The Shape of the Future

EXTENSION OF REMARKS

OF

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. ROSENTHAL. Mr. Speaker, I am taking the liberty of inserting in the CONGRESSIONAL RECORD the address made by the Honorable Frank D. O'Connor, district attorney of Queens County, N.Y., at a social science forum at Siena College in Albany, N.Y., on December 5, 1962.

After reading this speech, I certainly want to commend it to the attention of my colleagues.

The address follows:

THE SHAPE OF THE FUTURE

(An address by Queens District Attorney Frank D. O'Connor at a social science forum at Siena College, Albany, N.Y., on Wednesday, December 5, 1962)

The shape of the future is in every young generation. Like every young generation you have ideals and hopes and dreams. You have places to go and promises to keep and many miles to go before you sleep, to paraphrase Robert Frost badly.

There are people who suggest that you are the worst generation which has ever come down the pike—they are few but vocal.

There are others who suggest that you are the best and these are many and they are not vocal enough.

In a sense, both of them are looking not at you now so much as at what you are exposed to and what they think you can become. And in that sense they are both right.

The situation is complicated by the fact that you are being rushed to maturity by a group of forces never present before in human history from early dating, driving, drinking, the service, to TV, to space, to atomic energy, to the cold war, yes even to the twist. You are taller and faster and brighter and fresher, perhaps, than anything that has come before. You are also less patriotic if the polls are correct and having some experience with polls recently, I would not take that authority as absolutely final.

You are going to live longer, perhaps work less and earn more and you have it in your power to change this world or destroy it as never before. More than anyone else you are both the new future or the dead end of humanity and you better be prepared for the future or you'll be consigned to that end.

In that future you have a better chance than ever before.

You can aspire to high position in government and business without personally sacrificing your religion. And you will have to play a greater part in your church as laymen.

The point of this talk is that you have a choice not only about what you want to be and how good at it you will be, but where you will stand philosophically or more especially politically in the broad sense.

In an oversimplified but nonetheless real sense, you have two broad philosophical or political paths stretching before you in achieving this great future or this dead end—one is liberal and the other is conservative. Oh, there are variations of both and a road in between called moderate but that road is seldom walked without tending one way or the other at one time or other.

There are some observers who profess to seeing a danger that your generation—perhaps the best-educated lay generation in history—may pull against the growing trend toward what has been loosely described as liberalism in the church here and abroad.

There are others inside and outside the church of which you are members that contend that you cannot be a liberal now or ever and be a Catholic; that the two concepts are mutually exclusive. To hear Mr. BUCKLEY or Mr. GOLDWATER talk, Catholics are not alone in being committed to conservatism. To hear them speak, and both of them are impressive, there is a huge, irreversible ever-increasing wave of conservatism rising out of the colleges ready to crash upon the shores of America's, indeed, the world's economic, religious, political, etc., life.

And to hear the conservatives talk it's going to be the wave that will bring peace and security and a better life to these troubled times. In foreign policy they feel that President Kennedy merely stole their thunder on Cuba just as he should on several other problems; that it is conservatism, not liberalism that has a clearer view not only of communism but of life in general.

Now I neither have the wit nor the learning nor the gall to take such worthy adversaries on together on this general proposition. But I do have some experience and it tells me that I seem to recall hearing pretty much the same claim laid by the Communists and the ultra-Socialists a generation ago.

It tells me too that much of history is like a pendulum swing sometimes in larger and larger arcs and sometimes in smaller and smaller ones depending on the push, once liberal, once conservative, and that the wave of the future may be the opposite of the past in some ways but never too opposite.

Experience tells us something else. Man individually may not live on, but some of his works do. And while all change, few of them die.

What, then, can the shape of the future be when there is a premium on change and its effects, when much of recent history in the West has been a liberal triumph?

Granted, as of today, the future seems mixed. Our strong stand on Cuba may well usher in a new era in the cold war. At home, however, Mr. Nixon has lost, and with him has gone an era that is itself a curious contradiction in American life marked by internal suspicion and external trust or, at least, reluctance to face up to the many challenges to our way of life in the hope that some would change or go away.

Mrs. Roosevelt has died, and with her has gone a still older era in American life, an era of great crisis and great recovery, of great war and great victory, of social change and social progress, but with a difference; the rhythms of the age of Roosevelt will occur and reoccur, at least domestically.

On the other hand, a conservative force of considerable personal, intellectual, and even emotional attractiveness has come into more respect if not more power.

With all of this, internal suspicion has yielded place to a relatively friendly but nonetheless heated debate; giving some suggestion of a different era from the one immediately previous, an era to be marked by greater internal trust and a growing realism abroad in international action.

Could it be that BUCKLEY and GOLDWATER are mistaking this stronger line in Cuba, this quieter and more confident dialog within America—this acceptance of a specifically emergent conservatism, as a trend?

Even if it were, are there many who would want to roll back the ways of time and discover the old shores before social security, the SEC, the Bank Act, the Marshall plan, the integration decisions, etc?

These and their effects are here to stay and be expanded. What hopes can conservatives have? There are indeed some areas of dispute like education, medicare, prayer in the schools, Sunday laws, gambling, birth control laws, and there are many others where there is a growing clash of opinion—but not only between liberals and conservatives but among the two camps themselves.

And regardless of the differences among liberals on some of these questions, conservatism has not shown that impact on domestic issues it may claim on communism and it hasn't much time before there may be a new liberal resurgence.

Granted, the future may seem mixed now and that sometimes the answer to a specific problem can be claimed by either liberal or conservative.

Indeed, Mr. Rockefeller built part of his campaign on that chance, on the theme that it really did not matter if you were a liberal or a conservative you could vote for him because he was presumably both on occasion. It was interesting that both the New York Post and the conservative party disagreed with him. It is also interesting that he won but not by quite as large a margin as before.

Granted that victory is not on one side all the time or goodness or the best of commonsense, along which path does the future lie—Where are we going?

What will the shape of the future be? I for one believe that it will be more liberal than conservative, more liberal in the true sense, however, than in a specious sense.

Indeed the very emergence of a new conservatism may help liberalism define itself with more clarity and realism.

Let us begin by admitting one thing—the image of the conservative has been very bad until quite recently. A conservative evoked the image of a man dressed in a high starched collar and a ramrod posture who regarded the past as sacred and the future secure only when it closely resembled the past—a man one wag described as willing to move America—indeed the whole world—smartly back into the 19th century.

The liberal? Even the word is a little better; although his image gyrated crazily between a beatnik and a retired ad man neither of whom have any great feeling for the past or for its institutions. The difference was and is between the rigid and the relaxed.

Of course, these were only images but they really had an impact and they did reflect a certain truth about the more substantial differences which existed in reality.

While the conservative, in a word, stands for the status quo and the liberal stands for change, a really more basic difference seems

to be the degree that they care about individuals; what happens to them as individuals and why. Their concepts of the individual differ in many respects.

Now admittedly some of the following illustrations will be overdrawn but they are made more to stress than to prove a point. The conservative often seems to look at people less fortunate than himself and says, "I got where I am without too much help, certainly not from any government; why can't they?"

The liberal seems more liable to say, "There but for a better chance go I, let us give of what we have."

The conservative is against big government; the liberal is for it, in most instances as a way of helping the individual.

The conservative accents responsibility; the liberal pushes the heavy pedal for freedom from things like poverty, prejudice, fear, et cetera, as well as for things.

Yet there are many contradictions and some misconceptions that both share.

Liberty and responsibility are often but one side of the same coin.

And the conservative, not the liberal, may stand for freedom of big business, that is, and say in effect with the steel companies, we will be responsible if you let us alone in a free market. In this instance, the liberals retort in effect " * * * everyone will be protected and free if the people through the government help you stay responsible. And big business may retort with some justification, "Yes, but why cannot you be as tough with big labor?"

Welfare and foreign aid are other examples where the differences between conservative and liberal can be seen, perhaps, too easily in caricature.

Does not the conservative often talk as if a goodly number, if not an overwhelming majority, of those on welfare rolls were free-loaders without giving too much thought to whether this has been proven or not, or whether any of these people have been given a real chance at getting a job?

The liberal on the other hand may err the other way (toward charity?) by asking that they be given every opportunity to prove themselves before branding them "lazy" or "frauds."

The liberal may be too trusting, perhaps, naive on occasion; but the conservative is often not trusting enough.

On foreign aid, the conservative has usually leaned to the attitude: let me live and I'll let them live.

The liberal toward the attitude: we shall not only let them live, we shall help them live.

This is not meant to be an indictment of the conservative and a paean of praise for the liberal for this would be an oversimplification of the problem.

But it is to indicate that being a liberal is not new and difficult for a Catholic.

It should not have to take the President differing with the church on Federal aid to education or the spectacle of cardinals differing with each other on almost every topic at the council to disturb the false equation that has been set up between Catholicism and conservatism.

Catholics are not machine-tooled conservatives. The recent history of the church in America is proof alone of that. The litany of Cardinal Gibbons, Monsignor Ryan who worked so closely with President Roosevelt, Senator Eugene McCarthy, Dorothy Day, Father LaFarge, S.J., Courtney Murray, America, Commonwealth, and Cardinals Mundelein and Cushing testify to a strong liberal current in the Catholic Church in America.

And I suggest that this current is not new to the church. It is as old as the church itself and what's more, I suggest it is closer to the spirit of the church than critics out-

side and inside realize. The real question is how strong it has been and will be in the future.

The grave misconception that Catholicism from top to bottom is equatable with conservatism has arisen historically from a consideration of the church as a material institution not a spiritual force; this despite a great body of evidence that would incline one to the belief that the saints were the very opposite of conservative, that they were liberal reformers in the realistic sense not in the specious and unrealistic sense.

Saints were true liberals and reformers who reformed themselves first and then tried to do something with the world about them.

They did not start first with the world about them for they knew that was the long way around.

Unfortunately, the saints were often voices crying in the wilderness, ignored by the main stream of humanity and history clogged as they are by mediocre men and outright knaves—who misrepresented institutions, including the church, and used them often for their own ends.

St. Francis himself who is probably the most popular saint of the church to those outside, indeed a saint for Christian unity and world cooperation, was a revolutionary. He saw the status quo of his time leading to the defeat not only of the church but of all mankind.

His prayer, a universal favorite, was incidentally Eleanor Roosevelt's favorite prayer: "Lord, let me be an instrument of Thy peace," etc. This is the mission of the Catholic, indeed, of all mankind in the politics of this age.

It is not an easy politics no more than it is an easy moral or religious road to follow. For we have many angry men, young and old; and even those of us who are not angry by nature or avocation can be aroused by the injustice and misunderstanding of our time.

Why else does the conservative who often has religious roots judge so harshly on occasion while the liberal who often has no religious roots may judge more humanely?

Is it because the conservative whose central preoccupation has been communism in all its shapes regards the liberal for a fool, while the liberal who sees communism as only one of many problems and perhaps too trustingly regarded it until recently as being exaggerated, sees the conservative as a fanatic?

Is it because men like Buckley can often make a good case out for the indefiniteness of liberal thinking, its seeming failure to be able to follow through logically?

I suggest that one of our basic troubles has been that the self-appointed and sometimes shallow guardians of liberal orthodoxy have often excluded their potential friends and repelled overly much their enemies who could be more friendly and trusting.

And I think there are two reasons for this tension between the exclusive liberal who may be unrealistic at times and his more realistic friends and enemies. The unrealistic liberal sees the challenges of our times often in terms of comfort, convenience, and security, at one time economic, at another time political, etc., while the more realistic liberal sees the challenge of our times as essentially moral, involving man's free will qualified by temperament, experience, environment, and training but free, nonetheless.

There is another difference. While the unrealistic liberal often holds for freedom as much as possible, his position on occasion involves a restriction of freedom, not alone in terms of big government but as regards an individual's complete freedom. This may be true in terms of Federal aid to the education of all youth. But it is another topic for another time.

Suffice it to say that I really did not come here to try to convert you to voting Democratic from top to bottom.

I hope you are not that easy to convince. Your education as American Catholics is not designed broadly to turn you out as liberals or conservatives in overwhelming numbers, but to have you think behind the labels that liberal and conservative often are and to think deeply, to know there is a choice, to make it not in anger but in love; not for a program but a philosophy, not for a label but for a life.

That is the spirit of St. Francis, the spirit of John XXIII, the spirit of the new age of Christian unity and religious understanding and international cooperation, which will lead man not back but forward to a promised land, if not now or soon, at least someday in that future for which all of us were created and which the mind of God and man seek at all times to realize; a future where we shall not be afraid of our differences for being surer of our basic agreement, where we shall transmute the accidentals of color and nationality into a universal essential of respect and love of the many-faceted creation of which we are all small but important parts.

But the future will not belong to American democracy or to a new religious understanding, in short, to free associations of freemen who may differ but cooperate, unless these men are informed, discriminating, educated and disciplined, unless they are, in short, responsible. "To thine ownself be true and * * * thou canst not be false to any man."

You must draw the line for yourselves now, just as surely as the President drew the line in Cuba for the Communists.

Drawing the line means to seek the truth, to speak the truth, to live the truth, and spread the truth with understanding, with respect, with love. In this connection, have any of you thought about the Peace Corps?

You cannot live in a ghetto religiously, intellectually, politically, economically, socially, or racially.

You must, in turn, insist on truth and justice in your society; in the papers you read, in the TV, movies, and radio you see and hear; in the schools you attend; in the businesses you work for and in the government you elect.

You must seek the truth and live it confidently with Christopher Dawson that it is the essence of your faith as Americans and Catholics to find new answers to new questions.

But you must also seek the truth and live it knowing with Arthur Miller in this month's Harper's that "the world in which comfort rules is a delusion."

Patriotic Public Affairs Broadcasting Service

EXTENSION OF REMARKS
OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. BOB WILSON. Mr. Speaker, in support of the Federal Communications Commission's desire to encourage all radio and television networks to feature more public affairs programming of a positive, stimulating nature, I include the following remarks concerning the well qualified American Freedom Network:

Back in the days when television made its first appearance on the American

scene, the major radio networks understandably focused attention on this new and important communications medium.

Unfortunately, with the concentration on TV, the radio networks suffered, but that, happily, is being corrected. America's AM and FM stations are rapidly regaining lost ground as many discerning broadcasters concentrate their efforts on strong, stimulating, public affairs programming. This is in keeping with FCC admonitions to feature more presentations of this nature.

While serving my former—30th—Congressional District, I was extremely pleased to accept an invitation to serve as a member of the advisory council of the recently formed American Freedom Network—America's independent, non-profit, nonpolitical, but informational public affairs broadcasting service.

This is an organization—staffed by dedicated, veteran broadcasters—who believe, in the words of Chief Justice Charles Evans Hughes, that our Nation's duty is nothing at all unless we "have uncorrupted public opinion to give life to our Constitution, to give vitality to our statutes, and to make efficient our Government machinery."

The American Freedom Network—not associated with any other group or organization—was founded more than 6 months ago in Bonita, Calif.

I have known Morris C. Allen, chairman of the American Freedom Network's board of directors, for many years. At 73, he remains active as a Bonita real estate broker, as well as in civic and patriotic affairs.

For more than three-quarters of a century, the Allens have been a prominent and highly respected family in San Diego County, tracing their history to the Bradfords of *Mayflower* fame. A Bonita elementary school is named after Mr. Allen's mother—Ella Bradford Allen.

In discussing his participation in the American Freedom Network, Mr. Allen has stated:

I have watched my sons grow into manhood; we have been blessed with eight grandchildren * * * and it is for them, and for all of America's young people, tomorrow's leaders, that I count it a privilege to have been instrumental in making this informational service a reality.

"A little bit of information can be a dangerous thing, and I trust you will concur that Americans must be informed and kept abreast of all sides of important public opinion. I am convinced that radio is the most effective instrument in achieving this end."

I would add there are few Americans like Morris Allen. A man without great financial means, he has mortgaged everything he owns to get this essential project underway. I believe the American Freedom Network is deserving of financial support from all interested citizens.

In addition to Mr. Allen, others associated with the American Freedom Network are—

Jonathon Kirby, vice president and executive director, who founded the organization. Mr. Kirby is an experienced radio-TV news commentator with more

than 15 years of service in the broadcasting field. Only recently, Mr. Kirby was the recipient of the American Legion's Americanism Award and Silver Medal "in recognition of his constant efforts to preserve America and our way of life for future Americans."

Richard Lewis Venturino, director of programming and production, whose long experience in the programming and production aspect of broadcasting, assures the network of a high professional standard for its taped presentations.

Serving on the American Freedom Network's board of directors, in addition to Messrs. Allen and Kirby, are William R. Richards, well-known San Diego attorney; H. L. Michael, Jr., Bonita real estate broker; and James S. Duberg, city attorney for Chula Vista, Calif.

The American Freedom Network, for a minimal charge, provides a complete, varied informational service to America's broadcasters offering, whenever possible, both sides of an issue, in keeping with the FCC's "doctrine of fairness."

In its dedication to the radio industry, the American Freedom Network supplies its member stations with the "tools" to assist them in earning their FCC public affairs credits.

Every week, subscribing stations receive dynamic taped programs and features designed to enhance listener interest. This taped service consists of provocative talks, discussions, interviews, debates, and commentaries by prominent personalities in the various fields of politics, science, business, and entertainment.

The policy of the American Freedom Network follows a positive approach, as opposed to irresponsible denunciations.

In addition to serving commercial radio stations, American Freedom Network programs are made available, upon request, without charge, to college and university radio stations, as well as to schools, both public and private, and to all service, civic clubs, and church groups throughout America.

In these days, when charges of mismanagement of news in high Government circles are being made, I am delighted to publicly commend the American Freedom Network to wish it God-speed in its determination to present both sides of all issues—free speech in a free country—and I urge all of our fellow citizens to get behind this effort to further enlighten our people concerning America's precious heritage, and to the problems facing our Nation and the free world.

U.N. Intervention in the Congo

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. BRAY. Mr. Speaker, many words are being written today of the continuing atrocities in the Congo. Outstand-

ing among these reports is the column of William S. White as it appeared in the Washington Star of January 7, 1963:

U.N. INTERVENTION IS CONDEMNED

(By William S. White)

The United Nations has assumed a frightful responsibility before history—assuming that history will not be rewritten to suit the wishes of its ruling Afro-Asian clique as current facts already have been a hundred times suppressed or distorted—in the Congo.

For the first time in an organization supposedly devoted to peace, United Nations troops and tanks and bombers have moved with crushing military force to settle an internal dispute in a supposedly independent country. This is the unarguable meaning of the United Nations offensive to drive the breakaway province of Katanga back into the central Congo government and to destroy that province's elected leader, Moïse Tshombe.

No less terrible a responsibility has been assumed by the United States of America. For against the advice of our three best allies—Britain, France, and Belgium—we have directly assisted this military adventure by a United Nations whose imperious Asian leader, Secretary General U Thant, may yet disturb even our own most eager apologists for this fatefully crude thrust in power politics.

For if the United Nations without the slightest right except the sanction of force backed by a massive propaganda, can intervene in the internal affairs of the Congo today, it can intervene tomorrow in the internal affairs of any country in this world—in theory not excluding the United States.

SOVIET ROLE QUESTIONED

In some other time and in some other atmosphere of whipped up emotionalism, any other state or province can be described as secessionist, and U.N. troops can go in there, too, so long as the power of effective resistance is absent.

Repeatedly, the motivation of the United States in this wretched affair has been described in the State Department as a desire to force Katanga's return to the Central Congo Government to strengthen it against a possible Soviet takeover.

Men who really do not enjoy feeling that their own Government has taken up an indefensible policy have tried to accept this explanation. If it is true it could at least help justify by way of harsh expediency what cannot possibly be justified on any higher ground.

But even the argument of expediency is open to grave question. At the very moment the State Department was speaking of its fears of Soviet intrusion in the Congo, our Ambassador to the U.N., Adlai Stevenson, was casting great doubt on that line. On December 21 Stevenson—who is surely no enemy of the Afro-Asian clique—was thus quoted by United Press International: "As to Soviet interference, or intervention, in the Congo, so far as I know at the moment there isn't any whatever. I hope I am properly informed on that subject."

U.N. DECEIT CHARGED

The ugly truth is that deceit and evasiveness and incredible arrogance have marked the U.N.'s course in the Congo, from first to last. Men of good will toward the U.N. have been compelled to conclude, long since, that its word in this affair could not be trusted. A few illustrations:

Impartial war correspondents have formally protested the U.N. "censorship and duplicity" in the field. A score of U.N. disavowals of any intention to force the military submission of Katanga have been followed by the use of force for just such a submis-

sion. Heated U.N. denials of atrocities by U.N. troops have been proved false by the eyewitness testimony of independent correspondents.

Thant, in an ultimatum to Katanga on December 31, implied that attacking U.N. forces would halt after seizing Elisabethville to give Tshombe time to submit decently. Instead, on the U.N.'s own account, they went forward to assault another town, Jadotville. This was explained by the U.N. as a "breakdown in coordination." So sorry, we'll investigate.

Maybe a victory has been won. But not all the power of the U.N. to force conformity can hide the dark implications, for the future, of this campaign.

A Reminder of Grassroots Sentiment

EXTENSION OF REMARKS OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. DERWINSKI. Mr. Speaker, since the time that has passed since the sine die adjournment of the 87th Congress, events have continued to move in a rapid and complicated manner.

It has been my consistent belief that we in positions of responsibility in government have an obligation to provide leadership based on sound American concepts that have been the basis for the development of our Nation's greatness.

Grassroots public opinion and the inherent commonsense of the American public are too often disregarded by Government bureaucracy. Good, old-fashioned American commonsense is completely ignored by the present administration.

As a reminder of grassroots sentiment, under unanimous consent I insert into the RECORD three editorials, dealing with a variety of subjects, which appeared in community newspapers in my district.

The editorials follow:

[From the Chicago Heights Star, Dec. 2, 1962]
AS WE SEE IT: FOR HALL OF FREE ENTERPRISE

Proposed for the New York World's Fair of 1964-65 is a hall of free enterprise. It would, according to the American Economic Foundation, contain graphic examples of what free enterprise accomplishes.

It is a sound plan, not only for the New York World's Fair, but for continuing display to persons throughout the country.

Since 1932, says a spokesman for the Economic Foundation, "witch doctors" have been prophesying the death of the free enterprise system.

You can expect the prophecies, and the attacks on the system, to continue, despite the fact that even Russia is now taking a look at capitalism in hope that an incentive here and an incentive there will help cure her economic ills.

To be sure, you can expect no great frontal assault; that would be too much for even the most naive to digest. Instead there will continue the sniping at the system's limbs. It may be fine, the welfare state advocates will say in effect, but each of its component parts is bad and has to go.

This is not to say that actual faults of our way of life or any other should be ignored. We have many agencies charged with the responsibility of seeing to it that they are not ignored.

There is room for fair criticism, too, but we must insist on keeping it fair, lest we chance losing not only the system but the right to criticize.

The hall of free enterprise idea is a good one. It might serve to correct a natural tendency to overstress the faults while taking the myriad virtues for granted.

[From the Palos Regional, Jan. 3, 1963]

GOVERNMENT MANIPULATION OF NEWS

The continual attack of newspapers on the Federal Government's use of the news mediums as "weaponry" is based on the premise that newspapers are not weapons of the Government.

They are independent sources of information and opinion. Their existence is dependent upon the confidence of readers in their ability to report accurately events as they occur. Any attempt to misinform reporters or to withhold news must be regarded as an attempt to undermine the public's confidence in the press and as a threat to its existence.

If the Government is given the right to manipulate news, for whatever purpose, the freedom of the press—the people's right to know what their representatives are doing—will be extinguished.

Although the outcry against the Federal Government was intensified during the Cuban crisis, the shout has been heard since the first American newspaper was published in the 17th century. It has been directed at officials on all levels of government.

At the Federal level, secrecy has become increasingly popular under the guise of executive privilege. Congressional committees, as well as reporters, have been confronted with executive department officials who refused to divulge information. By claiming executive privilege, they have been able to leave unanswered the questions of Congressmen and reporters on the expenditure of billions of dollars. Executive privilege is a term devised by the executive branch and there is no law or court decision which governs its use. In practice its use is almost unlimited.

Executive session is the phrase which arouses the ire of reporters covering government on the local level. It is the euphemism applied to a secret session of a city council or school board. It sometimes is discarded for the pretentious term, "meeting of the committee of the whole."

It is at these sessions that debate on issues is held, a debate which will never reach the public. The decision is made before the public meeting, where the formal vote will be taken.

In theory there should be no reason for secrecy in government. Both the press and the government represent the public. Each has a responsibility toward the other—the government to allow the press to report those decisions and events objectively.

If either ignores its responsibility, one aspect of democracy has been threatened.

[From the Chicago Tribune, Dec. 29, 1962]
CUBANS TO HONOR KENNEDY

The title of this editorial is copied from the banner headline over our final edition yesterday. The story related that President Kennedy is to be honored today by the Cuban prisoners recently released. He is to review their brigade and to receive from them, as a mark of their gratitude, the flag they carried into the unfortunate engagement at the Bay of Pigs.

There has been the usual crop of preposterous events in 1962 but we submit this is the prize item.

Of course, you can't blame the freed Cubans for feeling grateful to someone. They spent many long months in semi-

starvation in Castro's miserable jails and now are at liberty in the United States. American money ransomed them. Mr. Kennedy has become the symbol to them of their liberation.

Mr. Kennedy is not the symbol but the very man who got them into trouble in the first place. He gave the go-ahead for their descent on the Bay of Pigs and then, at the last minute, withheld the air cover that they needed to secure their beachhead.

What President Kennedy may have done or may not have done to arrange the ransom is in dispute. Mr. Donovan, who unquestionably was the negotiator who closed the deal with Castro, says the President's brother, Attorney General Robert Kennedy, had almost nothing to do with it. On the other hand there have been circumstantial accounts of the tax interpretations that were put forward by the Internal Revenue Service and the Attorney General with a view to persuading drug manufacturers and others to come across. Mr. Donovan could hardly have made these commitments without going to one Kennedy or another, and probably both. Did the Kennedys promise to stop feuding with the drug industry? Did they pledge to muzzle Senator KEFAUVER?

There is no need and no justification for secrecy in these matters. Congress should get the facts. While they are about it, the investigating committee might also look into the allegation by one of the Cubans that all the missile sites have not been dismantled. The statement was made to our correspondent in Miami, Jules Dubois, together with a good deal of circumstantial detail.

The Dubois interview raises once again the question whether Castro's refusal to permit inspection of the missile sites from the ground constitutes a menace to American safety. The Russians agreed to a thoroughgoing verification on the spot but Castro has refused to cooperate.

Congress has the means to confirm these charges or disprove them. The sooner the inquiry is begun the better.

Our American Flag

EXTENSION OF REMARKS OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. ELLSWORTH. Mr. Speaker, Mr. James B. DeMasters, of Overland Park, Kans., is an able commentator on our American heritage. He has written patriotic and informative pieces to help illustrate the significance of much of our history and tradition. In the last session I inserted in the RECORD his article, "The Story on the One Dollar Bill."

Some time ago Mr. DeMasters became aware of the need for a brief interpretation of our American flag. On the basis of research and consultation with authorities on the subject of the flag, Mr. DeMasters has devised an interpretation which, under the leave to extend my remarks, I include in the RECORD:

OUR AMERICAN FLAG

(By James B. DeMasters)

The stars are States, united in our Nation. The stripes represent the Thirteen States. The Red signifies blood, shed by our brave. The white denotes virtue, forever our aim. The blue is our faith—in God we trust.

A Peace Corps Volunteer in Malaya

EXTENSION OF REMARKS

OF

HON. WILLIAM FITTS RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. RYAN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a letter written by Miss Margaret M. Balfe, a Peace Corps volunteer in Malaya, to her aunt and uncle, Mr. and Mrs. Robert N. Angus, of New York City. Miss Balfe is the daughter of Mrs. Lydia Balfe and the late Fergus A. Balfe of 109 Ridge-wood Avenue, Pittsburgh, Pa.

I think her letter is a fascinating description of the kind of work being done by individual Peace Corps members under difficult conditions.

In her letter, which was written in early December, she said that she would like to have some surgical gloves and hemostats for Christmas to use in her work. I think it should be noted that she got her wish. Her request came to the attention of the American Hospital Supply Corp. of Evanston, Ill. The firm immediately dispatched a shipment of surgical gloves, hemostats, and other items for Miss Balfe's use in the village where she serves as a nurse. She went to Malaya last September and was assigned to work in the rural health clinic in the village of Remban, about 200 miles north of Singapore. As she notes in her letter, she is the only American who has ever been in the village of some 350 persons.

Miss Balfe typifies the work of the fine young people who have volunteered for Peace Corps duty abroad. She is, as I am sure most Members of this body know, one of nearly 3,500 Peace Corps volunteers working in 38 countries at this time. She was trained for the Peace Corps at Northern Illinois University in De Kalb, Ill. She is a graduate of the Mercy Hospital School of Nursing in Pittsburgh, and before going to Malaya worked in the Washington, D.C., Hospital Center. Miss Balfe is 24 years old.

Mr. Speaker, I am proud to bring her letter to the attention of my colleagues:

REMBAN, December 2, 1962.

DEAR AUNT SHEILA AND BOB: Thank you for your letter and for the birthday card. Probably the only one I'll get this time.

I'm living in the village of Remban about 200 miles north of Singapore. The population is 350, the town is surrounded by lush green padi fields and palm trees. There are buffalos, goats, and chickens everywhere, including right outside my door and occasionally in my living room. In the not too distant horizon (about 10 miles) we can see the hills rising, covered with jungle. After a good rain the haze rises out of those hills like steam, colored here and there by rain-bows.

I'm writing this by kerosene lamp (we have electricity but only dim ceiling lights—no outlets) and I cook on a kerosene stove. I'm the first American and the only one to ever live here.

I work in a rural health clinic and know enough Malay now—however poorly—to run

the clinic, see all the patients, examine and assess the children as to growth and development, and advise as to diet, etc. We travel 3 days a week to subcenters, really in the "Ulee" just on the edge of the jungle, and set up our little clinic. We see a good bit of malaria and plenty of deficiency diseases—bleeding gums and night blindness. Also most of them have worms. We stop at lunch time and drink tea out of a flask and eat rice off banana leaves (our plates) with our fingers. The other days of the week we visit kampong homes (like the ones you've seen in pictures—up on stilts). The most delightful ones are way, way, back in. We take the van (a gift from UNICEF) as far as we can over dirt roads just wide enough between the padi fields which are full of water. Then we get out and walk along footpaths among the palm trees, fern bushes, and coconut trees. There are beautiful streams which we cross (over logs) that are filled with algae (the greenest green you've ever seen) and trees growing out of the water. Here and there, there are waterfalls. All the trees have vegetation growing up and down the bark and vines hanging from them. The women are washing clothes, dressed in sarongs, barefooted. Young boys are fishing in the streams, catching the fish with their hands. There are all kinds of animals running around, including monkeys swinging through the trees. When we reach the house we go up (not in; they're on stilts). It's most difficult to walk on the bamboo poles that make up their floors, while barefoot; they're round and poorly tied together and roll under your feet. Then we sit and just visit, while observing their health status. Then when we go back the next time, we venture to advise.

Last week I delivered a baby in a kampong house—the mother lying on the floor and I in a squat position.

Today I went to a Malay wedding. A grand affair, the like of which one doesn't see often. They carried out age-old rituals that are fast dying out. There were 1,000 guests. I was on the reception committee and wore Malay dress—the only non-Malayan there.

I know this is sketchy, but I hope it will give you some kind of an idea of my world. I feel as though I've been reincarnated into a different planet.

You asked what I would like for Christmas. If you could get your hands on some surgical gloves and hemostats, that would make a most useful gift. Not expensive ones because they will probably get some rough treatment.

Hope this finds you both well and happy.
Love and God bless you.

MARGIE.

Tax Rate Reforms for Growth and Jobs

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the gentleman from Tennessee, HOWARD H. BAKER, and myself, upon introduction of new bills for reform of personal and corporate income tax rates:

TAX RATE REFORM FOR GROWTH AND JOBS

(Statement of Hon. A. S. HERLONG, Jr., Democrat, of Florida and Hon. HOWARD H. BAKER, Republican, of Tennessee, January 10, 1963)

It is our hope that 1963 will witness the reversal of Federal tax policy which for so long has been stacked against capital formation, economic growth, and job creation. To this end, we have introduced new bills for reform of personal and corporate income tax rates over a 5-year period. The principle that lower tax rates mean more vigor and growth in the private economy is generally recognized by the average citizen. While this principle provides the basic guidance for reforming a rate structure, there are complex fiscal problems and sophisticated economic questions which tax specialists and policymakers, including Members of the Congress, must consider before agreement on specific legislation. To make it useful in policy deliberations, this statement in explanation and support of our bills is more of a technical than a popular exposition.

This legislative program is not designed to apportion tax relief among disputing claimants, but to serve the general public interest in greater growth and more jobs.

It is not designed to stimulate an inherently weak economy, but to release the world's strongest economy from the tax rates which bind it.

The critical test which we believe should be applied to any tax program at this time is not how much economic activity it might stir up in the next year or two, but is how much economic growth it will give us by the end of the decade. We believe our program meets this test; that it would produce maximum results in growth and jobs with a minimum of inflationary danger.

This is the third Congress in which we have proposed such legislation. Since the tax rate drags on the economy became a top public issue last summer, there has been a tremendous surge of interest in the key procedure of our bills; namely, spaced-out rate reform. Many new voices have been raised in support of our bills as a whole. Some others, however, seem to view the rate reform goals which we have set as unrealistic. Assuming that the purpose of tax action is to release the economy for optimum achievement in long-term growth and jobs, and without quibbling over negotiable details, we believe our bills encompass the only workable, realistic and adequate program now in being.

RATE REFORMS

This legislative program places the great emphasis on reduction of the range of graduation of the personal tax. The graduated rates now top out at 91 percent and reach 53 percent at the \$18,000 to \$20,000 bracket of taxable income.

Over a 5-year period, our bills would reduce the top rate of personal tax to 42 percent, and the 53-percent rate to 24 percent, with other graduated rates lowered in a consistent pattern. The first bracket rate of 20 percent would be lowered to 15 percent, assuring a minimum reduction of 25 percent to every personal taxpayer. The graduated rates from 22 to 34 percent would be reduced to a new range of 16 to 19 percent. The 38-percent rate would come down to 20 percent (see tables I and II).

The rate of withholding on wages and salaries would come down from the present 18 percent to 13.5 percent at the end of 5 years.

The combined top rate of corporate tax would be reduced from 52 to 42 percent over the 5-year period (see table III). The new top rate of 42 percent would still be more than 10 percent higher than the 38-percent top rate of corporate tax between World War II and the Korean war.

Our earlier bills contemplated that all rates would be put into effect as of January 1, with enactment coming in advance of the date for the first scheduled rate cuts. The current bills contemplate enactment

after January, but in time to make the first reduction in the withholding rate effective July 1, 1963.

Because taxpayer returns are on a calendar year basis, the actual 1963 tax rate cuts apply to the entire year, i.e., be effective as of January 1, but the percentage amount is only one-half of that which would have resulted from enactment in advance of January 1. The reduced withholding rate however, from July to December, is the same as it would have been if it had been effective from January 1 to reflect tax cuts for a full year. As regards the average taxpayer whose tax liability is satisfied by withholding, the practical effect is tax reduction beginning as of July 1.

This procedure enables a further reduction in the withholding rate effective January 1, 1964, as the second year's tax rate cuts go into effect on that date. There would be telescoped into these cuts the one-half year's cuts which were not made effective in 1963. Consistently, the corporate cut for 1963 is held to 1 percentage point, with the deferred percentage point added to the annual reduction of 2 percentage points effective January 1, 1964.

TAX SAVINGS, REVENUE EFFECT AND REVENUE GAIN FROM ECONOMIC GROWTH

The average annual tax savings under our bills would be approximately \$3.85 billion. These savings relate to the calendar year of tax liability. Of the average annual savings, \$2.85 billion would go to individuals and \$1 billion to corporations. Over the life of the legislation, the personal tax cuts would provide approximately \$14.25 billion in tax savings and the corporate cuts \$5 billion, or a total of \$19.25 billion. These data are based on 1962 income levels, because it would unnecessarily complicate this statement to assign different values to the tax cuts applying to the separate years.

Of the personal tax savings, about \$6.15 billion, or 43.1 percent of the total, would result from the cut to 15 percent of the 20-percent rate now applying to the first bracket of taxable income; \$2.1 billion, or 15.1 percent of the total, would result from the cut to 16 percent of the 22-percent graduate rate now applying to the second bracket of taxable income. The remaining tax savings, \$6 billion, or 41.8 percent of the total, would result from the cuts in the graduated rates which now range from 26 percent upward, but only 14.3 percent, or \$2.04 billion, from reducing the graduated rates now over 50 percent, ranging from 53 to 91 percent at the top. (See table IV.)

While tax savings are computed for calendar or taxpaying years, the Government calculates the effect on revenue of tax cuts to accord with its fiscal year (June 30) budget. The delay of cut in the 1963 withholding rate until July 1 means that the only revenue effect in fiscal year 1963 would come from revised declarations and payments of estimated tax and would involve only a nominal sum. The remaining revenue effect of the legislation would be spread over the 5 fiscal years ending with June 30, 1968. Because of the overlap of fiscal and calendar years, there is some bunching of revenue effect (as contrasted to calendar year tax savings) in fiscal years 1964 and 1965.

Because of this bunching, the revenue effect in fiscal 1964 would be \$4.81 billion, followed by an additional \$4.81 billion in fiscal 1965, or a total for the 2 years of \$9.6 billion. The additional revenue effect would be \$3.85 billion in each of the fiscal years 1966 and 1967, followed by \$1.93 billion in fiscal year 1968, when the total for the 5 years would correspond to the total tax savings of \$19.25 billion. None of these data take into account the return flow of revenue from a better performing and growing economy.

There is an alternate procedure for putting into effect tax cuts over a series of years

which would eliminate the bunching of revenue effect in the early years. An explanation of how the procedure would work is given in the final section of this statement.

At this point, the critical question is: To what extent would the revenue gain from economic growth compensate for the revenue effects of the tax cuts? Administration reports and statements, and other material which will be presented in the hearings before the Ways and Means Committee, may throw light on this subject which is not available to us at this writing. However, in addition to laying the basis for an adequate long-term growth rate (in the range of 4 percent as compared with the average of about 2½ percent over recent years), it is generally agreed that a goal of tax rate reform or reduction is to make up for the gap created by the past inadequate performance of the economy (7 to 8 percent of gross national product, or about \$40 billion). If the loss were to be made up over a 5-year period, an average growth rate of about 5½ percent would be required.

For purposes of illustration, it is assumed—if our proposed legislation is enacted—that after a growth build-up in the first year, the average growth rate throughout the decade would be in the order of 5 percent annually; and that such a growth rate would produce annual additions to revenues in the order of \$4.5 billion—computed on the basis of 1962 income levels. These assumptions are incorporated in the following table, showing the calendar year of tax cuts under our bills, the estimated annual and cumulative revenue effect in the ensuing fiscal years, and the estimated gain in revenue from economic growth—annual and cumulative—for the same fiscal years:

Calendar year	Steps in cuts	[In billions]			
		Revenue effect, fiscal years ending June 30		Revenue gains from economic growth, years ending June 30	
		Annual	Cumulative	Annual	Cumulative
1963	1st	(1)	(1)		
1964	2d	\$4.81	\$4.81	\$3.5	\$3.5
1965	3d	4.81	9.62	4.5	8.0
1966	4th	3.85	13.47	4.5	12.5
1967	5th	3.85	17.32	4.5	17.0
1968		1.93	19.25	4.5	21.5
1969			19.25	4.5	26.0

¹ Nominal.

In considering the implications of this table, the impact of the rate of growth on Government spending must be kept in mind. In the absence of an average growth rate in the order of 5 percent until the lost growth is recovered, economists generally agree that unemployment will not be brought down to reasonable levels. Contemporary attitudes do not admit of Government inactivity in face of excessive unemployment levels.

The options are clear. Either the Government provides the private economy through tax-rate reform with the opportunity to resolve the chronic unemployment problem, or the Government will compound the fiscal crisis caused by too much spending and too little revenue. The option of tax-rate reform offers promise of a stronger and freer America and in the long term, enough revenue to cover all necessary spending of the Government.

The option of more domestic programs and spending to solve the unemployment problem is a barren one. It inevitably would mean larger deficits carrying with them the possibility of a new, serious inflationary surge.

THE ECONOMICS OF TAX CUTTING

There are strong, respected dissenting voices mingled with what seems to be major agreement on the economic need for

tax cutting. By and large dissent is based on the proposal of tax cuts without expenditure reduction or control. Opposition is inflamed by loose statements attributing virtue to deficits. Question is raised as to the credibility of the general statement that lower taxes mean more revenue.

Unfortunately, among those who give full or qualified support to tax cutting, there is wide disagreement as to what tax rates should be cut, how much, and how tax cuts would bring about desirable economic results. Some place the great emphasis on removal or modification of the deterrent or drag effect of the present steeply graduated rates of personal tax, and the high combined rate of corporate tax, on capital formation, greater growth, and more jobs. Others place the emphasis on using tax-cut dollars for stimulation of private consumption, relying on secondary effects for greater capital formation and long-term growth. Some walk down the middle, giving credence to both approaches.

Our bills are oriented to the release of investment funds and incentives. Nevertheless, our estimate is that only about one-half of the tax savings under our bills would be employed as new capital, with the remaining one-half being used for current consumption spending. We believe it would be a serious economic mistake to enact legislation designed to channel the bulk of the tax savings into current consumption. This is a question which should be resolved on the basis of how tax cutting at different income levels affects the economy, and not on the basis of who gets the direct tax relief. The following explanations may be helpful in this respect.

The release of tax rate deterrents or drags. All taxation takes out of the private economy some income which otherwise would have been transformed into capital for growth. Large amounts of such income are taken by the steeply graduated rates of personal tax, and the excessive top rate of corporate tax. These rates also reduce the incentives of individuals to earn additional income, and to invest in risk-taking ventures, and the incentives of business to expand existing plant and the production of existing products and services, to add new products and services, and to employ more people.

In short, it is these uneconomic tax rates which restrict economic growth, limit the number of new jobs, and provide too little revenue for the support of government. Removal or modification of these tax rate deterrents or drags not only would be good business for the country; it also would be good business for the government. A chronically, artificially repressed economy simply cannot be relied upon to provide the revenues to meet the needs of contemporary government.

Tax cutting to stimulate consumption. There is a significant contrast between tax rate reform for the purpose of removing tax rate drags and disincentives, and the conception of tax cutting as a form of government help or aid designed to stimulate the economy. Tax cutting which would increase private consumption without corresponding reduction in government spending would fall in the latter category.

When the Government takes and spends income which otherwise would have been used for private consumption, there is no direct effect on the rate of economic activity or of economic growth. The Government, including its employees and the beneficiaries of its programs, simply spends more, and unsubsidized private citizens spend less. Conversely, when the Government reduces its spending and its taxes bearing on consumption in equal amount, private citizens spend more while the Government, and its employees and beneficiaries, spend less. There

is no direct effect on the rate of economic activity.

Thus, the stimulation of private consumption through tax cutting comes about only when the cutting is not matched by a comparable reduction in Government expenditures. In this situation, tax cutting creates \$2 of income where only \$1 existed before, because in effect, the Government borrows and spends an amount equivalent to the tax cuts.

An increase of private consumption through this means will add to the current rate of economic activity, and provide some return revenue flow. It is questionable, however, whether this process would have much significance for economic growth. The improvement in business volume would result in some increase in profits, and some increase in savings from personal incomes. As a general proposition, however, it would seem grossly inefficient to attempt to influence investment for growth and jobs in this roundabout manner. For any given number of tax reduction dollars, it is certain that a much greater result would be achieved by cutting the steeply graduated personal tax rates and the top corporate rate.

Moreover, whatever the immediate effect on private consumption of tax cuts financed by deficits, there would be no effect whatsoever as regards either total economic activity or economic growth when and if the budget is brought into balance. From that time on, the process would be substitution of private consumption, in itself highly desirable, for consumption brought about by government spending. It seems like an economic contradiction therefore to associate tax cutting to stimulate private consumption with long-term economic growth and job creation.

EASIER TAXES VERSUS TIGHTER MONEY AND CREDIT

In current discussions on tax cutting to increase private consumption, it is sometimes stated or implied that there may have to be a tightening up of the use of money and credit in the private economy to prevent the tax cuts from having inflationary effect.

Such a prospect seems wholly inconsistent with the goal of improved long-term growth and job creation. The inadequate growth of recent years has been accompanied by inadequate expansion in private use of money and credit. More growth inevitably will increase the private demand for money and credit. In fact, a fundamental purpose of tax rate reform is to improve the business climate, which in and of itself would create greater private demand for money and credit. It would be a most unfortunate thing if this demand went unsatisfied because too much tax cutting to increase private consumption had built up potential inflationary pressures.

A program of rate reform oriented to releasing capital and incentives for growth and making healthy but not excessive tax cuts over a number of years, would provide the best set of conditions for a much-needed expansion of money and credit without inflationary consequences. By contrast, any tax cutting program involving substantial revenue effect, and heavily oriented to the increase of private consumption instead of releasing savings for investment and growth, would carry grave danger of a return to tight control on the use of money and credit in the private economy.

HOW MUCH TAX CUTTING?

We believe our bills incorporate a program which is balanced from the standpoint of the fiscal realities and of the economic goals of tax rate reform. Economists generally agree that the key factor in the lag in growth and employment over the past 5 years has been the failure of business investment spending to expand. As set forth in the statement appearing in the CONGRESSIONAL RECORD of Oc-

tober 6, 1962, pages A7377-A7378, business expenditures for plant and equipment, in constant 1961 dollars, are some \$12 billion short of the level which would have been achieved under an average annual growth rate of 4 percent since 1951. We assume that about one-half of the tax savings under our bills, or \$9 to \$10 billion, would be saved and invested, instead of being used for current consumption. This would be on the short side of the indicated deficiency in business capital spending. Moreover, as new family formation moves up sharply after the mid-1960's, a considerable volume of new savings will be channeled into residential buildings, thus reducing the new savings available for use in business expansion. An offsetting factor, however, will be the business savings released by the depreciation reforms put into effect by the administration in 1962, and the investment tax credit enacted as part of the Revenue Act of 1962—the two together valued by the administration at approximately \$2.5 billion annually. To some extent these savings are nullified by provisions of the 1962 act which directly or indirectly reduce business or personal savings or adversely affect incentives. Relating all of these factors, it would be difficult to see how anyone could argue that our bills would release more income for capital formation, residential and business, than will be needed in the 1960's and beyond.

Nevertheless, our program involves a substantially larger total of tax cuts, over its proposed legislative life, than is contemplated by other programs under contemporary discussion. There is a tendency in many quarters to rely on the simple principle that tax cutting means more business and more revenues in the short future without facing up to the question of what is needed to turn our economy loose for optimum performance over the long term.

As a frame of reference in regard to size of tax cuts, it may be well to recall the aggregate tax reductions of 1954 which—at income levels then existing—involved tax savings estimated at about \$7.5 billion. Except for repeal of the Korean war excess profits tax, and the inauguration of the 4-percent dividend credit and \$50 exclusion, the 1954 cuts were not especially oriented toward capital formation and economic growth. The depreciation reforms provided in the 1954 act were of major importance, but in terms of depreciation speedup they did not provide for major key industries as much relief as had been available under the Korean war rapid amortization provision.

After the 1954 reductions, business activity expanded sharply in 1955 and 1956, with revenues increasing to the point of transforming deficits of \$3.1 billion in fiscal 1954 and \$4.2 billion in fiscal 1955 into surpluses of \$1.6 billion in both fiscal years 1956 and 1957. Thereafter, however, the economy turned downward and into the period of too slow growth and too much chronic unemployment resulting in repetitive Federal deficits.

To us, the moral of this experience is that the tax rate reform necessary to pull down the blocks to adequate long-term growth and jobs must be more sweeping than other tax cuts in our history.

The economy is still laboring under a tax rate philosophy and structure which was conceived in the gloom of the 1930 depression and implemented by the revenue requirements of World War II and subsequent years. Only a sweeping reform of rates can reverse this philosophy and change the tax structure so that capital formation and business and human incentives can play their full role in creating a stronger and more bountiful economy.

If further evidence is needed in support of a program cutting and reforming taxes as deeply as our bills would, it is provided by

the fact that the 1954 tax cuts, related to 1962 income levels, would have a current value in the order of \$12 billion. If we are to serve the objectives of growth and employment to which all groups and persons in our Nation are committed, it seems apparent that a much larger tax cutting package, much better distributed from the standpoint of capital formation, must be enacted in 1963.

After substantial tax cuts have been enacted in 1963, it is not likely that there will be further significant tax cutting in this decade or at least before the end of it. This means that if the purposes of growth and jobs in this decade are to be served by tax rate reform, the 1963 legislation must do the job.

Any question of doubt as to distribution of tax cuts, or as to total amount, should be resolved on the side of turning the economy loose from capital incentive destroying tax rates.

Looking ahead for a number of years, the prospect for further tax cutting will certainly depend on how fast the economy grows, unless there is a real easing of the cold war. From this benchmark, what is done now in cutting the growth-retarding rates will determine whether there can be future tax cuts to serve any purpose. By contrast, emphasis now on cutting taxes to stimulate consumption would leave little prospect of further tax cutting for any purpose in the foreseeable future.

THE MOST CRITICAL TAX RATES

While we are convinced of the economic necessity for enactment of legislation incorporating at least the full sweep of rate reform of our bills, we cannot ignore the fact of current proposals involving much smaller total tax cuts. In considering these less sweeping programs, we believe it important that the priorities in terms of long-range growth and jobs be recognized.

As against the potential for growth of a fully free economy, we believe that the steeply graduated rates of personal tax, as much through the middle brackets as beyond, constitute the most inhibiting and retarding force. Here are the rates which strike most directly at incentives, both business and personal. These steeply climbing rates discourage risk-taking, choke off venture capital at its source, curtail business starts and expansion, and thus prevent the creation of new jobs. They are the bane of small business and of the man on the ladder. In placing stiff penalties on hard work and long hours, such rates are a contradiction of the compensation principle of extra reward for extra effort and achievement.

It is these baneful effects of graduation which led us to the conclusion that, under a reformed tax rate structure, no unincorporated business or other individual should be required to pay a higher rate of tax than a corporation. Proposals for higher top rates of tax inevitably carry with them higher rates through the critical middle brackets. Similar top rates of personal tax would—

1. Give the unincorporated business roughly the same opportunity as a corporation to retain earnings for growth.

2. Relieve greatly the burden of double taxation on corporate income which is paid out in dividends.

3. Minimize the tax penalty on hard work, long hours, and achievement.

4. Maximize the release of incentives for venturesome investment, the creation of new products and services, the starting of new businesses, and the expansion of old.

Despite these objectives which would so well serve the general public interest, we recognize there is a reluctance to release from tax as much income of wealthy people as would result from our bills. We do not share this reluctance, because similar top

rates of tax would mean the most in growth and jobs in the future. However, we recognize the difference in economic consequences to be expected from maximum moderation in rates which may be generally associated with the earned income potential of unincorporated business and other personal endeavor as compared with very large incomes derived from large aggregations of wealth. The greatest tragedy of our present tax rate structure is that those with high earned income potential, on whom we depend the most for economic building for the future, have so little opportunity to accumulate savings out of their current incomes. Our bills would release incentives to men and women with the greatest capacity for personal contribution to the Nation's economic future, and also the capital which would free them to make the maximum contribution. For a free, dynamic economy, these are inseparable attributes.

A top personal tax rate similar to the top corporate tax rate would be a small concession to make in order to turn our high-powered people loose to lead the way to high-level growth. However, too much damage would not be done as regards the "earned income" group if one or two higher rates of tax were set at very high income levels. Such higher rates of tax could not be justified at any income levels from the economic standpoint, but they would not be as growth-retarding as such rates applied within the existing taxable income brackets. Above all, however, the No. 1 priority in tax rate reform is to minimize the tax restraint on the energetic, creative, and far-sighted people who must accumulate their capital out of current income, and who inevitably would use the capital so accumulated—plus savings of others in much greater amount—to lead the way in building for the Nation's future.

Below the priority which should be given in any tax legislation to reforming the middle-through-high graduated rates of tax, we believe that the following priorities—in serving the objective of growth and jobs—should be recognized:

Second priority—lower graduated rates.

Third priority—top 5 percentage points of corporate tax.

Fourth priority—next 5 percentage points of corporate tax.

Fifth priority—base rate of personal tax.

We are hopeful that this statement of priorities will influence those who have espoused tax cutting programs less sweeping than the rate reforms of our bills to reconsider their stand. Actually, substantial reduction in the first rate of personal tax can be afforded at this time only if it is part of a rate reform program promising increase in growth and income totals which could be expected to so expand the tax base as to lead to a balanced budget in the not too distant future. We believe that the first rate should be reduced as provided in our bills. It is obvious that reduction in this area should not be traded against the rate reforms which would assure dynamic growth over the years ahead.

RATE REFORM VERSUS RATE REDUCTION

Although the general pattern of spaced-out rate reform provided in our bills is well known, the significance of our use of the words rate reform as contrasted to the words rate reduction may not be. The effects of the personal tax in restricting economic growth and employment result largely from steeply graduated rates and not from the basic rate. Our bills are designed to drastically reduce the range of graduation, thus internally changing or reforming the rates in relation to each other. In a lesser sense, the corporate tax cuts provided in our bills would constitute reform, in changing the relation of the normal and surtax rates to each other.

Personal tax rate reform is fiscally feasible because the entire graduated superstructure provides only about 15 percent of the revenue from the tax, or \$6.7 billion out of a total of \$45.3 billion. The remaining 85 percent, or \$38.6 billion, comes from the basic 20 percent rate on the first bracket of taxable income and the first 20 percentage points of all the graduated rates. The lack of revenue productivity of the present graduation is further indicated by the fact that a flat rate of 22.4 percent would produce as much revenue as the present rates.

In contrast with rate reform, rate reduction has no particular implication in regard to the pattern of reduction. However, for comparative purposes it will be assumed here that rate reduction means a uniform percentage cut in rates, generally known as an across-the-board cut.

A valid question is: How much reduction in the most critical graduated rates, and how much potential high-velocity venture capital, would be lost if an across-the-board or uniform cut were substituted for reform of rates as provided in our bills?

The personal tax savings under our bills of \$14.25 billion equal 31.4 percent of revenue from the tax, based on 1962 income

levels. If there should be a uniform cut of 31.4 percent in all rates, the rate cuts in the middle-through-higher brackets would be substantially less than under rate reform, without very significant increase in the first bracket cut. For example, there would be a loss of 20.4 percentage points in rate reduction as regards the present top rate of 91 percent, and a top loss of 23.7 percentage points as regards the present 87 percent rate. But there would be a gain of only 1.3 percentage points of reduction in the first bracket rate. In addition, the present 22 percent first graduated rate would be reduced more, by 9 percentage points, under a uniform cut as compared with rate reform. All higher graduated rates would be reduced more under rate reform.

In terms of tax savings, the substitution of a 31.4 percent uniform cut for the rate reforms provided in our bills would transfer about \$1.9 billion from the taxable income brackets now carrying graduated rates from 26 percent upwards to the first two brackets. The rate reductions and tax savings effects from a uniform cut, as compared with rate reform, are set forth below for the same tax rate groupings which appear at the bottom of table IV:

Present rates	New rates				Tax savings (millions)				
	Rate reform		Uniform cut		Rate reform		Uniform cut		Differences
Percent	Percent	Percent	Percent	Dollars	Dollars	Dollars	Percent	Dollars	Percent
20	15	13.7	-1.3	6,145	7,729	1,584	+25.6		
22	16	15.1	-9	2,416	2,474	328	+15.1		
26-34	17-19	17.8-23.3	+8-4.3	2,351	1,945	406	-17.4		
38-50	20-23	26.1-34.3	+6.1-11.3	1,567	967	600	-38.4		
53-91	24-42	36.4-62.4	+12.4-20.4	2,039	1,133	906	-44.5		
Total				14,248	14,248				

¹ The percentage point differences regarding present rates from 78 to 90 percent would be greater than 20.4.

In relation to consumption totals, \$1.9 billion in tax savings has little significance for the present or the future.

But, \$1.9 billion of tax savings used as "lead" money—the dynamic, venture capital which pulls in other savings—would provide an ever increasing return in growth and jobs.

Some of the \$1.9 billion, if diverted to tax relief in the low taxable brackets, would be saved and invested. Some of it, if granted as tax relief in the middle-through-high brackets, would be used for current consumption.

On balance, however, distributing the \$1.9 billion through tax rate reform would reflect a decision to maximize economic growth and new job opportunities. To distribute it through a uniform cut would reflect a decision to maximize current economic activity at the expense of long-term growth and jobs.

POSTPONEMENT AND THE TAX CLIMATE

Unfortunately, widespread recognition of the need for tax rate reform did not come until lagging growth and revenue, and too much domestic spending, had put the budget in the red by some \$8 billion. Our military and space commitments require further increase in spending in these areas during the next fiscal year.

In our earlier bills, a provision required postponement of prescheduled rate reductions, after the first reduction, when the budget was out of balance. The provision included procedure by use of which Congress could limit postponements to 6 months without disturbing future reductions. However, if the postponement procedure were used fully, it would have meant that the reductions would have been spread out over 9 instead of 5 years.

This postponement provision was developed at a time when inflationary pressures were very great, when the budget was in

balance, and when the twin problems of a lagging rate of economic growth and chronic unemployment, though foreseeable, had not yet emerged. The problem now is how to adapt this provision in light of current and prospective conditions.

In forward scheduling tax cuts, a major objective is to improve the business climate and the public psychology, creating optimism for the future; to induce forward business planning in anticipation of steady relief from growth-retarding income tax rates. Such an environment inevitably would be accompanied by greater private use of money and credit, multiplying the benefits of the tax cuts in the early years. Over the long pull, of course, money and credit serve only as the lubricant of the economic system. The economy as a whole can prosper and grow without inflation only as current savings of business and individuals are adequate to the task. But, until the economy has recouped the ground lost during the inadequate growth of the past 5 years, expansion in private use of money and credit must be greater than would be appropriate thereafter. If such expansion does not take place in the private sector of the economy, we may be sure that it will take place through greater Federal spending and larger deficits.

To serve the purpose of expenditure control, without thwarting the objective of permitting forward planning on the basis of regularly scheduled lower tax rates, we have made two changes in the postponement provision:

The first change is to make postponement effective only as regards the rate cuts scheduled for the third and later years under our bills, as contrasted to the second and later years under earlier versions of our bills.

The second change is to add to the test of budget unbalance a new test, in regard to

expenditure control. Postponement would be applied only if the budget is out of balance and if what we call subordinate expenditures are higher in the current fiscal year than in the preceding year. Subordinate expenditures are defined as all expenditures of the Government except those related to military preparedness, space research and technology, and interest on the public debt. As a general positive description, subordinate expenditures cover those generally known as domestic spending programs and foreign economic assistance.

We believe that this addition to the postponement procedure makes our program entirely realistic, not just for enactment, but for expected effectuation over the 5 years. We are convinced that the executive branch and the Congress working in harmony can control the total of domestic spending without harm to any vital public program or segment of the public. Groups who are the beneficiaries of separate Federal spending programs also share the common general public interest in greater economic growth and economic strength. Actually, the unemployed and the underemployed, and the sections of the country which lag behind national economic achievements, will benefit the most from the release of capital and incentives under our bills. It makes much more human, as well as economic sense, to let the private economy provide new and greater opportunities to these people and sections of the country than to rely further on "dole-type" spending programs.

NEW WORKERS AND JOB OPPORTUNITIES

In addition to the problem of the currently underemployed and unemployed, during the remainder of the 1960's there will be an accelerating buildup in our working force—or of the number of young people who will need and want work, and who will expect good work opportunities. Over recent years, the "labor force" as it is technically known has increased by an average of only about 800,000 annually. Over the last 5 years of this decade, the average increase is expected to reach close to 1.5 million annually.

The excessive use of tax cutting at this time to increase consumption of people now fully employed is not going to solve the problem of good jobs for these new workers who are just around the corner in point of time. It will take a rebirth of business and individual incentives, and tremendous amounts of new capital, to provide those jobs.

EXPANSION OF THE TAX BASE

Our bills do not contemplate incorporation therein of structural tax reforms associated with base broadening. We believe that the objectives of tax rate reform are

too important to be submerged and obscured, and further delayed, by time-consuming discussion over what if any provisions of the tax law should be eliminated, modified, or revised. Moreover, whatever may be the merit of individual reforms or the overall case for structural reform of the tax law, we do not believe that this is a significantly productive route to broadening the base for taxation. On any extensive basis, such reform inevitably would reduce the potential of business and private savings, and thus tend to offset the release of incentives and capital formation provided by rate reform.

This is not to deny the need for base broadening. Aside from the system of exemptions, credits, exclusions, and deductions of general value to all taxpayers, the too small tax base of the current period is a product of inadequate growth over the past 5 years. Stated differently, if the economy had grown adequately over the past 5 years, the Federal tax base would be large enough to support all necessary spending out of current revenue. Looking ahead, the greatest opportunity for expansion of the tax base is found not in structural reform but in the enlargement of the economy which provides the tax base.

As a specific illustration, if the economy should not grow any more rapidly on the average over the remainder of this decade than it has over the past 5 years, the personal tax base under the law as it now stands would only be about \$259 billion in 1970, as compared to about \$193 billion in 1962. On the other hand, if the economy should grow at an average of 5 percent over the years ahead, the personal tax base in 1970 would be about \$337 billion. An \$80 billion addition to the personal tax base would be much greater than could be expected from any impact on base broadening of structural tax reform.

THE BOUNTY FROM GREATER GROWTH

The return from greater growth (5 percent as compared with the recent average of 2½ percent) over the remainder of this decade is indicated for gross national product, personal income, and personal income per capita, in table V, attached hereto. Regardless of judgment as to whether such goals will be achieved, we believe the Government has the obligation to adjust its policies to provide the best promise of achievement. Experience provides ample documentation that more Government spending will hurt rather than help accomplish such goals. In our opinion, a "mixed" policy of somewhat more spending, and somewhat less taxing, would offer little promise of much improvement over recent history. We believe the time is here when the Government must turn the

private economy loose from an oppressive tax rate structure; to let it develop its own head of steam and find out where it will take us. Halfway measures at the best can be expected to produce no more than half-way results. At the worst, they could keep the door open to return to the barren philosophy of greater growth in Government spending. The opportunity is present for a national decision for greater growth in the private economy over more growth in Federal spending (except as may be required for our military security and space effort). A positive declaration that our Nation is committed to restoring the full vitality and potential of our free economy, and the corroboration of that commitment through greater growth starting in 1963, could soon pave the way to forcing the Communist world to recognize that it had better collaborate in reducing the burden of military preparation so that it too can do more toward improving the everyday life of its citizens.

ALTERNATIVE PROCEDURE FOR SPACING OUT RATE REFORMS

If the one-half year's personal tax cut for 1963 provided in our bills were followed by only a one-half year cut as of January 1964, there would be no bunching of revenue effect in fiscal year 1964. Specifically, the revenue effect would be \$2.85 billion compared with \$4.31 billion under our bills as drafted.

If this process were repeated over 5 years—reduction in the withholding rate as of July 1 for a one-half year's tax cut, followed by another automatic one-half year's cut as of next January 1—there would be equal revenue effect, \$2.85 billion, in each of the 5 fiscal years. Combined with a 2 percentage point cut in the top corporate rate each calendar year, the annual revenue effect in each fiscal year would be \$3.85 billion.

This procedure might have further attraction as regards the working of a postponement provision. It would permit the provision to become an inherent part of the President's budget submitted to Congress each January covering the next fiscal year. The provision would, if the postponement test required, hold in abeyance the next sequence of tax cuts beginning with reduction in the withholding rate on July 1 for the first half year's cut and completed by another half year's cut on January 1 following. The Congress could put the sequence back into effect if it so decided in time to reduce the withholding rate on July 1. If Congress failed to act, the sequence would be postponed 1 year, thus moving ahead all following sequences provided in the legislation. The corporate tax cuts for the current calendar year would be held in abeyance, and then put back into effect or postponed for 1 year, by the same series of events.

President Kennedy repeatedly stated, "This is being done by a private committee," while our Government was as much in it as in the Bay of Pigs affair itself. This is now a secret everybody knows.

But inside his office the determined Attorney General had—from the beginning—what he called the wish list from Castro.

The Cuban drew up a crazy compilation. In totaling it to \$53 million he used mostly obsolete drug house catalogs. He specified some drugs unobtainable here, many scientifically obsolete, and even dreamed up others that never existed. His morphine feature, however, was the final clincher Castro demanded in his American blackmail. The Attorney General's opening explanation in soliciting each contribution was: "My brother made a mistake."

Why didn't our public servants simply perform in the straightforward basis required by their official position?

Congress specifically prohibited the use of taxpayers' money for ransom during the tractors-for-prisoners uproar.

To date the administration has even refused a list of items, quantities, and costs, making all assessment by our public impossible. Congress should at least expose the tax gimmicks and inside bait authorized overnight after the Attorney General's reported, "Fella, get busy," word to Treasury Secretary Douglas Dillon, by a Government which is about to challenge every citizen's nickel and Christmas cigar.

Moreover, impeccable Cuban underground sources as close to Castro as his beard (for Castro's inner circle has been well penetrated) insist Castro's real win was not the \$53 million ransom at all. His eye was entirely on a reaffirmation of a noninvasion pledge.

Knowing negotiator James B. Donovan spoke for President Kennedy and his brother, Castro required and received this pledge as the basic requirement before allowing the invasion prisoners to leave. Castro asked Donovan, "What if President Kennedy repudiates you?" Donovan replied, "He won't."

In short, Castro has achieved his ambition as the Communist leader of Latin America under a U.S. guarantee not to molest, or permit any neighbor to molest, Red Cuba's sovereignty.

This reaffirmed President Kennedy's guarantee through U.N. Secretary General U Thant if the missiles were removed, still never admitted by Washington but extracted from the secret U.N. minutes of the initial U Thant-Castro meeting in Havana which U Thant's office confirmed to me as accurate.

Nevertheless, the news manipulation continues unabashed. What did the President pledge in Miami, December 29, that brought the vast, tear-laden cheers from the very hearts and souls of the Cuban refugees? Accepting the banner of the Bay of Pigs survivors, Mr. Kennedy stated, "I can assure you this flag will be returned to your brigade in a free Cuba." How?

The blockade has been lifted, the dependents sent back to Guantanamo, and, to top it off, the Justice Department is in the process of arresting freedom fighters bound for Cuba for sabotage. The Attorney General claims the mere attempt violates our neutrality act. In addition, all suspected freedom fighters' boats, and even many of their personal automobiles, are being impounded in Florida.

First our President, then his brother, gave the nonmolestation guarantee to Castro himself, as well as to Khrushchev. That's the fact; all the rest, including the Miami speech, belongs to the moon and to the realm of manipulated news.

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. YOUNGER. Mr. Speaker, to bring the CONGRESSIONAL RECORD readers up to date on the columns written by Arthur Hoppe in the San Francisco Chronicle, I insert, under unanimous consent, his articles which appeared on December 5, 6, 7, and 12, 1962:

[From the San Francisco Chronicle, Dec. 5, 1962]

NO NUDES IS BAD NUDES

(By Arthur Hoppe)

We're going to have a \$30 million National Cultural Center in Washington. Thanks to the warm support of Mr. and Mrs. Kennedy, Mr. and Mrs. Eisenhower, and all the little defense contractors everywhere. If they know what's good for them, I'm against it.

I know Mr. Kennedy says we need one because of the Russians. "Of course, we do not have to point to them to indicate the importance of this work," he said, "but it is of significance that they have made a major effort in this field." So I'm against it.

Look where it got the Russians. Mr. Khrushchev says let's have a little freedom of expression around here. And all the artists happily dash off to splatter up their canvases. Mr. Khrushchev views the results and blows his stack. "Such pictures," he snorts. "You cannot tell if they have been painted by a man or have been daubed by the tail of a donkey."

And the artists, says Moscow radio, warmly thanked Mr. Khrushchev for his "valuable advice and critical comments." Honest.

Now I know, as Mr. Kennedy implies, that we've got to have more national culture than the Russians to win the cold war. But, frankly, I don't think we've got the right kind of artists.

Take J. Artmedes Springbourne, a neo-abstract Dadaist with inner cubistic leanings. He is just proudly hanging his latest work, "Some Second Thoughts on the Aspirations of Man," in our new National Cultural Center. And along comes Senator Hogfrier (Snappin' Sam) Headbone on his annual inspection of our national culture.

"What's that, son?" says the Senator suspiciously. "I think you got it upside down."

"I can't tell you," says Mr. Springbourne, blushing with pleasure as he tries inverting his painting, "how much I appreciate your valuable advice."

"Still don't look like national culture to me, boy," says the Senator, cocking his head. "Looks more like a fried egg painted by the hind quarters of an old drunken nanny goat. With the d.t.'s. And, anyway, the yolk's busted."

"I wish to thank you warmly for your most constructive critical comments," cries Mr. Springbourne happily as he removes his work and jumps up and down on it. "I shall go home to try again."

"You do that, son. And this time get some national culture in it. Like maybe a flag. Or a little barefoot tad with freckles a-going fishing. We got a cold war to win, boy."

No sir. It's not only unbelievable, it's frightening. I figure if Washington tries to mobilize art to win the cold war, as do the Russians, we may well lose both.

Oh, I can see the catalog of our 1984 National Culture Exhibition now: 32 American flags, 16 views of the Statue of Liberty, and the blueprints of a tractor factory. With not a nude in the lot. It could destroy our will to resist.

Personally, I like our national culture just the way it is now: We haven't got any. We've got what I like and we've got what you like. And my culture is none of the Government's business. Let's keep it that way. Because, after all, culture is only a question of taste. Which, in a democracy, is what the other person hasn't got any of.

[From the San Francisco Chronicle, Dec. 6, 1962]

WASHINGTON, WHERE THE RITE PREVAILS

(By Arthur Hoppe)

A few people seem a mite confused by the rumpus over Mr. Adial Stevenson. I can't see why. The facts are clear:

(1) The Saturday Evening Post says Mr. Stevenson felt the Cuba blockade might be going too far. (2) Mr. Kennedy and Mr. Stevenson both issued outraged, horrified, indignant denials of this absurd falsehood. (3) Everybody in Washington said this meant Mr. Stevenson was going to be fired.

I suppose the confusion stems from the fact a few people haven't read the book I'm not writing entitled: "Strange Native Customs in Washington and Other Savage Lands." Allow me to quote from chapter —VI, "Disagreeing With Policy as Compared to Hara-kiri Among the Japanese."

The natives of Washington, unlike other backward areas, convoke meetings only to agree with each other. This rite is called "ironing out our differences." And the rare native with differences is ironed out.

This does not mean, however, that natives summoned to high-level ironing out conferences cannot disagree with their leaders. They can. Indeed, it often earns them the title of "independent thinker." Which, within limits, is an accolade. But they must be careful to disagree only in one direction and only by the well-established ritual of "not far enough."

For example, should the leader of a small tribe like the Hog Advisory Board suggest advising all hogs to bathe their feet in purple ink, an independent thinker might well arise to say: "I disagree, chief. It's a great idea, but it doesn't go far enough. Let's go whole hog."

The key words are "far enough." The leader, by rejecting this extremism, earns himself a reputation for restraint and middle-of-the-roadism, a highly worshipped cult. But should the independent thinker contend that purple ink for hogs is hogwash, he will create disunity; which is awful. He is the automatically declared "not a member of the team" and stripped of his touch football. In extreme cases, he suffers banishment.

Banishment is accomplished in three steps. First, the leader leaks the story that the independent thinker is creating disunity by disagreeing the wrong way. Second, when the story hits the streets, the leader vigorously denies it. The reason he denies it is that he must stand behind his subordinates, a complex native art analyzed briefly in the next six chapters.

The denial also serves to increase the furor. This, in turn, solidifies the independent thinker's image as that of a grumbling malcontent. Eventually, of course, the leader has no choice but to banish this grumbling malcontent "for the common good," with deep regret.

The natives themselves never protest the banishment of one of their fellows. They are far too busy guessing who will replace the man who will replace the man who will re-

place the man who was banished. This ranks as a major native sport, second only to throat cutting.

I assume this clears up the confusion. If not, do purchase my other unwritten book, "Understanding Washington." It's currently being offered as a bonus with "Six Ways to Square the Circle." I trust you will find them both equally profitable.

[From the San Francisco Chronicle, Dec. 7, 1962]

JUST PLAIN JACK, THE HOPE OF PEACE

(By Arthur Hoppe)

Good morning, friends in televisionland. It's time for another episode of "Just Plain Jack," the heart-warming story of a young man's struggle to make a place in the world for his family. Each of them.

As we join "Just Plain Jack" today we find him in the midst of a homey family scene. He is reading "Profiles in Courage." As usual. And the Beautiful Society Girl he married is waxing her water skis while leafing through a stack of movie magazines. Between them, a 70-piece jazz combo accompanies poet Robert Freeze in a recital of his latest ode, "Democrats I have Loved." And John Junior is walling loudly from the staircase.

JACK (irritably). Why are you crying, John Junior? We must never cry.

JOHN JUNIOR. If Uncle Teddy can have a State, why can't I have a State?

JACK. Shut up and do your pushups.

BEAUTIFUL SOCIETY GIRL (whispering). Couldn't we surprise him with one for Christmas, dear? Just a little one. Like maybe Rhode Island. Think how happy it would make him.

JACK. You'll spoil him rotten. Besides, it wouldn't help your image. And speaking of images, I see you're on the cover of "Romantic Romances" again. What's that headline? "My Secret Sex Life."

BEAUTIFUL SOCIETY GIRL. Yes; it's just too horrible.

JACK. Dammit, we'll sue. They can't print articles like that about you.

BEAUTIFUL SOCIETY GIRL. Oh, it isn't about me. It's about Bernard Baruch. I was speaking of the picture. Look how it shows up that freckle under my eye. How much shall we sue for, Bunny?

(The jazz combo hits a crescendo of dramatic dissonance as Mr. Freeze cries, "Ah, Democrats! Party of the common man!" And three dogs scramble through the melee chasing a hamster, followed by a little girl on a galloping pony.)

JACK (hands over ears). Great balls of fire.

BEAUTIFUL SOCIETY GIRL. Don't shout, dear. You must relax. After all, the only duty I care about is to provide a little warm nook in your life where you can relax from the cares of the day in the bosom of your family amidst an esthetic atmosphere.

JACK. You said that in last month's issue of Well-Groomed Ladies Companion.

BEAUTIFUL SOCIETY GIRL. Did I? That reminds me. Why can't my groom, Will, be Ambassador to England? He's been so good with the horses. And he does speak English. Fairly well. And . . .

PORTLY PIERRE, the faithful family retainer (bursting in with a thick volume): Here it is, Chief. The first report of your new Domestic Peace Corps.

JACK (excitedly). Great. What do they recommend?

PORTLY PIERRE. Sending your entire family on a good will tour. To Cuba.

JACK (hand over heart). My only regret is that I have but one wife to give for my country.

Will the Domestic Peace Corps achieve domestic peace? Even for those of us who can't afford to send our wives abroad? Are you out of your mind?

Tune in to our next heart-warming episode. And meanwhile, as you go down the byways of life, folks, remember: when you think of man's eternal struggle for a little domestic peace, pin your hopes on just plain Jack.

[From the San Francisco Chronicle, Dec. 12, 1962]

POPULAR MECHANICS IN THE WHITE HOUSE (By Arthur Hoppe)

Life, the weekly magazine of news analysis for people who can't read, has issued its inside report on the Saturday Evening Post's inside report that Mr. Stevenson had independent thoughts during the Cuba crisis. A nasty charge which everybody's denied. And Life implies the whole episode was a trial balloon.

To clarify things further, I promptly began work on a piece for Popular Mechanics entitled: "How To Build a Trial Balloon With Simple Tools." To check facts, I called first on the U.S. bureau of trial balloons, a little heralded agency in the cupola of the White House.

I caught the director, Mr. John F. (Irish Jack) Mafia, huffing and puffing at a large red model on his desk. "Work, work, work," he said, pausing for breath. "I am blowing my brains out."

Busy, eh? "Under this administration," he said proudly, "we are becoming the most important agency in Washington. Nowadays, nothing's done around here without first running a trial balloon up the flagpole to see who shoots it down. Like this one to test reaction to a summit conference."

And he showed me the legend on the red one saying: "Khrushchev's Got Tertiary Psoriasis and Wants To Spend His Last Christmas in the United States." He then launched it out the window and ducked as it exploded. "You don't want to stand too close," he said, brushing himself off.

An aid hustled in, carrying a huge carton stamped: "One gross—Adlai's usefulness is now ruined—for immediate release."

Was that true about Adlai? "True-shmue," said Mr. Mafia, tossing a dozen out the window in a batch. "My name's not on it. Your name's not on it. Who are people going to argue with?"

"Amazing," I said. But to business. How do you make a trial balloon? "Well, first," he said, "you got to have a leak. High-placed leaks are best. They save stooping. Luckily, this place is lousy with them. The leak inflates the balloon, usually with hot air. Then, by observing how quickly it's shot down, we know precisely how angry it makes the public. If no one shoots it down, the idea it bears aloft automatically becomes official policy."

"An ingenious system," I said. "It's not all beer and skittles," he said. "The heart-rending part comes when the public clamor is very loud and the leak must shoot down his own balloon to show he had no part in launching it."

Outside, the anti-Adlai balloons began exploding. "See?" said Mr. Mafia, shaking his head sadly. I said that was a shame. "Oh," he said, releasing another dozen, "if we send up enough, the clamor gets weaker each time. And it becomes official policy anyway. But it takes a lot more work. And we're on three shifts now."

The heck with that article. Like most devices in Washington this one's too complicated for Popular Mechanics. They'll just have to be the only magazine in the country without an inside story on the Cuba crisis.

Instead, I've decided to launch my own trial balloon. It says: "Government by Trial Balloon Is Devious, Cowardly and Undemocratic." I can't wait to see who shoots it down.

Birmingham's Frank Brooks Yelding Heads U.S. Savings & Loan League

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. HUDDLESTON. Mr. Speaker, one of the outstanding businessmen and civic leaders in Birmingham has recently been elected president of the U.S. Savings & Loan League. He is Frank Brooks Yelding, whose skill and business acumen have made his Jefferson Federal Savings & Loan Association the largest in the State of Alabama.

All of us in Alabama are proud of Frank Yelding and want to share the following article about him which appeared in South on November 26, 1962.

FORMULA FOR GROWTH; SOUNDNESS AT THE TOP

In increasing numbers financial writers and business observers have been seeking to explain the unprecedented growth of the savings and loan industry. Their trail following has led them to certain more obvious factors: Heavy post-war housing demand; rising personal incomes; new office quarters and stepped-up advertising and promotion.

While all these reasons fill vital segments of the whole answer, one of the frequently overlooked but most basic clues is that in almost every major area where rapid expansion attends the savings and loan business there'll be a couple of men who are outstanding executives. They are the men who set the pace.

Such is Alabama's Frank Brooks Yelding, Jr., this month the new president of far-reaching U.S. Savings & Loan League. Personable, easy to meet, Yelding is president of Birmingham's Jefferson Federal Savings & Loan Association, the State's largest such enterprise and one of the top institutions in the Southeast.

Drive, determination, and persistence combined with personal warmth are a natural mixture drawn from Yelding's family background. His grandmother was a widow a year after her ninth child was born, yet managed to run a farm and keep the family together. Her ninth child, Francis B. Yelding, came to young Birmingham after a farm boyhood, arrived penniless, and obtained a job in a small variety store. Eventually he became part owner and then full owner, founding what is now areawide Yelding department store chain.

Born in 1904, Frank Yelding was the fourth son among a family of six boys and one girl, jokes that the size of his family put him in the savings and loan field. "By the time I finished college (Birmingham-Southern)," he recalls "three older brothers were already ahead of me in the family store and I doubted there was room for another brother."

His availability took a fortuitous turn through college friendship with Ervin Jackson, now one of the city's leading businessmen. Jackson's father was majority owner of Jefferson County Building & Loan Association, a stock savings and loan enterprise. The elder Jackson offered Yelding a job and the 21-year-old began the career he's followed ever since.

In the mid-1920's the savings and loan business was surging in the throes of a real estate boom. With assets of more than \$3½ million, Jefferson County Building & Loan was thriving. Interest rates were high, profits excellent. Common stock in the

business was eagerly sought because of generous dividends. Common stock was such a good investment that by 1929, the year Yelding was given the treasurer's title to attach to secretary which he'd held since 1926, that Internal Revenue stepped in. The IRS ruling was that because stock dividends were larger than those paid to holders of optional savings accounts that the association should forfeit its tax-exempt status then permitted all savings and loan groups and pay 5 years' back taxes. IRS finally offered an alternative: Convert the association to a mutual institution. Stockholders grumbled but management accepted and common stock was paid off at par. As things turned out the stockholders got a break. Depression and losses were near.

Because of bountiful post-War II business, some are prone to forget depression. But not Yelding, who vividly remembers the problems faced in weathering "those grim days." He was to hold the secretary-treasurer's joint responsibilities for a decade and a half. After the elder Jackson's death in 1945, Ervin Jackson became president for a year and moved up to chairman. Yelding was elected president. The two men are also partners in an insurance agency and both have other business interests.

Because of population trends and other factors, Yelding believes that conventional savings and loan associations are in somewhat better shape than FHA, now beginning to face the problem of disposing of repossessions. "We're in better shape because most of our borrowers have bigger equities," he says. While he doesn't delude himself into thinking his and Jefferson Federal's policies have built-in protection against mortgage losses, "We try to make good loans and we try to make sure the loans are paid on time." Company policy runs heavily to medium-priced homes loans. "Houses are a lot like autos," he observes, pointing out that medium-priced cars are more readily marketable than luxury models.

A conspicuous element of Yelding's conservatism is his insistence for a relatively high degree of liquidity. At the end of 1961, for example, his firm's savings accounts totaled \$58,360,000 and loans in process \$1,020,142. Cash was at \$2,213,000 and Government securities stood at \$10,131,000. This figures at a ratio of 21 percent to savings, well above of the national 12 to 13 percent average. Why does his company follow this policy of higher liquidity? "Because it helps me sleep nights," he says. The Jefferson Federal enterprise now stands in the \$70 million area.

In 1950, assets were nearing \$6 million. By that time business was making phenomenal strides and in the next 12 years was to grow in excess of 1,000 percent. Yelding doesn't believe that rate will continue but that future progress will be quite respectable.

Behind a calm and relaxed professional exterior, Yelding is a man of restless energy.

The Continuing Problem of Employment

EXTENSION OF REMARKS
OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. CURTIS. Mr. Speaker, in the face of America's continuing economic dynamism, the persistent high level of unemployment among this country's

workers is a serious problem. Each year the American economy hits new highs; even in the slump years we achieve new records of income, gross national product and in the other economic indicators that point to great national prosperity. Yet, even in the peak years we find a disturbing percentage of our labor force out of work.

The New York Times commented on this situation editorially in its December 8 edition. Along with its comments, the editorial pointed out areas in which our country can work to help overcome this problem, expansion of our retraining programs, improved opportunities and apprenticeships for young workers just entering the labor force, reforms of the unemployment compensation program.

No area of public policy deserves closer attention by the Congress than this matter of unemployment. I commend my colleagues who have taken the lead in this field, especially in the enactment of the Manpower Retraining and Development Act of the last Congress. This is an excellent start, but more remains to be done. I shall soon offer some legislative ideas in this field which I believe will help bring our labor force into better position to overcome the unemployment problem and help America meet its potential.

The New York Times editorial follows:
THE SPECIFICS OF UNEMPLOYMENT

There is fresh disappointment in the unemployment figures. Despite a somewhat better business picture, the seasonally adjusted unemployment rate for mid-November rose to 5.8 percent of the labor force compared to 5.5 percent a month ago. The Labor Department attributes the increase to a sharper than seasonal rise in the number of teenagers joining the labor force. Last month's improvement was due to a drop in unemployed women, presumably because they had left the labor force.

Although employment has increased, the number of jobless continues to pose a major economic—and human—problem. Unemployment has hit hardest at those least able to cope with it: the unskilled, the older worker, the Negroes, those whose experience is in depressed industries (like coal mining) or caught in depressed areas, or displaced by machines. There has been only 1 month during the last 5 years when unemployment registered less than 5 percent of the work force, while at present there are almost 400,000 who are listed as hard-core unemployed, without jobs for 27 weeks or longer.

The administration has been counting on a much faster rate of economic growth to absorb the unemployed. Though deficit spending and the Federal Reserve's easy money policies have helped to provide growth, unemployment has remained high. In fact, unemployment has itself been a drag on growth.

Paradoxically, there are jobs going begging in many industries. For the most part, they require skills that the unemployed do not possess. The increasing lack of mobility in the work force makes it especially hard on those in depressed areas who for one reason or another are tied to their homes, for these are the sites least attractive to new industry.

Given these barriers, it is doubtful that resort to general economic policies, whether through deficit spending or easy money or tax reductions, can solve the unemployment problem. A faster rate of economic growth can ameliorate the situation, but specific policies are needed to deal with the specific problems of the jobless. Expanding the

manpower retraining is one essential step; providing greater opportunities to the young, especially in apprenticeship programs, is another. Meanwhile, extension of unemployment benefits is essential to alleviate hardship, particularly among those who are chronically unemployed.

"I'm Fed Up to Here"

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. YOUNGER. Mr. Speaker, the following address by Adm. Ben Moreell, retired, should receive widespread circulation.

That is why I insert it, under unanimous consent, in the Appendix of the CONGRESSIONAL RECORD:

"I'M FED UP TO HERE"

(Keynote address by Adm. Ben Moreell, CEC, USN (retired) chairman, board of trustees, Americans for Constitutional Action, Fifth Human Events Political Action Conference, January 10-12, 1963, Washington, D.C.)

In the idiom of the New Frontier, I am called an ultraconservative. I accept the nomination—provided the title denotes one who tries humbly to follow the trail leading from tyranny to freedom, which was hewed through Government oppression by Washington, Jefferson, Madison, Franklin, Hamilton, and the other pioneers of our Republic. They raised a "standard to which the wise and honest can repair," a standard which retains its integrity because it is rooted deeply in religious faith and eternal principles.

The elements of this standard are: First, man derives, directly from the Creator, his rights to life, to liberty and to the unhampered use of his honestly acquired property and, thus, he is not beholden for them to any human agency; second, to protect his rights he joins with others to establish a government, whose powers are carefully limited and clearly defined in order that they may not be used to usurp the rights they are designed to defend; and third, for man to grow in wisdom and worldly possessions, he must have freedom of choice, a free exchange for ideas as well as for material goods. These rights are to be used without hindrance, so long as the possessor does not interfere with the similar rights of others.

Transcending all is the conviction that for every God-given right there is a collateral responsibility to use that right in strict conformity with the moral law, as revealed in such statements as the Ten Commandments, the Sermon on the Mount and the Golden Rule. When man's appetites are disciplined by such inner restraints, he can establish a society which will require a minimum of external police power to maintain public order, and this, in turn, leads to a maximum of individual freedom.

On this solid foundation, our Founding Fathers erected the social order which became a haven for the oppressed and downtrodden of the earth and a beacon of hope for those who could not escape to our shores. While there was never a dearth of compassion and material help for the needy in our land, the major emphasis was always on opportunity, rather than on relief.

In this climate of freedom, our Nation became the world's cornucopia of spiritual and

material blessings. Over the years it has poured out its abundance for the needy everywhere.

But, in recent decades, our people have been subjected to an unceasing barrage of allegedly "new" ideas. With increasing frequency, and most recently by our President, we have been told that the ideals of the Founding Fathers are "outmoded," their admonitions are "incantations from the forgotten past, worn out slogans, myths and illusions." Individual moral responsibility to God and to one's neighbor has been called a "cliche of our forebears," and we are instructed that this generation must "dismantle itself from an inheritance of truism and stereotype." We are urged to discard the accumulated wisdom of our ancestors and the time-tested traditions of Western civilization as useless impediments because the state now assumes full responsibility for the welfare of its subjects.

Unfortunately, many of us have yielded to these seductions. We have surrendered the solid substance of freedom for the illusory promise of security. In doing so, we have permitted the structure of our free society to be weakened and its foundations eroded to the point where there is grave danger of collapse.

All of us must share the blame for this debacle. Over the past 50 years we have participated in the propagation of a misplaced faith in the ability of government to accomplish any material, economic, social or moral purpose. Implementing this faith, we have thrust enormous powers on government, or we have stood by meekly while government has seized authority at an ever increasing pace and has centralized it in Washington, far removed from the control of those from whom it was obtained. Such enhancement of political power at the expense of individual rights is correctly labeled "socialism."

The tendency of citizens in all walks of life is to be complacent about government intrusion that does not encroach upon what each one believes is his own domain. We are apathetic about the general socialist drift. Frequently, we support collectivist measures which, it is claimed will "promote the general welfare," or will "stimulate the economy of the community" where we live. But we should now be aware that we are threatened by total state socialism, an ancient tyranny under a modern disguise. If we are to survive as a Nation of free men, we must oppose socialism with all our vigor wherever it appears. If our sole concern is that aspect of socialism which affects directly our own business, our own industry or our own community, we will contribute to the advance of State Socialism on other fronts by our neglect, and thus weaken the entire structure of freedom.

It is said that the people never give up their liberties except under some delusion. We have been surrendering our liberties under the delusion that government has some superior competence in the realm of economics, some magic multiplier of wealth, some ready access to a huge store of economic goods which may be had without working for them—merely by voting for them.

None of us is completely immune to these delusions or to the human passions aroused by the four horsemen of our own apocalypse, ignorance, fear, apathy and greed. Nevertheless, those who see the inevitable end of this progression are dutybound to sound the alarm. I will, therefore, present my thoughts on some specific aspects of our current situation.

The great iniquity of our times is that so many are trying to tell others how to live their lives. They ask, plaintively, "How can we do good for the people if we just let them alone?" As for me, "I'm fed up to here" with so-called masterminds, with states-

men, clergymen, schoolmasters and politicians who, though frequently unable to administer the affairs of their own small households, have no doubt of their ability to spell out, in detail, what, when, where and how 183 million Americans and countless other millions throughout the world must do to have a more abundant life.

"I'm fed up to here" with pseudo statesmen, whose wishbones are where their backbones ought to be, who are past masters of surrender, compromise, appeasement and accommodation, who believe we can buy friends like sacks of potatoes, who fawn upon, cajole and pamper our enemies and the so-called unaligned nations while they kick our time-tested friends in the teeth, who shiver and shake when "world opinion" is mentioned, who would depend upon U.N. mercenaries to protect the security of these United States, who never become surfeited with Soviet lies and deceit, who believe that the next time Khrushchev will surely honor his commitment, and who hold that the Russian Bear will soon change his claws and fangs for olive branches and rose petals.

"I'm fed up to here" with the wiser-than-thou, self-anointed oracles who insist that differences of opinion on foreign policy should stop at the water's edge and that free Americans must not criticize programs conceived and implemented by our "no-win diplomats" who, over the past 30 years, have racked up an almost unbroken string of losses to communism throughout the world; with those who would trade American lives, limbs, goods and services for Communist promises; with those who believe that the Castro Communist cancer has now been excised from the body politic of the Western Hemisphere; with those who are determined to democratize the Katangans even if necessary to kill them and destroy their property in the process; and with those who insist that we must subsidize, with massive foreign aid, arrogant Socialist and Communist governments all over the world though, while doing so, we help their dictators enslave their peoples.

"I'm fed up to here" with Robin Hood government that promises to rob the rich to pay the poor (in return for votes) and, when there are not enough rich left to pay the bills, robs both rich and poor alike to pay Robin Hood; with those who would tax and tax, spend and spend, elect and elect in the expectation that the day of reckoning will come after they are gone; with candidates who run on a platform of "I can get more from the Government for you," without reminder of what the Government must take from you; with officials who use defense contracts as instruments of political advantage; with politicians who think that a relief check means as much to an American as a decent job; with Government agencies which harass our industries with antitrust suits, threaten them with loss of Government contracts, dictate their economic decisions on costs and prices, resort to biased interference with their labor relations, burden them with punitive taxation and regulation, or tempt them to conform by promising lucrative contracts. What do you think Khrushchev would give to have General Motors, Dupont, General Electric, United States Steel, and Lockheed on his team?

"I'm fed up to here" with businessmen who are so busy making and selling widgets at a steadily decreasing profit, that they have no time or energy left to fight for preserving the system that makes their business possible; who do not protest Government intimidation and interference; who support socialist projects of short-range advantage to themselves; who finance foundations, schools, churches, cultural activities, news media and political parties which expound and promote socialist doctrine; or who "play ball" with the political apparatus in power

when there is a potential payoff in the form of subsidies, loans or contracts.

"I'm fed up to here" with farmers who boast of their rugged individualism but demand guaranteed incomes, public power and irrigation; with doctors who oppose socialized medicine but plug for subsidized medical education, research and hospitals; with educators who profess a belief in personal responsibility as a builder of character but insist that Government aid to education is essential for national survival; with scientists who demand freedom of inquiry, but favor Government-financed (and controlled) research; and with union officials who demand special laws which exempt them from the responsibilities of other citizens and give them exclusive power to regiment their members, to dictate their political allegiance and to practice physical violence on persons and property when they deem this necessary "to conserve labor's gains."

I could go on, reciting the things we have left undone that we ought to have done and the things we have done that we ought not to have done. But I have said enough to support the charge that all of us must share the blame for our present predicament.

Where do we go from here? Perhaps the first thing each one should do is look into a mirror to see "what manner of man he is" and keep looking, until he knows the principles for which he stands and which he will not compromise. Once this is done, he can seek out those in Government who share his views, as well as others of like mind who are willing to serve in similar posts. We must sustain and support them with every resource at our command, for they are fighting our battles. And we must try with might and main to increase their numbers. This should be our target for 1963 and 1964. The hour is late. This may well be our last chance.

We can have the kind of Government we demand. Let us demand what history has taught us is right for us. Our fighting men and women in legislative halls throughout the land will win, provided we give them the support they must have to regain our lost freedoms.

Let Congress Take Note

EXTENSION OF REMARKS OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. MEADER. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Adrian (Mich.) Daily Telegram of January 4, 1963:

LET CONGRESS TAKE NOTE

The lobby for Federal aid to the schools is as active as ever as the time for convening Congress nears. As usual, it is pointing out how vital to the educational system such aid would be. But it is saying nothing at all about the opinion expressed in a recent testing of opinion about Federal school aid.

This poll was taken by the National School Boards Association. It showed that 55 percent of 90,000 school board members queried across the Nation were opposed to Federal aid. Only 30 percent of those replying to a questionnaire said they believed such aid was necessary.

School board members are most directly concerned with raising money with which to operate the schools. They must do the worrying when funds are not sufficient to keep the schools going. But they are un-

willing to take the easy way of relying on the Federal Government for supplementary revenues.

School board members are not only close to school operations, they are close to the people. The majority of them seem to think that if local communities ever turn over to the Federal Government the responsibility for keeping the schools open the schools will suffer. The best school systems are in communities where the citizens are interested enough to see that they have enough money to operate at a high level. If the people are relieved of this worry, they are apt to cease being concerned with what goes on in their schools. Local responsibility is the cornerstone of the American system of public education.

The new Congress should note the results of the poll of school boards on Federal aid to the school system.

**A Christmas Prayer, 1962, by Hon.
Dewey Short**

**EXTENSION OF REMARKS
OF**

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. HALL. Mr. Speaker, under unanimous consent permission to revise and extend my remarks in the Appendix of the Record, I enclose herewith the "Christmas Prayer, 1962," by the Honorable Dewey Short, of Missouri.

The writer is an ordained minister and served 24 years in this House and 4 years as Assistant Secretary of the Army. Many of us recall him as the silver-tongued orator of the Ozarks. Although we received this deep-rooted and thoughtful prayer individually, it is my desire that it be preserved in the Record and made available to all because of its universal application and acceptability to those of us who believe in trust in Divine guidance. I commend it to all with respect and humility:

MY CHRISTMAS PRAYER, 1962

Our Heavenly Father, safely Thou hast brought us through another year. Thou hast spared us the ravages of fire, flood, and famine. Thou hast saved us from the horrors and destruction of devastating war.

For Thy countless blessings on this day and every day we give Thee our endless and sincere thanks. For the majesty of mountains, the silence of silver stars, the bountiful fruits of fields, forests, and streams, the understanding, sympathy, and help of families and friends we express our undying gratitude. Bless Thou especially those who have lost loved ones; comfort, strengthen, and sustain them which only Thy great love can do.

God of truth, beauty, and goodness, we are not worthy of Thy gifts but we want to emulate Thee and with humble minds and contrite hearts walk in Thy way. Help us, we beseech Thee, to preserve this Republic of ours, to keep it a land of freedom, opportunity, and justice and to strive constantly and untriflingly to make it a kingdom of Heaven on-earth.

O Lord, save us from idle gossip, from small and petty talk. May we never envy those who have more but always help those who have less. Teach us the relativity of

things and give us a true sense of values. Let courtesy, consideration, kindness, and generosity rule in our hearts and guide our lives. We do not want to think of ourselves "more highly than we ought to think." Help us to keep our sense of humor and add to the sum of human joy. Let us walk with God and go about doing good.

And now, our Father God, may our faith in Thee and in one another never wane; may we hope even "when hope is out of sight," and may we love each other as Thou hast loved us, that through sacrifice and service we can bring to a wretched, distraught, and divided world a united, just, and lasting peace. May we live or even die for it as the Master did. In His name we pray. Amen.

You will always be in my thoughts and prayers. Happy New Year.

DEWEY SHORT.

U.N. Atrocity

**EXTENSION OF REMARKS
OF**

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mrs. ST. GEORGE. Mr. Speaker, the two following editorials appeared in the Washington Star of January 5 and 7, respectively.

They bring to our attention the very sad state of things in the Congo and the deplorable part that both the United States and the United Nations have played in this whole catastrophe.

Atrocities have been committed by U.N. troops, but these are lightly brushed aside, and an Indian officer says:

It should never have happened.

Shades of Gandhi.

Yes, we have traveled a long way from nonresistance, and a still longer way since Great Britain submitted to it. Maybe India would still be a part of the British Empire if England had been able to call on the U.N. troops for support.

[From the Evening Star, Jan. 5, 1963]

U.N. Atrocity

The senseless murder of two women by U.N. troops in Jadotville is a shocking thing. But it is not wholly surprising. It is, rather, a culminating horror in the U.N. war to destroy secessionist Katanga and the political power of its president, Moïse Tshombe.

The U.N., of course, does not admit that it is waging war to crush Katanga's secession. On the contrary, it denies it. It says its wants peace, not war, and that it has no intention of trying to impose a political settlement on Katanga by force of arms. These sentiments were plausibly echoed by our own highest officials as far back as a year ago. But the facts speak for themselves.

Last week Katangese soldiers, apparently beyond Tshombe's control, started firing at U.N. forces in Elisabethville. On December 29, after his palace had been surrounded, Tshombe fled from the city, and on that same day a grim-faced U.N. official in New York said: "This time there will be no stopping short of total victory."

The trigger-happy Katangans were quickly routed in Elisabethville, and U.N. Secretary-General U Thant said on January 1 that "all firing and fighting had ceased" as of December 30. He renewed his assurance that the U.N. would not use force for political ends,

and, on January 2, gave assurance that "the U.N. forces will resort to fire only when fired upon."

The U.N. troops in Katanga, however, chose to ignore all of this. Apparently in pursuit of the promised "total victory," they fought their way into Jadotville, miles away, which had been abandoned by retreating Katangese forces. And there, 2 days after Mr. U Thant's assurance, a detachment of U.N. Indian troops opened fire with machineguns and rifles on a passing Volkswagen. The driver, a cement worker who had been urged to return to Jadotville, was shot in the face. His wife and a woman companion were killed. An Indian officer on the scene said: "It should never have happened."

But it did happen. And the most dedicated apologist for the U.N. cannot deny this or attribute it to bad reporting. The memory of the bleeding, anguished husband, crouched by his bullet-shattered car with upraised hands and asking: "Why, Why, Why?", will linger on.

His answer should come from those who try to justify what has been happening in the Congo by painting Tshombe as the "bad guy" and Cyrille Adoula as the "good guy."

Our State Department officials, or at least most of them, do not offer any such simple and simple-minded justification. Nevertheless, the United States is backing the U.N. in its biased effort to do what it has repeatedly said it is not doing, and what it lacks authority to do. It may succeed in the sense that Tshombe will be destroyed. When the last chapter is written, however, we doubt that many Americans will take pride in the story.

[From the Evening Star, Jan. 7, 1963]

CONGO SETTLEMENT

Secretary of State Dean Rusk is said to believe that there is now "a real chance" for a quick settlement of the "Katangan problem." If this means that the United Nations, by force of arms, has smashed Katanga's resistance and can now proceed to impose a political settlement, it probably is correct.

The price will be high—not in a military sense, for casualties in the superior U.N. force have been insignificant. It will be expensive, however, in terms of morality. For the U.N. with our active support, is doing what it has no authority to do under its charter, and what it has repeatedly pledged that it would not do.

The rationale is that Premier Adoula of the central government in Leopoldville must be effectively supported, and that this can be done only by crushing Katanga's secession and forcing the President of that province, Moïse Tshombe, to split its revenues with the national government. Unless this is done, it is argued, Adoula will fall, his successor probably would be more Communist-oriented, and the Reds would regain their foothold in the Congo. It is argued further that the "Katangan problem" must be dealt with promptly, since the Indian troops, the best combat unit in the U.N. command, soon will be withdrawn, and the U.N. funds are running low.

Even if one accepts all this as being factual, it still is an utterly cynical attempt to justify what is being done. The U Thant plan, to cite but one example, calls for adoption of a new constitution for the Congo, under which Katanga would enjoy a considerable measure of autonomy. This constitution was submitted to the Leopoldville Parliament last September, but it has never been brought up for a vote. Why not? Because Premier Adoula is afraid that his Parliament, which has been "recessed" until March, might vote down the proposed constitution and vote him out of office at the same time. So the U.N., with American support, is in the unadmirable position of using

armed force in violation of its charter to compel Tshombe to submit to a proposed constitution which has never been voted upon and which may never be ratified.

Whatever the expedient arguments for this course, we do not think history's judgment will be flattering.

Problem Arising From the Two-Price Cotton System

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. HEMPHILL. Mr. Speaker, Mr. Charles A. Cannon, a leading textile executive of my neighboring State of North Carolina, who has plants and employees in my district, recently made a statement before the Cotton Subcommittee of the Agriculture Committee, U.S. House of Representatives.

While the testimony of Mr. Cannon will be included in the printed hearings of that subcommittee, I believe the Nation as a whole, through the medium of the CONGRESSIONAL RECORD, should be familiarized with his excellent summation of the problems arising from the two-price cotton system presently in effect in this country as we deal with our domestic and foreign problems in cotton textiles.

His testimony is so well prepared that any comment from others would be entirely superfluous and, under unanimous consent, I include his remarks at this point in the RECORD:

TESTIMONY OF C. A. CANNON, CHAIRMAN, COTTON POLICY COMMITTEE, AMERICAN TEXTILE MANUFACTURERS INSTITUTE, IN SUPPORT OF THE OBJECTIVE TO ELIMINATE TWO-PRICE COTTON BEFORE THE COTTON SUBCOMMITTEE OF THE AGRICULTURE COMMITTEE, THE U.S. HOUSE OF REPRESENTATIVES, DECEMBER 13, 1962

INTRODUCTION

Mr. Chairman and gentlemen of the committee, I wish to thank you for the privilege of appearing before this committee in support of the objective to eliminate the two-price cotton system.

I am C.A. Cannon, chairman of the board of the Cannon Mills Co., of Kannapolis, N.C. At present I am serving as chairman of the Cotton Policy Committee of the American Textile Manufacturers Institute, the national trade association which represents approximately 90 percent of the spinners and weavers of textiles from cotton, man-made fibers and silk in the United States. I appear before you today in this capacity as well as in my individual capacity as a textile manufacturer interested in the elimination of the two-price cotton system.

The testimony which I will present to you has been approved and authorized by the American Textile Manufacturers Institute, and I assure you that I wholeheartedly subscribe to it personally.

A cotton policy resolution which expresses the desire of the American textile industry to have the two-price cotton system eliminated completely was adopted by the ATMI on October 12, 1962. This resolution reads in part:

"(1) As early as possible, a return to a one-price system for American cotton, whether sold at home or abroad.

"(2) The exclusion of any form of processing tax on manufactured cotton products.

"(3) Movement of cotton through normal trade channels rather than Government hands.

"(4) A fair procedure in respect to the net income position of the cotton farmer.

"(5) An increase in cotton acreage realistically geared to the increase in the demand for U.S. cotton that will result from a sound long-range cotton program."

BACKGROUND

There are two separate historical developments which bear upon this subject which I wish to summarize briefly for you: first, the import trend of cotton textiles into the United States and, second, the history of two-price cotton.

I. The import picture

In the past 10 years U.S. imports of foreign-made cotton products from all over the world have risen from the average cotton equivalent of 68,000 bales in 1952, to 225,000 bales in 1956, to 526,000 bales in 1960, and it now appears that imports of cotton products during 1962 will reach nearly 700,000-bale equivalents or more than 1,200 million-square-yard equivalents of cotton textiles. These imports are not only disrupting the markets for American-made textiles but they are rapidly taking away the farmers' market for American-grown cotton.

American textile mills in 1952 used approximately 150 bales of American-grown cotton for one bale equivalent of imported cotton textiles. In 1962 U.S. mills will consume only 13 bales for each imported bale equivalent. A return to a one-price cotton system can reverse this trend which, if continued, will be disastrous to the American cotton economy.

The Geneva Short-Term Cotton Textile Arrangement was designed to hold imports at the fiscal year 1961 level of 812 million-square-yard equivalents for the 12 month period ending September 30, 1962. The record is now complete and total imports for the short-term arrangement year reached 1,113-million-square-yard equivalents, an excess of 37 percent.

Preliminary figures on imports of cotton cloth alone (excluding all yarn, apparel, and other textiles) show that the October 1962 import rate of 46 million square yards is more than double the October 1961 imports of 21 million square yards. For the 10-month January-October 1962 period, these cotton cloth imports have reached 399 million square yards compared to only 198 million in the similar January-October 1961 period and 10 months at the October 1962 rate would reach 460 million square yards.

A significant factor in these excessive imports is the cost advantage that foreign textile producing nations have over domestic mills in the purchase of raw cotton.

The rising trend in imports of cotton yarn and heavy constructions of cotton cloth is clearly the result of the raw cotton cost advantage that foreign mills have over domestic mills because of the two-price cotton system. Imports of cotton yarn alone have jumped 117 times since the beginning of the two-price system in 1956—from only 865,000 square yard equivalents to an estimated 102 million square yards for 1962.

II. History of two-price cotton

American cotton textile mills have been prohibited by law since 1939 from buying foreign grown upland cotton in excess of about 30,000 bales a year—less than the amount of cotton consumed in 1 day by U.S. mills.

The Federal Government, to stabilize cotton production and farm income, has embraced a policy of price supports which has resulted in American cotton being priced higher than foreign grown cotton.

Since 1956, the Government has subsidized the export of American raw cotton at a rate equal to the difference between the U.S. and world prices; since August 1, 1961, by direction of the Secretary of Agriculture, this difference and subsidy has been at the rate of 8½ cents per pound, or \$42.50 a bale.

The upward import trend of cotton products for the most part has occurred since 1956, when the raw cotton export subsidy program was initiated creating the two-price system.

Foreign mills have been able to buy cotton—either American or foreign grown—at prices far below those at which American mills are required to pay by law.

Obviously these conditions—all Government imposed—have created a patently unfair circumstance which serves to throttle an essential American industry and prevent it from realizing its full potential to consume cotton, to contribute to the employment of American labor and the Nation's economic strength.

THE PRESIDENT'S REQUEST

On September 6, 1962, the Tariff Commission, by a vote of 3 to 2 rejected the Department of Agriculture's request that an equalization fee be put on the cotton content of textile imports.

On this same day, the President in commenting upon the Tariff Commission finding, stated in part:

"Thus, the inequity of the two-price system of cotton costs remains as a unique burden upon the American textile industry for which a solution must be found in the near future.

"I am, therefore, requesting the Department of Agriculture to give immediate attention to the formulation of a domestic program that would eliminate this inequity. I am also instructing all other departments and offices of the executive branch to cooperate fully to this end."

The President observed, in addition, that because the objective undoubtedly could be achieved only through legislative action, he would ask the next session of Congress to enact legislation, "designed to remove the inequity created by the present two-price cotton system."

It is with a great deal of satisfaction that we are privileged to participate in these hearings which have been called as a consequence of this expressed desire of the President.

The domestic textile industry enthusiastically agrees with the President that "the inequity of the two-price system of cotton costs * * *" is "a unique burden upon the American textile industry * * *" and requires "immediate attention to the formulation of a domestic program that would eliminate this inequity."

It is the considered judgment of the industry that this inequity should be abolished completely and at once.

The idea has been advanced that the inequity can be eliminated by something less than a return to a clear-cut one-price system for cotton, under which the American-grown product would be available to domestic mills and for export at the same price. This idea is both irrelevant and erroneous.

It is irrelevant because the President has directed that the two-price cotton system be abolished.

It is erroneous because the idea is apparently predicated on the belief that it costs foreign mills more to take cotton from the United States and send goods back than it

costs domestic mills to bring cotton to the mill and ship goods to the consuming centers.

The differences in the cost of marketing and distribution of cotton and cotton textiles prior to 1956 before the advent of the two-price cotton system, are present today, and anything less than a complete return to a one-price system will perpetuate that portion of the inequity which is allowed to remain.

Since the advent of two-price cotton, active cotton system spindles have dropped 9.1 percent of the remaining spindles formerly running on cottons, 11.8 percent, or 2,217,000, are consuming manmade or other fibers.

Furthermore, textile employment has decreased by 180,000 workers; per capita mill consumption of cotton has dropped by 3.7 pounds; and imports of cotton textiles continue their relentless upward surge.

Beyond question the import experience of the past few years demonstrates that the devastating impact of these imports cannot and will not be brought under reasonable control until American mills can buy American cotton at the same price foreign mills can purchase it.

The difficulties encountered in the administration of the 1-year International Cotton Textile Arrangement because of the two-price cotton program are carried over into the 5-Year International Cotton Textile Arrangement (October 1, 1962-September 30, 1967), and will continue unless corrected by the establishment of one-price cotton.

To allow these imports to continue at their present rate is to cause a further deterioration in the American textile industry, with its inevitable adverse impact on the entire cotton economy and the millions dependent upon it for livelihood.

U.S. mills must use only American-grown uplands-type cotton, purchased at the U.S. Government-supported price, except for an amount equal to less than 1 day's supply per year. In the 1962-63 cotton season an estimated 34.7 million bales, produced outside the United States, will be available to foreign mills at whatever prices they can bargain for. The result is that the foreigners can and will buy 85 percent of their requirements at prices even lower than the subsidized U.S. export price.

The price of foreign cotton is to 1 to 1½ cents per pound less than the price of U.S. cotton in foreign markets. This is in spite of the requirement in section 203 of the Agricultural Act of 1956 that U.S. cotton be competitively priced abroad. Thus, the inequity for the American mill in many instances is not restricted to the current 8½-cent differential—it is in the neighborhood of 9½ to 10 cents per pound or something more. When adjustments are made for the manufacturing waste losses involved in the higher priced cotton, the inequity is even greater.

The United States is rapidly losing its position as the most important cotton-producing nation in the world. Over the years, the domestic textile industry has proven to be the principal and most dependable outlet for this production.

Notwithstanding these facts, as a nation, we have been pursuing policies which penalize our textile industry and which work against the interest of our farmers. We have been favoring our foreign competitors by making cotton available to them on more favorable terms than it is made available to domestic mills. Primarily, as a result of this policy, we have a shrinking textile industry; the domestic use of cotton is declining; the number of cotton spindles is being constantly reduced; and the incentive for investment in new plants and equipment is weakened. Under these circumstances, the cotton industry as a whole cannot contribute to the fullest extent of its capability to the Nation's economic growth.

What does this mean to American cotton farmers? What does this mean to our national economy? It means loss of markets for cotton. It means loss of employment for workers.

The system under which we have been operating is destined to destroy the American cotton farmer because it is constantly weakening the textile industry upon which the cotton farmer must depend to process and market his crop.

A bale of cotton is virtually worthless until it moves through cotton textile spindles and is further processed. Thus, except for an uncertain export market, the strength of our Nation's raw cotton economy cannot possibly be any greater than that of the industry through which the product moves to market.

A healthy expanding textile industry with maximum employment and increasing cotton consumption is important not only to millions of those engaged in producing and handling cotton, but it is also vital to the growth and strength of the U.S. economy. The loss of cotton spindles is the loss of the potential to provide a reliable market for American cotton.

The U.S. textile industry is at the forefront in the effort to modernize its plants and equipment and maintain the capacity to spin American grown cotton. In 1962 the textile industry will spend for modernization an estimated \$1.78 for each \$1 of allowed depreciation compared to an all manufacturing industry average of only \$1.19. In 1960 the textile industry spent an average of 30 percent more, and in 1961, 29 percent more for plant modernization than did all manufacturing industries.

Since the President and the administration have recognized the existence of the undesirability of the two-price cotton system, and have resolved to abolish it, the sooner it is forthrightly and completely accomplished, the better it will be for all concerned.

Section 203 of the Agricultural Act of 1956 requires that we make cotton competitive to world prices in order to reestablish and maintain our fair historical share of the world market for cotton. The United States continues to be the residual supplier of cotton for the world market and an export of 5 million bales cannot continue to constitute a fair percentage share of a rising level of cotton production and consumption throughout the world.

Expanding cotton exports for dollars is important to cotton farmers and to the industry. It is also vital to the maintenance of a favorable international balance of payments and our gold reserves and, hence, to the maintenance of our military posture abroad and our fiscal soundness at home.

Cotton is losing markets here at home to a wide variety of competing fibers and other products. Highly detailed studies by the Department of Agriculture, the National Cotton Council, and the textile industry itself demonstrate beyond question that current price levels are destroying markets.

For example, rayon staple fiber production, with an increasing price advantage, continues to advance in the United States. From 1955, when production of rayon staple fiber was 9.9 percent of U.S. cotton consumption, it had increased to 11.8 percent in 1961. The increased production and use of other manmade fibers, not only replaces cotton at the mill door but also displaces farm jobs and related cotton processing facilities.

It is the considered judgment of textile manufacturers who consume millions of bales of cotton annually, and who are constantly exploring every conceivable market outlet, that a return to a one-price system for cotton would give cotton an opportunity to share equitably in market expansion and regain some of its losses.

Over the past decade the U.S. population has increased by nearly 30 million persons, yet cotton consumption has shown no growth and has remained relative constant.

Over and beyond the cold competitive impact involved, a forthright one-price policy would have a tremendous psychological effect on both users and competitors of cotton. To the users it would provide new hope and confidence, with consequent investment incentives, where a lack of confidence now exists; to the competitors it would serve as a warning not to develop or expand competitive products based entirely on an artificially high cotton cost.

The U.S. Government backed by a broad cross section of public opinion, apparently is committed to a policy of removing barriers and freeing trade throughout the world. Passage of the Trade Expansion Act of 1962 opens the door for severe changes in trade patterns. Although the policy has not yet been applied to most major agricultural products, there is no guarantee that this situation is permanent.

Cotton enjoys (1) a supported price substantially above the world level, (2) a virtually complete embargo on competitive raw cotton imports—therefore, a monopoly on domestic consumption, and (3) a legislated provision that export sales must be subsidized to whatever extent is necessary to insure export sales abroad at historic levels.

Everything considered, raw cotton enjoys what is probably the most complete protection of any important American product, either agricultural or manufactured.

However, this preferred position is jeopardized so long as foreign mills can buy U.S. produced cotton at a price below that which U.S. mills are required to pay.

CONCLUSION

The need for a return to one-price cotton is clear. The President has recognized this need and directed that it be met by the cooperation of all relevant interests in the executive branch of Government. The cotton industry supports the decision of the President and is eager to assist in designing the most desirable method of correcting the situation.

We appear here today representing an industry that uses and knows cotton and cotton's problems but even as the cotton producer must look to us to spin his bales, we must look to the market to consume our cotton textiles.

We have a tremendous investment in plants and equipment to process cotton and the American cotton farmer has a tremendous stake in the future of cotton.

If we look ahead under the two-price system we can see the rising trend of foreign-made cotton textile imports, inactive cotton spindles, bales of cotton piling up in warehouses and domestic consumption dropping to 7 million bales annually. When domestic mill consumption of cotton falls to 7 million bales we will need only 14 million acres to produce the cotton crop.

On the other hand, we can see a return to a one-price system, fewer cotton textile imports, more spindles active on cotton, and domestic cotton consumption rising with benefits of a healthy cotton economy spread all the way from farm to consumer.

A complete return to a one-price system for cotton in the United States could mean an annual cost saving to the consuming public of a probable \$600 to \$800 million when the initial cotton cost reduction is carried all the way through the textile pipeline to the retail counter.

Textile markets already reflect uncertainty and hesitation attendant the timetable of carrying out the President's decision to abolish two-price cotton. Delay in getting the job done will continue to paralyze the market. Foreign mills will continue

to buy cotton at an unfair price advantage compared to American mills.

Over and beyond the considerations we have been discussing, which obviously are important to all elements of the cotton industry, is the relationship of this subject to the national security of our country.

The military cannot function in hot climates without hot weather clothing; it cannot function in cold climates without cold weather clothing.

The work force of this Nation that must support a military effort cannot function without work clothing.

In addition, there are hundreds and hundreds of items involving textile products that are absolutely essential to the success of a military operation.

In 1941 and 1942 the stocks of cotton we had on hand in this country became a tremendous blessing, a lifesaver without which our military effort would have been seriously impaired. During the Korean conflict our stocks of cotton were so low that embargoes were placed on export shipments, and prices in the rest of the world rose to 80 or 90 cents per pound.

In 1942, during the peak of World War II, we consumed 11.2 million bales of cotton in this country; for the past 5 years consumption has reached 9 million bales only once. In 1942 our cotton system spindles in place were 23,971,000; today they number 19,609,000, and for the past 3 years have been decreasing at the rate of about 40,000 monthly.

An announcement has been made that cotton acreage will be reduced by 2 million acres next year because offtake is not equaling production.

Knowing as we do the absolute essentiality of cotton products in time of a national emergency, having learned from experience that we can depend only upon our own raw cotton supplies and our own textile industry when the chips are down, it is inconceivable that we can sit here—irrespective of all other considerations—and permit a continuation of policies that are having the twofold effect of killing off cotton markets and cotton production, and, at the same time, drying up the industry through which the raw material is transformed into items essential to the preservation of our people and our country.

Again, Mr. Chairman and gentlemen of the committee, I wish to thank you for the privilege of appearing before you in support of the President of the United States in his desire to abolish two-price cotton.

I thank you.

Outlaw Political Extortion of Federal Employees

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. BYRNES of Wisconsin. Mr. Speaker, I have today reintroduced legislation making it a criminal offense to threaten Federal employees with the loss of their jobs in the event they do not contribute to a political party.

This legislation is made necessary by the refusal of the Justice Department to use laws now on the books to prosecute party fund solicitors who coerce Federal employees into party contributions under threat of being fired.

In the last Congress I was unable to get any action by the Justice Department in such a case involving alleged threats of a Democratic fund solicitor against postal employees in my district. By a strange interpretation of the law, the Department maintains that it is legal for anyone, who is not a Federal employee, to threaten Federal employees with job loss as a means of coercing contributions to the party in power.

It is regrettable that Congress is forced to restate a law which clearly prohibits such pernicious activity. It is regrettable that Federal employees will be without the protection of the law until Congress is able to act. It is regrettable that the civil rights of those employees can still be violated with impunity.

I urge prompt passage of the bill. It reads as follows:

Whoever, directly or indirectly, deprives, attempts to deprive, or threatens to deprive any person of any employment, position, work, compensation or other benefit provided for or made possible by any Act of Congress, in an effort to force participation in any political activity, or support or opposition to any candidate or political party, or financial contributions to any candidate or political party, shall be fined not more than \$1,000 or imprisoned not more than one year, or both.

Clare E. Hoffman

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. FORD. Mr. Speaker, for the first time in 28 years Clare Hoffman is not in Congress to represent the people of the Fourth District of Michigan.

The Holland Evening Sentinel published in my congressional district but also circulating in Mr. Hoffman's former district commented on Clare's absence in an editorial Friday, January 4, 1963.

Under leave to extend my remarks I include this editorial.

CLARE E. HOFFMAN

Congressman Clare E. Hoffman has finished his career as our Congressman from the Fourth District of six counties—Allegan, Barry, Berrien, Cass, St. Joseph, and Van Buren after 28 years.

Millions of people over the country will remember Clare as a fighting Congressman and one that stood up for what he believed. There is no doubt in our mind that our country is much better for having Clare represent the Fourth District for so many years. As long as Clare wanted to represent the district in Washington we, the people, were more than glad to get out and work for him.

We have talked with lots of people who did not always agree with Clare but he was a power in Congress and was always looking for ways to save the taxpayers' dollars. He had the courage to speak out. The CONGRESSIONAL RECORD holds many of his speeches defending the principles for which he stood.

Clare had the courage of his convictions and was not afraid to stand up and tell the Congress where he stood.

Twenty-eight years is a long time to represent the people of the district in Congress. We wish Clare much leisure time to reflect on the service to his country.

Lucky America?

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. MINSHALL. Mr. Speaker, in the December 31 issue of U.S. News & World Report, Mr. David Lawrence, the distinguished editor of that magazine, wrote a brilliant recapitulation of the sorry sequence of events which has led us into our present, perilous position. I hope that every Member of Congress will take the time to read Mr. Lawrence's article:

LUCKY AMERICA?

(By David Lawrence)

"I think we ought to be rather pleased with ourselves this Christmas."

So spoke President Kennedy at the end of a television interview on December 17. But wouldn't it be more realistic to say that maybe it was by the grace of God the American people were saved from a horrible calamity? Indeed, the facts now show there was a dangerous delay in decisionmaking by the President.

For Mr. Kennedy has just made an unwitting confession of how a confused and risky system of policymaking preceded the action he finally took to protect the people of the United States against a nuclear attack from Soviet bases in Cuba.

The President made some amazing revelations in that interview. The full text of it is printed in 10 pages of this issue. Unfortunately, the American people heard only one side of the story, and the same TV and radio audience may never get the facts in rebuttal. Nor were the listeners reminded of certain statements made in October by the President and Secretary of Defense McNamara which have a direct bearing on the latest explanation of what happened in the Cuban crisis.

Thus, the President made a rather startling disclosure when he said: "I don't think that we expected that he [Khrushchev] would put the missiles in Cuba, because it would have seemed such an imprudent action for him to take, as it was later proved. Now, he obviously must have thought that he could do it in secret and that the United States would accept it. So that he did not judge our intentions accurately."

But did we judge Mr. Khrushchev's intentions opportunely and accurately? Or did we fumble for several weeks, and were we just lucky in the end?

Our vacillating course was revealed when the President replied to a question as to whether he was tempted to show Soviet Foreign Minister Gromyko at the White House our photographs of the missile bases in Cuba. Mr. Kennedy said: "No, because our information was incomplete and we had not completely determined what our policy would be. The information came in Tuesday (October 16). Our conversation was on Thursday. We were carrying out intensive reconnaissance. We were still considering the advisability of another course of action. And therefore it would have been very unwise for us to inform him [Gromyko] in detail of what we knew. We did not want to give him the satisfaction of announcing what he was doing. I think it was very im-

portant that the United States announced it before he did."

What kind of game was being played? Who was deceiving whom? The security of the United States was at stake. Yet as late as October 18, the President had made no decision. A month earlier—on September 11—the Soviet Government had announced publicly that the military weapons being sent to Cuba were "designed exclusively for defensive purposes," and that "there is no need for the Soviet Government to shift its weapons for a retaliatory blow to any other country, for instance, Cuba."

Did the President in September really believe these statements from the Kremlin? Was there no military man in the councils of the White House able to persuade the President that you must never assume the enemy is telling the truth about his intentions or the location and nature of his weapons?

The U.S. Government knew in August, through reliable intelligence sources, that the Soviet Government had landed armament in Cuba. There were reports even then about possible missile bases. Why didn't the President impose a blockade in August so that we could see for ourselves what weapons were being carried on ships into Cuba?

Why, on September 11, did the President accept a theoretical distinction between "offensive" and "defensive" weapons instead of verifying at once what kind of weapons were being landed? Why did he wait?

In his October 22 address to the American people, the President said: "The size of this [Soviet] undertaking makes clear it has been planned for some months."

Actually, beginning in late August, warnings were given on the floor of the Senate by Republicans and Democrats that the Soviets had made Cuba a military base and that Castro was being given missiles by the Soviet Union. But the President was traveling around the country making political speeches. Even on October 19—the day after the important meeting with Gromyko—Mr. Kennedy set out for 3 days of political campaigning that would have taken him to the Pacific Coast. He spoke in Ohio and Illinois and then returned to Washington on Saturday, the 20th.

On Monday, October 22, moreover—the night of the announcement of our belated blockade—Secretary of Defense McNamara revealed in a news conference that actual photographs of the missiles in place had been given to the President on Tuesday morning, October 16. This was a few hours before Mr. Kennedy left Washington to campaign in Connecticut.

Mr. McNamara told of the IL-28 bombers which had been introduced during the previous 10 days in Cuba. He said they were capable of carrying nuclear weapons and pointed out that the range of both the bombers and the ballistic missiles covered a large part of the United States, including the city of Washington.

Do we, in a missile age, wait several days to make up our minds? Haven't we been told that decisions in this atomic era have to be made in a matter of minutes?

The President, in his December 17 interview, described the process of policymaking today in the White House, but did not explain why the decision to blockade Cuba wasn't taken 2 months earlier—before the missiles were landed. He was asked, "How does a President go about making a decision, like Cuba, for example?" In his reply, Mr. Kennedy said:

"The most recent one was hammered out, really, as policy and decision over a period of 5 or 6 days. During that period, the 15 people, more or less, who were directly consulted frequently changed their view, because whatever action we took had so many

disadvantages to it, and each action we took raised the prospect that it might escalate with the Soviet Union into a nuclear war. Finally, however, I think a general consensus developed, and it certainly seemed after all alternatives were examined that the course of action that we finally adopted was the right one."

Is it going to take 6 days of conferences to reach a consensus on a course of action every time the Soviets initiate a military threat that could affect us directly? How many of the 15 advisers who sit in on these policy-making sessions are subject to confirmation by the Senate? What is the responsibility of such unofficial advisers directly to the American people? It is easy to say that the President has to make the final decision, but do such advisers exert undue influence on him? On this point, the President said: "So that, in my opinion, the majority came to accept the course we finally took. It made it much easier. In the Cuba of 1961, the advice of those who were brought in on the executive branch was also unanimous, and the advice was wrong. And I was responsible. So that, finally, it comes down that, no matter how many advisers you have, frequently they are divided, and the President must finally choose."

But what about the basic principle of safety first—when war threatens the security of a people? Is it a time to consult fears? Must we speculate at length on the ambiguous purposes of an enemy and guess at his course? Should we not have taken at once steps to thwart the enemy—such as ridding the Caribbean area in August and September of Soviet weapons of any kind and coincidentally imposing a blockade to keep any more weapons from being landed in Cuba?

In his December 17 interview, the President still speculates on Soviet intentions. It is to be hoped that the administration has learned a lesson and will never again confuse military security with the game of international propaganda.

Mr. Kennedy said: "I think in that speech this week he [Khrushchev] showed his awareness of the nuclear age. But, of course, the Cuban effort has made it more difficult for us to carry out any successful negotiation, because this was an effort to materially change the balance of power. It was done in secret, steps were taken really to deceive us by every means they could, and they were planning in November to open to the world the fact that they had these missiles so close to the United States; not that they were intending to fire them, because if they were going to get into a nuclear struggle, they have their own missiles in the Soviet Union.

"But it would have politically changed the balance of power. It would have appeared to, and appearances contribute to reality."

But we did gamble with our national safety. We allowed a group of 15 advisers—mostly civilians—to formulate military policy. The grim fact is that we waited while the Russians were allowed to place missiles in Cuba which an irresponsible Castro might have fired into the Southeast region of the United States. The crafty Khrushchev would have disclaimed all responsibility, thus delaying, if not frustrating, any retaliatory blow against Soviet territory.

England and France twice waited, appeased, and took the "first blow" in two world wars. We ourselves waited for the enemy to strike at Pearl Harbor. But we didn't wait to repel the sudden invasion of South Korea—for which aggression the Soviets later admitted they had supplied the armament.

Despite our public insistence on the right to make on-site inspections in Cuba, the President reveals now that he has given up that demand. Apparently we are to take a chance that no missiles have been concealed and that none will be reintroduced. Yet

guns, tanks and Mig planes were still coming into Cuba last week. Several thousand Soviet troops remain there.

Maybe we should reread Mr. Kennedy's book of 1940, "While England Slept." May we hope that subsequent events do not justify a book on the fateful months of 1962 entitled "While America Slept." Let us pray that we shall continue to be a lucky America.

Mona Lisa Cracks Her Smile

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. MINSHALL. Mr. Speaker, the times that try men's souls are not always those of grave international crisis nor serious domestic issue. Like the Buchwalds, the Minshalls attended the unveiling of the Mona Lisa. We can testify as to the veracity of his account of the affair in the January 10 Washington Post.

OUR FIRST OFFICIAL FUNCTION

(By Art Buchwald)

We went to our first official Washington function Tuesday night and it's something we'll remember for the rest of our lives. It was the black-tie, long-evening-dress opening of the Mona Lisa at the National Gallery, and our wife couldn't have been more excited if she had been invited to go water skiing with John Glenn at Hyannis Port.

When the invitation arrived she couldn't believe it.

She was waiting for us when we came home from the office and she threw her arms around us. "We've been invited to something," she cried. "And after only 4 months in Washington. It's hard to believe."

"What have we been invited to?"

"The unveiling of the Mona Lisa and the invitation says the President is going to be there and Andre Malraux and probably all of the Cabinet and the Supreme Court and the diplomatic corps and the Members of Congress and everything. Isn't it exciting?"

MOMENT OF WONDER

We held her close. "Our first Washington function. I wonder if we're up to it."

"I'll have to buy a new dress," she said.

"Spend, spend," we chortled. "These things don't happen every day."

"And I'll need new shoes, and gloves, and I'll have to have my hair changed and my nails done. I just don't know where to start."

"Just don't look more beautiful than Jackie," we chided. "I guess it wouldn't hurt to buy a new tuxedo. This will probably be the first of many White House functions. After all, once they put you on the list, they can hardly take you off."

"I have to call my mother," our wife said. "And my sister Pat, and my sister Joanie, and my sister Sue."

"Call, call. That is what long distance is for."

For the next 2 weeks we could talk of nothing else. Would the President speak to us? Would Malraux ask us to say a few words about the Mona Lisa? Would Vice President JOHNSON insist on introducing us to his wife?

Our wife read up on every protocol manual she could get her hands on.

"It doesn't say anything in any of them about what to do at the unveiling of a painting," she said.

"Just be yourself," we told her. "The Kennedys are not particular about protocol."

THE NIGHT OF NIGHTS

The big night finally came. Our wife had spent \$500 on a dress, \$30 on the hairdresser, \$100 for accessories. But she could hardly have spent less for such an important social engagement. Paul Young, of the restaurant, lent us his Rolls Royce so we could arrive in style. Our new tuxedo was cut straight from the cloth of the New Frontier.

At the door of the National Gallery, U.S. marines stood at attention under a long canvas archway. It was all we had dreamed it would be. We squeezed our wife's hand as we entered the gallery.

After checking our coats, we rode up in the elevator to the second floor with two admirals, three Senators and four Ambassadors, and their wives. Both of us were starry-eyed. Then we stepped out of the elevator into the beautiful rotunda.

We couldn't see anything except a mob of people standing facing a bunch of arclights way off in the distance. We stood patiently in the crowd staring at the lights. Obviously they were going to let the crowd in all at once. A half-hour passed. We were now hemmed in from behind. Another half-hour passed. Nothing happened.

STATIC AND APPLAUSE

We heard some static over a loudspeaker and some applause. The arclights were blinding us. Another half-hour passed. Nobody moved. Bodies were pressed tightly together. Ambassadors perspired, Congressmen muttered. More static, then more applause and then suddenly everyone turned around.

"That's it," said someone.

"What's it?" we asked.

"It's all over."

"What happened?" we asked him.

"How the hell do I know?"

"What do we do now?"

"You go home."

"Where's the President?"

"He went home too."

"But we haven't even seen the Mona Lisa."

"You can see it on television tomorrow morning at 8:30."

Our wife was heartbroken and was crying in the cloakroom.

An old experienced Washington hand tried to comfort her.

"It's all right, dear," the lady said. "You'll get over it. The first function is always the worst. After a while you get used to it. What a pretty dress you're wearing."

This last remark made our wife cry even more.

Wollaston Alloys, Inc., New Foundry in Braintree, Mass.

EXTENSION OF REMARKS

OF

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. BURKE. Mr. Speaker, on Friday, January 4, 1963, it was my privilege to attend the opening day ceremonies of the opening of the Wollaston Alloys, Inc., new foundry in Braintree, Mass. I wish at this time to bring to the attention of the Members of the Congress the program and also a brief history of this growing firm which is located in my congressional district:

PROGRAM

Chairman and Mrs. Edward H. Tibbetts, President and Mrs. Richard C. Tibbetts, Vice President and Mrs. E. F. Tibbetts, Mr. Richard C. Tibbetts, Jr., Mr. Binney E. Tibbetts, Mrs. Ruth A. Lescoe, Mrs. Louise V. Meredith.

Master of ceremonies: Mr. William G. Brooks, chairman, Braintree Industrial Commission.

Invocation: Rev. Francis A. Curley, St. Elizabeth Parish.

Speakers: Congressman JAMES A. BURKE, Washington, D.C.; Capt. Gerald Duffy, USN, Inspector of Naval Material, First Naval District.

GUESTS

Mr. Matthew Cushing, South Shore National Bank.

Mr. Robert H. Fay, Quincy Savings Bank.

Mr. Arthur I. Burgess, Quincy Savings Bank.

Mr. John W. Bettes, Norfolk County Trust Co.

Mr. Elmer O. Cappers, Norfolk County Trust Co.

Mr. Peter Murphy, Massachusetts Engineering Co.

Mr. William J. Richards, Quincy Steel Casting Co.

Mr. Donald Kane, Walworth Co.

Mr. Leo Darr, Quincy Motor Co., Inc.

Mr. P. F. Williams, Boston Gas Co.

Mr. James E. Coveney.

Mr. Henry W. Bosworth, Jr., Boston Traveler.

Mr. James J. Collins, Boston Globe.

Mr. Robert Plaisted, Patriot Ledger.

Mr. Donald Wilder, Patriot Ledger.

Mr. Herbert Fontaine, Radio Station WJDA.

Mr. James D. Asher, Radio Station WJDA.

Mr. Chester W. Nelson, Braintree Observer.

Mr. Donald R. Dickinson, Braintree Tab.

Mr. John C. Donahue, Jr., Braintree Sunday News.

TOWN OF BRAINTREE

Mr. Harrison T. Smiley, chairman of board of selectmen.

Mr. Fred A. Tenney, selectman.

Mr. Joseph M. Magaldi, planning board.

Mr. Warren J. Cuff, board of assessors.

Mr. Aaron P. Whitcomb, highway department.

Mr. Daniel A. Maloney, building inspector.

Mr. Harold C. Pearl, town engineer.

Mr. Carl W. Johnson, electric light board.

Mr. Alban G. Spurrell, manager—electric light.

Mr. Carl R. Johnson, Jr., town clerk and representative.

Chief John V. Pollo, chief of police.

Chief Harry T. Sears, chief of fire department.

Mr. Thomas A. Matthews, water commissioner.

Mr. Donato T. Richardi, water department.

Mr. William G. Dyer, sewerage department.

Mr. Charles R. Furlong, industrial commission.

Mr. Frederick J. Klay, industrial commission.

Mr. Calvin E. Young, industrial commission.

Mr. William B. Webber, industrial commission.

Mr. John O. Holden, industrial commission.

Mr. Richard McNealy, assessor.

WOLLASTON ALLOYS, INC.—A BRIEF HISTORY

Wollaston Alloys, Inc., formerly Wollaston Brass & Aluminum Foundry, Inc., of North Quincy, Mass., is the first industrial firm to commence production at the new Braintree Industrial Plaza located at the junction of Route 128 and the Southeast Expressway in Braintree, Mass. Coincidental with the move to its modern foundry, Wollaston Alloys

has changed its name to give a more accurate picture of what it has offered for the past 36 years—a variety of alloy castings, in addition to brass and aluminum.

The move to the new plant was made in order to meet the increased demand for the company's stainless steel, copper-nickel, monel, aluminum, and bronze castings. Wollaston Alloys is a pioneer in casting copper-nickel, an alloy which is continually finding new uses in industry. Some of the company's first castings were made for Regal shoe measuring machines, but today they range from measuring devices for finger holes in bowling balls to specialized castings for the Nation's newest submarines and other nuclear applications.

The firm was founded in 1926 by Mr. Edward H. Tibbetts, who is now chairman of the board of directors. Mr. Tibbetts started the business with \$1,000 capital which he borrowed on his life insurance policy. The original foundry, which still stands in North Quincy, is a 20- by 40-foot structure which Mr. Tibbetts personally erected.

In contrast to eight modern electric induction furnaces at the new foundry, which have a capacity of 500 kilowatts and are capable of melting 75,000 pounds of metal per day, Mr. Tibbetts made his first castings with metal he melted in his hand-built pit furnace.

In 1926 Wollaston Brass & Aluminum Foundry was a two-man operation. Mr. Tibbetts and one helper. Today the firm employs 65 people and expects to employ over 100 within a year from opening day at its new foundry, which was January 4, 1963.

The new foundry, although a great deal more complex than the original 20- by 40-structure, was completely designed and planned by Mr. Tibbetts and his two sons, Richard C. and Frank. Richard C. Tibbetts, now president of the firm, joined his father's business in 1935 and supervised the construction of the new plant and the installation of the equipment. Frank Tibbetts, vice president, is a graduate metallurgist from MIT and joined the company in 1950. Carrying on the father-son tradition at Wollaston Alloys is Frank's son, Binney Tibbetts, quality control manager. Richard Tibbetts, Jr., will join the firm upon his graduation from Northeastern University in June 1963.

Wollaston Alloys' new foundry is the most modern and one of the largest of its type in the country. The building is situated on Wollaston's 5-acre tract of land and has 40,000 square feet devoted to production. A pattern shop occupies 3,000 square feet, and 3,000 square feet are devoted to office space.

Modern casting equipment at the new foundry includes a new shell molding department, a mechanized green sand molding system which includes a conveyor fed sand slinger for large molds, two new automatic induction furnaces, core ovens, and new cleaning equipment. Wollaston Alloys is also installing its own cobalt source and radiographic laboratory to supplement its physical testing facilities.

Shame in Katanga

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mrs. ST. GEORGE. Mr. Speaker, the following editorial appeared in the

Evening News of Newburg, in my congressional district, on January 7.

I have put several similar editorials from other newspapers in the RECORD, and I am adding this to that number because I believe that we should be aware of the fact that in many parts of the country today there is great indignation over the atrocities perpetrated by the United Nations, and over the fact that they have stepped way beyond the limits of their own chatter.

Incidentally, these same people are indignant that our own country is the power behind the United Nations, which is committing these offenses:

SHAME IN KATANGA

Once again the troops of the United Nations, supported by the U.S. Government, are advancing in Katanga and once again there are misgivings in the hearts of many Americans who, like Senator THOMAS DODD, Democrat, of Connecticut, feel we may be on the wrong side again.

Certainly, the conduct of the soldiers of the Central Congolese Government and the United Nations was repugnant enough in the events which ended for a time last September in further negotiations. Widespread atrocities were committed, not by the Katangans and the Belgian nationals who serve the mining industry there, but by those serving under the U.N.-Congolese aegis.

The Associated Press photograph of a Belgian civilian crawling from his compact car, leaving behind the bodies of his wife and another woman passenger, cannot be a credit to the U.N. forces. These were not combatants, any more than the missionaries, nurses, and other innocent victims of last summer's atrocities. Yet the women were shot dead in what could not have been a warlike maneuver. They were innocent victims.

The U.N. may be able to crush the Tshombe regime, but it can't conceal the fact that under Tshombe the Katangan Government has been the most civilized and responsible to date in the Congo. If the Katangans chose to keep this war going by guerilla tactics, destroying the mineral production of Katanga's mines, and leaving the U.N. with a destitute Congo and a government dependent upon U.N. troops for its authority, how can we hold up our heads again? Right now there is a sense of shame and misery which must temper the enthusiasm of our strongest supporters of the United Nations as a force for peace and right.

A Famous Victory

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. BOB WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal of January 3, 1963:

A FAMOUS VICTORY

"But what good came of it at last?"

Quoth little Peterkin.

"Why that I cannot tell," said he:

"But 'twas a famous victory."

In its brief lifetime the United Nations has proved no stranger to the use of force, and it is not without victories of a sort. It seems to be winning another famous one in the Congo. Little Peterkin, however, might raise the same question he asked about the Battle of Blenheim. What good will come of it?

For this kind of force is quite different from that used in other U.N. military expeditions. Though the Korean war was largely a U.S. undertaking, it was nonetheless sanctioned by the U.N. as a means of keeping the Communists from grabbing another piece of territory, and it was at least a limited victory in that it did accomplish that objective. In other cases the U.N. has intervened in an effort to make people stop shooting at each other.

But now, in its third war against the secessionist Katanga Province of the Congo, the U.N.'s objectives are the opposite. Instead of keeping peace, it is waging war to force a people into a form of unity they do not so far find acceptable. To put it another way, the U.N. is fighting to extend the rule of the Central Congo Government over an area that doesn't want it.

In an age which pays so much lipservice to self-determination, that is a remarkable set of circumstances. No less remarkable is the fact that the United States not only condones but actively supports this policy.

We are quite aware of the "good" that is supposed to come of it. According to the official reasoning, the Central Congo Government in Léopoldville may not be able to last unless it gets hold of the income from Katanga's copper resources, though why Léopoldville's financial distress is the fault of Katanga is more than a little hard to fathom.

If the Central Government falls, the reasoning continues, then the way may be opened for all sorts of new troubles, including even a Communist victory in the Congo. Whether this would in fact happen is guess, but smashing a people's attempt at independence does seem a strange way of combating world communism, which is constantly trying to do the same thing.

In a word, it is an ugly spectacle for the United States to be supporting this U.N. war. Even more disturbing is the precedent being set for the future. With or without the Communists, the world has no lack of trouble spots, and Africa alone, with the fragmentation and political weakness of many of the new states, boasts other potential Congos.

Is the U.N. to intervene everywhere it finds a situation not to its liking for whatever reason? And is the United States in effect to give it the power to do so, regardless of all the considerations of fairness and human rights which it otherwise champions?

If so, U.N. and U.S. leadership would do well to heed the warning addressed to them by Albert Schweitzer. The medical missionary, who has spent nearly half a century in tropical Africa, said that in this war without juridical foundation they risk "losing the well-deserved respect which they enjoy in the world."

The United States has just enhanced that respect with its resolute defense of vital security interests in the Caribbean—without any help from the U.N. It is a shame to risk throwing it away on this U.N. performance in the Congo.

As for the U.N., its prestige and even future may depend on the Congo precedent. That is what the U.N. leaders themselves fear, and which is why they are so eager to finish their conquest of Katanga. But victory won at the expense of principle can hardly bring lasting good.

The American Citizen-Soldier, 1861-65

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks I wish to include the speech delivered before the National Conclave of Civil War Roundtables September 16, 1962, at Hagerstown, Md., and the reenactment of the Battle of Antietam, by Dr. Richard Nunn Lanier, executive director of the Richard Kirkland Memorial Foundation:

THE AMERICAN CITIZEN-SOLDIER, 1861-65

She stood on the top steps of her father's white columned portico and kissed her sweetheart goodbye. This beautiful girl of 15 summers, Miss Susan Eviline Kirkland, was the lovely daughter of Maj. Daniel D. Kirkland, a descendant of an old colonial family who had emigrated to Kershaw County, S.C., before the Revolution and whose ancestors had fought brilliantly at the Battle of Camden. Her sweetheart was an American citizen-soldier, likened in appearance to thousands of other American citizens who had answered the call to arms in defense of their country in 1861. This young soldier led no charge, won no thrilling victory, but the men who wore the Blue and the men who wore the Gray honor his memory because, in the midst of slaughter, he dared death to bring solace to his wounded foes. The fighting men on both sides of the lines called him "The Angel of Marye's Heights." Richard Kirkland was his name.

Gen. Ulysses S. Grant, general of all the Federal Armies and the 18th President of the United States, said to his friend John Russell Young, a few years after the war, "I would like to see truthful history written. Such history will do full credit to the courage, endurance, and ability of the American citizen-soldier—no matter what section he hailed from or in what rank."

The Civil War Centennial Committee of Fredericksburg, South Carolina, and Virginia, decided not to reenact any part of the Battle of Fredericksburg, but to present to the people of the United States and all foreign countries, the American citizen-soldier, 1861-65.

We believe we chose wisely when we selected Sgt. Richard Rowland Kirkland of Company D, 2d South Carolina Volunteers as symbolizing the ideal American citizen-soldier.

The late Judge Alvin T. Embrey in his book, "Historic Fredericksburg," summarizes his account of the brave and humane deed done by Sgt. Richard Kirkland in these words:

"History will record as a sublime example of that courage and faith which do honor to the human race, and evince its possession still of that spark of Fire Celestial communicated to mankind, when in the Garden of Eden, God breathed into the nostrils of Adam the Breath of Life and he became a Living Soul."

Maj. General U.S. Grant III, grandson of "the general" and chairman of the National Civil War Centennial Committee, as an Army Engineer, supervised the building of the Arlington Memorial Bridge at Washington, D.C. This bridge symbolizing the unity of the North and the South and spans the Potomac River between the Lincoln Memorial and

Gen. Robert E. Lee's home at Arlington, General Grant III, in the National Geographic, volume 119, No. 4, April 1961, had this to say:

"Cruelty is the handmaid of war, and out-rages the records of both northern and southern soldiers, but the Civil War was also replete with instances of mutual consideration, knightly courtesy, and nobility. At Fredericksburg, Confederate Sgt. Richard Kirkland heard wounded Union soldiers calling for water. He vaulted across a stone wall with as many canteens as he could gather and relieved their suffering at the risk of his own life."

Richard Rowland Kirkland was a tall, slender youth with dark eyes and hair, gentle in nature, with pleasing manners, good English and perfect penmanship. He was also a devout Christian and learned his lesson well from the great pulpit Bible of the Flat Rock Baptist Church in Kershaw County, S.C. This Bible was bought in 1833 and from it he would read in the quiet of a summer's evening that "It is more blessed to give than to receive." "Greater love hath no man than he lay down his life for another," and "If thine enemy thirst, give him drink." This great Bible is now a part of the Richard Kirkland collection, as is also his rifle and other interesting relics belonging to this American soldier and are to be found in the Lancaster (S.C.) Museum in Kershaw County.

When the great Battle of Fredericksburg was fought December 13-14, 1862, Dick Kirkland had been with Lee's army from 1861 when he went with Kershaw's brigade through the Seven Days Battle before Richmond, Second Manassas, Harpers Ferry, and Antietam. He was a seasoned soldier, but had never become hardened to the cruelties of war.

Today, I give you a poem written by Walter A. Clark of Augusta, Ga., one of Cobb's men who fought by the side of Sergeant Kirkland in that great trench behind the stone wall on the sunken road, at Fredericksburg. I wish to dedicate this poem to the gallant men in blue and the brave men in gray who, that day, gave their lives for their country—locked in deadly combat 100 years ago:

"THE ANGEL OF MARYE'S HEIGHTS

"(By Walter A. Clarke, of Georgia)

"A sunken road and a wall of stone
And Cobb's grim line of gray
Lay still at the base of Marye's Heights
On the morn of a winter's day.

On the plains below, the blue lines glow,
And the bugle rings out clear.
As with bated breath they march to death
And a soldier's honored bier.

And then from out of the battle smoke
There falls on the lead-swept air,
From the whitening lips that are ready to die

The piteous moan and the plaintive cry
For 'water'—everywhere.

And into the presence of Kershaw brave
There comes a fair-faced lad,
With quivering lips,
As his cap he tips,
'I can't stand this sir,' he said.

'Stand what?' the general sternly said,
As he looked on the field of slaughter;
'To see those poor boys dying out there,
With no one to help them, no one to care
And crying for "water! water!"'

'If you'll let me go, I'll give them some.'
'Why boy, you're simply mad;
They'll kill you as soon as you scale the wall
In this terrible storm of shell and ball,'
The general kindly said.

'Please let me go,' the lad replied,
'May the Lord protect you, then,
And over the wall in the hissing air
He carried comfort to grim despair,
And balm to the stricken men.

Like Daniel of old in the Lion's den
He walked through the murderous air,
With never a breath of the leaden storm
To touch or to tear his gray-clad form,
For the hand of God was there.

And I am sure in the Book of Gold
Where the blessed Angel writes,
The names that are blest of God and men,
He wrote that day with his shining pen,
Then smiled and lovingly wrote again:
'The Angel of Marye's Heights.'"

Little remains to be told. After the battle and in the winter of 1863 Kirkland was furloughed home by General Lee to recruit more men for the harvest of war. It was at this time when he was returning to the Army of Northern Virginia at Fredericksburg that he kissed his sweetheart goodbye. The lovely Susan was never to see her hero again.

He was with Lee and Jackson at Chancellorsville. Then Gettysburg. Here, again, he distinguished himself in battle. For this act, beyond the call of duty, he was promoted to first lieutenant.

He was with Longstreet at Chickamauga in September 1863. Here, in the hour of victory, he fell mortally wounded. He gave his life to save his comrades for in the last few moments of mortal life his thoughts and words as ever were for the safety of his comrades: "Save yourselves men, let me be. I am done for. Tell my Pa I died right."

In the Episcopal Church, the Prince of Peace, at Gettysburg, Pa., erected in 1880 as a thank offering and a memorial to our reunited country following the War Between the States, there is appropriately inscribed on a white marble tablet on the north wall of the front northex, this tribute to an American soldier who wore the gray:

"Lt. Richard Rowland Kirkland, Company E, Reg. 2, South Carolina Volunteers, a hero of benevolence; at the risk of life, he gave his enemy drink, at Fredericksburg."

In Camden, S.C., a massive boulder, given by the Kershaw County United Daughters of the Confederacy, marks the last bivouac of Richard Kirkland, American Citizen Soldier. His earthly remains rest in the old Quaker Cemetery, near the graves of his beloved leaders, Maj. Gen. Joseph Benjamin Kershaw and Brig. Gen. John D. Kennedy. And there Richard Kirkland sleeps. His name unknown to most of his countrymen of the North and the South, to whom for a few hours on a long past December afternoon he demonstrated what it was like to be "an American."

General of the Army Douglas MacArthur wrote: "I am deeply moved by the story of Sgt. Richard Kirkland. As a soldier myself it is a gratification to do honor to another."

Alexander Bielaski, of Springfield, Ill., close friend and adviser to Abraham Lincoln, was trained in the War College of the Czars. He was in the Federal Cavalry from Illinois and on Grant's staff. He was great-grandfather of Mrs. Angeliue Bielaski whose message to the youth of America follows:

"Richard Kirkland's heroism at Marye's Heights, when he risked his life to carry canteens of water to the Federals, brought cheers from the men on both sides of the wall, and he was acclaimed the "Angel of Marye's Heights."

"Our youth of today badly need heroes to emulate—daily headlines are not conducive to inspire them with the patriotism of George Washington or Patrick Henry or Robert E. Lee. They read of corruption in places, politicians whose corrupt practices fill them with disgust, clergymen who have disavowed the old principles of their faith and by their irreverent conduct have given aid and comfort to the Communists who are hopeful that the anti-Christ doctrine which they so fervently espouse is making progress—Is it any wonder that youth is confused?"

"It is important that the monument which will be erected at Marye's Heights be

an impressive one—one that will evoke the praise of the thousands of visitors, who, each year are attracted to the places of historic interest in Fredericksburg."

Mrs. Robert Bachman, president general of the United Daughters of the Confederacy, writes:

"I do not know when I have been so deeply touched by anything * * *. This is the kind of commemoration of such acts of valor that will bring our Nation together * * *. Thanking you, and wishing you a thrilling dedication of a most courageous deed * * *."

The memorial to Sergeant Kirkland will be completed and dedicated in the spring of 1964, on the battlefield in front of the stone wall where he performed his brave deed of mercy. Those wishing to help in the erection of this memorial to an American soldier may send their building stones to the Richard Kirkland Memorial, care of Postmaster, Fredericksburg, Va.

Numerical Composition of the Rules Committee

SPEECH OF

HON. ALBERT W. WATSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 9, 1963

Mr. WATSON. Mr. Speaker, despite the admonitions of some that a freshman Congressman should be seen and not heard, I am compelled to speak out on this vitally important matter. We are not debating a temporary change of the numerical composition of the Rules Committee as was done during the last Congress, but what is done today will result in a permanent change in the organization of this important committee.

As the distinguished gentlemen from Louisiana [Mr. HÉBERT] has so eloquently said, this proposed change in the rules is not designed to give a broader representation on the committee so that bills might be more carefully considered, but the move appears to be prompted to suit the purpose of the moment. Very well a movement so motivated to serve the hour could rise up to haunt this august body in the years ahead as we strive to save our country from bankruptcy and prevent further usurpation of our individual freedoms.

It is passing strange that the sage advice of Judge SMITH, the wise and experienced chairman of the Rules Committee, could be so blindly ignored in reaching a decision on the issue. I wholeheartedly concur in his remarks, and if in taking this position I am labeled as a southern Democrat or a conservative, I shall accept the label and be proud of the name.

In conclusion, may I say that in my humble opinion the effort being made today to pack the Rules Committee will ultimately destroy the effectiveness of this committee in determining the orderly consideration of legislation by this body. As I have said before, rather than attempt to pass a measure by manipulating the membership of a committee, may I respectfully suggest that the authors of this resolution attempt to have their legislation conform to the majority wishes of the Rules Committee and the House of Representatives.

Independence Day of Sudan

EXTENSION OF REMARKS
OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. POWELL. Mr. Speaker, on January 1, the Republic of Sudan celebrated the seventh anniversary of her independence, and we take this opportunity to send warm felicitations to His Excellency, the President of the Supreme Council for the Armed Forces, Ibrahim Abboud; and His Excellency, the Sudanese Ambassador to the United States, Dr. Osman al-Hadari, on the occasion of the anniversary of Sudan's independence.

Seven years have elapsed since the Sudan was declared independent, years of continued progress that have made the Sudan a nation to consider, to applaud. From the time of its independence ceremonies on January 1, 1956, the Sudan has achieved a unique position of self-reliance, rapid economic transformation, and political stability. It is with great pleasure that we in America extend greetings to honor the Sudan's independence anniversary.

On Independence Day, 57 years of Anglo-Egyptian rule came to an end. Colonialism had been imposed upon a proud people. Several attempts to overthrow the oppressive yoke had ended in failure. But through perseverance and peaceful constitutional means, colonial rule was at last expelled.

Seven years of economic development have been the greatest achievement of the Sudan as an independent nation. During those short years, over 4,000 acres of irrigated cotton was added; 750 miles of rail track now binds the far-reaching corners of the nation to its capital and port city; electrification of hydraulic plants promoted industrial expansion; and healthy foreign trade was realized, with cotton being the prime motivator in most transactions. These are milestones in the economic development of a new nation.

As a new nation, it has and will continue to suffer setbacks. Because of political ineffectuality and dismemberment, a bloodless coup overthrew the old regime and established a ruling junta, generally supported and praised, though, by all save the Communists.

While dissimilarities of culture, religion, and race between the north and south have brought about eruptive disorder, the Sudanese Government is determined to obliterate the differences between these sections of the country so that the entire nation may progress in harmony and unity.

I salute these achievements and hopes of the Sudan. I am certain that the next 7 years will bring even greater advancement. We hope that in the forthcoming years the Sudan will set an example for the world community to emulate. We are proud to claim the Sudan as a friend and to share with the Sudanese people the celebration of their independence anniversary.

Brooklyn Women on the Frontier of
FreedomEXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Andrew S. Roscoe, president of the Equitable Savings & Loan Association, at the Brooklyn Young Women's Christian Association campaign dinner on Thursday, November 1, 1962:

BROOKLYN WOMEN ON THE FRONTIER OF
FREEDOM

Madam Chairman, Madam President, distinguished members of the board of directors, board of trustees, and the campaign committee, my ladies, I feel highly complimented by the invitation of your gracious cochairman, Mrs. J. Victor Herd, to enjoy this nice visit with you, and I am thankful to Mrs. R. Whitney Gosnell, president, and Mrs. Ernest Tutino, campaign chairman, for their hospitality. But I warn you that when I get up steam, I am like the preacher who announces the theme of his sermon, then goes off on a tangent and speaks about everything else. My topic is "Brooklyn Women on the Frontier of Freedom," and I approach my assignment in the spirit of gratitude that all of you so well merit.

Gratitude is the greatest of all commandments; gratitude to you and gratitude to the splendid Young Women's Christian Association.

Let me, please, at this point record my appreciation to Mrs. Herd who, accompanied by Miss Kintner, so kindly briefed me on the history, program, and manifold accomplishments of the YWCA. I learned that I am meeting with you tonight after 74 years of glorious service by the Y to our young women—after 74 years of rich life. But life is a quality, not a quantity, and it cannot be measured entirely by clock or calendar. Time is but a system through which we measure the passing of the future, through the present, into the past. For there are organizations, whose value is such that to measure them by clock or calendar, might be trivial and meaningless. Their power is such that we cannot tell how long they will last or have lasted, for they give inspiration and direction to their whole generation and community and will always stand out as a source of strength and hope for posterity. Certainly, the YWCA stands out front as one of these organizations. The YWCA was founded 74 years ago and there must be many here in Brooklyn who recall with great reverence and appreciation what their grandmothers achieved two generations ago. They may not have occupied a seat next to their husbands on the covered wagon but they were pioneers in the very sense of the word. They builded well, these pioneers.

As we approach our greater community, not for alms or charity, but for continued support, broader support, and increased support of the program of the "Y," we can say that a contribution to the YWCA is a great American investment. The program was developed during the past three-quarters of a century by the very best brains of a dedicated leadership. It consists of varied services directed to the preservation and the enhancement of the position of our American women in whose hands, I say, lies the fulfillment of America's hopes.

Your program, in offering residences to young women without family ties in our

greater community, represents immense moral, social, and economic benefits for these young people. Your clubs and affiliated services, providing a congenial and dignified annex to that home lacking such facilities, serve as an encouragement and a source of hope for a better life. A home away from home is a typical American institution.

Your program of health education, personnel counseling, and food services, attests to the ingenuity of your planners because from a practical point of view in this and other areas, women are at a disadvantage, the 19th amendment notwithstanding. Your participation in that great Robin Hood camp, is exposing many of our young ladies to the beauties of mother nature of which our women are a conspicuous part.

Your school of practical nursing—this phase of your service is a heartwarming subject with me. I recall, rather vividly, that after Pearl Harbor, one of my responsibilities as a member of the nurse recruitment group of the American Red Cross obligated me to enlist all the registered nurses we could to join the Armed Forces, because at one point we had only one nurse for hundreds of servicemen in the Pacific theater. The practical nurses were there to fill the great vacuum left on the homefront. They are sorely needed today. Your school of practical nursing is "another jewel" in the crown of your attainments.

I could devote many hours to the analysis of your manifold services and to an interpretation of the impact of these services on our community at the present time, and on the future of Brooklyn. However, father time must be respected.

I said that the founders of the YWCA planned a great effort. Your distinguished officers and all those who labored for this great organization ought to be remembered and congratulated. Your dedication and devotion to the YWCA has earned the gratitude of the community and of America. You have built, and are building, a foundation with ever-increasing strength under the status of our American women, and, the future of America lies in their hands. We are very fortunate, and we are very grateful, for that 19th amendment to our Constitution because it assured America and the world that our human society can be preserved in a form consistent with the will of God and for the benefit of mankind.

I could devote much time to a discussion of the immense contribution that our American women have made to our economy, to our political pattern, and to our social structure. Their integrity, ingenuity, resourcefulness, and effectiveness, are unquestioned.

We select a few people, vest them with coercive power, and depending upon the area, we call them government, corporate management, or a board of a social welfare organization. The question on the ethical side is, what is the moral basis for their power and their authority? The answer is, obviously, general welfare, community welfare, and if we extend this philosophy to the "Y," your very presence here indicates that you have accepted a responsibility in this field of social action, and that you are blessed with that high degree of morality upon which our American women have always had, and always will have, an A-1 priority.

You are seeking the modest sum of \$90,000 to service 5,000 young women. It is indeed a modest sum considering this great frontier town of ours, which for three centuries has welcomed more new citizens to our shores than any other community. These groups include men and women, young and old—requiring social services, the provision of which, at times, exacts superhuman effort. But our \$90,000 is a small sum for the values created through the molding and the development of American womanhood, the firmest pillar of our great Republic.

Forty-some-odd years ago, I heard a story from one of my fellow seamen. On one of the islands of the seven seas, there was carved, by Nature, on the side of a coral hill, the head of a woman. Under certain atmospheric conditions, prior to a storm, when the sun's rays were reflected upon this object which otherwise was enshadowed, brilliant roses appeared around that head. This beautiful phenomenon was a warning signal to youngsters on the beach to seek shelter in anticipation of destructive tidal waves. The natives called this great work of Nature, the Goddess of the Roses.

You and I know that in this troubled world, we view the horizon many times with anxiety, particularly on ethical and moral issues. It is simply wonderful as I look around here to see dedicated women, each of whom has much in common with that Goddess of the Roses. I know that with your effort, fully aware of the warning signals, you will continue to provide the kind of support that the "Y" and your leadership merits, preserving for this community, and the Nation, the status of the American women, the greatest ideal on our frontier of freedom.

Truth-in-Lending Bill

EXTENSION OF REMARKS

OF

HON. ROBERT N. C. NIX

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. NIX. Mr. Speaker, today I have introduced a bill designed to accelerate the stabilization of the Nation's economy by assuring equitable relationships that will result from the full disclosure of financing costs in connection with extensions of credit. In recent years an increasing number of complaints of widespread extortion, arising from presently accepted business practices, has been disclosed by witnesses before congressional committees, revealed in reports of the public press and related by individuals personally victimized by the flourishing credit racket. An abundance of relevant testimony, clearly establishing the viciousness of the system, has been recounted by witnesses before the House District Committee and the Subcommittee on Production and Stabilization of the Senate Committee on Banking and Currency.

I, therefore, have presented the bill both to stabilize the economy and to promote individual justice. I am deeply concerned over the fact that from both the quantity of substantial evidence presented to committees and secured through personal sources it is conclusively indicated that countless Negroes have been robbed and cheated by unscrupulous business people who willfully exact exorbitant interest through subtle means unrevealed to them. As a consequence of such practices the full cost of articles to the trusting purchaser is withheld while the seller is realizing profits as great as 100 percent or more. Moreover, through such criminal practices there are thousands of well-known instances pointing out that it is a common policy of dishonest sellers to resell the same articles several times over with

the identical built-in interest charges to other unsuspecting Negroes further compounding, thereby, big profits for such businessmen. And, the sum total of the tragedy of this unconscionable condition has been that consumers who have suffered most are those in the lowest economic group and, thus, least able to pay.

