with all the appurtenances thereunto belonging, known as the Pennsylvania Hotel, and designated as by number 163, more particularly described as bounded on the north by the property of Muller, on the south by the property of Jose Garavel, on the east by the Panama railroad tracks, and on the west by the property of the Panama Banking Co., and Fishbaugh, respectively.

The above described property is to be sold at public auction as above described by virtue of a decree of foreclosure issued by the Circuit Court in and for the Second Judicial Circuit, Canal Zone, in which said cause, I. L. Tolodano was the plaintiff and A. Rome, Pascal Canavaggio, and F. P. Peterson were the defendants.

GROSVENOR A. PORTER, *Marshal.*

## OFFICIAL CIRCULARS.

## Wage Classification of Silver Employees.

CULEBRA, C. Z., February 11, 1909.

CIRCULAR No. 229-C.

The following additions to Circular No. 229—Pay Schedule for employees on the silver roll—are hereby approved:

H. F. HODGES,

*Acting Chairman and Chief Engineer.*

## Coupon Books in February.

CULEBRA, C. Z., February 12, 1909.

TO ALL CONCERNED:

There being only twenty-eight days in the present month, no coupon books will be issued after the 25th of the month.

H. F. HODGES,

*Acting Chairman and Chief Engineer.*

## Rules Governing Leaves of Absence.

CULEBRA, C. Z., February 12, 1909.

CIRCULAR No. 132-E.

Circular No. 132-B contains the following:

"In no case shall an employee be prevented from going on leave, under the new rules, within four months after it is due, and Heads of Departments will arrange accordingly."

In various instances this rule has been disregarded, without the previous sanction of the Chairman, and the circumstances have been reported later to this office with a request that the employee who was detained be permitted to enter on deferred leave.

Whenever it seems probable that the exigencies of the service will prevent an employee from entering on his vacation within the prescribed period, the case should be reported to this office, before his vacation is forfeited, with a full statement of the facts and an estimate of the earliest date on which the employee can be relieved. Each such case will then be decided on its merits and unless the postponement of the leave is specifically authorized before forfeiture, the rule will be applied literally and without exceptions.

H. F. HODGES, *Acting Chairman.*

## Duties of Superintendent of Plumbing.

ANCON, C. Z., January 30, 1909.

TO ALL CONCERNED:

The duties of the Superintendent of Plumbing are as follows:

1. To inspect all plumbing in I. C. C. buildings, including those at Porto Bello and Taboga in accordance with the regulations governing this work, during progress of installation, this to include the application of the water test and the final inspection on completion of work; also to make periodical inspection of all completed plumbing work, to see that the maintenance of same is properly attended to.

2. To supervise and direct Sanitary Inspectors in their work as inspectors of the water mains and water connections in the Canal Zone, whose duty it is to detect leaks and prevent the waste of water from public reservoirs.

3. To render such assistance to other departments as they may require.

The Superintendent of Plumbing shall be advised by departments or divisions who are doing work, of any and all construction, alteration or repairs to plumbing in I. C. C. buildings (but this shall not apply to the repair of a leak in a waste pipe, supply pipe, valve, cock, or faucet), and all such work must meet with his approval.

All wastes and leaks and stoppages, etc., detected, will be reported at once direct to the department responsible for the maintenance of the work effected, in order that same may be attended to with as little delay as possible.

W. C. GORGAS, *Chief Sanitary Officer.*

Approved:

GEO. W. GOETHALS,  
*Chairman and Chief Engineer.*

## SOCIAL LIFE OF THE ZONE.

### New Interest Awakened in Women's Clubs.

Mrs. Philip North Moore, president of the the General Federation of Women's Clubs, and her daughter, who have been guests of the Canal Zone Federation, returned to the States on the *Panama*, leaving Cristobal on February 13.

Mrs. John Dickinson Sherman, vice-president of the General Federation, underwent an operation for appendicitis on February 12, at Colon Hospital. She is recovering and will sail for the States as soon as she is able to do so.

During the visit of these ladies to the Canal Zone interest in the Women's Clubs and in general social life among the women of the Zone has been greatly stimulated.

At every place where she made an official visit Mrs. Moore not only made an address but met each club member. In her addresses she outlined the scope and purposes of the General Federation, giving a sketch of its history, and telling of the work of the committees. In speaking of the Zone Federation she emphasized the point that its chief aim was to be a help to the American homes on the Isthmus. Each club was encouraged to maintain its independence and persevere in its work of study, charity, and promoting interest in municipal affairs. Keeping in touch with the world at large by a careful study of current events was urged as a means of promoting interest in local affairs. Mrs. Moore expressed special interest in the work planned by the botanical committee of the Canal Zone Federation, which has recently been appointed.

Mrs. Sherman's addresses dwelt largely with parliamentary law. From the simplest rules of order she branched out into the more intricate rules that are necessary for a smoothly working organization. Mrs. Sherman's handbook, "Parliamentary Law at a Glance," is in use in all the clubs throughout the Zone.

The guests of the Federation were entertained on February 8 by the Paraiso and Pedro Miguel Women's Clubs, which met at Paraiso. Music was furnished by Mrs. Henry Montgomery, Mrs. William Lowe, and Mrs. W. Downs. Souvenir spoons containing a view of Culebra Cut were presented to the visitors. At Empire on February 10, the Empire Woman's Club entertained Mrs. Moore and Mrs. Sherman. Music was furnished by Mrs. Adolf Faure and Miss Sophie Johnson.

A joint meeting of the Gorgona and Las Cascadas Women's Clubs was held at the Gorgona clubhouse on February 11. Vocal music was rendered by Mrs. McFarlane and Mrs. Meyers, recently elected members of the Club.

The executive board of the Cristobal Woman's Club met on February 10, Mrs. Otis Biddle was appointed recording secretary in place of Mrs. J. J. Jackson, who has resigned, and Mrs. Charles Owens was chosen to take charge of the home department during the absence of Mrs. H. J. Slifer, who leaves on February 19, for a short visit in the States.

The Gorgona Woman's Club gave a reception to the married residents of Gorgona on the evening of February 10.

The Gatun Woman's Club held its regular study meeting on February 12 at the

home of Mrs. W. H. Brady. In the absence of the president, the vice-president, Mrs. O. L. Brownell, presided. The lesson was conducted by Mrs. H. K. Higgins, and literary selections in connection with the subject, "Panama," were read. Mrs. J. Vreeland and Mrs. W. M. Martin were elected to membership. The club will meet February 19 at the home of Mrs. C. G. Carty and February 25, with Mrs. Brownell. The membership is rapidly increasing and steps are being considered to secure a permanent meeting place. Until some such measure is effected, the club will continue to meet at the homes of the members, by invitation.

The Sunshine Club at Gatun has affiliated with the International Sunshine Society, and Mrs. Cynthia Westover Alden, founder and president-general of the society has appointed Mrs. Nellie Anderson, of Gatun, representative for the Canal Zone. Las Cascadas has also a branch of the society.

Thomas H. Lucey, impersonator and monologist has been giving a series of entertainments in various towns of the Zone. On Thursday, February 11, Mr. Lucey appeared at Kangaroo Hall, Empire, for the benefit of St. Mary's Church, and on Friday, at the Commission chapel, Culebra, for the benefit of Trinity Church. On Saturday evening Mr. Lucey gave an entertainment at Paraiso under the auspices of the Kangaroos. All the performances have been well attended.

J. Wesley Holland gave an entertainment at Pedro Miguel on Wednesday evening February 10, for the benefit of the Woman's club.

The Bachelor Girls' Club gave a St. Valentine's dance at the Culebra clubhouse on Saturday evening, February 13. There was a large attendance.

Services as follows have been arranged for St. Luke's Church, Ancon, during Lent: Ash Wednesday, February 24, there will be Holy Communion at 7 a. m. and morning prayer at 10. On Wednesday afternoon there will be a children's service at 3.45, followed with evening prayer. During the absence of the chaplain for a few weeks, services will be conducted by Col. W. C. Gorgas, Dr. H. R. Carter, and Judge H. A. Gudger.

### Red Men's Picnic Washington's Birthday.

The Improved Order of Red Men and Degree of Pocahontas will hold an outing and basket picnic at East La Boca on Washington's Birthday, February 22, to which all their friends are invited. A special train will leave Cristobal at 6.30 a. m., stopping at Gatun, Gorgona, Las Cascadas, Empire, Culebra, Paraiso, Pedro Miguel, and Panama.

The Red Men will form in line at Panama and march to East La Boca, and transportation will be furnished for ladies and children. Games and sports will be held in the afternoon followed by a ball in the evening. A special train will leave for Cristobal and way stations after the ball.

### Elks' Entertainments.

The members of the B. P. O. E. will hold a social on Sunday evening, February 21, at the Imperial, Panama. Members of the order who wish to participate should communicate with Mr. Charles Ponton, Panama, at once, in order that reservations may be made for them. An executive committee has been appointed with a representative in each

town who will receive names and forward them to the assistant chairman at Panama.

