LETTER OF TRANSMITTAL.

OFFICE OF CHIEF SANITARY OFFICER,
Ancon, Canal Zone, February 25, 1909.

CHAIRMAN ISTHMIAN CANAL COMMISSION,
Culebra, Canal Zone.

SIR: I herewith forward report of the department of sanitation for the calendar year 1908.

I would like to call your attention to several points in this report. In the first place, to the low death rate among employees. The figures for the past five years are as follows:

Year.	Force.	Deaths.	Rate per thousand.
1904.....	6, 213	82	13. 26
1905.....	16, 511	427	25. 86
1906.....	26, 705	1, 105	41. 37
1907.....	39, 343	1, 132	28. 77
1908.....	43, 890	571	13. 01

This means that, out of every thousand employees, we had in 1908 one-third the number die that we had die in 1906, and one-half the number that we had die in 1907.

In this connection it is particularly interesting to note how the death rate among the blacks has fallen:

Year.	Force.	Deaths.	Rate per thousand.
1905.....	13, 482	354	26. 25
1906.....	21, 441	1, 013	47. 24
1907.....	28, 634	953	33. 28
1908.....	31, 507	402	12. 76

This means that in 1906, out of every thousand blacks on our rolls, 47 died; whereas in 1908, out of every thousand on our rolls, only 12 died. The black death rate was slightly less in 1908 than the white death rate. This is the first year, since we have been on the Isthmus, that the black death rate has been smaller than the white death rate. In 1906 the death rate among the blacks was nearly three times as high as that among the whites.

Considering the total population of Panama, Colon, and the Canal Zone, we have the following:

Year.	Population.	Number of deaths.	Rate per thousand.
1904.....	35,000	1,224	52.45
1905.....	42,699	2,793	65.41
1906.....	66,011	3,544	49.10
1907.....	102,133	3,435	33.63
1908.....	120,097	2,983	24.83

This means that out of every thousand people on the zone considerably less than one-half as many died in 1908 as died in 1905.

Taking special diseases, we find that in 1906 we had among the 26,705 employees 69 deaths from dysentery; in 1907, with 39,343 employees, 48 deaths; and in 1908, with 43,890 employees, 16 deaths. That is, with 43,890 employees in 1908 we had less than one-quarter the number of deaths from dysentery than we had among 26,705 employees in 1906.

In 1906 we had from malaria 233 deaths; in 1907, 154 deaths; and in 1908, 73 deaths. That is, with a force more than one-third larger in 1908 we had from malaria less than one-third the deaths that we had in 1906.

In 1907 we had from typhoid fever 98 deaths, and in 1908, with a larger force, we had only 19 deaths.

In the number of deaths from pneumonia there has also been a great fall. In 1906 we had 431 deaths from this disease; in 1907, 328 deaths; and 1908, 93 deaths.

Among white Americans from the United States we had 42 deaths during the year. Exactly one-half of these were from violence. Our death rate from disease among this class was 3.84 per thousand—about the same rate as occurred in the year 1907 in our army.

During the year we had on the Isthmus 2,674 American women and children connected with the commission. The death rate among these was 9.72 per thousand. This is an exceptionally small rate for this class of population.

I consider malaria the best measure of the sanitary work done. In 1906, out of every thousand employees we admitted to our hospitals, from malaria, 821; in 1907, 424; and in 1908, 282. That is, we now have only about one-third the amount of malaria among our employees that we had three years ago.

Beriberi is also a disease that has considerably decreased in the past three years. In 1906 we had 68 deaths in the total population from this disease; in 1907, 53 deaths; and in 1908, 38 deaths.

It has been more than three years now since a case of yellow fever has developed on the Isthmus. The last occurred in November, 1905. The last case of plague occurred in August, 1905. No case of small-pox occurred during the year.

Taken as a whole, the health report for 1908 shows very much better conditions than have occurred in any previous year since we have been on the Isthmus, and the death rates and sick rates among our employees will compare favorably with those of most parts of the United States.

Very respectfully,

WM. C. GORGAS,
Chief Sanitary Officer.