Full disclosure of financing costs incident to consumer credit could prevent or at least restrain abuses of the helplessness imposed as is now the case through the concealment of true rates, the manipulation of charges by the use of fees, and the failure to rebate amounts taken in advance. These considerations, Mr. Speaker, are so compelling that I have presented this legislation and am now appealing to the leadership to join me in its passage.

The Brotherhood of Free Americans

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following "Greeting to Our Christian Neighbors," which appeared in the December 24, 1962, edition of the Washington Post.

Rabbi Norman Gerstenfeld here gives the response of the Jewish community to the expressions of spiritual brotherhood given them by their Christian neighbors. The unity of Christian and Jew as Americans is one of the finest expressions of a free society.

The holiday season has passed, but brotherhood in freedom remains.

Rabbi Gerstenfeld's greetings follow:
A GREETING TO OUR CHRISTIAN NEIGHBORS

On the eve of the high holidays of the faith of Israel many faithful Christians have tendered to me some profound expression of their spiritual comradeship. In the same spirit I now extend to the devout Christians of our city these prayerful greetings.

This week the children of the faith of Israel celebrate Hanukkah, the festival of light, to remember the heroism of the Maccabees, who, more than 2,000 years ago, fought for religious liberty against Hellenist tyranny. It was their struggle against the forces of cruel darkness that made it possible for our sages to keep burning the flame of our ancient faith on the altar of Israel. It was the torch raised high by these stalwart Maccabees of ages past that blazed the trail of light for the coming of Christianity. If not for their spiritual strength and sacrificial struggle and rededication, as they faced the forces of religious decadence within and intolerance without, the vision of the democratic state of freemen would never have been born.

As you gather this Christmas Day to turn your souls in prayer before the altar of Almighty God our hearts are joined with yours in the quest for peace on earth for men of good will; and our lives are reconsecrated with the fellow citizens of this blessed land in the will for the good that makes possible a world of good will. We pray for God's blessing to the Christian churches of our community and to all of the

Christian faith everywhere; who have faced the oppressor without appeasement; who have befriended the innocent from mankind's malevolence; who have truly shared the world's sorrow and who have been the living witness of our common faith: "To do justly, to love mercy, and to walk humbly with thy God."

May our prayers unite us, Christian and Jew, in this festival season of light, so that we will stand together, as free citizens of this good land, the hope of the world, to raise high a sacred torch to dispel the darkness. Now that God in His wisdom has swept mankind into the orbit of a tiny community, so that even the blind can see that all men on the face of the earth are neighbors, we pray that He shall give us the strength to rise to a great covenant of righteousness; so that the individual man everywhere shall have his divinely endowed, inalienable rights, guarded by neighbors who will live as brothers.

Rabbi NORMAN GERSTENFELD,
Minister of the Washington
Hebrew Congregation.

Congressman Philbin's Unique Tribute to Speaker John W. McCormack

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. DONOHUE. Mr. Speaker, last Monday, January 8, 1963, in the House Democratic caucus held here, it was the privilege of the Members on this side to hear the distinguished gentleman from the Third Massachusetts Congressional District, Mr. PHILBIN, deliver one of the most eloquent addresses and tributes ever uttered on such occasion when he nominated, for the continuing speakership of this House, our beloved and revered colleague from Massachusetts, the Honorable JOHN W. McCORMACK. Of course, the nomination was unanimously approved and that afternoon we wisely and formally reelected Speaker McCORMACK.

All of us agree with and share in the sentiments so ably expressed by Congressman PHILBIN as he summarily traced the patriotic public service of our great Speaker and reviewed the remarkable talents of his brilliant mind and courageous heart, which have endeared him to all who have ever served with him and which assure that the name of Speaker McCORMACK will be, forever, an inspiring byword in the legislative history of this Nation.

A great many Members, on both sides of the aisle here, asked me to intercede with my very dear and esteemed friend and colleague from the Third Massachusetts District for the purpose of having his eloquent address included in the permanent record. He graciously consented to permit me to introduce it into the RECORD and Congressman PHILBIN's nominating speech follows:

CONGRESSMAN PHILIP J. PHILBIN'S SPEECH
NOMINATING SPEAKER McCORMACK

Mr. Chairman and members of the caucus, I have a very delightful duty to perform this

morning and it comes to me as a very great honor and privilege indeed.

Our dear and highly esteemed and illustrious friend, Hon. JOHN W. McCORMACK, is one of the greatest Americans who has ever served in the Congress.

He enjoys the highest respect and warmest affection of each and every one of us.

He enjoys the confidence, esteem, and respect of the American people, indeed of the people of the world. To talk of his magnificent qualities and accomplishments seems almost like carrying coals to New Castle.

His service in the House, as we well know, can be measured only in superlative terms. During the time he has been here he has served his district, State, party, and country with a great ability, fidelity to duty, and humanitarian impulse that certainly has never been exceeded in the history of this great Government.

I hardly need, before this distinguished group, comprised of so many warm friends, admirers and supporters, to recount the prolific abundance of natural gifts, talents, characteristics and services that have distinguished the inspiring career of this great American from the colorful and patriotic community of South Boston in my home State of Massachusetts, as he forged his way from the humble precincts of his historic city to the third highest position of trust, honor, and responsibility in the great Government of the United States.

Speaker JOHN McCORMACK is admittedly endowed with all the attributes of personality, character, leadership, and capacity that make for greatness.

Time and time again, in and out of this great body, the renowned House of Representatives, the greatest deliberative body of its kind in the world, he has demonstrated his true worth as an unsurpassed public servant.

A fearless, articulate, and inspiring leader, a gifted and effective debater, a respected and admired political strategist, a skilled diagnostician of the public will, a truly great heart and great mind, devoted to lofty concepts and objectives of statesmanship, JOHN McCORMACK is commended and beloved by all of us.

A patriot of the top-most rank, a lawyer and counselor of recognized skill and experience, an eminent parliamentarian, known everywhere for his knowledge, fairness and impartiality, and, above all, a man whose vigorous, determined work in promoting the well-being and welfare of the great rank and file of the American people, the oppressed, the lowly, the exploited, the helpless and inarticulate, wherever they may be, has known no bounds.

Born with a great fighting heart and a buoyant spirit of uplift and regeneration, JOHN McCORMACK has always been in the vanguard of forward-looking leadership, philosophically, politically, socially, economically, spiritually, and in every other way.

Resolutely committed to the doctrine that our political and parliamentary institutions are valid instruments for promoting the liberty, stability and progress of the Nation, no man has ever labored more ably, diligently, and effectively to further the general well-being of the Nation, protect the rights of those who struggle and toll under our free enterprise system and enlarge and elevate the advantages and opportunities of the American people.

To succeed our late, lamented, dear friend and memorable leader, that great statesman and ever to be esteemed and remembered former Speaker, the great Sam Rayburn, was indeed a task of monumental proportions.

Yet, in a comparatively short time of JOHN McCORMACK's noteworthy service as Speaker, our membership, the Nation, and the world recognize the mettle and the high worthiness of the present great Speaker of the House.

In his characteristic way of deep humility, devout dedication to principle and conviction, Speaker McCORMACK has been something more than the leader of this body. He has been our warm friend, our ready counsellor, our unselfish guide and adviser, our constant sustaining strength.

Confidant and adviser of our Presidents since the 1930's, he has labored with vigor, loyalty, and marked success to implement the legislative program of our cherished former colleague and great President and friend, John F. Kennedy.

As we know, he can be trusted and relied upon to carry out these great tasks of leadership in this session of Congress and in the time to come.

And as in the past, he will carry them out with dispatch, efficiency and a great driving force of sagacious statesmanship that will make for success and victory for the great cause we represent.

To touch a personal note, JOHN McCORMACK has been my friend since before I came to this body. Just as many of you, I have seen and known him at close range. He is a great man, a great leader, a great American, a great Speaker, and he is a true and loyal friend.

We as Members of the House and the people of the Nation are fortunate indeed, especially in this time of uncertainty and peril, when surging movements of conspiracy and unrest are assailing the pillars of free government throughout the world, as well as in our own Nation, and when we must unite as we will, in an invincible, resolute force against these evils and dangers, to have a truly outstanding, well-polished, experienced, humane leader like JOHN McCORMACK to guide and counsel us and to join so wholeheartedly with our beloved and esteemed friend, our great President Kennedy, in preserving, protecting, and strengthening the rich heritage of our freedom and seeking peace, understanding, and amity for the world.

Man of deep faith and high destiny, man of profound spiritual beliefs and trust in his Divine Maker, who proudly bears the shield of justice and fair dealing and carries in his big heart an inspirational love of country and humanity, sprung from the people and devoted to their welfare, a true, dedicated, demonstrated believer in the American way of life, a great credit to our great party, the House of Representatives, the Congress, and our Nation, Hon. JOHN W. McCORMACK is destined to go down in history as one of the greatest statesmen and leaders of the Nation.

The reelection of Speaker McCORMACK is a foregone conclusion. But I want to say to my valued colleagues that Massachusetts is very proud of our great native son, the distinguished Speaker of the House.

It is with great pride and pleasure that I place in nomination in the Democratic caucus for Speaker of the House the name of our great, esteemed, and beloved friend, Hon. JOHN W. McCORMACK.

A Salute to Homer Capehart

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. BRAY. Mr. Speaker, as this 88th Congress gets underway, we find on both sides of the Hill that many familiar faces are missing. We in the Indiana

delegation particularly will miss Homer E. Capehart, who has represented the Hoosier State in the Senate for the past 18 years. He is, incidentally, the only man from Indiana ever to be elected to three full terms in the Senate.

As we all know, Homer's bid for a fourth term was a little short of being successful—and in this business there is no prize for second place. But our country today is a better place because Homer served here so long and well.

We wish Homer many years of health to enjoy the prize he has already won—the love and respect of so many, many Hoosiers which is reflected in this editorial from the Martinsville Daily Reporter of November 9, 1962:

HOMER ENTITLED TO RESPECT

In defeat, as in victory, Homer Capehart is the same man, entitled to respect.

By his own effort, without benefit of higher education or inherited wealth, he became a powerful man. Powerful, and respected because of his ability and his integrity.

He is an unashamed admirer of the "American system" which has made the United States the land of opportunity for those willing to work.

People either work for the Government or they work in private enterprise. "It is that simple," he has said. He held to the sound idea that it is better to encourage private business than to add to the Government payroll.

Even his friends and intimates in his party have had quiet fun at some of the Senator's little boo-boos. Once, in reading a speech someone had written for him, Homer is reported to have mispronounced "naive" as "nave." A former Indiana Governor, according to report, audibly corrected him, to the amusement of many.

These minor slips, which all must make occasionally, did not detract from, but rather added to, his personality. The old boy was not always right, but he has too much native good sense to be wrong most of the time. He is the salesman type, not a timeclock puncher. We choose to believe he was always thinking, striving to find answers to questions that have no apparent answer, as the farm problem.

The figure of Dempsey, the greatest of the heavyweights of our time, comes to mind. Fast footwork by his opponent and the inroads of time toppled Dempsey, as they did Homer. But honor remains.

Still of championship frame, Capehart is a symbol of individual effort, which our country must never lose if she is to progress.

"I want to retain that form of government under which the farm boy of today becomes the farmowner of tomorrow; under which the worker of today becomes the successful businessman of tomorrow; under which any citizen is free to become a leader in civil affairs, business, or government."

At the time of its greatest weakness, Capehart, originally a Democrat, rallied the forces of private enterprise and individual freedom as represented by the Republican Party, with his famous "cornfield conference."

So the party owes a lot to Capehart. Maybe all citizens, whether they acknowledge it or not, also owe him something. At the very least, respect.

In the Army, when a Regular retires, he is honored with an appropriate ceremony.

As a solid, loyal soldier of the Republic, Homer Capehart, on his retirement, is entitled to the true honor accorded those who have given loyal, faithful service to their country.

So, a salute to Homer Capehart.

Problems of the Textile Industry

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. HEMPHILL. Mr. Speaker, it is with considerable sadness that I announce to the House of Representatives that the problems of the textile industry have not been solved. I had hoped that we could make such progress on the seven-point program of President Kennedy that I could on this, the second day of Congress, make a statement that our problems were on the way to solution.

We have made progress, and we have every hope of progress in the future; meanwhile, the situation steadily degenerates from bad to worse, and, if not corrected, I fear, to desperate.

Typical, and exemplary, of conditions that are existing, and the abuses the Japanese textile people are making of our largess, and the Geneva agreements, is the plight of the narrow fabric industry. Many of the plants which have employed good, red-blooded Americans, have had to go out of business and others are being threatened. A plant in my district is being threatened, if not with extinction, with such changes or curtailment that many people will be out of work. This is not in keeping with the American democratic idea of full employment, and if this is the result of our foreign policies, or trade policies of the United States, then these policies should be changed.

A chronology of what is happening has been brilliantly cataloged by Mr. Arthur R. Hutchinson, president of J. Sullivan & Sons Manufacturing Corp., part of whose operations are located in my district. I include that letter as part of my remarks and I commend this to the thinking of my colleagues in the House of Representatives and to the American people, neither of whom, I am sure, wish for conditions such as this to exist within the textile industry or any other because of harmful promises, policies or agreements made by or on the part of our own governmental bureaus. These policies have been in existence too many debilitating years now, and need quick and sure revision.

The letter is as follows:

AN OPEN LETTER TO ANY INTERESTED PARTY
PHILADELPHIA, PA.,
November 28, 1962.

Re Importation of Japanese component parts of zippers, zipper tape, and zipper chain. Our companies, J. Sullivan & Sons Manufacturing Corp., of Philadelphia, Pa., founded in 1853, and our affiliate Sullivan-Southern, Inc., of York S.C., incorporated in 1949, are the largest producers in America of sales tape for the slide fastener or zipper industry.

Since early in 1961 we have been in constant touch with the excess imports of Japanese zipper tape and recently to the start of the importation of Japanese zipper chain.

The U.S. CONGRESSIONAL RECORD of Wednesday, January 24, 1962, No. 9, on pages 715 to 727, carried a portion of our fight against this increasing menace to our industry.

My letter to Congressman ROBERT W. HEMPHILL, of South Carolina, dated October 7, 1961, was placed in the CONGRESSIONAL RECORD in full.

I quote from this letter as follows: "In my opinion the increased voluntary quota of Japan, standing at 900,000 pounds in 1961, represents approximately 30 percent of all the zipper tape that all of the narrow fabric manufacturers made in 1960, which explains the reason why prices are becoming depressed and unemployment in the zipper tape portion of the narrow fabric industry is increasing.

"At the present time Sullivan-Southern, Inc., in York, S.C., has not fully felt the impact of these imports, and inasmuch as they have not, neither have our employees in Philadelphia, but if the voluntary quota of 300,000 pounds in 1961, which was voluntarily increased to 900,000 pounds, is further increased or not decreased back to where it was, I feel sure that come 1962 our companies will certainly have to curtail production both in Pennsylvania and South Carolina."

Well, this has happened. Three months ago we reduced production by curtailing the number of hours worked daily. On October 1 we further curtailed our production by full days off for many employees. We now plan further cuts in production starting December 3.

This curtailment in working hours is made in the face of statistics given us by our customers, the zipper industry, that sales of zippers have materially increased during 1962 over 1961, which gives our industry the answer—increased Japanese imports.

Other facts given and statements made in my letter to Congressman HEMPHILL have not changed since that date. A manufacturer of zipper tapes in North Carolina shut down as reported, and has, for the past year, been producing narrow fabrics other than zipper tape.

Another narrow fabric manufacturer has, I believe, found it more advantageous to purchase Japanese woven zipper tape for resale than to produce it in America as they have done in the past. Employees of this company are now looking for work.

In a letter written to our accountants on January 5, 1961, I quote, "We have a customer who purchases over \$750,000 worth of zipper tape per year at approximately \$10.50 per thousand yards average. A better grade we manufacture sells for \$12 per thousand yards. He has been offered a tape as good as, or better than our best, at \$7.02 per thousand yards delivered in New York, all charges and duty paid. I suppose this customer will be the next one of ours to defect."

Well, he has, in an effort to compete with his competitors who import both Japanese zipper tape and Japanese zipper chain.

Furthermore, our price of approximately \$10.50 per thousand yards is now approximately \$9.35 per thousand yards and we, of course, cannot compete with the Japanese quotations. Neither yarns, dyeing, nor labor has decreased for us nor have we been given any Government subsidy. This customer does not want to purchase Japanese tape but has been forced to in order to compete in the New York market.

The Japanese manufacturers have various ways and means of flooding our market with their products:

No. 1. They ship in to zipper manufacturers or chain manufacturers dyed flat zipper tape.

No. 2. They ship in to zipper manufacturers or chain manufacturers dyed zipper tape on which two cords have either been woven or sewed.

No. 3. They ship in to zipper manufacturers, chain manufacturers, or narrow fabric manufacturers flat tape or beaded tape in unbleached skeins, ready for dyeing.

No. 4. They ship in to zipper manufacturers or assemblers dyed zipper tape to which the metal element has been attached to the beaded tape.

As to No. 1: Zipper tape is, in our opinion, a component part of a zipper. In fact it is one of the most important component parts and when dyed flat zipper tape is imported with a 17½-percent duty it hurts the narrow fabric industry and the dye houses that would ordinarily dye this item in America.

As to No. 2: Dyed corded zipper tape, also in our opinion a component part of a zipper, is also imported with a 17½-percent duty and hurts the narrow fabric industry, the dye industry, the thread and bobbin industry, the cord industry, and the zipper or chain industry that previously sewed this cord on in America.

As to No. 3: Unbleached zipper tape either flat or beaded is imported in skeins, again at 17½-percent duty. This importation does not hurt our dye industry but certainly hurts the narrow fabric industry, if flat tape, and the zipper and chain industry, as well as the cord, thread, and bobbin industry, if it is a beaded tape.

As to No. 4: Dyed corded zipper tape made up into continuous or gap chain all ready to make into zippers with a duty of only 19 percent, it not being considered a component part of a zipper, although you and I could, within a few seconds, make a zipper from it with a top and bottom stop, a slider, and a small hammer.

Zippers are duty assessed at a rate between 40 and 50 percent. Component parts are supposed to be assessed at 50 percent.

However, tape, cord, thread, bobbins, and chain are not considered by the customs department as component parts of zippers, which we in our industry feel they are.

Up until a few months ago the zipper industry and the chain industry were not too much exercised about the plight of the zipper tape division of the narrow fabric industry.

Under date of December 5, 1961, the New York Daily News Record carried this headline "Slide Fastener Producers See Sales Zipping Along" and in the article "Although there has been much talk about slide fastener imports, particularly in the new nylon tape, most U.S. manufacturers are not unduly concerned. These U.S. producers feel that the quality and service they can deliver will more than offset any price advantage expected to be gained by a foreign producer. Moreover, they enjoy a sturdy tariff protection of 50-60 percent ad valorem."

Now that chain is coming into America by the thousands of pounds and hundreds of thousands of yards at a duty of only 19 percent, I wonder what will be the report this December in regard to the sturdy tariff protection of 50-60 percent they enjoyed a year ago. I feel that there is available the protection the narrow fabric industry, the chain industry and the zipper industry need in our custom's regulations. What we all need is an enforcement of its provisions.

The reported increase in the business of the zipper manufacturers during 1962 has been opposite to trend in the zipper tape division of the narrow fabric industry, where production has been curtailed because of Japanese imports and will have to be further curtailed because of the importation of zipper chain.

Quotes from Daily News Record of November 20, 1962: "Spinners have expressed disappointment in the weaving season. Weavers have not come through with the yarn business as was expected. They continue buying close to the vest, and the outlook for any improvement in this situation is dim" and "American cotton textile mills are in the most competitive industry in the Nation but still they cannot successfully compete with imports."

I feel that there are three ways to solve our problems and the problems of the narrow fabric industry, which in turn will help the zipper industry, the chain industry, the thread and bobbin industry, the cord indus-

try and the dye industry and furthermore help the cotton yarn industry in America, who up to the present time do not realize how badly they have been hurt but who I am sure must know that recently a cord manufacturer threw in the sponge.

1. By the proper application of the duty on all zippers and component parts, as already in the books.

2. By the enforcement by the Federal Trade Commission of their rules and regulations as to the proper marking of imported tape and chain.

3. By the adjustments of quotas as being worked on by the State Department with the cooperation of the Commerce Department.

In 1961, when we started to bring the Japanese tape situation before the eyes of our suppliers, our customers and our competitors, I stated that our company was running full and was not hurting but that some of our competitors had gotten out and others are hurting. Now, we are starting to hurt and we find as a result—

1. Decreased yarn purchases.
2. Decreased cord purchases or production.
3. Decreased commission dyeing.
4. Elimination of premium wages.
5. Curtailment of work week.
6. Many other curtailments in cash outlays.
7. Depressed selling prices.

We cannot compete with a tape manufacturer who gets his cotton with a subsidy, has his yarn made with 25-cent-per-our labor and follows through all weaving, warping, winding, dyeing, and finishing operations with substandard wage rates, even though our equipment is just about the newest and best equipment available in the world.

Respectfully submitted,

J. SULLIVAN & SONS
MANUFACTURING CO.,
ARTHUR R. HUTCHINSON,
President.

Alabama's Economy Hits New Peaks in 1962

EXTENSION OF REMARKS OF

HON. GEORGE HUDDLESTON, JR.
OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. HUDDLESTON. Mr. Speaker, the year just ended was a good year for business all over this country. We in Alabama's economy is a healthy growth of the Nation and in so doing reached new heights of economic growth and advancement.

Alabama's economy is a healthy growing one, and all of us are hopeful that in 1963 there will be further advances. In addition to this we will all be working to eliminate the pockets of poverty and unemployment through improvements in the structure of the economy.

I think all of the members of the House will be interested in the article by Irving Beiman which appeared in the January 6 edition of the Birmingham News, which I insert herewith in the RECORD:

STATE'S ECONOMY HITS NEW PEAK IN 1962

(By Irving Beiman)

Business in general reached an alltime high point in Alabama during 1962.

Figures from the U.S. Department of Commerce showed the State's economy made im-

portant gains in many fields during the past year.

For example, deposits in 238 banks over the State totaled \$2¼ billion, 11 percent more than at the end of 1961. So Alabamians have more money than ever before, money with which to buy things, to invest or to hold on deposit.

Banks are lending more than ever also. Loans in Federal Reserve member banks in Alabama were at the \$1 billion level at the end of 1962, a rise of almost 10 percent over loans at the end of 1961.

That is a healthy business indicator, because when banks lend money, that money is put to use somewhere in the State's economy.

In the retail trade field, department store sales showed an increase of 9 percent over the State during 1962. Birmingham department stores had a 2 percent decline for the year, approximately.

PHONE INCREASES

More telephones were in service than ever before over the State, Southern Bell reported. More than 800,000 phones were in place in homes and business establishments in the State, a record high.

More than 12,000 permits were issued to build new homes valued at more than \$100 million. This was a better record than for 1961.

Airlines and railroads had notable increases in their respective operations during 1962 in Alabama. The airlines counted 7 million revenue passengers and more than 5 million ton-miles of cargo carried. Railroads serving the region realized around \$1 billion in freight revenue and close to \$100 million in passenger fares.

EMPLOYMENT UP

Employment figures furnished a real bright spot for Alabama in 1962.

The State had more than 750,000 workers engaged in nonagricultural jobs, including around 250,000 in manufacturing. This was an increase in both categories over 1961.

It also was a source of satisfaction to know there were 10 percent fewer persons drawing unemployment compensation in Alabama during 1962 than in 1961.

Alabama's share of the world trade market also rose in 1962. The Mobile customs district recorded around \$275 million in total trading done with countries of the world during 1962. This included increased activity in both exports and imports.

FARM PROFITS

Another good spot in an otherwise fine business picture was in the agricultural field. Farmers in the State collected more than half a billion dollars in the cash market for their crop and livestock products. Alabama held firmly to third place in the Nation in commercial production of chickens, its hatcheries turning out around 275 million baby chicks, and slaughtering houses handling more than a million beef cattle and calves and hogs in the production of red meat for the tables.

ON OTHER FRONTS

In addition to all this, the year brought some other good encouragement for Alabama business by recording progress the State had made in different fields of economic activity.

It saw Alabama, for instance, advance from 24th to 23d among all States in homebuilding progress.

Pick up 48,000 residents between 1960 and 1961.

Go from 18th to 15th place among all States in total expenditures for new plant and equipment by manufacturers between 1959 and 1960.

Record one of the Nation's lowest rates of business failures in 1961, only 1 out of every 328 closing their doors, 33d down the list of 48 States.

Stood 14 among all States in rate of increase in dollar volume of goods and services sold to the Federal Government between fiscal years 1961 and 1962.

Counted nearly \$3 billion put into all forms of construction from 1956 to 1961, inclusive.

Manufactured \$16½ billion worth of goods from 1950 to 1960, inclusive, doubling, tripling, quadrupling, and quintupling the value of output in various lines, employing an average of 225,000 workers in the process each year, and paying them around \$800 million in wages and salaries annually.

Saw the number of motor vehicles registered in the State pass the 1.3 million mark.

Experienced the Nation's third greatest rate of increase in median family income between 1950 and 1960, with a rise of 116.3 percent in the decade.

Pointed to the fact that the average monthly earnings of its Government workers between 1950 and 1961 were third in the United States in rate of advance.

Go from 19th to 11th place among all States in production of paper and paperboard between 1950 and 1961, and land in 6th position in output of woodpulp in 1961.

Finally, 1962 produced the good tidings that Alabama was among only 9 States in the Nation to show an increase in number of commercial and industrial firms between 1960 and 1961, and among 21 to reflect a gain between 1950 and 1961, winding up 1961 with 37,777.

Young Men, Young Women, Wake Up

EXTENSION OF REMARKS OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Chronicle, of Detroit, Mich., on Saturday, December 15, 1962, by the distinguished scholar and educator, Dr. Broadus N. Butler, of Wayne State University.

As a vigorous and diligent civil libertarian, and as a courageous leader in the battle of equality, Dr. Butler expresses some thoughts which issue a challenge worthy of our consideration.

While his editorial by no means suggests that the real battle for equality is yet ended in this great land of ours, it nevertheless indicates a remarkable awareness on the part of this great American of a new phase of the problem of equality of opportunity which is entering the American way of life.

The editorial follows:

YOUNG MEN, YOUNG WOMEN, WAKE UP

(By Dr. Broadus N. Butler)

We are deeply impressed by two facts about the present employment and career horizon for young Negro men and women. One of them is bold and encouraging. The other should be a matter of grave concern to us all. The bold fact is that the dedicated labors of the many organizations and people who have striven for equal employment opportunity have begun to come to harvest—and opportunity is real now. The fact about which there should be grave concern is that neither the young people, nor their parents, nor their counselors, with few

exceptions, have achieved a full appreciation and realization of what this means.

It can be said with complete justification and validity that until the past year, equal opportunity, or even opportunity itself in any genuine sense, was a kind of nebulous thing that made good platitudes, but did not really exist for young Negro men and women in the important sectors of our national and economic life. It is no wonder that they could not be easily motivated to engage the strenuous effort of high preparation for careers which they were, at the same time, being impressed that they would be denied.

However, it can now be said with equal validity that so radical a change has taken place over the past year that the mantle is upon our shoulders now to produce young men and women to assume the responsible roles that now cry for them and now find them neither sufficiently motivated nor yet fully prepared (in the sense of discipline, not in the sense of capacity) to gird themselves to assume.

We are so rapidly approaching the dream and the hope expressed by Langston Hughes when he said:

"O, let my land be a land where liberty
Is crowned with no patriotic wreath,
But opportunity is real, and life is free,
Equality is in the air we breathe."

The most degrading and depressing consequences of employment discrimination have been that it has made the potential man look down and has sunk that potential man's aspirations and achievements so far below the level of his inherent capacities, that it not only demeaned and degraded the man, but it deprived society of the full measure of what would have been that fully developed man. Any person tends to see things at his own eye level. So if our youth do not raise their sights or have their sights elevated, they will not even now see the real opportunities and concomitant responsibilities there are for competent, confident, responsible, and adequate young men and women in this day.

Industry is calling for young executives. Where are they? Skilled trades are calling for young Negro men to return to them. Where are they? Technology is calling for men of science and research. Where are they? Government is calling for civil service executives for classifications G-12 and above. Where are they? Cities, States, and our Nation are looking for capable and responsible office holders. Where are they? Agencies of stock exchanges and banking and finance are looking for brokers and analysts. Where are they? Educational institutions and boards of education need able and visionary policymakers who will avoid the inadequacies of the past and have the courage to build an educational foundation adequate to the needs of the future. Where are they? Houses and communities which are not yet homes and neighborhoods are calling for young men and young women who can make houses homes in the real sense of family life and make communities neighborhoods in the positive reciprocity of neighborliness. Where are they?

They are in our schools and colleges—some of them. They have dropped out of school and are not working at all—some of them. (A relatively recent report showed that almost half of the best students in high school still do not enter college.) They are working odd part-time jobs—some of them. They are working jobs out of proper classification—some of them. They have resigned themselves to jobs that are well below their performance capacities—some of them. They are confused and discouraged—some of them. Wherever they are, they must be found and counseled and encouraged. They must have the confidence in themselves to explore and to keep exploring. Above all,

they must quickly acquire that added measure of competence, qualification, and confidence that transforms a youth to a man.

To this end we need more organized efforts to bring promising young people together under an entirely different definition of purpose. Frankly, we have had the day of massive mobilization of resources for annual dances. We need less social club emphasis and more preprofessional and pre-business club emphasis. We need fewer social fraternities and more career-oriented fraternities and sororities. Among such clubs and fraternities, we must get well beyond future teachers clubs to add future engineers clubs, future architects clubs, future diplomats clubs, future executives clubs, future politicians clubs, future writers clubs, future poets clubs, future businessmen clubs, and so on.

Young men, young women, I tell you opportunity is real now. The mantle is upon your shoulders now, and the call is for you to hear and heed—and wake up to the opportunities that are now real.

H.R. 71: Restore Economic Freedom to Automobile Financing

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. CELLER. Mr. Speaker, 2 years ago I introduced H.R. 71, a bill to supplement the antitrust laws of the United States against restraint of trade or commerce by preventing automobile manufacturers from financing and insuring the sales of their products. I have introduced again the same measure, bearing the same number.

I presented this bill—and another like it 4 years ago—because I was convinced that such action was essential to stop monopolistic powers and trends in the automobile industry and related businesses. I was convinced that automobile manufacturing should be separated from auto financing and insurance in order to restore free competition to vast segments of our economy and to prevent captive market patterns from totally engulfing the sale of autos and related goods and services.

Events of the past 2 years have strengthened these convictions. Six days of public hearings in 1961 and voluminous statements, documents, and letters established such a strong case that the House Antitrust Subcommittee reported the bill favorably to the Committee on the Judiciary in 1962. With the press of an extremely heavy agenda in the 87th Congress, the full committee did not vote on it. This measure deserves to advance further toward passage in the 88th Congress, and I am confident that it shall.

All of us are gratified that automobile production and sales proved to be one of the highlights in our economy in 1962. But we should not let our satisfaction obscure underlying shackles on economic freedom which endanger us all.

In this past year, the world's largest manufacturer, General Motors Corp., has

tightened its hold on the American automobile market, to claim well over 50 percent of sales, and at times nearly 60 percent. Some 80 percent of the U.S. auto market is controlled by only two manufacturers.

Such concentration is not healthy for our economy—neither for business nor consumers. In large part, this concentration has been a fruit of coercion of auto dealers and restraint of trade of sales financing. These abuses led long ago to antitrust indictments of the largest three auto manufacturers and their finance companies, conviction of General Motors and subsidiaries, and consent decrees enjoining certain coercive and discriminatory practices.

Injunctive consent decrees have failed as a substitute for the real remedy of divestiture which the Government originally sought, and to which Ford Motor Co. and Chrysler Corp. agreed if it would apply to all.

Captive markets in auto sales financing have surged, with the control which the dominant manufacturers wield over these dealers. Captive financing is both cause and effect in the manufacturer control over dealers and their sales.

General Motors dealers turned over 67 percent of their new-car sales financing to General Motors Acceptance Corp. in 1960—up sharply from a heavy 56 percent in 1956. These are GMAC's own estimates, prepared at the request of the House Antitrust Subcommittee.

The captive market pattern is equally clear in the dramatically abnormal growth of Ford Motor Credit Co. in its second and third full years of operation. In 1961, this fledgling finance company more than doubled its business with Ford dealers. FMCC apparently more than doubled its business again in 1962, almost reaching that stage in 9 months. It now holds well over \$200 million in sales finance contracts.

To appreciate the abnormality of this quadrupling of business by one auto finance company, consider that auto sales financing for all financial institutions together declined somewhat in 1961 and will have increased something like 10 percent in 1962.

What sets two finance companies apart from the hundreds of independent finance companies and thousands of banks and other financial institutions? A parent that is the dealer's only supplier of new cars—the source of his livelihood.

Under the GM pattern, now being copied swiftly by Ford, the car manufacturer is the fount for all the dealer's needs—new cars, financing, insurance, parts, and accessories. Another way to express it is "putting all his eggs in one basket."

This is an expression which Ford Motor credit circulated to Ford dealers last March. It quoted a dealer as saying: "A dealer may be reluctant to put all his eggs in one basket. But if FMCC helps him become financially stronger—as I am sure it can—is this so bad? I, for one, that it is fine."

From reports which have come to me, most Ford dealers have indeed remained reluctant to put all their eggs in one

basket, but they cannot afford to offend the factory when their turn comes to start using the factory finance services. Most, I am sure, would gladly trade the real financial strength of real independence for any advantages, apparent or real, of dependence on one source for everything.

The trouble for auto dealers in putting all their eggs in one basket is that someone else gets a tighter grip on the handle.

There are other troubles too. The captive auto financing and insurance pattern poses unfair handicaps for those manufacturers, and wholesalers of auto without such means. Moreover, when dealers must put all their eggs in the manufacturer's basket, monopolistic conditions result in various related markets.

Independent businessmen—insurers, manufacturers, and wholesalers of auto parts and accessories, repair garages, as well as sales finance companies and banks—have told the House Antitrust Subcommittee of being denied the right to compete in GM-controlled markets on their merits—all because of captive financing and insurance controls. If Ford keeps racing in the same direction, thousands more of independent businesses will become casualties.

I should like to make clear that H.R. 71 applies only to the automobile industry. It deals with specific and demonstrated restraints of trade which have been subject of much antitrust criminal and civil court action. It would provide an antitrust remedy at least 25 years overdue. I should like to point out also that divested companies can, and do, survive.

No other industry, to my knowledge, has a comparable economic and legal history to that of the auto industry and related markets. Our concern is not bigness as such, nor finance or other subsidiaries as such. Rather our concern is subversion of free competitive processes.

Businesses which have not misused finance or other subsidiaries to monopolistic ends have no need to fear either new laws nor the long-established antitrust laws under which the automotive giants were indicted and convicted.

In view of the clear need for relief, surely Congress will not stand by and let the free marketplace suffer further restraint by the two automotive giants. Consumers and all businessmen thrive best when goods and services are judged on merit in a free marketplace.

If competition is extinguished in any one sector of our economy, its survival is endangered in all commerce. Suppression of competition means suppression of economic freedom, and political and social freedoms as well.

Passage of H.R. 71 will be a great victory for the free enterprise system.

Congress Must Control REA

EXTENSION OF REMARKS

OF

HON. JOHN M. SLACK, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. SLACK. Mr. Speaker, most of us will recall the debate in this Chamber late in the last session when the House had under consideration the appropriation bills for the Department of Agriculture, and several pertinent questions were raised concerning operations of the Rural Electrification Administration. At that time due credit was given to REA for its gratifying accomplishments in the pursuit of its assigned objective—the transmission of electric current into rural areas where the standard of living had been held to minimum levels because of the lack of an electric power supply.

At the same time many Members indicated that they were disturbed by the growing tendencies exhibited by REA to branch out into other fields, without any directive to do so by the Congress, and to thereby enter into direct competition with private industry while holding an insuperable advantage through REA use of low-interest Federal funds. In this connection Congressman ROBERT MICHEL, of Illinois, has recently published in the Public Utilities Fortnightly an outspoken and discerning article which underscores a fundamental issue yet to be resolved satisfactorily. I commend this statement to your attention because I am firmly convinced that, sooner or later, we must grapple with this problem realistically, and determine by congressional action the ground rules within which REA must operate.

The article follows:

A student of government once made this wise observation: "Irresponsible bureaucracy can be made responsible most quickly through financial control. The legislature is the logical agency to exercise it and thereby restore democracy in administration."¹

The Rural Electrification Administration today is an outstanding example of "irresponsible bureaucracy." Although some of this irresponsibility may be attributed indirectly to the failure of Congress to exercise sufficient supervisory control over this agency, it is Congress and Congress only, as the legislature, that is "the logical agency" to "restore democracy" in the Rural Electrification Administration.

What has gone wrong? Essentially, Congress has not adequately exercised its constitutionally granted "financial control." But there is much more to it. As long as REA was doing what it was supposed to do, according to the law as it was drafted in 1936 and according to the intent and purpose of the founders of REA, Congress could rightly delegate its "financial control" to the

Administrator. But this is 1962, not 1936. Conditions and circumstances have changed. Above all, by a steady process of pyramiding one twisted interpretation of its basic statute upon another, REA is now headed in a direction never intended by its creators, the Congress.

Today REA is basically a Federal power agency. The words "rural" and "farm" have little meaning in terms of its program. It is even using Federal funds—the public's money—to help Federal power agencies bypass Congress in their efforts to build a nationwide public power system. In the absence of the "financial control" that Congress should exercise and does not, REA has taken upon itself the task of attempting to direct national power policy, and even more disturbing, to actually establish national economic philosophy. This is not, and can never be, the function of bureaucracy. REA today is violating virtually every precept of its founders. The need, therefore, has become pressing for Congress to step in and take control.

Look back for a moment. In 1936, American agriculture had been in a depressed condition for nearly two decades. Farm income was low, farms were widely scattered and, in some cases, relatively inaccessible. Despite the fact that land-grant colleges, national farm organizations, electrical manufacturers, and many of the Nation's power companies had been engaged in serious research programs, and positive efforts toward extending central station electric service to farms for over a decade only, about 11 percent of the farms were actually electrified. Under these conditions, and in an effort to stimulate the overall national economy, there was ample justification for the Congress to approve a program to promote farm and rural electrification.

Under the REA program, rural electric systems are 100 percent debt financed by the Federal Government. In the early years, borrowers had little or no equity in their systems. (These same cooperatives now have total assets of over \$3.5 billion and an equity of nearly \$700 million—or 20 percent—in their systems.)

Over the intervening years the REA grew largely with little or no congressional direction or supervision. At the same time, a radical change was taking place in the farm economy. Income improved steadily. Today, the whole farm economy is generally up as the capacity of American agriculture to produce has expanded. And, according to the latest available statistics from the REA, almost 98 percent of the Nation's farms are electrified. The task of bringing electricity to rural America is virtually complete.

INITIALLY FOR DISTRIBUTION

A cardinal fact to remember is that Congress originally intended rural electric cooperatives to secure their electric power, wherever possible, from existing power sources. They were to be primarily distributors of power. They were not to build generating plants unnecessarily. This was clearly understood by REA. Early in 1936, Morris Cooke, the first Administrator of the REA program, stated before a committee of the House of Representatives that "in 99 instances out of 100, they (REA cooperatives), are going to buy current from existing plants." The late Honorable Sam Rayburn, who introduced the bill in the House, had this to say: "By this bill we hope to bring electrification to people who do not now have it. This bill was not written on the

¹Prof. Harvey Walker in "The Legislative Process."

theory that we were going to punish somebody or parallel their lines and go into competition with them."

These comments indicate that there was some concern even then that the REA program might become a means of using Federal financing to compete unfairly with existing free enterprise and to do a job that others are ready, willing, and able to do. It is clear from the record that Congress was assured that this type of activity would not be carried on. So, with the belief that REA would be a noncompetitive type of program designed to supplement the activities of others in their efforts to electrify the rural areas of our country, support for the program was widespread.

Apparently in keeping with the promise of obtaining power from existing sources wherever possible, loans for generation and transmission, as against loans for distribution, constituted only about 3 percent of total REA loans over the period 1936-41. By 1950, however, this had risen to 18 percent. By 1961, the percentage of generation and transmission loans made up to that year had risen to 25 percent. In fiscal year 1962, a new record for G. & T. loans was set with more than 59 percent of all REA electric loans for the year being approved for this purpose; and, for fiscal 1963, it is estimated that between 65 and 70 percent of the electric loans will be for generation and transmission purposes.

The obviously changing character of the REA has not gone unnoticed. Because the very thing that the original founders tried to guard against was happening, attention has been focused on the problem.

Widespread controversy has been evoked by (1) new administrative policies of REA concerning the granting of generation and transmission loans, (2) the cloak of secrecy surrounding loan applications, and (3) the subsidizing of industry through rural electric cooperatives.

Increasingly, REA loans are financing generating facilities of giant "super cooperatives" so that they can create an autonomous, nontaxpaying, and generally unregulated electric supply system to compete with private power sources, contrary to the co-author of the original act, the late Mr. Rayburn, who said they did not intend to go into competition with anybody.

Prior to last year, it was REA policy to award generation and transmission loans only (1) where no adequate dependable source of power was available in the area to meet the borrower's needs, or (2) where the rates offered by existing power sources would result in a higher cost of power to the borrowers than the cost from facilities financed by REA. This was based on the announced policy of the first REA Administrator to Congress when the question of generating loans was discussed during debate on the 1936 act.

The present Administrator of REA, Norman M. Clapp, has stated, however, that it is not enough to judge the desirability of generation and transmission loans on the basis of adequacy, dependability, and low cost of power. On April 21, 1961, Mr. Clapp, in a speech before a Louisiana electric cooperative, said, "We must be certain that cooperatives enjoy a supply of power which will guarantee the cooperative device a permanent place in the American power industry."

On May 31, 1961, the Administrator announced a third criterion for G. & T. loans apparently aimed at enabling him to accomplish his previously stated goal. This new third criterion provides that, in addition to the two original criteria, loans for generation and transmission can be made "where generation and transmission facilities are necessary to protect the security and effectiveness of REA-financed systems." This

completely nullifies the two above criteria which, if administered fairly, carry out congressional understanding and approval of REA G. & T. policy.

EXISTING SUPPLIERS PROTEST

Under this new philosophy abuses of the REA program have been mounting. At least 10 large loans totaling over \$215 million have been approved in recent months for cooperative generating plants which will not fill any power shortage. All these loans were made over the protests of existing power suppliers that all present and anticipated future cooperative power needs would be provided and at a price cheaper than it would cost the cooperatives to generate it themselves.

A \$60 million loan to an Indiana generating cooperative, heralded by REA as the largest loan in its history, was approved on June 15, 1961. When it became evident that the Indiana Public Service Commission might disapprove this loan as unnecessary, the cooperative switched the loan to another cooperative in an obvious and blatant circumvention of the rights and powers of the State commission.

Last November a loan of over \$20 million was made to the Alabama Electric Cooperative to build a 66,000-kilowatt steamplant. This loan was made although REA's own published figures show that the local electric company is supplying power of the G. & T.'s member co-ops at a cost to them less than that G. & T. is now selling power to its members.

Not only is the total amount being loaned for generation and transmission facilities increasing each year, but the size of the individual loans is, on the average, becoming larger. With individual loans now running into the multimillion-dollar figures, Congress needs to take a closer look at the G. & T. program to make certain that loans of this size are necessary and in the public interest. A loan application has been filed by REA borrowers in Louisiana totaling \$53 million for the construction of two 100-megawatt generating plants and nearly 1,800 miles of transmission line. This is enough transmission mileage to crisscross the State from north to south and from east to west five times. If this loan is approved out of funds made available by the 1963 appropriations bill, it will require one-eighth of all the money Congress approved for REA loans for 1963. Certainly, under such circumstances the Appropriations Committees of Congress should review a loan of this magnitude.

It has also become evident that REA loans under section 5 of the act, intended primarily to assist farmers to utilize the electricity the REA program was bringing to them, are now being made to subsidize industry.

Section 5 of the 1936 act authorized the REA to make loans to finance electrical and plumbing equipment for persons in rural areas. During recent years, REA limited loans under this section to facilities for rural households and farmsteads. But the present administration has made section 5 loans for such diverse purposes as the purchase and installation of gravel-crushing and washing machinery, for the purchase of a snow-making machine for a ski resort, and for the purchase of textile machinery for a private textile mill. Incidents such as these force one to view the House Agriculture Committee's statement that it "feels that REA's present interpretation of section 5 of the 1936 act is inconsistent with the original intent of Congress" as a gross understatement.

LOW INTEREST RATE

The public money that REA is using to finance such industrial electrical machinery through section 5 loans is, of course, loaned to borrowers at the below-cost, taxpayer-subsidized interest rate of 2 percent.

With the aid of this public money REA is therefore subsidizing industry, not to help

the farmer, but merely to expand its own bureaucratic activities.

The Administrator also states that section 5 funds will not be used for financing industrial machinery until an industry has exhausted all other sources of credit. This may be the Administrator's policy, but the REA staff apparently is more interested in making loans than checking out the efforts of prospective borrowers to first obtain alternative borrowing sources. A case in point is the loan to finance snowmaking machinery for a ski jump. An official of the REA borrower making the loan testified before the House Agriculture Committee on the Food and Agriculture Act of 1962:

"Chestnut Hills [the ski resort] is our biggest load, and it promises to grow bigger every year. That is one important reason why our co-op agreed to make a loan [under sec. 5] to the company when the company could not get financing for snow-making equipment from any other source, including the Small Business Administration." (Pt. 2, p. 968.)

In reply to my query to the Small Business Administration as to whether the ski resort had applied to SBA for a loan, the Small Business Administrator wrote on March 22, 1962:

"This will confirm advice given to * * * your staff concerning the status of the loan inquiry made by Chestnut Hills Resort, Hanover, Ill. No loan application has been filed with this agency."

In short, if I could obtain such information by merely addressing a letter to SBA, why wasn't REA able to ascertain this fact? Obviously, REA made no real effort to verify the extent of other efforts to obtain financing when processing this section 5 loan. REA was apparently too interested in loaning its subsidized money and building up its own bureaucracy to check out all the facts it needed. If this is an example of REA efficiency in processing a relatively small loan amounting to only \$30,000, how can REA be trusted to handle the many millions of dollars made available to it by Congress each year and process the more complex G. & T. loans amounting in some cases to \$50 and \$60 million? As a banker entrusted with the taxpayers' money, REA standards appear to be slipshod. This provides a good reason why Congress through the Appropriations Committee should start taking more control over the activities of this agency.

The secrecy surrounding REA generation and transmission loan applications has also evoked criticism of the House Committee on Agriculture. In its report accompanying the Food and Agriculture Act of 1962, the committee admonished the REA, as follows:

"Testimony revealed a growing concern over the failure of REA to disclose information on various phases of its operation. The public is entitled to know how public funds are being used, and the REA should approach the consideration of loans for generating facilities in a manner designed to provide as full public information as possible. * * * Certainly, interested parties should be notified and their views obtained before such loans are approved. Secrecy tends to kindle doubt, whereas public knowledge of the reasons for and justification of loans would go far toward dispelling criticism which could bring the program into disrepute."

Last April, under pressure of increasing criticism from Members of Congress, congressional committees, as well as from the press and the public, REA issued an administrative bulletin on the release of information and availability of records relating to loan applications. REA supporters hailed this bulletin as a major departure from its previous policy of secrecy. A careful study of the bulletin failed to reveal any basic major policy change. In fact, rather than lowering the iron curtain of secrecy, the bulletin,

with minor exceptions, merely implemented existing REA practices in writing.

Perhaps the most determining argument in support of tighter congressional control over REA through the Appropriations Committee is the secrecy which surrounds the program. Today, secrecy stands between REA and what should be effective congressional financial control. Once having received its annual appropriation from Congress, REA conducts its lending activities in complete secrecy—not only from the Congress, but from the public and other interested parties who may be directly affected by its activities.

QUESTION OF CRITERIA

Two of the criteria which REA uses in approving G. & T. loans are the cost of power and adequacy of service. To ascertain the necessary facts upon which to base a decision, REA needs the best possible alternative offer from existing suppliers, public or private, in the area of a proposed G. & T. system. Unless existing power suppliers know what they are bidding on—i.e., the future plans and needs of the borrower—they cannot adequately present their own case for providing additional facilities to serve borrowers' needs. If the best alternatives cannot be presented by existing suppliers because of their inability to obtain enough facts to prepare their offer, then REA may be guilty of making an unnecessary loan as it is not comparing the proposed generating loan with the best alternative.

This raises the entire question of how the Administrator can honestly and accurately comply with his own criteria to measure the need for a G. & T. loan unless adequate information is made available to existing suppliers so they can make their best offer based on up-to-date, accurate information on their customers' needs. How can the Administrator in all candor approve a G. & T. loan application and spend the taxpayers' money when he is comparing a G. & T. application with alternatives drafted without knowledge of all the facts?

This raises further questions as to why REA conducts its program in secrecy from Congress and the public, the answers to which are not too difficult. Once secrecy is removed from REA's operations, it would become obvious both to Congress and the public that REA's generation and transmission program is, for the most part, wholly unnecessary and, in many cases, uneconomic and unsound.

Our Nation today is served by a power system unmatched and unparalleled anywhere in the world. There is an abundance of power available to meet the country's present and future needs. The average cost of electricity to the electric consumer has been steadily decreasing over the years.

In view of these accomplished facts, there is little or no excuse for REA to spend tax money for financing separate power systems for its borrowers. This is an uneconomic approach from the standpoint of both the REA borrowers and the public and, therefore, contrary to the best interests of the people.

REA is now in its 27th year. As local distribution borrowers repay their 35-year loans to the Federal Government, REA loses the control over their activities which is embodied in its mortgage and loan contract with its borrowers. As long as a local borrower is in debt to the Federal Government, the REA Administrator maintains such rights as the veto power over a borrower's choice of manager and attorney, and the right to maintain an exclusive banker's position by refusing to permit the borrower to obtain expansion funds elsewhere. Once the Federal debt has been retired, however, the borrower is free to conduct his business independently as a cooperative should.

Thus, when REA approves a G. & T. loan for a group of distribution borrowers, these

cooperatives become indebted to the Federal Government and come under the Federal Government's control for another 35 years. Once a group of cooperatives construct their own G. & T. system and take on a utility responsibility for their own power supply, normal load growth (a co-op doubles its load every 7 years) requires periodic expansion of facilities, thereby increasing the borrower's debt to REA. Thus, borrowers soon find themselves indebted to the Federal Government for an indefinite future. REA's strict contractual control over its borrowers makes this agency as much of a Federal power agency as TVA or the Interior Department.

CONGRESS CONTROLS ONLY FUNDS

This is another important reason why Congress should take greater control over the REA program. As an elected body, Congress represents the best interest of the people themselves, while REA, as a Federal bureaucracy, is primarily motivated by its own selfish interests—those of agency growth, prestige, and self-perpetuation of its existence.

Congress today has virtually no control over the REA program with the exception that it makes a lump sum appropriation available to this agency for loans each year. Under the Constitution, Congress is given responsibility to maintain control over the Government purse strings. When Congress authorizes expenditures for an executive agency without knowledge of how the money is to be used, Congress, in effect, is automatically transferring its responsibility to the executive branch of the Government.

There is no question that the REA Administrator, under the law, should and does have the authority to study, recommend, and approve REA loans, but this does not supersede Congress' authority to decide how Federal funds—including REA's—should be spent. The Bureau of Reclamation, for example, has blanket authority to construct projects which it finds financially feasible. Congress, however, will not permit the Bureau to spend money except on projects that it specifically approves each year in appropriation acts. Reclamation also gets lump sum appropriations, but how the money is to be used is specifically set forth by Congress in the reports of the Appropriations Committees.

A further reason that Congress, through the Appropriations Committees, should have the authority of approving the use of REA funds—at least for major G. & T. projects costing over a certain amount—is that the purpose of the REA program is no longer one of constructing distribution systems to provide electricity to farms and other rural customers in unserved areas. The major share of REA's money is now being loaned to put REA permanently and completely in the power business—by constructing generating plants and transmission systems to serve customers and areas that are already receiving central station electric service in adequate amounts at reasonable prices.

Because of this changed policy the REA power program is becoming the largest spender of all the Federal power programs financed by the taxpayers. In fiscal year 1963, REA estimates it will be spending more money for generation and transmission system (\$260 to \$275 million) than either the Corps of Engineers (\$238.8 million) or the Bureau of Reclamation (\$185.2 million) have requested for their multiple-purpose power programs.

For many years REA has been a sort of "sacred cow" in Congress. Each time legislation has been introduced which would, in any way, limit the powers of REA, those brave enough to introduce or support such legislation have been denounced by cooperative lobbyists as "antifarmer" and even "anti-American." But this is changing rapidly. Events during the latest session of Congress have indicated an increasing awareness and

concern of Members over REA actions in recent months. An amendment which I introduced to the agriculture appropriations bill this year to limit the amount of funds to be loaned for generation and transmission facilities received bipartisan support even though it lost by a vote of 133-94. The fact that Members would actively oppose REA's present administration of this program and stand up and be counted is, to me, a real step toward finding a solution to this problem.

Prior to this vote, during consideration of the REA appropriations request before the House Appropriations Committee, I proposed an amendment that would require the Budget Bureau in presenting REA's program for fiscal year 1964 to itemize and justify in detail all G. & T. projects costing more than \$5 million. This would have given the Appropriations Committee an opportunity to consider the REA construction program in the same way that it considers the power programs of the Bureau of Reclamation and the Corps of Engineers. The voting on this suggestion of mine, although defeated by a narrow margin of three votes in the House Appropriations Committee, indicated an increased willingness on the part of members to recognize the seriousness of the present trend in REA's policy.

A requirement of this nature would not deprive one single cooperative, or one single rural consumer, of electric power, nor would it create in any way a power shortage among cooperatives. It would not increase the cost of power to any cooperative. It would not in any manner reduce the amount of loan funds available to rural electric cooperatives. It would not impair the security of a single cooperative.

What such a requirement would do is to bring the REA program more closely into line with the intent and purpose of the Rural Electrification Act and to give Congress some semblance of control over this agency. In addition, the REA Administrator might be a little more careful of the manner in which he conducts some of his activities. Without any checks and balances, he has a clear field.

Presentation of this information to the Appropriations Committees of Congress would in no way infringe upon the authority of the Administrator to make loans. It would, however, give Congress the needed information to specifically approve appropriations for this agency. Congress has a right to this information and it has a responsibility to the taxpayers of assuring them that their elected Representatives still have control over Government spending. At present, insofar as REA is concerned, Congress has the responsibility, but not the control.

"Irresponsible bureaucracy can be made responsible most quickly through financial control. The legislature is the logical agency to exercise it."

The Budgetary Outlook and Its Meaning for Federal Expenditure and Tax Policy

EXTENSION OF REMARKS OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. YOUNGER. Mr. Speaker, since the House will be confronted with the new budget and recommendations for tax cuts early in the session, it seems to me that the advice of Dr. Raymond J. Saulnier, professor of economics, Barnard

College, Columbia University, who also served as Chairman of the Council of Economic Advisers for President Eisenhower, is worth studying.

His article on the budgetary outlook and its meaning for Federal expenditure and tax policy as published in the December issue of Tax Foundation's Tax Review are as follows:

THE BUDGETARY OUTLOOK AND ITS MEANING FOR FEDERAL EXPENDITURE AND TAX POLICY

(By Dr. Raymond J. Saulnier, professor of economics, Barnard College, Columbia University)

There is a considerable body of opinion which holds that neither the current position of the budget nor budget prospects for the next few fiscal periods ahead should have any material bearing on tax policy or on expenditure policy, either. But I do not share this deficits-don't-really-matter theory of fiscal policy.

My preference is for an earlier but still not wholly extinct point of view that the Federal budget should be brought into balance over the cycle; with surpluses in the expansion phase offsetting deficits in recession and early recovery. The strategy of Federal policy which I think would serve us best at this time and for the implementation of which I propose to make several suggestions, derives from this underlying fiscal policy preference.

We may begin with the budget outlook for fiscal 1963. In the official statement issued only a few weeks ago it was estimated that the administrative budget for that period would show a deficit of \$7.8 billion. The new estimate came as no great surprise and has evoked remarkably little comment, but there is a sense in which this outlook is both novel and important. Its novelty does not lie in the size of the prospective deficit. It has become commonplace in political exchanges to point out that a deficit of \$7.8 billion isn't as large as the \$12.4 billion deficit incurred in fiscal 1959. This is perfectly true. The novelty of the fiscal 1963 deficit lies in the fact that it comes at an advanced stage of a business cycle expansion. The \$12.4 billion deficit in fiscal 1959 was a deficit incurred in the first full fiscal year following the trough of the 1958-59 recession. The \$7.8 billion deficit in fiscal 1963, on the other hand, is occurring in the second full fiscal year following the trough of the 1960-61 recession.

The prospective fiscal 1963 budget deficit has a second significant feature, namely, that it is larger than that incurred in fiscal 1962. Thus, what it lacks in size relative to the fiscal 1959 deficit, it is more than making up in successiveness and in its capacity to grow. This suggests that we may be in a more or less chronic deficit situation. Far from a cyclically compensatory budget, what we may be confronting is the prospect of deficits in periods of expansion and growth as well as in periods of recession and early recovery. If this is the road we are traveling, we had better recognize it as such as soon as possible.

Much will depend on the budgetary outcome in fiscal 1964, which in turn will depend on developments in the economy over the next year and a half. Accordingly, let me state my views on the economic outlook.

EFFECTS OF CUBAN SITUATION

After a so-so kind of spring and summer, during which the economy made very little advance and in some important ways was losing ground, a new momentum developed at or just before the time of the Cuban crisis. There is evidence that some strengthening developed in the economy just prior to the Cuban incident. So far as I can see, this resulted mainly from the unusually

heavy volume of defense and space contracts awarded in the third quarter of the year. Additionally, there was mild help from tax changes, legislative and administrative, and considerable benefit from a heavy volume of early automobile production. The economy was still in a distinctly precarious position in mid-October, but these factors prevented a decline and appear even to have produced a mild upward movement.

In this atmosphere, the Cuban crisis had a clearly stimulative effect on the economy. I would not want to make too much use of this point, but I do believe that Chairman Khrushchev should realize that in recent years some of his major moves have been timed to earn him the right to be regarded as one of our most important economic stabilization aids, though this could hardly be a deliberate aim of Soviet policy.

The Russian reversal on Cuba was also a help to our economy. It evoked a sense of relief that seems to have strengthened psychology generally: consumers, financial investors and businessmen reacted positively, with good effects on the economy. There is something somehow precarious about all of this, but for the moment at least we have taken a turn for the better. What the Cuban developments means for the outlook is that our chances of navigating a difficult passage in the business cycle without overall decline in the near future have been very considerably improved. Given a reasonably favorable atmosphere, the momentum now developing will of course carry us through the year-end season and I would expect it to carry us well into 1963. Many of the indicators are still giving out warnings of a recessionary trend and these must be respected; but I would read them at this date, supplemented by what we know about developments in November, primarily as a warning against excessive optimism.

LOOKS FOR INCREASE UNTIL MID-1963

There are those who believe that the present momentum will carry well beyond mid-1963 and accelerate in the second half of the year. But the evidence for this is as yet visible only to the eyes of faith. I regard the momentum as still of modest proportions and there are still many obstacles in our path, notably the handling of tax legislation in 1963. For the moment, therefore, I look for an increase until around mid-1963 and then a situation much like what we had to cope with through the summer of 1962, namely, a kind of stalemate in which little overall advance is scored.

The next step we must take is to translate this view of the business outlook into terms that are meaningful for the estimation of budget receipts. To do this, we have to project gross national product from the third quarter of 1962 to the second quarter of 1964. I have made three such projections which we may identify as models A, B, and C.

Model A comes directly from the business outlook estimate I have just described. It extends gross national product at a rate which gives an overall growth for 1963 over 1962, in current prices, of about 3½ percent. With an allowance of 1 percent for price inflation, this would be a 2½-percent increase in real gross national product. This seems to me like a fairly optimistic projection but I am never quite sure of such things. What seems optimistic to me frequently seems pessimistic to my friends in government. So I will simply say that of all the models I have constructed this seems the most plausible.

Model B contemplates an increase in current price GNP of around 4.5 percent, with a constant price growth of around 3 percent.

Model C, which I regard as wildly extravagant, pictures a current price gross national product growth of around 6 percent and a constant price growth rate of 4 percent.

POSSIBILITY OF \$15 BILLION DEFICIT

Employing assumptions drawn from budgetary experience since 1954, I have derived estimates of budget receipts for fiscal 1964 for each of these three models of gross national product growth. What I find is that receipts in fiscal 1964 would be \$90.8 billion on model A; \$93 billion on model B; and \$95.8 billion on model C.

From these estimates of receipts we can derive some ideas as to budgetary outcome for fiscal 1964. What they tell us is that the deficit would be reduced to a relatively small figure if, with no reduction in tax rates from present levels and with fiscal 1964 expenditures at the same level as in fiscal 1963, we were to grow between 1962 and 1963 on a model A or model B pattern. And they suggest that economic growth in 1963 at the rapid rate pictured in model C would produce a surplus of around \$2 billion in the fiscal 1964 budget.

These are the results one gets if rates of economic growth ranging from 2½ to 4 percent in real terms are assumed to be achieved at the same time that Federal expenditures are held at the fiscal 1963 level of \$93.7 billion and if tax rates remain as they are. One may say that it would be impossible to achieve growth at these rates, even at a 2½-percent (constant price) rate, with this fiscal policy. This may be so; certainly, in view of what has been said officially about the prospect for substantial tax reduction in 1963-64, a good many people would be disappointed, with a generally dampening effect on the economy, if they were to be told now that there was to be no tax reduction for the present. Accordingly, let us consider the budget implications of a fiscal policy that would reduce taxes for the fiscal year 1964 by \$5 billion over what they would otherwise be and raise Federal expenditures by \$5 billion above the \$93.7 billion fiscal 1963 level.

What seems to be implied by such a fiscal policy is a very substantial deficit, as large or larger than the currently projected fiscal 1963 deficit of \$7.8 billion. Specifically, the deficit would be held close to the fiscal 1963 level if the economy were to grow by 6 percent on a current price basis (model C) and would be between \$10 and \$15 billion if the economy were to grow by 3½ to 4½ percent [rate] on the same basis (model A or B).

In other words, if a \$5 billion tax cut is effective in fiscal 1964 and if Federal expenditures are higher by another \$5 billion, we face a substantial and very likely enlarged budgetary deficit. This would mean an unbroken succession of deficits, each one larger than the one before, extending through the third full year following a trough in the business cycle. I leave it for reflection over the budgetary outcome if, sometime between now and mid-1964, or indeed at any time in 1964 or 1965, we should slide into a recession.

BROAD POLICY IMPLICATIONS SEEN

In my judgment, there are two broad policy implications in this fiscal outlook. The first is that there is an urgent need for control over the increase of Federal expenditures. What we should do is put a ceiling on expenditures for, say, 2 years, at the fiscal 1963 level, that is, at about \$94 billion. Considering built-in increases and additional new program requirements that must be met, such as those growing out of the present tensions in international relations, this means that substantial reductions in some expenditures are necessary.

The second policy implication of the fiscal 1964 budget outlook is that there is need for caution in the amount and character of tax reduction. As it is developing, the fiscal situation does not justify a reduction of more than \$2.5 billion on anything but an emergency basis, and the economic outlook

at this time does not spell emergency. Furthermore, such tax reduction as is legislated should be designed to promote a higher level of private investment expenditure. This would be done best, for a \$2.5 billion revenue loss, by a reduction in the corporate income tax rate to 47 percent. We are not now in a position to indulge ourselves in a large, across-the-board reduction of the tax burden. Under the right expenditure control conditions we could, however, take a first step in this direction, hoping to take additional steps at a later date.

Interestingly enough, however, the whole tenor of public discussion at this time contemplates a policy that is exactly the opposite of this. Very large increases in expenditure are being discussed for existing programs and last summer it was disclosed that our national goal for the next few years would be to land a man on the moon. At the same time that we contemplate these enormously exciting though also enormously expensive undertakings the air is full of official trial balloons and numberless unofficial proposals for large tax reductions. The mood is one of competitive venturesomeness and generosity in which there seems to be some thought that the prize should be allotted to whomever is prepared to make the boldest and most magnanimous offer. I trust I will be forgiven if I say that to me all of this has a distinctly bizarre quality.

Turning to the first of these policy implications, what about the possibilities of expenditure control?

CUTBACK ON CREDIT PROGRAMS

There is developing, I would judge, a kind of defeatism on this subject. I would be among the first to concede the political difficulties involved in a program of expenditure control if it lacked administration support, and even more so if it conflicted with administration policy. But given administration support, a program for restraining the powerful tendency for Federal spending to increase would, in my judgment, be entirely feasible. The question, therefore, is whether there are practical possibilities of achieving economies that would be economically desirable.

There are such opportunities. To illustrate, let us take the case of Federal credit programs. There is a grossly inadequate public understanding of the magnitude, let alone the character, of the Federal Government's lending activities, but for anyone interested in learning more about these the budget message for a number of years has carried a special appendix of factual information. From this source we learn that in the current fiscal year all Federal credit programs combined will be a charge on the budget to the extent of \$1.8 billion, which is the difference between the amount of disbursements made under the programs and the amount of repayments received and certain other offsets. However, this net figure tells little about the size of the programs. Currently, total disbursements under them are estimated for fiscal 1963 at something over \$3 billion. About half of this is accounted for by the Commodity Credit Corporation and the Agency for International Development, but other agencies also account individually for considerable sums. Thus, the Export-Import Bank will disburse an estimated \$800 million in fiscal 1963; the Small Business Administration, something over \$400 million; the Farmers' Home Administration, more than \$500 million; the Rural Electrification Administration, \$360 million; the Community Facilities Administration, close to \$500 million; and the Federal National Mortgage Association, more than \$400 million.

SELL LOANS AND SECURITIES

Since we are dealing with a very large deficit, economies must be of substantial size to be significantly helpful. In this respect,

Federal credit programs would be a good place to start. It is never a wise budgetary policy to undertake flat, across-the-board budget cuts, because existing programs have such widely different degrees of merit, but it is interesting to observe that a reduction in disbursements averaging 10 percent would produce an expenditure reduction of around \$800 million. And such a program could hardly be regarded as a severely austere one. Astonishing as this may seem, a 10-percent overall reduction would leave disbursements for Federal credit programs as a whole still as large as they were in fiscal 1962, and \$3 billion higher than they were in fiscal 1961.

To do this would require a searching reappraisal of credit programs and techniques. Some of the programs, certainly those represented by the Agency for International Development, have been designed to accomplish purposes that could in no way be achieved except through governmental effort; but others are in part, at least, competitive with private effort and have assumed their present size mainly because they make credit, often of a long-term variety, available at interest rates significantly below the market. For such programs, an interest rate policy more closely attuned to market realities would direct a larger proportion of the financing to the private financial system and thereby reduce budget expenditures. Administrative limitations would do the same thing. Economies could be effected in other programs by requiring greater reliance on loan participations with private lenders, a more determined search for available private financing before public credit is offered, or the substitution of loan insurance or guarantees for direct lending. In still other cases, all that would be necessary would be for the Federal agencies involved to relax their currently aggressive search for loans.

Still in the area of Federal credit programs, let me mention another possibility for helping to offset budgetary deficits. This could be done through the sale to the public of loans and securities accumulated under Federal credit programs. The January 1962 budget message estimated that Treasury holdings of these financial assets will reach \$29 billion by the end of the fiscal year 1963. Only direct loans are included in this amount; insured or guaranteed loans or securities are excluded.

This \$29 billion fund constitutes what I believe is our least well-understood stockpile. It includes over \$3.5 billion of mortgage loans held by FNMA; nearly \$4 billion of loans made by the Rural Electrification Administration; \$1.8 billion of loans made by the Community Facilities Administration; \$1.4 billion of credits extended by the Farmers Home Administration; and nearly \$15 billion of loans growing out of various international lending activities.

Many of these financial assets would be ineligible for sale; others would be unsalable under any practicable arrangement. But there is reason to believe that some of them could be sold publicly and to make a market distribution of even a small fraction of the total would produce a very large volume of budget receipts. And to do so would not be a novel move. The Federal National Mortgage Association was established in the first instance on the theory that it would sell mortgages as well as buy them. The Veterans' Administration has marketed some of its holdings of direct loans. Recently the Export-Import Bank did the same abroad and some years ago loans made by the Reconstruction Finance Corporation were liquidated in this country under a carefully designed and executed program.

Of course, sales would have to be made subject to two major conditions: first, the terms of the sale would have to be fully protective of the public interest; second,

sales would have to be made in a manner and on a schedule that would avoid depressing the economy by forcing a significantly higher level of long-term interest rates.

As regards the first of these two conditions: because most of the loans were made in the first instance at below-market interest rates it would be necessary to sell them at prices below par. But when one considers the difference between the income being earned by the Federal Government on the assets in question and the rate of interest the Treasury must pay on the public debt in order to continue holding them, it is by no means certain that a net loss to the Federal Government would be involved in a sales program. In any case, so long as sales were made on terms that provided no more than a reasonable compensation and return for underwriters and private investors, such capital loss as there might be could properly be regarded as a payment in advance of future subsidies, and this obligation would be discharged without imposing a current burden on the budget.

HOLD DOWN PUBLIC WORKS SPENDING

As regards the second of the two conditions, namely, that public sales of financial assets might raise long-term interest rates and exert a restrictive effect on the economy, this would depend on the timing and volume of sales and on the availability of investment funds. Actually, there has been a surplus of funds seeking investment of late, not a shortage, and there is accordingly a good chance that a properly administered sales program would have little effect on the prices of long-term securities. Also, whether sales tended to raise long-term interest rates would depend on monetary policy. But it seems reasonable to expect that monetary policy would actually assist a program aimed at helping to reduce the budget deficit. Of course, the budget assistance one would get from sales would be only temporary but it would come at an opportune time and it could be an ingredient of a fiscal policy that would hold promise of reversing the trend to larger and larger deficits.

Let me mention only one more expenditure program in which economies might be found, namely, the programs of Federal construction and grants to the States for civil public works. These have been increasing by leaps and bounds of late.

There is about a 50-50 distribution of expenditures for civil public works as between budget accounts and trust fund accounts, with each accounting in fiscal 1963 for about \$3¼ billion. But the budget accounts alone have increased by about \$1 billion in the last 2 fiscal years. As a group, their increase is exceeded by the ballooning of expenditures under the Federal credit programs, but it has been very rapid, all the same. A program under which civil public works expenditures would be held in fiscal 1964 to the level prevailing in fiscal 1962 would produce a budget economy of close to \$500 million, but it would still mean a level of spending \$500 million higher than obtained in fiscal 1961. This, again, would be no austerity program.

Other possibilities could be mentioned. What is really needed is a thorough reexamination of Federal expenditures. A Presidential appointed commission of private citizens who would approach the problem in terms of what is good for all Americans and not of what is good for particular interest groups could do this.

To undertake such a budget reappraisal in order to prevent our being engulfed by Federal spending that is growing so fast and is getting so large and so complex that no one really comprehends it would be reason enough. An additional reason derives from the budgetary outlook I have sketched in these remarks. It is this:

We need to restructure our tax system and lighten the burden of taxation in ways

will improve the burden of taxation in ways that will improve the performance of our economy, but the budget outlook tells us that unless we exert a much more effective discipline over the volume of Federal spending we cannot undertake these needed measures of tax relief without courting larger and larger deficits. All the evidence points to the need for a searching scrutiny of expenditure priorities.

Great Lady From Ohio: Mrs. Bolton

EXTENSION OF REMARKS OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. MINSHALL. Mr. Speaker, there are 67 new Members in this Congress. They have not had the privilege many of us enjoy of having worked and counseled with a charming and remarkable colleague, Congresswoman FRANCES P. BOLTON. I am indebted to her tenfold for the benefit of her wisdom and for the courtesies she has consistently extended to me and my office ever since I came to Washington as a freshman in 1955. I can think of no better way to introduce her than through an excellent article written recently by Alvin Silverman, chief of the Washington bureau of the Cleveland Plain Dealer. There is, of course, one of the 67 new Members who needs no introduction to Mrs. BOLTON—and that is her son, Congressman OLIVER BOLTON, whom we are delighted to welcome back to Capitol Hill.

The article follows:

GREAT LADY FROM OHIO: MRS. BOLTON
(By Alvin Silverman)

WASHINGTON.—The passing last week of Mrs. Eleanor Roosevelt and the resulting effusion of tributes to her character and achievements brought to mind the lamentable fact that not until death occurs is very much laudatory ever said about any individual.

Judged by any except the most illiberal of critics, Mrs. Roosevelt was a great woman. There are not many great women around. Their total only slightly exceeds the number of great men.

There is, however, a great woman who is a Clevelander. Since she is very much alive and very much disinclined to toot her own horn, this might be an appropriate time to discuss her.

Her name is FRANCES P. BOLTON.

Congresswoman from Ohio's 22d District since 1940, Mrs. BOLTON comes from a distinguished family long associated with public service. Both of her grandfathers served in the Ohio General Assembly and one of them, Henry B. Payne, became a U.S. Representative and then a Senator.

Mrs. BOLTON and her son, OLIVER, just elected to the House for another term after sitting on the sidelines for several years while recovering his health, comprise the only mother-son team ever to serve together in the Congress.

Mrs. BOLTON is regarded as an authority on legislation dealing with U.S. foreign policy, particularly Africa and France.

In 1955 she made a 20,000-mile study tour of Africa. Her visit to 24 countries south and east of the Sahara Desert was the first extensive mission to Africa by a Member of Congress.

Two years later, she returned to Africa as an official delegate to the Ghana independence ceremonies, and later in 1957 she made an official report on United Nation refugee camps in the Middle East.

There is not a single important official of any of the new African nations who does not consider Mrs. BOLTON a close friend and adviser. Her Washington home is virtually a headquarters for them when they are in the capital.

Far beyond her contributions in the field of foreign affairs, however, have been Mrs. BOLTON's activities in health and nursing.

The first Army school of nursing in World War I was largely the result of the pressure she personally applied on her friend from Cleveland, Secretary of War Newton D. Baker. During World War II, her Bolton bill created the U.S. Cadet Nurse Corps, an organization that graduated 125,000 nurses for the Nation's war effort. Western Reserve University's School of Nursing, named for her, eloquently bespeaks her efforts.

A friend recently was feeling pretty proud that he had been chosen to receive an honorary doctorate degree from a university. Mrs. BOLTON acted as if she could not have been more thrilled if she had received one herself. If she had, it would have been No. 15 for her.

France awarded her membership in the French Legion of Honor officer class for her work during and after World War II.

Her other awards include "Churchwoman of the Year," and the American Social Hygiene Association's award for distinguished service to humanity.

Mrs. BOLTON is vice regent for Ohio of the Mount Vernon Ladies Association, possibly the most exclusive organization in the Nation. For more than a century, it has been in charge of the George Washington National Shrine. Only recently, Mrs. BOLTON bought a large tract of land across the Potomac River from Mount Vernon so that the view would remain unchanged.

There is probably not a church or a hospital in northern Ohio that has not been saved in a major crisis by Mrs. BOLTON's financial help or other assistance.

All this, of course, does not make her a great woman.

Her greatness comes also from her character and personality and—well, you get the general idea by now.

Pay Increase for the Military

EXTENSION OF REMARKS OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. BOB WILSON. Mr. Speaker, for many months I have been extremely concerned at the delay of the Kennedy administration in pushing for a pay increase for the military, despite the fact that other governmental employees have benefited from pay raises on two occasions since the last general military pay increase in 1958.

Last fall I pledged to introduce, if necessary, and support legislation calling for a substantial pay increase. Included was to be a section correcting the inequities in the pay scales for those retired personnel who left the service prior to July 1958. These retired persons were discriminated against and a great in-

equity has existed for over 4 years as a result.

A few weeks ago I was heartened to learn that the Defense Department was supporting a pay increase measure amounting to as much as 14 percent in some categories and also correcting the inequities I mentioned previously.

Rather than introduce my version of a pay bill I have decided to defer such action until the administration's measure comes before the Personnel Subcommittee of the Armed Services Committee. As a member of the subcommittee, I recognize that legislation as introduced by the administration is merely the raw material from which a truly effective and meaningful pay bill can be molded by our subcommittee and subsequently by the Congress.

It is the responsibility of the Congress to act with dispatch on a substantial and constructive pay bill for active duty and retired personnel of our military service and I am looking forward to helping to expedite this much-needed legislation.

Current Communist Goals

EXTENSION OF REMARKS OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. HERLONG. Mr. Speaker, Mrs. Patricia Nordman of De Land, Fla., is an ardent and articulate opponent of communism, and until recently published the De Land Courier, which she dedicated to the purpose of alerting the public to the dangers of communism in America.

At Mrs. Nordman's request, I include in the RECORD, under unanimous consent, the following "Current Communist Goals," which she identifies as an excerpt from "The Naked Communist," by Cleon Skousen:

[From "The Naked Communist," by Cleon Skousen]

CURRENT COMMUNIST GOALS

1. U.S. acceptance of coexistence as the only alternative to atomic war.
2. U.S. willingness to capitulate in preference to engaging in atomic war.
3. Develop the illusion that total disarmament by the United States would be a demonstration of moral strength.
4. Permit free trade between all nations regardless of Communist affiliation and regardless of whether or not items could be used for war.
5. Extension of long-term loans to Russia and Soviet satellites.
6. Provide American aid to all nations regardless of Communist domination.
7. Grant recognition of Red China. Admission of Red China to the U.N.
8. Set up East and West Germany as separate states in spite of Khrushchev's promise in 1955 to settle the German question by free elections under supervision of the U.N.
9. Prolong the conferences to ban atomic tests because the United States has agreed to suspend tests as long as negotiations are in progress.
10. Allow all Soviet satellites individual representation in the U.N.

11. Promote the U.N. as the only hope for mankind. If its charter is rewritten, demand that it be set up as a one-world government with its own independent armed forces. (Some Communist leaders believe the world can be taken over as easily by the U.N. as by Moscow. Sometimes these two centers compete with each other as they are now doing in the Congo.)
12. Resist any attempt to outlaw the Communist Party.
13. Do away with all loyalty oaths.
14. Continue giving Russia access to the U.S. Patent Office.
15. Capture one or both of the political parties in the United States.
16. Use technical decisions of the courts to weaken basic American institutions by claiming their activities violate civil rights.
17. Get control of the schools. Use them as transmission belts for socialism and current Communist propaganda. Soften the curriculum. Get control of teachers' associations. Put the party line in textbooks.
18. Gain control of all student newspapers.
19. Use student riots to foment public protests against programs or organizations which are under Communist attack.
20. Infiltrate the press. Get control of book-review assignments, editorial writing, policymaking positions.
21. Gain control of key positions in radio, TV, and motion pictures.
22. Continue discrediting American culture by degrading all forms of artistic expression. An American Communist cell was told to "eliminate all good sculpture from parks and buildings, substitute shapeless, awkward and meaningless forms."
23. Control art critics and directors of art museums. "Our plan is to promote ugliness, repulsive, meaningless art."
24. Eliminate all laws governing obscenity by calling them "censorship" and a violation of free speech and free press.
25. Break down cultural standards of morality by promoting pornography and obscenity in books, magazines, motion pictures, radio, and TV.
26. Present homosexuality, degeneracy and promiscuity, as "normal, natural, healthy."
27. Infiltrate the churches and replace revealed religion with "social" religion. Discredit the Bible and emphasize the need for intellectual maturity which does not need a "religious crutch."
28. Eliminate prayer or any phase of religious expression in the schools on the ground that it violates the principle of "separation of church and state."
29. Discredit the American Constitution by calling it inadequate, old-fashioned, out of step with modern needs, a hindrance to cooperation between nations on a worldwide basis.
30. Discredit the American Founding Fathers. Present them as selfish aristocrats who had no concern for the "common man."
31. Belittle all forms of American culture and discourage the teaching of American history on the ground that it was only a minor part of the "big picture." Give more emphasis to Russian history since the Communists took over.
32. Support any socialist movement to give centralized control over any part of the culture—education, social agencies, welfare programs, mental health clinics, etc.
33. Eliminate all laws or procedures which interfere with the operation of the Communist apparatus.
34. Eliminate the House Committee on Un-American Activities.
35. Discredit and eventually dismantle the FBI.
36. Infiltrate and gain control of more unions.
37. Infiltrate and gain control of big business.
38. Transfer some of the powers of arrest from the police to social agencies. Treat all

behavioral problems as psychiatric disorders which no one but psychiatrists can understand or treat.

39. Dominate the psychiatric profession and use mental health laws as a means of gaining coercive control over those who oppose Communist goals.

40. Discredit the family as an institution. Encourage promiscuity and easy divorce.

41. Emphasize the need to raise children away from the negative influence of parents. Attribute prejudices, mental blocks and retarding of children to suppressive influence of parents.

42. Create the impression that violence and insurrection are legitimate aspects of the American tradition; that students and special-interest groups should rise up and use united force to solve economic, political or social problems.

43. Overthrow all colonial governments before native populations are ready for self-government.

44. Internationalize the Panama Canal.
45. Repeal the Connally reservation so the United States cannot prevent the World Court from seizing jurisdiction over nations and individuals alike.

American Jewry Meets the Challenge

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Louis H. Solomon on September 28, 1961, at a dinner meeting of the New York University Jewish Culture Foundation, marking the beginning of the campaign to erect a Center for Jewish Culture at New York University.

Mr. Solomon, a trustee of the New York University Jewish Culture Foundation, is a distinguished attorney. He is a graduate of New York University and a noted leader in many civic activities. He is well known among business and community leaders as the head of the Greenwich Village Chamber of Commerce.

His tribute to American Jewish leadership follows:

AMERICAN JEWRY MEETS THE CHALLENGE

(Address presented by Louis H. Solomon on September 28, 1961)

There has been a great deal of provocative discussion of late on the subject of the role of Judaism and the Jew in Judeo-Christian world society. Too much of the discussion is a veiled attack upon the devotion of the Jew to the heritage and traditions that define his status as an identifiable, ethnic personality in a Christian-dominated world and his resistance to pressure for assimilation.

The discussions acknowledge, sometimes with evident reluctance, frequently with extravagant generosity, the importance of Judaism in world culture, as the source of the Judeo-Christian religions, and the essence of Judeo-Christian ethical philosophy. Yes, they say, the Jew has given to mankind the Judeo-Christian religions. He has given Jesus to Christianity. He has provided the concept of justice and the sense of social responsibility which make up the meaning of Judeo-Christian ethical philosophy. But the whole mood of the discus-

sion radiates the sentimental regret that the Jew remains unchanged in his determined status as a Jew, as a separate, identifiable creature, loyal to Judaism in defiance of centuries of pressure for assimilation.

Toynbee, the English historian, reflects the pronounced assimilationist viewpoint. He projects the argument that the resistance of the Jew to assimilation is responsible in a large measure for the anti-Semitic posture of the world.

In a recent discourse by Toynbee, he acknowledges generous recognition of the Jew for fundamental contributions to world society. He even ventures the regret that the strong traits of the Jew, the character responsible for the miracle of survival and so much of the world culture, that this strain is not available to enrich the other segments of human society. The underlying tone of the Toynbee creed is the covert annoyance of the historian, that in spite of centuries of history, in defiance of the sword and the pen, this remains the heritage of the Jew, a relatively small identifiable group, immune to absorption. On the other hand, is the frustrating regret of the historian, that society as a whole is denied the special strain of character values that persist in the Jew and would be made available to the rest of society by intermarriage and full assimilation.

Sometimes one wonders what prompts the persistence of the Toynbee followers to argue for the assimilation of the Jew. What is it that pushes the endeavors of this historian and his disciples so vigorously to bury centuries of sacred traditions, to subvert loyalties to faith, to destroy the spiritual potential that has given so much to so many? There is persuasive authority for the premise that all anti-Semitism is a psychoneurosis. To the psychologist, "anti-Semitism," so-called, to conceal specific Jew hatred (Judenhass), is not explainable as a rational drive. One is tempted to ask—Is the pressure for the assimilation of the Jew but an unrestrained sprout from the same sprig? Is it a symptom of the same complex?

THE "INTELLECTUALS"

Contemporaneously with the Toynbee discourse, an article appeared in a recent issue of the magazine *Commentary*, under the title "Intellectuals" which poses the problem, but with a wide difference in motivation. This article purports to review the attitude on assimilation of the Jew on the college campus. It emphasizes a seeming indifference to heritage and tradition among budding intellectuals.

The intellectuals, so called, are not by any means the sages of our day. Nor do they reflect the mature community judgment. These are students, budding scholars perhaps, living in an environment of challenge, of abstraction and speculation. This is not the climate conducive to respect for tradition or heritage. To them heritage and tradition are related to the dead past. History is important more for its dates than for its monuments. They present a pose of pride in sophistication, a sense of revolt against the authority of yesterday. This is a passing phase in the pursuit of wisdom. Sober assessment of spiritual values will come with maturity. They will learn that man does not live by bread alone. Then shall they claim their kinship to the people of the Bible and the treasured heritage of the Torah.

The infamous Nauman group of pre-Hitler Germany is the prototype for a small segment of American Jewish life emphasizing a pose of sophistication, ready to trade heritage and tradition. They do not want to be counted out of the fold, yet they cannot endure minority status, and they spurn affiliation with the "common herd." Devoid of intellectual insight, of moral vigor, of loyalty to tradition, and the capacity to

evaluate the validity of their great heritage, they are content to separate, to be exclusive, to sit on the sidelines, seemingly in smug complacency, or to vaunt their separateness.

THE POSITIVE REALITIES—MEANINGFUL PLUS VALUES

There has never been a period in the long history of the Diaspora in which the Jew was altogether free from enmities and pressures from without and from within. But the Jew has moved far forward from the cringing, crawling figure of ghetto days. The American Jew has emerged. He stands with head high. He worships openly. He speaks freely. He defends his cultural status vigorously. He manifests openly and freely the enthusiasm and inspiration of a true pride in his great heritage.

In advancing the theme that American Jewry meets the challenge posed by the pressures for assimilation from without and from within, I am not unmindful of the lessons of history—the collapse of the gains made in France following the Dreyfus case, the horrors of the Hitler rule that descended even upon the optimistic and seemingly assimilated, proud German Jew, who compromised heritage and tradition for acceptance, in Germany. Nor am I unmindful of the threat of Nasser and his United Arab Republic, nor of the pose of Rockwell and pseudo-Hitlers of his ilk in America. These are the realities that the Jewish community must never forget or overlook. The frontiers of freedom must never be left unguarded. But in the same context, it must not be forgotten that this is America; that the principle of religious freedom is woven into the very fabric of our basic law and government; that every assault upon religious freedom here has been repulsed. As a lawyer, I have some knowledge of the difference between man rule and government by law. In the tradition of Judaic teaching, in America we "do not rely on princes and the sons of man."

The last 25 years for the Jew in America have been years of incalculable progress, probably the highest in the achievement of integrated community status for the Jew in America, in all of American history.

(a) Israel: Within this period has come the rebirth of Israel and the attainment of its place in the council of nations. Of course, the rebirth of Israel is not an American phenomenon, but the resources for economic and industrial status, for domestic well-being came from America. The response of the American Jew to the event was electric. American Jewish leaders arose. They came from everywhere and from nowhere. It is to the everlasting glory of American Jewish leadership, to the inspired men that led the drive to enlist American resources, to the dedicated leaders of United Jewish Appeal, then and now, that American Jewish millions poured into the little State of Israel, and the glory of Israel was served. This chapter of American Jewish history will ever remain a monument attesting to the realness of the loyalties of the Diaspora in America, to ties of kinship and heritage, as Jews, without dilution of loyalty to America, as Americans.

(b) In the area of higher education: During the last 25 years also, the American Jew has seen the emergence of Brandeis University, of Yeshiva University, and of institutions of learning not so well known, under Jewish sponsorship and supported by the American Jew. Of no less significance is the awakening responsibility of the Jew for sharing in the support of nonsectarian private institutions of learning within the American domain. The growth in the contributions of the American Jew to the support of our colleges and universities and the greater participation of the Jew in executive and administrative departments of American private colleges and universities is writing another important chapter in the history of the developing integrated status of the Jew in American community life.

(c) The breakthrough in higher education: But the greatest gain in the status of the Jew in America, the vital step forward in the area of higher education, may be recorded here in New York, and specifically in developments at New York University.

Twenty-five years ago, not one secular institution of higher learning in America, not one American secular college or university had a department of Hebrew culture. In the early colonial history of America scholarship in Hebrew was an element of culture. The people who came to America and settled in New England were revolting against religious restraints. They sought religious freedom. The first settlement in America was part of a religious revolution. The Old Testament was respected as the source of Western religions. Classical Hebrew was a requirement of the cultured gentleman when Harvard was founded in 1636. Early colonial literature is replete with classical Hebrew.

Then came the impact of politics. Immigration increased. In the political environment that followed, cultural values suffered. Classical Hebrew became but a memory. It was just tolerated as a dead language in the department of Semitics. Then, in the first half of the 20th century, came an unique development.

Twenty-seven years ago there was born at New York University the first curriculum of studies that grew into the Department of Hebrew Culture at New York University. It was the first department devoted to a comprehensive course in Hebrew culture, in any major secular college or university in America. This event was destined to make history.

The factors that led to the founding of the Department of Hebrew Culture at New York University are details of history available to the student of American culture at the university level. Prof. Abraham I. Katsh, head of the Department of Hebrew Studies at New York University, will ever remain the pioneer in the movement, which blazed the way for the scholars who followed.

The significant fact is that this achievement at New York University was a breakthrough, an opening in the hard crust of conventional, American, educational procedures. This was indeed a historic milestone that integrated Hebrew culture into the curriculums of the secular colleges and universities of America.

Today, the top 50 universities in America, including the group known as the Ivy League, boast a department of Hebrew culture and civilization. This is in the pattern set up at New York University, embracing the cultural contributions of the Jewish people, over the entire span of world civilization.

(d) New York University Jewish Culture Foundation: In the academic curriculum of New York University is a chair of Hebrew culture and education, established in perpetuity by generous, farsighted men and women in the community who comprehended the meaning of this historic event.

A full-fledged undergraduate and graduate department of Hebrew culture and education was established. Forty subjects of study in the area of Jewish culture and civilization are now part of the New York University curriculum, leading to all three degrees in Hebrew language and civilization, the baccalaureate, the masters and doctorate. This is the positive, dramatic reality of today.

The now famous New York University Library of Hebraica and Judaica is also a fact. It grew in this great university. It includes priceless volumes and manuscripts, among them the private collection of the late Dr. Mitchell M. Kaplan, poet and bibliophile, containing rare editions, rare manuscripts, and important incunabula. It includes the valuable collection of the late Solomon Rosenthal, presented by his son,

the late William Rosenthal; also the invaluable Israel Matz collection of current Judaica and Hebraica and the Semitic collection of rare volumes from the famous Lagarde Library. This proud collection has been augmented by the rare Hebrew and Judaic-Arabic manuscripts and microfilm uncovered from the unique Hebraica treasures within the Soviet Union, assembled and contributed by Dr. Katsh. This discovery from the archives of Soviet Russia was heretofore unknown to Western scholars.

The campus population of New York University has now reached 20,000 Jewish students, the largest population of Jewish students on the campus of any university in the world. More than 50 percent of the total student enrollment at this university are Jewish students.

This, too, is a significant reality and points up the climate at New York University, referred to in the evaluation made by the great educator, Dr. Carroll V. Newsom, president of the university, as he assessed cultural integration as the factor in true freedom in the following words: "giving reality to the only concept that can make this earth the kind of place we really want for ourselves, for our children, and for our children's children."

This is the living reality at New York University.

Sober scholars speculate that the integration of the study of Hebrew culture and civilization into the curricula of the universities of America, is the most important event in the annals of Judaism in America. Integration of Jewish culture and civilization into the curricula of the universities of America is now a significant reality.

THE GOLDEN ERA IN PROSPECT—A CENTER FOR JEWISH CULTURE

It is difficult even for the student of Jewish history, with a sincere interest in contemporary human progress, to evaluate the contributions of New York University in broadening the academic horizon in American institutions of learning to make a place for Jewish culture and education, in the study program. It is difficult to acknowledge in sober prose the influence of this progressive outlook in the general area of academic life in America. The influence of the Jewish Culture Foundation of New York University and especially of Dr. Katsh in this meaningful result may better be conjectured than explained.

The work of the New York University Jewish Cultural Foundation has moved quietly, with little fanfare, with no attention to publicity. The magnitude of its achievement is not generally known. Its mission to implement and to advance the academic curriculum of the Department of Hebrew Culture tells but part of the story. It serves New York University's 20,000 Jewish students. Its extracurricular service encompasses forums, public lectures, books and other publications, workshops to Israel, study groups, exchange students, interfaith relations.

For me, the last 25 years in America have produced meaningful plus values for American Judaism, historically important beyond present measurement. These gains represent the labors and the heroic achievements of American Jewish leaders. History will record to the memory of the men and women who shared in these achievements a tribute as enduring as time.

As significant as is the emergence of Brandeis University and Yeshiva University on the American scene as institutions of higher learning, as awe inspiring as is this great achievement, it is important that we evaluate the net result for the Jewish community. It must be considered for its service potential in the area of higher education by these institutions. This net result must be assessed in the light of the magnitude of the effort and the cost.

This towering achievement but pales in the light of the monumental developments at New York University in the last 25 years and in the foreseeable future. Here, at New York University, the lives of 20,000 Jewish students are being fashioned for the role of leadership in every field of human endeavor, to take their places in the living community of man. This is the unparalleled, living, functioning reality.

This equation must not be withheld from the American Jewish leaders. Its purpose is not to lessen interest in Brandeis and Yeshiva, of course, but to avoid obscuring the growth, the potentials, the true portion in the promise of tomorrow.

There is now in the making at New York University a program for the articulation of interfaith relations of such scope as to bypass every frontier thus far explored in that area. I refer to the program projected at New York University for a triangular University Religious Center.

The project embraces three centers of culture, the Catholic, the Protestant, and the Jewish, each independent, each wholly autonomous, all united in function and in motive, for better interfaith relations. These three units represent the three sides of the triangle that makes up the Religious Center of New York University.

The thesis underlying the united program is the premise that religious freedom as a theory is not enough. It must be made a way of life in America. It affirms that meaningful integration in community life among peoples of different faiths is attainable only with uncompromising religious freedom. It aims for a broader and better exposure to religious culture and its disciplines and a better climate of understanding among peoples of different faiths.

The New York University Center for Jewish Culture is the first structure of its kind in any secular institution of learning in America. The importance given by American Jewish scholars to the achievement of the integration of Hebrew culture, into the curriculums of institutions of higher learning in America is exceeded only by the magnitude of what is to come in the plan of the triangular Religious Center of New York University, now within reach.

The three centers that make up the New York University Religious Center and the operating fund for each are being financed by public contributions, each group relying primarily on the members of its own faith for support. The campaign for the Catholic Center was organized first, and has raised well over \$1 million and is working toward the budgeted requirement of \$2 million for building and operating costs.

The Center for Jewish Culture is the responsibility of the New York University Jewish Culture Foundation. The campaign is now in progress. Last October, a member of its board of trustees, aroused by the prospect of a Center for Jewish Culture in this meaningful triangle, acquired and donated to the Jewish Culture Foundation, as the site for the center, a 10-story building and the adjoining 7-story building, on the Washington Square campus of New York University within the area designated for the New York University Religious Center.

The \$2 million goal is the problem of a committee of Jewish community leaders which include such names as Mr. Irvin A. Edelman, president of the Jewish Culture Foundation, Mr. Benjamin Hornstein, its honorary president, Mr. Jack A. Goldfarb, its vice president, Mr. Charles Frost, head of the building committee, Hon. Maximilian Moss, Surrogate of Kings County, chairman of the executive committee, and trustee, and others equally identified with the major Jewish philanthropies in contemporary America. They look to the awakening of Jewish leaders in America to the magnitude of the event.

The building is to be the first on the campus of any secular college or university in America, to serve as a center for Jewish culture. It will have the stature and the functioning organization equal to the great responsibility.

The building will house the now famous New York University Library of Judaica and Hebraica available to students of the university and to scholars and researchers from everywhere.

It will serve the 20,000 Jewish students of New York University, many of them away from home and without affiliation for spiritual guidance and influence.

It will provide a center of culture with generous facilities for study and research, within the academic climate of New York University. Its facilities will be available to scholars and study groups from every part of the world.

It will have an auditorium for lectures, for seminars, for the dissemination of ethnical values and disciplines implicit in religious culture, with emphasis on interfaith relations for the community.

It will provide the stimulus to implement the thesis underlying the entire interfaith program at New York University—religious freedom as a way of life in all America.

It will consolidate the gains of yesterday; it will broaden and perpetuate these gains. It will transmit the basic truths beyond the realm of the scholar into the broad avenues of community life.

The program of a Center for Jewish Culture at New York University is so big in meaning, so large in opportunity, so important in fortifying the advances made by the community of Jews in America over preceding generations that its potential must be studied to sense its full significance.

The terms "assimilation" and "integration" are frequently used interchangeably in common speech, with consequent misunderstanding and confusion. To assimilate is to absorb, to destroy identity. To integrate is just the opposite—it means to preserve identity.

When the early Roman Empire prohibited religious worship to the Jew, after the destruction of the second temple, it aimed to destroy the identity of the Jew. When misguided churchmen ordered the tortures of the Spanish Inquisition to end Jewish worship, it aimed to destroy Jewish worship and the identity of the Jew. All the cruelties to purge the Jew over 2,000 years of history—all of this aimed at assimilation. The miracle of the survival of the Jew, as a phenomenon of history, attests to the long, successful struggle of Jewish leadership to resist assimilation.

The recognition of Judaism as an American culture; the introduction of a department of Hebrew Culture and Education into the curricula of studies of American colleges and universities, that is integration. Integration preserves identity.

The freedom to live as you are in a world of diverse cultures is the final test of freedom. That is integration.

The integration of the culture and education of a people, into the curriculum of American life is the American ideal. It was the formula adopted for America when America defined freedom in its Constitution and opened its doors to immigration as the free world.

In that climate of integration a great civilization, a culture evolved out of 3,500 years of discipline, of the wisdom of its prophets and its sages; a culture that has provided the basic religious principle for all of western society and the ethical philosophy for all of contemporary civilization, may serve to enrich the present and be preserved inviolate for posterity.

A TRIBUTE TO JEWISH LEADERS

In the advances of the last 25 years American Jewry has met the challenge. Ameri-

can Jewish leaders have served heroically and with inspiration. Never in the history of the Diaspora has leadership given so much and so nobly.

But the golden era lies yet ahead. It will encompass the great gains already here. It will preserve the roots of these gains and cultivate them for posterity. It will open the gates to new understandings and greater freedoms. In the next decades is fulfillment. Opportunity was never more promising.

The leaders of Jewry in America know the achievements of yesterday. They will not fail to evaluate what lies ahead. Let me quote from our sages:

"Men of vision and mercy whose righteous deeds have not been forgotten

Their heritage shall continually remain, And their names live on unto all generations,

Men will declare their wisdom and continually speak their praises."

This is the tribute. Here also is the prophecy.

Copyright—New Frontiers

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include my remarks before the American Guild of Authors and Composers on November 14, 1962, at the Hotel New Yorker in New York City:

Now that the American people have chosen their Representatives and we are on the threshold of the 88th Congress, it seems peculiarly appropriate to review with the distinguished members of this guild the strengths and weaknesses of the Nation's copyright laws and the immediate prospects for their improvement as a protection for the authors and composers of music. What are the new frontiers in copyright?

Both as a private citizen and as chairman of the House Committee on the Judiciary, I have long been interested in the drama and musical arts—as a musician, a devotee of opera, a student, and a champion of the rights of all creators of American music, whether serious or popular. The jurisdiction of our committee includes measures affecting copyrights, but it is not merely concerned with the technical aspects of copyright legislation. The committee has the solemn duty of guarding the intellectual property of composers and authors, and of making sure that as our civilization grows more complex, American native talent will continue to be encouraged by receiving a just return from the commercial exploitation of its works.

For it must be recalled that the copyright law of the United States is founded on the constitutional provision (art. I, sec. 8) which empowers Congress " . . . to promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries."

The Constitution thus envisages two purposes in providing for copyright. It wishes to foster the useful arts and it proposes to do so by rewarding authors for their contribution to society. Obviously these two purposes are closely related.

The last general revision of the copyright laws occurred in 1909. We have gone from

a horse-and-buggy day to a nuclear age. Tremendous changes in technology have taken place in the intervening half century. These have fostered entire new industries and new methods for the reproduction and dissemination of literary and artistic works. In consequence the 1909 statute is no longer adequate in its application to present-day conditions. It is like measuring the tail of a pig with the tail of a comet. Among the respects in which the copyright laws fail to achieve the constitutional objectives are a number of shortcomings which peculiarly affect songwriters and composers—notably the present inadequate term of copyright protection, the outmoded jukebox exemption, insufficient sanctions against the counterfeiting and piracy of phonograph records, the compulsory license for the recording of music, and the awkward and unsatisfactory provisions governing renewal and reversion of copyrights.

Past efforts to bring the copyright laws up to date have failed, largely, according to the Register of Copyrights, because of controversy among various private interest groups having a stake in the matter. In 1955, however, Congress provided funds for a comprehensive study by the Copyright Office as the groundwork for a general revision and in 1961, after much study, the Register issued a tentative report containing detailed recommendations.

These recommendations in large measure meet the proposals of your own group as to major matters, though varying in some areas and in particular details. Widespread discussions of the Register's report were undertaken and are still in progress, with your organization taking a leading part. What is more, the Copyright Office has now turned its efforts to the drafting of a comprehensive bill which, in turn, will be the subject of extensive study by interested parties before it is submitted to Congress. It is hoped that, with the genuine cooperation of organizations interested in the project, such submission will take place during the forthcoming 88th Congress.

While waiting for the legislative proposals of the Register, the 87th Congress has not been idle in this field. With respect to the term of copyright, for example, Congress was called upon, as an emergency measure, to take steps to prevent the expiration of renewal terms of copyright during the period which still must elapse before the enactment of overall legislation. The present term of copyrights, as you know, is 28 years from first publication or registration, renewable during the 28th year by certain persons for a second period of 28 years. One criticism of existing law is that today the United States is the only important Western power in which it is possible for a copyright to expire during the life of the author. The Register's 1961 report recommends that the maximum term be increased from 56 to 76 years. Under this recommendation the basic term would continue to run for 28 years, and would be renewable for a second term of 48 years. Although some groups, including your own, prefer a term of protection that would endure for the life of the author and for 50 years thereafter, as is the rule in many European countries, all interested parties appear to agree that the present term of copyright is unduly short. Meanwhile, existing renewal terms were continuing to expire and would be lost forever.

In this context, I introduced House Joint Resolution 627, which extends the duration of copyright protection temporarily. As enacted, this measure continues until the end of 1965 the renewal terms of all copyrights subsisting on September 19, 1962, the date on which President Kennedy approved my measure. It thus provides an interim suspension of copyright expirations pending the enactment of detailed overall copyright

legislation. Originally this bill proposed to extend copyright terms until the end of 1967, but the subcommittee accepted the argument of the Register of Copyright that a temporary extension of that length might unduly impair the incentive of interested parties for achieving agreement on an overall revision.

Another significant congressional achievement of the 87th Congress in this area was the enactment of my bill outlawing the vicious traffic in counterfeiting phonograph records. Hearings before the Copyright Subcommittee of the Committee on the Judiciary elicited testimony from representatives of phonograph record manufacturers, music publishers, and composers and performers of music to the effect that there exists a widespread practice of counterfeiting phonograph records, including labels, produced by reputable phonograph record manufacturers and selling them in interstate commerce in competition with the genuine articles. In 1960, alone, it was estimated, this practice drained more than \$20 million from the legitimate music industry. Typically, the counterfeiter takes hold of a legitimate phonograph record manufactured by a reputable concern and containing a popular song or arrangement. He makes copies of the recording and of the label as well. Then he palms off his counterfeit copies as the genuine products of the manufacturer whose label and recording he has appropriated.

Because the counterfeiter operates outside the law, paying no compensation to artists, no arrangers' fees, no copyright royalties, and no excise taxes, he is able to sell his illegitimate and often mechanically inferior records to jobbers and dealers at prices far below those charged by the legitimate manufacturers whose work has been forged.

The victims of this unconscionable practice are many. They include songwriters and publishers; record manufacturers, distributors, and dealers; recording artists and musicians; manufacturers of phonographs; and the U.S. Government. The songwriters, publishers, artists, and musicians are deprived of their royalties. The record industry is denied its legitimate profits. The Federal Government is robbed of its excise and other taxes. And the music-loving public, often as not, receives a mechanically imperfect product. This in turn injures the reputation of the artists and of the manufacturers of records and sound equipment, because the public naturally attributes the mechanical defects of the counterfeit record to the producers of the real thing.

The few State laws which attempt to deal with the problem impose relatively ineffective fines. Counterfeiters are happy to pay such fines, regarding them as in the nature of licenses.

Inasmuch as counterfeit records are being shipped in interstate commerce across State lines, I believe it essential to the proper administration of justice that Congress should enact a Federal criminal statute that would add the power and weight of the Federal Government to State and county law enforcement agencies. Accordingly, I introduced and Congress enacted H.R. 11793, a bill that amends the Federal Criminal Code by declaring the traffic in counterfeit records to be a criminal act, subject to fine and imprisonment.

I believe that it is significant that both of these measures—the copyright extension bill and the counterfeit record bill—underwent amendment before they were enacted. I cannot emphasize too strongly the necessity for flexibility and compromise in the area of copyright legislation. In the copyright extension bill, as I have said, Congress accommodated the need of copyright owners to be saved from unnecessary extinction of their right to the equally urgent need of the Reg-

ister to avoid a flagging of interest in a final agreement in overall revision. I believe the accommodation was a wise one.

Similarly, the counterfeit record bill underwent revision by the Senate, which sharply reduced the penalties provided by the House bill. This took place near the end of the session. Our House Committee was faced with the alternatives of accepting the Senate amendments and the greatly reduced penalties, or asking the Senate for a conference. In the second alternative, it is possible that we might have come out with a stronger deterrent; on the other hand, we might have come out with nothing at all. In this context committee staff consulted the principal proponents of the measure, representatives of phonograph record manufacturers. These persons wisely expressed their preference for a bird in the hand. I think this was much to their credit. One must stretch one's feet according to one's blanket. The measure, as amended by the Senate, was enacted; trafficking in counterfeit records is now a Federal offense; and the investigative agencies of the Federal Government can be enlisted to stamp it out. A new deterrent has been placed on the books and, should the penalties prove inadequate, they can easily be revised upward.

There is one area, however, in which the spirit of compromise and accommodation has not yet borne fruit. I refer to my unceasing efforts to bring about the repeal of the anachronistic and outmoded jukebox exemption.

Through the years, Congress has amended the provisions of the copyright law to protect authors and composers in the commercial exploitation of their creative works by requiring users to pay reasonable fees to copyright owners for the sale or use of their property. Radio and television broadcasters, concert halls, movies, hotels, cabarets, wired music—all these industries pay composers of copyrighted music for the right of commercial performance. The sole exception is the coin machine operator—the corporation that owns and leases coin machine phonographs to taverns and restaurants. To quote the Register of Copyrights, "Jukebox operators are the only users of music for profit who are not obliged to pay royalties, and there is no special reason for their exemption. The jukebox exemption should be repealed or at least replaced by a provision requiring jukebox operators to pay reasonable license fees for public performance for music or profit." With this statement I agree. The use of copyrighted music on jukeboxes for profit without so much as a by-your-leave to the composers of such works is nothing less than legalized piracy.

In the 85th and 86th Congresses, I introduced bills to repeal the jukebox exemption. In June 1959 the Copyright Subcommittee of the House Committee on the Judiciary held extensive hearings on my bill, H.R. 5931. Witness after witness testified to the injustice and inequity of the out-of-date copyright law which was enacted in 1909, 21 years before the modern machine phonograph made its appearance. Helen Sousa Abert, daughter of the late John Philip Sousa, told the subcommittee; "A songwriter is entitled to compensation during the short term of his copyright from all sources which perform his work publicly for profit. The jukebox is certainly performing copyrighted music for profit."

The subcommittee also heard from qualified witnesses that the jukebox industry is today a \$500 million industry—purchasing popular works at wholesale prices and selling renditions of the music at 10 cents a play. Coin machine performances of recordings are clearly performances for profit; but under existing law the composer receives no royalties for them.

On the other hand, the coin machine operators make the plea that they cannot afford to pay such royalties, that they fear that outright repeal of the present exemption would leave them at the mercy of the copyright owners who might charge them unconscionable fees.

Thus, embraced in controversy, the antiquated 1909 jukebox exemption remains unchanged. But it should be changed, and Congress must act responsibly to find a path of justice in this matter.

In August 1958 a subcommittee of the Senate Committee on the Judiciary reported favorably a bill to repeal the jukebox exemption. In the report on this measure there were several references to a possible compromise solution of the problem, offered by the National Beverage Association. This proposal envisaged the payment of between \$15 and \$25 per annum per coin-operated machine, depending upon size. Even Mr. George Miller, president of the Music Operators of America, Inc., originally expressed interest in this proposal and the House Judiciary Committee staff attempted to schedule a conference for the purpose of discussing it. This conference, however, could not be arranged, the operators having apparently lost all interest in discussing a possible area of agreement.

In the 87th Congress I again introduced a bill to repeal the jukebox exemption, H.R. 70. Along with the Register of Copyrights, many public-spirited citizens—authors, newspaper columnists, actors—have endorsed H.R. 70. The Department of State supports it. The American Bar Association, the American Patent Association support it. But because of the controversy that surrounds this matter, some Members of Congress may feel that a blanket repeal of the exemption is not the best answer, because the coin machine operators and the music copyright owners might not be able to agree on fair and equitable royalty in negotiations. Accordingly I introduced, as an alternative to H.R. 70, a new bill, H.R. 12450, which would not only provide for the payment of royalties by jukebox operators but would also establish trustees with an obligation to provide for the fair and orderly determination of the amount and the proper distribution of such royalties. Hearings were scheduled on these bills but had to be canceled because of the unavailability of necessary witnesses.

In the new Congress I shall again introduce legislation for the purpose of eliminating this grossly unfair provision of existing law and I shall do everything in my power to see to it that this legislation is given a very high priority.

In appraising the reasons for the failure of Congress thus far to remedy this unconscionable situation, I believe that the members of your guild—as well as all members and friends of the songwriting profession—have an indispensable role to play. Because of the inability to foresee the development and popularity of the coin-operated phonograph, the jukebox industry has been able to reap large profits from the exploitation of music and at the same time to deprive the songwriters of their just share. The songwriters must bring the justice of their position to the attention of the Members of Congress, not only in the large urban centers but also the less populated areas. I am confident that when the issue is thoroughly understood remedial action will inevitably follow.

I believe that all auguries are peculiarly favorable for substantial progress in copyright law reform. The Federal administration has uniquely manifested its interest in cultural affairs, having for the first time appointed a Special Presidential Consultant

on the Arts, the Honorable August Heckscher. The President and the First Lady have manifested great zeal in fostering the arts in this country. They have in many ways shown that we do not live by bread alone. The Congress will be increasingly alert and sympathetic to these problems, having worked with them, and it is your job to make us wholly conversant with your needs and problems. The Copyright Office is diligently tackling the challenging task of drafting legislation. Last, but not least, distinguished organizations like your own with specific stakes in copyright legislation are lending their expert assistance to the Register in attempting to accommodate competing interests and minimize conflicts among groups. It is hoped the new Congress will see the introduction of a general revision bill supported by the greatest possible consensus. In this work, no less than in the work of legislators, patience, statesmanship, recognition of the other fellow's needs, and an eye to the public interest are indispensable. Above all you must learn patience. Patience is bitter but it bears sweet fruit. From what I have seen of their work, I am happy to say that your own president, Burton Lane, your counsel, Mr. Kellman, as well as the members of your copyright committee, admirably combine these qualities and seem uniquely fitted to represent the interests of your guild in this vital area. I am confident, also, that the public interest will be furthered by their continued efforts.

**American Memorial to Churchill To Be
Established at Westminster College,
Fulton, Mo.**

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 10, 1963

Mr. CANNON. Mr. Speaker, under leave granted, I include a report on the American Memorial to Sir Winston Churchill to be established at Westminster College, Fulton, Mo.:

AMERICAN MEMORIAL TO CHURCHILL TO BE
ESTABLISHED AT WESTMINSTER

As a memorial to Winston Churchill's Iron Curtain speech a long-vacant Christopher Wren church, blitzed by enemy air raids over London in 1941, will rise again on the campus of Westminster College in Fulton, if the request made by the college board of trustees of the Bishop of London is granted. Westminster is the scene of the famous and prophetic speech, made at the college March 5, 1946.

Permission is being sought from the church, civil and arts authorities to dismantle St. Mary Aldermanbury, or at least the outside shell of it, transport it to Fulton, and rebuild it and rededicate it as the chapel of Westminster College. In honor of Sir Winston's visit to the campus it will bear the name of the British wartime prime minister. In response to a letter from Westminster officials, Sir Winston said:

"I am honored that Westminster College should wish to commemorate the speech I made at Fulton on March 5, 1946. The removal of a ruined Christopher Wren church, largely destroyed by enemy action in London in 1941, and its reconstruction and rededica-

tion at Fulton, is an imaginative concept. It may symbolize in the eyes of the English-speaking peoples the ideals of Anglo-American association on which rest, now as before, so many of our hopes for peace and the future of mankind."

Located in the heart of the city of London, not far from St. Paul's Cathedral, the Church of St. Mary the Virgin, Aldermanbury, was erected by Sir Christopher Wren on the site of an earlier church which was destroyed by the great fire. The year of its completion is believed to be 1677. In the adjoining churchyard are the tombs of Henry Condell and John Heminge, associates of William Shakespeare who are generally credited with the preservation of many of his plays by arranging for their printing from his original manuscripts. No tombs or other local memorials will be disturbed when the outer shell of the church is taken down.

Once it is located on the campus of Westminster College, the Wren church will serve not only as the College Prayer Chapel, but, attached to it, will be a repository of Churchill memorabilia, of which the college already has a sizable collection. It will in fact become the Churchill memorial in the United States. The present chapel, though built only in 1917, is slated for razing, due to foundation weaknesses which developed during a long series of droughts.

It is estimated that it will cost about \$200,000 to complete the first step, namely, dismantling the church, packing it in numbered pieces and transporting the stonework overseas and by inland waterways to Fulton. Final estimates on the total costs of reconstruction have not yet been completed. The project's completion is contingent upon the ability of the college to raise the necessary funds.

S-s-s-sh!

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY

OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 10, 1963

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[Editorial from the Washington (D.C.)
Evening Star, Jan. 9, 1963]

S-s-s-sh!

If participation in the Kerr-Mills program of old-age medical assistance had dropped last year, or even stood still, we can't help wondering what the Department of Health, Education, and Welfare would have had to say about that in its roundup progress report on Government help for the aged.

As it turned out, the 16-page HEW report devoted a single brief paragraph to Kerr-Mills, concentrating almost entirely on the point that average payments declined under the program. It avoided entirely the facts that the actual number of Kerr-Mills beneficiaries during the year ending last June more than doubled, from 46,247 to 101,634, and that monthly payments around the country in that period increased from \$9,311,027 to \$17,415,814.

Why? Well, according to Miss Ruth Lauder, a spokesman for the HEW staff, the omission of any reference to gains in the program was not deliberate. For one thing,

she said, the report concentrated on newer and more dramatic programs—including, presumably, the President's bill for medical care for the aged through social security, which the report called the most important legislative proposal of 1962. And anyway, Miss Lauder added, the Kerr-Mills program is really an income maintenance program, which doesn't have anything to do with the health of old people, except indirectly.

This must be a surprise to those Members of Congress who passed the Kerr-Mills program, who think it has not been given a fair shake, and who believe it is at least a partial answer to the administration bill. One who is not surprised, however, is Representative BYRNES, of Wisconsin, the ranking Republican member of the House Ways and Means Committee. Mr. BYRNES says the HEW has deliberately kept the program in a vacuum, that it has not only been dragging its feet on encouraging State participation in Kerr-Mills but has actually put stumbling blocks in the way of its success.

Whether that statement is accurate or not it is certainly true that the public at large has only the fuzziest idea about the Kerr-Mills program and how it is working. And from this viewpoint alone, the congressional investigation of the matter which Mr. BYRNES has advocated is clearly merited.

Independence Day of Libya

EXTENSION OF REMARKS OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. POWELL. Mr. Speaker, on December 24, 1962, Libya celebrated the anniversary of her independence, and we take this opportunity to send warm felicitations to His Majesty, King Idris I of Libya; and His Excellency, the Ambassador of Libya to the United States, Dr. Mohieddine Fekini, on the occasion of the eleventh anniversary of Libya's independence.

Eleven years have passed since the nations of the world were witness to a modern Christmas story; for on December 24, 1951, a new nation was born for all the world to proclaim and honor. Libya, so long a pawn and conquered territory of militant powers, became a new member of the world community.

Successive waves of conquest comprise Libyan history, from Phoenician times through Greek, Roman, Vandal, Arab, Turk and Italian, to German and British forces during World War II. All have imparted an important lesson where Libya is concerned—its strategic importance as a crossroads between Europe and Asia.

Libya is primarily a desert. And unfortunately this desert, until the present, has been a deterrent for economic stability and independence. The Romans had built vast irrigation systems to support the large cities which they built in Libya. But through the years, these cisterns and water aqueducts fell into ruin. The newly independent country was in poor straights at its birth. The desert,

though, became the succor for the nation when oil was discovered. The discovery of oil in other desert nations in the Mediterranean area led geologists to suspect the presence of oil in the South of Libya, but its production is above and beyond the expectation of any specialist. "Oil" is now the keyword to the country. Its entire economic system is being geared toward an oil economy. As one writer so aptly proclaimed:

Only 5 years ago, Libya was regarded as little more than a vast empty tract of the Sahara's rock and sand. * * * Within that brief half decade, Libya underwent an economic metamorphosis that has already transformed it into a viable State possessing a dynamic and expanding economy.¹

By 1965 oil royalties will amount to \$500 million. Twenty-one oil companies have established headquarters in the country, with more expected. Development possibilities are unlimited.

Each year, as the world helps the Libyans to celebrate their independence, one and all can review with pleasure the progress that has occurred. Expansion of agriculture and water projects will enable the Libyans once more to call their country a granary as the Romans did during their reign. Confidence in the government is establishing greater unity throughout the three semi-autonomous provinces and will enable the Central Government to carry out without discord its development projects.

The United States has interested itself in Libyan affairs since the Barbary Pirates pillaged American shipping. Today the United States has in Libya, Wheelus Field, a tremendous air base. There are approximately 10,000 Americans stationed or living in Libya. The policies of Libya and the United States are, therefore, closely allied. Recently the Crown Prince visited the United States on a good will tour, solidifying the amity of the two nations. It is with great pleasure that we in America recognize the anniversary of the establishment of Libyan independence.

¹ Stephen Duncan-Peters, *Foreign Commerce Weekly*, Feb. 5, 1962, p. 208.

Is Venezuela Changing?

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. BECKER. Mr. Speaker, last year I inserted in the RECORD a history of the seizure and confiscation of the properties of American citizens and investors in Venezuela. Subsequent to the seizure and confiscation of some \$20 million of property, the U.S. Government gave aid and loaned millions of dollars to Venezuela.

I cannot understand this and have opposed it with all the vigor at my command. American taxpayers cannot understand it and, certainly, investors are

not going to put more money in these Latin American and South American countries and then have it taken away from them. This, to me, is utterly ridiculous, and I sincerely hope that our State Department and the President will take some steps to see to it that the Government of Venezuela or any other country first reimburses the American investors the money they have put into businesses in Venezuela, or return the properties to the rightful owners who operate under the agreements made.

I am inserting herewith an article entitled, "Is Venezuela Changing?" This gives a reasonable history of the present situation and the seizure of one property that cost millions of dollars of investors' money:

IS VENEZUELA CHANGING?

Is Venezuela moving, and in which direction, forward or backward. Nothing remains still, as it is a world of faction, one of movement. Which way is Venezuela going?

It is a question asked by many. To arrive at an intelligent answer we must look at what has happened in the immediate past—not what has been said, or will be said. Actions speak for themselves and are easily understood, while volumes are written that well may be meaningless.

In this present 13th annual conference on the Caribbean much has been expressed about various roles—that of the private investor at home—that of the foreign investor—the role of the Government, both fiscal and taxwise—and the role of the Government in aiding business—and how such roles are activated—promoted—and influenced. Much has also been said of projects of the past. We must look at the present and to the future.

The main foundation upon which all such roles must be supported is confidence.

Confidence is an element that is created and nurtured over a long period before it arrives at its full maturity. It then must be protected from any sudden impacts, or shocks, as it always remains delicate. It can be destroyed overnight.

We now look at the record of the immediate past in Venezuela. It is again emphasized—actions speak louder than words—they speak for themselves. A single incident is chosen from the record.

In 1952 a small group of U.S. investors, having among its members, leading bankers and industrial leaders, obtained large concessions to explore for minerals in Venezuela. This group put up its own money and started a vast exploration program on its area in northeastern Venezuela. It was first necessary to build many miles of roads through dense jungle and mountainous terrain in order to have access. This initial stage of exploration took several years. It was during this part of the program after the drilling equipment had been brought in that geothermal energy (superheated natural steam) was discovered at depth. This continues to blow off with great force. This steam is also laden with minerals, making it most economical to extract them directly from the steam. The best known scientists were engaged to continue the studies.

As more money was needed this original group was greatly enlarged and the work was continued. This superheated natural steam (geothermal energy) had lain under the earth's surface in the jungles of northeastern Venezuela for over 20,000 years according to scientists prior to our discovery.

The volume of the geothermal heat source is, of course, millions of times greater than all the known resources of fossil fuels and will endure for millions of years. In other words, it is inexhaustible. Of the 4,000 miles from the surface of the earth to the center

of the earth, some 20 miles of this surface cap has been cooled off, and has taken millions of years. Therefore, the remaining heat source has practically eternal life expectancy. The only problem is to find the vent flues bringing this heat to within accessible distance from the surface. These have been found in Italy, New Zealand, California, and lastly on these concessions in northeastern Venezuela.

This great and important discovery was made by these private investors from the United States. It would have added much to the economy of Venezuela in many respects, in addition to generating cheap electricity. How were these investors rewarded—the following is the story.

A contract was made with the Venezuelan Government in April 1959 who were to purchase electric power that was produced by this geothermal energy. On the strength of such contract and the future plans for the project arrangements were made for a credit of \$25 million. These were also private funds.

At this time after 8 years of work and without any discussion this geothermal energy, which had been our property since its discovery in 1955, was nationalized by decree No. 126 dated August 28, 1959. These private investors were given a choice by their Venezuelan attorneys, either to sue them for damages, or to attempt to negotiate an equitable contract. They were assured that no harm would come from this act of nationalization by the Ministry of Mines, Juan Pablo Perez Alfonso, on November 17, 1959. Negotiations were then started.

The results of this no harm guarantee was that after 3 years of useless negotiations, and just 3 months ago, the company was given an ultimatum by the Minister of Mines, on a take it or leave it basis to produce and sell electricity, to the Venezuelan Government at a rate that in itself was confiscatory.

No compensation was ever offered the company for the confiscation of its property rights, or for the unilateral cancellation of the original purchase power contract, or the losses sustained by the 3 years of paralyzation of the project since the nationalization.

The effects of such crude and ruthless treatment to U.S. investors has had wide and distinctly unfavorable repercussions toward Venezuela, having been denounced in the Senate of the United States, as well as on the floor of the House of Representatives of the United States.

This incident is cited from the record as an aid to future planning, and in an effort toward possibly creating a more favorable investment climate in Venezuela for private investment funds.

Let us all learn from such actions. Let such wrongs be corrected, so that the important element called confidence may again be created and nurtured in Venezuela.

As we are one large hemispheric family, it is only by such frankness and open discussion an understanding of fundamentals can be reached.

The Spirit of the Unknown Soldier

EXTENSION OF REMARKS

OF

HON. JOHN F. BALDWIN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. BALDWIN. Mr. Speaker, my constituent, Mr. Dan Arteaga of Richmond, Calif., has written such an inspiring

tribute—"The Spirit of the Unknown Soldier"—that I would like to insert it in the CONGRESSIONAL RECORD so that it may receive the widest possible distribution:

THE SPIRIT OF THE UNKNOWN SOLDIER

I am the spirit of the Unknown Soldier, my name, rank, or place of origin is of no importance. I am an American.

I died for you to obtain and preserve freedom and independence, the pursuit of happiness, peace and security.

I died all over the world by the struggle of war between nations and among brothers.

I died for good causes, also for appeasement, miscalculations, and blunder.

To obtain the independence of this Nation, I fought and died at Lexington and Bunker Hill. To maintain the Union and abolish slavery, I gave my life at Fort Sumter, at Gettysburg, and Richmond, Va. At the Alamo I died to repel the invasion of the imperialist Santa Ana.

In the two World Wars I died to stop the arrogance of the Kaiser, Hitler, and Hirohito. In Korea, I died to appease the Communist hordes.

I died in Verdun and St. Mihiel, at Pearl Harbor, Manila, and Corregidor, in the sands of Iwo Jima, in the Pacific and in the Atlantic, at Tunis, Cologne, Essen, and Dusseldorf.

I died in the battlefields, in the air and on land, in the swamps, and jungles, in the hot sands of Africa, or froze and drowned in the cold waters of the ocean; by the treacherous air raids at Pearl, or by the tropical diseases of the Pacific. I died of malnutrition, weather exposure, or mistreated as a prisoner of war. I died as the result of war, at home and abroad, in war and peace. I died for you, for my country, and for liberty.

By an act of Congress, a day has been set aside to commemorate the event on Memorial Day. Flowers were spread over the ocean, wreaths placed over my tomb, speeches delivered, special events performed; I saw you at the parks and beaches, at home and on the road; I was awakened by the event.

While awake, my spirit went back to the places and times where I died. I want to recapitulate, to observe and ask: What have I died for? Has freedom, the pursuit of happiness been maintained? Has the fear of war ceased all over the world? Has the stain of my blood been washed off from my flag, with peace, tranquility, and respect for my country? If that is the case, let me accept your honor and I will rest in peace; if not, permit me to suggest how I should be honored:

Honor me by preserving the things for which I died; liberty and freedom from want, the independence and respect for my country. Honor me at the Executive decisions and congressional legislation, at the foreign conference table, when the common enemy of democracy would try to take something for nothing, when the lives and welfare of my fellow men are at stake. At the United Nations, when the property and dignity of the free nations are in jeopardy, then honor me.

Honor my wife with enthusiasm and the chance to maintain a home and raise my family. Put the Congressional Medal of Honor on the chest of my children by giving them the protection that I cannot give them, the proper education and opportunity to become worthy citizens; teach them the principles for which I died, tell them of the genuine glory and pride of this country, keep them from falling into the lies and treachery of totalitarian doctrines. Place a wreath of laurel leaves on the head of my elderly mother, help her if she is in need, reward my father in his older days.

With all these things, tell me that I did not die in vain, show me that you meant to honor me.

Conservatives Are Justified in Hard Foreign Aid Stand

EXTENSION OF REMARKS

OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. MEADER. Mr. Speaker, under leave to extend my remarks, I include the following article from the Ypsilanti, Mich., Daily Press of January 8, 1963:

CONSERVATIVES ARE JUSTIFIED IN HARD FOREIGN AID STAND

(By John Chamberlain)

It is often said of conservatives that they are mean, curmudgeonly fellows who like to see babies starve to death. And when a conservative—or an old-fashioned liberal like myself—opposes an extension of foreign aid, the common retort is that men on the right wing of contemporary politics have no feeling for the needs of less fortunate countries.

In the arguments, pro and con, over foreign aid, the fact that it is generally unsuccessful when it passes through the hands of governments is pretty much overlooked. Yet even liberals such as J. Kenneth Galbraith, our Ambassador to India, are coming to see that intergovernmental grants and loans tend to get short-circuited. They are wasted, so to speak, on Cadillacs for potentates, and the common people, far from benefiting from the money, cower in the alleyways.

When foreign aid follows voluntary patterns, however, it is seldom wasted. And the fact is that some of our most effective foreign aid comes as a reflex of programs developed by farsighted businessmen.

There is Mr. J. Paul Austin, the new president of the Coca-Cola Co., for example. With a long background of experience in Africa and Europe, Mr. Austin is a mine of information about the unintended local benefits of American business activity in foreign parts. Coca-Cola went into foreign countries for a reason that was eminently acceptable to its stockholders: it was looking to make more money. But that, as Mr. Austin points out, proved to be only half of the tale.

In the Middle East, even as late as the 1950's thirsty people drank germ-infested water out of community tin cups that were dipped, unwashed, into malodorous goat-skins. For a short period the appearance of Coca-Cola in the Middle East seemed to be helping only that segment of the population that could afford the local equivalent of a nickel for a drink. But soon a number of secondary—and unidentified—effects became apparent.

It so happens that Coca-Cola depends on an absolutely pure water supply. To provide enough water to mix with concentrate, local bottlers had to import the latest and most efficient methods of water purification. Local politicians, watching sewerage water being transformed by running it through modern filters, suddenly saw a bright light.

The example spread to southeastern Asia; Singapore, for instance, gave itself a modern water system after looking at a Coke bottling plant. And in distant San Salvador in Central America, where Coca-Cola had an early program the Government used the local Coke bottling works to supply water for the town when an earthquake disrupted the municipal mains.

In its dealings with foreign countries, Coca-Cola is careful to avoid the taunts of "coca colonization" by letting local entrepreneurs build and own the bottling plants, the glassworks, the metalworking establishments, and the lithographic industries,

that are needed to bring the product to the customer.

But the benefits deriving from the diffusion of ownership among the local populations were not limited to indigenous capitalists. A metalworking industry, formed to produce, bottle caps, soon branched out in many countries to provide other types of metal products. Glassworks created to make soft drink containers found themselves taking orders for medicine bottles.

Local truck services, using Coca-Cola maintenance manuals, were quickly plunged into a general garage business, with the result that the lifetime of a truck in the Middle East or Africa has been extended to 5 years instead of the traditional 1.

To its establishments in Atlanta, Ga., and elsewhere in the United States and Canada, Coca-Cola brings hundreds of young native foreign executives every year on its own version of the Fulbright scholarships. Turbaned Indians mingle with Chinese from Malaya and Latins from South America as they go about the United States for 3-month capsule courses in modern management techniques.

And the hundreds who go back to Africa and Asia carry advanced management know-how with them to indoctrinate thousands of their countrymen who never leave home.

Thus the benefits from a voluntary foreign aid program are spread like seeds from a bursting milkweed pod. It beats anything that Washington has been able to dream up.

The Words and Deeds

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. CURTIS. Mr. Speaker, one of the major legislative actions of the 87th Congress was the passage of the Trade Expansion Act of 1962. The administration made a strong request for support on this bill and members on both sides of the aisle responded. It was sought by the administration as a way of freeing up trade, of promoting the freer and fairer interchange of goods among the nations of the world.

At the time this proposal was under discussion, however, the administration was in the process of arranging an international cartel in the textile industry, setting quotas on the amount of textile products which would be received in each country from abroad. Very quietly, unlike the vocal proclamation of its free trade policies, the administration came to the Congress to get additional, after the fact, increase in power to be sure its trade limitation agreement would be valid. This act on the part of the administration, evincing so different a philosophy from its policy declarations on the Trade Expansion Act, is noted along with other suspected trade limiting "deals" by the administration in an editorial comment in the *New Republic* of December 8, 1962.

I think the administration owes the American people an honest statement of its beliefs in the area of foreign trade.

Are we to believe the words or the deeds?

Especially disheartening to me is the fact, as noted in the *New Republic's* statement, that these under-the-table deals are far more restrictive of trade than are tariffs. The marketplace loses its function when decisions on how much of a particular item shall be imported falls within the discretion of an administrator with power to set quotas, issue licenses, control exchange rates, or whatever one of the broad range of trade restrictions is chosen in a particular case. The first real step to making trade more free is assuring that it is fair. The Trade Expansion Act did this by establishing a forum to which complaints of unfair trade practices might be brought and in which the interests of those affected might be aired. This is an excellent provision, yet through the acts of the administration the value of this forum, and the chance for an open resolution of the competing interests, is in jeopardy.

The *New Republic's* editorial is a serious indictment of the duplicity of the administration in this matter. I believe it deserves the attention and consideration of the Congress. It follows:

FREE TRADE, BUT—

The administration's most acclaimed legislative victory in the 87th Congress—the trade bill—was won at some cost. Protectionist pledges were made, and these presumably will have to be given consideration by Christian Herter as he administers the Trade Expansion Act. The cotton textile industry was assuaged by a worldwide system of quotas which will probably limit the imports into this and other industrial countries of cotton textiles to annual increases of between 3 and 5 percent. A high official in the Department of Commerce has even suggested that the administration is committed to trade limitation agreements for each textile commodity. The oil industry seems to have been promised that quotas on crude petroleum imports would continue, the coal industry that residual fuel oil imports would remain under control, the lumber industry that it will be saved from Canadian competition.

Last week, five senior Japanese Cabinet Ministers visited Washington to discuss trade, aid and international finance. The Japanese have done well in the U.S. market—imports from Japan went from \$182 million in 1950 to \$1.1 billion in 1961, and rose another 35 percent in the first 8 months of 1962. A few U.S. industries have been arguing since 1956, however, that these imports were seriously hurting profits and employment. They have been pressuring the administration to establish import quotas. That has not been done, but by threatening the Japanese with the possibility, the administration has persuaded them to impose a comprehensive system of "voluntary export quotas" on about 30 Japanese commodities, ranging from baseball gloves to Christmas light bulbs, which account for between 25 and 35 percent of Japanese sales in the United States.

Unlike tariffs, "voluntary" quotas are worked out under the table; the number and size of the quotas, and the ways of setting them up, remain obscure. The future of these quotas will be a significant index of how far the administration is prepared to go in supporting a policy of freer trade which, harmful as it inevitably is to some domestic industries, benefits both American exporters and consumers.

Birmingham's Committee of One Hundred To Push Hard for New Business and Industry

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. HUDDLESTON. Mr. Speaker, Birmingham's Committee of One Hundred was a pioneer effort of local business leaders to attract new industry to our area. Its efforts have been singularly successful. Part of the explanation for its success lies in the advantages that Birmingham has for plants and firms that are expanding their operations. However, part of the explanation lies in the dynamic and public-spirited leadership of men who have headed the committee in years past.

This year Caldwell Marks is chairman of the Committee of One Hundred and the following is an account of talk to local business and professional people which indicates that Birmingham's growth industrially will continue:

COMMITTEE OF ONE HUNDRED WILL USE BIG SELL TECHNIQUES IN 1963

Birmingham has the stuff of which great cities are made.

Take a look around you and start assessing the resources, natural and man made, that abound in this Birmingham district; in other words, start counting your local blessings.

These hard-hitting words came today from Caldwell Marks, newly named chairman of Birmingham's Committee of One Hundred, the industry-seeking organization of local business and professional people that set a pattern the world over for this type of agency.

"No salesman ever sold a product by knocking it," Chairman Marks said cryptically, foretelling the manner in which he will seek to mold the committee's activities during the coming 12 months.

What I mean is, we can sell Birmingham to the Nation and world at large by stressing the many fine things that already exist here.

In that way, we create an image of Birmingham that is true, factual, and salable."

MEDICAL AND RESEARCH

Then, enumerating some of the city's and district's advantages, Marks pointed to:

"We have a wonderful medical center right here in Birmingham. Can you point to another city in the South with such a center?"

"We have great research facilities right here in Birmingham. Southern Research Institute is the finest institution of its kind in the entire Southland, and it is growing daily.

"How about our climate? Isn't it wonderful? You can work, play, do anything you want virtually the year round, right here in the Birmingham district. Our climate is a great asset.

"WATER RESOURCES

"Look at our water resources. We just cut into a new industrial water supply, which adds 75 million gallons of water daily to what we previously have been able to offer industry. We can offer industry in America today what few other cities can offer, and that is an abundance of water that is the best for industrial purposes."

The committee chairman then swerved over to Birmingham's cultural resources, pointing to:

"Our wonderful art museum; our grand symphony orchestra; our splendid little theater groups; our civic ballet; our varied recreational facilities here and within a 50- or 100-mile radius of the city.

"We have everything in or near Birmingham to provide the good life, the best life available in America."

Marks then pointed to a little-known fact about municipal airport. "It's closed down by weather factors less than any airport in the entire country, except for Miami, Fla., and Phoenix, Ariz."

FINE TRANSPORTATION

Marks also praised the district's "fine bus transportation system, its fine truck facilities for transporting goods and commodities, the excellent railroad facilities that connect Birmingham with all parts of the Nation."

Then this industrialist, with years of strictly industrial work in his background, expounded on Birmingham's "excellent labor supply."

"People are productive in this area," he declared. "They are easily trained. They adapt easily and well to new jobs, and in certain areas we have a large supply of highly skilled labor.

"Our labor climate has improved tremendously, and it's now better than that of most cities in the country. That is a great and salable asset for Birmingham today."

NO ORGANIZED CRIME

People for too long have taken Birmingham for granted in the realm of the way its governments operate locally, Marks stated. He explained what he meant this way:

"Our city is relatively free of vice, of organized crime, of corruption in government," he said. "You can read in your daily paper of vice, gambling, corruption in official circles, etc., in other cities over the Nation. It's not so in Birmingham."

Marks said the committee of 100 solicits the help of all Birmingham district citizens in its task of attracting new industry, new people, to Birmingham. "Everyone should be a salesman for his city," he declared, "particularly when he goes on a trip to other parts of the country. Tell them elsewhere what we have in Birmingham. Brag about your city, because you have the stuff to brag about."

Textile and Related Industries in South Carolina

EXTENSION OF REMARKS OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. HEMPHILL. Mr. Speaker, on November 8, 1962, I was privileged to be a guest of the Rock Hill, S.C., Rotary Club. The speaker on that occasion was the Honorable Robert S. Small, president of the South Carolina Textile Manufacturers Association. Mr. Small made a very fine and timely speech and I was so impressed that I immediately asked him if I could take his speech and put it in the CONGRESSIONAL RECORD for the enlightenment of all who may be interested, and for the purpose of continuing to record for all to see. I hope this will also enable our posterity to study the problems of the textile industry in

this decade, and the efforts that are being made to solve those problems.

As you know, Mr. Speaker, I have on many occasions, spoken before the membership of the U.S. House of Representatives on this subject and I shall continue to do so with all the vigor at my command.

My purpose today is to use the fine testimony of one who is eminently acquainted with the industry to supplement the information we already have.

The speech is attached:

ADDRESS BY R. S. SMALL, ROCK HILL ROTARY CLUB, NOVEMBER 8, 1962

Industrial South Carolina is largely textiles and related industries.

(a) We are the largest textile-producing area in the world.

(b) Out of 260,000 industrial workers in South Carolina, 165,000 are directly associated with the textile industry. Textile wages alone amount to nearly \$700 million annually.

(c) It is not generally known, but the average textile wage paid in South Carolina is higher than the textile wage paid in any other State—or the world, for that matter; and, it is higher than the average industrial wage in South Carolina.

(d) Many fine, new associated industries have located in our State since the war, due primarily to the proximity of this major textile market—plants like Du Pont in Camden and Florence; Allied Chemical in Lexington; Chemstrand in Greenwood and now Blacksburg; Saco-Lowell in Easley; Eastman has purchased a huge tract of land near Columbia; Draper in Spartanburg and Marion; Crompton-Knowles in Greenville; and, of course, the fine Celanese plant here.

We should really add Fibre Industries just across the line in North Carolina.

I tell you these things to emphasize the importance of textiles to all of us, in all phases of life here in South Carolina—whether we are a textile worker, doctor, schoolteacher, or merchant.

What then is the status of our industry today?

Assets: Our industry here in South Carolina, indeed in the United States, has many assets. I'm tired of hearing us classified as a "sick or ailing industry." We are actually vigorous, competitive, and an example of what one industry can accomplish through modernization and competition, to hold the price of its product down.

Our industry has many assets. I will deal with these rapidly for they are obvious and well known but have not received the publicity they deserve.

1. We have the greatest mass markets of any country in the world.

2. We have the greatest styling in the world.

3. Although we have been slow in our machinery research and development, in recent years we have taken advantage of many technological improvements.

4. Our technical schools are superior to and more advanced than comparable educational facilities.

5. We have the greatest group of skilled workers—men and women who through their free inheritance and native ability can outperform his or her counterpart in any country in the world. And they are proud of it.

Like nearly every industry, however, we too have our problems. Our basic problems are twofold and are Government made. Since this is the case, we are forced to work with any administration in order to have our position understood and acted upon.

The first of our problems is imports. I would like to bring you up to date on what has been and is being done in this regard.

(a) I speak of cotton imports. Cotton still

comprises 65 percent of our textile manufacturing. And, too, although the President on May 2, 1961, directed the Interagency Textile Advisory Committee to restrain imports of all fibers, only cotton has been acted upon—and poorly—thus far.

(b) Let us see what has been done on cotton imports. 1. August 1961: Short-term Geneva agreement with 19 nations. 2. Bilateral agreement with Japan.

(c) Country by country, category by category. Imports to be limited by categories (64) and by country of origin, to the amount imported in the fiscal year ending June 30, 1961.

(d) By March 1962, some obvious over-shipments, mainly Hong Kong.

(e) By June, the fat was in the fire—over 100 items embargoed in more than 12 of 19 countries.

(f) As a result, the short-term Geneva arrangement has resulted in a colossal failure. One hundred thirty-three percent of the base quota was imported—with a quota of 567 million yards, 754 million yards were imported. Categories were largely ignored. Concentration of imports were, to a great extent, made in the heavier weight fabrics such as sheetings, where the raw cotton differential offered such a windfall profit. Many categories were overshipped 200 percent and more. Concentration of imports crippled certain segments of our industry.

What about the bilateral agreement with Japan?

We had increased Japan's quota voluntarily from 247 to 275 million, to run concurrent with the calendar year 1962. For the first 9 months, through September, we have imported 285 million yards from Japan—already 3½ percent over its quota. For the 12 months ending September 30, 1962, Japan shipped in 359 million yards.

Isn't it obvious that the exporting nations consider these agreements a floor, not a ceiling; a minimum, not a maximum—and our governmental committees, supposedly implementing these agreements while paying lip-service to our textile industry, have done little to protect the interest of our textile workman.

Our total cotton imports for 1962 will exceed 1,100 million yards. Just realize that for every 1,000 yards imported, one American textile worker loses 1 week's pay—1,100,000 weeks' pay will be lost this year. At \$80 per week, \$90 million of pay lost—but more important, this year 21,000 American textile workers will lose a year's pay—on their jobs.

LONG-TERM AGREEMENT

(a) Five years based on imports during 12 months ending June 1952. This will result in a substantially higher base than the short-term agreement due to the gross overshipment under the short-term agreement.

(b) Increase in fourth and fifth years are to be granted under the long-term agreement.

(c) No rollback agreement or short-shipment agreement.

(d) Assets:

1. Year's experience.
2. Better reporting from census.
3. Still have 64 categories.
4. No longer have to prove market dis-ruption.

5. Will call countries on a monthly basis. But we are now told that this is subject to political significances as determined by the State Department.

Best we can hope for is a tighter control which will at best allow modest increases. We have to continuously fight for reasonable treatment.

Our governmental problem No. 2 and our major problem is the so-called two-price cotton system. We, the American textile industry, are forced to pay \$0.085 more per pound for American cotton than our foreign textile counterparts have to pay for American cotton.

Why?

(a) This is why—we are the victim of the Government's agricultural problem.

We grow in this country an average of 15 million bales annually. The Government support price is roughly \$0.335 per pound. The world price is \$0.25. Our industry consumes 8,500,000 bales, so 6,500,000 bales have to be sold for export. In order to sell this surplus American cotton, our merchants have to compete with \$0.25 foreign grown cotton. So, the American Government subsidizes the exporting merchant \$0.085 per pound for any American cotton sold out of the United States.

(b) Why don't we buy world cotton at world prices? We are not allowed to, 60,000 bales only; it would upset the farm program—and that it would.

(c) What have we done?

First, section 22 case brought by the Secretary of Agriculture. It would have imposed an offset fee of \$0.085, or equivalent to the subsidy, on cotton content of cotton cloth coming back to into the United States. By a 3-to-2 decision, this was turned down by the Tariff Commission on September 11, of this year.

(d) President Kennedy on September 7, 1962, commenting on the tariff decision, said, "The inequity of the two-price system of cotton costs remains as a unique burden upon the American textile industry, for which a solution must be found in the near future."

"I am therefore requesting the Department of Agriculture to give immediate attention to the formulation of a domestic program that would eliminate this inequity. I am also instructing all other departments and offices of the executive branch to cooperate fully to this end."

Secretary Hodges, recently speaking in Charlotte, termed the Nation's two-price cotton system, "The most foolish thing any government has ever done."

(e) As a result, efforts are now being made to formulate a program to satisfy the farmers, merchants, mills, the Agriculture Department, and bring about a competitive one-price for cotton. This will be submitted by the administration early in the new session of Congress; hopefully, to be effective with the new crop year, August 1, 1963.

(f) We should know the details of this new proposed cotton legislation within the next 2 weeks. It will be well publicized. You can help by writing your Congressmen. I cannot think of a more important piece of legislation for our section of the country.

IN SUMMARY

Given a reasonable and controlled import quota, given the opportunity to compete equally for our raw material, South Carolina mills will enjoy their greatest period of prosperity. Our mills are the most modern, our employees the most skilled, and management is willing to risk the capital to keep South Carolina the leading textile-producing area in the world.

Independence Day of Cameroon

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. POWELL. Mr. Speaker, on January 1, the Republic of Cameroon celebrated her third independence day anniversary, and we take this opportunity to send warm felicitations to His Ex-

cellency, the President of the Republic of Cameroon, Ahmadou Ahidjo; and His Excellency, the Cameroon Ambassador to the United States, Jacques Kuoh, on this memorable occasion.

CAMEROONS: A COUNTRY REUNITED

New Year's Day 1960 was a joyous occasion for the thousands of Africans whose home was the French Cameroons. On that day the U.N. trust territory under French administration became the sovereign Republic of Cameroon, the 11th nation on the African continent to achieve independence. Thus ended a 75-year period of foreign occupation. Germany had declared Cameroon a protectorate in 1884. After World War I the territory was divided between the British and the French as League of Nations mandates. Then in 1946 the Cameroons became U.N. trust territories.

October 1, 1961, was another day for rejoicing in Cameroon, when the British Southern Cameroons joined the former French trust territory to form a federal republic. This event marked the fruition of the Kamerun idea which had emerged with political consciousness in the Southern Cameroons and had gained momentum as the British territory moved toward self-government. Kamerun became the political ideal of the reunification of the two Cameroons. The formation of the Federal Republic was an important event not only from the standpoint of the Cameroons themselves, but also from the larger perspective of continental African political development, for it was the first African experiment in the union of a British territory and a French territory. The educational, linguistic, and legal adjustments of the new union are gradually and most satisfactorily being worked out under the skillful leadership of Vice President Foncha and President Ahidjo.

The successful development of Cameroon is all the more spectacular because of the enormity of the difficulties, pointed out by observers of all kinds, facing the new nation. Ethnologists reminded us that Cameroon, lying at an ethnic crossroads of Africa, contained a "bewildering hodgepodge" of races from Islamic stock breeders in the north to Bantus and Pygmies in the south. Political scientists noted that as of independence day there were some 382 legally registered political parties. Geographers pointed out that the northern and southern sections were divided by a central plateau which effectively discouraged communication. Economists said that the primary crop economy was extremely vulnerable to climatic change and price fluctuations. The pessimists predicted that President Ahidjo would have considerable difficulty in holding together his newly independent country.

But the pessimists were wrong. The republic has been stabilized. The economy is advancing. Substantial improvements are being made in education. Communications development is under way, and industrialization is being speeded up. When President Ahidjo made a 5-day visit to the United States as the guest of President Kennedy in March 1962, the President of the United States congratulated President Ahidjo for his

successful efforts in the progressive development of his country. The two Presidents agreed to encourage commerce and investment between their countries and expressed confidence that the visit had strengthened relations between the United States and the Federal Republic of Cameroon.

The American people add their voice to the congratulations of President Kennedy. To President Ahidjo, Vice President Foncha, and the people of the Federal Republic of Cameroon we express our faith in, and best wishes for, the continued successful development of their nation.

The Current Attitude Toward the Monroe Doctrine and Our Relations With Latin America

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. YOUNGER. Mr. Speaker, the International Section of the Commonwealth Club of California spent almost a year studying the background and current attitude toward the Monroe Doctrine and our relations with Latin America. Following the study a secret ballot was taken among the members of the club on 12 selected questions.

The results of the voting are as follows:

VOTE OF THE COMMONWEALTH CLUB OF CALIFORNIA ON MONROE DOCTRINE AND LATIN AMERICA

(Results of the secret mail ballot submitted to all members of the Commonwealth Club of California immediately following distribution of the transaction, "Monroe Doctrine and Communist Threat to Americas")

I. After 30 years of the "good neighbor policy"—

A. Is the United States in general more popular in Latin America, 506; or less popular in Latin America, 1,371; or no change? 306.

B. Has the United States more or fewer Latin American nations on whom it can depend for support in our efforts to defend this hemisphere against communism? More, 932; fewer, 1,250.

C. Are the international policies and practices of the U.S. Government largely responsible for whatever may be your answer to B? Yes, 1,681; no, 446.

II. Do Latin Americans in general regard the United States as a so-called paper tiger (meaning a nation which will not effectively support its friends)? Yes, 872; no, 1,237.

III. Should it be U.S. policy, generally, to support any form of Latin American government which is anti-Communist? Yes, 1,275; no, 956.

IV. Should it be U.S. policy, generally, to achieve the replacement of any pro-Communist Latin American government? Yes, 1856; no, 369.

V. Should the United States act to prevent expropriation by Latin American countries of property of U.S. citizens—

When fair and dependable compensation is assured? 474; or when fair and dependable compensation is not assured? 1665.

VI. Should the United States continue its present policy of cooperation with Latin

American military forces? Yes, 2009; no, 158.

VII. Should the United States—

Consider the Russian intervention in Cuba's affairs a violation of the Monroe Doctrine? Yes, 2061; no, 171; at an appropriate time take whatever action may be necessary to overthrow Castro's government? Yes, 1751; no, 412.

VIII. Should the Alliance for Progress Charter be amended specifically to forbid employment of Communists in the Alliance organization? Yes, 1830; no, 349.

IX. Should specific provision now be inserted in the Alliance Charter, so as to provide a definite opportunity for private business to aid development of Latin American nations? Yes, 2070; no, 131.

X. Should at least semiannual reports to our Congress, and to the legislative bodies of other supporting nations, be made on progress or no progress achieved by Alliance nations toward conforming with Alliance standards as pledged in August 1961 at Punta del Este? Yes, 2123; no, 57.

XI. Is the Monroe Doctrine dead? Yes, 397; no, 1781.

XII. Is the Theodore Roosevelt Corollary dead? Yes, 715; no, 1192.

America's Day of Infamy

EXTENSION OF REMARKS OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. BRAY. Mr. Speaker, countless Americans have been shocked by news from the Congo where the United Nations has again ground its heel upon the hopes of the Katanganese who seek independence. We have still not received full reports on happenings there, but from what we know already it is a very distressing spectacle—a shame which may linger for many decades.

Summing up the reactions of many Americans is the following editorial from the Indianapolis Star of January 1, 1963:

AMERICA'S DAY OF INFAMY

For the first time in our history the United States has deliberately set out to destroy the liberty and independence of another people.

By our outright support of the savage colonial policy of the United Nations in Katanga, the American Government has made itself a party to one of the most vicious attacks on a free people since the Soviet Union smashed the victorious revolt of the people of Hungary.

Without U.S. support and direction, this brutal destruction of the rights of the people of Katanga could never have occurred. Succumbing to the pressures of the so-called neutralist states in the U.N., and to the Soviet-dominated Secretary General U Thant, our Government has turned its back upon its own historical principles.

We have abandoned our traditions and our principles.

To please the primitive and dictatorial regimes of Africa and Asia, to satisfy the ambitions of neutralist leaders who neither understand nor acknowledge the principles of self-determination and personal freedom, we have helped to destroy one of the few African states whose leaders understand the necessity for cooperation between the races and mutual tolerance and common effort for progress.

This despicable action flies in the face of everything Americans have always been taught to hold dear. We, who liberated Cuba from Spain, who gave the Philippines their independence, who fought three great wars to help preserve the independence and freedom of peoples from Europe to Korea and are still doing so in far off Vietnam—we Americans—have now joined the motley crew of self serving wreckers in the U.N. who want to destroy, not build; to colonize, not liberate.

Why was this thing done? What possible good can come of joining with these unlettered and unprincipled nations with their mercenary troops in stamping out one of the most hopeful and progressive African regimes to emerge from the welter of dictatorships and mismanaged police states on the Dark Continent?

No wonder the United States quietly agreed to drop the Hungarian suppression from the U.N. agenda in recent weeks. The administration was already planning to do the same thing to Katanga. We have copied the Soviet Union's bloody action in Hungary by mounting and directing the same sort of mercenary attack against the freely chosen government of Katanga.

We the people of the United States through our representatives at the United Nations supported and applauded a victory in Elisabethville where U.N. troops entered a hospital and shot to death hopeless, helpless, innocent patients.

This is indeed the climax of the gradual erosion of principle that has sickened the United States in the last few decades. This is the final abandonment by our Government of our long-held belief in the rights of people to determine their own destiny in their own way, in freedom.

This is the final abandonment of the ideals of our country to the expediency of the conscienceless United Nations.

This is America's first day of infamy. Let us pray it is our last. It will be hard enough to explain this betrayal of principle to the rest of the world. How will we explain it to our own consciences?

American Battle Monuments Commission

EXTENSION OF REMARKS OF

HON. VICTOR A. KNOX

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. KNOX. Mr. Speaker, I wish to congratulate and commend the American Battle Monuments Commission for its devotion and concern for the men who died in defense of our country during World Wars I and II.

I have received a communication from Mr. Roy D. Hollingsworth, of Sault Ste. Marie, Mich., a former first sergeant with the 125th Infantry, 32d Division of Michigan and Wisconsin, during World War I, who visited Romange Sous Montfaucon and American Luxembourg cemeteries.

Under permission granted, I include the letter I have received from Mr. Hollingsworth as part of my remarks:

SOO MACHINE & AUTO CO.,

Sault Ste. Marie, Mich., December 10, 1962.

Hon. Victor A. Knox,
Washington, D.C.

DEAR VICTOR: I recently returned from Europe where I visited my son, a captain in the U.S. Army. He had obtained a 14-day absence from duty and he and his wife drove

Mrs. Hollingsworth and me to the Argonne in the vicinity of Romange Sous Montfaucon.

I enjoyed the old battlefield in that my division, 32d of Michigan and Wisconsin, served in this well-known battle for 21 days ending the operation with my regiment, 125th Infantry, playing an important part in the occupation of Romange, beyond which there were no trenches or defensive works.

Now, Vic, my main reason for commenting on this trip is to bring to your attention just what I observed with regard to the activities of the Monuments Commission.

VICTOR, I wish that every mother and father could see the consideration given to our fallen heroes in the beautiful cemeteries where they now rest.

The cemetery at Romange Sous Montfaucon is most beautifully maintained, the masonry of the buildings and monument is outstanding.

At one time, more than 16,000 of our boys from homes in the United States of America were buried here. Actually, after 44 years, I could, with satisfaction, remain on the site for days, if time would permit.

My son drove us to the American Luxembourg Cemetery. This is one of the beauty spots of the Old World.

Every detail of care and original thinking is also evident here. I photographed my son, who proudly stood by the grave marker of General Patton. Nearby, 3,700 American boys are laid to rest in well-marked graves. Visiting relatives with whom I talked were strong in their praise of those responsible for the care and maintenance of our cemeteries in Europe.

Let me add that the authorities in France also never forget those who gave their lives for their Nation.

VICTOR, please forward my letter to the proper authorities in Washington.

Merry Christmas.

ROY D. HOLLINGSWORTH,
First Sergeant, Sy Co.,
125th Infantry, 32d Division, AEF.

From a Meager Grubstake

EXTENSION OF REMARKS OF

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. UDALL. Mr. Speaker, recently the Valley National Bank, one of this Nation's 40 largest banking institutions and the largest in Arizona, celebrated its 63d anniversary. On that occasion the Arizona Weekly Gazette in Phoenix published an excellent history of this pioneer enterprise. All Arizona takes pride in this success story, so typical of the accomplishments made possible by our democratic system. The article follows: [From the Arizona Weekly Gazette, Dec. 18, 1962]

VALLEY BANK CELEBRATES 63D ANNIVERSARY—A MEAGER GRUBSTAKE, A DUSTY CATTLETOWN, STARTED A GREAT BANK

PHOENIX.—Valley National Bank celebrated its 63d birthday this week with an outlook as bright and cheerful as the candleglow on its anniversary cake.

On December 15, 1899, articles of incorporation were signed and the Gila Valley Bank, forerunner of today's statewide Valley Bank, became a legal entity.

The bank was launched in the dusty little mining-cattle town of Solomonville (in what today is known as Graham County) at

a time when Arizona was only a territory and banking laws were virtually nonexistent. It was destined to become the most colorful of Arizona's prestatehood financial institutions.

Situated 5 miles east of Safford and roughly 180 miles east of Phoenix, the town of Solomonville was founded in 1876 by I. E. Solomon, pioneer merchant, who by the turn of the century had built (and owned) most of the buildings flanking the community's main street.

German-born Solomon had emigrated to New York in 1860 at the age of 16, then gradually worked his way West until he settled in eastern Arizona in 1876 with a contract in his pocket to supply charcoal to the Clifton copper mines.

The business prospered despite the threats of marauding Indians and white outlaws. Solomon branched out into sheepraising (the Apaches made a number of successful raids on this enterprise), freighting, hotel-keeping and general merchandising.

Headquarters for his various activities was a large brick building housing his general store in the center of town. It was in a corner of that crammed structure that the Gila Valley Bank officially opened for business on January 16, 1900.

Solomon's fellow incorporators—merchants and cattlemen for the most part—included many colorful personalities. Among them were George A. Olney and Phoebe Fruedenthal, the latter a brother-in-law of Solomon's.

Olney was an ex-Texas Ranger who resided in nearby Safford and was a wealthy cattleman of great influence. At the time of the bank's incorporation he lived in the area's biggest house and was its senator in the Territorial Legislature.

Fruedenthal, a merchant, later became a delegate to the 1912 Republican National Convention. Solomonville also was the home of a hearty storekeeper named Pete Bolan who had fought under Parnell in his native Ireland. Known for his fierce bouts with the bottle, Bolan was reputed to have caused the adjournment of a pre-1900 Democratic National Convention in Chicago with his stentorian shout: "Let's all recess for a drink."

There was some justification for Bolan's affinity for liquor—at least in Solomonville Territorial Gov. Benjamin Franklin visited the town in 1896 and pronounced its drinking water unfit for man or beast.

"It's terrible," he remarked but, after noting the community's many busy saloons, added: "I doubt if most citizens realize it, however."

Charles L. Rawlins, who later became one of the territory's best known attorneys, drew up the original charter. When he died in 1954, he was the only surviving depositor listed on the bank's opening day customer record. Valley Bank still retains Rawlins' law firm—now headed by his son George—continuing without interruption a 63-year-old association.

The Gila Valley Bank opened with capital funds of \$25,000. At its first annual meeting it reported \$64,284 in deposits and a net profit for the year of \$1,546.55. The directors promptly voted themselves a dividend of \$1,500—leaving a surplus of \$46.55.

By 1912—the year Arizona achieved statehood—the Gila Valley Bank & Trust Co. (as it was then called) had climbed into second place among Arizona financial institutions.

It had survived the panic of 1907, had increased its deposits to \$1.6 million, and was now operating branch offices in California, Morenci, Globe, Stafford, Miami, Ray, Winkelman, and Hayden—all thriving copper-producing towns.

In June 1912, a fire which started in a Chinese laundry completely leveled the pic-

turesque community of Ray—with the sole exception of the bank's concrete vault and the office's bare walls.

The next morning, while the town's ashes were still smoking, enterprising manager Jim Houston opened the fire-scarred vault's iron door, placed a board counter in the doorway, and painted a sign announcing the bank was ready to do business. His action brought cheers from the homeless miners and their families.

By 1912 the two dominant personalities in Gila Bank's management were mining executives Charles E. Mills and Dr. Louis D. Ricketts. A taciturn, hard-driving individual, Mills vanished in 1888 from Harvard University, where he had been enrolled as a student, and turned up in Arizona as a laborer in a railroad construction gang near Bisbee. By the time he was 25, he was a mine superintendent for the Phelps Dodge Corp. and at the age of 30 he was in charge of the famed Detroit Copper Mining Co. at Morenci.

Mills was elected a Gila Valley Bank director in 1912 and, until his death in 1929, was its principal policy shaper. He served for many years as president and, on two occasions, as president of the Valley Bank of Phoenix with which it merged in 1922. Prior to the merger he held the presidencies of both banks simultaneously, no small feat even in the freewheeling West.

Ricketts, a genial man of many talents, won his doctorate at Princeton University with a thesis on Colorado ore formations, then rejected a post on the Princeton faculty for a career in mining which ultimately gained him international renown.

In Sonora, Mexico, in 1897, for example, he built the industry's first all steel and concrete centrally driven ore mill which became the model for the larger concentrator erected at Morenci in 1900.

His brilliant career spanned three widely separated fields of interest: mining, education, and banking. As a mining engineer he became consultant to several of the world's largest companies. As an educator he served 8 years as a regent in Arizona and many more as a trustee of both Princeton and California Institute of Technology.

As a banker he worked closely with Mills in fostering the growth of both the Gila Valley Bank and its successor, Valley Bank. He was chairman of the latter's board of directors when he died in 1940 at the age of 80, mourned by countless thousands as one of his adopted State's best known and best loved citizens.

The Gila Valley Bank & Trust Co. merged with the Valley Bank of Phoenix in 1922, dropped the "Gila" from its title and became known as the Valley Bank & Trust Co. Thirteen years later it purchased the Consolidated National Bank of Tucson and changed its name to Valley National Bank.

But it was 2 years earlier—in 1933—that Valley Bank began taking the giant strides that were to transform it from a relatively obscure southwestern institution into one of the Nation's largest and most enterprising banks.

Responsible for this last surge of growth, which has continued unabated ever since, was Walter R. Bimson who took over the presidential reins in January 1933 at the nadir of the depression.

Bimson was no stranger to Arizona. For several years prior to 1933 he had been making trips here, servicing agricultural loans for the large Chicago bank he represented as a vice president. He was delighted to settle in Arizona; equally important, he wanted to test a number of progressive and often unorthodox banking services he felt were sorely needed in modern day banking.

When Walter Bimson was named president in 1933, Valley Bank listed less than \$7 mil-

lion in deposits, resources of only \$8.6 million, a bare \$3 million in loans outstanding, 11 offices, 15,000 customers, and a handful of stockholders.

Today it lists in excess of \$700 million in deposits and approximately \$800 million in resources. Loans outstanding are close to \$500 million, offices add up to 78 (at this writing), and customers total around 400,000.

Stockholders now number over 10,000, and dividend checks are mailed to addresses in all 50 States and several foreign nations. Bulk of V.N.B.'s shareowners reside in Arizona, however. Capital funds are knocking on the door of \$55 million—more than 2,000 times the original \$25,000 posted in 1899.