An informal smoker will be held at the B. P. O. E. lodge hall, Cristobal, on Tuesday, February 23, at 8 p. m. All Elks are cordially invited to attend.

### Red Cross Benefit Dance.

There will be a dance at the Tivoli Hotel Saturday evening, February 20, at 8.30 o'clock, for the benefit of the Canal Zone Branch of the Red Cross. Mrs. Squiers, Mrs. Blackburn, Mrs. Gorgas, Mrs. Bishop and Mrs. Gudger have consented to act as patronesses. Tickets are being sold by a committee of young ladies, and may also be obtained at the office of the District Quartermaster at Ancon.

### Atlantic Baseball League.

The Atlantic Baseball League was organized at Cristobal, on January 28. The officers of the league are: R. E. Stevens, president; M. Arango, vice-president; C. E. Gilmore, treasurer; R. W. Kiplinger, secretary; Dubois and Mansfield, umpires; Daniels and DeCreny, scorers. The league is composed of teams from the Subsistence and Commissary Department, the Cristobal Dry Dock, the Department of Civil Administration at Cristobal, and from the general offices of the Panama railroad. Uniforms for all the teams have been ordered from the States and they are expected to arrive very shortly. The league is using a park at the corner of 13th and D streets back of the Salvation Army social hall. Two games are played every Sunday afternoon, the first game being started at 1.30 o'clock.

### Personal.

The Hon. Arnold Shanklin, former Consul-General at Panama, who has been appointed Consul-General to the City of Mexico, will sail for the States on Friday, February 19. He will attend the inauguration in Washington and take possession of his new post on April 1.

### Missing Man.

Information is wanted in regard to Joseph Molyneux, an Englishman. Anyone having knowledge concerning him is requested to communicate with the Collector of Revenues, Ancon, C. Z.

### Pacific Masonic Club.

A meeting of the Pacific Masonic Club will be held on Saturday evening, February 20. Master Masons along the Line are cordially invited to attend.

### Brotherhood of Locomotive Engineers.

A regular meeting of the Division 756 of the Brotherhood of Locomotive Engineers will be held at Las Cascadas on Sunday, February 21, at 1 o'clock in the afternoon.

### Steam Shovel and Dredge Men.

Local No. 19, I. B. of S. S. & D. M. will hold a special meeting Sunday, February 21, at 2 p. m. in the I. C. C. lodge hall, Empire. All members are requested to be present.

### Order of Railroad Conductors.

All members of the Order of Railroad Conductors of America are requested to be present at a meeting to be held at Paraiso on Sunday, February 21, at 9.30 a. m. Very urgent business is to be transacted.

## BACHELORS OR MARRIED MEN?

## Which Were the Isthmus Pioneers?

THE CANAL RECORD:

Four years ago, more or less, Uncle Sam purchased the Canal rights to construct a canal from the Atlantic to the Pacific. Energetic young men, ambitious and full of hope, like Cæsar, came amidst plague and sickness and the fearful ravages of yellow fever, that they might in after years be proud of having been each a small iota in this wonderful work. How many proved martyrs to the cause? Ancon cemetery, with its short upright pine boards, is grim evidence: There are the ages—19, 21, 23, 24, and so on, all young, mostly unmarried men who came to an early death.

Now comes "Benedicto" to reap the rewards of young America's hard fought battle. The poor unmarried man now hears himself reviled for lack of interest, insufficient capability of performance without brother "Benedict's" guardian soul and hand to guide him in varied tasks on this great undertaking. How many married men, pray, were in the machine that fought *stegomyia*, *anopheles*, and the scarcity of necessities of life in the early days? Yea, how many? No doubt the married men did come here with families and subsist out of the kindness of a beneficent country, after the lovely, berated young bachelor, the unfortunate single man, had cleared a path of cheerfulness in what was a "satanic paradise."

Point to the great number of lonely bachelors who have mated after untiring efforts and laborious savings—and still he is chided, scorned. Is the married man not given his just dues, his meritorious reward for the kindness shown him by U. S. America? Kindly elucidate, Mr. Married Man of Family, elucidate the exaggerated ability you have given the Zone public at large to understand you are possessed of. A satisfactory explanation and we bow, kneel to your talents.

In conclusion, as a bachelor, let me quote from President Roosevelt's speech (in reply to an interruption), made at Cristobal in November, 1906: "In all great undertakings there is always to be found some one small enough, low enough, mean enough, to find fault; but such persons will rise like bubbles on the surface of a stream and gradually disappear as they float onwards."

SAMUEL D. FREEDMAN.

Gorgona, C. Z., February 12, 1909.

## Proof Wanted.

THE CANAL RECORD:

In reference to Antonio's allegation "Are Bachelors Worth Less?" of January 25, I would thank you to print the following:

It is a matter of record that there are numerous bachelors on the job, in the capacity of superintendents, chief clerks, chiefs of divisions, yardmasters, foremen, etc., which require steadiness and force of character. They are filling these various jobs with efficiency, and they have also shown stability by holding them down several years; in fact some of them were here in the earliest days when married men on the Isthmus were few.

It may be true that there is more stability in that class of married men who were "bad men" when they were bachelors. But is it not a fact that there are a great many in-

stances where married men's efficiency at work is somewhat impaired, viz.:

When married very happily and spooning too much.

When married unhappily and trying to drown his sorrows

When wifey hits him with a rolling pin.

When hubby is obliged to walk the floor all night to put baby to sleep.

When walking the floor with babies (plural). In which case he is denied even the soothing effect of a cigarette, etc.

Bachelors may or may not be worthless, but if Antonio cannot support his allegation with better than the proverbial toothbrush and clean collar, we will have to conclude that his inspiration was put on paper at a time when he was over-intoxicated with nuptial happiness. WORTHLESS BACHELOR.

Culebra, C. Z., February 12, 1909.

## Philosophical Views of a Married Man.

THE CANAL RECORD:

Will you allow me space in THE CANAL RECORD to answer the writer of the article that appeared in the issue of February 11, 1909, entitled "Are Bachelors Worth Less?" His article can be construed two ways: "Are Bachelors Worth Less?" or "Are Bachelors Worthless?" Which does he mean? He evidently is a married man and is afraid of his position or he would not write such an article. But being a married man myself, I will nevertheless take up for the bachelors, being that I was once one myself. They, as a rule, are a steady hard working body of men with no responsibilities attached to them, but who can tell but what they have a dear old widowed mother back in the States to take care of? Who were the pioneers to the Canal Zone, if they were not mostly composed of single men? Did they not leave good positions to come down here, to work on this, the greatest undertaking the world has ever known, "digging the Panama Canal?" In the starting of this work, were they not in the eyes of thousands, called heroes, coming to a foreign land where yellow fever and diseases were rampant? How many married men cared to venture here, either by themselves or bring their families with them?

Of course the single men can do as the writer stated, that is, pack their toothbrush and a clean collar any week, and go back to the States or where they will. Yet cannot the married man do likewise and also carry an extra toothbrush along with his family? Does he forget that he was once single himself or is he just talking so as to get his name in print? What does the writer mean by saying that it is necessary to have married men to direct the movements of the poor little single fellow, who, in his estimation, is only fit for minor clerical duty or laborers' work? Where did he get all his knowledge from? Why don't he publish a book on such things, then perhaps he could resign from his position which he now holds and leave the bachelor all to himself to dig the great ditch. Is the married man always the best worker? Nay. It is often the case that he is the worse of the two and uses the fact of his family as an ironclad bond to retain his position. It is not always the fault of the man for being so unfortunate as to remain single. Can our able writer say that he has probed this question so deeply that he can quote himself as he has done? Where did he get his knowledge from? I speak for many, when

I say I am surprised that any man down here, no matter who he is, would make such statements as he has.

I agree with what the Quartermaster wrote and will say that my friend who signs himself "Antonio Falvo" should not be so positive in putting himself in print. The Quartermaster does not tell the whole truth. But why should we argue this question. Each and every one of us is here for a certain purpose and that is to help to build the Canal, be it that all are single or all are married men. I agree with my friend when he says "base metals cost less than gold," but he must also remember that "all that glitters is not gold."

F. G. TREVLAC.

Miraflores, C. Z., February 11, 1909.