Under the leadership of Walter Bimson and his brother, Carl, who succeeded him as president in 1953, Valley National's growth was termed "as dazzling a banking achievement as the country has seen" by the Saturday Evening Post.

The Bimson philosophy of banking was succinctly summed up by Carl a few years ago:

"Although we are a private enterprise, we try never to lose sight of the fact we are primarily an instrument of public service; we firmly believe the best way to build Valley Bank is by helping to build Arizona; we regard Valley Bank as 'a financial department store' which must be ready to offer every feasible service needed by its customers."

The Bimsons implemented this philosophy by introducing a number of "firsts" to the Arizona banking scene. Among them were the first installment loan department, first drive-in bank, first small business loan department, first "community room," first bank employees' profit-sharing plan under a new Treasury ruling, first "assured education" plan, and scores of other precedent-shattering innovations.

Result of the bank's public-oriented philosophy is history. By 1945 Valley National had forged into first place among all other banks in the eight-State Rocky Mountain area. Today it is among "the top 40" in size on the rollcall of the Nation's 14,000 commercial banks, guards half of all Arizona bank deposits in its vaults, and is the State's primary source of credit.

Highest honor in U.S. banking circles—presidency of the American Bankers Association—was conferred upon Carl Bimson in 1960-61. Editorially, it was hailed as a tribute to his banking acumen, Valley Bank's policies, and Arizona's remarkable economic expansion.

In January of this year, James E. Patrick succeeded Carl Bimson as president of Valley National. Carl moved up to vice chairman of the board and chairman of the executive committee. Walter continued as board chairman.

The three are unanimous in their belief that Valley National and Arizona have yet to witness their greatest growth. Their judgment is underscored by one of the Nation's largest brokerage firms which recently commented:

"Valley National has far outshone the U.S. banking industry over the postwar years, and this record is expected to continue over the years ahead." Another investment house plotted the expansion of both bank and State and noted "their growth lines are virtually parallel."

Community-minded Patrick summed up the bank's outlook this week as it looked ahead to its 64th year. "Arizona's future prosperity is inevitable. Barring the unexpected, it will continue to lead the Nation in most economic indexes in the foreseeable years ahead. And we at the bank are convinced that as Arizona goes, so will Valley National."

Governor Lawrence Addresses
Pennsylvania Assembly

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. TOLL. Mr. Speaker, I had the opportunity of attending the opening session of the Pennsylvania General Assembly in Harrisburg on New Year's Day. As a former member, I was very interested in the remarks which were presented by the Governor of the Commonwealth, the Honorable David L. Lawrence, in his final address to the new general assembly.

He called to the attention of the legislators a number of very important projects which should receive their attention in the coming session. One of these was the subject of education, which should not only receive the attention of the Pennsylvania General Assembly and of other legislative bodies in the country but should also receive the attention of the 88th Congress.

I am sure that members will read this speech, which I have attached to my remarks with great interest and benefit.

FINAL MESSAGE OF DAVID L. LAWRENCE, GOVERNOR OF PENNSYLVANIA TO THE GENERAL ASSEMBLY OF PENNSYLVANIA, TUESDAY, JANUARY 1, 1963

Mr. Lieutenant Governor, Mr. Speaker, ladies and gentlemen of the general assembly, almost three centuries ago, William Penn set forth the frame of government for his new colony and preceded it with a preface which has been described as the best expression of his ideas of government.

In that preface he makes the point that "Governments, like clocks, go from the motion men give them," adding "Let men be good, and the government cannot be bad; if it be ill, they will cure it."

I come before you today to report on the movement of Pennsylvania's government, on the direction it has taken, on the advances it has made during these past 4 years—years which have been difficult and challenging but which, also, have been rewarding and productive.

Fortunately, I entered this office with no illusions and I approached its duties realistically. I came to this beautiful capital city in a spirit of humility, in the hope that God might give me the power and the ability to help Pennsylvania and its people.

I leave, in a few short days, with the earnest hope in my heart that the beginning we have made, together, will be continued and improved upon and completed.

I have used the word "we" in the preceding paragraph with careful deliberation. Those of you who know me well, know also that I am a man who believes, with strong conviction, in the value of cooperation—cooperation among individuals in private effort and cooperation between the various elements and branches of a governmental organization.

I hope you will forgive the note of pride in my voice when I say that, during this administration, the cooperative spirit between the legislative and executive branches has been both healthy and productive for this Commonwealth's government and its people.

Pennsylvania is in far better condition, today, because of that spirit.

Having said this, I must say, also, that much remains to be done.

Pennsylvania stands, at this moment in her history, on the threshold of a great move toward recovery. The foundation has been set in place; the building materials are ready; the plans and blueprints have been drawn and the basic course is charted.

Pennsylvania's problems are many—but they are not new problems. They were not born overnight through the oversight of one administration or one assembly—and they will not be solved by a simple wave of a magic wand.

The greatest of those problems is Pennsylvania's economic growth, how to keep it going and make it stable. That problem has been with us since the turn of the century; unfortunately, it is not likely to disappear tomorrow.

A few people recognized the problem when it was still in its embryonic state, 50 years ago. They saw, then, that Pennsylvania should be looking for other economic foundations than those it had cut out of the heart of the forests or dug out of the western hills or the anthracite mountains. Their warnings fell on deaf ears.

A quarter of a century later, the number of those cognizant of the difficulty our economy faced had grown even larger—but we were in the heart of a national depression and, because of this, our situation was not unique and, once again, little was done to prevent the downward plunge.

From the domestic tragedy of economic depression, America moved through the superficial boom of two wars—one a global conflict, the second a determined effort to prevent a worldwide holocaust.

Both those wars provided a burst of speed for Pennsylvania's economy; we had been, by tradition, the Arsenal of Democracy and we remained so in World War II and the Korean conflict.

Despite the significance of our wartime effort, however, the surge did not survive and the private and public forces which mold our future were lulled, once again, into complacency.

Not until the midfifties was there general agreement that we were not only slipping backward while other States moved ahead of us in economic growth, but that we had been gradually and inexorably falling behind for many years.

We began, then, to look around us—and the shock of recognition shook the giant that is Pennsylvania into awakening.

The evidence was there, ready to be seen and analyzed by any objective observer who cared to look. It provided conclusive proof that Pennsylvania's government had neglected many of its responsibilities—and that it would take many painful months and even more painful decisions to remedy that neglect.

Our resources had been squandered and the majestic beauty of our countryside had been scarred and despoiled by those who took from it and gave little or nothing in return.

Our schools had been ignored and the goals of our educational system had been allowed to settle down in the comfortable platitudes of another time.

We patched narrow roads of limited usefulness rather than building the modern, high-speed traffic arteries that had become the lifeblood of growth industry.

We had discouraged new industries from coming in, often out of fear that they would compete too easily and too effectively for the labor market we had available.

Our industrial climate was not the most attractive in the Nation, and we had failed to keep our economy viable and diversified.

There were countless new industries abroad in the land—industries devoted to the conquest of space, the development of advanced electronics, and nuclear power.

They were searching for homes, for skilled workers, and community resources. They may have considered Pennsylvania, but they did not settle here. They went, instead, to Massachusetts where a great technical institute had established a concentrated center of brainpower and academic scholarship, or they turned to California with its plentitude of power, its enlightened tax structure, and a growing higher education system.

When the problems were, at long last, recognized, it took only a short while longer for us to realize that a large part of the responsibility for reversing Pennsylvania's downward economic spiral rested with government itself.

My predecessor in this office, Governor Leader, determined to accept that responsibility—and with the help of enlightened legislators, he was able to make a beginning. It has been my privilege to build upon that beginning and strengthen it these past 4 years.

At the same time, the first fact of life that became obvious to me was that the State's own governmental affairs were in deplorable condition, financially.

While this administration was faced with many things which should have been done long before, it was, at the same time, confronted with an appalling condition brought about by appropriation of State funds when there was no money available to foot the bill.

The disease had lingered for many years, sapping the strength of the patient and preventing its recovery. Skilled treatment was not only desirable, but mandatory as well.

When I took the oath of office on the 20th of January 1959, it was calculated that Pennsylvania's State government had a deficit of \$177 million. Five months later, at the end of June, it had been reduced to \$144 million—still a staggering amount. We succeeded in cutting it back further until last year when we ended the fiscal period with a surplus. The deficit has been eliminated and I hope and pray that it is never again permitted to accumulate.

The dilemma of the new administration on that cold and stormy day 4 years ago was a real one. We knew there were bills to be paid, that there were programs to continue and improve upon. We wanted, also, to give the people of this State new programs and new services where they were needed and wherever it was feasible to do so.

The administration had an obligation to restore fiscal integrity and responsibility to the management of State government affairs. That obligation was not only mandated by the constitution; it was, more than anything else, the moral duty of a government devoted to the citizens it serves.

Unglamorous though budget balancing may be, it is the cornerstone of good State government. It is, also, the cardinal requirement of a forward-looking program to attract industry, for the plain fact is that modern industries are not interested in a State that does not know how to operate its own business.

Granted, then, that the first challenge I saw confronting this administration was to restore fiscal responsibility, I feel a strong sense of pride in the fact that the budget, this year, is balanced and that several million dollars of the surplus have been distributed to public schools and Pennsylvania State University in accordance with the wishes of the general assembly.

I am happy to report, moreover, that revenues at this point are substantially in accord with our original estimates, and we

have now been able to lapse thus far more than \$10 million in unused funds from various State agencies.

We not only balanced the budget last year but we leave to the incoming administration a fiscal condition which should assure balance for this year as well.

I should be less pleased with this report if it were necessary to say, at the same time, that the services of State government have been cut back or curtailed. But there has been no cutback and there has been no curtailment.

We have continued the valued and valuable programs of State government at peak levels. We have improved upon them and expanded them. In urban renewal, in education, in public health and mental health, in building a stronger, more effective State police force, in human rights, in recreation and conservation and industrial development, we have made far greater progress, relatively speaking, during the past 4 years than during any comparable time in Pennsylvania history.

More importantly, we have been able to initiate new programs for the development of Pennsylvania libraries and the encouragement of tourism that are the first of their kind in the Nation.

The odds against these achievements have been enormous, for Pennsylvania has been, traditionally, lacking in the stable financial resources that are necessary for governmental improvement.

Not until 1953 did our State have a broad-based tax to finance the operation of State government services—and not until 1956 did that tax, which many of us had not agreed with, become the major source of revenue for the State.

Not until 1955 did we see that the State had a direct and unavoidable role to play in the development of new industry. And it has been only during this administration that Pennsylvania has been given a forward-looking, adequately-financed program for highway construction designed to meet the industrial and travel demands of modern times.

Not until 1955 did we recognize the desperate need for a new approach to the treatment of mental illness—an approach that now results in cure and release, wherever possible, rather than senseless and inhuman perpetual imprisonment.

I have not come here, today, to present either a blueprint or a program for your consideration. My duties, in this regard, are nearing their official termination.

It remains for a new Governor and a new administration to map the next 4 years—and I pray, with you, that they will have far more than moderate success in that venture, for the sake of Pennsylvania.

There are certain areas, however, which I cannot ignore; they are too close to my heart and too much in my thoughts to be left out of these remarks today.

The first of these is the education of Pennsylvania's children, for this is a field in which you have also been intensely interested and it is the frontier upon which the destiny of our State, its people, and the entire free world will be decided.

I want to say, once again, that there has never been a better blueprint for the advancement of Pennsylvania education than the one now available through the report and recommendations of the Governor's committee so ably chaired by Lieutenant Governor Davis. It is a comprehensive, practical, and studiously realistic report and I am proud to give it my fervent and heartfelt endorsement.

Within the realm of public education—and higher education, also—it is imperative that we take steps to improve teachers' salaries and continue to provide the physical plants they need to perform their duties.

We must do far more than we have done in the field of higher education and in this respect I am delighted to report that Pennsylvania's State-aided colleges and universities have now come up with a formula for equitable assistance which is both sound and realistic and which I urge as a pattern for the new administration and this legislature.

I earnestly hope that this general assembly will give its approval to the constitutional amendment which would legalize scholarships and loans to deserving students. It is essential that we make it possible for good students to continue to advance their education and this is one of the most practical and reasonable methods available. Another, needless to say, is establishing a system of community colleges in the State—an action long overdue.

These are all constructive and creative measures; they deserve your support and your active interest.

At the same time, I feel it is necessary to warn against the potential destructiveness involved in the emasculation or possible repeal of Act 561 calling for school district reorganization.

Let's be frank about it. This law has been more flagrantly misrepresented—either through deliberate partisanship or ignorance of its provisions—than any other law ever passed in the halls of this assembly and signed into effect by a governor. The campaign against it has been a campaign of distortion and deception and demoralization—and that campaign has done an immense injustice, not only to this legislative body but to this administration as well.

Worse still, it has been completely unjust to our children, themselves—and that is what really matters.

Now that the rattling drums of political oratory have died away, I hope that the members of this legislative assembly will look upon Act 561 with the detached and sober minds of men who place the best interests of their State far above any small gain they might make otherwise.

The act is not a perfect one, for there are no perfect laws.

Perhaps the law can be amended; I reject the hypothesis that it should be hamstrung or repealed.

Act 561 was the greatest forward-step Pennsylvania education had taken in 50 years. It remains a good law and it deserves far better than the calumny and criticism it has thus far received.

There are numerous other fields in which I hope and trust this assembly will show its enlightened concern.

Although in practice it will not apply to our State, I hope that Pennsylvania will hastily ratify the amendment to the Federal Constitution which will abolish the use of the poll tax.

The Pennsylvania Industrial Development Authority—which is already the most effective of its kind in the country—must be continued and expanded. The present rate of loan activity is at a record level, so much so, in fact, that additional money must be provided if the industry authority is to function at its maximum effectiveness for the remainder of this fiscal year. This, of course, is money we cannot afford not to spend.

Beyond this, the authority's work must become both preventive and remedial; its aid must be offered to communities which now seem prosperous and stable in their economy so that they may continue so. Aid to the chronically distressed areas of our State should be—and must be—maintained at its present pace, at least, and, if possible, strengthened in the future.

In the continued struggle to encourage industrial development, we must not lose sight of the need for improved transporta-

tion facilities and rates and the provision of feasible power rates for industrial uses.

Along this line, I want to express my pleasure at the recent announcement of Pennsylvania utility companies that they will build and operate power-producing plants at the mouths of mines. Such a move, it seems to me, could make Pennsylvania the foremost power-producing State in the northeastern part of the Nation.

We must move forward with the highway construction program that is already far ahead of original expectations. The plans have already been drawn; the money is available and there is no reason, whatever, that Pennsylvania cannot set the pace for the rest of the Nation in completing its interstate highways program.

The department of highways now has \$1,600 million worth of plans in process—70 percent of that total already in final design, and all of it scheduled to be ready for advertising for bids within the next 4 years.

While we are building our highways and our schools, we must do everything in our power to insure the preservation of open space. We have too little of it, now, and we must make certain that the supply for recreation and scenic value is not further depleted.

This assembly will have the opportunity to vote upon—I hope, favorably, once more—the finest plan to guarantee open space of any State in the Nation. That plan, of course, is Project 70 and I earnestly hope that you will make it possible for the people, themselves, to vote on it in the next general election.

We must also make certain that we preserve and protect our precious water supply, and continue to pioneer in developing master plans for our great river basins, as we have done so successfully on the Delaware.

Although we now have the best and strongest strip mining legislation in America on Pennsylvania's law books, we must strengthen the effort to eliminate the further destruction of our natural beauty. I hope, also, that the assembly will give its support to the creation of a new agency, using both private and public funds, for the reclamation of land that has been scarred by workings prior to enactment of the present legislation.

There are many other areas which require attention—a list too long and too involved for me to recite here. Both parties have made promises and it is up to the party in power to implement those promises by legislation. It is the responsibility of the opposition to prod that action if it is not otherwise forthcoming.

But I must mention the necessity to push forward in such vital human fields as public welfare and public health. We must also zealously advance and protect the human and civil rights of all peoples.

I hope, too, that Pennsylvania will soon join its sister State of New York in developing a State arts council, which can bring to every section of the Commonwealth the great cultural attractions which are now available in the larger communities. I am pleased to note that a task force of the joint State government commission plans to recommend assistance for Philadelphia's University Museum so a mobile museum can be put into operation bringing great treasures to every section of the State. This, certainly, is a step in the right direction, and I hope it comes about.

There is one personal project, on which we have been working, that I would urge upon you. For many, many years, I have been closely associated with the deaf—a group of handicapped people whose problems have been generally neglected and misunderstood. A special study committee, which I appointed last June, has now recommended

that an office for the deaf be established in the department of labor and industry. Knowing the problems of the deaf as intimately as I do, I strongly recommend that this office be created as an imperative part of our overall work to aid the handicapped. I hope also that the Governor's committee on the handicapped, which has been chaired so effectively these past years by Pearl Buck, will be made a statutory agency and given the powers it needs to carry forward its exciting and far-reaching program.

Finally—but by no means least important—there is the desperate need to recruit the finest available talent to work in State government—not only in our mental hospitals, our libraries and health and welfare agencies, but equally in the management of the State's fiscal affairs.

We must have inspired and imaginative governmental leadership, for the complex and diversified functions of State government must have it if we are to hope to attract the kind of competent, professional workers we need.

We have made the transition from the day of the quill pen to electronic data processing rapidly—not only in private industry, but, as of now, in government also.

But new methods and new equipment require new talents and skills. We must, therefore, be able to recruit the kind of able, highly trained, technically skilled personnel that modern government demands.

Having said this much, I want to assure you that my remarks are nearing an end. Speeches, like courtships, should not be overlong for the longer they are the greater the risk of disenchantment.

I want to say only this, in conclusion:

No Governor in Pennsylvania history has ever had the services of a finer, more dedicated or more effective cabinet than I.

To these men and women, I owe a great and everlasting debt of gratitude—and to the thousands of State employees who have worked with efficiency and dedication to make this a better State for the future.

To each of them—and to each of you—I offer my thanks and my fervent prayer for a provident and progressive future.

The incoming Governor and his administration have my best wishes and my prayers, also.

I ask that you give them the same measure of devotion, the same enlightened and selfless determination to do what is right for all of Pennsylvania that you have given me.

If you do that—and I know that you will—the beginning we have made these past 8 years under Governor Leader and under this administration, will result in a noble and prosperous new order for this great State and its people.

Thank you. And God bless each of you in your deliberations in this assembly.

Certainly There Is No Freedom To Be Indecent

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. BECKER. Mr. Speaker, I am inserting, herewith, an editorial which appeared in the Brooklyn Tablet of December 8, 1962, treating with the television program of Howard K. Smith and the vilification of former Vice President Richard Nixon by none other than the perjurer and traitor, Alger Hiss.

As this article states, the program was defended by Jim Hagerty on the grounds of "freedom of the press." This, as everyone knows, was a specious argument and an attempt to apologize for one of the worst programs ever put on the air and to which the American people were exposed against their will.

The so-called freedom of the press is an abuse in this and other instances. What is meant is "freedom for the press" for no one else would have the same opportunity as was given to Alger Hiss. It is a sorry day in America when convicted perjurers and, far worse, traitors, are given free time on our television to vilify good Americans, sound Americans, and courageous Americans, through whose diligence and untiring efforts culprits are exposed to the point of sending them to jail.

During the past year, I said on numerous occasions that there is a strange philosophy, entertained by some people in our country, that extends a great freedom to Communists, fellow travelers, and "pinks" that is never extended to sound, honest-to-God, patriotic Americans. I believe it is time that the American people who believe in justice and fair play see to it that the channel putting on this program be thoroughly denounced thereby letting them know that Americans do not agree with them. The article follows:

CERTAINLY THERE IS NO FREEDOM TO BE INDECENT

One would not be out of line in surmising that the American Broadcasting Co. is having difficulty getting the public to accept the argument advanced by James Hagerty, ABC official, and echoed by others, that the appearance of Alger Hiss on the Howard K. Smith program is to be excused on the grounds of an omnipotent "freedom of the press."

The argument, of course, of those who objected to a TV bit role for a man convicted of perjury concerning not land fraud or illegal whisky but the giving of his country's secret documents to her sworn enemy, a man who has evinced no contrition or remorse for his actions, was voiced on the ground of bad taste and in violation of decency. The protesting public and sponsors, insulted and beaten down by Mr. Hagerty's and others' counterattack with a strawman, are still making their objections known.

Two letters appearing in the New York Herald Tribune of November 30 are typical of those appearing in the daily press and which spell out the real issue so earnestly befogged by ABC and a host of well-meaning, mischievous people in high places:

"I have no newspaper or advertising affiliations and think that any advertiser is justified in leaving any medium that he thinks has lowered its standards. ABC's reputation is downgraded if the network shows poor judgment, and nothing has been as low as the Hiss presentation.

"B. N. HARRELL."

"The editorial, 'Mr. Hagerty and Mr. Hiss,' caused me great displeasure. Public opinion is subjected to every kind of pressure and propaganda by people with power. We have the right to accept it or reject it. There seems to be a double standard for those who attack and assassinate characters but describe as reprehensible and irresponsible those who protest this assassination.

"MARY KEARFOTT."

In the diocesan press there were those who correctly saw that the issue was not "censorship by the political Right" or the need for

"balanced programming" or that a "tragedy" was incurred by the not altogether unique situation of a sponsor seeking to withdraw from a station.

In an editorial entitled "Time To Hiss Mr. Hagerty," the Providence Visitor, while agreeing on the perjurer's right to a TV appearance, said: "For the life of us we cannot understand how anyone can square with the minimum canons of decency and good taste placing a perjurer in judgment on a man whom 49 percent of the U.S. citizens believed worthy of the highest office in the land. We did not relish at all how Mr. Nixon made his political exit on television, but we can only admire his restraint in commenting on this humiliating treatment in a particularly bitter hour."

Msgr. John Kelly, editor of the Chicago archdiocese's New World, asserted: "If gloating over the political defeat of a former Vice President of the United States comes into the area of good taste, I fall to see how. Mr. Nixon, whether you like him or not, is a man with a fine record of courage and diligence in serving the American public. The taste that makes you want to rinse your mouth is the employment of a convicted perjurer and traitor to vilify before millions the man who worked so courageously to expose his treachery.

"No doubt many will rise to defend ABC, Howard K. Smith, the sponsors Nationwide Insurance, and even Hiss, on the badly abused grounds of 'freedom of speech.' I would say they all deserve each other. Let's hope they're happy together."

We wonder why it is that when, using as a standard not decency but a system of ratings placed godlike on a pedestal as sole indicator of a program's value, a network unceremoniously dumps—read censors—a program, there are none to mount the battlements waving the tattered ensign of "freedom of the press"? Is it just that where cost per thousand is concerned, decency has nothing to do with it?

Salute for B'nai B'rith

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. PELLY. Mr. Speaker, may I take this opportunity to pay tribute to the world's oldest Jewish service organization, B'nai B'rith, on the occasion of its 120th anniversary. This venerable organization, founded in New York City in 1843, is now worldwide in scope. It has played a major role in promoting understanding and tolerance throughout the United States and the 41 nations in which it has expanded its activities.

In this connection, I would like to include an excellent and appropriate editorial from a newspaper in my congressional district, the Washington Examiner.

The editorial reads:

MILESTONE FOR B'NAI B'RITH

B'nai B'rith is 119 years old. As it enters its 120th year, a venerable age even by Biblical standards, the world's oldest Jewish service organization carries its years well and remains a perennially zestful and energetic force in Jewish life throughout the free world.

B'nai B'rith's elixir has been its ability to meet history head on and become a force for good in the midst of turbulent human

events. Thus, it established the first Jewish library in America, and the first Jewish community center, opened the first free employment office for immigrants, fought anti-Semitism here and abroad before that word was coined, and was the first national organization to undertake disaster relief.

Its 119 years are studded with many rich and enduring contributions to community enlightenment and human progress. Since its inception in 1843 on New York's East Side, it has expanded to 41 nations throughout the world embracing some 470,000 members.

B'nai B'rith stays healthy and young because it continually meets the challenges and opportunities of contemporary events.

And so, hearty congratulations to B'nai B'rith on this significant anniversary. May it endure.

Women Strike for Peace and the HUAC

EXTENSION OF REMARKS

OF

HON. WILLIAM FITTS RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. RYAN of New York. Mr. Speaker, during December 1962, while Congress was not in session, the American public was treated to a sorry spectacle by a committee of Congress. The House Un-American Activities Committee decision to investigate the Women Strike for Peace and the subsequent hearings again demonstrated that this committee serves no useful legislative function and is antithetical to the principles upon which our Nation was founded. At the time of the hearings I issued a statement which I wish to call to the attention of my colleagues. I regret that on the first day of this session there was no opportunity to offer an amendment to the resolution on the rules of the 88th Congress which would repeal clause 1(r) of rule X and clause 18 of rule XI which provide for this committee. The House will have an opportunity to vote on this issue when the 1963 appropriation for the committee is before it.

The statement follows:

STATEMENT OF CONGRESSMAN WILLIAM F. RYAN CONCERNING THE ACTION OF THE HOUSE UN-AMERICAN ACTIVITIES COMMITTEE IN HOLDING HEARINGS ON THE WOMEN STRIKE FOR PEACE

The announcement by the House Un-American Activities Committee of public hearings with reference to the Women Strike for Peace is another example of the misuse and abuse of legislative power.

The hearings apparently are intended to discredit the Women Strike for Peace and to cast doubt upon the loyalty of those active in it. The action of the committee induces conformity of thought and action and intimidates citizens who are seeking to express their concern for peace.

The spontaneous peace movement in the United States is dramatic evidence of the strength of our democracy. Even at the height of an international crisis, citizens exercised their constitutional rights of petition, assembly, and free speech. However, the committee consistently opposes the spirit of independent inquiry and humane protest. By intimidation and innuendo the committee spreads fear and stifles dissent. The

committee has a habit of using its power to expose and punish groups and individuals whose programs and ideas the committee disapproves of.

Disarmament under effective international control and a strong United Nations, imperatives of our time, are stated goals of Women Strike for Peace. A group of citizens working for these goals within our constitutional framework should be commended, not condemned.

The first amendment explicitly protects all ideas and expressions. The framers of the Bill of Rights asserted their belief in freedom of speech and the right to nonconformity at a time when our Nation was new and insecure. We should do no less today.

The committee has said one purpose of the hearings is to determine "whether existing Federal laws are being violated." As Dean Erwin Griswold, of Howard Law School, has pointed out, "a legislative investigation is improper when its sole or basic purpose is to expose people or to develop evidence for use in criminal prosecution" ("The Fifth Amendment Today," Harvard University Press, 1955, p. 48). If the committee has any evidence of violations of Federal law, it should turn it over to the proper law enforcement agencies and not usurp the function of the Department of Justice.

We should be mindful of the words of Supreme Court Justice Black:

"History should teach us, then, that in times of high emotional excitement minority parties and groups which advocate extremely unpopular social or governmental innovations will always be typed as criminal gangs and attempts always made to drive them out. It was knowledge of this fact, and of great dangers, that caused the founders of our land to enact the first amendment as a guarantee that neither Congress nor the people would do anything to hinder or destroy the capacity of individuals and groups to seek converts and votes for any cause, however radical or unpalatable their principles might seem under the accepted notions of the times" (*Bar-enblatt v. U.S.*, 360 U.S. 109, 150-1).

The House Un-American Activities Committee is antithetical to the principles upon which our Nation was founded. Its latest action demonstrates again the need for its abolition.

Open Season

EXTENSION OF REMARKS

OF

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. FINDLEY. Mr. Speaker, I commend to my colleagues the following editorial excerpt which appeared in the January 1963 issue of the IAA Record. It was written by William J. Kuhfuss, president, Illinois Agricultural Association:

EXCERPT FROM ARTICLE ENTITLED "OPEN SEASON"

Our Government was set up with checks and balances to insure the preservation of the rights of people. The legislative branch of Government was to set the policies and determine the course this country would follow. The executive branch was to administer those policies. The judicial branch was to check the validity of legislation. When any one branch begins to dominate the other, there is cause for concern.

When the U.S. Department of Agricul-

ture, a part of the executive branch, begins to assume the role, not only of administrative responsibilities, but of policymaking and legislation, then our checks and balances have lost effectiveness. The USDA now has staff in every county in every State in the United States to administer legislative programs.

Legislation drafted and proposed by the Secretary of Agriculture in 1961 would have reduced these legislative responsibilities of Congress to a veto power. This year the USDA has solicited information from the county ASC (agricultural stabilization and conservation service) offices asking for opinions and ideas from farmers, at taxpayers' expense, to be interpreted by employees of the USDA and presumed to be presented to Congress in support of newly proposed legislation. This effort to assume both legislative and administrative responsibilities is evident not only in agriculture, but in many other fields.

Real concern has been expressed by many people in the electric power field. Many feel that the concentration of authority and the buildup of a Government-directed public utility, providing electrical service for all of America, is definitely within the realm of possibility. This is the real issue that is being camouflaged with promises of lower cost, better service, and public benefit. This drive for centralized power and authority may be the real issue behind medicare, Federal aid to education, and all of the other Government-directed bonanzas.

Today, many discussions and proposals for legislation are heard that politicians would not have dared suggest or discuss a few years ago. It is time people became concerned for what lies ahead for America. If we get this centralized, supply management, Government-controlled operation all over America—and there isn't a way of isolating it in any one place—it can easily mean the end of the marketplace as a guide for future production. It can mean the end of private ownership and the inducements and incentives involved. It can mean the end of the rights of individuals to live and to operate as they see fit and to enjoy the benefits resulting from their good judgment, thrift, and hard work. It could mean the end of the extension service directed by dedicated scientists guided by the truth as they find it. It could mean there would be no place for a general farm organization to be active in the fields of legislation, education, commercial services, and public relations.

We have traveled far down this path of centralized authority in the past 15 or 20 years. We could some day be awakened and find that the ship of freedom has already left our shores.

Farm Bureau must not sidestep this issue. The future, not only of America, but of freedom-loving people everywhere may well depend on what we do.

The 100th Birthday of Billy Frost

EXTENSION OF REMARKS

OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. ROGERS of Texas. One hundred years ago, on January 10, 1863, there was born at Tinestry, Pa., on the banks of the Allegheny River, an American citizen who was named Billy Frost by his proud parents. At 14 years of age this

new citizen started pumping oil wells at Oil Creek, Pa., when this business was in its infancy. Some of it must have gotten into his blood, because he has stayed with it through the years and as the great oil fields were discovered and developed, Billy Frost moved from one to the other—from Pennsylvania to Ohio, to Kansas, to Oklahoma, and to Texas.

In 1885 Billy Frost married Miss Effie Jane Thompson, the daughter of a minister. To this union were born two fine sons and two fine daughters. Billy Frost continued his work in the oil game and found his way with his fine family to Texas, in 1927. This was the beginning of the famous Panhandle oil field, which is located in the 18th Congressional District of Texas.

His kindness, good nature, and willingness to help others at all times had won for him the popular name "Uncle Billy," which has stayed with him through the years. As time began to take its toll, as it does with all of us, "Uncle Billy's" walk became a little slower and his eyesight began to dim, but his great personality remains unchanged and the reasons for continued loving reference to him as "Uncle Billy" have become more pronounced with each year. His host of friends will pay honor to him at the Coronado Inn, in Pampa, Tex., on this, his 100th birthday. All America recognizes the great contribution that he has made to our country and to our way of life, in the exemplary leadership he has furnished in his chosen work.

Cathedral Club Man of the Year, Joseph P. Hoey

EXTENSION OF REMARKS OF HON. ABRAHAM J. MULTER OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. MULTER. Mr. Speaker, on January 24, 1963, the Cathedral Club of Brooklyn will honor as its man of the year the Honorable Joseph P. Hoey, U.S. attorney for the eastern district of New York. A dedicated public official, Joe Hoey is richly entitled to the respect and admiration of his fellow New Yorkers.

I commend to the attention of our colleagues the following article which appeared in the January 5, 1963, edition of the Brooklyn Eagle upon the occasion of Joe Hoey being chosen as that newspaper's man of the week:

MAN OF THE WEEK—U.S. ATTORNEY'S STORY
FAME WITHOUT FANFARE
(By Steve Solomon)

Joseph P. Hoey is an enigma.

He has risen to the position of U.S. attorney for the eastern district without fanfare.

He is a man who could be in the public eye a great deal more if he chose to.

In an age when a dynamic personality tops all requisites for climbing the ladder of success in politics, he has risen on dedication and merit.

He has wanted it that way.

From 1940 until World War II interrupted his career as assistant Brooklyn district attorney in 1942, his office was one of the most efficient in the administration of William O'Dwyer as district attorney.

In the Navy, he served 3 years as an intelligence officer aboard a squadron of PT boats (Motor Torpedo Squadron 30) assigned to Europe and took part in the invasion of Normandy.

Reinstated as assistant district attorney in 1945, a position which he held until his current appointment on April 18, 1961, Hoey handled many outstanding cases.

He conducted the Mergenthaler Linotype Corp. larceny investigation. He also investigated tieup between bookmakers and the police in the Harry Gross case.

He participated in the inquiry into the operation of New York City departments which resulted in many important operational changes.

Hoey was born in Flatbush, not far from where he now resides, on October 21, 1912, to Patrick and Margaret Hoey.

He made a better than average record in public school.

It was not until he had been graduated from Brooklyn Preparatory School in 1931 and entered Fordham University, that he began to think seriously about a career in law.

"The law suddenly began to fascinate me during my early college years," Hoey said recently in his office at the Brooklyn District Court.

He went on to St. John's School of Law where he received his degree in 1937.

"Of course, the law is in my blood now," he said, "but what always made it so interesting for me is that it's always changing, always being modified.

"You can't really know the law unless you keep abreast of the latest court decisions being handed down."

Law was not the only subject that fascinated Hoey while at college.

A pretty little girl from Forest Hills named Kathryn Daley also caught his attention.

"I still maintain that I met my wife while at college," he said smiling, "but she insists we met at a party. We haven't come to a decision yet."

The Hoeyes have been married 19 years and have four children—Anna Maria, 14; Joseph P., Jr., 12; Patrick T., 10; and Kathryn Marie, 9.

The transition from assistant district attorney to head of the eastern district attorney's office is not an easy one and Hoey is the first to admit it.

Into the jurisdiction of his department falls almost every type of criminal and civil Federal case.

"I used to work mostly on criminal cases when I was an assistant. As the U.S. attorney I have to be an expert on both criminal and civil law.

"I hate to say it, but I had to go back and learn the civil law all over again."

One of Hoey's prime tasks is reviewing every case his 32 assistant district attorneys have been assigned to.

He advises them and determines whether or not they are prepared properly.

The decision on whether he tries a case personally or assigns an assistant is his alone.

The list of organizations in which Hoey is active would fill a page in "Who's Who." He belongs to 14 organizations and is presently vice chairman of the criminal law and procedure committee of the Brooklyn Bar Association. He is a former president of the Emerald Association of Long Island and the St. Patrick's Society of Brooklyn.

On January 24, the Cathedral Club of Brooklyn will honor him as Man of the Year. It is a deserving award to a man who doesn't look for the limelight.

The limelight looks for Joseph P. Hoey.

O'Neill: Politician's Politician

EXTENSION OF REMARKS

OF

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. BURKE. Mr. Speaker, may I take this occasion to bring to the attention of the Members of the Congress an excellent article which appeared in the Boston Sunday Globe on December 16, 1962, written by C. R. Owens, one of the ablest political writers in the Nation. Mr. Owens here made a clear and concise report on the Honorable THOMAS P. O'NEILL, JR., my colleague and yours, and his efforts in behalf of the newly elected Governor of the Commonwealth of Massachusetts, Endicott Peabody.

It has been my privilege to know Congressman O'NEILL for many years. I served for 8 years with him as a member of the Massachusetts General Court; 4 of which he was speaker of the house. Gov. Endicott Peabody was very fortunate to have a man of the ability of Congressman O'NEILL at the helm of his campaign and we in Massachusetts are very proud of him.

The article reads as follows:

O'NEILL: POLITICIAN'S POLITICIAN

(By C. R. Owens)

Each art, profession or trade—and politics can be all three—develops men who are looked upon by their peers as a master of his calling.

Among those who seek or hold public office in the Commonwealth such a man is Congressman THOMAS P. O'NEILL, JR., campaign chairman of Governor-elect Peabody in the election and recount.

The word "politician," so often used to defame, disparage or deprecate, has a brighter meaning when used to describe public servants of O'NEILL's training.

"Politics is not a black art carried on in secrecy," according to "Tip" O'NEILL. "Nor is it a way of life to be ashamed of, but it must be studied and carefully cultivated by one who would practice it if the people are to receive the full benefit of a democracy."

For more than half of his 50 years, Tip O'NEILL has devoted his efforts toward fulfilling his duty, as he sees it, as an elected public official.

A native of Cambridge, the Congressman was raised in a family with firm ties in the Democratic Party. His father, the senior Thomas P. O'Neill, served in the Cambridge City Council in the early years of the century. Tip took to Democratic politics as naturally as a thoroughbred to racing.

Before O'NEILL was graduated from Boston College, he was holding party office.

Except for a single failure, he has been holding political offices since, as a State representative (he rose to be the first Democratic speaker of the Massachusetts House), as a school committeeman, and as a Member of Congress.

One of O'Neill's earliest supporters, Robert J. O'Hayre, currently a member of the State ballot law commission, recalls the one defeat for elective office, which occurred while "Tip" was a college junior.

"Tip" was an at-large candidate for the Cambridge City Council and we were driving to a finish when he committed a faux pas and learned a lesson," O'Hayre said.

The youthful candidate had planned to destroy some of his opponents by reading

from a Cambridge Chronicle editorial at a Central Square rally, but when he reached into his pocket for the newsclip, it had disappeared.

He decided to improvise, pretending a letterhead was the clipping when a youngster standing at the tailgate of the truck shouted, "That's no newspaper."

When the boy repeated the accusation, O'NEILL, in what he thought was a stage whisper, told an aide, "Get that brat the blazes out of here."

"Unfortunately," recalled O'Hayre, "Tip" was speaking over a microphone and his comment on the youngster was heard by hundreds. He lost that fight by only 276 votes, citywide."

A gregarious man, O'NEILL was happiest during his years at St. John's High School and Boston College when engaged in group efforts—basketball, baseball, debating. He was never any great shakes as an athlete—"I couldn't play marbles"—but he tried, and enjoyed the associations.

His classmates were his supporters when in the spring of his senior year he sought and won a seat on the Cambridge Democratic city committee, and, later that year, backed him in his first successful bid for the House of Representatives. The Congressman remained in the House from 1937 through 1952.

Between 1944 and 1952, O'NEILL also served on the Democratic State committee, and in 1946 and 1947 was a member of the Cambridge school committee.

O'NEILL said both these offices came his way under unusual circumstances. Referring to his election to the party organization, he remembered, "I was at Ogunquit with Mille (his wife, the former Mildred Ann Miller, of Somerville) on vacation when early one afternoon I got a call from Sonny McDonough. Sonny was looking for the chairmanship of the State committee and he told me nobody was running from my district and that the deadline for filing was 5 that afternoon.

"I approved, so Sonny and my father took out papers for me and a week later I signed them. There was no opposition."

His election to the Cambridge school board also came about through the absence of candidates. "The only reason I ran," he said, "was that there was no one from our end of town on the school committee. Jerry Sullivan, that is, Judge Sullivan of the Nantucket probate court, and I were asked to run and hold a position until the boys came back from the war.

"So we flipped a coin to see who would run. I lost the toss and had to make the run, and won."

O'NEILL was a lean, gangling young man, well over 6 feet tall, when he entered politics. He has enjoyed elective office and it obviously agreed with him. By the time he reached his thirties—he observed his 50th birthday last Sunday—the Congressman's appearance was pretty much what it is today, a stocky build, heavy facial features, and topped by a shock of coarse, straight, gray hair.

Well liked by Representatives on both sides of the aisle, O'NEILL moved ahead fast in the House and was chosen minority leader at a Democratic caucus in 1947. Looking back, O'NEILL remembers the years when his party was in the ascendancy and the Republicans in the House were splitting between the old and the new guard.

Speaker at the time was Frederick B. Willis, now House counsel. "Freddie and I have been very good friends throughout the years, but once he ordered me 'seated,' which was perhaps the only time that the leader of the opposition was ordered to refrain from participating in a debate," said O'NEILL. "The debate was over a Republican highway bond issue and Freddie objected to my complaints as to the number of corners he was cutting."

Democratic legislators felt they were carrying the party in the 1947-48 period—"we were making the snowballs for Paul Dever and Maurice Tobin to throw"—and in the latter year, O'NEILL led a rebellion against the mossbacks in the party, headed by Boston's Mayor James M. Curley.

"I was only 34 at the time, but I had been in the House 12 years. Strangely, the man who has become my best friend in Washington, Speaker JOHN W. McCORMACK, and I had never met when we decided to fight city hall and elect our own slate of delegates to the Democratic National Convention that year," O'NEILL related.

"Well, our slate carried 38 of the 39 cities, but it was James Michael and McCORMACK who went to the convention. Curley would have accepted myself and Representative Jerry Crowley as members of his team, but when we declined, he replaced us with Dr. Silas Taylor and Frank Goon.

"After it was over, Congressman McCORMACK called me down to his office and we talked over the future of the Democratic Party. He asked me if I had ever considered that Massachusetts was a Democratic State and that with a little extra effort, the House, which had been in Republican hands since the Civil War, would go Democratic.

"It seemed like a wild dream. When I got back to the statehouse, I sat down with Tom Mullen, then and now my top assistant, and we reviewed every House contest of recent years. We found 25 districts which had been carried by Tobin 4 years earlier, yet the incumbent Republican Representatives had had no opposition.

"One district, around Athol, hadn't had a Democratic candidate for 45 years. We decided this called for a fight and we raised \$14,000 for it. A second-year Congressman heard about our dream and he asked if he could help. We accepted the \$1,000 contribution offered by John F. Kennedy.

"We handpicked the candidates in the districts, ran their campaigns even to paying for their campaign literature and addressing envelopes. The effort paid off and that November the House went Democratic 122 to 118."

The shift in power in the House also brought O'NEILL in as speaker. Modestly, O'NEILL today credits Congressman McCORMACK, Mullen, and a group of representatives, including MDC Commissioner Robert F. Murphy, Representative John J. Toomey, of Cambridge, and Thomas F. Riley, now assistant clerk of the Dorchester District Court, for the upheaval.

"I can't conceive of the Democrats ever losing the house again," said O'NEILL.

During the 4 years Paul A. Dever was Governor, O'NEILL, a fellow Cantabrigian, was speaker and managed to make the Governor's lot an easier one.

In the fall of 1952, Dever sought a third term, and Congressman John F. Kennedy moved up the ladder to the U.S. Senate. O'NEILL moved into the congressional seat vacated by Kennedy.

The move wasn't an easy one. O'NEILL said his primary fight with the then Senator Michael LoPresti "was the only real fight of my life." LoPresti's senate seat represented about half of the congressional district, while O'NEILL's house seat represented only one-sixth.

O'NEILL graciously gives others credit for his successes, and his victory over LoPresti in 1952 he awards to Charles H. McGlue, former Democratic State committee chairman.

"We had 22,200 Democrats registered in Cambridge and it was Charlie who directed the drive for independents to vote in the Democratic primary. Mike must have wondered for a long time how 26,000 voted that primary day in Cambridge."

A lesson learned in his first congressional

contest, according to "Tip" O'NEILL, is that there is no relationship between campaign expenditures and the vote a candidate receives. "Mike was spending money in my part of the district and I spent some \$10,000 wooing support in east Boston. We had some of the biggest rallies and pizza parties in the district, but all I received was about 900 votes. The reverse was happening in Cambridge."

O'NEILL has been reelected to Congress with little opposition. Twice, he put aside his own campaigning to head campaign committees for nominees for Governor, Foster Furcolo and, this year, Endicott Peabody.

He has been particularly close to Peabody politically for many years. O'NEILL is confident that Peabody will make a good Governor and one in whom the Democrats will take considerable pride.

Peabody, he is willing to agree, is a new type of Democrat. "I hope his relationship with the legislature will be harmonious. He is a good Democrat and I am confident in the program he will present," added the Congressman.

"I am not helping Chub draft his State program," O'NEILL said, "I will be in Washington working along with the New Frontiersmen.

"But I have let Chub know in no uncertain terms that if he comes up with a program which runs counter to my views as a Democrat, I will let him know in no uncertain terms. He was amazed, but I wanted him to know in advance that if that day comes, I will not be turning my back on him, but he will be deserting party principles."

When he accepted the task of serving as Peabody's campaign manager, O'NEILL said, it was as one Democrat assisting another. "I told him, 'if you have to offer me something for me to be campaign manager, I'd be of no use to you, if I asked for something to be campaign manager, the same would be true.'"

O'NEILL has assisted Peabody through the recent recount. "It is interesting to see the number of persons who were with Peabody all along and fought to work for him on the recount," observed "Tip." "A couple of months ago, they wouldn't answer their telephones when we needed help."

Persons have turned to O'NEILL seeking his help with the Governor-elect. "Most of these requests," according to O'NEILL, come from State troopers who would like to be assigned to the Governor's office and from candidates for the State racing commission."

Party loyalty and party regularity are important elements in O'NEILL's makeup. The late Speaker Sam Rayburn, probably with a nudge from JOHN McCORMACK, recognized this back in 1954 when he tapped O'NEILL for membership on the Rules Committee of Congress. Tip became the second Congressman in history to go on this committee after a single term.

At the time, Rayburn told O'NEILL that the new job had been offered him because he had served as speaker of the Massachusetts House, but more particularly, because he recognized the need for party discipline. O'NEILL is No. 8 man on the Rules Committee, which determines when and how legislation will reach the House floor. Five of those with higher rank have passed the 70-year mark.

"Tip O'NEILL enjoys politics as a way of life. He regrets, however, that being a Congressman often takes him away from his family. In any conversation with the Congressman, he makes continual reference to Mrs. O'Neill and her reactions to politics. The O'Neills are the parents of five children, Rosemary, now 19; Thomas 3d, 17; Susan, 14; Christopher, 12, and Michael Tolan, 10.

O'NEILL in the next 2 years may be the chief political catalyst in Massachusetts. His friendship with McCORMACK and his position on the Rules Committee has made him a liaison man with the White House, where he is welcomed by his predecessor in Congress, President Kennedy. Now he will also have entree into the office of Governor-elect Peabody.

Independence Day of Western Samoa

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. POWELL. Mr. Speaker, on January 1, Western Samoa celebrated her first independence day, and we take this opportunity to send warm felicitations to Their Excellencies, Tupua Tamasese Mea'ole and Malletoa Tanumafili II, the heads of state of this Republic, on the occasion of the first anniversary of Western Samoan independence.

January the first is a symbol throughout the world for the birth of a new year; to the people of Western Samoa, this date has a special meaning. One year ago, on New Year's Day, Western Samoa was proclaimed sovereign and independent. It is this accomplishment that I wish to commemorate today.

Since its discovery by the Dutch in 1722, the Samoan Islands have played an important part in the history of the South Pacific. Strategically located as a naval station and a crossroads for trading ships, the islands were soon coveted by many nations. The United States sent its first expedition to the islands in 1839 and the first American consul was appointed in 1856. The climax of this particular struggle for possessions abroad occurred in 1889 when the United States, Germany, and Great Britain successfully checkmated each others forces. This led to a partitioning of the islands. The large islands of Opolu and Savaii, with several lesser islands, were awarded to Germany. These became Western Samoa.

As a result of World War I, Western Samoa was wrested from Germany by a New Zealand expeditionary force. Since then, New Zealand has held mandate over these islands, first through the League of Nations, then more recently through the United Nations.

New Zealand recognized the right of sovereignty for her trust territories and a constitution was promulgated in October 1960. Independence was proclaimed on January 1, 1962, thus ending 46 years of New Zealand administration and 70 years of foreign rule.

Samoa today has an approximate population of 113,500, mainly Polynesian, with a birth rate among the world's highest. Its complex constitutional system of government, headed by a dual chieftainship and a prime minister, govern Western Samoa with wisdom and caution. Americans, visiting the country, will be able to pay their respects to

Robert Louis Stevenson, who is buried near the capital, and who is revered and loved by the Samoans, his adopted people.

The Samoans, who are proud of the fact that they are the first independent Polynesian nation, look forward to a continuous and productive life under their own rule. The able Prime Minister Flame Mata'afa summarized the sentiments of the Samoans when he said:

Rooted and responding to the invigorating influences of the modern world, the independent state of Western Samoa will grow and flourish to become an ornament—if only a minor one—to the world community.

It is to this spirit and this nation that I salute the people of Western Samoa on their first independence anniversary.

Report of an Interview

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. AUCHINCLOSS. Mr. Speaker, I am very pleased to receive permission to insert in the CONGRESSIONAL RECORD with these brief remarks a report of an interview held by Jane Katims, an undergraduate of the Red Bank, N.J., High School which appeared in the school paper, the *Buccaneer*, a monthly newspaper published by the students of Red Bank High School, on Wednesday, November 21, 1962. Jane Katims was very objective in her interview and asked pertinent questions which showed thought and study. I was very much impressed with her knowledge of public affairs and commend the Red Bank High School highly for stimulating the interest of their pupils in such matters. The published interview appeared, as follows:

VETERAN CONGRESSMAN STRESSES VALUE OF BROAD SOCIAL STUDIES BACKGROUND

(By Jane Katims)

Congressman JAMES C. AUCHINCLOSS is one critic who thinks the American schools are far superior to the European educational systems. However, he believes that there is a lack of training in American history in our schools.

He feels that it is imperative for students of today to study American history thoroughly before fully understanding the growth, industry, philosophy, liberty, and freedom of our great country.

It isn't easy to catch the Congressman at his home, 25 Waterman Avenue, Rumson. Most of his time is spent in Washington, D.C. But talking to Mr. AUCHINCLOSS is a real treat.

A veteran of 20 years in the House of Representatives, Congressman AUCHINCLOSS was reelected early this month to serve his 11th term. He has always been interested in civic affairs and considers service to the people as his reward. He believes that you must enjoy people before you can consider yourself qualified for a career in politics.

REMEMBERS ROOSEVELT

In his interesting public life Mr. AUCHINCLOSS went to school with Franklin D. Roosevelt and campaigned with Harry S. Truman.

He is well acquainted with ex-President Eisenhower and President Kennedy. He remembers Douglas MacArthur's famous speech as a great thrill.

An unusual incident in the Congressman's life is the time when he interrupted his busy schedule to play cupid. A young man was called for special duty due to the Cuban situation a week before his wedding day. The girl he was to marry was frantic because she was unable to locate her fiancé out at sea. Congressman AUCHINCLOSS received a call from her minister asking for his help. Although much classified information was withheld, Mr. AUCHINCLOSS was able to contact the ship and bring that boy home. The couple was happily married, November 10.

Congressman AUCHINCLOSS has firm ideas about American youth and education of today. He is much in favor of the high school system of student council and he believes that its aims are not only to guide students but to guide teachers as well.

EDUCATION STATE RESPONSIBILITY

The Congressman stated that he always voted for Federal aid to school buildings but holds education a state responsibility.

When asked if President Kennedy's physical fitness program is a good one, the Congressman replied, "Why, that's like asking me if sin is bad. Of course, everyone should be physically fit."

Mr. AUCHINCLOSS would enjoy an opportunity to visit Red Bank High School and speak to the student body and faculty. He feels that most Americans do not completely understand the complicated procedure involved in preparing a bill before it becomes a law. He is anxious to explain this procedure.

Cooperation for Progress: Israel and the Afro-Asian Nations

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the Congress Biweekly of November 26, 1962.

Israel has shown and is showing in Africa and Asia that freedom works. The suspicious attitude toward democracy by some governments will undoubtedly be changed by association in economic cooperation with the dynamic young society of Israel.

The article follows:

ISRAEL AND THE AFRO-ASIAN NATIONS

(By Elias Cooper)

The past 2 years, filled as they were with international crises, also witnessed an expansion of trade and cooperation between Israel and more than 40 African and Asian countries, thus continuing a trend in international relations that began in 1955. Although Nasser is still able to force anti-Israel declarations into the communiques of Afro-Asian political conferences, the continuing practical relations between Israel and the developing nations of those two continents provide concrete evidence of Nasser's failure to attain his dearest objective—the political and economic isolation of Israel.

Considering Israel's limitations in terms of population and economic capacity, the extent to which Afro-Asian countries are mak-

ing use of Israel know-how is truly remarkable. Israel's Department of International Cooperation is conducting an imaginative technical assistance program in Asia and Africa. Students from these continents are trained at Israeli institutions, while Israeli instructors and experts are sent out to the students' home countries to train additional personnel and to initiate complex undertakings. Israeli commercial and industrial firms have pioneered in a novel form of assistance by establishing joint enterprises, in which the host governments always retain a 60-percent interest. The avowed purpose of these arrangements is to have the Israeli establish the enterprise, train local personnel in all phases of the operation, and then allow the local government to purchase the Israeli share on a predetermined equitable rate of return. The exchanges of students, experts, trade and state delegations between Israel and the new nations have been so voluminous as to necessitate reciprocal state visits during the current year by President Ben Zvi, Premier Ben-Gurion, and Foreign Minister Golda Meir.

The outstanding features of the Israeli technical assistance program have been the training of students and civil servants in Israel, and the sending of Israeli instructors and survey missions to countries requesting them. Currently over 1,000 African and Asian students are receiving training in Israel; their tuition costs are covered by scholarships provided by the Israel Government. In addition, there are several nongovernmental programs. The Histadrut (General Federation of Labor) is operating an Afro-Asian Institute for Labor Studies and Cooperation, which opened its doors in 1960. Half of the 120 annual scholarships of the institute are provided by the American Federation of Labor-Congress of Industrial Organization. The Hebrew University-Hadassah Medical School is training students from Africa and Asia in special classes conducted in English and French for the convenience of students from former English and French colonies. The Technion (Israel Institute of Technology) has inaugurated a similar program for graduated students from the same areas. Unparalleled anywhere is the opportunity provided by ORT (Organization for Rehabilitation through Training), which has made available annual space for 40 African students at its renowned technical high school in Natanya. Israel's major radio station, Kol Israel, is currently training broadcasters from Togo, Dahomey, and Niger.

The bulk of the African and Asian students study the varied branches of agriculture and agricultural marketing. The remainder are distributed in the fields of education, public administration, finance, housing, tourism, medicine, sanitation, and the academic disciplines. At the present time there are students in Israel from Ethiopia, Ghana, Nigeria, Burma, India, the Congo (both Brazzaville and Leopoldville), Togo, Liberia, Tanganyika, and the Central African Republic. Israel's pioneering youth groups, Gadna and Nahal, have appealed to some leaders of African and Asian countries. Ghana has fashioned a Builders Corps patterned on and trained by its Israel antecedent, Gadna. Seventy-four young men and women from 11 other African countries attended a 4-month course in 1961 to prepare themselves as youth leaders in their own countries. In 1962, police officers from the Congo (Leopoldville), Dahomey, Malagasy, and Niger attended an Israel course for senior law enforcement officers.

No less impressive is the roster of Israel experts sent to developing countries; during the current year they number over 900. This aspect of the assistance program stresses specific projects, which are given their start by Israel experts and are taken over by staffs trained in Israel. Israel medical ex-

perts have served in Ghana, Ethiopia, Liberia, and the Congo (Leopoldville). An Israel engineer and doctor are currently planning a 200-bed hospital in Sierra Leone. An Israel medical team is operating a clinic for eye diseases in Liberia, while training Liberians to take over. Other Liberians are studying medicine in Israel. An Israeli is serving as director of the Technical College in Ethiopia. Over 100 Israeli technicians are directing the construction of 13 roads totaling 250 miles in the Abidjan area of West Nigeria. Staff members of the Hebrew University and the Technion have been sent on missions to Liberia, Ethiopia, Ghana, and Nigeria. Administrators from the Egged bus cooperative are now establishing a similar cooperative in Nepal. Israel agricultural experts are now serving in more than 20 African and Asian countries. The same countries have also received Israel experts under the auspices of the various United Nations specialized agencies. In the initial phase of the Congo crisis the majority of doctors provided by the United Nations to Leopoldville were Israelis.

The joint enterprise of Israel companies and Afro-Asian government partners have provided another avenue for technical assistance. The undertakings are numerous and include construction companies and merchant marine flotillas. In all cases the Israel partner undertakes to train local personnel to take complete control. The joint companies have increased trade between Israel and the countries involved. The trade has expanded the market for Israel's manufactured goods, drugs, chemicals, and tires, while providing her with sources of raw materials. The investments have also increased employment opportunities for the Israel labor force. In order to spur trade Israel has extended several short-term loans, which are usually applied toward the purchase of equipment from Israel. Impressive as it is, the investments field cannot constitute a major aspect of Israel aid in the foreseeable future. Israel can, however, continue to provide needed expert aid and study facilities in fields wherein she has met with enviable success in the eyes of developing countries.

The factors that led to a flowering of Israel-Burmese relations are representative of the reasons for Israel's successful relations with developing countries. On his 1955 visit to Israel, Premier U Nu was most impressed with the Government's successful efforts to turn arid areas into cultivable land, and with practical Israel improvisations. He wrote: "The people of Israel are hard working and intelligent. * * * Without forests they import African lumber, and export furniture, as they export tires after importing rubber." U Nu was also attracted by the "privilege of choosing any mode of life that one prefers" in Israel; although there are the various cooperative forms of settlements, no one in Israel is forced into communal life as in China, Burma's neighbor. U Thant, the present Secretary General of the United Nations, accompanied U Nu in the capacity of Director General of the Burmese Prime Minister's office. He subsequently noted that he was impressed with the speed that characterized the development of Israel's industry, cooperative agriculture, and the high level of education in the country.

The 1955 visit of the Burmese leaders greatly spurred cooperation between the two countries. To date Israel experts have advised Burma on irrigation, cultivation, the use of agricultural machinery, and the manufacture of products ranging from tires to pencils. Their services were also used to plan an interurban telephone system, a public health system, rice market, and the building of housing projects. The total of Israel specialists in Burma exceeds the

number sent by any other country. Israel military personnel have also aided in training the Burmese Army and Air Force. Several groups of Burmese officers and their families underwent training in Israel and have returned to their country to build the first four in a series of Israel-type border settlements in the Shan States, where Burma is vulnerably exposed to Communist China along a 450-mile frontier.

Israel has from the very outset of the African independence movement cultivated relations with the African countries. The development of friendly Israel-African relations followed the pattern set by Ghana. An Israel delegation was sent to the Ghana independence day ceremonies in order to initiate contacts. The following year (1958), a trade agreement was signed between the two countries, and Ghana requested a number of Israel experts in the fields of agriculture, banking, marketing, and road construction. Israelis have also assisted in establishing a pilots' school and a central training camp for the Ghanaian Army. Nearly 100 Ghanaian students enroll annually in Israel study programs. A joint construction company was established in Ghana by Solel Boneh, the Israel building cooperative. Zim, Israel's navigation company, and the Ghanaian Government jointly established the Black Star Line, a merchant marine company that operated four freight ships at its inception. In 1960, as part of Premier Nkrumah's general nationalization program, Ghana bought out Zim's 40-percent investment 2 years prior to the date stipulated in the original agreement. Zim will nevertheless continue as managing agent of the concern until 1967 in order to train local personnel.

There can be no doubt that Israel has gained an imposing array of friends on the international scene as a result of her policies in Asia and Africa. There have been setbacks, but they came from only a few of the more than 40 nations involved. Israel's ties with Burma have caused other Southeast Asian nations (Thailand, Cambodia, and Laos) to pursue similar relations. Burma has remained Israel's staunchest friend in Asia (the ouster of U Nu by the Burmese Army has apparently not resulted in any change in the country's Israeli policy). Burma tried, though in vain, to gain Israel's invitation to the Bandung Conference in 1954, and at last year's Belgrade meeting of neutral leaders, U Nu prevented Nasser from blasting Israel in the final resolutions.

Some setbacks in Israel's relations with Africa and Asia are inevitable since neither Israel nor the Afro-Asian countries are immune from the cold war. Israel's Western connections are undisputable and they are underscored by Egyptian and Soviet propaganda whenever possible. The Soviet Union has officially made known its displeasure over Israel's technical assistance program. On December 12, 1960, *Izvestia*, the official organ of the Soviet Government, characterized Israel as "fulfilling the role of a Trojan horse for NATO," and accused her of attempting to undermine the new African governments and rendering their armies ineffective by selling them outmoded weapons. Guinea is the only African country that has accepted Moscow's line, but Guinea's Sékou Touré has long ago decided to turn to the Eastern bloc for aid. More forboding for Israel is the neutralist path followed by Ghana and Mali because, as neutrals, these countries are at times forced into a tactical alliance with Nasser. Yet both Ghana and Mali continue their normal relations with Israel.

Israel does have friends in Africa who support her as strongly as does Burma. The most influential of these are Tanganyika and Nigeria. The vast majority of African nations reject the Soviet and Arab conten-

tions and do not view Israel as an imperialist appendage. In the long run Israel's policy in Africa may offset Nasser's ambitions on that continent. In his "Philosophy of the Revolution," Nasser clearly sees Africa as Egypt's burden," just as 19th century imperialists saw it as the "white man's burden." This outlook is not likely to escape the attention of African leaders.

A Deepwater Port for Indiana

EXTENSION OF REMARKS

OF

HON. J. EDWARD ROUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. ROUSH. Mr. Speaker, yesterday I introduced a bill to authorize the construction of an Indiana port on Lake Michigan. Ever since I began my political life in Indiana, I have been talking to people all over our great State about the potential for development which such a port would present. The people of Indiana know the benefits which can be gained by the development of this deepwater port, and they share my enthusiasm for an Indiana port.

The road by which progress travels is always a hard one. There are always many obstacles, there are always delays, there are always disappointments and the path followed by this progressive proposal has provided no exception. Discussion of the Indiana public port predates concrete development of the St. Lawrence Seaway. A full 80 years before the congressional Deepwater Seaways Commission report of 1896 suggested the development of the St. Lawrence Seaway, the statesmen of early Indiana recognized and protected Indiana's right to a harbor. By having the Indiana State boundary moved 10 miles north of the line established by the Northwest Ordinance, these early leaders laid the groundwork for our port development today.

By the establishment of the 36-mile coastline on Lake Michigan the political leaders of Indiana established our claim to a water access at the time of our introduction to statehood. Now, after years of bipartisan effort on the part of leaders of the State, our plans are formulated, our authority is developing, and we look forward to the early construction of our deepwater port.

The economic feasibility of the operation of a port at Burns Waterway is well substantiated. Scholarly economic presentations developed by Indiana University, various State agencies and private sources indicate that the Indiana deepwater port can become an important transportation center and an economic success. Preliminary work by the Indiana Port Commission indicates, without doubt, that previous estimates as to the economic potential of the port have been very conservative.

The navigational plan developed for this harbor is not only adequate but quite attractive. The approach and entry pattern, I am told, is one of simplicity and ease of management. For

example, in tug service alone, a grain-carrying vessel would save \$1.055 per trip, for tugs will not be needed at the proposed Indiana Waterway Harbor.

I am proposing the development of an additional transportation facility for my State and for the Nation. History has shown that the access to water routes has, since the advent of recorded history, been a primary determinant in the economic progress of nations. Those nations and states and cities with access to this most economical form of transportation have prospered and have become the trade, population, and cultural centers of the world. Certainly, areas without such water commerce facility have also developed successfully but they have prospered in spite of transportation hardships.

Indiana is a State which has developed richly in both industrial and agricultural productivity. The richness of our soil and the skill of our farmers has combined to make Indiana an important part of America's food-producing Midwest. The industrial ingenuity and the quality of our workmen have contributed to our industrial progress.

Located as we are, at the crossroads of America, Indiana's industrial and agricultural capacity is important to the entire Nation. The food we produce is easily available to feed the people of the country. The goods we manufacture are easily available to fill the needs and wants of all Americans because we are located in the very population center of the continental United States. But to expand our industrial development, to provide further markets for our agricultural abundance and our rich natural resources, Indiana needs access to inexpensive water transportation which can be provided by the Burns Waterway Harbor.

The development of the harbor is consistent with the national transportation policy. Indeed, the national transportation policy dictates its development because the needs of commerce cry out for the development of this additional transportation facility in our State.

Indiana is the only State bordering on the Great Lakes which has no public deepwater port; no door to the trade routes of the world. Since the St. Lawrence Seaway has provided Great Lakes ports with access to the world's great commercial centers, the importance of our harbor has taken on added significance. We now have the opportunity of making the industrial goods, the natural resources and the agricultural products, in which our State so abundantly abounds, available to the markets of the world. The key, of course, is the Indiana public deepwater port.

Let us look for a minute into the world of the future. We are discussing today the potential of the needs of commerce in Indiana and the benefits which an additional transportation facility can contribute to this commercial development.

I believe the greatest hindrance to our clear analysis of this problem lies in the inadequacy of our standards of judgment. I do not question the analyses made by so many learned and competent men, but I question the accuracy of any

one of us to completely comprehend the potential for future growth and development of our area.

Who of us will predict, with any confidence in its accuracy, how much the population of our State and its environs will grow in the life of this project? Who will estimate the gross commercial product of our area for the next 50 years, and rest comfortably on that estimate? Who will suggest the maximum agricultural productivity of the great Midwest after the production explosion of the last decade and a half? We are incompetent judges of tomorrow's world because we are tied to the standards of today in making our analyses. We cannot fully comprehend the wonders of tomorrow's life because the frailty of our nature forces us to depend, for our premises, upon sensations which we have experienced.

Our Nation is built on growth and our society, our economy, and our future is geared to grow. Change is the only constant value in our society and the change pattern is one of growth.

Economic need for the Burns Waterway Harbor is clearly established in the world of today. Certainly the unlimited potential for the commercial development of the area adds further impetus to the favorable report on these navigation improvements.

There is clear and evident need for the development of the public harbor at Burns Waterway. The State of Indiana is determined to carry through its development of the facilities which are its responsibility. I trust that the Federal Government will move forward in good faith to initiate action on the navigational improvements which are its responsibility. There are 53 federally improved harbors in the 8 States on the Great Lakes waterways in the United States today. Construction of a second Indiana project to allow the State to develop its only deepwater public harbor seems fair and just.

Mr. Speaker, my State is a great State but its greatness cannot always be measured by its proud history. Its greatness must also be measured by its willingness to meet and accept the challenges offered by the hope of an even greater future. I personally look upon this dream and this endeavor as a step by the people of Indiana to justify our heritage of greatness. It is a real and challenging expression of a progressive spirit.

Mr. Speaker, I trust that, in the very near future, this proposal might receive the approval of this House. Indiana will be very grateful.

Independence Day of the Republic of Tanganyika

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. POWELL. Mr. Speaker, on December 9, 1962, Tanganyika celebrated

her first independence day, and we take this opportunity to send warm felicitations to His Excellency Mwalimu, Julius K. Nyerere, President of the Republic of Tanganyika, on this memorable occasion.

TANGANYIKA: FROM COLONY TO REPUBLIC

On December 9, 1961, Tanganyika, a United Nations trust territory under the administration of the United Kingdom, became a sovereign member of the British Commonwealth and the 29th African state to achieve independence. The hoisting of the new green, black, and gold Tanganyikan flag marked the emergence of the first multiracial nation in Africa under African government. As such, it aroused considerable interest in a continent where racial problems have taken their place among the difficulties facing governments. The general optimism that the nation's 9 million Africans, 20,000 Europeans, 80,000 Asians, and 20,000 Arabs could live together in peace and order and in dedication to common goals was engendered to a large extent by the leadership qualities of Tanganyika's first Prime Minister, and now President, Julius Nyerere. Prior to independence British officials had called Nyerere "the key to everything in Tanganyika." The American press stated that "the personality, skill, and absolute dedication of Mr. Nyerere to nonviolence and antidiscrimination against Africans and non-Africans alike" was a key factor which would make a multiracial nation possible. In the not always smooth year since independence we have seen Mr. Nyerere's influence at work both in office and behind the scenes to mold Tanganyika into a democratic republic and a model of non-racialism for the rest of the African Continent to follow.

What is this country over which Mr. Nyerere has become President? Located just to the south of the equator on the Nile-Congo-Zambezi divide, Tanganyika stretches for more than 450 miles along the Indian Ocean. It borders on Kenya in the north and on Mozambique in the south. It is comparable in size to Nigeria and is larger than Texas and Oklahoma combined. Substantial portions of 2 of Africa's "great lakes"—Lake Tanganyika and Lake Victoria—lie within the country's boundaries. It is a land of plains and plateaus, with a humid coastal belt. It is the land where Stanley met Livingstone and where, on the Kenya border, the summit of Mount Kilimanjaro, permanently covered with snow, rises over 19,000 feet from sea level to make it the highest mountain peak in Africa.

When Tanganyika became independent under the leadership of Julius Nyerere and his party, the Tanganyika African National Union—TANU—the government pledged, in Nyerere's words, to lead the people in an all-out fight against poverty, ignorance, and disease. "Uhuru na Kazi," TANU's slogan in the campaign for independence, has increasingly become used as a greeting throughout the country. "Uhuru na Kazi," meaning freedom and work, expresses Tanganyika's faith in the future and determination to fulfill the expectations of her people.

The world was momentarily stunned when Mr. Nyerere resigned from his post as prime minister only 6 weeks after independence to devote himself more fully to the chairmanship of the Tanganyika African National Union. Then, in late May the government announced plans to turn the country into a republic, with a president elected by universal suffrage as the head of state. It became clear that Mr. Nyerere's resignation from office had not been an abdication of power but rather the prologue to his reemergence as president of the republic of Tanganyika. On December 9, 1962, 1 year after its accession to independence, Tanganyika became a republic with Julius Nyerere its first President.

In commemorating the anniversary of Tanganyika's independence we commend President Nyerere and the people of Tanganyika for their untiring efforts in transforming Tanganyika from a colony to a republic. We wish them every success for the future.

Our Heritage of Boldness

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 10, 1963

Mr. YOUNGER. Mr. Speaker, the following article "Our Heritage of Boldness" by Catherine Drinker Bowen, was published in the "Sports Illustrated" December 24, 1962, issue, and I believe sets forth in very dramatic fashion the accomplishments under our system which does encourage the boldness of our citizens in their quest for the common good:

[From the Sports Illustrated magazine, Dec. 24, 1962]

OUR HERITAGE OF BOLDNESS
(By Catherine Drinker Bowen)

"We are the heirs of all time," wrote Herman Melville a century ago, "and with all nations we divide our inheritance." In this essay the distinguished historian and biographer, Catherine Drinker Bowen, has analyzed the intangible elements in the heritage of every American—handed on from the circumstances of the discovery of the New World and the perils and opportunities of mastering a continent. It is a heritage of boldness, which has powered the magnificent American accomplishments. Yet it includes something light-hearted and carefree as well, and in the paragraphs that follow there are pictured a few of the innumerable expressions of our native gift: the disciplined endurance of champions, the daring exploits of sky divers and white-watered canoeists, the imaginative audacity of designers and architects—a part of that boldness in the pursuit of happiness that gives enduring meaning to the transient excitements of sport.)

They were bold from the first. Bold in dreaming, bold in persistence. It is no mere boast, because they made their dreams come true. A man stood on the shores of Portugal and looked westward, nearly five centuries ago. From the way the winds blew, from the seasonal steadiness of them and the direction, the man conjectured there might be land behind these winds. A mariner might sail, and

by dead reckoning—by the log, by the compass—he might find this land.

A wild thought, a bold dream, yet it came true; the land was found. Spain, all Europe, England heard of it. "The breath of hope," said Francis Bacon, "which blows on us from that new continent * * *" adding that Columbus had made hope reasonable. In these beginnings is something symbolic, something the American mind leaps to meet. The ships embarked, captained by freemen, adventurers. At the end of voyage, at the end of hazard, struggle, endurance and high gamble, our country was found. On a perilous horizon America took shape and was realized.

The years passed, and the generations. Not Columbus now but America herself made hope reasonable. Put it in terms of government—1787: "We, the people of the United States, in order to form a more perfect Union * * * do ordain and establish this Constitution for the United States of America." Europe laughed. "We, the people." What kind of a phrase was that? Nowhere had so big a federation been attempted, nowhere so bold a vision entertained. In high good spirits and in deadly earnest, John Adams, of Massachusetts, wrote to the Virginians: "When, before the present epocha, had 3 millions of people full power and a fair opportunity to form and establish the wisest and happiest government that human wisdom can contrive?"

Europe watched and waited. A government had been erected on the proposition that all men are by nature equally free and independent. Preposterous statement, subverting the established order. Nor did the Americans pause to argue their statement or bolster it decently with citation of ancient authority, after the fashion of the times. They simply declared certain "truths" to be "self-evident." "Novus Ordo Seclorum," they wrote on the Great Seal of the United States: "A New Order for the Ages."

Was ever a country, young or old, so brash? How serious, asked Europe, were these Americans? More importantly, how powerful were they and how long could they sustain this impudent program, which by its mere existence threatened ruling classes everywhere? Europe laid traps, offered bribes, threats, inducements, hoping to divide these United States and bring them low. A federation so large, embracing such diversified regions and interests, would surely fail, disintegrate, slip and slide of its own weight in one quarter or another. In the Old World only an occasional statesman saw into the future, as Edmund Burke in the House of Commons. "America," he said, "which at this day serves for little more than to amuse you with stories of savages and uncouth manners, yet shall, before you taste of death, show itself equal to the whole of that [British] commerce which now attracts the envy of the world."

It is a story often told, yet to Americans it does not grow stale. Threats from without only helped to solidify the Union. It was from within the real danger came. Ours was a country founded in a religious era by men of fierce fighting piety and dogma. Religion could have divided us; we had seen the religious wars of Europe and we were forewarned. From the first, Americans made a separation of church and state that was to remain profoundly significant, giving citizens a scope and a hope which nowhere else was entertained. "There is no argument," announced the Presbytery of Hanover, Va. (1776), "in favour of establishing the Christian religion, but what may be pleaded with equal propriety, for establishing the tenets of Mahomed by those who believe the Alcoran."

A bland statement, satisfied with merely setting forth. Thomas Jefferson, writing the Virginia "Statute of Religious Liberty," said

it more urgently—but this was a man who could not put pen to paper without leaving a trace of fire down the page: "Whereas Almight God hath created the mind free * * * our civil rights have no dependence on our religious opinions, any more than our opinions in physics and geometry."

What did these statements, these documents and declarations do for Americans individually, and how were men, singly, motivated thereby? Nowhere had these documents mentioned "the individual" or addressed themselves to him. Yet by this government and this system the American individual was freed exactly as if fetters had been struck from him. In Europe since time immemorial men had been divided into classes, "some to toil and earn, others to seize and enjoy." The U.S. Constitution provided for neither class nor privilege. All was mobile, a man could move up or he could slip down. It was a wholly unprecedented departure, and to Americans, both immigrant and native born, it gave extraordinary scope. Neither the Declaration of Independence nor the Constitution claimed to make timid men courageous, lazy men active or stupid men bright. But these documents allowed bold men to be bold; they unlocked doors, let Americans walk through, each one to his destiny.

Take it in terms of those men who opened up our western territory. In 1804 President Jefferson dispatched the Captains Lewis and Clark westward to map out a land route to the Pacific. For some 16 months the two traveled the wilderness, rode turbulent river waters, broke trail—careful always to draw their maps, record their meticulous pictured reports of birds, fishes, wild animals. On a rainy November morning of 1805 Clark looked westward from his mountain camp above the Columbia River and wrote, in his own phonetic spelling, "Oclan in view! O! the Joy."

Trappers, fur traders, the long hunters and the mountain men. The Mormons carried fiddles across the plains, and there was dancing within the circle of wagons below the dry Western mountains. Bold men and women; scared, hungry, sick, yet surmounting. Daniel Boone with his yellow eyebrows and sharp blue eyes ran the forest trails in Kentucky, fast as an Indian. A quiet man, serene and easy, who ended up with an appalling series of debts paid, 50 cents left over, and a reputation for rifle shooting that would inspire American boys for a century.

These were Americans, the American type. And they developed not alone because the frontier stretched before them, limitless and inviting. Other countries possessed virgin lands, timber, rivers, mines, rich plains. Yet could Daniel Boone be imagined anywhere but in America? "All power is vested in, and consequently derived from, the people." The impact of such ideas, entered upon unthinkingly, set down on paper, signed and sealed, can send a man on a very far journey.

But political ideals, like law, are of no use unless implemented. It was union which gave us power; it was the Federal idea which gave us scope. Nevertheless, even in America the doubters still spoke out. National federation on such a scale was impossible, they said; it was impracticable altogether. The country had grown too big for union. In 1828, an election year, Harvard College had a debate: "How can one man be President of the United States when it is eventually settled from Atlantic to Pacific?" The noes were victorious. The Nation would have to be cut up into republics, each with its separate president. Andrew Jackson could be president of Tennessee, John Quincy Adams of New England.

Thirteen States became twenty, became thirty-four. Through the terrible years, 1861-65, the Union held. When Richmond fell and the Civil War was over, citizens celebrated. In Boston, New York, Philadelphia, men stood on soapboxes, stood in

pulpits to orate. But it was not the word victory that stirred them. "The United States," they said, life a refrain. At the word united, the crowds went crazy. Tears poured down men's faces. "Yes, sir!" they shouted. "Yes, sir, you bet! The United States of America!"

"I have often inquired of myself," said Lincoln, "what great principle or idea it was that kept this [federation] so long together. It was that which gave promise that in due time the weights would be lifted from the shoulders of all men, and that all would have an equal chance." To Americans an equal chance means a chance to excel, get ahead, win the race, beat the other fellow to the prize. Consider the year 1865, and a transcontinental railway to be laid. The scheme had been authorized by Congress. Two companies contracted for the work: Central Pacific, Union Pacific, the one to start laying track at Omaha, the other in California, and the tracks to meet eventually at Promontory Point, Utah. (A federation needs, above all, communication, interchange of commerce.) The railway has been called a work of giants; it was sparked and spurred by giants; Leland Stanford, Collis P. Huntington, Mark Hopkins, Charles Crocker, the engineer.

In whatever spirit the project had been conceived, before 2 years were out it had become a race and a competition, unequalled for magnitude in sporting circles or business circles before or since. It was a game, an epic, an American legend:

"At the head of great Echo,
The railway's begun.
The Mormons are cutting
And grading like fun."

Thousands of Chinese laborers from the West, Irish laborers from the East, competed under their bosses as to which gang could lay the most track, matched skill and endurance, or even fought it out on occasion with charges of dynamite and killed each other in the doing. Snow in the Sierras, higher than a man's head. Night storms in the hot Nebraska plains, the water foul to drink. By May 1869 the two companies were within a dozen miles of meeting. The whole country watched, getting the news by telegraph where it could. On May 10 the tracks came together, the last spike was hammered. In the cities cannon boomed, firebells rang, citizens paraded. Nobody remembered who had won, they only knew the goal was reached.

There was a joyousness about it, a shouting, lusty braggadocio. Competition. The great reckless, expensive American game had begun. Followed now the captains of industry: steel kings, oil kings, railroad manipulators. In their day they were called promoters, and the word did not bear a pretty connotation. A rich land lay ready to their hand and they took it over: Astors, Vanderbilts, Rockefellers, men who founded dynasties that are powerful today. Choose the names as you will: Gould, Jay Cooke, Carnegie, Schwab, E. H. Harriman, J. J. Hill, J. P. Morgan. Bold men who, for the most part, came from plain beginnings, men whose imagination was limitless, who worked the country for what it was worth, using and discarding human material as they chose, and who built America into the greatest industrial productive system the world has ever seen. Pause for a moment on only one of them: Cornelius Vanderbilt, of New York Central and Hudson Railroads, who made himself an empire. Observe him at 73, still powerful, erect, pink checked, with an opulent spread of whiskers, and boasting a young southern bride and a stable of fine trotting horses. "Law?" said Commodore Vanderbilt. "What do I care about law? Hain't I got the power?"

These men seized opportunity and used it; such a chance would never recur. Over against them rose the labor leaders, Americans made bold in their turn by desperation.

Uriah S. Stephens and Terence V. Powderly of the Knights of Labor, Samuel Gompers and, much later, the towering, scowling, well-nigh symbolic figure of John L. Lewis. Pushing along with them on the road came the bold men and women of moral protestation, fighting corruption in business and politics, fighting the evils of a too rapidly expanding industrialization. Ida Minerva Tarbell attacked the princes of Standard Oil, drove her lance against giants and lost the fight, but made her voice heard. Governor Altgeld, of Illinois, dared to pardon the anarchists after the Chicago Haymarket riots. Henry George, the visionary, promoted his single tax, ran for mayor of New York, and polled more votes than Theodore Roosevelt. Jane Addams, Jacob Riis fought the city slums. The suffragettes and the temperance ladies marched with their banners: Susan B. Anthony, Lucy Stone, Anna Howard Shaw, Frances Willard, Carrie C. Catt, and Carrie Nation.

Saints or crackpots, America had room for them all. In so vast a country, so polyglot a population there is always a powder keg somewhere, in our own time the grave problem of racism. James Meredith in 1962 walks into the University of Mississippi through a hostile mob. (Can anybody say young Meredith lacks the essential quality of an American, and the essential boldness?) "If Governor Barnett keeps this up," says Meredith, "I may not vote for him." A beautiful understatement, wry, hard as Vermont granite.

Wrote Walt Whitman:

"I swear I begin to see the meaning of these things.
It is not the earth, it is not America, who is so great,
It is I who am great, or to be great—it is you up there; or any one;
It is to walk rapidly through civilizations, governments, theories,
Through poems, pageants, shows, to form great individuals."

The quiet men, the thinkers, writers, philosophers who knew how to express the American spirit—these also proved bold in their time. Emerson, Thoreau, Mark Twain; William James, John Dewey, Hemingway, Faulkner, Robert Frost; each name conveys an American era. Consider also the builders, the innovators who altered the face of our cities: Louis Henry Sullivan, father of the skyscraper. We see him as a youth step from an eastern train to the open shed of the Chicago station after the great fire of 1871. He looks toward the city, ruined and in ashes. He raises a hand, stamps his foot among the crowd and cries out loud, "This is the place for me." We remember, too, the Roebblings, father and son, engineers for the Brooklyn Bridge. Washington Augustus Roebbling, the son, at 35 was carried out unconscious from the caissons beneath the East River, suffering from the bends. He did not recover and suffered constant pain. Yet for 10 years he directed work from his room overlooking the river, struggling not only against illness but against the corruption of contractors and city politicians who sought to defeat him and the bridge. Roebbling saw his work completed, saw the cables swing from tower to tower and fireworks zoom across the sky on the night the bridge was opened.

Since the first American beginnings, bold men have been allowed to build, to invent, to roam the country at will. No passport, no redtape halts them from State to State. Through two world wars the system has held; the Union has held, and the vision. Under it our country has grown so great that we find ourselves embarrassed, apologetic. We stoop our head like a man too tall for a doorway; we talk ourselves down and experience twinges of guilt at our own size and power. We are materialistic, we say further,

and look embarrassed. We want to be comfortable, live well—and not only the rich want it and claim it, but everybody. And is that then evil, is that a betrayal of trust, the final American irony? Impossible to believe it. True, we have betrayed the fathers more than once. In fear, in greed or mere human cussedness we betray them every day. But still we know the dream is there, the vision and the opportunity. We would fight for it, die for it.

And what a springboard to rise from, this notion of government by consent of the governed. It is like a trampoline. Jump, and you are in the air. A distinguished American physicist, director of a radiation laboratory in California, lately expressed it in his own way, succinctly, as becomes a scientist. "There are very few things in this country that really can't be figured out," said Dr. John Stuart Foster, Jr., "You can excel. You just can."

America's role is global, now. The United States has won to a sophistication the world finds surprising; we are a little surprised by it ourselves. Not Paris, not London or Rome or Berlin or Madrid is today the center of the world's art and music—but New York. When astronauts compete they compete not with Californians or Nevadans but with the world. The great steel companies look over their shoulders not to see if Pittsburgh or Bethlehem is overtaking them but if Japan or Germany is catching up. Thirteen States have become fifty. At each new domestic crisis we ask ourselves in momentary panic if among these diverse sovereign interests our Union can hold, and if our constitutional democracy is equal to such a strain. Yet we know that it is equal and will hold.

America's role is global. Yet we have not lost our good provinciality, the qualities which make our strength and which define the genius of our independence. The bold men still go their way. Europe knows it. Even while expressing contempt (or is it envy?) of our material welfare, from time to time Europe perforce acknowledges the American quality. In 1958-60 the United States sent an exhibition of paintings to Europe. "The New American Painting," the show was called; it went to eight countries. Comments ranged from Berlin to Barcelona to London. And the critics might have been writing not of painting but of skyscrapers or of Charles Lindbergh or Henry Ford I, or the launching of space rockets. "Americans are world travelers and conquerors. They possess an enormous daring." "The quality of adventure is here, a pioneering sense of independence and vitality." "The exhibition offers that climate of unconstraint which never fails to strike anyone traveling to the United States for the first time." "These," said a final critic, "are other myths, other gods, other ideas, different from those prevailing in Europe."

Long ago, Americans found these gods, these myths and made them their own. Surely it is these myths and these gods which still propel us, still inspire and send us on our journeys? Commander Schirra in his space capsule; Scott Carpenter, the onetime hot rodder, problem boy from Colorado who was given his American chance and grew to heroism—these are bold men indeed. Yet without the "climate of unconstraint" that Europe speaks of, they might never have found their opportunity. Two hundred years ago this climate was deliberately created and confirmed by men brave enough to launch a revolutionary government, men wise enough to create a constitution expedient, workable, elastic—a government under which the bold American still finds scope.

A Bill To Eliminate Labor Union Monopolies

EXTENSION OF REMARKS OF

HON. DAVE MARTIN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. MARTIN of Nebraska. Mr. Speaker, I have today introduced legislation designed to eliminate labor union monopolies. This legislation embodies amendments to the Sherman, Clayton, Norris-LaGuardia, and National Labor-Management Relations Acts. This is the identical bill which I introduced in the 87th Congress.

Under existing court interpretations, antitrust statutes apply only to industry—prohibiting monopolies; prohibiting price fixing; and prohibiting collusion, but only on the part of management.

We do have monopolies in the field of labor. For instance, the United Automobile Workers Union represents all organized labor in the manufacture of cars, trucks, and farm implements, and so forth, a monopoly in this industry. One union bargains with all of the firms in this field—a monopoly. The same thing applies to steel—the United Steel Workers; coal—the United Mine Workers, and so forth.

Jimmy Hoffa has stated that he intends to have all teamster contracts end on a common date beginning in 1964. Do you realize the power which would be vested in the hands of this one man? He could tie up the economy of this country within a matter of hours. Metropolitan areas would be without perishable foodstuffs, in addition to necessities too numerous to mention. He could bring every city in the country to its knees at his command.

We now have a costly maritime strike in progress which covers the entire Atlantic and gulf coasts. This strike is preventing the shipment of goods to foreign countries, lowering the prestige of the United States in the eyes of other governments; causing American industry to lose business because it cannot make deliveries—leading perhaps to permanent loss of our customers to other countries. With an already serious imbalance of trade, this further complicates the entire situation.

My proposal, for instance, would put an end to this longshoremen's strike which is having such a catastrophic impact on the Nation's economy. Under my bill, bargaining between the parties would have to be conducted by a single employer and the representative of the employer's employees, or as provided in some cases, group bargaining where not more than 25 percent of an industry is involved in the labor negotiation. Also, the featherbedding demands by unions as indicated in the dockworker's strike could never become a labor issue since such restrictive practices are prohibited by my bill.

I wish to emphasize that my bill still allows strikes. It restores union power to the local labor unions and takes it out of the hands of the international unions. I repeat—this bill does not interfere with any legitimate labor objectives but only eliminates those activities not in the public interest. Industry-wide bargaining would be eliminated. It would be illegal for two unions to confer with one another in regard to the settlement of a wage dispute; and, likewise, it would be illegal for the management of two companies to confer with one another in regard to a settlement. You have to treat both sides fairly.

The evil of present industrywide bargaining is that identical labor costs throughout the industry further lessen competition and increase the chances for similar pricing. Bargaining increases costs of production which further place the American manufacturer at a disadvantage in competition with foreign firms.

Recent Department of Labor statistics on strikes and man-days idled in 1962 vividly demonstrate the need for legislation which would eliminate national labor disputes. Figures released for 1962 show that there were about 3,550 strikes, involving some 1,250,000 workers. About 19 million man-days were lost, compared with 16.3 million in 1961.

The Nation can ill afford a continuance of these labor disputes. The passage of my moderate approach to curbing union monopoly power and the abuses resulting from this power would, in most cases, eliminate the ever-growing chaos in the labor relations field. Yet, the remedy would not interfere with any legitimate union activity nor destroy unions or their welfare and pension programs. My bill will put an end to only those abuses we have been facing daily in our Nation; it will maintain collective bargaining without granting further authority to the executive branch of the Government to dictate the terms of a labor contract through such weapons as compulsory arbitration and seizure, which, in my opinion, lead this Nation down a dangerous path of socialism.

Is there a demand for this type of legislation over the country? Yes. The Institute of Public Opinion of Princeton, N.J., in a recent survey found that 62 percent of the people throughout the Nation favored this type of legislation. In a recent questionnaire circulated in my district, 84 percent replied in favor of curbing union monopolies. The average American citizen, the man and woman on the street, wants this legislation passed—the voice of America without a lobby. Who would like to see this legislation defeated? The heads of the international labor unions whose monopolistic powers would be checked by the passage of this bill.

I can think of no better recommendation than that which appeared in the International Teamsters magazine for September 1962, in which it was stated that my bill was the worst of the lot on this subject; to me, that means it is the best.

Appendix

Society of Magazine Writers Honors Editor of Harper's Magazine With Annual Richard L. Neuberger Award— Plaque Presented to John Fischer

EXTENSION OF REMARKS OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 14, 1963

Mr. RANDOLPH. Mr. President, each year the Society of Magazine Writers selects from the world of journalism the publisher or editor who, in the society's judgment, has done most to raise the standards of magazines as a medium of democratic communication. This worthy individual is chosen from among distinguished nominees by a panel of society presidents, past and present, and the choice is made known at a pre-Christmas gathering.

Known as the Richard L. Neuberger Award, this honor is named in memory of our late colleague from Oregon, and in a short span has become a nationally respected recognition of excellence and dedication in the field of magazine publishing.

We here in the Senate who knew and loved Dick Neuberger are indeed gratified that this meaningful presentation carries his name. We recall vividly the steadfastness and integrity which were the hallmarks of Senator Neuberger's energetic efforts in behalf of conservation and improved health facilities. And, we recall that his cause was ever ably served by the keen perceptions and facile expression of the professional writer, a calling which was his first love. It is noteworthy that Senator MAURINE NEUBERGER now serves in the Senate. She shared with her late husband a unity of purpose.

As a member of the Society of Magazine Writers it was my privilege to be present on December 21, 1962, at their annual Christmas gathering, and to present to John Fischer of Harper's magazine the Richard L. Neuberger Award.

I ask unanimous consent that excerpts from my remarks in presenting the Society of Magazine Writers Richard L. Neuberger Award to John Fischer of Harper's magazine be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR JENNINGS RANDOLPH, DEMOCRAT, OF WEST VIRGINIA, PRESENTING THE SOCIETY OF MAGAZINE WRITERS' RICHARD L. NEUBERGER AWARD TO JOHN FISCHER OF HARPER'S MAGAZINE, HOTEL ASTOR, NEW YORK, N.Y., DECEMBER 21, 1962

The invitation of our president Gerald Walker, to share in the second annual presentation of the Richard L. Neuberger Award

of the Society of Magazine Writers has provided me a most pleasant assignment. Participation is especially meaningful, not only because of my cherished membership in this society and 40 years of dedication to journalism, but also because of my personal admiration and understanding friendship for Dick Neuberger.

You have acted wisely in naming this significant recognition of excellence in the magazine editing and publishing field for an American who contributed so much to broadening the base of thought and conscience in this country and the world. A career as an author brought real satisfaction and merited achievement to Senator Neuberger. As his seat mate in the Senate we often talked of his years as a writer, and of the incisive and purposeful journalists with whom he labored.

Throughout his service in public life Dick fought for the integrity of the individual, for preservation of our vast natural resources, and for improved health facilities for our citizens—and ever was his cause ably served by the keen mind and facile expression of the professional writer.

It is extremely appropriate therefore, that this coveted honor of the Society of Magazine Writers be conferred in his memory, and as a memorial to the courageous contributions he made to the better way of life.

We recognize this evening the magazine editor or publisher who, during this year, has done most to strengthen the standards of magazines as a medium of democratic communication.

The selection of the award recipient has been committed to a panel of SMW presidents, past and present, and the decision has been difficult. The choice is a man known to all of you and one whose beneficial influence has long been identified in the world of magazine production.

As editor of Harper's he has been instrumental in bringing forth in this publication a rare combination of readability and candor which has insured it a position of eminence among our sprightly and yet serious magazines. When John Fischer has needled with words the net result has been affirmative. If he has sometimes seemed to accent the negative it was not intended to be in reverse. Criticism has never been a capricious or carping instrument in his hand or heart.

He is an exponent of noncliche thinking. He has been conscientious in fashioning a forthright forum in which major problems of our Nation and the world can be discussed by men of experience and knowledge.

Among the merits of this monthly magazine is its penchant for attacking current and familiar controversies from wholly unexpected angles. Another objective has been to intelligently define what is fundamentally at issue in various current questions. And, governed by these admirable and remarkably well achieved goals, Harper's and its editor have amassed a truly enviable record of articles which have contributed substantially to the awareness and understanding of the reading public, and which have stimulated wholesome original thinking.

America has faced problems of a material nature often in the past, and being blessed with the natural resources, physical wealth, initiative, and strong economy with which to surmount them, we have survived. However, it is in the area of creative thinking that our most far reaching challenges now exist.

And so, for his cogent and courageous contributions to Harper's magazine, and to its

stature as a leader in American thought we honor the editor and that which he has wrought.

Acting as your intermediary I present the 1962 Richard L. Neuberger Award of the Society of Magazine Writers, to the distinguished editor of Harper's magazine, Mr. John Fischer.

Vice President Lyndon B. Johnson Tours His Native State of Texas

EXTENSION OF REMARKS OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the speeches delivered over a 3-day period by the Honorable LYNDON B. JOHNSON, Vice President of the United States, in his native State of Texas.

I was privileged to be in attendance at several of the meetings, and I was happy to witness the acclaim given his appearances and the reaction to his remarks.

The speeches referred to are as follows:

REMARKS BY VICE PRESIDENT LYNDON B. JOHNSON, AUSTIN ROTARY CLUB LUNCHEON, AUSTIN, TEX., TUESDAY, DECEMBER 11, 1962

If you look at a globe of the world, you will see that the 30th parallel passes Austin and San Antonio. I suggest that some time you put your finger on that parallel and spin the globe—to see the others of the people on earth who live in climates much like our own.

The 30th parallel crosses the Pacific slightly to the north of the Midway Islands, passes south of Shanghai, over Chungking, north of New Delhi, near Tehran, over Kuwait, and south of Jerusalem. It crosses the Suez Canal and Cairo, runs on through Algeria, across the Atlantic, near Jacksonville, Fla., south of Mobile, through New Orleans and back across central Texas.

Over the past 2 years, at the request of the President of the United States, I have traveled to many of the lands traversed by that parallel; and I have been impressed many times by the similarities of climate and topography of those faraway places and our own country here in central Texas and the Southwest.

But there is another similarity which is even more impressive. In all those lands—as here in our own State—the free peoples who live along that line share a common determination to build a better, more prosperous and more rewarding life for themselves and those who come after them.

In each of the free world countries along that parallel efforts are being made—as such efforts are being made in Texas—to secure new industry, create new jobs, bring in new payrolls. It is not difficult to understand why. Of all the peoples who live within that line, including those of other States in the United States, the people of

Texas enjoy by far the highest standards of living, of income, and of opportunity.

Our per capita income in Texas last year was \$1,972. In most of the countries along the 30th parallel per capita income would not exceed—and usually not even approach—\$360 a year, \$30 a month.

Compared with our fellow men—who share this latitude with us—we are rich. But we in Texas are not content. We know that our per capita income is still only 85 percent of the average for all Americans. We understand that there is a gap to be crossed. We are making that effort today—as we have never made it before—in Texas.

If our motivation is as great as it is to cross the gap of 15 percent, the realization of this helps us to understand how great are the motivations—and how intense are the desires—for those who face the challenge of crossing a gap of 500 percent or more.

What is happening in this world—in which you and I live—is that billions of people no longer accept the fate of living at the bottom rung of the economic ladder. They aspire to a better way of life, a better standard of living, a floor under their feet, a roof over their heads, milk for their babies, a cupful of water they can drink without fear of disease, schools their children can attend to learn to read, and some kind of a job which frees them from tilling the soil.

This explosion of aspirations, as it is sometimes called, is a great and awesome thing, it has unloosed a powerful force in the world, a force which is bound to reshape the world into a better, freer, more just place for men to live out their years on earth.

But in saying this to you it is not my purpose merely to talk about other lands and other places. The underdeveloped world is not exclusively a foreign world. Here at home—in our own vast United States—we have our own areas, our own regions, our own States which are still underdeveloped.

I believe that the greatest single force at work in the United States today is the gathering momentum for growth and development in these long underdeveloped areas, of which our own State of Texas is one. Throughout the world, in this last half of the 20th century, there has appeared a new momentum—a shift of population and of economic development to the warmer latitudes. This is occurring in Asia, in the Middle East, in Europe and Africa, and in our own United States.

Today in the United States the major growth States are those in the warmer climates which, until now, have been passed by in terms of full development—Florida, Arizona, California, and Texas. Population is shifting this way at an accelerated rate. Economic investment is shifting this way at an accelerated rate. For our own immediate area it is clear that during the next several decades the States which rim the gulf coast will experience expansion, new activity, and growing industrial importance on a scale never achieved in the past.

There are many developments of importance to this trend. The single most significant such development is the laying of foundations in this region for the technology and industry associated with the age of space. In Texas the location at Houston of the Manned Spacecraft Center is the most important business development since Spindletop.

I wish it were within my capabilities and purview to foresee fully and accurately for you the eventual meaning of this installation. Certainly it will mean growth of business activity in all of the conventional sectors. But there is a more important meaning. Because of the nature of the industries which will grow around space technology, the next 20, 30, or even 50 years will bring to Texas and the Southwest a new kind of industrial force.

Unlike the past, space technology requires employees with advanced college education. Strong backs and stout arms are not enough—one degree is a necessity, two or more college degrees are commonplace. This means higher income levels, higher social standards, higher living standards on the part of the working force of the principal industry.

We cannot foresee exactly what this means because nowhere else on earth has a major industrial force had these characteristics. But there are certain responsibilities we can foresee.

The chief of these is in the realm of education. Make no mistake about it; the NASA Center at Houston was not located there because Houston is Houston or Texas is Texas. The decisive force attracting the choice of the Manned Spacecraft Center site was the public support of higher education of the first class in the public institutions of this State.

If the space industry is to grow and expand in Texas continued steadfast public support of higher education—and of public education at all levels—will be required. The standards of public services of all kinds must be maintained at a high level. The quality of municipal and county government—as well as State government—must measure up to new expectations on the part of the people served.

The challenges facing our State will be great and demanding. The requirements for public leadership and for civic-mindedness on the part of this generation of Texans will be the highest any generation has ever known. As Texans in the past have been concerned with the rights of States, Texans henceforward must be especially concerned with the responsibilities of States.

I say these things to you in a spirit of hope and confidence. Over the years, it has been my high honor to work for you and with you in the many tasks in developing the resources of central Texas—and all of Texas. Much has been accomplished. Good and strong foundations have been laid.

We now come to the time in history at which we stand to realize the fruits of those labors. The foundation developed over the last 125 years—and especially in the last 25 years—is the foundation on which we can complete the development and fulfillment of the Texas potential.

In doing what we can do—and are privileged to do—here, we must remember the millions of human beings who live along the parallels of the world aspiring to achieve for themselves and their children even a small measure of what we ourselves have already achieved. Our Nation is strong and great. But neither our strength nor our greatness lies in our military might, nor in our plants and factories. Nor in the productivity of our farms. The strength and might of the United States is that of leadership—moral leadership—for a world of peace and freedom and justice.

If we are to hold what we have, if we are to enjoy more in the future than we have in the past, we must continue as a responsible Nation to uphold the pursuits of peace as we adhere to the necessities of power.

As Winston Churchill once said, "The first victory we have to win is to avoid a battle. The second, if we cannot avoid it, is to win it."

The United States stands strong, firm, and steadfast in its role in the world today. Where we have drawn the line of freedom—and pledged ourselves to its defense—we shall remain firm. We are determined that line shall never be crossed.

But the very purpose of our firmness is our determination to maintain peace with honor. As we shall always stand up to those who threaten the peace, we shall never refuse to sit down with those who seek sincerely to assure peace for mankind.

REMARKS BY VICE PRESIDENT LYNDON B. JOHNSON, ANNUAL CHAMBER OF COMMERCE BANQUET, FORT WORTH, TEX., TUESDAY, DECEMBER 11, 1962

When the U.S. Constitution was adopted in 1789, there was a king in Paris, a sultan of the Turkish Empire in Constantinople, a czar in St. Petersburg, an emperor with the mandate of "heaven" in Peiping, and a mikado on the throne of Japan.

Today, neither those royal offices nor royal empires exist. But the Office of President of the United States remains the same Office—presiding over the same form of government—as George Washington knew 173 years ago. The revolution of freedom which began on these shores at that time has swept the globe, touched every continent, and brought liberty, independence, and self-determination to tens of millions of people everywhere.

Among us, there are many who—easily, casually, and critically—make statements about how communism is winning everywhere, and that we are ineffective and impotent in checking its spread.

This is simply not so. For us to poison ourselves—to blight our own pride in our own country—with such fearful fatalism is one of the greatest disservices we can render to ourselves, our country, or our cause.

As long as there have been nations on earth there have been totalitarians and aggressors. As long as there have been totalitarians and aggressors the weak and small have lived in fear and danger of armies of the forces of evil among mankind. Fifteen years ago, in the wake of World War II, all of the civilized world seemed to lay at the feet of the greatest tyranny and strongest aggressor the world has ever seen.

The Soviet Union added to its empire the brave Republic of Czechoslovakia. Nothing of consequence stood between the Soviets and the English Channel or the western shores of Europe. At the eastern edge of the Mediterranean the brave people of the barren lands of Greece and Turkey saw the bear of the north threatening their borders. In the south of Asia the vast land of Iran likewise lay exposed.

As Winston Churchill described it, in one of his historic speeches, thousands of years ago the Mongol hordes of Genghis Khan had come across the steppes of what is now Russia into the heart of Europe. On the same day, decisive battles were fought near Vienna and Poland, and the most able defenders of Western civilization were vanquished. Nothing stood in the path of the conquerors. But then the aging Khan died. The tribesmen turned eastward to their homes to choose a successor. And, as Churchill put it 12 years ago, "They have not returned until now."

Twelve years have passed and not an inch has been added to the perimeter of the Soviet domain. Three months ago, at the request of President Kennedy, I visited those lands where—beginning in 1947—the United States began a great experiment and a great gamble on the belief that men who want to be free will stand up for their freedom if they know the strong stand with them.

In Iran, in Turkey, in Greece, only a line drawn on a map separates those people from the Russian armies. But that line—through all these years—has not been breached. It was my proud privilege to take to those peoples and to their leaders a solemn reaffirmation of the determination of the leaders and the people of the United States that those lines will never be breached.

What I am describing is one of the most noble achievements in the history of the human race. It is an achievement in which each of you has had a part—and of which every member of this generation should be proud: proud of his country, proud of his country's leadership under administrations of both parties, and proud of his own individual participation in this achievement.

This generation of Americans drew a line in the path of the great aggressor and made it clear that line could not be crossed without the aggressor paying a fearful price. For ourselves, for our families, and our businesses, the price of courage has not been cheap—in dollars and cents.

From 1949 through 1961, Americans have paid \$498 billion for defense and security. We have paid \$47.5 billion in foreign economic aid. What have we gotten for our money?

On Sunday morning, October 28, the answer was provided when the message came from Moscow that Khrushchev had, in the face of unmistakable American determination and might, agreed to the withdrawal of his missiles and bombers from the island of Cuba.

Only 10 days before, when the intelligence photographs had first confirmed the Soviet installations, I was looking over maps in the meeting room of the National Security Council. On these maps had been plotted the range and possible targets of the missile installations under construction in Cuba. Various distances and times were being cited. I pointed my finger to Fort Worth, knowing the strategic importance of the installations here. A military expert at my side anticipated my question and answered it before I asked: "Less than 5 minutes, sir."

Less than 5 minutes. Except for the \$500 billion spent to keep America strong, Fort Worth—like most of our cities—would be living under that threat tonight, instead of living as we do in a world at peace from which this grave threat has been removed.

America got its money's worth from the B-24 Liberator bombers built here in Fort Worth. America got its money's worth from the B-36. America will get its money's worth from the TFX.

And the world—and the cause of freedom—has gotten full value from faith in America.

I do not know—no man on earth knows, on either side of the Iron Curtain—what the meaning of recent events will ultimately be. We can believe, however, that a time of turning has come in the destiny of this century. The recent events leave no doubt about two crucial points.

First, there is no doubt that the assumptions of Communist strategy—about the eventual collapse of ability or will in the West—have been proved failures.

Secondly, at the same time, the concept, purposes, and conduct of the policies of the West—initiated by the United States—have been proved correct.

Communism has been contained. It has been contained in Europe. It has been kept from establishing a land frontier with the Arab world. It has been repulsed and rejected by Africa. Six guerrilla wars in southeast Asia and the far Pacific have ended in five defeats for communism and, with the support of the United States, the tide has been turned in the sixth such war in Vietnam.

Unlike Khrushchev, we of America—and we of the free world—seek to bury no one. Our purpose is peace—a peace in which the hopes of man may rise from the graves of poverty, illiteracy, disease, and injustice, to common aspirations and expectations of a life of freedom.

This year of 1962 is a year in history of which all Americans can be proud and can feel new pride in themselves and their associations with the cause for which their country stands.

Where the Communist bloc is surrounded by enemies, we of the United States can count as our blessing that we are surrounded by friends. We can believe, at this moment of history, that the revolution of freedom which began in this land is the tide of the future—a tide still running, a tide which will bring the ultimate triumph of freedom everywhere before this century ends.

It has been our lot and our fortune to become the richest people in the richest nation the earth has ever known. In only five other nations does the per capita national income exceed \$1,000 per year—for most of the nations and peoples on earth, annual income is less than \$40 per month and some only \$60 a year. For us the average is \$2,800.

As, in the writings of the ancient Greeks, the Corinthian ambassador told the mighty Spartans, "Supremacy has its duties—leaders are required to show a special care for the common welfare in return for the special honors accorded to them by all, in other ways."

We enjoy what we have today, at home and in the world, because we have applied the precepts of our moral teachings and beliefs to the policies by which we conduct our Nation's affairs. We have shared with others. We have cast our bread upon the waters—to the humble and the lowly at home, to the exhausted and vanquished abroad. From 1949 through 1961 we sent to Europe \$18.7 billion in economic aid. In just the last 4 years the prosperous Europe of today has bought from us \$23.2 billion of our goods, products and services, and will soon be purchasing from us each year as much or more than the total of the aid we have sent.

The bread we have cast upon the waters is coming back manifold.

I say these things to you in a spirit of optimism based on the practical realities of confidence. Ours is a strong and mighty land. Our might lies not in our arms and armor but in the character of the American soul and in the determination of the American will that men everywhere shall have the right to live as we live in freedom, justice and equality.

The first Americans to reach the moon will, when they return to earth, land at Houston—although, I suppose, they might land in this vicinity if Fort Worth and Dallas ever got together on an airport.

This region—reaching from the Atlantic coast of Georgia to the far edge of the Arizona desert—will be a principal center of growth for the technology of the age of space.

What older sections of the United States have been to our national development in the past two centuries, this region will grow to be during the next century to come.

If it seems far-fetched to describe such potential for the State we know now, I remind you that you live and attend school now amid one of the great wonders of the Western World. In the Dallas-Fort Worth metropolitan complex, there is the greatest concentration of population—anywhere in the world—not located either at the edge of the ocean or on a navigable stream. It is not so wild a dream to envision Texans of your generation working even greater wonders in the future which lies ahead.

Since the beginning of this century, one of the great problems of this portion of the United States has been the annual loss of talent and skills on the part of the most able graduates of our public institutions of higher learning. Between 1900 and 1930, 3.5 million persons left the Southern States—including Texas. Sociologists have estimated that the economic loss—even in terms of the prices of that era—amounted to between \$5 and \$10 billion.

REMARKS BY VICE PRESIDENT LYNDON B. JOHNSON, ARLINGTON STATE COLLEGE, ARLINGTON, TEX., WEDNESDAY, DECEMBER 12, 1962

I realize that most nonacademic visitors to college campuses these days come in the role of recruiters—if not for major corporations, seeking talent for their jobs, then, at least, as recruiters for the Young Republican League. Needless to say, I am not here in either role.

I would, however, like to do some recruiting—the recruiting of your talents, or

if not your talents then your faith, for the great opportunity which faces you and your generation. For where other generations of Americans have met their destiny—and their opportunity—in winning wars on the battle fields of the world, it is your destiny and the opportunity of your generation to win the battles of peace on the battle grounds of the world today.

Among my duties, at present, I serve as Chairman of the Advisory Committee to the Peace Corps. One of the great satisfactions I have had in my public life has been the chance to see your generation disprove the libels and dispel the doubt that has been cast upon the idealism of young Americans today.

Too many people have the habit of equating idealism of youth with political labels of their elders. If young people on college campuses adopt for themselves the label of conservative, there are cries raised that "the college generation is not idealistic." This I refuse to accept. The division of political sentiment on our campuses today—the debates between factions labeling themselves conservative or liberal—reflects, I believe, a healthy interest in the directions of our national policy and it reflects, also, a necessary sense of protest on the part of the young for the way in which their elders are running the affairs of the country.

At Peace Corps camps around the world, I feel that these views have been confirmed. In the training camp at Puerto Rico—out in the jungles of the island there—I have seen young men and women who were both Goldwater Republicans and Kennedy Democrats up before 6 in the morning, running up and down jungle hills, swimming a river with their hands tied behind their back, living 3 nights on the land carrying only compasses, pocket knives, and canteens.

I don't worry about the politics of the college generation when I see such evidence of idealism motivating young Americans to prepare themselves for the work of building a better world.

But, in saying this about one of my favorite subjects—the Peace Corps—I do not mean to overemphasize the world abroad. There is work to be done here at home. There is work to be done in the Southwest—and here in Texas.

The moving finger of history is writing large on the future of this part of the United States. In the past 50 years, a strong and stable foundation has been put in place. In the next 50 years, there is every indication that Texas—and the other States of the gulf coast and Southwest—will emerge as one of the major centers of industrial, economic, and social leadership in the world.

The first Americans to reach the Moon will, when they return to Earth, land at Houston—although, I suppose, they might land in this vicinity if Fort Worth and Dallas ever got together on an airport.

This region—reaching from the Atlantic coast of Georgia to the far edge of the Arizona desert—will be a principal center of growth for the technology of the age of space.

What older sections of the United States have been to our national development in the past two centuries, this region will grow to be during the next century to come.

If it seems far-fetched to describe such potential for the State we know now, I remind you that you live and attend school now amid one of the great wonders of the Western World. In the Dallas-Fort Worth metropolitan complex, there is the greatest concentration of population—anywhere in the world—not located either at the edge of the ocean or on a navigable stream. It is not so wild a dream to envision Texans of your generation working even greater wonders in the future which lies ahead.

In this context, I think it can be said to you as it could not be said to any generation before you: Your greatest future and

opportunity is in Texas—and in the cities of our State where you may now live.

Since the beginning of this century one of the great problems of this portion of the United States has been the annual loss of talent and skills on the part of the most able graduates of our public institutions of higher learning. Between 1900 and 1930, 3.5 million persons left the Southern States—including Texas. Sociologists have estimated that the economic loss—even in terms of the prices of that era—amounted to between \$5 billion and \$10 billion.

Today many of our leading industrial corporations, financial institutions, educational establishments, and other major centers are headed by people who were born in this region, but who have lived their lives since college outside the region. For you there is ahead the special promise and opportunity that the major opportunities in the Nation will be here in this region.

To say this is not to speak provincially but to speak factually. But it helps in maintaining perspective to remember this: much of the future for this region will lie in trade, commerce, and travel in other lands.

The largest single trading market in the free world in the latter half of this century will be the world of Latin America. This will be a major outlet for your energies and talents whatever line you may pursue.

But the enterprise of Texas in the future will not concentrate solely on the Latin region. Already airlines are flying from Texas points to Europe. In the not too distant future, we may anticipate sufficient speed in the air for such flights to Europe to be completed round trip in a single day. Africa and Asia will neither be a day's travel away.

You will live and you will work from a Texas base, but the world itself will be yours to help develop, to help lead, to help bring to its feet.

No generation has ever had such broad horizons or such great promise. Because of this, no generation has ever needed stronger ideals or a more fixed determination to right what is wrong, give attention to what has been neglected, to give heed to directions which ought not to be followed and to define new goals and new directions for the future.

Whether you label yourself "conservative" or "liberal"—whether "Democratic" or "Republican"—the proudest label you can bear is that of "American."

In the world for which you are preparing yourselves now, there is a warm and friendly reception for those who bear that honored name. Many generations of Americans—much effort, much toil, much sacrifice—have gone into the image which the world bears of us and what we stand for. But the essence of the favorable image that the world holds of us is the belief among men in every land that Americans are, in some special way, people who are at heart idealistic.

From what I have seen of your generation—from the many fine and inspiring visits that I have with many of you from time to time—I know that you are heirs of that tradition.

REMARKS BY VICE PRESIDENT LYNDON B. JOHNSON, STUDENT CONFERENCE ON NATIONAL AFFAIRS, TEXAS A. & M., BRYAN, TEX., THURSDAY, DECEMBER 13, 1962

In the world of undergraduates, and in the world at large, one of the chronic sources of tension is speeches. This is especially true of speeches by public figures on topics covered by your agenda for this eighth Student Conference on National Affairs.

The 20th century has brought explosions of population, of aspirations, and of nationalism. But the impact of these has been equalled, if not exceeded, by the monumental explosion of statistics—about those explosions. As a result, in our speeches—and,

perhaps, in our policies, as well—statistics are sometimes substituted for substance.

In these remarks this afternoon, I hope to keep statistics in their place, remembering Mr. Dooley's comment on a public figure of his day who over-used facts and figures. "All he needs," Mr. Dooley said, "is an index and few illustrations to make himself a bicyclopedia of useless information."

I make this point about statistics for a purpose. On your agenda for the study of "Sources of World Tension," there are listed the four most commonly accepted topics for such discussions: the population explosion, economic problems, nationalistic aspirations, and the arms race.

Our solution of a problem will be no better than our definition of it. In this context, I would like to begin by raising what may seem to be a surprising question: are these forces the real sources of world tensions?

Are these the real problems? Or do these merely happen to be the problems which are easiest to measure with our statistics—and, hence, most convenient to discuss and debate? Frankly, certain personal observations and reflections have led me to question whether our accepted diagnosis of the causes of world tensions is as precisely accurate—or as fully comprehensive—as we have thought it to be. Over the past 2 years I have traveled nearly 100,000 miles on official missions to Asia, to Africa, to Latin America—to the places where the forces you are discussing are now at work. I have gone to the emerging nations, to the centers of population explosion and poverty, to the lands where undeclared wars and counter-insurgency actions are in progress to the nations and the headquarters of the anti-Communist alliances—NATO, CENTO, and SEATO.

Generalizations are hazardous. But if I were to list the sources of tension identifiable in those lands, the listing would differ in both details and emphasis from what our computers and many of our commentators tell us. This is not to say that population, economics, nationalism and the arms race are unimportant or overrated. But it is to say that relief for these tensions involves more than providing the underdeveloped nations with pills, payrolls, prestige, and peace talks.

If, our perspective is to be realistic—and if our efforts are to be fruitful—we need to include certain additional realities in our list of sources of world tension.

First, we must recognize that many of the most explosive tensions worldwide are generated by local issues, rather than global forces.

Second, we must recognize that in most areas, animosities of race, religion, caste, and inequality are central sources of tension.

Third, another source of tension is the restriction on free movement of peoples. This is not only a problem of geographical movement but is also a problem of movement, up or down, within traditional social structures.

Fourth, in most of the emerging portions of the world, a very real source of tension—with many ramifications—is created by a lack of tradition and experience in organizing for mutual effort on a basis of mutual trust.

These factors are often overlooked by peoples of the developed nations—especially Americans. We concentrate on the conspicuous. We neglect those sources of world tension which are not conveniently measured by statistics. Hence, we know the impact of south Asia's birth rate, but not the impact of the area's border disputes. We concentrate on Africa's nationalism and miss the significance of its localism. We identify Latin America's poverty but we fail to identify its problems of class and resistance to social mobility. The world over we predicate both our efforts and expectations on the assumption of a capacity for social and

structural organization which is, in fact, absent from and alien to the traditions of many peoples.

In our approach to the tensions of our times, we tend to treat the 20th century as an entity—as though human history were the sum and substance of our achievements and our failures since the year 1900. This is not realistic. In many instances, the tensions most dangerous for our 20th century world today date back to the 12th century—or earlier. The emerging nations have been bypassed by the industrial revolution. But many of their problems result at least as much from having been bypassed by the political revolutions of and since the 18th century.

We have recognized the necessity for what is called the infrastructure of a modern economy—the necessity for roads, communications, sanitation facilities, hospitals, and all else. The developed nations of the West have committed themselves to long-term programs to provide such facilities. But the question we need to ask—and to answer candidly—is whether these measures are genuine first steps or intermediate steps? Are we beginning at the beginning, so to speak, or have we begun at a point of economic development in our programs somewhere beyond the actual point of social readiness or political capabilities?

The world today has—by economic reckoning—a major, capital deficit. If a 5-percent annual increase in the income of emerging nations is to be sustained throughout this decade of the 1960's—the decade of development—it is estimated that \$70 billion of capital investment will be required from the capital-producing countries of the world. On the basis of performance thus far, this means about \$8 billion each year from 1963 to 1970.

The present annual capital investment in such development is \$5 billion. The annual deficit is, thus, \$3 billion. How and where that deficit is to be overcome would lead us into a discussion far longer than the time allotted.

The particular point I wish to emphasize is the existence not of a capital deficit, but of a political deficit. Technically, we have the solutions to the world's development problems—the engineers, the scientists, the economists, and all the other technical people, have done their jobs. The gap that remains open measures our failure in the political realm.

If the capital investment of this decade of development is to take root and flower into a full harvest, there must be more attention concentrated on these neglected political deficits. In terms of human population, for example, the world has a carrying capacity of possibly as many as 16 billion people. Our political systems, however, are doing a poor job of providing for the needs of only 3 billion people.

If we are seriously to undertake the relieving of world tensions, a greater degree of political courage, political imagination, and political innovation will be required—in both the developed and underdeveloped worlds.

This begins at home—in our own country and in other developed countries. We, too, are experiencing population explosions. We, too, have our underdeveloped regions and resources. We, too, have poverty, changing social structures, shifting populations, and much else which requires political courage today as much as 30 or 50 years ago.

The Western nations—including the United States—are not so far advanced, not so free internally of sources of tension in their own society, that the permanent necessity for reform, for progress, for responsible change can be ignored.

We of the capital-producing industrial nations of the West must not permit the burdens of security to stifle either our initiative or capacity for internal innovation

and reform in our domestic political responsibilities.

The same is true with regard to the assistance we offer emerging sections of the world. If material objectives are to be reached, moral objectives cannot be left behind; 20th century technology simply will not function or serve its intended purpose when imposed upon 20th century or 17th century or even 19th century values about human life or the worth of human labor. In fact, such conditions might only produce greater tensions for the world—not fewer.

We have, I believe, a responsibility to be certain that we define the sources of the world's tensions correctly and fully.

The population explosion, the aspirations explosion, the nationalism explosion—and all the other forces of our times—may intrigue us and occupy us. But tensions of the world will not be relieved until the world experiences a genuine explosion of human justice and recognition of individual rights. We must have the political courage and imagination to work for and achieve this objective at home and abroad.

The tensions of our world result not because couples are having too many babies but because political leaders are having too few new ideas for answering the world's ancient problems with the capabilities of today's modern technology.

I speak as I have because my assessment of the future is one of optimism and confidence—confidence inspired in no small degree by the high sense of responsibility being shown on campuses everywhere by your generation. You are concerned—as no generation has ever been concerned—about building a better world, and the capabilities at your command permit such a world to be built. Your talents are great, and they are needed. That is why I would like to conclude with a question to you, from the writings of the contemporary philosopher, Will Durant:

"Why should not every man, rich or poor, give 2 years of his life to the state, not for the purpose of killing other people, but to conquer the plagues, and drain the marshes, and irrigate the deserts, and dig the canals, and democratically do the physical and social engineering which builds up so slowly and painfully what war so quickly destroys?"

Remarks by Mayor James H. J. Tate, Emancipation Proclamation Centenary

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. TOLL. Mr. Speaker, I had occasion to participate in a luncheon in the city of Philadelphia at the Bellevue Stratford Hotel in connection with the celebration of the 100th anniversary of the Emancipation Proclamation.

The main speaker was the mayor of the city of Philadelphia, the Honorable James H. J. Tate. His talk was very inspiring and his suggestion that the children of the city participate in acknowledging the centenary of this outstanding American document is so interesting that I feel the Members of the House will read it with great profit.

I, therefore, have included the address of our distinguished mayor in my remarks:

REMARKS BY MAYOR JAMES H. J. TATE, EMANCIPATION PROCLAMATION CENTENARY, JANUARY 2, 1963

One of the peculiarities of American life in this day and age is the fondness we seem to have for celebrating all sorts of occasions—some of which are profoundly important.

It's a fine thing to celebrate the historical events. It's a healthy thing that we can draw sustenance from our own inspiring history.

As we consider our national history and observe its anniversaries, as we give a measure of remembrance to those chronological landmarks along our pathway to greatness—there is usually no burden of obligation to be found in them. To be sure, history has its moral lessons, but from most of these commemorations, we elicit no new responsibilities, we derive no new obligations or challenges. The acts have been accomplished. The dead have been buried. The specific issues have altered. The objectives have, for the most part, been achieved.

But today, we here acknowledge a historical anniversary that does call out to our public and private conscience. This is an anniversary we celebrate which cried out loud and clear across the years for action.

On September 23, 1862, the newspapers of the United States carried a draft of a proclamation that the then President of our country had drafted. It was an amazing proclamation—a powerful proclamation. It stated that on January 1, 1863—almost exactly 100 years ago—all slaves held in a State or part of a State which was in rebellion should be "then, thenceforward and forever free."

With the drafting and signing of this proclamation, which we now know as the Emancipation Proclamation, President Abraham Lincoln had brought a new dimension into the terrible grinding war that was consuming so much of the vital substance of this Nation. Instead of being merely a war for the preservation of the Federal Union—which was certainly a just and mighty cause in itself—the war became a struggle for human freedom. In taking a resolute and public stand on the slavery issue, the Government, in a sense, sanctified the war by harnessing to it one of man's noblest aspirations—the desire for freedom.

The Emancipation Proclamation, though it rang out across the land in 1863, has still to be fully implemented in this great country of ours. The chain that has shackled human dignity has been only partly broken. The link has been only partly out. There remains a great deal of unfinished business still to be done.

We live in an incredible age—an age of such enormous complexity that our forefathers of recent generations would be completely shattered if they were here today.

And yet, my fellow citizens, we are still haunted by the same ghost that Mr. Lincoln sought to kill in 1863 with the silver bullet of the law. It is a sad but inescapable fact that we have not yet put the ideals of the Emancipation Proclamation fully into practice. The chains must still be struck from the legs of 1 in every 10 of our fellow citizens.

It seems strange—even sad—that civil rights should still be spoken of in terms of "the question of civil rights." Going back even further in our Nation's history, the Declaration of Independence—written right here in Philadelphia—should have resolved things adequately and taken civil rights out of the "question" category. The Emancipation Proclamation should have completed the job.

Those documents were merely good beginnings. They were the sign posts to show us the way. Their letters should be splashed in great characters across the horizon. They

should be emblazoned on our public buildings for all to see. Most importantly, they should be written—indeed carved—on our hearts.

We in Philadelphia should draw particular inspiration from the anniversary of the Emancipation Proclamation, for it was here that freedom to those of every race, and creed, and place of national origin, was implemented from the very beginning. Our city has always been a place of refuge for those who fled persecution. In the dreams of William Penn, Pennsylvania and Philadelphia would stand always as beacons of inspiration for all the land to see. And so it has gone down from Penn's day.

Philadelphia was the first municipality in the Nation to include an official human relations agency in its fundamental law, the home rule charter. It has been a trail blazer in working toward equal opportunities in employment, in housing, in education, in public accommodations, in civil service. Our great commonwealth has also been in the forefront of this struggle to bring real meaning to Lincoln's great ideal.

But partial success is not enough. Self-congratulations must not be allowed to strangle the great challenge of that which must still be done. And more than legislation is required. We also need to educate ourselves to the significance of emancipation. We need to learn to take Lincoln's Executive order to heart, to make it a conscious part of our daily lives.

With this in mind, I would like to propose that we mark this centenary observance with something more specific than words and sentiments. It has been said with great truth that only in giving do we receive—that the physical act of giving carries with it a spiritual symbolism that is deep and everlasting.

I propose that a suitable monument be erected to the Emancipation Proclamation—a monument that will be paid for not by the stroke of a pen from some philanthropist, or by a public or private subsidy of funds. Rather, it should be paid for by the children of our public, private and parochial schools here in Philadelphia. They can in a great and moving campaign donate one modest Lincoln's head penny each, and thus make this monument possible.

That this single tiny act of good will and brotherhood—this single act of giving something of value, however small—will carry with it a sense of the great spiritual message of the Emancipation Proclamation. I believe this modest contribution to a physical monument can help to bring about, within each child, an awareness of the even greater spiritual monument that will finally enable our Nation to dispose of this unfinished business.

And surely it cannot be said that this is too much. In this modest way our debt to history can be acknowledged by the schoolchildren of Philadelphia who are now learning of the importance of the Emancipation Proclamation.

The Civil War snuffed out hundreds of thousands of lives—soldiers, sailors, civilians of the North and of the South. It ruined millions more, and destroyed an incredible amount of private and public property.

Was it all for nothing? The Union was preserved, and happily so. But what of the work of emancipation that Lincoln incorporated into the very hardest years of that war? Is this to remain half done? Can we allow this to go to waste from our safe vantage point in the 20th century?

And what of the toll of human suffering since then? What of the unfortunate consequences of slavery—watered down to unfair employment practices, inequitable housing, and the millions of little humbling, discourteous acts that have separated races, one from the other despite common citizenship?

What will we do in the next 100 years? Will we have to mark the second centenary with these same thoughts, the admission of these same half successes?

Perhaps the pennies of our schoolchildren, and the acts of good will to flow from our own hearts, will make the next centenary observance of Lincoln's great executive act just an appreciative memory. I trust we will be able, within the next generation, to finally close the books and lay this volume to rest, along with the other great events of our Nation's history.

Let us resolve to finish, once and for all, the great work which Lincoln started 100 years ago. We here in Philadelphia have shown, by our enormous progress of the past decade, that it is possible to solve many problems once thought to be insoluble. That progress, and those solutions, were made possible because we had the whole-hearted support of all the diverse elements of our community. With your continued cooperation, I believe this additional great challenge is also capable of solution.

We owe it to ourselves, as well as to generations yet unborn.

The 50-50 Picture in TV and Radio

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Monday, January 14, 1963

Mr. MUNDT. Mr. President, a recent issue of the Los Angeles Herald-Examiner contains an interesting and informative discussion by its noted columnist, George Todt, on the ever-present problem of how privately owned and federally authorized radio and TV outlets can best serve the public interest.

Since it is obvious that a news and information medium which enjoys a Federal franchise to protect it against excessive or destructive competition requires a somewhat different approach in the development of appropriate policies of objectivity and equity from those of a newspaper which is not only privately owned but also required to provide its own protection against potential or actual competitors, it is important that the Congress continue to concern itself with the evolution of optimum laws and regulations relative to the radio-TV industry. In this connection, I believe George Todt's comments merit careful reading.

I therefore ask unanimous consent that the column written by Mr. Todt on this significant subject be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GEORGE TODT'S OPINION: THE 50-50 PICTURE
"Nolsy commercials really are not louder—they just sound that way."—Newton Minow, Town Hall address, December 18, 1962.

One of the best of Bill Miller's consistently good programs at Town Hall took place last Tuesday noon when Newton Minow, Chairman of the Federal Communications Commission, was guest speaker.

He is bright, intelligent, and seems dedicated to turning TV into something besides the "vast wasteland" he called it a year ago.

The FCC headman is only in his mid-30's,

but don't let that fool you. His mind is a storehouse of factual information and he knows what he is talking about. I liked him very much. He is on the ball.

In the first portion of his well-received address, Minow told of the tremendous advances now being achieved in the field of satellite communications. Much more is to come. Bodes well for our future.

The second part of his informative remarks concerned the new educational TV station in Los Angeles which Dr. Lee DuBridge, of Caltech, and his group have been quietly working on for some time. Very commendable objective.

In the regular question-and-answer period which followed, I asked Minow this basic question: "In the interest of fairness and impartiality, what are you doing to guarantee that conservative and liberal voices will balance out on a 50-50 basis in the areas where FCC has control?"

Minow replied that the FCC, by law, has been given a very difficult but necessary job. When controversial issues are before the public, it tries to see that a fair share of time is allotted both sides.

"The FCC does not monitor programs," Minow told us. "It only listens to complaints from the public—then acts on them."

"If complaints come in to us, we call them to the attention of the concerned station. Whenever the public believes it is only getting one ideological side of the picture, we want to know about it."

"As long as both sides are heard, then there should be no complaint. But if both sides are not being heard, then the FCC can step in and require fair treatment."

"If the American people think they are not getting fair balance between liberal and conservative ideological viewpoints, please let us know."

I talked with this fine young man for a few moments afterward. Would he welcome letters from my readers who had views on this subject? By all means, he told me. Just address your letters to him in care of the FCC, Washington, D.C.

He is anxious to give the public what it really wants.

We agreed that what our Nation needs is balance between the liberal and conservative viewpoints. Just as a human needs a right and left hand, our Republic requires 50-50 opposition for best results.

Thanksgiving

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. SIKES. Mr. Speaker, the following article on the true meaning of Thanksgiving was written by Yolanda Clegorne, a junior at Crestview High School, and read at the annual Thanksgiving banquet of the Wesleyan Service Guild of the Crestview (Fla.) First Methodist Church.

Because of the timeliness of the theme, and the excellence of the thoughts which it contains, the article is reprinted here. I am very much impressed with the excellence of this article. I have known Yolanda all of her life. She is a very fine young lady whose parents are my very good friends of long years.

The article follows:

THANKSGIVING

(By Yolanda Clegorne)

Thanksgiving is an American holiday. There is nothing like it elsewhere in the world. It does not commemorate a great battle, or the birthday of a great leader.

Thanksgiving is the expression of a deep feeling of gratitude by our people. It is a day set aside to recognize God for all His goodness He has bestowed upon us.

We should try to recognize that Thanksgiving should be a way of life, not a once-a-year occasion.

HUMILITY

Humility. This Thanksgiving Day, as in years past, the Americans are enjoying it in a marvelous state of prosperity.

The Americans are creating it an ugly image abroad. People in other countries think of America as a puffed-up capitalistic country.

Americans must learn humility. Humility is a virtue. Humiliation is an evil. Those who are on the giving end must be humble so that those who are on the receiving end are not humiliated.

Americans are to often prone to say, "Those foreigners should be glad to get that." We should be thankful for the opportunity to give. One day the tables will be turned, if by nothing but time itself, and America will be on the receiving end.

GRATITUDE

Gratitude. A Catholic has a string of beads called a rosary to keep count of his prayers, so each of us should keep a mental rosary of his blessings.

The beauty he has seen, the fellowship he has enjoyed, his life and the gifts it has brought him. These are but a few. Look back into your memories, and think of the many forgotten reasons for gratitude.

The times your mother sat up with you when you were ill, and so many things we think about that we received in our homes.

BLESSINGS

When we start thinking about our many blessings, do you recognize the rights we take for granted in the free countries like the United States—freedom of worship, freedom of speech, press, public schools? Americans never think of what it would be like to live under a dictator.

A noted Christian teacher suffered much at the hands of the Nazis in Czechoslovakia. Finally, he was able to flee with his family to the United States, leaving all his possessions behind. Many times he would stop during his lectures to American students and say with tears in his eyes, "I love your country."

That man could appreciate freedom and he gave genuine thanks for it because he knew what it was like when freedom was taken away.

FREEDOM

Freedom led to the first Thanksgiving. In England many of the people desired a simple church service. A service different from the service of the Church of England. They were treated terribly and many were imprisoned and fined.

Finally, unhappy and restless, they banded together and came to the new land of America. No one would be able to say when the first Thanksgiving took place. Ancient Greeks and Romans had days to give thanks for harvest, but the Pilgrims are usually given credit for the Thanksgiving as we know it today.

The settlers (especially in Virginia) had several days per year for giving thanks. The first Presidential proclamation of a National Thanksgiving Day was made by a Virginian, George Washington, in 1783, and the matter bobbed up irregularly for the next 10 years.

Finally, in 1863, President Abraham Lincoln urged that all work be suspended so that everyone might give thanks to God.

Not all of Lincoln's Thanksgivings were in November, although his last official proclamation placed the date as the last Thursday of that month, and this became more or less official.

At last in 1941, by congressional action, the fourth Thursday in November was made official.

As we might think of our blessings, our thoughts should go all the way back to Calvary. Here our hearts should fill with an unexpressable gratitude. We should realize that we are all on the receiving end. No one of us is paying his full way through life.

GIVERS AND GETTERS

People could roughly be divided into two groups.

The first are those who think they are giving more than they get.

The second are the people who feel they are getting more than they give. The first group are restless and discontented, no matter what they have. The last group have peace of mind, and contentment with whatever they have.

How much do we have? Thanksgiving as many other things has become commercialized. It has become associated with the familiar scene of a family sitting around a table filled with turkey, cranberry sauce, hot rolls and mincemeat pie.

This is a season of personal thanksgiving not a time of physical indulgence.

THANKSGIVING PSALM

"I love the Lord, because He hath heard my voice and my supplications. Because He hath inclined His ear unto me, therefore will I call upon Him as long as I live. The sorrow of death compassed me, and the pain of hell got hold of me; I found trouble and sorrow. Then called I upon the name of the Lord: O Lord, I beseech Thee; deliver my soul. Gracious is the Lord, and righteous; yea, our God is merciful. The Lord preserveth the simple; I was brought low, and He helped me. Return unto Thee. For Thou hast delivered my soul from death, mine eyes from tears, and my feet from falling. I will walk before the Lord in the land of the living. I believe, therefore have I spoken; I was greatly afflicted; I said in my haste, all men are liars. What shall I render unto the Lord for all His benefits toward me? I will take the cup of salvation, and call upon the name of the Lord. I will pay my vows unto the Lord now in the presence of all His people. Precious in the sight of the Lord is the death of His saints. O Lord, truly I am Thy servant, and the son of Thine handmaid; Thou hast loosed my bonds. I will offer to Thee the sacrifice of thanksgiving, and will call upon the name of the Lord. I will pay my vows unto the Lord now in the presence of all His people. In the courts of the Lord's house, in the midst of Thee, O Jerusalem. Praise ye the Lord."—Psalms 116.

PERSONAL MESSAGE

This is a psalm of personal thanksgiving. It tells two things. First the story of the psalmist's own experience, giving the circumstances that brought this thanksgiving. And second, the account of how he paid the vow he made to the Lord in the moment of his deep distress.

The story is told of an ancient Israelite (poor, family dead) who offered his "sacrifice of thanksgiving." During an illness the dark and dismal abode of death became very real to him. Now, he sang his hymn of praise for restored life. Christ by his coming freed us from the disgrace of sin and took away the sting of death. In its place he gave us eternal life in him. What is our sacrifice of thanksgiving?

LOVE

Love. The greatest gift of love was that of Christ. This is the greatest reason anyone could have for being thankful. A small boy in a country school daily shared his lunch with a little boy who had none. One day the giver found a note on his desk which said in childish simplicity and sincerity, "I love you." That was an expression of thanksgiving from the heart. When it comes to expressing true appreciation and thankfulness a small child often puts us to shame. When a little child suddenly looks up into his mother's face and says right out of his heart, "Mother, I love you," you know it is sincere.

We all do extol Thee, Thou leader triumphant and pray that Thou still our Defender wilt be, let Thy congregation escape tribulation, Thy name be every praise! O Lord, make us free!

HISTORY MESSAGE

America is a strong and powerful nation, but she must not forget God in her struggle to remain first. The path of history is strewn with nations who forgot God. One of the books of the Bible tells the story of God's children, His nation. Because they forgot him, they were captured and placed in bondage. Don't think that He does not have the power to do it again.

Every day is a new page in the book of life and it is our duty as a nation and as a person to put something new and beautiful there.

George Washington summed up this day as a time for "Devotion to the service of that great and glorious Being who is the most beneficent author of all that is good, of all that was good, and all the good that will be."

"GOD IS THERE"

"When thy heart, with joy overflowing,
Sings a thankful prayer,
In thy joy, O let thy brother,
With thee share.
When the harvest sheaves ingathered
Fill thy barns with store.
To thy God, and to thy brother,
Give the more.
If thy soul with power uplifted
Yeans for glorious deed.
Give thy strength to serve thy
Brother in his need.
Share with him thy bread of blessing,
Sorrow's burdens share.
When thy heart enfolds a brother;
God is there."

THEODORE C. WILLIAMS.

U.N. Action in the Congo

EXTENSION OF REMARKS

OF

HON. BURT L. TALCOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. TALCOTT. Mr. Speaker, persons across the Nation are very disturbed by the action of the United Nations in the Congo and the role of the United States in backing this policy. This is expressed clearly in the following editorial from the January 8, 1963, Monterey Peninsula Herald. I know that the editor speaks for many and therefore include it in the Appendix of the CONGRESSIONAL RECORD:

As the efficient, well led, superbly equipped United Nations soldiers, all of them professionals, shot their way through Katanga—

U Thant held his court and did his business in the United Nations building in New York;

President John F. Kennedy rocked in a chair as he discussed world affairs with his viziers as they were called from Washington to Palm Beach;

Nikita Khrushchev watched from the Kremlin with smug satisfaction as the only stronghold of independence, productivity and anticommunism in the Congo was bludgeoned to its knees.

So far as the U.N. military action was concerned, it may be summarized by the expression: "Like shooting fish in a bucket." The number of casualties will never be known, because neither the U.N. nor the United States, chief Western sponsor of the U.N. in Katanga, will let the truth be known.

The truth is that the highly trained professionals of the U.N. forces—Indians (mostly Gurkhas), Ethiopians, Ghanians, Irish, and Swedes—ran through the raw Katanga troops like a hot knife through butter. They had plenty of tanks, plenty of modern planes, plenty of artillery, and plenty of food, ammunition, and transportation.

Behind these fine troops were many millions of dollars of U.S. taxpayers' money.

These troops should have done well. They killed hundreds, more likely thousands of black people. They killed an unknown number of whites. They riddled two white women in a small automobile because unfortunately the car was caught in a crossfire. That, of course, is not true. There was no crossfire. A picture taken at the time proves that there was no crossfire. U.N. troops were simply shooting at everything that moved. Callous troops that don't give a damn for human life, especially where most human life is black, do that sort of thing.

The American people should feel deeply disturbed at this tragedy in Katanga.

Why do the people of Katanga hate Americans more than they hate the people who have been shooting them? Because they know that American policy and American money have uprooted their lives. For principle? That's for the funnypapers. It has been for loot.

Moise Tshombe could truthfully say this at an MPC forum in Monterey: "Gentle readers of the Monterey Peninsula Herald, you have been shooting a lot of people in Katanga by proxy, all of them innocent of having done any harm to you or to any Congolese outside of their borders. You've killed women and children with the fine weapons you have given the civilized troops that had already invaded my country and that had wanted to occupy all of it. You killed those Belgian women in a 'crossfire' that wasn't any crossfire because no one was firing back at the U.N. troops. You were urged by the great missionary, Albert Schweitzer, to let us alone. Why didn't you let us alone? * * *

The reason why the U.N. did not let Katanga alone was that it wanted to loot Katanga.

The U.N. said that Katanga seceded, and U.S. State Department equivocators inferred that this was like the secession of States that marked the beginning of the U.S. Civil War.

Unfortunately for the American side, that is untruthful. Katanga was a province of the Belgian Congo, which was not at any time a state or an independent state, but which was a grouping of tribes put together by the Belgians for administrative purposes.

When the Belgians quit the country as colonial rulers rather than face civil disorders directed and financed by Soviet Russia, they turned the reins of government over to a pseudogovernment in which anarchy almost immediately prevailed.

The Katangan leaders refused to put their lives and the wealth of their province under the direction of the Leopoldville politicians, and their land under occupation by the troops of Leopoldville.

It is ridiculous to consider the tribes of the Stanleyville and Leopoldville areas to be

the fellow countrymen of the black tribes of Elisabethville. In fact it is unheard of.

Unfortunately for the Katangans, they had skills, jobs and resources. The U.N. wants these things incorporated into the Congo to make that sad country viable. And U Thant, Director General of the U.N. by virtue of the satisfaction he renders Soviet Russia, doesn't care how many blacks are killed to force the surrender of Katanga to the looters.

All of this wretched, morally degrading operation has been approved and egged on by the United States in order, it is said, "to keep the Russians out of the Congo." How many black people will we have to kill in order to keep the Russians out?

This folly, smeared with the blood of innocent people, is American folly. That is why the name American is the most hated name in Katanga; and Americans supporting such policies are hell-bent to make America the most hated name in Africa.

How do we get that way? Because we let ourselves be conditioned by the Soviets. Because we are playing like amateurs for the Afro-Asian vote in the U.N. Because our policy has been influenced by men like Assistant Secretary of State G. Mennen Williams, Presidential Adviser Chester Bowles, by half-ditched Adlai Stevenson, and by U Thant, whose most recent formal, prepared speech was an apology for the Communists and an attack on the free world.

What becomes of the character of a great country that tolerates, let alone supports, such an outrage?

A. G.

"Low-Road" Literature in Our Homes

EXTENSION OF REMARKS

OF

HON. WILLIAM H. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 14, 1963

Mr. BATES. Mr. Speaker, I am pleased to include in the CONGRESSIONAL RECORD an article which appears in the present edition of Variety magazine. It was written by Mr. Lawrence J. Quirk, a nephew of Mr. James R. Quirk, the founder and editor of Photoplay. He is also the nephew of our late and beloved colleagues, William P. Connery, Jr., and Lawrence J. Connery who successively served so ably in the House from 1923 to 1941.

The Members of this body who so fondly recall the high principles upheld by both Billy and Larry Connery will be pleased to detect that the same moral characteristics and values of our former colleagues are manifested by their nephew. It gives credence to that old adage that "the fruit does not fall far from the tree".

The article is timely and its essence born of experience. The lesson is vital and revealing. Its challenge is great. Its commentary is alarming. Are we really exercising our duties as parents when we permit "low-road" literature to enter our homes.

The article follows:

Fan magazines have been under considerable fire in the last year or two. National magazines, newspaper columnists, the trade press, recent books on Hollywood—all have had a go at them.

The gist of the accusations seems to be that the fan magazines revel in rehashing current scandals about prominent film and television personalities, lending to their treatments a saccharinely mendacious and circusy tone.

Religious publications denounce them. Studio publicity executives hold them in contempt. Stars, allegedly unhappy over distorted quotes and tasteless story slants, duck interviews with them.

What is behind all this journalistic sound and fury?

There are currently some two dozen movie and television fan magazines with an estimated total circulation of 8 million. Motion Picture, Modern Screen, and Photoplay—the so-called big three, claim circulations of well over a million each. The remainder, some of them bimonthlies and quarterlies, trail with circulations averaging 250,000.

In the 1920's and early 1930's (some readers may be surprised to learn) the better fan magazines were highly respected and influential journalistic mediums with a predominantly adult readership. Today's readers are chiefly teenagers.

Thirty years ago, Photoplay, whose then editor-publisher, the late James R. Quirk, was known as the inventor of the fan magazine, led a field of about a dozen publications. Photoplay's then circulation, quite respectable for its time, was 500,000. Its nearest rival, Motion Picture, boasted a readership of several hundred thousand. The others, led by Picture Play, New Movie, and after 1930, Modern Screen, averaged 150,000 copies each per month. The total circulation of the fan magazines in 1932 hovered at about 3 million.

These 3 million constituted, however, a quality readership, an eager, adult public enthralled by the then fresh, novel and vital film medium. This public, especially that of Photoplay, sought information about all phases of movies, and tended to concern itself more with clean romance than with morbid sexual experience. Certainly it was at that time more enthralled by wholesome dreams and fine ideals than the later generation of readers, who sought sensational revelations and vicarious eroticism.

STRICTLY AURAL

There was no TV, of course, in those days, and radio had the drawback of being strictly an auditory medium. Movies, accordingly, enjoyed a monopoly on the attention of the entertainment-seeking public. The movie magazines of that time monopolized the field journalistically, for the newspapers and magazines on the national level were slow to accord space to a medium that was just beginning to develop its own peculiar literature and was only just commencing to engage the attention and respect of more intellectual folk.

As the 1930's advanced, however, the nationals and review weeklies began giving the movies more and more coverage, the adult film public began turning, especially after the tasteful James R. Quirk's death, from Photoplay to the metropolitan newspaper critics and review weeklies for advice as to what films were worth seeing, and for intelligent, informed information about picture people in general.

The fan magazines, which up to the mid-thirties had been feeding the public equal doses of romance and information content, found themselves accordingly at an impasse.

Photoplay and its rivals resolved this by lowering their cultural sights and aiming at a younger, more impressionable audiences. They proceeded to cultivate the readership allegiance of these youngsters by providing them with romantic escapism and soapy, semifictionalized articles on stars—to the gradual exclusion of more informational, analytical and documentary type material

covering every aspect of films, and which Photoplay, especially, had formerly stressed.

The transformation was dramatic. Photoplay within a few years had regressed from a highly respected journal of the screen to a plaything for teenage girls. The other magazines followed suit. This debasement continued, with minor variations, from the mid-thirties to the midfifties when Confidential's gaudy success forced the fan magazines into still another "agonizing appraisal" based strictly on the dollar sign. For fan magazine editors and managers found to their consternation that the hitherto moneymaking saccharinities and escapist pipedreams were beginning to pall on their young readers.

In a desperate effort to retrieve a declining circulation and tap some of Confidential's ever-growing audience, the fan magazines began aping that publication's scandalous format, with, however, somewhat more caution and restraint than their high-flying model.

NATIONALS COMPETE

Once engaged on this cycle, however, they shortly found themselves vying with some of the franker, more incisive national magazines when it came to collecting their fair share of libel suits brought by enraged stars. In late 1960, Elizabeth Taylor and Eddie Fisher brought suit against seven fan books, the total damages asked being some \$7 million.

In justice to the fan magazines, it must be stated that certain stars proceeded to forfeit popular sympathy by public carryings-on, leading to the suspicion that they secretly relished the lurid publicity that they sometimes publicly deplored.

Incongruously enough, the stars often rap the fan magazines for intensively briefing the public on scandals that these undisciplined, mercurial personalities bring on themselves because of untidy personal lives, which, being exhibitionists by nature, they have a compulsion to project on the public.

Some of these personalities, especially the ones who are slipping or have slipped, have even carried their essential hypocrisy to the point of instituting unjustified libel suits against fan magazines as a publicity gimmick, later quietly dropping, or eeling out of, suits they know they can't win, once their specious publicity aims have been achieved.

Without unduly whitewashing the questionable taste of the fan magazines in some instances, it must be pointed out that they have often been treated with rank ingratitude by stars they helped to fame—stars who, once arrived, scorned the lowly fan magazines whose coverage they had once eagerly sought, and which had made them national names. Deploping highly personalized stories that they themselves had once eagerly cooperated in preparing, they belatedly found expedient to seek a dignified public image—often losing public favor in the process.

Most glaring current example of fan magazine bad taste, of course, is the frequent use of Mrs. Jacqueline Kennedy on fan covers, accompanied by often tasteless cover lines. The White House is reported increasingly irritated over the exploitation of the President's wife in this crass and infantile manner. The misuse of a noncinematic personality of exalted background and exemplary private life smacks of execrable taste and editorial desperation, and has caused a number of observers to ask if circulation chasing is superseding commonsense along fan magazine these days.

The current scene finds these 2 dozen fan magazines serving an audience that has changed vastly over the past three decades—an audience which they helped cultivate and whose tastes and intelligence they have often underestimated and insulted. But it

is also true that most of the teenagers who read these magazines are more concerned with romance and glamor and self-indulgence than with the culture and artistry of films.

The attempts of the fan magazine editors to mix the scented water of romantic mendacity with the murky oil of confidential-type (albeit watered-down) scandal has currently produced an uneasy, tightrope-walking editorial compromise between the two once successful formats. Still, as their healthy circulations attest, they have retained the loyalty and interest of their young readers. Chief reason: their constant and detailed and highly personalized coverage of young personalities that teenagers want to read about.

Studios consequently owe the fan magazines a considerable debt. For there is no denying that they have been more responsible than any other journalistic medium for the emergence of new young stars like Troy Donahue, Connie Stevens, and Vince Edwards.

Fan publications have invested these personalities with a glamorized, personalized (albeit often phony and overblown) public relations gloss that has no parallel since the old days when studio contract lists (now largely nonexistent) sustained mammoth publicity staffs who kept the public star conscious. The fan magazines are serving this function today—and doing no mean job of it.

Some analytical observers feel, however, that if this same loving attention and image fashioning were accorded more intelligent and talented younger players coming up, that the fan magazines would really be a first-class publicity outlet.

Since adult readers have now, it seems, permanently turned to other publications for their entertainment news, criticisms and personality profiles, and since the fan magazines still engage their young readers heavily, what, then, should their function be henceforth if they are to grope their way to some sensible medium between healthy circulations and editorial self-respect?

As one shrewd observer put it: "They can point a good moral for immature minds, sugar-coating it to order. They can subtly uphold right values for courtship, marriage, and later family life. And if you add to a basically moral content (and by "moral content" I don't mean preachy, antiseptic, puritanical Pollyannaism) the values of literacy, taste, originality, and liveliness (all geared, and stirred in, for teenage palates)—and above all, truth and commonsense, then fan-mag editors might feel a greater sense of fulfillment and creativity than they have for 30 years now."

Will the fan madders follow such wise advice? It is possible they may have to, and soon, for young people of the sixties are less easily hoodwinked.

Interview With Mr. Justice Tom C. Clark Over NBC Radio Network

EXTENSION OF REMARKS

OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert a portion of the transcript of an interview broadcast Sunday, January 6, on the NBC "Monitor" program, in which correspondent Russ Ward ques-

tioned Mr. Justice Tom Clark regarding the founding of our judicial system as we know it today. This was the first in a series of programs the NBC radio network is carrying, in cooperation with the Federal Bar Association, to help promote respect for the law and those who enforce it.

The interview, in part, follows:

Mr. WARD. Mr. Justice, we are often referred to as a nation of laws, not of men. Could you tell us what this means?

Mr. Justice CLARK. Well, that comes from the politics of Aristotle, which was simply that in any well-ordered community it is not man who should govern but law that should govern. Now, you notice I did not say laws, I said law, the singular law. And that is because, as they conceived it, and as we carry it out, man, once he has power, is apt to abuse that power. "Power begets power" is a phrase that is used. While the law is usually immutable.

Now, of course, there are those who say that the law is but, well, words and paper. That you have to have some hand, some sword in that hand, in order to carry it out. And that is true. But that hand and that sword are under the law, and that is the beauty of that phrase and of our system. As Theodore Roosevelt said: "No man is over the law; no man is below the law." And we ask no man when we come to enforce the law; we enforce it as it is written.

Mr. WARD. Mr. Justice, if the Bill of Rights were being drawn up today rather than 200 years ago would it include anything new or different? Is the Bill of Rights still the keystone to individual freedom in this country?

Mr. Justice CLARK. Well, I would say that the Bill of Rights is the primary source, the primary source of our freedoms. But in the body of the Constitution there are quite a few rights and privileges that are created that are most important. For example, the right of habeas corpus, one of our most sacred rights. Also the right of a jury in criminal cases. Separation of the powers of the Government. The dual federalism that we have between our State and our Federal system. But as far as changing the Bill of Rights, or whether it would be the same today if it were rewritten, I think that depends on the draftsmen.

Now the Chief Justice several years ago said that from the sources that came to him there was some doubt as to whether the Bill of Rights would be adopted if it were put to a popular vote today. And he said that because so few people had an understanding, a complete understanding, of just what is in the Bill of Rights or what the conception of the founders of our Government had when they wrote those words.

Now I think myself that there would not be too much change if they were rewritten today. Of course, there would be some, in order to get away from some of the concepts that they had at that time, such as every person has to be charged by indictment. Now we charge by information, and things like that, formal matters.

But I think where we fall down is in the improvement and development of public understanding of just what the Bill of Rights is and what it stands for, and just what our responsibilities are under it.

Mr. WARD. Mr. Justice, in the weeks ahead "Monitor" will be exploring in greater detail such Government departments as Treasury, Defense, Post Office, and others, to see how individual rights are protected. Would you say that we as individuals are overly dependent on the Federal Government? Or is this Federal regulation necessary in our increasingly complicated world?

Mr. Justice CLARK. Well, I rather think the former. I believe we are becoming more de-

pendent upon our central or national government, and that is something that President Adams way back there abhorred. He said that that would possibly be a tendency, and he was prophetic when he said that.

I think it's been brought about possibly because of the great change that has come about in our national formation of our beliefs and our transportation and our communication and things like that.

Way back there, you know, we put more power, you might say, in rural communities. And, for example, the case that we handed down last year on reapportionment, you remember, out of Tennessee. It was shown there that for many years, over 60, these small communities had controlled, in fact had more power in legislative assemblies, than did the larger cities. And I think that the reason for this, you might say more control in Washington, is because the cities and the States have not taken advantage of their opportunities in grasping a problem and trying to solve it.

Now some of it is being caused by the fact that this failure at apportionment, their vision has not been as clear. The necessities of a large urban population have not been seen by the man who is representing a small community and who has a larger vote you might say than the urban community.

So I think as an answer to the problem is that the States and the cities have not sometimes had the money, sometimes they have not had the foresight. Sometimes they have not carried on their plans and programs as well, and so some of them would suggest why don't we get the Federal Government to help us out. And the first thing you know the Federal Government is in housing and all sorts of things of that type.

Now I am not saying that it should not be there at all. I think it has been a very healthful evolution. However, I am a firm believer in having as much government as possible at the local level, and that the National Government should only come in where it is necessary in order to make a cohesive whole of our national association that we have.

Award to Ronald Staffieri

EXTENSION OF REMARKS

OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. BUCKLEY. Mr. Speaker, the greatest natural resources of our Nation today are the youth of our country. As has been said many times before the young men and women now in our schools and colleges will be the future leaders of another era and upon their proper development depends the welfare of this great Nation of ours.

Thus I am extremely pleased to report to you on the activities of a young man; a constituent of mine; a resident of Bronx County and an outstanding student. His name is Ronald Staffieri and he resides at 1019 East 179th Street, Bronx, N.Y. This young man is an advanced-class student at the School of Visual Arts in New York City. He is to graduate this June. In addition to this, he is active in community affairs so that he is now a captain in the Washington Grey's Cadets whose headquarters are in the King's Bridge Armory, also in my district. He has risen from a cadet in

8 years to the position of captain. This group of young men drill weekly and learn not only the discipline of the military but how to become good citizens for the future.

Last November Ronald was the recipient of an award from the National Committee on Employment of Youth for his outstanding cover design for that organization's magazine *American Child*. I congratulate Ronald for his accomplishments to date and I extend my congratulations to his fine family as well. I am certain that in future years Ronald Staffieri will make an excellent contribution to the well-being of his community, his State and his country.

Under leave to extend my remarks, I include the press release wherein Ronald was named the winner of the National Committee on Employment of Youth contest:

Nineteen-year-old Ronald Staffieri shows his award-winning cover design to Eli E. Cohen, executive secretary of the National Committee on Employment of Youth. The cover is for National Committee on Employment of Youth's magazine, *American Child*. It was judged best of a selection submitted by advanced-class students at the School of Visual Arts in New York City. Ronald hails from the Bronx, where he majored in commercial art at Dodge Vocational High School.

Interestingly, the first issue of *American Child* using Ronald's cover is on the theme "Automation: Outlook for Youth." According to Mr. Cohen, Ronald is in the rare group of young people today whose working future will not be complicated by advancing technology. No machine has yet been invented that can design a cover, write a poem, or take over any of the creative arts. "But," said Mr. Cohen, "most other youngsters will indeed have to consider the dynamic changes ahead in planning their futures." To help them keep pace, Mr. Cohen urged an immediate and vast improvement in counseling and vocational training programs, as well as increased research and information on the occupations and training needs of tomorrow's labor market.

Honorary Citizenship for Sir Winston Churchill

EXTENSION OF REMARKS OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mrs. FRANCES P. BOLTON. Mr. Speaker, on January 9 the opening day of the 88th Congress, I introduced House Joint Resolution 109, authorizing the President of the United States to issue a proclamation declaring Sir Winston Churchill to be an honorary citizen of the United States of America. As the son of an American mother and an English father, Winston Churchill, more than any other, truly epitomizes the union between the two great English-speaking peoples. His courage and devotion to the cause of freedom and human dignity have served to challenge and inspire our Nation as well as his own to victory in war and to achievement in peace.

The gift of honorary citizenship of the United States of America is one honor, one token of rare esteem and love which is within this Nation's power to bestow, and which is worthy of Winston Churchill's place in history. It is my hope that the Committee on the Judiciary will move swiftly to get the joint resolution to the floor where I believe it will meet with unanimous approval.

The Washington Post carried an editorial on January 9 endorsing citizenship for Sir Winston and also a letter to the editor from Miss Kay Halle of Cleveland, Ohio, and Washington, to whom much credit must be given for making the suggestion that we honor Sir Winston Churchill in this way. Under unanimous consent I include the editorial and Miss Halle's letter as part of my remarks. The editorial and letter follow:

CITIZEN CHURCHILL

The Congress of the United States, which gathers in Washington today, can demonstrate in a thousand ways and by a hundred legislative acts, the power and wisdom and virtue of what has become beyond all doubt the world's greatest legislative body. These demonstrations will not startle or amaze a world grown accustomed to the might and authority of this august assembly of the chosen representatives of the world's foremost republic.

There is one way, which all may hope it will not neglect, of demonstrating besides, its subtle, sensitive and perceptive appreciation of those mysterious forces above the ordinary objects of legislation. There is one action by which it can show how truly it reflects the sentiment, the gratitude, and the understanding of the American people. There is one way of demonstrating to the world that representative government is moved by impulses rising in the hearts of common people, springing from their instincts of generosity and affection, and having nothing to do with the expectation of future gain. There is one means by which it can stir in our minds old memories and in our hearts new hopes.

This Congress should swiftly move, by appropriate legislation, to confer American citizenship upon the former Prime Minister of Great Britain, Winston Churchill. Such legislation, to be sure, will only affirm in the law what already prevails in the essence of things, but it will be an affirmation that will brighten the twilight that slowly gathers about the aged man whose inspired union of noble words and great deeds was our salvation and solace in dreadful days.

Only once before, in the case of Lafayette, has Congress been moved to this unique expression of national sentiment. It is the most appropriate gift and token that it is within its power to convey and the one that more than any other symbolizes the warmth and affection and reverence that a grateful people feels toward a noble friend.

It is such a gift as we may safely think will inspire the aged hero to turn once more toward the West, to murmur again the magic lines of Arthur Hugh Clough with which he lifted Great Britain from despair in the darkest days of the war:

"And not by eastern windows only,
When daylight comes, comes in the light,
In front, the sun climbs slow, how slowly,
But westward, look, the land is bright."

ONE OF US

When Sir Winston Churchill cut into his 15-pound birthday cake last November celebrating his 88 years, he found the most heartfelt of his memorable utterances in-

scribed on its icing. "I am an English speaking union." One of his proudest boasts is, "Among Englishmen I have a special qualification, I am directly descended through my mother from an officer who served in Washington's Army. And as such I have been made a member of your strictly selected Society of the Cincinnati. I have my pedigree supported by affidavits at every stage if it is challenged * * * I feel on both sides of the Atlantic. In my mother's birth city of Rochester, N.Y., I hold the latch key to American hearts."

Not long ago I spent a day with Sir Winston at his beloved Chartwell in the beautiful countryside of Kent. During lunch I watched him rise from the anasthesia of his great age, lift his glass of hock and propose a "toast to the good health of your leader and ours." He spoke often that day of "undying fraternal association of your great country and mine." He said that if we are together nothing is impossible as a special relationship exists between the British Commonwealth and the United States. He mused on the eventuality of common citizenship but was "content to leave that to destiny whose outstretched arm so many of us can clearly see. I feel eventually this will come."

The 88th Congress has just begun. It could perform no more rewarding or auspicious first act than to pass with unanimity Senate Joint Resolution 215 already introduced into the Senate by Senator STEPHEN YOUNG, Democrat, and House Joint Resolution 866 by Congresswoman FRANCES BOLTON, Republican, into the House proposing honorary American citizenship for Sir Winston Churchill.

Some might consider this setting a precedent. If it were anyone but Sir Winston the point could be argued. Sir Winston is a precedent. Once before we so honored a Frenchman, the Marquis de Lafayette who fought by our side to help us win freedom. There is little time to lose if we are to make one of the greatest of our blood brothers, Sir Winston Churchill, truly one of us.

KAY HALLE.

WASHINGTON.

Another U.S. Installation Goes South

EXTENSION OF REMARKS OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. MICHEL. Mr. Speaker, it is a well-known fact that the State of Illinois has something of everything, yet it ranks 50th among the States in return of money from the Federal Government. Federal funds Federal projects, and Federal installations have an amazing habit of going over, under and around to everybody but us. The biggest economic barrier this State faces is the draining off of its wealth by the Federal Government while such funds go pouring into the economies of other States.

The Government is about to launch a new rocket test center costing \$500 million for construction alone, not to mention the sums that will continue to go for its operation. Once again, the funds are not going to Illinois, but from Illinois, and not borrowed money but real cash. Where is it going? Right smack in the same State where the Federal

Government has been defied and the Governor himself is under Federal charges. We do not believe in pork-barrel politics. We do not believe in doling out projects on the basis of political favoritism. But when folks in Illinois are good for nothing except paying more taxes than almost anybody else, it is time something was done by way of self-protection.

Mr. Speaker, under unanimous consent, I include the following editorial from the Peoria Journal Star under date of January 11, 1963, in the Appendix of the RECORD.

ANOTHER U.S. INSTALLATION GOES SOUTH

The United States is about to launch a whole new rocket test center. It will involve pouring into the State concerned \$500 million for construction alone, not to mention the sums of Federal money that will flow there constantly for its operation.

Where is this money going do you suppose? To the great State of Mississippi.

Here in the North, the Federal Government makes a big to-do about forcing integration in the South by means of troops, contract rules, housing moneys, and so on. By golly, you can't borrow Federal money to build segregated housing. This sounds good to the Negro vote districts of Chicago and New York, presumably.

But when it comes to pouring in real money, not borrowed, on a fantastic scale, where does Uncle put it? Right smack in the same State where Federal marshals and Federal troops and Federal courts have been defied, and the Governor himself is under Federal charges.

All the strokes of the pen made to bring economic pressure on the State of Mississippi are wiped out and more by bestowing upon them half a billion of our dollars, outright—for a start.

It looks as if somebody is playing both ends against the middle.

And you know who is in the middle—were folks in Illinois, who Washington obviously figures are good for nothing except paying more taxes than almost anybody else.

National Bargain: The FBI

EXTENSION OF REMARKS

OF

HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. JOHANSEN. Mr. Speaker, if any reminder is needed with respect to the efficient operation of the Federal Bureau of Investigation under the distinguished leadership of its Director, Hon. J. Edgar Hoover, such a reminder is provided by issuance of the Bureau's latest annual report.

A well-merited tribute is paid to the FBI and Mr. Hoover in connection with this annual report in an editorial appearing in the January 2 Detroit Free Press.

Under permission to extend and revise my remarks, I include the editorial:

NATIONAL BARGAIN: THE FBI

The annual report of the FBI has come along and, as in previous years, leads us to conclude that the agents who work under the direction of J. Edgar Hoover put out more energy than anybody else on the Federal payroll.

There is the never ceasing war against the Communists, whose endeavors in this country have been augmented in the past year by the Cuban situation.

As Mr. Hoover puts it in his report, "During even the most critical moments of the Cuban crisis, the party openly proved its loyalty to the international Communist cause. Its members stood unwaveringly opposed to our country's efforts to stop the Soviet Union's buildup of offensive military equipment in Cuba and to assure the removal of weapons already there."

Then there was the need to inquire into civil rights violations aimed at dissuading southern Negroes from voting. Identification work had to be done at scenes of disaster, including one airliner tragedy in France. FBI men assisted at more than 3,600 police schools, and gave instruction to police officers at the FBI's academy.

Felonies in violation of the Federal bank robbery and incidental crimes statute had a boom year, with 25 percent more investigated than in 1961.

With all this work to be done, and with the job done so well, the United States can well afford to lay out the money it costs to keep the FBI running.

But the fact is that the FBI costs American society nothing. Instead, it brings in a profit. The organization's operating appropriation is considerably less than the fines and recoveries its work produces.

This year the FBI's getback was over \$200 million, which is even higher than the figure we hailed a year ago. In 1961 it was \$148,421,690.

With a government so open to accusations of waste and inefficiency, it's greatly satisfying to read Mr. Hoover's report. The taxpayer gets his money's worth from the FBI, and no doubt about it.

A Resolution To Establish a House Committee on Captive Nations

EXTENSION OF REMARKS

OF

HON. HENRY C. SCHADEBERG

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. SCHADEBERG. Mr. Speaker, in reintroducing my resolution to establish a special House Committee on the Captive Nations, I must point out that one more country has been added to the list of captive nations since I introduced similar legislation a year and a half ago.

Cuba must be regarded as a captive nation. We have seen firsthand what has happened to the Cuban people under Communist tyranny—the heartache, the loss of liberty and property. Some have even sacrificed their lives. It should serve to remind us of the obligations we have to them and to enslaved peoples everywhere to aid in all practicable ways in their quest for freedom.

The Congress has a special responsibility to provide leadership in this vital freedom movement. And it must be more than mere lipservice in the form of resolutions and declarations and observances. It must take the form of action.

The purpose of a Committee on the Captive Nations would be to conduct

inquiry into and to study satellite countries and captive non-Russian nations to help them to regain their national and individual freedoms.

In faith the people of the captive nations of the world are looking to the United States for guidance. In giving it, let us never forget that the future of the free world is linked with the future of these captive nations.

It is my conviction that a congressional committee devoting itself to the study and recommendation of ways to further promote a peaceful offensive in the cold war would contribute tremendously to the prosecution of the cold war and to ultimate—and necessary—victory.

REA Mailing Privileges

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. MICHEL. Mr. Speaker, the *Glasford Gazette*, one of the many rural weeklies in my district, can always be counted upon to have an excellent editorial in each issue.

In the December 6, 1962, issue, the front page of the paper contained an outspoken editorial on one aspect of the REA program which has not received a great deal of attention to date.

Along with many other critical comments concerning this power hungry agency which will be forthcoming in this session, I wish to call the attention of my colleagues to this article. The editorial follows:

UNJUSTIFIED KID GLOVES

One of the difficult domestic problems with which the last Congress wrestled was the huge post-office deficit. The result was a postal service bill creating increases in various classifications of mail rates. Newspapers, for example, will pay three 10-percent increases with the first to take effect on the first day of the coming year.

However, Congress wore kid gloves when it came to publications of the rural electric cooperatives. Formerly, according to Editor and Publisher, these publications paid a one-half-cent rate. The new bill gives them a special rate of about one-eighth of 1 cent per copy.

The general manager of the American Newspaper Publishers Association states that there is "no justification for this special privilege." Another comment says, "so REA groups will now be able to enjoy a financial advantage which for propagandizing against their prime target, the investor-owned private power industry. Meanwhile, the publications of the private power industry will be compelled to pay the regular rates to tell their side of the story."

There are 28 REA publications. Their circulation is about 3 million. They carry advertising. They are all actually engaged in attempting to extend the REA scheme. And no one can say the REA co-ops, or anything connected with them, are poor and struggling enterprises in need of special help. The REA movement is big business—and it is a big business conducted with Government loans at below-cost interest rates, plus other special privileges, including tax

advantages, which are denied to private enterprise.

The least one can ask is that the REA co-ops operate on precisely the same basis as do comparable utilities in the production and distribution of electric power. This means paying the same costs—whether those costs be taxes, interest rates on borrowed money, or the mail charges on their publications. This country's rural electrification problem was solved long ago—more than 95 percent of all farms are using central station power or have it available. There once was but is no longer an excuse for giving the co-ops special privileges.

Asbury Theological Seminary Inaugurates New President

EXTENSION OF REMARKS

OF

HON. JOHN C. WATTS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. WATTS. Mr. Speaker, under leave to extend, I wish to incorporate herein an editorial appearing in the Lexington Herald, under date of October 19, 1962, relating to the inauguration of a new president at the Asbury Theological Seminary, which is located in my congressional district.

The growth which the institution has enjoyed over the years speaks for the ability and dedication of its leaders.

Under Mr. Frank Bateman Stanger, Sr., the new president, I have no hesitation in stating that the seminary may look forward to a continuation of the outstanding leadership which it has enjoyed over the years.

The editorial follows:

GROWING THEOLOGICAL SEMINARY INAUGURATES ITS NEW PRESIDENT

Asbury Theological Seminary, which in its 39 years has sent its graduates to pulpits throughout the country and mission fields around the world, has inaugurated a new president. Dr. Frank Bateman Stanger, Sr., who has filled the presidency since last May, was formally inaugurated the seminary's third president last week. He succeeded Dr. Julian C. McPheeters, who now is heading the school's 5-year expansion program.

Founded in 1923 by the late Dr. Henry Clay Morrison, Asbury Theological Seminary by 1942 had 89 students, four professors and one building. It now has grown to a student body of 300, a faculty of 22, five major buildings, an annual budget of more than a half million dollars and an endowment of \$5 million, and the expansion program already has made possible the planning of other buildings.

Dr. Stanger, a graduate of Asbury College, Princeton University, and Temple University and for 25 years a Methodist pastor, called attention in his inaugural address to the theological tenets of the interdenominational seminary he heads.

"This is a seminary with a confessional theology," he said. "We hold firmly to the basic beliefs of historical evangelical Christianity. We believe in the full inspiration and absolute authority of the Word of God. We affirm a trinitarian view of God."

He spoke, too, of the necessity for training the ministers of today for the "new society," the modern world in which they serve. "Theology, to be useful, must speak

to the contemporary situation," he stated. "But even then, theology is not the chief thing. Jesus Christ is. Therefore, theology must interpret Jesus Christ to each generation."

The Leader extends its congratulations to Dr. Stanger and its sincere wishes for his success and his school's continued growth.

The New Bronx Post Office

EXTENSION OF REMARKS

OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. BUCKLEY. Mr. Speaker, on January 5 last, in Bronx County, there was officially dedicated the new Bronx post office, a completely separate facility for the use of the citizens of Bronx County. I was a participant at these dedication ceremonies and took pardonable pride in the fact that the creation of this post office was in a large measure due to my efforts over the years to obtain this badly needed public facility for the residents of Bronx County. The dedication ceremonies were impressive and among those present were such distinguished citizens as the former Postmaster General of the United States, the Honorable James A. Farley, the present Assistant Postmaster General of the United States, the Honorable Frederick C. Belen, along with the Honorable Sean P. Keating, regional director of the New York region of the Post Office Department. In addition to these present and former postal officials there was also present the president of the Bronx Board of Trade and an outstanding Bronxite, Donald Darcy. The invocation was delivered by Rt. Rev. Msgr. Bernard J. Fleming, principal of Cardinal Hayes High School and the benediction was pronounced by Rev. William J. Kalaidjian, pastor of the Bedford Park Congregational Church. The present postmaster for the new Bronx County post office, the Honorable Louis Cohen, pointed out in a few short sentences how important and how needed this new agency would be when in the course of his remarks he stated that this office would handle over 2 million pieces of mail daily and do more than \$12 million worth of business a year.

I have always been proud of the fact that I have been a lifelong resident of one of the finest communities in the country, Bronx County, and I was deeply proud to participate in these ceremonies on January 5, both as a citizen of that community and as a Representative in Congress from Bronx County.

Under leave to extend my remarks I include an excellent editorial from the Bronx Press-Review, of January 10, 1963.

THE BRONX POST OFFICE IS ESTABLISHED

An important and historic move was celebrated on Saturday, when the establishment of a Bronx general post office was celebrated in the former Bronx Central Annex post office.

Ceremonies signaled the start of a separate post office for the Bronx, which formerly had

been serviced through the New York, N.Y., general post office in Manhattan.

Under the direction of Postmaster Louis Cohen, the Bronx post office will manage its own affairs, routing 2 million pieces of mail a day, at a total business level of \$12 million annually.

The dignity and importance of the Bronx deserved such a move. Even more, it made good commonsense in terms of service and economies, to have the Bronx handle its own mail directly instead of transshipping it through the downtown general post office.

This piece of status building of the Bronx comes at a time when the whole direction of government is toward a centralization that has some objectionable features. The office of the borough president just last week suffered certain diminutions under charter reform. Added efficiency and administrative shortcuts are good in metropolitan and megapolitan areas, to be sure, but the sustenance of local pride and identity is being overlooked in the process.

We're glad that the new post office for the Bronx not only brings to us an activity that rightfully belongs here, but that in the midst of all of the talk of centralization it is recognized that this exception in decentralization is recognized as being impelled by indices of efficiency.

Pay of the Military

EXTENSION OF REMARKS

OF

HON. CHARLES M. TEAGUE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. TEAGUE of California. Mr. Speaker, the following letter from L. R. Heron, commander, U.S. Navy, retired, clearly, unselfishly, and objectively sets forth pay and related problems of the military. I commend it to my colleagues:

VENTURA, CALIF.,

January 2, 1963.

HON. CHARLES M. TEAGUE,
House of Representatives,
Washington, D.C.

MY DEAR CONGRESSMAN: The purpose of this letter is to bring to your attention, my views on the matter of proposed increases in military pay, which I understand will be considered during the forthcoming session of the Congress, together with the related matter of military exchanges and commissaries, the continuation of which is again being attacked by powerful nonmilitary pressure groups.

Although the Department of Defense recommendations to the Congress have not been made public, considerable data in this connection has been printed in the Army-Navy-Air Force Journal, which is normally both accurate and authoritative.

With respect to the pay measure, it is understood that the traditional tie-in between active duty and retired pay may be ignored in the recommendations. With respect to the issue of exchanges and commissaries, it is understood that the Department of Defense is not unsympathetic to the idea of imposing further stringent restrictions on the operation of these.

I must emphasize at the outset that my protests are not generated because of selfish reasons. As a highly trained engineering specialist in the Navy, I found it not too difficult to obtain a very satisfying and lucrative engineering position in industry upon my retirement. Consequently, the 1 percent per annum cost-of-living increase which

may be suggested by DOD, amounting to \$4 per month in my own case, would have little effect on my standard of living, neither would the \$95 per month realizable if my retired pay were based on the to-be-suggested active duty scale for an officer of my grade make substantial difference, however pleasant the increase might be.

I am vitally concerned for those of my colleagues possessing no such technical skills, for those who retire at an age when a transition into a civilian position is difficult, if not impossible, and, equally important, to the effect on young career officers now in service, or the future recruitment of such officers, in the face of the ever-continuing whittling away of service fringe benefits.

It is a matter of practical fact that reasonable increases in military pay are essential to the national security, to insure retention of the type of people necessary to operate and maintain the incredibly complex weapons in use today, and the services are not altogether successful in retaining, let alone obtaining, such personnel. I am not amused when I reflect that junior civilian engineers now working for me earn about 10 percent more than I did as an active duty commander in charge of 2,200 personnel at the time of my retirement in 1958. Company paid health and life insurance benefits, plus noncontributory retirements benefits equal, or in most cases exceed, those offered by the service. Per diem, payment of actual movement costs and realistic relocation allowances, and similar benefits, more than offset the lack of exchange and commissary privileges which accrue only to the military.

As a consequence, the armed services today attract two types of personnel, the highly dedicated and the mediocre or incompetent.

We do, fortunately, have many, many dedicated personnel in the services, who, as one senior officer said a few years ago, "live on in genteel poverty, moderately indifferent to money."

The many inconveniences and the general instability in family life experienced by service families are too well known to recount them. Their income is in the middle to low group, so along with the instability, they must forgo many of the conveniences available to their civilian contemporaries. In spite of this, most prefer to stay with the services, although many weaken in the face of the constant whittling away at fringe benefits and most particularly, as the result of broken promises.

The tangible values of fringe benefits are highly touted by officer and enlisted procurement officers, and equally acclaimed, if not overstated by officials of the Department of Defense. Typical examples of benefits which are fast disappearing are:

1. Post exchanges and commissary stores: These are now no more than simple conveniences as a result of restrictions imposed in recent years. Severe limitations are placed on the type of item that may be stocked, and in many areas, chainstore operators actually provide such items to the civilian population at substantially lower costs. Only on such staples as fresh milk, bread, and the like, are any real savings realized. To impose further restrictions at the bidding of selfish pressure groups would be tragic.

2. Medical care: Despite medicare, the medical care available to military personnel, more particularly to their dependents, is very poor, except in certain selected areas, simply because facilities and medical officers are lacking or do not exist. Retired personnel are in a few cases treated very well, but only at the expense of active-duty personnel, but in most cases, receive very shabby treatment because of the shortages which exist. (In our area, Port Mugu has only 4 medical officers for some 5,000 military and civilian personnel, and for 7,500 military, civilian, and dependent personnel, Port Hueneme has

only twice that number.) As a result of this, many active-duty and retired personnel are literally forced into paying for medical care out of pocket. Thus, promised medical care during active duty and upon retirement is a paper promise which often cannot be met.

3. Retirement opportunities: In the case of officers, conflict-of-interest legislation, interpretations by the Comptroller General, and so forth, impose serious restrictions on employment of retirees. As the result of accusations by certain Members of Congress, action by the executive department at the behest of pressure groups, individuals with years of service in honorable careers find themselves accused of perfidious conduct, and many employers discourage hiring them out of concern for the possible trouble their presence will generate. Employment opportunities are decreasing as the number of retirees increase. The real estate, securities, and insurance fields are glutted, and few qualify to be teachers. As a result, more and more retirees are forced to live primarily off retired income, supplementing this as best they can. Failure of the pre-1958 retirees to receive pay equalization that year is now to be further complicated by the offensively low suggestion of 1 percent per annum cost-of-living increase, although it is hoped that there will be an adjustment for some to the 1958 scale.

Realistically, substantial pay increases for the ever-increasing number of retirees could be fiscally unsound for the Nation—yet all concerned were promised the tie-in between active-duty and retired pay. Some form of contributory retirement may be desirable for the future to insure economically sound programs. Resorting to a 1-percent-a-year increase is not the answer, and may have retirees looking forward to the drab existence of pensioners.

I would like to believe my statements are truly representative of the situation which exists today. Although retired, I am based at Port Mugu for my company, live with the military, understand their problems, and of course, as a retiree, have firsthand experience with the problems in this area. The local commands do all they can to help, but they have limitations imposed by higher authority.

After reviewing the foregoing, I hope you may find it possible to support all or part of my viewpoint in the Congress, and to call the contents of this letter to the attention of your colleagues.

Your consideration and cooperation will be much appreciated.

Respectfully yours,

L. R. HERON,
Commander, U.S. Navy (Retired).

The Seeds of Fascism

EXTENSION OF REMARKS

OF

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. NELSEN. Mr. Speaker, in the moves toward greater government domination of our lives are the seeds of fascism, Curtis Boeder, editor of the *Arlington* (Minn.) *Enterprise* warns us in an editorial which so impressed me that I include it, under unanimous consent, in the Appendix of the RECORD. Truly we must be on guard if our free institutions are to survive.

The editorial follows:

THE SEEDS OF FASCISM

Some thoughtful people have expressed a fear that a form of fascism may, in time, reach power in this country. If it ever does, it will be the evolutionary consummation of a trend which has been subtly and insidiously undermining free institutions for many years.

The matter is not an easy one to discuss with any precision. For one thing, the meaning of words often tends to blur, and the problems and situations they are intended to describe often lose contrast. One totalitarian state—whether it be called Fascist, Communist, or anything else—is very much like another in its fundamentals.

That aside, the causes of fascism, and the tools which are used to create it, are spotlighted by history. The technique is to bring about a marriage of the instruments of power in a nation—its government, its industries, and its labor in cases where the unions are strong and yield vast influence. The ambitious leader uses these instruments with utmost care—and the utmost cynicism—to achieve his purposes. He woos industry, by convincing it that by going along with him it will achieve an advantage over labor. And he woos labor with precisely the same siren song in reverse.

The stage is set for fascism—or totalitarianism of any kind—when the resources of a nation become overly dependent on its government. And, certainly, we have moved far in that direction. The Government is the principal customer of many huge companies. Beyond that, Government, by its laws and regulations, its bureaucracies, its thousand and one departments and agencies, and its own business operations, plays a dominant role in the life of the Nation that would have seemed both impossible and intolerable even half a century ago.

Wars—hot and cold, past, present, and possible—have been enormous forces in producing this trend. A \$50-odd-billion defense budget alone is a continuing threat to fundamental liberties. All we can do about this is to minimize that threat in every way possible, by working to prevent government domination of our lives in every area where the national security does not clearly demand it.

Beyond this, the Fascist danger lies in areas which have no connection with our safety in a chaotic world. These areas we describe with a general term—the welfare state. This, carried to its logical conclusion, is a state in which government is all things to all men, offering a dubious cradle-to-the-grave security. The cost in dollars—tax dollars—is exceeded only by the costs in loss of liberty, self-reliance, and individual pride and responsibility.

So the seeds of totalitarianism exist. Only an informed and determined public, dedicated like its forebears to the principles of freedom, can make sure that they will not sprout into choking weeds.

The FBI: Where Would We Be Without It?

EXTENSION OF REMARKS

OF

HON. H. ALLEN SMITH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. SMITH of California. Mr. Speaker, the Federal Bureau of Investigation has an enviable record in its service to the citizens of the United

States. The Hartford Courant, of January 4, 1963, has pointed this out in an editorial that I would like to bring to the attention of my colleagues. I submit it herewith:

THE FBI REPORTS

Among the more interesting recapitulations of the old year is the statistical statement of the FBI showing an increased activity in almost every phase of its work. J. Edgar Hoover calls particular attention to the sharp increase in bank robberies. "An average of 100 robberies, burglaries, and larcenies of banks and other financial institutions covered by statute have been reported to the FBI each month this year," Mr. Hoover reports. This represents better than three a day, and is an increase of more than 25 percent over the previous year.

As usual the FBI has during the year dealt with a wide variety of malefactors ranging from murderers to spies and saboteurs. One of the more spectacular feats was the arrest of the Cuban gang, complete with their arsenal, before they set out on their mission of destruction and terror. The FBI has assumed an extra load because of the civil rights conflict in the South, and has spent much time and energy tracking down the church burners in that section.

The figures of the report are staggering. More than 1,400 fugitives were apprehended, and 12,700 convictions were obtained. Fines amounting to more than \$200,000 were assessed, compared with \$148,000 last year. Another feat was the recovery of 19,000 stolen automobiles under the Interstate Transportation Act.

This, of course, represents only the highlights. The day in and out work of laboratory testing, identification in tragedy as well as crime, the local and regional police schools are all integral parts of this picture. Perhaps Mr. Hoover's greatest achievement is the fact that he has built up this tremendous organization without ever letting it become one that treads on civil rights. Instead the FBI is respected and admired, as a matter of national pride and satisfaction. Don't know what we could do without it.

America's Basic Rights

EXTENSION OF REMARKS OF HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. CELLER. Mr. Speaker, at the suggestion of our former colleague, Hon. John H. Ray of New York, I am pleased to present an address delivered by a distinguished rabbi, who has been a faithful shepherd of his flock and who, by his wisdom and erudition, educated parishioners in his temple in the ways of peace and righteousness. This message, delivered by Rabbi Charles E. Shulman, of the Riverdale Temple, New York City, before the covenant breakfast at Staten Island, N.Y., on December 9, 1962, is as inspiring as it is appealing to the human heart. The address follows:

AMERICA'S BASIC RIGHTS

Mr. Chairman, this breakfast attended by hundreds of men and women of the Catholic, Protestant, and Jewish faiths is a significant testimony to the validity of the process of American democracy. It could not happen on the scale manifest here in other lands because the United States, being an amalga-

tion of different racial stocks, religions, and nationalities under one flag, has long pointed the way to countries more rigid in social living than this country and far less spontaneous in friendly recognition and respect for differences than societies in other parts of the world. This is the 17th year that these breakfasts have been held in the Staten Island community, and in that time awards have been given impartially to Catholic, Protestant, and Jewish citizens, colored and white alike, who served this community with distinction. On this occasion you are honoring Thomas Ryan, an outstanding Catholic layman who has contributed unselfishly and nobly to the welfare of your borough on so many occasions with his heart, his spirit, and his means. He richly deserves the honor you are bestowing upon him, and his family gathered together with us this morning may be justly proud of him as we all are for his meritorious display of citizenship in your midst.

I might add that I would consider it a great compliment if his little daughter Gina applauded my remarks as vigorously as she did her daddy's just a few minutes ago when he acknowledged the B'nai B'rith Award to him for the year 1962. It is this type of citizenship embracing a total community rather than a particular sect or church or organization which makes America a unique nation among the nations of the world. We have our faults. We have our unsolved problems. But when we Americans live up to our potentialities as a free people we display the human values that oftentimes bring us the admiration and the envy of those not so fortunate as we are to breathe the air of freedom daily.

There are lands in our contemporary international society where people would gladly change their vaunted material possessions for the intangible values under freedom which are ours—inalienable and enduringly so as long as this Republic lasts.

Communist dictatorships in Russia, China, and the satellite countries never tire of boasting that the future belongs to them, and not to the democratic lands. But nothing in their program—neither their achievements in space nor their efficiency in controlling the channels of public communication—substantiate their claims. In fact, we have many stories that seem to indicate the reverse of their public boasts and show that they are far less secure in their hold on the people than they would have the world believe. One of those stories concerns the party boss of one of the Communist satellite countries who was making a tour of the State institutions with his secretary. They came to an orphanage. The secretary asked the head of the institution how much was allocated daily for the care of each child. "Ten zlotys," was the reply. "Cut the amount in half," the secretary ordered the official. They visited a prison. The secretary asked the warden how much was allocated daily for the prisoners. "Six zlotys per prisoner," was the reply. "Make it 25 zlotys," he secretary ordered. The party boss called the secretary aside and whispered to him: "Are you insane? You reduce the care of each child in the orphanage and you raise enormously the sum for each prisoner. Why do you do this?" "I know what I'm doing," the secretary answered, "I'm looking out for our future. And it isn't going to be spent in an orphanage."

America is still growing despite our shortcomings. Next year is the 100th anniversary of Abraham Lincoln's immortal Gettysburg Address recalling to his fellowmen the dignity of their heritage stemming from the American Declaration of Independence. The unfinished tasks of our democracy will be fulfilled as we grow to a greater understanding of the basic rights inherent in our citizenship. These rights have never

been absent in our national existence. Were they ever to be lost sight of by Americans, serious harm would befall our way of life. It is good on such civic occasions as these to recall the principles which draw the allegiance and respect of every generation of Americans.

I. THE RIGHT TO BE DIFFERENT

America is essentially a nation of differences, differences of religion and ethnic patterns, differences of sectional thinking as reflected in the Halls of our Congress in Washington, differences in economic views and social views and educational views. Yet it is a remarkable fact that all these differences are harmonized in both war and peace in our land. In war the call to the colors to protect and defend our Nation from external foes brings every stratum of our society into uniform. But the differences in background and culture are not lost even in the military organizations in time of war. I recall my service as chaplain in the U.S. Navy in the Second World War. Both here in this country and in the far reaches of the South Pacific Islands where I was on the staff of the commander of our 7th Fleet, religious services for every religious denomination proceeded apace on the sacred days of worship without let or hindrance. Through them each American boy was enabled to find his own social and religious outlet in company with his own. And in peacetime life of our Nation it would be difficult to match the example of differences of origin and nationality with those say of a Notre Dame football team whose names cover ancestries from many lands of the world.

II. THE RIGHT OF OPPORTUNITY

One of the wonderful gifts which America offers its people is the chance to advance in life. The Horatio Alger society which represents every section of our country is an interesting illustration of the march from rags to riches. Here in this very audience in Staten Island citizens are many examples of people who have climbed the ladder of life from humble beginnings. Your guest of honor today and his family earned their present status not through inheritance but through taking advantage of the American opportunity and working hard to achieve the rewards of honest industry. In contrast to people in other countries, each individual here has the equality of opportunity. Each can make his life what he wishes it to be. The stories of our immigrants are legendary in the unfolding of their accomplishments. A refugee from European tyranny comes to our country only 25 years ago, and in that short span develops a sewing machine industry to fantastic proportions.

A Jew by the name of Albert Einstein, forced to leave the European continent by German intolerance, finds a new home here and gives America the secret of atomic energy. The illustrations can be multiplied indefinitely to cover every walk of life. Few have expressed the quality of American opportunity better than a former President of the United States, Herbert Hoover, who said:

"I have traveled the world over. Every homecoming was for me a reaffirmation of the glory of America.

"Each time my soul was washed away from the relief of grinding poverty of other nations by the greater kindness and frankness which comes from the acceptance of equality and the wide-open opportunity to all who want a chance. It's more than that. It's a land of self-respect born of free men. I have had every honor to which any man could aspire. There is no place this whole earth except here in America where the sons of man can have their chance in life that has come to him * * * The mention of the word 'America' flows from one perfect source. Within the soul of America is freedom of mind and spirit. They alone are the open windows through which pours the sunlight

of human spirit. Here alone is human dignity, not a dream but an accomplishment. Perhaps it is not perfect. But it is more full of its realization here than in any other place in the world."

III. THE RIGHT TO DIGNITY

The greatest value of American citizenship is its dignity. No matter how great the wealth or power, how comfortable the existence, how successful the enterprise, if a man is not granted his dignity as a human being, as a child of God, he is incomplete and he suffers the status of inferiority of both position in life and citizenship. Our problem with regard to opportunity for the Negro is difficult because we fail to measure it in terms of human dignity. This is why we often lack understanding of what the Negro wants. He is not satisfied solely with opportunity to be on a material footing with his neighbors. Nor is he satisfied with equal but separate facilities for his growing children in the schools. He knows that money cannot buy respect. And he has long realized what the U.S. Supreme Court enunciated so clearly in 1954 that when children are educated under conditions which keep them apart from their neighbors' children they grow up strangers in their own environment. When a member of the Senate of the United States expresses a personal opinion while on a visit to Africa that no black person on the African continent has made progress in terms of Western civilization except under the guidance of Europeans he conveniently overlooks the fact that for over three-quarters of a century when the Belgians ruled over the Congo they never permitted a black person, no matter what his education and intelligence, to hold a higher officer rating than a sergeant in the Congolese Army.

Given the opportunity there is no reason why colored people cannot achieve any status in life comparable to white people. The trouble is that we are often blinded by a priori judgments which render us incapable of granting others the capacities we own. The Negro poet, James Weldon Johnson, in his lines "We to America" challenged us to answer his questions:

"How would you have us? As we are
Or sinking neath the load we bear?
Our eyes forward on a star?
Or gazing empty at despair?"

"Rising or falling? Men or things?
With dragging pace? Or footsteps fleet?
Strong, willing sinews in your wings?
Or tightening chains about your feet?"

The colored people in our country are, in essence, saying to us: For over 300 years we helped to light the fire of American life. All we wish is to be permitted to warm our hands beside that fire.

Here in this audience representing a cross-section of an American community we rehearse the American values as they are demonstrated in the respect we show for the basic rights which distinguish American life and give it such a high position among the peoples of the world—the right to be different, the right of equality of opportunity to make our lives worthy of our years and the right to the dignity of a human being, Jew or Christian, black or white, as a child of God. We have not always shown our capacity to advance these rights. But as citizens we are conscious of their presence or absence in our lives because they are the foundations of our national life. With them democracy flourishes. Without them democracy dies. No matter how far we may be from our goal we have never lost sight of it. As the Attorney General of the United States, Robert Kennedy, has told us:

"It is an unfinished society that we offer the world, a society that is forever committed to change, to improvement and to growth, that will never stagnate in the

certitudes of ideologies, or the finalities of dogma. A hundred years from now there will be new ways of making life better or giving man fuller opportunity to fulfill his hopes. We have no infallible party, no infallible creed, no all-purpose blueprint. We do not propose to chain mankind to a system of false logic. We have instead faith in human intelligence, human will and human decency. And we know that in the long run these are the forces which will make history."

Urban Mass Transportation Act

SPEECH

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. SHELLEY. Mr. Speaker, I rise to urge that the 88th Congress enact the Urban Mass Transportation Act of 1963. This day I have introduced legislation providing Federal grants and loans for the development of comprehensive and coordinated mass transportation systems. This measure will authorize the Administrator of the Housing and Home Finance Agency to provide additional assistance for mass transportation systems in metropolitan and other urban areas in the Nation.

It is my firm belief that if our urban areas, both large and small, are to escape strangulation by traffic congestion, the efforts of all levels of government are needed to solve the critical transportation problems now confronting them.

The transportation problems of the urban areas are of true national concern. Seventy percent of the Nation's population live in urban areas and it is here that the highest rate of population growth is occurring. It is evident that because our Nation is predominantly an urban nation, the solution of urban problems is very much a part of the current worldwide race for economic, scientific, and cultural leadership. The strength of our very Nation will be demonstrated in the cities. These core cities of 50,000 or more and their surrounding urban and suburban territory have been the fastest growing sections of the country since the start of the century. Over two-thirds of the population of the Nation today resides in urban areas.

One of the key and unique pressures that faces the city today is the burden of handling a daytime population 30 to 50 percent greater than the residential population. The continuing decline in the use of mass transit facilities is making this task enormously more difficult. Within recent years heavy emphasis has been placed on building or planning freeways to the central cities and by adding to the supply of parking spaces. It strikes me as apparent that a highway program alone will fail to solve the problem of accessibility for many cities as they are constituted today. The question of accessibility has a great deal to do with the decision of the businessman to stay downtown or the decision of the shopper to go there. In fact, the very

question of accessibility to the modern city is closely tied to the question of the survival of the central city.

Mr. Speaker, I believe it to be a fact that the movement of the great masses of people into and out of the central city can be accomplished only by a mass rapid transit program. Nationally, it makes little difference what form this transport takes—elevated trains, subways, surface trains, buses, or a combination of any or all of them. What is clear is that the fact of galloping congestion in our urban areas must be met—and with dispatch.

Our highway programs, our urban renewal projects, and all urban planning assistance programs will become more effective with the enactment of the Urban Mass Transportation Act of 1963. Under this act Federal aid will be given to State and local government agencies. They are in the best position to keep abreast of the trends which indicate need for specific transportation facilities and the best ways to meet local problems.

Mr. Speaker, I feel we have come to a point in the development of our Nation at which neither the Federal Government nor the American economy as a whole can afford the expense and damage if metropolitan areas fail in their productive function. Enactment of the Urban Mass Transportation Act will do much to insure the good health of the American city.

Medical Care for the Aged

EXTENSION OF REMARKS

OF

HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. ROUDEBUSH. Mr. Speaker, the issue of medical care for the aged financed through the social security system will confront the 88th Congress during the ensuing months.

Undoubtedly, the majority of Members of the U.S. House of Representatives have formed an opinion on the controversial program after much study of the issue.

Likewise, many millions of Americans have strong sentiments, either pro or con, on the proposal offered by the administration.

One of the most thorough and well-documented studies of the entire compulsory health insurance program brought to my attention is a 40-page research paper authored by Mr. John B. Moody, a college preparatory senior student at Waveland High School in Montgomery County, Ind.

This outstanding Indiana student has managed to grasp all facets of the controversy and presents a brilliant study of the dangers and pitfalls in such a program, together with a detailed list of alternatives to the Socialist approach.

It is a privilege to present Mr. Moody's conclusions and general summary, which follow:

MEDICARE SUMMARY BY MR. JOHN B. MOODY

U.S. medicine matches any in the world. With all of our medical advances we can see where we have gotten a rise in the cost of medical care. Our people over 65 have twice as many medical expenses, with two to three times as much chronic illness. Yet, they have less income a year.

Compulsory health insurance is a possible solution, and may be the easiest answer. This would be in the form under social security. It would cause a rise in social security taxes of one-half of 1 percent of the first \$5,200. This would cover 14.25 million of the aged. This insurance would cover hospital bills and would leave the other medical expenses to the patient. Under this insurance, we would have 3 million of our aged still not receiving benefits.

Every European country, with the exception of Finland, provides health protection for all its people. But Britain's NHS cost \$2,520 million in 1961. To put it another way, they are living in a welfare state which costs them one-half of all taxes, or one-sixth of the nation's output. This is penalizing enterprise and initiative. These countries are truly socialistic, and I think most Americans don't want this type of government in our country.

One thing which is developing very fast is our prepayment medical plans. This can be less expensive with even better medical care. Several plans are being opened to people over 65, which can be a helping factor to them. Voluntary health insurance is growing faster than ever before and covering 135 million Americans. Health insurance plans are now open to all age groups with no physical examination. Our American aged can get complete medical care coverage for about \$15 a month. With still other plans, the aged can get coverage for those in the very low-income group.

Doctors fear compulsory health insurance because it will be a form of socialized medicine, and will take the power in providing medical care for Americans away from the doctor. They also fear it will lessen the quality of the world's best medical care. Federal legislation and intervention cannot educate people to practice preventive medicine. Persons with imaginary ills, lining up to receive their "free" Government-prescribed medical care will not result in a healthier nation. Rather, it will make us have a shortage of hospital beds such as happened in Britain and Canada. Doctors have introduced a new health-insurance plan which covers doctors fees and hospital fees for \$13 a month, and much more than the administration's plan does. The AMA has urged its physicians to adjust their fees not only in relation to the proposed Blue Shield plan, but also in relation to any proposed health-insurance coverage for people over 65. It is also been a custom of our doctors to treat patients who cannot pay. They take care of these patients just like any others.

The compulsory health-insurance plan has many things wrong with it. It would cost millions in payroll taxes to pay for medical care for a few who do need it and for millions who could be self-reliant. What would keep it from being made to cover all people under social security, such as widows and dependent children? Why stop at the age 65? Why not 50 or 40? Under this plan the road is wide open to socialized medicine.

Doctors are doing all that's possible to provide for the best medical care coverage. Voluntary health-insurance companies have also been working hard to provide low-cost plans with complete coverage. There are several aged who cannot afford even these. For them let's use the Kerr-Mills law, which is now in effect in 38 States and completely under State control.

For many aged they would have to skimp to pay for this insurance. But that is what our country is built upon, free enterprise and freedom. If they can't afford this small amount, the children should help out. If 1 mother can support 12 children, surely 12 children can help support 1 mother. Let's keep our freedom in American medicine; even better, let's keep out freedom in all things. Millions don't want compulsory health insurance for the medical care for our aged, but are they willing to fight against it to save medical freedom and theirs? As Michael B. Petrovich said:

"Most people don't want freedom, or at least find it very painful. A freedom which becomes too easy and ceases to demand loses its value. Freedom is not at all easy. Freedom is difficult."

Hon. Robert S. Kerr

SPEECH

OF

HON. WILBUR D. MILLS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. MILLS. Mr. Speaker, the profound shock which came to all of us on learning of the sudden and tragic passing of ROBERT S. KERR cannot be expressed in words. This sad and distressing news reached us as the new year was dawning, but the impact of the tragic event will be felt for years to come.

From the wellsprings of the earth of the Oklahoma frontier a towering oak arose. This giant of the forest was BOB KERR. He arose from humble beginnings to great heights. From the log cabin of the western frontier to the highest councils of State and Nation ROBERT S. KERR blazed a trail of leadership which few have ever matched. In conflict and in peace, on the battlefields of World War I and during the cold war of these last decades, he rendered devoted service to his Nation.

BOB KERR's passing is a profound personal loss to me. He was my close friend. I came to know him quite intimately, particularly so in recent years. I have worked with him on literally hundreds of legislative projects, both large and small. The most recent of these was the Revenue Act of 1962. The extent of his contributions to the public interest cannot be described here today. Who can, in the metes and bounds of a few words, show how this great man labored over the minute details of legislation and refused to face even the possibility of defeat? I can with sincerity and vigor offer my testimony wholeheartedly to all those qualities and characteristics which have been associated with him by those who have spoken before me. Above all, I can testify to his character, his complete dedication and singleness of purpose in accomplishing great objectives, and the enormous capacity for successful leadership which was his.

The tremendous power of his intellect and innate brilliance of mind, combined with his driving energy, his diligence and

great strength of character, propelled him to the forefront of every endeavor which he ever undertook. His legislative talents and his enormous capacity for reaching solutions in the public interest—matters to which he had devoted himself especially since coming upon the national legislative scene in 1948—are known to all his colleagues and especially those of us who were privileged to work with him on particular projects of great significance and importance to the Nation.

The loss to the Nation in the passing of BOB KERR can only inadequately be described by those of us who speak today. Historians will, I am confident, accord him a very large place and high stature in the account of these years in the life of our great Nation.

To his family I offer sincere and heartfelt condolences. They can take solace from the abiding knowledge that his life and works contributed great and good gifts to the lasting service of mankind.

Rules Committee

EXTENSION OF REMARKS

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. COLLIER. Mr. Speaker, now that the vote has been taken, I take this opportunity to make a brief résumé of and express my deep disappointment in the vote on the House Rules Committee for the millions of Americans who voted for the Republicans in this last congressional election. It is impossible for me to comprehend the principles upon which the majority party has voted, for it was the majority party which usually voices its desire for the right of the minority. Now most of them have voted against giving to the minority in this House equitable representation. The Republican conference on Tuesday, January 8, 1962 adopted a series of three fair play amendments which were presented by the Honorable Mr. FORD.

First. An increase in the size of the House Rules Committee to 15 members based upon numerical apportionment of the House of Representatives, which in the 88th Congress, controlled 3 to 2 by the Democrats would mean a committee of 9 Democrats and 6 Republicans.

Second. An increase in minority staffs of House committees to a total also proportional with overall House minority membership thus giving Republicans 40 percent of committee staffs in contrast to the current overwhelming and unjust control of the staffs of a number of important committees by the majority.

Third. A guarantee of equal time for the minority in debate or consideration of the joint House-Senate conference committee reports on the House floor. The majority party in the House now has the power to completely dominate time in this regard and has in the past abused

this power. The amendment did not ask for 48 percent, but just 40 percent based on the actual number of Republicans in the House and they have now denied our request and given us the unjust 33 percent. The fact remains now that the Rules Committee will be nothing more than an open door for the liberals in the National Capital without proper representation for the millions of American people who voted for the Republican congressional Members. The theory that without the enlargement of the Rules Committee the majority would be unable to obtain their wishes in the House is a fact unfounded since everyone knows that by the use of the discharge petition, a simple majority of the House can bring a bill to the floor.

Remarks by B. M. McKelway, Citizens' Crime Commission Dinner, Shoreham Hotel, Washington, D.C., December 10, 1962

**EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER**

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1963

Mr. BECKER. Mr. Speaker, in the past year I have been fighting for the passage of legislation necessary to correct the ever-increasing crime in the District of Columbia. This matter is well known to every Member of Congress.

I am inserting herewith, a speech made by Mr. B. M. McKelway at the Citizens' Crime Commission dinner on December 10, 1962.

The statements contained in this speech need no elaboration by me but it certainly lends impetus to the necessity for immediate action by the Congress and hope that it will help speed necessary and far-reaching legislation.

No one knows better than I, that we do not stop this ever increasing wave of crime by merely enacting legislation to punish lawbreakers and that other steps must be taken to cure the cause, and create a decent atmosphere in which law-abiding citizens can live without fear. But until such time, legislation to punish the evildoers is vitally necessary and Mr. McKelway's speech points up without a doubt the urgency:

I am not a spokesman for the public. I am here merely as a humble member of at least that portion of the Washington public which is becoming conscious of the frightening loss of certain rights hitherto regarded as unalienable—the right to walk in safety on the public streets of this city and the right to security in our homes or places of business.

These rights are being constantly violated in Washington. And one of the most insidious dangers accompanying the loss of these rights is that the loss may become taken for granted as inevitable, and regarded merely as the symptom of the diseases of poverty, ignorance, and environment.

It may be true that alarming forms of singularly depraved, vicious and even sadistic crimes against the public are merely the symptom of a disease that afflicts our urban society. It may be true that it is more important to attack the disease than to become too much concerned with the symptoms.

But if this philosophy becomes widely accepted; if the commission of vicious crime against innocent people is rationalized and even condoned as merely the symptom of a disease, and that it is futile to attack the symptom as long as the disease remains, we face yet another danger, for the symptom may become more fatal to our society than the disease diagnosed as producing it.

In fighting disease, the medical profession does not fail to treat the symptoms with all available knowledge and vigor merely because the prevention or cure of the disease is yet to be discovered.

But in crime we are sometimes advised to take the opposite course. We are told, in connection with some outrageous crime, that its commission is not really the fault of the criminal but the fault of society, or of the community. I doubt the wisdom of this generalization, or that it is supported by the truth. It is a negative and self-defeating approach to the problem of violent crime. It implies a readiness to condone crime as long as others among the numerous ills that beset mankind remain unremedied.

The logical fruit of this tacit condonation of crime is acceptance of the idea that crime is the unavoidable product of conditions for which the criminal is not responsible. That idea encourages crime, by persuading those inclined to commit crime that they are, in effect, blameless, having been forced by society to go out on the streets and rob or maim the first person who comes along.

At any rate, the doctrine of public responsibility for violent and unprovoked crime produces an interesting anomaly.

We are members of a society which has seen fit to compensate the victims of destitution and unemployment; to lighten, by provision of cash, the burdens of the blind and unemployable; to recompense the worker who through no fault of his employer is injured on the job; to pay the disabled veteran for his sacrifice; to reimburse the farmer who sticks to assigned allotments and refrains from planting more than his Government tells him to plant. We spend substantial sums (as Mr. Clemmer has indicated) in attempts to rehabilitate criminals and return them to normal life. Much of the time of our civil courts is occupied in fixing damages due to the victims of mishaps, in which provable negligence by somebody else has played a part.

The really forgotten men and women of this same society are those innocent and law-abiding citizens who, through no fault of their own, are robbed, raped, beaten, or murdered in cold blood on the streets, in their homes—or even in church. If they survive, sometimes carrying their injuries to the grave, they must get along as best they can. If financially able to do so they must pay the hospital expense for treatment of their injuries. After brief notice in the press of what happened to them, they drop from public notice and are forgotten.

But if the community, rather than the criminal, is held responsible for their misfortune, should not the community be held financially liable for its negligence?

The question is rhetorical. Yet the discrimination against victims of unprovoked attack is a realistic condition. The existence of this condition is leading to a growing belief, by laymen as well as able lawyers and judges, that something seems to have gone awry in adjusting the delicate balance of justice, and that a growing preoccupation with the rights of the criminal has been ac-

companied by a growing neglect of the rights of the public.

Now I suppose that at this point I should offer the trite observation that the rights of the criminal are rights that also extend to decent, law-abiding citizens, and that to ignore the rights of the criminal is to endanger as well the rights of decent citizens.

The observation is true and I do not debate it.

It may also be necessary to remind ourselves that this question of balancing the rights of the accused as against the rights of the public has been under debate for at least 2 centuries by able and conscientious judges, all of them searching for the truth that must support the administration of even-handed justice.

It is dangerous for a layman to trespass too far into these sacred precincts reserved for learned men of the law, such as our able U.S. attorney.

But while laymen may be incompetent to join in discussion of those philosophical and legal concepts and principles which are the root of this continuing debate over the balancing of rights, some of the immediate conclusions reached by judicial majorities in the District of Columbia should be challenged by the laymen who must live with those conclusions. One of those conclusions appears to be, to use an old expression, that we should punish the constable for what some judges may regard as the constable's misconduct in the investigation of crime, leaving the misconduct of the criminal as a secondary consideration.

It is high time that more laymen get down to cases on what is taking place here in the District of Columbia, and indignantly echo the classic pronouncement of Mr. Bumble that "if the law supposes that, the law is an ass, an idiot."

We find our upright judges hopelessly split among themselves. They stop at the edge of name calling. But some of them accuse their brethren of such grave offenses as striking "a grievous blow at the administration of criminal justice"; of rendering futile, by their decisions, the rights of society to protect itself; of going beyond what the Supreme Court or the statutes have ever meant or said, and of writing new law to conform to their personal predilections.

If this acrimonious dispute between our highly placed judges were merely academic, if the judges were only indulging in some rarefied form of intellectual recreation such as trying to decide which ought to have come first, the hen or the egg, the public could go happily about its own business and leave the judges to stew in a juice of their own making.

But the dispute is not academic. It involves hard realities affecting law enforcement. An indirect, or perhaps a direct result, is that one of the cleanest police departments in the country finds itself on the defensive.

It is condemned by implication as practicing methods associated with the inquisition, of persecuting citizens on whimsical suspicion, of deliberately trampling on the individual rights of defenseless people.

Is it any wonder that there is thus created a public psychology, or state of mind, which regards the Metropolitan Police Department as public enemy No. 1, rather than as the thin blue line of courageous men who stand between the public and the depredations of vicious desperadoes?

The confusion of the police under conflicting opinions as to what constitutes legal and illegal procedure is shared to a lesser if more sophisticated extent by some of the trial judges and the prosecutors. If you doubt that, ask them. The precise location of the line dividing legal and illegal investigation of crime seems not to depend, as it should, upon the circumstances in each par-

ticular case, but upon the identity of the judges assigned to survey it.

This unhappy condition is not conducive to good law enforcement at a time when failure or inability to enforce the law has become an intolerable menace to public safety. Nor is it conducive to respect for the courts, an element that is essential in an orderly society.

Some of the confusion stems from broadened interpretations of a rule of evidence or procedure in the Federal courts—rule 5(a). It was recommended to the Supreme Court by an advisory committee some 16 years ago and approved by Congress.

The need for its clarification became evident several years ago and an attempt to amend the rule in Congress failed—not because the votes were lacking to amend it. The votes were there. A lone Senator's threat to filibuster, in the closing hours of a Congress ready to adjourn, prevented completion of congressional action.

The Citizens' Crime Commission should take the lead in mustering community support for two undertakings in the next Congress.

One is to amend rule 5(a), to clarify its intent and its meaning. Mr. Acheson was against this. He may be right. But rule 5(a) has been interpreted by the courts to an extent that was never contemplated by those who drafted it.

Whatever the remedy for existing conditions—we need the accommodation that Mr. Acheson so correctly says is needed.

The other is to be sure that when the Horky committee recommendations to abolish the practice of arrest for investigation are adopted, the abolition of the practice be accompanied by more precise laws or regulations, spelling out the valid procedures available to police investigation of crime.

Attainment of these objectives is desirable, even if there is no guarantee that any substantial decrease in crime would quickly follow.

But something else seems to be needed, which, if supplied, might reduce crime. The overwhelming majority of citizens of Washington are law abiding. They are frightened and dismayed by ugly crime. They share a common danger. What seems to be lacking is a spirit that will bind this majority together as a whole; a spirit which finds us all united in awareness of the fact that this is our community, and that beset as it may be by various forms of distress, including the rancor of old grievances and injustice, it is still our community and our community is now threatened by anarchy that finds expression in violent crime.

If that spirit is lacking, if we must delay a greatly needed, all-out war on crime until we can perfect a society that is agreeable to everybody, we are sunk.

West Virginians Gather for Emancipation Proclamation Centennial Anniversary Banquet in Charleston—Governor Barron, Other Leaders Speak

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 14, 1963

Mr. RANDOLPH. Mr. President, the citizens of West Virginia have long been justly proud of their State's record in the area of civil rights and human relations. Our aims have ever been to rec-

ognize the worth and dignity of the individual and toward securing for one and all equal rights and responsibilities under the law.

In keeping with these traditions, a banquet was held at the First Baptist Church, of Charleston, W. Va., on Friday, January 4, 1963, as a part of the yearlong observances of the 100th anniversary of the Emancipation Proclamation. A large and distinguished audience gathered for this meaningful program. West Virginia's Governor, the Honorable William Wallace Barron, spoke of the State's commendable record in school desegregation and equal employment opportunity.

Also speaking to those assembled were former Governor Cecil H. Underwood, and the executive secretary of the National Association for the Advancement of Colored People, Roy Wilkins. The latter told of legislative goals and stressed national problems.

Instrumental in the success of this observance was Rev. C. Anderson Davis, chairman of the West Virginia Emancipation Proclamation Committee. Dr. Davis and his coworkers are to be commended for their energetic efforts in bringing about this memorable evening.

Mr. President, originally scheduled to take part, I was necessarily absent due to the passing of our late colleague, the Honorable Robert S. Kerr, at whose funeral I served as a member of the official Senate delegation.

I ask unanimous consent that an article appearing in the Charleston Gazette of January 5, reporting on the Emancipation Proclamation Centennial anniversary banquet be printed in the Appendix, along with excerpts from my own message prepared for delivery on that occasion.

There being no objection, the article and excerpts were ordered to be printed in the RECORD, as follows:

[From the Charleston (W. Va.) Gazette, Jan. 5, 1963]

IN RACE RELATIONS: BARRON CITES STATE HARMONY

Governor Barron said Friday that "West Virginia is a prime example of the harmony that can be achieved" when race relations are handled in an atmosphere of mutual trust.

Speaking in Charleston, Barron said the State firmly believes in the principle that "all men are born free and each is deserving in his own right of an opportunity equal to that of any other person."

Barron spoke at a dinner in the First Baptist Church which was held as part of observances of the 100th anniversary of the Emancipation Proclamation.

Other speakers were Roy Wilkins, executive secretary for the National Association for the Advancement of Colored People, and former Governor Cecl Underwood.

Senator JENNINGS RANDOLPH, originally scheduled to appear, was unable to attend because he was a member of a Senate delegation at the funeral of Senator Robert Kerr in Oklahoma. Excerpts from his prepared text were read.

Barron said the State is particularly proud of "our fine record in the desegregation of schools," and that the total number of Negroes working in State government probably is at an all time high.

In his prepared remarks, Senator RANDOLPH said the future task of emancipation is extending the scope of freedom to white as well as Negro Americans.

"For when the American Negro has full equality of education—when color no longer bars him from equal opportunity and when he becomes a full participant in the American community—then also will all Americans be emancipated from the foreboding, fear, anxiety and misundertaking which yet block the fuller realization of the American dream," RANDOLPH said.

EXCERPTS FROM REMARKS BY SENATOR JENNINGS RANDOLPH, DEMOCRAT, OF WEST VIRGINIA, PREPARED FOR THE EMANCIPATION PROCLAMATION CENTENNIAL ANNIVERSARY, FIRST BAPTIST CHURCH, CHARLESTON, W. VA., JANUARY 4, 1963

Reverend Davis, members of the Emancipation Proclamation Committee, and ladies and gentlemen, perhaps no other action in the history of the American Presidency serves better to illuminate the nature of American history itself, than does the Emancipation Proclamation.

For this action, which President Lincoln exercised as a "military necessity" to save the Union, has in the balance of history become his greatest claim on the affections and respect of his countrymen. And in the eyes of much of the world, President Lincoln's Emancipation Proclamation outshines the original justification of preserving the Union itself.

Lincoln's first and last concern was to save the Union. As he wrote to Horace Greeley shortly before the publication of the preliminary proclamation in September, 1862, "if I could save the Union without freeing any slave, I would do it; and if I could save it by freeing all the slaves, I would do it; and if I could save it by freeing some and leaving others alone, I would also do that."

The Emancipation Proclamation of 1863 took the last of these three alternatives. It limited its application only to the secession States and expressly excluding from its provisions those "48 counties designed as West Virginia," as well as other sections of Virginia held by Union forces.

However, it detracts neither from the significance of the Emancipation Proclamation nor from the greatness of Lincoln to acknowledge that in its inception the Proclamation was issued on the grounds of political and military expediency. For this covenant was committed to ideals and values of the English-speaking world which were much older than the conflict between the North and the South—ideals which achieved their most noble expression in the American Declaration of Independence.

The Proclamation was a successful measure of expediency because it reached into enduring and ultimate values which extended beyond the civil strife of the Nation at that time. For, though active abolitionists were in a minority even in the Northern States, probably no adult or civilized person in any section of the country was entirely free from guilt concerning the enforced bondage of his fellowman. Jefferson, perhaps saw more truly than Lincoln in this respect, when he questioned, "Can the liberties of a nation be thought secure when we have removed their only firm basis, a conviction in the minds of people that these liberties are of the gift of God? That they are not to be violated but with His wrath? Indeed I tremble for my country when I reflect that God is just; this His justice cannot sleep forever . . ."

The Proclamation thus succeeded in its aim because it turned again the soil of liberty which had been cultivated in the Anglo-American world since the Magna Carta. It provided—for adherents to the Union—a moral cause deeper than that of State pride or regional loyalties or even preservation of the Union itself.

Ralph Waldo Emerson, the leading philosopher of that day, spoke for this cause when he wrote, regarding the proclamation, that

"The force of the act is that it commits the country to justice, that it compels the innumerable officers, civil, military, naval, of the Republic to range themselves on the line of this equity * * *. The first condition of success is secured in putting ourselves right. We have recovered ourselves from our false position and planted ourselves on a law of nature."

Thus, Lincoln, who campaigned for the Presidency largely on the issue of preventing the spread of slavery to the new States and territories, became the agent for a force greater than himself in the act of abolishing slavery from the established States.

Jefferson spoke of this force as a "gift of God," Emerson, as a "law of nature," and Justice Learned Hand, as the "spirit of liberty." But by whatever name we call it, whatever the theological or philosophic foundation we ascribe to it, it is this thrust that has given direction and meaning to American life for more than three centuries.

And it is this spirit of liberty—dedicated to the unfinished task of emancipation—that gives meaning to our gathering here. In this regard, we do not celebrate—we commemorate the centennial anniversary of the Emancipation Proclamation. We commemorate Lincoln's action by rededicating ourselves to the goal of emancipation—emancipation of all Americans—not only those of color—in body, mind and spirit.

The enforcement of the original Proclamation not only freed the slave from physical bondage. It also freed the master from the bondage of his own despotism. Very often he did not realize his transgression.

Thus, the future task of emancipation is further to extend the scope of freedom for white as well as Negro Americans. For when the American Negro has full equality of education, when color no longer bars him from equal employment, and when he becomes a full participant in the American community, then also will all Americans be emancipated from the forebodings, fear, anxiety and misunderstanding which yet block the fuller realization of the American dream.

Our progress during the 100 years has been stumbling and faltering. But progress there has been; and it is safe to say that no other race has equalled the advancements of the American Negro in the past 50 years. And if a clear view of history reveals to us certain facts, it also provides us with the vision of an ideal which illuminates the way and will help us to achieve a better and brighter future for all Americans.

Farm Bureau Policy for 1963

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. MICHEL. Mr. Speaker, as the U.S. Representative of the 18th District of Illinois, which includes a large rural population, I am naturally interested in the Farm Bureau which is very active in my district.

Listed below is the official text of the Farm Bureau's policy for 1963 on rural electrification and telephones as adopted by the delegates at their 44th annual meeting in Atlanta in December.

I have studied carefully all of the Farm Bureau resolutions adopted at that meeting, but due to many disturbing developments which have been brought out in

the hearings before the Agriculture Subcommittee of the Appropriations Committee on which I serve, I made particular note of their REA policy.

In view of the interest that was focused upon this problem during the last session by the Members of the House on both sides of the aisle, Mr. Speaker, I am sure that the following statement will be keenly scrutinized by my colleagues.

The text follows:

RURAL ELECTRIFICATION AND TELEPHONES

We support rural electric and telephone cooperatives organized and operated in accordance with accepted cooperative principles and practices. Further development and growth of these cooperatives call for the active and loyal support of member patrons who understand their responsibilities for supporting and helping finance them. Local ownership by well informed members is the best safeguard for true cooperative principles.

It is time to make certain that the members of rural electric cooperatives can obtain full and complete member ownership and control. Ownership and control should be clearly secured in the hands of the patrons. We recommend that member equities be made transferable to eligible persons on the books of the cooperative at any time.

We urge members of rural electric cooperatives to study the bylaws of their associations and to make certain that they contain provisions that make it mandatory to (1) allocate annually the equities of individual members and inform each member of the amount in his equity account and (2) require approval by a majority of patrons before the principle assets and business of the cooperative can be sold.

Power shortages and inadequate grids or transmission lines continue to be a major problem in supplying adequate power to farmers in some areas. We support sound and economic developments to assure farm people adequate electric service.

We urge power companies to expand their facilities to meet the increasing demand of farm people at reasonable cost. We urge efforts on the part of the rural electric cooperatives and other private power companies to reach agreements that will be in the best long-time interest of all concerned.

If satisfactory agreements cannot be reached for necessary amounts of energy for farm use at competitive rates, we support the use of Rural Electrification Administration funds to finance the generation and transmission facilities farmers need. We oppose any efforts to change the present law which makes this possible.

Where further expansion or improvement of power production is contemplated, serious consideration should be given to the possibility of seeking funds for the program on an investment basis from members of the cooperatives. If revisions in legislation or regulations are needed in order to permit such procedures, we will support the necessary changes.

Rural electric cooperatives have performed a valuable service for rural America, but many factors affecting their operations have changed materially since Congress authorized their establishment. Any future loans made by the Rural Electrification Administration to established rural electric or telephone cooperatives and other borrowers should be made at not less than the cost of money to the Federal Government.

We oppose any plan or effort to convert rural electric cooperatives into a public power system.

Rural electric cooperatives should not participate in financing the rural areas development program. We recommend that they confine their activities to the purposes for which they were organized.

Let's Balance the Act

EXTENSION OF REMARKS

OF

HON. GEORGE A. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. GOODLING. Mr. Speaker, Webster says a pendulum is a device used to regulate the machinery of clockwork and other machinery. There are times when adjustments become necessary.

For many years the labor-management pendulum was swinging too far in one direction. Adjustments were made and the machinery appeared to be operating reasonably well.

Gradually and imperceptibly, foreign matter accumulated, causing that same machinery to malfunction to a greater degree than it had previously. The newspaper and longshoremen strikes furnish ample evidence to support that statement.

The President of the United States has been defied. Irresponsible action is threatening our entire economy, including our national defense. The machinery of collective bargaining is threatened. The public welfare is completely ignored by certain leaders. The patience of the public is wearing extremely thin.

Repercussions of the strikes are being felt in the 19th District of Pennsylvania. This has been attested to by communications from district residents, in the past few days. Some means must be found to again regulate that pendulum so that it may again swing in the interest of the masses rather than for a few irresponsible leaders.

The following editorial from the January 6 edition of the Harrisburg (Pa.) Patriot expresses similar concern:

WE NEED A BALANCING ACT

By warning that the dock strike "is bound to have an effect on the future of collective bargaining," Labor Secretary Wirtz has lent weight to reports that President Kennedy, angered by the flat union rebuff to his personal plea to head off that strike, is considering some form of antistrike legislation.

But even before the President became disturbed about this, it was apparent that the new Congress would be considering legislation to curb what some Members believe to be excessive union powers that are against the national interest.

One reason is that the years ahead promise to be extremely difficult ones in labor-management relations. The resulting strikes could have wide national impact, like the current dock strike.

Currently, Lockheed workers are under a Taft-Hartley injunction that will keep them on their jobs until sometime in March. A strike after that, which is not unlikely, would stall vital defense production. Then there's the danger of a crippling nationwide railroad strike over the featherbed issue, a dispute that almost has exhausted legal appeals.

Whatever the administration finally does, Senator McCLELLAN, Democrat, of Arkansas, already has said he'll resubmit a bill to put unions in the transportation industry under the same restrictions as the antitrust legislation for business.

"There is too much unrestrained and uncontrolled power vested in the transportation unions across the country," he claims.

This ability of a single union to close down an entire industry, or cripple all the ports and transportation facilities of the country, concerns many Americans these days. It's time for Congress to consider again where labor's power has gone beyond the bounds of reason and what can be done to curb the excesses.

Whether the answer is some form of anti-trust law against labor monopolies or legislation giving the Government broader power to intervene in major labor-management disputes, or something else, it won't come easily in the 88th Congress. All of the passions and pressures on both sides will be brought into play. They always are when labor legislation is considered.

But there's one important reason why the issue should not be put off. A grave imbalance in labor-management strength can harm the entire Nation.

That was true earlier in this century when management's power was so lopsided that workers didn't have a chance to make their weight felt on such subjects as wages and working conditions. But business has no monopoly on the ability to grow ever larger. Unions today no longer are underdogs. They are every bit as widespread and powerful as the industries with which they negotiate. And the relative freedom from Government controls makes many of them even stronger. Unchecked, this union power can prove as bad for the country as the excesses of management decades ago. In some instances, it already has reached that stage.

There is a third force to be considered today—the public interest—when it comes to labor negotiations in defense industries, in transportation, in any field where long, nationwide strikes can cause serious inconvenience.

Congress has a responsibility to make sure that this interest is protected, whether the threat comes from the excesses of business or of labor.

The President and Congress

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a reader's letter which appeared in the January 8, 1963, edition of the Baltimore Sun. This well-thought-out letter is one of the best statements I have seen regarding the attempt of the administration to take over the rights and prerogatives of the Congress:

PRESIDENT AND CONGRESS

SIR: How much do we, the American people, expect of a President? As he is head of the executive department of the Government we hold him responsible for the management of all the branches of the Government except the legislative and judiciary. This would seem enough for one man to be responsible for. But our Presidents are not satisfied with this, they put pressure on our legislators in Congress to bow to their wills and legislate as they, the Presidents, want them to.

Members of Congress have always welcomed the opinions and suggestions of Presidents. Almost as soon as Congress convenes the so-called President's message is presented.

Formerly the Presidents merely sent their messages which were read to Congress by clerks. Now the President appears in person and tries to impress his wishes on Congress by force of argument and by his eloquence and personal appeal. There is nothing wrong in this, even though it represents a change from what used to be.

However, Presidents no longer limit their attempts to influence Congress by eloquence and argument. Members or the executive branch of the Government, the President's political family, spend much time on Capitol Hill subjecting our legislators to many types of pressure. An example of this is the fight now being waged by President Kennedy to change the number of members on the Rules Committee of the House of Representatives.

The number of members on this committee which will give this country the best service may be 12 or 15 or even 10 or 20, but this is something for the Members of the House of Representatives to decide for themselves. It is their decision to make.

Except for Khrushchev and Mao Tse-tung, President Kennedy has control over the lives and happiness of more millions of people than any man living today. In view of this it seems only right for him to permit the Members of the House of Representatives to decide for themselves the number of their Members who should be on a committee which is theirs, not one appointed by the President.

The American people did not elect President Kennedy head of the legislative branch of their Government. To limit his activities to running the executive branch is something the American people have a right to expect of a President.

LEO BRADY.

BALTIMORE, January 6.

Future of the ROTC Program

EXTENSION OF REMARKS

OF

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. HALL. Mr. Speaker, in recent weeks it has become evident that a move is underway in the Department of Defense to reorganize the ROTC program in our Nation's high schools and colleges. Although the details of the plan have not yet been made public, the effect of previous reorganized plans such as the one involving the Nation's National Guard forces causes one to be uneasy about the possibility that this program will be scuttled for all intents and purposes. Many high schools of the Seventh Congressional District of Missouri which I am privileged to represent have felt the ROTC program a vital force for good citizenship. I call the attention of the House to the following editorials from the Carthage Missouri Press:

A FORCE FOR GOOD CITIZENSHIP

Pentagon plans to eliminate the high school ROTC program are a step in the wrong direction.

The program in the Carthage schools, consistently one of the finest in the Nation, has proved highly beneficial not only to the young men who participate but to the schools, the community, and the Nation's Armed Forces.

Graduates of the Carthage ROTC program repeatedly have indicated the experience stands them in good stead when they formally enter the armed services. It provides them with the basic essentials of military organization, respect for authority, and ability to understand and obey military orders. This in itself is a matter of extreme importance to the maintenance of an adequate protective force for the Nation at all times.

It also provides these young men with a definite sense of involvement in the affairs of their Nation at an age when they otherwise might be devoting their energies and thoughts to the escapades of the black-jacket, motorcycle set.

It is a force within the community for good citizenship and this in itself is reason enough to continue it.

The ROTC program here has proved its worth. The results are evident on all sides.

The Press firmly opposes any attempt to eliminate this valuable program and urges all citizens join in a loud protest.

You can help by writing your expression of opposition to the Pentagon proposals to Congressman DURWARD G. HALL, Senator STUART SYMINGTON, and Senator EDWARD LONG.

Early action is desirable. Otherwise we might lose, never to regain, one of our most significant community and national assets.

CARTHAGE SCHOOL ADMINISTRATORS OPPOSE POSSIBLE ROTC ELIMINATION

A Defense Department proposal to drastically revise and cut back the Reserve Officers Training Corps program in colleges and high schools was met by strong opposition today from Carthage Senior High School administrators.

Carthage is one of the smallest high schools in the Nation to support an ROTC program.

"We'd hate very much to lose the ROTC program," Supt. Lester Gillman said today. "It is an important part of our school, both in the curricular schedule and extracurricular activities."

"The training offered is beneficial to boys. Many of our graduates who have gone into college ROTC or into service have told us it has been very helpful."

Edward L. Rogers, Carthage Senior High principal, voiced Gillman's sentiments. "It's a fine program and the association of the school with the ROTC personnel has been of great benefit. I'm strongly in favor of ROTC and hope it will be retained."

Defense officials said the revised program will eliminate all high school ROTC programs, compulsory ROTC programs in all land-grant colleges, and reduce the 4-year courses in most colleges and universities to 2 years.

There are 183 boys enrolled at present in ROTC at Carthage Senior High. One-half credit toward graduation requirements are offered each of the first 2 years of the program and a full credit for the final year.

Railroads Need Help—Diversification Would Be Welcome

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. CELLER. Mr. Speaker, the President called to the attention of the 87th Congress the "chaotic patchwork of in-

consistent and often obsolete legislation" which has become the framework of this Nation's transportation policy. His April 5, 1962, transportation message made the flat statement that this patchwork policy "does not fully reflect either the dramatic changes in technology of the past half century or the parallel changes in the structure of competition."

The Interstate and Foreign Commerce Committee of the House, and the appropriate committee of the other body, conducted extensive hearings in the last Congress on the recommendations made in this important domestic legislative message. They gave particular attention to proposed deregulation of certain minimum freight and passenger rates. Undoubtedly there will be further hearings in the current session of the 88th Congress. I am confident, too, that this new Congress will act once its committees have finished their work and brought transportation legislation to the floor.

Yet there is an anachronism in U.S. transportation today, Mr. Speaker, which rivals or surpasses the most threadbare of the statutory patches to which Mr. Kennedy directly referred. Since hearings in 1960 before the House Subcommittee on Transportation and Aeronautics, Congress has heard relatively little about it. In short, it is this:

The American railroad industry, recognized by all of us as both economically vital and economically ailing, is being forbidden by the fears of a past era the tools it needs to build a healthy future.

When every signpost in transportation points toward freer flow of traffic by whatever transport mode is most economic and offers best service, U.S. railroads remain pinned down by Federal regulatory restrictions that sprang from the 19th century of transportation.

An unmistakable promise of future rejuvenation lies in a railroad's ability to offer a shipper the transportation service which best fits his needs and his budget, whether it be by rail, truck, ship, or aircraft. Yet under existing Federal regulation the railroad is barred from acquiring the surface facilities—by road or water—it would require to offer the service of a true transportation system to its customer.

Current public policy on single ownership of multiple transportation modes stems from the Interstate Commerce Commission Act and the Federal Aviation Act of 1958. In effect, this policy today bars a railroad from acquiring other forms of surface transportation without severe restrictions, while leaving all other surface transport modes free to diversify as they choose.

It is significant to note in passing, Mr. Speaker, that none of the statutes involved contains language specifically prohibiting transportation diversification as such. The rules which now operate to deny railroads equal opportunity among surface modes to own and operate other forms of transportation largely are interpretations of the statutes by the Interstate Commerce Commission, the Civil Aeronautics Board, and the courts.

Thus it can be said that even with so fundamental a question of national transportation policy, the answer has been supplied more by the judiciary and by the Congress' independent agencies than by the Congress itself.

In virtually all of existing and prior statutes and in the history of their application, the single dominant theme has been the real or imagined fear of railroad monopoly. This fear was the cumulative result of the explosive 19th century growth of America's railroads, of the trustbusting of the early 1900's, of the industry's relatively giant proportions in the early 20th century, and of the childlike strengths of the motor, water, and air carriers as new legislation sought to nurture their early development in the 1920's and 1930's.

But this is 1963.

In 1926, railroads carried more than four-fifths of all ticketed intercity passengers. The rail share of intercity freight tonnage exceeded 75 percent.

Today, best estimates place railroads' share of ticketed intercity passenger traffic at 26.4 percent for 1961, the last full year statistically available. Rail freight for 1961 is estimated at 43.4 percent of the total. This means, Mr. Speaker, that the railroad share of the passenger and freight markets has shrunk from three-quarters and more to well under one-half.

On a year-by-year basis, World War II distorted the picture of relative strengths of various modes in the U.S. transport market. But the trend of postwar years is quite plain. In 1947, railroads accounted for 58.5 percent of all U.S. intercity passenger service, but in 1961 it could claim only the estimated 26.4 percent share of this market. Similarly, railroads' 1947 portion of the intercity freight business—excluding coastwise and intercoastal traffic—was 65.3 percent, but in 1961 this had shrunk to the estimated 43.4-percent figure.

Throughout this period of dwindling railroad strength in the transportation market, competing modes which had been the infant enterprises of the 1920's and 1930's were showing sometimes phenomenal growth. In terms of relative share of the intercity ticketed passenger market, airlines were exploding from an insignificant 7.8 percent in 1947 to a full 45 percent in 1961. In intercity freight traffic, trucking grew from a 10-percent share of the 1947 market to an estimated 23 percent of the 1961 market. Inland water carriers' share of this traffic nearly tripled, and pipelines' share nearly doubled.

Among all forms of passenger transportation, of course, the private automobile remained the unchallenged favorite. It has carried upwards of 90 percent of all intercity passengers for the past three decades, and was second only to the commercial airliner in rate of postwar growth as an intercity carrier.

Looking over this picture, the so-called Doyle report—a special transportation study reported to the Senate Commerce Committee early in the last Congress and one of the most comprehensive available surveys of the modern transportation scene—concluded:

It is clear that the era of the railroad as a dominant monopolistic industry in transportation has long since ended, and that most of the growth of passenger traffic has gone to the private automobile and of freight traffic to other surface carriers.

Mr. Speaker, the statistics which paint this picture of a railroad industry sliding steadily back down the competitive hill are vivid ones. Certainly they should lay at rest any lingering fears of a 20th century railroad monopoly in transportation in the sixties—possibly the one most compelling reason for action to ease the restrictions on some sort of railroad diversification.

The common carrier, backbone of America's concept of Government-regulated but privately owned transportation, is losing out to the private carrier. Industry after industry has turned away from the common carrier because it cannot offer the service the shipper believes he must have to meet his own precise needs. So he contracts privately with a for-hire carrier, or he buys wheels and does his own transportation job.

Evidence of the trend is unmistakable and rarely contested. The Doyle report predicted that by 1975, regulated carriers will represent barely more than 60 percent of all transportation. If the report's projection of postwar private carriage growth proves accurate, "a rapid deterioration of regulated carriage could be expected under the competition of unregulated carriage."

The report said:

The base of our transportation of freight in the last quarter of the century may be expected to be unregulated private and exempt carriers rather than public carriers if present trends continue.

The report also noted:

The impact on the railroads as the principal public carrier is much more serious than on public carriage as a whole.

Even after making allowances for short-term factors it said:

The recent 5-year trend of railroad freight appears to offer substantial cause for alarm.

Under any such long-term decline in public carriage as is forecast, "it is entirely unlikely that private ownership of public carriers could survive," the Doyle report concluded.

I should like to point out here, Mr. Speaker, that impending dominance by private carriage is much more than a vague exercise in transportation academics for me and for every one of my colleagues in this Chamber. When public carriage declines, the big shipper shifts to private contract carriage—or decides to haul his own goods—with relative ease.

But the small shipper often cannot afford this. As public carriers are forced to retrench, the service they can offer the small shipper steadily deteriorates—in convenience and quality as well as in frequency. As do-it-yourself carriage siphons off more and more of the most profitable traffic, the public carrier is forced to charge more for hauling the remainder. Thus it is the small shipper who in turn is forced to pay a higher transportation bill.

How is this fundamental problem to be solved? Certainly not just through tug-

ging and hauling within the transportation industry to see how common carriers are to divide a steadily decreasing share of total traffic among themselves. Rather we must help common carriers find means to retain existing traffic, and to win back business they have lost.

Joint services and rates among the various transport modes has been put forward as one answer. Yet these are of little interest to the private shipper who has purchased barges or trucks or airplanes to handle his own transportation requirements. Private shippers will turn to common carriers only when they are assured of getting the kind of coordinated transportation service they want for less—or at least no more—than the cost of providing it themselves.

The only real answer is to permit the establishment of true transportation companies that can perform service by a variety of modes or combination of modes. And for conclusive evidence of this, need we look any further than at the mushrooming growth in recent years of piggyback service that carries truck trailers by rail or water between their doorstep pickups and deliveries?

The twists and turns which our so-called national transportation policy has taken in fashioning today's chaotic patchwork sometimes is wondrous to behold. With few exceptions—where grandfather clauses have permitted already established, rail-owned trucking companies to continue their operations—our rail carriers are handcuffed in turning to the truck as an alternative transportation vehicle. In general, the railroad today can truck its freight only in supplementing its regular rail service. It is sharply limited to certain key points along its routes, and must truck only freight that was originated with or is destined for rail haul.

Yet, in literally hundreds of these very key points, Mr. Speaker, public tax and transportation policies create this remarkable distortion: The independent trucking company, with no roadbed to build or maintain, pays the key point's municipal government nothing for the highway rights-of-way its trucks roll on, and nothing for the police and fire protection they receive. It pays little or no property taxes; the shippers own and pay local taxes on most of its loading and unloading facilities. And the trucking company thrives.

The railroad, however, pays often excessive property taxes on roadbeds, tracks, yards, and terminals—facilities which it financed entirely with its own private funds. In hundreds of smaller U.S. communities, the railroad is the town or city's largest single taxpayer, and has been for years. Its unenviable tax position, it should be noted here, prompted the Doyle report authors to recommend exemption of common carrier rights-of-way from property taxes—a plan which, whatever its merits, certainly reflects a basic tax problem. And in addition to contending with this, the railroad finds the Federal Government effectively limiting its trucking operations to a virtual neighborhood delivery service, and meanwhile the railroad founders.

Can even a rich and prosperous Uncle Sam afford to impose on its transporta-

tion system so wasteful a handicap? We need look no further than our northern neighbor, Mr. Speaker, so see the benefits of diversification. Both the Government-owned Canadian National Railways and the privately owned Canadian Pacific have been permitted to broaden their transportation services, and both own and operate airliners, ships, and trucks. And when rail revenues sagged so badly in 1960 throughout North America as well as in the United States, Canadian railroads were that much better prepared to adapt to the changing revenue picture and to fit their services to it.

I do not advocate for the present or immediate future any mergers, consolidations, common stock ownerships, or mutual affiliations of railroads and airlines. I peer into the dim periods ahead. If it be for the well-being of airlines and railroads to come together and the public welfare be served and public transportation be bettered and cheapened, then so be it. I emphasize that I do not speak of the present. Railroads are in difficulties and many airlines are not without trouble. Numbers of them seek and have sought surcease of their difficulties by mergers. United absorbed Capital Airlines, American seeks to merge with Eastern Airlines, Colonial was swallowed by Northeastern, Pan American would unite with TWA. I doubt whether marriages of railroads and airlines at present would be successful. The frustrations and embarrassments of both do not and cannot be blended together happily. Two plus two cannot make five. In other words, presently such marriage would be disastrous and end in tragic divorce.

However, whether it be diversification rights, an end to tax inequities or relaxed rate regulation, the record shows that American railroads have asked us not for favored treatment but for fair and equal treatment.

They seek equal rights with their competitors to quote rates that will win them business.

They seek equal tax treatment with other property owners and other forms of transportation so they may be in a financial position to quote more competitive rates.

And they ask elimination of artificial diversification barriers not to invade competitive modes purely for the sake of expansion; rather they seek equal opportunity to offer a varied transportation service which always would be required to meet the basic statutory test of public convenience and necessity.

They seek, Mr. Speaker, equal opportunity to render better service at lower cost to the shipper.

Fairplay in Congress

EXTENSION OF REMARKS

OF

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. QUIE. Mr. Speaker, yesterday we considered a basic change in the per-

manent rules under which the House of Representatives will function in the future. Our decision is an indication of the attitude with which the House will approach the tasks it faces.

Some people, both inside and outside of this body, have made the claim that the Rules Committee has come to hold too powerful a position with the House of Representatives. These people conclude that the Rules Committee has the power to prevent the entire House from making decisions on various important issues. It is the so-called power to "block" legislation.

The solution which these same people advocated was to permanently expand the membership of the Rules Committee from 12 to 15. This solution was adopted and is simply a power play to control the committee. It is not an attempt to correct any present weakness in the committee.

If it is true that the committee has the ability to block legislation it does not like, having more members will not change that fact. Indeed, a new group will simply have the right to stop legislation which it finds undesirable.

The House has always had a formal written guarantee that the Rules Committee cannot permanently act contrary to the wishes of the majority of the House. That guarantee is the discharge petition. It was used successfully on a major bill as recently as 1960 when a discharge petition for the Federal employees pay raise bill was adopted by the majority of the House.

Whenever we discuss the desirability of any legislation, it is important to know who is determining the desirability. Does the majority of the House make that decision or do most of the members of the majority party of the House? When the Speaker was prohibited during the early part of this century from serving on the committee, it was assumed that such action was intended to make the committee a tool of the majority of the House Members rather than only of the leadership of the majority party.

Increasing the committee size from 12 to 15 members increases the Democratic majority from 4 to 5. Yet, proportionate representation would give the Democrats a majority of only 3 members on a 15-man committee.

Fair representation of the minority party should always be maintained in any committee. Such should certainly be the case in a committee as powerful as the Rules Committee as was pictured yesterday.

I would have been favorable to considering reviving the 21-day rule. By prohibiting the Rules Committee from holding any bill for more than 21 days this change would correct the situation in which the Rules Committee could block legislation. At the same time, fair representation would be maintained on the committee.

If our concern is to insure that the majority of the House be given the opportunity to express its will on the important issues which come before this body, we should not simply give the power to determine desirable legislation to another group. That is what the present makeup of the Rules Committee does.

In the future, changes should be guided by three factors:

First. Congress should decide whether the Rules Committee should have the power to stop legislation.

Second. If the decision is affirmative, the minority party should be given representative strength on the committee.

Third. If the decision is negative, some means such as the 21-day rule will be necessary to weaken the power of the committee.

This is the only way fairplay in the House of Representatives will be secured.

J. P. Stevens & Co.

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Chester Reporter, Chester, S.C., of January 9, 1963:

J. P. STEVENS & Co. BEGINS 150TH ANNIVERSARY CELEBRATION

J. P. Stevens & Co., Inc., began the official observance of its 150th anniversary year Friday. Founded in 1813, just 37 years after the signing of the Declaration of Independence, the company history of 150 years of continuous operation is unique in the annals of American industry. From modest beginnings, the business has grown into one of the leading textile companies in America, employing 35,000 people. Fifty-five manufacturing plants produce over 800 million yards of fabrics annually.

In 1813, Nathaniel Stevens began the manufacture of woolen broadcloth in North Andover, Mass. The business acquired additional mill properties in New England and, following his death in 1865, continued to prosper under the guidance of his son and grandsons in the years that followed. In 1839, John P. Stevens, a grandson of the founder, formed a partnership, J. P. Stevens & Co., to sell the product of M. T. Stevens & Sons. During the next few years, J. P. Stevens & Co. expanded its cotton goods business through participation in the building of plants in the South and by acting as selling agent for additional cotton mills.

The partnership was incorporated in 1923 and, upon the death of John P. Stevens in 1929, his sons, John P. Stevens, Jr., and Robert T. Stevens, who had been actively identified with management, assumed greater responsibilities in the conduct of the business. A strong and aggressive management team included such men as William O. Frasier, an original member of the firm, and its treasurer, who occupied a position of leadership in the credit world and whose achievements in the prevention of commercial fraud won him widespread recognition; William J. Gillon, whose dynamic personality and vigorous leadership were a constant inspiration to all who knew him; Thomas W. Estes, a man of extraordinary creative and merchandising ability; Horace N. Stevens, a grandson of the founder; and Joseph H. Sutherland, who was first a salesman in the Boston office before being called to New York in 1935 where he later became largely responsible for the growth of the company's synthetic goods business.

In 1930, the company established a connection with 10 additional mills and from 1936 to 1939, achieved further penetration of the steadily growing market for synthetic fabrics through financial participation in the building of 2 plants and by becoming sales agent for 2 additional concerns. One of these the present Slater Plant at Slater, S.C., was part of a business conducted by the descendants of Samuel Slater who founded America's first cotton mill at Pawtucket, R.I., in 1790.

In 1946, the Stevens selling organization merged with 9 textile companies which operated 29 manufacturing plants. As a result of his reorganization, J. P. Stevens & Co., Inc. emerged as a publicly owned corporation and its shares were admitted to trading on the New York Stock Exchange on August 28, 1947.

John P. Stevens, Jr. reached the company's retirement age in February and retired as chairman of the board of directors and chairman of the executive committee on March 1, 1962. He had served the company approximately 40 years in many important capacities, including 11 years as president and more than 9 years as chairman of the board. He played a major part in the development of the business, Mr. Stevens continues as a director.

Robert T. Stevens was elected president in 1929 and has held the office of president or chairman of the board since that time except for the years he spent in the service of our Government, an artillery lieutenant in World War I. He served as Deputy of Purchases in World War II with the rank of colonel. In 1952, he was named Secretary of the Army by President Dwight D. Eisenhower. He returned to the company as president in 1955. He has also held the office of chairman of the board since the retirement of John P. Stevens, Jr., in March 1962.

In commenting upon the occasion of the company's 150th anniversary, Mr. Robert T. Stevens said, "The progress of J. P. Stevens & Co., Inc., symbolizes the spirit of American free enterprise—the spirit we hope future generations will strive constantly to preserve. Whatever success our company has achieved has been due to the combined abilities and spirit of the 35,000 people of Stevens who produce and merchandise its products. Although our industry is threatened by a serious import situation, I believe that President Kennedy's seven-point textile program, if fully implemented, would be most helpful in assisting the American textile and apparel industries to deal with cheap imports."

The Stevens Co. will have many events throughout 1963 to commemorate the anniversary. On the 27th of December, an unprecedented salute from the city of New York took place, when a 30 by 40 foot banner was unfurled across Broadway at the Stevens building, one-half block south of the crossroads of the world, Broadway and 42d Street.

An event of singular importance will take place on January 8 when the company will have a special 150th anniversary dinner in the ballroom of the Hotel Plaza. Industry and Government leaders will attend this event. The dinner is a salute to free enterprise in America.

A special Stevens anniversary movie, "The Exciting World of Stevens Fabric," has just been released as a part of the anniversary program. A local spokesman said that the movie is available to be shown in both 35 millimeter for theater showing, and in 16 millimeter for smaller groups. "Anyone interested in seeing the film need only call the Stevens plant in his community," he said.

Special displays of Stevens fabrics and products have been scheduled in communities where Stevens has plants and offices. A comprehensive schedule of advertising will appear throughout the year in national magazines and newspapers.

Later on, New York City will further hail Stevens when famous Times Square will temporarily be renamed "Stevens Square" in honor of the 150th anniversary of the famous textile company.

The Future Is Not Ours To See—But Our Attitude Will Determine It

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. SIKES. Mr. Speaker, I am very much impressed by a very timely statement from the pen of John C. Malone, Jr., president of the First National Bank in Milton, Fla. I feel that his statement is something which carries a message of importance for the Congress and for the Nation.

THE FUTURE IS NOT OURS TO SEE—BUT OUR ATTITUDE WILL DETERMINE IT

This is the time of the year that our national interest seems to center on how good business was in the old year and what is the outlook for the new year. This is not my intention. I am more interested in bringing to your attention the key figure in your prosperity in any year, your employer.

In the last 80 years ending in 1957, our Nation's population has quadrupled, our total output of goods and services has multiplied 21 times, personal output has increased 2 percent each year and living standards have doubled each 35 years. This phenomenal growth in general has been due to the traditions, attitudes, and aspirations to growth of the American people. The strength of our country is that this growth is shared by all our people, our family incomes have steadily increased. We are not plagued by multitudes of the underprivileged. Our growth has been shared by all. Our government at all levels is keyed to listen to the voice of the people, not vice versa.

We have more than 4 million businesses in our country, large and small, corporate or otherwise. These businesses are young. Some of our largest corporations are less than 50 years old. The heads of these businesses are men of imagination. It is their competence, managerial ability, farsightedness, and financial risk that makes your employment possible. It is these men that provide the wages with which we have established our standard of living, the highest in the world. Their wages keep us in the position also of being consumers. Our use of consumer goods is the largest of any people of any nation. We own more automobiles, electrical appliances, have better roads, public buildings, schools, colleges, than all the rest of the world together. All is made possible by the wages we earn from our employer. He translates the demand into products through your employment and the necessary equipment.

There is keen competition between businesses. Three hundred thousand to four hundred thousand turn over each year out of the total number of over 4 million. Managerial ability and competence of the employer seems to be the key factor. Your employer is an "uncommon man."

He is also a taxpayer. His business, corporate or otherwise, pays taxes at all levels of government—Federal, State, county, and perhaps municipal. He is generous in contributions to the many funds for public

good. He fosters education at all levels because he uses it in his enterprise.

To do all this your employer must make profits, high profits, to satisfy you, the wage earner, the tax structure, to replace equipment, to build new factories, and through research to improve his product and find new ones. Contrary to popular belief high profits mean all of this plus high wages and more jobs for you and yours, more banking business for me. Low profits mean a declining business, a poor job future for you, inefficiency, lack of ability to create, or the presence of artificial pressures which create conditions under which business cannot grow. Low profits mean declining employment and if persisted in can only end in the loss of the business or industry and all of the employment it provided. The old parable of the goose that laid the golden egg is more true today than ever before. The greater Milton-Pensacola area has been very fortunate. Our economy has been climbing slowly but steadily throughout the years. We have seen an agricultural, timber, naval stores economy gradually change to an agricultural, industrial, forestry and military supported one. We have made this transition in the memory of most of us.

What would constitute catastrophe for the Greater Milton-Pensacola area short of natural disaster or war damage? The answer is simple. The loss of one of our larger payrolls would cause a local depression such as we have never experienced. We would gain national headlines by being declared a disaster area. The industrial and military payroll of this area is the lifeblood of our way of life. It flows through you to the storekeepers, shops, banks, taxes, recreation, hard goods, and back again into more business which means more and bigger payrolls at better wages. This is our economic life cycle in which each shares his own part, and contributes that for which he is compensated, his very best.

The employer, be he small or large, independent or corporate, is the key to our economic prosperity. Treat him well and grow with him. Kill him in the search for the golden egg and depart with him. In our drive for "improved everything" in late years we have forgotten to improve the lot of he who provides all through the utilization of knowhow, capital, and your services.

In the years gone by the panacea for poor business was "Go west, young man, go west." Today that west has gone also. We must achieve success where our services or attainments can be utilized. Let's keep business in business by cooperation with our employer, giving him the imaginative creative work, faithfulness and loyalty that he pays for. In so doing our own lot will continue to improve and our economic area will prosper. Let the people of the greater Milton-Pensacola area be known for their appreciation of their employers.

I propose that the year of 1963 be known as "employer appreciation year" when we contemplate the workings of the system that provides us so much and identify the key figure therein—the employer. It is in our personal interest to keep him in business and making plenty of profit.

Hon. Ernesto Ramos Antonini

EXTENSION OF REMARKS
OF

HON. JACOB H. GILBERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. GILBERT. Mr. Speaker, I am deeply grieved by the death of the very

able speaker of the Puerto Rico House of Representatives, the late Ernesto Ramos Antonini.

It was my privilege to meet the distinguished speaker when I visited Puerto Rico, and I was deeply impressed by his high degree of intelligence, his brilliant mind, his love for the people of Puerto Rico, and his high ideals and strong faith in democracy.

The record shows that he was an outstanding public servant, closely associated with the people, untiring in his efforts in their behalf and largely responsible for the great success of Operation Bootstrap and the economic development of Puerto Rico; he worked in close cooperation with Gov. Luis Muñoz-Marín and Ambassador Teodoro Moscoso to insure the splendid achievements realized in the remarkable development of the island in recent years.

Ernesto Ramos Antonini will be greatly missed and we deeply mourn his loss as a noble leader in the Western Hemisphere.

U.S. Retaliatory Punch Being Reduced by 80 Percent

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. HOSMER. Mr. Speaker, according to current figures U.S. missile strength now includes 126 Atlas, 54 Titan, and 20 Minuteman intercontinental ballistic missiles, plus approximately 144 Polaris missiles and some 100 Jupiters and Thors. This force of about 444 missiles has approximately a 1,000-megaton nuclear punch.

Also according to current figures we have in our strategic manned bomber force approximately 1,600 B-52's, B-58's, and B-47's. This manned strategic bomber force has approximately a 10,000-megaton nuclear punch on its first run, plus such force as might be delivered on reruns to strategic targets since potential enemy defenses cannot be estimated as perfect.

An estimated 10,000 missiles yet un-built, yet unemplaced, not even contemplated, would be needed to replace this manned strategic aircraft retaliatory capacity which now deters Kremlin masterminds from pushing their surprise attack button. This is assuming the Soviet Union's massive effort to erect ICBM defenses ends in a semitotal failure.

Should the U.S. retaliatory force wind up around about 2,000 missiles, which seems to be the present thinking of administration planners, and should manned strategic aircraft fleets be allowed to phase out, which seems to be the present thinking of administration planners witnessed by statements and inferences out of the Skybolt controversy, then our retaliatory capacity shrinks by approximately four-fifths, 80 percent, to around 2,000 megatons

with no backup rerun capability whatever.

Phasing out the manned strategic aircraft surrenders weapons systems which are genuinely maneuverable, which can carry defensive armament and which are usable in coordination with ground-to-ground and air-to-ground missiles capable of reducing an enemy's offensive and defensive missile and aircraft interceptor bases. The replacement missile weapons systems are generally unable to identify and pinpoint targets, attack moving targets or destroy very hard targets. Thus unable to function without cooperating aircraft, they would be unable to knock out enemy offensive forces and stop an invasion of Western Europe.

Neither would the missile weapons systems be capable of being held on airborne alert. With only the capabilities of an all missile deterrent system, a U.S. President could only choose between pressing the button or sitting out an attack. But with manned aircraft in the deterrent system in proper proportion, he would have the additional alternative of foregoing irreversible action on ambiguous warnings and delay a fatal decision until the facts are established.

All of the foregoing is the burden of an excellent and most perceptive letter to the editor of the San Francisco Examiner published December 26, 1962.

The letter was written by one of the keenest minds in the United States which is devoted to the philosophy and strategy of U.S. national defense. He is Dr. Stefan T. Possony of the Hoover Institution on War, Revolution and Peace, Stanford University.

Dr. Possony has been adviser to the Assistant Chief of Staff, Intelligence, Department of the Air Force. Born in Vienna, he received his Ph. D. from the University of Vienna and subsequently studied in Rome and Paris. From 1947 until joining the Hoover Institution he was professor of international politics in the Graduate School, Georgetown University. He is an associate of the Foreign Policy Research Institute, University of Pennsylvania, and lectured at the first National Strategy Seminar for Reserve Officers.

The following is the text of Dr. Possony's letter:

MISSILES, BOMBER FLEET

TO THE EXAMINER:

On December 20, 1962, Peter Andrews wrote: "The 200-missile U.S. missile right arm now includes 126 Atlases, 54 Titans, and 20 Minutemen. This growing missile strength is one more sign that the manned bomber fleet is dead. All that is needed is a dignified funeral."

This missile force presents a firepower of approximately 600 megatons. If you add the firepower of 144 Polaris missiles, and 100-odd Jupiters and Thors, our present missile force has a 1,000 megaton punch. Approximately 1,600 B-52's, B-58's, and B-47's are able to drop in excess of 10,000 megatons. This is their single mission punch. Remember that even if the Soviet defenses were perfect, many of those planes would fly several missions. (These figures do not take into account carrier aircraft, fighter bombers, and tactical missiles.)

Hence if we desire to replace our bombers with missiles, we would need a minimum of some 10,000 missiles—but no one has yet talked about a U.S. force even approaching

this size. But if we reduce our strategic force to 2,000-odd missiles, as seems to be the present plan, our deterrent and retaliatory power would be cut by four-fifths or more. Hence if the manned aircraft fleet is dead, perhaps it is the United States which should prepare for its dignified funeral.

Khrushchev recently stated that the effort which the Soviet Union has put into defense against ballistic missiles equals that invested in the missile itself. Hence the present invulnerability of our ICBM's won't last. In the offense-defense race the aircraft ultimately will come out on top, because (a) it is manned and, therefore, genuinely maneuverable, (b) it can carry defensive armament, and (c) it would be used jointly with ground-to-ground and air-to-ground missiles which would be aimed at the enemy's missile and aircraft interceptor bases.

The missile is unable, by itself, to identify and pinpoint targets; attack moving targets; and destroy very hard targets. Hence a missile force cannot function without aircraft and cannot be the main element of a strategy designed to knock out the enemy offensive force and stop the invasion of Western Europe.

Moreover, the missile force cannot be held on airborne alert. If warning is received, we have but an all-missile force, the President has only one choice: to press the button or sit out the attack. Bombers on air alert allow him to forego taking irreversible action on ambiguous warning and delay the fatal decision until the facts are established.

STEFAN T. POSSONY,
Hoover Institution,

Editorials of Interest to Members

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. BOW. Mr. Speaker, two recent editorials in the Repository, of Canton, Ohio, will be of interest to Members of the House and under unanimous consent I include them with my remarks:

WE LOST THE ARGUMENT TOO

Everything possible will be done to build up the illusion that the United States came out ahead in the Cuban showdown. The truth is, the United States will be whistling in the dark.

Once more there has been a tardy reaction after a harsh provocation. Once more it has been shown why the side that seizes the initiative and holds it in a cold war gets the breaks and the other side does the bumping.

The Soviet Union seized the initiative in Cuba and held it.

It moved in on what appeared to be a genuine revolution against an oppressive dictatorship that had been shored up with U.S. assistance. It snatched Cuba from under Uncle Sam's nose.

It then added injury to insult by changing Cuba into a Communist state and in turn added insult to injury by fortifying it as a Communist bastion in the New World—a studied and insolent challenge to the Monroe Doctrine.

When the U.S. reaction to this was violent, the Soviet Union scored still another cold war triumph by withdrawing missiles and bombers on its own terms and in its own time and refusing to permit inspection of

Cuba to see what might have been left there.

Meanwhile, it seized President Kennedy's ill-advised offer not to invade Cuba if the missiles and bombers were withdrawn and built this into a commitment. It will do no good for the United States to explain that it despairs of inspecting Cuba to find out if Russia acted in good faith and therefore withdraws its promise not to invade Cuba.

If it became necessary to invade the island to eliminate a submarine base that might be deadlier than a missile base or a bomber base, the United States would be beaten over the head with its no-invasion promise by every Latin American diplomat.

It has never been grasped by U.S. critics of United Nations intervention in the Congo that Latin Americans have strong convictions about U.S. intervention in Cuba. Latin Americans believe as firmly in self-determination for Cubans as critics of the United Nations believe in self-determination for the Congolese.

There has been a reversal for the United States in Cuban policy—if the absence of a policy can be referred to as "policy."

With formal termination of discussions between Washington and Moscow in the United Nations, the issue is officially closed.

We lost the ideological issue after six decades of relations with Cuba that gave free enterprise a black eye.

We lost the military issue. Cuba is now a heavily armed offshore island manned by thousands of unfriendly troops, and this fact has not been altered an iota by a show of U.S. military strength in the Caribbean and in the air over Cuba. The Russians are still there.

And on top of everything else we lost the argument. We had to back down on the Monroe Doctrine.

There must be days in the Kremlin when Khrushchev, Mikoyan, and their pals are so busy laughing they can't find time to pick out another strategic place to make Uncle Sam bleed a little.

BUT DON'T BLAME REPUBLICANS

The chairman of the Democratic National Committee, John M. Bailey, is the author of a remarkable communication that has been sent to newspapers.

It deals with the Democratic Party's complications over its reactionary majority on the House Rules Committee—the dilemma dissolved temporarily 2 years ago by the late Sam Rayburn's determined and successful fight to weaken the majority's domination by adding three new members to the committee.

Chairman Bailey, who is understandably concerned because the same dilemma now must be dealt with at the beginning of the 88th Congress without the matchless influence of a Sam Rayburn, has come up with a remarkable point of view.

He blames the whole thing on Republicans.

He uses the same inverted reasoning that has been applied to Democratic inability to muster majorities in the House and Senate on key votes, though the Democrats are an overwhelming majority in both houses—Republicans are to blame for not voting with Kennedy Democrats against non-Kennedy Democrats.

Continuing this inverted reasoning, the Democratic chairman argues that it somehow has become the responsibility of Republicans to rescue Democrats from the consequences of the North-South schism that has made many southern Democrats the opponents of Democratic Presidents starting with Franklin D. Roosevelt.

It is not a Republican responsibility to help the majority party in Congress or a Democratic regime in the White House.

Every committee in the House of Representatives and the Senate is affected by it to some extent. The Rules Committee is especially affected because its chairman, Representative HOWARD W. SMITH, Democrat, of Virginia, is a crusty reactionary who thinks it is his personal duty to block every bill he personally dislikes.

Moreover, he thinks it is his legislative duty to use his chairmanship and his committee to block bills objected to by his southern associates.

This is not surprising, nor is it exceptional. Key committees in both the House and Senate are dominated by southern Democrats and chairmen who hold their posts because, as southerners, they built up seniority. Only in the Democratic South with its one-party system can a legislator be reasonably sure of winning reelection long enough to qualify for the chairmanship of key committees.

It's a party problem, particularly acute in the Rules Committee, where abuse of power can cause bills to be held up with only a scant chance for a House vote. The Democrats can't be blamed for getting into a stew over this weakness in their political situation.

But blaming it all on the Republicans because the Democratic Party is split wide open over civil rights—aw come on.

That's ridiculous. Even for Chairman Bailey, who is paid for being 150 percent Democratic, it's silly.

Compliment to President Kennedy on His State of the Union Message

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. WIDNALL. Mr. Speaker, as a member of the minority party who believes in responsible and constructive comment on the words and deeds of the administration in power, I wish to compliment our Chief Executive, President John F. Kennedy, for his cogent state of the Union message.

The President's analysis and constructive comments with respect to the Atlantic Alliance, and his cautious approach to the presumed rift in the Communist camp should serve notice to all that America and her allies have not relaxed their vigil. I must admit, however, that I am somewhat skeptical at the vision of the unaligned countries painted for us by the President, as a result of the Russian-Cuban missile scheme and the Chinese invasion of India. The so-called neutrals have shown a notable lack of response to moral force, as witness the silence accompanying the resumption of nuclear testing by the Soviets and even this very same aggression against India. There has been an equally remarkable tendency to respect apparent physical power, or their own internal political needs. A more critical analysis of past foreign aid programs would have been welcomed as well.

Until the full details of the President's tax proposals are made available to us, I believe it behooves the Congress to speak

with some reserve with respect to the plan outlined in the state of the Union message. Certainly, a more equitable sharing of the tax burden is called for, and the recognition of the role played by business expansion in the economy by the President is heartening. Present indications for new expenditures for plants and equipment do not pose quite the optimistic picture included in the state of the Union message for last year's investment tax credit plan, however.

The most encouraging news of all is the President's pledge to submit a budget which will, in his words, "hold total expenditures for all other purposes below this year's level," although anticipating increases for defense, space, and fixed interest charges. This is, at least, a favorable start toward a fiscally sound budget policy. I would suggest that the next step is to critically consider the new proposals proffered by the President, since he himself has indicated the need to reduce or postpone many desirable programs.

I believe, Mr. Speaker, that we can all join together, regardless of party, in welcoming the constructive suggestions by the President, in complimenting him on a forceful presentation of America's worldwide goals and achievements, and in assuring him of the most careful examination of this and subsequent messages in light of the national interest.

**Commendation of Volunteer Firemen
From the Villages of Franklin Square,
West Hempstead, South Hempstead,
Uniondale, Roosevelt, Elmont, Lake-
view, Garden City, and Hempstead**

**EXTENSION OF REMARKS
OF**

HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. WYDLER. Mr. Speaker, I would like to call to the attention of this august body a feat of daring, bravery, and courage performed by a group of my constituents: the volunteer firemen from the villages of Franklin Square, West Hempstead, South Hempstead, Uniondale, Roosevelt, Elmont, Lakeview, Garden City, and Hempstead.

On the morning of December 31, 1962, a blaze broke out in a warehouse in the village of Hempstead which eventually destroyed Long Island Railroad station there and caused over \$1 million worth of damages. During its course, several homes were threatened.

The temperature was at near zero throughout many hours these brave men spent fighting the blaze. In a short time after they arrived at the scene, each man resembled a ghostly apparition; each was covered with a cake of ice. The cold was bitter; the fire raged. Despite these obstacles, these wonderful men fought on, eventually bringing the fire under control—a fire that had all the

earmarks of being the most devastating Long Island had ever experienced.

Mr. Speaker, I call the attention of the House of Representatives to these men because they are volunteer firemen—they receive no pay for their labors—they are dedicated to the preservation of life and property in the community. Through the years they have performed their duties with courtesy, kindness, and efficiency. They are on call 24 hours a day. And when the siren sounds, they are on the go immediately without regard for personal comfort or safety.

These men deserve the undying admiration of the people of their communities. The same admiration is due their wives and families who keep the fearful vigil, many of whom have formed auxiliary units which, like the male groups, travel to the scene of the fire and provide these hardworking men with coffee and doughnuts and aid during the critical firefighting time.

I commend to your consideration all volunteer firefighting units, but especially, at this time, the brave men of the villages I have cited who performed so well in the recent, critical Hempstead blaze.

These are men I suggest, who do not ask what their country can do for them, but in the tradition of the minutemen of Concord and Lexington, are actually doing right now. They are to be applauded as examples of the finest in Americanism.

Another Year of Service by FBI

**EXTENSION OF REMARKS
OF**

HON. G. ELLIOTT HAGAN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. HAGAN of Georgia. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues an editorial from the Columbus Enquirer entitled "Another Year of Service by FBI."

This editorial does an excellent job in pointing out the outstanding record of service that is being rendered the American taxpayers by J. Edgar Hoover and his dedicated agents:

ANOTHER YEAR OF SERVICE BY FBI

Another successful year in its relentless war against crime has been reported by the Federal Bureau of Investigation.

The annual report of Director J. Edgar Hoover, made last week to Attorney General Robert F. Kennedy, shows marked increases were recorded in all major categories of FBI accomplishment in the past year.

More wanted persons were apprehended, more convictions were recorded in cases made and fines and recoveries gained.

The 12,700 convictions obtained in FBI cases exceeded the 12,418 of a year ago by more than 200. It was a like story on the number of fugitives apprehended—11,400 as compared to 10,668 in 1961.

Fines imposed and recoveries made totaled well above \$200 million. The figure was \$148,421,690 for 1961. Taxpayers will be

pleased to learn the figure far exceeds the funds it takes to finance FBI operation.

The statistics cited above are only the highlight of Mr. Hoover's annual report. Careful reading of the full outline of accomplishments causes one to realize how much Americans depend upon FBI agents to protect them and how much assistance the FBI gives to law-enforcement officers at the local level.

Accomplishments of the FBI in 1962 are a tribute to the leadership of Mr. Hoover, which has spanned a period of more than 38 years. Under his direction the FBI has established and maintained a high level of service to the Nation.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 135, p. 1942).

Appendix

Conserving America's Agricultural Resources

EXTENSION OF REMARKS

OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. CONTE. Mr. Speaker, I would like to draw the attention of my colleagues to the remarks of Mr. Edward M. Dwyer, of the Massachusetts Department of Agriculture, during a panel discussion entitled "Action Today for Tomorrow's Growth." Mr. Dwyer presents in capsule form some of the very real problems we face in the field of conservation, especially as they relate to the American farmer. This is a particular area of American agriculture in which the Federal Government can and should be of greater assistance to our farmers if for no other reason than a consideration for the future needs of our people. Though Government's massive intervention into agriculture has not cured any of its ills, we must be extremely careful in any withdrawal that such a vital area as conservation is not left floundering.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by Edward M. Dwyer, director of the Division of Livestock Disease Control of the Massachusetts Department of Agriculture:

REMARKS OF EDWARD M. DWYER

Farming today is far different from what it was 2,000 years ago, 100 years ago, yes, 10 years ago. Credit for the constructive change must be given to many brilliant minds, to many different chemists, to many different engineers, to many different industries, to our national leaders starting with George Washington and Thomas Jefferson, and continuing with our present leaders in the Department of Agriculture in Washington and the departments of agriculture in our States. But most of all we must praise our dirt farmer himself who has adopted the new found basic rules of nature in the production of food and fiber. One farmer suffices today to supply the needs of 26 whose labors have been used by our widespread system of industry.

The soil releases its food to the plant more abundantly, the seed resists its natural enemies, the drought is still a hazard, but it is not a bugaboo; the swarms of destructive pests are kept in place, and the fungus and rot are being conquered. As a result, we have more food for man and animal, a greater variety for our national diet and all this at a lowered price as measured by the percentage of the consumer dollar spent for food.

The task before us in the next 10 minutes is to discuss "Action Today for Tomorrow's Growth." If we are satisfied that everything possible is being done and that we are handing on to posterity our natural inherited as-

sets at interest, then this talk is unnecessary. But if you are not satisfied, as I am not, that with our progress we are not replacing each year the essential elements in the soil eaten up by the harvest, then this talk is apropos.

Responsible officials estimate that our topsoil has been depleted from a national average of 9 inches at the time of the founding of this country to a present day average of 6 inches. This is a truly alarming rate of depletion in a period of 250 years, but more alarming still is the fact that our agricultural lands, west of the Mississippi, were tenanted by the Indians a mere 100 years ago.

Before the breaking of the land, our forests and ground cover protected the soil against movement by wind and water. Leaving the soil without cover after the harvest created the situation whereby the howling and roaring winds from the frozen north picked up the topsoil and deposited it in far off spots where it was not wanted. Traces have been found thousands of miles away after being blown from west of the Mississippi. Added to the wide open spaces were the areas denuded of trees by our rapacious settlers to provide lumber for homesteads and ground for crops. The lands lost much of the natural barriers to keep the winds in check. And when we denuded the forests and left the soil without ground cover, the rains gushed into our unprotected fertile areas and carried with the torrents, thousands of tons of topsoil to the brooks and streams, to the rivers and to the sea. No scientist is needed to prove this statement as any common man can witness the color of the waters, all murky with soil and wade in the silt piled high at the mouths of the rivers.

All this is manmade conditioning for destruction.

What about the nutrient values of our soils today as compared with 50 years ago? Every soil needs calcium, nitrogen, phosphorus, and potash among other trace minerals for normal growth of crops. Over cropping without replenishing the soil nutrients and humus has created a situation where one-half-a-million acres of crop land is being removed from agricultural production. (Some of this land is going into housing developments and business pursuits.)

The consuming public is diet conscious and insists on balances for proper human growth and survival. If our crops lack the proper elements because the soil has been drained of them, the public will be forced to survive on capsules and eat only for bulk. This statement may have more merit than a casual reading may warrant. If we have the means at hand to maintain fertility, can we justify handing on to posterity the barren land that we have robbed of its riches when we at best are only tenants of the soil? And what does this malpractice do to the economy of the present day farmer? He will increase his time and expense to get from the soil a poorer product chemically, and a much poorer product marketably. Let us not forget that the soil produces food for our nourishment, clothing for our warmth, and shelter for our protection.

Our suggested program for the present and for the future is a logical one.

1. First and foremost is the job of informing our Representatives and Senators of the basic farm problem affecting the health of our citizens and the citizens of

the future. The solution to the problem is for our own economic welfare and, in addition, for our own health. An abundant food supply maintains a healthy body politic and substitution of concentrated forms of health-supplying additives is a far cry from the real proven product.

Supplying the essential facts to our elective body will condition them for the time when the appropriation for the several projects comes before them for a vote.

2. Administration:

The most important factor for the correction of the existing evil, as I have presented it, is the administration of the agricultural laws that are now on the books.

Any correction of the basic conditions is beyond any individual efforts or any one-group effort. The social body must meet the challenge.

There are programs operating under present laws. These programs are good in themselves, but powerful when joined in a concerted and coordinated effort. Each program must have maximum funds to successfully operate.

I will review some of these programs briefly and in outline, with suggested improvements.

A. First: The ACP program:

Some of the practices administered by the agricultural stabilization and conservation committee in the Northeast area through the local and State committees are the following:

1. Soil protection and replenishment through (a) cover cropping—for protection of the topsoil; through (b) permanent re-seeding of certain lands which will replace the organic matter of the soil (lost through several causes); through (c) liming to correct the acidity of the soil to foster growth of legumes; through (d) adding minerals for plant growth such as phosphates, potash, nitrogen, and trace minerals.

2. Reforestation: This work involves the thinning and replanting of trees cut for harvest.

3. Watersheds and farm ponds: This project conserves our rainfall for useful purposes by holding it until the time is most useful and most necessary and prevents loss by erosion.

4. Incentives: Much of the above could not be done through the efforts of the individual farmer unless a tangible token reward was dangled before his eyes. The reward is recognition of a job well done. Of course, some of the services performed by ACP could not be done by the individual because of the cost factor, but when the services are performed on an area basis, the individual cost is reasonable and economic.

SUMMARY

The above work by the ACP is a national effort at a present outlay of \$250 million. The legislation as originally passed contemplated a budget of \$500 million. With the accumulated experience of the personnel for the past 25 years, it is my humble opinion that the budget for ACP should be increased so that the program can be expanded to our economic advantage.

I mention here, and more is to be said about the committee system for the operation of the ACP program. Suffice for now to say that this system is democracy at the grassroot level.

I am quoting the agronomists when I say that the application of lime to the soil is but 15 to 20 percent of the recommended

annual application, and the addition of minerals is but 20 to 25 percent.

B. The Extension Service Program: The personnel attached to this service carry to the farmers the message of the results of research and its practical application. Let us give our need of praise to these dedicated men who have helped the farmer to produce more of a better crop and channeled the product into marts of the world.

C. Soil Conservation Service: This Service offers great financial assistance through their technicians, to carry out major farm programs. These programs protect and extend croplands and develop other lands for recreation, for wildlife, and for forestry. The Service is invaluable and the plans should be carried out by each individual producer involved.

D. Forest Service: This Service is widely known through publicity in all forms. What child does not recognize Smokey, the bear, and the forest warden at the top of the tower, alone in the depths of the woods? This picture stirs the imagination of everyone. The Service is widely acclaimed for its work in protection, education, and in development of our great national resource: forests.

E. Farmers Home Administration: This service provides money when needed, under controlled auspices, to our farmers, through the constituted farm banks. The lending of money to an individual is coordinated with the services described above. Its greatest asset is the personnel who understand the meaning of money and who understand the work of the farmer. The city banks slant their programs to the needs of our industrial communities.

3. Education:

When the public gets the facts on agricultural needs, repeated for emphasis, and without scare headlines, great strides will have been made. The exposure of the facts depends upon artists trained in the art of communication. Our federally aided schools and colleges must rise to the opportunities in this field, but talent must be seized wherever available.

Our farmers must be trained and developed in the art of soil conservation. The Extension Service has performed notably, but the goals must be set higher. Let us take note of the classic studies made in industry by Taylor and Galbraith with their works on industrial management and individual effort.

Our programs on television, slanted to propagandize the farm problem, should carry the spirit of adventure which Telstar and the rockets so superbly exhibit.

And to close with one of my own personal experiences, not a great accomplishment, but an effort which can be multiplied many times to advantage.

I acquired 290 acres of farmland in the 1930's. The soil was depleted by malpractice that the acreage would not pasture 40 head of cattle. Using every available service and help, the fertility and quality of the soil was developed by application of tons of lime, hundreds of pounds of nitrogen and phosphorus, and the cover crop was plowed in for humus. Today these fields support nearly 300 head of cattle, with 800 tons of grass silage and 300 to 400 tons of hay. This is a long way from the days in the 1930's when the acreage would not support a farmer.

My experience with these programs has convinced me that the local committeemen are in the best position to help solve the problems of the local farmer, and these solutions fit into the national picture. To suggest a substitution of the local committeemen for committeemen ruling from a seat in Washington would be a tragic error. Such a substitution could allow a corn belt man or a cotton plantation man to make rulings for agriculture in our Northeast section of the country. Our problems are local and the character of the farmers are peculiar to our

section. Local men understand our needs and our oddities and have made, and can continue to make, this democracy of ours work.

Our farmers are individualists and hate rule by dictation. So let us keep our programs operating through the local committees.

I emphasize my firm convictions in the strength of our free enterprise system of government. We are great and strong and resourceful, all because we are allowed freedom of choice with a minimum of regulation. But this does not justify subsidizing the inefficient in the name of a support program.

I take this moment to express my appreciation for your kindness in listening to me and to those responsible for the invitation to be a panel member.

Russian Agriculture

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 15, 1963

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the RECORD an article dealing with Russian agriculture by Dr. Paul Sanders, which was published in the December issue of *Rural Virginia*.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Russian agriculture is fully 50 years behind that of the United States, and shortage of food is their biggest problem. They are making fantastic progress, though, on farms and in factories; but lack of incentive for extra effort is plaguing them.

These are among the major impressions of agriculture that I brought back from a 3-week, 15,000-mile tour with 34 other Virginians in Central Europe. Most of the time on the tour last summer was behind the Iron Curtain, studying farming methods and country life deep in the heart of the Soviet Union.

Our tour group was handpicked by Parke C. Brinkley, then Virginia's commissioner of agriculture, to represent every phase of the industry of agriculture.

There were dairymen and milk handlers, stockmen, and meatpackers; fruitgrowers, truck farmers, and canners; poultrymen, grain growers, and nurserymen; county agents, vocational agriculture teachers, and farm journalists. Two outstanding farm machinery men made the trip.

Everyone paid his own way. Not a dime of State or Federal money went into the undertaking. It was a people-to-people project made possible under a treaty between our Government and Russia which permits the exchange of cultural and scientific knowledge. Our route was carefully planned in advance and arranged to permit us to see every facet of Russia farming.

Nearly everyone in the tour group had a camera or two. When we compared notes in the evening after a long day on a farm or in a factory the group came up with a pretty good picture of its operation.

To begin with, Russian farms are too big for efficient operation. Their state farms average 58,000 acres; the collective farms, 14,000 acres each. Compare this with the U.S. average of 220 acres per farm and you see one big difference between the democratic and the Soviet systems. Our people own family farms, and work hard and in-

telligently to make land and labor profitable in order to enjoy a high standard of living. In Russia, the Government owns all the land, and everybody works for the Government. The standard of living of all Russians is alike as "two peas in a pod." There is no incentive to achieve. Result: low production.

On Russian collective farms, the workers draw a very low wage but share in returns from production over and above a quota or norm set by the Communist Party. The surplus is sold to the state and the proceeds divided among the workers. This type of operation is on the decline because the norm is being constantly inched up and there is little surplus to divide.

On state farms, wages are higher, and there is no participation in the proceeds. Everybody trades at the state stores. It is the Russian feudal system without compassion.

Farming methods in Russia are a paradox, a study in contrasts. On the same farm one sees practices used since the days of the Pharaohs and others as modern as tomorrow. I saw tractors pulling four-row cultivators alongside 129 women with short-handled hoes weeding hybrid corn; oxen supplying farm power in the shadow of a dozen huge combines being readied for the grain harvest; women gleaning fields, as did Ruth in Biblical times, and others in a nearby modern milking parlor milking 1,000 cows with electric milking machines. This strange mixture of the old and the new is Russia's agriculture today.

This clash between the old and the new stems in part from the Kremlin's frantic effort to adopt the scientific farming methods that have brought the United States the most abundant food supply at the lowest cost mankind has ever known. The Russians apparently have access to all of the technical knowledge in the experiment station bulletins of our land-grant colleges, U.S. Department of Agriculture, and commercial concerns. But the Soviets have failed to allocate enough machinery, chemicals, and scientific know-how to agriculture.

The best trained manpower in Russia has been moved into official functions, defense work, and propaganda agencies, leaving illiterate and poorly skilled labor on the land. This type of farm worker might be satisfactory for the peasant agriculture that characterized Russia for 1,000 years, but as the country moves into an industrial complex with a large percentage of the population living off the farm a highly technical agriculture is essential. Russia still has 45 percent of the labor force in farming, and the average consumer spends 50 percent of his income for a drab, starchy diet that is woefully weak in meat, milk, and eggs.

Contrast this with the United States, where less than 9 percent of the labor force is engaged in farming and the consumer spends only 20 percent of his income for the best diet on earth. The competitive free enterprise system of our country has channeled essential machinery, chemicals, and professional manpower into food production that all of our people may eat well at low cost. Farm research and universal education have made American agriculture the marvel of the world.

There is nothing Mr. Khrushchev wouldn't give for our farming system of land-grant colleges with their research, teacher training and extension work, and the U.S. Department of Agriculture with its multiplicity of programs designed to meet every inequity in American agriculture. Such a system behind the Iron Curtain might well be the difference between success and failure of the Soviet system.

Soviet peasants are still permitted to farm small garden plots of ground around their homes—one-half to 2 acres. This production can be sold in the market places for a profit. These small garden plots were the best-

farmed areas we saw in all Russia, showing that private initiative and profit attain production. From these small private plots which constitute only 3 to 4 percent of the total sown acreage in the Soviet Union, come 47 percent of the meat, 80 percent of the eggs, 60 percent of the potatoes, and 50 percent of the green vegetables.

Drought is another thorn in the side of Soviet agriculture. The deep, rich soils of the Ukraine—the "bread basket" of Russia—look like Iowa and Illinois land. But shortage of rainfall cuts deep into crop yields.

Average rainfall in much of the Ukraine is 20 inches a year—less than half Virginia's annual precipitation. Some irrigation is used for vegetables, berries, and other high acre value crops. But as one travels east, the climate grows dry and the population sparse. It is in this arid country that 5 million of some 90 million acres have been plowed and seeded to grain. Many soil experts feel the Russians may be unwittingly opening up what could become another "dust bowl."

What holds Russia together? They have little to eat—mostly brown bread and potatoes. Yet the people appeared healthy and well fed. The clothing is inadequate—ill fitting, loud and ugly. There is a noticeable dearth of consumer goods, recreational facilities, and luxuries. Wages are low and prices are high. Housing is substandard. Life is cheap. Safety devices of all sorts were conspicuous by their absence. Everyone wears a serious, deadpan expression. There is little laughter.

Communists are all cast in the same mold. While some of the people were pulled down to fit the pattern, others were pulled up. Unquestionably, the average Russian is better off today than ever before. They never knew freedom and, therefore, they don't miss it.

Three things are holding Russia together: work—everybody works in order to eat; fear—of atomic bomb attack, famine, or someone squealing on them; promise—of more food, consumer goods, and free housing, medicine, and no taxes in the future.

I would summarize my 3-week trip by saying Russia is making great progress. To deny this is to kid ourselves. The average American has been badly victimized by propaganda on Soviet agriculture. The Communist threat to the free world is genuine. It's real. It may be later than many Americans believe.

Communism is more than a form of government. It's a new economic and social order—a religion. They have abolished God by public decree and substituted the Soviet system as the supreme power. The state owns all enterprises, housing and land. Everybody works for the Government. It's a political paradise—every able-bodied person has a government job.

The free world can thwart communism only by a healthy economy where the private ownership of property is profitable, greater dedication to the basic precepts of democracy, and a deeper religious and moral consciousness among our people.

Success Story Spiced by Horseradish

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. JOHNSON of Wisconsin. Mr. Speaker, on January 15, my colleagues in the House had the opportunity to

sample an outstanding product from my home district in Wisconsin. The House of Representatives dining room was serving zippy Wisconsin horseradish, compliments of Ed Bartusch, general manager of Silver Spring Gardens, Inc., Eau Claire, Wis.

I have had the pleasure of visiting Silver Spring Gardens, which began as a home operation during the depression and which has since grown into the largest horseradish producer in America. The success story of this enterprise is told in a story which appeared recently in the Milwaukee Journal, Milwaukee, Wis. Under leave to extend my remarks, I would like to have this article printed in the Record:

HORSERADISH: WISCONSIN'S SNAPPY HARVEST (By Clarice Rowlands)

EAU CLAIRE, WIS.—Snow flurries were in the air; the temperature was 13 above zero. Even horseradish harvesting was at a temporary standstill as the ground started to freeze. This was the state of late autumn weather in northwestern Wisconsin as a horseradish grower and processor became concerned about digging roots. Last of the State's crops harvested from mid-October into November, there is a concentrated rush of activity before winter sets in.

Familiar to most people in its grated, creamy form as it comes from the bottle, zippy horseradish starts its existence as a root cutting in the ground, according to Ed Bartusch, vice president and general manager of Silver Spring Gardens, Inc., largest producer in America. Located near here, the 360-acre farm is part of a 2,500 acre operation which also grows melons and potatoes.

RESULT OF DEPRESSION

Credit for the development of the nippy condiment goes to Ellis Huntsinger, president of the concern and father-in-law of Bartusch. When the depression deprived him of his sales job in 1929 he recalled his earlier farm life. With this inspiration he started growing melons, berries, and horseradish. He began with half an acre of the latter and produced three-fourths of a ton of horseradish. Today production is 1,500 tons.

Although he admits he's taking it easier now he still has his eye on the business. While others worry about the advent of winter, he contemplates leaving shortly for Florida to spend about 5 months.

RECALLS FIRST PACKING

"The first time I grated horseradish, there was no ventilation," he recalled. "There was nothing. We packed bottles by hand and we worked 16 hours a day, 6 or 7 days a week. I started the present operation in the milk-house on this site."

His daughter, Mrs. Ed. Bartusch, remembers how she used to apply labels by hand on top of a board over a box. Mrs. Huntsinger, she said, did all the bookkeeping and anything else necessary to get the job done.

The present processing and bottling facilities at the plant are quite a contrast. They are the most modern available with sanitary stainless steel equipment handling the 48,000-bottle capacity per day.

Because Huntsinger is modest about his pioneer work in the horseradish business, Bartusch, who joined the concern in 1945, speaks proudly of it.

"It takes a cold climate to mature horseradish roots properly," he pointed out. "They become nice and white once the tops are frozen. The 'R' months are the best for harvesting. We harvest about two-thirds of the crop now but leave some in the ground over winter for our spring harvest which accounts for about one-third."

Lush horseradish plants with their broad leaves look like Swiss chard during the growing season. Once frost hits they start turning brown, he explained. The main root is used for grinding stock while the best shoots or sets which branch from it are cut off and saved for future plants. It requires about 8,000 plants per acre and these are planted in rows.

AREA IS RECLAIMED

Bartusch drove us to a 1,000-acre area 5 miles west of Mondovi which his company started reclaiming from swampland in 1954 and is now an excellent productive area. While harvesters were digging roots in one section, other employees were planting cuttings in another area. The mechanical planter is capable of planting four rows at a time as eight employees sit on seats and feed the cuttings.

"The hills are worked off in the spring," he said. "We worry about a fast thaw. It should be gradual to insure our plants."

The St. Louis area, particularly in southern Illinois, is the center of horseradish growing in the United States, according to Bartusch. Approximately 3,000 acres are grown throughout the country and from this comes the horseradish supply for the Nation. Because of a shortage in the St. Louis region in 1952 and 1953, some was imported from Sweden and Japan at that time. No foreign horseradish, however, is now coming into this country, he added.

Bartusch is an authority, too, on who likes horseradish best. He's in a position to know because his concern distributes from coast to coast in 30 States and also in Canada.

"The North is the best market, although we do sell in Los Angeles and Miami. We think the liking for horseradish can be traced directly to European heritage. Polish people seem to be the best horseradish eaters, with those of Jewish and German heritage next. The French think it isn't subtle enough, and Italians never seem to use it. Wherever the climate is warm they don't know what it is. Argentinians do use it," he explained.

He also mentioned that Huntsinger worked closely for many years with the University of Wisconsin college of agriculture in development of roots to produce a better yield, color, and strength. Wisconsin was the first to produce a hybrid horseradish.

The greatest advancement for the consumer came in 1941 when Huntsinger mixed some cream with horseradish and discovered that it prevented horseradish from turning brown and deteriorating. Butterfat coats horseradish and prevents oxidation. As a result this cream style stays fresh several times longer than the old vinegar pack.

In addition to the cream style, the firm turns out a shrimp and seafood sauce, hot dog relish, and beet horseradish, all incorporating horseradish. A rabbi from the Twin Cities regularly visits the plant prior to Passover to supervise the packing of horseradish for Jewish consumption. Labels are applied while he is there.

Bartusch has a strong word of advice for consumers. "Horseradish has to be kept cold. The colder, the better," he cautioned.

Like other packers, he is behind the label which appears now on shipments. It says, "Horseradish is a fresh food and to taste best must be refrigerated at all times."

"It is discouraging for us to find stale brown horseradish in restaurants, institutions, and even on grocery store shelves. Obviously, someone did not take care of it—the shipper, the warehouse, stock clerk, the restaurant, or the institution manager," he said in behalf of all packers.

In tracing the steps of horseradish roots from the field to the grated product available to the consumer, Bartusch explained that the roots dug by a mechanical digger are hauled

directly to a sorting shed. Here some 200 women working on conveyor belts separate the main root for grinding from other attached roots which are cut and bunched as cuttings for future plantings.

The grinding roots are then transported to coolers and the processing plant. A temperature of 32° is maintained in the huge cooler building where as many as 100 tons of roots can be stored when it is filled to capacity. From here the roots go to the processing plant where they enter revolving stainless steel churns. They undergo the washing process in a constant tumbling action.

Roots are then hauled in carts to the peeling room where women trim most of the blemishes by hand as roots move down a conveyor belt. A gentle spray of water washes them again and they are taken in carts from which they are dumped into two huge grinders. After the grinding, vinegar, sugar and cream are added. The completed mixture then moves on in stainless steel pipes to the bottling room where automatic machinery fills 5 ounce, 10 ounce, 1 pint, quart, and gallon containers. Labeling and packing into cartons complete the process.

The uses of this finished product are much more numerous than most homemakers think, the Huntsinger and Bartusch families believe. Huntsinger's favorite use is a sauce in which he combines one-third portion tartar sauce, one-third portion sweet or sour cream, one-third portion horseradish, a little lemon juice and sugar to taste. He mixes the ingredients and likes to serve it on baked potatoes, with meat or fish. A homemaker, he said, might prefer to use sour cream because it makes the sauce thicker.

John P. Duncan, Jr.: Man of the Year in Agriculture

EXTENSION OF REMARKS OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 15, 1963

Mr. TALMADGE. Mr. President, John P. Duncan, Jr., a fellow Georgian and friend of farmers throughout the Nation, has been selected by the Progressive Farmer magazine as a Man of the Year for 1963 for his dedicated service to agriculture.

I congratulate Mr. Duncan on this honor, and know that my pride is shared by all those who know the outstanding contributions he has made toward improving agriculture and the life and welfare of the farmer.

Mr. Duncan served with distinction as president of the Georgia Farm Bureau before coming to Washington to become Assistant Secretary of Agriculture. His splendid work has drawn praise from all of his associates, including Secretary of Agriculture Orville Freeman.

Mr. President, I ask unanimous consent that the citation given Mr. Duncan be printed in the Appendix of the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

JOHN P. DUNCAN, JR., GEORGIA, A SUCCESSFUL
DIRT FARMER SERVING THE NATION WITH
GREAT DISTINCTION

As a boy and as a young man, John Duncan trained for a career in farming and

farm leadership. He grew up as an active worker on his father's farm—that of Master Farmer John P. Duncan, Sr., Brooks County, Ga. He gained more than usual training as a student at the University of Georgia College of Agriculture and at Emory University.

These years were followed by experience in the old Triple A State office in Athens, as a southern regional AAA representative in Washington, and then as a successful dirt farmer back in Brooks County. All these prepared him for the superior work he did as Georgia Farm Bureau president, and is now doing as Assistant Secretary of Agriculture.

Secretary of Agriculture Orville Freeman says, "John Duncan is well known from one end of Georgia to the other as a dedicated, tireless worker for the farmer. His work in Washington may not be as well known to his friends in Georgia, but it is equally outstanding. He carries a heavy burden in the Department of Agriculture and commands both the affection and respect of all his associates. I am privileged to join the Progressive Farmer in saluting John Duncan as Georgia's Man of the Year."

Under Secretary Charles S. Murphy added, "John Duncan's rare combination of ability, courage, and integrity, coupled with his thorough and practical knowledge of agriculture, qualify him to a unique degree for the position he now holds. The farmers of the Nation owe him an immeasurable debt of gratitude."

Few, except those who know intimately his Washington activities from week to week, can appreciate the tremendous job he has done for cotton, poultry, peanut, tobacco, and all other farm families of the South. In present cash dollars, it would run into multiplied millions; in contributions to a permanently stronger and brighter agriculture, his worth cannot be easily measured.

The Taxpayers' Friend: Comptroller General Joseph Campbell

EXTENSION OF REMARKS OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 15, 1963

Mr. DOUGLAS. Mr. President, I ask unanimous consent that an article from the Chicago Daily News, very ably written by James McCartney, praising the extraordinary efficiency and public spirit of the Comptroller General of the United States, Joseph Campbell, may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TAXPAYERS' DEDICATED "WATCHDOG" NIPS AWAY
AT WASTE IN WASHINGTON
(By James McCartney)

WASHINGTON.—In the vast administrative jungle that is Washington, Joseph Campbell, 62, may be the taxpayer's best friend.

He is a man sworn, purely and simply, to fight waste in Government spending.

He is a modern "David" in a David versus Goliath struggle to prevent inefficiency, extravagance, and downright crookedness in the spending of the people's money.

Campbell is the Comptroller General of the United States, head of the Government's General Accounting Office.

As such, he works for Congress with the express role of keeping an accountant's eye on the mushrooming Federal bureaucracy.

Consider the odds:

The executive branch of the Government has more than 2,500,000 employees. Campbell has 4,700 in the GAO.

The Federal budget next year will approach \$100 billion. Campbell's operating budget at the GAO is about \$43 million.

It is an unequal struggle at best, but, amazingly enough, Campbell—unlike almost every other agency boss in Washington—is not in the business of trying to boost his own budget or enlarge his empire.

In fact, in fiscal 1962 the GAO, because of Campbell's tight administration, didn't spend all of its appropriation.

It didn't draw \$2,100,000 of its legally appropriated funds because Campbell figured he could get along without the money.

And, rather than growing in size in recent years, the GAO payroll has been sharply cut.

When Campbell took over 8 years ago the agency had 5,800 employees—1,100 more than it has now.

AN UNUSUAL BREED OF PUBLIC SERVANT

These actions, needless to say, violate every rule of Washington empire building and, in themselves, single out Joseph Campbell as an unusual breed of public servant.

Perhaps even more remarkable is the fact that Campbell believes his small force is doing a better job than the larger force he inherited.

When it comes to running an agency, Campbell is a believer in quality rather than quantity.

"A smaller number of more efficient, more professional men can do a better job than a larger number of voucher clerks without professional training," he says.

It's not that he doesn't think he could use more people to perform his assigned job. If he could get good people, he'd want them.

But he is not currently asking for more help because professionally trained accountants of the quality he would like to have are in short supply, and he doesn't want to load up with second-class men.

The pipe-smoking Campbell, a deep-voiced, soft-spoken man with bright, penetrating blue eyes, was brought into the Government by President Eisenhower.

Campbell was treasurer of Columbia University when Mr. Eisenhower was Columbia's president. When Mr. Eisenhower became President of the United States he appointed Campbell to the Atomic Energy Commission and then, later, moved him to GAO.

Campbell still carries the aura of the campus with him.

He wears informal blue shirts, a vest, dark brown horn-rimmed glasses and thick, rubber-soled shoes. He might be mistaken for a professor at almost any university.

"He can call hundreds of GAO employees in offices throughout the world by name," says an aid.

MAKES SPOT CHECKS ON U.S. SPENDING

The GAO's job is to spot check Government spending through independent audits.

On one occasion an audit turned up the fact that some Army officers at Fort Lee, Va., had spent more than \$500,000 for an airfield—when they were officially limited to \$25,000 for the project.

When the cat was out of the bag, Congress clamped down quickly.

Another time the GAO discovered an administrative maze in the Weather Bureau.

It seems that supplies bought by the bureau were delivered to a storeroom where they were counted and inspected for breakage, then reshipped to another location 2 miles away where they were counted again and tested.

The crowning touch, however, was the discovery that the supplies were then shipped back to the original storeroom—where they were counted again.

The Weather Bureau has revamped its procedures since.

These are but isolated samples, however, of hundreds of reports issued by the GAO. At any one time the GAO is involved in about 200 to 250 investigations.

By its own estimate, measurable potential savings to the taxpayers as a result of GAO recommendations came to about \$95 million last year. That is well more than twice the GAO's own budget.

Campbell believes the biggest problems in trying to prevent waste lie not so much in outright thievery or dishonesty as in honest mistakes or bad judgment.

He says the biggest areas of waste are in procurement of government supplies, particularly in defense supplies, and he is sharply critical of lack of competition for many defense contracts.

There are many areas of "inadequate controls" and "inadequate management" in governmental administration, he says.

In brief, Campbell would like to see the government operated like a taut, well-run ship, with the best possible personnel. He knows it can be done. He has done it in his own agency.

Wisconsin Author Honored

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. JOHNSON of Wisconsin. Mr. Speaker, the town of Pepin in my home district of Wisconsin is known across the Nation as the birthplace and childhood home of the noted author, Laura Ingalls Wilder. Countless readers have become familiar with pioneer life in the area surrounding beautiful Lake Pepin by reading Mrs. Wilder's book, "Little House in the Big Woods." It is a well-written and fascinating account of her childhood in a frontier community.

Although Mrs. Wilder's books were written primarily for children, the stories have a universal appeal. The philosophy which they express is basic:

It is still best to be honest and truthful; to make the most of what we have; to be happy with simple pleasures; and to be cheerful and have courage when things go wrong.

Last fall, a historical marker honoring Mrs. Wilder was unveiled in Pepin's village park, which has been renamed Laura Ingalls Wilder Park. Under leave to extend my remarks, I would like to include in the RECORD an editorial from

the Courier-Wedge, Durand, Wis., concerning this event:

NEW PEPIN MEMORIAL

Late last fall, residents of Pepin staged an unveiling ceremony at a new historical marker in their village park. The marker honors Laura Ingalls Wilder, whose book, "Little House in the Big Woods," created national interest in the Pepin community. Many people who learn about Pepin through the book have visited this area; countless others send inquiries by letter.

Mrs. Wilder was born 7 miles north of Pepin in a little log house surrounded by a crooked rail fence. Today, the house and fence are gone. The big woods are gone, too. State Highway 183 passes through the former Ingalls farm, apparently following a wagon track described in the book.

Records in the courthouse at Durand show that Charles Ingalls acquired his farm in 1863. His famous daughter, Laura, was born February 7, 1867. The philosophy expressed in her books is basic: "It is still best to be honest and truthful; to make the most of what we have; to be happy with simple pleasures; and to be cheerful and have courage when things go wrong."

During the final years of her life, Mrs. Wilder and husband, Almanzo, resided on a farm near Mansfield, Mo. After Mr. Wilder died in 1949, she lived alone until she succumbed February 10, 1957.

The wolves, bears, and panthers Mrs. Wilder described in her writings are gone from this area. One thing which still remains is the beautiful lake. It is just as beautiful as the first time Laura saw it on a trip to town. People catch fish in the lake just like her father did in 1870. Through the years, Lake Pepin has been a source of fish both for the sportsman and the commercial fisherman. Many fish are sold in eastern markets.

With respect to the noted author, Pepin Park has been renamed Laura Ingalls Wilder Park. People who pass through Pepin cannot miss the historical marker along Highway 35. Visitors are not disappointed to find the Ingalls house and the woods gone. As the author noted: "Now is now. It can never be a long time ago."

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Kremlin Can't Kill Christmas

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, January 16, 1963

Mr. BEALL. Mr. President, I would like to bring to the attention of the Senate a highly interesting article from the December 23, 1962, issue of Family Weekly by Ernest Conine, entitled "The Kremlin Can't Kill Christmas." Mr. Conine, one of McGraw-Hill's leading writers, spent 2 years in Moscow, Russia, as chief of McGraw-Hill's publication bureau. He is at present chief of their bureau in Boston, Mass., and editor of Business Week.

In these days it is encouraging and refreshing to me, as I am sure it is to the other Members of the Senate, to know that the spirit of Christmas still lives in the hearts of the Russian people.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE KREMLIN CAN'T KILL CHRISTMAS

(By Ernest Conine)

For more than 45 years, the Kremlin's propaganda machine has hammered away at the theme that Christmas is a fraud.

Yet one day next week hundreds of Soviet children will troop into the Great Kremlin Palace, the very citadel of Red atheism. There they will stare wide-eyed at a towering fir tree festooned with lights and bright baubles, and accept gifts from Grandfather Frost—a benign old gentleman who looks suspiciously like Santa Claus.

To be sure, the word "Christmas" will never be uttered, certainly not by the Kremlin sponsors. The gathering is calculated to instill in the children a devotion not to God but to the state.

Undoubtedly, the regime succeeds at least partially in this aim. But as a news correspondent who lived 2 years in Moscow, I can testify that the occasion also stands as a monument to the Kremlin's failure to erase Christmas from the hearts of the Soviet people.

Shortly after my arrival in Moscow, I stood shivering one day on Gorky Street, one of the capital's major thoroughfares. While waiting for a taxi, I pondered the sadness of the holiday season in Russia. It was Christmas morning, and I thought of the Nativity scenes in the store windows back home in America, the streets overhung with holly, the soft peal of church bells.

In Moscow, it appeared to be just another workday. Just one touch of color showed in the great, drab street—a huge red banner urging: "Onward to the Victory of Communism."

Anyone who lives in the U.S.S.R. learns, however, that beneath the dreary surface the Spirit of Bethlehem survives after all the years of propaganda, pressure, and persecution.

Small gifts, even crude Christmas cards,

are exchanged among friends. And when I visited the home of one Russian during the holidays, I was surprised to see a Christmas tree; I knew they were unobtainable in the markets, "I cut it myself in the forests near Moscow," he explained. "Many of our people do so."

But more worrisome to the Kremlin is the fact that millions of professed atheists who never go to church any other time—even Communist Party members—attend the special Christmas services which are held on the evening of December 24 in Roman Catholic and Lutheran churches and on January 7 in the Russian Orthodox churches.

Take the case of Vasily, a Soviet journalist who once told me mockingly that: "Our cosmonauts found no God in space." One Christmas Eve I visited Moscow's St. Louis Cathedral, where attendance usually is light for normal services. But on this occasion, I could barely crowd in. As I surveyed the faces, I was struck by the number of young people there—including Vasily, who stood silent with his head bowed.

Although galled by the persistence of the Christian faith, Khrushchev and company cannot afford to return to the harsh persecutions of the Stalin era; the resulting discontent might dangerously impair industrial production.

The regime's current tactic is a flank attack. A clever campaign is underway to take Christ out of Christmas—to preserve the festive trappings while removing the religious content and turning the holiday to Communist purposes.

Christmas is not forbidden; it is simply ignored. But on New Year's Day, celebrations are held in workers' clubs and Young Pioneer Palaces all over Russia. The traditional Christmas tree is there, with all the trimmings. But it is called a New Year's tree, and the accent is on the glorious victories to be won by communism.

The children's party at the Kremlin is the most glittering of all, with admittance reserved for those who have especially distinguished themselves in Young Pioneer work for the Soviet state. Grandfather Frost, a rotund, white-bearded fellow with a sparkling suit, plays the traditional role of Saint Nicholas.

The authorities go all out to make the celebration a truly happy and memorable one. They hope the youngsters will grow up identifying this occasion with the party, not the church.

At home, most Russian families now have a tiny tree of their own. Again, it is called a New Year's tree, at least in the presence of foreigners. But it is significant that the tree usually stays in place until January 8, the day after the Russian Orthodox Christmas—even in the homes of my godless Soviet acquaintances.

Erosion of American Fishing Rights

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. PELLY. Mr. Speaker, joint House-Senate hearings are scheduled to

be held in Seattle, February 13-14, in connection with North Pacific halibut conservation. The purpose of such hearings is to review results of the International North Pacific Fisheries Commission which meets in Tokyo on February 5 and to obtain information as to the effect on American fishermen of the recent opening of the East Bering Sea halibut fishery to Japanese fishermen by this Commission.

Meanwhile, a recent issue of the Fishermen's News contains a guest editorial by George Johansen, secretary of the Alaska Fishermen's Union. This editorial which expresses great concern over the erosion of American fishing rights, follows:

UNITED STATES CHALLENGED IN HALIBUT CONTROVERSY

(By George Johansen)

Considering the efforts made by the United States and the long uphill struggle we had to rebuild the halibut fishery, it is our opinion that we have a special and preferential right because, without our efforts, the halibut would not be found in commercial quantities on the open ocean today.

Moreover, through research conducted by the Halibut Commission, a pattern of migration from Bering Sea to the Gulf of Alaska as been established. On the basis of that research, we can consider that eastern Bering Sea is, in fact, a nursery ground for part of the halibut caught south of the Aleutian Islands. The reports of the Halibut Commission show that when heavy catches were made north of the Aleutians, a decline in catches was experienced south of the Aleutians. The relationship between Bering Sea and other districts of Alaska has definitely been established.

By the terms of the tripartite treaty, any of the participating nations can open up the treaty for negotiations as of June 1963. In accordance with expressions made in Japanese newspapers and fishery periodicals, the Japanese will go all out for abolishment of the abstention principle, and this is a fact which we must face in forthcoming negotiations. The only hope of adequate protection for the American fisheries in the new treaty, lies in full and complete support from our Government. Appeasement and soft talk are not going to accomplish desired results.

In our previous discussions with the Departments of State and Interior, we have received their assurances they will support the abstention principle. We hope those assurances mean that the United States will provide the necessary pressure to implement the promise of support which they have made to the fishing industry.

WORD "ABSTENTION" NEEDED

There already has been some talk of finding language which would substitute some other word for "abstention"—a word which would be less objectionable to the Japanese. In our opinion, this would be disastrous and would not give us the protection we seek; in fact, it could be a circumvention of the abstention principle.

I would respectfully call to your attention that the present treaty has not granted the Japanese any historical fishing rights on North American stocks of salmon on the open ocean. It has specifically stated that the Japanese should abstain from the taking

of North American stocks of salmon. In spite of this and due to what we term "an erosion of the principle of the treaty," the Japanese have taken millions upon millions of North American salmon west of the provisional line. They have been given the red carpet treatment, and while we must and should maintain good relations with the Japanese, we should not appease them to a point where our salmon resource will be destroyed for all time to come.

We note that the U.S. Bureau of Commercial Fisheries has stated that the recommendation of the International North Pacific Fisheries Commission on eastern Bering Sea halibut will be referred to and given most careful study by the Departments of State and Interior. In the first place, the action taken by the Commission was strongly recommended by the advisors of the State and Interior Departments, so it would be very unlikely that those advisors would now comment unfavorably in any way on the Commission's decision. If such review of the decision is conducted by the same representatives who attended the ninth annual meeting of the Commission, then we should discount such review as having little merit under the circumstances.

The salmon, halibut, king crab and other fisheries on the Pacific coast are of utmost importance to the Pacific Northwest, including Alaska. The fishermen on this coast are not unreasonable—they believe in following orderly and lawful procedures, but, in this instance, they feel their rights have been compromised. We had a fuller utilization of halibut in Bering Sea in 1962 than in any previous years, but still, in 1962, we are told to give up rights which we had earned over a period of 40 years.

ECONOMIC IMPACT

We think there are three considerations embodied in our fishery problems, namely: political, economic, and scientific. In the case of eastern Bering Sea halibut, it is our view that the only aspect which was given any consideration was on the scientific side. Recognition should be given to the economic impact upon the fishermen who have to catch those fish to make a living. Down through the years, we have supported all appropriations for scientific fishery research because we believe that in order to successfully manage our fisheries, we must have scientific knowledge. On the other hand, we would not want theorists and biologists to completely dominate the fisheries, and it appears to us that the trend is in that direction.

I believe a treaty is necessary for our future protection. All of us have a responsibility to recognize that fact. I do not believe we can achieve worthwhile results by retreating and appeasement. I would recommend the immediate charter of one or two vessels to conduct necessary research work in the Bering Sea area, to provide additional information needed.

The reaction and opposition to the decision shown by the many hundreds of people who attended the Seattle meeting on December 7, was a clear indication of the tremendous interest and concern the fishing industry has in regard to Government policies pertaining to our fisheries.

The Committee To Save Halibut, composed of various segments of the fishing industry, has forwarded a resolution which we believe should be seriously considered and should constitute policies to be followed in the future.

We must stop the erosion of American rights. As a nation, we have sincerely strived for sound conservation of our fisheries—we have sacrificed to make that program possible and we believe we have a right to enjoy the fruits of our labors.

Mists of the Deep

EXTENSION OF REMARKS

OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, January 16, 1963

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address by Davis Y. Paschall, president, College of William and Mary, entitled "Mists of the Deep" which was made at the launching of the *Henry Clay* at Newport News on November 30, 1962.

There being no objection, the address was ordered to be printed in the Record, as follows:

MISTS OF THE DEEP

(By David Y. Paschall)

It is pertinent to ask why a naval craft, outfitted with the most powerful striking force of the atomic age, should bear the name of one of American history's most effective men of peace. The answer is not difficult, of course, when we recall the historic mission of America itself, which has always been to preserve a just peace among men and nations. The answer is amplified when we consider the main features in the life of Henry Clay himself, and consider again some of his great pronouncements on the destiny of the Nation he loved and served so well.

Henry Clay was born in Hanover County, Va., on April 12, 1777. He grew up in the shadow of the great Virginians of the Revolutionary era—men like Jefferson, Pendleton, and Wythe. It was under Chancellor Wythe—as it had been with Jefferson and John Marshall—that Clay studied law. During his period of study he also served as Mr. Wythe's secretary, and under his inspiring personality Henry Clay grasped the fundamentals not only of the law but of the classics of Western literature and political philosophy that were to characterize his great papers throughout his public life.

At the age of 26, as a resident of the new frontier State of Kentucky, Mr. Clay was elected to the State legislature—and 2 years later to an unexpired term of a U.S. Senator, thus beginning that public career which covered the first half of the 19th century, until his death in 1852. For more than a dozen years in the House of Representatives, and for almost 20 years in the Senate, Henry Clay steered the young United States through the crisis of the Missouri Compromise of 1820 and in his dying years helped shape the Compromise of 1850, by which in two different generations he sought to save the country from the perils of civil war.

As a member of the U.S. Peace Commission in 1814 he witnessed the satisfactory conclusion of the War of 1812, while as Secretary of State under John Quincy Adams he helped effectively to dispose of some of the lingering contentions over trade and national rights which had been fomented by the Napoleonic period. In the compromise of 1832, involving the furious domestic quarrel over tariffs and nullification, he again demonstrated the ruling philosophy of his life—let all parties be prepared to make reasonable sacrifices in the interest of the national peace and harmony. Twenty years later, at the end of his long life of service, the eulo-

gies of onetime political opponents aptly quoted the poet's lines:

"Born when freedom her stars and stripes unfur'd,

When revolution shook the startled world—
Heroes and sages taught his brilliant mind
To know and love the rights of all man-kind."

This is the man we honor on this occasion—Virginian, Kentuckian, American—the man of whom the attribution, "I'd rather be right than be President," has become part of our political heritage—the man whose reputation as "the Great Compromiser" has been universally recognized not as a yielding to any pressure to abandon principles but a constant desire to sacrifice the personal interest where the national interest required it. As a practicing lawyer he always chose to represent the defense against the State. As a diplomat he supported the South American wars of independence and the Greek revolt against the Turks. As an expansionist he stated a characteristic policy with regard to Texas—that its annexation should be only under conditions "without dishonor, without war, with the common consent of the Union, and upon just and fair terms." If it is true that this creed cost him his last chance for the Presidency, it gave this country something much more valuable in his legacy.

On this occasion it might be interesting to quote an early comment from Henry Clay—made in Congress in 1812, during a debate on the expansion of the U.S. Navy. While many contemporary emotions and factors entered into the debate, Mr. Clay accurately foresaw the role that the young country must assume if it were truly to have a voice in the councils of the great nations. He spoke against a motion to reduce the naval forces, and in the process made this prophetic observation:

"But the source of alarm is in ourselves. Gentlemen fear, that if we provide a marine, it will produce collisions with foreign nations; plunge us into war, and ultimately overturn the Constitution of the country. Sir, if you wish to avoid foreign collision, you had better abandon the ocean; surrender all your commerce; give up all your prosperity. It is the thing protected, not the instrument of protection, that involves you in war. Commerce engenders collision, collision war, and war, the argument supposes, leads to despotism. Would the counsels of that statesman be deemed wise, who would recommend that the nation should be unarmed; that the art of war, the martial spirit, and martial exercises, should be prohibited; who should declare, in the language of Othello, that the nation must bid farewell to the neighing steed, and the shrill trumpet, the spirit-stirring drum, the ear-piercing fife, and all the pride, pomp, and circumstance of glorious war; and that the great body of the people should be taught, that national happiness was to be found in perpetual peace alone? No, sir. And yet, every argument in favor of a power of protection on land, applies, in some degree, to a power of protection on the sea. Undoubtedly a commerce void of naval protection is more exposed to rapacity than a guarded commerce; and if we wish to invite the continuance of the old, or the enactment of new edicts, let us refrain from all exertion upon that element where we must operate, and where, in the end, they must be resisted."

In 1818, Henry Clay again voiced an American creed in his support of the independence movements in Latin America. Again, what he said in that creed has a striking pertinence to our present situation:

"Our Revolution was mainly directed against the mere theory of tyranny. We had suffered comparatively but little; we had, in

some respects, been kindly treated; but our intrepid and intelligent fathers saw, in the usurpation of the power to levy an inconsiderable tax, the long train of oppressive acts that were to follow. They rose; they breasted the storm; they achieved our freedom. Spanish America for centuries has been doomed to the practical effects of an odious tyranny. If we were justified, she is more than justified.

"I am no propagandist. I would not seek to force upon other nations our principles and our liberty, if they do not want them. I would not disturb the repose even of a detestable despotism. But, if an abused and oppressed people will their freedom; if they seek to establish it; if, in truth, they have established it; we have a right, as a sovereign power, to notice the fact, and to act as circumstances and our interest require. I will say, in the language of the venerated father of my country, 'born in a land of liberty, my anxious recollections, my sympathetic feelings, and my best wishes, are irresistibly excited, whensoever, in any country, I see an oppressed nation unfurl the banners of freedom.'"

Again may I quote to you from Henry Clay, in a passage full of import for our own time. Here he speaks in support of a resolution to authorize steps leading to recognition of the Greek revolutionaries in their fight against the Turks, and in his speech he deals with the charge that bold action on a matter of principle may bring the United States face to face with grave international dangers:

"This Government, you, Mr. Chairman, and the body over which you preside, are the living and cutting reproach to allied despotism. If we are to offend them, it is not by passing this resolution. We are daily and hourly giving them cause of war. It is here, and in our free institutions, that they will assail us. They will attack us because you sit beneath that canopy, and we are freely debating and deliberating upon the great interests of freemen, and dispensing the blessings of free government. They will strike, because we pass one of those bills on your table. The passage of the least of them, by our free authority, is more galling to despotic powers, than would be the adoption of this so much dreaded resolution. Pass it, and what do you do? You exercise an indisputable attribute of sovereignty, for which you are responsible to none of them."

This is the man whose name most fittingly is now to be identified with a powerful instrument of peace and the enforcement of right dealing among nations. Henry Clay was a man of peace—but of peace which was reconciled with principle. He shared with Plato the conviction that with nations as with individuals, it is not death, but the failure to attain the just life, which is most to be feared. He lived in a time when the idea of freedom was threatened by different forces, but with as much sinister power, as it is today. He was born during one conflict, and was just beginning his public career when a second was fought on his native soil.

And now we prepare to dedicate another mission in the name of Henry Clay, in our own time. How striking are some of the parallels between his day and ours, and between the issues on which he spoke and those which now confront us.

There are—today as in 1812—those who question whether, with forces of destruction in the hands of those who hate everything democracy stands for, we should not constantly look to our own capacity to strike back.

There are—today as in 1818—forces at work for freedom and forces at work to destroy

freedom among our great sister states of Latin America. Can anyone question what our course should be, today, as when the Monroe Doctrine was first in the process of evolution?

There are—today as in 1824—threats to independent nations around the borders of the great Eurasian land mass which represents the unhappy fortress of totalitarianism. Henry Clay saw the support of the Greek patriots as a duty we owed to our own concept of freedom; we are committed to the same viewpoint, essentially, in our decision to resist infiltration and aggression seeking to destroy the free governments of southeast Asia.

The chief difference between our world and that of Henry Clay is simply one of magnitude. The threat to freedom is now worldwide. The capacity for destruction is now a thousandfold greater in the atomic age. Can there be any question but that our response to these challenges must be in proportion?

It is a rather striking coincidence that when Henry Clay spoke in support of an expanded Navy in 1812, he was urging the construction of a number of frigates not quite as large as the number of nuclear submarines now being augmented by his namesake. The modern U.S.S. *Henry Clay* will be the 15th nuclear submarine launched in the national program to guard the frontiers of freedom throughout the world. It gives a proper pride to Virginians to note that so many of the submarines in the Navy's ballistic missile or Polaris system have taken their names from the sons of this Commonwealth who helped launch this great Nation—the *George Washington*, which deployed on her first patrol 2 years ago this month; the *Patrick Henry* and the *Robert E. Lee*, the *John Marshall*, the *Thomas Jefferson* and the *James Monroe*, with the keel already laid for the *James Madison*. A salute of pride is, also, the earned accolade of this great shipyard—the bulder of so powerful a deterrent to aggression and so striking a protector of the peace.

It is the happy and solemn responsibility of this generation to preserve what our great forefathers handed down to us. In this century, it has sometimes been an unfortunate practice to treat our heritage as something we have outgrown. The truth is, not only that it is inescapable because it is part of us, but that heritage is our only justification for continued existence as a free people. "Let us now praise famous men"—the early Americans who are living characters in our own living history. Let me assess them in the words of a leading modern American historian:

"Whom did the American revere, whom did he condemn? Who were the models held up to the emulation of the young? Every child carried with him a number of images of the father of his country: The boy George with his hatchet—'Father, I cannot tell a lie'; the young Washington on Braddock's field; Washington crossing the Delaware; kneeling in prayer at Valley Forge; adjusting his spectacles as he addresses his comrades in arms—I have grown not only gray but almost blind in the service of my country'; retiring in the end to Mount Vernon. He was clearly first in war and first in peace, yet too remote and formidable to be first in the hearts of his countrymen. That place in the affections of Americans was long held rather by Benjamin Franklin, who was recalled more familiarly munching his loaf of bread, trundling his wheelbarrow through the streets of Philadelphia, flying his kite, compiling the homey aphorisms that adorned a hundred readers, and flaunting his fur cap at the court of Versailles. When Poor Richard seemed too tame, there was

the fiery Patrick Henry, and every schoolboy knew that Caesar had his Brutus, and echoed, with appropriate gestures, the invitation to 'Give me liberty or give me death.' Besides these, there was a splendid gallery of lesser heroes: John Smith saved by the beautiful Pocahontas; Roger Williams trekking through the snow to Narragansett Bay; Daniel Boone hewing out the wilderness trail; Paul Revere on his midnight ride; Jefferson penning the Declaration; Marion the Swamp Fox; Nathan Hale with but one life to lose for his country; Ethan Allen to whom profanity was permitted; * * * Perry who met the enemy at Put-in-Bay; Decatur who burned the *Philadelphia* in Tripoli Harbor; Jackson who went straight from New Orleans to the White House. All of them, in the end, made way for Lincoln, the very apotheosis of the American, too homely for idolatry, too inscrutable for mere history, a legend before the lilacs bloomed again. These were his heroes: A people could have worse."

In the perspective of time, we can honor men who in their day were often violently opposed to each other—Clay and Andrew Jackson, Jefferson and Marshall, Lee and Lincoln. We honor them because they all exercised the two basic responsibilities of freemen—first, to arrive at a conviction of national welfare based upon honest judgment and integrity; second, to accept the consequences of standing by that conviction.

It is to protect such a heritage that we send forth our armed naval forces to patrol. Because the international waters of the world cover about 70 percent of the world's surface, this is the tactical area in which the patrol should operate. Contemporary need and our own historic policy has settled the question of whether we should choose this course of action—in the words of Henry Clay, "If you wish to avoid foreign collision, you had better abandon the ocean." Rather, we have chosen to use that ocean for protective purposes, and to equip our underwater forces with the facilities of the atomic age—almost unlimited cruising range and endurance limited only by the human capacities of the crew; mobility, secret deployment, constant readiness for action, or carefully considered delayed action.

The American of 1962 does not shrink from the task of following where his fathers walked. He sees again in his mind's eye the "mists of the deep" which slowly and fatefully unfolded over Fort McHenry to show that "our flag was still there," unyielding against the most powerful forces hurled against it. He remembers the Confederates who died on Little Round Top at Gettysburg, and the Union soldiers who died in the Crater at Petersburg. He remembers John Paul Jones who had just begun to fight when he seemed about to be overwhelmed, and the GI's caught in the Battle of the Bulge and their one-word answer to a demand to surrender.

This is the heritage whose preservation we trust to the American of 1963, and which the new U.S.S. *Henry Clay* carries in the armor of the Polaris missile. It is now to be launched, with the dedication of another sailor whose life mission was described by the poet:

"Though much is taken, much abides; and though

We are not now that strength which in old days

Moved earth and heav'n; that which we are, we are;

One equal temper of heroic hearts,

Made weak by time and fate, but strong in will

To strive, to seek, to find, and not to yield."

Texas Loses Distinguished Citizen in Death of Former Representative Joe H. Eagle

EXTENSION OF REMARKS OF

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 16, 1963

Mr. YARBOROUGH. Mr. President, Texas has lost a champion of the people, a distinguished citizen in the death of the Honorable Joe H. Eagle, who served his State in Congress from 1913 to 1921 and from 1933 to 1936.

He was a man of exceptional brilliance, who was superintendent of schools in Vernon, Tex., before he was 20 years old and had served as city attorney in Wichita Falls, Tex., before he was 25—having passed the State bar examination while holding the school administrative job.

Mr. Eagle was a close friend of President Woodrow Wilson. He was a leader in legislative action setting up the Federal Reserve bank law and in farm loan legislation that enabled so many landless farmworkers to acquire their own property.

I ask unanimous consent that an article and an editorial from the Houston Press of Friday, January 11, captioned "Joe H. Eagle" and "Joe Eagle, Scholar and Congressman," be printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

JOE EAGLE, SCHOLAR AND CONGRESSMAN

Joe H. Eagle, scholar, ex-Congressman, statesman, attorney, philosopher and poet, died Thursday at the age of 92 at his home at 3424 Wickersham.

A Houston resident for 67 years, the man who cracked jokes in Greek with President Woodrow Wilson succumbed after a 3-day illness.

Mr. Eagle had been confined to a wheelchair following leg injuries when he fell under a bus in 1958.

Born in Tompkinsville, Ky., January 23, 1870, he finished all courses in the little town's school and obtained his first-grade teacher's certificate when he was only 14.

HIGH MAN IN CLASS

Three years later, in 1887, he completed a 5-year course at Burritt College in Spencer, Tenn. He was high man and valedictorian of his class.

Mr. Eagle once told a Press reporter:

"I was 9 years old when my mother told me to be honest and truthful, to work at every task, never to touch liquor.

MOVED TO TEXAS

"She wanted me to become a scholar, a lawyer, an orator, a Congressman—like Henry Clay. That became the program of my life." He never tasted alcoholic beverage.

In 1887, Kentucky's loss became Texas' gain when Mr. Eagle moved to Vernon, where he was superintendent of schools when he was only 19.

On Sundays and holidays he studied the University of Virginia law course by correspondence. After passing the Texas bar examination he became a lawyer.

He moved to Wichita Falls and was elected city attorney at 24.

CAME HERE IN 1895

Houston was a city of 40,000 in 1895 when he moved his law offices here. Recently, his offices were in the First City National Bank Building.

In 1900, by then a prosperous attorney, Mr. Eagle married pretty Mary Hamman of Houston. Mrs. Eagle died in 1939.

Twice in his lifetime, Mr. Eagle gave unstintingly of himself to his Nation.

SERVED IN CONGRESS

He served 8 years in Congress from 1913 to 1921. Then again, starting in 1933, he was elected for two more terms. Both times he retired voluntarily.

It was during his earlier term, as a Member of the House of Representatives, that Mr. Eagle and President Woodrow Wilson became close friends.

Both men spoke Greek and often exchanged jokes in that language.

FOUGHT THE KLAN

Mr. Eagle was a champion of free silver, a bitter opponent of the Ku Klux Klan, and argued against women's suffrage, explaining he believed the latter to be a States right matter.

For the same reason he fought prohibition. He helped write the Federal Reserve bank law and was the author of the farm loan bill, which enabled hundreds of thousands of tenant farmers to acquire their own homesteads.

JOE H. EAGLE

The death of Joe H. Eagle at 92 years—and so long retired from public life—will send many an oldtime Houstonian's memory shuddering back 25, 50, perhaps even more years.

Elected to Congress here from 1913 to 1921 and again from 1933-36, Mr. Eagle was by far one of earlier-day Houston's most popular political figures.

Self-taught scholar, philosopher, poet, and gifted storyteller, he was even more popular with those who knew him personally.

Mr. Eagle was born in a small Kentucky town, finished all the schooling offered when 14, and at that tender age won a teacher's certificate.