## Suggestion of Nogi.

THE CANAL RECORD:

This for you: Who are Hon. Antonio Falvo? I require of cousin Nogi, with battle expression. Why for you expel so sudden affection to Hon. Antonio? say Nogi, with serious look. Who are he, I yell, with fist smash that upset ink well: who are he that make faces at poor bachelor boys in one whole column of CANAL RECORD, which paper always complain of "no space" habit? No noise from Nogi. I declaim, with Roosevelt move, that Hon. Antonio are a very hen-pecked galleigho gentleman, maybe, who live at Empire, so say, and who demand all bachelor boys get married whether can or not. Nogi screw up eyes and doze like a trance for thought. Presently it sound like this from him: Suppose, maybe, Hon. Antonio have a few daughters, cousins and aunts, with long necks and short hair, which are marked down to 98 cents, and which presence have very much influence with Hon. Antonio and cause him all this pain. My face open with surprise and admiration for Nogi was very smart. Nogi now says that he make some demands or resolutions, which are the same, and like this:

We resolve not to marry any one—unless they say so.

We resolve that a bachelor is worth more than a married man and his wife.

We resolve not to be bum clerks and laborers.

We resolve to pack our toothbrush, maybe?

Togo No. 2.

Empire, C. Z., February 12, 1909.

## Bachelors Dig But Don't Talk.

THE CANAL RECORD:

Please give one of those "worthless" bachelors a show now. You know "bachelors cost less" and they don't take up so much room, neither in the Commission houses nor in your valuable newspaper.

It has been a long time since I've read such an article supposed to be written by a "transmuted" bachelor who hints that he is capable of assuming "great responsibilities," and is endowed with that stuff called "force of character," and then writes the narrowest article about bachelors (who have been much talked about lately by one or two of the "transmuted"), that I have ever read.

But with all your talk "Antonio" I have observed three things, *i. e.*, bachelors don't write things about "transmuted" people, nor they don't liken themselves unto a lump of gold, but they do dig dirt and "that's all."

CIGARO CIGARILLO.

Empire, C. Z., February 12, 1909.

## COMMISSARY DEPARTMENT.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

## COMMISSARY PRICES

For week beginning February 16:

## Misdirected Letters.

Division of Posts, Customs and Revenues  
Ancon C. Z., February 17, 1909

The following insufficiently addressed letters, origi-  
nating in the United States and its possessions, have  
been received in the office of the Director of Posts  
and may be secured on request of addressee:

Bromer, Fred.....	Johnson, Mason W.
Christoferson, Nikolai.....	Johnson, Jul
Cox, John.....	Lamarcha, Cecil
Curran, James S.....	Meyerswitz, Mrs. Fannie
Dalrymple, W. H.....	Smith, Denton H.
Donnelly, E. A.....	Smith, H. A.
Fulpano, Emilia.....	Squires, Geo. B.
Garvey, Joseph.....	Stamer, Jack
Golden, John A.....	Walker, John A.
Gore, W. T.....	Willett, S.
Williams, Jno. H.....	

J. W. Holland of Culebra, will deliver an  
address on "Singular Life" at the Metho-  
dist Episcopal church, Panama, on February  
23, at 8 p. m.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Pan-  
ama Railroad Steamship Company, of the Royal  
Mail Steam Packet Company, of the Hamburg-  
American Line, and of the United Fruit Company's  
Line, the Panama Railroad Company's dates being  
subject to change:

## NEW YORK TO COLON.

Allianca.....	P. R. R. Saturday.....	Feb. 13
Prinz Joachim.....	H. A. Saturday.....	Feb. 13
Colon.....	P. R. R. Friday.....	Feb. 19

## COLON TO BARBADOS, CALLING AT TRINIDAD.

Atrato.....	R. M. Tuesday.....	Mar. 2
Trent.....	R. M. Tuesday.....	Mar. 16

The Panama railroad steamships sail at 3 p. m.  
from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line  
sail from Colon at 1 p. m. via Kingston, Jamaica,  
for New York.

All Royal Mail steamers mentioned above leave early  
in the morning from Colon via Kingston, Jamaica,  
for New York. All mail and passengers should be  
on board early on day of sailing.

The steamers of the United Fruit Company's line  
sail from New Orleans at 10 a. m. for Colon, calling  
at Puerto Barrios, and from Colon at 1.30 p. m., via  
Port Limon and Puerto Barrios, for New Orleans.

Sailings of the French line (Cie. Générale Trans  
atlantique) for Venezuelan ports, Martinique and  
Guadeloupe on the 3d and 20th of each month.

The next sailing of the Leyland Line for New  
Orleans via Kingston, Ja., will be as follows: Steam-  
ship *Mercant* about February 23; steamship *Mem-  
phian* about March 6.

## Concert by the I. C. C. Band.

## CRISTOBAL, C. Z.

Wednesday, February 24, 1909, at 8.15 p. m.

## PROGRAM

1 March—Our Director.....	Bigelow
2 Selection—A Knight for a Day.....	Hubbell
3 Waltz—Moonlight on the Hudson.....	Tohani
Requested.	
4 { a Intermzzo—Rainbow.....	Wenrich
b Southern novelty—Moonlight in Dixie.....	Clement
5 Morceau—The Dawn of Love.....	Bendix
6 Selection—Chimes of Normandy.....	Planquette
7 Descriptive—The Forge in the Forest.....	Michaelis
Adagio, Night; Adagio lento, Morning; Allegro, vi- vace, By the Brook; Adagio, Morning Prayer; Alle- gretto, At Work at the Forge.	
8 Overture—Raymond.....	Thomas
9 Patrol—American.....	Macnam
Requested.	
10 March—Col. Estey.....	Bagley

CHAS. E. JENNINGS, Musical Director.

The next concert will be given at Taboga, Sun-  
day, February 28.

## Entertainments at Ancon.

Prof. J. J. Lowe will give a moving pic-  
ture entertainment entitled the "Life and  
Passion of Christ" at Ancon Chapel on  
Thursday evening, February 18, and Dr. L.  
W. Munhall will deliver his lecture on The  
Book of Books on Friday evening, Febru-  
ary 19, in the same chapel. Admission free.

# CANAL

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, FEBRUARY 24, 1909.

No. 26.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

### THE CANAL RECORD

Ancon, Canal Zone,

Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

## NOTES OF PROGRESS.

### New Dock at Cristobal.

Commissioner Rousseau, S. B. Williamson, and Major Jadwin, conferred with General Manager Slifer, Chief Engineer Budd, and Superintendent Smith of the Panama Railroad on February 19, with regard to the extension of dock No. 11 at Cristobal, to be known as dock No. 12. The borings show that a suitable foundation exists along the line of the old French canal between dock No. 14, at Mount Hope and dock 11, and this will be the location of the new dock. No decision was reached as to the type of dock, that is, whether the tracks will run longitudinally with the line of the dock, the same as on the La Boca wharf and dock No. 11 at Cristobal, or at right angles, as on dock No. 4 in Colon, but it is believed that the latter form will be adopted. The method of construction, that is, the engineering problems, and the manner of construction, whether by day labor or by contract, were also considered, but no decision was reached.

### Chairman's Monthly Report.

The report of the Acting Chairman of the Isthmian Canal Commission for the month of January is published in other columns of this issue of THE CANAL RECORD. The grand total of excavation for the month was 2,924,551 cubic yards, of which 1,803,997 cubic yards were removed by steam shovels, 1,108,677 cubic yards by dredges, and 11,877 cubic yards by hand excavation.

Pile driving for the docks at the handling plant at Gatun was practically completed during the month, and other work in connection with the handling plant is advancing steadily. During the month two duplex tail towers for the handling plant were erected on the west cableway dock, and four lock duplex head towers were erected, up to the level of the operating platform, and the erection of the first duplex lock tail

tower was started. The dredge *Mindi* excavated 35,000 cubic yards from the channel to the cableway docks. At Gatun Dam 119,559 cubic yards of material were placed in the north and south toes. The mixing and handling plant for concrete for the spillway was practically completed at the close of the month.

The average daily number of laborers employed on actual Canal construction was 14,078. There were 327.15 tons of explosives used, and 398,710 feet, or 75½ miles, of rock drilling were accomplished.

The total revenues of the Canal Zone collected during the month amounted to \$52,444.63. The general revenues amounted to \$44,595.40, as compared with \$14,990.74 in December. Of the amount collected in January, \$34,800 was for licenses for the sale of liquor at retail.

The amount of water consumed in the city of Panama in January amounted to 27,524,000 gallons, and in the city of Colon 22,388,488 gallons.

### Oil Burning Locomotives.

Six of the twelve new locomotives recently purchased by the Panama Railroad Company have arrived on the Isthmus, and the other six will come in two consignments, on ships due to arrive this month. These are the locomotives that are to use oil as fuel, and to this end they have been equipped with combination oil and water tanks, the oil capacity being 2,300 gallons and the water 5,000 gallons. The oil tanks can be taken from the tenders and the space they occupy can be used as coal bins in case it is ever desirable or necessary to use the locomotives as coal burners. The coal capacity is ten tons. The oil burners are of the Booth pattern, and they can be removed readily and replaced by grates at any time it becomes necessary to use coal. The locomotives are of the simple mogul type, cylinders 20 by 26 inches, tractive power, 26,000 pounds; steam pressure in boilers, 200 pounds to the square inch; drivers, 63 inches in diameter. They have the latest Westinghouse air brake equipment automatic couplers, and Cardwell draft gear. The first of them will leave the Cristobal shops this week, and all six of those now under erection will be in service within a month. When the twelve are put in service the twelve 100-class engines now in use will be retired to yard use, or will be equipped as oil burners. A 50,000-gallon oil tank will be erected at Cristobal to supply oil to the locomotives.