He completed a 5-year college course in Tennessee in 3 years. At only 19, he came to Texas to be superintendent of schools in Vernon.

While in that position, he studied law and passed the Texas bar examination, served as city attorney in Wichita Falls then came to Houston to practice law—all by the time he was 25.

That is a formal picture of the young Joe H. Eagle but even the recital of these accomplishments do him scant justice.

Joe Eagle would fight a circle saw if he thought he was right and the saw was wrong. He proved it many, many times—as a public official and as a private attorney.

When it was almost official suicide to do so, he opposed women's suffrage on a national basis. The right to say who voted belonged only the the States, he believed. No pressures swayed him. When Ku Klux Klan fever swept Texas around 1920, he was among the first to denounce it as mob rule. When the Nation wracked itself with the pains of pro- and anti-prohibition, Joe Eagle, a personal teetotaler, fought prohibition, again as an invasion of States rights.

With all his firm views and his largely self-acquired erudition (he was famed for cracking jokes in ancient Greek with scholarly President Woodrow Wilson), Joe Eagle was a fairminded, friendly, and modest man unusually tolerant of and courteous to others.

Joe H. Eagle was a fine gentleman who lived a long, useful life, highly respected and admired even by those who differed with him.

American Success Story Awards

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, January 16, 1963

Mr. BEALL. Mr. President, on December 11, 1962, the American Success Story Awards were presented by the Free Enterprise Awards Association, Inc. Receiving the awards were two women and eight men whose accomplishments symbolize the success possible to all under America's free enterprise system. Each of the award recipients rose from humble jobs to head or own large industries.

I am particularly proud that my own State was represented at the proceedings in the person of Mr. Talbot T. Speer, Free Enterprise Awards Association awards chairman. Mr. Speer is himself an example of the American success story.

Mr. President, we often lose sight of the fact that our country continues to offer opportunities for success to all who are willing to strive for it. To emphasize this, I ask unanimous consent that an article included in the December 11 issue of the Annapolis Evening Capital, together with brief statements made by the award recipients, be printed in the Appendix of the RECORD.

There being no objection, the article and statements were ordered to be printed in the RECORD, as follows:

AWARDS CHAIRMAN SPEER SYMBOLIZES TRAITS OF AWARDEES

Of the many words of praise written about FEAA Awards Chairman Talbot T. Speer, none more succinctly summarized his character, fighting spirit and service to his community than those of Charles P. Crane, former president and chairman of the Baltimore Gas & Electric Co., who now is the firm's executive committee chairman.

Said Crane, in introducing Speer as he was to be honored by the Newcomen Society in North America:

"He has carried energy and determination with him through his business career. His drive and will to succeed have never diminished. A man of action, he often has stepped into difficult and patriotic chores because of his belief in the cause they represented. And I'm happy to say, he has been instrumental in leading them to successful goals."

Speer has, indeed, been a fighter all of his life.

Following great athletic achievements at the University of Maryland and the University of Virginia in football and track, he became an officer of the famous U.S. Army 1st Division which so highly distinguished itself in France.

His leadership and courage with field artillery won for him one of the few Silver Stars that were awarded for heroism.

Captain Speer also returned to the United States at the close of the war wearing, in addition to the U.S. Silver Star Medal, the French Fourragere, Croix de Guerre Medal, and the right to wear the Purple Heart ribbon.

At stages throughout his more recent life, the Government has continued to cite Speer for his service on commissions. A number of certificates have been presented to him for Federal service rendered in connection

with our country's war and economic efforts.

Since 1922, Speer has been president, general manager, and chairman of the board of the Baltimore Salesbook Co., and more recently also of Baltimore Business Forms Co. These huge printing firms have offices in all sections of the United States. Like the newspapers, these companies have expanded many times under Speer's leadership.

He also is president-publisher of the Capital-Gazette Press, Inc., of Annapolis, Md., which publishes the Maryland Gazette—America's oldest newspaper—the daily Evening Capital, the weekly Brooklyn (Md.) News, and the County News.

And in 1951, he created the philanthropic Talbot T. Speer Foundation.

Speer was born in Pittsburgh, Pa., and was educated at the Brennens and Bradshaw Schools, Pittsburgh, the Episcopal High School, Alexandria, Va., the University of Virginia and the University of Maryland.

TOOK OVER REINS IN 1921

He was a salesman for the Daniel Miller Co., of Baltimore, from 1919 to 1921, became the assistant to the president of the Baltimore Salesbook Co. in 1921 and that same year became president and chairman of the board of the company.

He is the founder and president of National Education Fund, Inc., of Baltimore.

Speer lives at Friendship Hill, in Baltimore County, and also owns a large estate directly on the ocean at Delray Beach, Fla. He and Mrs. Speer have three sons, Talbot T. Speer, Jr., J. L. Dawson Speer 3d, and Ramsey Speer, and a daughter, Jane Alexander Speer.

Speer has been a director of the Union Trust Co. of Maryland since 1947 and was a director of the Baltimore Association of Commerce, 1935-40, Baltimore Convention Bureau, 1946-48, the County Taxpayers League of Baltimore County since 1945, and a director of the U.S. Naval Academy Foundation, 1950-54.

He has been a member of the Higher Education Commission of Maryland since 1945, and was on the prison board, 1948-50, the War Production Board, 1940-45, the Industrial Mobilization Commission since 1950 and the U.S. Army Advisory Commission since 1947.

LONG ACTIVE IN NATIONAL ASSOCIATION OF MANUFACTURERS

A member of the National Association of Manufacturers, he was a senior director representing Maryland from 1947 to 1950. He is a member of the Accounting Supply Manufacturers Association, a director of the Associated Industries of Maryland, being president in 1951; president of the Salesbook Manufacturers Association, and was president of the alumni association, the University of Maryland for two years starting in 1950.

Speer also is a member of the Newcomen Society, the Navy League, the Society of the First Division, AEF, the American Legion, Purple Heart, and Delta Psi. He is an Episcopalian, being member of the lay council, pro-cathedral of Maryland, 1925-54.

He was director, Baltimore Association of Commerce, 1935-39; director, Keystone Automobile Club, 1943-51; director, the Campaign for the 48 States, 1953-59; director, the Defenders of the Constitution of the United States, 1953-59; director, the alumni fund, University of Virginia, for the class of 1915, from 1930 to 1959; director, the alumni fund for the University of Maryland, 1957-59.

Also, director, the Eastern Business Forms Co., 1957; first president, director, and organizer, the Associated Industries of Maryland, 1949-51; president and founder, National Educational Foundation, Inc., Baltimore, Md., 1951-59.

He was general chairman, the Gen. Douglas MacArthur celebration in the State of Maryland, 1952. Member of the Society of the First Division, AEF, the American Legion, the Purple Heart, the Delta Psi Fraternity.

Also, member the lay council of the Episcopal pro-cathedral of Maryland from 1925 to 1954. Member of the vestry of the Episcopal Cathedral Church of the Incarnation, Baltimore, Md., 1924-56, chairman of the Consolidation of the Church of the Incarnation and Emanuel Protestant Episcopal Churches, 1953. Member, vestry of St. Paul's Episcopal Church, Delray Beach, Fla., 1952-53.

ACTIVE IN MANY ORGANIZATIONS

He belongs to the following clubs: Rotary, Bachelors Cotillion, Elkridge Kennels, Green-spring Valley Hunt, president, Carrollton Hounds; president, Wythmore Hounds; Baltimore Country Club, Annapolis Yacht Club, Annapolitan Club.

Also, St. Anthony Club, Lake Placid Club, Everglades Club, National Press Club, the Gulf Stream Golf Club, Newcomen Society; president, alumni association, University of Virginia, of Maryland, 1925-27.

Also, member, Higher Education Committee of the State of Maryland, 1945-53; chairman of the Community Fund, publishers committee, 1936-39; member of the prison board of the State of Maryland, 1948-49.

Also, chairman, the business and industry sections of the American Red Cross, 1936-39. Member, NRA, representing the business forms industry, 1933-35. Member, the War Production Board, representing the Business forms industry, 1940-45.

He was cited by U.S. Government, and awarded a certificate of merit for services to the national war effort. Member, the Industrial Mobilization Committee, 1949-58.

He was chairman, the committee to run the National Amateur Golf Championship, 1932.

He was nominated Man of the Year for 1950 in the South by the southern newspapers as announced in Publishers Auxillary and the editors of Dixie Business magazine. Served on War Manpower Commission as judge of labor management problems, 1944-45.

Chairman, the committee celebrating (in protest of the enormous taxes of 1957) the burning of the Peggy Stewart (burned in protest of the taxes of 1775).

Trustee the Episcopal High School, Alexandria, Va., 1930-33. Chairman of the building campaign committee for the Episcopal Cathedral of the Incarnation in Baltimore, 1930-32. General chairman, Cathedral Church of the Incarnation building campaign committee, 1954.

Donated a room in the parish house at St. Anne's Episcopal Church, Annapolis, Md., 1956. Second largest contributor to rebuilding program of the Episcopal High School, 1945-46.

Second largest contributor in the 1953 rebuilding drive for the Episcopal High School, and served on campaign committee. Donated new chapel to Sunday school, St. Paul's Episcopal Church, Delray Beach, Fla., 1953.

Donated two adjoining building lots to St. Paul's Episcopal Church in 1955, an air conditioner and heating unit for the rectory in 1958. Donated wing to the young people's building, Episcopal Church of the Incarnation, Baltimore, Md., 1954.

Donated room to the Women's Building of St. John's College, Annapolis, Md., 1953. Donates yearly to the pay of the underpaid clergy of the Episcopal Church Diocese of Maryland. Chairman of board of advisers for Maryland, Western Tax Council, Inc., 1954-55. Selected frequently, including 1960-61, to present the American success story awards for the Free Enterprise Awards Association. Advisory board, U.S. Air Patrol, 1954-55.

STATEMENTS MADE BY FEAA 1962 AMERICAN SUCCESS STORY AWARDS RECIPIENTS PRAISING AMERICA'S FREE ENTERPRISE DEMOCRACY AND ADVICE TO THOSE SEEKING SUCCESS

Walter J. Tuohy, president, Chesapeake & Ohio Railway: "A company's success, as does a nation's, depends on the loyalty and dedication of its people. Teamwork, sharing of problems and freedom of opinion, assures the success of any endeavor. Just as despotism in government or business crushes the human spirit, so does democracy bring out the dignity of the individual—the best in citizen or worker."

John D. MacArthur, president, Bankers Life & Casualty Co.: "In our democracy any person can reach for the rainbow. Don't stop if you come up with a fistful of air. If you stop trying you start dying."

J. Donovan Forney, owner, Forney Industries, Inc.: "In our free enterprise democracy workers have the best working conditions, benefits and own shares in industries. Yet don't be too 'chicken' to go into business for yourself or you might end up with nothing to crow about. Faith in God, your Nation and your ability will bring peace and success."

Mrs. Mae Bonnell Sauls, president, The William Bonnell Co.: "Free enterprise is the only economic system that gives each of us the right to be what we want to be, including the right a woman has to make business or homemaking her career."

Mrs. Zella Ritz-Woller, president, King Bee Manufacturing Co.: "America gives equal opportunity to men and women. Success in a man's world is not always through pleasing his palate. Give him a good product and you will succeed. If men can make ladies' dresses why can't a woman make safety lighting and products for truck-drivers?"

Dudley D. Sherman, president, National Chemical & Manufacturing Co.: "I am just one of the thousands of Russian and other immigrants who achieved success and freedom in America. Our success is a tribute to America's free enterprise democracy and proof that it works for all."

Harold F. Coffey, president, Kent-Coffey Manufacturing Co.: "In our democracy you are free to build your own business. You can make it last forever—like the work of the Old Masters, if you put beauty, durability, and craftsmanship into any product you make."

Dr. Charles D. Bradley, president, Bradley Semiconductor Corp.: "America's free enterprise gives incentive to original research. Anyone is free to develop new and better products and enrich himself and his fellow men. Our competitive system insures success for better 'traps.'"

James Ralph Riley, president, Suburban Motor Freight, Inc.: "Success in America's democracy is assured if you give unselfish service to your customers and your community. Help improve the areas you serve and you will prosper in material and spiritual values."

Lilburn S. Barksdale, president, Barksdale Valves: "In our democracy one can achieve personal and business fulfillment if he couples determination to succeed with personal integrity in his dealings with employees and customers and has a sincere desire to be of service to his fellow men."

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

Tax Cutting Without Expenditure Reform

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. CURTIS. Mr. Speaker, in a comment on the December 1962 report on tax reduction issued by the Committee for Economic Development, Mr. Gaylord A. Freeman, Jr., vice president of the First National Bank of Chicago and a member of the Committee for Economic Development's Fiscal, Monetary and Debt Management Subcommittee, has made a highly useful contribution to our thinking about the subject of tax reduction and reform.

Mr. Freeman takes the position that tax reduction must be accompanied by an offsetting increase in revenues or a reduction in expenditures. He points to the seriously adverse effects which increased budget deficits might have on our gold and balance-of-payments position. Essentially, he takes the position that expenditure and rate reform must accompany rate reduction because of the imperative necessity for maintaining world confidence in the dollar.

Under unanimous consent, I include Mr. Freeman's remarks in the RECORD, as follows:

REMARKS OF COMMENT, RESERVATION OR DISSENT BY GAYLORD A. FREEMAN, JR., IN COMMITTEE FOR ECONOMIC DEVELOPMENT, REDUCING TAX RATES FOR PRODUCTION AND GROWTH

I cannot join in the recommendations for a massive tax cut unless accompanied by an offsetting increase in revenues or reduction in expenditures. While the objectives which the committee's proposal is designed to obtain, namely, economic growth and reduced unemployment, are highly desirable, the necessity to maintain world confidence in the dollar is imperative, more important, in my view, than even an increase in the rate of economic growth.

If one assumes that the Federal budget at fiscal 1964 will result in a deficit in the administrative budget of about the present magnitude, \$8 billion, in the absence of a tax cut, the loss of the first step cut of about \$6 billion would (without allowance for the additional revenue that would be collected on the resulting increase of national income) result in a total administrative budget deficit of \$14 billion. If we make the highly optimistic assumption that in the first year, as much as one-half of the cut would be recovered (through the tax on increased national income), that would mean perhaps an \$11 billion administrative budget deficit in 1964. Such deficits may well persist in subsequent years.

Foreign governments and central banks now have \$24.2 billion of short-term claims against us, for which we promise to pay gold if the creditors ask for it. But we have only \$15.9 billion of gold. If we adjust for the fluctuations caused by Canada's recent pay-

ments difficulties and for the nonrecurring repayments of foreign aid loans, our balance-of-payments deficit this year will be about \$2.5 billion—no gain over last year despite considerable effort. There is little reason to expect significant improvement immediately ahead. Under such circumstances, a wise debtor would pursue a course calculated to enhance the creditor's confidence. He would make every effort to operate at a surplus and reduce his indebtedness. But we propose to do just the contrary, to operate at a deeper deficit and to increase our indebtedness.

If our foreign creditors think they see the recurrence of inflationary pressures here, they may prefer to repatriate their funds. We are tempted to ignore this risk on the basis that even a massive deficit will not cause price increases when there is high unemployment and excess capacity. But as recently as 1954 to 1958 with unemployment averaging over 5 percent for the period, and with extensive idle plant capacity, the wholesale price index rose 8.1 percent and the consumer price index 7.6 percent—and this in a period when the annual deficit for the 5 years averaged only a little over \$1 billion.

Continued budget deficits of the order of \$10 billion or more (particularly if accompanied by an easy-money policy) may well cause our foreign creditors to prefer gold to dollars. Once they make that choice, their knowledge that we do not have enough gold for all may aggravate their withdrawal. We may find our country faced with the unhappy choice of refusal to pay in gold or devaluation. This we should not risk.

It is because of the imperative necessity for maintaining world confidence in the dollar, more important in my view than even an increase in the rate of economic growth, that I cannot join in the recommendations for a massive tax cut without some offset—either a comparable reduction in expenditures, which is desirable, but perhaps politically unrealistic, or an equivalent increase in other taxes which is difficult but in my judgment attainable.

U.S. Naval Academy Class of 1966:

Profile

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. FLOOD. Mr. Speaker, as a member of the Board of Visitors to the U.S. Naval Academy, I know the concern of its members for the well-being of that important educational institution. As a Member of the Congress, I also realize the efforts made to select candidates of quality, which is a basic first step in the making of a high-grade officer corps.

It was, therefore, with the keenest interest that I read in the November 1962 issue of *Shipmate*, the magazine of the U.S. Naval Academy Alumni Association, a most illuminating analysis of the back-

grounds and qualifications of the midshipmen entering the Naval Academy in 1962 (class of 1966).

As the information therein contained will be helpful to all Members of the Congress and others charged with responsibility in the making of future appointments to all the service academies, I quote the indicated article as part of my remarks:

PROFILE—U.S. NAVAL ACADEMY CLASS OF 1966

This profile of the entering Naval Academy class of 1966 has been prepared as a guide to prospective candidates, school authorities, and interested persons. The characteristics noted will aid guidance counselors in determining the representative backgrounds and qualifications of young men entering the Academy, and it is hoped that this information will prove of assistance in advising prospective candidates.

Each candidate for the Naval Academy must meet general eligibility requirements as to citizenship, age, character, and marital status. He must obtain a nomination either from a Member of Congress or from one of the competitive sources. In addition to presenting an acceptable secondary school record, he must score acceptably on specified college board tests or, if he holds a congressional non-competitive nomination, he may present a satisfactory 1-year college record. He must also qualify physically. It is in most of these respects that the Naval Academy's admissions procedures and requirements differ from those of civilian institutions. Detailed information on the above matters is contained in the "Regulations Governing the Admission of Candidates," which may be obtained from the Admissions Office, U.S. Naval Academy.

In the selection of candidates who are competing for appointments, the Naval Academy takes into account the quality of the secondary school record, additional study, the college board scores, extracurricular activities, athletics, honors and awards, employment outside school hours, recommendations of teachers, guidance counselors, principals, coaches, and others who know firsthand the candidate's accomplishments, his potential and his motivation for a career in the naval service.

The prospective candidate should be informed that, while admission to the Naval Academy is highly selective and competition during the 4 years is keen, the associations and experience of these 4 years are rich indeed. The highest ideals of duty, honor, and loyalty are characteristic of the brigade; the 160-semester-hour curriculum is supplemented by a broad elective course program; a comprehensive extracurricular program is maintained; and physical fitness is developed to a high degree. The graduate receives his bachelor of science degree and his commission as an ensign in the U.S. Navy and joins his fellow officers in a rewarding life of service to his country.

COLLEGE BOARD SCORES

The Naval Academy requires that all candidates attempting to qualify for admission by the examination method (94 percent of the class of 1966) take the scholastic aptitude test and the achievement tests in English and either intermediate or advanced mathematics. The following table covering the class of 1966 shows the percent within score

ranges of those qualifying for entrance by examination:

	Sat. V	Sat. M	English composition	Mathematics
Score range (percent):				
750 to 800.....		4	2	10
700 to 749.....	3	17	5	20
650 to 699.....	13	35	14	25
600 to 649.....	24	28	24	26
550 to 599.....	30	15	24	14
500 to 549.....	25	1	23	5
450 to 499.....	5		8	
Mean scores.....	586	655	594	661

VOLUME OF APPLICANTS

Nominated.....	6,219
Examined.....	4,606
Qualified scholastically.....	2,133
Admitted.....	1,307

DISTRIBUTION OF CLASS BY SCHOOLS

	Percent
Admitted from public schools.....	78.2
Admitted from independent schools.....	21.8

Twenty-seven and nine-tenths percent of the class of 1966 had some college preparation (one-half year or more) prior to admission.

RANK IN HIGH SCHOOL CLASS

	Percent
1st quarter.....	68.3
2d quarter.....	21.0
3d quarter.....	7.6
4th quarter.....	3.1

SCHOOL ACTIVITIES AND HONORS

Honors:	Percent
Valedictorians.....	3.5
Salutatorians.....	2.7
National honor society.....	34.1
Other honor society.....	18.8
Academic awards and medals.....	19.2
Scholarship winners.....	32.7
Science fair award.....	9.1
Activities:	
Class president or student body president.....	11.8
Other class officer or student body officer.....	35.3
School publication staff.....	28.3
Varsity athletics.....	71.7
Intramural athletics.....	45.0
Subject clubs (Latin, French, mathematics, etc.).....	44.5
Dramatics.....	24.0
Debating.....	11.0
Musical groups.....	29.9
Service clubs.....	31.1
Eagle Scout.....	8.8

GEOGRAPHICAL DISTRIBUTION

Midshipmen were admitted from every State in the Union and the District of Columbia. Additionally, the class of 1966 included one midshipman from the Philippine Islands, one from Chile, one from Peru, and one from Venezuela to fill quotas authorized the Republic of the Philippines, and the American Republics (other than the United States).

SONS OF ALUMNI

The class of 1966 included 55 sons of Naval Academy graduates (4.2 percent of the class).

Lithuania, Latvia, and Estonia

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. MADDEN. Mr. Speaker, the Lithuanian, Latvian, and Estonian resi-

dents of the First Congressional District of Indiana have unanimously adopted the following resolution pertaining to the Communist enslavement of their native land. Resolutions calling for a congressional investigation of the enslavement of captive nations have been pending in Congress during the last two sessions.

Along with other Members sponsoring these resolutions, I do hope that we can get favorable action on the same in this session of Congress. If this legislation comes to the floor of the House, it no doubt will be passed by a large vote. A special congressional committee can again call the attention of the world to the Soviet enslavement of these freedom-loving nations.

The resolution follows:

Whereas the greatness of the United States is in large part attributable to its having been able, through democratic process, to achieve a harmonious national unity of its people, even though they stem from the most diverse of racial, religious, and ethnic backgrounds; and

Whereas this harmonious unification of the diverse elements of our free society has led the people of the United States to possess a warm understanding and sympathy for the aspirations of peoples everywhere; and

Whereas so many countries under colonial domination have been or are being given the opportunity to establish their own independent states, on the other hand, the Baltic nations having a great historical past and having enjoyed the blessings of freedom for centuries are now subjugated to the most brutal colonial oppression; and

Whereas the Communist regime did not come to power in Lithuania, Latvia, and Estonia by legal or democratic processes; and

Whereas the Soviet Union took over Lithuania, Latvia, and Estonia by force of arms; and

Whereas Lithuanians, Latvians, and Estonians desire, fight, and die for their national independence; and

Whereas the Government of the United States of America maintains diplomatic relations with the free Republics of Lithuania, Latvia, and Estonia and consistently has refused to recognize their seizure and forced "incorporation" into the Soviet Union; and

Whereas no real peace and security can be achieved in the world while Lithuania, Latvia, and Estonia remain enslaved by the Soviet Union: Now, therefore, be it

Resolved, That the Senate and House of Representatives of the United States of America request the President of the United States to bring up the Baltic States question before the United Nations and ask that the United Nations request the Soviets (1) to withdraw all Soviet troops, agents, colonists, and controls from Lithuania, Latvia, and Estonia; (2) to return all Baltic exiles from Siberia, prisons, and slave labor camps in the Soviet Union; and be it further

Resolved, That the United Nations conduct free elections in Lithuania, Latvia, and Estonia under its supervision and punish Soviet Communists who are guilty of crimes against the peoples of the Baltic States.

Benjamin Franklin, whose statesmanship contributed so much to our heritage of liberty and independence.

Although Franklin was born in Boston, he spent the major part of his adult life in Philadelphia, and we of the Commonwealth of Pennsylvania are proud to claim him as our first citizen.

Of humble origin, he rose to a position of affluence and renown, honored throughout the civilized world. I need not discuss at length his illustrious career as an author, publisher, scientist, inventor, diplomat, and statesman. Countless pages have been written in his praise. I should like, however, to point out that there is guidance in the precepts of Franklin that will help us to meet the difficulties that confront our Nation and the free world today.

Franklin's philosophy was based upon his unflinching devotion to the cardinal virtues of integrity, industry, and thrift. Such a philosophy, which might otherwise have been stern and demanding, was relieved by tolerance, serenity, zest, and humor. The homely wisdom of Poor Richard is timeless. To many of our present problems Franklin, if again in our midst, would apply his well-poised judgment, his unflinching humor, and his love of constructive achievement. He might urge that many of these problems could be solved by more working and less talking.

It is often unfair to evaluate an individual's political philosophy in the light of the knowledge of a much later date. But Franklin's ideas of democracy have more than held their own with the passage of time. Throughout the world his principles of an extended franchise and proportional representation have been steadily gaining ground. Even his proposal of a unicameral legislature has been coming into increased favor with the passing years.

However, it is in the field of international relations that Franklin's vision has had its most dramatic vindication. The need for closer international cooperation, which he was among the first to see clearly, is now apparent to all. In his conception of the duties and responsibilities of nation to nation, his political theories attain their loftiest and most progressive form. In his faith in the application of united effort to the common problems of human society, he was consistently in advance of contemporary thought. No system which has been consciously evolved to further this ideal will become obsolete as long as human society itself endures.

Few philosophers have exerted a more wholesome influence upon the development of political thought than did Franklin, or have equaled him in transforming abstract theories into living realities of government. The record of his long life of public service endures in the imperishable annals of our Nation.

In these days of world crisis, every American can find inspiration in the words and deeds of Benjamin Franklin. It is appropriate on this anniversary of his birth that we pay tribute to a great champion of human freedom and a great American.

Benjamin Franklin

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. TOLL. Mr. Speaker, today marks the 257th anniversary of the birth of

New Light on the Michigan Study of the Elderly

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. CURTIS. Mr. Speaker, most of the major American newspapers carried, shortly before the last election, articles on the report of the University of Michigan Survey Research Center on its study of the condition of America's elderly. A great deal of information is to be gained from a careful reading of this report, just as a great deal of information could be gained from a careful reading of the House Ways and Means Committee's hearings on the King-Anderson proposal, H.R. 4222, of the last Congress. Unfortunately, these articles did not reflect a careful reading and a careful reporting job.

I was contacted by one of my constituents who, on the basis of the newspaper coverage given this report, took issue with earlier statements I had made about the financial position of our senior citizens. I am placing a copy of my reply to my constituent in the CONGRESSIONAL RECORD for two purposes: First, to set the record straight factually, giving a more accurate presentation of the position of our elderly, and second, to show how distortion can be used to prevent the real facts of an issue from getting through to the people:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., November 19, 1962.

DEAR SIR: Thank you for your letter of November 1, 1962, calling to my attention an Associated Press story appearing in the October 31 St. Louis Globe-Democrat, page 9C, on the report from the University of Michigan Survey Research Center, "Oldsters Worse Off Financially." I not only read this Associated Press story which the Globe-Democrat printed; I have read the Michigan University report itself. Far from disputing the point I made, that 80 percent of those 65 years of age and over are well able to take care of themselves and do not need financial assistance for their medical costs, the report actually substantiates the point.

The Associated Press story deceives the casual and already somewhat prejudiced reader.

Let me quote the lead sentence. "Older people are worse off financially than other groups on several counts, reports the University of Michigan Survey Research Center." The phrase which keeps the sentence from being a whole cloth lie is "on several counts," but this phrase is buried in the sentence structure and so glossed over by the quick reader. The headline writer fell for the trap and the headline reads, with no qualifying phrase, "Oldsters Worse Off Financially." Later in the article it is pointed up that the report said on other counts the oldsters are better off financially. The real question we are seeking the answer to is, What is the total financial condition of the oldsters balancing off the various counts? The total picture of oldsters today is that—

1. They are better off financially than they have ever been before, as are other groups.
2. They are better off in the total financial

balance than any other age group in our society.

The only areas in which they are worse off are the two listed:

1. Yearly income, which is to be expected because they generally receive pensions rather than salaries, and pensions are less than salaries.

2. Their health costs average more than the health costs of any other group.

Balancing off are these counts, among others:

1. They have more assets, both liquid and in total, than any other age group. (Almost 80 percent own their own homes, and this free of mortgage—their average equity is over \$9,000.) This is to be expected because they have been accumulating property and savings during their working years which the younger age groups are only in the process of doing.

2. Their budgets for food, clothes, rent, dependents, travel, recreation, and insurance (except health insurance) are considerably less than that of any other age group and the total budget, including the one higher cost for health insurance, is considerably less than for that of any other age group.

All the statistical studies adduced by the Ways and Means Committee in its public hearings on the subject of health care for the aged point out the same thing. One item that tends to prove this point is the statistical studies which consistently reveal that the oldsters are the best paying of any age group when it comes to medical or any other kind of cost.

Our problem is with the less than 20-percent oldsters who are having problems, not just for health costs, but many of them for other living costs. There is little sense, in my judgment, for establishing compulsory governmental system which covers the 80 percent simply to get at the problems of the 20 percent unless there is no other practical way of doing it. Fortunately, there are practical ways of meeting the problem of the 20 percent without interfering at all with the 80 percent—the Kerr-Mills Act and the golden-age 65 plans, health insurance for people over 65 without medical examination and noncancelable, which Connecticut started just a year ago, and New York, Massachusetts, and other States are imitating. The prospects in the future are even better for our oldsters because of the health insurance programs contained in most of our labor-management contracts which now carry over into retirement and the availability of prepaid noncancelable insurance on an individual basis or group basis paid up at 65. The 20-percent oldsters with health cost problems will dwindle in the future until they are less than 10 percent of our older people.

I appreciate your writing to me on this important subject. I would be glad to receive your further comments.

Sincerely,

THOMAS B. CURTIS.

Tragedy at Robena No. 3 Mine in Greene County, Pa.

EXTENSION OF REMARKS

OF

HON. THOMAS E. MORGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. MORGAN. Mr. Speaker, on December 6, 1962, the people of southwestern Pennsylvania heard the tragic

news that an explosion had occurred at the Frosty Run shaft of Robena No. 3 Mine in Greene County trapping 37 miners. Rescue teams began to work immediately to try to reach the miners and worked untiringly day and night. The families and friends of the trapped miners kept vigil day and night just waiting and hoping. But as the search went on the feeling of despair increased and after 5 days of agony, those who waited heard the news that the rescue teams had reached the trapped miners only to find them all dead.

Mr. Speaker, I was at the scene of the accident and it was indeed heartbreaking to watch the families of the trapped miners who waited with mixed feelings of hope and despair. I know that they had the sympathy not only of the people of southwestern Pennsylvania, but of the entire Nation.

Mr. Speaker, I have introduced legislation for the past three or four Congresses to amend the Federal Coal Mine Safety Act so as to provide for the prevention of accidents in coal mines. I am confident that Federal inspection of all coal mines, regardless of size, will save lives. I hope that the Committee on Education and Labor will take early action on my bill, H.R. 1666, or on similar legislation so that we can try to put an end to the tragic loss of lives in coal mines.

Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a letter from the United Mine Workers of America, together with resolution adopted by the international executive board during its recent meeting held here in Washington:

UNITED MINE WORKERS
OF AMERICA,

Washington, D.C., January 11, 1963.

To the Members of the 88th Congress

DEAR SIR: The terrible tragedy occurring on December 6, 1962, at the Frosty Run shaft, Robena No. 3 Mine, of the United States Steel Corp., Carmichaels, Pa., in which 37 coal miners lost their lives was before the international executive board of the United Mine Workers of America during its meeting in Washington, D.C., December 12-15, 1962.

During this meeting, the board adopted the enclosed resolution, which is self-explanatory.

We again urge earnest consideration by the Members of the 88th Congress to enact enforcement legislation to bring all employees in the coal industry under the provisions of the Federal Mine Safety Act.

Sincerely yours,

JOHN L. LEWIS,
President Emeritus.

THOMAS KENNEDY,
President.

W. A. BOYLE,
Acting President.

JOHN OWENS,
Secretary-Treasurer.

RESOLUTION OF THE UNITED MINE WORKERS OF AMERICA

"Whereas this board is horrified and appalled at the explosion which occurred December 6 at the Frosty Run shaft, Robena No. 3 Mine, United States Steel Corp., Carmichaels, Pa., in which 37 coal miners were killed violently; and

"Whereas 31 of those who died were members of United Mine Workers of America,

Local Union 6321, District 4, Masontown, Pa.; and

"Whereas this pre-Christmas tragedy also symbolizes a growing trend in the industry toward placing production of coal ahead of human lives; and

"Whereas many American coal miners who work in small underground mines do not now receive full protection under Federal law because of an arbitrary exemption granted their employers by the Congress: Therefore be it

"Resolved, That this international executive board and all officers of this organization including local union officers and mine safety committeemen press with renewed vigor for strict compliance by coal operators with all Federal and State mine safety laws and with the Federal Mine Safety Code which is written into the National Bituminous Coal Wage Agreement; and be it further

"Resolved, That the U.S. Bureau of Mines and mining departments in the various States be informed that this organization will insist on their strict and to-the-letter enforcement of existing mine safety regulations; and be it further

"Resolved, That the international union, labor's nonpartisan league and district officers urge with renewed vigor that the 88th Congress pass an amendment to the Federal Coal Mine Safety Act that would extend enforcement provisions of that act to all employees of underground coal mines regardless of size; and be it further

"Resolved, That a copy of this resolution be forwarded to Local Union 6321, each Member of the U.S. House of Representatives and the U.S. Senate, the Director of the U.S. Bureau of Mines, and directors of mining departments in coal mining States, and that it be printed in the United Mine Workers Journal."

Unanimously adopted by the international executive board, United Mine Workers of America, this 14th day of December 1962.

Sincerely yours,

John L. Lewis, President Emeritus; Thomas Kennedy, President; W. A. Boyle, Acting President; John Owens, Secretary-Treasurer; International Executive Board; John T. Kmetz, John Ghizzoni, Ewing Watt, W. J. Hynes, Joseph Yablonski, Peter Phillippi, Mart F. Brennan, Wilbert Killion, Joseph T. Kershetsky, Sam Nicholls, Louis Austin, Joseph Shannon, John A. Hupton, Henry Allai, John L. Mayo, R. O. Lewis, Edward Boyd, James W. Ridings, William Mitch, David Fowler, Arthur Biggs, John H. Delaney, R. J. Boyle, Carson Hibbits, George J. Titler, C. J. Urbanak.

Washington: City Hall of Nation?

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Richard Wilson which appeared in the January 13, 1963, issue of the Des Moines Sunday Register:

WASHINGTON: CITY HALL OF NATION?

(By Richard Wilson)

WASHINGTON, D.C.—President Kennedy is about to propose a domestic Peace Corps, a force of social workers and well-doers who

would carry the light from Washington, D.C., to the slums and depressed areas of America.

This venture would cost only \$20 million, employ up to 5,000 young people in its earliest stages, and doubtless expand later on as do all such Government undertakings.

It is hard to find out where and why the idea of a domestic Peace Corps originated. However the idea was originated, it was heartily welcomed by Attorney General Robert Kennedy, campaign manager for John F. Kennedy in the 1960 presidential election.

SPREADERS OF LIGHT

Bobby Kennedy is entranced by the idea. What could be more rewarding than having ardent young Kennedy people, clear-eyed idealists, braving the dangers of the urban jungles, spreading the gospel and serving the cause selflessly and without pay?

At last a New Frontier concept emerges which is as wide in scope, and with the same promise of success, as the early concepts of the New Deal for the creation of new communities to give homes and the good life to the ill-housed, ill-clad, and ill-fed. Only a few surviving today can remember the fate of those communities.

Some of the difficulties—and this is not historical exaggeration—were that housewives tore out the screens the easier to throw the dishwasher into the front yard, and the gleaming new bathtubs were found to be convenient places to store coal. These were projects which the now snow-manned Rexford G. Tugwell and the late Mrs. Franklin D. Roosevelt were glad to forget, and they have gone down in history unsung and abandoned.

BETTER LIFE

But nevertheless the spirit lives on, and could have been dimly perceived when John Kennedy announced during the 1960 presidential campaign the still unconfirmed information that 17 million Americans go to bed hungry every night.

The currently used figure is that 32 million persons in the United States live at a lower level than America is capable of providing for its citizens.

This is a variation on Franklin D. Roosevelt's phrase, "One-third of the Nation ill-fed, ill-housed, ill-clothed" in the great depression of the early 1930's, a condition which in somewhat different form the Kennedys seem to imagine still exists.

If Congress in a careless moment should approve this venture some good will no doubt result. The harm that will be done will be to shift to Washington in still another field responsibilities and costs that should lie with local communities. The success of a domestic Peace Corps would be its undoing. Mayors and welfare boards would demand as a political right an equal share of free welfare help at a steadily rising cost to the Federal Government. In many areas, of course, local communities would not welcome the intrusion of outsiders in their welfare problems.

Fully in step with the program for sending Washington-trained volunteers to fight the good fight in the Nation's slums is a new proposal by Secretary of Agriculture Orville Freeman to expand the food stamp plan and make it national in scope.

This former New Deal program has been on a trial basis in eight depressed areas and will soon be expanded to 40 new localities. It is being projected on a basis to give 4 million people surplus food at an annual cost of \$375 million a few years hence.

THE NEW SOCIETY

As these programs and plans emerge, and fall into a pattern with other projects, the true significance of the New Frontier in its domestic phases becomes a good deal clearer. From the evidence now available the shadowy shape of the new society can be seen.

It amounts to Federal responsibility for local affairs on an ever-widening scale:

Local schools with Federal support which will surely have to meet Federal standards; if not now, then before very long.

Federally financed hospital and medical care on an ascending scale heading toward the nationalization of all medical services.

Local welfare activities supplemented and possibly in the end controlled by Washington standards.

Financing and control of local projects for mass transportation, sewage disposal, public services.

And Federal responsibility for enforcing social standards.

Washington would then become truly the city hall of the Nation.

Watching Washington

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Kranish which appeared in the January 1963 issue of Western Aerospace:

WATCHING WASHINGTON

(By Arthur Kranish)

Twice in its 2 years of existence the Kennedy administration came within a breadth of liberating Cuba, the Caribbean and the Western Hemisphere of Soviet imperialism. Twice the President and his close advisers retreated from the brink. Only history will decide whether these events represent caution, wisdom, or cowardice.

But in the brief time we have for reflection before another crisis robs us of our complacency or our will, an assessment of the lessons of Cuba might be instructive. This assessment may be contrary to almost everything publicly proclaimed by the administration. In a sense it is an argument, an attempt to stir debate and perhaps to shake the widespread conviction that we have achieved victory and peace in our time.

We can first of all deduce from the little we have been told that the widely heralded shakeup of our intelligence system in the first year of the Kennedy administration was a failure. The professionals apparently scoffed at refugee reports of a Soviet missile and military buildup. The repeated questioning by opposition Congressmen served to place a political cast over the pros and cons and clues, and an intelligence-gathering machinery badly shaken by the events at the Bay of Pigs was in no mood to gather facts or reach conclusions which would obviously find no favor at the White House. We can ask, therefore, whether the new concept of unified intelligence best serves the Nation, or whether information is being tailored to meet the measurements of expediency.

Fortunately, no political filters are being supplied with our aerial reconnaissance cameras. And so the evidence in the now-famous photographs could not be explained away. If the administration kept those cameras flying on a constant basis during the months preceding the second Cuban crisis, it deserves full credit for seeing to it that these missions were carried out with skill, tact, and thoroughness. But if these missions were on a reduced, catch-as-catch-can

schedule, and vital early clues to a missile buildup were missed as a result, then an explanation is certainly in order. We have no information to support either theory, but there are many who refuse to believe that the delivery, preparation, and installation of so many missiles and aircraft was as sudden and secretive as the administration would have us believe.

If it was sudden and secretive, we have a superb argument against those who believe that space reconnaissance, spies in the sky, black boxes, and inspection teams can guard us against another massive buildup elsewhere in the world.

If it was not sudden and secretive, if it was as brazen and open to observation as later photographs would have us believe, then we can rightly ask whether or not the administration knew, while it was issuing frequent public denials, that the Soviets were engaged in creating a vast nuclear arsenal 90 miles from our shores.

For a brief period, it seemed as though our national response to the events in Cuba was unmistakable. Mr. Kennedy, with superb courage and control, made it abundantly clear to the Soviets and to a shocked world that the newly discovered buildup would not be tolerated and that we were as prepared as Mr. Khrushchev to play the nuclear black-mal game.

It is obvious now that Khrushchev—through caution, wisdom, or cowardice—was unwilling to enter that kind of contest. And so the missiles and aircraft, or most of them, were withdrawn, and the West, we are told, won its first major victory against Communist expansion since the days following World War II. And Mr. Kennedy and his administration won the stunned admiration of the free world.

These breathtaking events were followed by a pleasant rift in the Sino-Soviet ranks and perhaps even by a major loss of initiative by the entire Communist bloc. We may well have lived through one of these periods in history when tides turn, foundations crumble, and clichés collapse.

For if we have truly won peace in our time, we may have also paid a price for that victory. One fee is the further erosion of a treasured American freedom—the right of the press to find and print the truth, in the belief that it is the truth that will keep us free. Those who manage the truth (a word that approximates the news) have decided for themselves that there are times of expediency when the weapons of tyranny can be superimposed upon a system that has weathered revolution, civil war, economic disaster and two wars for world survival.

And if we have won peace for ourselves, have we not mortgaged away the liberties of our neighbors? Have we not consented—at the price of peace—to the enslavement of the Cuban people? Have we not acknowledged something that just a few months ago any American would have regarded as unthinkable—the firm establishment of a Soviet colony, armed and apparently invincible, almost at our border? Americans in uniform die each day, as they died at Corregidor and on the fields of France and the hills of Korea—to reclaim an inch of foreign soil for freedom. Yet twice, in our own hemisphere, we have decided that we are not our brothers' keepers. Is life that dear? Is peace that sweet?

If we have won the victory that the Cuban events represent to many, we may have future opportunities to ask such questions. As the strongest nation in the world, we will someday have to accept the moral obligations of strength. In the Cuban crisis, despite our strength and our will, we permitted the Soviets to enslave still another mass of humanity. We must ask ourselves whether our national mission in the world is to preserve our safety or to extend the

blessings of liberty to our fellow man. If the Communist bloc is weakening, will there be other Berlin riots, other Hungarian revolts, other opportunities to light the spark and feed the flames of freedom? Can a strong nation, conceived in liberty, be dedicated only to its own peace and safety and security? Is that our message to a neighbor in chains?

Pennsylvania Has a New Governor

EXTENSION OF REMARKS
OF

HON. GEORGE A. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. GOODLING. Mr. Speaker. On Tuesday, January 15, at 12:08 p.m., our friend and former colleague, William Warren Scranton, became the 103d chief executive of the Commonwealth of Pennsylvania.

In a brief, dynamic inaugural address he made a sincere plea for unity toward progress. He is not unmindful of the grave responsibilities he has assumed nor does he approach the challenges fearfully. Those of us who know him best are confident he will meet each problem conscientiously and solve it to the best of his ability.

I know his host of friends on both sides of the aisle wish him well, and God-speed in his new and responsible position.

Following is the text of his inaugural address:

My fellow Pennsylvanians, nearly 300 years ago a God-fearing man carved the first bits of civilization out of the land that lay west of the Delaware. His name was William Penn. He had an idea. It took root in our soil. His idea was that men and women are resourceful and imaginative. He believed that, given a chance, they could turn back a wilderness, chisel out a monument to human dignity, and live in peace and prosperity. In an age rife with human hatred—with religious bigotry, with political persecution—he had the wisdom, and the courage, to launch a holy experiment.

He made Pennsylvania the bastion of freedom—the temple of tolerance, the showcase of economic enterprise. He believed freedom is more than a cliché. He believed courage is more than a slogan. He believed human willpower more than a match for all the obstacles of nature or economics. He believed human ingenuity capable of solving human problems. He believed indifference and despair can be put to rout by human hope.

But, most of all he believed in himself; he believed in his fellow men; he believed in Pennsylvania. That was three centuries ago.

Three months ago I was campaigning through a Pennsylvania town. The day was dreary. A cold rain had drizzled down all morning. A young man with tired eyes, a sad voice and a scared handshake told me: "Pennsylvania is no place for me."

And, a day later, I campaigned through a sun-drenched suburb. Other people with other, quite different, problems.

Another young man, this one with a kind of "I'm going places" look about him grasped my hand. He looked me in the eye. He said: "I can't for the life of me figure out why anybody would want to be Governor of this State." And he explained, "Pennsyl-

vania is going nowhere." That was 3 months ago.

Three days ago I pondered what to say on the day that I became Governor of this State. I thought of William Penn 300 years ago. But I remembered the young man of 3 months ago.

With this memory the vim and vigor of the campaign seemed to sour. The flush of election victory paled. The brave hopes of just yesterday seemed puny. The awful responsibility seemed to dwarf the high honor of the office I was about to assume.

But then more of Pennsylvania came to mind. More of what we have been taught and know of Pennsylvania. More of her heritage. More of her people—and their pride and their faith—the hands I had clasped, the warmth of their welcome.

I remembered the face of the woman. Woman of a town blasted by industrial migration. Plants closed. Gates locked. Menfolk idle. I remembered the courage in the face of the woman.

I remembered the eyes of the man. Man out of work. Tiny worry lines around those eyes. The haunting fear that self-respect might flee, but even stronger, the challenge: "Give me a chance, and you'll see what I can do." I remembered the hope in the eyes of the man.

I remembered the hands of the farmer. A sower of seeds. A cultivator of life. A man close to God. Hands flecked with soil, so the tan of the skin seemed almost one with the tan of the earth. Hands that make things grow. I remembered the pride of those hands.

I remembered the arms that swung a lurch pail. Skilled arms. Strong sinews. A cadence to his walk that said: "I do a day's work. I do it well." Perhaps the proudest boast of man. I remembered the fresh, pungent smell of independence.

I remembered the frown of the young college student. Inquisitive. Prove it or I won't believe it. Why can't Pennsylvania move ahead? Who says my only opportunities lie elsewhere? Is it wrong to care? What are you going to do about it? Yes, I remembered the anxious student.

And, I remembered the brow of a businessman. Furrowed? Yes, but perhaps even more accurately, concerned. "I have a duty here. A role to perform. I want Pennsylvania to climb to the top. I'm busy and it's easy to find excuses, but point the way and I'll do my share." Yes, I remember the concern, the willingness, in that face.

And, suddenly, I knew that Pennsylvania today is not really very different than the Pennsylvania of three centuries ago.

Yes, the challenges wear different faces. Problems assume different guises. But truly, we hold the same trump cards.

Resourcefulness, imagination, fortitude. And one more—faith.

The Pennsylvania that responded to the 17th-century promise of William Penn's holy experiment.

The Pennsylvania that nurtured an 18th-century Ben Franklin and became the cradle of liberty.

The Pennsylvania that was strengthened by a 19th-century influx of brave, stout hearts from the Old World.

The Pennsylvania that in the 20th century has remained basically strong and vital, despite a buffeting from history's greatest technological revolution.

That Pennsylvania—don't tell me that Pennsylvania can't lick its problems, because I know it can.

We still have the same God-given natural resources, the same advantages for commerce and industry, the same progressive spirit that brought us greatness in other years, in other ages.

But, these things must be tapped. Resources and advantages and spirit must be put to work. Human courage and human

hope must drive the motors of human effort and human toll.

Some of Pennsylvania's problems can be solved soon, others can only be solved in time. But nothing will happen, nothing will move, unless the labor begins today.

The State government has an obvious and vital role in that labor. As a Pennsylvanian, no one can convince me that our State is incapable of that labor. No one can convince me that other States and other governments are more capable.

Of course, there are those who would prefer to dwell more on our fears than on our hopes.

There are those who would prefer to curse the darkness, rather than light a candle. Blame the past, rather than work to assure the future.

There are those who would prefer to gossip of yesterday's divisions, rather than work on today's need for unity.

Show me a Democrat who was wrong or shortsighted, I will show you a Republican who was. And vice versa.

Show me a businessman who was selfish, I will show you a labor leader who was. And vice versa.

Show me a citizen in Pennsylvania who has suffered by someone's lack of concern, and I will show you another citizen who has caused suffering by his lack of concern.

But let us hope that in the showing, both you and I will grow wiser and learn that today's opportunities are far more important than yesterday's mistakes.

With these opportunities, Pennsylvania is on the march. Toward greatness for herself. Toward progress, for her people.

Our Commonwealth has the resources, the human strength, the get-up-and-go from which greatness is made. There is work to do, lots of it, but Pennsylvanians have never shirked from that prospect.

In both the executive branch and in the legislature, all of us must vow today to do our part to bring about a new era in Pennsylvania progress. We must have the wisdom to keep what should be kept; the courage to change what should be changed.

With the help of God let us embrace the challenge, let us welcome the labor.

Let us stand tall—as Pennsylvanians.
Let us walk proudly—as Pennsylvanians.

Going Now and Paying Later

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mrs. ST. GEORGE. Mr. Speaker, the following article by Jenkin Lloyd Jones is a humorous picture of the modern philosophy well pictured by the slogan "Go now, pay for it later."

In the meantime we are still floating in a sea of red ink supported by barrels stuffed with paper dollars.

The article follows:

GOING NOW AND PAYING LATER

(By Jenkin Lloyd Jones)

The American people have taken first-class passage on a ship bound from Buffalo to the Big Rock Candy Mountains via the Niagara River. So far there have been cocktails and canapes and caviar for just about everybody.

You get a lot of funny people on a cruise, of course. Occasionally, some loudmouth has started running around the deck waving a chart, calling attention to the gradually

increasing current, and pointing excitedly to that attractive cloud of mist up ahead. But the rest of the passengers have thrown these alarmists overboard. Anyone with a lick of sense knows that the faster the current the quicker we'll get to where we're going.

Not only is the ship traveling faster than we thought it would, but it is lighter, too. It used to be loaded down with a lot of gold, but most of that is gone. There was the cost of protecting our friends abroad who would rather not go to the expense of protecting themselves. And there was foreign aid.

And then some of our newly prosperous pals from Europe came aboard and hauled away the gold on which they had a claim. It was really funny to see them wrestling the heavy ingots ashore when we would have been glad to give them our paper dollars as surety for our debts to them. You would almost think they doubted the future value of our dollars.

We've got a pretty quarrelsome crowd aboard. Every few minutes the propellers quit turning or the water doesn't run in the faucets or the deckhands throw down their swabs and paintbrushes. The crew wants easier work and more money. The passengers want more service, bigger staterooms, fancier meals, and cheaper tickets. And the captain says everybody is right.

The U.S. Government will end this fiscal year 1963 next June 30 with a deficit of about \$8 billion. The President's economic advisers had, in contrast, forecast a surplus of about half a billion for the same period. Never has the arithmetic been so far off.

Yet the President is pushing a sweeping program of tax cuts. He makes the point (and he couldn't be right) that the tax burden is now so great that it is slowing down the economy's expansion. In other words, taxes have removed so much of the incentive to take risks and earn profits that we are not producing as well as we might or creating jobs or providing new opportunities for our young people. Amen.

But, at the same time, there is no inclination to cut Government spending. For fiscal 1964 it looks as though we're going to have a \$100 billion budget. This will be greater than in the peak years of World War II. The national debt limit, now at \$308 billion, will have to be raised this spring as usual. If we honestly added in the unfunded actuarial liabilities for social security, the figure would be about \$65 billion higher.

Our trouble is that we can't tell the difference between our needs and our wants any more. That devilish word "need." We need low-cost housing. We need to be first on the moon. We need interstate highways. We need medicare. We need more aid for education. These are all desirable things. But change each "need" to "want" and you get closer to the truth. A need is a necessity. A want is a desire. We are being drowned in our "druthers."

And, simultaneously, we are becoming rebellious about paying the cost of what we have. Of course, we haven't been quite paying the cost. The steady progression of the national debt is eloquent testimony to our refusal to meet our bills. But, as the President correctly asserts, even though we have taxed ourselves too little to meet our expenditures we have taxed ourselves too much. The fires of enterprise are getting smothered and the steam gage may soon be dropping.

What is the way out? You'd never guess—unless you've been reading the papers. Government officials, business braintesters, union leaders have discovered a marvelous escape hatch. You don't have to cut spending. What you do is cut taxes and then the rapid growth in the gross national product will so expand the tax base that the deficit will be overcome and we'll be put ashore on the Happy Isles.

This is probably the finest piece of economic bluebird twittering since F.D.R. waved his cigarette holder airily and dismissed the national debt with the remark, "After all, we only owe it to ourselves."

In the meantime, the able and busy people of Europe's Common Market, whose war-wrecked industrial plant was largely rebuilt by United States funds and who have cheerfully shucked off on American taxpayers most of the cost of their common defense, are now beginning to whip the pants off us in many fields of competition. Their steel makers blow oxygen into their converters while we still blow air. Their featherbedding problems are insignificant. Their currencies grow harder while ours grows softer.

But, so far, we've had a pretty good ride down the Niagara River. In spite of the squabbling and grabbing the guzzling and gobbling have been good.

And there was that wonderful sign over the ticket office back on the dock:

"Go Now, Pay Later."

Richard L. Maher Knighted in the Order of St. Gregory the Great

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. FEIGHAN. Mr. Speaker, Mr. Richard L. Maher, one of Cleveland's outstanding citizens and an eminent journalist of long standing, was recently honored by His Holiness Pope John XXIII, as a Knight of St. Gregory. This high honor was conferred on Mr. Maher because of his many years of outstanding service in charity work and service to youth in the Greater Cleveland area.

Under leave granted, I include an article appearing in January 15 issue of the Cleveland Counselor:

RICHARD L. MAHER KNIGHTED IN THE ORDER OF ST. GREGORY THE GREAT

A past grand knight and former district deputy from Cleveland Council has received the honors of papal knighthood from Pope John XXIII.

Richard L. Maher, who served as grand knight of Cleveland council from 1934 to 1936 and was district deputy for the East Side of Cleveland in the mid-1940's, has been designated a Knight of the Order of St. Gregory the Great.

Announcement of the honor which came to Brother Maher along with 16 other laymen of the Cleveland diocese was made in mid-December by Archbishop Edward F. Hoban.

For Maher this is the third of a series of honors that he received this year. Last spring he was named by the Catholic Youth Organization to receive the Duo Decum Award for his work among youths of the diocese.

In June, he was chosen by the Ripon Club as the recipient of its first annual Good Government Award.

Maher, who is politics editor of the Press, is treasurer of the Catholic Charities Corp.

He has served as a member of the board of trustees of the Catholic Charities for nearly 10 years—the last year as treasurer.

His elevation to the Order of St. Gregory came, it is understood, because of his charity

work. In addition to his service with the Charities Corp., Maher has been a member of the Catholic Youth Service Advisory Board for years and served three terms as its chairman.

His work for Catholic Charities was recognized earlier when he was invited to address one of the section meetings of the Golden Jubilee Convention of Catholic Charities in New York City in 1960.

Other honors have been heaped upon him. In 1948 he was designated Catholic Man of the Year. A few years ago Xavier University at Cincinnati named him an honorary alumnus because of his work for the university. Two of his sons attended Xavier.

Maher has served as a councilman of St. Raphael's Parish, Bay Village, since its founding in 1946.

In his newspaper work, Maher has received many honors. Several times he was cited by the Cleveland Newspaper Guild for his work, winning the best reporting award for several years. He also only recently was reelected a director of the Press Club of Cleveland.

Maher joined Cleveland Council in 1926—and was elected grand knight when he was scarcely 30 years old. Under his direction Cleveland Council paid off much of the debt it had accumulated in the early depression days, and was launched on its period of progress.

When he became head of the council, after serving as chancellor and deputy grand knight, the council had just over 1,100 members. In 2 years he lifted the membership to 1,586—more than half of them insurance members.

In 1959 Maher was designated dean of the Ohio Legislative Correspondents Association, having covered sessions of the general assembly for 25 years.

With his wife and family, Maher lives at 28626 Bruce Road, Bay Village.

Two of his sons, Francis R., and Thomas P., are members of the council. A third son, Edward J., is a law student at Georgetown University. His daughter, Lucile Helen, is a school nurse in Las Vegas, Nev.

Flights Over Heavily Populated Areas Should Be Held to Minimum

EXTENSION OF REMARKS
OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. PUCINSKI. Mr. Speaker, the Jefferson Park Press, which is published in my district by Mrs. Morton Steinman, recently carried an excellent editorial regarding flights of jet aircraft over heavily congested areas. The editorial was written by this fine newspaper's public affairs editor, Miss Sally Swanson, who, like myself, has followed the problem of jet operations out of O'Hare Field over my district for some time.

Miss Swanson is indeed an authority on this entire subject of jet operations and the tremendous problems which these jets are creating for hundreds of thousands of people in my district.

This editorial appeared a few days after a privately owned propeller-driven airplane encountered heavy icing conditions while on its final approach to O'Hare Field and crashed into a house

in my district. The tragedy brought death to four passengers of the aircraft, which was demolished, and only through a miracle spared the occupants of the private residential dwelling in my district into which the plane crashed.

This tragedy points up again the absolute folly of the Federal Aviation Agency in permitting aircraft coming in on instruments during bad weather to fly across the entire length of Chicago and its 3½ million population to get into the landing pattern for a southeast approach to O'Hare Field when these very same airplanes could just as easily fly into proper position along the lake shore out over Lake Michigan.

At the time I said it is absolutely illogical—and even tragic—to compound the incident of air fatalities by directing these airplanes over the city during inclement weather. Unfortunately, my ardent appeals to the FAA seem to fall on deaf ears, and the entrenched bureaucracy continues to do business as usual, using approach and landing patterns that were developed a decade ago when jets were still on the drawing board.

It is my sincere hope that perhaps an aroused press in this country will be able to finally impress upon the FAA that while no one is suggesting any reduction in safety standards, nor is anyone suggesting flight operations that would make it impossible for the airlines to keep up with progress, the fact of the matter is that there are better ways of flight operations than permitted at present by the Federal Aviation Agency.

I hope this editorial will serve as a basis for arousing the FAA out of its apparent apathy. There are more than 1 million people in the vicinity of O'Hare Field who are entitled to more consideration than they have been getting heretofore from the FAA.

It would appear to me that if the people who are now in charge of the FAA are incapable of doing an adequate job, they should be replaced forthwith by FAA Administrator Halaby; and they should continue to be replaced until he finds a team of people who can give the residents of my district the kind of safety standards in heavy jet operations to which they are rightfully entitled.

Miss Swanson's excellent editorial follows:

WHAT IF A JETPLANE CRASHED ON NORTHWEST SIDE?

(By Sally Swanson)

Although it occurred out of the Press papers' territory, the crash last Wednesday of a light plane into a Portage Park house focuses attention on a threat to the entire Northwest Side. A threat too grim to put into words.

Bad as last week's accident was—taking lives of four of the plane's passengers and critically injuring the other two—the tragedy would have been compounded manifold had persons on the ground been in the path of the crashing plane.

And this was a relatively small craft. Imagine, if you can, the devastation that would result if one of the giant commercial jets that roar over our area plowed through a local neighborhood.

The Northwest Side's Congressman, Representative ROMAN C. PUCINSKI, who flew here from Washington Thursday, called the flight pattern of the ill-fated plane "totally illogi-

cal," and asked that all planes landing at O'Hare from east or southeast follow the lake shore north of the North Shore suburbs before turning west.

A letter this week from the Bryn Mawr-Higgins Community Club says that the crash points up the club's objections to air traffic over thickly populated city neighborhoods.

We realize that planning approach routes for the world's busiest airport is not uncomplicated, but we feel that safety of thousands of people in their homes should be a first consideration.

And thus we wish success to both Congressman PUCINSKI and the Bryn Mawr-Higgins Club in efforts that may spare the Northwest Side a major disaster.

What Next in Cuba?

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. RHODES of Arizona. Mr. Speaker, since the talks between the United States and Russia on Cuba have been officially closed, many people are inclined to settle back with a feeling of well-being, contemplating what appears to them to have been a victory for the United States. Many of us, however, are cognizant of the fact that the situation which existed prior to the discovery of Russian missiles on the island of Cuba, is still very much in existence. The public pronouncements of Dictator Castro, both in Cuba and East Berlin, certainly do not indicate any cessation of the Communist drive to take over South and Central America.

An editorial printed in the Arizona Republic on Saturday, January 12, 1963, outlines the problem so well that it should be read by every Member.

The article follows:

WHAT NEXT IN CUBA?

When President Kennedy lifted the naval blockade of Cuba, he did so only after receiving Khrushchev's assurance of onsite verification of the removal of Soviet weapons.

The other day, with onsite inspection seemingly as remote as ever, Adlai Stevenson agreed with Soviet Deputy Foreign Minister Vasily Kuznetsov that "the time has come for the (U.N.) Security Council to close its book on the case."

Despite this obvious backdown in the American position, many editorialists throughout the Western World are hailing the unresolved Cuba crisis as a victory for the United States. But is it?

Is it a victory for the United States that some 17,000 Russian troops remain in Cuba? Is it a victory for the United States that 25,000 political foes are languishing in Castro's jails? Is it a victory for the United States that some 7 million Cubans remain as inexorably under Communist control as they were before the October blockade announcement? Is it a victory for the United States that our primary condition for removing the blockade has been denied? Is it a victory for the United States when its Government in effect repudiates the Monroe Doctrine and its several expanded compacts? Is it a victory for the United States that

a communized Cuba continues exporting revolution throughout the Americas?

Long before the October blockade announcement, President Kennedy pledged, "communism is not negotiable in the Western Hemisphere." Yet he did in fact negotiate with communism in the Western Hemisphere by promising Khrushchev that, in return for onsite inspection, the United States would not invade Cuba or sanction an invasion by our allies or by Cuban exile groups. The fact that the no-invasion pledge no longer remains in effect, inasmuch as Russia has chosen not to permit onsite inspection in her Cuban satellite, does nothing to refurbish the national honor tarnished by the original no-invasion pledge.

Within days after his emotional, fighting speech to Cuban refugees in Miami's Orange Bowl, President Kennedy disclosed to reporters at Palm Beach his true feelings about Castro's Cuba—a disclosure which a New York Times columnist said means that the U.S. Government fully "accepts the status quo" of having Castro rule Cuba.

No wonder Guatemala's anti-Communist President, Miguel Ydigoras, recently announced his country's retirement from "the front line of the fight against Castro communism." Why, he asked angrily, with an eye toward the U.S.A., should his small nation be constantly in conflict with Cuba, while other countries "receive the Ambassadors of Russia, Byelorussia, Bulgaria, Poland, Lithuania, and Czechoslovakia"?

The remainder of the anti-Communist world can only await answers to President Ydigoras' question.

Schacht's Decision a Matter of Regret in City Politics

EXTENSION OF REMARKS
OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. MILLER of California. Mr. Speaker, on January 11, 1963, the Alameda Times-Star, Alameda, Calif., carried an editorial expressing regret on the retirement of Vice Mayor Richard P. Schacht from the City Council of Alameda.

Mr. Schacht has been a great public servant and, during 6 years on the Alameda City Council, has contributed much to his community through the use of his time and energy and the ideas which he offered.

His dedicated service should be an inspiration to others who might aspire to public office.

I believe that the editorial in my hometown newspaper is a fitting tribute to this distinguished Californian, and under unanimous consent, I am pleased to insert it in the RECORD:

SCHACHT'S DECISION A MATTER OF REGRET IN CITY POLITICS

The announcement yesterday by Vice Mayor Richard P. Schacht that he will not seek reelection is a matter of regret.

His decision, resulting from the "steadily increasing demands of his law practice," is one that has been duplicated countless times in the history of the country, but it is not for that reason made any more palatable. On the contrary, it offers merely another ex-

ample of how difficult it is for able men to stay in office once the public is fortunate enough to get them there.

Schacht, through his 6 years of experience on the council, is a man who has a valuable fund of knowledge of the city, its problems and how to meet them. He has shown that in a variety of ways in his official capacity.

Furthermore, he is a staunch member of the Democratic Party, one of a minority on the council and one with a more than usual dedication to the principles of the Democratic Party. That, too, he has evidenced in many ways as many of those acquainted with him know, and it is of especial interest to us in this respect that he showed that dedication again this week in his remarks during consideration of the proposed charter revision apropos both an elective mayor and the division of the city into districts so as to assure a fair representation to the entire population on the city's governing body.

Though Schacht did not wholly agree with the stand taken by the Times-Star on these points, he did let it most emphatically be known that he was for both having the mayor of the city elected by all the citizens, rather than by the members of the council, and also for the districting of the city in such a way as to assure the maximum benefit of the democratic process—two points that are truly fundamental to the democratic process here.

Origin of "The Star-Spangled Banner"

EXTENSION OF REMARKS
OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. LANKFORD. Mr. Speaker, one of the many things for which Marylanders can be proud is that "The Star-Spangled Banner" was composed in Maryland by a Marylander as a result of a battle in Maryland between American and British forces in 1814. Following is an excerpt from the 1941 edition of the Encyclopedia Britannica giving the origin of "The Star-Spangled Banner":

EXCERPT OF THE ENCYCLOPEDIA BRITANNICA
1941 EDITION

The origin of the "Star-Spangled Banner" is well known and agreed upon by historians even to smaller details. Francis Scott Key, an American lawyer, had been delegated to negotiate the release of a prominent physician, Dr. William Beanes, who had been captured by the British fleet in Chesapeake Bay in 1814. He secured the physician's freedom but was detained aboard the British flagship during the projected bombardment of Baltimore. On the night of September 13-14 the British opened fire upon Fort M'Henry, one of the forts defending Baltimore at the mouth of the Patapsco. Under the cover of night, Key could not determine the issue of the battle but at dawn he was overjoyed to see the American flag still flying over the fortress. He then composed the poem, apparently having in mind a tune often employed before in American patriotic songs, that of "Anacreon in Heaven" composed by John Stafford Smith (1750-1836) as the club song of the Anacreontic Society, an association of musicians in London. After Key's return to shore "The Star-Spangled Banner" was set up in type and distributed throughout Baltimore, where it attained an almost instantaneous popularity.

Less than a week afterward it was published with an account of its authorship in a Baltimore newspaper, and soon the song was known and sung throughout the Nation. The main facts about its origin and adoption have been set forth in detail by O. G. T. Sonneck in his "Report on the 'Star-Spangled Banner,'" issued by the U.S. Library of Congress in 1914. Among other published reports may be mentioned P. H. Magruder's description of the first and the final text in the Proceedings of the U.S. Naval Institute, June 1927. In 1933 the original manuscript of the verse was sold for \$24,000.

Can President Deliver the Hoped-for Tax Cut?

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mrs. ST. GEORGE. Mr. Speaker, having been told of our great prosperity and bright future by the President of the United States, and then, in the same message, that the economy is "sluggish" and that we need a lot of pump priming—\$10½ billion over the next 3 years—to get the country moving, it is perhaps well to read the following article. This was written by Mr. J. A. Livingston and appeared in the Washington Post of January 16. It brings us down to earth and to the facts of life. We need to be reminded of both.

The question is one of finances and it cannot be dealt with and solved by campaign oratory.

CAN PRESIDENT DELIVER HOPED-FOR TAX CUT?
(By J. A. Livingston)

To examine President Kennedy's state of the Union message politically is to conclude that he's a confident optimist. He expects to be around in 1965 to push his tax program through. The \$10 billion net reduction is phased over 3 years.

In the first year, there'll be a \$6 billion cut—enough to whet appetites for the second bite.

This reduction ought to give the economy a boost sufficient to ease the President into 1964 with a prosperity slogan for the November election:

"We got the country moving again."

And then if he's elected, the third phase should be readily attainable. In planning so far ahead, the President profits from the recent past.

The 1960 recession contributed much to Richard Nixon's defeat. President Kennedy made much of the economic malaise during the campaign and overemphasized it in his first state of the Union message saying:

"The present state of the economy is disturbing. We take office in the wake of 7 months of recession, 3½ years of slack, 7 years of diminished growth, and 9 years of falling farm income.

"Business bankruptcies have reached their highest level since the great depression. Since 1951 farm income has been squeezed down by 25 percent. Save for the brief period in 1958, insured unemployment is at the highest peak in history. Of some 5½ million Americans without jobs, more than 1 million have been searching for work for more than 4 months."

Those are words to rue—first, because they were ill timed and much too dolorous. Such a catalog of ills, coming from the President, was not conducive to cheer and confidence. Hardly were the words said than the bottom of the recession was reached. The upturn began—and with little or no impetus from the new administration.

They are words to rue—also because, fundamentally, conditions hardly have changed. In arguing for a tax cut, the President noted that we are "on the side of the hill, not the top. . . . America has enjoyed 22 months of uninterrupted economic recovery, but recovery is not enough. . . . Persistent slack . . . has kept unemployment at or above 5 percent for 61 out of 62 months."

The President is treating a condition with a theory. After the postwar boom, the rate of economic expansion slowed—as pent-up wants were satisfied. This was natural, expectable. Meanwhile, other countries—able to profit from our industrial leadership, know-how, and aid—moved faster than we. This also was natural.

Now we have before us this theory: Our tax structure is a drag on industrial activity, on consumption. As prosperity increases, the tax collector skims more and more of the income stream. Recovery spending—is cropped off at the top.

Whether this theory is sound, I don't know. We have had top-offs of recoveries recurrently in the United States. The industrial cycle is to business what "The Children's Hour" is to Longfellow—"a pause in the day's occupation." Will changing the tax structure change that?

But this is clear to me. The top rates—both corporate and individual—have been far too high. Getting them down will add zest to the profit motive—to risk taking, experimentation, and innovation.

Thus, the state of the Union message raises economic hopes. But it also raises problems.

Piling an immediate loss of \$6 billion in revenues on a deficit of about \$7 billion will not meet unanimous approval in Congress. Hearings will be protracted. Getting the legislation out of committee will be a tedious process. And the form the legislation takes is likely to differ drastically from what the President has proposed.

All the while, Wall Street and businessmen will be watching—worriedly. Will the President be able to deliver? Anticipation, which encourages expansion and investment, will be adulterated by anxiety which palsies initiative.

Private Versus Public Power Again

EXTENSION OF REMARKS

OF

HON. RICHARD H. POFF

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. POFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the January 14, 1963, issue of the Roanoke-World-News, entitled, "Private Versus Public Power Again."

PRIVATE VERSUS PUBLIC POWER AGAIN

The objections now being raised by the U.S. Department of Interior and the Army Corps of Engineers to the Appalachian Power Co.'s power dam projects on the New River in Grayson County furnish glaring proof of the lengths to which bureaucracy will go to outmaneuver and supplant private enterprise.

Appalachian applied to the Federal Power Commission for license to erect hydroelectric

facilities at Boyer Ferry and near Fries, a dual dam arrangement similar to the Smith Mountain and Leesville Dams on the Roanoke River.

The Interior Department has asked that Appalachian Power Co. be denied license because the project would nullify an Army Engineer's plan for a dam on the New River near Galax, study for which supposedly was authorized in 1941. Further, say the objectors, the FPC is without authority to issue a license.

The question at once arises: If private enterprise is willing and able to put up the money for investment to create such a great hydroelectric facility why should Federal agencies object? Certainly this would save vast sums for the taxpayers.

The answer, of course, is bureaucracy and the insatiable desire of public power supporters. The battle with state socialism is never ending. The spenders want the Government in the power business without regard to the cost or the lack of efficiency.

To begin with, the Appalachian's two proposed dams would be far more efficient as a flood control and conservation measure than the single dam desired by the Army Engineers.

Secondly, such a facility, built, owned, and operated by private industry, would yield considerable tax revenue to the county in which it is located. The Federal facility would pay nothing. Only by removing land from local taxation and building at public cost can Federal power deliver what it calls cheaper power to consumers.

Another question which automatically suggests itself is this: How long does a congressional authorization for Federal study preempt a field of operation? Surely not forever. It seems rather evident from the failure of Congress to appropriate money for the Army Engineers project that Congress doesn't think much of it.

What about the Interior Department-Army Engineers argument that FPC lacks authority to issue a license to Appalachian Power Co.?

Turn back to 1940. After a lengthy case, first tried in the U.S. District Court for Western Virginia, the U.S. Supreme Court ruled: (1) The New River is navigable and therefore (2) Appalachian must get its license from the FPC. The Power Commission thereupon issued a license for erecting the Claytor Dam near Dublin.

It would seem that the Supreme Court's opinion is still the rule-of-thumb unless the present Court members feel like overturning the verdict of their predecessors on the Bench.

It is not without significance that Representative TUCK, in whose district Grayson County lies, is in favor of the Appalachian plan. So is Representative RICHARD H. POFF in the Sixth. Senator A. WILLIS ROBERTSON has restated his backing for the company and it is our recollection that Senator HARRY F. BYRD also is on record in that direction.

Here, then, is a readymade opportunity for business and industry to go to bat for private, revenue-producing enterprise. We trust that they will waste no time in making themselves heard.

Freedom of the Seas

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. FLOOD. Mr. Speaker, an informative article dealing with the ques-

tion of freedom of the seas, by Rear Adm. John D. Hayes, U.S. Navy, retired, was published in the December 1962 issue of Shipmate, the monthly magazine of the U.S. Naval Academy Alumni Association.

The article follows:

FREEDOM OF THE SEAS—SENSELESS SLOGAN OR MEANING TOOL FOR THE COLD WAR?

(By Rear Adm. John D. Hayes)

In November 1960, the following appeared in my column, "With a Round Turn," under the heading, "Freedom of the Seas in a Cold War. Why?"

"Has it occurred to any of us who are supposed to understand sea power that the inroads which the Soviets have made into the free world in the past few years has been possible only because we have granted them the freedom of the seas which we control.

"How do arms get to Egypt and Syria? How does oil get to Cuba? Where does the gasoline come from that fuels Soviet aircraft in the Congo operating independently of the United Nations? How did Khrushchev get to the last United Nations meeting?

"Freedom of the seas is a Western idea, conceived for an entirely different world from that in which we live today. Is it realistic to continue such a concept in a continued cold war, waged by a closed society?

"It does seem time that the whole idea of freedom of the seas be reviewed by the Nation and the Navy that is alone able to control the sea."

Two years later the American people suddenly discovered that they had allowed the Soviet Union to extend this freedom into a license unmatched since the days of piracy, with nuclear bombers and IBEM missiles imported into Cuba. This bold attempt at either destruction or blackmail came within days of success. The American people faced the threat by exercising their control of the seas. A blockade was established and the aggressive weapons declared absolute contraband (although neither of these terms, recognized in international law, were used). The exercise of control of the seas, even in this mild form, was enough to bring about the most abject retreat that the Soviets have so far made in the cold war.

The perceptive Cat Brown, 1921, at the time of the Lebanon crisis, stated to a television interviewer that Premier Khrushchev did not understand seapower. Perhaps so, but this wily realist must have decided that the American people did not know much about it either. Otherwise they would have used their powerful Navy as a diplomatic persuader rather than massive retaliation, brinkmanship, and the "big bang."

The several situations mentioned above indicate how we allowed the Soviets to use the seas against our own best interests. In another case we failed to use it to our own advantage. During the Korean war we did not interdict supplies brought in by sea to support the Chinese Communists through invoking the doctrine of continuous voyage as was done in World War I. I have no idea how much the Soviets used this means of logistic support, but whatever it was, it relieved the Trans-Siberian Railroad. The inability of that railroad to support a Pacific war—a repeat of 1904-5—eventually forced a truce on the Chinese.

On May 25, 1962, it was announced on a television program that at least one Soviet ship was in the area of our nuclear tests in the central Pacific. The commentator added: "There is nothing that we can do about it." He was referring to a sea area that the Japanese had successfully kept closed for 20 years and for whose control the American people had spent both blood and treasure. Yet, with the strongest Navy in the world, they were told "there was nothing that we

could do about" this Soviet violation of our strictest security at sea.

"FREEDOM OF THE SEAS;" THE SLOGAN THAT ALMOST DESTROYED US

Cases such as these must have induced Premier Khrushchey to make the trial in Cuba. Our lack of action he attributed to a reluctance to face hard issues but my belief is that it was a slavish and misunderstood devotion to a slogan. Sir Julian Corbett, able historian of the British Navy, wrote almost a half century ago: "Freedom of the seas," is one of those ringing phrases that haunt the ear and continue to confuse the judgment.¹

Freedom of the seas cannot exist so long as naval warfare is allowed to exist, since without substantial permission to command the seas, navies, except as mere adjuncts to armies, cease to have meaning.

The seas are free in peace but they never have been free in war. We are told today almost constantly that we are in a cold war. *Ipsa facto*, the seas should not be free today.

The seas have been free in peace only because the British Navy kept them so. Actually the concept that no individual nation has the right of domination of the high seas is of comparatively recent origin. The trend now is the other way with various nations, including the United States and the Soviet Union, claiming rights to certain sea areas outside their territorial limits. Nevertheless, Great Britain has never used her naval power to restrict commerce to her own advantage and neither has the United States. There is certainly no assurance that this will still be the case if naval power should fall into other hands.

In time of war, however, the British have never hesitated to close the seas to her enemies. The United States, as a neutral, gave lip service to the doctrine that private property in the form of ships and cargo should be free to use the seas in time of war but when the chips were down we followed British practice, in the Civil War, and in World Wars I and II.

Julian Corbett again succinctly stated the case: "In time of peace freedom of the seas exists already; in time of war it does not exist, never has existed, and at no time has it ever been put forward in its entirety by serious authority as an ideal of international politics."

In summary, freedom of the seas is a free world gift in time of peace but subject to control in time of war. In the age in which we live, peace and war are no longer distinguishable. What can be sharply defined in this cold war condition is who belongs to the free world and who does not.

In modern times, threats to the free world have come from land power. In every case it has been turned back by control of the seas. On the other hand, this control of the sea, by itself alone, cannot threaten the existence of any state.

NAVAL POWER CAN KEEP COMMUNIST AGGRESSION LOCKED WITHIN THE LITTORAL OF EURASIA

Geographically, communism is land power while the free world is a great sea state. The natural boundary between them is the littoral where the land mass of Eurasia meets the sea. The free world has the advantage of a salient into Communist land power in the form of the peninsula of Europe which has been successfully supported from the sea twice in our century. In today's cold war, naval power, using the belligerent rights granted it by international law, can keep communism from again breaking out of that littoral as it was allowed to do for the first time in the case of Cuba.

At the same time, land transportation being what it is, naval power cannot impose an effective blockade on the Soviet Union and its contiguous satellites. The failure of the attempt to do so on the Korean Peninsula, 1951-53, proves this. Naval power can only be used offensively in conjunction with the power of the other two armed services. Used alone it is restricted to the defensive and in this manner contributes in a large degree to the stalemate of the cold war which is about all we can hope to accomplish by military means. The permanent stopping of the dynamic Communist ideology must be done in some other way.

Today with no real peace but only a spectrum of wars—cold war, limited war, general war, total war and the grades between—our aim is to keep the situation in the cold war stage, on our terms. The most logical way of doing this, now that the Soviets refused to face the test, is to exercise our control of the seas as we see fit, employing such belligerent rights allowed by international law as we care to use.

When wars were limited to the armed forces, a merchant could go about his business at sea without becoming involved unless he wanted to. The principle of immunity of private property which we call freedom of the seas was a byproduct of the limited wars of the 18th and 19th centuries. Such immunity became a casualty of the 20th-century total wars. Cold war is milder in form than limited war so there is no reason why the doctrine of immunity of private property cannot be applied in this form of conflict.

The U.S. policy with regard to Cuba at present is consistent with this doctrine as it was propounded by John Adams and Woodrow Wilson. Private property, whether ship or cargo, is exempt. Contraband, that is whatever can be used to disturb the delicate balance of power, is not. We, who possess naval power, must alone determine what is contraband and whether it is absolute or conditional as defined by the early writers on international law and by our own Chief Justice Salmon P. Chase. We should decide when blockade will be resorted to and in what form.

NAVAL METHODS OF STOPPING COMMUNIST AGGRESSION

Wherever communism has succeeded, it has been in the shadow of armed might. Naval power can easily stop inroads of communism into the sea state of the free world by stopping the shipment of its arms beyond the littoral of the continent of Eurasia. The methods used can be the conventional visit and search such as the recent boarding of the Lebanese freighter under Soviet charter. There is always the danger in such procedure of submarine attack and there is no need to keep ships on this arduous duty at high cost and to the detriment of their training. Air surveillance and diversion to an inspecting port, the modification of the visit and search procedure adopted in World War I, will accomplish the same thing. Another means available, which also had its precedent in World War I, is the issuing of written documents, called "navicerts" at the port of departure, certifying to the contents of the cargo.

One saving feature of the laws of war at sea is that the actions of naval officers are reviewed by civilian judges in prize courts. Nothing parallels this in martial law. It may be necessary some day to again invoke prize courts but such courts must, as always, be those of the naval power itself. For the time being, the prospect of delay and inconvenience may be sufficient to deter shipping owners from chartering their vessels for purposes of Communist aggression. If not, there is still another tool which the British used effectively during World War I—bunker con-

trol. Except in the Black Sea, oil fuel is everywhere under the control of the free world.

The Soviets retreated when we confronted them at sea. It is in this area where we should patiently press our advantage and not be exasperated into an invasion or a "surgical" air strike on missile or airbases in Cuba. The blackmail is over now, to regain the initiative the Soviets must employ the force they have in that country and this force has to be supported from overseas. A blockade can therefore keep the situation in the realm of cold war. If for this purpose, the blockade has to be made more extensive, it will still be less cruel on the Cuban people and more deflating to Castro than other military action.

A CODE FOR SEA LAW AGAINST AGGRESSION

What is needed now is a code for the law of the sea in a cold war, and it is ready and waiting. It may be found in a draft convention on the "Rights and Duties of States in Case of Aggression" prepared by the Research in International Law of the Harvard Law School and published in the American Journal of International Law, October 1939. (Note the date.) This document defines aggressor states, defending and codedefending states and supporting states, and outlines measures that may be taken at sea against the aggressor state.

It also states: "Nothing in this convention shall be deemed to entitle any state to deprive the aggressor of territory or to impair the political independence of the aggressor, as a penalty for aggression."

SOME LITERATURE ON FREEDOM OF THE SEAS

One of the important facts of the Cuban situation which naval people should not overlook is the failure of the experts who have been writing about strategy and defense in the nuclear age to foresee what actually did happen and to provide any guide for action in handling it. Such best sellers as Henry A. Kissinger's "Nuclear Weapons and Foreign Policy" (1957) and Hahn and Neff, "American Strategy in the Nuclear Age," do not have a word on the kind of confrontation that actually took place. Neither does the newest work, Waskow, "The Limits of Defense" (1962). These books, it would now appear, are to be the only casualties of the crisis.

For any enlightenment of the subject of control of belligerent shipping in the cold war of the nuclear age, a reader must go back to a political scientist of more than a generation ago, Pitman B. Potter. His short but definitive "Freedom of the Seas, in History, Law, and Politics," traces this doctrine in international law, treats its modern interpretation in World War I, and offers some solutions which might stand the test of our time. He alone of the many writers on the subject then did not fall into the trap of finding an easy solution in the League of Nations.

No Navy man will go wrong who searches for guidance on any maritime question in the writings of Alfred T. Mahan. In this case it can be found in one of his little known works, "Some Neglected Aspects of War." This compilation of essays contains one by Julian Corbett, "Capture of Private Property at Sea," in which this writer in his incisive style lays bare the whole problem. Another by Mahan himself, "Belligerent Merchant Shipping," indicates why his associate at the Hague Conference, Alfred D. White, wrote of him: "When he speaks, the millennium fades, and the strong, severe actual world appears."

McGeorge Bundy, the President's adviser on national defense, in his biography of

¹ Corbett no doubt felt that "seapower" was another of these phrases as he did not use the term in his extensive writing on the history of the British Navy.

² It is frightening that in such serious situations, our planners still communicate in Madison Avenue slogans whose purpose is to hide reality.

Henry M. Stimson, published in 1947, wrote of "the peculiar psychology of the Navy Department, which frequently seemed to retire from the realm of logic into a dim religious world in which Neptune was God, Mahan his prophet, and the U.S. Navy the only true church." What he now thinks of Mahan and sea power is not known.

**Hon. Wayne N. Aspinall, of Colorado,
Discusses Need for Public Land Law
Study**

EXTENSION OF REMARKS

OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. RIVERS of Alaska. Mr. Speaker, on December 11, 12, and 13, 1962, the National Association of Counties held a conference on matters relating to grazing, water, and revenue in conjunction with the meeting of the association's western regional district. Many thought-provoking papers were presented.

One of the outstanding presentations was made at a general session by the Honorable WAYNE N. ASPINALL, chairman of the House Committee on Interior and Insular Affairs. Because of the importance of this paper, I bring it to the attention of the Members by setting it forth in full as part of my remarks.

Not only does the message that follows outline some of the important work to be undertaken by your Committee on Interior and Insular Affairs during this Congress, it also sets forth the philosophy and principle underlying the chairman's approach:

**A WESTERN LEGISLATOR VIEWS THE 88TH
CONGRESS**

(By Hon. WAYNE N. ASPINALL, of Colorado)

The President has said that we are living in climactic times. This is true, not only in the specific areas to which he was referring, but also in the fields of public land law and the development of public land areas with which this western regional district of the National Association of Counties should be, and I think is, vitally concerned.

Actions taken in the 88th Congress that will convene on January 9, 1963, may well shape the future patterns into which western communities will be required to mold themselves for years, and possibly decades, to come. I believe that the development of a revised, revitalized, and possibly brandnew public land policy will be one of the major accomplishments of the Interior and Insular Affairs Committee of the House of Representatives in the next Congress. For my part I intend, within the limits of our physical capabilities, to assign to the Public Lands Subcommittee sufficient time in the months ahead to assure adequate review and study of existing processes and proposed modifications. In this work we shall cooperate with the administration and thoroughly examine any and all proposals that may be submitted for our consideration.

In discussing our physical capability to handle legislation, I would like you to keep in mind a few factual details: In the 87th Congress, 909 pieces of legislation were referred to the House Committee on Interior

and Insular Affairs; the full committee met 67 times and the six subcommittees met a total of 283 times in Washington. The 87th Congress was, as we all know, a long one and despite this, although we scheduled meetings every working day until the very end of the session, an equal division of the 283 meetings would have given the six subcommittees approximately 47 meetings each which, at 2 hours each, would provide 94 hours for both hearings and deliberation. (Actually in the 87th Congress the Public Lands Subcommittee, which is the one with which I am most concerned today, met 57 times in Washington.)

Local government and county commissioners should be interested in substantial portions of our work in addition to that of the Subcommittee on Public Lands. The Subcommittee on National Parks, for example, reported favorably in the last Congress, and there were enacted, 12 bills authorizing the establishment of new units of the National Park System of which 3 were major and 9 smaller elements; the Subcommittee on Irrigation and Reclamation passes on projects that have a lasting effect on local affairs; the Subcommittee on Indian Affairs considers legislation involving Indian lands which form such a large portion of the land mass of some of the Western States; and the Subcommittee on Mines and Mining has jurisdiction over the mining and mineral leasing laws as well as mineral resources of the public generally, all of which are of vital and immediate interest to local governments.

The Committee on Interior and Insular Affairs must not only consider legislation referred to it, but, in addition, it has the responsibility for legislative oversight of the Department of the Interior and the exercise of surveillance over the administration of statutes authorizing current activities. The importance of this legislative oversight responsibility can best be judged by a few examples of areas in which we can expect the committee to be active during the next Congress.

The Committee on Interior and Insular Affairs and its staff are keenly aware of the interest of county officials in these various matters. We not only welcome but solicit your views and recommendations. But, remember you and your counties, like everybody else, cannot have your cake and eat it. You cannot pick and choose those instances in which you want the law followed and those instances in which you would rather wink at the law. This is part of the reason that we examine the operation of existing law to determine compliance on the one hand or the need for revision on the other hand.

We know, for example, that there are revenue-sharing formulas that make it inviting in some areas to continue the management of public land areas by either the Forest Service or the Bureau of Land Management, that is management and retention in Federal ownership instead of placing the property in a position where it could be sold even though after sale property developed for private use would be placed on the tax rolls. At this point let us acknowledge that there are important differences between revenue sharing and payments-in-lieu of taxes, and that, particularly where construction has been replaced, the shared revenue is sometimes paid to a county that has not suffered and may have even benefited from a Federal project.

Many of us have become deeply concerned by the fact that the Bureau of Land Management seems to lose sight at times of the opening sentence of the Taylor Grazing Act which authorizes the Secretary of the Interior to do certain things "in order to promote the highest use of the public lands pending its final disposal." The attempt to

designate these public lands as a "national land reserve" implies retention rather than preparation for disposal. In addition we have noted the Bureau's applications for funds to enter the recreation field on a large scale on public lands where the construction of recreation facilities would certainly be inconsistent with plans for the final disposal of the land contemplated by the Taylor Grazing Act. We shall therefore be concerned in the immediate future with a review of the proposed Bureau of Land Management recreation program to see, first, whether it is consistent with existing legislation and, second, to what extent it is proposed to establish duplicate administrative machinery by failing to utilize the services of the National Park Service as a management agency of these new proposed recreation areas.

I am sure you are all aware of the fact that the last Congress enacted a law making it possible to bring certain Federal district court actions outside the District of Columbia against government officials and agencies. Suits can now be brought in the specified instances within the judicial district in which, among other things, real property involved in an action is situated. I supported this legislation and am gratified that after years of effort it has been enacted. However, unless administrative remedies are first exhausted one cannot sustain any law suit. It therefore becomes imperative that we remove roadblocks to administrative consideration of cases as a necessary ingredient of full operation of this new law.

Many of us in the last year have become increasingly concerned with the extensive backlog of appeals before the Director of the Bureau of Land Management and the Secretary of the Interior. We have, accordingly, been pursuing an analysis of present procedures to determine whether the committee should initiate legislation to facilitate consideration of cases on administrative appeal. I am sure you all realize that a 2 to 3 year lag between appeal and decision not only frustrates the individual's rights but can have a direct impact on the availability, use, and development of public lands which are matters of great concern to county commissioners trying to plan ahead.

I do want to acknowledge the efforts made by the Department and the cooperation that has been given to the committee and its staff by the Department of the Interior Solicitor, Mr. Frank Barry, who shares the platform with me this morning. Some progress has been made. However, in a report 2 weeks ago from Assistant Secretary Carver, who informed me of the introduction of new procedures designed to expedite appeals, it was pointed out that the backlog of appeals to the Secretary had been reduced between July 1, and October 1, 1962, from 793 to 726 cases. (At this rate it would still take 2½ years to clear up the existing backlog; but, it is definite progress.)

The Department had been requested to either institute positive procedures to assure reduced appeal time or to recommend to the 88th Congress legislation to accomplish the purpose. But, whether or not the Department makes significant inroads in its current backlog, the committee must look to the long-range program. I hope, therefore, that we will have time to hold hearings looking toward a constructive solution.

Another matter that the committee has been studying in one phase of the operation of the Recreation and Public Purposes Act of 1926. A special Public Lands Subcommittee, at my request, looked into a specific transaction in the adjacent town of Henderson, Nev., where a land area was made available for private recreational use as a so-called public golf course without any formal notification or hearing by Department officials. The examination of this one

case led to a general review of the law as it applies to nonpublic bodies and groups; but no hearings could be held because of the lack of time. I understand that the subcommittee is presently completing its report and I expect that this matter will be pursued in the next Congress.

You, as county officials are, I know, very much concerned that public lands be devoted to some use, whether it be recreational or for intensive development and occupancy for residence or business. Our committee has in the last 5 years reviewed all proposed withdrawals over 5,000 acres and considered legislation for those involving defense utilization. In addition to continuing these procedures during the next Congress I have the assurance of Secretary of Agriculture Orville Freeman that the Forest Service will cooperate with us in an effort to enact new-type statutory withdrawals in those instances where it will be possible to protect the public interest while providing for multiple use through a partial withdrawal that cannot be effected administratively.

The principle of multiple use is part of the history of our basic public land policies. Traditional policy, which I vigorously support and which I take every opportunity to espouse, has always equated conservation with wise use. What makes our proposed approach different is that we plan to apply this idea of multiple use of tracts of land required for governmental use.

In the past, wherever an agency of Government required the use of a parcel of land, it was withdrawn from appropriation under the public land laws under an express or implied executive authority. As a result of our coordination of proposed withdrawal actions we know now that there are areas in which it will be possible to withdraw the land for surface use but permit subsurface exploration and development. In addition to the National Forests, we have determined that this approach will be feasible in connection with Corps of Engineers reservoir projects.

A partial withdrawal, however, cannot be effected administratively. The general laws do not contemplate that type of action. Accordingly, it will be necessary to consider individual withdrawal bills while, at the same time, the committee studies the practicality of establishing general guidelines to meet the modern requirements.

The obvious reason for the current emphasis on developing new means of assuring multiple use is the growing scarcity of usable land for the various programs, purposes, and uses for which the people of the United States have legitimate demands. Those of us who are familiar with the development of the West know that it could not have taken place without the use of public lands. This city of Las Vegas has grown through the use and development of public lands and their transformation into privately held lands. Likewise, I know that many of your counties rely for your revenues on taxes levied on real property that once was nontaxable because it was public land; and I can see you looking eagerly and hopefully for new additions to the tax rolls.

Here our responsibilities for legislative oversight and for consideration of bills will probably merge again. We know that our land laws generally need modernizing; and, in recent years, recommendations for modification have been made by both the previous Republican administration and the present Democratic administration. Our committee has held hearings on several proposals and heard conflicting views. The bills before the committee last year ranged from the relatively minor proposal to repeal the Pittman Act, which establishes special procedures for land grants for agricultural development in the State of Nevada, to full-scale major revision of the nonmineral public land laws.

As I indicated at the outset, the most important business for the West that I foresee in the 88th Congress will probably see the climax of these and other studies leading toward revision of the basic public land laws. In order to put this projected action in focus I would like to review with you a few salient background factors, including the fundamentals of our land laws.

Article IV, section 3, clause 2 of the U.S. Constitution imposes on Congress the responsibility and authority for the disposal of all Government property. When Congress fails to act it creates a vacuum into which the Executive may—no, I will say must—move to assure effective, efficient management. Congress did fail to enact general legislation designed to govern the use of public lands; and the executive branch has accordingly made its own rules as to which areas should be preserved as wilderness, which areas should be open for disposal, and which areas should be retained for recreational use.

In the consideration of legislation to dispose of reserved minerals, in proposals to make lands available for urban and business development, in bills to set aside wilderness areas, and in the several measures that have been introduced governing the withdrawal and reservation for specialized use of lands in excess of 5,000 acres, the central problem has revolved around the executive-legislative relationship in the management and disposal of our public lands. I submit that this will emerge as the clear-cut issue early in the 88th Congress. I promise you that we will meet this issue squarely and that I, for one, will insist that Congress shall not shirk the responsibility that it has under the Constitution.

This group knows, I am sure, that our committee reported a bill that in effect would have required an act of Congress for most future withdrawals and changes in use designations of public land areas in excess of 5,000 acres; and would also have set aside 6.8 million acres of land for wilderness preservation, with provision for additional areas to be safeguarded in the future. Incidentally, in this bill we adopted an amendment that was so ably recommended by your new president of the western regional district, Jim Stearns, who appeared before the Public Lands Subcommittee in his capacities, at that time, as vice chairman of the district and chairman of the Public Lands Committee of the California County Supervisors Association. The amendment to which I refer, of course, is the one that would require the views of local governments to be obtained before additional areas could be set aside and preserved as wilderness. I congratulate you on having elevated Mr. Stearns to the presidency of this body.

The bill we reported out, which I sponsored as a substitute for the wilderness bill, was, I am pleased to note, received with satisfaction by this organization and its many components including my own State of Colorado county commissioners whose voice, in the person of Fritz Schneider, is heard so clearly. The wilderness preservation advocates did not like the bill and some of the executive departments objected to the proposed limitation on their powers. This opposition was not unique in the recent history of related legislation. Many different proposals have been made in individual areas as well as for general application concerning the guidelines for the future management and disposal of public lands. None has met with universal approval nor has any met with sufficient approval to permit enactment without controversy. Accordingly, on October 15, 1962, I wrote to the President and invited him to use his offices to submit to the Congress when it reconvenes in January an administration proposal for the enactment of legislation to define once and for all the

executive-legislative relationship. I have been assured by the White House that this matter is being given serious consideration and I look forward to working with the administration in the 88th Congress to obtain mutually acceptable legislation.

The constitutional provision I cited a moment ago is explicit. Nonetheless, we have areas of misunderstanding. For example, I find some of my good friends in the conservation movement completely missing the point of my objectives in this area in which I have been supported by recent committee actions. First, I hasten to assure you that I know of nobody on our committee motivated by any preconceived conclusion to obtain the use of public lands for any specific purpose.

There is a big difference between evaluating all uses and advocating particular uses. I would like to keep the record straight on a few things: I do not advocate any particular use—as a general proposition—as having any higher priority for allocation of public land areas than any other use; I believe that it is imperative that added areas be set aside for recreational use; I believe that we should preserve some wilderness areas; and finally I think that, after considering all possible uses, it is proper, if found to be in the national interest, that areas of public lands be reserved for limited or even single purpose use.

The important ingredient, that even some of my friends overlook, is that this procedure must place the responsibility for authorizing less than full multiple use in the hands of the Congress, the entity of the Federal Government closest to the people, and therefore most capable of acting as the landlord for the people themselves. In general enactments Congress has repeatedly, in words and substance, provided for the broadest possible multiple use; in specific bills we have set aside national parks for the enjoyment of all the people as recreational havens. We must now move on and either enunciate specific policy guidelines for the executive to carry out, or, in some way, pass on each specific major set-aside of public lands for limited or single purpose use.

The failure of Congress to act has permitted the Executive to set aside within national forests, exclusive of the Minnesota canoe areas, almost 14 million acres of land for wilderness preservation. If we fail to act and the Bureau of Land Management likewise sets aside for preservation of recreational development large units of public domain lands, we shall have no one to blame but ourselves if we later disagree with that action.

The 88th Congress will, I expect, bring these matters into focus for decision. Bearing in mind that the Homestead Act was enacted 100 years ago, the basic mining law 90 years ago, and the Taylor Grazing Act almost 30 years ago, I think we can all agree that the tremendous expansion of the country since the end of World War II requires some modernization of our public land laws. I think it is imperative that county commissioners individually and collectively, through organizations such as this, let us have your views. You, the commissioners, are closest to the people whose areas are being affected. In the final analysis we in Congress must legislate in the overall national interest; but, in doing so, we, at least, will give every consideration possible to local and regional needs before overriding them for the greater good of the greater number.

The only limitation that we will have on the extent to which the Committee delves into these various subjects that I have mentioned, as well as others such as my own bill to permit local taxation of personal property within Federal areas, will be the physical limitations of time. We should devote whatever time is necessary to each of these matters; and yet, as I demonstrated earlier, we

will be fortunate if the Public Lands Subcommittee has a total of between 90 and 100 hours in which to consider all of the matters within its jurisdiction.

I hope that these remarks will serve to bring about among you, as well as others, a little better understanding of my own approach and some of our problems. Possibly you will be able to help when someone criticizes us for failing to act more quickly.

A Brilliant Milestone

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. LIPSCOMB. Mr. Speaker, the city of Pomona, Calif., is an outstanding and progressive American city. It possesses citizens with wonderful community spirit and ability, and unusual natural resources. As a result Pomona has made great strides. I feel honored to represent this community in the Congress.

Pomona this year observes its diamond jubilee. Under leave to extend my remarks, I submit for inclusion in the RECORD an editorial which appeared in the January 6, 1963, Pomona Progress-Bulletin outlining Pomona's rich and interesting history:

A BRILLIANT MILESTONE

Just as the diamond is the most highly valued of stones, so a diamond anniversary is a brilliant and precious milestone for any community.

As Pomona begins observance of such an anniversary with its diamond jubilee, a look back over the years shows a record of accelerating growth and progress that assures an even brighter future for the city and the area it serves.

Blessed with unusual natural resources—a wonderful climate, beautiful scenery, rich soil, abundant pure water, and a strategic location—this valley was a land of opportunity to the early day residents and has continued to be through the years.

Its greatest wealth, however, has always been found in the men and women whose vision, character, courage, and devotion has given the community aggressive and successful leadership.

In its earliest pioneer days, this was a land of big cattle ranches. They went out of the picture with the drought of the early 1860's. Hay and grain were giving way to vineyards and deciduous fruit orchards in the late 1880's when Pomona was incorporated, and development of citrus groves was on its way.

By the turn of the century, Pomona Valley was the very center of the southern California citrus industry. The Richards Ranch in north Pomona was said to be the largest navel orange grove in the world, and for a time the packinghouse in San Dimas was the largest lemon-shipping house in the country.

So the valley excelled in citrus as it had in raising cattle and horses and subsequently in building an enviable reputation for its canned deciduous fruit.

Pomona citrus growers were among the first to ship their fruit cooperatively, and took a leading part in the founding of the California Fruit Growers Exchange—now Sunkist, Inc.—which was at one time the

largest cooperative shipping organization in the world. It played a major part in making the southern California citrus industry world famous.

In the early 1920's the desire of the people of Pomona to provide a showcase for agriculture, horticulture and animal husbandry prompted chamber of commerce and other leaders to launch the Los Angeles County Fair. Today the fair is, as it has been for many years, the largest and most beautiful county fair in America.

Pomona early became known as a city of fine homes, schools and churches. At one time the per capita giving for missionary work exceeded that of any other community in the West. Pomona churches through the years have sent and maintained missionaries in many parts of the world including Africa, India, China, Japan, Central and South America.

From the city's early days its residents wanted the best in education for their children, and were willing to make sacrifices to provide it. They established a splendid system of public schools from kindergarten through college.

Pomona College, founded during the same year as the city's incorporation, is today the outstanding liberal arts college of the West. But Pomona was only the first college. Now there are 12 fine schools on the college level in the Pomona Valley area.

As the schools were developed, special attention was given to music and art. Today Pomona takes pride, with its neighbor communities, in being a well rounded cultural center.

In the field of medicine, too, Pomona has developed steadily. The multimillion-dollar Pomona Valley Community Hospital, for example, is the heart of one of southern California's outstanding medical centers.

Pomona people have had visions in other fields as well. Before Pomona College was scarcely a year old, its president, the late Dr. Cyrus G. Baldwin, had secured the cooperation of electrical engineers in the building of a hydroelectric powerplant in San Antonio Canyon. The powerline that brought electric energy from that plant to Pomona pioneered the vast electrical industry of today.

First recognition in the industrial world came to this city with the organization of the Pomona Manufacturing Co., later named the Pomona Pump Co., and now the Pomona works of Fairbanks, Morse & Co. Its deep-well pump, the Pomona pump, became known over much of the world.

Today, Pomona industries are supplying products to meet a broad field of needs, including those of the space age. Its electronic, missile, and other plants are being supplemented rapidly. They will provide employment for many new residents, thus further fortifying Pomona Valley's stable economy.

Pomona has made rapid strides in recent months, so rapid that some persons describe its development as explosive.

Wishing to develop an outstanding core business district, Pomona businessmen inaugurated a revitalization program which included building offstreet parking lots and the Pomona Mall. This program has attracted nationwide attention.

With the construction of a \$4½ million superior courts building, Pomona's importance as a judicial center will be fully realized. This and many other assured developments in the civic center area and elsewhere are giving Pomona increasing momentum. This community has been building the foundations for a bright future that should offer great new opportunities for its citizens.

A great statesman might have been thinking of a community such as Pomona when he said, "The past is but a prolog for the future."

The Fiscal Problems of Our Government

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. HARVEY of Indiana. Mr. Speaker, the fiscal problems of our country are paramount. I, therefore, under unanimous consent, include the following three editorials in the Appendix of the RECORD:

[From the Wall Street Journal, Dec. 17, 1962]

THE POSSIBLE AND THE PERFECT

Every criticism President Kennedy directed at the tax structure Friday night is absolutely right. If it were simply a question of lowering rates to get the economy going faster, there would be no quarrel instead of the angry national argument that is in fact developing.

As Mr. Kennedy said, the present tax system "siphons out of the private economy too large a share of personal and business purchasing power . . . it reduces the financial incentives for personal effort, investment, and risktaking." Those are exactly the incentives that could spell greater growth.

In addition, the endless tinkering with taxes in an effort to make them somewhat less burdensome has created a patchwork that distorts private economic judgments and makes certain types of activity more profitable than other and more valuable undertakings. All this, the President wisely said, "inhibits our growth and efficiency."

The President is probably correct, too, when he says that as a practical matter Federal spending is going to continue rising. He had hoped to propose tax cuts in the frame of a balanced budget; instead he will do so in a swirling sea of red ink. Yet to defer tax cuts until spending is reduced and budgets balanced might be, to borrow a phrase of his, to force the possible to wait on the perfect.

He may even be right when he argues that lower tax rates might not seriously augment the deficit for very long. Certainly increased economic activity could produce more revenue for the Government from lower rates.

Unfortunately it is right there that some of the trouble begins. While higher spending is as sure as Mr. Kennedy and his advisers can make it, the economic impact of lower taxes is a guess at best. And Government planners are notoriously poor guessers.

They estimated a modest surplus for fiscal 1959 under President Eisenhower and they got a \$12.5 billion deficit. For the current period they estimated a small surplus and they are getting a deficit now calculated at nearly \$8 billion. What the figure will be in the budget Mr. Kennedy proposes next month is not known, but nobody denies it will be another deficit.

This seemingly perpetual round of deficits in good times and bad, for any excuse or none, is what gives so many Americans the jitters about tax cuts that could aggravate the already unbalanced arithmetic. People simply cannot understand why it is that, even if defense and space spending must rise, the Government is so unwilling to pull back on obviously less essential projects. The President's promise to hold the line on such projects in the forthcoming budget is not going to reassure them—not with all experience to the contrary.

For that reason we believe the President's refusal to base tax cuts on lower spending

is not only a drastic economic error but may be a political mistake as well. Such a skilled political practitioner must be aware of the mood of the country. You would think he would want to capitalize on it by going before Congress with recommendations for both tax and spending reductions. If he would do that, he could stop worrying about the polls, his legislative program, Nelson Rockefeller, or just about anything else.

That is not demanding an unattainable perfection but only common economic sense. The honest truth is that we can and should have both lower taxes and lower spending. If politics is the art of the possible, the President is overlooking a magnificent possibility.

[From the Shelbyville (Ind.) News]

DON'T SPEND IT—YET

Information on the administration's forthcoming tax program, leaked to the press in advance of the President's message to Congress on that subject, indicates a contemplated gross reduction of \$8 billion to \$10 billion in tax receipts, but to be offset by \$3.5 billion of increased revenue that is now seeping through those so-called loopholes.

Furthermore, it has been revealed that reductions are to prevail over all tax brackets, from the poor man's 20 percent to the millionaire's 91 percent and including the 52-percent corporate income tax.

The avowed purpose is to stimulate business so as to relieve unemployment. But it is difficult to see how a cut of these overall proportions and spread so thin can offer significant relief in any quarter.

Speculation on the effects of a proposal yet to be presented are rather idle, of course.

But it now seems plain that there will be strong resistance in Congress to tax-cutting without similar reductions in spending, especially when the current fiscal year that ends next June 30 is expected to show a deficit of around \$8 billion—and perhaps even more.

Representative JOHN BYRNES, of Wisconsin, for one, has declared that if the President will cut nonemergency spending, taxes can be cut, too. And he is expected to have plenty of company in both Houses among Congressmen and Senators who have been listening to constituents who are far more concerned about the welfare of this Nation than that of others on which we have been spending huge sums—and who are not as happy about all those costly Federal "help" programs on the domestic level as some politicians like to think.

The thought of adding even a few billions of dollars to a national debt of \$300 billion is disturbing to those of us who are naive enough to cling to the idea that nations should pay their bills as well as people—and who remember enough history to recall that a score of once-great nations have perished because they didn't.

[From the Greenfield (Ind.) News, Jan. 10, 1963]

TAX CUT ALREADY EARNED

Most prominent subject for action in the new session of the U.S. Congress, just now beginning, as seen by the political prognosticators in Washington, is the Presidential proposal for a cut in income taxes, more or less "across the board" and irrespective of whether or not the cut is accompanied by a reduction in spending.

There is by no means unanimity of opinion as to the exact details of this reduction, but if any action by the new Congress seems fairly sure, it would be that some sort of a reduction in income tax is in the cards. The reason or excuse for such a cut at this time is as a means of speeding growth, employment, prosperity, by providing more money for investment in business and industry and,

therefore jobs, and by permitting the people to retain a greater portion of their incomes to spend in obtaining what they desire.

It all seems very kind and charitable on the face of it and is a tacit admission that income taxes for the last 25 years have been far too high. With that we heartily agree and include that spending has also been allowed to be maintained at too-high a level. The very fact that tax collections have been allowed to remain at such a high level, year after year, was in itself an invitation to high spending and extravagant waste in public business.

And the fact that a cut in taxes is looked upon as a sure-fire remedy for an insufficient rate of growth is, in itself, an admission that taxes at present levels are not good and have contributed to a dwarfing of virility, ambition, and growth.

But, when we look the whole field over; not just focusing on Federal income levies alone, we see that there is a certain amount of deception and sham in the tax-cutting proposals.

For instance: Just as of this present month, substantial new drains have been put upon the pocketbook of the consuming public by the Federal Government and it will take a considerable cut in income tax rates to merely even up to the citizen and make his position as tenable as it was even last year.

The social security tax against all payrolls and the earnings of the self-employed, was substantially increased as of January 1. It will place in the Treasury hundreds of millions of additional dollars each year, and two further increases in coming years has also been provided in the statutes. In addition the "medicare" proposal if it should be passed, would up the rate still further, at a rate of nearly \$2 billion a year.

Also, as of January 7, every postal rate in the book was raised substantially. First-class postage was raised 25 percent. Second class was raised 10 percent this year, with two additional 10-percent raises to go on next year and the next. So on through all postal categories. This will raise annually added hundreds of millions. When there is a postal deficit it is made up out of tax collections, so the manipulation of postal rates is directly tied to the income tax. Therefore, it can be easily seen that it will take a relatively large cut in the income tax to put the average taxpayer on balance so that he will actually be paying less than he was in 1962 to the Government in all forms of assessment. In other words, we have here a considerable bit of hocus-pocus.

We bet a lot of you hadn't even thought of that.

Gen. Curtis E. LeMay

EXTENSION OF REMARKS

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. CUNNINGHAM. Mr. Speaker, news reports speculate that Air Force Chief of Staff Gen. Curtis E. LeMay will not be reappointed at the end of his term in July. This would be a great loss to the Air Force and to the country.

It would also be positive indication that along the New Frontier, you must muzzle your dissenting comments or look for another line of work. This administration has, through press releases, told Federal employees to speak out on mat-

ters within their jurisdiction. With fanfare, State Department officers are told to try something new, be imaginative.

Yet in General LeMay we have a man whose strong convictions and honest beliefs caused him to speak out against the proposed abandonment of manned bombers. Apparently his reward will be an end to his services.

This would be most unfortunate. There are few men more dedicated to the security of this Nation than General LeMay. All of us know him for his outstanding performance as head of our first line of defense—the Strategic Air Command. His high sense of duty and his complete devotion to the Air Force and the defense of this country have won him a place in the ranks of our greatest military leaders.

It would be a grave loss indeed to have the country deprived of his services, knowledge, and abilities because he had the courage to speak out for what he believes we need for our own defense.

A forceful editorial from the Omaha World-Herald of January 11 deals directly with this matter, and I include it at this point.

DISPOSING OF LEMAY

This newspaper's Washington Bureau says it now seems almost certain that Gen. Curtis LeMay will not be reappointed as Air Force Chief of Staff when his term ends in July.

Admirers of General LeMay—and we believe that this includes almost all of his countrymen—should have been prepared for this shock.

The man who commanded SAC in its formative years and who, perhaps more than any other man, is responsible for creating America's bomber force, has all but been shoved out the door of the Pentagon.

He was overruled on the Skybolt missile. The fate of the proposed RS-70 hangs by a slender thread. The whole concept of the manned bomber is being thrown overboard by the Kennedy administration. If the "whiz kid" civilians in the Pentagon have their way, they may scuttle the U.S. Air Force as we have known it.

Civilian supporters of the Air Force are bitter about this treatment of Curtis LeMay. We surmise that the officers and men of the Air Force are even more disturbed. For if the ideas, the knowledge, the lifelong experience of General LeMay can be cast aside in such cavalier fashion, how much attention will be paid to the views of other airmen?

The day General LeMay is thrown to the wolves may prove the sorriest day for American airpower since other so-called "bright boys" in another era court-martialed Billy Mitchell.

Progress and the Public Interest

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. BECKER. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD an excellent address delivered by Mr. Kenneth H. Klipstein, president of the American Cyana-

mid Co., before the Society of Chemical Industry on October 19, 1962. On that date, Mr. Klipstein received the coveted 1962 Chemical Industry Medal of the American Section of the Society of Chemical Industry.

Mr. Klipstein is an outstanding leader in the chemical industry and his remarks should be read by all who are interested in the achievements of the American chemical industry and the preservation of the free enterprise system:

PROGRESS AND THE PUBLIC INTEREST

(Remarks by Kenneth H. Klipstein, president, American Cyanamid Co.)

No recognition that may come to a man is more gratifying, more to be cherished than that which his peers and lifelong colleagues may choose to bestow upon him. This is a day unlike any other in my life. Through me, you have also highly honored all of my associates, past and present at American Cyanamid Co., and on their behalf, as well as my own, I thank you with all sincerity.

It has been good to spend my life in the chemical industry, seeing it grow and taking part in one of the high adventures of all time. My fervent wish is that this adventure never cease for others—that men never run out of opportunities to be uncovered, problems to be solved, frontiers to be explored.

One of the purposes of the founders of the Society of Chemical Industry was to provide for "the discussion of all matters bearing upon the practice of applied chemistry."

I would like to invoke that purpose tonight. The matter I mean to discuss has considerable bearing upon the practice of applied chemistry. It is not exaggeration to say that it may even determine whether the practice of applied chemistry as we know it today shall continue to exist.

MANY ATTACKS ON INDUSTRY

The chemical industry is under attack—on many fronts.

We see a challenge posed to our patent system—at the very time when other nations are taking steps to strengthen protection for their own inventors.

We see mounting alarm over possible pollution of our air and water, without recognition of the preventive steps being taken by industry.

We see a concerted attack on the pharmaceutical industry by critics who seem to forget what has happened to life expectancy in recent years.

We see the public being frightened over the use of agricultural chemicals, despite their enormous benefit to our food supply.

We see new trade and tariff provisions which, depending on how they are applied, might undermine whole segments of the chemical industry.

At a time when images are often considered more important than the very things they portray, there are many who see us only as contaminators and polluters.

All these problems stem largely from the same root: namely, the deplorable lack of public understanding.

People don't know enough about what we are, about what we do, and why we do it. To us here tonight, the development of synthetic organic pesticides is one of the major accomplishments of the chemical industry. We are proud to have been able to place these amazing tools into the hands of those charged with providing our food and protecting our health.

To the readers of the book, "Silent Spring"—and there are many because it is the current book of the month—synthetic organic pesticides would appear to be a national hazard, and their makers eager to tamper with the balance of life itself in order to turn a profit.

The author writes that "for the first time in history virtually every human being is subjected to contact with dangerous chemicals from birth to death." The fact is that all life is biochemical and all matter is chemical. We have always been—and will be—exposed to chemicals from birth to death. A few are dangerous; most of them are harmless; others, many of them created by man, are beneficial; some are indispensable to sustain life.

OTHERS DANGERS ALSO EXIST

Air, salt, and water are all chemicals and can all be dangerous, but without them, no living thing could survive. Burning is a chemical reaction; it is a process of oxidation. Fire can bring about fearful destruction. The loss of life and property which it can cause may be terrible. Yet we would not want to do without flame for cooking and heat and power and we could not live without respiration.

There is always another side, but unfortunately, rebuttals never have the force or persuasiveness of the original charge.

It is small wonder then, lacking the necessary understanding, that many people are trying to impose tighter controls on us. They seem to feel we must be prodded into rectitude and legislated into virtue.

My concern over what the public knows and thinks about us is occasioned by the fact that the public can, if it chooses to do so, prevent us from effectively doing our job.

They can do so by giving tacit approval to policies and regulations which will ultimately stifle our enterprise. From the start, the great lifeline of applied chemistry has been the freedom to innovate—the freedom to set our own research goals and pursue them in the light of our own knowledge.

RESEARCH MAY BE AFFECTED

To carry on research and not only to carry it on but expand it proportionately to the growth of knowledge, complexity of industry and diversity of application, entails a need for more and more scientific personnel and more funds to support their activities. If our critics are successful in prosecuting their cases, inevitably we will see the effect creep into our balance sheets. Cost of plant investment, cost of raw materials and conversion costs are not subject to arbitrary cuts, but if profits disappear, something will have to give. Reluctantly, it may have to be research. There have been instances in the past when this has happened and we know the demoralizing results. Not only for self-preservation must we gain public support but also in order to discharge our obligations to the public in its very own interest. To secure public support, we will first need public understanding.

People mistrust the unknown. In many primitive languages, the word for "enemy" is the word for "stranger". Despite its explosive growth and the important position it occupies in our economy, the chemical industry is a relative stranger. Perhaps we are too diverse, too complex, too interrelated, too technical, and too ever-changing.

We do, however, have one common denominator. Unseen and unrecognized, we are at man's service in countless different ways. We are a silent servant of mankind.

I think the time has come for us to speak out.

First, however, let us make certain that all we do is truly in the public interest. By this I do not mean a cursory check to reassure ourselves that we are acting within the letter of the law. What I do mean is a sincere, searching appraisal of our actions and of their probable consequences on the society which we inhabit and which nurtures us.

This we must do not through charity and benevolence, not through gratitude, not through a sudden desire for popularity. We must do it for the most hardheaded, real-

istic business considerations, born of the clear knowledge that a free society does not long tolerate harmful or undesirable elements in its midst.

We must do it for the very simple reason that if we fail to, someone else will most assuredly do it for us. We have seen in our lifetime the growth of the assumption that of all social and economic institutions, only government can be trusted to be guardian of the public interest. Yet there are many things which the individual, acting singly or in variously organized groups, can do for himself that the government cannot do better.

FOR THE PUBLIC INTEREST

I do not want to leave the impression that the chemical industry is in any special need of self-scrutiny, or that such scrutiny will uncover shameful evils. Rather, I suggest that a continuous appraisal of the social impact of our policies and actions—a public interest audit, if you will—is essential if we are to discharge one of our most pressing and important responsibilities.

This is the responsibility to explain to the public what we are trying to do.

The consuming public tends to think of the chemical industry in terms of test tubes and fumes without realizing what a giant we really are. Everybody is familiar with aluminum and copper, but ammonia means little more to the man on the street than a household cleansing agent. He would be astonished to learn that more ammonia is produced each year in America than aluminum and copper combined, with zinc, lead, and magnesium thrown in for good measure. The production of sulfuric acid is three times that of ammonia. Our industry's dollar sales are about twice as large as those of the steel industry.

OPEN HOUSE IS NEEDED

There are more than 12,500 chemical plants in the United States, in every kind of community and in every corner of the country. Let the people see what we are doing. Let us proclaim open house and extend a cordial welcome to all so that they can begin to appreciate how much what we do means to them. Let us prove to them that chemicals are what they eat, what shelters them from the elements, what protects their health, what guarantees our national safety, what provides both the necessities and the bountiful luxuries of the good life. Let us help them come to the realization that the word "chemical" is not just an abstract noun, but rather refers to thousands of articles of everyday use in every home.

Let us enlist the help of our own employees. They should all be supporters of our cause, along with their families, their friends, and their neighbors. They have a vested interest in the welfare and continued success of our industry. More than that, they should be proud of the contributions they are making to the general welfare. They should be knowledgeable and enthusiastic ambassadors. They should be, and they can be.

We never hesitate to appropriate time, creative energy, management skills, and adequate funds for those projects which are directed toward generating greater sales and increasing profitability. After all, the primary responsibility of a business enterprise is to create a profitable return on investment in plant, property, and equipment. If we recognize, and I believe we are beginning to, that lack of public understanding of the chemical industry may result in a serious potential hazard to our continued growth and well-being, then we must devote the same serious attention to solving this problem as we would to a decision involving a major expansion program.

You all remember the little rhyme about—

"When in trouble,
When in doubt
Run in circles,
Scream and shout."

This we have no need to do. It is fortunate that we have a good story to tell, an honest story and an interesting and exciting one.

OUR PRODUCTS HELP ALL

Let us tell it in terms of our products. The chemical industry is so varied that it defies definition. Together, we make so many different things that no single classification has been devised to encompass them all adequately. All the better. We can tell people that our products contribute to every waking and sleeping moment of their lives. We are important to them for as many reasons and in as many ways as the multitude of products we produce.

Let us tell our story in terms of their interest, not ours. What we are asking for—what we need—is their consent. Public permission to carry on our affairs free from unreasonable restrictions and legislative or regulatory harassment. The easiest, surest way to gain this consent and to keep it, is to demonstrate to the public that what we do is useful, is beneficial, even indispensable to them. What could be more convincing?

Let us tell our story in terms of what we have already done, of the contributions we have made to the growth and creation of our industries which in turn have provided jobs and wealth; of the contributions we have made to better health and a longer, richer lifespan; of the contributions we have made to our national security.

MAN HAS BENEFITED

Let us, to show what more we can do, tell our story in terms of technology. A century ago, man was obliged to devote a major part of his time and energy struggling against his environment. Today, he can confidently penetrate every corner of his planet, establish himself, and prevail. He can communicate instantly anywhere on earth; he can change the face of his lands and harness the primary energy of matter; he has already smashed the chains that bind him to the earth and now calmly prepares for the voyage that will soon take him up and into the limitless arch of space itself.

The instrument which made all this possible is science, conceived as abstraction and converted into fruitfulness by our great industrial establishment.

Let us, in telling our story, by all means talk about research. We can say to the public: we ask your consent and your support for the sake of all the new things which we want to provide for you, and which we will provide for you if you will only allow us to.

Let us tell our story in the schools, to the citizens and the voters of tomorrow.

Let us tell it to women of our land, in their many clubs and organizations. They may not be interested in industrial trends or technological breakthroughs, but they are interested—to the point of militancy—in the welfare of their families, the purity of the food they prepare, the safety and quality of the thousand and one inanimate objects which touch their lives and to which—largely unbeknownst to them—the chemical industry makes important contributions.

Let us tell our story to our elected officials; it is important that they should be informed about our programs and our problems, because information is the material out of which they fashion their legislative judgments. Let us remember that ultimately elected officials only mirror the desires of their constituents. As astute an observer as Abraham Lincoln recognized this when he pointed out that "public opinion is everything. With public opinion nothing can fail. Without it, nothing can succeed."

Let us tell our story through every means at our command—through our sales and technical service forces, through the advertising we do, through trade associations and through community groups. The effort must be massive to achieve its objective.

CONTROLS ARE ON INCREASE

Unless we take the initiative, both in word and deed, tighter controls will surely follow. This trend is already evident in our national economy. Every year, more and more goods and services are bought and paid for by the Government; every year, Federal regulation expands in scope and direction; every year, Government enlarges its field of activities; increasingly, Government assumes responsibility for protecting those it claims cannot protect themselves; and Federal expenditures for research and development have far outstripped those of private research and now total nearly \$12 billion as compared with \$4 billion for private research.

It would be absurd to suggest that there exists a basic, irreconcilable conflict between Government and the business community. It is in fact one of the paradoxes of our times that business—and especially big business—should be the very instrument which Government has chosen to achieve the national goals. Business is expected to provide the impetus for continued growth and prosperity; it is expected to maintain America's ability to compete in the world's markets; it is expected to provide employment to keep pace with our expanding population.

DIFFERENCES OF OPINION

Obviously, a serious, permanent breach between business and Government is unthinkable. But while both can agree on major objectives, it would be less than realistic to ignore the divergence of opinion on how these objectives can best be reached.

In our democratic process, divergent opinions are subjected to the test of the ballot box. This is why it is essential for us to tell our story; why it is essential to think through carefully the consequences of all our actions; both in long-term effect and in immediate impact.

Our chemical industry is still a growth industry. Today, the opportunities before it are as great as ever before.

And so too are the problems it faces.

But we have had problems before, and have learned to deal with them.

I am convinced that the chemical industry can continue to solve its problems and can continue to grow—provided only that it is given the freedom to act.

Let us all do whatever is necessary to make sure that it continues to enjoy that freedom.

Target Date: January 9, 1963

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. UTT. Mr. Speaker, under unanimous consent to insert my remarks in the Appendix of the RECORD, I wish to include an item entitled "Target Date: January 9, 1963" by Mr. Maurice Ries, an authority on the Committee on Un-American Activities. The article deals with the attack that was supposed to have been made on the opening day of Congress to eliminate this important committee.

The article follows:

TARGET DATE: JANUARY 9, 1963

Let's understand each other. Your Committee on Un-American Activities in the U.S. House of Representatives is an absolutely legal, absolutely constitutional arm of the U.S. Government. If it weren't, would the Congress have kept the committee in existence for a quarter of a century? In August 1963, you see, the Committee on Un-American Activities will be 25 years old.

And experience will make it more effective with every passing year.

Listen to the objectors and you'd never learn that everything the Committee on Un-American Activities does has one basic purpose: legislation. Under orders from the Congress, it works to ascertain what old laws need to be revised, what new laws need to be passed, in order to control those who menace the United States of America—whether by penetration, persuasion, or propaganda; by sabotage, subversion, or spying. Thus its hearings, public and private: so information may be collected under oath. Thus the publication of its findings: so Congress and public may be kept informed.

These activities are not intended to harass but to place facts on the record. If such operations reveal disloyal organizations and expose traitors, why, a nation not only has the right, but the obligation to protect itself.

In its time, the committee has investigated Nazis, Fascists, Japanese imperialists, and Communists. Significantly, when it was looking into totalitarianism of the right, the Committee on Un-American Activities almost never was accused of being unconstitutional or of acting illegally. But when it turned the spotlight on the totalitarian left, a withering fire erupted from every sector of American opinionmaking, from the topmost levels of Government down through education, press and pulpit, to the Communist Party itself.

Identified Communists—which is to say, identified traitors—are leading vicious nationwide onslaughts upon the Committee on Un-American Activities (being careful always to mislabel it "the un-American Committee," and its members "the un-Americans.") One prong of their attack seeks to slash the committee's congressional appropriation. They say this investigative unit of the House of Representatives costs far too much money. Yet in truth the committee's appropriation is one of the tiniest droplets in the roaring cataract of the Federal budget. The funds allocated to the committee have been estimated to cost each man, woman and child in the United States the enormous sum of eighteen one-hundredths of 1 cent per year.

In the Communist-led offensive, January 9, 1963, is being termed the target date for smashing the House Committee on Un-American Activities. On that red-letter day, say Moscow's American puppets, they will flood the Congress with petitions. Heavy with leftwing signatures, these documents will demand that the House abolish the committee.

It would be no more brazen if the Kremlin announced that January 9, 1963, is to see an all-out Soviet atomic attack on the United States.

If nuclear aggression actually were being announced, no citizen in his right mind would do nothing. That's why Americans should be rallying to the defense of the Committee on Un-American Activities—now, before the bombs begin to fall.

It is heartening to know that good citizens already have been rallying. For example, at the last national convention of the American Legion, in October 1962, the representatives of three and a half million members of the Legion voted unanimously to support

the committee. This means that not just this number of American Legionnaires, but three and a half million American families threw in behind the Committee on Un-American Activities.

Such support for America's first line of domestic defense promises hope for America itself. If Americans can save the Committee on Un-American Activities, they have it in their power to save America.

And make no mistake about it—the committee is at the top of the Communists' hate list. The most recent (October 1962) issue of the World Marxist Review, a behind-the-iron-curtain publication which admits it is the global "Theoretical and Information Journal of Communist and Workers' Parties," reaches across an ocean to hack at the House Committee on Un-American Activities. It slashes at the committee, by name, on pages 69, 70, and 72. In fact, on the latter page all Communists, and particularly those in the United States, are given their newest instructions from Moscow: (1) fight anti-communism; (2) make Americans believe that the Communist Party, U.S.A., is not run by the Kremlin; (3) force Washington to adopt a hands-off Cuba attitude; and (4) "struggle against the ultraright and against the reactionary policies of the Kennedy administration, and for restoring the Bill of Rights, abolition of the House Un-American Committee, repeal of the anti-Communist laws, particularly the McCarran Act, lifting the ban on Communists in industry, in the unions, and in other popular organizations, for a ban on the fascist organizations, prohibiting their hate literature, and removing the fascists from the Armed Forces."

Abolition of the Committee on Un-American Activities. Those are orders, comrade—Moscow's orders. And Moscow intends to see that they are obeyed.

Sure, let our foes strip the United States of her internal defenses. Let them leave her naked before the domestic assault. That way, we'll find out whether the internal danger really exists.

Tragically, however, by the time we have found out, it will be too late.

The Five Future Wonders of the World

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. ASPINALL. Mr. Speaker, in the January issue of Reader's Digest is an article by Mr. Don Wharton entitled "The Five Future Wonders of the World." The first "wonder" described is the Snowy Mountains Scheme in Australia, which is of special interest to me because many of the major features of this great undertaking—which will make possible the development of a vast desert into a fertile, productive area of rich farmland and pasture—were designed in my home State of Colorado, in the Denver office of the Bureau of Reclamation.

The Bureau worked on this gigantic project, not as a part of our foreign aid program, but simply under a straight contract at the invitation of the Australian Government and with Australian financing. Bureau experts have been making their technical knowledge and skill available to foreign countries for

many years. The in-service training program of the Bureau's Engineering Center in Denver has foreign alumni all over the world who are now leaders in the resource development of their own countries.

More than a hundred Australian engineers came to Denver to be trained for planning and construction of the Snowy Mountain Scheme, and we have had consultants cooperating down under during the entire job, which is now half completed. These reclamation technicians are still there and probably will remain in Australia until the project is finished in 1975.

We hear a great deal lately about the superior accomplishments of Soviet engineers and of our lagging in scientific fields. I think it is time we take a good look at some of the achievements of our own Government engineers. For example, I recall that several years ago, out of seven projects designated by the American Society of Civil Engineers as "modern civil engineering wonders of the United States," two were built by the Bureau of Reclamation—Hoover Dam and the Columbia Basin Project—both internationally known engineering developments. And today the vision and technical skills of engineers from this same Federal Government agency are being translated into reality in Australia, an achievement that author Don Wharton says "will go a long way toward transforming the face of the 'land with the big thirst.'"

It is highly significant to me that practically all the projects designated by Mr. Wharton as "modern wonders" relate to water conservation. This points up the burgeoning importance of water development not only here in America, but also throughout the world.

We in the West have always been poignantly aware of the necessity for conserving our meager water resources. We have shuddered at the awful waste of letting untold billions of gallons of this precious commodity flow through arid areas, unused, to return to the sea—gallons we so desperately need to irrigate our fields, to bring a water supply and electric power to mountain valleys and broad barren plains so that families may establish homes and communities and industries can move in to build the economy and utilize our great wealth of natural resources.

The face of this continent, as well as that of the Australian Continent, is being changed by great engineering marvels that divert and store water and put it to beneficial use. I am proud of the part our engineers in Denver and elsewhere are doing to realize the long-held dream of converting deserts into gardens.

Mr. Wharton's article follows:

The 1960's may well become the greatest construction decade in history. All around the globe man is at work on mammoth projects, turning engineers' dreams and blueprints into concrete-and-steel wonders that will soon affect the lives of countless millions.

Though experts cannot say of a single undertaking, "This is the most important civil-engineering project now under construction in the free world," there is agreement that

the projects described here¹ can suitably be referred to as "The Five Future Wonders of the World."

Australia—Snowy Mountains Scheme: The Snowy Mountains, highest land mass in Australia, located almost 300 miles from Sydney, are drained by three rivers. Two of them, the Murray and the Murrumbidgee, catch the water on the inland side of the divide and carry it 500 miles westward to convert semidesert country into lush pastures and farms. But never have these two river basins provided enough water to irrigate more than a fraction of the good land.

Meanwhile, the Snowy River gathers even more water on the eastern side of the divide and carries it southeast through a narrow coastal strip which has ample rainfall. By one of the largest individual engineering undertakings ever attempted, this water, pouring in waste into the Tasman Sea, is going to be forced through the main dividing range in long tunnels to provide an additional 650 billion gallons of irrigation water per year for the desert country. As the waters are switched from east to west, they will be rammed into a series of shafts that will drop them through power stations to generate 2,500,000 kilowatts of peakload electric power.

The Snowy Mountains scheme will cost about a billion dollars, and will involve construction of 9 major dams and several smaller ones, 10 power stations, some 100 miles of tunnels and more than 80 miles of aqueducts. Just to open up the deserted area for construction forces has required 300 miles of roads, over 400 miles of tracks, 150 miles of powerlines. A complete radio network was established to link construction sites, and parachute drops were used for regular delivery of supplies to remote camps. The project is so immense that the Australian Government established a special immigration program to attract technicians and skilled workers. Eventually, people from 30 nations were employed.

Last spring, Snowy construction reached the halfway mark—well ahead of schedule. For instance, the huge Eucumbene Dam was built in 2 years instead of the 4 allowed by the contract. It creates Lake Eucumbene, which holds nine times the amount of water in Sydney harbor. From this lake, the heart of the project, runs a 14-mile tunnel, the interior of which is 21 feet in diameter. Much of the work was done 1,800 feet underground. In the process, the world's speed record for comparable tunneling was broken; yet, on breakthrough, the alignment error was only three-eighths of an inch.

One power station is located 1,200 feet underground, in an L-shaped excavation 568 feet long. For a year excavation and construction had to go on simultaneously, with 28,000 cubic yards of concrete moving in as 66,000 cubic yards of rock debris moved out.

Scheduled for completion in 1975, the Snowy scheme will go a long way toward transforming the face of the "land with the big thirst."

United States—Chesapeake Bay Bridge-Tunnel: At the mouth of Chesapeake Bay a crossing 17.6 miles long is scheduled to open early in 1964. It is being built in what amounts to open ocean, where there are high waves, tricky currents, huge tides and occasional hurricanes.

Never before has man spanned such a long stretch of exposed navigable ocean water. How to do it? To tunnel the whole distance was too expensive and impractical. To use

¹ Selected from 107 projects in 26 countries, with the evaluation and counsel of the American Society of Civil Engineers after its consultation with national engineering societies in other countries. Military construction is excluded.

high bridges over the ship channels was not advisable—the Navy feared that a bomb-wrecked bridge span would block the channel to Hampton Roads, which contains the world's largest concentration of naval installations. So the answer was a novel combination of tunnels beneath the main channels, medium-height bridges over minor channels, and low-level trestles over the rest. Cost: approximately \$140 million.

The crossing starts from the Norfolk side as a 3½-mile trestle carrying the highway 28 feet above average high water. Then it encounters an island, dips into a mile-long tunnel 98 feet below average low water, climbs out onto another island, becomes a trestle again for 3¼ more miles. It crosses a third island, dips into another mile-long tunnel, climbs out onto a fourth island. Then it runs along 4½ miles of trestle, rises into a steel bridge clearing average high water by 75 feet, drops down onto 2 more miles of trestle and causeway, climbs up into another bridge with 40 feet of clearance, then glides down onto a short trestle to the shore of the Delmarva (Delaware-Maryland-Virginia) Peninsula.

Wasn't it fortunate that those four islands were there to anchor the tunnel-ends and to link them with the bridge sections? They weren't—they are completely man-made. Each is constructed in water 30 to 40 feet deep, rises another 30 feet above the surface, covers some 8 acres at the top, is made of 1½ million tons of sand and 300,000 tons of rock.

Many tunnels are bored, but the 2 for this crossing are being built out of sections prefabricated on shore—a series of 37 huge double-walled steel tubes, each nearly as long as a football field and as wide as a street. Each tube shell is constructed on a shipway in Texas, launched like a ship, and towed 1,700 miles to Norfolk, Va., where it is outfitted. Then it is taken to the tunnel site, where a deep trench has been dredged in the bay bottom. As concrete from a floating mix plant is pumped between each tube's inner and outer shells, the tube gently sinks to the bottom. Once all the tubes are in and connected, crews with torches will cut successively through the watertight bulkheads at the ends—and when the gaps between the sections are filled in and a ceiling is added, there will be a mile-long tunnel ready for finishing touches of tile walls and fluorescent lighting.

The Netherlands—delta plan: In February 1953 the worst storm since 1421 struck the Netherlands, tearing huge breaches in the dikes, inundating 1 out of every 22 acres of the country's land area, destroying or damaging 47,300 houses, farms, and schools, and drowning nearly 1,800 persons. In 1952 the Dutch had begun to draw up a plan for the prevention of further salting of fertile land and for reclamation of land by the closing of some river estuaries. After the 1953 storm the matter became much more urgent; recurrence of such a disaster had to be prevented. The result is the delta plan, the most ambitious, costly, and comprehensive program to hold back the sea ever undertaken anywhere. Work on it began in 1955, will continue at least through 1978, entailing expenditures estimated at more than \$750 million.

The target is the southwestern part of the Netherlands, where five arms of the sea (four wide and one narrow) reach far inland. Through them roll heavy seas and high, powerful tides. The delta plan will close four of these sea arms and one river with massive dams at their funnellike mouths, and three of the closures will be further reinforced by secondary dams deeper inland. One sea arm and one canal will be left open so ships will still be able to reach Antwerp and Rotterdam.

One dam has been completed, across the Veersche Gat; another is well underway, a

third just started. Work on the fourth, closing the Eastern Scheldt, will begin in 1965. All are being built facing the open sea in depths and against tidal currents greater than ever before dealt with.

The Veersche Gat dam is almost 2 miles long, deliberately located right where the arm joins the North Sea. It could have been built farther back, but the Dutch engineers wanted to get the most experience possible in preparation for tougher jobs on other sea arms. For example, the tide used to jam 20 billion gallons of water through the Veersche Gat before the dam was built. But at the Eastern Scheldt engineers will be confronting a tide of 290 billion gallons. The dam there must be 5 miles long.

The most intriguing dam is the one being built across the Haringvliet, a 13-year job now more than half done. The three other dams are solid, to create large inland lakes. But the Haringvliet must carry water from the Maas and Rhine Rivers to the sea, plus a huge discharge of winter ice. So the three-mile dam includes two-thirds of a mile of concrete-and-steel sluiceways: two rows of 17 steel gates, each weighing 425 tons, each 185 feet wide. Hydraulic machinery will open and close the flaps.

In addition to providing flood protection, the delta plan, by shortening the coastline 500 miles, will reduce seawall maintenance. And by keeping the sea water out of the river estuaries it will check the increasing soil salinity, which is now impairing agricultural production in the southeastern Netherlands, and bring better distribution and control of badly needed fresh river water.

United States—New York Narrows Bridge: Now being thrown across the Narrows at the entrance to New York Harbor, this bridge will have the world's longest main suspension span—4,260 feet from tower to tower. That means that more than four-fifths of a mile of steel will hang in the sky 228 feet above the ship channel between Brooklyn and Staten Island.

Engineering News-Record has observed that "everything about the Narrows Bridge is big, bigger, or biggest." The double-decked central span, containing 12 traffic lanes, will be the heaviest ever built. The four steel cables must hold up a suspended deadweight of 84,000 tons, plus their own weight of 39,000 tons, plus a potential live weight, from traffic, of over 10,000 more tons. This requires huge anchorages at the two ends, solid monoliths of concrete and embedded steel faced with granite above water, as high as an 18-story building, shaped and weighted so that the weight of the bridge will not tip them over or pull them bodily into the water. One block weighs 410,000 tons—that's heavier than the Empire State Building. Each of the two bridge towers, rising 600 feet above average high water, with foundations reaching down 105 feet on one, 170 feet on the other, has two legs—each leg is big enough to squeeze in the Washington Monument with room left over for most of the Statue of Liberty.

One startling aspect of all this immensity: Because of the curvature of the earth, the towers, though perfectly perpendicular to the earth's surface, are 5 inches farther apart at their summits than at their bases.

This bridge is destined to become a spectacular landmark. A ship's captain informed me that when one of the towers had been built up to only half its full height he had sighted it from 20 miles at sea. Everyone coming to New York by ocean liner will pass under the span; plane passengers will spot it easily; motorists will drive out of their way just to cross it. When completed in 1965, this engineering marvel will be the world's costliest bridge—\$325 million.

France-Italy—Mont Blanc Tunnel: For nearly 4 years French and Italian teams have been working on the world's longest vehicu-

lar tunnel—the Mont Blanc Tunnel under the Alps. Motorists have long been able to cross the Alps easily in summer. But through the snowy winter, traffic bound for Italy from France, Britain, the low countries, and much of Switzerland has run into a formidable roadblock. Motorists had either to ship their autos on flatcars through the Alpine rail tunnels, or to detour eastward to the Brenner Pass, or to skirt the Alps by heading south to the French Riviera. By mid-1964, autos, trucks, and buses will be able to roll through this new 7¼-mile shortcut whose midpoint will be almost 6,000 feet below ground surface. The tunnel will provide the first straight-line all-year route from Paris to Rome, speeding the trip in summer, and cutting the distance 140 miles in winter. It will put Geneva and Turin only 172 miles apart, as against today's 596 in winter.

The more-than-\$40-million tunnel is being financed mainly by France and Italy, with extra money from both the canton and city of Geneva. It will be operated as a toll road by the construction companies that drilled shafts from the two ends that met last August 14. Both teams ran into difficulties, which delayed the opening a year. One blast broke open a glacier-fed stream, which spurted icy water at the rate of more than 11,000 gallons a minute. The French were beset with 29 serious accidents, with 5 fatalities. The Italians, slowed by troublesome rock, also lost five men in the digging operation. Then, one night last spring, a huge avalanche swept down on the workers' quarters, killing three more men.

The Mont Blanc Tunnel (it does not go under Mont Blanc itself, but slightly to the northeast under two peaks of the Mont Blanc massif) will carry a two-lane highway with narrow walkways on either side. Every 1,000 feet there will be an emergency bay for repairs—long enough for large truck-and-trailer units. The tunnel is expected to handle 40,000 trucks and buses and some 400,000 cars a year, all covering in 15 minutes what now sometimes takes as long as a day.

America Nears the Waterfall

EXTENSION OF REMARKS

OF

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. HALL. Mr. Speaker, in recent years we have heard many speakers telling us where the United States is "going in a handbasket," but now for the first time a talented writer tells us where we are going on a steamboat. I commend to the attention of this House the log-book of this frighteningly delightful cruise as kept by Jenkin Lloyd Jones in the Washington Evening Star of January 16, 1963:

GOING NOW AND PAYING LATER

(By Jenkin Lloyd Jones)

The American people have taken first-class passage on a ship bound from Buffalo to the "Big Rock Candy Mountains" via the Niagara River. So far there have been cocktails and canapes and caviar for just about everybody.

You get a lot of funny people on a cruise, of course. Occasionally, some loudmouth has started running around the deck waving a chart, calling attention to the gradually increasing current, and pointing excitedly to that attractive cloud of mist up ahead. But the rest of the passengers have

thrown these alarmists overboard. Anyone with a lick of sense knows that the faster the current the quicker we'll get to where we're going.

Not only is the ship traveling faster than we thought it would, but it is lighter, too. It used to be loaded down with a lot of gold, but most of that is gone. There was the cost of protecting our friends abroad who would rather not go to the expense of protecting themselves. And there was foreign aid.

And then some of our newly prosperous pals from Europe came aboard and hauled away the gold on which they had a claim. It was really funny to see them wrestling the heavy ingots ashore when we would have been glad to give them our paper dollars as surety for our debts to them. You would almost think they doubted the future value of our dollars.

We've got a pretty quarrelsome crowd aboard. Every few minutes the propellers quit turning or the water doesn't run in the faucets or the deckhands throw down their swabs and paint brushes. The crew wants easier work and more money. The passengers want more service, bigger staterooms, fancier meals and cheaper tickets. And the captain says everybody is right.

The U.S. Government will end this fiscal year 1963 next June 30 with a deficit of about \$8 billion. The President's economic advisers had, in contrast, forecast a surplus of about half a billion for the same period. Never has the arithmetic been so far off.

Yet the President is pushing a sweeping program of tax cuts (and he couldn't be right) that the tax burden is now so great that it is slowing down the economy's expansion. In other words, taxes have removed so much of the incentive to take risks and earn profits that we are not producing as well as we might or creating jobs or providing new opportunities for our young people. Amen.

But, at the same time, there is no inclination to cut Government spending. For fiscal 1964 it looks as though we're going to have a \$100 billion budget. This will be greater than in the peak years of World War II. The national debt limit, now at \$308 billion, will have to be raised this spring as usual. If we honestly added in the unfunded actuarial liabilities for social security, the figure would be about \$65 billion higher.

Our trouble is that we can't tell the difference between our needs and our wants any more. That devilish word "need." We need low-cost housing. We need to be first on the moon. We need interstate highways. We need medicare. We need more aid for education. These are all desirable things. But change each "need" to "want" and you get closer to the truth. A need is a necessity. A want is a desire. We are being drowned in our druthers.

And, simultaneously, we are becoming rebellious about paying the cost of what we have. Of course, we haven't been quite paying the cost. The steady progression of the national debt is eloquent testimony to our refusal to meet our bills. But, as the President correctly asserts, even though we have taxed ourselves too little to meet our expenditures we have taxed ourselves too much. The fires of enterprise are getting smothered and the steam gage may soon be dropping.

What is the way out? You would never guess—unless you've been reading the papers. Government officials, business brain-trusters, union leaders have discovered a marvelous escape hatch. You don't have to cut spending. What you do is cut taxes and then the rapid growth in the gross national product will so expand the tax base that the deficit will be overcome and we'll be put ashore on the happy isles.

This is probably the finest piece of economic bluebird twittering since F.D.R. waved

his cigaret holder airily and dismissed the national debt with the remark, "After all, we only owe it to ourselves."

In the meantime, the able and busy people of Europe's Common Market, whose war-wrecked industrial plant was largely rebuilt by U.S. funds and who have cheerfully shucked off on American taxpayers most of the cost of their common defense, are now beginning to whip the pants off us in many fields of competition. Their steelmakers blow oxygen into their converters while we still blow air. Their featherbedding problems are insignificant. Their currencies grow harder while ours grow softer.

But, so far, we've had a pretty good ride down the Niagara River. In spite of the squabbling and grabbing the guzzling and gobbling have been good.

And there was that wonderful sign over the ticket office back on the dock:

"Go now, pay later."

"Flights of Angels Sing Thee to Thy Rest"

EXTENSION OF REMARKS

OF

HON. ABNER W. SIBAL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. SIBAL. Mr. Speaker, on the day after Christmas, the American theater lost one of its greatest and most productive figures when Lawrence Langner died at the age of 72.

Variety notes that:

Langner was best known as a cofounder, codirector and, in recent years, coadministrator of the Theatre Guild, and in that capacity he was influential in the production of early works of George Bernard Shaw, Eugene O'Neill, Robert E. Sherwood, Sidney Howard, Maxwell Anderson, S. N. Behrman, William Saroyan and William Inge. He was the motivating energizing force of the Guild. In a practical sense he was the Guild.

It is with deep regret that I inform this House of his passing. In tribute to him, I offer the following editorial from the Westport Town Crier, which expresses far better than I can the immense sense of loss that is felt by the community in which he lived:

"FLIGHTS OF ANGELS SING THEE TO THY REST"

When one wakes up to his morning newspaper to find that a great and distinguished national figure in one of the useful fields of human endeavor has died, there is an understandable feeling of regret and loss. But when a neighbor dies—a neighbor whom you know as a dedicated, talented, and sensitive human being—there is a sense of personal loss that cannot but outweigh the distant regrets at a lost talent.

It's that way with Lawrence Langner.

The obituaries have recorded that Mr. Langner was the architect of one of the most distinguished theatrical enterprises in our generation, that he was more than a passing playwright, that he was responsible for discovering and promoting literally dozens of the brightest lights of the theater world, and, on top of it all, was a highly successful and authoritative lawyer. But within this cold recital, there was a sense of dedication and a variety of drive that are rarely come upon.

Mr. Langner's tastes in the theater were catholic. All he demanded of a theatrical performance was that it be a good one. He relished good comedy as much as he did good

Shakespeare. He saw nothing inconsistent between the most serious dramatic work of Eugene O'Neill—one of the Theatre Guild playwrights—and the liting gaiety of Rodgers and Hammerstein's "Oklahoma." He was no theatrical "nice Nellie," but his taste was impeccable.

Lawrence Langner was a man of strong feelings about his beloved theater. He believed, of all things, that actors should be able to act, not just to imagine themselves a pomegranate or a pumpkin. And even more startling, he felt that they should be able to enunciate their lines with the clarity—if not the exaggerated emphasis—of an earlier day. He had little sympathy for the faddish avant garde in the theater; he could be indignant about the obscenities of an Albee.

His aversion to the self-conscious and the precious in the theater was no deeper than his distaste for the deliberately tinselly and overcommercial. During his last years he took a dimmer and dimmer view of the state of the Broadway theater, asserting that technical costs were far out of hand and that a sheeplike public would support only the big brassy musicals and the most pat of sex comedies. He admitted to exceptions to this rule, but could prove with dollars and cents that the critical success could seldom attract a large enough audience to pay its costs.

His enthusiasm for an American Shakespeare Theater, and recently for an American theater of comedy, was largely based on his conviction that this country was not offering enough opportunity for a new crop of actors to learn their trade—and that both the stylism of Shakespeare and the subtleties of comic playing might well be lost in a shuffle of formless plays and playing.

Our community has known Mr. Langner for many years. We have been favored by having his Westport County Playhouse here, which for so long has represented the standard in summer playhouses. While he and his wife, the talented Armina Marshall, had retired from direct participation in the playhouse for the last few years, there was never an opening night that did not see them there to keep an eye on things. Mr. Langner also tried to bring his Shakespeare Theater to our community, and moved it elsewhere only when he was deeply hurt by stupid and unjustified criticism on the part of a few.

Mr. Langner had not been well during the last several years, but he made few concessions to his infirmities. He found time not only to direct the guild, to watch over the playhouse, and to keep the Shakespeare Theater moving ahead; in addition, he organized the enormously successful international tour, designed under State Department auspices, to show the rest of the world some of the finest in American drama and performance. And just so there were no idle moments, he was actively advancing his dream for a year-round theater far off Broadway—one of the ways he saw through which the theater might escape the overpowering mechanics that is frustrating its originality and vigor in midtown Manhattan.

Mr. Langner is one more of those immigrant Americans (he came from New South Wales) to whom this country owes so much and who have done so much to shape its developing culture. Anyone who enjoys the theater, and recognizes it as an integral part of the Nation's life and culture, must be grateful to Mr. Langner both for advancing its cause and for working to maintain a standard of taste and excellence that has so often been ignored both by tyros and get-rich-quick invaders. We will all miss him. But we can take some satisfaction in the conviction that the fine things that he built will continue to flourish as a living memorial to his contributions.

The Just and the Unjust

EXTENSION OF REMARKS

OF

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. BETTS. Mr. Speaker, much has been said and written about the new regulations of the Internal Revenue Service with respect to entertainment expense allowances. But, one of the finest treatments of the subject is contained in the following editorial from the Wall Street Journal of January 8, 1963. It points out with statements and cases some of the absurd consequences of these regulations.

Some administration officials refer to these new rules as the end of the expense account era. For the vast majority of American taxpayers who honestly report their tax liabilities, the allegation of expense account living is unwarranted. But these honest taxpayers will find the new expense account regulations to be unduly burdensome on them. This, of course, constitutes a significant change of an accepted way of doing business, and for that reason, I feel that every comment on the subject should be given wide publicity. Every businessman, and especially the small businessman, should have the opportunity to learn the full impact of these rules. At the same time it might be appropriate for Congress to review this portion of the tax law passed at the last session since these rules go beyond the original congressional intent.

The editorial follows:

THE JUST AND THE UNJUST

We guess we don't run in the right social circles.

For years we have been reading those books about wild living in the suburbs and wondering somewhat plaintively why the excitement seems to pass us by. In years of suburban living the wildest shock to the even tenor of our domesticity was the day the dog drank up the cocktails and bit the mayor. It was weeks before we were forgiven.

For almost as long, we've been reading about all this notorious high living on the expense account, boats and all that, and groaning over what we seem to have missed. After a quarter century in that den of iniquity, Wall Street, no one has tempted our journalistic virtue with even so much as a night at a hunting lodge, much less a sea-going voyage. Where, indeed, are all those expense-account yachts?

True, we aren't without sin, as defined in the new dogma of the Internal Revenue Service. We suffer business luncheons dreadfully often and when we turn in the voucher we don't deduct the \$1.25 we would have spent anyway for the blue plate special. A man is entitled to some recompense for punishment in line of duty.

When business takes us to Peoria or Dubuque, as it does all too often, we take an apertif before dinner, choose the steak over the chicken-a-la-king and sometimes splurge on the movies, charging the lot to the stockholders. If it weren't for their business we wouldn't be there at all, and frankly we have better steaks at home.

Moreover, the children being more or less at the age of discretion, we have lately taken

our wife along on some trips. We haven't persuaded the curmudgeonly auditor to okay her expenses, but not long ago we drove to Washington on legitimate business (if talking to a Senator is legitimate) and our wife rode along in the car. Even that baleful auditor didn't ask us to reimburse the company for the equivalent price of her bus ticket.

Give or take a few details, this is not unlike the situation of thousands of businessmen in a country where men at work are ceaselessly traveling to and fro. The door-to-door salesman and the flying corporate executive are brothers under the skin; they are working also when they pass the time of day with the lady at the door or the business acquaintance across the luncheon table. Sometimes the smartest business is not to talk business at all but to be friendly, interested; to listen and to learn. Only ignorant and petty minds could imagine that the free lunch is all beer and skittles.

But now it turns out that all this is under the suspicion of undermining the public morality and the solvency of the U.S. Treasury. In any event the Government is going to treat all the people as crooks until proven otherwise.

This suspicion of malefaction flows from every word of the new regulations on record-keeping, pedantic in language and picaresque in detail, drawn up by the Internal Revenue Service.

Hereafter you must account to the Government not only for your yacht but the beer you buy a business acquaintance. The documents for any entertainment, no matter how trivial, must include the amount, date, place by name and address, type (martini or ham sandwich), explanation of the benefit to be returned for this bounty, the name of the recipient, and sufficient documentation to explain your extravagance to the satisfaction of any revenue agent who subsequently examines your tax report.

And if perchance on a trip you spend more than \$25 in any day you must itemize everything else too—the day you left home, day you got back, every telephone call, meal, cup of coffee, taxicab and bus fare. If you want your books to balance, you'd better even keep track of the postage stamps for the letters to the home office.

The sheer absurdity of this avalanche of paperwork is only the beginning. The metaphysics of Mr. Mortimer Caplin's bureaucracy have now gone off to mull such esoteric questions as: What, precisely, constitutes a "business meal"? What is the allowable difference in cost between a lunch for a life insurance prospect (\$5,000 policy) and the prospect for an electric dynamo (\$5 million sale)? Can you also buy lunch for the prospect's wife, or do you suggest she go eat in the drugstore? What if your own wife is along too—do you leave her back in the hotel room to munch a hamburger and watch television?

As ridiculous as these questions sound, they are precisely the sort of thing that must now be decided upon at the highest levels, and Mr. Caplin confesses—quite understandably, we think—that it will be some weeks before we can expect any official enlightenment. It has never been easy to decide how many angels can dance on the head of a pin.

Yet it is neither the absurdity of the paperwork nor the ridiculousness of the metaphysics that is the true evil.

Here is a situation in which the Government is, no doubt about it, confronted with a problem. Some people do hide yachts in expense accounts, just as some do hide misbehavior in the suburbs, and the Government has power to deal with the real tax cheaters. But the vast majority of the people everywhere lead quiet, placid, and upright lives, and the vast majority of those

whose taxes support the Government give an honest accounting of their affairs.

Yet here we use the majesty of the law to treat every taxpayer as a potential cheater, because pinhead minds can think of no other way; the integrity of all must be insulted, and the conduct of their affairs made insufferable, because of the sins of the few.

Now completely apart from this question of expense accounts, this is a philosophy of Government which is evil in itself. We once had an example of this when, to stop a few people from drinking too much, we adopted prohibition which treated all men as potential alcoholics. Surely the results have not left our memory.

The results of this noble experiment can also be foreseen. These new rules will give trouble only to honest men. The real operator—the man who is really out to cheat on his taxes—can drive a truck through them.

The smart lawyers are already figuring out the perfectly legal loopholes; beyond that, those with larceny in their hearts will not be disturbed, because they will show records, receipts, and paper accounts by the carload. As sure as the sun rises tomorrow, today's rules will have to be followed tomorrow by new rules upon new rules tightening the rules.

And while all this is going on, the honest man—the man who takes a business trip to do an honest job for his company and with no desire to cheat either his company or his country—that man will see himself not merely laden with burdensome paperwork but with the fear that everything he does is under suspicion.

Because he honestly tries to keep honest records, all the records will be there, and he can be called up a year later, 2 years later, and find that what he did in good faith is adjudged wrong by some petty bureaucrat imbued with the idea that any expense account must conceal some wickedness. The smart operator will have his lawyers; the little taxpayer will be helpless against the insolence of office.

We submit that to order the public affairs in this manner is an affront to the public morality, just as it would be for the State to require of every citizen a detailed accounting of his home coming and going, because some men cheat. That Government governs illy which can find no other way to deal with malefactors than to maltreat all of its citizens, the just and the unjust alike.

A Moratorium on New Spending

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. LIPSCOMB. Mr. Speaker, the need for sound fiscal policies in the Federal Government has always been a matter of prime importance to the welfare of the Nation.

During these times of mounting costs and in view of the proposed tax reduction this problem has been magnified even more.

In an editorial on January 6, 1963, the Los Angeles Times discusses this matter and comments favorably on a recommendation by our colleague, the gentleman from Wisconsin, Representative JOHN BYRNES, calling for a moratorium

on new spending projects that do not deal with actual emergencies.

I believe the Times editorial will be of interest to many Members of Congress:

A MORATORIUM ON NEW SPENDING

The skirmishing in the battle over Federal tax reductions sought by President Kennedy has produced a sound suggestion from Representative JOHN BYRNES, of Wisconsin.

BYRNES, ranking Republican on the Ways and Means Committee, says that an administration moratorium on all new spending projects "not designed to deal with actual emergencies" would advance the cause of tax reduction.

It is pretty generally agreed that a reduction in Federal taxes is desirable. Some pressure groups are hooahing for limiting the tax cut to personal incomes in the lower brackets, but such demagoguery is to be expected. This would not accomplish the stimulus to industry on which the hoped-for reduction in unemployment depends.

Any tax reduction proposal should include substantial corporate and personal income tax cuts in all brackets.

However, there is opposition among practical men, truly concerned with the national welfare, to any tax reduction without some balancing reduction in Federal spending.

They fear, with reason, that the reduction would cause a budget imbalance estimated at between \$12 billion and \$20 billion. Such a deficit, they argue, would adversely affect our shaky balance-of-payments position in world trade as well as the national credit. Our Fort Knox gold reserve could evaporate if the world lost confidence in our fiscal policies.

Mr. Kennedy's in group advisers are all for bulling ahead with the tax cut, without much thought to reduction in the spending program. It is fairly obvious that the prudent bloc in Congress will resist.

However, Representative BYRNES' plan for a nonemergency spending moratorium offers some hope that the national benefits of a broad tax cut can be salvaged.

It is probable, as he says, that it would be impractical to demand a dollar-for-dollar matching of reduced spending and reduced taxes. But it is practical and logical to suggest that nonemergency programs for siphoning off Treasury funds be abandoned until the tax reduction program has a chance to stimulate industry and increase revenues. This would keep the budget deficit within reason.

If the administration can see its way clear to forgo some of its medicare and other New Frontier proposals, which are largely 1964 vote bait anyway, there is a chance for a sound tax reduction program that will benefit the country.

Going Now and Paying Later

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. YOUNGER. Mr. Speaker, as Congress considers the budget for fiscal 1964 which will contain an apparent deficit in excess of \$10 billion, the following article by Jenkin Lloyd Jones appearing in the

Washington Evening Star of January 16, 1963, seems to me to be very pertinent:

GOING NOW AND PAYING LATER—GOVERNMENT SPENDERS CANNOT TELL DIFFERENCE BETWEEN NEEDS AND WANTS

(By Jenkin Lloyd Jones)

The American people have taken first-class passage on a ship bound from Buffalo to the Big Rock Candy Mountains via the Niagara River. So far there have been cocktails and canapes and caviar for just about everybody.

You get a lot of funny people on a cruise, of course. Occasionally, some loudmouth has started running around the deck waving a chart, calling attention to the gradually increasing current, and pointing excitedly to that attractive cloud of mist up ahead. But the rest of the passengers have thrown these alarmists overboard. Anyone with a lick of sense knows that the faster the current the quicker we'll get to where we're going.

Not only is the ship traveling faster than we thought it would, but it is lighter, too. It used to be loaded down with a lot of gold, but most of that is gone. There was the cost of protecting our friends abroad who would rather not go to the expense of protecting themselves. And there was foreign aid.

And then some of our newly prosperous pals from Europe came aboard and hauled away the gold on which they had a claim. It was really funny to see them wrestling the heavy ingots ashore when we would have been glad to give them our paper dollars as surety for our debts to them. You would almost think they doubted the future value of our dollars.

We've got a pretty quarrelsome crowd aboard. Every few minutes the propellers quit turning or the water doesn't run in the faucets or the deckhands throw down their swabs and paint brushes. The crew wants easier work and more money. The passengers want more service, bigger staterooms, fancier meals and cheaper tickets. And the captain says everybody is right.

The U.S. Government will end this fiscal year 1963 next June 30 with a deficit of about \$8 billion. The President's economic advisers had, in contrast, forecast a surplus of about half a billion for the same period. Never has the arithmetic been so far off.

Yet the President is pushing a sweeping program of tax cuts. He makes the point (and he couldn't be right) that the tax burden is now so great that it is slowing down the economy's expansion. In other words, taxes have removed so much of the incentive to take risks and earn profits that we are not producing as well as we might or creating jobs or providing new opportunities for our young people. Amen.

But, at the same time, there is no inclination to cut Government spending. For fiscal 1964 it looks as though we're going to have a \$100 billion budget. This will be greater than in the peak years of World War II. The national debt limit, now at \$308 billion, will have to be raised this spring as usual. If we honestly added in the unfunded actuarial liabilities for social security, the figure would be about \$65 billion higher.

Our trouble is that we can't tell the difference between our needs and our wants any more. That devilish word "need." We need low cost housing. We need to be first on the moon. We need interstate highways. We need medicare. We need more aid for education. These are all desirable things. But change each "need" to "want" and you get closer to the truth. A need is a necessity. A want is a desire. We are being drowned in our druthers.

And, simultaneously, we are becoming rebellious about paying the cost of what we have. Of course, we haven't been quite pay-

ing the cost. The steady progression of the national debt is eloquent testimony to our refusal to meet our bills. But, as the President correctly asserts, even though we have taxed ourselves too little to meet our expenditures we have taxed ourselves too much. The fires of enterprise are getting smothered and the steam gage may soon be dropping.

What is the way out? You'd never guess—unless you've been reading the papers. Government officials, business braintrusts, union leaders have discovered a marvelous escape hatch. You don't have to cut spending. What you do is cut taxes and then the rapid growth in the gross national product will so expand the tax base that the deficit will be overcome and we'll be put ashore on the Happy Isles.

This is probably the finest piece of economic bluebird twittering since F.D.R. waved his cigaret-holder airily and dismissed the national debt with the remark, "After all, we only owe it to ourselves."

In the meantime, the able and busy people of Europe's Common Market, whose war-wrecked industrial plant was largely rebuilt by U.S. funds and who have cheerfully shucked off on American taxpayers most of the cost of their common defense, are now beginning to whip the pants off us in many fields of competition. Their steelmakers blow oxygen into their converters while we still blow air. Their featherbedding problems are insignificant. Their currencies grow harder while ours grows softer.

But, so far, we've had a pretty good ride down the Niagara River. In spite of the squabbling and grabbing the guzzling and gobbling have been good.

And there was that wonderful sign over the ticket office back on the dock: "Go now, pay later."

China and India

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. FLOOD. Mr. Speaker, over many months there have been millions of words published concerning relations between China and India but very little by writers whose qualifications include both study and long residence in the area discussed. One notable exception was the late George Sokolsky, whose lifetime of study and stay of many years in the Far East enabled him to make notable contributions in our understanding of the Orient, especially China.

In his article on "China and India," published in the Washington Post of November 19, 1962, there is a most perceptive treatment emphasizing that the history of China is the bloody story of periodic losses of territory and subsequent irredentism.

The article follows:

CHINA AND INDIA

(By George E. Sokolsky)

Before it is possible to understand the war between Red China and India, it is necessary to realize that Nationalist China on Formosa remains silent.

Prior to 1925, the flag of China consisted of five bars: one for each of the component people of the country—the Chinese, the Manchus, the Mongols, the Tibetans, and the Moslems. More realistically than either the later Kuomintang or the Communists, the early revolutionists particularly recognized the racial complexity of China.

In a book I wrote in 1932, "The Tinder Box of Asia," is a map of China which includes parts of India but also areas that are now in Russia. I then wrote:

It must be noted that China does not politically recognize the loss of Mongolia and Tibet or the lessening of its authority in Sinkiang, Turkestan, and were China today sufficiently powerful to regain these territories by warfare, she would fight for them. But in every moment of dynastic weakness in Chinese history, the periphery of the empire was reduced, large areas becoming either wholly independent or colonies of other countries. China's long and bloody history is a recital of just such losses of territory and subsequent irredentism.

This was written in 1932; the irredentism is taking place today. That is normal to every Chinese, whether Nationalist or Communist. Nehru surely knew all about that, because he can read maps as well as anyone. It is possible that as early as the Bandung Conference (1955) Krishna Menon realized that sooner or later, India would have to fight for a boundary between China and India which the British delineated and protected. Without the British to do the job, India had to depend upon the United Nations or very clever diplomacy. The Communists did not give him enough time.

The Chinese never forget Chinese cultural unity even when they fight each other. Sun Yat-sen's revolution was originally designed to drive the Manchus from China. They were then ruling the country. The Ming Dynasty, which had been defeated by the Manchus, had attempted to erect a vestigial government on Formosa. This failed.

There was no successor Chinese dynasty, so a Republic was established.

The Republic did not work out because it could not establish a center of power. What is not recalled these days is that the early revolutionary movement of Sun Yat-sen was profoundly influenced by the Black Dragon Society of Japan. Neither India nor Indian philosophy played any role in the development of the revolutionary party, called the Tungmenhui.

The last Ming Emperor was conquered by the Manchus in 1644; the Manchus were overthrown in 1912. To the Chinese, this is just a moment in history and China can always wait.

This must be understood if one is to realize that China is now going back to about 1795, to the Chienlung Line, which not only must take China to the Bay of Bengal, but includes, in Turkestan, territory now Russian and the maritime provinces of Siberia. And China will seek to take it all, sooner or later.

The races in eastern Siberia are numerous. What in the West are called Tatars at one time or another were among the peoples of China. These races are not Russian by any scientific measurement.

Khrushchev apparently cannot defeat the principle of location which is so dear to the Oriental conception of life—the family, the clan, the village are realities; Peking and Moscow are far away. To the latter one offers obedience until it becomes unnecessary. The West seeks complicated explanations; in the East, it is simple.

National Accident Prevention Center

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. ROBERTS of Alabama. Mr. Speaker, when Congress reconvened last week I introduced H.R. 133, a bill to amend title III of the Public Health Service Act to establish a National Accident Prevention Center.

The Health and Safety Subcommittee of the House Interstate and Foreign Commerce Committee, of which I have the honor to be chairman, held hearings on this legislation last year and I was very pleased to find that it received favorable comments, not only from some executive departments, but from the various organizations that are directly concerned with matters of accident prevention.

Having received so much encouragement, I again introduced this bill on the opening day of this Congress and I am hopeful that we will be able to report it to the floor of the House at an early date and that it will have the support of this body at that time.

Mr. Speaker, to indicate some of the favorable reaction to this legislation I include in the Appendix of the Record a resolution adopted by the National Association of Municipal Judges at their convention in Miami, Fla., during November 25 and December 1, 1962:

Whereas automobile accidents continue to inflict untold tragedy in rising numbers on our streets and highways; and

Whereas expanded research into human factors and accident prevention motivation of drivers would immeasurably aid further understanding of the driver, driving characteristics and accident causation, and potentially prompt positive safety and licensing approaches and provide direction to those having responsibility in these areas: Now, therefore, be it

Resolved, That the National Association of Municipal Judges, in convention assembled at Miami Beach, Fla., representing judges from 45 States and every Canadian province, approve in principle the aims, objectives, and purposes of the establishment of an Accident Prevention Research Center, national in scope, and under the Accident Prevention Division of the U.S. Public Health Service, Department of Health, Education, and Welfare, and construction of facilities, necessary staffing and budgeting incidental thereto.

The Just and the Unjust

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Rec-

ORD, I include the following editorial from the Wall Street Journal of January 8, 1963:

THE JUST AND THE UNJUST

We guess we don't run in the right social circles.

For years we have been reading those books about wild living in the suburbs and wondering somewhat plaintively why the excitement seems to pass us by. In years of suburban living the wildest shock to the even tenor of our domesticity was the day the dog drank up the cocktails and bit the mayor. It was weeks before we were forgiven.

For almost as long, we've been reading about all this notorious high-living on the expense account, boats and all that, and groaning over what we seem to have missed. After a quarter century in that den of inequity, Wall Street, no one has tempted our journalistic virtue with even so much as a night at a hunting lodge, much less a seagoing voyage. Where, indeed, are all those expense-account yachts?

True, we aren't without sin, as defined in the new dogma of the Internal Revenue Service. We suffer business luncheons dreadfully often and when we turn in the voucher we don't deduct the \$1.25 we would have spent anyway for the Blue Plate special. A man is entitled to some recompense for punishment in line of duty.

When business takes us to Peoria or Dubuque, as it does all too often, we take an aperitif before dinner, choose the steak over the chicken-a-la-king and sometimes splurge on the movies, charging the lot to the stockholders. If it weren't for their business we wouldn't be there at all, and frankly we have better steaks at home.

Moreover, the children being more or less at the age of discretion, we have lately taken our wife along on some trips. We haven't persuaded the curmudgeonly auditor to okay her expenses, but not long ago we drove to Washington on legitimate business (if talking to a Senator is legitimate) and our wife rode along in the car. Even that baleful auditor didn't ask us to reimburse the company for the equivalent price of her bus ticket.

Give or take a few details, this is not unlike the situation of thousands of businessmen in a country where men at work are ceaselessly traveling to and fro. The door-to-door salesman and the flying corporate executive are brothers under the skin; they are working also when they pass the time of day with the lady at the door or the business acquaintance across the luncheon table. Sometimes the smartest business is not to talk business at all but to be friendly, interested; to listen and to learn. Only ignorant and petty minds could imagine that the free lunch is all beer and skittles.

But now it turns out that all this is under the suspicion of undermining the public morality and the solvency of the U.S. Treasury. In any event the Government is going to treat all the people as crooks until proven otherwise.

This suspicion of malefaction flows from every word of the new regulations on record-keeping, pedantic in language and picaresque in detail, drawn up by the Internal Revenue Service.

Hereafter you must account to the Government not only for your yacht but the beer you buy a business acquaintance. The documents for any entertainment, no matter how trivial, must include the amount, date, place by name, and address, type (martini or ham sandwich?), explanation of the benefit to be returned for this bounty, the name of the recipient and sufficient documentation to explain your extravagance to the satisfaction

of any revenue agent who subsequently examines your tax report.

And if perchance on a trip you spend more than \$25 in any day you must itemize everything else too—the day you left home, day you got back, every telephone call, meal, cup of coffee, taxicab, and bus fare. If you want your books to balance, you'd better even keep track of the postage stamps for the letters to the home office.

The sheer absurdity of this avalanche of paperwork is only the beginning. The meta physicians of Mr. Mortimer Caplan's bureaucracy have now gone off to mull such esoteric questions as: What, precisely, constitutes a business meal? What is the allowable difference in cost between a lunch for a life insurance prospect (\$5,000 policy) and the prospect for an electric dynamo (\$5 million sale)? Can you also buy lunch for the prospect's wife, or do you suggest she go eat in the drug store? What if your own wife is along too—do you leave her back in the hotel room to munch a hamburger and watch television?

As ridiculous as these questions sound, they are precisely the sort of thing that must now be decided upon at the highest levels, and Mr. Caplan confesses—quite understandably, we think—that it will be some weeks before we can expect any official enlightenment. It has never been easy to decide how many angels can dance on the head of a pin.

Yet it is neither the absurdity of the paperwork nor the ridiculousness of the metaphysics that is the true evil.

Here is a situation in which the Government is, no doubt about it, confronted with a problem. Some people do hide yachts in expense accounts, just as some do hide misbehavior in the suburbs, and the Government has power to deal with the real tax cheaters. But the vast majority of the people everywhere lead quiet, placid, and upright lives, and the vast majority of those whose taxes support the Government give an honest accounting of their affairs.

Yet here we use the majesty of the law to treat every taxpayer as a potential cheater because pinhead minds can think of no other way; the integrity of all must be insulted, and the conduct of their affairs made insufferable because of the sins of the few.

Now completely apart from this question of expense accounts, this is a philosophy of Government which is evil in itself. We once had an example of this when, to stop a few people from drinking too much, we adopted prohibition which treated all men as potential alcoholics. Surely the results have not left our memory.

The results of this noble experiment can also be foreseen. These new rules will give trouble only to honest men. The real "operator"—the man who is really out to cheat on his taxes—can drive a truck through them.

The smart lawyers are already figuring out the perfectly legal loopholes; beyond that, those with larceny in their hearts will not be disturbed because they will show records, receipts, and paper accounts by the carload. As sure as the sun rises tomorrow, today's rules will have to be followed tomorrow by new rules upon new rules tightening the rules.

And while all this is going on, the honest man—the man who takes a business trip to do an honest job for his company and with no desire to cheat either his company or his country—that man will see himself not merely laden with burdensome paperwork but with the fear that everything he does is under suspicion.

Because he honestly tries to keep honest records, all the records will be there and he can be called up a year later, 2 years later, and find that what he did in good

faith is adjudged wrong by some petty bureaucrat imbued with the idea that any expense account must conceal some wickedness. The smart operator will have his lawyers; the little taxpayer will be helpless against the insolence of office.

We submit that to order the public affairs in this manner is an affront to the public morality, just as it would be for the State to require of every citizen a detailed accounting of his home-coming-and-going because some men cheat. That government governs illy which can find no other way to deal with malefactors than to maltreat all of its citizens, the just and the unjust alike.

Timely Remarks by Arthur Hoppe of the San Francisco Chronicle

EXTENSION OF REMARKS OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. YOUNGER. Mr. Speaker, the readers of the CONGRESSIONAL RECORD have shown continued and avid interest in the timely remarks and witticisms of Arthur Hoppe who writes for the San Francisco Chronicle.

It is my pleasure to bring to their attention the following articles which appeared during the later part of December 1962 and early January 1963:

[From the San Francisco Chronicle, Dec. 9, 1962]

WE MUST KEEP CALM! (GULP)

(By Arthur Hoppe)

Everybody is now hitting the streets with inside reports of how the White House solved the Cuba crisis. And everybody commends our leaders for keeping cool. Through sheer grit. Everybody, that is, but Mr. Eugene Burdick, the author. Washington, says Mr. Burdick suspiciously, boasts "an abnormally high consumption" of tranquilizers.

"And no one," he says, "can say these drugs help in achieving wisdom in the vital decisions made there." No one but me and my friend, Mr. Glenn Dorenbusch. For we have pieced together our own inside report from other inside reports, a pharmacopoeia and two racing forms. Help? These drugs merely saved the world, that's all.

Precisely at 10:32:27½ a.m., a familiar figure strode into the Cabinet room, took his place at the table's head, swallowed two blue pills and said: "Gentlemen, bad news. Those are missile sites in Cuba. We have already ordered a blockade. We must now consider what other stringent steps we should—hohum—take. If (yawn) any. What do you think, LYNDON? LYNDON? Dean, he's overdone it. Give him a pep pill. Meanwhile, you can talk for awhile, Adlai."

A balding, sad-eyed man gulped down three magenta and two puce pills and said firmly: "A blockade is immoral and illegal. Little Cuba is no threat to us. We are a great and prosperous nation and * * *

"Adlai," interrupted the familiar figure. "You're going to have to start taking the same brand we take. Your euphoria level is too high. What do you say, McGeorge?"

A bespectacled man leaped to his feet, swallowed two reds, three whites, and a blue from the pillbox at his place and delivered a 28-minute harangue on how we must blow up Cuba, Russia, the Common Market, and Basutoland, winding up shouting: "I can't

stand it any more. Bombs. Rockets. Incredible tensions. Press the button, Chief. For Pete's sakes, let's get it over with."

"Bobby," said the familiar figure with a frown, "hand me McGeorge's pillbox." He took a pill from it, tasted it, and shook his head. "Just as I thought," he said. "Jellybeans. McGeorge, you can no longer sit in on our meetings until you learn to take your medicine like a man. And now (yawn) who's for a nap? LYNDON? Dean, give him some black coffee."

Right. This is a clear-cut issue and I disagree wholeheartedly with Mr. BURDICK. If there's anything I consider wise these days, it's tranquility in government. Have you ever heard of a shot fired in tranquility? Nonsense. Will the world be blown to smithereens by the tranquil? Hardly likely.

No, sir, what all these disputed inside reports prove is that our leaders weren't tranquil enough. Except maybe Mr. Stevenson. As Mr. Lincoln said of Mr. Grant: "Tell me what brand he's eating; I want to send the prescription to Mr. Kennedy."

[From the San Francisco Chronicle, Dec. 13, 1962]

WHY THE WHITE HOUSE WON'T HOLD WATER (By Arthur Hoppe)

In trying to become an ace White Houseologist, I've meticulously explained the whole device of trial balloons. But, oddly, there's still some confusion. "How," inquires and indignant lady, "is a trial balloon filled with a leak?"

I thought everybody knew that. But, if not, best we go back and review.

Leaks, as you know from reading the papers, come from either administration sources, high administration sources, sources close to the White House, sources inside the White House, or inside White House sources. In that order of importance.

Let's start at the bottom. You get a job as an administration source, of which there are thousands. The rating (GS-13) and the pay (\$12,500) aren't bad, but you have to eat in the cafeteria. So you start issuing leaks to all your friends and passing strangers. Like who in personnel stole Miss Pope's potted philodendron. Through diligence you get several people fired. Your work is noticed by your supervisors and you are promoted to high administrative source (GS-18, \$17,250 and a seat in the junior executives dining room).

This entitles you to leak the inside story to the Peoria Weekly Foghorn and other lesser media. But only the inside story which will appear on the inside pages. Such as the oversupply of graphite in the bureau of locks and bugles. It is, however, a gay, ego-rewarding position and most would be wise to stop here.

Not so. The dedicated go on to become sources close to the White House, hanging around the South Lawn buttonholing passing newsmen to issue leaks. This is a very arduous job. Especially in winter.

But, with luck, your work may catch the eye of the President. "Son," he will say, "your work has caught my eye. We need more men like you. Come inside where it's warmer." Thus you reach the pinnacle: becoming an inside White House source. Issuing leaks about who issued the leak that sunk you-know-who.

Inside White House sources, unfortunately, are often confused with sources inside the White House. The latter means newsmen in the pressroom, to whom inside White House sources leak, and the maids, staff antique dealers and the like, who just write books.

Now while newsmen are known as sources inside the White House and constantly leak to each other, they are also leaked to by inside White House sources. This is because the pressroom is near the door. And news-

men are thus also known as sources close to the outside world.

In practice, of course, there are vague areas between these clear-cut distinctions. While newsmen agree all gardeners are unofficial sources close to the White House, what about the doorman? Sometimes he is a source inside the White House; sometimes a source close to it. Depending on whether it's cold outside.

But, actually, all that's necessary to understand the news these days is to form the proper picture of our White House. Sort of like a giant sieve. A giant sieve leaking balloons which cut throats.

I'm sure this answers the lady's question. If not, don't bother me. I've decided not to become a White Houseologist. I've decided to become a Kremlinologist. It's simpler.

[From the San Francisco Chronicle, Jan. 2, 1963]

CAN NIKITA SURVIVE THE BIG YURT CRISIS? (By Arthur Hoppe)

As you may recall, I've decided to become a Kremlinologist. But, like butterfly collecting, there's not much money in it. So, in hopes of a little spare change, I'm writing a pamphlet entitled: "How To Become a Kremlinologist in Your Basement in Your Spare Time."

The first step, of course, is to analyze brief news items from Russia. I have one here by Associated Press which definitely throws light on the mysterious power struggle in the Kremlin. All of them do.

"B. Mambetov, Premier of the Republic of Kirghizia," reports A.P. from Moscow, "told the Supreme Soviet today that the old-fashioned yurts are overcrowded and 'do not correspond to the needs of modern-day living.'"

Now, it is immediately apparent to any Kremlinologist that Mr. B. Mambetov is anti-party and is clearly using yurts in an attempt to discredit, if not overthrow, Mr. Khrushchev. But, before rushing in, we must ask ourselves some serious questions. Not: "Who is B. Mambetov?" Nor: "Where is Kirghizia?" True, such questions have merit. But they are the sign of the overeager amateur. The question we must first ask ourselves is: "What are yurts?"

I'm glad you asked. Yurts, says Webster's, are tents made of skin "used by the Kirghiz and other nomadic tribes of Siberia." This is important, as it spares us talking about "the gross failure of the 1962 yurt crop" or "the long lines of housewives in front of the State-run butcher shops hoping to purchase a few kilos of yurts."

Thus armed, we are now prepared to turn to the mysterious power struggle in the Kremlin and ask ourselves the crucial key question: "Will yurts put B. Mambetov in the driver's seat?"

The way we go about it is this:

"The proven failure of the much-heralded 5-year yurts plan has given rise to speculation that Khrushchev is on the way out. Desperate attempts are now being made inside the Kremlin, insiders report, to design a split-level yurt with picture windows for gracious indoor-outdoor living. But production would put a serious strain on the Soviet economy."

"Thus far, the great yurts crisis shapes up this way: The military, hitherto coolly warm to Khrushchev, are militantly pro-yurt. But the young intelligentsia, previously warmly cool, are intelligently anti-yurt. As for the Kirghiz, on whom it blows both hot and cold, they are, it is widely known, sulking in their yurts."

"Waiting in the wings is the shadowy figure of B. Mambetov, a shadowy figure little known in the West. Long recognized by experts as the No. 2 man in many places, Mambetov may be in excellent position to seize

the reins of power should the reins of power be seized. First of all, it cannot be gainsaid that Mambetov knows his yurts. And, secondly, as Kirghizia goes, so goes Azerbaijan. On the other hand."

But that should give you the idea. That should give you the idea anybody can be a Kremlinologist. All you need is my handy pamphlet and a dictionary. It's good for your ego and nobody ever proves you wrong.

In fact, you don't need a dictionary. Should you be asked, "What's a yurt?" just think like a Kremlinologist, always alert for tension and intrigue. And you will invariably find that a yurt, in the final analysis, is a hot potato.

[From the San Francisco Chronicle, Jan. 11, 1963]

THE DIFFICULT ART OF APPRECIATING ART (By Arthur Hoppe)

WASHINGTON.—As you may recall, I came back to Washington to find out whose Peace Corps is being sent into our American communities. And I will. But Washington is no place to get information. So, in the interim, I'm working on my book, "Strange Customs in Washington and Other Savage Lands." And already I've got a whole new chapter: "Culture and Other Taboos."

In Washington, the natives all worship culture. The more important the native, the more he worships culture. Worship is performed through a strange rite known as appreciating art.

While all the native tribes appreciate art, the numerous and important Kennedy tribe appreciates art most often. They are considered very devout in appreciating art and many lesser chieftains now attempt to emulate them.

Fortunately, I was able to attend an authentic native appreciating art ritual—a rare opportunity for an anthropologist. So I'm quickly setting forth my notes while I can. I only hope they reach the outside world.

This ritual was held for the painting of a dead Italian lady named Mrs. Mona Lisa. The Kennedy tribe borrowed Mrs. Lisa from France (which is a real country) so that all the other tribes could join with them in a mass appreciating art ceremony.

Unfortunately, when Mrs. Lisa arrived, the Kennedys, the solons, and the heads of many other tribes were out of town on various foraging expeditions. So Mrs. Lisa was locked up in a sealed vault for 3 weeks. But all the lesser natives said they appreciated it where here.

At last, however, the tribal chieftains returned and the rite began. It was held in the National Gallery, which the natives always speak of as a shrine. The male natives arrived in their traditional appreciating art costumes (black tie). And the female natives wore their traditional appreciating art expressions (arched eyebrows).

Mrs. Lisa was hung at one end of a small nave where, in Christian ceremonies, the altar would stand. The nave was crowded with lesser natives, each saying, "I never have enjoyed the painting much since the French put the glass over it."

Which is apparently some sort of dogma. The more important natives, however, circulated in a rotunda just outside to perform a separate rite called, "Who's that with." For example, the man chatting with Senator HUMPHREY would say: "Who's that with George Ball?"

And the man next to Mr. Ball would be saying, "Who's that with HUGH HUMPHREY?" The reasons for this ritual are obscure.

Several very high chieftains delivered sermons from the altar. Some in English, some in French. Due to the acoustics, they were understood to say, "Rowwowwow." Except those who spoke in French. They said,

"Renhrenhrenh." All sounded most sincere.

When it was over, a few lesser natives went up to look at Mrs. Lisa. But most went home to tell their friends where they'd been. Which is the main purpose of appreciating art. As it is practiced in Washington.

A Great and Honest Politician

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Gould Lincoln which appeared in the Washington Evening Star of November 15, 1962:

A GREAT AND HONEST POLITICIAN (By Gould Lincoln)

"There will always be a Democratic Party and there will always be a Republican Party, and frankly I think the best interests of the country are served by two great parties." This is the unqualified prediction of a great and skillful politician—one who has given the lie by his own career to the oft-repeated statement that "all politicians are dishonest," and by one who has rendered great public service—James A. (Big Jim) Farley, of New York, chairman of the Democratic National Committee and Postmaster General during the first two terms of the late President Franklin D. Roosevelt. His prediction was made during the National Broadcasting Co.'s television program, "Meet the Press," last Sunday. Mr. Farley had been asked whether he saw any time in the future when we might have a Liberal Party as opposed to a Conservative Party in this country.

Mr. Farley's whole life experience—he was born a Democrat and began his work in Democratic politics 52 years ago—has been an exemplification of his statement. He has been called a liberal, particularly when he was playing an important part in the Roosevelt New Deal, and he has been called a conservative. But he has always been a Democrat, loyal to the Democratic Party. He never has scratched a Democratic ticket. When he broke with President Roosevelt over the third term issue in 1940 and opposed the President's renomination, he still declared his support of Roosevelt in the election campaign that followed and voted for him. Just as he has supported every Democratic nominee for President and for State office in New York.

A PRACTICAL REPLY

The question put to Mr. Farley during the "Meet the Press" program was actuated by the strong divergence of the southern conservatives and the northern liberals in the Democratic Party of today, and a similar divergence in the Republican Party over the Rockefeller Republicans and the Goldwater Republicans. He was asked specifically: "Do you think that the liberal Democrats and the southern conservative Democrats belong in the same Democratic Party?"

Mr. Farley, ever practical, replied: "Well, it is not that they belong—there is nothing that you and I can do about it." And when he was pressed still further to say whether the southern conservatives and the northern liberals in the Democratic Party have much in common, he answered: "They have much in common in the different direction," which

sounds enigmatic, but after all is very practical. Up to now both wings of the party have desired victory at the polls, and they have had it.

Mr. Farley once told this writer that the Democrats "will continue to win as long as they hold the labor vote and the Negro vote." At that time, the solid South was taken for granted—as it still is, particularly in congressional elections, if not presidential.

PREDICTS KENNEDY REELECTION

Mr. Farley still sticks to this political estimate of Democratic strength. In his interview he made a number of predictions for the future. Principal among them was a forecast that President Kennedy will be re-elected in 1964; that Governor Rockefeller of New York will be Mr. Kennedy's opponent, and that in another 2 years much of the Kennedy program will be enacted into law. Mr. Farley, ever frank, admitted that the Bay of Pigs invasion of Cuba in April 1961 had been a fiasco. But he insisted President Kennedy's recent strong stand against the Communist military buildup in Cuba would be maintained.

As a forecaster of election results he does not have to yield to any professional pollster. His most famous prediction was on the outcome of the 1936 presidential election. He said President Roosevelt would carry all the States except two and he did—all except Maine and Vermont.

Because of his break with F.D.R. over a third-term nomination, Mr. Farley has never been the choice of New York State Democratic conventions for Governor or Senator. It was then the conservative label was pasted on him by New Dealers and by members of the Liberal Party. Mr. Farley, however, then chairman of the Democratic State Committee, retained great political power, so great that he defeated F.D.R. on his own ground. In the 1942 Democratic State Convention he succeeded in nominating his candidate for Governor, although Mr. Roosevelt backed the late Senator James M. Mead. Mr. Farley commanded deep devotion and loyalty among the party leaders. His word was as good as his bond, and he always kept his promises to the leaders and to the rank and file. He remained State chairman until 1944.

Mr. Farley made it clear in his interview that he believes strongly in party organization. Today he remains one of the best loved and respected politicians in the country, although he has held no office since he gave up the State chairmanship. The one thing which cut him to the quick was President Roosevelt's failure to use him in any way in the great war effort this country made from 1941 to 1945. With his organizing ability and experience his services could have been of great value.

Accident and Health Insurance Tax Credit

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. BYRNES of Wisconsin. Mr. Speaker, on January 9, 1963, I introduced a bill—H.R. 453—to provide a 20-percent tax credit for premiums paid by the taxpayer for health and accident insurance. The 20-percent credit is the equivalent of allowing a full deduction for insurance costs for a taxpayer in

the first tax bracket. I first introduced this bill in July of 1962—H.R. 12693, 87th Congress, 2d session—and am reintroducing it in this Congress because I feel it is a sound and practical approach to the problem of encouraging voluntary health insurance.

This bill is intended to serve a two-fold purpose: First, it remedies an inequity in the provision of existing tax law providing for a medical deduction; second, it will encourage more persons to obtain accident and health insurance.

The medical expense deduction presently available is confined to expenses in excess of 3 percent of the taxpayer's adjusted gross income. This penalizes the taxpayer who insures himself and his family through accident and health insurance.

For example, taxpayer A, whose income consists of wages of \$5,000 per year, purchases a medical insurance plan at a cost of \$150 per year. Since \$150 is not in excess of 3 percent of \$5,000, he would not be allowed a medical deduction in any year for the cost of his medical plan. Taxpayer A continues the plan for 5 years at a total cost of \$750. In none of the years was he able to deduct this as a medical expense. In the fifth year, he incurs \$750 of medical expenses. This \$750 of medical expenses is covered by his insurance. He gets no deduction because his medical expense was covered by insurance, although he has paid out a total of \$750 over the 5 years for the coverage.

On the other hand, taxpayer B, who has the same \$5,000 income as our first taxpayer, has no medical insurance. Taxpayer B deposits \$150 a year in a savings account, on which he earns interest. In the fifth year, taxpayer B also incurs \$750 of medical expenses. He uses \$750 which he has saved to pay his medical bill. The first \$150—3 percent of his income—is not includable as a medical deduction. Taxpayer B subtracts this \$150 from his \$750 medical bill, and takes a medical deduction for the balance—\$600.

Thus, while both taxpayer A and taxpayer B had identical annual incomes and medical costs, B gets the benefit of the interest earned while his \$750 was invested, plus a tax deduction of \$600. From this simple illustration it is apparent that the present medical deduction favors the uninsured taxpayer, to the detriment of the insured taxpayer.

While I have taken taxpayers with an income of \$5,000 for purpose of comparison, the effect is the same irrespective of the taxpayer's income. The taxpayers who carry medical insurance are penalized under the Federal tax laws because those taxpayers will not obtain any benefit from the medical deduction, while the taxpayers who do not carry medical insurance will have the benefit of a tax deduction if their medical expense in any year exceeds 3 percent of their income. Taxpayer A is, in effect, penalized for protecting the Government's revenues against the risk of a medical deduction.

In providing a tax credit for medical insurance for the taxpayer, the bill includes amounts paid by the individual

for himself, his spouse, his parents, his spouse's parents, and his dependents. Thus, whether or not his, or his spouse's parents qualify as dependents within the meaning of our tax laws, the taxpayer would be permitted to claim the 20 percent credit. This will act as an incentive for children to adequately insure their parents against a major illness.

The effect of this will be to encourage individuals to provide for adequate medical protection: First, for themselves; second, for those dependent upon them; third, for those who might later become dependent upon them; and fourth, beyond this, it will encourage individuals to provide for adequate medical insurance in advance of their old age.

Some may find that if they waited until age 65 or over to take out medical insurance, the cost would be such that adequate coverage is not within their means. This credit would apply to the purchase of level-premium policies or paid-up policies during their younger years which would provide health insurance coverage for their later years.

In providing for a credit instead of a deduction, the bill would still permit the taxpayer to use the tax tables or to take advantage of the standard deduction. The standard deduction—which is reflected in the tax tables—is the equivalent of a deduction of 10 percent of the adjusted gross income. This use of the tables makes it unnecessary for the taxpayer to itemize all his personal deductions. It is in lieu of any other deductions permitted under our tax laws—such as charitable deductions, interest payments, personal taxes, and nonbusiness casualty losses. If medical insurance premiums are treated as an additional personal deduction, the 37 million taxpayers who today elect to use the standard deduction and the tax tables would either lose the benefit of the insurance deduction or the simplicity of the standard deduction and the use of the tax tables. They would have to account for each and every item of personal expense allowable as a deduction. This would materially complicate the filing of returns, particularly for those in the lower tax brackets.

On the other hand, with a 20-percent tax credit for medical insurance, the taxpayer who had an income of \$5,000 would still be entitled to the \$500 standard deduction. The tax credit provided by my bill would be taken in addition to—not in lieu of—the standard deduction. In other words, the medical insurance credit would be treated in the same manner as the 4-percent credit for dividends received and the \$1,200 retirement income credit, both of which are taken in addition to the standard deduction.

Medical care is not solely a problem for those under the social security system, or those 65 years of age. A major illness can befall both young and old. Legislation which limits relief to a segment of the population is deficient. A young father may be just as hard pressed to meet the expense of illness in his family as would the retired person who himself became ill. The bill I have introduced provides tax relief for meeting

the medical expenses of both through private insurance. It does not attempt to socialize medical insurance as the Kennedy administration would do.

This bill makes no attempt to register our elderly citizens into a Government-conceived, adopted and controlled system of compulsory health insurance. It does not require that the taxpayer's insurance conform to certain standards set by the Federal Government before favorable tax treatment can be obtained. Many of our elderly citizens are at present adequately providing for themselves through private plans of their own choosing, and prefer to continue to do so. This bill recognizes that it is the right of the individual—young and old—to select the type of insurance program which best meets his needs—and to select it in a free and competitive marketplace.

The bill approaches the problem through the encouragement of private insurance—without Government interference and control. Unlike other concepts, it realizes that it is not only the role of the Government to encourage adequate health protection among those age 65 and over, but that our Nation is faced with a problem which transcends both age and economic standards. The bill would encourage individuals of all ages and income levels to provide health and accident insurance as a means of protecting themselves against catastrophic and prolonged illnesses.

We have made tremendous gains in public acceptance of health and accident insurance over the past decade. The problem is that medical expenses are so treated under existing law that the taxpayer, instead of being given an incentive to enroll himself or his family in a medical plan, is penalized for doing so. Recognition in the tax laws of the desirability of private health insurance is long overdue. The tax credit I propose, by correcting this inequity, would build on the gains we have made in the field of private health insurance.

Best Stories of 1962

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. LINDSAY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following: There will be a flood of stories and articles about the "Best Stories of 1962." My vote for the best is Art Buchwald's column, "Best Stories of 1962." It reads as follows:

(By Art Buchwald)

BEST STORIES OF 1962

Every year we pick the best news stories of the year. Many of them have never been reported before; others have been lost among the classified and real estate ads.

The first has to do with a stamp collector named Jonathan Kincaid, who used to buy

sheets of newly issued stamps as soon as they were put on sale by the U.S. Post Office.

Mr. Kincaid, who made \$80 a week as a contact man for a contact lens company, went down to the post office one day and bought a sheet of a new stamp that was honoring the aborted Bay of Pigs landing in Cuba. But when Kincaid got home he noticed there were American airplanes printed on the stamp, and since there were no airplanes at the Bay of Pigs, Kincaid realized that someone in the printing office had made a grave error.

He called up the newspapers and told them that he had a sheet of misprinted stamps that were worth \$200,000.

The newspapers immediately called Postmaster General J. Edward Day and informed him of the printing error. They asked him what he intended to do about it.

Mr. Day was adamant. "When the U.S. Post Office makes a mistake, we should pay for it. We shall give Mr. Kincaid the \$200,000 he is asking, and we will pay anybody else \$200,000 for a similar misprinted sheet. To do otherwise would make a mockery of stamp collecting throughout the world."

PROBLEMS OF A STUDENT

The second story has to do with Abraham Lincoln Roosevelt, a Negro student who wanted to enroll at the University of Mississippi.

Mr. Roosevelt, a straight "A" student in high school, made his application to the admissions office, and was immediately accepted by the university. On his first day of school he was asked to join a fraternity, and several students invited him to the freshman prom. He was elected class president and cheerleader and a member of the exclusive Knife and Fork Club.

In a couple of weeks Mr. Roosevelt was editing the college humor magazine, was active in the dramatic society, chairman of the blood bank, member of the student council, manager of the football team, and captain of the debating squad.

By the end of the first term, Mr. Roosevelt flunked all his courses and was thrown out of the school.

"They made me do so many extracurricular activities," Mr. Roosevelt said bitterly, "I didn't have time to do any studying."

HAPPY ASTRONAUT

Maj. Carl Lemuel was selected as one of the original U.S. astronauts to go into space. Major Lemuel went through all the training and it was his turn to go up next. But a week before he was to be shot into space the doctors discovered he had a bad kidney, and said he couldn't possibly go into orbit.

In an interview after the medical examination Major Lemuel said, "I couldn't be happier. I was wondering how I was going to get out of it. I think anyone who goes up in one of those capsules is nuts, and it doesn't prove anything anyway."

NOTHING ELSE TO DO

EDWARD KENNEDY, a 30-year-old citizen of Massachusetts, decided to run for U.S. Senator on the Democratic ticket. A group of citizens came to him and said "TEDDY, your brother is President of the United States, your other brother is Attorney General, your brother-in-law is head of the Peace Corps. It will look awfully bad if there is another Kennedy in Washington. Why don't you give up the idea of running for Senator so that you don't embarrass the party?"

"But what else can I do?" Mr. KENNEDY asked.

The citizens thought and thought, but no one could come up with an answer.

The Just and the Unjust

EXTENSION OF REMARKS

OF

HON. BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. CASEY. Mr. Speaker, under leave to insert my remarks, I wish to call attention to the reaction of the Wall Street Journal of January 8, 1963, to the proposed regulations of the Internal Revenue Service in handling expense accounts.

I think the observations made in the following article are very meritorious:

THE JUST AND THE UNJUST

We guess we don't run in the right social circles.

For years we have been reading those books about wild living in the suburbs and wondering somewhat plaintively why the excitement seems to pass us by. In years of suburban living the wildest shock to the even tenor of our domesticity was the day the dog drank up the cocktails and bit the mayor. It was weeks before we were forgiven.

For almost as long, we've been reading about all this notorious high living on the expense account, boats and all that, and groaning over what we seem to have missed. After a quarter century in that den of iniquity, Wall Street, no one has tempted our journalistic virtue with even so much as a night at a hunting lodge, much less a sea-going voyage. Where, indeed, are all those expense-account yachts?

True, we aren't without sin, as defined in the new dogma of the Internal Revenue Service. We suffer business luncheons dreadfully often and when we turn in the voucher we don't deduct the \$1.25 we would have spent anyway for the blue plate special. A man is entitled to some recompense for punishment in line of duty.

When business takes us to Peoria or Dubuque, as it does all too often, we take an aperitif before dinner, choose the steak over the chicken-a-la-king and sometimes splurge on the movies, charging the lot to the stockholders. If it weren't for their business we wouldn't be there at all, and frankly we have better steaks at home.

Moreover, the children being more or less at the age of discretion, we have lately taken our wife along on some trips. We haven't persuaded the curmudgeonly auditor to okay her expenses, but not long ago we drove to Washington on legitimate business (if talking to a Senator is legitimate) and our wife rode along in the car. Even that baleful auditor didn't ask us to reimburse the company for the equivalent price of her bus ticket.

Give or take a few details, this is not unlike the situation of thousands of businessmen in a country where men at work are ceaselessly traveling to and fro. The door-to-door salesman and the flying corporate executive are brothers under the skin; they are working also when they pass the time of day with the lady at the door or the business acquaintance across the luncheon table. Sometimes the smartest business is not to talk business at all but to be friendly, interested; to listen and to learn. Only ignorant and petty minds could imagine that the free lunch is all beer and skittles.

But now it turns out that all this is under the suspicion of undermining the public

morality and the solvency of the U.S. Treasury. In any event the Government is going to treat all the people as crooks until proven otherwise.

This suspicion of malefaction flows from every word of the new regulations on record-keeping, pedantic in language and picaresque in detail, drawn up by the Internal Revenue Service.

Hereafter you must account to the Government not only for your yacht but the beer you buy a business acquaintance. The documents for any entertainment, no matter how trivial, must include the amount, date, place by name and address, type (martini or ham sandwich?), explanation of the benefit to be returned for this bounty, the name of the recipient and sufficient documentation to explain your extravagance to the satisfaction of any revenue agent who subsequently examines your tax report.

And if perchance on a trip you spend more than \$25 in any day you must itemize everything else too—the day you left home, day you got back, every telephone call, meal, cup of coffee, taxicab and bus fare. If you want your books to balance, you'd better even keep track of the postage stamps for the letters to the home office.

The sheer absurdity of this avalanche of paperwork is only the beginning. The metaphysicians of Mr. Mortimer Caplin's bureaucracy have now gone off to mull such esoteric questions as: What, precisely, constitutes a business meal? What is the allowable difference in cost between a lunch for a life insurance prospect (\$5,000 policy) and the prospect for an electric dynamo (\$5 million sale)? Can you also buy lunch for the prospect's wife, or do you suggest she go eat in the drug store? What if your own wife is along too—do you leave her back in the hotel room to munch a hamburger and watch television?

As ridiculous as these questions sound, they are precisely the sort of thing that must now be decided upon at the highest levels, and Mr. Caplin confesses—quite understandably, we think—that it will be some weeks before we can expect any official enlightenment. It has never been easy to decide how many angels can dance on the head of a pin.

Yet it is neither the absurdity of the paperwork nor the ridiculousness of the metaphysicians that is the true evil.

Here is a situation in which the Government is, no doubt about it, confronted with a problem. Some people do hide yachts in expense accounts, just as some do hide misbehavior in the suburbs, and the Government has the power to deal with the real tax cheaters. But the vast majority of the people everywhere lead quiet, placid, and upright lives, and the vast majority of those whose taxes support the Government give an honest accounting of their affairs.

Yet here we use the majesty of the law to treat every taxpayer as a potential cheater because pinhead minds can think of no other way; the integrity of all must be insulted, and the conduct of their affairs made insufferable, because of the sins of the few.

Now completely apart from this question of expense accounts, this is a philosophy of Government which is evil in itself. We once had an example of this when, to stop a few people from drinking too much, we adopted prohibition which treated all men as potential alcoholics. Surely the results have not left our memory.

The results of this noble experiment can also be foreseen. These new rules will give trouble only to honest men. The real operator—the man who is really out to cheat on his taxes—can drive a truck through them.

The smart lawyers are already figuring out the perfectly legal loopholes; beyond that, those with larceny in their hearts will not be disturbed because they will show

records, receipts and paper accounts by the carload. As sure as the sun rises tomorrow, today's rules will have to be followed tomorrow by new rules upon new rules tightening the rules.

And while all this is going on, the honest man—the man who takes a business trip to do an honest job for his company and with no desire to cheat either his company or his country—that man will see himself not merely laden with burdensome paperwork but with the fear that everything he does is under suspicion.

Because he honestly tries to keep honest records, all the records will be there and he can be called up a year later, 2 years later, and find that what he did in good faith is adjudged wrong by some petty bureaucrat imbued with the idea that any expense account must conceal some wickedness. The smart operator will have his lawyers; the little taxpayer will be helpless against the insolence of office.

We submit that to order the public affairs in this manner is an affront to the public morality, just as it would be for the State to require of every citizen a detailed accounting of his home-coming-and-going because some men cheat. That Government governs idly which can find no other way to deal with malefactors than to maltreat all of its citizens, the just and the unjust alike.

The Vast New Factor

EXTENSION OF REMARKS

OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. MATHIAS. Mr. Speaker, under leave to extend my remarks, I call attention to the following editorial by Mr. Joseph Alsop which appeared in the Washington Post under date of January 14, 1963, entitled "The Vast New Factor":

THE VAST NEW FACTOR

(By Joseph Alsop)

"Heavy, heavy, what hangs over?" was the beginning of an old children's game like 20 questions. "Communist China" would be the winning answer, in the case of the new round of Soviet-American talks about a nuclear test ban, which will soon begin in New York.

The thought of Communist China naturally haunts the Soviets. The flat Chinese refusal to abide by a test ban was one of the two main factors—the other being Soviet military pressure to resume testing—which caused Khrushchev to torpedo the Geneva negotiations in 1961, when President Kennedy went so far to secure an agreement.

Today, the simmering discords of 1961 have boiled up to the point where an open, avowed, and final rupture between Khrushchev and Mao Tse-tung appears to be almost unavoidable. And the seemingly inevitable break between Moscow and Peking is, in itself, a vast new factor in the Soviet-American negotiations.

This is true because of the effect of a Sino-Soviet break on the problems of cheating. In 1961, it was out of the question for the United States to accept a test ban without some provision for inspecting inside China, since the Chinese would then have aided the Soviets to cheat despite their many disagreements.

If there is a final Sino-Soviet break, however, a test ban may seem a reasonable cal-

culated risk despite its rejection by China; since the main danger of China-sheltered Soviet cheating will then have disappeared. In fact, China-sheltered Soviet cheating is already almost unimaginable, in the present embittered state of Sino-Soviet relations, even though the rupture is not formal and avowed.

This very great change in the contours of the test ban problem has of course been even more carefully weighed by the American policymakers than by the Soviet policymakers. The United States, after all, is the party to the bargain that will have to accept the calculated risk, if and when a test ban agreement is reached—which is still highly doubtful.

But there is another, perhaps even more important reason why the thought of Communist China haunts the American policymakers quite as powerfully as it haunts the Soviets. The President and those around him have lately been hard at work calculating the future effect on the general world balance of power of a Communist China divorced from Russia, on its feet again, and possessing atomic weapons.

There are two reasons why these fairly gruesome calculations are now being made at the White House. On the one hand, the time is at hand which was long ago named by the American forecasters as the first moment when the Chinese Communists might test their own atomic bomb. After that lower limit has been passed, there will be no telling when the first Chinese test may occur.

To be sure, the immediate effect of a Chinese test will be purely psychological. More time will be needed, after a test, before the Chinese can be said to have an atomic arsenal. But the Chinese problem, curiously enough, is rather simpler than the French problem.

The French nuclear program will only succeed if France creates an effective nuclear deterrent vis-a-vis the Soviets. The Chinese program will be successful, at least in part, if China merely has enough atomic weapons to overawe southeast Asia. Fewer weapons, and much less sophisticated weapons, will do for this purpose.

This is a real danger, if you accept as valid the other reason for the White House calculations about China. In brief, the President and a good many of those around him incline to take quite literally all that the Chinese have said, in their war of words with Moscow, about the United States being a paper tiger, about the Communist duty to use military power to bring about the Communist millennium, and so on and on.

If the Chinese really mean all that they have said on these topics, then the final Sino-Soviet rupture, if and when it comes, will mean that an aggressive China has cast off the last shred of moderating influence. The possibility that a Sino-Soviet rupture will produce this kind of aftereffect certainly needs to be weighed.

But there are other points to weigh as well. In the first place, the Chinese have been sounding very warlike, but the only country they have attacked is India, a self-announced paper tiger, and they have left even Chiang Kai-shek's offshore island severely alone.

In the second place, the picture of Communist China on its feet again and armed with atomic weapons is something of a scarecrow if Communist China has little chance of getting on its feet again. The moderate improvement in this year's harvest does not mean that Communist China is again a healthy country. The problem needs much more careful investigation.

Yet this new White House preoccupation, even if not entirely justified, is another proof that the Sino-Soviet row is changing every-

A Graduated Income Tax—Graduated Downward, That Is

EXTENSION OF REMARKS

OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. KASTENMEIER. Mr. Speaker, all of us, I am sure, are deeply and genuinely concerned with the sluggish state of the Nation's economy, and in the weeks to come will be preoccupied with the increasing perplexity of what form of tax reduction will most effectively restore us to prosperity.

In the January 12 issue of the New Yorker magazine, the editor not only has grasped the lesson to be learned from a recent editorial in the Wall Street Journal, but he rephrases the lesson with such a clarity and lightness of touch that I would like to have it reprinted here for the enlightenment and amusement of those of my colleagues whose attention it may have escaped:

THE TALK OF THE TOWN

In the absence of other New York newspapers, we have been reading the Wall Street Journal more faithfully than usual, and learning quite a bit about economics. We are consequently becoming more conservative and apprehensive 5 days a week, and have only Saturday and Sunday, when the Journal does not appear, left in which to defrighten ourself. Just the other day, for example, the Journal warned the readers of its editorial page of what, it conceded, has been a hitherto unnoticed "especially adverse effect of the corporation profits tax as a drag against more efficient economic activity." Under the present fiscal scheme, the corporations that make the most money—and therefore, in Journal language, are the most "efficient"—pay the highest taxes. "The marginal producer pays less; nothing if he is sufficiently inefficient as to make no profits," the editorialist pointed out. This astonished us; we had always opposed the creation of a privileged fiscal class, but the danger of the anomaly had escaped us. "The effect of this . . . is to slowly shift the control of more of the Nation's resources into the hands of the less efficient producers and managers." (A trivial question, undoubtedly frivolous, momentarily crossed our mind: What would a man with no income eat while the control of the Nation's resources slowly shifted in his direction? Long acquaintance with the Journal's thought processes enable us to formulate the answer without posing a query to the editor: He would disguise himself as a native of an undeveloped country and live on surplus powdered milk wastefully distributed by the Agency for International Development.) What the Journal was advocating, in the interim before the income tax could be "replaced by some sort of expenditure tax," was relief for the big income. "Income taxes discourage savings because they treat consumption and savings equally—that is, your tax is the same whether you spend the money in riotous living or whether you save and make a contribution to the future economic growth of the country," it noted. "Moreover, the highly progressive rates especially restrict the amount of savings by falling most heavily on those incomes from which come the greatest savings." Since earners of low incomes indubitably spend a higher proportion of what they get than earners of high incomes—their

pitiful irrelevant excuses for this can be ignored—the obvious remedy is a graduated income tax made progressive downward, or upside-downward, from no tax on incomes of a hundred thousand dollars and up (which furnish the most funds for investment) to a hundred percent on incomes of a thousand dollars and down (which are probably wasted on riotous living, since those earning them own few corporate shares). This would not eliminate the favored position of the man who makes no money at all, since even if he were taxed a hundred percent he would still pay nothing, but it would at least temper the injustice to his most efficient competitors, since they would pay nothing also.

A Legal Lottery Helps Solve Some Pressing Social Problems

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the American Zionist of December 1962.

It is interesting to see how Israel has turned the desire to gamble to the benefit of the nation. It makes one wonder what the revenue would be if such a lottery were instituted in this country. I suspect that the expectation of a direct financial return would be of greater interest to the average American than the more abstract and indirect return he now receives from his tax dollar.

The article follows:

GAMBLING OR SOCIAL SERVICE?

(By Helen Fried)

An American visitor to Israel scarcely expects to find a lottery operating openly. He comes from a country in which such enterprise is generally taboo.

Hence, when my host Simon and I were walking through a business district in Haifa and came upon a lottery booth, I was shocked. When I saw that Simon was ready to buy a ticket, I said, "Walt—is gambling considered respectable in Israel?"

"Our lottery is not like American horse-racing," Simon explained. "Israel's national lottery is legal, and the money that comes in through it we use for developing some of our most needed institutions. The lottery was established in 1951, when Israel was tragically short of hospitals and clinics for the chronically ill among the escapees from Hitler's death camps. After sufficient health institutions had been built, the lottery income went to building schools. More than 4,000 classrooms with facilities for over 200,000 children, have been built since the program has been in effect. How respectable does this sound to you?"

"Does that mean that the ends justify the means?"

"Let me tell you some more. Then you can judge for yourself. The 1,500 persons engaged in selling lottery tickets are elderly and handicapped. For nearly all, the earnings—which are only a little more than 6 percent of the gross sales—are their only income. Otherwise, most of them would be on the welfare rolls." There were warmth and pride in Simon's voice.

A memory of elderly men and women, still well-preserved physically, sitting around in

the parks and squares of New York City with nothing to do, came to my mind. Perhaps they would welcome a chance to be useful, as Israel has made many of her aged citizens functioning parts of the society.

Slowly I began to feel that not all games of chance deserve to be condemned. Israel's national lottery hurts no one, and helps solve many social problems throughout the country. "I have to admit," I said to Simon, "your lottery provides jobs for those who are considered unemployable. And it is wise of the Government to restrict such jobs to the elderly."

That something like a national lottery would interest me, I never dreamed. But this socially useful device was new to me. "How much does a ticket cost, and how often are the drawings?" I asked.

"Each ticket costs 2 pounds, and the drawings are once a week. But as high as 58 percent of the income goes back to the customers, since the prizes include many for small amounts. No Israeli has ever become a millionaire overnight." Simon sat back and lit a cigarette.

"How do the ordinary wage earners respond to betting even as little as 2 pounds?"

"Well, I can see that you have never bet," Simon laughed. "Israelis, whether they are workers, managers or professional people, hardly ever squander money on lottery tickets. As few as three percent buy more than one ticket. By the way, most of the winners in Israel do not permit their name to be mentioned in the newspapers. Well, what do you think of our lottery now? Do you still think it's something that takes money away from widows and orphans?"

I pondered the question as we left the Technion for home. My first disapproving response to the lottery had not been changed by our talk. That attitude was too deeply ingrained by my living in a country where games of chance are regarded as morally wrong. But it had opened my mind to the possibility that a lottery managed as it is in Israel could be socially useful, providing jobs for needy men and women.

As we approached a lottery booth, I said to Simon, "Go ahead, buy yourself a ticket. I see no wrong in it now, and maybe this time you'll be lucky!"

Actions of the Government in the Congo-Katanga Controversy

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. FRANCES P. BOLTON. Mr. Speaker, many letters are being received by Members of this House relative to the actions of this Government in the Congo-Katanga controversy. These come from traveling Americans and those whose businesses keep them in various parts of the world. I give you one only at this time because of its concise language. It reads:

S.O.S. Please send me some explanation of why the United States is fighting and backing the U.N. decision to fight Katanga. Everyone here believes it is only so U.S. financiers can get control of the copper mines. Opinion here unanimous that present U.N. policy means chaos and bloodshed. Tshombe considered the only one with any idea of civilization. Russia expected to

step in when chaos arrives and United States cast as the real villain in the drama. Difficult to stand up for one's country when everything one reads or hears is contrary to our State Department pronouncements.

Mr. Speaker, when are these matters going to be brought before this House?

Virginia Poultry and the European Common Market

EXTENSION OF REMARKS

OF

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. MARSH. Mr. Speaker, the unwarranted and discriminatory import duty and so-called gate-price restrictions which the nations of the European Economic Community have placed on our poultry is causing cruel damage to a domestic industry which, without price supports or other subsidies, has made a remarkable self-help record in developing a European market.

The effects are particularly serious in Virginia, a major poultry producer.

In a conference attended by representatives of virtually all segments of the economy of the Commonwealth, held in Richmond, Va., on January 11, 1963, Hon. Albertis S. Harrison, Jr., Governor of the Commonwealth of Virginia, set forth the scope of the problem in a notable address.

Because of the importance of this problem to other poultry-producing States—and, indeed, to American agriculture generally—I include, under leave to extend my remarks in the RECORD, a summary of Governor Harrison's remarks:

SUMMARY OF REMARKS BY GOV. ALBERTIS S. HARRISON, JR., POULTRY FEDERATION BREAKFAST, RICHMOND HOTEL, JANUARY 11, 1963

All of you who are in attendance here today—members of the poultry industry, bankers, manufacturers, businessmen from many fields—are aware of the purpose for which we gather. By your attendance here, you also indicate the urgency and the scope of the problem before us.

Our immediate concern is that the governing directorate of the European Common Market has more than doubled its tariff on importations of poultry. The obvious reason for this action is to protect the poultry industry in the member nations. The immediate effect has been to bar the door against more than 28 million pounds of Virginia poultry, representing a substantial portion of our total production and projecting a loss to our total economy of approximately \$30 million.

This has been a unilateral action on the part of the Common Market. It amounts to a penalty for the superlative efficiency of the Virginia poultry industry, which is able to deliver an attractive, tasty, ready-to-cook bird to West Germany and other points at a price well below that offered for local, farm-grown chickens.

The broad impact of this action was presented to me in detail on Wednesday by representatives of the Virginia State Poultry Federation and the Virginia Department of Agriculture, and I commend both of these

organizations for their prompt and detailed response to this challenge.

Obviously this is a problem which warrants the wholehearted support of the Governor, and that I freely and gladly give. I have urged the necessity for both immediate and permanent relief upon the President of the United States, the Secretary of State, the members of Virginia's congressional delegation, and upon other southern Governors who will be similarly affected.

The economic aspects of this action present particular difficulties for an industry already beset with narrowing margins and intense competition, yet it has other implications.

This is a major preliminary move in the evolution of the Common Market and in the development of trade patterns which will form the basis of that agency's future relations with our entire Nation. The outcome has many implications for Virginia's future relationship with this growing economic entity.

Along with Great Britain, the 6 nations of the Common Market represent a market of 200 million people, many of them just beginning to acquire the beginnings of the infinite variety of consumer goods that make up our American standard of living.

Many of them have already been introduced to Virginia poultry, and have indicated they want more.

The large truth hovering in the background is that the Common Market has been fabulously successful, and that it has become a reality that our own economy must reckon with and with which we must establish a fair but firm basis of trade.

But our immediate and overriding concern is Virginia's poultry industry. A vigorous attempt to bring about adjustments in these tariffs is indicated, first, in order to allow our poultry industry to resume serving the market its products have created abroad, and second to demonstrate that Virginians and Americans mean business when they set out to do business.

I am delighted that the poultry industry has permitted me to take part in this session and to lend my personal support and the support of my office to this endeavor. I am confident that the caliber of the support assembled here lends assurance of eventual success.

Judge Patrick T. Stone

EXTENSION OF REMARKS

OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. KASTENMEIER. Mr. Speaker, on Sunday, January 13, 1963, death brought an end to the career of one of our Nation's most eminent and able jurists. Patrick T. Stone succumbed to cancer at his home in Wausau, Wis. He was 73 years old. For 30 years he had served the people of Wisconsin as judge of the U.S. District Court for the Western District of Wisconsin.

He served the people well. For him, the speedy and impartial administration of justice was not just an ideal to which our judicial system should aspire—it was the basic and necessary principle of his daily courtroom conduct.

Despite a schedule that would have staggered the most ambitious of men, Judge Stone was always up to date in

his work. His court was a model of efficiency, impartiality and dignity.

At the same time, his deep compassion for people was well known and greatly appreciated by all who had the privilege of working with him.

Judge Stone was born in Ontario, Canada, but moved with his family to Tomahawk, Wis., when he was 2. He attended Tomahawk's public schools and received his law degree from Marquette University Law School. During World War I, Judge Stone served in the U.S. Navy. After practicing law and serving as Wausau city attorney for 8 years, Judge Stone was appointed to the Federal bench in 1933 by President Franklin D. Roosevelt. His was the first judicial appointment made by the new President.

Judge Stone presided over many important cases in his long career on the bench. In 1937 and 1938 he sat during the trial of 23 major oil companies charged with price fixing. He presided over the famous bankers trial in Detroit, the trial of two assistant U.S. attorneys in Chicago, and an historic counterfeiting case in New York. Just last year Judge Stone was one of three Federal judges named to hear the Wisconsin reapportionment suit.

His great respect for the traditions of our law did not keep Judge Stone from urging reform when he thought it necessary. He was a pioneer in the use of presentence investigations, which were instituted in his court in 1938.

Both on the bench and off Judge Stone had the respect and affection of lawyers and laymen alike. His firmness and businesslike conduct in his courtroom was matched by his warmth and affability during his rare leisure hours, when he enjoyed a good game of bridge with some of his many friends.

We of Wisconsin are proud of Judge Stone. His record of service to his community, the incisiveness and humanity of his judicial opinions will long be remembered. He has left an indelible mark on the law and on the lives of the people of the western district of Wisconsin. He will be missed, not only by those of us who knew him and felt the power and warmth of his personality, but by all who respected him as a judge among judges, as a man among men.

Progress Is Not a Gift

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. ALGER. Mr. Speaker, as we begin this new session of Congress with the certain knowledge that we will be pressured from all quarters for more and more Federal programs to solve all of mankind's ills, it may be well for us to ponder on the wisdom contained in the text of the advertisement of the Warner & Swasey Co., in U.S. News & World Report of December 31, 1962. Many of our

current problems will be solved if we return to the old-fashioned American idea for success—individual hustle and sweat. Only then can we earn the sweet rewards for tomorrow or as so aptly put in the following statement, "Tomorrow must be earned—not appropriated":

TOMORROW MUST BE EARNED—NOT APPROPRIATED

Voting more money for schools doesn't make this an educated Nation. It isn't billions for more veterans' hospitals that will make America healthy. It is honest production, not shorter hours, that protects jobs. It takes more than costly playgrounds to cure juvenile delinquency. Pouring our billions all over the world doesn't buy security nor peace.

Nothing worth having or worth being is ever reached except by honest hard work, but it is becoming the tragic fashion to think we can shortcut the work, and have everything we want if we only spend enough Federal dollars. And then we mistakenly feel "the Government has taken care of it," so we can sit back and relax.

Another once-great nation withered and died when its people were drugged with that same fatal poison. (Perhaps "The Decline and Fall of the Roman Empire" should be required reading in many places today.)

Everything government offers free is obviously and always paid for by all of us in higher taxes or a worsening deficit—both of them deficits of dollars but, even more tragically, deficits in national character and self-respect. What would ever be worth that?

Our Traditional Christian Christmas Must Forever Be Preserved

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. UTT. Mr. Speaker, under unanimous consent to insert my remarks in the Appendix of the Record, I wish to include a Christmas message written by Mr. Charles Wilson, principal of Wakeham Elementary School in Orange County, Calif. This message was delivered to the 700 students of that school. Mr. Wilson is to be congratulated for having the courage to extend this message at a time in our national history when anything connected with religion is under attack.

The message follows:

OUR TRADITIONAL CHRISTIAN CHRISTMAS MUST FOREVER BE PRESERVED
(By Charles Wilson)

The world is in a state of confusion, turmoil and crisis upon crisis. It is divided a battleground between two ideologies striving to capture the mind, the heart, and the very soul of mankind. Country after country has disappeared behind the Iron Curtain, and these unfortunate people have been engulfed—swallowed up—by a political philosophy that is atheistic, denies the existence of a Divine Being and destroys by every means of dictatorial suppression and oppression the religious freedom of the subjugated citizens.

Change—change has become the modern panacea, the shot of penicillin, the magic cure-all for too many people in this land

of Constitutional guarantees that actually had its founding in the Mayflower Compact of November 11, 1620. However, change for the sake of change itself is not necessarily good or constructive. Change is desirable only if it produces progress beneficial to mankind and the future of civilization.

Customs, traditions and mores have too often been considered obsolete, old-fashioned, and hence, discarded or minimized by a powerful faction of sincere but misguided Americans who have attempted to indoctrinate the American public through every possible media of communications and weapons of propaganda to the benefits of change and modernism without analyzing the ultimate consequences of these actions or the values of an appreciation and understanding of the basic foundations of our country.

There is one belief that has defied change. Time has not been able to erase it or tarnish its perfection. Numerous emperors, kings, and dictators, be they called Fuehrer, Il Duce, or premier, have not been able to eradicate by propaganda, physical and mental torture, or even death this faith. It has remained because it is an eternal truth, defying the powers of man to pervert or time to diminish its message.

"For unto you is born this day in the city of David a Savior, which is Christ the Lord." Nineteen hundred and sixty-two years later this is still the symbol, the significance, the very soul, the everlasting spirit of Christmas, and the message it joyously sings out for all peoples of the world of faith to hear can never be changed by mortal man although an attempt has been made in the past years in the United States for a changed celebration of Christmas.

Let us analyze, after scrutinizing carefully, the concepts of this changed version of Christmas we are asked to accept.

Christmas cards replete with galloping horses; ships in full sail upon a pastel sea; talking animals that deliver the holiday message; a martinied, jolly old Santa Claus that delivers a package of bottled cheer instead of a doll for Laura or a chemistry set for Charles are all an integral part of the changed new version of season's greetings.

Christmas songs that describe our children catching Santa Claus kissing mother with implications that are, at the best, questionable; the total commercialization with the only green being the color of money; music that has deliberately lost the true spirit of why we celebrate December 25 is repetitiously heard on radio and television before the Thanksgiving turkey has been eaten.

The changed colors of Christmas are exemplified in an abundance of yellows and pastels of various shades; turquoises, powder blues, pale pinks, fuschias, and avocado greens that dominate cards, the lights on the tree, wrapping paper, and ribbons on the gifts for those we love.

Christmas presents must be expensive, fancily wrapped in pastel colors and purchased at a store with a famous name that represents status and prestige. There must be a huge quantity of pastel wrapped presents under the pastel tree for each member of the family—including the dog and cat.

The basic belief of a Christian Christmas has been questioned, challenged, and threatened by a segment of our society. Christmas has become controversial. This is difficult to believe or understand because our country was, is, and must always be a God-centered nation. The Mayflower Compact, the Declaration of Independence, our Constitution, the pledge of allegiance to the flag of our country, the motto on our coins, and the oath of office of elected officials all give evidence that we are a land that does base our faith and trust in a divine being. Are these obsolete? Does the changed image of Christmas offer us more?

What is a traditional Christian Christmas?

Christmas cards must have the ancient and true symbols of Christmas—the Nativity scene, the star and the candle that shed light upon darkness, the wreath and the holly, the Three Wise Men, home scenes that portray abundant evidence of family love and loyalty with the warmth of the hearth permeating and adding to the blessings and joys of the yuletide season. These pictorial representations of Christmas must never vanish from our way of life but must continue to spread the deeper values of why we celebrate that 25th day in December each year.

Christmas songs must ring out in the voices of children at school, carolers in the streets, choirs in the churches carrying the hope of the world in the significance of the words of "Silent Night," "Away in the Manger," "O Come, All Ye Faithful," and the multitudinous hymns of Christmas that have come to stand for the richer thoughts of this season over hundreds of years.

Christmas colors have traditionally been red as the blood that Jesus Christ shed upon the cross for the forgiveness and salvation of all mankind; green as the everlasting life of nature as represented by the evergreen of the tree and the holly. Can we exchange these for pastels?

Christmas gifts stated so clearly by their intrinsic value that the "gift without the giver is bare," as children and adults made through perspiration and inspiration the presents for their loved ones—grandmother and grandfather, mother and father, sister and brother, friend and relative. Quality of present was the objective, not quantity. Time and effort, signifying love of the giver, was represented in each and every gift. The only brand name was the name of the giver.

And yet, we have missed the true and deeper implications of Christmas unless we devoutly and fondly remember the purpose of the home and the family at this season of the year. The family planned the presents together amidst great hustle and bustle and small huddles of secrecy and giggling; gifts were wrapped at home by hand and hidden with the greatest of care in every possible nook and cranny; cookies were baked in the shapes of stars, crosses, trees and plump Santa Clauses; taffy was pulled, fudge was boiled and fondant was made; popcorn was popped to be threaded and hung on the tree (all that was not eaten by the busy hands); gifts were so often made by hand—an embroidered apron or pillowcase; the button boxes or jewel boxes made out of coffee cans, cigar boxes and plenty of creative imagination. They represented love and unselfishness because they were the creations and efforts of the giver. Christmas carols rang throughout the home, and traditional songs were sung by the entire family on Christmas Eve before the cracking fireplace or gathered closely around the battered piano or organ. Fireplace, piano or organ, or just a home full of family love, Christmas carols were sung with an inner and spiritual feeling. The family that harmonized together these songs of devotion and hope of the world were united by a spiritual and intellectual bond that could never be broken.

Christmas belongs not only to the children of the free world but also to the adults. Childhood believes in the magical powers of Santa Claus and Frosty the Snowman. No gift, no wish is impossible as long as the child believes. No gift, no wish is impossible as long as the adult truly believes. We only have to witness the miracles performed by Jesus Christ as he made the lame to walk and the blind to see because they had faith, truly believed.

Childhood pathetically and tragically comes to an abrupt climax when the child discovers that Santa Claus is only a figment of the imagination and the magic powers of Frosty vanish with the sunlight, but for-

tunately the richer and deeper significance of Christmas replaces this loss if we as parents and adults have taught our children the religious connotation of Christmas. Santa Claus is replaced by the love and redemption of Jesus Christ.

Brotherly love seems to express itself in all the young at heart from 2 to 102 at this joyous season of the year. Miracles do still happen as in the days of Christ. People smile that have frowned and scowled for 11 months of the year and greet you with a warm, cheery and sincere "Merry Christmas." Hearts and purses that have been closed too long open generously to help those less fortunate. Even Scrooge found the joy of giving. Stockings will continue to be hung by the chimney with the greatest of care as long as the United States remains free. People who have forgotten to worship in God's house will return to his abode as long as Americans continue to have the guarantee of freedom of religion.

The world is a better place, people display their more noble emotions for a few short days as they consider unselfishly the welfare and happiness of others, rather than themselves. The Golden Rule prevails for an all too brief moment of the 365 days of the year. It seems so tragic, so futile that this spirit of love and unselfishness cannot shine throughout the world for the entire year, every year.

The church has not been overlooked in this homage, this tribute to Christmas, but each individual must honor his God as he believes. The school, the home, the Government must never usurp the privileges and right of each person to worship his God in his own manner. This right is guaranteed to us by the Bill of Rights, the first 10 amendments, to our Constitution. The makers of our Constitution were so firm in their belief of freedom of religion that they made this right a basic part of the law of our country.

The 25th of December is the day that Christians throughout the world honor the birth of Jesus Christ. But be we Christians or not, Christmas is a vital part of our American culture, our American way of life, and has been since the Pilgrims from the Mayflower landed at Cape Cod in 1620 and signed the Mayflower Compact, commencing with these words of faith, "In the Name of God."

Our American system of free enterprise that rewards initiative and risk has given us the greatest materialistic wealth of any nation since the creation of the earth. Our standard of living surpasses that of any people that have existed. And yet, we are not a materialistic people; we are a people that still believe in Santa Claus.

And what, then, is a Christian Christmas? It is the second chance for the people of the world. It is the eternal hope for peace on earth, good will to men.

"And suddenly there was with the angel a multitude of the heavenly host praising God, and saying, Glory to God in the highest, and on earth peace, good will toward men."

An Answer to Ole Miss Chaplain

EXTENSION OF REMARKS

OF

HON. ARTHUR WINSTEAD

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. WINSTEAD. Mr. Speaker, in view of the fact that public attention is presently focused on the high crime rate in the District of Columbia and the recent race riot at District of Columbia Sta-

dium, I feel that the following newspaper article written by able columnist Tom Ethridge, of the Clarion Ledger, merits your reading and consideration. The Clarion Ledger is published at Jackson, Miss., and this article appeared in his column titled "Mississippi Notebook" on January 9, 1963. I find it to be most appropriate and timely:

MISSISSIPPI NOTEBOOK

(By Tom Ethridge)

AN ANSWER TO OLE MISS CHAPLAIN

Our text today is based on the following letter which appeared in this newspaper's "Voice of the People" yesterday, January 8: "DEAR EDITOR: The people of Mississippi have been shamed by the presence of soldiers in our midst sent to keep the peace.

"Our politicians hope to win votes by loudly denouncing the Army's presence. Even Ole Miss officialdom has now joined in the popular hue and cry.

"Yet not a single one of these leaders has offered to guarantee that peace and order will be maintained if the troops are withdrawn.

"Sincerely,

"The Reverend WOFFORD K. SMITH,
"Episcopal Chaplain,
"University of Mississippi."

Well now, must a State or city be occupied by Federal troops simply because it cannot provide ironclad guarantees against violence or unpleasantness? If so, Federal troops should occupy every big city in America, including Washington.

Why should our State be expected to guarantee absolute protection for agitators and troublemakers, some seeking to provoke friction—when the President and Congress are not able to guarantee protection for citizens in our Nation's Capital?

Washington, as everyone knows, has become a jungle of violence and terror. Many of its streets are not safe, even in broad daylight.

The official bulletin of the U.S. Supreme Court recently warned women workers to take full advantage of the police escort service provided for them by police, due to numerous sex crimes on Washington streets—some within the very shadow of the Capitol and Supreme Court Building.

POLICE UNABLE TO STOP RACE RIOTS

If any place on earth is to be a model of law and order, it should be the Nation's capital city, but the opposite is true. Washington has one of the worst crime records of any metropolis in the world. By comparison, the African Congo is a safer place to work, visit, and live.

A race riot broke out in Washington this past Thanksgiving Day, after a white team defeated a colored team for the city high school championship. Of the 50,000 spectators, two-thirds were colored.

Negroes mobbed white men, women and children indiscriminately. This wild disorder was the fourth that has marked such championship games in the last 5 years.

As a result, the District of Columbia Board voted to deny use of the Municipal Stadium for future city title games.

The Right Reverend John S. Spence, director of education for the archdiocese of Washington, has suspended participation of Catholic high school teams, not only in championship football games but also in championship basketball games with the city's public high schools whose student bodies are fast becoming all colored.

Even the city's "liberal" press has gone along with this unprecedented action.

Why? Simply because the Washington police and Federal Government cannot guarantee protection for players and spectators.

Over 200 policemen were on duty at the stadium but a police official said the rioting

could not have been prevented if there had been 2,000 officers on hand.

NEW YORK CAN'T PROTECT ITS MAYOR

New York City is another notorious hot-spot of crime and violence. Despite its large and efficient police force, protection cannot be guaranteed for the citizenry. In fact, vicious street gangs often mob officers on their beats. Students are robbed, raped, and beaten on the campus and even in the halls of Columbia University, the neighborhood of which is a criminal's paradise.

Many New York churches no longer hold night services, because the streets are unsafe for Christian people.

New York can't even protect its own mayor from roving gangs of human packwolves.

Not long ago, dedication ceremonies were scheduled at a new housing project on West 94th Street, Mayor Robert Wagner was slated to officiate.

The ceremony was canceled. Why? The reason, as given by the New York Times, was that police could not guarantee either the mayor's safety or the safety of other dignitaries invited to attend.

This, mind you, in broad daylight, in the middle of the biggest city of a nation which claims to be a world leader and a model for other nations to follow.

The Federal Government, taking cognizance of this ugly situation, has assigned 80 members of the Peace Corps to work among the Negroes and colored Puerto Rican imports causing the trouble in that crime-ridden neighborhood. The liberal New York Times ventured this angry comment:

"How many more such reminders does this city's administration need to develop a sense of outrage? Our parks are a no man's land after dusk; muggings throughout the city are common. Is it the hope of city hall that, if things get bad enough, we will eventually qualify for grants under the Alliance for Progress?"

Big cities of progressive States have become crime jungles but no such horrible conditions exist here in peaceful law-abiding Mississippi. The FBI's latest annual crime report showed Mississippi's crime rate was less than half the national average and the fourth lowest crime rate in the entire United States.

Thus, the Federal troops allegedly upholding law and order in Mississippi are needed more badly in America's metropolitan areas where vicious and pampered minorities wage a steadily worsening reign of terror. By comparison, Mississippi is a model of law and order.

President Kennedy's First 2 Years

EXTENSION OF REMARKS

OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. FRIEDEL. Mr. Speaker, inasmuch as everyone is interested in ascertaining how knowledgeable journalists have evaluated the first 2 years of President Kennedy's administration, I wish to invite my colleagues' attention to an illuminating article written by Mr. Thomas O'Neill, a brilliant columnist of a regular feature of the Baltimore Sun, "Politics and People." This particular article, entitled "After 2 Years," appeared in that highly respected news-

paper on January 16, 1963, and contains this very significant sentence:

As the legislative rebuffs accumulated, the popularity polls disclosed Mr. Kennedy winning public support surpassing that given General Eisenhower, who is customarily described as the most popular of modern Presidents.

The entire article is as follows:

POLITICS AND PEOPLE

(By Thomas O'Neill)

AFTER 2 YEARS

WASHINGTON.—President Kennedy arrives midway in his first elective White House tenancy high in the favor of his countrymen, with whom rests the question of an extension of his lease for a further 4 years, and encouraged by a wisp of congeniality in a previously stiff and indifferent Congress. Quite plainly, the Chief Executive has grown on the Nation since it entrusted him with a grudging and barely visible mandate 2 years ago.

The most persuasive explanation that appears is that the vigorous young President reflects in person and performance the mood of the times, concerned but confident.

In retrospect, the first 2 Kennedy years were a get-acquainted period during which the country learned a lot that had been largely unguessed about the all but total stranger to whom it turned in preference to a better known opponent on election day, 1960.

Surprises have been apparent at frequent intervals as the familiarization between public and President took its course. A Democratic President who is also an economic conservative, for example, was provided for in few of the abundant postelection scripts undertaking to predict the course of the new administration, especially in those sketched by romantics anticipating a return to the heady days of their youth in the early New Deal. Left similarly dismayed were those in the opposition who misread the Kennedy career to mean that he was a purely political animal and were undone when their bellicose shafts aroused no strenuous partisanship at the White House and the President, bent on leading a united nation in a difficult time, steadfastly abstained from what he himself calls highly charged political positions.

Mr. Kennedy adhered to his chosen course, which can now be recognized as innate, while a disdainful Congress, whose Members generally had run better at the polls than the President, denied him even the customary Presidential honeymoon. His proposals were scuttled mercilessly by a Congress more negative than any of those that had confronted his predecessor.

At this stage a revealing phenomenon appeared. As the legislative rebuffs accumulated, the popularity polls disclosed Mr. Kennedy winning public support surpassing that given General Eisenhower, who is customarily described as the most popular of modern Presidents.

Some degree of support in such soundings goes to any President simply because he is the President. Beyond that, the test is the popular appraisal of the Presidential manner and character. Here Mr. Kennedy scored high. Surely it was more than coincidence that concurrently the President was quietly demonstrating that he had no taste for repining or for self-excuses when things went wrong, either on Capitol Hill or at the Bay of Pigs. He neither sulks nor rants, and accepts that buckpassing ends at the President's desk.

Victories, when they occur, have been accepted with corresponding restraint.

Roger Blough learned last April that the President can be a dangerous adversary when aroused, but he was spared Presidential

crowning when Big Steel pulled in its horns. The expected criticism was raised in the expected places at the time—Mr. Kennedy lost four points on Dr. Gallup's popularity thermometer—but the rest of the populace applauded, recognizing a doublecross when it saw one.

Nor was there any flamboyance when Mr. Kennedy brought off the premier triumph of the cold war, the facing down of Khrushchev over the Cuban missiles. Restraint and understatement are habitual to the urbane and patrician President. A smile of contentment playing about the Kennedy lips when the Russian retreat is the topic offers the only evidence that anything out of the ordinary has occurred.

Mr. Kennedy presents a knotty problem for his political opposition, principally by his firm preemption of the political center. It is plain in the awkward readjustment occupying his presumptive 1964 challenger, Governor Rockefeller, as the New Yorker studiously moves in a direction designed to please Senator GOLDWATER. The Rockefeller campaign for 1964 has begun—his pronouncements in New York are now conscientiously distributed in advance to the national political writers in the Washington press corps—and obviously he regards the Republican nomination as worth the effort.

Most opinion is that, in the absence of calamitous events in the remainder of his present term, Mr. Kennedy is assured of reelection. A dissenter from this view, along with Governor Rockefeller, is the President himself.

At his leaky Palm Beach background session with correspondents the President talked of second-term prospects and was pointedly bearish. Except for Franklin D. Roosevelt, he observed, Democratic Presidents since the Civil War have faced rough going as second-term candidates—Cleveland, defeated (he then ran a third time, and won); Wilson and Truman barely successful.

President Kennedy's State of the Union
Message

EXTENSION OF REMARKS

OF

HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. ST. ONGE. Mr. Speaker, this was my first experience as a new Member of Congress to hear the President deliver in person his state of the Union message to the Congress and the people of the United States. It was not only a most exhilarating but also a most sobering experience.

I could not help but think, as I sat and listened to our Chief Executive, that here was a man who is very serious minded, who has deep understanding of our Nation's problems, and who possesses the leadership and the ability to cope with these problems in this very crucial period in world history.

The program he presented to Congress today is a sensible one. I am in agreement with most of the proposals contained in that program, because they are in the best interests of the American people. I am very much encouraged by the President's assurance that "we have

every reason to believe that our tide's running strong."

I believe the President deserves the full support of the people. I shall do all I can to help in the enactment of his program.

Forty-fourth Anniversary of the Republic
of Latvia

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD a letter and statement received by me from Mr. Sigurds Rudzitis, president of the Latvian Association in Detroit, in observance of the 44th anniversary of the Republic of Latvia, which has, since its founding, to the sorrow of all free-men, lost its independence and liberty and been dragged behind the Iron Curtain.

The letter and statement follow:

LATVIAN ASSOCIATION IN DETROIT,
HIGHLAND PARK, MICH.,
November 24, 1962.

HON. JOHN D. DINGELL,
House of Representatives,
Washington, D.C.

DEAR SIR: Enclosed please find a copy of a statement issued by the Latvian-American of Metropolitan Detroit commemorating the 44th anniversary of the Independence of Latvia.

Any assistance that you can give to carry out the spirit of this statement will be deeply appreciated by the Latvians in the United States and Latvia.

Very truly yours,
SIGURDS RUDZITIS,
President.

STATEMENT

The Latvian-Americans of Metropolitan Detroit, assembled at the Detroit Institute of Arts, 5200 Woodward Avenue, Detroit, Mich., on 18th day of November 1962, to commemorate the 44th anniversary of independence of the Republic of Latvia, unanimously agreed to issue the following statement:

"1. As we pause today to observe the 44th anniversary of the independence of the Republic of Latvia, we again thank the U.S. Government for refusing to recognize the forcible seizure by the Soviet Union of the Baltic States of Latvia, Estonia, and Lithuania. We urge that this policy be continued.

"2. As Latvians, who witnessed the Communist brutality of Soviet occupation of our country, we know the true meaning of communism. With this thought in mind we heartily endorse President Kennedy's action in Cuba as a step toward what we hope is the eventual liberation of enslaved peoples. We hope for equal firmness in other threatened areas, such as Berlin and southeast Asia.

"3. We urge all Americans to stand behind the Government in a courageous reaffirmation of America's leadership in the struggle against tyranny. We urge that the leaders of the other free world powers recognize that the threat posed by international com-

munism is as dangerous to them as to the United States.

"4. Blinded by cries of 'colonialism' many neutral nations have failed to distinguish between Western traditions of freedom and Communist propaganda. The mistake in this attitude is demonstrated in Communist China's invasion of India. We hope this lesson will not be lost on the new African and Asian states.

"5. If there are to be any negotiations with the Soviet Union, the free world should constantly remind the Communists and neutral states of their opposition to the subjugation of the Baltic States and press for their liberation. There can be no peace in the world unless the principle of self-determination is applied universally for the small states as well as the large.

"6. We request the U.S. Government to bring the question of Latvia and other Baltic States to the attention of the United Nations and to take whatever other steps it may consider appropriate to reestablish freedom and independence of Latvia, Estonia, and Lithuania, which were destroyed by the criminal acts of the Soviet Union.

"7. Despite 22 years of Communist persecution, the continued deportations, attempted extinction of the church and the people's national heritage, the Latvians still proudly hold their head high and look to the day they will be free again. They see the United States their only hope. This country must not fall them.

"8. This statement is the expression of the entire Latvian-American community of Metropolitan Detroit and this assemblage directs that copies of this statement be sent to the President of the United States, Secretary of State, the U.S. delegation to the United Nations, Senators and Congressmen from Michigan, Governor of the State of Michigan and mayor of the city of Detroit."

Done in Detroit, Mich., this 18th day of November A.D. 1962.

Castro Fooled Nearly Everyone

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. RHODES of Arizona. Mr. Speaker, Mr. William R. Mathews has written an editorial on the advent of Castroism in Cuba. Since Mr. Mathews is one of the few people who interviewed Castro before he assumed power, this editorial is one which will be of interest to all the Members.

The editorial follows:

[From the Arizona Daily Star, Nov. 16, 1962]

CASTRO FOOLED NEARLY EVERYONE

(By William R. Mathews)

When President Adolfo Lopez Mateos, of Mexico, told James Reston, of the New York Times, in a recent interview, that blunders made by the United States pushed Castro into the Communist camp, he spoke an alibi that is most popular in Latin America.

This is a subject on which I can speak in the first person, because I was one of a small group that interviewed Castro in a home near Havana on February 28, 1959, 2 months after he assumed power. None of us knew that Castro had a Communist background, and that he had participated as a rebel in the Bogota incident of 1948. Jules Du Bois, of

the Chicago Tribune, insisted he was not a Communist.

My first alarm about Castro began when, after winning power, he instituted a program of terror and extermination that reflected pure Stalin Communist tactics. Stalinism might be defined as the maintenance of power by the deliberate extermination of all persons who can be suspected of opposition.

That program was just getting under way, when we interviewed Castro. He is a man of powerful physical and intellectual character. To us he was the soul of reason. All he wanted to do, he pleaded, was to establish an honest democratic government, and make many vested interests pay their back taxes. There would have to be agrarian reform, but that program would be worked out with respect to all who owned land. He wanted to break up only the big estates.

He was most plausible, except for one slip that he made, which did not impress any of us at the time. He spoke bitterly about how the United States had intervened needlessly in the freeing of Cuba in 1898. His hand should have been called by me and others right then, but we were gracious and sympathetic to his general program.

So were most of the Cubans. They saw him as the leader of a government that would restore full civil liberties and eliminate the corruption of the Batista regime. Castro won his most effective support from the middle class, which had been growing steadily in strength and influence. His revolt was not an agrarian or workers' rebellion. Cuba at that time had one of the highest standards of living in the whole Latin-American world. It was these people whom we saw about him as his assistants and public champions.

I wrote favorably about him, despite the increasing terror he instituted. My previous visit in Cuba was in 1955, when the country was thriving, and a high degree of freedom prevailed. We went all through the great Cabana fortress and prison, in which there was not a soul. When news came that it was being filled with prisoners by Castro, it sounded an alarm.

When Castro went to Washington and spoke before the American Society of Newspaper Editors, my question to him was the last one in a long session. It was, "What is your attitude toward the future and present investments of American capital?" Immediately he shot back, "We will treat American capital fairly; we need more capital to make our revolution a success."

On the other hand, the White House and Department of State remained aloof, because they knew Castro's record, and the records of some of his new assistants. Washington could get no assurance from him that would justify either economic or political help. Washington acted wisely. The United States would have been a plain sucker to have given him aid which he would use promptly to transform and strengthen his obviously growing Communist society. The terror was intensified. Those fine men—and women—who had supported him soon found they had to flee for their lives, or suffer imprisonment and death.

Can this record by the United States be called one that pushed Castro into the Communist camp? Rather it represents an overly patient and correct attitude.

President Lopez Mateos blames the American press for the wide publicity Castro received before he won power. The New York Times did start the ball rolling with the interview and picture of its correspondent, Herbert Mathews, in Castro's hiding place in Cuba. Other papers, radio, TV and magazines chimed in. Castro seemed like a benevolent Robin Hood, while Batista was the cruel bad man. The Department of State continued its hands-off policy of noninterference in a Latin-American rebellion, which at

that time was considered quite correct by the people of the country.

But the Mexican papers and radio chimed in, also. Throughout Latin America, Castro won initially warm sympathy. He was a modern David who had slain a modern Goliath. Not until Castro actually confessed his communism publicly, did these admirers change their tune.

Official Mexico didn't change until the October revelation of offensive missiles being installed and prepared to fire on the United States.

The irony of this whole matter is that if the United States had announced public support of Batista, Castro would have been squelched. He would not have won the support of the middle class, who saw in him the promise of a free, honest democratic government. But, if the Eisenhower administration had done that, it quickly would have been called upon by Congress to account for such an unpopular policy.

At that particular time, most Americans were living in the dreamland that confidently assumed that all people everywhere were capable of democratic—parliamentary—self-government. That the Kennedy administration, shortly after it came into power, tried to achieve that very thing in Africa, confirms how deep seated that belief was.

It will be many, many years before Cuba can develop among its people the ability and morality to accomplish that difficult task of restoring democratic, parliamentary government.

The Origins of a Human Tragedy

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the December 1962 edition of the National Jewish Monthly.

This article reminds us of the facts of this human tragedy: That the Arabs are refugees because their own leaders insisted that they leave their homes. The passage of years should not obscure this and it should not be ignored in attempting to reach an early solution to the problem.

The article follows:

THE ARAB REFUGEE PROBLEM: HOW IT ALL BEGAN

(By Edward E. Grusd)

The origin of the Arab refugee problem, which plays so large a part in the tension between Israel and the Arab States, has become obscured in recent years by both the passage of time and the intensification of the cold war in so many other parts of the world. But the problem itself remains; its solution has been blocked by the Arab States, which continue to use it to keep the pot boiling against Israel, while their victims languish in refugee camps. However, there is a growing disposition on the part of influential figures and governments to reach a just solution, and the subject is once more being debated on the floor of the United Nations.

It is now 15 years since the first of the refugees fled from Israel, and their original number—about a half million—has grown considerably in two ways: through births,

and the failure of the Arab host countries to report large numbers of deaths. Dr. John H. Davis, Commissioner-General of the U.N. Relief and Works Agency for Palestine Refugees, in a recent report to the U.N. General Assembly, admitted there were at least 100,000 dead on the UNRWA relief rolls. Their ration cards are not turned in, as they should be, but are used unlawfully to enrich those Arab functionaries who control them. In addition, many Arabs from neighboring countries have infiltrated the camps, preferring public support there to unemployment at home.

During the past 15 years, Israel and its Arab neighbors have traded arguments and demands on the refugee issue. But the public memory is short, and the origins of the problem have become either forgotten or distorted. We feel it will be useful to refresh that memory with a summary of facts.

On November 29, 1947, the United Nations voted overwhelmingly to partition Palestine into two states—one Arab, one Jewish. But the Arab States rejected the vote and declared they would resist it with force. The Jews of Palestine, although disappointed at the area allotted to them, accepted the U.N. decision, and began to prepare for statehood.

Many people today, their memories dulled by time, may think that nothing further happened until May 14, 1948, when Israel officially proclaimed its independence, and that immediately thereafter the armies of five Arab States attacked Israel and the Palestine Arabs began to flee. It did not happen that way.

Egypt, Jordan, and other Arab States made armed incursions into Palestine and used internal subversion there long before May 14. At the same time, the Arab Higher Committee applied utmost pressure upon the Palestine Arabs to leave the country temporarily until Arab armies could conquer it. This pressure was not only in the form of persuasion and promises of loot, but also in the form of threats and violent terrorism: Arabs who remained in the Jewish State were called traitors to the Arab cause, and were warned they would be treated accordingly by the Arab Higher Committee, which was headed by the former Grand Mufti of Jerusalem, who had helped the Nazis during World War II.

On the other hand, immediately after the U.N. partition decision, the leaders of Israel-to-be strongly urged Palestine Arabs to remain as peaceful citizens, promising them protection and security in a Jewish state. This was done by Haganah in all Arab villages and by Histradrut in the cities where Arab workers lived.

But the first thing that happened after November 29, 1947, was the mass departure of some 30,000 wealthy Arabs, organized by the Arab higher committee. They can hardly be called refugees; they responded to organized pressure, took their property, and moved to neighboring Arab countries. Tens of thousands of propertyless Arabs then began to leave as the Arab higher committee flooded their press and radio with warnings that there was going to be a war, and that all Arabs who remained in Palestine would be considered traitors. Thus, even before Israel officially proclaimed its statehood, vast numbers of Arabs—estimated at close to 200,000—fled the country.

After Independence Day, May 14, 1948, this movement increased, because the armies of five Arab States actually crossed the borders into the new state and the war was on officially. Arab military commanders and political leaders again sternly warned Palestine's Arabs to leave so as not to be destroyed by the invading armies. They assured the refugees they could soon return, since the Arab armies would sweep the Jews into the Mediterranean and then the emigres

could come back and divide all the Jewish property among themselves.

This is not "Israel propaganda." Al Hoda, a Lebanese newspaper in New York, 3 years later published an article quoting the secretary general of the Arab League as having assured Palestine's Arabs in 1948 that the Arab armies were "already on the frontiers and that all the millions the Jews had spent on land and economic development would be easy booty, for it would be a simple matter to throw the Jews into the Mediterranean." The newspaper added: "Brotherly advice was given to the Arabs of Palestine to leave their land, homes, and property and stay temporarily in neighboring, fraternal states, lest the guns of the invading Arab armies mow them down."

About the same time, the Beirut Moslem weekly, Kul-Shay, in an extraordinary confession, declared: "Who brought the Palestinians to Lebanon as refugees * * * in dire straits and penniless, after they lost their honor? The Arab States, and Lebanon amongst them, did it."

One of the refugees himself, Mahmoud Seif ed-Din Irani, writing in 1956, also confessed: "We left the country of our own free will, believing we were going on a short visit, a trip, and soon we would return as if nothing had happened." Nimer Al-Hawari, ex-commander of the Palestine Arab Youth Organization, wrote: "We shall smash the country with our guns. * * * The Arabs should conduct their wives and children to safety until the fighting has died down."

BRITISH CONFIRM THE FACTS

During the fighting, Haganah seized a number of British files. One of them, a British district police report in Haifa, dated April 26, 1948 (3 weeks before Israel independence) declared: "Every effort is being made by the Jews to persuade the Arab populace to stay and carry on with their normal lives, and to be assured that their lives and interests will be safe."

There are many documented expressions like these. Yet to this day the Arab contention is that it was the Jews who terrorized the Palestine Arabs and forced them to flee and who are therefore responsible for the tragedy. But in spite of all the Arab pressures, about 160,000 Palestine Arabs remained in the new Jewish state, and their number has now grown to 220,000 through natural increase and the reunion of separated families, which Israel has permitted. There are several Arab representatives in Israel's Parliament.

Altogether, 587,000 Arabs fled from Palestine, and became refugees, mostly in Lebanon, the Gaza strip and in the part of Jordan west of the Jordan River. During the same period, almost as many Jewish refugees (476,000) from Arab countries came into Israel, which welcomed them and integrated them, at a stunning economic cost, since practically all the newcomers had to leave their property behind. In effect, therefore, there was a kind of exchange of Jewish and Arab populations.

It is not the purpose of this brief survey to examine the fate and future of the Arab refugees, or to describe their misery and despair (as well as their often gratifying U.N.-aided progress) or to go into the arguments and counter-arguments between Israel and the Arab nations on the subject. Its purpose is solely to set forth, as factually as documentary evidence permits, the origin of the problem.

However, the U.N. has wrestled with that problem for 15 years and has still not found a solution. The Arab States have done little to help their refugee brethren, who have been supported in the camps by a U.N. fund, with a large portion of the millions of dollars contributed by the United States. The Arab leaders demand that Israel take back all the refugees and restore their property to them. Israel answers that it is ready to

discuss the refugee problem as part of a general peace settlement (it must be remembered that the Arab States still proclaim themselves formally at war with Israel).

Israel has already paid out a huge sum to individual refugees in compensation for deserted property, and has permitted many of them to return in the case of split families. But Israel has said it cannot permit hundreds of thousands of Arabs to pour into the country—especially after they have absorbed 15 years of the bitterest kind of anti-Israel indoctrination. Israel has also pointed out that it consists of 8,000 densely populated square miles as against nearly 3 million sparsely populated and underdeveloped square miles of Arab lands; that the refugees would be bewildered strangers in the new Israel of today whereas they share the language, religion, and customs of the Arab States; that the U.N. and many individual countries stand ready to appropriate large sums for big-scale rehabilitation and development projects in Arab nations which would not only make the refugees self-supporting but also enrich the host countries.

To all of which the present Arab rulers adamantly repeat the Israel drove the refugees out, and must take them all back.

And so the problem remains on the world's agenda.

Effects of Imports of Zipper Tape on American Industry

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks, I wish to include a letter sent to me by Mr. J. K. Benfield, of the Sullivan-Southern, Inc., Narrow Fabrics Manufacturing Co., York, S.C., which will supplement my remarks of January 10. This is just another example of what is happening to the textile industry in this country:

SULLIVAN-SOUTHERN, INC.,

York, S.C., January 9, 1963.

HON. ROBERT W. HEMPHILL,
House Office Building,
Washington, D.C.

DEAR BOB: You are familiar with the difficulties we have had and are having regarding the importation of zipper tape from Japan by U.S. companies. We in the zipper tape manufacturing of narrow fabrics became aware in 1960 that the Japanese were increasing shipments of this item into this country by a great percentage each year, starting in 1959.

In 1958, imports of Japanese zipper tape in this country were 171,000 pounds. In 1959, imports were 274,000 pounds, and in 1960, imports were 319,000 pounds. Since 319,000 pounds is approximately 10 percent of the total zipper tape sales in this country, we became alarmed, and in December 1960, we obtained samples of the Japanese tape to check for quality, thinking that it might be substandard. It was not.

During the early and middle part of 1961, we tracked down information regarding increased imports, which we felt must surely be increasing, since we were advised by some of our customers that our prices were out of line. Further customer resistance to our prices has increased to this present day. For instance, a standard construction in zipper tape is 42 ends 30/2 K.P. and 40 picks 20/2

K.P. Our cost to make this in natural is \$8.18 per thousand yards. The Japanese price, delivered in New York, all customs and other costs paid, is \$6.76 per thousand, or a difference of \$1.42 per thousand. I have had people in Washington tell me that we would have to get more modern machinery, or adopt more economical methods of manufacturing. Let me say that we have the most modern machinery in the world, and our operation is very efficient. The difference in price lies in cotton at 8½ cents per pound cheaper than we can buy it, and in labor that is 25 cents per hour against our \$1.50 per hour.

Since we did feel the increase in Japanese zipper tape imports, and since there was no way to compete pricewise with their cheap cotton and labor costs, we in this industry thought it would be the first line of approach to go to the U.S. Tariff Commission and ask them to raise the duty on zipper tapes to a point where our selling prices with the Japanese tape would be somewhat equal. After all, zipper tape is a component part of a zipper—the zipper cannot be made without the tape. It was at this time that we received a rude awakening about the intricacies of government.

We made an appointment with Mr. Donn H. Bent, Secretary, U.S. Tariff Commission for February 27, 1962. By this time, we knew that the Japanese were flooding the U.S. market with zipper tape. We later learned that in November and December 1961, alone, the Japanese shipped 282,564 pounds to this country. That was more than the entire year 1960.

We arrived for this appointment with Mr. Bent and found that he was away. However, he had made proper arrangements for us to have a conference with Mr. Roland L. Lee and other gentlemen of the Commission. These gentlemen were very nice but told us that they could do nothing. Although zipper tape is a component part of a zipper, it is also listed as "chief value cotton with fast edges not over 12 inches wide." This had a rate of duty of 17½ percent, whereas a component part would be 40 percent to 50 percent as interpreted. It seems that Tariff Commission chooses to call zipper tape the item calling for 17½ duty. This was amazing to me as a country boy being more familiar with an actuality rather than an interpretation of a section of the tariff regulation. At that time, our first thought was to ask Congress to correct this mistake, but felt that this would be a minor business to Congress, however major it was and is to us.

At the suggestion of Mr. Lee, we asked for and got an appointment at the Commerce Department with Mr. Jackson Spears, who had with him Mr. Thomas McMullen, of Commerce. Remember at this time, we were being flooded with Japanese tape and we could find no way to turn.

Arthur Hutchinson of J. Sullivan & Sons Manufacturing Corp., Philadelphia, Pa., and I talked with Mr. Spears on 27 February, 1962, and after what I consider a waste of time in a further discussion, Mr. Spears advised he would "look into the matter." I felt at that time exactly like an innocent man who was sentenced to die for murder, was sitting in the electric chair with the current ready to be applied, yelling for all he was worth that he didn't do it and nobody would believe him. Nobody believed us at this time and the hour of reckoning had passed, although we were not sure of it at that time.

We waited for Mr. Spears to look into the situation, but had no reply. On March, 1962, you replied that you contacted Mr. Spears, who told you that he would get the information. On April 5, 1962, having heard nothing, I again wrote to you asking what were the results from Mr. Spears. He still had given no information. On April 18,

1962, with the situation getting worse by the week, I again wrote to you asking what information Mr. Spears had given. Still no information from Mr. Spears.

It was then that we asked you to set up another appointment at Commerce Department and from your arrangements and those of Honorable Hugh Alexander, Arthur Hutchinson, Garner Bagnal from Statesville Narrow Fabrics, Statesville, N.C., a competitor, you two Congressmen and writer went to see Mr. Jefferson Davis of Commerce Department. This was on May 22, 1962. Mr. McMullen, previously mentioned, was also at this meeting.

This was another meeting that looked to me as if we had to start the entire procedure over, for we seemed to be getting nowhere. Mr. Davis and Mr. McMullen were very kind and courteous but did not seem to have proper power for what we needed—a restraint on Japanese tape under the then existing bilateral agreement with Japan. We couldn't find the proper party or parties to put into effect a restraint of a product that was ruining an industry.

It was then that you suggested going to Department of State and on May 22, we met with Mr. Michael Blumenthal and Mr. Stanley Nehmer of Department of State. It was then, as you recall, that Mr. Blumenthal advised that they would indeed consult with the Japanese Government regarding a restraint on zipper tape, and in a letter of June 2, 1962, Mr. Blumenthal advised you that consultation between the two Governments on the zipper tape question had begun on May 31, 1962. At this consultation, the Japanese Government was requested to hold exports during consultation at the level of, or 110 percent of, the exports of zipper tape during the period May 1961 to April 1962.

The results of this consultation would be a setting of a level for exports from Japan for 1962. To this date, I do not know what has been agreed, however, we are now under the long-term cotton textile agreement. The Japanese shipped to us 822,727 pounds of tape during the period mentioned above, i.e., May 1961 to April 1962. This meant that 110 percent of this would be 905,000 pounds that could be shipped to this country by the Japanese in 1962 calendar year. I wrote to you on July 31, 1962, that this amount was ridiculous and would hurt us badly in the industry in this country. It has. We have been on slow time for some 4 months and other manufacturers have been on slow time and/or sold part of their production to other types of tape users. I also advised you then that the quota was approximately 30 percent of all the sales zipper tape used in this country and asked if there were not some way to reduce the amount coming in to 10 percent of usage, or 300,000 pounds per year, which would be fair to the Japanese and we could live with, even with the difficulty with their cheap prices. I don't know what can be done about this, but there is somebody somewhere who can make this right. I obviously haven't been in contact with that person. I still believe that a country as great and as good as ours is, will not let an industry die needlessly. Some way, and it must be soon, we must correct this situation.

You see, all the time we told these people what was happening, nothing happened until too late, as far as zipper tape is concerned.

Now something else has happened and this must be corrected at once. When the Japanese were restrained at the too-high export quota, they were not satisfied and more and more tape is now coming into this country from Japan as zipper chain. To make zipper chain, one takes tape, sews a cord on either side of one edge, then by a special machine, metal elements are attached to the cord and tape, and this is called a

zipper stringer. Two stringers joined together make zipper chain. A zipper, as we know it, can be made by taking this chain, cutting it to length desired and attaching to this length a bottom stop, slider, and top stop. You see, then, this chain coming in is a way to bypass the tape quota, for chain is not restrained as of this date and the duty is only 19 percent, whereas a component part of a zipper is 50-percent of duty.

Chain is the most valuable component part of a zipper, but by someone's interpretation, zipper chain is classed as a metal product, but with chief value not being metal. The Japanese have been smart on this, for if chief value were metal, it would be 50-percent duty. This takes us back to the point where Tariff Commission does not classify zipper tape as a component part of a zipper; however, it is and a zipper cannot be made without it.

With our industry seriously damaged by the high tape quota, which is approximately 30 percent of U.S. sales zipper tape, the Japanese are now sending in zipper chain. We first noted this as a sample lot of 280,000 yards of chain in May 1962; 280,000 yards of chain contains 560,000 yards of zipper tape or approximately 3,500 pounds of tape. This sample must have proven satisfactory, for in August 1962 it started on the same course that tape had followed 4 years earlier, only with the chain they will build it up faster so that if and when a quota is put on, the quota will be very high, as in tape. Let me emphasize that the chain coming in that contains tape is just adding insult to injury up and above the extremely high tape quota.

From August 1962 to December 31, 1962, we have records of one company in the United States receiving 102,900 pounds of chain, as against nothing in prior years and only a small amount in May 1962.

This 102,900 pounds of chain, most of it in late 1962, is 3,430,000 yards and it contains 6,860,000 yards of tape. This tape would weigh 42,867 pounds, plus 13,720 pounds of cotton cord. This, you see, is in addition to the quota on tape and if chain would continue to come in at this rate that it is now coming, it would include 195,000 pounds of tape, plus 62,400 pounds of cotton cord. This item does not even have a quota and in addition to pushing our zipper tape industry further in the grave, it also hurts the man in this country who makes metal for teeth on the zipper, the man who makes the yarn for the cord, the man who makes the cord, the man who puts the metal teeth on the cord and tape, the dye house that would dye the tape, and other auxiliary industries.

This is bad enough. But again, let me remind you that we are on the same path as on zipper tape. I have learned from reliable sources that just one U.S. customer expects to import this chain at the rate of 2 million yards per month beginning July 1963 and 4 million yards per month beginning January 1964; 2 million yards of chain per month is 4 million yards or 25,000 pounds per month of tape as well as 8,000 pounds of cord. This is at the rate of 300,000 pounds of tape per year. This again would be in addition to the zipper tape quota. If the imports rise to 4 million yards of chain per month as expected, this would be 8 million yards or 50,000 pounds of tape per month plus 16,000 pounds of cord per month. In tape per year on the chain, this would be 60,000 pounds. Add any of these figures of tape on chain to the tape quota and you can readily see that within 12 months the Japanese will have 50 percent of the U.S. sales tape. Of course, we in the zipper tape industry will be bankrupt or have to go out of business before then, as well as cord manufacturers and zipper tape dyers.

The zipper tape division of the narrow fabric industry is not expendable. Now we

are making the tapes for zippers for all military and Government uniforms, as well as all the special tapes for special zippers for the space agencies. In times of national emergency, we make all types of necessary webbings and tapes for our Government, as we did in World Wars I and II, and in the Korean war. In World War II, our company was 100 percent on webbings and tapes for our Government. Should this import situation with the Japanese continue, you know that we will not be available if needed again because the industry will not exist.

Please understand that this matter is of utmost urgency and time is very, very limited. If we have to go through the same procedure on chain as we did on tape, we will be out of business before the end of this year.

I recommend as an immediate measure to restrain the Japanese at once on zipper chain exports under the long-term cotton agreement since zipper chain is in chief weight cotton and this can be done at once under the long-term agreement. This must be immediate and no evasion of the question as last time. By immediate, I mean within 10 days at the latest.

After that, we must do two things:

1. Classify zipper chain as a component part of a zipper at 50-percent duty, where it should be in the first place.

2. Reduce the Japanese quota on zipper tape from the present approximately 900,000 pounds per year to a reasonable 300,000 pounds per year (10 percent of U.S. sales zipper tape), and if this is not possible due to law or agreement, then we must have zipper tape properly classified as a component part of a zipper at a higher tariff to protect our zipper tape industry in the United States.

I hope that I have made it clear what has gone on, what is going on, and what must happen if we wish to save this U.S. industry. I shall expect you to make appointments for representatives of our industry to meet with the proper parties in Washington in the immediate future. I shall anxiously await your advice.

Kindest personal regards, I am,

Sincerely,

JOHN K. BENFIELD, Jr.

Resolution, Charles Trumbull Hayden Chapter, DAR

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD a resolution adopted by the Charles Trumbull Hayden chapter of the Daughters of the American Revolution, of Tempe, Ariz. The resolution follows:

Whereas the U.S. State Department has been and is continuing to support in every manner, including financially the unmerciful, unwarranted action of the United Nations against the anti-Communist, freedom-loving government of Moise Tshombe, of Katanga.

Therefore, by resolution, passed unanimo-ly, on January 7, 1963, the members of the Charles Trumbull Hayden chapter of the Daughters of the American Revolution, of Tempe, Ariz., request that a complete in-

vestigation of this action be demanded by the U.S. Congress, and those persons in our Government responsible for this action, regardless of their status or high position, be removed from their positions of influence. This wanton action is in complete violation of that which all true Americans hold inviolate, Freedom for all, and in addition is illegal under the terms of the United Nations Charter; be it further

Resolved, That because of this illegal action of the United Nations, the United States is justified in withdrawing its membership and support from the United Nations, which since its inception has become a tool of the Communists and not the best hope of peace for the world as it was originally represented to be.

(Mrs. E. J.) FLORENCE ROTH,
Regent, Charles Trumbull Hayden
Chapter, DAR.

Cuban Freedom

EXTENSION OF REMARKS

OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. FALLON. Mr. Speaker, I com-mend to the attention of our colleagues the following speech delivered by Mrs. Harold B. Chait, president of the Baltimore Woman's Committee for Cuban Freedom, on October 18, 1962:

SPEECH BY MRS. HAROLD B. CHAIT, PRESIDENT OF BALTIMORE WOMAN'S COMMITTEE FOR CUBAN FREEDOM, MONTHLY LUNCHEON MEETING OF THE TOWSON INNER WHEEL, THURSDAY, OCTOBER 18, 1962

Thomas Jefferson once said that an in-formed, alert American people were vital if our liberties and our Nation itself were to survive. That is why it is so desperately important that women like you, community leaders, thoughtful citizens, keep constantly aware of developments affecting our security. Our very survival hinges upon it. To paraphrase Clemenceau, America is much too important to be trusted blindly to bureaucrats.

Cuba is the most dramatic example of that danger—and I mean the Cuba of 4 years ago as well as the Cuba of today. Cuba is now a Soviet stronghold because in 1957 and 1958 there was a systematic campaign by powerful groups in and out of our Govern-ment to whitewash Fidel Castro from flaming Red to pale pink.

Ladies, I have seen documentation pre-pared as far back as 1948 citing Castro's Communist affiliations and citing specific acts he had performed in the services of communism. Long before Castro launched his revolution from Mexico, Robert C. Hill, our Ambassador to that country warned, bluntly, that Castro had surrounded himself with Communists and that Communist aid and direction was paramount in his move-ment.

Despite massive evidence compiled to prove unmistakably that Castro's revolution was a monstrous Red hoax, a combination of official policy and unofficial propaganda per-mitted the Marxist-Leninists to conquer Cuba. Few people realize the extent to which Florida was privileged sanctuary for Castro's forces during his revolution. I have heard former Castro gunrunners laughingly describe how they were sometimes given official escorts when they wheeled Castro's munitions through the streets of Miami.

The FBI was forbidden to intervene against the swarms of illegal Castro agents openly operating throughout the United States.

Today, I might add, some of those same erstwhile agents complain that it is more dif-ficult to slip arms out of the United States—arms destined for Cuban freedom fighters—than it is to slip them in Red Cuba itself.

The question of how Castro came to power might seem ancient history—but for one strange fact. History seems to have an odd way of repeating itself regarding Cuba these past few years. We make the same mistakes again and again. The same people are trying to impose the mantle of silence and ac-quiescence which imposed communism on Cuba in the first place.

Did you realize, for instance, that the mas-sive Soviet buildup in Cuba—now getting so much publicity—actually began many months ago? And for many months it was systematically swathed in silence by the peo-ple charged with guiding our struggle for survival. Do you realize that the arrival of those shiploads of munitions and troops was common knowledge in Cuban exile circles in Miami long before they were known to the American people? Do you realize that exile spokesmen who attempted to alert the American people were threatened by U.S. agents? They were told to keep silence or else. And do you realize that it was those same exile spokesmen who, refusing to bow to threats, finally succeeded in piercing that curtain of silence and alerting the American people to what was going on 90 miles from their country? It would appear that we are dependent on those Cuban exiles for knowl-edge of what is happening along our southern flank. It is significant that as late as August 30 the State Department was still doggedly insisting that it had no knowledge of Rus-sian troops in Cuba—and that the new ar-rivals were merely agricultural and industrial technicians.

From these repeatedly compounded errors have sprung new fallacies. The most mis-leading is that Cuba confronts us with only two alternatives: Do nothing or face nuclear war. Cuban freedom fighters are said to be too disunited to accomplish anything. To fill the gap between the two main poles a third view is now being leaked in Washing-ton: That is that our intelligence services have the capacity to vastly increase secret anti-Castro operations inside Cuba. Let us examine this situation more closely.

The great weakness of both the U.S. ser-vices and the Cuban liberation movement is the Bay of Pigs debacle in April 1961. Not only was it a crushing defeat for the cause of Cuban freedom—it was also the begin-ning of a disastrous new policy orientation toward Cuba. Responsible officials panicked and began to act along lines unrelated to reality. The end result was that Washington in practice reversed its sponsorship of Cuban liberation and systematically torpedoed exile-underground operations against Castro.

One of the more fascinating aspects of CIA operations in Cuba is its method of supplying arms and ammunition to Cuban liberation groups. Time and again, CIA cut-ters make their dash to Cuba and deliver such items as .45-caliber Thompson sub-machineguns and .30-caliber ammunition. On other occasions, CIA provides the patriots with .57-millimeter recoilless rifles and .75-millimeter rounds. One boat will run to Oriente Province with C-4 explosives; the needed detonators will be landed 700 miles to the west in Pinar del Rio Province.

This sort of thing, done consistently, used to baffle the anti-Castro freedom fighters to the point of hysteria. But eventually, CIA's reasoning became clear. The policy of de-liberately separating weapons from ammuni-tion and explosives from their fuses serves two purposes: (1) The munition will be stockpiled until a given signal, at which time

the underground will unite and wed bomb to fuse, rifle to bullet, and (2) until then, the munitions can't be used.

Trouble is, the shattered Cuban underground is in no shape to coordinate with anything or anybody. Where the clandestine fighters survive at all it is as a tiny, isolated fragment. It was, in fact, this insistence on coordination that really destroyed the Cuban underground. Maintaining secret liaison between a swarm of underground groups and between those groups and abroad is always a desperately risky business. In Cuba, it proved fatal.

From my own limited contact with the CIA, I would say that the Florida agents are perfectly well aware that the present system of arms delivery is nonsensical. However, it is also plain that this policy is primarily political. The agency is under orders to restrain Cuban freedom fighters at any cost—hence all the deactivated munitions. On the other hand, the CIA is charged with gathering intelligence, keeping underground groups alive—barely—and be in a position to renew major operations should the word ever be passed.

But by so doing, the CIA is bankrupting its potential for the future. Some Cuban commandos, who man the boats, wonder out loud if their bosses aren't slightly mad. Other crewmen are resigning, claiming that they are being asked to risk their lives in order to keep up a pretence that something is being done. They suspect, as one exile leader said, that all the CIA activity is designed to keep the exiles occupied and entertained.

"I made more than 20 trips," a former commando told me, "but it finally got to the point that we were delivering fuseless bombs to people we didn't know, who didn't know us, and didn't know what to do with what we gave them. I decided it was time to quit."

The fact is the 400,000 Cuban exiles and their underground supporters are quite capable of freeing their island on their own. They need only a minimum of moral and material encouragement from Washington—plus protection from interference by certain U.S. officials and agencies. If anything, the arrival of foreign Communist troops—hated by even pro-Castro Cubans—has served to actually increase chances of triggering a mass upheaval. Cuban freedom fighters are aware of this. They are determined that neither Washington nor Moscow shall have the last word in deciding Cuba's fate. They are shifting their bases from Florida to a number of points in the Caribbean. Certain Caribbean governments are now quietly extending aid and facilities to those freedom fighters—despite the opposition of the State Department. Attacks against Cuba and against ships supplying Red Cuba can be expected not only to continue but to actually expand in scope and intensity. Nor can the United States be held responsible for those acts. Who can declare war on underground freedom fighters and exiles scattered through 20 nations?

Now for the question of Cuban disunity, so often advanced as an argument for shrugging off the potential power of the Cuban liberation movement. Ladies, I can tell you that much of what has been said about Cuban disunity is mostly nonsense. Superficially, yes, there is disunity. There is squabbling between so-called exile leaders. But the vast majority of Cuban freedom fighters are fed up with the powerless exile politicians and their bickering. The issue of "batistiano" and "ex-fidelista" means far less to them than it apparently does to American reporters and officials. I have visited guerrilla training camps in Florida. I have seen young men who had lost relatives and friends to Castro firing squads. I have seen those young men training alongside other youths who had served on those same

firing squads. Neither of the two now care about past issues or allegiances. They scorn those who talk of postwar plans and shadow cabinets. These men have one purpose, one burning desire: they want to fight. They want to free Cuba.

Ladies, I suggest to you that there is great power which could be unleashed against Soviet Cuba. I also suggest that unless that power is freed from its shackles that Communist power radiating from Cuba will eventually crumble the weak and trembling governments of other Caribbean states. The future of Central America now hangs in the balance. Haiti and the Dominican Republic are in mortal danger. Venezuela is convulsed by Castro Communist subversion. Even great Brazil is being shaken to its foundations by Cuba-based subversion.

The facts bear out the contention of many thoughtful Latins that the Alliance for Progress program is no answer to this massive subversive offensive. Do you realize, for instance, that more capital has already fled Venezuela for New York and Switzerland than all the Alliance for Progress aid that is to be allocated to that country for the next 10 years? In far less than 10 years, at the present rate of deterioration, there will be no Alliance and no free Venezuela.

But the implications of Cuban liberation extend far beyond this hemisphere. It has been said, for instance, that the day the West initiates successful political warfare operations in a Communist-captured land is the day the cold war will shift in our favor. To put it another way, if and when the West successfully implements a strategy of victory which does not require nuclear weapons, it is then that the global balance of power will tip to the West.

We now have that opportunity in Cuba. Remote from the Eurasian land mass, Cuba is the Achilles' heel of communism. Victory in Cuba might well trigger a chain reaction of liberation throughout the Communist world. The power potential to free Cuba by political warfare exists. It remains for us to resolve that freemen have the right to fight against alien imperialism and oppression. Their fight is ours. With all my heart, I urge you to support the Cuban freedom fighters in their great struggle. Thank you.

More Than a Doorkeeper

EXTENSION OF REMARKS

OF

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. MARSH. Mr. Speaker, a new Member of this House is awed and humble and grateful for the friendly word of counsel and the helping hand. He learns early to appreciate the generous guidance of the Doorkeeper.

Under leave to extend my remarks in the Appendix, I include an informal sketch of this valued aid and Mississippi gentleman, William M. Miller, as seen by The Rambler of the Washington (D.C.) Evening Star in its issue of January 7, 1963, as follows:

THE RAMBLER FINDS FISHBAIT
(By John McKelway)

One of the great characters in the world today is a man named William M. Miller.

He is 53, a skilled politician, a round man who weighs about 200 pounds. He is the superintendent of a Sunday school at a Baptist church in Arlington, a successful trashman, a Democrat, the Doorkeeper of the

House of Representatives, and a native of a place called Pascagoula, Miss.

He can move fast, in spurts, at speeds approaching 10 miles an hour. His legs appear to be rather rubbery but the upper part of his body remains steady in flight. He always knows exactly where he is going.

His hair is coal black and parted in the middle. His face is moon shaped and friendly.

One of his chores is to announce the arrival of distinguished visitors in the Chamber of the House such as the President of the United States or the President of Pakistan. He does this magnificently after a struggle to pull in his stomach and puff out his chest. In a ringing cry, from the Deep South, he says, "Mistah Speakaah, the President of—"

Yet he has never been known by any name other than "Fishbait."

This started in 1933 when he arrived on the Hill with Representative COLMER, Democrat, of Mississippi. Mr. COLMER introduced Fishbait as "Fishbait" to the young man's boss in the House Post Office.

Before that, in Pascagoula, he had been called a variety of other names because at the age of 15 he weighed only 75 pounds, having been smitten in childhood by a collection of illnesses (which probably toughened him up for the rough-and-tumble of the House). In those days, he was called "Alligatorbait," "Shrimpbait," "Garbait," and "Crabbait."

Fishbait once received a letter from Pascagoula from a constituent of Mr. COLMER's. It was addressed only to "Fishbait, Washington, D.C." The letterwriter could not think of his Representative's name. He remembered Fishbait and so did the local post office.

As Doorkeeper, Fishbait commands around 300 employees on a payroll of \$1.3 million. His domain includes all the other doormen, the pages while on the floor, the Document Room, the Folding Room, two cloakroom snackbars, three barbershops, and, in his words, "six ladies' retiring rooms."

It is also his responsibility to station a man outside the Prayer Room of the Capitol to prevent any interruption if it is occupied by a Member of Congress.

He also runs a trash collection service. Under his supervision, since 1956, 13 million pounds of wastepaper on the House side of the Capitol has been picked up and baled and sold. A total of \$92,000 has been returned to the Treasury and President Kennedy recently told Fishbait it was the sort of thing he liked to see.

Ol' Fishbait, he sharp. His is an elected office. Within a week, a newly elected Congressman gets a letter from Fishbait. Fishbait announces he is ready to serve him in any way. He signs his letters, "Yours for Service."

Since the election, he has been memorizing the names of the 67 new Congressmen. He has a picture of each pasted in a notebook. Within 2 or 3 hours after the start of the first session on Wednesday, he says he will have every name and face cold.

He tells new Members where to sit, how to get the floor, how to get something printed in the CONGRESSIONAL RECORD. He knows everything that's going on.

He was first elected Doorkeeper in the 81st Congress by the Democratic majority. He was minority Doorkeeper in the first 2 years of the Eisenhower administration, and then got his old job back which he's held ever since. He's up for reelection tomorrow, by the Democratic caucus. Fishbait is unopposed.

"A good Congressman," says Fishbait, "has got to work at his mail, be on time, do his committee work, get to the floor in time for the opening prayer.

"You find out about people in the House. And they don't fool the people back home." Or Fishbait.

Philosophy of Democrats Lights Way

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Detroit (Mich.) News of November 24, 1962, which speaks for itself.

The article by Mr. Ralph McGill is perhaps one of the clearest and most concise statements of why the people of this country return again and again to support the Democratic Party.

The article follows:

PHILOSOPHY OF DEMOCRATS LIGHTS WAY (By Ralph McGill)

Driving up from Alabama, and cutting across to Warm Springs, Ga., one sees the relics of a South that was—the one which stirred Franklin D. Roosevelt to anger and to action in behalf of a depressed people, whose cotton economy was ended.

There are the lonely chimneys in the fields. Once a tenant or sharecropper house was there. There are still old shacks, cabins and barns, dilapidated, vine-grown, windowless, weather-stained, and broken.

The faded men and women in faded denim, the children who played in the swept yard or picked cotton and chopped weeds, are a part of a past unknown to today's generation.

There was no tenure. There was a surplus of croppers and tenants. They were, with few exceptions, ruthlessly exploited by landlords and stores.

In the Cotton South's depression years that began with the boll weevil in the 1920's, these persons were a cloud of witnesses testifying that for many thousands of Americans the misery, squalor, and hopelessness of the human condition was as bad in the rural slums as in the cities.

They witnessed, too, another fact. The country was so lost in fear and grief, so bedeviled was it with unemployment and the tears of the thousands whose farms and homes were sold because mortgages went unpaid, that there was no mechanism by which the Nation could help human beings in trouble. And to many it seemed no one cared.

They walked the roads—husband, wife, children. They piled their pitiful goods on a mule-drawn wagon—a stained and dirty mattress, sagging springs, a few old quilts, a pot-bellied stove, a straight chair or so and moved on, hungry, hollowed and defeated. (John Steinbeck wrote about their mid-western counterparts in "The Grapes of Wrath.")

Today, as one drives the roads one sees the remaining evidences of a time that was—the shacks, barns, chimneys—and the new, prefab houses dotting the edges of fields where once cotton grew and the mules and croppers moved.

One notes, too, the electric wires that run to the farmhouses and the bright new prefabs of those who work in town, but have enough land for a pig, some chickens, a garden.

There is always the electric wiring, the TV aerials, the washing machines on the front porch, the pump in the well. (To the young generation "the ole days" are those that existed before TV.) To young executives in their late twenties and thirties, the depression years are something that dad or granddad talks about.

It was in the simple, plainly beautiful cottage at Warm Springs that Franklin D. Roosevelt signed the REA bill—the Rural Electrification Act. The signing took place in the cheerful little combination living room. The date was May 11, 1935.

Roosevelt had become interested in electric power when he paid the cottage bills. They were about four times the rates charged in New York. He saw that none of the farms on the roads he drove had electric power.

He thought of installing a small generator at a suitable place on a nearby stream. The site was under lease—but unused. A sort of rage grew in his mind. When it cooled he set into motion the forces which drew the REA Act and made it law.

In that year 1 farm in 10 in the United States had electric power. And in the South there were large areas where no farm at all had lights. The ratio was roughly one in a hundred.

There are men today who are Democrats because they remember the day "the lights were turned on."

There are older men and women who, when the city demagogues rant and rave about the Kennedys, the Trumans, the Roosevelts, quietly and patiently vote the Democratic ticket because they recall when the pump went in a well, when running water came to the kitchen, when a man could sit at night before his fire and read his Bible or his newspaper.

There are those today who say, glibly, that there really is very little difference between the two parties. Superficially this is true.

But there is a constant thread of philosophy that pushed through REA—and the forces of greed were not easily displaced.

It is the philosophy which brought about the Soil Conservation Act, the conservation legislation, the TVA, which established a power yardstick, made fertilizer available, and provided progress in a long valley dying of floods and erosion.

It is the philosophy which guaranteed savings accounts, made farm- and home-owning credit plentiful—the story runs on.

One thinks of this—remembering the depression years—riding through REA-P.D.R. country.

Bulwark of Freedom

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD an editorial from the Ontario, Calif., Daily Report of January 3, 1963, commenting on a recent statement by FBI Director J. Edgar Hoover in the FBI bulletin with regard to the role of law enforcement today and containing the always timely warning of the threat of communism to the security of the United States:

BULWARK OF FREEDOM

"Communism remains a constant threat to world peace and a threat to the priceless heritage of freedom."

These observations are made by J. Edgar Hoover, Director of the Federal Bureau of Investigation, in the January issue of the FBI Bulletin. And observations by Director Hoover merit the close attention of every citizen of the United States.

Most of Mr. Hoover's statement in the Bulletin is in regard to the role of law enforcement in times of crises.

"The year 1963 dawns on a deeply troubled world," Mr. Hoover writes. Communism jeopardizes world peace and the posterity of mankind. Communists continue to push forward aggressively in many areas seeking new lands to rule and additional people to regiment.

Man—the fallible being that he is—now holds in his hands a destructive force of such great potential that its very existence poses the question of whether or not mankind is to have a future. It is no wonder that people everywhere fear the worst, knowing as they do that a militant force dedicated to world rule possesses such destructive power.

In this country, Americans are justifiably alarmed at the ever-present threat of communism to the priceless heritage of our great land. They view with grave concern the tactics of the Communist Party, U.S.A., to undermine our system of justice. They recognize the imminent danger of communism's encroachment, and they deplore the dogma of Communist dictators to rule all men and all nations.

In times of peril, the rallying strength of our country stems from its democratic safeguards. Our faith and trust are anchored in the God-inspired hallmarks of Americanism—truth, liberty, and justice. From these ideals springs the determination to protect and preserve our way of life from tyrants near and far. From these ideals comes the will of a united, free, and righteous people to stand firm against godless despotism.

Law and order are bulwarks of freedom. Law enforcement must relentlessly promote the perpetual existence of this honored axiom. In this new year, we must labor with unswerving devotion and we must be firm and resolute in the face of adversity. Let us keep fully appraised of our country's needs and fully informed as to our individual and collective responsibilities.

International tension should not for a moment divert our attention from vigorous and effective law enforcement. Not only must we shoulder additional burdens or hardships, but we must also be sure the operations of criminals and lawbreakers are detected and the perpetrators apprehended. There can be no breakdown in the respect for law.

In the past, law enforcement has repeatedly demonstrated its ability to serve our Nation above and beyond the call of duty. In the fight against crime and subversion, we cannot afford to do less.

Let all officers resolve to make this a distinctive year in the annals of law enforcement. Let no community of our land become a haven for enemies of society. Rather, let 1963 come to be known as the year in which this Nation made marked progress toward its goals of freedom, abundance, and equal justice for all.

No-Show Plan

EXTENSION OF REMARKS

OF

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. MACDONALD. Mr. Speaker, in March of 1962 the Civil Aeronautics Board put into effect a program penalizing passengers who missed their plane connections. Under the no-show plan, passengers who failed to fulfill their reservations were fined from \$5 to \$40. As I have stated on several occasions,

this plan is loaded in favor of the airlines and is unfair to the traveling public.

I am happy to inform my colleagues that the no-show plan will expire on February 1 of this year. Although I commend the dropping of the passenger penalties by the airlines, it is indeed regrettable that the Civil Aeronautics Board did not end the fines at the end of the original 6-month experimental period. It is significant to note that most airlines found the passenger ill will with the plan worse than the no-show problem itself.

The sole benefit to come out of this notable experiment was the fact that much of the reservation problems of the airlines were found to stem from the internal practices of the airlines themselves. A recent Wall Street Journal account estimated that 90 percent of the no-show problem was caused by the airlines, not the passengers. I urge the Civil Aeronautics Board to continue to investigate this problem.

It is a warning signal that this plan which hurt the individual passenger was dropped only after pressures exerted on the Civil Aeronautics Board, which is charged with protecting the public interest, by the airlines who understandably are interested in the private interests of their owners and shareholders.

The Futility of a Third Party

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I wish to include a letter to the editor appearing in the Santa Ana (Calif.) Register, which was written by Mr. Robert A. Geier, my former administrative assistant.

At a time when there is a great deal of talk about forming a third party, I believe this letter analyzes the futility of such a move:

DEAR MR. EDITOR: Anyone who heard me speak during the recent campaign knows that I believe in the conservative principles espoused by the proposed conservative party in California. Those who call these principles extreme are either seeking votes or other evidence of public approbation, or are ignorant of what made the United States the greatest nation on earth. And yet there are some who believe in America who are extreme, not in what they espouse but in the manner in which they defend it.

One may present facts and do it accurately, but if the conclusions reached on the basis of those facts are not logical, then the charge of extremism might be well justified and this then becomes harmful to the cause for which we fight.

It is true that both parties have promoted the welfare state, and without thinking in practical terms one might feel that the only solution is to form a third party. The argu-

ment is made that both the Republican and Democrat Parties were once third parties. However, the first and second parties at that time were not as well organized and as strong as they are today, and communications were extremely slow.

There is a difference between the parties' members. Republican Members of Congress, when they controlled the Congress in 1948, produced the largest budgetary surplus in U.S. history, \$8.4 billion. Democrats, when they controlled Congress, ran up 93.4 percent of the national debt. Democrat Congresses approved deficit spending budgets or deficiency appropriations which resulted in deficits during 20 of the last 27 years.

There were of course some Republicans who voted for some of these spending sprees, just as there were some Democrats who voted against them, but the majority of Democrats by far voted for them and the great majority of Republicans voted against them.

The ratings given by the Americans for Constitutional Action prove without any doubt that Republicans in Congress are much more conservative than the Democrats.

To me this proves that there is a chance of conservatives taking over the Republican Party but only if we use our heads and quit fighting among ourselves.

The best way to win is to form a conservative group as is being done, but stay registered in the Republican Party and get the conservative Democrats to register in the Republican Party. And before anyone gets his mind closed, let me explain.

In the primary in 1962, liberal Republicans were nominated for some offices and then in the general election there was no choice for the voters. These liberal Republicans were nominated because too many conservative Democrats could not vote for a conservative in the primary and neither could conservative independents. In the congressional race, conservative Democrats had the chance to vote for Sam Campbell but the independent's didn't. And too few conservatives like Sam run for office on the Democrat ticket.

Now if all the conservatives join the third party and register therein, they will not be able to vote for either a conservative Democrat or a conservative Republican, and this will assure that a liberal will be nominated on both tickets.

Sure, I know that the conservatives can then nominate one of their own—but they can't elect him. So what's going to happen to Jimmy Utt, H. Allen Smith, Glen Lipscomb, and, if they run, Johnny Rousselot and Eck Hiestand? They will be defeated in the primary by liberals.

One might say that these conservative office holders should join the conservative party so that they can get the conservative votes in the primary. Now that would be rather foolish, wouldn't it? It would be a noble gesture but ineffective as far as having conservatives in office because in the general the liberals on the Democrat ticket would be opposed by a Republican and a conservative which would split the vote and enable the liberal Democrat to be elected.

On the other hand, the formation of a conservative group, all registered in the Republican Party, will give that group a tremendous amount of power—a real balance of power—to assure that conservatives are candidates and get nominated. Then they can all really get together and work to make them win in the general election.

It is only the primary that makes any difference as to registration. In the general any registered voter can vote for any candidate, but if the conservative isn't nominated, he surely can't win the general.

Freeman Forges Ahead

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. BERRY. Mr. Speaker, the international thunderheads seem to be hiding the glow of the New Frontier dawn over agricultural trade with the Common Market.

A year ago today, the New Frontier cowboys were riding around the Nation telling the American people that if an unwilling Congress were only forced to turn the tariffmaking power over to the President, he would increase our exports many times over.

Secretary of Agriculture Freeman was telling the farmers that the Trade Expansion Act was necessary if the American farmer expected to increase his sales to the Common Market countries.

The New Frontiersmen, who have been able to sell their program of centralization of all legislative, executive, and judicial power in the hands of the President, sold this nefarious plan to the Nation and to the Congress. Now, less than 6 months later, we find them talking out of the other side of their mouths.

In his testimony before the House Ways and Means Committee last year, the Secretary of Agriculture, on page 840 of the committee report, testified:

The potential for expanding foreign trade is of vital importance in the years ahead. It is especially apparent in Western Europe, particularly in the six countries of the Common Market. We have had a taste of what prosperity can do to our export sales in that area, and would like more of it. During the past 5 years, our sales of farm products to EEC countries have expanded 29 percent. In fiscal year, 1961, our agricultural exports to EEC came to \$1.1 billion, which was about one-third of our total dollar exports.

Again, on page 842, the Secretary is reported as having testified, "From most of these commodities, which account for about 70 percent of our agricultural export trade to the community, we can expect our exports to expand in the years ahead."

On page 843, the Secretary, still attempting to sell the so-called Trade Expansion Act to the Congress, testified as follows:

The legislation before this committee would give us a splendid opportunity to do some swapping of concessions. But we must try to make certain that any swap with them includes assurance that reasonable terms of access will be provided for our agricultural products.

Later, he said:

Our ability to support these forces and to help direct the path of the Common Market trade policies in the liberal direction will depend to a large extent on the new authority of the proposed Trade Expansion Act.

Later, he said:

Furthermore, we have ample evidence that a liberal trade policy helps American farmers

to capitalize on their export market potential.

That, Mr. Speaker, was before the passage of the Trade Expansion Act, when they were putting the heat on Congress to pass the bill. Now, less than 6 months later, when they have their so-called liberal trade policy to help the American farmer to capitalize on his export market potential, what is this great exponent of freewheeling and free trade saying? I would like to quote to you from a speech he made at the annual meeting of Farm Cooperatives in Miami Beach, on January 8, 1963.

In that speech, he said:

The vital nature of our export trade in farm products causes us to be deeply concerned that protectionist tendencies are appearing today in the common agricultural policy of the European Common Market.

He said further:

Protective devices, adopted or proposed by the Common Market center, around the use of a varying levy fee are a serious threat to as much as \$600 million in our annual agricultural exports to present and prospective members of the Common Market.

It must be just a little embarrassing to the great and wise planners of all political and economic programs, both nationally and internationally, to find that in less than 6 months, the bubble they painted as a gold nugget has blown up in their face. Instead of doubling our agricultural exports, as Mr. Freeman predicted 9 months ago, these exports for cash to the Common Market countries are actually being slashed in half, while the farmers of America are paying the price for another New Frontier experiment.

The thing the planners downtown cannot understand is that whenever a country wants to protect their industries or farmers they will do so without asking us. After it is too late our planners will probably discover that the people of these countries are not a bunch of Boy Scouts.

Order Out of Chaos in the Congo

EXTENSION OF REMARKS

OF

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. UDALL. Mr. Speaker, at a time when Americans are seeking an understanding of events taking place in the Congo, the editor and publisher of the Arizona Daily Star has written a profound editorial, based on his personal observations in the Congo, worthy of the attention of all of us. The editorial follows:

[From the Arizona Daily Star, Tucson, Ariz., Jan. 6, 1963]

AMERICA, THE CONGO, AND KATANGA

(By William R. Mathews)

Recently the Arizona Republic of Phoenix published an editorial headed, "America's Day of Infamy," in which it took to task our Washington administration for its official conduct in the Congo and Katanga.

It makes almost hysterical charges when it writes, "For the first time in our history the United States has deliberately set out to destroy the liberty and independence of another people."

"Without U.S. support and direction, this brutal destruction of the rights of the people of Katanga could never have occurred. We have abandoned our traditions and our principles. We have copied the Soviet Union's bloody action in Hungary by mounting and directing the same sort of a mercenary attack against the freely chosen Government of Katanga. This is the final abandonment of the ideals of our country to the expediency of the conscienceless United Nations."

These heated charges bring back memories of my brief stay in the Congo, including at Leopoldville and Elisabethville, in 1961. When our group of editors was there, the astoundingly beautiful and modern city of Leopoldville was policed by United Nations troops. At that time the Katanga issue was getting hotter, but the biggest danger came from Stanleyville, where a Communist sympathizer by the name of Gizenga held forth. It was impossible to go outside of Leopoldville save by plane. The American Embassy was trying its best to bring the warring factions together. We talked for an hour with President Kasavubu, and took a military briefing from General Motuba.

When we flew south we stopped at Elisabethville, where Tshombe maintained order. While we were there we saw Pan-American planes come in with troops from India to add to the U.N. forces.

It was quite evident that the former Belgian Congo was in chaos, and that the only force capable of maintaining order outside of Katanga was the United Nations force. It was also quite evident much of the prosperity of this former Belgian colony has its roots in the mineral wealth of Katanga. Unless the Congo included Katanga, with its superior leadership of whites and blacks, as well as its mineral revenue, the Congo would collapse into a state of anarchy, which would require the authority and funds of a great power to restore law and order.

The success of Katanga in maintaining law and order has been made possible not merely by its wealth, but by the good relations that always have existed there between the whites and the blacks. Tshombe could not be a success without the excellent advice he has received from the whites, who, in turn, have kept the mines operating.

Leopoldville, on the other hand, had endured a reign of terror deliberately precipitated by a tiny group of Belgian Communists, three of whom belonged to the Belgian Parliament. Most of the whites had fled from it and from other cities in the interior. It was quite evident that the blacks lacked the ability, prestige, and knowledge to run their government alone. The American Embassy was trying to fill the gap, while United Nations troops maintained order.

All of this American effort was indispensable, if the Congo was to be kept from going Communist. If it were not for the presence of American authority, supported by United Nations troops, some other great power would have had to step in the breach. The Soviet Union was ready and anxious to do the job. We broke the power of their stooge, Gizenga of Stanleyville. We furnished the money to pay the expenses of the United Nations troops, which have acted as an instrument of American power.

Evidently progress has been made. We Americans have been paying the bill. We have found out that we will have to continue to pay the bill, unless Katanga remains under the authority of the Leopoldville government, as it was before when Belgian authority was in power.

Katanga has no more right to secede from the Congo than Mississippi has from the

United States of America; no more right than the South had the right to secede from the Union in 1861. The Leopoldville government has the right, indeed the duty, to see that Katanga does not secede. That cannot help involving the United States and the United Nations.

Unless a viable self-supporting nation is developed out of this Congo mess, the United States is the party that will have to pay the bill for its deficits and its chaos. If United Nations troops are not used, then American troops must be used. The minute we flunk out, the Communists will take over, because they will be the only authority to whom the black people of the Congo can look for help.

This is a matter of American self-interest. Things will not be changed by pulling out the crying towel and shedding tears over our mistaken policy of wrecking the empires of our allies. A situation, not a theory, confronts us. We have to make the best out of what has been a tragic mistake.

As to the shocking charges the Republic makes, the only thing true in them is that, after exhausting all peaceful means, we have, and should have, taken what measures are necessary to bring Katanga under the authority of the Leopoldville government. We have not abandoned the ideals of our country; we have not sought this brutal destruction of the rights of the people of Katanga. I repeat, if we had not used U.N. troops, we would have had to use American troops. The fact that President Kennedy has sent an American military mission there within the past 10 days gives some indication of that.

The casualties have been trivial. No American principles have been violated. We might remember that when we took over the Philippines, we had to wage a long guerrilla war, before we could restore law and order, and finally make possible an independent government of the Philippines. That is all we are trying to do in the former Belgian Congo. If we do not do it, someone else will; and that power will do as we are trying to do—keep rich Katanga within whatever government is established in Leopoldville.

U.S.S. "Maryland": Diplomatic Cruises

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. FLOOD. Mr. Speaker, in the Appendix of the CONGRESSIONAL RECORD of August 29, 1962, I quoted a most interesting article by Harry W. Frantz of the United Press International, which described the 1922 centennial mission to Brazil headed by Secretary of State Charles Evans Hughes. The naval unit accompanying Secretary Hughes during his historic visit at Rio de Janeiro consisted of the U.S.S. *Maryland*, flagship, and the U.S.S. *Nevada*.

In a sequel to the story mentioned above, Mr. Frantz at Christmas 1962 tells of some of the subsequent cruises of the *Maryland*.

The news story follows:

U.S.S. "MARYLAND": DIPLOMATIC CRUISES

(By Harry W. Frantz)

In the 1920's, the battleship *Maryland*, flagship of the U.S. Fleet, made goodwill cruises

to South America which gave it a memorable importance in the evolution of inter-American relations.

The *Maryland* did the honors for the United States at the international naval review in Rio de Janeiro harbor in September 1922, on the occasion of the Brazilian centennial celebration.

A week later it carried Secretary of State Charles Evans Hughes from Rio to New York, simultaneously making record speed tests of new electric turbine engines. A United States-Brazil naval agreement soon followed.

In December 1928 the *Maryland* took President-elect Herbert Hoover from San Pedro, Calif., to Valparaiso, Chile, on the Pacific leg of Hoover's goodwill tour of Central and South America.

During that voyage Lt. Comdr. Harry W. Hill, a gunnery officer, served as liaison to the 20 newsmen and 7 cameramen aboard. He edited a book logging the cruise to which each of the press party contributed chapters or photos.

This Christmas Adm. Harry W. Hill, now retired, has sent to his shipmates of 1928 an illustrated booklet about the battleship *Maryland* which revives memories of those long past events.

Although the booklet does not say so, Hill after the 1928 cruise gradually became one of the Navy's greatest experts in the evolution of amphibian warfare, and he was in the top echelon of naval commanders in decisive engagements at Tarawa, Iwo Jima, and other Pacific islands which wrested control of the Western Pacific from Japan.

He also served for a time as Superintendent of the U.S. Naval Academy, and was host to many Latin American naval visitors.

Hill recounts that an armored cruiser named for the State of Maryland was commissioned in 1905, renamed the *Frederick* (a Maryland city) in 1916, and served with the cruiser and transport service during World War I.

The battleship *Maryland*, which was to become well known in South American ports, was commissioned on July 21, 1921, served with outstanding distinction in the Pacific during World War II; was decommissioned in 1946, and scrapped in 1959.

The *Maryland's* length was 624 feet, beam 97½ feet, displacement 31,500 tons, speed 21 knots. Its armament was eight 16-inch, twelve 5-inch, and eight 5-inch antiaircraft guns.

Considered a masterpiece of advanced naval construction in its day, battleships of the *Maryland* type have become entirely obsolete since World War II.

Among the 20 newsmen who were shipmates of Hill and President-elect Hoover on the 1928 cruise to Valparaiso were some of the most distinguished writers in North American journalistic annals.

Preeminent, perhaps, were Edward Price Bell, of the Chicago Daily News, Will Irwin, of the North American Newspaper Alliance, William Phillip Simms, of the Scripps-Howard newspaper chain, L. C. Speers, of the New York Times, and Mark Sullivan, of the New York Herald Tribune service.

Bell had probably interviewed more chiefs of state than any other newsmen in the world, and had recently published "World Chancellories."

Will Irwin was the star reporter, second to none, of World War I. He contributed to Hill's *Maryland* cruise book a story about the Neptune ceremonies at the equator which is probably the best documented account of King Neptune's court ever written.

Speers had already worked 18 years for the New York Times, and was famed for his coverage of the Teapot Dome and other oil scandals of the early twenties, and his reviews of United States-Mexican relations.

Simms had been the first U.S. correspondent accredited to British Army headquarters

during World War I, manager of the United Press office in Paris, and a worldwide traveler on special news assignments.

Mark Sullivan is still remembered as the ablest political analyst of his time, and a writer of brilliant books on the political and social history of the United States.

Merl Lavoy of Pathe News, dean of the cameramen, had covered every European front in World War I, and before his disappearance in Africa a few years ago filmed innumerable scenic spots from Aconcagua to Mount McKinley, the Yangtze Gorge to the South African national parks.

Washington Report

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of January 12, 1963:

WASHINGTON REPORT

(By BRUCE ALGER, Fifth District, Texas)

EIGHTY-EIGHTH CONGRESS OPENS

In one of the most critical periods in the history of mankind the 88th Congress convened on Wednesday. Once again 435 elected Representatives of the people to the House of Representatives swore to "support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same." Within minutes of taking this oath the Members engaged in the first debate and vote testing our allegiance to the Constitution in letter and spirit—the administration-backed proposal to pack the Rules Committee. The resolution passed 235 for (207 Democrats, 28 Republicans) to 196 against (148 Republicans, 48 Democrats). I voted against the proposal because it violates the constitutional conception of the separation of powers. The President, in my opinion, exerted undue influence on Congress to get his way and he will now control the Rules Committee whose primary function is to determine the rules under which legislation is brought to the floor. Past history shows us that when the radical-liberals have had such control all the welfare state and social legislation is sent to the House under gag rules with debate strictly limited and all amendments prohibited. The Rules Committee cannot block legislation. House rules contain adequate provisions for bringing to the floor any measure the leadership wants to bring out.

Preceding the rules votes the House was organized and every Democratic Member voted for liberal leadership which insures that all important House committees will again be headed by the most liberal Members in Congress. Just to remind you what Democratic organization of the House means and for which every Democrat votes on this first vote, the key committees of Education and Labor, Judiciary, Government Operations, and Public Works, among others, will again be headed by chairmen who have 100-percent Americans for Democratic Action voting records.

Big battles ahead will concern tax legislation, medical aid under social security, raising the debt limit, Federal aid to education, and expanded Federal programs and control. The President will begin a series of messages on Monday with his state of the Union mes-

sage. Most of the bills embracing the President's program will come before my Committee on Ways and Means, emphasizing again the importance of this powerful committee on which I represent the people of Dallas County.

TEXAS REPUBLICAN DELEGATION

The Texas Republican delegation in Congress, consisting of Senator JOHN TOWER, Congressman Ed FOREMAN, and me, held our first meeting, luncheon with the press representatives of Texas newspapers and wire service. Ed FOREMAN is going to be a great Congressman and I appreciate the honor and privilege of serving with him in the House. He was my first guest on my 1963 television series, the first of which will be telecast on WFAA, Sunday, January 20 at 1:15 p.m. Congressman FOREMAN and I divided the two Republican Committee appointments with Ed serving on the Republican Congressional Campaign Committee and giving me the responsibility of continuing service on the Committee on Committees. At the moment I am doing my level best to get Congressman FOREMAN appointed to the Armed Services Committee, the committee of his choice.

ALGER LEGISLATION

The Alger yardstick, "Is it a function of the Federal Government—can we afford it?" formed the basis of the 11 bills and resolutions I introduced on the first day of the session. This is my way of doing my part as your Representative to preserve your freedoms and the free enterprise system. My bills are: H.R. 263, to rescind and revoke membership in the United Nations; H.R. 264, to make labor unions subject to antitrust laws; H.R. 737, to provide for a flat percentage tax instead of present income tax rates; H.R. 738, tax reduction and reform (Alger-Baker-Herlong bill); H.R. 739, to eliminate withholding of income tax from wages and salaries; House Joint Resolution 5, to prevent treaties and international agreements from superceding the Constitution (Bricker amendment); House Joint Resolution 6, to prohibit the Federal Government from engaging in business in competition with its citizens; House Joint Resolution 7, enforced balanced budget; House Joint Resolution 8, expressing the will of the American people and their Government in winning complete victory over the worldwide Communist conspiracy (the victory resolution); House Concurrent Resolution 4, emphasizing the sovereignty of the United States by protecting American lives and property anywhere in the world; House Resolution 26 to establish proper representation for the minority party in House committee staff appointments.

Legislation in these fields is basic to reestablish responsible, constitutional limited Government of, by, and for the people. My bills may not be the complete answer, but they form the groundwork for discussion. If the committees will schedule hearings the best brains in the Nation within and without Congress, could use my proposals as a basis for discussion. I hope these proposals will receive widespread publicity across the Nation so the people will express themselves on the importance of action on these matters. My conservative creed: the Government cannot successfully nor constitutionally, feed, clothe, house, provide jobs, medical care and basic necessities for the people.

CURRENT EVENTS

Why? Why? Why? The world was horrified at news stories of innocent women shot down by U.N. troops in Jadotville in the Congo. The pitiful picture of a husband of one of the murdered women asking "Why?" aroused in all of us deepest sympathy and stirred in our minds the same question. Why are U.N. troops, an organization dedi-

cated to peace, forcing war on Katanga? Why does U.S. policy permit us to support such action? Adequate answers have not been given by the U.N. or the Kennedy administration. U.S. foreign policy is being tailored to meet U.N. approval and the U.N. is packed against us with the Communist nations and the so-called neutrals who invariably vote with the Communists, in the majority. While we, the American taxpayers, almost alone finance the U.N., it is being used as a propaganda forum for the Soviet Union and its stooge nations, and millions of dollars of our tax money is actually being channeled to Cuba whose Government is doing its level best to involve us in a war with the rest of the world. The U.N. influence has never been used in the interest of self-determination of people, a must in the cause of freedom. The U.N., as it is presently constituted, does not serve the self-interest of the United States, is a threat to our sovereignty, and its heavy financial demands upon us endanger our solvency and could be a contributing factor to bankrupting the United States. For these reasons, I introduced H.R. 263 to withdraw from the U.N. and to strengthen our alliances with those nations determined to stand with us in the cause of freedom.

God-fearing Americans were heartsick at the news of 30 Christian peasants in Russia being refused asylum by our Embassy in Moscow. Unfortunately, there was nothing we could do to help these unfortunate people who are being denied the right to worship God by the anti-God Government of the Soviet Union. We cannot dictate to that Government how it shall operate in Russia. We can, as I have suggested, encourage and assist satellite nations which have been enslaved by the Soviet to revolt which, in turn may inspire the Russian people themselves to throw off the yoke of Communist slavery. We can, as I have advocated, break off diplomatic relations with a nation which denies its people the right to worship freely and which is attempting to spread its antireligious doctrine to the whole world. If we refused to recognize the Communist Soviet Union, we would take away from that ruthless dictatorship the respectability we have given it through recognition and its acts of violence, murder, and suppression of the rights of man, would be exposed in all clarity.

"The spirit of truth and the spirit of freedom—they are the pillars of society"—from "Pillars of Society" by Henrik Ibsen.

Equal Pay for Equal Work

EXTENSION OF REMARKS

OF

HON. DAVE MARTIN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. MARTIN of Nebraska. Mr. Speaker, I have introduced a bill today which will go far toward insuring that the women of America will receive equal pay when they are doing work which is equal to that which is performed by male employees. The concept of lower wages for female employees is both antiquated and ridiculous in this day and age. Today, the women of America, thanks to our splendid educational system and the increasing trend toward automation and labor-saving devices, are just as capable of performing the bulk of the office and industrial tasks as are the men. Thus, many of the logical reasons for a differ-

ential in pay have been narrowed and in many cases they have even disappeared.

As you know, Mr. Speaker, an equal pay bill, H.R. 11677, was passed by the House of Representatives on July 25 of last year. Thanks to a number of amendments which were offered by my Republican colleagues and accepted by the House, the bill as enacted was basically a good bill. It was then considered by the Senate on October 3, 1962. Unfortunately, it was considered and passed as an amendment to an embassy construction bill, H.R. 11880. As a result, it could not go to the appropriate conference so that the differences between the House and Senate version could be ironed out.

The bill which I have introduced today is basically the same bill which was passed by the House last year. It contains the safeguards with respect to the investigative authority of the Secretary of Labor. It also provides for the trial of all violations in a U.S. District Court rather than before an administrative tribunal. Finally, the provision that there shall be equal pay for equal work is retained.

I believe that the modifications which I have made in the bill, although minor in nature, will both strengthen it and help it to receive favorable consideration.

For example, I have substituted the word "establishment" for the term "place of employment." This change nails down once and for all the often-expressed congressional intent that the provisions of this bill will apply only within and on an individual plant or store basis. Jobs in one plant or store will not be compared to jobs in another store or plant.

In section 4 I have also added the phrase, "or where such payment is attributable to other reasonable differentiation based on a factor or factors other than sex." This phrase appears in a number of State equal-pay statutes. By adding this phrase it is then no longer necessary to list in detail each and every valid reason that would justify a disparity in wage payments. For whenever an attempt is made to list exceptions, there is also the danger that subsequent statutory interpretation will construe the partial listing to mean that those exceptions and only those exceptions that are listed will be considered valid.

Section 5(b) has also been reworked so that it is absolutely clear that the Secretary's investigative authority is limited to those facts, conditions, practices, and matters that are specified in and directly relate to the charge. I am sure that no one wants to arm the Secretary of Labor with a wandering-minstrel type of investigative authority. One of the touchstones of our present legal system is that the accused is advised in advance of the charge that has been made against him. We do not permit the police or the FBI to move in on a citizen, or to invade his place of residence or business; there to stay until such time as an exhaustive and never-ending in-

vestigation discloses some type of violation. This smacks far too much of the police state. Certainly this concept should not be applied in the name of equal pay for women.

I have also established a 6-month statute of limitations. This corresponds with the statute of limitations in the Taft-Hartley Act. The National Labor Relations Board has not experienced any difficulty in operating under this rule. In fact, it has proven to be a blessing for it automatically weeds out all stale claims.

In section 6(d) I have eliminated the reference to double pay and have substituted a provision which calls for the payment of back wages plus 6 percent interest. Assessing double pay can be only construed as a penalty or a fine whereas the concept of backpay is instituted in an effort to make the employee whole for any loss that she may have suffered. The addition of a reasonable amount of interest along with the award of backpay further implements this policy of complete restitution without moving into the field of a penalty or a fine.

Finally, Mr. Speaker, I have completely eliminated section 8 from the bill. This section provided special blacklisting penalties for any employer who does business with the Government. I am sure that we have all been troubled by the recent trend which some have characterized as an antibusiness trend. All too often a concept of special and exceedingly harsh penalties has been applied to business. Business has been treated as if it is some type of "Peck's Bad Boy." It is unnecessary and unwise to permit this special-treatment concept to creep into this bill. Moreover, it is an exercise in forensic vindictiveness for under the related provisions of this bill, an employer cannot be penalized in this fashion unless he has been found guilty of a violation by a U.S. court and then refused to comply with an appropriate court order. In other words, he would have to be in contempt of court. We all know that the courts can take care of themselves if and when an individual or a company has the poor judgment to become contemptuous.

It is my sincere hope that the bill that I have introduced will be speedily considered by the Education and Labor Committee. As a member of that committee I will do everything that I can to see that this is done. I urge my colleagues to vote in the affirmative when it is brought before the House for approval.

Transmission of Electricity

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. MOSS. Mr. Speaker, today I have introduced a bill to allow transmission

of electrical energy in interstate commerce at normal voltages in excess of 230,000 volts. A similar bill has been introduced today also by my good friend, the distinguished Senator from California, Hon. CLAIR ENGLE.

The new bill, similar to one offered in the 2d session, 87th Congress, would amend the Federal Power Act so as to require Federal Power Commission authority for the construction, extension, or operation of certain facilities for electrical energy transmission in interstate commerce.

The old bill, H.R. 12181, was referred to the Committee on Interstate and Foreign Commerce, but was not taken up before the end of the session.

In recent years, there have been great advances in the techniques of transmitting electric power. Until recently, the longest economical transmission distance ranged from 200 to 400 miles at maximum voltages of 230,000. For several years, there have been lines operating in Europe and Russia at greater distances and higher voltages. An Interior Department task force which recently studied the possibility of an intertie between the Pacific Northwest, where power can be produced economically in hydroelectric plants, and the Pacific Southwest, where the need for more electric energy at low cost is acute. The Interior Department study points out that electricity now can be transmitted for more than 1,000 miles at 750,000 volts.

Construction of such lines would have a tremendous impact upon the power utilization and economic growth of our country. Experiments have been conducted in the United States on transmission of extra-high-voltage power. Recently it was announced that such a line will be built in northern California and southern Oregon to interconnect the systems of Pacific Power & Light Co. and Pacific Gas & Electric Co. The Federal Power Commission has ruled by split vote that the terms of the Federal Power Act do not authorize the Commission to determine whether such extra-high-voltage lines are compatible with the public interest, convenience, and necessity.

The tremendous effect of such extra-high-voltage lines demands regulation by the Federal Power Commission. The bill provides that a certificate of convenience and necessity must be obtained from the Federal Power Commission before any person or company may construct, extend, operate or maintain any facilities for transmission of electricity at normal voltages in excess of 230,000 volts. Anyone who, at the time this bill is enacted, is already then engaged in the transmission of electricity at a normal voltage in excess of 230,000 volts will automatically receive such a certificate if he files for it within 90 days. Our proposal will require all applicants, except those who already have existing extra-high-voltage lines in operation at the time this bill is enacted, to show that their operations are required by present or future public convenience and necessity, and to observe such reasonable terms and conditions as the Federal Power Commission requires for the public convenience and necessity. In addition, no public utility

would be permitted to abandon or curtail such extra-high-voltage transmission lines unless the Commission finds that such abandonment or curtailment would be consistent with the public interest and then grants permission for such abandonment or curtailment. The abandonment provision in our bill is identical with the provision in S. 1607 which was approved by the Senate August 14, 1961.

This bill also provides that any such extra-high-voltage transmission facilities authorized, but not required for the applicant's own use in power transmission, shall be made available on a common carrier basis for other electric energy. The Federal Power Commission will have authority to attach other reasonable conditions to granting permission for extra-high-voltage transmission facilities.

Governor Hollings' Farewell Address

EXTENSION OF REMARKS

OF

HON. ALBERT W. WATSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. WATSON. Mr. Speaker, the great Palmetto State has just inaugurated as Governor an intelligent, articulate, and extremely capable gentleman, Donald S. Russell. Under his leadership, South Carolina will continue to ascend the ladder of State superiority.

Today it is my privilege to present for the RECORD the outstanding farewell address of our esteemed former Governor, Ernest F. Hollings, which in itself exemplifies a man mature, intelligent, and progressive thinking. Although only 37 years of age when he assumed the governorship we are proud of his 4-year record as our chief executive.

As he so eloquently pointed out, 100 years ago our State lay bleeding under the heel of a punitive Reconstruction era but today South Carolina is America's No. 1 opportunity State.

Mr. Speaker, it is a long, hard, and expensive road from poverty to prosperity, from ruin to recovery, but the Palmetto State has both the people and the will to travel that road successfully. Governor Hollings' complete address follows:

GOVERNOR HOLLINGS' FAREWELL ADDRESS

(EDITOR'S NOTE.—This is the complete text of the farewell address of Gov. Ernest F. Hollings, delivered to the general assembly on Wednesday, January 9.)

I'm very much at home here—and regret leaving you. This ends 16 years in these halls as page, house member, speaker pro tempore, Lieutenant Governor, and Governor. The friendships, the experiences make me an oldtimer. The wonderful advice, cooperation, and assistance you have given me will again and again give me new inspiration. Pat and I are genuinely grateful.

I wish the best for Governor Russell. In short time, he will make important decisions for our State. I have tried to prepare our people for these times. The State's institutions and all law enforcement agencies

have been charged with their responsibilities. I know you will give Governor Russell the same fine cooperation you gave me. I gladly offer him my support.

CONTROVERSY

The general assembly, unfortunately, leads a life similar to a football referee. You are seldom noticed until you make a controversial decision. I have never served with men of more courage and resolve. You took a \$23 million deficit, and in 4 years turned it into a \$19 million surplus. Meanwhile, the counties have received \$18 million added assistance. For the first time in decades the incoming Governor begins operating in the black.

You took an insurance mess and created a strong department. A penitentiary with inadequate provisions is now being turned into a modern penal system. We have a securities law. The Attorney General of the United States says there is no organized crime in South Carolina. The law-enforcement officers now have a reliable retirement fund. Long needed State office building facilities are being built. We lead the Nation in TV education. A nuclear space commission points forward.

A commission on higher education tells how. A magnificent technical training program prepares the people for jobs. And the country's best development program brings jobs for our people. Thousands, tens of thousands of jobs. Over a billion dollars in new and expanded industry in 4 years. This is at the rate of over a half million dollars a day each and every day for 4 years.

The Advisory Council for Agriculture is working. The "50 to first" education program has been launched. Teachers' pay is up 34 percent, and personal income is up 25 percent. Tax seminars, insurance seminars, safety conferences, conferences on business, industry agriculture and education—people from the different sections of our State have joined hands for the common good. We are working together. You have every reason to be proud.

TRAVEL

I am honored to have worked with you on these projects. But there must be more than a rollcall of accomplishments. You have given me more. You have traveled me over 200,000 miles—to four countries in Latin America, seven countries in Europe, to Hawaii, Canada, Puerto Rico, and up and down, crisscrossing this Nation. I've met with the industrial giants, the labor leaders, talked with the university presidents, served in Washington at the appointment of President Eisenhower and President Kennedy, headed up the nuclear-space effort of our Governors' conference, talked constantly to fellow Governors and public leaders, both Republican and Democratic. And today, you who have supported me so loyally, you who have given me this vast experience, want to know about South Carolina. Have we a chance? Where are we headed?

As I visited in these foreign lands and talked with their people; as I traveled over this great country of ours, I began to realize that South Carolina really has a chance—an opportunity to succeed, to pull away from the hangover of 100 years of poverty, to climb to the top of the ladder of States.

This is my valedictory. In short time, South Carolina can reach the top and stay there.

Some foreign languages have no words for English words. Some have words with plural or different meanings. The Chinese language has the word "chuang-chi" which possesses the plural meaning of "crisis," or "opportunity," depending on its use.

South Carolina, this year, has much the same characteristic. We are in chuang-chi, crisis and opportunity. We need, must have, a time machine to compress 100 years into

1 year to speed with precision South Carolina into the age of space.

AT BOTTOM

This region, nearing 100 years ago, lay bleeding under the heel of a punitive Reconstruction era. Seventy-five years later the South was still the Nation's No. 1 economic problem. Even now, we have not recovered. This very day, any ranking of regions or States, for any purpose, finds the South and her States wearily clinging to the bottom rungs.

Why? Because the Northeast section of the Nation experienced an industrial revolution, prospered from it, and went on to enjoy its riches, while we struggled to feed our hungry children, and broke the spirit of our men and women who grew the fields of cotton that suddenly no one wanted.

Why? Because the Nation pushed West. The manifest destiny of exploitation drew the daring and the brave to draw from the land in the West the gold and the oil, the wheat and the corn, and to raise the great cattle herds that filled their wallets with money and their people with plenty.

And of us? We built our textile mills and gave our people jobs and hope. But again we were 50 years too late. International considerations had risen in America's mind and the textile industry is now expendable—and the jobs of our people with it.

Always too late with too little—that was the demon that plagued the South. Well, my friends, we still have too little, but this time we don't have to be too late. History has given us one more chance.

Just as the frontier's marksman with his single-shot muzzle loader had to hit the target with his first shot because he couldn't reload in time if he missed, we have to be accurate now. We have one shot. We must not miss.

LIMITED

With limited ammunition, we should understand and appreciate the forest in which we're hunting. This is the space age forest. It's deceiving. Many think this is just Buck Rogers fantasy. But this is real. This is not reaching to the moon or some particular planet. What creates the forest are the things we learn on the way. The study of extreme temperatures has given the housewife a coffee pot she can take out of an icebox and put on an open flame. The telemetry system of satellites is now being used in surgery to track blood temperature and blood flow, cutting a 90-minute operation down to 10 minutes. From a rocket propellant, we have developed a drug to treat mental illness. The satellite itself has brought international TV. And on and on it goes. With this age's dynamic technology, we wander into a wonderland of near magic. Science fiction is now scientific fact. Devices scoffed at 10 years ago, even 5 years ago, are exciting the research men of America today.

Scientifically, then, the space age means the reaching for outer space, and all the new scientific knowledge that is gained therefrom. Militarily, the space age means the determination of who shall control the space above us. But for the 95th general assembly, the space age means turning this crisis into opportunity. It means equipping our people for this new era. It means preparing our State so that she can compete with other States for space-age facilities. It means taking a tremendous leap forward now to prevent forever being relegated to the 50th of States.

YEAR 1970 TOO LATE

To prepare, some will think of a 3-year program, a 5-year program, or a goal to be attained by 1970—1970 will be too late. Knowledge of man recently has been calibrated to determine its rapidity of growth.

From 4000 B.C. to the 16th century, man's knowledge was constant. With the invention of the printing press, the communication curtain was broken and by the 18th century the knowledge of man was doubling every 50 years. In the 20th century the doubling time dropped to every 20 years, with the space age now man's knowledge doubles every 10 years. In the next 10 years then, there will be twice as much to be taught in our universities than there is today. Veritably, we are in the midst of an education explosion.

This space-age forest is growing like wildfire and this general assembly must understand this problem; it must appreciate this problem; and it must legislate for it—now.

The question before South Carolina is not whether this explosion is good or bad, necessary or not. The question is simply, can we equip ourselves to utilize it before the rest of the Nation leaves us behind. The current of history is more swift than ever. Those who float will shortly be left in the eddies of the stream.

HOW TO AIM

In an age where bullets to shoot down bullets are being designed, how do we aim so that the target is not out of date when we hit it? This sounds impossible—but is it? Space's dynamic technology allows us to accomplish something never before possible by a State or area. We can catch up. We can condense time and leap from today all the way over to the day after tomorrow, without pausing, even for an instant—in tomorrow. This is no pipedream or wild theory.