### Safety Appliances on Panama Railroad.

In order to comply with the provisions of the safety appliances law and the order of the President published in THE CANAL RECORD of January 27, 1909, the Panama

Railroad Company has placed orders for equipment and supplies needed to bring all its engines and cars up to the requirements before July 1. Most of the equipment on the road already meets the requirements of the law.

### Rapid Work by Steam Shovels.

Fourteen shovels in the Empire District, Central Division, on February 17, 1909, excavated 22,286 cubic yards of material in a working day of eight hours, an average of 1,592 cubic yards per shovel for the day. The shovels were under steam a total of 112 hours and were actually digging 79 hours and 30 minutes. The time not spent in digging is accounted for as follows: Cleaning track, 1 hour and 25 minutes; waiting for cars, 23 hours and 10 minutes; mining, 1 hour and 55 minutes; cleaning dipper, 1 hour and 45 minutes; repairing shovel, 3 hours and 25 minutes; coaling shovel, 30 minutes; sliding, 20 minutes.

On Thursday, February 18, 1909, seven shovels in the Tabernilla Construction District, Central Division, during eight working hours, excavated 11,450 cubic yards of material, an average of 1,636 cubic yards per shovel for the day. The shovels were under steam 56 shovel-hours and were actually digging 48 hours and 5 minutes of this time.

### Horses and Mules.

An order has been placed in the United States for fifty mules to take the place of mules condemned as unsuitable for service and to meet the increased demand for animal transportation in road building and other construction work. A consignment of forty-five mules arrived in January. Nearly half of the mules now in the service were purchased prior to September, 1905, and have therefore put in over three years of work. A consignment of twenty horses also arrived in January. Both the horses and mules were carefully inspected on their arrival and were found to be of unusually high grade. A statement of the horses and mules purchased since the beginning of the work follows:

Date of Purchase.	Number.	Price paid.
March, 1905.....	2 horses,	Each \$154.00
June, 1905.....	4 horses,	Pair 600.00
July, 1905.....	6 horses,	Each 219.15
April, 1906.....	20 horses,	Each 145.00
April 1906.....	6 horses,	Each 160.00
August, 1906.....	9 horses,	Each 275.00
October, 1906.....	2 horses,	Each 250.00
October, 1906.....	10 horses,	Each 150.00
January, 1908.....	13 horses,	Each 250.00
March, 1908.....	3 horses,	Each 210.00
January, 1909.....	20 horses,	Each 109.00
December, 1904.....	10 mules,	Each 175.00
March, 1905.....	28 mules,	Each 178.50
June, 1905.....	70 mules,	Each 178.50
July, 1905.....	50 mules,	Each 174.00
September, 1905.....	120 mules,	Each 188.50
April, 1906.....	50 mules,	Each 169.50
October, 1906.....	50 mules,	Each 186.50
March, 1907.....	77 mules,	Each 189.50
January, 1909.....	45 mules,	Each 157.50

## ESTIMATED COST OF CANAL.

## Summary of Items Entering Into the Estimates Made in the Year 1906 and in the Year 1908.

Supplementing the comparative statement of the amount of work necessary to complete the Panama Canal from the time the Americans took control on May 4, 1904, as estimated by the Board of Consulting Engineers in 1906, and by the Isthmian Canal Commission in December, 1908, and published in THE CANAL RECORD of February 17, 1909, a statement of the cost as estimated by the Board and by the Commission is given below. This statement is a general summary. An itemized statement giving the differences in the estimated amount of work and the estimated cost in the Central Division is published in this issue, and similar statements for other parts of the work will be published in forthcoming issues of THE CANAL RECORD.

The cost of an 85-foot-level lock canal as contemplated by the Minority of the Board of Consulting Engineers in 1906, was estimated—Construction, \$116,421,000, plus 20 per cent for administration, etc., \$23,284,200; total, \$139,705,200.

The cost of the Canal as estimated by the Commission in December, 1908, was—Construction \$213,671,000, general items, corresponding to the 20 per cent for administration, etc., \$84,095,000; total, \$297,766,000. Neither of these estimates includes the expenses of Canal Zone government, or of sanitation, or the \$40,000,000 paid the French Canal Company, or the \$10,000,000 paid to the Republic of Panama.

Comparing the two estimates it is seen that the cost of construction is \$97,250,000, or about 53 per cent greater in the Commission's estimate, and that the cost of administration, etc., is \$60,810,800, or 261 per cent greater.

The 83 per cent increase in the cost of construction comprises an increase of over 50 per cent in the amount of work to be done, an increase of about 20 per cent in the cost of excavation, and a general increase in the cost of labor. The 50 per cent increase in work is explained in the comparison of the estimated amounts of work, as published in THE CANAL RECORD of February 17, 1909, and as it appears in detail for the Central Division in this issue, and will appear for other parts of the work in future issues. This is due chiefly to changes in the locks, greater minimum width of channel, and the change in the location of the Pacific locks from La Boca to Miraflores. In making its estimate, the Board was obliged to adopt typical sections for the prism of the Canal with certain standard slopes for silt, earth and rock. It has since been found by experience that in many places flatter slopes, and consequently larger quantities, are necessary.

The cost of excavation as estimated by the Board was a little less than 60 cents per cubic yard, while that estimated by the Commission in December, 1908, was 72 cents; an increase of about 20 per cent. The estimate of the Board was based upon a ten hour day, whereas the work is being done on the basis of an eight hour day. There has been a large increase in the base pay of employees of almost every grade, the rate of pay since the Board estimate was made has greatly increased, and increase of pay on account of continued service has been granted to a large proportion of the gold employees.

## ESTIMATE OF BOARD OF CONSULTING ENGINEERS, 1906.

Atlantic Division .....	\$35,445,000
Central Division .....	48,867,000
Pacific Division .....	28,109,000
New Panama Railroad .....	3,700,000
Land damages .....	300,000
	<u>\$116,421,000</u>

20 per cent for Administration, Engineering and Contingencies, but not including interest during construction, sanitation and expenses of Zone Government..... 23,284,200

Minority's estimate of cost of Canal, exclusive of interest during construction, sanitation and expenses of Zone Government..... \$139,705,200

## ESTIMATE OF ISTHMIAN CANAL COMMISSION, DECEMBER, 1908, FOR ITEMS INCLUDED IN ESTIMATE OF BOARD OF CONSULTING ENGINEERS.

Atlantic Division .....	\$68,564,000
Central Division .....	88,458,000
Pacific Division .....	47,985,000
New Panama Railroad .....	8,164,000
Land damages .....	500,000
	<u>\$213,671,000</u>

General items corresponding to 20 per cent for Administration, etc., of Minority's estimate:

Lighthouses, buoys and beacons .....	\$500,000
Roads, waterworks, sewers, etc., termed Municipal Improvements (as per itemized statement).....	12,114,000
Constructing and repairing buildings for the Department of Construction and Engineering (as per itemized statement) .....	14,651,000
Double tracking Panama Railroad .....	1,200,000
Purchase of steamers Panama and Colon (leased to Panama Railroad).....	1,300,000
Purchase of steamers Tremont and Shawmut .....	1,550,000
Docks and wharves leased to Panama Railroad Company .....	500,000
Purchase of land not flooded by Gatun Lake.....	100,000

General expenses (as per itemized statement) .....	23,730,000
Purchase of Panama Railroad stock .....	150,000
Contingencies, including fire and marine risks .....	20,000,000
Loans to Panama Railroad (as per itemized statement) .....	8,300,000
	<u>\$1,095,000</u>

Commission's estimate including items covered by estimate of Board of Consulting Engineers .....

## ESTIMATE OF ISTHMIAN CANAL COMMISSION, DECEMBER, 1908, FOR WORK NOT INCLUDED IN ESTIMATE OF BOARD OF CONSULTING ENGINEERS.

Sanitation:	
Expenditures to October 1, 1908.....	\$7,553,000
Estimate after October 1, 1908: 6¼ years, at \$2,000,000.....	12,500,000
	<u>\$20,053,000</u>

Civil Administration:	
Expenditures to October 1, 1908.....	\$2,382,000
Estimate after October 1, 1908: 6¼ years, at \$800,000.....	5,000,000
	<u>7,382,000</u>

Grand total..... \$27,435,000

Payments for Franchises, as authorized by the Spooner Act of June 28, 1902:

Amount paid to New French Canal Company.....	\$40,000,000
Amount paid to Republic of Panama.....	10,000,000
Total.....	<u>\$50,000,000</u>

## ESTIMATE OF REIMBURSEMENTS TO THE UNITED STATES TREASURY NOT INCLUDING ALLOWANCE FOR SALVAGE FROM PLANT UPON COMPLETION OF THE WORK.

Municipal Improvements—Cities of Panama and Colon.....	\$3,700,000
Loans to Panama Railroad Company.....	8,300,000
Miscellaneous receipts returned to the United States Treasury, not credited to appropriations for the Canal.....	3,000,000
Total .....	<u>\$15,000,000</u>

## COMPARATIVE ESTIMATES OF COST OF WORK FOR CENTRAL DIVISION, 1906 AND 1908.

The Central Division includes the territory between the south end of Gatun Dam and the locks at Pedro Miguel. In this territory the Canal will run through Gatun Lake and Culebra Cut. The estimates for the Atlantic and Pacific Divisions will be published in the issues of March 3 and March 10, respectively, and for other parts of the work in the issue of March 17.

## ESTIMATE OF BOARD OF CONSULTING ENGINEERS, 1906.

<i>Channel from Gatun Locks to Mile 30.6:</i>	
(15.42 miles, 1,000 feet wide; 3.5 miles, 800 feet wide; 3.6 miles, 500 feet wide.)	
Excavation—Earth, dry, 600,000 cubic yards, at 40 cents per yard.....	\$240,000
Indurated clay (rock), 130,000 cubic yards, at 70 cts. per yd.....	91,000
Rock in the dry, 1,160,000 cubic yards, at \$1.15 per yard.....	1,334,000
Dredging, 12,960,000 cubic yards, at 25 cents per yard.....	3,240,000
Total.....	<u>\$4,905,000</u>
Cutting trees in Gatun Lake.....	100,000

Total excavation, 14,850,000 cubic yards, at 33.7 cents per yard.... \$5,005,000

*Mile 30.6 near Bas Obispo to Mile 39.0, Pedro Miguel Locks:*

(0.65 miles, 500 ft. wide; 3.05 miles, 300 ft. wide; 4.7 miles, 200 ft. wide.)	
Excavation—Dry, 53,765,000 cubic yards, at 80 cents per yard, \$43,012,000	
Allowance for diversion channels between Bas Obispo and Pedro Miguel.....	\$50,000
	<u>43,862,000</u>

Total, Central Division, 68,615,000 cubic yards, at 71.2 cts. per yd., \$48,867,000

## ESTIMATE OF ISTHMIAN CANAL COMMISSION, DECEMBER, 1908.

<i>Channel from Gatun Locks to Mile 30.6:</i>	
(15.42 miles, 1,000 feet wide; 3.0 miles, 800 feet wide; 0.50 miles, 700 feet wide; 3.6 miles, 500 feet wide.)	
Excavation—Earth and rock, dry, 7,752,198 cubic yds., at 90 cts. per yd.....	\$6,977,000
Earth, dredging, 4,000,000 cubic yards, at 25 cts. per yd.....	1,000,000
Total excavation, 11,752,198 cubic yards at 68.87 cents per yard.....	<u>\$7,977,000</u>

*Mile 30.6 near Bas Obispo to Mile 39.0, Pedro Miguel Locks:*

(0.65 miles, 500 feet wide; 7.75 miles, 300 feet wide.)	
Excavation—Dry, 78,042,295 cubic yards, at 98 cts. per yard \$76,481,000	
Concrete, 400,000 cubic yards, at \$10 per yard.....	4,000,000
	<u>\$80,481,000</u>

Total, Central Division..... \$88,458,000

Total excavation, 89,794,493 cubic yards, at 94 cents per yard.....	\$84,458,000
Concrete, 400,000 cubic yards, at \$10 per yard.....	4,000,000

The present estimate is greater than that of the Minority—	
By reason of increase in quantity, 21,179,493 cubic yards, at 94 cents per yard.....	\$19,921,000
By reason of increase in unit prices, 68,615,000 cubic yards, at 24.1 cents per yard.....	16,520,000
By reason of concrete revetment 400,000 cubic yards at \$10 per yard.....	4,000,000
Total.....	<u>\$40,441,000</u>
Less lump sum for diversions in Minority estimate .....	850,000
Total.....	<u>\$39,591,000</u>
In the Minority estimate the cost of concrete revetment was included in the 20 per cent allowance for administration, contingencies, etc.	
Of the increased yardage 15,000,000 cubic yards are due to widening Canal from 200 feet to 300 feet for 4.70 miles.	

## LIST OF EMPLOYEES WHO ARE ENTITLED TO CANAL MEDALS.

The publication of names of employees of the Isthmian Canal Commission and Panama Railroad Company who are entitled to receive Canal Medals, which was begun in THE CANAL RECORD of February 10, is continued in this issue. The names thus far published are those of employees of the Isthmian Canal Commission. When all these have been given the names of employees of the Panama Railroad Company will follow. Address communications relating to corrections in Medal list to Assistant to the Chairman, Culebra, C. Z.

## MR. TAFT ON CANAL WORK.

Two Speeches in New Orleans on His Return from the Isthmus.

FIRST SPEECH, FEBRUARY 11.

I am here on my way from a great constructive work, the greatest entered upon by any Nation during the present two centuries, and I am glad to say to you who perhaps are more interested in that work than any other part of the people of the United States, that the work is going on as you would have it to go on; that on the 1st of January, 1915, if not before, and I am very much interested in having it in the next four years, that Canal will be completed and you will see flowing down this river your great commerce, going on through those straits to the west coast of America, to the west coast of South America, to the Orient and Australia. The board of engineers that accompanied me have examined the whole work, and they say it is good; that it shall go on as it has gone on, and that the esprit de corps along the Isthmus, the organization and the American push that are there, commend themselves to them as men who understand great works and convince them that the Canal is now in immediate prospect.

SECOND SPEECH, FEBRUARY 12.

Now, I want to come to another matter, and that's a matter that we have gotten into a condition where work is being pushed and where we can look forward confidently to completion. I mean the Panama Canal. I am quite willing to concede to the State of Louisiana her patriotic desire to have that Canal completed, and also to concede that the treaty of 1903 made it possible to build the Canal, but I want to call your attention to one thing. It is said that the Lord looks after children and drunken men. Well, I think we ought to include the United States, too. The class is not as high in intelligence in the rest of the United States, but it is a very good class to be in, when the Lord is looking after it. If the Hay-Harmon Treaty of 1903 had been confirmed by the Colombian Senate, a failure to do which aroused our national indignation, we would not have been at all in the favorable position we are now to complete that Canal.

Because, under the Treaty with Panama we are entitled to exercise all the sovereignty and all the rights of sovereignty that we would exercise if we were sovereign, and Panama is excluded from exercising any rights to the contrary of those conceded to us. Now that may be a ticklish argument, but I do not care whether it is or not. We are there. We have the right to govern that strip, and we are going to govern it. And without the right to govern the strip, without the power to police it, and without the power to make the laws in that strip bend, all of them, to the construction of the Canal, we would not have been within two or three or four years, hardly, of where we are now in the construction.

Read the history of the French and you will see the significance and proof of what I say in respect to something that happened to us that we were very sorry to have happen, to-wit, the defeat of the Colombian Treaty. What happened subsequently met the approval of the people of the United States. It met the approval of the Repub-

lican Administration and the people who supported it, and it has worked out well.

Now, I would like to say that the result of the visit of the Commission of seven engineers to the Isthmus has been entirely favorable to the project as it has heretofore been planned, and according to the type already determined by Congress, and that their views are full of commendation for the organization of the forces on the Isthmus, and in the conviction that a continuance of what is now going on will give us a Canal within a very reasonable time.

Now, gentlemen, there are those who believe, and have always believed, in a sea-level canal, and there are those who believe in a canal of the lock type. We have got to build one type or the other, and we want the Canal as soon as we can have it. If we are going to change our minds every time you see a sensational article in the newspapers we will never build the Canal by any type. It has got to be decided some time. We did decide it through our houses of Congress and through our President four years ago, and nothing has occurred since that time to make the arguments any less strong in favor of the type adopted than they were when we adopted them on those arguments.

In that view then, what I say is that I believe that—well, it is not fair, of course, to impugn the patriotism of a man who differs from you, just because he does differ from you, but I believe if they sat down and thought the matter all over, they would realize that this continuous agitation about a change in the type of the Canal is the thing that, more than any other, is calculated to paralyze the hands and confuse the brains of the gentlemen whom we have there, who are attempting to carry out the plans as already made, and who, if not interfered with, will carry out these plans to redound to the credit of the Nation.