Nor will it be for a first time in history. For it has just been done by another people in another land. In 1917, Russia was distraught. There was no industry, no education, no science, no arts or culture. There were only 47,000 Communists, and as a nation the Soviet was only to be found in the geography book. But they took good aim. They didn't frustrate over trivia—over what was nice and who had to be kept happy. They were determined to pack 100 years into a few short years. And while we disagree with the bullet they used, they hit the target.

They skipped the 100 years of the industrial age and went from oxcart to space vehicle. They caught up and passed the United States, Britain, and other great powers. Instead of 47,000—today there are over a billion people in the world now controlled by Communists—the fastest growing political development in the history of man. With no culture and arts—the Bolshoi ballet. Of many sports they never knew, but they have just won the olympics. With no power, today a world power. Russia and the United States are the only ones in space, and admittedly, today, the Soviet is 2 years ahead. And 5 years ahead in oceanography.

The Soviet saw the way the world was headed and they took a shortcut. They saw what day after tomorrow would be and they went straight for it. They ignored the middle ground—they avoided trivia. The Russian science, culture, and technology hurdled from American Civil War levels to the level of the day after tomorrow. They didn't have much to work with, but they used it all for one purpose. And it worked. This is the type aim South Carolina must take. We must unflinchingly avoid the temptation to restrict our goal—to aim merely at catching up. Our ultimate goal has to be nothing less than to forge ahead—and stay ahead.

NOISES

In taking aim let's become accustomed to the noises of the forest. We must not be distracted. These noises are trivia. The problem of South Carolina—the problem of this general assembly, is trivia. Trivia means cussing and knocking each other out all year long about two parties, when the

choice is Kennedy or Rockefeller. Trivia means holding alerts all over the place when there are by last count two Communists in the State. We all know that teachers' pay should be increased, but trivia means the long palaverer each year in this hall whether to give the teachers 10, 12, or 15 percent when any one would be inadequate, and all together would not give us quality education. Trivia means trying to legislate loyalty—or trying to regulate politics by law. These noises of the legislative forest must be recognized and given their position of unimportance if our one shot is to score.

Now we are set. We know the forest. We know the noises of the forest. We know how to aim. We know the target. But what is this one shot we are to use? A college professor. You say we have lots of those, and we do have many good ones. But we don't have one with a National Aeronautics Space Agency grant. We don't have one with a space science grant. We don't have one internationally famous who will attract leading scholars and professors. You say that's Harvard thinking. South Carolina can't afford it. Any money available should go to the teachers, and not these ivory tower professors. But I disagree. We can't afford not to do it.

Let's talk money. Suppose we had a faculty budget of \$60,000 for 5 professors. The ordinary way, the South Carolina way, is to hire 5 good professors at \$12,000 each. But the space age approach is to retain an outstanding one at \$20,000 and hire the other 4 at \$10,000 apiece.

ATTRACTION

The \$10,000 ones are just as good, perhaps better than the original \$12,000 professors, for this type will sacrifice to associate with the outstanding. And you haven't spent any more money. In fact, you've made money. For the grants and contracts that the outstanding professor can attract will bring a fortune to the campus. You see, the national effort in space has released from the Ivy League campuses the brains of the country. For those that can qualify, money for research is available anywhere—on every campus. Last year our country devoted \$18 billion to various research and development projects. In this one year, we spent more for research than was expended by this country for research from the Revolution up to and including World War II.

In 1957, internationally famous Prof. John Gibson came to Purdue, a State university. After a year, he finally secured \$300 to start on a program with a few German scientists and students. Today, his research team consists of 7 other professors and 60 graduate students—all involved in teaching of research. Funded by grants and contracts John Gibson works on a budget of \$300,000 a year. None of this money comes from Purdue.

Recently, his team's work on computers has received national fame—and further grants. Purdue and Indiana have taken a position of leadership because of the seed corn planted by John Gibson. This one shot—the outstanding professor—has a snowballing effect. First, you have the professor, then his associates, then talented students, then contracts, then grants, then quality education, then leadership. Multiply this by 5 or 10 professors and it's easy to see the effect.

PALO ALTO

And it's not all Government money. The great percentage by far is private capital under the free enterprise system. Recently, I saw this in Palo Alto, Calif., on the campus of Stanford University. Over 35 great names in American industry, with million dollar research centers. Think of the investment, the brains, the talent, the leadership—and new industry. In 1955, Lockheed had its 1 division of space in Palo Alto with 450 em-

ployees. Today, this same division has over 30,000 employees. And the talented become more talented. Lookheed has a program that pays 75 percent of the cost of a course at Stanford for any of their employees—and presently, there are more employees in attendance at Stanford than we have students enrolled at the University of South Carolina.

This division has 279 doctorates on its staff. You begin to see—and feel the impact of the space age. Similar endeavors are underway in Alabama, Texas, Florida, Virginia, and Georgia. And the place to start is with that one nationally prominent professor.

It also gives us the quality we've been looking for. Raising the pay of the incompetent teacher will not make him competent. But raising the level of higher education elevates all levels of education. The professor will be more talented, his associates brighter, the students more challenged, the graduating teacher better trained and more inspired. And your children and mine, when they graduate from high school can get into college and compete in society.

STIMULATE

When you bring in the best men from outside—when you encourage and free the best men we have now on our faculties—when you do these things, you stimulate our students, you stimulate our society. Nothing is more urgent than for our State's now splendid array of brainpower and leadership, across the board, to be supplemented, infused and even cross-pollinated and inspired by an inflow of genius, spirited enterprise, and topmost talent.

This assembly must look at South Carolina's role in the Nation if it is to do its job well. Whether it realizes it or not, it is a part of the space age. And if we are to compete—if our people are to have a chance at good jobs—if the communities are to continue to attract new industry—if our children are to be educated and skilled, and if we are to retain these children as useful leaders for the State—then it will be because this assembly had courage. A call on this courage is imminent.

FACT OF LAND

We have all argued that the Supreme Court decision of May 1954 is not the law of the land. But everyone must agree that it is the fact of the land. Interposition, sovereignty, legal motions, personal defiance have all been applied to constitutionalize the law of the land. And all attempts have failed. As we meet, South Carolina is running out of courts. If and when every legal remedy has been exhausted, this general assembly must make clear South Carolina's choice, a government of laws rather than a government of men. As determined as we are, we of today must realize the lesson of 100 years ago, and move on for the good of South Carolina and our United States. This should be done with dignity. It must be done with law and order. It is a hurdle that brings little progress to either side. But the failure to clear it will do us irreparable harm.

THE ANSWER?

In the intriguing swirl of supernewness—with limitless mother lodes of progress, advancement and betterment in many forms becoming ripe for exploitation by the wise and the pioneering of this age—South Carolina should be, and I believe is, America's No. 1 opportunity State. Our ability to turn the crises into opportunities is beyond question. The real question is our willingness.

My serving with so many of you over the years confirms my confidence in your courage. But, years of public service have proved to me that we have to prove ourselves again and again. The space age is on us—the only question is—does it smother us or save us? This general assembly will give South Carolina's answer.

Business Leader Supports President's Tax Proposal

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. EDMONDSON. Mr. Speaker, Mr. James F. Oates, Jr., president of the Equitable Life Assurance Society of the United States, has just sent to Members of the House a copy of a letter addressed to the President, strongly supporting the President's recommendation for a cut in personal and corporate income taxes. In a message to Members of the House which accompanied his letter to the President, Mr. Oates states that he believes the tax reduction is "the main issue," and "contrary to earlier views I now strongly believe that we should not insist on concurrent enactment of tax reforms."

Significantly, the insurance company executive expresses the opinion that—

We should hold off on demands for concurrent expenditure reductions as an offset to tax reduction.

Controversy over these matters, however meritorious, will only serve to delay or defeat achievement of the essential goal.

We should instead join together to support vigorously the proposal for an across-the-board substantial tax reduction now. Here is a rare opportunity for all Americans to reaffirm their faith in free enterprise and to demonstrate once again its mighty capabilities.

Because of the high priority which this issue has been given by President Kennedy in his state of the Union message, and because of Mr. Oates' prominence in the business world, I believe the Oates letter to President Kennedy is one which will interest many people. On the assumption that this letter has already been made available to many by its author, and further publication should serve a similar constructive purpose, the text of the letter is made a part of these remarks at this point:

THE EQUITABLE LIFE
ASSURANCE SOCIETY
OF THE UNITED STATES,

New York, N.Y., December 20, 1962.

THE PRESIDENT,
The White House,
Washington, D.C.

MY DEAR MR. PRESIDENT: The tax program outlined in general terms in your speech to the Economic Club of New York on December 14 deserves the support of the Nation. In addressing yourself, as you made clear, not to the possibility of recession in the near future, but to the basic necessity of growth and employment during the longer term, you went to the heart of the matter. Your solution, an across-the-board cut in individual and corporate tax levels to increase demand for production and investment and thereby release the private sector of the economy to go to work, seems to be the right one. It should appeal alike to business, labor, and the consuming public.

On reading the full text of your remarks, it was a gratifying experience, if you will permit me to say so, to note the similarity in principle between your views and the position presented in a speech delivered by me before the New Jersey Association of Real

Estate Boards on December 6 last, a copy of which is attached.

You have offered the choice before us in these words: "Our practical choice is not between a tax cut deficit and a budgetary surplus. It is between two kinds of deficits; a chronic deficit of inertia, as the unwanted result of inadequate revenues and a restricted economy, or a temporary deficit of transition, resulting from a tax cut designed to boost the economy, increase tax revenue and achieve . . . a future budget surplus."

Business, in my opinion, should endorse wholeheartedly your statement that "the Federal Government's most useful role is not to rush into a program of excessive increases in public expenditures, but to expand the incentives and opportunities for private expenditures."

Business should also welcome your decision, in line with the suggestion of Chairman MRLS, of the House Ways and Means Committee, to accompany tax reduction by "increased control of the rises in expenditures." Although one would prefer to have nondefense and non-space expenditures cut back so as to hold total governmental expenditures constant in fiscal year 1964 at the fiscal year 1963 level, the main issue of prompt tax reduction should not be jeopardized by the inevitable controversy over the extent and incidence of budget reductions. In my judgment, therefore, the public—in furtherance of the long-term objective—should accept your statement that "defense and space expenditures will necessarily rise . . . but . . . that . . . all other expenditures combined will be held approximately at its current level."

Similar considerations should apply to proposed tax reforms other than the structural reform needed to change the level and degree of progression of our tax rates. Other reforms, such as so-called loophole reforms, the elimination of special privileges and tax simplifications, whatever their merits, are highly controversial and—as you have so well indicated, difficult to enact into law. There is every reason to believe that insistence on the enactment of such loophole reforms at this time would frustrate the achievement of the basic structural reform of tax reduction, with its far greater potential for furthering material growth. The detailed controversial issues should be left to the Congress for later debate and resolution. As you stated in answer to an Economic Club question: "Well, the purpose of reform really is directed to the encouraging of growth, and employment. I quite agree that to launch into a full-scale battle on general reform for academic reasons would be unwise."

It is my intention to support the broad principles of your tax reduction program. The views expressed in the attached December 6 remarks and in this letter will be given circulation among my friends within and without the business community and made known to the Members of the Congress. I hope that these steps will take place in what I confidently believe will be a broad-based and enthusiastic response to your tax program.

Respectfully yours,
JAMES F. OATES, JR.

Records Show Most Crime by Repeaters

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for

inclusion in the RECORD an editorial from the January 2, 1963, issue of the *Livingston Enterprise*, Livingston, Mont., citing the accomplishments of the Federal Bureau of Investigation and commenting on causes for the rising crime rate:

RECORDS SHOW MOST CRIME BY REPEATERS

In his yearend report to the U.S. Attorney General, FBI Director J. Edgar Hoover reported marked increases in all major categories of FBI accomplishments in the past year. The Federal Bureau of Investigation's final tabulations particularly will show marked increases in the number of criminal convictions, number of criminals apprehended, and well over 200 million in fines, savings, and recoveries this past year, compared with \$148,421,000 in 1961. All this emphasizes the importance of a tightly coordinated, experienced organization, such as the FBI with its extensive and complete record on hundreds of thousands of individuals, in the endless war against U.S. crime.

In citing individual crime problems confronting the Bureau, Director Hoover called particular attention to a sharp increase in violations of the Federal Bank Robbery and Incidental Crimes Statutes, as the anti-bank holdup law is titled. Bank holdups showed "an increase of approximately 25 percent over the number committed in 1961," Hoover reported.

In short, there has been more crime, but the FBI has been keeping pace with it in stepped up results. The answer lies not in well-trained personnel and a well-run field organization alone, however, important as those factors have been. Much of the FBI's success rests in the hands of the unknown technicians who work deep in the Bureau's files and laboratories of its central offices across the country as well as in Washington.

Every day the FBI receives literally thousands of fingerprints of people all over the United States who have been newly arrested for some crime. In its criminal files today are fingerprints of more than 14 million individuals. In addition the Bureau has vast numbers of fingerprints of persons involved in purely civil matters, such as security clearance.

The striking fact standing out in this flood of fingerprints from criminal arrests arriving in Washington daily is that 8 out of 10 of them results in a "make." That means 8 out of 10 of the persons involved in today's arrests already have been arrested on a criminal charge at least once before. Clearly the bulk of the Nation's crime is the work of repeaters.

This is something to think about, for this evidence shows plainly that law enforcement is not the root problem in America's rising crime rate. The problem stems from what is done with these individuals after they have been arrested and convicted. There is the area where real study and tightening up are needed if this zoom in the U.S. crime rate is to be checked.

Wanted: Maturity

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. UTT. Mr. Speaker, under unanimous consent to insert my remarks in the Appendix of the RECORD, I wish to include an editorial from the Costa Mesa

Pilot, Costa Mesa, Calif. This editorial points up the dangers threatening the freedom of the press as guaranteed in the first amendment. The present administration not only is covering up the truth, but has actually adopted the policy of false reporting to the American people, and every newspaper in the country should rise up to defend the freedom of the press.

The editorial follows:

WANTED: MATURITY

Robert F. Kennedy continues to disturb even his friends in Government with his uses of power.

Less than a year ago, in the United States Steel case, he ordered the FBI to roust Washington reporters out of bed to reveal what Big Steel's president had said to them.

More recently he used the implied threat of the Department of Justice's big stick to bludgeon money, food, and medical supplies out of individuals and companies in the Castro blackmail case.

Although never elected to office, he is wielding more power at the top level—thanks to his brother—than any Attorney General in history. His influence extends far beyond the limits of Federal law enforcement. He is a key figure, even more so than the Secretary of State, in determining foreign policy.

Now he has pressured a great newspaper to suppress a story. Without publishing this particular story, the newspaper's proud 86-year old reputation for honesty and integrity would have been severely tarnished.

The incident involved the James Hoffa conspiracy trial, which ended in a mistrial with a deadlocked jury December 23.

Someone pretending to be a reporter for the *Nashville Banner* talked to prospective jurors. Some of these had said in court that they had received such calls.

The newspaper promptly reported the incident, branded the caller an imposter and offered a \$5,000 reward for the arrest and conviction of the person who made the false statements.

Last Thursday the *Banner* published the transcript of a telephone conversation between James G. Stahlman, publisher of the *Banner*, and Bobby Kennedy last October 23, the second day of the Teamster union boss's trial.

Kennedy, the transcript revealed, called Stahlman from Washington. The Attorney General said he understood the newspaper was planning a story on the incident and said Government attorneys felt that "if a detailed story in connection with the matter were made, it might very well lead to a mistrial."

Stahlman replied that he hoped the Government could get both a jury and a conviction in the case, and that the newspaper was "just as anxious to see a successful case against this fellow as you are."

However, he said he felt he should protect the *Banner* against this reprehensible stuff and therefore had published an offer of a \$5,000 reward. He said he felt this did not jeopardize the Government's case or its effort to get a jury.

When Stahlman told Kennedy he could not leave his newspaper or its staff in a position of having false statements made about them, Kennedy replied, "These matters require sacrifices by many people."

To which Stahlman replied, "Attorney General Kennedy, I have made as many sacrifices for the Department of Justice as any man in middle Tennessee. I am suggesting to you that what has happened has made it necessary for me to defend the reputation of my newspaper, which has existed for 36 years, and I don't intend to have it sacrificed for Jimmy Hoffa, the Federal Government, or anybody else."

In publishing the transcript last Thursday, Stahlman said he did so with Kennedy's knowledge and because he felt nothing in it reflected on him, the Attorney General, or the newspaper.

With this we cannot agree. The fact that Kennedy would seek to suppress a story which involved the reputation of the *Banner* and its employees reflects on his judgment.

Bobby Kennedy has been too prone to act impulsively. Perhaps flat refusals to knuckle under—such as those by Dr. Arnold O. Beckman, of Corona del Mar, in the Castro blackmail case and by Publisher Stahlman—will help to make a mature executive of him.

The Youth Conservation Corps

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. RODINO. Mr. Speaker, one of the more dramatic and effective programs of the late great President, Franklin Delano Roosevelt, was the Civilian Conservation Corps. Not only did the work of the corps bring improvement and beauty to much of our Nation's countryside, but by their enlistment in the corps, many of the otherwise unemployable youth of the day were gainfully employed and thereby diverted from the danger of collective idleness.

There is not today the economic depression that then gripped the Nation. But there is the danger of idleness and wasted energies for many of our young men. There is also the need, as always in any nation, for public works to improve the appearance of our urban and nonurban areas. To meet that need, I now propose that we establish a Youth Conservation Corps.

Today, I have introduced such a bill. From talking with many of the community leaders of my own and other districts, and from my own studies of the proposal over the past few years, I believe that the corps can and will make important contributions to the well-being, the appearance, and the economic strength of the Nation.

I am not alone in this belief, I know. I recognized that others in the Congress share it with me. I know, too, from talks within and outside my district, many civic officials and private citizens share the belief, also. One of the more succinct comments on the proposal appeared this week in the major afternoon daily in my district, the *Newark Evening News*. And I would like at this time to bring it to the attention of my colleagues to assist their consideration of the legislation that I hope soon will come before this body:

IT WORKED BEFORE

The Nation's three-quarters of a million jobless youth, the apparent nonexistence of jobs for them and the ominous prospect for trouble their idleness offers are eloquent arguments in favor of the youth employment corps proposed by Senator HUBERT HUMPHREY, of Minnesota.

Mr. HUMPHREY's bill—promised vigorous administration support—would offer youths in the 16-to-21-age group a useful role much as the Civilian Conservation Corps offered during the depression of the 1930's.

The CCC, it will be recalled, discharged its program with credit. The Nation's parks, forest lands, farms, and streams were lastingly improved by the young men who responded to the call.

Even more valuable than conservation of land, forests, and streams was the CCC's conservation of youth. There is no way of knowing how many lives were enriched for idle city boys, but it doesn't take much imagination to picture what might have happened to many of them if left to drift in idleness during that trying period.

There is much to be done today in the cities as well as on the countryside. And there is a growing pool of young unemployed capable of doing it. Senator HUMPHREY's plan offers the framework for a useful harnessing of otherwise wasted and potentially troublesome manpower. The history of the old CCC is all in its favor.

Thomas J. Quirk Dies, Retired Hartford Public High School Principal

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. DADDARIO. Mr. Speaker, perhaps no one can leave a greater impression upon a community and its youth than an outstanding teacher or principal. Hartford lost an outstanding educator this week when Thomas J. Quirk, retired principal of Hartford Public High School, died in an untimely accident which, through a strange coincidence, occurred in front of the school where he had governed for nearly a quarter century.

A graduate of Holy Cross College, from which he later received an honorary doctorate as an alumnus of distinguished career in the field of secular education, he taught in Providence and was principal in his native Milford, Mass., before coming to Hartford.

I knew him personally and feel his loss keenly. He had entered recently upon a new venture in education and he looked forward to it with zest. The State and the community mourns him, but he has left behind him thousands of living memorials in the lives of the many pupils he taught and he saw graduated. In their accomplishments and achievements he always took his greatest satisfaction.

Under unanimous consent, I include in the Appendix of the RECORD a news account of his life from the Hartford Courant and editorials from the Courant and the Hartford Times noting his passing:

[From the Hartford Courant, Jan. 15, 1963]
THOMAS J. QUIRK DIES, RETIRED HARTFORD PUBLIC HIGH SCHOOL PRINCIPAL

A half-century career in education ended Monday when Thomas J. Quirk, retired principal of Hartford Public High School, died in front of the school he had headed for 24 years.

The 70-year-old educator was stricken with

a heart attack as he drove up Broad Street, past Hartford High about 8 a.m.

He was on his way to Fairfield University where he became director of the teacher training program when he retired from Hartford Public High School on November 1.

COLLAPSES AT WHEEL

When Dr. Quirk collapsed at the wheel of his car, it swerved across the street and struck a tree in front of the Broad Street YWCA, directly opposite Hartford Public High School. He was pronounced dead on arrival at Hartford Hospital.

In his memory, Hartford Public High School will be closed all day Thursday.

For nearly a quarter of a century he, more than anyone else probably, personified Hartford High and its traditions and authority to those who went through the school.

He devoted himself to the school almost around the clock; the lights often burned late in the old high-ceiling office in the Hopkins Street wing where he kept his roll-topped desk.

Dr. Quirk entered into his new position at Fairfield University with zest and enthusiasm. But he was always eager for news of activities at Hartford High.

FIRM BUT GENIAL

A firm disciplinarian, he had the assets of a booming voice and imposing stature—but these were combined with geniality and a humorous twinkle that would often break through.

Interviewed at the time of his retirement 2½ months ago, Dr. Quirk said with a smile, "It's as easy to run a high school today as it ever was. But then, I've been at it so long it should be easy."

Dr. Quirk came to Hartford in 1932 as superintendent of the old Washington School District; when the city's school system was reorganized he became principal of Burr Junior High School in 1934. He was appointed to head Hartford Public High School in 1938.

Before coming to Hartford, Dr. Quirk taught at LaSalle Academy in Providence, R.I., for 2 years and served as principal of the junior and senior high schools in his native Milford, Mass., for 15 years.

He was born in Milford November 29, 1892, and was graduated from Holy Cross College in 1915. He received a master of arts degree there in 1919.

GIVEN HONORARY DOCTORATE

Holy Cross awarded him an honorary doctorate of laws in 1938, citing him as "an alumnus of distinguished career in the field of secular education * * * a man whose exemplary character is the living reflection of honor, justice, truth and charity."

He was also honored frequently by the students of Hartford Public High School, most recently at his final assembly as principal, with two scholarships bearing his name.

Although he never attended the school, Dr. Quirk headed its alumni association for many years. He also maintained a solicitous interest in the Hartford Public High School faculty and its retired members.

During his long career he has served as chairman of the State teachers retirement board, president of the Hartford Principals Club; president of the 2,800-member Worcester County, Mass., Teachers Association; president of the Hartford Holy Cross Alumni Association, and vice president of the Massachusetts Teachers Federation.

Dr. Quirk leaves his wife, Mrs. Marcella Quirk; and a brother, James F. Quirk of West Dennis, Mass.

THOMAS J. QUIRK

It was a queer trick of fate that had Thomas J. Quirk die in front of the building in which he had labored so long, and which he left in retirement just a few weeks ago. He had been principal of Hartford High

School since 1938, and he left his imprint on the thousands of young men and women who walked its corridors during the years since then.

During his lifetime Mr. Quirk got the kind of recognition he wanted most—from the graduates of his school. Even though he was a stern disciplinarian he was fair and just, holding the interest of his boys and girls above all else. They sensed it, and they returned his affectionate interest with both respect and love.

A man who spends his life with young people usually stays young. And even until the day of his death Tom Quirk had that quality of youthful zest, of keen interest in the world around him, so that it was difficult to realize that he was 70 years old. In all, this man devoted 48 years of his life to teaching. Only a little more than 2 months ago he retired from Hartford High School not to rest, but to embark on a wholly new career at Fairfield University.

This kind of man does not quickly fade from memory. For many years to come his name will be synonymous with the best in education. Although people thought of him as an old-fashioned educator because of his basic virtues, he was neither old nor new. He was the timeless educator, dedicated and tireless in his job of educating the young.

MR. QUIRK'S DEATH WIDELY MOURNED

When it was announced last October that Thomas J. Quirk was to retire as principal of the Hartford Public High School in November there were widespread expressions of regret.

Dr. Quirk died suddenly Monday in his car in front of the school that he headed for nearly a quarter century.

In that span Dr. Quirk became an example of wisdom, tolerance, and good nature. He was greatly admired and beloved by students, graduates, and his fellow townsmen.

Dr. Quirk was one of a long line of distinguished educators who have filled the principal's post at Hartford High. He added luster and distinction to the office.

His untimely death so soon after retirement will sadden all who knew him because everybody liked him whether they knew him casually or intimately.

An Integration Success Story

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the November 1962 issue of the Bulletin of the Antidiscrimination League of B'nai B'rith.

All of us owe a debt of gratitude to James C. Evans. He is a public servant of the highest caliber; the success of integration in the Armed Forces is a fitting tribute to a fine man.

The article follows:

THE ARMED FORCES: AN INTEGRATION SUCCESS STORY

(By Morton Puner)

"Certainly my Air Force days were the most influential time of my life. I served in nothing but integrated units. It seems to me the integration of the Armed Forces is one of the most important things that has happened to the Negro in the United States."—James H. Meredith (quoted in the Saturday Evening Post, Nov. 10, 1962).

Earlier this year, the ADL Bulletin featured a special issue on "The Administration and Civil Rights" with an introduction by President Kennedy and articles by Federal officials on their current activities in the field. All the authors of the articles were under 40; all but one had gone into Government service in 1961 as part of the New Frontier.

"It's a good thing to let the young fellows have their say," said James C. Evans, counselor to the Assistant Secretary of Defense for Manpower, when he saw the issue. He looks with approval and hope at the efforts of the young men of Washington to bring equal rights to all Americans. He knows their frustrations and problems—and the hope of a better America which stimulates and goads them. He's seen it all before—and worked at it constantly for more than a quarter of a century. Evans' own entry to Government work, together with an earlier group of dedicated young men, is recorded in the book, "The Negro Vanguard," by Historian Richard Bardolph:

"When the New Deal brought its trainloads of bright young men into Government service, a few colored members came with them, recruited like the whites with scant regard for party affiliation or political obligation, and in most cases drawn fresh from college faculties. Men like Robert Weaver, James C. Evans, William H. Hastie, Frank S. Horne, and Ralph Bunche."

The office of James C. Evans in the Pentagon is today concerned with anything having to do with race and other minority group relations in the Armed Forces. The area is a huge one—more than 5 million Americans, servicemen, civilians, and their dependents, are directly involved. It is also a fascinating, encouraging area: Among the many types of American communities, it is in the Armed Forces that integration has been implemented most fully and has worked out best—offering substantial proof that racial harmony is workable on the job, in schools, and in everyday living.

And soft-spoken, 62-year-old James C. Evans, Tennessee born and MIT trained, is the man most responsible for carrying it out.

Integration in the Armed Forces, true, took a long time in coming. During much of World War II, Negroes were allowed to serve only in the steward's branch in the Navy, and as truckdrivers or heavy manual laborers in the Army. Sometimes they were sent into battle ill prepared, with disastrous results. Such incidents nourished the myth, "Negroes can't fight."

This was simply not true. At the height of the war in Europe, 50 Army researchers interviewed thousands of soldiers about their attitudes toward Negro platoons fighting experimentally within their white divisions. The findings: Negroes, fighting within an integrated framework, could do just as well as whites. But these findings were never made public during the war. Segregation generally remained the rule.

It was the lessons of the war, plus post-war drives for more democracy, that brought the change. In 1948 President Harry S. Truman's Executive Order 9981 set the policy for equal treatment and opportunity for all persons in the Armed Forces without regard to race, color, religion, or national origin. It took 7 years, under Presidents Truman and Eisenhower, to implement that order.

Negroes have flourished under integration in the Armed Forces to such a degree that they are now a crucial factor in America's defense. They constitute 15 percent of all non-commissioned officers in the Army, even though they make up only 10 percent of Army personnel. In the U.S. Air Forces in Europe, 14.5 percent of all noncoms are Negroes, though they represent only 7.5 percent of enlisted men—a testament to what Negroes can do given equal opportunity and training.

The number of Negro officers is expanding too, although not at the same rate. Now, 3 percent of all Army officers are Negro, compared to less than 1 percent at the end of World War II. Of Air Force officers, 1.1 percent are Negroes. Only about 0.1 percent of Navy and Marine Corps officers are Negroes; but there were none at all at the beginning of World War II. And 34 of the 8,500 cadets at the various service academies are Negroes.

The highest ranking Negro officer in the services is Maj. Gen. Benjamin O. Davis, Jr., Deputy Chief of Staff for Operations at USAF headquarters in Germany. The Army and Air Force have more than 100 Negro colonels and lieutenant colonels. There are about 200 Negro officers on active duty in the Regular Navy and among the Reserves.

Above all, since Korea—the first war in which whites and Negroes fought in genuinely integrated units—no one in authority seriously questions the military value of integration.

There are still a number of problem areas. Pockets of resistance to the Federal policy of integration exist, mainly in the Southern States, in the National Guard, military Reserve units, and the Reserve officers training camps. But the overall picture is a heartening one. Evans, who is an electrical engineer as well as manpower specialist, uses an engineer's analogy to explain: "If there is a lag in a magnetic circuit, we change it, improve it, and it never snaps back. We've done the same thing for a cultural lag in our society; through integration we have changed it, improved it. It cannot easily snap back."

Despite his years at the job, Evans and his functions are largely unknown to the general public (but not unknown to the Negro community). His methods of work are quiet but effective and its consequences are far ranging. One of his jobs is monitor of the progress of Armed Forces integration, making sure that improvements in the cultural lag don't snap back. The force of Presidential orders supports Evans in his efforts to see that integration is in force and maintained in Federal military installations—in housing, training, educational facilities, for dependent children, in all aspects of the lives of military personnel and their families.

But there are other, less clear-cut areas. For example, Evans may learn that someone at a military post has decided to put on an oldtime minstrel show, complete with burnt-cork makeup and "mammy" songs. Minstrel shows are about as offensive to Negroes as Mike and Ike jokes are to Jews. Evans will act discreetly, writing to the post commander or other persons involved, explaining to them precisely why such stereotypes are insulting to Negroes—and damaging to American unity generally. His reasoned statements of principle are usually persuasive enough; his Pentagon position and prestige give him the authority to make his advice stick.

Or else, a much-decorated Negro officer, stationed at the air base near El Paso, Tex., may drop into Evans' Pentagon office with a problem. Suitable off-base housing is unavailable to a Negro family in El Paso; the officer, his wife, and children have had to take up residence across the Mexican border in Juarez, from where he daily commutes.

Such problems are grist for the mill of the Evans office. Because of his years of service—he started with the military in 1942 as assistant civilian aide to the Secretary of War—Evans has developed a formidable complement of friends and allies serving throughout the world. They are both white and Negro, from the North and South, eager to work with him to further compliance with integration orders.

For most servicemen—particularly those making a career of it—integration has now become a normal way of life. No matter how strong their preservice prejudices they seem to suspend them for the balance of their military careers. Mr. Evans tells the

story of a white officer who was raised in Greenwood, Miss., attended the University of Mississippi, and became a lawyer. After several years of Army service in various parts of the world, the officer faced a dilemma. Army integration had given him new insights and attitudes. He did not know how he could ever return to Greenwood—a fountainhead of the White Citizens Council movement—"where 95 percent of my friends are council members."

"As a matter of conscience, I can no longer tolerate and live with their prejudice," he told Mr. Evans. The officer's wife agreed and suggested a solution: Don't go back to Greenwood. But a man's roots, spiritual and economic, are strong. The dilemma still faces the white couple.

Paradoxically, through Armed Forces integration, our mighty defense machinery, with all its potential for destruction, is sowing seeds of brotherly love and understanding among Americans. It has, as witnessed by the opening words of this article, contributed to the education and determination of James H. Meredith, Negro Air Force veteran now attending the University of Mississippi. It has produced such attitudes as that expressed by Negro Navy Lt. (jg.) L. E. Jenkins: "After a while you start thinking of whites as people." And the attitude of hundreds of military leaders who have seen integrated units in action, an attitude summed up in the words of Maj. Gen. Harvey Fisher, a West Pointer and Korean veteran: "Heart is heart, blood is blood, muscle is muscle. . . . What difference does color make?"

James C. Evans has seen all these changes come about in his years of service. In the late thirties, he was administrative assistant to the president of West Virginia State College, then one of the highest ranking Negro colleges in the Nation. War Department policy at the time prevented Negroes from becoming pilots or air crewmen in the Army Air Corps. Evans managed to start at West Virginia the first federally sponsored civilian pilot training unit to accept Negroes. Soon there were eight such units at Negro colleges; these formed the basis for the training program at the all-Negro Tuskegee Army Air Corps Airfield. Two of the first five Negro youths to receive their commissions and wings as pilots were Evans' former students. (One of the graduates is now Maj. Gen. Davis.) This was the pioneering effort leading to Air Force integration, and also served as a lever for further integration in all the services.

Recognition for his years of achievement has now started to roll in. The Defense Department cited him in 1956 for outstanding contributions in the field of racial relations. In 1959 he was given the Career Service Award of the National Civil Service League in recognition of his distinguished service to the U.S. Government. He also holds the Harmon Award in Science, the Dorie Miller Award in Human Relations and a host of honorary degrees. Most recently he was awarded the distinguished service citation of the Chapel of the Four Chaplains in Philadelphia.

His concern for intergroup understanding is reflected in many ways. He talks with reticence but deep pride about his forebears and his family. His wife, Rose McGoodwin Evans, is a New York University graduate and mathematics teacher; his daughter, Evangeline, is a Stanford University senior. His 21-year-old son, James Carmichael Evans, Jr., was the first Negro to be elected president of one of the 28 on-campus fraternities at the Massachusetts Institute of Technology, from which his father graduated in 1926. Young Evans is an Episcopalian who attends services at Boston's Christ Church. But the fraternity which elected (and a year later reelected) him, Pi Lambda Phi, is composed mainly of Jewish youth. When its members gather for dinner, James C. Evans, Jr., as president, recites the blessings—in Hebrew.

Appendix

State of the U.S. Lead-Zinc Mining Industry

EXTENSION OF REMARKS OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Friday, January 18, 1963

Mr. ANDERSON. Mr. President, I have had brought to my attention the remarks made by Mr. Lindsay Johnson, vice president, New Jersey Zinc Co., before the American Mining Congress at San Francisco, on September 27, 1962. Mr. Johnson has given a fine outline of the state of the lead-zinc industry and suggested some things that could be done to solve some of the industry's problems. This is a fine speech and I recommend it for the attention of every Member of the Senate.

Mr. President, I ask unanimous consent that this speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STATE OF THE U.S. LEAD-ZINC MINING INDUSTRY

(By Lindsay F. Johnson)

It is most appropriate that this report on the state of the U.S. lead-zinc mining industry has been scheduled for the afternoon of the last day of these sessions, right at the bottom of the program.

This is entirely consistent with the current position of lead and zinc in the politico-metal series—right at the bottom.

In this series the combined weight of the two metals appears to be zero.

This is a dismal subject, because such part of the U.S. lead-zinc mining industry that has not already expired is leading a dim existence, deep under the shadows cast over it by many things.

There has been no change for the better in the state of the industry since the last report to the mining congress a year ago. In fact, some of the shadows have deepened, and one or two additional ones have further clouded the lead-zinc horizon in recent months.

None of these overhanging and depressing shadows is the creation of the U.S. lead-zinc mining industry itself. But the industry is compelled to take the primary and secondary adverse effects of them because it is a captive of circumstances, with little apparent ability to influence or combat them.

First, there is the shadow of continued overproduction with its consequent depression of metal prices, resulting in turn in gross devaluation of the real worth of U.S. lead-zinc mine products.

Statistics show that there is overproduction of lead and zinc metal in the United States as well as the rest of the free world, as evidenced by mounting stocks in the hands of producers, both here and abroad. They show also a continued and growing aggravation of this condition by net exports of the metals to the free world markets from Russia and other centrally-planned

economies, with West Germany and Great Britain receiving the bulk of them.

It took a long time to convince some people in the international lead-zinc study group of this fact, but it is fundamental that there can be no surplus production of lead and zinc metal without surplus mine production.

The U.S. lead-zinc mining industry is not contributing to surplus mine production, but it is a victim of the depressing effects of surplus created elsewhere finding its way to our shores.

Let us examine the facts behind that statement.

Because it has been reduced by external economic forces, for several years, the U.S. lead-zinc mining industry has been limping along on a bare existence basis. In the case of lead it has been producing at less than 65 percent of demonstrated potential, and in the case of zinc, at about 70 percent. Conversely, mine production of lead and zinc elsewhere has increased.

Of raw materials involved in primary lead products consumed in the United States, less than 40 percent now originates in U.S. mines. Of raw materials involved in primary zinc products consumed in the United States, but little more than 40 percent originates in U.S. mines.

Because it is caught in the web of inflation, with no compensating value of its products, the U.S. lead-zinc mining industry is captive within its own borders. It cannot profitably put 1 pound of its products into the world markets.

In summary these are the facts:

The decline of the U.S. lead-zinc mining industry has been seen. Its current economic distress is known. It is bound to its own national borders and has difficulty holding a place against foreign competition in our own markets let alone having any ability to compete in foreign markets.

In the face of these facts, I submit to you that to refer, as was done here on Monday, to the industry's plight and its inability to compete with foreign competition at home or abroad as a myth is an affront to the intelligence of the Members of this Congress. This is cavalier thinking of the highest order.

We must face up to the facts that U.S. lead-zinc mines cannot possibly exist without U.S. smelters, but that U.S. smelters can, and in large part do, get along without U.S. mines. There are few, if any, smelters in the United States that do not operate to some degree on imported materials, and it is by this route and by metal imports that surplus mine production outside the United States finds its way in to create surpluses here.

Unless and until it is recognized that a healthy lead-zinc mining industry is a national necessity and asset and the will or the means are provided that will close off the influx of surplus foreign mine production into the United States, be it in the form of ores or metal or other manufactured products, the U.S. lead-zinc mining industry must live under this shadow, and the longer it stays under the shadow, the more it will languish.

By far the greatest shadow enshrouding the lead-zinc mining industry is the trade policy of our Government. This is not a new thing but is a continuation of what has been with us for some time.

It is a policy that seems sometimes to admit on the one hand that we need to preserve a strong lead-zinc mining industry but then proceeds to submerge the interests of

such an industry so deep in foreign policy considerations that it becomes increasingly difficult to bring them to the surface.

This is a policy that has failed to come to grips with the problem of protecting a vital natural resource industry that has demonstrated beyond doubt that it has been seriously injured by the impact of imports.

It is a policy that has gone to great lengths to avoid facing up to the question.

It has involved us in such expedients as the international lead-zinc study group.

This group, which started out with a whoop and a holler, has slowly ground to an ineffective position. It has become increasingly evident that the participants, except the United States, are there primarily to protect their own lead-zinc industries.

The United States submerges the interests of its mining industries in broad foreign policy considerations. Others take advantage of this and do not hesitate to berate us on any suggestions of moves that would control their participation in our domestic markets for metals and ores, even though these moves may be the only means of preserving some vestige of health in the domestic lead-zinc mining industries.

It is further evident that there is an underlying philosophy of the member governments, including ours, that the lead-zinc industries must accept and operate on a one-world basis. As pointed out earlier, our lead-zinc mining industry, involuntarily caught in the web of inflation, cannot profitably put one pound of its mine product into the world markets. We are the only nation so restricted. As long as this condition and this philosophy prevail, there is little reason to think that the other nations, who exploit our market without fear of retaliation or competition in their own markets, will voluntarily give up this advantage. So, the prospect of anything constructive for the U.S. lead-zinc mining industry coming from the international lead-zinc study group seems extremely remote.

Since the last report to the mining congress there have been two more sessions of the study group in Geneva, with no accomplishment that has been reflected in improvement in world market conditions.

Oddly enough, in the 1962 session our Government did not even barter any more foreign metal into our stockpiles, as it did to no avail in 1961.

Another session is scheduled for October. There seems to be some prospect that the group is now leading into a discussion of an international commodity agreement for lead and zinc, based on a proposal by Mexico.

Representatives of the U.S. industry are opposed to this for obvious reasons beyond the hopeless complexity of it. Our State Department avers it is not in favor of such a commodity agreement but seems to lack the decision to close the door on it.

Should discussion of this subject get underway in this study group, I think it is reasonable for you to expect the first progress report at the mining congress of 1967.

Another expedient the policy has led us to is the quota plan.

As pointed out in previous reports to you, the quotas were another compromise to facing up to the problem. As it has turned out, the quota plan has been of more advantage to foreign producers than to the U.S. lead-zinc mining industry it was supposed to help. The quotas gave to foreign producers what amounts to a guaranteed quantitative participation in our markets, regardless of the

level of consumption. Since the last report to you, they have continued to use them to full advantage, pushing in practically 100 percent of the quotas and thus using their guaranteed place in the U.S. market as an umbrella over a perilously low price structure in their own markets.

Unfortunately, while the umbrella has been good and tight for exporters to this country, it has leaked all over the domestic industry. In their avidness to find a place for the surplus mine production they import, the metal producers and distributors have got into the habit of buying out the house every night for the popular Broadway show "I Can Get It for You Wholesale" and distributing the tickets to consumers. This is, no doubt, good entertainment for the consumers but is a sad result of surplus foreign mine production being attracted to and encouraged to enter the United States.

Also, there has been increasing adeptness in developing end runs around the quotas by exporting to the United States lead and zinc in manufactured or semimanufactured products. This has been particularly so in the past year with respect to certain lead products.

In fairness it must be said that while the quotas have failed to accomplish their purpose of stabilizing and improving the state of the U.S. lead-zinc mining industry, they have prevented chaos. There is little doubt that without them the U.S. mining industry would today be in a completely intolerable position.

And now in recent weeks we have been confronted with the policy at its zenith in the Trade Expansion Act of 1962. We have heard much in these sessions about the evils and virtues of this highly controversial piece of legislation.

Analysis of the act and the history of its enactment would seem to indicate that the sacrificial prospects are greatly increased for many industries already beset by competition from imports.

Many of these industries can reap no benefit from the achievement of the ultimate general purposes of the act. Their inflated costs, not the least of which is labor cost, eliminate them from competing in foreign markets, and in many cases they will be driven in large part from their own markets. The act itself admits of this possibility.

In the case of lead and zinc, even though there seems to be some prospect that provisions of the act could lead to maintenance of the status quo, we all know that the status quo is not good enough.

Unfortunately, many remaining segments of the lead-zinc mining industry in the United States could well follow those that have preceded them into this sacrificial category.

However, it seems too early to judge how developments in our own Nation as well as elsewhere in the world will influence the exercise of broad powers under this act by our Chief Executive. One can only speculate at this point on what the course will be.

No rule can be hard and fast for everything. It is to be hoped that in the end the wisdom of preserving and encouraging natural resource industries will prevail and that, just as it is founded on anomalies of geology, the lead-zinc mining industry will be found to be an anomaly of political economy and receive by executive or legislative action treatment that will preserve it and encourage it rather than allow its partial or entire destruction.

Another event of the year that has cast a dark shadow over the lead-zinc mining industry has been the investigation of stockpiles. We have likewise heard this subject well covered in these sessions.

The effect of these investigations has been profoundly depressing, and the uncertainties involved most certainly have had their sec-

ondary effect on the U.S. lead-zinc mining industry.

This shadow unfortunately will remain as long as these uncertainties remain, and they will remain until reappraisal and wiser counsel demonstrate that stockpiles are not liabilities, as some would make them, but rather are of great value to the Nation, not only for their potential physical use in emergency but for their enhancement of our Nation's position in the current state of international political economy.

I do not mean to leave the impression that the U.S. lead-zinc mining industry is giving up; far from it. There have been some noteworthy achievements in opening new mines and developing means of reducing costs of production. Up to now, however, these must be counted as means of survival rather than accomplishments that can within themselves create a strong, healthy industry that can capture a fair and reasonable share of our own markets.

Likewise, the industries, through their joint research programs, are making highly commendable efforts to further consolidate and expand present uses for lead and zinc and to find new applications that may result in greater consumption.

One might infer from this glum picture of a national policy that the lead-zinc mining industry does not have a friend in the world, let alone in Washington. This is far from the case.

There are many in the Congress who have complete awareness of the importance of a healthy lead-zinc mining industry in the United States. We feel that they believe in the principle that it was on development of natural resources our vast economy was founded, and by their actions have shown they will do all they can in the interest of preserving the industry as an important and necessary part of our national economy.

To mention a few, foremost among them are our eminent Senators Clinton P. Anderson and Robert S. Kerr, supported by Senators Gordon L. Allott, Wallace F. Bennett, Alan Bible, Howard W. Cannon, Frank Carlson, John A. Carroll, Dennis Chavez, Frank Church, Everett M. Dirksen, Carl Hayden, Henry M. Jackson, Len B. Jordan, Estes Kefauver, Thomas H. Kuchel, Edward V. Long, Warren G. Magnuson, Mike Mansfield, Lee Metcalf, Frank E. Moss, Alexander Wiley, and on the House side, the Honorable Wayne N. Aspinall, chairman of the House Interior Committee, who has already stated his stalwart position to you from this platform, supported by the Honorable Howard Baker, Walter S. Baring, James F. Battin, Frank M. Clark, Peter H. Dominick, Durward G. Hall, Ralph R. Harding, Walt Horan, Harold T. Johnson, Richard Ichord, Cecil R. King, David S. King, Walter L. McVey, Joseph M. Montoya, Thomas G. Morris, Arnold Olsen, M. Blain Peterson, Gracie Pfost, Vernon W. Thomson, William M. Tuck, Al Ullman, Francis E. Walter, William B. Widnall, and Morris K. Udall.

These statesmen are firm friends of the lead-zinc mining industry, and the industry will do well not to forget that they are.

We believe that we even have some friends in Interior, Commerce, and State whose hearts basically are with us but whose hands for the moment must be tied.

For a decade now the once hardy breed of lead-zinc miners in the United States have been shouting for "Chloe" into the dismal swamp of the Potomac but without a rewarding answer. The only answers that filter back through the morass seem to be in foreign languages, which the lead-zinc miners cannot understand, but they know they are not Chloe. It is certain though that they must keep shouting into the swamp for Chloe, and their smelter cousins, who are approaching equal peril, might do well to

add their voices in unison. They must find her soon, for there seems no other way to avoid extinction of the breed.

Those "Mercenaries"

EXTENSION OF REMARKS OF

HON. ARTHUR WINSTEAD

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. WINSTEAD. Mr. Speaker, I would like to call to the attention of my colleagues an editorial which appeared in the Evening Star, January 9, 1963, together with letters to the Star from Mr. Robert L. Buell, former American Consul General at Leopoldville and Mr. Aubrey Cox. Since the United States agreed to or advocated the support of the partition of Korea at the 38th parallel, the partition of Palestine, the division of India and Pakistan, and the division of Vietnam, it appears rather inconsistent to me that this administration would listen to the advisers in the State Department to the extent of encouraging, supporting, and financing United Nations forces in waging war on Tshombe and the people of Katanga—possibly the most civilized group in the Congo—in an effort to force them into union with other provinces.

I am unalterably opposed to our financing this type operation through the United Nations. I did not support the U.N. bond issue and sincerely hope that more Members of this House will vote against the appropriation of funds to finance further action of this type through the U.N. In my opinion, there is grave danger that the Congo will end up with another Castro.

The editorial and letters follow:

[From the Washington Evening Star, Jan. 9, 1963]

THOSE "MERCENARIES"

An especially irritating aspect of United Nations propaganda in the Congo matter is discussed in two letters appearing elsewhere on this page.

Time after time, the apologists for the U.N., as well as its official spokesmen, refer in slurring terms to the "white mercenaries" in Moise Tshombe's Katangan Army. The impression is conveyed that these "mercenaries"—a few hundred men at most—are the root of all evil in the Congo, and that if they could be given the old heave-ho all would then be sweetness and light.

The public is not told that many if not most of these so-called mercenaries have lived for years in Kantanga, and that it is at least possible that some of them are fighting for a cause in which they believe—not for money alone. Nor do the U.N. propagandists ever mention that the combat troops in the U.N. Congo Army—whether white, black or brown—are also "mercenaries" in the sense that they are being paid to fight—largely by the United States.

These points are well stated by our correspondents, one of whom is a former American Consul General at Leopoldville, and we think their comments are worth reading.

SOMETHING TO PONDER

The recently published Associated Press photograph of two European prisoners of

the Katangan forces, tied with ropes to their U.N. captors, labeled them as "mercenaries."

Who knows but that they were brave men who volunteered to fight for a cause they believed to be just. One was a Hungarian. Fonder that.

Who, pray tell, are the U.N. forces in the Congo if not mercenaries; yes, and with services paid for more than half by U.S. contributions to the U.N.?

Were volunteers in the Allied forces in World Wars I and II branded as mercenaries? The Hessians employed by King George III during our revolution were. So have Gurkhas always been. Let us leave dictionary definitions aside.

The misguided and, I fear, confused U.N. mercenary forces in the Congo were sent there after the end of Belgian rule, when murder, rape, and pillage ensued in some areas, solely to restore law and order and to protect lives and property. They were not sent there to engage in aggressive warfare; not to shoot innocent noncombatants, as they recently have done; not to impose by force of arms unification of discordant local political groups.

By the invasion of Katangan territory, controlled by the forces of a patriotic political leader, Moïse Tshombe, it seems apparent that U.N. forces and those who control them have exceeded the authority which prompted these forces to be sent into this area.

The animosity engendered by this action in large areas of Africa and among our allies may well be the prelude to destroying the U.N. itself. The shocking precedent of misconduct by such mercenary U.N. forces will, I fear, preclude all possibility of future U.N. police actions elsewhere of a comparable nature. The U.N. has, alas, destroyed its alleged reputation as a great moral force for the maintenance of peace and integrity in international relations.

ROBERT L. BUELL,
Former American Consul
General at Leopoldville.

The editorials in the Star on the Katangan situation have been excellent; and I am sure that the editor is not laboring under the illusion that the Belgian and French officers who are assisting in the defense of Katanga really deserve to be called white mercenaries any more than the trigger-happy Indian Gurkha and Irish officers and troops employed by the United Nations for the subjugation of Katanga deserve to be called brown and white mercenaries. We, American taxpayers, who are paying most of the hire of the Indian and Irish troops know that they are "mercenaries." And yet, most news stories relating to the Congo (including some of those appearing in the Star) manage to employ the phrase "white mercenaries" in referring to the Katangan army of defense in such a manner as to leave the impression that the Belgians and the French (who really do have a valid interest in Katanga) are in some way immoral in defending that interest, whereas the professional Indian and Irish troops that have been brought half way around the world to subjugate Katanga and deliver her over to a group of hostile tribes headed by Aoula are not subject to the same scornful term of "mercenaries."

I bitterly resent being subjected to the so-called brainwashing process; but I think there is overwhelming evidence that the public is being subjected to a brainwashing program carefully designed to make the strong odor of the United Nations policy in the Congo somewhat less offensive to the nostrils of the American public.

AUBREY COX.

Each NATO Country Must Assume Full Responsibilities of Membership— Acting Secretary General of NATO, Hon. Guido Colonna, Addresses Paris Meeting of NATO Parliamentarians

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, January 18, 1963

Mr. RANDOLPH. Mr. President, as a member of the North Atlantic Treaty Organization, the United States is a shareholder in a 15-power partnership for world peace—a cooperative effort which demands from each participant a strong sense of understanding, trust, and responsibility. And, as our efforts are set in an alliance of 15 sovereign and independent states, and since the degree of cooperation and agreement among the member governments will necessarily dictate its effectiveness, it is essential to the interests of the free world that we unceasingly strive to reach a common accord.

One tangible evidence of a determined drive to attain this unanimity was the conference of parliamentarians from NATO countries in Paris last November. As a member of the official delegation from the Senate of the United States, it was my privilege to be in attendance, and, along with a number of colleagues, to participate in meetings aimed at promoting a singleness of purpose among treaty nations.

One significant highlight of the session was an informative address by Hon. Guido Colonna, who served as Acting Secretary General of NATO during the illness of Secretary General Dirk U. Stikker.

Mr. Colonna began his remarks with an informative digest of the changes in world affairs which had taken place in the last year, and the relationship of these alterations to the NATO alliance. He also discussed the current status of NATO in vital areas of political relationship, military preparedness, and civil emergency planning. The Secretary emphasized dangers which face the treaty countries, not only military, but ideological and economic as well.

In commenting on recent Western optimism over signs of strain between elements of the Communist bloc he observed that—

Anything that may make for more variety and more independence behind the Iron Curtain is all to the good. Here again, however, we should not indulge in wishful thinking and we should not base our policies for today on what may—or may not—happen tomorrow. A less monolithic, less oppressive communism will not necessarily be a weaker communism. It may well be stronger because more firmly based on public support; and indications are not lacking that this may be so.

Mr. President, fully aware of the far-reaching implications of a cooperative

spirit among the NATO countries, it is nevertheless my conviction that the United States should move to stimulate a more proportionate degree of participation in alliance activity by some other members nations. Certain of these Allies have, of course, been weakened by shortages of materials and manpower, and they have not yet fully recovered from the devastation of World War II. But, the United States has been shouldering a far larger portion of the military and financial burdens, and it is time that we make clear our desire that others also assume their full responsibilities.

I request that excerpts from the address by Secretary Colonna before the NATO Parliamentarians Conference be reprinted in the Appendix of the RECORD. Additionally, I request that statements of mine dealing with the need for equal adherence to NATO commitments, as reported in the Elkins Inter-Mountain, Elkins, W. Va., December 17, 1962, be likewise reproduced.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM A SPEECH OF THE ACTING SECRETARY GENERAL, AT THE NATO PARLIAMENTARIANS CONFERENCE IN PARIS ON NOVEMBER 12, 1962

Mr. Chairman, ladies and gentlemen, it is a high honor for me, as the Acting Secretary General of NATO, to welcome you at our headquarters building on the occasion of your annual conference. At the same time, I am all too well aware that this honor has fallen to me only because, owing to his recent illness, the Secretary General, Mr. Stikker, could not be here today himself. Mr. Stikker has, however, asked me to express to you his most cordial wishes for a successful meeting and his profound regret at not being able to be with you.

He has—I know you will be glad to hear—made a remarkable recovery from what was a pretty serious operation; but even he still needs some rest to be fully able to resume his duties. There is every reason to hope that he will be back with us very soon. Meanwhile, Mr. Chairman, I hope I may convey to him the conference's best wishes for a speedy and complete recovery.

During this important conference, as indeed at any other time of the year, the International Secretariat will do everything in its power to lend you such help and facilities as it can in order to promote the successful work of this gathering.

We attach, as you know, the greatest value to your work, because we are fully aware that what we are trying to do, we can never accomplish in a vacuum. To succeed, we need the full support of the public opinion of our 15 member countries, and this means, first and foremost, that of the elected representatives of our allied nations. You, parliamentarians, and we, officials, must work hand in hand in mutual trust and in a common conviction as to the common goal to reach.

Every word spoken by you during this conference, every idea thrown out and every resolution passed by you will be read and listened to by all of us with the greatest respect and with the greatest interest. The wishes expressed by you and the suggestions you make will guide us in our future work as they have in the past.

I now wish to turn to the world situation in general and try to assess what changes there have been since last year. We should be deceiving ourselves if we were to say that there had been any diminution in

the Soviet threat. Indeed, in some ways, it may even have increased. There is, therefore, no reason for either complacency or slackness on our part. Allow me to review the elements of the situation one by one.

The Soviet Union continues to gain economic, technological and military strength. It is true that she, as well as China and some of the satellites, encounters great difficulties in food production and the management of agriculture. The laws of nature often refuse to submit to the laws of Marx and Lenin. It is equally true that the standard of living in the Soviet Union, not to speak of that of Communist China, continues to be miserably low compared with that of the West. Progress is painfully slow, thus often straining the patience of the Russian masses, as manifested in the disturbances in some parts of southern Russia last summer.

But let us not be misled by the undoubted shortcoming in the Soviet system into underrating the expansion of Soviet industrial power, the rapid and in some respects admirable achievements in the scientific and technical field, and the formidable military build-up which these have enabled the Soviets to achieve. We in NATO have, to be sure, considerably improved our military posture. Our alliance possesses a formidable deterrent in time of peace and impressive fighting power in the event of war. The Soviet leaders must realize this. They must also realize that if they were to force a conflict upon us, they might certainly inflict fearful damage and loss on the whole Western alliance, but they would also provoke their own total destruction. That is the balance on which the peace of the world precariously rests. But that balance is not a static thing. If we have not stood still, neither—we may be sure—has our adversary. That is why we cannot be content with our efforts, but must renew and redouble them.

Over the years, there has been a gradual change in the face of communism. Since the death of Stalin, there have been one or two cracks in the grim, monolithic facade. Here and there, a little freedom, a little light has been allowed to seep in. We in the West have watched these developments with interest and not without sympathy. Not one of us would grudge the Russian people some relaxation in the burden they bear. None of us but would be overjoyed if they could have even a fraction of the right and freedom we take for granted. We have no quarrel with them: our enemy is the system under which they are forced to live. There may have been what some people call a thaw. The Soviet leaders may indeed have realized that the human spirit, even after 40 years of despotism, can stand so much tyranny and no more. But let us have no illusions. The central structure of communism remains. If anyone is inclined to believe that there has been a change of heart, let him look at the wall in Berlin, and at the tragedy and shame it has brought.

We know, it is true, that the Communist empire has its ideological and political strains and stresses. We know too that what in the horrible jargon of kreinology is called "polycentrism" (ugly subjects seem to generate ugly words) is more and more replacing the monolithic bloc of Stalin's day. We have no reason not to welcome this. Anything that may make for more variety and more independence behind the Iron Curtain is all to the good. Here again, however, we should not indulge in wishful thinking and we should not base our policies for today on what may—or may not—happen tomorrow. A less monolithic, less oppressive communism will not necessarily be a weaker communism. It may well be stronger, because more firmly based on public support: and indications are not lacking that this may be so.

So much for our Soviet adversary. Let me now briefly review our own position today compared to our situation last year. Economically, the Alliance as a whole continues to prosper and progress. Production in most countries of the Alliance is still at an all-time high, though the rate of growth in some of the major industrial countries has levelled off, and we have had one or two warnings—in the stock market for example—that we cannot take our present momentum for granted. Encouraging progress is being made in the economic and social development of those countries and regions in the Alliance which had hitherto lagged behind. In the case of Greece and Turkey, two consortia have been set up under the aegis of OECD. This development warrants new hopes for increased and better coordinated economic assistance to these two countries.

The Common Market has proved an outstanding success exceeding even the hopes of its well-wishers. Its radiation and attraction is felt in every part of the Western World and far beyond.

The determination of the United Kingdom Government to negotiate acceptable terms for its entry into the Common Market will, we hope, bear fruit before long. With the addition of Great Britain and other Western countries, and with the association of large parts of Africa, the Common Market would become one of the most powerful units in the world and an entirely new element in world affairs.

If we needed any reassurance on the importance of the Common Market, it would be amply provided by the reactions of the other side. First of all, the line was that co-operation among capitalists was doomed to failure owing to the contradictions of a system under which—as some eminent Marxist once said—if one capitalist announced his intention of hanging himself, the rest would compete with one another to sell him the rope. It was indeed embarrassing when in a Europe which seemed ruined by war, rent by dissension, and doomed, by all the rules of the Marxist game, to decadence and decline, our free economy not only refused to lie down and die, but staged a spectacular renaissance. Later, the Soviets seem to have admitted to themselves that the Common Market could not be laughed or vilified out of existence. They would still like to see it fail. They, and those who consciously or unconsciously play their game, are still trying to prevent its further extension and to misrepresent it to the underdeveloped nations of the world as a cunning device to perpetuate their colonial bondage. But for better or worse they have had to accept that it is a force to be reckoned with—and lived with.

Politically, our alliance is in good health. Khrushchev's hopes to divide us on the issue of Berlin have been disappointed. We have stuck together, and jointly we have stuck to our guns. Most recently the alliance has shown spontaneous and magnificent solidarity with the United States in the Cuban crisis. Other issues which threatened to divide us in the past have faded into the background. Intensive political consultation carried on over the years is beginning to show its fruit, not necessarily by producing unanimity on each and every issue—which is perhaps not essential or even desirable in a community of free peoples—but in creating a common pattern of thought and of reactions to political events around the globe. In other words, we are not only overcoming past divisions, but we are in full process of growing together into a true family of like-minded nations. In this respect the spectacular Franco-German reconciliation—a long-evolving process whose completion was symbolized by Dr. Adenauer's visit to Paris and General de Gaulle's visit to Germany—is in its way as positive and momentous an event for the alliance as

President Kennedy's declaration on 4th July of this year on interdependence between the United States and Europe. Europe must unite. None of us here, I think, would gainsay that. But we must not allow the bonds of unity which are growing closer every day to divert us from our goal of a true Atlantic community, or allow any contraction or conflict to arise between the two objectives of European unity and Atlantic solidarity. The Atlantic Ocean must unite, and not divide, the free world.

As to the development and strengthening of our Military Establishment, I have already had something to say in connection with the recommendations of your conference of 1961. I would now like to go into this question in more detail because it is, after all, an essential element in any review of Western strength and achievements that we wish to make.

You are all aware that since the Oslo Conference of May 1961 the North Atlantic Council has been engaged in a thorough examination of NATO defense problems with a view to determining long-term planning and policies. In his opening address to you last year, Mr. Stikker described some of these problems, particularly those relating to the control of nuclear weapons, and also explained to you why the council had temporarily to interrupt this study in order to give the highest priority to the urgent build-up of our military forces in face of the Soviet threat in Berlin.

I should, first of all, like to assure you that the determination and solidarity shown by NATO countries after the construction of the wall in Berlin in August 1961 has in no way slackened and that as a result the efficiency and state of readiness of the forces under SACEUR's command has greatly improved since last year and will continue to improve. But we have still a long way to go before we can be sure that our shield of conventional forces is fully capable of playing its role in the overall deterrent to aggression.

There is another aspect of our work in NATO to which I would like to refer this morning, that is civil emergency planning.

We regard progress in the wide field of planning and preparing for war in the civil sectors as of vital importance. Civil emergency planning is an essential complement to the NATO military buildup.

If our preparations in the civil field are obviously inadequate, the credibility of the deterrent is lessened. If war should be forced upon us, effective preparations in the civil sectors, both nationally and internationally, offer the only practicable means by which our populations could hope to survive and to sustain the allied war efforts to a successful conclusion.

We recognize of course that national preparations must remain the responsibility of the individual member governments. We recognize also that financial, and in some cases psychological, considerations cannot but hinder the full implementation of the wide range of measures ideally required.

We now review annually the progress made both nationally and internationally, and a comprehensive but, I regret, secret report is prepared each year by the senior civil emergency planning committee. Each government will thus be able to judge the success or failure of our international efforts and the extent to which they and their fellow governments have met national goals.

I will not hide from you that much remains to be done, but I am satisfied that the tasks with which we are confronted are being tackled with energy and determination by a sound and satisfactory organization acting under the direct auspices and responsibility of the North Atlantic Council itself.

At the same time I would like to point out the importance that we attach to the aid you can give in this as in other fields. Your sup-

port for legislation and financial measures aimed at enabling your respective governments to prepare for war in the civil fields is vital to the success of our combined efforts.

I should like now to look further afield. In a world in which two powerful alliances maintain an uneasy equilibrium, the position of those countries which remain outside the two alignments, is clearly of cardinal importance. This applies both to those countries which have formally adopted a policy of nonalignment, and to those which, though their political alignment is clear, do not actually belong to any particular grouping. Developments in those three countries are of the greatest importance to our alliances and we must pay the closest attention to them.

With this in mind I should like to try to draw up a kind of balance sheet of developments favorable and unfavorable to the West in those parts of the world which are not covered by NATO or the Warsaw Pact.

In the Far East, we watch with satisfaction and confidence the growing economic power, the social and political stability, and the sense of international responsibility of Japan.

In southeast Asia, the Geneva agreement has put an end to the dangerous fighting in Laos, though we still have considerable misgivings about what seem to be circumventions, if not breaches, of the agreement by the Communists.

In South Vietnam, the bitter guerrilla warfare between pro-Western and Communist forces continues, though the massive aid given by the United States appears to have given the edge of advantage to the West.

By a strange reversal of fortune, India—the aggressor of last year—has herself become the victim of a massive, ruthless and determined aggression by Communist China. It is too early to say how the conflict will develop. But there can be no doubt that it will have profound and far-reaching effects. It will certainly disillusion the Indian leaders and the Indian masses still further about the true nature of communism. The Indian Communists themselves have been unable to find any justification for China's action. It may well shake to its foundations the whole philosophy of nonalignment on which the Indians and many others, following their example, have based their whole foreign policy.

Mr. Nehru himself has virtually admitted that for the past 15 years, India has been living in a fool's paradise. It has already created a major problem in Sino-Soviet relations. Can the Soviets continue to give economic and even military aid to a power which with the other half of the Communist world is in a state of undeclared war, and what will happen to their relations with China if they do?

The Middle East has remained relatively calm, except for the revolution in Yemen and the Kurdish rebellion in Iraq, which General Kassam appears to be unable to put down, and which may yet have wider repercussions.

In north Africa, the farsighted and courageous action of the French Government has ended the 7 years' nightmare in Algeria. It has opened the way for a new pattern of co-operation, on a basis of sovereign equality, between two countries whose fates have been closely linked for more than a century. It has afforded France the opportunity of re-summing in the near future her rightful role in the military effort of our alliance. It is our earnest hope that the great work begun at Evian will continue and that the new Algeria will develop along democratic lines and in close friendship and cooperation with France.

In Africa, south of the Sahara, the process of decolonization has gone steadily and peacefully on.

The road from colonial dependence to full sovereignty is a hard one for both sides to travel. There have been difficulties, and there are bound to be many more. But all that has happened over the past year has confirmed the wisdom of the decision to end the colonial link in freedom, order, and friendship. Even in the Congo, the gradual emergence from chaos and civil war affords some hope that some measure of stability may return to that unhappy country. Such progress as has been achieved has been won against heavy odds. The Soviet bloc has been concerned only to exploit and intensify internal divisions. But with patience and goodwill, order may yet prevail.

To turn now to Cuba, the swift and courageous action of President Kennedy has foiled a major threat to the security of the West and the peace of the world. It is too soon to say how things may turn out. It may be that this brave and well-judged stand may have opened up new possibilities and new prospects. Many of us may think so. But in our relief that, this time, catastrophe has been averted let us not forget that negotiations between East and West have been burdened for too long by a legacy of all too well founded suspicions of Soviet intentions and all too blatant Soviet bad faith. The events of the past few weeks can only have added to that burden. It is hard to negotiate with confidence with an interlocutor whose main weapon in debate is the lie direct.

While the credit for the outcome of the crisis must be given in full measure to the courage and steadfastness of one country, and indeed of one man, I feel certain that the hand of the President of the United States was greatly strengthened by the response of the Organization of American States and by the full support he was given by this alliance. Therein lies a lesson for the future.

On the whole, and despite the alarms and excursions of the past weeks, I think the picture of the uncommitted world emerging from the survey is an encouraging one. Decolonization has continued swiftly and in general peaceably. Gradually, some measure of order and stability seems to be emerging in the southern half of the world. And—perhaps most important of all—slowly, painfully, but nonetheless surely, the neutrals are beginning to understand the realities of the world situation and the realities of world power. The shedding of illusions is always a painful process. We have found that ourselves. It is likely also to be a long one. We shall need all our patience and all our sympathy. But if we keep our heads, and steadily and consistently pursue our policy of promoting the independence, the economic well-being and the social stability of the emergent countries, commonsense is bound to prevail in the end. The neutrals are learning fast. Sooner or later they will realize—as many of them do already—that neutralism only makes sense in a world in which the opposing forces are more or less evenly balanced; that the attempts to upset that balance come from one side and one side only; that they themselves could not survive in a world dominated by communism; and that they bear a heavy responsibility not to upset the balance in favor of those who are in truth the last real and unrepentant imperialists of today.

However, provided we have the willpower to see things through, there is good reason to hope that peace will be preserved and that in the long run our side will win the race. There are many signs and facts to encourage us. Our economic strength and with it our social stability continue to grow. In the scientific field, we are making great strides forward and the recent splendid successes of our U.S. ally in the space field give us hope that the headstart which the Soviets have had in this field will be grad-

ually diminished and finally overtaken by the West. Politically, our solidarity and cohesion as allies are growing and the prospect of a permanent interdependence of a united Europe and a United States of America, opens entirely new vistas into a better future.

Our greatest handicap often seems to be our lack of confidence in our own strength and our skepticism about our own values. A more positive, a more offensive psychology appears to me the necessary complement to a defensive strategy in the military field. And let us never forget that the West is not only NATO, but all those who, whether they are formally associated with us or not, share our aspirations and our way of life. In resolutely pursuing its policy of peace through strength, this alliance is fighting their battle as well as its own.

Mr. Spaak, in a recent and most eloquent speech before the United Nations, appealed to the Soviets to recognize the peaceful character of the Western system and to show through deeds that they are in earnest with their slogan of peaceful coexistence. This speech and this appeal received one of the most thunderous ovations the United Nations General Assembly has witnessed. Will it receive any response? On the answer to that question hangs the whole future of the world.

We live in the midst of many and great dangers, but the dangers that beset us are matched by the opportunities within our grasp. Let us seize them boldly and advance to our goal of a world in which war shall be no more.

[From the Elkins (W. Va.) Inter-Mountain, Dec. 17, 1962]

RANDOLPH SAYS UNITED STATES MUST INSIST ALLIES MEET OBLIGATIONS

Insistence by the United States that its partner governments of the North Atlantic Treaty Organization meet their defense obligations, is imperative in the belief of U.S. Senator JENNINGS RANDOLPH, who returned only recently from a trip to Europe and a visit to the Supreme Allied Headquarters in Paris.

Before leaving Elkins this morning, following a visit here on Sunday, the legislator indicated that America is 10 percent over its commitment for conventional forces, while many other countries in the alliance against communism (Soviet Russia) are below promised strength.

"It is a fact that the covenant has not been adequately met by several nations," declared Senator RANDOLPH, who stated that "we have been the bulwark in this cooperative effort and have reason to be critical of certain deficiencies of our allies. They have, of course, been weakened by some shortages of materials and manpower and they have not recovered from the devastation of actual war destruction. But the United States has been committing 10 percent of its gross national product to defense as Great Britain allocates but 7.4 percent which is a little more than is done in France. In West Germany, the figure is only 5 percent but there will be an increase soon in that crucial area of West Europe."

"We know that the average of 1.1 percent of population in the armed forces in the NATO nations as a group does not equal the 1.5 percent of America.

"A month ago in Paris at the Supreme Allied Headquarters, I was told by Gen. Lauris Norstad, top commander, that we must have a stronger conventional force if our deterrent shield is to command respect of the Communist leaders, I fully agreed with his experienced conviction and so stated in public addresses in several cities in West Virginia."

Senator RANDOLPH went on to stress that citizens of West Virginia are concerned that NATO be more effective and they have been

studying the cost in our budget of the alliance.

Later today at Salem College, the State's senior Senator will speak to the students there on the subject of "the alliance and our part in the organization."

"NATO," said the Elkins citizen, "is generally viewed by the public as primarily a military alliance. The success of this historically unusual venture is due in large part to the military shield which has prevented a Soviet takeover either by direct aggression or internal subversion, but there are other achievements which should be recognized.

"The fundamental objective of the alliance to maintain peace and stability having been achieved, NATO found itself forced to counter Soviet offenses in the political, economic and psychological areas. This led to purposeful cooperation, involving prior consultation among the nations in order to develop a common political front. Exchange of information and views before announcing a national policy has created mutual understanding and trust, especially as such a procedure forces each nation to consider and understand the point of view of its fellow nations before deciding on its own policy. Thus a degree of unanimity has been achieved, without sacrifice of national principle or national policy, unique in the history of the world.

"As a member of NATO, we are shareholders in a 15-power partnership for world peace—a cooperative effort which demands from each participant a strong sense of understanding, trust, and responsibility. And, since our effort is set in an alliance of sovereign and independent states, and since the degree of cooperation and agreement among the member governments will necessarily dictate its effectiveness, it is essential to the interests of the free world that we unceasingly try to reach understanding and accord.

"Though we attempt to maintain open and realistic diplomatic relations with nations the world over, it is in the scope of our NATO commitments that we perhaps meet our most challenging tests of loyalty, determination and resolve."

Banking World Spotlights Hon. Henry S. Reuss

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. RAINS. Mr. Speaker, I am inserting in the Record today an article entitled "Banking's Spotlight on HENRY S. REUSS," which appeared in the January issue of Banking, a publication of the American Bankers Association.

Those of us who have served with Congressman REUSS on the Banking and Currency Committee know him to be an energetic and tireless worker for sound monetary and economic measures; he is indeed a battler for those things in which he believes. I know all of HENRY'S friends will be most interested in reading this most complimentary article:

BANKING'S SPOTLIGHT ON HENRY S. REUSS, MEMBER, HOUSE BANKING AND CURRENCY COMMITTEE AND JOINT ECONOMIC COMMITTEE

HENRY S. REUSS, 50-year-old scion of Wisconsin German ancestors, is a Republican

family's gift to the liberal wing of the Democrats in Congress.

A prominent member of the House Banking and Currency Committee and of the Joint Economic Committee, who by his probings of Fed and Treasury policies has attracted the notice of the banking world, Mr. REUSS in November won his fifth term in the House by a safe margin of 43,000. He campaigned partly on Cuba, but mainly on the need for a more dynamic economic policy and more vigorous export efforts. These may not all have been the issues the voters would have selected, but they seemed to like Mr. REUSS' leadership and gave him 63.3 percent of the total of ballots cast in his district.

HENRY REUSS is a battler for those things in which he believes. He fought in World War II, entering the service as a private and emerging from the war as a major with bronze battle stars for Normandy, central France, and Germany. In the Congress he fights for the liberal monetary and economic measures he deems necessary, although this brings him into inevitable clashes with the views of the more conservative school represented by Chairman Martin of the Fed.

Congressman REUSS paid no major attention to economics on his way through Cornell and Harvard Law School, but since college days he has read extensively on our central banking system, money and banking, and economic questions. He is chairman of the Joint Economic Committee subcommittee which is concerned with the balance of international payments.

"The commercial banking system plays an indispensable role in the United States," says HENRY REUSS. "The growth we need for our own welfare and for our world responsibilities can come only with a healthy banking system. Since the great depression, our banks have worked well, but there are at least two areas in which the House Banking and Currency Committee under Chairman PATMAN will take a long and deep look: (1) The laws governing the national banks cry for revision and improvement in many particulars; (2) the relationship of the Federal Reserve System to the Congress and to the executive branch needs attention. I believe the Fed should be independent, but also that it must play a responsible role.

"While I don't want the Executive to have the power to overrule the Fed, I do want the lines of authority fixed so that responsibility of decisionmaking won't be blurred and obscured. I think this needs to be the subject of a full-fledged study by the House Banking and Currency Committee, a legislative committee, unlike the JEC which has had many hearings," he continued. "If the public is to understand its government, it must know who makes decisions and why. In this matter the JEC has come to the end of its abilities. Now it is a matter for the legislative committee.

"As for the recommendations of the three interagency committees which have reported to the President on subjects dealt with by the commission on money and credit and others, we'll look at their recommendations. I'd welcome a broadly based Presidential program for reforms; but this does not relieve the Banking and Currency Committee from its constitutional duty to survey the Nation's needs and seek passage of needed laws. I feel a sense of urgency on this, as domestic and foreign policies are almost totally interdependent.

"Under Chairman PATMAN for the first time in recent history I expect the Banking Committee to study the entire field of money and banking and to draft and report appropriate legislation. Also for the first time in many years, I expect subcommittees with specified jurisdictions to be appointed. Congressman PATMAN will prove to be a vigorous, forthright, and responsible chairman."

Asked for his views on particular changes he favors in the banking system, Mr. REUSS

explained: "I can't be very specific on the changes in the national banking system, since I need to do a lot more research and study. The one thing that I am clear on is that the present system of divided jurisdiction between the Federal Reserve, the FDIC, and the Comptroller of the Currency results in divided authority and responsibility, particularly in the field of mergers. Unified regulation should be the first order of business."

Mr. REUSS has been following money and banking not only on the two committees already mentioned, but also as a member of the House Government Operations' Subcommittee on Foreign and Monetary Affairs. Twice during the past year he has carried on individual inquiries on these subjects in Europe and has lectured before several German university groups. Mr. REUSS was one of several Members of the Congress who attended the International Monetary Fund meeting in Vienna in 1961.

In 1939-40 Mr. REUSS was assistant corporation counsel in Milwaukee County. Next he was with the OPA in Washington. In 1945 he was with the price control branch of the Office of Military Government for Germany. Later, before running for Congress in 1954, he held various public and private posts. Mr. REUSS explains how he got into politics very simply: "I didn't like the way the older generation was handling the world."

ONCE A REPUBLICAN

How did a Republican scion become a Democrat? "In the early 1950's Joe McCarthy dominated Wisconsin politics." How did he happen to land on the House Banking and Currency Committee? "Couldn't get Public Works or Foreign Affairs, my first preferences."

The Congressman's grandfather came here from Germany in 1848 as a youth of 18, soon had a job with the Marshall & Isley Bank in Milwaukee, and ultimately became its president. The bank, the oldest in the Northwest, is now Wisconsin's second largest bank. The Congressman's father also made his career with this bank and HENRY REUSS himself, during his college vacations, did stints there as a runner and as a teller in the transit department. Until he entered politics HENRY REUSS was a director of the bank.

ARTICULATE CONGRESSMAN

Mr. REUSS is one of the most articulate of Congressmen. Time magazine has called attention to his "energy, ability, and ideas." He is a leading Congressional conservationist. A former deputy general counsel in Paris for the Marshall plan, he is now a lieutenant colonel in the Infantry Reserve. Mr. REUSS is an enthusiastic outdoorsman; he likes to fish, hunt, hike, camp, sail, and play tennis with his wife and their four children.

The Wisconsin Congressman is keeping a close eye on banking. Bankers should keep an eye on him.

Well Done, FBI

EXTENSION OF REMARKS

OF

HON. WILLIAM T. CAHILL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. CAHILL. Mr. Speaker, while I am sure that all Americans are aware of and appreciate the great contribution being made by the Federal Bureau of Investigation to the safety and welfare of our

country, it is gratifying to note the praise of our newspapers concerning the recent accomplishments of the FBI during the year 1962. I am therefore pleased to call to the attention of the Members of Congress and the American people an editorial which appeared in the News-Dispatch, Michigan City, Ind., praising the work of the FBI:

WELL DONE, FBI

By custom, FBI agents toil in quiet anonymity, preferring effectiveness to personal glory. Consequently the public often is unaware how well these modern-day "untouchables" fight crime.

Appreciation of the FBI's remarkable record can be gleaned from Director J. Edgar Hoover's yearend report to Attorney General Robert F. Kennedy. Here, briefly, are a few of the things FBI men accomplished in 1962:

1. Apprehended 11,400 fugitives, compared with 10,668 in 1961; provided evidence which led to 12,700 convictions against 12,418 the prior year.

2. Ran up a total of fines, savings, and recoveries well over \$200 million—considerably more than it costs to operate the FBI and much higher than 1961's \$148.4 million.

3. Located 19,000 cars stolen and driven out of State—and 2,500 fugitive felons for local authorities.

4. Processed 23,000 fingerprint cards a day while maintaining an unmatched identification file that contains 165 million sets of prints from an estimated 77 million persons.

5. Made 236,000 scientific laboratory examinations of evidence for local police in all 50 States—without charge.

6. Assisted, upon request, in more than 3,600 local and regional police schools—and trained another 165 picked lawmen at the famed FBI National Academy, bringing the Academy's graduate total to 4,258 since 1935.

7. Furnished more than 100,000 items of criminal intelligence to other law-enforcement agencies, resulting in some 2,400 arrests and \$32.5 million in recoveries—plus the smashing of an international dope ring and seizure of \$20 million worth of illicit drugs.

On the security front, the FBI continued to enfeeble the Communists' American apparatus; nabbed three pro-Castro saboteurs and seized their cache of explosives; caught a Navy man passing military secrets to the Russians and developed evidence leading to the expulsion of several Communist bloc diplomats.

In addition, it was largely the FBI which turned up witnesses and information leading to conviction of the U.S. Communist Party as an organization for failure to register with the Attorney General—a decision which puts American Reds in a tighter straitjacket.

In the South, FBI agents turned up church burners who tried by intimidation to keep Negroes from the polls. In Chicago—for the first time in years—they brought gangland killers (of union official John Kilpatrick) to justice and ultimately to prison.

Impressive as it is, the FBI's record of accomplishment is not the only reason Americans should be grateful to Director Hoover and his quiet crimefighters. There are others even more important.

No police agency in the world is more scrupulously considerate of individual rights. None works more harmoniously with other lawmen. And rare indeed is the police force anywhere in the world which can match the FBI's dedication of purpose and incorruptibility.

If you feel, as we do, that these splendid public servants deserve a "well done," why not say so in a letter to the Director? The address is J. Edgar Hoover, Federal Bureau of Investigation, Washington, D.C.

What Is Self-Determination?

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Friday, January 18, 1963

Mr. TALMADGE. Mr. President, the Savannah (Ga.) Morning News has editorially noted that the policy of self-determination subscribed to by the United Nations is often inconsistent with its actions. Cited as a case in point was the United Nations military venture to force Katanga's union with the Congo, and its failure so far to urge self-determination for the nations in Europe held under the iron heel of communism.

I ask unanimous consent that this editorial from the Savannah Morning News be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT IS SELF-DETERMINATION?

Many people may wonder, in the light of recent and current history, just what definition of "self-determination" is subscribed to by the United Nations and the United States.

Spokesmen of the U.S. Government, in accordance with this country's own founding, profess a heartfelt belief in independence and self-determination. They have supported the policy of self-determination in some cases so extreme that close allies have been alienated.

The United Nations, which is to say the controlling Afro-Asian and neutral bloc is committed by charter to freedom of people and to noninterference in the internal affairs of nations. The Afro-Asians have made a fetish of anticolonialism and continually espouse the principles of self-rule even though often ignoring the responsibilities which go with independence.

Yet what is the record of the U.N. and the United States in respect to self-determination? Katanga was denied even negotiation on the subject of independence and was invaded to force its union with the Congo in what many call a raw act of aggressive colonialism by the U.N. Goa and West New Guinea were not turned over to India and Indonesia by a vote on self-determination; they were invaded and taken over by force or, as in the case of New Guinea, by threat.

In two of these cases, the United States and the U.N. were active participants in the actual denial of self-determination. In the other, both condoned conquest by force.

The record is even worse. The U.N. has yet to call for self-determination for the captive nations of Europe or to oppose totalitarian rule in Cuba or Communist invasions of Vietnam and India. It dropped its lukewarm criticism of the Soviet Union's suppression of Hungary.

The United States has done little better. Our Government soft-pedals its criticism of Russian colonialism and actually sponsored the desertion of Hungary. It has promised not to invade Cuba or to interfere with the flowering of a Communist state in the Western Hemisphere, even if that means discarding this country's historic principles which until now, no foreign power has dared to challenge.

Yes, there is reason to ask what the United States and the U.N. means when they pledge allegiance to the principles of self-determination. But there is an answer.

Self-determination means whatever the Afro-Asian bloc wants it to mean. It means, in most cases, berating the great powers of the West for their colonialism and ignoring the more deadly Soviet brand of the same evil. It means acceptance of aggression by members of their bloc and the turning away from any member, as in the case of India, who has been unfortunate enough to clash with the Communists.

Self-determination, as subscribed to by the Afro-Asians and uncommitted nations, is a self-serving hypocrisy, a policy as devious as their pro-Communist neutralism. Since these countries dominate the U.N. and have their own man in the Secretary-General's chair, their policy is naturally that of the U.N.

The reasons for this are clear. The Afro-Asians and so-called neutrals care for themselves and themselves alone. They have no fear of the West which will accept their hypocrisy and their criticism and still subsidize their irresponsible governments. The Communists are a different matter: Unwilling to give aid without something in return, scornful of world opinion, resentful of criticism, and quite adept at using force to get what they want. This kind of policy the neutrals understand and even admire.

What is not clear is the reasoning of the U.S. Government, which condones all this and allows the U.N.'s boldest hypocrites to set our foreign policy. No wonder the neutrals have little respect for us. Washington doesn't even practice self-determination itself.

A Protest From the Rural Press

EXTENSION OF REMARKS

OF

HON. VERNON W. THOMSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. THOMSON of Wisconsin. Mr. Speaker, an alert and perhaps indignant editor of a prominent weekly newspaper makes some pertinent observations about Secretary Freeman's complaints. Because of the relevancy to the farm policies being proposed, I submit it for the benefit of others:

A PROTEST FROM THE RURAL PRESS

U.S. Secretary of Agriculture Orville Freeman has complained that the smalltown newspapers in the West and Midwest are an impediment to the success of the Kennedy administration's farm program. This information was carried in a daily newspaper report printed Friday, January 4, 1962.

In a memorandum which he gave to President Kennedy at Palm Beach, Fla., last Thursday, January 3, Secretary Freeman referred to the "strongly GOP orientated press" and contended those newspapers were making it difficult to present to the farmers the claim that farm progress had been achieved the past 2 years due to efforts of the present national administration.

Of particular interest to residents of the areas mentioned by Mr. Freeman is his statement that, "The small towns of the West and Midwest where current farm programs have been most beneficial, seem to appreciate it the least."

It would almost seem that Mr. Freeman is convinced that small towners out here are an ungrateful lot—that they appear unable to recognize all the good things he is doing for them. What a sad day when folks don't know how much better off they are now that the ex-governor of Minnesota is doing the

major painting in the farm picture. What can logically be said about such a wealth of ingratitude?

The fact that there have been failures in the national farm administration, even despite the earnest, and no doubt sincere, efforts of Mr. Freeman—is certainly no secret. But what is most amazing is that Mr. Freeman thinks the smalltown newspapers to be largely responsible for rural people not appreciating what his Department is doing or attempting to do. His statement is surely one of the few left-handed compliments regarding the prestige and power of the rural press. While his statement may not be welcomed by most smalltown publishers (whether Democrat or Republican) it is a recognition to the degree that now, at long last, a high-placed official has found out that there are smalltown newspapers.

However, smalltown papers will not be panicked by the unprecedented statement of the Secretary of Agriculture. They will not be extremely nervous for the simple reason that the politicians owe a far greater debt of gratitude to the small rural papers than those papers owe to generations of politicians.

For years the smalltown papers have had to take it on the chin and the business mortality rate of the rural press is a grievous testimony to the growing forces of urbanization and misguided liberalism. And the economic difficulties of the small towns are not by any means limited to the newspapers in those towns.

First of all let's set the record straight. Who is most concerned about the economic welfare of farmers? At the top of that list, and rightfully so, are the farmers themselves. They head the list because their existence is at stake—and the changes in markets and expenses and taxes are of extremely vital concern to them and their families. The advantages which they can give their families depend entirely on the balance between income and expenditure. The situation is of far greater importance in rural areas than the most effective influence that has been exerted by politicians of several administrations.

Next in line among those concerned with farm conditions are the smalltown retailers, doctors, dentists, technicians, artisans, and all those who are dependent upon the patronage of the farmers. These people, who have not been a primary consideration in governmental economic programs, are more appreciative of anything that benefits farmers than any politician can ever know. If times are bad for farmers, they just as quickly become bad for those who sell to the farmers. Farm prosperity is always greatly wanted by all the people who live in small towns. The prices of milk, corn, cotton, wheat, livestock, poultry and eggs, vegetables, and fruits are far more critical in smalltown America than in any big city, including Washington. Policies affecting the economy, the freedom of the people, and the future of America's agriculture are also of much more importance to rural citizens than their concern for the popularity of one political party over another. If politicians have failed to appreciate this latter fact, then they are drifting out of harmony with their farm and smalltown constituents.

There are many reasons why rural conditions, which have caused the worry of many diverse farm organizations, do not go unnoticed by businessmen and other residents of small towns. What easy talkers in far-off places never seem to understand is that in rural areas farmers and small townsmen are of one and the same social-economic family. They go to the same churches. Their children attend the same schools. They belong to the same civic and patriotic organizations, to the same lodges, to the same service groups and to the same political parties. They are

of similar ethnic stock in many areas. And, most important of all, in a very large number of rural communities, the farmers and townspeople are interrelated—and many of the townsmen are retired farmers. Add to all this the basic fact that rural people are just as good, loyal Americans as those aligned with the powerful forces of mass unification and growing centralization and there seems mighty good justification for rural America to protest unjustified criticism directed their way.

The smalltown newspapers have no enmity toward the Department of Agriculture which most generally moves in an orbit far removed from the editorial paths of the weekly press. But newspapers in any area have a right to speak in defense of their own integrity when an undeserved missile is hurled at them—in a sweep that has the potential of alienating them from their rural friends and neighbors. Such denunciations, if not refuted, could be injurious to the life and progress of the smalltown press and also the advancement of the people and communities served by that press. For this reason, all those interested in such newspapers must register their protest without any equivocation, no matter how much they may regret differing with any governmental official.

A general criticism of bureaucrats is that they often make neat plans for supposed progress and then become angry or petulant when the citizenry fails to become enthusiastic about those plans. Maybe Mr. Freeman's observation is really a compliment to independent-thinking farmers—an acknowledgement that after carefully sifting the facts many have refused to comply with the Department's plans, basing their decision on what they consider best for themselves and their families. Is it possible that thousands of rural people are utterly wrong in their lack of acceptance of some of the Department's programs? Or is it possible that there are policies in the national agricultural program that rightfully should be corrected?

Mr. Freeman received a very great honor when he was chosen to be U.S. Secretary of Agriculture. He was chosen because the President had hope that Mr. Freeman possesses the qualifications to lead American agriculture out of the many ills that sorely beset it. Certainly, it must have been a nettling disappointment to hear the Secretary even indirectly blame the rural press and small towns for the lack of further success of certain programs advocated by his Department.

All serious-thinking persons in State or Federal Governments know of the loyalty (in peace as well as wartime) of the smalltown press in carrying news of governmental and political importance to their readers. In what way then, can Mr. Freeman's criticism of smalltown newspapers be justified?

Effective Speaker

EXTENSION OF REMARKS

OF

HON. GRAHAM PURCELL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. PURCELL. Mr. Speaker, the well-known Capitol Hill weekly newspaper Roll Call carried an editorial in yesterday's edition titled "Effective Speaker." I believe it reflects the feelings of most Members of Congress concerning our distinguished Speaker, the man we have come to know and love as

an outstanding and effective leader and a true and valued friend. The editorial follows:

EFFECTIVE SPEAKER

We are getting annoyed at the daily papers' constant harping about Speaker JOHN McCORMACK's alleged lack of leadership. Some 50 years ago a Speaker was cut down to size when his tyrannical leadership became too strong for his colleagues to stomach. Speaker Rayburn ruled with an iron hand, but in his final years he had lost much of his absolute influence and suffered several reverses on major points.

Congressman McCORMACK became Speaker following the death of a man who had served longer than any other Speaker of the House. Many oldtimers were chomping at the bit to assert their independent thinking, as well they should.

The record will show that Speaker McCORMACK has racked up an impressive score of major victories, accomplished in a manner constant with the type of leadership that should be exercised in a body of independent legislators.

To say that he is not an effective leader because one Congressman who aroused the ire of several factions of his party failed to gain a seat on an important committee is unrealistic analysis.

The Speaker has the respect and fidelity of his colleagues. And because he is not one to abuse the power of office, he will maintain both, gaining in the process their admiration and devotion.

Grazing on Lands Managed by Bureau of Land Management and Forest Service

EXTENSION OF REMARKS

OF

HON. FRANK E. MOSS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, January 18, 1963

Mr. MOSS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a speech made by Utah County Commissioner George Buzianis at the annual meeting of the National Association of Counties in December 1962. This speech deals with grazing on the lands managed by the Bureau of Land Management and the Forest Service. It is timely and interesting.

As one who has long been interested in county government and who recognizes the effectiveness of our counties, I am extremely pleased with the concern being shown by county officials in effective administration of public lands.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY TOOELE COUNTY, UTAH, COMMISSIONER GEORGE BUZIANIS, AT THE NATIONAL ASSOCIATION OF COUNTIES' GRAZING, WATER, AND REVENUE CONFERENCE IN LAS VEGAS, NEV., DECEMBER 11-13, 1962

I am very happy to have been able to accept Mr. Stearn's invitation to participate in NACO's grazing, water, and revenue conference. The title of my talk today will be "A County Commissioner's Interest in Public Grazing Lands." I don't profess to be an expert but I will do my level best to bring to you a county commissioner's view-

point on this subject. I am sure most of you know the definition of an "expert"—that is just an ordinary man who is far away from home.

One might say that public lands have no direct concern of public officials because they do not directly support the local property tax structure. That statement is entirely wrong. We as county commissioners have a great deal at stake in this matter. We are concerned with the problems which relate to the productive use of the resources of our public lands. The economy of many Western States counties is dependent upon the use of these public grazing lands.

Before I proceed any further on this matter I would like to present to you some figures on this subject "grazing." It is astounding to note that one-fifth of the land in the United States is used as cropland. Somewhat over one-fourth is in grassland, pasture, and range. One-third is in forest. If grassland and forest land used for grazing are included, about 60 percent of all lands in the United States are in crop and livestock production. If all forest land was included, the area for agriculture use would be approximately 80 percent of the land area. It is interesting to note that grassland, pasture, and rangelands were 22 million acres lower in 1959 than in 1930. Why? Much of this change was due to forest use and some nonagricultural uses. Also conservation and soil bank programs have had some effect on this decrease. From 1950 to 1960 there have been approximately a million acres a year of agriculture lands being used for urban expansion, highways, airports, and so forth.

Most of the country's crop, pasture, and range production is on private lands.

Now let us see how much of this agriculture land is federally owned or administered by a department of the United States.

Federally owned lands make up 34 percent of the land area in all of the 50 States. The greatest majority of this land is in the western part of the United States. This land is in timber and grazing uses and also in mineral development. It is also used for recreation, water development, and wildlife.

Of the 765 million acres of federally owned land in the United States, 483 million acres are in forest or grazing land. The federally owned lands are classified in two groups: public domain which consists of 714 million acres or 94 percent, and land that was acquired by purchase or other means which amounts to 51 million acres or 6 percent. It may be of interest to note that the State and local governments own only a total of 121 million acres or 5 percent of the land area in the United States.

Grazing is the largest single use of agricultural land. The gross income from cattle and sheep alone in 1960 was well over \$12.5 billion. There are approximately 10 million head of deer, elk, and antelope that also obtain forage on these ranges and pastures which also has a great effect on the local economy. In the past years there have been a continuous cut in grazing permits on Bureau of Land Management and forest lands which has affected the economy in most western counties who are dependent on agriculture as their key source of revenue.

I have taken the time to find out just what the economic value of the Utah cattle industry has to Utah's economy. Just 1 year ago the University of Utah's staff of the bureau of economic and business research made a very thorough study.

The total cash receipts from farm marketing have been running about \$160 million a year in Utah. Of this, 78 percent comes from livestock and livestock products. Forty-eight million or 30 percent of this total comes from cattle and calves. Actually cattle and calves are the single most important agricultural product produced in Utah. Approximately 25 percent, or 40 million, of this total comes from sheep.

Another way to evaluate the industry is to examine the number of cattle and calves on farms, the number of animals produced each year and the trends of production in the cattle industry compared with other important industries of the State. In January 1961 there were 726,000 cattle and calves on Utah farms. If the count were taken in the summer at the seasonal peak rather than the low it would be higher than the figure I have cited. According to the 1959 census of agriculture we have in Utah 18,000 farms, 13,500 of these farms have cattle and calves. Keeping this 13,500 figure in mind and compare it with the following: we have in the State only about 700 mining firms; about 3,700 construction companies; only 1,400 manufacturing establishments; 10,000 retail and wholesale stores; 2,000 banks, finance, real estate offices and insurance companies. Altogether we have a total of approximately 25,500 nonagriculture businesses in Utah, or only about twice as many as we have farms with cattle and calves. The value of this industry is approximately one-half billion dollars, as compared to the value of all airlines, trucklines, gas and other pipelines, power companies, railroads, telegraph and telephone companies which amount to just a little less than \$1 billion.

The net contribution to Utah's income stream from the cattle industry alone was over \$63 million in 1961.

These figures alone indicate the importance of the cattle industry to the economy of the State of Utah. Most of these cattle-men depend upon the grazing lands administered by the Forest Service and the Bureau of Land Management.

Note: Utah doesn't rank with the top half of Western States in livestock production.

Not being critical of the actions taken by the Bureau of Land Management and Forest Service in this matter and realizing that there is definitely an over grazing problem and our range conditions are depleting very rapidly, the question now is what are the Bureau of Land Management and Forest Service going to do to correct this problem. They cannot go on forever making cuts and eventually do away with grazing on public lands. Livestock people everywhere who depend upon Federal lands on which to graze are very much troubled by the present day trends. It could well mean that many livestock men could be out of business before too many years if the present cutting trend continues.

Now back to the question, What are the two Federal agencies, the Bureau of Land Management and Forest Service, doing to correct this problem? Several years ago a large group of Senators and Congressmen called to the attention of the Secretaries of Agriculture and Interior the decline in range use because of the deterioration of Federal rangelands. They felt there had been no comparable range appraisals. They also felt there was a need to coordinate range development programs and to develop data on the character and quality of our range resources.

Last year the Senate Committee on Appropriations directed the Secretaries to conduct a trial program of public land range appraisals. There were three areas selected and they were areas administered both by the Bureau of Land Management and the Forest Service. This study was not only for grazing purposes but also for watershed, wildlife and other important uses. I might add at this time the areas selected were in Alamosa, Colo., Dillon, Mont., and Lakeview, Ore.

Selection of the sample area within each State was contingent upon three basic requirements: (1) Presence of considerable acreages of rangelands administered by the Forest Service and Bureau of Land Management; (2) several representations of broad classes of range operations using Federal lands; (3) existence of data relative to the needs of the range appraisals.

In July 1962, the Department of Agriculture and the Department of the Interior released the findings of the so-called pilot range study.

This data was assembled on factors important to management of these lands. These factors include area and suitability for livestock grazing, past and present management, range condition and trend, current and potential grazing capacity, range use by livestock and wildlife, and existing and needed conservation practices and improvements.

These areas varied in elevation from 4,200 feet to 13,000 feet. The vegetation varied from sagebrush ranges in the lower elevations to the timbered mountain slopes. The three areas studied contained 14,571,850 acres. The Federal Government being the largest owner of the land in each of the areas.

Although the livestock industry in all three areas is dependent upon the public rangelands, all of the livestock industry does not use these public lands. Some operators depend solely upon private lands. Although most operators had a combination of Federal lands and private lands to maintain a year-round operation.

Capacities in these areas were estimated through use of standard methods of range inventory and analysis and were expressed in animal unit months. An animal unit month is defined as one cow unit grazing for 1 month. Five sheep were considered equal to one animal unit. It might be of interest to note in the study areas that Colorado had a total grazing load decrease of 46 percent in the last 10 years, Montana, a 16-percent decrease in 15 years and Oregon a 19-percent decrease in the last 10 years.

It was found that range improvement practices now in force have proved practical and necessary in the three study areas. This being fencing, stock water development, range seeding, control of less desirable brush and weeds, access roads and trails, boundary markings and pest control. The ultimate result of this study showed that all areas need more improvement practices than now exist. There was a definite need of more fencing and more stock watering facilities and last but not least a continued increase in range seeding to convert depleted ranges into productive grazing lands. It pointed out that areas where the vegetation and the soil stability conditions were poor or very poor, the trend was always downward. These study areas showed they had a potential increase in animal unit months from 11 to 41 percent above current capacities providing there were better management and range improvements. You might note that even this potential figure would not equal the cuts made in the past 15 years in these same areas. I feel this study has been very beneficial.

Now the thing that troubles me more than anything is the cost estimated by these two Federal agencies to make this study on all the lands. Now don't take me wrong; I am not opposed to these studies. There have been questioning—and this is strictly personal—the cost to make these studies. There have been two procedures suggested. One estimated to require 5 years at a cost of \$25 million. This would provide both a generalized appraisal of resources condition and a complete area-by-area inventory useful for administration. The alternative route would require only 5 years at a cost estimate of \$7 million and provide only a general appraisal of relative low accuracy.

Now, after talking to some so called range specialists and Bureau of Land Management personnel I am under the impression that this information is available at the present time from Bureau of Land Management and Forest Service districts. At the present time the Bureau of Land Management conducts a continuous 5-year inventory program of the range conditions and I am sure that each

district manager in a short while could plan out in detail what areas should be improved. This could be done in much less time than 5 years and much less money than \$25 million.

While I am on the subject of grazing on public lands I would like to comment briefly on the much discussed subject "Grazing Fees on Public Lands." In February of this year the Department of Interior announced there would be no increase in the present rate of grazing fees for 1962. The present rate is 19 cents per animal unit month. Now bear this in mind, that means one cow can graze for one month on public grazing lands for 19 cents. Five sheep which are considered one animal unit month can also graze for 19 cents per month or 3.8 cents per sheep. This fee was set about 28 years ago under the Taylor Grazing Act. I am sure that these fees have not increased proportionately with other costs.

I am sure that much time and thought has been given by the Department of the Interior on grazing fees in the past 10 months. According to Assistant Secretary of Interior John Carver, Jr., in his report at the Albuquerque meeting of the National Advisory Board he requested that the Board come up with a plan for scheduled moderate upward adjustments designed to reach mutually agreed upon standards. A plan suggested would have the Department of Interior fix a minimum and maximum fee, allowing the local districts grazing advisory boards to recommend adjustments of fees within this range based on individual circumstances. One feature of his plan would permit the local districts to retain the amounts collected above the minimum and use them for range improvements within that district. I am sure that most sound livestock operators would welcome such a program.

In summarization:

1. I have shown the amount of public land used for grazing and the value of this grazing to our local economy.
2. Local government depends greatly on assessment of livestock that graze upon these public lands for revenue.
3. We as county officials are deeply concerned with these continuous cuts in grazing allotments.
4. We urge modern methods of range improvements to continue at a much faster pace.

In closing, I would like to commend the Department of Interior and Secretary of Interior Udall's decision to increase the members of the State multiple-use advisory boards and include members of county and State governments. In the past, these boards have been known as grazing advisory boards. Membership was limited to livestock men and wildlife representatives.

Secretary Udall's announcement provides the first opportunity for county government to be represented on these important State advisory boards, whose functions have now been expanded to include all phases of public land management.

Water Resources and Unity

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. ASPINALL. Mr. Speaker, my colleagues in this great body are well aware of my devotion to the cause of the full development of our wealth of natural re-

sources. Perhaps, at times, some of my distinguished friends have puzzled over the preeminent position in which I regard our Nation's water resources. Recently, one of the recognized authorities on water resources, William H. Nelson, the associate editor of the Grand Junction (Colo.) Daily Sentinel, published a series of three articles dealing with some of the problems that are challenging some of our water-short areas. For a brief glimpse at how wide-ranging these problems can be, I recommend to my colleagues the final portion of Mr. Nelson's series.

WATER RESOURCES AND UNITY

(By William H. Nelson)

If water is so scarce, why continue to build irrigation projects?

With farm surpluses costing taxpayers billions not only for purchases but also for storage, why bring more land under cultivation?

Why not use the water still available in industry?

Magazine writers periodically ask these questions and provide answers critical of the reclamation West.

The answer, so far as western Colorado is concerned, to the first question is that using water to grow crops is the only way available at present to establish firm rights to the use of water.

The answer to the second is that reclamation projects do not produce surplus crops.

It is hard to convince easterners of this fact, but it is true.

Industry isn't ready yet in western Colorado to use big amounts of water. Oil shale development is still in the future, and coal hydrogenation may be even further off. Coal will probably be put to use first in thermal electrical generation plants.

If industries were ready to start diverting from streams, there would be less emphasis on irrigation.

A fact which makes the situation more encouraging for the future is that when an industry moves into an area or when a residential development springs up, the amount of water used for farming is about the same as that needed by industry and homes. Water rights acquired for irrigation can be transferred by purchase to industry and municipalities.

With eastern Colorado groups devising new and more fantastic schemes to take water through the Continental Divide, western Colorado water users must prove to the courts they have put water to use to get absolute water decrees.

The lower basin States, California, Arizona, and Nevada, are anxious to use any water which Colorado or other upper basin States do not use. Western Colorado citizens must put the water to use as quickly as possible to perfect and keep rights.

Many farmers and ranchers in western Colorado need dams and canals to increase their supplies of water for irrigation of land now under cultivation. Changes in climate have reduced the precipitation, and the farms and ranches need supplemental supplies.

The Bureau of Reclamation is paying more attention to water for industry and municipalities, but the effort is meeting with considerable criticism from easterners who feel they are subsidizing competition for themselves. They don't look upon reclamation as a national investment that brings in new taxes, creates new business, and helps stabilize the economy. Reclamation farming is more diversified than one-crop farm economies of other sections of the Nation.

A change in criteria—rules, regulations, and procedures—for passing judgment on reclamation projects may result in approval of some projects which would have been re-

jected under the old A-47 set of rules used throughout the Eisenhower administration.

Demands by Mexico for additional Colorado River water are a threat to future western Colorado projects. The fact that the matter might be submitted to an international court of arbitration group or the possibility of the Kennedy administration being magnanimous to placate Mexico and impress Latin America worries Colorado water men.

Another factor in the speed in which potential western Colorado reclamation projects can be translated from ideas and plans to structures of dirt, concrete, and steel is the attitude of the new Colorado administration of Governor John Love. If Love should openly oppose reclamation or just drag his heels, project promoters will experience additional difficulties in Washington.

How well western reclamation States work together in Congress is perhaps the most important factor, even though one of the least understood. Representative WAYNE ASPINALL was sharply critical of western Congressmen who supported only projects from their own States or own districts and voted against other projects or at best were only lukewarm in support.

How well interstate compacts on administration of rivers work determine in part how much cooperation our neighboring States will give us in backing our projects. Difficulties over the Rio Grande compact, for instance, threaten to cause New Mexico and Texas to oppose openly western Colorado projects.

Promoters of projects face many obstacles. They must find ways of avoiding as many as possible and of overcoming those they must hit head-on. Unity among western Colorado residents is essential, and unity among the reclamation States is also a must. Achieving unity at both levels will require tact, diplomacy, and clear thinking.

Management's Problems in a Dynamic World

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. OSTERTAG. Mr. Speaker, we frequently read that our railroads should do more to take advantage of modern technology, research, and development in order to improve their position. However, I doubt whether there is a general understanding of the great strides which the railroad industry has actually made in research, development, and technology; industry leaders have demonstrated exceptional enterprise and initiative.

Mr. Alfred E. Perlman, president of the New York Central System, discussed this challenge and related considerations in an important address delivered here in Washington, D.C., last November before the American Institute of Industrial Engineers. Entitled "Management's Problems in a Dynamic World," Mr. Perlman's address met with great acclaim in the press and elsewhere. One columnist, Mr. Frank C. Porter, writing in the Washington Post of November 2, had this to say, in part, about Mr. Perlman's speech:

His plea for greater understanding of Government was perhaps the strongest made by a leading executive since the row over an

abortive steel price increase brought a wide rift between the Kennedy administration and much of the business community last April.

Mr. Speaker, under leave to extend my remarks, I hereby submit the complete text of Mr. Perlman's address so that others may have the benefit of his thoughtful discussion of the industry's responses to the challenges of today's society:

MANAGEMENT'S PROBLEMS IN A DYNAMIC WORLD

(By Alfred E. Perlman)

I want to speak today about management's problems in a dynamic world.

Our world is characterized by constant activity and change, which is a result of the explosive growth of science and technology.

We stand at the dawn of a new age. Through a second industrial revolution, we will lengthen lifespans, create more leisure, produce a higher standard of living, and provide increased economic security. This revolution, utilizing the automated machine controlled by the computer, will eliminate much of the human monotony and drudgery of mass-production industry. For the first time in history, great numbers of people will have the opportunity to develop and use their highest abilities.

The new technology has already placed in the hands of management the means to overcome one of its major problems, the problem of how to increase productivity. This problem has always been with us, but today it is of far greater importance than ever before.

We must increase our productivity just to maintain our present standard of living. Our total population is increasing at a faster rate than our labor force. Young people are staying in school longer, and older people are retiring earlier and living longer. By 1975, we will have to nearly double the amount of goods and services produced by each worker.

Secondly, we must increase productivity to offset long-range inflationary pressures. Even with continued high employment and without a traditional business depression, it is obvious that inflation can effectively and silently destroy the real buying power of millions of people.

Thirdly, we must increase productivity to meet the growing economic challenge from other nations. In the years ahead, virtually everything we produce will be sold, even in our own country, in competition with products moving in international trade. Thus, the efficiency, or the lack of it, of our own industrial establishment will decide whether or not we hold present markets and move into new ones.

Although we now have the means to increase productivity, or are developing them rapidly, the problem is not just a technological one. We have developed our technology to the point where we can do almost anything we desire with matter. But the rapid accumulation of scientific technique has not been matched by a corresponding improvement in the sphere of human and group relations. Our sociology has not kept pace with our technology. We may find ourselves unable to utilize our technological advances, unless we are also able to advance in the social sphere.

Technology deals with material things, while management deals with both material things and human beings. Thus, management, in its efforts to increase productivity through technological innovation, must take into account the human factors involved in such advances. To do this, management must learn to communicate with many diverse groups.

Let me describe a management problem resulting from the disparity between what we are able to do technologically but which

we are unable to do because of social factors.

The technology to develop crewless trains is available today. Such trains would give us great savings through higher efficiency and lower wage costs. But, at the present moment, we are not able to operate such trains, primarily because of labor contracts and State laws—unjustified by today's technology—which require a specified number of crewmen on each train.

It is clear from this instance—and I could cite many others—that enlightened labor and enlightened management must communicate with each other, in order to achieve mutually satisfactory solutions to the problems of labor in our modern society. We must increase understanding and cooperation. For certainly, as productivity is increased—and, as I have said, it must be increased—some jobs will be eliminated and some will be radically changed.

The new age will need more technologists, more highly skilled people than we have today. These people will come from today's labor forces. We must seek to create a widespread understanding of the fact that as each individual increases his skill he will deserve added prestige and a higher income. After all, the same thing happened during the first industrial revolution, which raised the manual laborer to the semiskilled worker of today. Today's semiskilled worker is certainly tomorrow's skilled technologist, who will enjoy the benefits of increased productivity.

Of course, business leaders who intend to communicate effectively with any group must remember that communication is a two-way process. If management wants to be understood, it must first understand the views of others. If it wants to be heard, it must listen. And if it wants others to support its aims, it must attempt to support the aims of others.

Thus, management must realize that, before it can propose acceptable employee programs, it must understand its employees' problems. Only then will it be equipped to ease worker adjustment caused by technological change.

The art of effective communication also applies to a second important area—government relations. As cybernation produces increased interdependence between producers, consumers, and the government, it is clear that greater centralized control will arise. Businessmen will find it increasingly essential to understand the expanding role of government in our economy. The most successful managers will be those who know how to communicate their needs to the various governmental legislative and regulatory agencies, and who understand the functions and inner processes of government. Communication and understanding will enable them to utilize the activities of government as an aid to their own business operations.

We should not be blind to the fact that there often exists a true community of interest between Government and private business. Government, which spends about a third of our gross national income, will have a real and legitimate interest in certain facets of business. And, certainly, it is right for businessmen, who occupy such a pivotal position in our industrial society, to seek to counsel with those who set public policy and enact law.

The American Telephone & Telegraph Co. is an outstanding example of an organization that knows how to communicate effectively its policies and objectives to a wide range of audiences. It has representatives in hundreds of communities explaining their company's intentions and actions. With A.T. & T., this is a 24-hour a day program. As a result, the company has the public on its side on most important issues. And, even though it is a true monopoly, it enjoys the confidence and support of Government.

In recent years, my own industry has learned to present its legitimate interests more effectively to the public and the Government. Our efforts were instrumental in securing the passage of the Transportation Act of 1958, which was the first major revision of policies that had been in effect since the days of the railroad monopoly. Legislative reform was long overdue.

We are now experimenting with freight rates for the first time in history and getting a pat on the back from the Government for doing so. We also feel that the President's excellent message on transportation was influenced by more effective communication between Government and industry. This message indicated a real awareness on the part of Government of the many inconsistent and unnecessary regulations under which the American transportation industry must operate. The President referred to a "chaotic patchwork of * * * obsolete legislation and regulation * * * which does not fully reflect either the dramatic changes in technology of the past half century or the parallel changes in the structure of competition." No other President in recent history has spoken so strongly or truly concerning our industry.

The recent report of the Presidential Commission on Railway Labor, which upheld many of the views of management, is one more instance of the impact of effective communication with Government.

However, because my industry was a long time awakening to the need for real communication, we still must endure unnecessary and restrictive regulation in many areas. Concerning most of our rates, we are treated as if we were still a monopoly, even though we have only 3 percent of the total passenger business and 43 percent of the total freight. Every State has a railway regulatory commission, despite the fact that the Federal Government's Interstate Commerce Commission exercises a firm control over all our operations. In the State of New York, we have three regulatory bodies which must approve our actions. And we have been unsuccessful in some cases in securing permission to price our services or reduce our costs to the point where we can make a reasonable profit. In Albany, for example, we still are not allowed to move our passenger station a block and a half, even though it would free valuable land for first-class development and save hundreds of thousands of dollars annually for the New York Central.

But we are narrowing these inequities, and the prime tool we are using is communication with a wide range of diverse groups.

The third important management problem centers on marketing. As productivity is increased, it is obvious that managers must employ the true concepts of marketing—as distinguished from merely selling—if they are to distribute the flood of goods produced by a cybernated economy. Marketing takes into full account the needs of the customer, whereas selling considers only the needs of the seller himself. We must increasingly tailor the product to fit the specific needs of the customer. Increased sales, resulting from customer-oriented production and distribution, will create more jobs and income for many people.

In line with this need, 2 years ago the New York Central completely revamped its own marketing operations. We realized that we could expand our market only if we fully understood the business and the needs of our present and potential customers. We set up a marketing industry planning department with specific responsibility to make detailed studies of particular industries and individual shippers, and to act as a logistics consultant for customers. It coordinates the Central's own efforts to develop and sell new services. Working with other groups, including our market research and industrial development departments, this new organ-

ization was primarily responsible for the establishment of a whole new market for the Central—the transportation of automobiles, which had been moving by truck over the highway.

I cite this as an example of the kind of marketing we are going to need as the second industrial revolution progresses. We are going to have to find markets; we are going to have to create markets; and we are going to have to develop new products and services to satisfy old and new needs.

Of course—and I want to emphasize this—managerial freedom to move forward into the new era will be of little use unless management maintains its own energy and creativity. This is the fourth major problem management now faces.

This creativity will be difficult to maintain, since cybernation will place a premium on conformity and standardization. As more and more companies become linked by interdependent systems of production and distribution, the mental ability to see the whole picture may be difficult to acquire. The tendency may be to rely too much upon computers, in order to eliminate the possibility of human error. Carried to extremes, this could lead to a programed mediocrity pervading all facets of life.

We must preserve the ability to think and the initiative to act, in spite of the trend toward pushbutton operations. This is especially true in relation to the traditional training ground for new executives, the area of low middle-management, which is likely to have many of its functions taken over by computers. Thus, we must guard against doing away with the one place where creative people can acquire knowledge and skill. We must preserve autonomous, decentralized operations wherever possible—despite the centralizing tendencies of cybernation—so that we will maintain the freedom for creative individuals to express and exploit their own ideas.

We must find and develop intelligent, decisive people to fill management ranks—the kind who will be so necessary if we are to increase productivity, communicate with many diverse groups, and create the marketing innovations essential to the second industrial revolution. We can maintain closer contact with educational institutions, in order to advise them concerning the type of education needed in the evolving world of business. We can institute internal training programs, to upgrade our own people. We can guard against inbreeding in executive groups, by bringing in people from other industries. And we can delegate more responsibility to younger people, who have greater drive, energy, and ambition.

Management must also create incentives that will attract and reward the right kind of management candidates. The traditional incentive of higher pay for greater responsibility has been weakened by our income tax laws. What happens to a creative person's initiative, when he realizes that the next salary increase may mean the same or even less take-home pay? But, even though our tax situation is not what it should be, we can devise incentives to attract creative people.

The ambitious, talented person sometimes considers money a secondary goal. One may want more prestige. Another, more power. And a third, the freedom to act on his own initiative. Whatever the incentive may be, it is the responsibility of management to find and offer it to the people it needs. To do this, the successful manager must spend a tremendous amount of energy gaining an understanding of what motivates people—even though there are no unchanging rules concerning human behavior, as there are in the world of science. In our dynamic world,

managers must acquire the experience, knowledge, and skill to promote and expand human creativity.

To increase productivity will require more than just technological knowledge—it will require the ability to deal with people. As Government becomes more influential and as centralized computer control becomes more prevalent, we must make even stronger efforts to develop—not the common man, the organization man—but the uncommon man, the creative man. He's the one who will lead the way into the new age.

We face no insurmountable obstacles. We have the ability to meet the problems I've outlined today. And, in meeting them successfully, I believe we will be creating a world far better than the one we've known. We no longer face a geographical or technological frontier; we face a human one. On this frontier, we will find our greatest challenges and gain our greatest rewards.

Going Now and Paying Later

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, January 18, 1963

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a column entitled "Going Now and Paying Later" written by Jenkin Lloyd Jones and published in the Wednesday, January 16, Washington Evening Star. I commend this column to the attention of my colleagues.

There being no objection, the article was ordered to be printed in the Record, as follows:

GOING NOW AND PAYING LATER

(By Jenkin Lloyd Jones)

The American people have taken first class passage on a ship bound from Buffalo to the Big Rock Candy Mountains via the Niagara River. So far there have been cocktails and canapes and caviar for just about everybody.

You get a lot of funny people on a cruise, of course. Occasionally, some loudmouth has started running around the deck waving a chart, calling attention to the gradually increasing current, and pointing excitedly to that attractive cloud of mist up ahead. But the rest of the passengers have thrown these alarmists overboard. Anyone with a lick of sense knows that the faster the current the quicker we'll get to where we're going.

Not only is the ship traveling faster than we thought it would, but it is lighter, too. It used to be loaded down with a lot of gold, but most of that is gone. There was the cost of protecting our friends abroad who would rather not go to the expense of protecting themselves. And there was foreign aid.

And then some of our newly prosperous pals from Europe came aboard and hauled away the gold on which they had a claim. It was really funny to see them wrestling the heavy ingots ashore when we would have been glad to give them our paper dollars as surety for our debts to them. You would almost think they doubted the future value of our dollars.

We've got a pretty quarrelsome crowd aboard. Every few minutes the propellers quit turning or the water doesn't run in the

faucets or the deckhands throw down their swabs and paintbrushes. The crew wants easier work and more money. The passengers want more service, bigger staterooms, fancier meals, and cheaper tickets. And the captain says everybody is right.

The U.S. Government will end this fiscal year 1963 next June 30 with a deficit of about \$8 billion. The President's economic advisers had, in contrast, forecast a surplus of about half a billion for the same period. Never has the arithmetic been so far off.

Yet the President is pushing a sweeping program of tax cuts. He makes the point (and he couldn't be right) that the tax burden is now so great that it is slowing down the economy's expansion. In other words, taxes have removed so much of the incentive to take risks and earn profits that we are not producing as well as we might or creating jobs or providing new opportunities for our young people. Amen.

But, at the same time, there is no inclination to cut Government spending. For fiscal 1964 it looks as though we're going to have a \$100 billion budget. This will be greater than in the peak years of World War II. The national debt limit, now at \$308 billion, will have to be raised this spring as usual. If we honestly added in the unfunded actuarial liabilities for social security, the figure would be about \$65 billion higher.

Our trouble is that we can't tell the difference between our needs and our wants any more. That devilish word "need." We need low cost housing. We need to be first on the moon. We need interstate highways. We need medicare. We need more aid for education. These are all desirable things. But change each "need" to "want" and you get closer to the truth. A need is a necessity. A want is a desire. We are being drowned in our druthers.

And, simultaneously, we are becoming rebellious about paying the cost of what we have. Of course, we haven't been quite paying the cost. The steady progression of the national debt is eloquent testimony to our refusal to meet our bills. But, as the President correctly asserts, even though we have taxed ourselves too little to meet our expenditures, we have taxed ourselves too much. The fires of enterprise are getting smothered and the steam gauge may soon be dropping.

What is the way out? You'd never guess—unless you've been reading the papers. Government officials, business brain-trusters, union leaders have discovered a marvelous escape hatch. You don't have to cut spending. What you do is cut taxes and then the rapid growth in the gross national product will so expand the tax base that the deficit will be overcome and we'll be put ashore on the Happy Isles.

This is probably the finest piece of economic bluebird twitting since F.D.R. waved his cigarette-holder airily and dismissed the national debt with the remark, "After all, we only owe it to ourselves."

In the meantime, the able and busy people of Europe's Common Market, whose war-wrecked industrial plant was largely rebuilt by U.S. funds and who have cheerfully shucked off on American taxpayers most of the cost of their common defense, are now beginning to whip the pants off us in many fields of competition. Their steel makers blow oxygen into their converters while we still blow air. Their featherbedding problems are insignificant. Their currencies grow harder while ours grows softer.

But, so far, we've had a pretty good ride down the Niagara River. In spite of the squabbling and grabbing, the guzzling and gobbling have been good.

And there was that wonderful sign over the ticket office back on the dock: "Go now, pay later."

Legislators Work for You

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, January 18, 1963

Mr. YOUNG of North Dakota. Mr. President, one of the great needs of this country is a better knowledge and understanding on the part of people generally as to how legislative bodies operate both on the State level and in the Congress of the United States. A better understanding would be of mutual help to both the general public and legislators who represent them.

One of the finest articles I have ever read on this subject was one written by Lloyd W. Sveen in the November 16, 1962, issue of the Fargo Forum in his widely read and respected "Column Eight."

I ask unanimous consent to have this column printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LEGISLATORS WORK FOR YOU

(By Lloyd W. Sveen)

Now you have voted, at least some of you, and a select group of your fellow men will represent you in the Congress and in your State legislature. Perhaps your candidates won, perhaps they lost, but if you want your voice to be effective in government your job isn't over just because you voted.

You may not realize that your voice among the millions of us can be heard by the relatively few who pass our laws, so do not sell yourself short.

I have never met a Senator or Representative who does not want to hear from the people back home. His principal business is to represent you in the legislative process of the State and Nation, and faithful representation of his constituents balanced against the national interest determines whether he will be reelected or not.

There isn't anything magic or complicated about getting effective representation. Here, based on the experience of Congressmen, are some do's and don'ts:

Get to know your Congressman or legislator, either in person or by letter. Let him know who you are, ask him to send you his newsletter and let him know of your interests. By knowing you and your principal interests he can better understand your point of view.

Write to him about matters on which you have some information and in which you are concerned. Be sure your letters reflect real information, which you know personally, and show from your own experience how an issue (such as medicare) will affect you.

When you have an interest in a subject write in plenty of time. Remember that the basic work of legislation is accomplished in committees; you can't look for a miracle from your Representative in changing a piece of legislation once it gets to the floor of House or Senate.

Don't make the mistake of trying to give instructions on every vote, and don't berate your man if his every vote isn't the same as your thinking. Legislation is a process of compromise between many points of view, and not every law is going to be precisely what you want in every detail.

Don't join pressure campaigns of petitions, mass mailings, and mass telegrams. A per-

sonal letter based on specific points has meaning far beyond a sheaf of identical letters or telegrams.

Don't abuse your Representative if he does not agree with you on all points. Perhaps he voted against a bill which you think he should have supported; write to find out why. The bill may have been amended so it contained features which would have hurt you, which led your man to vote against it. If you are not satisfied with his reasons, tell him why you disagree and if you object seriously you can vote against him at the next election.

Don't rely blindly on voting records kept by pressure groups to rate your Congressman's ability. These groups often compile a list of favorite issues and rank Congressmen only by their votes on those issues. Here again, your man in his campaign may have supported certain issues but when these came before him in bill form he felt the proposed law faulty.

Do judge your Congressman and legislator by the total effect of his work—in committees and in representing his district in the interest of the State and the Nation.

If you follow these suggestions, remembering to speak for yourself without pretending to represent more political influence than you have, you'll help your Congressman and legislator do a first-class job.

Poor Management, Bad Policy Blamed in Army Shakeup

EXTENSION OF REMARKS

OF

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. JONES of Missouri. Mr. Speaker, in reviewing past actions and in the light of current proposals of the Department of Defense, it appears that the executive department intends to remove an effective National Guard from the States and build up the Reserve which is completely under Federal control.

Because of the militia clause of the Constitution, this cannot be done legally, but unless the Congress writes a specific law preventing continual changes and spelling out in the appropriations bill preventive measures the present method will be used to gradually weaken the National Guard.

The periods of time since World War II in which the National Guard of some State has not been undergoing a reorganization, or an impending reorganization, have been relatively small.

In the past, as is the case now, a number of reasons have been offered the public as a basis such as "to increase readiness," "more responsive to possible contingencies," "strengthen the Reserve components," "modernize the Reserve components," "effectively complement the Active Forces," "improve reinforcement capability," et cetera.

For many years, outside the larger cities, single units of the Missouri National Guard have been recognized as important parts of the economic and governmental structure of many towns. As a result of prior realignments, and in

order to maintain a unit in these towns and make use of established facilities, it has been necessary to split one unit between two towns.

It now appears that in order to prevent vacant armories and to keep a token National Guard in these towns, it will be necessary to split one company size unit among three towns.

Maj. Gen. Thomas A. Lane, U.S. Army, retired, the military writer of the St. Louis Globe-Democrat, has set forth in the following column the reasons why he believes "it might be well for Congress to prohibit the reorganization of the National Guard and Reserve Forces more frequently than once in a decade since the Army seems to lack the self-restraint to impose so reasonable a rule upon itself."

Mr. Speaker, I hope that my colleagues will consider the basis for General Lane's suggestion, as set forth in this article, "Poor Management, Bad Policy Blamed in Army Shakeup":

[From the St. Louis Globe-Democrat, Jan. 9, 1963]

POOR MANAGEMENT, BAD POLICY BLAMED IN ARMY SHAKEUP

(By Maj. Gen. Thomas A. Lane, U.S. Army, retired)

WASHINGTON.—The new Congress will have before it the revised plan of the Secretary of Defense for the reorganization of the Army National Guard and organized Reserve Forces.

Revisions were required to meet the hostile criticism which the original plan received from the last Congress. The plan originally was designed to correct deficiencies disclosed in the callup of 1961.

Reorganization looks like the wrong medicine.

The problems of the callup were not organizational; they were created by poor management and bad policy decision. In some degree they are chargeable to reorganization, for the Army had completed in 1960 a reorganization of Reserve Forces which undoubtedly introduced confusion into the mobilization problem.

IT TAKES TIME

It takes time to shake down new organization, to train the new units, to build teamwork, to perfect the new logistical programs.

The first virtue of military organization is stability, for only an old organization can be a good organization. This ancient truth has been little understood by our Army in recent years as it has worked on a series of disruptive reorganizations.

The concept that change is progress seems to be the Army's answer to the atomic age. If it had put as much attention on training and on mobilization planning as it had on reorganization, there might have been less difficulty in the 1961 callup.

Fortunately, the virtue of stability seems to be better appreciated in the Navy and the Air Force.

The 1961 mobilization troubles are chargeable in the first instance to bad policy decision. The callup should not have been made at all, and this should have been clear to anyone familiar with our national defense organization.

Our Reserve Forces are manned by citizens who pursue normal civilian occupations in our society but who have trained and are ready for military duty in time of war. It is not in the basic conception of these forces that they will be called from their civilian occupations every time some international pressure makes desirable an augmentation of Active Army strength.

IMPLICIT CONTRACT

Thus, the callup violated an implicit contract which is part of the very organization of the Reserve Forces.

It was obvious to our people that the Soviet coup in building the Berlin wall merely exploited an opportunity and did not portend any radical change of foreign policy nor threat of war. Thus, the mobilization seemed wholly unwarranted.

An increase of Active Army strength could have been accomplished in good time by retention of men in service, increased draft quotas and voluntary recall procedures. It is a tribute to the patriotism of men called under these conditions that they groused so little.

Reserve Forces are based upon area organization and upon armories and other training facilities which have been built or maintained to support them. If these forces are to have stability and the efficiency which it promotes, it is obvious that their structure cannot be changed every time an administration sets a new manning level for them.

Changing force priorities and related manning levels are normal elements of good mobilization planning. This kind of action does not require reorganization as strength changes. It requires better Army management.

Military organization should be approached from the view that change is bad, that it should be made infrequently and that the disruption and confusion caused by change must be more offset by substantial gains introduced by the change.

In other words, change should not be made for small or questionable advantage, nor to avoid a confession of bad management, nor to cover up a bad policy decision.

It might be wise for Congress to prohibit the reorganization of the National Guard and Reserve Forces more frequently than once in a decade since the Army seems to lack the self-restraint to impose so reasonable rule upon itself.

Dr. Herman A. Bayern, American provost, was then introduced, and he set forth at length the achievements and accomplishments of former President Eloy Alfaro, President of Ecuador at the turn of the century, as follows:

We are gathered here today to honor a great humanitarian and philanthropist, Mr. Samuel Woden Gralnick, for his distinguished public and private services to mankind and in further recognition of his efforts toward the establishment of international peace.

But because many of you may not be fully aware of the background of the foundation, I would like at this point to describe it to you. The foundation was authorized by decree issued by His Excellency, Domingo Dias Arosemena, the President of the Republic of Panama, on January 22, 1949, to perpetuate the memory of Eloy Alfaro, martyred ex-President of Ecuador, a movement which has been devoted to the task of encouraging the study and propagation of the liberal ideals and principles, for which this Ecuadoran statesman and leader fought and died for during more than a half century.

General Alfaro was a soldier, patriot, statesman, and martyr, was a citizen not only of his native Ecuador, but of all the Americas. The personal integrity, the unwavering defense of the principles of truth, justice and friendship among nations, the self-control and self-sacrifice that marked about a quarter of a century of unflagging service to his fellowmen, extended beyond the confines of his own country, Ecuador.

He was a rebel and a conspirator—but his rebellion and conspiracy was directed against hatred, injustice, discord, and tyranny. He was the leader of a generation fired with the hope and desire that responsible political action would enhance the prosperity of their country and the welfare of their people. General Alfaro advanced the cause of his nation by setting up the judicial system, and expanded her schools and colleges and other institutions of learning.

How the world needs another Alfaro today. History records that 70 years ago there was convened in Washington, D.C., the Conference of American States, in which Eloy Alfaro actively participated as the dynamic leader. Subsequently, the Pan American Union developed. So that as long ago as 1890, Eloy Alfaro firmly advocated measures for improving the status of the Indians and the downtrodden, in his country and emancipating them from exploitation.

In 1907, Eloy Alfaro again was the dedicated leader who played a leading part at this International Conference in Mexico City, where the United States and six other Pan-American nations assembled and did discuss and resolve questions relating to the well being of the American states. As a matter of historical fact, Eloy Alfaro welded together the factions of the Cuban Freedom Party in December 1895, 3 years before the Spanish-American War, when he publicly petitioned the Queen of Spain demanding Cuban independence. In view of his achievements and accomplishments, there are monuments in the memory of Eloy Alfaro in almost every capital of the Western Hemisphere. And so today, we stand inspired by his example. The magnificent lessons resulting from so many noble undertakings by Eloy Alfaro are worthy of being transmitted from generation to generation for the honor and benefit of an entire community of nations.

Were he alive today, he would be in the forefront of the fight to preserve for the Western Hemisphere the pan-American unity of freedom loving people, that would be the perpetual harbinger against the attempt of

any form of despotism to plant the tyrant's heel on even the tiniest portion of the soil of our pan-American nations, as the Soviet Union and Dr. Castro have actually done in Cuba.

Were Eloy Alfaro alive today, he would be a zealous supporter of the work of the program of our United Nations and the Organization of the American States, and he would leave no stone unturned to assure, for all peoples of the world, that hope and peace and good will to all men that is our common heritage from our common Creator.

The philosophy of Eloy Alfaro was based principally on service to his fellow human beings and to the cause and promotion of international peace. The public and private motion of peace. The public and private activities of our distinguished guest of honor, Mr. Samuel Woden Gralnick, comes within the framework of this kind of service to humanity. In recognition of this fact, and that you are a great humanitarian and philanthropist, the ruling body of the foundation grants you, Mr. Gralnick, its highest honor—the Eloy Alfaro Grand Cross and Diploma.

You know, my dear Mr. Gralnick, that you now join a goodly company of distinguished Americans, who have been similarly honored in the past. They include President Kennedy, former Presidents Hoover, Truman, and Eisenhower, Governor Nelson Rockefeller, General McAuliffe, Commissioner Moses, General Crittenberger, along with J. Edgar Hoover, who typify the caliber of men who hold this high honor.

Indeed, we further the ideals to which we are dedicated, we who are presented to do honor to ourselves, when in behalf of the Eloy Alfaro International Foundation it gives me genuine pleasure to exercise a pleasant duty, imposed upon me by the board of dignitaries of this foundation to carry out its determination to honor Mr. Samuel Woden Gralnick with the Eloy Alfaro Grand Cross.

Mr. Speaker, Mr. Gralnick then acknowledges receipt of the award which reads as follows:

Eloy Alfaro International Foundation—"Thus one goes to the stars"—recognizing the special value of the services rendered by the Honorable Samuel Woden Gralnick in support of the objectives of this institution, he has been awarded the Cross of the Eloy Alfaro International Foundation. In witness whereof, this diploma, with the seal of the foundation, is presented in the city of Panama, Republic of Panama, on the 25th of June 1962.

Mr. Gralnick acknowledges receipt of the award as follows:

I am overwhelmed with the great honors you have bestowed upon me and at joining such distinguished company. I little thought when I followed the dictates of my conscience that I would one day be so honored amidst such outstanding company from all over the world.

To be the recipient is indeed a high honor, and I shall regard it as an inspiration to accelerate my efforts in carrying out the high ideals and principles of Gen. Eloy Alfaro, and the principles for which General Alfaro laid down his life.

I wish to again express my personal appreciation and gratitude for your kindness in conferring this Eloy Alfaro Grand Cross on me.

May God be with you all, always.

Mr. Speaker, I am happy to join the many friends of Mr. Gralnick throughout the United States who sent congratulations which were read by Rabbi Ruslander. The Third District of Ohio is honored by the selection of this public

Hon. Samuel Woden Gralnick Receives the Eloy Alfaro Grand Cross and Diploma of the Eloy Alfaro International Foundation, of the Republic of Panama, in Recognition of Humanitarian and Philanthropic Services to His Fellow Man

EXTENSION OF REMARKS OF

HON. PAUL F. SCHENCK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. SCHENCK. Mr. Speaker, under leave to extend my remarks, I insert the highlights of the proceedings of the Eloy Alfaro International Foundation, of the Republic of Panama, on the occasion of the luncheon and ceremony in the gold room at the Van Cleve Hotel, Dayton, Ohio, at which the award was made to Mr. Gralnick on November 7, 1962. This high honor was bestowed on him in the presence of a very distinguished group of his friends.

The invocation was delivered by Rabbi Selwyn D. Ruslander.

spirited person to receive such an important award for his achievements and accomplishments.

Top Career Employees Pressured for \$100 Democratic Gala

EXTENSION OF REMARKS

OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. MATHIAS. Mr. Speaker, prior to his recent illness, our colleague, the gentleman from Virginia [Mr. BROYHILL], was preparing to insert in the CONGRESSIONAL RECORD the following column written by Joseph Young, an eminent writer on Federal employee matters.

As I share Mr. BROYHILL's concern over the pressure being placed on career employees to contribute \$100 apiece to the Democratic National Committee, I am pleased to insert on behalf of Representative BROYHILL and myself the "Federal Spotlight" column from the Washington Evening Star of January 10, 1963:

TOP CAREER EMPLOYEES PRESSURED FOR \$100 DEMOCRATIC GALA
(By Joseph Young)

The Democratic National Committee is putting increased pressure on Government career employees to attend the \$100-ticket Democratic gala in President Kennedy's honor on January 18.

All Federal careerists who haven't responded to the committee's formal mailed invitations to attend the dinner are being contacted by telephone at their homes at night and asked if they plan to attend.

Another gimmick being used by the Democrats is to tie the gala affair with an invitation to attend a cocktail party preceding the affair at the home of the head of the agency where the worker is employed. For example, Veterans' Administration career employees are being invited to attend a cocktail party at the home of VA Administrator John Gleason as part of the \$100 affair. This same inducement was used for District government career employees, who were invited to a cocktail party at the home of the president of the Board of Commissioners.

The Star last month disclosed the letters mailed to Government career employees in many agencies in grades 12 and above, asking for the "pleasure of their company" at the affair to be held at the armory.

Career employees charged that this amounted to pressure on them to buy tickets, and they also reported that some of their bosses were getting in the act and asking them to attend.

The last week or so has seen a followup effort by the Democratic National Committee's gala salute committee to have Federal career employees attend the affair which is being held primarily to swell the Democratic campaign fund.

Democratic National Committee spokesmen acknowledged that a squad of Democratic volunteer workers has been telephoning all Government career employees who haven't responded to the written invitation.

The career employees are being reminded that the affair is being held in honor of President Kennedy and Vice President Johnson and that it is one of the most important events of the year.

Career employees charge that the Democratic National Committee is receiving the lists of career employees in grades 12 and above from officials in the various Federal agencies.

The dinner, incidentally, is strictly an entertainment affair, with such top personalities as Judy Garland scheduled to entertain. As one career employee, who reluctantly bought a ticket, remarked: "We're not even going to get anything to eat for our \$100."

The gala committee is under the chairmanship of Bedford S. Wynne, Dallas, Tex., attorney and coowner of the Dallas football team.

Employees declare that threats of denial of promotions, in-grade salary raises, etc., are being made by agency bosses in an effort to force purchase of tickets.

Meanwhile, Representative BROYHILL, Republican, of Virginia, has invited any Federal career employee who has been pressured in the matter to gather whatever evidence they can and contact him.

"I will do all in my power to bring the offenders to justice and see that they are prosecuted to the full extent of the law," Mr. BROYHILL said.

Mr. BROYHILL also said he will bring the matter to the attention of the House Civil Service Committee, of which he is a member, and ask for a full-scale investigation. If a stronger law is necessary to prevent such pressure on Federal career employees, Mr. BROYHILL said he will push for such a measure.

Mr. BROYHILL said that while contact with Federal employees at their homes by non-Government workers such as employees of the Democratic National Committee does not constitute a violation of the Federal Corrupt Practices Act, it constitutes highly questionable ethics. However, he stressed that Government officials who "release their files, including names and home addresses, to the Democratic organization" are violating the law.

He warned that these officials are subject to imprisonment or fines or both under the law.

One career employee summed up the dilemma regarding the invitation to the Democratic gala:

"We're damned if we do and damned if we don't. It's not just the \$100 involved, although that certainly is a big factor. But if we don't attend, we may be jeopardizing our careers. And if we do attend, we may also be jeopardizing our careers."

"You may recall that when the Eisenhower administration came to power, some of the Republican officials secured the lists of Federal employees who had attended Democratic \$100 affairs and these employees were on the blacklist as far as promotions and even holding their jobs was concerned. The same thing could happen again when a new administration comes into power."

Donations by Intimidation?

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. GROSS. Mr. Speaker, is there installed in Washington an administration that resorts pressure and intimidation to resolve problems external and internal, including the raising of campaign funds for the Democrat Party?

Is this the real meaning of the New Frontier?

When a Federal employee, supposed to be protected by the civil service system and the Hatch Act, is invited by his or her boss to attend a "booze with the boss" party and it is made plain that a \$100 contribution to the Democrat campaign kitty is in order, who is supposed to protect the civil rights of such employee? Is the Civil Service Commission interested?

When defense contractors are called to the White House and told they are expected to contribute to a National Cultural Center, what happens if they refuse to yield to such pressure and their contracts are quietly yet effectively stripped from them?

In these and other dealings, including the tributes being exacted from Federal employees, where is the Attorney General of the United States? Are civil rights covered by a political patent, obtained and controlled by the Attorney General?

The Waterloo, Iowa, Daily Courier has printed an editorial dealing with some of these questions. Under unanimous consent, I submit it for reprinting in the RECORD:

At a time when the President is asking increased powers from Congress, the administration has been criticized in several instances for abuse of the immense power it already possesses:

(1) Administration officials called in a group of leading defense contractors and President Kennedy told them in frank terms that they ought to contribute to the National Cultural Center being planned in the Capital.

(2) During the trial of James R. Hoffa in Nashville, the statement was made in court that someone describing himself as a reporter for the Nashville Banner had contacted one of the jurors by phone. Attorney General Robert Kennedy called the publisher of the Banner and asked him not to publicize the matter for fear of causing a mistrial. But the newspaper nevertheless printed the story and offered a \$5,000 reward for the arrest and conviction of the person falsely identifying himself as a Banner reporter.

(3) During negotiations on the release of Cuban freedom fighters, Castro demanded payment of \$2,900,000 which had been promised for release earlier in the year of 60 ill or injured prisoners. Attorney General Robert Kennedy raised a million from an anonymous donor and Gen. Lucius Clay borrowed \$1,900,000 from a bank on his personal signature. American corporations are now being asked to make donations for the Cuban deal; and the question is whether they dare to refuse. During the drive for medical supplies, one company which has been indicted for antitrust law violation received a call from the Justice Department requesting a contribution.

There is nothing wrong, of course, in the simple act of requesting donations from corporations. None of the companies have openly charged that they were promised immunity from antitrust actions if they contributed or the loss of defense contracts if they refused.

But there is, nevertheless, an inference of impropriety when administration officials, with the power of life or death over businesses, ask for voluntary contributions. While the motives involved in the cases cited above are worthy, many examples could be cited to show that the Kennedys are fully capable of retaliating against those who re-

alist pressure. The launching of an antitrust violation against steel companies which refused to accept the voluntary price stabilization program is the best example of this ruthlessness.

The Law Observance Committee of the Federal Bar Association

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. TOLL. Mr. Speaker, because of its important current value, I refer to the speech of a distinguished Philadelphia lawyer, Harry D. Shargel, Esq., before the 11th annual conference of the National Association of Citizens' Crime Commissions, held at the Warwick Hotel in Philadelphia on November 13, 1962.

Mr. Shargel is the national chairman of the Law Observance Committee of the Federal Bar Association, and his remarks are concerned with the current drive of the association on a national scale to promote respect for law. I am sure that my colleagues will be interested in the material which the national chairman presented:

REMARKS OF HARRY D. SHARGEL, NATIONAL CHAIRMAN, LAW OBSERVANCE COMMITTEE, FEDERAL BAR ASSOCIATION, AT THE 11TH ANNUAL CONFERENCE, NATIONAL ASSOCIATION OF CITIZENS' CRIME COMMISSIONS, WARWICK HOTEL, PHILADELPHIA, PA., NOVEMBER 13, 1962.

When Dan Michie asked me to speak I believe it was our mutual intention that I discuss the work of the law observance committee of the Federal Bar Association and our endeavor to promote respect for law and those who enforce it. I shall do this but before I do, I want to mention something that disturbs me and I hope disturbs all of us and will inspire all of us to constructive action.

I want you to know that I am honored to share this session with Chancellor Scott of the Philadelphia Bar Association. Not only is he the leader of a bar association which has a record of outstanding accomplishments but he is a great leader who in recent months has evidenced the type of courage and impartiality and loyalty to the principle of our profession that should serve as a lesson to other leaders of the bar—a lesson, I am said to say, these leaders should not have needed.

I am a firm believer that the courts are the bulwark of our liberties, our Government, and our established society; that unless we have an independent and courageous judiciary, the America that we know will not be possible. It is incumbent upon all citizens, but especially upon members of the bar, to uphold the dignity of the courts and to do nothing to cast aspersions on the integrity of its members merely because the judges may have rendered a decision with which they do not agree.

Not only must we agree with President Kennedy that the law of the land is what the Supreme Court of the United States says it is but we must go further and say that, until reversed, the law of the case is what the judge presiding over the particular case says it is. Those holding public office as well as those running for public office cannot pick and choose the laws that they will obey or the decisions that they will respect. I have difficulty distinguishing between the

acknowledged criminal who does this and the public official. As a matter of fact, I am inclined to condemn and damn such public officials more because they set an example for law-abiding citizens whereas the acknowledged criminal speaks only for himself. The public official in his defiance of the law contributes an aura of respectability to what otherwise may be regarded as a criminal act and when he evidences to the public that it is proper to pick the law that is to be obeyed and the decision to be accepted, he is contributing to the chaos that results when each person is a law unto himself.

I am happy to report that in the course of my activities as chairman of the law observance committee of the Philadelphia Chapter of the Federal Bar Association and as national chairman of the law observance committee of the Federal Bar Association I have had contacts with many judges and law enforcement officials and I can tell you this—these people are honest, dedicated, courageous men trying to do an impartial job in the best way they know how. We must remember that the decisions that they make are based on the facts and the law as they see them. Facts the public may not be aware of and law that the public may not understand. It is incumbent upon all the citizens to realize this and to refrain from wild criticism but it is especially the duty of members of the bar not only to defend the courts, but to refrain from wild disparaging remarks about judges who disagree with them or with whom they disagree. I for one feel that it is the duty of the organized bar to discipline its members who violate these precepts. I urge all of you to consider the importance of the courts, of promoting respect for the courts, and of defending its members so that we may maintain an independent and courageous judiciary and protect our liberties and our form of government.

Now that I have gotten this off of my chest, I want to tell you about our law observance committee.

We are endeavoring to promote respect for law and those who enforce it. Our message to the public is a simple one: "The law protects you, respect it, uphold it, obey it. It is a personal message to all our citizens—to every man, woman, and child. The emphasis is on the fact that the law protects you—you personally; that none of us can continue in his day-to-day functions if we are not governed by the rule of law. There would be no safety for the person, no civil liberties, no property rights. Society could not exist without the rule of law. We must appreciate what law does for us and in appreciating it, we will respect it, uphold it, and obey it.

We must also appreciate the important part played by all those concerned with law enforcement in maintaining this rule of law—the local policeman, the Federal agent, the prosecutor, and the courts. By and large these people are dedicated servants trying to do the best job they can with the tools they have. We recognize that ours is a self-regulating society; that in general, our citizens are law abiding; that our law enforcement machinery necessarily assumes that our citizens are law abiding and that the lawbreaker is the exception. It is our objective to reinforce the law-abiding community and to deter the lawbreaker. We must promote the law enforcer's self-respect. We must promote the competence of the law enforcer. We must increase his standards and attract the best personnel to the field.

I do not know whether you are aware of the fact that the Federal Bar Association consists of lawyers who are or were employed by the Federal Government. We have over 50 chapters all over the United States with 3 in Europe. Our national association has established a law observance committee. Our objective is to have each

of our chapters set up chapter law observance committees to promote respect for law and those who enforce it. Our national committee provides guidance and assistance and initiates national activities which transcend the jurisdiction of the local chapters. Incidentally, the concept of a law observance committee started here in Philadelphia and we are modeling our activities on that of the Philadelphia chapter.

Here is some idea of what the Philadelphia chapter law observance committee has sponsored:

(a) Coordination conferences among the law enforcement officials, among organizations concerned with juvenile problems and among law enforcement officials and service organizations.

(b) We have prepared a "Directory of Law Enforcement Agencies" in the Philadelphia area describing the jurisdiction and scope of each as well as the cooperative services offered to others. It includes the names of the top officials of each agency as well as his phone number and lists the names of police chiefs of adjoining counties and the presidents of the police associations in Philadelphia and vicinity.

(c) Our efforts have resulted in a course in police science and administration at the Community College at Temple University—the first degree course of its kind in this area.

(d) Exhibits of the work of the various law enforcement agencies were held in a central location and portions of these exhibits were made available to the schools and to other banks in other areas.

(e) We have sponsored radio and TV programs designed to inform the public of the work of the various law enforcement agencies. Incidentally, a weekly series is now in process on station WIBG and we have commitments for TV time on WFIL this Christmas and Easter.

(f) We have disseminated thousands of pieces of literature through the schools.

(g) Our speakers bureau, under Norris Harzenstein, has provided speakers for schools and service organizations.

Our national law observance committee has brought together authority, talent, and ability from the executive, legislative, and judicial branches of the Government and from industry so that working together we can accomplish our program. The following are members of our national committee: Hon. Tom C. Clark, Justice, Supreme Court of the United States; Hon. Robert F. Kennedy, the Attorney General; Hon. Emanuel Celler, chairman, House Judiciary Committee; Hon. Cyrus H. Vance, Secretary of the Army; Abram Chayes, Esq., legal advisor, Department of State; Robert H. Knight, Esq., the General Counsel, U.S. Treasury Department; John T. McNaughton, Esq., General Counsel, Department of Defense; Daniel B. Michie, Jr., Esq., president, National Association of Citizens Crime Commissions. Public information adviser: Mr. Charles R. DeHaven, manager of Public Relations, Philadelphia Gas Works. Community relations adviser: Mr. Milton Eisenberg, vice president, Yellow Cab Co. of Philadelphia. Advertising adviser: Mr. Arthur G. Petry, executive secretary, Traffic Safety Program, Outdoor Advertising Association of America, Inc.

Radio and television advisory subcommittee: Mr. Alfred R. Beckman, vice president, American Broadcasting Co.; Leon R. Brooks, Esq., assistant general attorney, Columbia Broadcasting System, Inc.; Howard Monderer, Esq., National Broadcasting Co.; Mr. Stephen McCormick, vice president, Mutual Broadcasting System; Mr. William J. Wheatley, program manager, Station WIBG, Storer Broadcasting Co.

Here is what the national committee is doing to help and supplement the local programs:

(a) The first thing we did was to publish a "Law Observance Committee Manual" which was furnished to each of the chapters. This manual was conceived and prepared by our public relations adviser, Mr. Charles R. DeHaven, manager of public relations of the Philadelphia Gas Works. The manual furnishes the names of our national committee, describes the committee objectives, the functions of the national committee, sets forth a sample organization of a chapter law observance committee and suggests specific activities for the local chapters.

(b) Supreme Court Justice Tom C. Clark, who is a member of our committee, wrote to members of the Federal and State judiciary requesting cooperation with the local chapters and he received letters from judges all over the country offering to cooperate. As the names of these judges were received they were sent to the local chapters with the recommendation that they be invited to become members of the chapter law observance committee.

(c) The Federal Bureau of Investigation has issued directions to its local field offices to cooperate with and participate in the activities of the law observance committees.

(d) The coordinator of Treasury enforcement agencies has urged the Treasury enforcement agencies—locally and nationally—to cooperate in our program.

(e) Your national president, Dan Michie, has requested local crime commissions to participate in our program.

(f) We have a radio and TV advisory subcommittee consisting of representatives of the major networks who are endeavoring to facilitate local programing and to arrange national programs on radio and TV. We have tentative plans for a 26-week program on NBC's "Radio Monitor" starting in January which will describe the work of many different law enforcement agencies over a network of over 200 radio stations throughout the country. Within a few days we hope to inaugurate a series of short messages on the role of law in our society and the need to respect the law and those who enforce it. We expect to start on local station WIBG which is owned by the Storer Broadcasting Co., then—if successful—expand it to the other seven stations of the company throughout the country and ultimately make them available to all radio stations so that the radio will ultimately bring our message to over 100 million people on a repetitive basis. We are also considering plans which may ultimately bring our message through television on a national basis.

(g) We have established an exhibit subcommittee headed by Inspector Lynn Edwards of the FBI. By contacting one person our local chapters can now coordinate exhibits of the work of all national law enforcement agencies.

(h) The Pennsylvania District of Kiwanis International has furnished an initial printing of large 24-sheet posters bearing our slogan, "The Law Protects You, Respect It, Uphold It, Obey It." These posters are to be placed on outdoor billboards. We are endeavoring to establish a revolving fund which will permit us to make these posters available to local chapters for posting on billboards in local communities. The Pennsylvania Kiwanis is endeavoring to induce other districts of Kiwanis to participate in this program and make these posters available throughout the country. Local chapters are being asked to secure billboard space through their own efforts. The General Outdoor Advertising Co. has made 20 billboards available in the Philadelphia area and has arranged for its Washington office to make billboards available in the District of Columbia. The Baltimore chapter has made its own arrangements for billboard space and so has the Omaha chapter. Where chapters need assistance in obtaining billboard space, we will supply such assistance.

(i) We are exploring plans to secure the assistance of industry organizations. We believe we will soon have concrete actions to report.

We urge all organizations to participate in this program. We claim no patent, copyright, or monopoly. You are free to use our materials with or without credit to the Federal Bar Association. We will assist any organization to start its own program and we will cooperate with any organization that wishes to participate in our program.

We are most optimistic. The soil is fertile. We have planted many seeds. We expect a bumper crop.

Thank you.

Mississippi Doctor Writes Voicing Disappointment in Congress

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. WILLIAMS. Mr. Speaker, typical of the many letters I received during the controversy over the Rules Committee was one from Dr. James E. Safley, of Brookhaven, Miss. Dr. Safley's letter poses some searching questions which, I think, would be well for this body to ponder. Under leave to extend my remarks in the Appendix of the RECORD, I am including the text of Dr. Safley's letter, and commend it to the attention of the House:

BROOKHAVEN, MISS.,

January 8, 1963.

Members of the 88th Congress, Washington, D.C.:

GENTLEMEN: Speaking as a disturbed and concerned citizen and more important as a parent, I wish to convey my pride and thanks to many Members of the Congress for a job well done but I emphatically wish to voice my disappointment of the Congress as a whole. How does one answer his 12-year-old son who asks, "Dad, if they [the Congress] can pack a committee to get what some people want, why can't you and I slip in and fix the cards so we can beat Mother and Susan at rook?"

How can we, the parents of children who hold the destiny of our country in the palms of their now innocent hands effectively teach them that honesty and truth is the only way to greatness while you "stack" committees to do the bidding of an ambitious family. As Ed pointed out with his question, this is essentially no different from the crooked gamblers who tempt and often succeed in ruining the lives and future of college athletes.

Our President, who is personally ambitious, and his power-mad brother, the Attorney General, speak from both sides of their mouths. First, they justify some of their actions by resorting to court rulings dating back to the 1800's, while at the same time they utilize a "stroke of the pen" or a "packed" U.S. Supreme Court to hand down rulings in the 1960's to justify the New Frontier.

I beg you learned gentlemen to review that part of ancient history which deals with the early stages of the fall of the Roman Empire and compare that with the current history of the United States of America. I believe you will, as I have, find an amazing parallel. I implore you to search your hearts and then vote your honest convictions.

Sincerely,

JAMES E. SAFLEY, M.D.

Civil Service Cocktail

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. GROSS. Mr. Speaker, at last some attention is being given throughout the Nation to the coldblooded blackjacking of career Federal employees for the purpose of raising funds for the Democrat Party.

Let it be pointed out that this campaign to exact political tribute from civil service employees actually started early last December as duly reported by Mr. Joseph Young, expert writer on civil service matters for the Washington Evening Star.

Unfortunately, most of the Members of Congress had not yet returned to the Capital on December 6, 1962, when Mr. Young, in a front-page story in the Washington Evening Star, called attention to this brazen, outrageous, fund-raising campaign.

To keep the record straight and to silence any Federal official stationed in Washington who may argue that he or she was unaware of what was taking place, I submit for printing in the RECORD the December 6, 1962, article as printed by the Evening Star:

PRESSURED FOR \$100 TICKETS, FEDERAL WORKERS CHARGE

(By Joseph Young)

Government career employees are getting formal invitations to purchase \$100-a-plate tickets for the second inaugural salute dinner being sponsored by the Democratic National Committee.

Civil service careerists in grades 12 and above in many of the departments and agencies have received letters at their homes mailed by the Democratic National Committee asking for "the pleasure of your company" at the affair to be held at the Armory on January 18.

The dinner, in honor of President and Mrs. Kennedy and Vice President and Mrs. Johnson, will swell the campaign coffers of the Democratic National Committee.

FOLLOWUP AT OFFICE

Some of the career employees are complaining that the invitations are not-too-subtle pressure on them to pressure tickets if they want to remain in the good graces of their bosses and hang on to their jobs or receive promotions.

In some cases, employees complain that their immediate bosses are following up on the letters of invitation by asking them at work if they plan to attend and stressing that the agency would like to see a good turnout.

Civil Service Commission officials said no violation of the Hatch Act is involved so long as the invitations were mailed to the employees' homes and were not mailed from Government buildings nor at Government expense.

However, some Government personnel officials question the ethics in such a procedure and feel that it does not help the merit system.

The practice of some Government officials in following up on letters by contacting employees personally in their offices to see if they are going to the dinner could be a violation of the Hatch Act, it was pointed out. But it would be difficult to get a criminal

conviction without the definite proof which most employees would be loath to give because of fear of losing their jobs.

The letter received by career employees requesting the "pleasure of your company" was accompanied by a reservation card in which employees were invited to send back in an enclosed stamped-addressed envelope to the Democratic National Committee.

The card contains the information that for each \$100 contribution to the Democratic National Committee, one ticket to the dinner will be sent to the employee. It provides the adequate spaces for filling out how much money will be contributed along with the number of tickets desired.

Officials of the Democratic National Committee defended the invitations, declaring that Government workers were also solicited to attend Republican fund-raising dinners during the Eisenhower administration.

They denied that employees' careers would be jeopardized if they failed to buy tickets and said it all was on a voluntary basis.

The personnel director of one of the biggest Government agencies, who for obvious reasons didn't want to be quoted by name, declared:

"While my office wouldn't stand for any direct pressure on Government career employees, and I'm sure in this we would be fully supported by the head of the agency, there is a rather subtle form of pressure used in the sale of the tickets to the dinner.

"The Democratic officeholders, for the most part, are more enthusiastic and politically minded than the Republicans were. And some of them do mention to their career subordinates that it might be nice if they could see their way clear to attending the dinner.

"I'm certain that most of the officials don't intend it to be a 'you-attend-or-else' proposition, but nevertheless some of the employees probably feel that it would be best for their careers and job security if they do go. Our office has made it clear that employees don't have to go and that their jobs won't be jeopardized, but some employees just don't want to take the chance of offending their bosses by not going."

In a few cases, eager-beaver agency heads let it be known to some of the political appointees under them that it will be good for the agency to make as good a record as possible in dinner ticket sales, and this in turn results in pressure on career employees to purchase tickets, the personnel man noted.

The question arose as to where the Democratic National Committee got the list of names of career employees in each department.

"Don't be naive," said the personnel man. "This is a Democratic administration, isn't it?"

Keep the Trucks Off MacArthur

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. MILLER of California. Mr. Speaker, as one travels throughout the country and, particularly, in the State of California, one finds that this is certainly the age of freeways and expressways, to take care of the large number of motor vehicles owned by our growing population.

The urgency of meeting the traffic needs of this growing number of motor vehicles presents many complex ancillary problems. This situation is illustrated

by a very interesting editorial that was delivered on KCBS radio in San Francisco.

It concerns the interest of Oakland, Calif., in keeping trucks off the MacArthur Freeway which is a main artery currently being developed in that community.

I am pleased to insert this editorial in the RECORD in the interest of my colleagues and other citizens throughout the country who either do face these problems today or will be facing them in the future:

KEEP THE TRUCKS OFF MACARTHUR

The city of Oakland is waging a serious battle to keep heavy trucks from using the new MacArthur Freeway. The people of the city, through their representatives, have taken every legal step available to them to keep trucks from being routed through a fine residential neighborhood, past homes, churches, and schools. The final step has now been taken, in the form of an ordinance passed unanimously by the Oakland City Council, prohibiting trucks from using MacArthur, and designating Nimitz Freeway as the alternate route.

Unfortunately, this ordinance, although it is perfectly legal, is not enforceable.

The reason is that a city has no control over traffic inside its borders if that traffic uses a State highway. The new MacArthur Freeway is not only a State highway, it is also a part of the Interstate System, and a great deal of Federal tax money was spent on its construction.

So at this point Oakland can only ask for help. The city has forwarded its ordinance to the division of highways in Sacramento, asking that the State publicly designate Nimitz as the alternate route for trucks. The division of highways, however, must in turn recommend to the Bureau of Public Roads, an agency of the Department of Commerce, that the Oakland ordinance be enforced.

The MacArthur Freeway, for the benefit of those who have not seen it, is immense. Eight lanes wide, it cuts a tremendous swath through the heart of Oakland. It runs through one end of the Mills College campus, within 100 feet of one residence hall, and an off ramp and underpass will be only 90 feet away from the Mills College Pine Arts Building.

This routing itself is inexcusable, and even with the freeway restricted to passenger cars the effect on the neighborhoods through which it passes will be drastic enough. But if heavy freight rigs are allowed on MacArthur, the situation will become intolerable.

Mills College is not alone in demanding a truck ban. As Dr. C. Easton Rothwell, president of that college, said recently to KCBS:

"Mills College, and all the institutions that have joined to form the committee called citizens against trucks on the MacArthur Freeway, are very much concerned about the increase in noise and dirt and vibration that is going to be caused if these heavy trucking rigs come out through what is the residential and educational and religious heart of the city of Oakland.

"We know that, even taking the estimates of the State highway engineers themselves, the number of trucks when the peak is reached will be more than one a minute, 24 hours a day, 7 days a week."

As Dr. Rothwell further declared, this is a problem of values. The point is, do you build a huge concrete strip through the finer residential area of a great city, and then run huge trucking rigs over it? The matter is too important to be left to the engineers. And especially in this case there is no excuse to justify running trucks on the MacArthur Freeway. If they were to be required to take the Nimitz Freeway around Oakland, rather

than MacArthur through it, the distance would be no greater.

KCBS strongly urges the State authorities in Sacramento, and the Federal authorities in Washington, to support the city of Oakland. The time is long overdue for the highway builders to recognize the need for more thoughtful handling of heavy traffic through our major cities. Let's start by banning trucking on the MacArthur Freeway in Oakland.

Dr. W. F. Bond

EXTENSION OF REMARKS OF HON. WILLIAM M. COLMER OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. COLMER. Mr. Speaker, under leave to extend my remarks I wish to include in the RECORD a well-deserved tribute to one of the pioneer educators and welfare officials of my State, Dr. W. F. Bond.

The tribute was delivered by Mr. Kirby P. Walker, superintendent, Jackson Public Schools, Jackson, Miss., on the occasion of the observance of the anniversary of the founding of the University of Southern Mississippi as a normal college, September 18, 1912, and the dedication of Willard Faroe Bond Hall at Hattiesburg, Miss., September 18, 1962.

I should like to associate myself with this splendid tribute to this outstanding Mississippian. I have had the privilege of knowing Dr. Bond for almost a half century. His whole life and efforts have been unselfishly dedicated to the people of Mississippi and in particular to the youth of my State.

Superintendent Walker's speech follows:

President McCain, honored and distinguished guests, members of the faculty, alumni, students, and friends, it is a difficult task which I am undertaking.

A résumé of 61 years of continuous public service cannot be recounted properly in the few minutes I have been allotted. But I hasten to confess that even with more time I would be far from adequate to the honor which has been accorded me in paying deserved tribute to Dr. Willard Faroe Bond. I trust you will be tolerant of my shortcomings.

Since attaining the age of accountability W. F. Bond has demonstrated a consuming interest in people and in their welfare.

He committed the first 42 years of his active career to public education. That period of prodigious effort was zealously given for those whose productive years were before them. They were devoted to that segment of our population who needed advantages of education to make them more useful to their families and to their State.

When 16 years old he was teaching in his community for \$10 a month, and board. After several years of teaching and going to college, he served as superintendent of a south Mississippi high school for a decade, then professor of Latin and history at Mississippi Normal College for 4 years, followed by a score of years, as State superintendent of education.