There is nothing so discouraging as a fire in the rear, and when you are on that isthmus, and you do not get papers more than once a week, and there is only filtered through the cables to the one or two papers published there, anything that is said in Congress that has a sensible turn—when you realize the nervous strain that there is on the men who are carrying out this great work; when you realize they are 2,000 miles from base, so to speak, and that they cannot understand and cannot have the sense of appreciation of the importance of what a gentleman says on the floor of the House or the floor of the Senate, when he is only talking for buncombe—you will understand me when I say that that kind of fire in the rear is calculated to break down the nervous system of those persons on the Isthmus and who are working night and day, tooth and toenail to build the greatest enterprise of two centuries.

What I appeal for is the settlement of this question definitely, so that we shall not have continuous debates, which, to those of us who understand the matter and know how difficult it is to establish an affirmative in Congress against something that has been done, does not appear to be important, and yet may be important to those men upon whose nerve and upon whose energy the whole enterprise is dependent.

Now, it is going to cost more than was estimated, and why? Well, there is 50 per cent more yardage of excavation in the

Canal than was estimated. That is one thing. Then we pay 20 per cent more than they estimated per yard. We pay good wages down there, excellent wages, and we built a very extensive plant in the way of furnishing good accommodations to the laborers who go down there. We have had to deal with a tropical country, and any one who knows what a tropical country is, knows that the conditions cannot be made too good to save the energy and preserve the health and strength of those who are to work under that tropical sun. It is said that we might have let the work by contract.

We tried to figure it out in some way, and after receiving bids concluded that to do general work, dependent upon a railroad forty miles long, dependent for its success upon Government control and upon sanitation, was not a work that could be safely intrusted to contractors. Generally, I am in favor of Government contract work, but I am familiar with the difficulties that we have encountered there, and I believe that the present system is the only one by which the work can be carried on to a complete success.

We have increased the size of the locks over what was projected by the original Commission. They made the locks 950 feet long and 95 feet wide. The Navy Department comes in and tells us they are going to build ships that will be too wide for these locks, and as we are building the Canal to meet the value, the fighting value of our Navy, we want the Canal big enough to carry our largest warships. Hence, we enlarged the locks to 110 feet in width and 1,000 feet in usable length. Those two extensions added a number of millions of dollars to the cost. Then there was in the middle of the Canal one passageway only 200 feet wide across the bottom, in the great Culebra Cut, about five miles. We thought, gentlemen, that that was one of the weaknesses of the Canal, and accordingly the President directed the plan to be changed, so that now that width for five miles is 300 feet instead of 200 feet, making a very great difference in the safety of navigation from one side to the other. The truth is that that is one of the great features of the Canal which we are now constructing.

Most of the Canal will be 500 or 800 feet or 1,000 feet in width across the bottom of the channel. There will be only eight miles out of the fifty-one that are 300 feet. The sea-level canal would have been but 150 feet wide across the bottom of the Canal for twenty-one miles, and 200 feet for the rest of the Canal. It is said that the increase in the cost, which may be even double or more, but hardly more than that, of what was estimated by the engineers is an argument, or is newly discovered evidence in favor of the construction of a sea-level canal, because the increase in the cost of the lock canal indicates that the lock canal will be now as expensive as a sea-level canal. Well, that kind of an argument does not impress me. We have done very little work on the Canal now that would not have had to be done in a sea-level canal.

The work that has been done has been largely that of excavation and if we went down eighty-five feet below the level of where we are now going, the cost of excavation as you go down, because of the difficul-

ty of working steam shovels or mud dredges in the same extent of dredging surface, will make the cost considerably greater. So that every argument in favor of the sea-level canal, dependent upon it being less expensive than a lock canal, ignores that situation entirely. The present increase in the lock canal is an increase which would have had to be met in a sea-level canal. With a full understanding and knowledge of the language I use, I wish to say and challenge any evidence to the contrary, that a man wanting evidence to weigh as worth a scintilla, that the money which has been expended in that Canal, every dollar and every cent of it has been expended in the interest of the Government, and not a dollar can be traced to graft in any shape. When you see in the headlines of the newspapers "Panama Scandal," "Panama Graft," "I beg you to read down under those lines and pick out what statement is made there that makes it graft or makes it a scandal."

I beg you to weigh those statements and find out whether there had been, on the fact as proven or on the mere allegation of some gentleman who forgets the obligation placed on him as a member of Congress or a member of the Senate, because he is in a place where what he says is immune, by not weighing the evidence as he would if he were a lawyer speaking to a jury, a judge considering its weight, or a man of business looking into a question of fact. Fortunately, the lightness with which such charges are made and not proved, because incapable of proof, has so impressed itself on the American people that they do not hurt anybody.

And now, my friends, I have spoken of the Panama Canal to this audience because I really believe that the people of New Orleans are more interested in the completion of that Canal than any other Americans within the borders of the United States, and you are entitled to know as much as any of us know about the Canal and what we really believe.

Colonel Goethals, who honors the Army and the Corps of Army Engineers, is carrying on that work with a fidelity and judgment and a knowledge that do honor to the corps of which he is a member, and I could not pay a higher tribute. He believes thoroughly in the lock type of canal, and its successful completion. If you change that type, I do not think it too strong a statement to make that you will dishearten a force on the Isthmus to-day that is working as no force I ever knew about has worked heretofore, with an esprit de corps and a belief that they will build a canal that insures success.

#### Reward for Life Saving.

Fitz Wiltshire, Grenadian, was presented with a gold watch and Robert Mellon, American, with a medal, on February 18, in token of their heroism in saving Robert Dean, Scotch, from drowning on January 20, near Perico Island in Panama Bay, reference to which was made in the THE CANAL RECORD of January 27.

The watch and medal, each with a suitable inscription, were purchased by a subscription made by the gold employees at the La Boca shipways and dredges, and the presentation was made by the Resident Engineer at La Boca at the close of the day's work.

## SOCIAL LIFE OF THE ZONE.

### Women's Clubs, W. C. T. U. Organized, and Other Features.

"The Civic Federation in Chicago" was the topic of an address delivered by Judge Lorin C. Collins, at a meeting of the Cristobal Woman's Club, held February 17. Mrs. Campbell, who is visiting her daughter, Mrs. Courtland Nixon, spoke on Club work in Denver, and the presiding officer, Miss E. Lewis Baker, spoke on the civic work of the Nebraska Women's Clubs. A short address was given by the Rev. Mr. Elliott, pastor of the Cristobal Union Church.

A comedy will be presented by the art and literary department of the Cristobal Woman's Club on Wednesday evening, March 3. Mrs. Claude C. Pierce is the director.

Dr. R. H. Carter spoke on "Early Days on the Isthmus," giving a review of domestic and sanitary conditions during the first years of the American occupation, at the meeting of the Ancon Woman's Club, February 17. A reception will be given by the education department at the Club rooms in Ancon on Thursday evening, February 25. Tea and light refreshments will be served at club rates. It is the intention of the department to give similar receptions once a week. The Club Year-book is ready for distribution.

A Washington program was the feature of the meeting of the Empire Woman's Club on February 18. Eighteen children from the public school gave a flag song, Mrs. A. B. Hillerman gave a talk on Mount Vernon. Miss Mills rendered several musical numbers, and the audience sang "America." Refreshments were served and appropriate favors were given.

A bowling class has been formed by the Gorgona Woman's Club. The art department, which meets each Tuesday afternoon, is working on linen for use at the social sessions of the Club.

Through the efforts of the Paraiso Woman's Club a wagonette has been assigned by the Commission to meet all train stopping at Paraiso. On Sunday the wagonette meets the 1 o'clock train from Panama at Pedro Miguel, as this train does not stop at Paraiso.

Mrs. John Dickinson Sherman, second vice-president of the General Federation of Woman's Clubs, who was operated on at Colon Hospital for appendicitis, is recovering, and it is believed she will be able to sail for the States in about two weeks.

The Christian League of Culebra gave a concert at the Commission chapel on the evening of February 17, in which the Tivoli orchestra, Mrs. Adolph Faure, Mrs. Lee, and Mr. J. Wesley Holland participated.

### Woman's Christian Temperance Union.

The Empire Union of the W. C. T. U. was organized on February 17, the memorial day of the founder, Frances E. Willard. Mrs. Abbie B. Hillerman, president of the Oklahoma Branch, who has been appointed organizer for the Canal Zone, presided. The following officers were elected: President, Mrs. Hillerman; vice-president, Mrs. Ball; recording secretary, Mrs. Rainwater; corresponding secretary, Mrs. J. C. Freeman; treasurer, Mrs. C. L. Whitaker. Memorial exercises were held, in which Mrs. Rainwater and Mrs. Helmer read papers on Miss

Willard; Mrs. Gray and Mrs. Sobey gave reminiscences of Miss Willard and Lady Somerset, and Mrs. Ball outlined the Junior and Legion work. Meetings will be held at the Commission chapel each Thursday afternoon.

### Visit of the Pacific Fleet.

The first squadron of the Pacific Fleet of the United States Navy in command of Rear-Admiral Swinburne arrived in Panama Bay at noon Monday, February 22. The vessels of the squadron are the same as were in Panama Bay between December 13 and 22, a list of which was published in THE CANAL RECORD of December 16. It is expected that the fleet will remain here until March 4.

### Misdirected Letters.

Division of Posts, Customs and Revenues,  
Ancon, C. Z., February 24, 1909

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts and may be secured on request of addressee:

Bartholomew, J. M.	Osborne, H. C. (2)
Crown, James F.	Rhodes, H. G.
Cumiskey, John	Scheels, Lambert G.
Deans, Robert	Southerland, Jay
Frayne, Thomas	Splin, T. H.
Greenslade, G. A.	Stolberg, E. W.
Hooper, Allison C.	Tafel, Mr. and Mrs. R. J.
Jenkins, George L.	Watt, J. M. G.
Jerry, Carl	Weast, Mrs. W. L.
Kelsey, John B.	Williams, James O.
Lorich, Walter L.	Woods, L. F.
McClelland, J. L.	Zampeta, Cosima
Oliva, J. T.	

### Stages of the Chagres.

Maximum height of Chagres above low water for the week ending midnight February 20, 1909:

## CANAL WORK FOR JANUARY

Monthly Report of the Acting Chairman to the Secretary of War.

CULEBRA, C. Z., February 16, 1909

The Honorable the Secretary of War,  
Washington, D. C.

Sir: I have the honor to submit the following report of operations on the Isthmus for the month of January, 1909:

Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central, and Pacific Divisions during the month:

Item.	Unit.	Atlantic	Central	Pacific	Total.
<i>Steam Shovel Excavation—</i>					
In prism	Cubic yards	114,665	1,445,321	138,119	1,698,095
Auxiliary	Cubic yards	19,207	86,695		105,902
Total	Cubic yards	133,872	1,532,016	138,109	1,803,997
<i>Dredge Excavation—</i>					
In prism	Cubic yards	573,321		490,584	1,063,905
Auxiliary	Cubic yards	14,772			14,772
Total	Cubic yards	588,093		490,584	1,078,677
<i>Hand and Scraper Excavation—</i>					
In prism	Cubic yards		7,632		7,632
Auxiliary	Cubic yards			4,245	4,245
Total	Cubic yards		7,632	4,245	11,877
Total excavation	Cubic yards	751,965	1,539,648	632,938	2,924,551
Explosives used	Tons (2240 lbs)	38.04	270.96	18.15	327.15
Rock drilling	Feet	44,653	328,643	25,404	398,700
New track laid	Miles	2.85	11.8	3.94	18.57
Track removed	Miles		12.8		12.8
Material placed in dumps	Cubic yards	212,714	17,578	79,334	309,626
Rock crushed	Cubic yards		6,504	6,593	13,097
Cement used	Barrels	870		966	1,836
Concrete placed	Cubic yards	767		845	1,612
New roads built	Miles	0.11	0.85	1	1.96
Water mains laid	Feet	1,800	440	1,320	3,560
Sewers laid	Feet	4,066	640	773	5,479
Open drains and ditches dug	Feet	400	2,411	60	2,901
Open drains and ditches cleaned	Feet			68,801	68,801
Daily average number of laborers	Feet	3,040	8,019	3,019	14,078
Piles driven	Feet	738			738
Wash drilling	Feet	1,140		1,685	2,825
Diamond drilling	Feet	61.9		125.5	190.4
Rail fall	Inches	7.17	2.25	3.08	

## Atlantic Division.

## GATUN LOCKS.

*Unloading Cableway Dock*—Work on the diagonal bracing under the wharf was commenced, and 12,890 square feet of decking have been laid. Pile driving in this dock is 99 per cent completed; decking 85 per cent completed.

*Cement Shed Dock*—During the month 293 piles were driven in this dock, and 5,000 square feet of vertical sheathing were placed on the east side of the cement delivery tracks running under this dock. The pile driving and capping in the dock is 99 per cent completed.

*Unloading Head Tower Tracks*—These tracks were completed during the month throughout, and are now ready for the erection of the head towers.

*Storage Pile Tunnels*—Excavation in the open cuts for these tunnels was completed, and the reinforced concrete footings for the timber were placed. Framing of the timber work for these tunnels was completed, and the erection commenced. This work was 20 per cent completed.

*Automatic Electric Road*—About 3,000 cubic yards of rock and earth were removed, and the trestles carrying the Panama railroad tracks over this road were 60 per cent completed; 75 piles were driven. A portion of this road, approximately 500 feet in length, is ready for laying of track.

*Cableway Towers*—Two duplex tail towers were erected on the west cableway dock and are ready for placing of concrete counterweights. Four lock duplex head towers were erected up to the level of the operating platform, and the erection of the first duplex lock tail tower was started.

*Power House*—Construction of this plant was continued. About 3,000 cubic yards were excavated in the foundation for culvert and main building, a small portion of which was rock. In the construction of the intake culvert, 300 feet of which is completed, 105 cubic yards of concrete and 11 tons of reinforcement were placed.

*Excavation and Dredging*—The excava-

tion of the lock prism was continued with two shovels and one hydraulic dredge. During the month the dredge *Mindi* excavated 35,000 cubic yards from the approach channel to the cableway docks.

## GATUN DAM.

Pile driving, dredging and excavation was continued in the dam operations, and 119,559 cubic yards of material were placed in the north and south toes of the dam.

At the close of the month, the mixing and handling plant for making concrete for the spillway was 98 per cent completed. Grading for tracks for concrete trains was nearly completed.

## PORTO BELLO.

Satisfactory progress was made in the work at this point, which included work on the crusher site, the erection of an air compressor, a driving engine, three Porter locomotives, one 15-ton locomotive crane and 15 dump cars, hydraulic stripping in the quarry and miscellaneous road and building construction.

## NOMBRE DE DIOS.

The dredge *Chagres* has been operating at this point during the month. A concrete dam was constructed at Gloria Springs. Preparations were made for the construction of a pile bulkhead for use as a wharf.

## HARBOR AND CHANNEL SECTION.

At the close of the month, 40 feet of water could be carried from 0 to Mile 2 + 4,500

feet; 30 feet to Mile 3 + 900 feet; 20 feet to Mile 3 + 5,000 feet; and 15 feet to Mile 4 + 4,540 feet, the end of the cut.

MUNICIPAL ENGINEERING AND BUILDING CONSTRUCTION.

The usual work of this subdivision was performed, consisting of the construction of bridges, surveys, laboratory work, and construction and maintenance of buildings.

## Central Division.

During the month of January, the total amount of material excavated in the Central Division was 1,539,648 cubic yards, of which 506,866 cubic yards were classified as earth and 1,032,016 cubic yards as rock.

Of this quantity, 1,532,016 cubic yards were removed by steam shovels, and 7,632 cubic yards by hand on the Bohio Diversion.

The daily average number of steam shovels at work during the month was 51.80, as compared with 50.73 for the month of December.

For comparison with the work done during the corresponding month of the previous year in the area embraced in the Central Division, the following table has been prepared:

Period.	Total amount of material excavated by steam shovels	Classification of material.	Av. No. of steam shovels working during month	Av. amount excavated per shovel per 8-hour day.
	cu. yds.	Rock	Earth	
1908:	cu. yds.	cu. yds.	cu. yds.	cu. yds.
Jan. ....	1,392,939	816,138	545,801	51.53 26
1909:				
Jan. ....	1,532,016	1,027,132	504,884	51.80 25

Rainfall at Empire: 1908, 0.024 ins.; 1909, 2.280 ins.

The above table shows that the average output per shovel-day was nearly 14 per cent greater in January, 1909, than in the corresponding month of the previous year.

During the month, 146,640 cubic yards of material excavated from the Cut were transported to the relocation of the Panama railroad between Caimito and Bas Obispo and dumped as filling in the embankment for the new roadbed, making a total to date for this purpose of 449,901 cubic yards.

In building construction work, three new buildings were completed, two of which were turned over to the Quartermaster's Department and one to the Department of Motive Power and Machinery. Eleven new buildings were worked upon during the month, but not completed. Five jobs of alterations to buildings were completed and thirteen were partly completed. Twenty-three buildings had rescreening completed and four partly completed. There were four repair jobs other than rescreening, done to buildings and completed, and five were partly completed. Three buildings were demolished during the month. At the close of the month, two buildings were being moved to new locations.

## Pacific Division.

## DISTRICT NO. 1—LOCKS AND DAMS.

At Pedro Miguel, the storage trestle and the dump track leading to the same were continued. The installation of a pump for the purpose of puddling the core of the west dam was begun. The excavation of the locks and east recess was continued, and the installation of a pump at the south end of

the lock site, to take care of drainage, was completed.

At Miraflores the excavation for the upper locks was continued, and the excavation for the diversion of the Cocoli River begun. The core trench for the Cocoli dam, south of Cocoli River, was carried down to rock, and four test pits begun along the center line.

Grading for the power house was continued during the month. Grading for the 100-ton powder magazine was completed, and the construction of the building begun.

The dredge *Sandpiper*, operating at the lower end of the lock site, made slow progress, due to necessary alterations and to the character of the material, which is extremely hard and mixed with boulders. This material is so hard, in fact, that blasting has been found necessary and advantageous.

The construction of the track leading to the quarry on Ancon Hill was begun and well advanced; also the storage yard.

#### DISTRICT NO. 2—DREDGING, AND LA BOCA SHIPWAYS.

Four dredges were in operation during the entire month. The dredge *Culebra* worked from the 1st to the 6th inclusive; was beached on Perico Island from the 7th to the 28th inclusive, and worked from the 29th to the 31st, inclusive. The output of the dredges was as follows:

Dredge	Type.	Cubic yards.		Remarks.
		Imp'm	Auxil'y	
Culebra	Suction	99,102	.....	Scow measurement
Gopher	Ladder	120,613	.....	Place measurement
Mole	Ladder	.....	78,634	Place measurement
No. 14	Ladder	122,790	.....	Place measurement
Dipper	Dipper	48,385	.....	Place measurement
Total	.....	390,895	78,634	

A large amount of repair work was done on dredges, claps, tugs, launches and other floating equipment.

#### DISTRICT NO. 3—MUNICIPAL AND BUILDING WORK.

The usual work of this subdivision was satisfactorily performed during the month.

##### Mechanical Division.

The usual work of this Division was performed.

##### Relocation of Panama Railroad.

During the month, 77,717 cubic yards of excavation were accomplished on the relocated line, and 258,595 cubic yards of embankment. At the end of the month a total of 801,024 cubic yards of excavation had been accomplished, and 3,282,289 cubic yards of embankment. The work of constructing trestles for filling, bridges and culverts was continued.

The heading of Miraflores tunnel has been opened through to the south end, and the full section of the tunnel has been opened and timber placed for a distance of 55 feet from the south end.

During the month, 1,868 linear feet of permanent track were laid, making a total at the end of the month of 59,154 feet.

The unusual rainfall during the month interfered with the work on the relocated line to a considerable extent.

##### Quartermaster's Department.

No appreciable change in the labor and quarters situation during the month is noted.

The new allotments of appropriations for the Quartermaster's Department, put into effect February 1, show a reduction of \$14,000 from the allotments of October 1.

The new system of property accounting

is reported by the Chief Quartermaster to be working out with gratifying success.

##### Subsistence Department.

The Tivoli Hotel at the end of the month, showed a profit of \$2,373 17.

On the 15th of the month, an extra food cost to the common laborers' kitchens of two cents per ration was authorized, and the food cost allowance of all the hotels was increased, so that the minimum allowance was twenty-six cents at the end of the month.

##### Department of Civil Administration.

###### COURTS.

The Supreme Court held one session during the month.

In the Circuit Courts 9 civil cases and 37 criminal cases were disposed of, and in the District Courts 68 civil and 463 criminal cases were disposed of.

##### DIVISION OF POSTS, CUSTOMS AND REVENUES.

The total revenues in the Canal Zone in January aggregated \$52,444.63. The general revenues amounted to \$44,595.40, as compared with \$14,990.74 in December. Of the amount collected in January, \$34,800 was for licenses for the sale of liquor at retail.

Money order sales in the post-offices during the month amounted to \$409,262.41, of which \$288,058 was payable in the United States and foreign countries, and \$121,204 41 in the Canal Zone.

Thirteen vessels entered at and 16 cleared from the port of Ancon, and 18 vessels entered at and 15 cleared from the port of Cristobal during the month.

##### DIVISION OF POLICE AND PRISONS.

The number of arrests during January was 524, as compared with 507 in December.

There were 138 persons confined in the district jails at the close of the month. Nine convicts began penitentiary sentences during the month, 7 were discharged at the expiration of their sentences, and on January 31, 124 convicts were confined in the penitentiary.

##### DIVISION OF PUBLIC WORKS.

The usual business of this division was conducted during the month. The amount of water consumed in January in the city of Panama amounted to 27,524,000 gallons, and in the city of Colon 22,388,488 gallons.

##### DIVISION OF FIRE PROTECTION.

No serious fires occurred during the month. Authority was granted for the establishment of a paid fire company at Gatun, and the necessary equipment therefor has been requisitioned.

##### DIVISION OF SCHOOLS.

The total enrollments in the white schools was 656, and the average daily attendance was 566. In the colored schools the total enrollment was 1,258, and the average daily attendance 731.

##### Department of Sanitation.

[The substance of the report of this department was published in THE CANAL RECORD last week.]

President-elect William H. Taft arrived on the Isthmus January 29, on a visit of inspection, accompanied by the following engineers: Frederick P. Stearns, John R. Freeman, A. P. Davis, J. D. Schuyler, Allen Hazen, Isham Randolph and Henry A. Allen.

Respectfully,  
H. F. HODGES,  
Acting Chairman and Chief Engineer.

## OFFICIAL CIRCULARS.

### New Style Brass Check.

DEPARTMENT OF EXAMINATION OF ACCOUNTS.  
EMPIRE, C. Z., February 20, 1909

CIRCULAR No. 10.

To all Chief Timekeepers—Effective March 1, 1909. The new style brass check (round) will be issued to all employees of the Commission. This style of check was furnished to contract laborers as provided in Circular No. 8 of January 19, 1909, issued from this office.

About February 24, 1909, a supply of these new checks will be sent to all chief timekeepers and should be issued to all employees except contract laborers, on or before March 1, 1909, and after the latter date no other check will be recognized.

In the case of contract laborers the same check number was given and the old star checks taken up. In the present issue there is no occasion to take up the star checks as they will be void on March 1. All employees should retain their star checks for use in connection with hotel and commissary books which have been issued under their star check numbers.

Chief timekeepers will be charged with the new checks sent to them for distribution, and will send to this office a list showing the numbers of checks issued by them to each district timekeeper. When an employee leaves the service the timekeeper must take up his metal check and give to the employee a certificate to that effect, for use in connection with the cashing of his time voucher. If the check is not taken up and certificate furnished, a deduction of 50 cents must be made. Checks so taken up must not be reissued, but will be sent to this office once a month.

A record should be kept in your office showing the name of the employee to whom each check is issued.

W. W. WARWICK, Examiner of Accounts.

Approved:

H. F. HODGES,

Acting Chairman and Chief Engineer.

### Dogs Must be Muzzled.

In accordance with authority vested in the Chief Sanitary Officer by resolution of the Isthmian Canal Commission, dated July 18, 1908, and approved by the Secretary of War on August 12, 1908, the entire Canal Zone is designated as territory in which it shall be unlawful for unmuzzled dogs to be allowed at large until further notice.

Any unmuzzled dogs found at large shall be impounded by the police officers and the owners punished as provided for in the resolution above referred to.

W. C. GORGAS, Chief Sanitary Officer.

ANCON, C. Z., February 16, 1909.

### SALE OF REAL PROPERTY.

By virtue of a decree of foreclosure of real property, to me directed from the Circuit Court in and for the Second Judicial Circuit, Canal Zone, in favor of Pascal Canavaggio against A. Rome, I shall sell, at public auction, to the highest bidder for cash, at the east door of the court house of the Circuit Court, in the city of Empire, Canal Zone, on the 4th day of March, 1909, at three o'clock in the afternoon of said day, the following described property, situated in the city of Empire, Canal Zone and more particularly described as follows: A certain three-story frame building, together with all the appurtenances thereunto belonging, known as the Pennsylvania Hotel, and designated as by number 168, more particularly described as bounded on the north by the property of Muller, on the south by the property of Jose Garavel, on the east by the Panama railroad tracks, and on the west by the property of the Panama Banking Co., and Fishbough, respectively.

The above described property is to be sold at public auction as above described by virtue of a decree of foreclosure issued by the Circuit Court in and for the Second Judicial Circuit, Canal Zone, in which said cause, I. L. Toledano was the plaintiff, and A. Rome, Pascal Canavaggio, and F. P. Peterson were the defendants.

GROSVENOR A. PORTER, Marshal

### Proposal for Building Jail at Pedro Miguel, C. Z.

Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, C. Z., until 2 p. m., Saturday, February 27, 1909, when they will be publicly opened, for the erection by contract of a type "A" jail at Pedro Miguel, C. Z. The Commission will furnish all materials at the site of the work and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$5 is required to insure their return. Each bidder must accompany his proposal with certified check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$150 conditioned upon the faithful performance of the contract. The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals. C. Nixon, Purchasing Agent on the Isthmus.

## PERFORMANCE OF STEAM SHOVELS