There were no guidelines to follow when Professor Bond entered upon his assignment as chief State school officer. Specialists in education as we now know them

were few in number in that day and when found the limited resource of the State department of education placed most of them beyond reach.

His critics have said of him that his genius was in his ability to judge the competencies and personal qualities of others and to recruit for his colleagues the best of those who would share with him the challenge and excitement of helping to build a creditable State system of public schools.

Such renowned leaders in public education as Claude Bennett, Jim Broom, M. D. Broadfoot, J. T. Calhoun, Sam Hathorn, C. O. Henderson, F. J. Hubbard, G. D. Humphrey, H. M. Ivy, F. C. Jenkins, W. C. Strahan, and Sam Woods, to name a few, are illustrative of educators who joined Professor Bond to give a forward thrust to public education in Mississippi which is not yet spent.

From the beginning of his educational career he used a yardstick which he consistently applied to measure the merits of every proposition or appropriation made in behalf of education—namely, children of Mississippi and their future.

II

The second era of Dr. Bond's public service was fully committed to those persons, in most instances, whose productive years were behind them, who through misfortune or otherwise, required an assisting hand or an opportunity for rehabilitation.

In public welfare administration as it was when he entered State educational administration, there were no guidelines for a State welfare program.

Again the yardstick of human values was employed, and through his sound judgment and unremitting work, Mississippi founded and developed another valued instrument for its people.

III

In my childhood, Horatio Alger novels were to be found in the homes of most boys. Such fiction—from log cabin to White House, from poverty to riches. They were spun out of the pathos and the aspirations of people whose native land was founded on the principle that everyone in the United States had an opportunity to better his station in life. With the turn of the century we needed the romantic dream of better times. The burdens of reconstruction laid heavily upon the shoulders of Mississippians.

The biography of W. F. Bond records a series of experiences from 1881 to 1957 which will thrill young and mature readers as no Horatio Alger fiction could. Listen to these lines which relate his earliest recollections:

"In a lonely place among the trees near a dwelling deep in the pine forests of southeast Mississippi, a young woman had just been buried. There was not much ceremony at the funeral, for it was many miles to the home of the nearest preacher, and the woman had been only a housekeeper in the home of a farmer and stockman where she had worked for board and lodging for herself and her 5-year-old son. As the boy was led away from the scene, he left behind the only relative he had ever known. Three years before, he had been brought to this farm home with his mother. Now she was dead, and there was no will or other papers, for there were no possessions.

"What shall we do with the boy?" asked one.

"We will keep him," replied the head of the house, a kindly old gentleman who had no family of his own. A year later [he had] died. This time there was a will, and the first section stated that \$500 of his estate should be set aside for the education of the boy, Willard Faroe Bond."

Dr. Bond's extensive, fruitful life of public service had its genesis just a few miles south of this great seat of learning.

He learned how to win friends and influence people long before books were written

on the topic. He is chief among the few people I have known who can win others to his view even though their earlier positions were known to be hostile to his.

From raw experience he can attest that "organized society finds human nature the toughest problem to solve," but this never quelled him in working for solutions to improve it.

His great humanism combined with eloquence and power of persuasion provided the thrust and attitude necessary for building and expanding our public school system.

Two things Dr. Bond was not, and is not, to this good hour. He has never been self-centered, nor has he been vindictive. Being human and having to deal with some who were amply supplied with these traits, he had many provocations and temptations to be selfish and revengeful during his long tour of duty in education and welfare.

Through his perceptiveness, his broad experience, and his remarkable vigor, he promoted and defended the causes which he represented with all of the prestige of the office he held and with statesmanlike acumen and leadership.

IV

It is timely and proper that Dr. Bond's public service be dramatically highlighted in the ceremonies of this day and in this particular locale.

The splendid new residence hall for men which bears his name will serve the university for years to come. Not only this generation of students but future generations will be grateful for their commodious campus home which this new dormitory provides.

All of us rejoice in this commemoration of Willard Faroe Bond. We are pleased to see his name and his portrait so fittingly enshrined in public remembrance. Above all, however, we know that the most meaningful, the loftiest, and the most lasting monument to Dr. Bond is the memory which will live in the minds of all who know him. It will remain in the hearts of those for whom he worked with inspiration and devotion, who have been and will continue to be beneficiaries of his noble needs which were designed and measured by his boundless love and faith in his God and in the people of his beloved State.

Mississippi will always be in his debt.

Auto Excise Repeal Logical Starting Point for Tax Cut

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. CHAMBERLAIN. Mr. Speaker, the President has called on Congress to enact measures to revitalize the growth of our economy by reducing income taxes and corporate taxes. I have recently reintroduced my bill to repeal the discriminatory and depressive 10-percent automobile excise tax, a measure that will not only remove a tax inequity but help give the economy the kind of boost the President wants.

I would like to call the attention of my colleagues to an editorial from the December 27, 1962, issue of the *Flint Journal*, of Flint, Mich., which reflects the sentiment of that community with respect to the continuation of this tax. This editorial, entitled "Auto Excise Repeal Logical Starting Point for Tax

Cut," points out that the excise tax has outlived its usefulness and its repeal would be a boon to the growth of the economy.

Under unanimous consent, I present the editorial for inclusion in the *RECORD* herewith:

AUTO EXCISE REPEAL LOGICAL STARTING POINT FOR TAX CUT

"Our tax system is a drag on economic recovery and economic growth." These were words spoken a few weeks ago by President Kennedy.

In that same speech he promised a tax reduction aimed at "creating more jobs and income and eventually more revenue."

The form such a tax cut should take has been the subject of much discussion and argument over the past several months.

Representatives CHARLES E. CHAMBERLAIN, of this district, has used the President's concern about the tax drag on economic growth to renew his fight for repeal of the 10-percent excise tax on automobiles. He contends that this is the logical starting point for chartering sound tax revision.

Preparing to again carry his campaign to the floor of the House, he pointed out last week during a Flint visit that while Mr. Kennedy has urged that we get this country sailing economically, "we can't do much sailing without raising the anchor. As long as tax inequities and other burdens are heaped on the economy's major industry, the ship of state won't get very far out of harbor."

By the major industry, of course, he was talking about the production of automobiles. And to underline its importance he called attention to the fact that this industry is responsible for one out of every six businesses, and it employs one out of every seven workers.

"You don't have to be told what automobile production means in the way of jobs," he admitted. "It directly affects everyone in Flint. But sometimes people lose sight of the overall impact of the industry."

"Take the steel industry, for instance. One-fifth of all steel produced in this country goes into the production of automobiles. Car makers also use 62 percent of all rubber, 11 percent of all aluminum, 35 percent of all zinc, 47 percent of all lead and 63 percent of all leather upholstery sold in the United States.

"In the highway transport industries alone, employment totals 10.5 million—one-seventh of the Nation's work force.

"When you think of some of these figures you start realizing what automobiles mean to the economy of this country. And no matter how you look at it, the retention of such a highly discriminatory and depressive tax on this vital industry cannot be construed as conducive to the expansion of our economy."

The excise tax that has been CHAMBERLAIN's target ever since he has been in Washington was levied as a "temporary" measure during the Korean war. Every year Congress has voted to extend the 10-percent levy.

CHAMBERLAIN's proposal is to repeal the tax. But even if Congress won't support such legislation, it would be a step in the right direction if it would see fit not to vote its annual extension. Without such an extension, the levy would revert by law from 10 to 7 percent.

"Either of these actions would be a giant step toward releasing an emergency brake that has prevented new automobile sales from reaching even greater levels than they have experienced," he insisted. "And as car sales increase, so does employment."

His estimate is that repeal of the excise tax would make possible an average price reduction of \$230 per car, which would be a boon to auto sales and a boost to the entire economy.

We agree it is a discriminatory tax that has outlived its usefulness. It is discriminatory in that it is directed at one industry. If it is necessary to levy an excise tax then it should be a 1- or 2-percent excise on all manufacturing. The automobile industry shouldn't be expected to carry the entire load.

Repeal of the tax would cost an estimated \$1.4 billion in Federal revenue. Reduction of the tax from 10 to 7 percent would cost an estimated \$400 million. But an average \$230 price reduction would boost sales enough to permit the Government to recoup much of the revenue in tax receipts from automobile manufacturers, their suppliers, transportation companies, dealers, finance companies, salesmen, production workers and many, many others down the line.

The President is seeking "long-needed tax reform" aimed at "creating more jobs and income and eventually more revenue." Support for CHAMBERLAIN'S repeal of the temporary excise tax on automobiles would be directed at that very target.

Tax Cuts

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. BOW. Mr. Speaker, the Evening Star of January 17 carries an interesting article by Mr. David Lawrence in which he comments on the Government's fiscal problems in much the same vein as my remarks in the House on that same day. I ask leave to include the Lawrence column with my remarks.

POLITICS AND KENNEDY TAX CUTS—PARTY BELIEVED AIDED, EVEN IF CONGRESS SKIPS REDUCTION AFTER FIRST YEAR

(By David Lawrence)

When President Kennedy delivered his state of the Union message just a year ago, he told the American people he was submitting for fiscal 1963 a balanced Federal budget. A few days later he sent Congress a budget showing there would be a surplus of \$500 million for the fiscal year beginning July 1, 1962, and ending June 30, 1963. Actually the figure officially indicated now for that same year is a deficit of \$3.8 billion. This is a mistake of \$9.3 billion.

What assurance does the country have that another mistake isn't in the offing? The President in his state of the Union message earlier this week frankly predicted in general terms that there would be a deficit for the 2 fiscal years 1963 and 1964. How are the people to know the extent of the deficit if such a gross error as was made in January a year ago doesn't get corrected for many months thereafter?

It so happens that economists were quite sure early in 1962 that the President's prediction about fiscal year 1963 was wrong, but not until after the congressional elections in November were the official figures revising the January estimate given out. The excuse for the delay was that Congress was still in session and might change the appropriations. But there was no reason why the Government couldn't have issued revised figures as early as August 1962, when it could have conceded the possibility of a slight increase in the deficit. The people at least would have been told that the \$500 million surplus was a "myth."

Persons who have followed budget figures

for years now say that the President's estimate of a deficit of around \$12 billion for the fiscal year ahead is too rosy a prediction. They think the deficit will go much higher.

It is always difficult, of course, to estimate tax receipts. Under the Eisenhower administration and its predecessors the final figures often varied from those forecast, but the percentage of overestimate has seldom been as big as the one Mr. Kennedy made in his state of the Union message in January 1962.

Plainly, the new device of spreading the tax cuts over 3 years will not tend to clarify the picture. Individuals will not know when or whether they will get the promised tax cuts. Congress has a way of changing its mind from session to session about legislation projected for the future. Thus, for 9 straight years Congress has declined to permit certain taxes to expire at the time set under the laws previously written. Instead, these taxes have been regularly retained.

Many Members of Congress are by no means convinced that the President's new formula will ever be applied as he outlines it. For if economic conditions get worse instead of better, there may have to be changes in the formula. Also, if business does boom and big deficits still continue, the demand will be for a cut in the deficits by postponing some of the tax cuts.

The whole picture is, of course, political. The administration apparently feels that, by promising cuts in three separate years, the voter will look forward to them and will reward the Democrats in the 1964 election. But there is also the possibility that the tax cuts will not spur the economy because of the presence of other factors, such as the insistence of laborunion leaders on high wage rates as their share of the savings from a lowering of corporate taxes. Naturally, the employers will then want to increase prices. If the increased wage costs cannot be offset by higher prices, more profit squeezes will develop and the Treasury will get less tax receipts than it has anticipated.

Altogether, America is in for a period of economic confusion and an era of uncertainty that is not conducive to the development of the confidence so essential to business planning. Juggling budget figures for political purposes may win the 1964 election, but the state of the Union messages in 1965, 1967, and 1968 will have to acknowledge the futility of relying on tax cuts alone to stimulate sound business growth. It is already conceded by high officials that the budget will not be balanced until 1967.

An inflationary price wave seems certain to cut down the purchasing power of the dollar to the lowest point in 50 years. This is because the idea of cutting down nondefense expenditures has been scorned by the administration.

Evidently the theories of the 1930's that kept American's unemployment figures high, as pump priming failed, are being applied again. If a tax cut doesn't stimulate the economy this year or next, will it be argued that higher deficits will then be in order? This dilemma will someday confront an administration which is borrowing billions to reduce taxes.

An American Creed

EXTENSION OF REMARKS

OF

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. HALL. Mr. Speaker, recently the Medical Society of the District of Co-

lumbia brought to my attention an editorial reprinted from Philadelphia Medicine, volume 58, No. 38, of September 21, 1962, entitled "An American Creed." The executive board of the society reviewed this creed and wholeheartedly endorsed the thoughts behind it and the views expressed in it. It is recognized as Dean Alfange's "Message of 1952; My Creed," which appeared in the New York Herald Tribune December 30, 1951. A framed version hangs in the office I occupy in my district as furnished by St. Clair County chairman, Don Giesler, M.D. Under leave to extend and revise my remarks, I believe the creed is again deserving of consideration by the Members of the House of Representatives, due to its timeliness and as forwarded by our District of Columbia Medical Society:

I do not choose to be a common man. It is my right to be uncommon—if I can. I seek opportunity—not security. I do not wish to be a kept citizen, humbled and dulled by having the State look after me, I want to take the calculated risk; to dream and to build; to fall and to succeed. I refuse to barter incentive for a dole. I prefer the challenge of life to the guaranteed existence; the thrill of fulfillment to the stale calm and dry rot of Utopia. I will not trade my freedom for beneficence, not my dignity for a handout. I will never cower before any master nor bend to any threat. It is my heritage to stand erect, proud and unafraid; to think and act for myself; to enjoy the benefit of my creations; and to face the world boldly saying, "This I have done with my own hand, I am a man. I am an American."

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

Theodore F. Shuey, Late Official Reporter
of Debates, U.S. Senate

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 21, 1963

Mr. ROBERTSON. Mr. President, I have in my hand an article giving a vivid and interesting sketch of Theodore F. Shuey, at one time the Chief Official Reporter of Debates of the Senate.

Mr. Shuey was born in Staunton, Va., and while in Washington in 1868 was appointed by Mr. Sutton, then the Official Reporter, as a member of his staff. From 1868 to 1933, when he passed away, he was Official Reporter of the Senate, and during the 65 years of his service he was never absent a day on account of sickness.

I am sure this article will be of absorbing interest to Senators, and I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Shorthand Reporters' World, New York, February 1916]

THEODORE F. SHUEY, AGE 71 AT THE TIME

"Let us read together the life story of probably the most scholarly reporter in the world."

There is nothing more inspiring than a conspicuously successful life. Of all the bright names that have honored and adorned the profession of verbatim reporting, there is none greater than that of Theodore F. Shuey, now for more than 47 years and Official Reporter of the Senate of the United States, and today one of the youngest and most vigorous men of all the hundreds who work beneath the dome of the Capitol.

There are great lawyers, great surgeons, great engineers. Let us read together the life story of a great reporter. Let us see what it means not only to put words on paper swiftly and clearly, but to transmute colloquial speech into the finer metal of the smooth, written record. This is the fine art of the linguist, the scholar, the master of speech. "Our business is with words," says Mr. Shuey; "and the more we know about words, the easier and the better is our work." There is no language so rich in its treasures as the English; for it has ruthlessly snatched the wealth of many other tongues, and no one can be a really great reporter of the English spoken words unless he knows a good deal about other languages. The French parliamentary reporting system is better than ours in one respect at least, because in France no man can enter that gate unless he is at least a bachelor of arts.

Of the famous report of a great speech in the British House of Commons it was once said that the scholar in the gallery thought that the scholar on the floor would, in his remarks, make a certain classical allusion which was very apt; but the orator forgot to

do so, and the reporter put it into his speech for him. There may be others who can do that sort of thing as well as Mr. Shuey can, but none who can do it better. And when there is a fierce personal debate, and the words are called for, there is no one who can stand up and read them more fluently to the listening Senate. When you add to that the fact that never in more than 47 years has he missed a day of a session of the Senate, and that he has sometimes gone 2 or 3 days and nights at a stretch, without taking off his clothes, when there was a "physical endurance" debate running continuously, you begin to realize something of the fiber and caliber of the man who is the subject of this too brief and modest sketch. For buoyant resiliency in the face of long hours there are few young men who are his equal.

Theodore F. Shuey was born near Staunton, in Augusta County, Va., February 2, 1845. His Huguenot ancestors came to this country nearly 200 years ago. For generations they were successful farmers. When Theodore was 14 years old a farmer clergyman, who was a guest at his father's house, had a copy of Elias Longley's "Manual of Phonography," which he showed to the boy. This clergyman, Rev. Samuel Evers, taught Theodore the alphabet of phonography, and thereby made the career of the most noteworthy shorthand reporter now living. In less than a year Shuey had gone through the Benn Pitman books, and then the "Handbook of Standard Phonography," by Andrew J. Graham.

In Virginia everybody who aspires to be anything gets a classical education. Thomas Jefferson, father of the University of Virginia, believed that no man can lay the foundations of an education except in Latin and Greek; and today, man for man, there is probably no State in the Union where you will find such a general knowledge of the classics as in Virginia. Shuey went to Otterbein University, at Westerville, Ohio. There he began the conquest of Latin and Greek, which he has carried on for more than half a century, so that Homer and Virgil in their original tongues are to him a vacation pastime. Blessings on the hundreds of small colleges in this country, which open to so many thousands the door to the wonderful past, rich with the spoils of time.

Before young Mr. Shuey had been long in college the cannon began to boom the muskets to rattle in the great Civil War. He lived near the border of West Virginia. As a lad he had seen the sale of the slaves on a neighboring estate at the owner's death. He had seen mothers separated from their children, brothers from sisters. He had seen the slavetraders from Charleston and Savannah bid them off like cattle, and march them away handcuffed, going they knew not where. The unusual sight made him an abolitionist at heart; and when the time came—when in that border region one man chose one side and another the other side, Shuey went with the Union.

In 1863, not waiting to finish his collegiate course, he wrote a cousin in Pennsylvania that he was about to enlist in an Ohio regiment then at the front, in which were some of his classmates. His uncle immediately sent this cousin to bring Mr. Shuey to Pennsylvania, and going there he fairly ran into the Battle of Gettysburg, which he witnessed and of which he made a diary in shorthand. In response to the call of the Governor of

Pennsylvania for emergency troops he enlisted, but in this service saw only 6 weeks of soldiering. Then he enlisted in the 3d Pennsylvania Heavy Artillery, and was sent to Fortress Monroe, where he remained until April 1864. But his real fighting came after that.

In the last year of the Civil War those who wanted action got it. In April 1864, the 188th Pennsylvania Infantry was organized from volunteer members of the 3d Pennsylvania Heavy Artillery. Mr. Shuey was in Company H, which, consisting of 82 enlisted men and 3 officers, lost in killed, wounded, and missing in action, 55 of its members. These missing men were killed, so that the total loss was far above the average of the fighting regiments of that bloody conflict. We who are too young to remember have little conception of the terrible character of some of these battles. Mr. Shuey never drilled except under fire, as in the intervals of comparative quiet he was doing high-grade clerical work for his regiment; but whenever there was any fighting to be done, he was in it. A comrade, the same Geist, referred to in the shorthand specimen herewith printed, has published of him the following tribute:

"Having served with him as a member of Company H, 188th, I know that no braver or more faithful soldier ever carried a musket. In the campaign of 1864 he was nearly always on detached service as company clerk and at regimental headquarters, yet he refused to give up his gun, which he always kept in apple-pie order; and in every action in which the 188th was called upon to take part, volunteered to take his chance with the rest of the boys—at Drury's Bluff, Cold Harbor, Petersburg, Fort Harrison—in fact, all of the hard battles of 1864."

General Grant has been described as the most terrible general of all the wars until his time because of the way in which he sent his own men to death to gain the object on which he had set his heart. In his memoirs he says that the Battle of Cold Harbor was one of his greatest military mistakes. At all events the regiment of which Mr. Shuey's company were a part was ordered to charge the outer rifle pits of the enemy, just outside the main Confederate earthworks. Only a few Union troops reached the rifle pits, and these were at once swept by a terrific hail of lead. Shuey and his company comrades were far to the right, where they had no protection, and lying flat on their faces, men were killed and wounded faster than the story can be told. Now read a page from Mr. Shuey's diary, written in shorthand while the scene was fresh in his memory—one of the few shorthand diaries of that war. A photographic facsimile of the page describing the thick of that slaughter is here presented; and while this article was being written, 51 years later, Mr. Shuey wrote the same page again from dictation. The history of his changed shorthand style will be told later. Now read the diary:

"KEY TO THE PAGE OF NOTES FROM MR. SHUEY'S DIARY, MADE IN 1864

"Just then another ball struck him, and then another, which finished his mortal career. In his death agonies he writhed right over the fork [of the limb] behind which I was lying, and remained there, presenting his front to the enemy. To this circumstance I may probably owe the preservation of my life, for I think during the

time I was lying there his dead body received at least half a dozen bullets. Geist who was near me, received a ball through his leg, and made his way out of that as soon as possible. Julio, who was also wounded, crawled to a tree. Price lay almost beside me, and received three balls, all in his legs. Our men who had gained the pits were not able to fire upon the rebels, as the pits could scarcely protect them sufficiently by lying flat on their faces. The bullets passed over and around me in every direction. Many grazed me. I remained there an hour, probably two of them, for in such a position one cannot judge of the time; when a brigade of our troops on the right made a charge which drew the whole rebel fire. Then I sprang up and reached a tree, from behind which I called to Julio, who crawled to me, and then I helped him back. The poor fellow received six or seven wounds, and will undoubtedly die. Crossley was killed just as he reached the pits on the left, and Bates badly wounded. As far as I can learn, in our company there are 6 killed, 12 wounded, and 7 or 8 missing. Captain Leckie and Lieutenant Bean were wounded. Our company, that is, what remains of it, is scattered in every direction. At night I made some coffee, and slept at the edge of the woods, about the same place I did two nights before. There was a good deal of firing on the left."

There may be braver acts than carrying a wounded comrade to safety under such a fire. There are not many. This is just a glimpse of Mr. Shuey's Army experience. In March 1865, he was in the hospital, where at one time he lay unconscious for 13 days and narrowly escaped being taken to the dead-house. He says that since his recovery he has never had a day of sickness, in more than 50 years.

After the war was over he went back to Otterbein, and then home to Virginia, where he worked for the Richmond Whig and Lynchburg News, but in that limited field there was not room enough for a shorthand career. In the first 10 years of his shorthand experience he had never met a verbatim reporter, but when he did so, found himself well equipped. A. F. Crutchfield, proprietor of the Literary Pastime, was about to remove his publication office from Richmond to Baltimore, and asked Shuey to go with him. On the way Shuey stopped in Washington, and there met Col. John W. Forney, editor of the Washington Daily Chronicle, who had been Secretary of the Senate, and on his saying to Colonel Forney that he knew more about shorthand than he did about newspaper work in a strange city, Colonel Forney told Shuey to go and see Mr. Richard Sutton, contractor for the shorthand reporting of the Senate for the Congressional Globe. He went to see Mr. Sutton, and was employed as an amanuensis at \$20 a week.

In 1868 the actual reporting of the Senate was done by Dennis and James Murphy, who, with their brother, Edward, formed the most remarkable family of shorthand reporters that the world has ever known. Dennis had been a reporter in the Senate for 20 years, and most of the note-taking was done by him. James was also a fine reporter, and in those days Edward was in charge of the transcribing department, reading the notes of his brothers with the utmost fluency. In later years Edward became one of the reports, and now, in 1916, he and his son James—namesake of his famous uncle—are doing one-third of all the Senate reporting. If anyone will take the trouble to read the Senate debates of 1868, or any of the preceding years, he will see that we of modern days know nothing more of splendid verbatim reporting than did the Murphy brothers. Dennis in particular was a perfect

shorthand machine; he could write at 200 words a minute for hours at a time, if necessary, making notes that several people could read easily. He once called the attention of the writer of this article to a day's debate in the Senate which averaged 208 words a minute for 4 hours. For mere manual skill no one can possibly beat this.

Into this wonderful opportunity came young Mr. Shuey. During the long vacation of 1868 he learned to read Dennis Murphy's notes; and naturally he lapsed into the long, simple outlines of which Murphy was the dextrous master. No one need write such long outlines as Mr. Shuey does, but if God has given a man fingers as nimble as a hummingbird's wings, there is no easier way to record human speech. Compare now the diary of 1864 with the corresponding page, written from dictation on December 20, 1915.

Since December 1868 Mr. Shuey's professional life has been one long, uninterrupted success. In 1872 he assisted in the reporting of the Pennsylvania constitutional convention. In 1876 he went to California in the congressional recess and reported the first senatorial investigation of the Chinese question. In 1896 Dennis F. Murphy died, and Mr. Shuey and Edward V. Murphy were unanimous made the principal reporters of the Senate.

In 1902 Virginia held a great constitutional convention, which began during the recess of Congress. Two men from Washington, with more ambition than skill, obtained the reporting of this convention, and fell down. Then, without solicitation or desire on his part, Mr. Shuey received, at his ancestral home near Staunton, a summons to come to Richmond, where the reporting of the convention was offered to him substantially on his own terms. He and Milton W. Blumberg did the reporting till Congress met in December, when it was continued by other skillful hands.

In 1904 appeared the Encyclopedia Americana. For that publication Mr. Shuey wrote, and was paid for, the article on the history of shorthand. In it he gave just tribute to the great work of American shorthand authors, Andrew J. Graham, Benn Pitman, and others. It is one of the curiosities of literature, and one of the mysteries of the cyclopedic art, that when this article appeared in print in the Encyclopedia Americana—word for word as Mr. Shuey wrote it except for certain mutilations—it was signed by another name. Mr. Shuey, who showed the manuscript of his article to the writer of this sketch when he was writing it, in 1904, often laughs at the queer transformation, and wonders how it came about.

Some of the reporting in the Senate, as elsewhere, is very easy. Much of it is terrifically hard. When the Senate squares away for months of debate on a tariff bill, it sits 9 hours a day as a regular thing, and often much longer. In recent years there was a debate which lasted 3 days and 2 nights without a break. It is at such times as these that Mr. Shuey's wonderful vitality and perennial youth come to the front. He is tireless and indefatigable, cheerful and elastic as a boy.

But it is as the trained nurse of ailing sentences that Mr. Shuey shines at his best. He is probably the most scholarly reporter in the world. During the past congressional vacation he read the Iliad and part of the Odyssey in the original Greek. He is very fond of this quotation from Max Mueller:

"What people call 'mere words' are in truth the monuments of the finest intellectual battles, triumphal arches of the grandest victories won by the intellect of man. When men had found names for body and soul, for father and mother, and not till then, did the first act of human history begin. Not till there were names for right and wrong, for

God and man, could there be anything worthy of the name of human society. Every new word was a discovery; and these early discoveries, if but properly understood, are more important to us than the greatest conquests of the kings of Egypt and Babylon. Not one of our explorers has unearthed with his spade or pick-axe more splendid palaces and temples, whether in Egypt or Babylon, than the etymologist. Every word is the palace of a human thought; and in scientific etymology we possess the charm with which to call these ancient thoughts back to life. Languages mean speakers of language; and families of speech presuppose real families, or classes or powerful confederacies, which have struggled for their existence, and held their ground against all enemies."

Here is a reporting incident that has never been told in print. In a recent session of Congress Senator Money, of Mississippi, was whiling away the time during a filibuster by telling the story of an old Greek play, "The Cloud," with the names of the players, and many other interesting facts about ancient heroes of mythology and bygone song. Senator Money always spoke rapidly, and not very distinctly. A former Senate reporter, now dead, who was a great note-taker and splendid reporter of current English, told the writer of this sketch that the only time in his senatorial reporting career that he had been absolutely floored by a speaker so that he could not dictate his notes, was on this turn of Senator Money. After the day was over, Mr. Shuey, with that kindness which is ever a part of him, bound up the wounded and gave first aid to the injured.

When you have known a man for 25 years, and every year you have admired him more; when his life is full of interest to the younger men in the business, it is a great temptation to write on and on, *crescam laude recens*. On his father's death he became the owner of his ancestral home, where in congressional vacations he lives the life of a quiet country gentleman. He has been twice married. His only son is a distinguished chemist, and he has three charming daughters. Long may he be with us.

FRED IRLAND.
WASHINGTON, D.C., December 20, 1915.

Fiscal Fantasy

EXTENSION OF REMARKS
OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. OSTERTAG. Mr. Speaker, the President has submitted a staggering Federal budget to the Congress for the 1964 fiscal year, with an estimated deficit of almost \$12 billion. Judging from past experience, the deficit will go even higher than estimated, and will be the highest ever for a peacetime year.

If the President's recommendations are accepted, we will incur a record deficit, despite the fact that the Government will have the highest Federal income in history. The reason is that the President is proposing the highest level of Federal spending by our Government or any government in the world's history.

These extravagant and uncontrolled proposals seem to have stunned people throughout the Nation, and rightfully

so. Leading newspapers in western New York are reflecting the general reaction, and under leave to extend my remarks I would like to submit two newspaper editorials dealing with the budget; the editorials are, "Red Ink Forever," from the Buffalo Evening News of January 18, 1963, and "President's Frugal Budget Threatens Fiscal Disaster," from the Rochester Times-Union of January 17, 1963.

[From the Buffalo Evening News, Jan. 18, 1963]

RED INK FOREVER?

One year ago today, President Kennedy sent Congress a balanced budget of \$92.5 billion. The economy, he said, was "moving forward strongly," and to "plan a deficit" under those circumstances would be to risk inflation.

Now the President has submitted a radically different sort of budget, rationalized on a radically different set of economic theories and assumptions. This one is more than \$6 billion higher and nearly \$12 billion in the red—by far the largest deliberate deficit any President ever recommended in peacetime.

This time, the President says, the economy is still moving forward, but not strongly enough. High taxes are holding it back, and cutting them drastically is his major economic objective of the year. This, he says, obliges him to "limit severely" his 1964 expenditure proposals.

What follows, however, is evidence of a continuing spending spree that, by any conceivable measure, is heading rapidly skyward.

This new budget, besides being \$6.3 billion higher than the one submitted a year ago, is \$10 billion higher than last year's actual spending—\$17.9 billion higher than the last Eisenhower budget (submitted 2 years ago)—\$22.3 billion higher than the last full Eisenhower fiscal year (1960).

Or judge it, if you prefer, by another tell-tale symptom, "new obligatory authority." When this runs significantly higher than current spending, it means the spending trend in future years will be higher still. It is here, rather than on current spending, that a really determined economy drive would show up first. Last year, the total of these requested "licenses to spend" was \$5 billion greater than actual spending. But in the budget for next year, it is \$9 billion greater.

In other words, while this budget's total of spending estimates (which may prove quite wide of the mark) is held below \$100 billion, the total of Kennedy requests for new authority to spend comes to \$107.9 billion.

Still another overall sign of how little economy the administration has in mind is the trend in Federal employment. Even though the Defense payroll is down, the rest of the vast Federal bureaucracy is scheduled to go up by another 46,000 employees. This will bring the total increase to about 260,000 since this administration took office 2 years ago. And virtually every department and agency shares in the rise.

The President, in presenting all these figures, makes much of the claim that next year's spending for everything but defense, space and interest has been stabilized, or even cut a little. The claim is misleading. For the spending trend in most categories is distinctly up. What causes the illusion of stability is a collection of some \$2 billion worth of bookkeeping entries or hopelessly low estimates of spending required on programs (like farm subsidies) that are controlled by statute. Where any administrative discretion is involved the trend is gen-

erally and markedly up—far short of justifying any claim to have held the line.

The budget contains no suggestion anywhere of an apology for the huge \$11.9 billion deficit, or of a challenge to Congress to help reduce it. On the contrary. The President tells us our choice is only between "a chronic deficit of inertia due to inadequate economic growth" and a "temporary deficit" which has been purposely designed to "boost the economy" and "achieve future budget surpluses."

When? He doesn't say, though some aids hopefully mention 1967 as a target date. But if Congress votes a massive tax cut, and still has any hope that its middle-aged members will live to see any of those "future budget surpluses," it had better take a king-sized economy ax to the spending side of this swollen budget.

For the Government actually to step up its spending pace this much while drastically cutting taxes when faced already with a near-record deficit—at a time when the President declares that "America has enjoyed 22 months of uninterrupted economic recovery"—is, to us, fiscal irresponsibility.

Lower taxes and faster growth can be prudently expected to produce those "future budget surpluses," only if spending is disciplined much more strictly than is indicated here.

[From the Rochester Times-Union, Jan. 17, 1963]

PRESIDENT'S FRUGAL BUDGET THREATENS FISCAL DISASTER

In Monday's state of the Union message, President Kennedy promised a fiscally responsible program which would cut nondefense spending, reduce taxes and limit the budget deficit to manageable size.

Details of his budget today show that he actually proposes, in our view, to plunge the Nation into a bottomless pool of red ink.

His array of budgets under various names all ask the highest Federal spending ever, in war or peace. He proposed a piddling slice of \$300 million in nondefense spending which makes up close to half of the \$99 billion expenditure total. His estimated deficit of nearly \$12 billion is about as manageable as a tidal wave.

To grasp the dangerous trend of Federal spending, compare the proposed fiscal 1964 budget with its highest predecessor, in fiscal 1945. Then, major national security spending totaled \$81 billion and nondefense spending ran to \$17 billion. Next year, the President estimates national security spending of \$56 billion and a nondefense total of \$43 billion.

Even taking restricted wartime civilian activities into account, it is obvious that the Federal Government has pulled the cork on welfare spending.

Expenditure increases for programs ranging from scientific research (already provided with more money than can be spent responsibly) to pork-barrel projects (dear to Congressmen's hearts) again prove that old Federal programs never die, they don't even fade away—they just go on."

The President tries to justify the enormous deficit on two grounds—(1) rising national defense and space costs and (2) proposed tax cuts, which he asserts will spur a business boom and eventually bring budget surpluses.

These arguments don't tell the whole story. If Kennedy really meant what he said about the need to slash nondefense spending, he'd have slashed enough to counter any needed rise in national security expenditures.

Further, the net estimated revenue loss from the President's tax proposals, still to be detailed, is set at only \$2.7 billion. He

even predicts total tax receipts \$1.4 billion higher than the Government is taking in this year—yet the estimated deficit will go up some \$4 billion in the same period.

And what if Kennedy is guessing too low on spending and too high on revenue? That's what happened this year, and his small predicted surplus has turned into an \$8-billion deficit. If experience repeats itself in fiscal 1964, that \$12-billion estimated deficit will zoom out of sight.

The President's failure to bring Federal spending under sharp rein in nondefense areas imperils the tax cuts which everybody agrees are long overdue. His deliberately planned deficit, raising the national debt to at least \$316 billion, threatens inflation and assures sharply increased interest costs.

"This budget presents a financial plan for the efficient and frugal conduct of the public business," Kennedy said. To us, it presents anything but that. If Congress doesn't finally put the brake on the President's profligacy, the Nation will be fully embarked toward fiscal disorder.

Successful Fight To Save Historic Fort Davis Described by Author Barry Scobee

EXTENSION OF REMARKS OF

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, January 21, 1963

Mr. YARBOROUGH. Mr. President, a distinguished Texas author, Barry Scobee, has written a special article for the San Angelo Standard-Times concerning 30 years of effort to make Old Fort Davis a national historic site.

This was successfully accomplished in 1961 when Congress passed enabling legislation, of which I was the Senate sponsor.

Barry Scobee is author of "The Story of Fort Davis, Jeff County, and the Davis Mountains," published by M. Hunter, Jr., of Fort Davis; and of "Old Fort Davis," published by Naylor Co., of San Antonio. Both are valuable historical works on a significant area of the frontier West.

I ask unanimous consent that the newspaper article from the San Angelo Standard-Times of January 10, 1963, captioned "Fort Davis War of 30 Years Ends," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORT DAVIS WAR OF 30 YEARS ENDS

(By Barry Scobee)

FORT DAVIS.—This town is almost dancing in the streets with elation over having won a "war" of 30 years duration to save the old frontier army post from total vanquishment by time, weather and vandals. It has been taken over as a national historic site.

The deed to the property, signed by the owners, Mr. and Mrs. John C. Jackson, of Houston, has been recorded here. It conveys to the United States full title to 447 acres, with all buildings thereon, all now in the hands of the National Park Service.

Local citizens through the years turned up a dozen schemes to raise funds for the

purchase of the property, and every one fell flat on its tummy. Then in 1960 Senator RALPH YARBOROUGH and Representative J. T. Rutherford, both having personal acquaintance with the crumbling old post, took up their guns to save the historic fort.

In 1961 Congress passed the enabling bill and appropriated \$115,000 for the purchase price, to buy no more than 460 acres, which was about the supposed area. In the autumn four men in new jeeps and expensive sweat shirts came here a-surveying. They were not National Park Service men—that much was learned. They sighted their transits and dragged their steel tapes (survey chains) all around the neighborhood, and told nobody anything except that they were "working for the fort," a shut-mouth attitude that irritated the curious population no end.

Two of the men were Americans, two were said to be citizens of Mexico. At least they spoke no English that anyone heard. It may be that the pair was brought in to investigate old Spanish land grant surveys measured in veras rather than feet. It is understood that they examined ancient original records in the State land office at Austin, though this may be a mere guess. It is known that when the United States buys land it really combs the landscape to make certain that the title is sound.

At any rate, it was found that the fort property did not have 460, or 454 acres as had been set out, for the deed shows less than that and that the Government paid the owners \$110,000 for the tract.

To supply more music for the victory dancing, last Friday the man arrived here, with his household goods, one wife and three children, who is the first superintendent of the national site. He is Michael J. Becker, a native of Maryland who says "you all" and who was a lieutenant, junior grade, in World War II, in the South Pacific. He has been 16 years with the National Park Service. His first job was at Lake Texoma in Texas. He came here from 4 years as superintendent of the Tumacacori National Monument, an old mission, in Arizona.

Fort Davis folks just have to find out about people and things—though they took a licking from those four surveyors. Sometimes they find out through a nose reporter. So now they know that Becker is called Mike for short, that Mrs. Becker's given name is Ruth, that she is a native of Indiana, and that the children are Donna Rose and Joe, in high school; and Kathleen, in the grades. The Beckers have no dog.

Other towns that want Congress to donate 'em a national historic site or such, wonder how in—under the sun this town got the old fort promoted. In the war citizens went from here and the area and blithely told Senate and House subcommittees in Washington exactly what virtues the post had that should be saved for posterity. Here's a few of the highlights:

That the fort was established in 1854 and soon became the most important anti-Indian setup on the (capitalized) Great Military Road between San Antonio and El Paso and points west.

That it is the cradle of the present U.S. Signal Corps, because a young New York doctor by the name of Albert S. Myer arrived here in 1855 to be the post surgeon and saw the Apaches using talkie-talkies among themselves by fires on the mountains at night, smoke in daytime, and by waving their arms or anything else handy.

Dr. Myer scratched his noggin thoughtfully and asked why our soldiers couldn't communicate in some similar manner. Result: He got Congress to establish a signal corps, of which he was the first officer—and Fort Myer, Va., in plain sight of the Washington monument, is named for him.

Also Congress was told that both Federal

soldiers and Confederate troops in the Civil War garrisoned this post, that Fort Davis was the terminal three times on tryouts of the camels that Jeff Davis imported to America for army pack-animals in the Southwest and that eventually Fort Davis troops closed the book on Indian scalping parties and horse stealing in this area.

But where the Fort Davis talkers to Congress really went to town was in their heartwarming sentimentality about how the old post soon became an oasis, a coveted stopover spot on the Great Road where dusty and weary wagon travelers going farther west could relax, wash themselves in the limpid waters of Limpia Creek, get their wheels retired, the harness mended, buy corn at a buck a bushel from Government cribs for their mules and oxen—or get it for nothing if they were broke—obtain fresh supplies of dress goods, flour, sowlbely and Arbuckle; have their hurt and sick doctored by the post surgeons, and their lovelorn pacified by the chaplains.

That almost brought cheers and tears to the hardhearted Congressmen. So that, towns, is the clever way to win a national historic site.

Oh, yes, one thing more. It was pointed out also that Fort Davis is the halfway point between the Big Bend National Park and Carlsbad Cavern. That was a telling ringer, for it indicated brisk business for the historic site.

And also the Congressmen were told that when the post was inactivated in 1891 people coming here to find plentiful grass and water for their "caows" lived in the vacated houses on officers line on the post and were called squatters. Further, that today it is a social distinction for descendants of those early families to say, "My pa and ma were once squatters on the post." That got a Washington smile.

Now what does Supt. Mike Becker think of it all? He phrases his and the National Park Service objective for the site as being:

"To create an interpretive picture of the fort in its aspects as an outpost on the old, wild frontier in opening new land for settlement and civilization a hundred years ago."

If you keep asking questions he will tell you: "When the job is finished 3 or 4 years from now we want the country's youth to see and absorb the meaning of those buildings in relation to bold and earnest soldiers, adventurers, and trailbreaking, homeseeking men and women of a hundred years ago."

In speaking of just what will be done, Becker uses the words "restore" and "reconstruct." It is considered likely that four buildings will be put back to what they originally were and that the many others will be preserved by methods known by the National Park Service, against further deterioration by wind and dust and rain and old daddy time.

County Revenues and the U.S. Forest Service

EXTENSION OF REMARKS

OF

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. JOHNSON of California. Mr. Speaker, a short time ago, the National Association of Counties held a grazing, water, and revenue conference at which

the question of county revenues and the U.S. Forest Service was discussed by Mr. Hamilton K. Pyles, Deputy Chief of the Forest Service.

This statement is an excellent presentation of the positive partnership approach which is required by the local county government and the U.S. Forest Service to accomplish their mutual goals of full conservation and utilization of our national forest resources.

Under unanimous consent, I include this presentation in the Record:

ADDRESS BY HAMILTON K. PYLES AT THE WESTERN REGIONAL DISTRICT MEETING OF THE NATIONAL ASSOCIATION OF COUNTY OFFICIALS, LAS VEGAS, NEV., DECEMBER 13, 1962

It is a pleasure for me to be here, not only to take part in this meeting, but to visit again with people with whom I work more than 10 years ago as a national forest supervisor in California.

The theme of this meeting, which emphasizes a positive partnership approach to mutual problems and opportunities, is most appropriate and timely. A common goal, clear communication, and a good understanding are basic to a productive partnership.

The common goal to which we all subscribe is the achievement of a sound and suitable economic resource base to produce the most in goods and services that the land is capable of. This, in broadest terms, is the goal of the national forest enterprise which I want to talk about here today.

Successful partnership also requires a mutual trust founded on good understanding and frankness. My purpose today is to promote that understanding as frankly as I can.

First, I would like to briefly review the extent and meaning of the National Forest System in the counties of the Western States; the trend in receipts for use of these national forest resources; and other benefits which we believe accrue to local economies through the protection, development, and management of national forest resources.

Second, I would like to discuss some of the difficulties and problems which are causing concern to county governments under the present system of sharing revenues from sale of national forest products and other uses of its resources.

Third, I would like to discuss some avenues of cooperative effort which should result in reasonable progress toward reducing these difficulties and furthering the good relationship which we have enjoyed over the years.

First, the current situation as we see it: about 80 percent of the area in Western States is in private, State, or Federal ownership other than national forests, yet national forests occupy over four-fifths of some western counties. One-fourth of all the counties in the United States contain at least 1,000 acres of national forest land, and almost two-thirds of these counties are in the West.

The most productive land, both for agricultural use and commercial timber growing, is in private ownership. This is as it should be and testifies to the astuteness of the early settlers who took up land under the various settlement acts including the Timber and Stone Act. The national forests were by and large the residual areas of public domain with much of the area considered to be chiefly valuable for watershed purposes. Less than half of the national forest acreage in the West is usable for commercial timber production.

In spite of much low-value land, management of the national forests has become big business by any standard. These forests are the source of some 15 percent of all of the

timber products used in the country. More than half of the usable water in the West originates on the national forests; and this is a priceless commodity. Ever increasing numbers of people are looking to the national forests for their outdoor recreation. National forest rangeland supplements the requirements of local ranch operations, and national forests comprise one of the greatest natural habitats for big game, other wildlife, and fish under a system of management anywhere in the world. In addition, they have great potential for mineral production and hydroelectric power development. These benefits derived from the protection and multiple-use management of these forests are an essential base in the economy of the country.

The direct financial revenues to counties from national forest receipts have tripled in the last decade reaching a high of about \$35.2 million in 1960. The counties' share of receipts dropped to \$24.8 million in 1961, and show a slight rise last year to \$27 million. The drop in 1961 and slow recovery reflects the severe drop in the lumber market which still requires considerable improvement before we regain the high level of receipts of 1960. This reduction in stumpage prices and reduction in timber volume harvested has a major impact on most county receipts because the sale of timber accounts for more than 60 percent of the dollar revenue from national forest management.

Twenty-five percent of total national forest receipts is the only direct payment through the States to the county. These payments are often used in making comparisons between revenue to county governments from national forest lands against taxes from lands under other ownerships. Tabulations of these payments alone do not tell the whole story for there are other benefits to counties accruing from the existence of national forests within their borders.

National forest roads within a county and used by the public for various purposes are developed and maintained from the return of 10 percent of all receipts. This source of road funds is in addition to the regularly appropriated funds for forest development roads and roads built and originally maintained by the purchasers of national forest timber.

The existence and maintenance of thousands of miles of public forest roads, including the construction of forest highways, aids in the development of the country economy and should relieve counties of a substantial burden in maintaining roads for intracounty travel. These roads add to the capital improvement within a county and under sustained yield management eventually mean higher returns for timber sold and more use of the forest resources.

Protection of national forests benefit a number of county governments which under other circumstances would be required to bear a significant share of the costs.

Indirectly, national forest protection and development activities such as reforestation, erosion control, range rehabilitation, construction of recreational facilities, and improvement of the wildlife habitat have both immediate and long-range benefit to the local economy.

The Forest Service maintains about 750 offices in the Western States. These offices employ several thousand people and the majority of them own their own homes, many in sparsely settled rural areas. The Department of Health, Education, and Welfare under Public Law 874 provides school funds to counties where children of Forest Service people working on national forests create a burden on the school system. The payrolls of these employees and thousands of local residents hired on a part-time basis and other program expenditure including research and capital total nearly \$200 million annually.

Impressive as these figures are, they are dwarfed by the payrolls and local income generated by the use of national forest timber, recreation, and other forest use. And many communities and their industries are directly dependent upon the national forest watersheds for their water supply and protection from floods. Recreation use of national forests, currently well over 100 million visits annually, is fast becoming a major segment of the rural economy in many western counties. Winter resorts, motels, restaurants, shops of all kinds, service stations, and many other enterprises owe their existence to visitors attracted to the national forests throughout the year. The tax base and income generated by this public use alone is already decisive in some counties and continued increase in recreational visits and tourist trade are clearly indicated.

This, in brief, outlines the wide variety of benefits from having a national forest in a county, as we see it. However, it is always difficult to combine dollars with intangible benefits and get a meaningful overall measure—particularly one that may satisfy the budget and finance people in all levels of government.

So, 10 years ago a study was made by the Forest Service to determine how 25 percent fund payments compared with the taxes levied on similar lands in private ownership. We studied 135 representative counties containing 40 percent of the total national forest acreage.

It was found that the estimated tax averaged 19 cents per acre from private lands as compared with 11 cents per acre from 25 percent of the national forest receipts. However, taking into account Federal expenditures for that portion of the fire control and road construction and maintenance costs that might reasonably have been expected to have been assumed by the county had these lands been in private ownership, the total Federal contribution averaged 24 cents per acre, about 25 percent above comparable tax receipts.

Then again, in 1955, the President's Commission on Intergovernmental Relations made a comprehensive study of all Federal revenue-sharing arrangements with State and local governments. They concluded at that time that the present revenue-sharing arrangement regarding national forest receipts appeared to be generally fair and reasonable and should not be disturbed. The study also pointed to several problem areas involving other Federal programs and made recommendations for their solution.

These intangible benefits, long-term development programs, analytical studies, or even strong local economies do not always solve the current problems faced by a county government. This brings me to the second point of problems and difficulties of general concern to county governments.

We recognize that fluctuation in dollars returned to the county from national forest receipts is a major problem which creates difficulties in your budget planning, long-term programs, and orderly work. It becomes a most acute and pressing problem when these fluctuations are sharply downward, such as occurred in 1961. The reason for this fluctuation is simply that the value and volume of timber harvested is affected by the lumber market and the lumber market became seriously depressed in 1961 for a variety of reasons. In the eastern national forests, receipts from gas, oil, and mineral leases also fluctuate widely with consequent local impacts.

The problem is further aggravated when this drop in receipts comes as a surprise to the county officials affected. This is primarily a matter of poor communication and we in the Forest Service must assume a major share of the responsibility for correcting it.

A second problem, and one recognized by the Commission on Intergovernmental Relations, was the restriction placed upon local use of these Federal payments. Use of these funds for roads and schools only is considered by some States and counties to be a handicap in meeting changing fiscal needs. The State, of course, can make adjustments between roads and schools but Federal legislation would be required to further broaden this authority.

Another continuing problem to government at all levels is the increasing cost of doing business and meeting the needs and demands of the people for which each level is responsible. To meet these costs, counties with large areas of national forests must necessarily seek to increase their revenues from these areas as well as from lands in other ownerships.

These, I think, are the matters of common interest that are causing most concern to county officials. New Federal legislation obviously could drastically change the situation; and no doubt some of you believe that this is the path to fiscal salvation for many counties. It is a most difficult route as indicated by the fate of many such bills introduced in past sessions of Congress. However, a great deal can be done in a partnership approach to these problems without legislation. Furthermore, it would be out of order and improper for me at this time to discuss any proposals dealing with Federal legislation involving revenue from Federal lands. These matters involve the policy of the administration, the Bureau of the Budget, and other Federal land-management agencies. And a major difficulty is to find a common denominator for any broad new legislative proposals which is fair to all.

On the matter of the fluctuating character of annual 25-percent payments to the counties, the Commission on Intergovernmental Relations recommended that the 25-percent fund payments be computed on a 5-year average of receipts instead of upon an annual basis in order to secure a greater stability in shared revenue payments. If this were considered desirable and proposed at the Federal level, it would require a change in the present law. However, it might be possible for counties to explore the possibility of a similar system within their individual States.

On the Forest Service side of this partnership, we must continue to improve those operating practices on our timber sales which tend to reduce the receipts to the Treasury and thereby the 25 percent returned to the counties. In some sales of low-value timber we are caught in the squeeze between high operating costs for roads, betterment of the timber sale area, erosion control, disposal of logging slash, fire control, and the reduced value of the timber over the last couple of years. Most of our standards for this work are at a nearly irreducible minimum now to insure continued productivity of the land; a few may not be. For example, we are taking a very critical look at application of our road standards, particularly the spur and branch roads, to determine whether or not we can further reduce the costs in these areas without sacrificing conservation needs.

On the matter of communications, we are just going to have to do a better job of keeping county officials informed of local, short-term projections of national forest revenues. I think in the great majority of cases this is being done and there is a close association and working relationship between our field units and the appropriate county officials. But, perhaps we need to do this on a more formal basis to insure that the outlook for estimated returns to the county reaches the right people in a county organization at the proper time.

We in the Forest Service also need to have a better understanding of the problems of county government. We need your help in

finding solutions that will be effective and have wide application. For example, work is now underway to restudy national forest contributions made 10 years ago. This will again compare the 25 percent fund payment to counties with taxes estimated to be payable on similar lands in private ownership in the same manner as we did before. We are attempting through this new study to determine what changes in the underlying situation may have occurred during the last decade. The study is being made on the same sampling basis as that employed before. In each sample county, the county assessors will be consulted to determine the land and timber classifications and value currently in use as a basis of assessment. The total national forest area in each sample county will then be classified and prevailing tax rates applied to find the estimated tax per acre.

Once the data from this new study have been compiled, we would like to review the results with representatives of your association. This could provide an opportunity for joint interpretation of study findings and we could explore and discuss together the desirability of any changes in our program efforts or in current revenue arrangements.

I am sure a meeting of this sort between representatives of NACO and the Forest Service would not only be fruitful in the interpretation of this current study, but in a general exchange of viewpoints aimed at working together on important mutual problems and at providing direction to national programs that affect county interests.

Now to the problem of carrying out the required responsibilities of government under increasing costs of doing business—that is, the need for more revenue. Our best solution is to do the utmost to increase production from all the products and uses of forest resources under sustained yield. We are working hard on this. The Forest Service has increased its allowable cut limitations. It has moved in other ways to stimulate timber harvesting on national forests. The additional authorization approved by the 87th Congress for stepping up the road development program on the national forests, and subsequent increases in appropriation, will probably do more to aid us in meeting our allowable cut of timber and opening the forests to other resource uses than any other single item. Your association was most effective in supporting this legislation. This was an essential forward step in developing the 10-year program for the national forests. As you know, this program blueprints the actions we plan to achieve greater benefits from these lands and consequently increased revenue to the counties.

Before too long, we expect to have a system of recreation user charges. The new Bureau of Outdoor Recreation, with the assistance of the interested departments of Government, is working to develop a uniform system of charges for the recreation use of Federal land and facilities. It is too early to predict just what this system of charges may mean to national forest receipts, and thus to the counties, but the outdoor recreation business is growing by leaps and bounds. There is no question in my mind, barring unseen catastrophes, that the national forests will continue to experience a gradual upward trend in receipts just as we have experienced in the past decade or so.

Finally, I want to reiterate the desire of the Forest Service to work closely with you toward meeting our mutual goals, problems, and opportunities. The detailed problems of revenue sharing are extremely complex. While I have attempted to cover that subject in a most general way, I believe it is quite impossible to tackle the details in a general meeting of this kind. On the other hand, I believe that meetings between a representative group of NACO and a similar

Forest Service group could be productive. To be specific, I would suggest a meeting in early 1964 to review the study findings and further to discuss ways and means of overcoming difficulties that are regional or national in scope. If an earlier meeting seems profitable, we would be glad to take part. These meetings should further a positive partnership approach.

Present and Potential Economics of Southern Forests

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, January 21, 1963

Mr. TALMADGE. Mr. President, ours is the most prosperous nation in the world, and our strong and stable economy is due in large part to the natural resources with which the United States is so abundantly blessed.

Not the least of these resources are our great forests, and I am proud of the fact that the South and my State of Georgia stand at the top of the Nation's timber economy, in terms of supply, conservation and management.

F. C. Gragg, of International Paper Co., New York, N.Y., in a recent paper presented in Atlanta, Ga., noted that the South earned its position as "wood basket of the nation" through diligence and ingenuity. I commend his discerning analysis of the great forests of the Southland to Members of the Senate.

Mr. President, I ask unanimous consent that this paper be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESENT AND POTENTIAL ECONOMIES OF SOUTHERN FORESTS

(By F. C. Gragg)

In 1935, there were 25 pulp and paper mills in the South, using 2½ million cords of pulpwood a year. Last year, there were 73 mills. Together, they are consuming over 24 million cords of pulpwood annually. The value of the pulpwood crop delivered to the pulp mills in the South last year was more than \$482 million. Sawmill chips, once wasted, accounted for almost \$63 million of this.

Today, the southern forests bring as much money to the landowner, the lumberman, the turpentine operator, and the poleman as the old forests ever did. The outlet for pulpwood has cemented the foundation of a new prosperity.

What's more important, except in time of all-out war, in which there is no time to plan ahead, these new forests need never fear another wave of destruction. They have only to look forward to continued growth and added importance.

For those who lack the "big picture," let me describe this wonderful 12-State area.

It extends from Virginia into eastern Texas and Oklahoma. It contains 193 million acres of commercial forests—more than one-third of all commercial forest land of the Nation. No other single region approaches this in forest resources.

Generally, the area is a low coastal plain, ranging from sea level to about 1,000 feet,

with occasional interior mountain ranges up to 3,000 feet. The coastal area is occupied by almost pure stands of pine, interspersed in the alluvial bottoms with hardwoods and cypress. Mixed pine and hardwood cover the minor mountain areas. In the higher country, almost every species can be found, from the southern lowland trees to the northern hardwood types and into white pine and spruce.

The soil varies greatly, from poor sands and rock to rich alluvium. For every soil there is generally at least one valuable timber tree that thrives upon it. The climate is generally mild, with plenty of rain well distributed throughout the year. All in all, it is a splendid land for growing trees.

Henry Hardtner, of Urania, La., whom many consider the father of large-scale forestry in the South, enjoyed telling how impressed northern lumbermen were with his success in growing trees for the Urania Lumber Co. This was right after the turn of the century. There were no yield tables then, and most people thought it would take 60 to 100 years to grow a merchantable crop.

"When I showed visitors my success in obtaining reproduction on cut-over long-leaf stands," Mr. Hardtner used to say, "the results were so marked that they accused me of 'nature faking.'"

Sixty percent of all the tree farms in the Nation are in the South. They represent 66 percent of the Nation's tree farm acreage. Nine of the top 10 tree planting States in the Nation are in the South. The South now supplies about two-thirds of the wood to feed the Nation's gigantic appetite for paper, one-third of its demand for lumber, almost all of its requirement for naval stores, plus such items as poles, pilings, and furniture stock.

In terms of net annual growth in excess of use, the South is better off today than at any time in the past 25 years.

In 1935, when the expansion of the pulp and paper industry really went into full swing, there was some concern that this added demand for raw material would soon strip the southern countryside of all of its existing timber. As a matter of fact, it served only to emphasize the South's great wood producing potential by increasing the financial return on a forest investment and by encouraging the planting of trees on marginal and submarginal farmland.

Since 1935 the forests of the South have supplied a truly phenomenal amount of raw material, not just to the paper industry, but to all the wood using industries as well. At the same time, the South has increased its reserve of growing stock by almost 10 percent.

This fact pinpoints the South as the most important section of the U.S. timber economy, not only because of its present day contribution, but also because of its probable contribution in the future.

It is a most outstanding accomplishment and the credit belongs not only to the pulp and paper industry, but also to the cooperative effort of the U.S. Forest Service, the State foresters, the Extension Service, and others.

There are those, of course, who point to this "miracle" and to current growth-drain ratios and argue that there is too much wood now and always will be. While I concede that there are areas in the South where people have more wood than they can sell at the present time, that is as far as I can go, and for several very good reasons.

In the first place, a medium projection by the U.S. Forest Service Timber Resource Review indicates that in the next 13 years, or by 1975, the demand for pulpwood in the United States will be 72 million cords, and as much as 100 million cords by the year 2000. Assuming that the South will be re-

quired to provide at least 65 percent of that volume, as it is doing now, it is obvious that we must continue building up the growing stock and improving net annual growth of the southern forests.

In the second place, timber surpluses—reserve growing stock is a better term—are not prevalent in every county of every Southern State. There are local shortages or deficits of annual commodity use over annual growth in many areas.

J. E. McCaffrey, a vice president of International Paper Co. in charge of southern woodlands, made this clear at the recent annual meeting of the Southern Pulpwood Conservation Association.

He urged those attending to think about the string of mills that now exist from West Point, Va., down the South Atlantic seaboard, along the gulf coast, and over as far as Houston, Tex. The wood drainage area available to each of these mills has been drastically curtailed by addition of new mills and expansions within the past 10 years.

Too many engineers and manufacturers, he said, think that the site for a new paper-mill depends only on its proximity to water, power, transportation, and labor. What's more, because it is less expensive to expand an existing mill than to build a new one, they regard expansion as a logical, competitive step. But, if this construction or expansion upsets the forest economy in their area, it weakens not only that company, but also the entire industry. At this very moment, pine timber use exceeds growth in South Carolina, North Carolina and Florida are rapidly approaching that condition.

Mr. McCaffrey's point was not that the industry should stop growing in the South, but that it should grow in the right places. It is the duty of timberland managers and forest economists to bring these facts to the attention of top management. If we fail to do so, or if they fail to listen, the time could come when the southern pulp and paper industry will no longer be competitive with mills in other sections of the country.

At this point, may I suggest that we foresters update our own terminology—that we stop using terms that may be clear to us but which are misleading to the general public. "Drain" is one of the words often misunderstood. We mean "use," of course, so let's say "use." "Surplus" is another misleading term. When we speak of a timber surplus, we are talking about reserve growing stock. A surplus connotes too much of something or something that is not needed. Reserve stock, on the other hand, is like money in the bank—earning interest on the capital while standing ready for use when needed.

Reserve growing stock is a necessity to the forest industries. It provides the freedom to meet the needs of a growing economy. It is the necessary latitude in which to expand, to improve products and to develop new products. Without this assurance, markets may gradually disappear—not because the consumer has lost interest in wood or paper, but because any question in his mind about the dependability of his source of supply could lead him to seek substitutes. Once a market is lost, it is almost impossible to regain.

So, if the markets are to be held, the industry must grow, through research and expanded manufacturing capacity. These things are possible only if sufficient reserve growing stock is available.

Instead of worrying about excess timber, we might do better to worry about the widespread and continued withdrawal of lands from timber production. In this country, it is estimated that a million and a half acres are diverted to superhighways, airports, reservoirs, recreation and defense projects each year.

We are hardly accustomed to this encroachment on private land ownership in the South. Yet, I daresay few managing sizable holdings have not experienced it.

The biggest drain—and here the use of the word is intended—on privately held forest land in the future will undoubtedly be for State and Federal recreation areas. According to President Kennedy, the increased leisure time enjoyed by our growing population and the greater mobility made possible by improved highway networks have dramatically increased the Nation's need for additional recreational areas. Already we have a new Bureau of Outdoor Recreation, and the administration is advocating and pursuing a vigorous policy of land acquisition for recreational purposes.

The wood-using industries have long been aware of this social need and have been responding actively to meet it. Almost without exception, the industry has subscribed to the multiple-use theory of forest management under which vast areas of privately managed forest land are being made available to the public for recreational use. Recently the American Forest Products Industries conducted a national survey covering some 58 million acres of industry-managed forest land. The survey shows some 92 percent of this acreage open to hunting and 97 percent open to fishing with varying amounts being made available for other public recreational purposes.

If both public and private interests continue to support the theory of multiple-use forest management—if we continue to resist attempts to set aside productive lands for unproductive single-use management which destroys the economic base on which good forestry rests and which benefits only a limited segment of our population—this Nation's forests can continue to achieve the greatest good for the greatest number.

If, on the other hand, further substantial withdrawals are made by State and Federal agencies for single-purpose uses, particularly, if lands are set aside to serve as so-called wilderness areas, we shall find the day coming closer when our forest needs exceed our means. This will be just as true in the South as in the other forest-growing areas of the country.

Moreover, the unsurpassed forest resources of the South are by no means free from fire, insects and disease. We have made such great strides in fire control in recent years that we are inclined to underestimate its continued importance. It is still our No. 1 problem and a serious deterrent to the growing of commercial timber crops. At the same time, our long summers, mild winters and abundant rainfall, are highly favorable to destructive insects and fungi. Among the more serious of these are the southern pine beetle, tip moth, fusiform rust and fomes annosus.

Fomes annosus is a particularly alarming disease. It attacks the stump and progresses through the roots like cancer, spreading to the roots of adjacent, living trees. It's quick and it's deadly, and so far we don't know how to stop it. The Southern Pulpwood Conservation Association is currently working with a group of forest products companies who are attempting to deal with some of these threats. Their efforts will tie in closely with the U.S. Forest Service, State agencies and colleges, but the successful conclusion of their work will require the concerted efforts of the entire wood-using industry.

In the meantime, we must not relax our conservation efforts on behalf of the private timberland owners. They have proved they can do the job where technical assistance is available and where enough markets exist to make it worth their time and effort to grow trees. Still, according to the TRR, only one-third of the 177 million acres held

by small timberland owners in the South are today being managed for high productivity.

I do not believe that Federal subsidies will improve this situation. Instead, I recommend that we devote our attention to the economics of maintaining continuous markets where they are needed. And second, we must begin to provide for the proper regeneration of hardwood stands through research and the development of appropriate silvicultural procedures. Hardwood is now being used more and more throughout the pulp and paper industry, accounting for about 20 percent of our pulpwood requirements in 1960. Trees of little or no value 20 or 30 years ago are becoming highly valued sources of raw material today, and yet we have done little or nothing to encourage the proper management of hardwoods for future production.

In brief review, I have tried to establish that the South is, indeed, the "wood basket" of the nation, that its claim to this title is the result of hard work and perseverance. Where shortages of raw material exist, we have made them ourselves by ignoring the facts of a stable forest economy. In a sense, we have also made our own "surpluses," but these should be considered a bank account of growing stock, paying dividends as the industry expands and markets grow. And, of course, much remains to be done to conquer wildfires, insects and tree diseases, and to develop the hardwood potential that exists today.

Southern forestry needs two more things to assure its future potential. The first is better research by everyone concerned with forest management problems. The development of more reliable data on the economic results obtained from specific silvicultural procedures is a good place to start. The regeneration of pine on good land in combination with brush is an unsolved problem still.

Modern forestry's second need is for foresters who pay attention to the economics of growing timber. Right now, pulpwood accounts for about 65 percent of the cost of making wood pulp. I doubt that the cost of raw material for aluminum or even steel is as high. We need trained foresters who understand the economics of production, who will think and plan in terms of what our raw material is going to cost us 5, 10, 20, or even 50 years from now. Our schools of forestry can help us here.

Given all these things, in addition to its unsurpassed topography and climate, coupled with certain compelling economic factors, the South is destined to remain a great reservoir of highly valuable and diversified timber, upon which the Nation can depend for its future supplies.—Condensed from a paper presented before the 62d annual meeting of the Society of American Foresters, in Atlanta, Ga., October 21-24.

Tax Reform

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1963

Mr. DERWINSKI. Mr. Speaker, the distinguished Ways and Means Committee has before it numerous major proposals, many of which wear the magic label of "Tax Reform," or "Tax Adjustment." The Palos Regional is typical of the energetic, local newspaper of the

country, and in its Thursday, January 10, edition provides an interesting insight into the thought processes imposed on citizens for tax computation. I believe this editorial worthy of sympathetic attention, and, under unanimous consent, I insert it into the RECORD, as follows:

You should have been around the regional office last Friday morning when we were making up the weekly payroll.

It was the first week for figuring the 3½-percent social security deduction for employees and we had quite a time of it.

We started by multiplying the base pay by 3, then taking one-eighth, which of course, never came out even. This answer was multiplied by 5. By that time we had a long line of figures and a question as to where to put the decimal point.

The first answer came out to \$48. We figured that was a little too much to deduct at a rate of 3½ percent. We moved the decimal point one figure forward, making it \$4.80. That didn't look right either, so we moved it one more figure and came up with 48 cents.

To prove our answer, we figured it another way. We did it fraction-wise by multiplying 29 eighths by the base pay. The answer was 44 cents.

Then we got smart. We reasoned that the fraction five-eighths was 0.625 of 100 and adding 3 percent, we got a total of 0.03625, which we decided was a pretty smart way to do it. We were elated until we multiplied this figure by the base pay and came up with 46 cents.

Three different ways of figuring and three different answers, 48, 46, and 44 cents.

At this point we sat back to reflect on the whole problem. We did some mental arithmetic and decided the company would have to raise \$200 to \$300 more each year to pay its share of the added tax. Our contribution, plus the employees, now amounts to 7¼ percent. We also remembered that it will go up again in 1966 and 1968.

Then our thoughts switched to the increase in postal rates for the regional, and the increase of first-class mail. There will be several more hundreds of dollars which we will have to pay.

By the time we got back to our figures we were hopping mad, but the payroll had to be completed. We checked, and found several just plain arithmetic errors and eventually finished. We started at 8 a.m. that day and finished at 11—3 hours of time that could have been used to go out and hustle up some business.

Kerr-Mills Improvement: A State Responsibility, Not Federal

EXTENSION OF REMARKS

OF

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. SHORT. Mr. Speaker, one of the things I have repeatedly emphasized, when complaints have come my way about the Kerr-Mills Act, which authorized State-Federal assistance to older people in need of medical care who are not welfare cases—is the fact that the law, as passed by the Congress, is flexible and can be implemented by each

State in a manner best suited to the needs of a particular State. This feature was provided for the specific reason that many Members of Congress—Republican and Democrat—feel that the State and local governments know their own problems and possible solutions better than a Federal bureaucracy could ever know them. Therefore the law was couched in terms which left it up to the States to determine how to most effectively administer the law, within just a few Federal guidelines. Retaining the self-respect, as well as the personal initiative of our citizens is of prime importance, not teaching them to rely more and more on a paternalistic Federal Government.

I, therefore, am pleased to offer for the possible guidance and inspiration of our States, one of the solutions worked out by the North Dakota State Medical Association. I am proud to see this evidence of responsibility on the part of our medical profession in North Dakota. While their suggestions may or may not become law in North Dakota, their efforts are certainly to be commended and emulated by other groups in other States.

I commend to the attention of the House of Representatives the following article from the Bismarck Tribune of January 15, 1963, written by Bill Tillotson, and entitled "Bill Will Seek To Widen Medical Care for the Aged":

BILL WILL SEEK TO WIDEN MEDICAL CARE FOR AGED

(By Bill Tillotson)

Broadening of the State's medical aid to the aged program to prevent persons aged 65 and over from falling into medical indigency is proposed in legislation being prepared by the North Dakota State Medical Association.

The bill, which will be introduced shortly into the 38th biennial legislative session here, is designed to add to income classes to the 1961 medical aid to the aged law in an effort to spread coverage beyond the present income limits.

The present law limits individual income to \$100 per month and income for an elderly couple to \$150 to qualify for medical aid to the aged coverage, with a further provision that the first \$50 of medical care furnished in the 12-month period prior to application shall not be included in benefits.

The new legislation calls for a second income class for individuals with monthly income up to \$125, and \$175 for a couple with a "deductible" figure of \$100, and a third class for those with incomes of \$150 and \$200 respectively with a \$200 deductible feature.

The Federal Kerr-Mills Act, under which the North Dakota medical aid to the aged program is implemented, permits annual income of up to \$2,500 for a single person and a slightly higher figure for couples.

Dr. Clifford H. Peters, Bismarck physician and a member of the medical association's legislative committee—said that while North Dakota's medical aid to the aged program is one of the best in the Nation, it is lacking in the eligibility requirements.

He said he had actuarial figures which will show that broadening the medical aid to the aged base would not push the program above the \$2,660,000 appropriated for the program during the current biennium.

Based on the first 15 months of operation of the medical aid to the aged law, \$502,000 of the State's appropriation was actually spent for medical aid to the aged care with

65 percent of the medical aid to the aged caseload representing transfers from old-age assistance and other programs with medical benefits.

"I think that we will find the number that fall into those new categories will be very few," Peters said.

"One reason I'm interested in upping these categories is the medical profession wants to see that the catastrophic illnesses are covered," he said.

He said the medical profession is interested in seeing that persons over 65 are able to cope with chronic or serious illness without becoming indigents seeking OAA help.

"That's what we want to prevent * * * indigency," he said.

"When we talk about Kerr-Mills or medical aid to the aged in North Dakota and we think about these increased eligibility levels, we're thinking about benefits and care for these people 365 days of the year * * * a complete program covering any eventuality," he said, not just a 90-day program as proposed under the Federal social security approach.

He said the deductible feature will discourage abuses and clearly define to the applicant and his family the self-help responsibilities.

He quoted from a statement from the American Medical Association and adopted by the State group:

"Personal medical care is primarily the responsibility of the individual. When he is unable to provide this care for himself, the responsibility should properly pass to his family, the community, the county, the State, and only when all these fail, to the Federal Government, and then only in conjunction with the other levels of government, in the above order."

Peters said the State organization will have some suggestions about the so-called means test to obtain medical-aid-to-the-aged care.

"Our contention is that a means test is necessary but it doesn't have to be to the extent that it prohibits a program," Peters said.

He said certain aspects of the test should be modified, but he said that doesn't mean to do away with a test of need entirely. He said the association would suggest changes so that the test will not be as "demeaning" as it is claimed.

Peters said that the medical profession will sponsor legislation creating a public welfare board medical advisory committee to help the State welfare board supervise the medical aid to the aged program. He said he believed the bill will call for nine doctors, all appointed by the Governor.

Peters said the welfare board has repeatedly emphasized that budget and other problems have increased because of the medical care programs.

"If such is true, and we concede a large portion of their budget goes for medical care, then it seems to us only logical that there should be close medical supervision of these programs," he said.

Peters said that the medical profession is not interested in taking part in the administration of the programs, but only in providing orientation and direction where needed.

In commenting on the medical association proposals, Leslie Ovre, director of the State public welfare board, said that the \$2,660,000 budget figure for the past biennium was a shot in the dark based on 1960 census figures and was designed to cover the maximum number of persons who might qualify.

"There have been very few applications which have been denied," Ovre said, adding that the board was "surprised" that more persons did not avail themselves of the benefits.

"The rate of those applying is increasing," he said.

The board has estimated that 40 percent of the new applications are from persons who would not qualify under the old-age assistance program.

Ovres said that persons requiring medical aid have been receiving it, either under medical aid to the aged or old-age assistance.

The welfare board director raised the legal question of whether one class of persons receiving tax benefits can be treated differently from other classes.

"I don't believe any other State has set up any classification system," he said.

However, he acknowledged that the basis of need factor depends on how liberally the word "need" is defined.

"After 18 months of operation we know a little bit more about it," he said of the medical aid to the aged program.

Goal of the Federal Prison System

EXTENSION OF REMARKS

OF

HON. EDWARD V. LONG

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, January 21, 1963

Mr. LONG of Missouri. Mr. President, in the winter issue of the *George Washington University Alumni Review*, there appears an article "Talent Scout for Alcatraz" written by Mr. James V. Bennett, Director, Federal Bureau of Prisons. The article discusses the goal sought by our Federal prison system and a number of its successes. Mr. Bennett has served our Nation well over the past 25 years, and as chairman of the Subcommittee on National Penitentiaries, I commend this article to the attention of all those who seek a more orderly and responsible society.

Mr. President, I ask unanimous consent that the article be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TALENT SCOUT FOR ALCATRAZ

(By James V. Bennett)

(NOTE.—James V. Bennett, LL.B., 1926, this year completed 25 years as Director of the Federal Bureau of Prisons, supervising 31 institutions which he visits every year and in which he is responsible for many basic prison reforms. Mr. Bennett was assigned to assist a congressional committee investigating the employment program of the Federal penal system in 1926 and has worked in the Federal prison field since then. He is credited with helping promote and draft the Federal Youth Correction Act. He has served on many boards and commissions of a national and international nature. His awards include the Selective Service Civilian Award and the Exceptional Civilian Service Medal by the War Department, the Distinguished Public Service Award by Navy, the President's Award for Distinguished Federal Civilian Service. He holds the University's Alumni Achievement Award.)

With the inmate population of the Federal prison system going up every year, as it is in nearly every other penal system, there really isn't any need for me to drum up business. Yet there are those who conceive of my job in just such terms as the title of this article implies. One of them is

the old-time bank robber Eddie Bentz who was one of our guests at Alcatraz several years ago.

Eddie occupied a cell off the flat known to the inmates as "Broadway." On my frequent visits to Alcatraz I always stopped by to see him and we became good friends. Our discussions often took a philosophical turn. "Just stop to think," he told me on one of these occasions, "supposing everybody in the world were honest and there were no bank robbers—"

It immediately occurred to me that if this utopian situation came to pass, there would be no Alcatraz. Like Eddie, most of his 250 colleagues at Alcatraz were serving long terms for their depredations on various and sundry banks around the country. But I sensed that this wasn't the point Eddie wanted to make, and without commenting I heard him out.

"First of all," he said, "you would be out of a job, and after you, the judges and large segments of lawyers and policemen would be out of a job, and the locksmiths and the safemakers would be out of a job, and most banks would have to close up."

He paused dramatically and then made his point. "If there were no banks, then there would be no money to loan to keep our economic wheels moving. The logical thing, since I have never robbed any bank that wasn't insured, and since I'm a sort of catalytic agent, is to let me go out and thus keep this whole scheme of yours going."

Eddie wasn't completely wrong from a sociological point of view. But in subsequent years it dawned on him that inasmuch as he and his associates had created jobs for policemen, the policemen were going to carry out their responsibilities. This meant extended terms of incarceration for Eddie. He is now awaiting release from a midwestern State prison, and I am sure that when he gets out he will make a good citizen. And put his money into banks and, like the rest of us, take a rather jaundiced attitude toward his successors in crime who try to withdraw these funds at the point of a gun.

In prison work we are not trying to perpetuate our jobs. A recent 4-year study made by the University of Illinois under the auspices of the Ford Foundation indicates that 70 percent of the persons who leave the institutions of the Federal prison system make good in their efforts to stay out of trouble with the law. On its face this statistic would imply that we are rapidly working ourselves out of a job. But unfortunately—and we choose to look upon it that way—the complexities, stresses, and ills of our society generate more than enough replacements to fill the ranks of those who have gone straight.

The challenge to those of us in prison work is therefore greater than it has even been before. And we cannot meet that challenge with the traditional prisons—the Jollets, San Quentins, and Leavenworths. It is no longer possible, and in my opinion it never was, merely to attempt to try to frighten men into conformity with the law. They must be equipped with the education and vocational skills which will permit them to assume a useful role in a highly demanding and increasingly technological society. Also, those who have become emotionally disturbed under the pressures of today must be given the psychiatric treatment and the intensive counselling that will stabilize them to the point where they can meet the responsibilities of citizenship with resolution and confidence.

We are developing new types of institutions and new types of programs which can cope with the problems of crime and delinquency in the space age. A prototype of the new institution is the famous "Prison Without Walls" at Seagoville, Tex. Here you will find none of the features that characterize

the usual concept of a prison. It has no walls, no guard towers, no long lines of men marching off to work or to meals under the watchful eyes of guards. The inmates live in simply furnished rooms, and carry their own keys to these quarters. They go to their assigned jobs at the appointed time on their own initiative. On visiting days a man can take his family to church services or to lunch in the dining hall. A full program of employment, education, and vocational training, religious counseling, casework services, a wide range of recreation and leisure time activities and medical care comprise the day-to-day operations. The emphasis throughout is on self-reliance, self-respect, and trustworthiness.

A full third of the 24,000 prisoners in our Federal institutions are aged 25 and under, and the emphasis in our programs is necessarily upon youth. In 1950 the Congress, with the full support of the Federal Judiciary, passed the Youth Corrections Act. This act opened up a wide range of possibilities for dealing with the problem of youthful offenders. Judges no longer had to sentence young offenders to flat terms of imprisonment; they could commit them to the control of the Attorney General for an indeterminate period of 6 years or for a period as long as the statutory penalty provided for the offense. The youths committed under this procedure could be paroled to the community at any time but in no case later than 2 years prior to the end of their term. Under the stimulus of this flexible procedure a number of our institutions were geared to focus on these offenders a particularly intensive program of treatment. The act also authorized the board of parole to set aside the convictions of those youths who followed up programs of institutional treatment with particularly fine records in the community. In effect, the act provided all the means necessary to reorganize the lives of youthful offenders and give them a fresh start.

Not many years ago we received four young men under this procedure from a midwestern court. They had kidnapped and assaulted a young woman. This was a grave offense, and the judge was under extreme public pressure to throw the book at them. But he felt that they could be salvaged and committed them for 12 years under the Youth Act. The youths responded earnestly to the chance that had been given them. They worked hard in the institution to improve their education and to learn a vocation. Eventually they earned parole.

I kept in touch with the progress of these young men. One of them entered college following his release and graduated last year. Two started businesses with the skills they had learned in the institution and are doing well. The fourth is working steadily in a vocation that he similarly acquired. Of the four, two are married and are considered solid family men in their community. Upon the recommendation of their supervising probation officer, the board of parole has set aside their convictions.

But for the new approach permitted by the Youth Act these young men would still be serving extended terms in a penitentiary. Instead of being expensive liabilities perhaps for their entire lifetimes, they are now taxpayers and productive citizens.

It was the success of the Youth Act with cases like these that led in 1958 to the enactment of a far-reaching statute permitting similar flexibility in the treatment of adult offenders. It gave the judges discretion to impose indeterminate sentences on older offenders, and in the cases of particularly perplexing cases, to commit the defendants to us for a diagnostic study and sentencing recommendation. The judges have made great use of their new discretion.

One of the first cases committed for study was that of a policeman who had committed a series of robberies. Our institutional staff found that he had a bizarre fantasy life. He imagined himself as the "Black Phantom," and in the darkness of an alley, dressed in a black cloak and hat, he would often swoop down on unsuspecting drunks. Our psychiatrists concluded that he was mentally ill but still sufficiently rational to be considered responsible for his acts. Upon our recommendation the judge committed him for 20 years under the new indeterminate procedure. The policeman is responding well to psychiatric treatment, and I am sure that within a few years it will be possible to parole him to the community with safety.

We have had encouraging success in redirecting the lives of many offenders, but we are also aware that we have a responsibility to keep out of circulation as effectively as possible the dangerously perverted and psychopathic, and the thoroughly ingrained antisocial rebel who will not voluntarily accept any responsibility for himself or anyone else. For these and many others, probation or some other type of controlled supervision in the community seems unrealistic. Even the modern psychiatrist would hesitate to assure us that these distorted personalities could be transformed into attractive, acceptable members of our complex, competitive society.

These men for the most part are confined in the old-line penitentiaries where custodial security remains as tight as it has ever been, and perhaps even tighter with the refinement of our custodial methods and the application of electronics and the other products of modern technology to the problems of security. But even in these facilities we do not entirely give up on our efforts to salvage men. Except for the 2 or 3 percent who eventually die in prison, they all come out some day.

One such man was released nearly 8 years ago at the end of his term, and it was with crossed fingers that the warden saw him go. He had an extended record of offenses and imprisonment. Our psychiatrists tentatively labeled him a psychopath. Although he had taken a number of courses in prison—advertising, business administration, copywriting, and so on—there was little to indicate that he had really changed his attitude and values.

But somewhere in his last prison experience the necessary alchemy had taken place. With the assistance of his probation officer, he found a job as a copywriter in a radio advertising agency. Within a short time he was promoted to an accounts executive, and not long afterward to station manager. He continued to earn successive promotions, and within a half-dozen years of his release from prison he headed a chain of radio and television stations, with a salary several times that of the prison warden who with such trepidation had watched him leave the prison gates.

I had gotten to know this man in prison, and one day there arrived at my office a fine leather briefcase that he made for me during the long evening hours in his cell. I have carried this case home loaded with work every day for the past several years. It is battered now and somewhat the worse for wear. But I would not be without it.

It serves as a constant reminder to me that we cannot give up hope on any man. With an awareness of the amazing transformation in this man's life, I find it much easier to open the case and get to work on its formidable contents—the problems of the 24,000 men still in prison.

Cuba: A National Orgy of Self-Congratulation

EXTENSION OF REMARKS OF HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, January 21, 1963

Mr. GOLDWATER. Mr. President, I ask unanimous consent that an article entitled "Great National Orgy of Self-Congratulation," written by Gen. Thomas D. White, U.S. Air Force, retired, one of the best that this outstanding patriot of America has prepared for that publication thus far, and published in Newsweek issue of January 14, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GREAT NATIONAL ORGY OF SELF- CONGRATULATION

(By Gen. Thomas D. White, U.S. Air Force, retired)

"Placebo," any harmless substance, as bread pills, given to humor a patient.—Funk and Wagnalls Practical Standard Dictionary.

Uncle Sam has long been suffering from a severe case of national apathy recently aggravated and climaxed in a high Cuban fever. His most dangerous sequela is overconfidence. As an aftermath of Cuba we may become more off-guard than ever, tranquilized by our own nostrums and the propaganda pills constantly fed to us by Dr. Khrushchev.

Our Government acted courageously in the Cuban situation. But that is exactly what I expect the Government of the United States of America to do.

What seems strange to me is that we have been engaged in a great national orgy of self-congratulations. We congratulate ourselves over the confrontation of our sworn enemy who, armed with lethal weapons aimed at the very heart of this country, marched almost openly into our own front yard. It seems to me that rather than congratulate ourselves, we should soberly recognize that Cuba is surely one of the easiest of all the areas and circumstances of possible decisive confrontation with the Soviet Union. Instead of crowing over a 12th-hour decision, we should be taking stock of our national attitudes which permitted the immediate situation to arise in the first place.

I find it especially difficult to understand why our military authorities did not raise the alarm long before October. In my opinion, and I spent many years in the intelligence business, there was enough information to be found in the daily press alone to have led to a military conclusion that the Russians in Cuba were posing a serious threat to the United States.

Surely the stream of Russian ships to Cuba which began last midsummer should have aroused deep suspicion. Could anyone in uniform really have believed that the construction in Havana Harbor was for a fishing fleet? Did the evaluators of Soviet intelligence, who should be chosen for their cynicism, actually give credence to published reports that thousands of Russian troops in Cuba were there for peaceful purpose or that the U.S.S.R. would mount such an effort merely to arm Fidel Castro with defensive missiles? Was not the sum total of indicators

enough to raise the alarm long before it was raised?

I am perturbed that, whatever the current arrangement of intelligence organizations, whatever the Department of Defense policies on military expression of views, there should be such evidence of complacency among our professional military watchdogs.

There have been changes in our military intelligence setup, and the military voice has certainly been muted. Nonetheless I am confident that if our highest military authorities had stood up and spoken on this subject, the Commander in Chief would have acted promptly on their warning.

It bothers me also to know that the equipment for launching and guiding certain types of missiles can be hidden readily and that some missiles and aircraft themselves can be transported piecemeal and quickly reassembled. These factors and other clandestine capabilities of the U.S.S.R. in Cuba lead me to believe that as long as there is a Communist government in Cuba, the United States and all of Latin America are in jeopardy. Our naiveté in believing otherwise has brought us close to a major disaster.

We may have been "eyeball to eyeball" and this time the other fellow may have blinked—but maybe he only winked. In any case, we may be sure that he is already plotting a next time. He will continue to feed us propaganda pills to lull our senses and will always be set to administer us a fatal potion. Khrushchev has sworn to bury us. Presumably he would prefer to bury us alive. But if necessary he would gladly bury us dead.

"Placebo," the opening antiphon of the vespers for the dead.—Funk and Wagnalls Practical Standard Dictionary.

Scientific Efforts To Serve Humanity

EXTENSION OF REMARKS OF

HON. EDWARD V. LONG

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, January 21, 1963

Mr. LONG of Missouri. Mr. President, several weeks ago, the St. Louis Post-Dispatch carried a thought-provoking editorial directed to the world scientific community. However in a board context, it was directed to all mankind. We are all responsible for the end use of our efforts. It is not enough to answer that we search for knowledge only or that we follow the directions of our superiors. We must, each of us, strive to see that our efforts serve humanity. Such a path may bring adversity, but the goal is worth the endeavor.

Mr. President, I ask unanimous consent that the editorial "For Death or for Life?" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR DEATH OR FOR LIFE?

The Nobel Prizes for physics and chemistry, we suppose, exemplify the spirit of modern scientists—or many of them. The former went to Lev Davidovic Landau of the Soviet Union whose theories for condensed matter

made possible the sputniks. The other went to Dr. John Cowdery Kendrew and Dr. Max Ferdinand Perutz for their studies of human blood. One achievement has deepened the foreshadow of destruction. The other has brightened hope in the combat against pain and death. Both are applauded equally as contributions to pure knowledge.

Scientists say that is how it should be. Knowledge is to be sought for the sake of knowledge, and the search should not be hampered by the dread of misapplications. Who can say otherwise? Having put the skull and crossbones on the bottle, the scientist may refuse responsibility for those who draw the cork to ill purpose. But is it really so simple?

Of course, one does not bid the searchers to fill their bottles only with elixirs of happiness, and it would be futile to forbid the discovery of deadly draughts. Yet more often than not, the searcher has a purpose as he follows one line of investigation rather than another. In spite of the cant about the "two languages," he also is of this world, and he must choose his work according to its needs. He is not above judgments and priorities.

Happily, great scientists accept the duty which comes with the freedom of the search. The men who gave us the bomb are among the most zealous in curbing its use. It is the ordinary man who sets the goal for the scientists. They did not create the temper of our times; they are more nearly its victims. Yet they, like the rest of us, must be concerned about the applications of their work. The danger is not in knowledge. It is in choosing it for death or for life.

An American's Creed

EXTENSION OF REMARKS

OF

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. HALL. Mr. Speaker, recently the Medical Society of the District of Columbia brought to my attention an editorial reprinted from Philadelphia Medicine, volume 58, No. 38, of September 21, 1962, entitled, "An American's Creed." The executive board of the society reviewed this creed and wholeheartedly endorsed the thoughts behind it and the views expressed in it. It is recognized as Dean Alfange's "Message for 1952: My Creed," which appeared in the New York Herald Tribune December 30, 1951. A framed version hangs in the office I occupy in my district as furnished by St. Clair County Republican Chairman Don Giesler, M.D. Under leave to extend and revise my remarks, I believe the creed is again deserving of consideration by the Members of the House of Representatives, due to its timeliness and as forwarded by our District of Columbia Medical Society:

I do not choose to be a common man. It is my right to be uncommon—if I can. I seek opportunity—not security. I do not wish to be a kept citizen, humbled and dulled by having the state look after me. I want to take the calculated risk; to dream and to build; to fail and to succeed. I refuse to barter incentive for a dole. I prefer the challenge of life to the guaranteed existence; the thrill of fulfillment to the stale

calm, and dry rot of utopia. I will not trade my freedom for beneficence, not my dignity for a handout. I will never cower before any master nor bend to any threat. It is my heritage to stand erect, proud, and unafraid; to think and act for myself; to enjoy the benefit of my creations; and to face the world boldly saying, "This I have done with my own hand, I am a man. I am an American."

Deserved Recognition

EXTENSION OF REMARKS

OF

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. ROGERS of Colorado. Mr. Speaker, Mme. Odette Lameignere Combs recently was paid the highest honor by her native country. During World War I she married an American soldier. Thereafter, she came to the city and county of Denver and contributed so much to the community. Victor Gares, French Consul General in Denver, presented her with the Cross of the Legion of Honor from French President Charles DeGaulle. Her accomplishments are outlined in an article by Barbara Haddad which appeared in the Denver Post, as follows:

DESERVED RECOGNITION

(By Barbara Haddad)

The most elegant calling card in Colorado probably belongs to a silver-haired little woman who has the privilege of listing two major French decorations after her name. And next Tuesday, Mme. Odette Lameignere Combs will add a third: the Legion of Honor. It's enough to make Molly Brown sink with envy.

Mme. Combs admits she burst into tears when she heard of her nomination for the medal.

"I think I am just a sissy," she said in delicately accented English, "but I shall be most proud to receive it."

Napoleon Bonaparte founded the Legion of Honor to reward valor in battle. Mme. Combs' battlefield has been the classrooms of Denver, ever since she started teaching 2 months after her arrival as a war bride in 1919.

"I was born in Bordeaux," she said, "and came here with my husband right after the war. There were only three of us French brides in Denver, and the mistaken ideas people here had about France * * *." The mistaken ideas leave her almost speechless. But—she's French and female—not quite.

She believes communications have done wonders in providing bridges of understanding. "You always knew about Lafayette and the Huguenots," she said. "And you knew Paris was the fashion center. But if one just mentioned wine or garlic, one was thought to be a low-down renegade. Today Americans are well informed and eager to learn. Civilization is on the march."

Mme. Combs does her part to urge civilization ahead by taking students from South High School, where she teaches French, to her homeland every other year.

"I've done it regularly since 1935, except during the war," she said. "And the students always learn something."

The learning starts even before they leave. The group meets monthly to discuss travel plans. Last Saturday, Neustettr's presented a style show of what to wear where, with the

six girls and four boys scheduled for the 1963 trips as models.

The group will sail on the *France*, one of the sleekest ships afloat.

"My brother is a naval officer and so was my father," Mme. Combs said, "so the officers are often friends of the family. They treat us like royalty."

Both her brother and her father also received the Legion of Honor, her brother winning distinction for service in the Indochina war and in the underground during World War II.

"I feel we should all serve our country, in war or peace," Mme. Combs said earnestly. "This is something American young people are not sufficiently encouraged to do. These trips—preparing them for responsible citizenship through understanding—are one way I feel I can serve both my countries."

Mr. Speaker, Mr. William C. Wisc, a student at the University of Colorado, had this to say about Mme. Combs:

Having been privileged to sit as a former student of Mme. Combs, I know that I echo the sentiments of thousands of other students and friends when I say that she is an example of that rare class of educator that taught with complete dedication. She fostered the intangible element of enlightened discipline in more than one generation of Denverites and so deserves the thanks of the country she loves.

Late Speaker Sam Rayburn Honored in Many Ways—In His Hometown, Flag Flown on Birthday—A College Building Named for Him

EXTENSION OF REMARKS

OF

HON. RALPH YARBOROUGH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. YARBOROUGH. Mr. President, more than a year has passed since the death of the late beloved Speaker Sam Rayburn, and each passing day his name becomes engraved more deeply into the history of our country. New honors continue to come to Mr. Sam.

On January 6, 1963, the day Sam Rayburn would have been 81 years old, a move was started in his hometown of Bonham, Tex., for the residents there to fly the American flag each January 6 as a reminder to the world that the home-folks have not forgotten.

I ask unanimous consent to have printed in the Appendix of the RECORD a front-page editorial from the Bonham Daily Favorite of Sunday, January 6, 1963.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TODAY IS MR. SAM'S 81ST BIRTHDAY

Today, January 6, is a day on the calendar Bonham should always pause to remember. It is the birthday of Speaker Sam Rayburn.

Mr. Sam would have been 81 years of age today.

Time seems to slip by rapidly, but memories remain with us, and for this great man, the memory will linger forever. His birthday should become an observance date

here in his hometown, it should be celebrated each year in some dignified manner so we, his homefolks, could always remind the world that we have not forgotten.

Few Americans achieved his greatness as statesman or the depth of love and respect in the hearts of millions of Americans.

Out of respect to his memory we think it would be well for as many homes as have them to fly the American flag Sunday for Mr. Sam on his birthday.

Mr. YARBOROUGH. Mr. President, in the same edition of the Bonham Daily Favorite an article entitled "Tribute Paid to Late Sam Rayburn" was published, written by a distinguished Texan who was a long time close friend of Sam Rayburn, Mr. H. E. Perry, of Flag Springs, Tex. I know H. E. Perry from personal experience in campaigns in Texas as one of my State's ablest and most dedicated campaigners for good government.

In his article, H. E. Perry described Sam Rayburn as a man whose "tribute to his fellow man was a life of honest service dedicated to their highest and best interest." Mr. President, the same might well be said of my friend, H. E. Perry.

Mr. Perry was once a neighbor of Sam Rayburn. He lives in the black-land farm country of Flag Springs in Fannin County. Now 61 years of age, he continues to operate a farm and to maintain an active interest in government despite a serious accident while working with a tractor 10 years ago.

I ask unanimous consent that his article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRIBUTE PAID TO LATE SAM RAYBURN

(By H. E. Perry, Flag Springs community)

On this January 6, we all pause in grateful remembrance of the birthday of the beloved Sam Rayburn.

God was good to the freedom-loving people in this and other lands when he gave mankind Sam Rayburn.

As this January 6 is the second birthday memorial since Mr. Sam passed from this life, every true American should be thankful for his life and should have equal cause to mourn his passing.

We have suffered from his death on November 16, 1961, which left a void in American life which can never be filled. No greater statesman or finer public servant ever served a free government than Mr. Sam.

In early life on a farm in the Flag Springs community he heard his country's call.

He answered it with complete devotion to Christian ideals and the democratic concept of government. Mr. Sam has done more than any man of his generation to make this America a better country in which to live.

Whether at work on a farm at Flag Springs, in a schoolroom at study, teaching in a small school or in the halls of the Texas Legislature, he put forth his best efforts.

From the Texas Legislature to the Halls of Congress, Mr. Sam lived and served in the highest and best way his State and Nation—always with great credit to his country and honor to himself.

This country has produced no equal. Mr. Sam's place in history is secure and will shine with lustrous beauty each passing day.

Mr. Sam has made so much history for America and the free world as he belonged not alone to the United States but to the world.

In his knowledge and devotion to democratic ideals, Mr. Sam was the equal of

Thomas Jefferson, the father of democracy.

His high concept of legislation from the time he entered public life as a member of the Texas Legislature in 1907 won for him the love and respect of all the people.

In looking at any piece of legislation, Mr. Sam would seek to determine if the bill was fair and just to everyone, would it strengthen the free enterprise system, and did it contain any provision that would give some group special privileges at the expense of others.

He believed in equal and exact justice for all men and special privileges to none. Mr. Sam loved and served the people—not the interests.

His sincerity and honesty won for him the love and respect of his colleagues in the Texas Legislature, his district, his State, and his Nation. That is why he was returned to office every 2 years after his first election in 1906.

He loved his Maker, his fellow man. His tribute to womanhood was a living tribute—a life of devotion to his sainted mother. His tribute to his fellow man was a life of honest service dedicated to their highest and best interest.

Mr. Sam wielded the gavel in the greatest and finest lawmaking body ever assembled. There will be successors to his office, but there will never be another Sam Rayburn.

His life was well lived. He was great, yet so humble, sweet, and kind. He never lost the common touch. He walked the good earth erect with a heart attuned to his Maker, with the upreach to Him who holds the destiny of us all and the friendly outreach to mankind.

We honor his name and memory on this January 6, 1963.

His hands wielded the gavel

And signed so many good bills

This Nation will never see his like

Again yonder on Capitol Hill.

Mr. YARBOROUGH. Mr. President, another honor which has come to the late Mr. Speaker is reported in the January 9, 1963, edition of the East Texan, student publication of East State College in Commerce, Tex. The student union building at East Texas State College will be named in honor of Sam Rayburn, a graduate of that college. I ask unanimous consent that the article be printed in the Appendix of the RECORD at this point, entitled "S. C. Named for Rayburn."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STUDENT CENTER NAMED FOR RAYBURN

The student union building under construction at East Texas was named the Sam Rayburn Memorial Student Center at the November 9 meeting of the board of regents, according to the official minutes of the board.

The naming came in the form of a resolution while the board was in executive session, the minutes of which are not published until weeks after the meeting.

Deplorable Action in Katanga

EXTENSION OF REMARKS

OF

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. ASHBROOK. Mr. Speaker, I have persistently protested the deplorable

action under the banner of freedom in the Congo. The United States has participated in the invasion of a free and sovereign country, Katanga. I believe that people are waking up around the country in regards to this unjustifiable action.

Recently, the Mansfield News-Journal, one of the fine independent newspapers in my district, carried an excellent editorial which asked the question that is on the lips of many Americans today "Why? Why?" One of their syndicated columnists, Robert Ruark, had an excellent column on January 8, 1963, which I am including in these remarks. These two prophetic articles are worthy of the attention of all Members of this body and I include them at this point in the RECORD:

[From the Mansfield (Ohio) News-Journal, Jan. 8, 1963]

U.N. HEISTS TSHOMBE'S BANK

(By Robert Ruark)

The most shockingly immoral action by a mealy-mouthed nation—the United States of America—employing a sanctimonious weapon, the United Nations—just transpired.

We hadn't seen the like of it since Russia took over Hungary; in fact, there is really no parallel for the United Nations' commercial attack on Katanga, unless you want to consider it in the same class as a TV rendition of "The Untouchables."

It was fitting that the Irish, Indian and Ethiopian mercenaries employed on American money by the United Nations knocked over the bank in Katanga's capital, Elisabethville, since the whole plot was based on hijackery anyhow. Katanga has money. The highbinders of a so-called Central Congolese Government wanted Katanga's loot. So the hired gunmen obviously knocked off Moise Tshombe's bank.

I know this sounds like bad fiction, but it unfortunately is a truth of our times. The United Nations has been on the prowl for Katanga ever since Tshombe seceded and expressed a disinclination to share Katanga's copper and cobalt revenues with that bunch of low-comedy politicians in Léopoldville—a minstrel show that we have subsidized even when it had two prime ministers . . . two separate governments in office at the same time.

Adlai Stevenson shows himself as a faker of the purest persuasion when he maintains, as he did the other day, that "Katanga is as much a part of the Congo as separate States are part of the United States." Katanga is no more a part of the Congo than is Angola or Rhodesia or Uganda or Gabon or the French Congo across the river in Brazzaville.

There is no central government. There is only a pack of clowns playing at being adults in Léopoldville, on our time and our money. If the current clown falls we get another one, and our leaders are bringing up the old bogey of Russian intervention to provide us with a diversionary crisis for 1963.

Nothing really has changed in the Congo situation since the Belgians freed it for disaster 2½ years ago. There is no more Red menace now than there was then. I doubt seriously if the Russians want such an expensive mess on their hands—in any case, the Russians have stoutly refused to pay their whack of the United Nations bill.

The only thing really worth stealing in the Congo is what the United Nations just stole. That is Katanga, a reasonably civilized business, not a state, that is run by the shareholders in the Union Minière du Haut Katanga, a subsidiary of the international octopus, the Societe Generale Belgique. Katanga produces annually millions of dollars worth of minerals. Katangan money is something of value; Central Congo money isn't much better than scrip.

But I swear I didn't think that even the United Nations, which made no murmur when India knocked off Goa, or Russia went into Hungary, would be brazen enough to stick up the bank.

[From the Mansfield News-Journal,
Jan. 11, 1963]

WHY? WHY?

Slowly, the conscience of the world seems to be awakening to the U.N.'s moral debacle in the Congo.

Thousands of words have been written about this vicious action, ordered by U.N. Secretary U Thant and backed by the United States, in which mercenary troops moved in to deny independence to Katanga Province.

But one news picture seems to have told the story far more graphically than all the words.

It shows a Belgian resident of Katanga on his knees beside his little car. Blood streams down his face from a wound in the head. In his car his wife is dead. They were attacked for no reason by U.N. mercenaries while driving along the road.

On the man's lips are the words "Why? Why?"

That is the question the world is asking.

Why should the Province of Katanga which asked only its independence have been bombed and strafed and invaded?

Katanga had been the most anti-Communist of the newly liberated African areas. Yet the United States backed the U.N. in its drive to crush Katangan independence and to force the big state to become a part of the disarrayed, chaotic Congo.

Why? Why?

Did our own State Department goof again?

In the background is this. The U.N. is facing bankruptcy. The Congo was its most costly operation. Observers in Washington said weeks ago that our Government would back a U.N. move to end the Congo venture quickly by crushing Katangan opposition to being forced into the Central Congo Government.

That is what happened. A phony crisis was created and ballyhooed at the meeting of President Kennedy and Prime Minister Macmillan in Nassau. A U.S. military mission was ordered into the Congo. The U.N. sent Ralph Bunche there and he held a news conference that must have left as bad a taste in African mouths as the recent performance of Senator ELLENDER.

Bunche, smirking with self-satisfaction, gave flippant answers to questions of deepest seriousness to the people of Katanga and Africa. He announced that as soon as possible he was going back to New York where he had something of importance to do.

The way he said it implied that what was happening in the Congo was really of no importance, just a minor nuisance.

He was speaking for the United Nations.

The most patriotic American cannot help feeling secretly ashamed that his Government on one side of the world pays \$53 million ransom to a filthy dictator while on the other side of the Atlantic the rulers of "the land of the free" support the ruthless suppression of a free and anti-Communist people, the Katangans.

Why? Why?

Inexcusable Ignorance

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. DERWINSKI. Mr. Speaker, the Paramount crisis facing the world is ac-

ceptance of the false dogma of communism or acceptance, approval and implementation of some governmental and economic principles of nondictatorial nations. Numerous leaders have pointed to the lack of deep understanding that the public has often manifested toward communism. This fact is very effectively illustrated by an editorial in the La Grange Citizen, La Grange, Ill., of January 10, which I ask to insert into the RECORD at this point:

INEXCUSABLE IGNORANCE

Two recently published items indicate widespread ignorance of what communism does, and is. It is difficult to comprehend that people exposed to millions of words in newspapers and magazines, to news films, to television and radio still lack basic information about what happens when communism takes over.

"It is amazing how widespread this idea still is among Americans—no matter what descent—who cannot imagine that under communism a citizen is powerless and the government is almighty; that one day a citizen owns a store or a farm and the next day has nothing; that he may be imprisoned for no reason." This is a comment in the American Bulletin a publication by the Czechoslovak National Council of America.

The author made the comment after telling about opinions and remarks made by people who call the council, mistaking it for the Czechoslovak consulate. Trying to tell people that the council is different than the consulate and that it has nothing to do with the latter because it represents a communistic government gets the retort:

"So what if they are Communists? What difference does that make? Why can't my aunt visit me in the United States if I invite her? There can't be an iron curtain, as you say, because I know lots of people who went to Czechoslovakia."

The article reports: "One young lady was quite irritated by our stupidity when we tried to explain that people in Czechoslovakia no longer own their shops, business, farms, etc. That the Red regime has taken away their land, cattle and machinery without compensation to the owners. 'The farmers wouldn't give their farms if they didn't want to: they must get a lot for their property' was the reply."

The author remarks further: "Incredible as it may seem to some of us, many Americans have no idea what communism is in practice; how it operates; what the dangers are to the free world."

An editorial in the St. Louis Post-Dispatch confirms what the Czech writer stated. It comments:

FIFTY PERCENT FLUNKED

"The hardest thing about teaching young Americans what communism and capitalism stand for may turn out to be the long prevailing attitude that it isn't necessary for them to learn it—that they get it by a kind of osmosis that comes of being Americans. That, at any rate, is a possible conclusion from the results of the first year of a 6-week course in the subject required by State law for high school seniors in Florida."

Only half the Jacksonville students who took the final test scored a passing grade of more than 70 percent.

"Furthermore, a third of them failed to pick out as false the statement 'It is possible to be at the same time a loyal citizen of this country and a true Communist,' which was what the State legislature had been most particular they should learn. The course says the law, shall lay special emphasis on the false doctrines, evils and dangers of communism, and ways to fight it.

"Some of the seniors had only the most confused notion of what Communists and capitalists are even after taking the course. One said capitalists are 'anti-Communists'

another that they are 'the haves, and the proletariat the have-nots.'

"As for the other system, a graduate of the course described it by saying that 'whenever you have a thesis and antithesis you always have a synthesis which is communism.'"

All of which means that despite the volumes written on the subject much of the message fails to penetrate. The basic information, about what actually happens to people when communism takes over seems to get lost.

Hatch Act Eclipse

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. GROSS. Mr. Speaker, the brazen solicitation of Federal employees for Democrat political campaign funds continues to outrage many of the newspapers of this country.

Not even the Washington Post, which usually carries the banner high for the New Frontier administration, can swallow the tactics that have been used in this political fund-raising drive.

The Post calls it "shabby business" and "subtle coercion." It places the blame right where it belongs when it says "the President could have warned his subordinates that no coercion or pressure would be tolerated."

Mr. Speaker, I offer herewith the Washington Post editorial of Friday, January 18, 1963, for reprinting in the RECORD:

HATCH ACT ECLIPSE

However one looks as it, the pressure that has been applied to Government employees to buy tickets for the Democratic fund-raising affair tonight is a shabby business. The Hatch Act tells Federal employees that they may not participate in partisan activities. The civil service system holds out to them assurance that they will be compensated and promoted on the basis of merit. Yet many of them are being pressured to give \$100 to the Democratic cause—in installments if they cannot afford to buy a ticket to the gala outright—by their supervising officials who should be the first to respect the spirit and letter of the law.

The law on the subject is unequivocal. It provides:

"Any executive officer or employee of the United States not appointed by the President, with the advice and consent of the Senate, who shall request, give to, or receive from, any other officer or employee of the Government any money or property or other thing of value for political purposes shall be at once discharged from the service of the United States."

Probably most officials have avoided outright violation of the law which forbids them to solicit funds for partisan purposes from other Federal employees. But no one can fail to recognize that, when the head of any agency invites all those who are going to the gala to attend a preliminary party at his home or elsewhere, he is applying indirect pressure to buy a gala ticket. The Hatch Act and the Corrupt Practices Act are designed to protect employees from precisely this kind of subtle coercion.

It may be taken for granted that most of the steam behind this venture comes from the Democratic National Committee. Party officials are always eager to bring in new

recruits and replenish the party's treasury. The chief fault lies in the failure of many high officials, the Civil Service Commission and the President to offer employees any protection against the demands of the politicians.

A very different atmosphere would have prevailed if the CSC had publicly reminded officials of the provisions of the law and assured employees that refusal to make requested partisan donations would not count against them. Better still, the President could have warned his subordinates that no coercion or pressure would be tolerated. In the absence of any such protective measure, many employees are likely to feel that the Government itself is winking at violations of the law, leaving them no alternative to making a "contribution."

The Tax Cut Plan

EXTENSION OF REMARKS

OF

HON. CHARLES M. TEAGUE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, I call the attention of my colleagues in the Congress to a timely editorial entitled "The Tax Cut Plan," which appeared in the January 16, 1963, edition of the Oxnard (Calif.) Press-Courier:

THE TAX CUT PLAN

Everybody knows taxes are too high. So people generally will be happy, we suppose, because President Kennedy, in his state of the Union message, plumped for a reduction in the income tax.

His program is one with appeal. Spaced over three years, it will blunt, somewhat, the immediate blow to balancing the budget. Mr. Kennedy believes that the lower taxes will mean more spending. More spending will help business and industry and increase employment. All of this will, by itself, produce higher tax receipts. That is his optimistic view.

He stresses the help it will be to the lower income families, by giving them more money to spend. In the lowest levels it will mean about \$18 a year less paid in taxes. Of course that isn't much. But if everyone of the families goes out and cheerfully spends that money, and the \$18 goes into business channels instead of into the Treasury maw, it is reasonable to think that overall, tax income may grow.

But the man who has been drawing his weekly paycheck in 1963, will look at the deduction for social security. It has been raised from 3 1/2 percent to 3 5/8 percent. There's an immediate increase in his tax payment, that he must balance against the chance of saving that \$18. So for him there won't be much left to squander, or to spend on nylons for the wife, shirts for the kids, socks for himself.

The corporations, too, will be helped. The \$25,000 income corporation—and tax help is needed badly by the little fellow just getting along—will have several hundred dollars more for payrolls and equipment, and for business promotion.

That will help. The bigger corporations, paying the 52 percent on all profits over \$25,000, will have that reduced to 47 percent. This could prove even more effective in building up a stronger tax base. For the sum total will mount up. Risk capital will

not be so timid about new machinery, modernizing plants, seeking new markets.

That invitation to risk capital could hold real promise for a growing prosperity. But it is hard to explain that. All that many persons would see in a tax saving for their boss would be a chance to grab a bigger paycheck. Those come, too, but they come from expanding businesses in our competitive system.

Mr. Kennedy recognized, albeit in a somewhat perfunctory manner, the obligation to reduce spending if taxes are cut. He held out some hope of reducing the budget outlays in various fields of domestic legislation. He is completely vague about that. He is not vague about the certainty that more money would be spent for paying the interest on the national debt—and that keeps growing; more money for defense needs—and there is no early thrift in sight in that area; and in spending for space achievement—and that means the ventures toward the moon and out-of-space travel will take more, much more money, if we ever do beat the Russians.

Now the President proposes, but Congress disposes. There is no assurance whatsoever that the tax cuts, and the suggested tax reforms, will get to first base with a critical, informed, and independent Congress.

"Tax loopholes" are to be closed. That is a meaningless term. For example, there is talk about reducing the depletion allowance for those who venture into oil and mineral prospecting.

This particular item is not a loophole. It is the law of the land. It is a law based upon the entirely reasonable proposition that if companies are to be encouraged to drill oil wells, even though 9 out of 10 fail to produce oil, they should be given some tax benefit if they are to keep on drilling. Tax loophole, in this respect, is a misnomer. If the law is to be changed, will wildcatting in the oilfield be done despite the heavy risk? No one knows for sure. But there will be a strong fight in Congress, led by those in such oil-producing States as California.

That is only one example. Every Congressman is going to translate the President's specific proposals for closing loopholes, into what that would mean for business and employment in his district.

Mr. Kennedy spoke of the need for reforming the tax structure. Every economist recognizes that need—and it has been a need for a long, long time. When the Congress gets the specific recommendations for reform, there will be a chance to weigh them up and discover whether reform can be accomplished, or whether only a few face-saving gestures will be made.

The tax structure of the Nation, right now is a tax upon production and enterprise. Those fields need encouragement. Will they get it through future tax legislation?

The chances are doubtful. It is much easier to apply a cut, tell the voter his saving, and seek reelection.

But the voter is becoming wise. He is going to look beyond the surface appearance of things. He has yet to be heard from.

Steel Price Controversy

EXTENSION OF REMARKS

OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks in the Ap-

pendix of the RECORD, I include the following editorial from the Chicago Tribune of June 16, 1963:

MR. BLOUGH ATTEMPTS TO KILL A MYTH

Roger M. Blough, chairman of the United States Steel Corp., who was the most prominent victim of President Kennedy's tantrum over a proposed rise in steel prices last April, tells his side of the story in the current issue of Look magazine. He tries to correct certain "publicly held misconceptions" about the episode, among them that he purposely lulled the President into the false impression that United States Steel would not raise prices, and then raised them.

This, says Mr. Blough, "is absolutely contrary to the facts."

It will be hard to set the record straight. Mr. Blough is up against an administration which tries to manage the news and often succeeds. The administration's claque of commentators and columnists has spread the story that wicked steel magnates double-crossed the valiant young President by raising prices after he had managed to persuade the noble steelworkers to accept a new contract without a strike.

Mr. Blough makes it clear that the steel companies never made a commitment about prices before the labor agreement. For one reason, they could not do so without being hit by the Department of Justice for violating the antitrust laws. Months before the wage settlement Mr. Blough himself explained to the President and to the secretary of labor [then Arthur J. Goldberg] that nobody could speak for the industry about prices. Mr. Goldberg was advised emphatically that United States Steel had not raised prices for almost 4 years and was being squeezed by the soaring costs of wages and benefits for workers.

After the new labor contracts were agreed upon, President Kennedy telephoned the negotiators on both sides, congratulating them on the settlement which, he said, "should provide a solid base for continued price stability." At this point the steel companies made a mistake which they now recognize. They should have reemphasized immediately that they had made no promises about prices and that a price increase was overdue.

Their failure to do so opened the way for the administration to peddle its myth that United States Steel's move to raise prices was a doublecross. The myth was an excuse to threaten the industry with court action and investigations under the antitrust laws. The President addressed the Nation on television, accusing the steel industry of "utter contempt for the interests of 185 million Americans." The New York Times reported that he had summoned his closest aids to his private office and let go as follows: "My father always told me that all businessmen were sons-of-bitches, but I never believed it till now."

Later, at a press conference, the President denied that he had intended to refer to all businessmen, but he continued to pretend that he was misled by Mr. Blough and other steel executives. He said: "I felt at that time that we had not been treated with frankness, and therefore I thought that his [Papa Kennedy's] view had merit."

Mr. Blough's article in Look shows that he learned a lot from the ruckus last April. He now concludes that Mr. Kennedy's vehement reaction to the news of the proposed price rise was not because he expected an inflationary spiral to result from it, but because he wanted to placate the labor unions. Mr. Blough notes that the President's earlier stand against a 35-hour week had displeased the unions.

"I believe that he and Secretary Goldberg felt that an increase in steel prices, following the early wage negotiations, would be viewed as evidence that the administration's

policies were adverse to labor's interests," Mr. Blough writes.

It is a polite way of saying that the administration will do anything, regardless of truth or the general public welfare, to keep on good terms with the labor bosses.

Medical Care

EXTENSION OF REMARKS

OF

HON. M. G. (GENE) SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. SNYDER. Mr. Speaker, these are indeed awesome times for a newcomer to take his seat in this Chamber.

Abroad we are beset with the menace of communism, the need for arming and strengthening our allies, the constant threat of further crises which we may have to meet at any time at any of half a dozen points on the globe.

At home we are faced with the unending problems of our growing population, the provision of adequate, normal services for our citizens at all levels of government, and the ever-growing costs incident thereto. Military spending is to be increased in the aftermath of the Cuban crises. Our race into space continues to cost billions. The expense of welfare programs already on the books is rising steadily.

To meet these tremendous obligations, we are carrying an income tax load which many competent authorities insist is a drag on our entire economy. At the same time, we are struggling under a mounting burden of State and local taxes.

Against this background, as the time drew near for me to take my oath, I was disturbed by the administration's determination to revive its ill-conceived program to federalize hospital care for the aged under social security.

The program is bad enough; the strange "business as usual" attitude on the New Frontier is past understanding. This is a period of grave national concern over problems affecting our very prospects of survival. It is not a time for power-hungry bureaucrats and irresponsible crusaders to be running wild, bent on rescuing a segment of the population from an artificial difficulty which only they can see. As usual, of course, they expect to accomplish their wonders with other people's money and other people's liberties.

With debate already contemplated over an income tax cut—and the question in some circles already having become whether the cut shall be \$13 billion or more or less—it makes no sense to talk at the same time of a new tax levy which will move in the opposite direction and siphon off added billions from the resources of American workers and their employers in the years ahead.

I am not discussing the merits or demerits of a tax cut at this time. That issue will be before us later. We will then have the benefit of the views of

the Ways and Means Committee on the wisdom of such a step when Federal spending remains at the highest point in our peacetime history.

What I am saying today is simply that if the economy is lagging, as the administration claims—and if a reduction in personal and corporate income taxes is a valid means for increasing business activity by putting more money in circulation—then a program to increase taxes and take more money away from wage earners and employers is insupportable. The administration cannot have it both ways.

By the same token, it is equally unreasonable to project a new and fantastically wasteful spending scheme in the face of the soaring Federal deficit. Yet that is what the administration proposes in this instance.

No one knows what the ultimate cost of an adventure into Government medicine would be. We do know that no nation which has tried compulsory, government-controlled health care has ever been able to anticipate the cost correctly. England's program now costs five times the original estimates.

The administration's estimate of the cost of its plan was \$1 billion at the last session. But that was when, in its infinite wisdom, the administration was ignoring the 4 million Americans over 65 who are not on social security, an anomaly which never has been explained. For among these older citizens are the most needy in the Nation.

Adding them to the program would increase the cost still further. Many actuaries believe, and have produced figures to show, that the \$1 billion estimate was merely the beginning. They have computed the cost at \$2.2 billion the first year and a steadily increasing load as more and more citizens reach retirement age.

There is only one answer to this—constantly growing payroll deductions lowering the income of American workers, or more deficit spending and a staggering new addition to the national debt.

Moreover, it does not square with the President's pledge last month before the Economic Club of New York as he spoke eloquently of the need for a tax cut to spur the Nation's economic growth. He used the words of our own Ways and Means Committee chairman when he acknowledged that a tax reduction must be accompanied by "increased control of the rise in expenditures."

Said the President:

That is precisely the course we intend to follow.

Saddling the Treasury with a new burden of spending, the end of which no one can see, to provide federalized hospital care for millions of the aged who are self-reliant and can take care of themselves, hardly seems to be following a sensible course of controlling rises in expenditures.

For the current fiscal year, according to the administration's own estimate in November, we face a budget deficit of \$7.8 billion. It will be the 28th deficit in 34 years, during which the national debt has risen from \$16 billion to \$300 billion.

A probable deficit of \$11 billion or more is foreseen next year, not all of which is because of defense and space expenditures deemed vital to the national security. If there is a tax cut of \$13 billion, the deficit could be \$15 billion or more, the largest in peacetime. The overall budget next year will be the highest in history, exceeding the peak spending of World War II.

I say it is folly for the administration to promote extravagant new social spending schemes in the situation confronting us today. But more than this, I say it is folly beyond description for any administration to tamper at any time with a system of medicine that has become one of the wonders of the modern world.

Let me make myself clear. I am not here to defend the medical profession. It has demonstrated that it can take care of itself in the arena of public affairs.

Rather, I am speaking on fundamental principles that lie at the heart of our system. It is wrong, for example, to compel one segment of the population to underwrite a program of health care for another regardless of need. But that is exactly what has been proposed. The measure before Congress in the last session called for young wage earners to pay a double increase in payroll taxes—a one-quarter of 1 percent higher rate for employees and employers, alike, and a broadening of the tax base from \$4,800 to \$5,200. The rate for the self-employed would have been three-eighths of 1 percent on the first \$5,200 of income.

Administration spokesmen quote these small and harmless sounding fractions in their efforts to show how little is involved here. Surely, they argue, anyone who would object to one-quarter of 1 percent to take care of a segment of the population which they portray as being uniformly sick and impoverished must be stingy and unfeeling. To hear them tell it, you would think they have a monopoly on sympathy and goodwill in this country.

What is involved, actually, is a 17-percent increase in the amount of the tax with the burden falling entirely on the small wage earner. The \$5,200 clerk would pay as much as the \$50,000 corporation executive. At least 40 percent of all taxable income in the United States would escape any responsibility whatever to help defray the cost of medical care for the aged, including the income of 9 million workers not on social security.

We are aware that an automatic increase in the social security payroll deduction went into effect January 1. This is the ninth such increase since the social security program was adopted in 1937. Two more increases by 1968 are already scheduled by law. Without any other increases, the rate then will be 9¼ percent, or within a fraction of the 10 percent which many experts believe is the limit taxpayers will stand.

Had the compulsory hospital care tax also been adopted, employees and employers would now be paying 40 percent more social security taxes than they were in 1961. By 1968, they would have been paying 87 percent more. And these fig-

ures are based on the administration's outdated estimate that the cost of the program will not exceed \$1 billion. That was the amount when only older citizens on social security were to be covered. If the cost reaches \$3 billion by 1968, which has been forecast, wage earners and their employers would be paying 94 percent more social security taxes than they were in 1961.

But, I repeat, nobody actually knows what the ultimate cost of the program will be. Yet, this uncertainty notwithstanding, Congress is asked to accept the program, and at the same time take away liberties of older people, impose a new tax on younger people, and clear the way for the Washington bureaucracy to fasten its grip on hospitals and physicians in this country for the first time.

This is not all. Passage of the legislation would immediately impose an unbelievable liability of \$35 billion on the social security system, already staggering under a mounting excess of outgo to pay benefits beyond income from payroll taxes. This sum is the amount necessary to cover the expected lifetime hospital expenditures of those who would be eligible for care at once without ever having contributed a dime to the program. The money, of course, would have to come from the contributions of younger workers. They would be paying their family medical expenses out of their pockets while they pay increased taxes for the care of the elderly, millions of whom are completely solvent and able to handle their own needs.

Meanwhile, the entire social security system would be subjected to a new and possibly ruinous strain. Most of today's workers are relying on social security for some support in their retirement years. As originally conceived, the system was intended to place a "floor of protection" under the elderly with cash dollars to spend as they see fit, to buy the things they want or need, when their income falls below a certain level. Now something drastically different is proposed. Federal control of hospitalization for the aged would be a program of services, not cash benefits. Instead of trusting people to decide how they want to spend their health care dollars, the Government would spend their money for them through a new system directed from Washington.

Before wage earners join in a move to take social security on this alien venture, they should pause and reflect on the fact that the social security fund went \$1,248 million deeper "into the red" in the last fiscal year. An automatic tax increase on January 1, 1962, did not halt the drain on the reserve fund to pay retirement benefits. Even with the new tax rise this month, the Treasury has reported that it sees no hope of getting the fund's current disbursements in the black this year. The total fund is already about \$300 billion in arrears in cash to meet retirement obligations to all who have paid into it since its inception, or an amount equal to the national debt.

Surely, this is not the time to be playing fast and loose with a national institution which people are depending upon to permit them to live in dignity and security in their older years.

I have dealt with some of the basic fiscal objections to this unworkable, ill-founded proposal. There is more, much more, that can and will be said on the question in the months ahead. For there is a deeper, graver meaning to this controversy than the surface arguments that have been advanced by the proponents of government control of hospitalization for the elderly.

This is not, as they loudly proclaim, a holy crusade to bring help to a pathetic group of Americans.

If the legislation known as the King-Anderson bill had passed the last session of Congress, it would not have become effective until 1964. What of the ailing older people in the meantime, if the emergency is as great—if the need is as imperative—as the administration says it is? Where were they going to get help for more than a year?

When the program did become operative, according to responsible authorities, it would have covered only about 25 percent of an individual's normal medical expenses. It would not have paid for doctors' bills, or surgery, or prescription drugs outside a hospital. Even the most needy would have been required to pay the first \$90 of their hospital bills.

How would the needy sick raise the 75 percent of their illness cost not covered by the program?

How can an indigent sick person pay as much as \$90 of a hospital bill?

The questions answer themselves. This program would solve nothing. The need is not present—has never been present in the exaggerated terms employed by the administration in its drive to pressure Congress to adopt the program.

I believe it is well established by now that this is simply a matter of playing politics with human need and not the appealing humanitarian cause claimed for it. It is a bold bid to buy the votes of the Nation's older citizens by taking credit for offering them tax-supported hospital care whether they need it or not. At the same time, there is an appeal to sons and daughters by giving them the opportunity to shift responsibility for their aging parents on to the back of the Government. I do not buy that kind of thinking and I am proud to acknowledge here and now that most Americans have demonstrated they do not buy it either.

Last March, according to the Gallup poll, a majority of voters—55 per cent—favored Federal control of old age hospitalization. By July, those favoring the administration's program had slipped to 48 percent. By August Dr. Gallup reported, public support had fallen another four points to 44 percent—from a majority to a clear minority in the space of a few months as the Nation learned more and more the plan's details and implications.

All of us here are familiar with the gigantic propaganda circus that has been staged by the administration and certain so-called labor leaders to whip up a crisis atmosphere over the health problems of the aged. In the last campaign, many of us had to meet the tide of misrepresentations, untruths and slippery statistics which have marked the

calculated efforts to stir the Nation's sympathies for the elderly people. They are portrayed as a mass of helpless, sick human beings, unable to cope with the problems of their later years.

The opposite is true. Today, 55 percent of all Americans over 65, or 9,550,000, have private insurance plans to protect them from the costs of illness. They have demonstrated their self-reliance. They do not need Government paternalism to free them from risk and individual responsibility. In a few years, the figure is expected to reach 90 percent.

For those who are in need, and those generally self-supporting but unable to meet the cost of serious illness, the Kerr-Mills law provides for State-Federal matching funds to help them secure much more complete medical care than under the limited benefits offered a federally controlled hospital program. Administration of the Kerr-Mills law is left where it belongs, at the local level. Tax funds are not squandered on the nonneedy. The self-supporting and the well-to-do cannot get a free ride at the expense of the small wage earner.

But the Kerr-Mills law has never been liked by those, including labor union bosses, who want the Federal Government to assume total charge of medical care. It is not a gravy train or a gigantic handout. It will not produce millions of votes. These forces are most interested in creating a political issue on false grounds than they are in existing law which will do the job now for those requiring assistance. They would substitute compulsion for free choice in financing medical care. This must not happen.

For passage of the administration program in any form whatever would mark the first step down the road toward complete socialization of medicine in this country. This is the fundamental peril that confronts us. The greatest system of medicine ever enjoyed by any people anywhere has unjustifiably been placed on trial in the political arena. Here it must be safeguarded and protected. We cannot afford to retreat to a form of mass medicine, cafeteria style, under Government controls. We cannot permit the quality of medicine to deteriorate or allow the standards of practice to be corrupted under bureaucratic interference.

These are basic considerations. We all know that a healthy nation is a strong nation and at no time in our history has it been more vital that our Nation be strong.

President Kennedy's Budget

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. MADDEN. Mr. Speaker, the following editorial from the Gary Post-

Tribune, Gary, Ind., seems to be a rather fair analysis of the important budget problem which will be confronting the Congress this session. These comments coming from a Republican newspaper seem to be nonpolitical and rather sensible.

WILL CONGRESS CUT BUDGET?

President Kennedy has presented some cogent arguments in behalf of his proposed Federal tax cut. A larger immediate deficit is of slight concern if lower rates stimulate the economy and soon bring sizable increases in revenue. The arguments may sound better to our ears, of course, because a tax cut would be a pleasing thing to practically everyone.

At the same time, most of us would agree that there should be a reduction in Federal spending, of at least some degree, at the same time that Federal taxes are trimmed down. We had hoped for efforts to minimize the deficit increase by curtailing the Federal budget.

So it is a shock to learn that Kennedy has proposed a budget for fiscal 1964 of nearly \$99 billion, the largest in the national history. Republicans in Congress call it incredible and cynical. Some Democrats are fully as outspoken in criticism. The chairman of the House Appropriations Committee says the budget is unbalanced because "we are spending money we do not have on things we could get along without."

The outcries against the monstrous budget are so shrill that a newcomer in the congressional press gallery might well conclude that the President's program was in deep trouble, and that the budget would have to be reduced considerably if the tax cut proposal were to have any chance of getting passed.

A look at the breakdown of the spending proposals will convince otherwise, however. Out of the budget dollar, 62 cents is set aside for national defense, international activities, and the space program. Veterans' programs will get 6 cents; interest on the public debt takes 10 cents; and agriculture is down for 6 cents. All other Federal activities are budgeted for 16 cents.

Nothing can be done about the interest charges, and practically the same thing can be said about funds for the veterans. Does anyone seriously believe a further cut can be made in farm aid, budgeted at about a billion less than this year? Or that much might be cut from the "all other" funds, up about a billion in the new budget?

So we turn to the major item, 62 cents out of every dollar for defense, world activities, and outer space. Is there any chance of important savings being made here? If we are honest about it, the answer will be in the negative.

On purely military budgets, Congress has been inclined to vote more, not less, than the administration has requested. Defense Secretary Robert McNamara has said economies are possible, but if any are realized he will have to make them directly, and despite strong local and State pressures to the contrary. These pressures, plus Pentagon lobbying, may be expected to hold the budget fully up to the President's request.

Request is made for larger space funds, to keep the Apollo lunar program on track. Some still question the urgency of going to the moon. However, Congress has been firmly behind the President's decision and we believe most of the people are also.

Through the whole budget, savings of a million here or a hundred million there are undoubtedly possible, and they could add up to an impressive figure. But when the President himself is willing to propose a \$10 billion deficit, Congressmen may show little concern for sums that are piddling by comparison, especially when a vocal lobby can

be mustered in behalf of almost any spending project.

There will be one massive endeavor to trim the budget, however—an effort directed against foreign aid. The \$3.75 billion foreign aid program undoubtedly will be made the whipping boy, although it is one of the most defensible items in the whole \$98.8 billion budget.

What Next From TVA?

EXTENSION OF REMARKS

OF

HON. ROSS BASS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. BASS. Mr. Speaker, the Tennessee Valley Authority has been doing an outstanding job with its fertilizer program. This program, however, needs to be better publicized. I, therefore, commend to my colleagues the following editorial which appeared in the publication, *Farm Chemicals*, and which reflects the growing acceptance of the TVA's fertilizer program.

WHAT NEXT FROM TVA?

Amid all the cries of "too much government" one agency stands out as one of the most useful services an industry can possibly have at its beck and call. We're speaking of the TVA, of course.

True, there have been criticisms leveled at its system of using farmer-owned cooperatives to distribute its high analysis fertilizer to farmer-cooperators. And that's expected. The fertilizer industry has a history of great dislike for cooperatives, because of their tax-free status. But no technologists are more welcome anywhere (including abroad) than TVA fertilizer experts.

Everytime we read about some new innovation in fertilizer technology, we wonder what next from TVA? The way they work, you'd think they'd work themselves right out of a job sooner or later.

The answer to that is: TVA may eventually be this country's answer to increasing foreign competition.

Phosphate manufacturers in particular have benefitted directly or indirectly from TVA's research. As Jesse W. Markham reported in his book, "The Fertilizer Industry," at least 16 companies have obtained designs or detailed operating information, or both, on TVA installations and processes; 5 have employed TVA personnel to assist them with initial plant operations; 5 other phosphate manufacturers and several engineering and construction companies have sent representatives and operators to Wilson Dam for training in TVA plants; and 2 fertilizer producers have built plants using one of TVA's nitric-phosphate processes.

Mind you, that was the report as of 1958. The record since then is equally impressive. In fiscal 1962, for example, TVA issued 43 licenses for use of its chemical developments.

This month we're proud to bring you an exclusive report on a fertilizer material which will have a tremendous influence on liquid fertilizer, indeed the entire fertilizer industry—ammonium polyphosphate. It's the highest of the high analysis fertilizers—even higher than diammonium phosphate.

Boasting 77 percent plant food (16 percent nitrogen and 61 percent P₂O₅), it's primarily a mixture of ammonium orthophosphate and ammonium pyrophosphate. Another factor in ammonium polyphosphate's favor is ease

of handling; it is less costly to handle, ship and store than many other fertilizer materials. Diammonium phosphate has 74 percent plant food.

Ammonium polyphosphate can be used conventionally as a fertilizer and it can be used to make highly concentrated solutions. Dissolved in water it gives a liquid fertilizer containing as much as 44 percent plant food—about 10 percent nitrogen and 34 percent P₂O₅—or about the same concentration as made directly with superphosphate acid and ammonia. One of the great possibilities of this material is that it makes possible the preparation of a liquid fertilizer from wet process acid instead of the more expensive furnace acid.

And herein lies quite a tale, too. Wet process acid, another product of TVA, was considered to be the key to the future expansion of the entire liquid industry back in 1959 when FC brought you a special report the complete liquids field. Now it is being used extensively by liquid operators—and it is also brought the price of white acid down to a competitive level.

We think TVA's biggest challenges lie ahead. As T. P. Hignett reported following a visit to 20 fertilizer companies in seven European countries 2 years ago:

"The quality of granular fertilizer in Europe is probably better than the average in the United States in some cases, 75 percent of the superphosphate granules are on-size."

Continuous operation and limitation of the number of grades, he believed, help producers attain good granulation in Europe.

By way of comparison, in the United States a mixed fertilizer plant's average annual production may consist of 50 or more grades while a European company with more than 5 times the tonnage may produce no more than 5 grades. (Most of the companies he visited had capacities in the range of 100,000 to 500,000 tons.)

Hignett made it clear why European fertilizer manufacturers can compete in the world market, despite the high prices they have to pay for raw materials. They select economical processes and build large-scale, integrated operations.

If we are to continue to maintain our position in the world fertilizer market, it's obvious that the TVA will be needed like never before.

Operation Free Enterprise

EXTENSION OF REMARKS

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mrs. DWYER. Mr. Speaker, one of the most effective and impressive programs devoted to the training of young people in the values of freedom, initiative, and responsibility is junior achievement.

Many of our colleagues, I am sure, are familiar with the work of junior achievement in their own areas, especially the leadership it has taken in conjunction with business, industrial, civic and professional leaders in furthering an understanding and appreciation of the American free enterprise system among those to whom we look for future leadership.

In Union County, N.J., I have followed very closely the progress of what is certainly one of the most successful junior

achievement programs in the country. Its 1962-63 project, Operation Free Enterprise, seems to me to surpass anything Junior Achievement of Union County, Inc., has previously accomplished, and I believe a description of the project would be of great interest to our colleagues.

This is the kind of work, Mr. Speaker, which is effective with young people because it is practical, realistic and worthwhile. By engaging in actual business operations, for which they accept full responsibility, boys and girls of high school age learn the meaning and value of private enterprise in the free American tradition. Junior Achievers and their parents, their adult advisers and industrial sponsors deserve great credit for their energy, imagination and genuine contribution to the strength of the free enterprise system.

Under leave to extend my remarks in the RECORD, I include a memorandum prepared by J. Kenneth Roden, the very able executive vice president of Junior Achievement of Union County, Inc., which describes the project in detail:

JUNIOR ACHIEVEMENT OF
UNION COUNTY, INC.,
Elizabeth, N.J., March 15, 1962.

To: Junior Achievement advisers.
From: J. Kenneth Roden, executive vice president.

Subject: Operation Free Enterprise.

Operation Free Enterprise is a three-pronged youth incentive public relations and youth educational project planned and developed by the board of directors of Junior Achievement of Union County, Inc. in cooperation with Junior Achievements of Essex-West Hudson, Inc., Junior Achievement of New York, Inc., Junior Achievement of Hartford, Inc., and Junior Achievement of Delaware Valley, Inc. (Other junior achievement areas will be invited to participate.)

Operation Free Enterprise will start in September 1962 as a dynamic youth incentive and educational program which will continue throughout the junior achievement program year. It will be climaxed with a week-long visit of about 100 Junior Achievers from the Union County, and other participating junior achievement areas, to West Germany. There the Junior Achievers, winners in the youth incentive competition, will have an opportunity to obtain a personal view and impression of the Berlin situation which is creating so much tension and so many world problems which they, as leaders of tomorrow, will have to face and solve. They will come face to face with the Communist wall, evidence of the failure and inhumanity of the Communist philosophy which they will compare with the industrial, educational, scientific and cultural growth and development and general prosperity of the Federal Republic of Germany under its free, democratic government in cooperation with other nations of the free world.

It is contemplated that the group of student-achievers will meet with American and German Government officials both here and abroad, including the U.S. Ambassador and other high-ranking American officials, and the German Chancellor and other top German officials.

An important phase of the visit in Germany will be meetings with industrialists who will discuss with the group Germany's postwar economic development and its effect on the future of the free world. It will be demonstrated to them that the German system is in many ways a replica of our own; its institutions are similar and its policies are based on the same fundamentals: private enterprise and competition free from state and monopolistic interference.

There will be visits to industrial installations, cultural and religious centers. Arrangements will be made for the junior achievers to attend classes at an American school in Germany.

Extensive press, radio, and television coverage will be planned for both the United States and Germany. A publicity factsheet will be made available soon.

A program and itinerary will be distributed at a later date.

COMMUNITY PARTICIPATION

There will be extensive community participation in Operation Free Enterprise. In order to give the American people an opportunity to rededicate themselves to the principles of free enterprise which this Nation followed, in achieving its present position of world leadership, individuals will be able to purchase shares of stock in Operation Free Enterprise at a cost of \$1 per share. Their return on this investment will not be monetary, but will be considerable in terms of a more enlightened younger generation dedicated to the task of strengthening and expanding the free-enterprise economy through cooperative good will throughout the world.

Operation Free Enterprise will provide all people of the participating communities with a constructive outlet for demonstrating that the American free enterprise system is not just a system for carrying on business but is much more; it is the best system for promoting human progress while preserving individual freedom.

OBJECTIVES OF OPERATION FREE ENTERPRISE

(1) To provide junior achievers and advisers with a positive, effective incentive program designed to stimulate a clear, complete understanding of the principles and the benefits and rewards of the American free enterprise system and to make young people good salesmen of free enterprise.

Operation Free Enterprise will demonstrate that every individual, whether employee or manager or community leader, must always be aware that the vigor of the free enterprise system in America depends on a heritage that attaches prime importance to liberty, equality of opportunity, individual rights and dignity as well as personal initiative, creative thinking, responsible leadership and teamwork with each individual carrying his share of the load and discharging his responsibilities to the best of his ability. Operation Free Enterprise will demonstrate that each individual's contribution, if properly utilized, will result in a profit to himself, to the employer, to the community, and to the Nation. It will further demonstrate that corporate profits will assure continued growth, prosperity, and stability, all of which are more valuable and desirable than security through handout or a welfare-state economy.

(2) To give Junior Achievers an opportunity to become good-will ambassadors and to enable them to feel firsthand the pulsebeat of international relations, especially industrial, governmental, and educational, between the United States and West Germany.

The Junior Achievers will develop a keener understanding of the importance of sincere cooperation in international relations in all areas: human relations, government, and particularly in business and industry. The Achievers will be introduced to the cultural, educational, and esthetic aspects of German life through visits and association with German businessmen and their families, and German officials. German industrialists will have an opportunity to meet personally with representatives of the junior achievement companies sponsored by their American affiliates.

(3) To reverse the emphasis teenagers are placing on benefits and security in employment.

The project will demonstrate that such attitudes contribute to a preference for a welfare-state economy and fail to develop the full potential of the individual as an employee, manager, and community leader.

(4) To maintain the high standards of performance, productivity, and prestige of the junior-achievement program.

Special emphasis will be placed on stimulating and developing personal initiative, creative thinking, responsible leadership, high attendance, punctuality on the individual and total company level, improved production techniques to result in reduction of operating costs, and aggressive and continuing safety and sales programs.

(5) To expand the learn-by-doing principle of junior achievement.

The experience of international jet air travel will demonstrate to the Junior Achievers how, under the free enterprise system, research and development in the transportation industry, and aggressive promotion, have aided international trade and communications and generally narrowed the world's horizons. Discussions with German industrialists and visits to German industries will further enhance the Achievers' understanding of international trade.

(6) To demonstrate to Junior Achievers, parents, educators, and the community at large the degree of interest which local businessmen have in our young people.

The program will demonstrate to the community that local business and industrial organizations are good neighbors, willing to help prepare young people for the day when they must accept responsibilities of business and professional leadership at home and abroad.

INCENTIVE PROGRAM COMMITTEE

The board of directors of Junior Achievement of Union County has delegated responsibility for the planning and execution of Operation Free Enterprise to Mr. J. Kenneth Roden, executive vice president. He will be responsible for liaison with junior achievement areas and other participating organizations.

The board of directors has named a committee to advise and assist Mr. Roden, who will also serve on the committee. Members of the Incentive Program Committee are: William M. Bristol, III, president, Bristol-Myers Products Division; John J. Conlon, vice president, Phelps Dodge Copper Products Corp.; Harry P. Frank, publisher, the Daily Journal; James L. Macwithey, president, New Jersey chapter, Public Relations Society of America, Inc.; Judge Richard R. O'Connor, general counsel, Junior Achievement of Union County, Inc.; J. Kenneth Roden, executive vice president, Junior Achievement of Union County, Inc.; W. J. Sheridan, manager, Humble Oil & Refining Co.

PLANNING BY JUNIOR ACHIEVEMENT ADVISERS

Operation Free Enterprise is an incentive program to encourage each junior achievement company, as well as each individual junior achiever, to maintain high standards in all phases of operations. Only junior achievement companies which meet or exceed the performance standards outlined below will qualify to nominate company members for participation in Operation Free Enterprise.

Advisers should prepare now to maintain standards in company operations which will assure that their companies will qualify, and also prepare to select outstanding junior achievers for nomination to participate in Operation Free Enterprise.

PERFORMANCE STANDARDS

(1) Attendance: Each junior achievement company must maintain a monthly attendance rating of not less than 85 percent. In order to be counted present, each achiever must have punched his timecard and reported to his company work area no later

than 7 p.m. Attendance record sheets signed by the company secretary and an adviser must be turned in to the program director at the end of each company meeting. In the case of those companies which do not meet at the Elizabeth Business Center, attendance forms must be mailed to Junior Achievement Headquarters in Elizabeth the day following the company meeting. Reports received by mail will be checked as to the time and date stamped on the envelope at the post office.

Achievers who fail to attend the first company meeting will be contacted by telephone. If the notice of the first meeting was received, and unless the achiever was ill, the absent achiever will be dropped from the company and a replacement assigned by junior achievement.

In the event of dropouts, and if the junior company wishes to maintain its total membership at its beginning number, replacements will be made by junior achievement up until December 1, 1962.

(2) Company meeting schedules: Each company must meet one night a week from 7 to 9 p.m. The first company meeting should be scheduled as soon as possible after junior achievement issues the membership list.

There will be no company meeting on November 22, Thanksgiving Day. Companies which wish to make up lost production and sales time may request an extra work night by contacting the program director.

There will be no official company meetings December 24 through January 1, 1963. Regular company meetings will be held starting January 2. It is strongly recommended that advisers stress the need for achievers to continue to sell their products and to maintain high individual and company sales during this Christmas vacation period.

Official company meetings cannot be canceled because of special school events such as shows, athletic tournaments, etc., or for any operating reasons such as lack of raw materials, low production schedules, or other difficulties which reflect poor planning or lack of achiever interest.

In the event of extremely bad weather, cancellation of a company meeting must be cleared with junior achievement headquarters in Elizabeth.

(3) Production: The junior company must be in production not later than the fourth company meeting.

(4) Operating plan and budget: The company must submit to junior achievement headquarters, not later than the eighth company meeting, a copy of its operating budget and profit plan which must provide for fixed company payments as outlined in the bulletin dated September 15, 1961, entitled, "Operating Procedures—Fiscal Practices."

(5) Special credits for outstanding performance: Special consideration will be given to nominees of junior achievement companies which have shown evidence of outstanding performance in any of the following areas:

(a) Exceptional improvement in any phase of company performance, through increased efficiency, cost reduction programs, sales incentive plans, safety programs, 100 percent attendance, punctuality, good housekeeping, etc.

(b) Originality of junior achievement product.

(c) Originality in any phase of company operations.

(d) Outstanding teamwork among company members.

(e) Unusually good management by company officers.

(f) High individual and company sales.

(g) High sale of stock in Operation Free Enterprise.

(6) Penalties: Although it is not anticipated that there will be any reason for im-

posing a penalty upon any junior achievement company. It must be emphasized that a severe penalty will be imposed upon a company in the event of an accident caused by carelessness or horseplay. Failure to pay bills, to maintain cleanup and good housekeeping requirements, may also subject a company to penalty.

NOMINATION OF ACHIEVERS

Each junior achievement company which qualified will have the privilege of nominating two members, one boy and one girl, for participation in Operation Free Enterprise. Consideration should be given only to outstanding junior achievers.

Advisers should take into consideration qualities of leadership, personal initiative, appearance, poise, ability to get along with young people and with adults. Junior achievement attendance, punctuality, attitude toward safety regulations, knowledge of junior achievement company operations, and general knowledge of the sponsoring company's operations. Also, consideration should be given to interest in and knowledge of the industrial growth and development of the countries within the European Common Market.

Advisers must bear in mind that junior achievers who are selected to participate in Operation Free Enterprise will be good-will ambassadors of our industrial and educational community, and will be guests of German businessmen and governmental leaders.

SELECTION OF ACHIEVERS

Nominations will be made on a nomination form provided by junior achievement. Four signed copies must be returned to junior achievement headquarters prior to a deadline date which will be specified by junior achievement.

All nominees will be interviewed by a panel of junior achievement officials and members of the junior achievement board of directors. They will be notified by junior achievement of the time and place of the interview.

Selection of achievers who will participate will be announced several weeks in advance of the trip date. At that time instructions will be issued on procedures to follow to obtain passports, public health certificates, etc., and written permission of parents or guardians to make the trip to Germany.

TRANSPORTATION

Transportation to Europe will be arranged by junior achievement. Advisers will be requested to assist in making satisfactory arrangements for transportation of achievers to and from the Junior Achievement Business Center. The Elizabeth Daily Journal will furnish transportation to and from Idlewild Airport.

PREPARATION OF ACHIEVERS

If a Junior Achiever from your company is selected to participate in Operation Free Enterprise, you should take full responsibility for his or her preparation to participate actively in all phases of the program.

Remember: The impression our Junior Achievers make upon radio, television and press representatives, German and American officials, and businessmen will reflect upon Junior Achievement of Union County, and our advisers, and upon our sponsoring industries.

The following points are essential. You will think of others.

(1) Be sure your achiever is thoroughly prepared to discuss the operation of his junior achievement company and, in a general way, the sponsoring company.

(2) Explain carefully to the Achiever that he will be the guest of German Government and business leaders, and will have a unique opportunity to leave with those he meets a fine impression of the American people, especially American youth.

(3) Review the questions which have been prepared for the guidance of the Achievers.

(4) Impress upon the achiever that it is common courtesy to show a sincere interest in his host's community and activities. The Achiever should ask questions.

(5) Explain the importance of good grooming. Advise the Achiever to follow instructions which will be given to him in writing with regard to dress.

(6) Explain the importance of courtesy and punctuality. Ask the Achiever to keep in mind that press, magazine, newsreel and television photographers and cameramen will be invited to take photographs throughout the trip. The Achievers must remember that these men and women have a job to do and should help them by being cooperative, punctual, and courteous.

OPERATION FREE ENTERPRISE COMMITTEE

A Cotton Farmer Proposes Important Changes in Farm Legislation

EXTENSION OF REMARKS

OF

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. UDALL. Mr. Speaker, the cotton industry is vitally important to Arizona and to the Nation. While cotton is now

reasonably healthy, there are storm clouds on the horizon and important legislative decisions will face the 88th Congress. Mr. R. Keith Walden, president of Farmers Investment Co., Tucson, Ariz., is an exceptionally intelligent and responsible cottongrower who is recognized in the industry as an independent, thoughtful student of cotton problems. I recently asked Mr. Walden to give me a memorandum outlining his proposals for future legislation and administrative action. His response is so thought-provoking, and his suggestions so interesting that I would like to share them with my colleagues. I commend this letter especially to the attention of the members of the Committee on Agriculture:

JANUARY 16, 1963.

HON. MORRIS K. UDALL,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN UDALL: As you requested, I will endeavor to recapitulate my comments made in your office last week with reference to the raw cotton industry. First, I would like to refer to some historical background, because it is important in order to understand the cotton problem.

In 1950, the United States experienced a short crop of cotton. This was also true in other cotton-producing countries. Furthermore, world stocks of cotton had not been built up to normal figures since their depletion during the war, and demand was high. These factors resulted in a rapid rise in the price of cotton. During the year, the U.S. Secretary of Agriculture issued two orders from which it took the American cotton industry a long time to recover. The orders were (1) an embargo on exports of American cotton to foreign countries and (2) establishment of a ceiling price on U.S. cotton at 45 cents per pound. The world price for about 2 years was more than 90 cents per pound.

In 1951, acreage controls were eliminated, but the world price was still high, and the shortage of supply had triggered the development of cotton production in many foreign countries. Expansion of production continued; and, in 1954, acreage controls were again imposed on the U.S. crop. By this time, the world price was substantially below the U.S. support price, and the United States had become a residual supplier. Our exports had dwindled to slightly over 2 million bales.

In 1956, American cotton was again made competitive in the world markets by an export subsidy. Exports climbed to over 7 million bales in one year. By 1960, the domestic support price had been reduced from some 34 cents to less than 30 cents per pound. Domestic consumption was expanding, synthetic fiber plants were running at 70 percent of capacity, and the future of cotton was bright in the fall of 1960.

Many interests in the old southern Cotton Belt were unhappy with cotton's new outlook. Allotments had been built up in the low-cost producing areas of the Mississippi River Delta and the irrigated West. The newly elected President did not carry the Cotton Belt of the Deep South in the presidential election of 1960. In February of 1961, the newly appointed Secretary of Agriculture, notwithstanding strong testimony by leaders of the cotton industry, who pleaded for no increase in price support, increased the price support by more than 3 cents per pound.

After the increase in the domestic price support, Congress authorized a similar increase in the export subsidy. Notwithstanding the increase in the subsidy, the position of American cotton has continued to dis-

integrate, both at home and abroad, and the rate of deterioration has been accelerated in the last 12 months. Exports last year were off more than a million bales. They will be off another million bales in 1963. Domestic consumption is also off about a million bales.

U.S. textile mills are turning to synthetic fibers wherever they can, and U.S. cotton-growers have had their allotment cut 11 percent for 1963. In spite of the cut, disappearance will likely be 1½ million bales less than production in 1963. One of the principal reasons for the decline in raw cotton consumption by domestic mills has been the price disparity of 8½ cents per pound between the world price and our domestic supported price. It means that American textile mills are required to pay \$42.50 more for a bale of cotton than do foreign mills. Both the cotton industry and the textile industry actively encouraged the Tariff Commission to establish an offsetting equalization fee on imported cotton goods to represent the difference in the cost of raw cotton. In September of 1962, the Tariff Commission turned down the request of the industry. On the same day, the President stated that, in view of the Tariff Commission's decision, he had instructed the Secretary of Agriculture to take steps to remedy the unfair competitive

situation faced by the domestic textile industry. The cotton industry, represented by the National Cotton Council, immediately notified the President that it stood ready to cooperate with him to find a proper solution to the problem. The solution to the problem could be as follows:

1. Immediately reduce the support price on all American-grown cotton by 3 cents per pound.

2. Adopt an equalization payment system to the American textile mill to offset the difference between the support price and the world price, enabling both foreign mills and domestic mills to buy cotton at the same price.

3. Reduce the price support by 1 cent per pound per year until such time as the payment is eliminated.

4. Appropriate \$15 million per year for the next 5 years for an expanded research program over and above what the industry is now doing, in order to enable the industry to: (a) lower its costs; and (b) improve its quality.

Simple arithmetic with regard to comparative costs to the Federal Government of the above program for the remainder of this decade, as opposed to the present program, are as follows:

1. Cost of present export subsidy program per year:		
(a) 5,000,000 bales at \$42.50 per bale.....		\$212,500,000
(b) Total cost next 7 years.....		1,487,500,000
2. Cost of proposed program to make cotton competitive:		
(a) Since domestic support price reduced 3 cents per pound, equalization payment on all production at \$27.50 per bale times 13,500,000 bales estimated production.....	\$371,250,000	
Research.....	15,000,000	386,250,000
(b) 2d year: Estimated consumption and production up to 14,500,000. Equalization payment at \$22.50 per bale.....	326,250,000	
Research.....	15,000,000	341,250,000
(c) 3d year: Estimated consumption and production up to 15,500,000. Equalization payment at \$17.50 per bale.....	269,250,000	
Research.....	15,000,000	284,250,000
(d) 4th year: Estimated consumption and production up to 16,000,000. Equalization payment at \$12.50 per bale.....	200,000,000	
Research.....	15,000,000	215,000,000
(e) 5th year: Estimated consumption and production up to 16,500,000. Equalization payment at \$7.50 per bale.....	123,750,000	
Research.....	15,000,000	138,750,000
(f) 6th year: Estimated consumption and production up to 17,000,000. Equalization payment at \$2.50 per bale.....	42,500,000	
Research (discontinued).....	0	42,500,000
(g) 7th year: Estimated consumption and production up to 17,500,000.....	(1)	42,500,000
Total cost next 7 years.....		1,408,000,000

¹No equalization payment.

To the Federal Government, the cost of the declining support price program is indicated at some \$80 million less than a continued high support program with an export subsidy for the remainder of this decade. Announcement of a long-range declining support price program would discourage further expansion of production in other countries. Cotton exports would increase, providing, annually, more than half a billion dollars of additional foreign exchange, so badly needed in our balance-of-payments problem.

The alternative is a continually declining domestic consumption and a permanently subsidized export of cotton. Textile people predict that, by the end of this decade, annual domestic cotton consumption would have declined to 5 million bales or less. Acreage allotments would have been cut another 20 percent or more. To Arizona, this would mean a minimum reduction of \$65 million in the gross product income to the State. Given an average multiplication of 5, the effect on the Arizona economy would be something in the order of a \$325 million overall decline. Needless to say, this would be a terrible depressant on the entire Arizona economy.

The future of American-grown cotton is indeed bright, if we can solve its current problem. If we fail to do so—if we fail to make it competitive—it will likely become

just a curiosity product within the next 15 years. I well realize that one of the jobs of the Secretary of Agriculture is to deliver the votes to the administration from voting citizens in the farm belt. In order to do this in the Deep South, perhaps a necessary adjunct to the declining support program outlined herein would be some sort of limited direct subsidy to producers of 10 bales or less. If so, I suggest that we do it, but I trust we will be courageous enough to do it without signing the death warrant of a great American industry.

Sincerely,

R. KEITH WALDEN.

The Fruits of 2 Years

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. DERWINSKI. Mr. Speaker, last week we heard the expected reassuring

description of foreign policy progress of the administration as the President presented his state of the Union message. Actually, the conditions existing throughout the world now, as compared to problems inherited by the New Frontier, are considerably different than described by administration propaganda.

The Chicago Sunday Tribune, January 13, contained an editorial discussing our current relations with 23 different nations. I feel it is a timely commentary on the actual relationship of the United States to these nations.

It is my hope that Members of the House will study these editorial observations, and contrast them to the explanations emanating from administration sources:

THE FRUITS OF 2 YEARS

Mr. Kennedy entered the White House 2 years ago on a tide of complaint that the image of the United States had deteriorated vastly under the Eisenhower administration and that he was going to set everything to rights in our relations with the rest of the world. The halfway point in his administration provides an appropriate opportunity to look around and see how well the prospectus has been fulfilled. A map on the front page of our "Spotlight on the World" section shows how America's troubles range across the globe.

Among the neuralgic spots, these may be noticed:

1. Cuba: After the disaster of the Kennedy supported invasion of April 1961, the President came awake in time to discover boatloads of Soviet missiles, jet bombers, and troops in Cuba. He professes to believe that Khrushchev removed the weapons. The Russian military contingents and Castro's communism remain.

2. Laos: Here Mr. Kennedy adopted the Soviet formula of ending civil war by establishing a coalition neutralist government. Today, instead of the old pro-American regime, we have a hybrid whose Communist faction curtly notifies us that even our mercy food flights to Lao mountain tribesmen will be continued at our own risk, because the Reds have not authorized the operation and will not do so until their own followers are cut in on the food.

3. South Vietnam: American military advisers have found it impossible to get South Vietnam troops to fight effectively against the Communists, and concede that Red guerrillas could win the war for the country with captured American weapons and communications equipment.

4. Cambodia: This country in southeast Asia is angry at the United States because it contends that its border is repeatedly violated by South Vietnam forces armed with American weapons.

5. Thailand: Cambodia's neighbor is equally angry because Dean Acheson, former Democratic Secretary of State, represented Cambodia in a successful action before the World Court to get possession of a disputed border temple. Thailand interpreted Acheson's activity as a sign of American hostility, because the former Secretary still sits in councils of the Kennedy administration.

6. Red China: Keeps snarling that the United States is a paper tiger and a push-over and derides Khrushchev's reminder that the paper tiger still possess nuclear teeth.

7. Korea: No resolution here of a cease-fire now 9 years old which was supposed to lead to the unification of Korea through free elections. North Korean Communists have repeatedly violated the armistice terms and created border incidents.

8. Jordan: King Hussein of this American subsidized country has recently attacked the

United States for recognizing the Yemen rebel republic established with help from Russia and the United Arab Republic. Hussein charged that America was alienating her old friends in the Middle East by supporting subversive movements seeking the overthrow of established governments.

9. Morocco: The United States has lost airbases upon which it expended hundreds of millions of dollars in this country, which has proved increasingly receptive to Soviet overtures.

10. Algeria: Ben Bella, the boss, received with open arms at the White House, promptly went to Cuba, embraced Castro, and pinned a medal on him, declaring that Algeria would always be grateful for the Cuban revolutionary example and Castro's support in its own rebellion. The new Algeria has moved far to the left, toward Moscow.

11. Britain: Angry at the United States over the scrapping of the Skybolt missile which was to provide Britain's air force with nuclear striking power. At odds with the United States over its support of United Nations policy in Katanga. Also opposed to American policy in Yemen and other parts of the Middle East.

12. Belgium: Angry with the United States over the Congo, a former Belgian territory, with anti-American demonstrations in Brussels.

13. Holland: Angry that the United States provided the motive force in compelling the Netherlands to hand over West New Guinea to Indonesia in a bloodless surrender after reneging on a declaration by the late Secretary of State Dulles that America would not permit President Sukarno to achieve this feat.

14. Indonesia: Despite American appeasement at the expense of Holland, mobs wrecked the American consulate, the consul's residence, and the United States Information Agency office in Surabaya. The Indonesia Foreign Minister described the violence as a protest against United States policy toward Cuba.

15. France: President De Gaulle continued to be scornful of the U.N., standoffish about NATO, persistent in his intention to make France an independent nuclear power, and antagonistic toward the Congo policy supported in the U.N. by the United States.

16. Spain: Difficulties were developing in negotiations over the continuance of American bases in this country.

17. Portugal: The Lisbon government was angry over America's policy in the Congo, its support of anti-colonialist activities in U.N. against Angola and other Portuguese-African possessions, and was backing away from extension of existing agreements governing American air bases in the Azores.

18. Canada: During the Cuban crisis, when a full alert against attack was declared by the North American Air Defense Command, Canada refused to honor its commitments to arm planes with nuclear weapons and send them to forward bases. It continues to trade with Cuba and to ship great quantities of grain to Red China and other Communist countries, ignoring Washington embargoes.

19. Mexico: Is tepid about the American hard line toward Cuba and protects open Communist activities to win over the landless and to infiltrate and propagandize Latin neighbors.

20. Brazil: President Goulart, despite economic bribes by Robert Kennedy, brother of the President, has expropriated American investments, obtained a mandate for virtual dictatorial rule, made trade deals with the Communists, supported Castro in the Organization of American States, and is angry that the United States has not handed over blank checks through the Alliance for Prog-

ress, Mr. Kennedy's creation to bring progress and reform to Latin America.

21. Guatemala: Angered over American refusal to support a more forceful policy against Cuba, this country now announces a new policy toward Castro and has ordered the arrest of an anti-Castro leader.

22. Pakistan: Angry with the United States because of arms aid to India in its border war with Red China, fearful that these arms will be turned against Pakistan, but mollified in part by America's action to persuade India to reopen discussions on disputed Kashmir.

23. India: Still nonaligned in the cold war despite the Communist Chinese border invasion and American military and economic aid to Nehru. After 1 day of negotiations on Kashmir, Nehru remained as recalcitrant as ever, announcing there was nothing to negotiate.

If we have come anywhere in Mr. Kennedy's first 2 years, the progress is all but invisible. The world is in a muddle, the threats remain, and we are nowhere greatly loved.

California Defense Dollars Go National

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. HOSMER. Mr. Speaker, six of the larger California defense contractors recently reported to the California Defense Industries Committee of the Los Angeles Chamber of Commerce procurement data covering the national pattern of their relations with suppliers and vendors for articles, materials, and services.

This compilation of the data is on an annual basis for the various corporate fiscal patterns ending in the 1961-62 period, the most recently available data in each case. Each reporting corporation carries on an intensive procurement and contracting program aimed at the widest possible participation nationally, and in each case a main facet of the total program is the determination that small business receive an equitable opportunity to compete for subcontracts for articles, materials, and services of all kinds.

California defense contractors are doing business in 49 States with all kinds of enterprises from the local hardware store to the giants of industry. Truly, California defense dollars go national.

The six reporting California defense contractors listed \$1,608,646,403 in dollars expended in 49 States and the District of Columbia to suppliers and vendors of articles, materials, and services.

Principal States receiving the impact of the California national procurement effort are:

	Percent of total	California dollars
New York.....	7.976	\$128,310,653
Connecticut.....	6.679	107,441,173
New Jersey.....	5.555	89,301,909
Ohio.....	5.252	84,492,287
Massachusetts.....	3.476	55,019,997
Illinois.....	2.775	44,645,064
Pennsylvania.....	2.627	42,263,470

In reporting for this study the companies that reported small business data revealed 37 percent of California procurement dollars to small business; 63 percent of California procurement dollars to large business. By comparison, only 17.7 percent was the national average to small business for fiscal 1962.

The accompanying table shows a percentage breakdown by State of the total procurements reported expended in each State. Truly, California defense dollars go national.

California defense dollars go national—50-State breakdown

	California dollars	Percent of total ¹
Alabama	\$1,344,433	0.0835

¹ Will not total 100 percent because of rounding.

Statement in Support of the Establishment of Federal Mutual Savings Banks

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. MULTER. Mr. Speaker, on January 9 I introduced a bill (H.R. 258) to authorize the establishment of Federal mutual savings banks. During the past few Congresses I have been joined by several of my distinguished colleagues on the Committee on Banking and Currency

in introducing similar legislation. In the past these bills have been introduced for the purpose of allowing study of their provisions. This year the bill is being introduced for consideration and, hopefully, early action.

The basic idea of the proposed legislation is to authorize the granting of Federal charters to mutual savings banks. At present this fine thrift system operates solely under charters granted by 18 of our States. It is most appropriate that this legislation be considered during the current year that marks the centennial of the establishment of the dual banking system for commercial banks. Savings and loan associations also have the opportunity to obtain either Federal or State charters. So do credit unions. The passage of this legislation would bring the mutual savings banking industry with its \$45 billion of assets into the fold of dual banking.

Mutual savings banks have a long and honored history of stability in this country. The first such banks in the United States were established in the early 1800's in Philadelphia and Boston. They provided a useful facility to encourage people of moderate means to open and maintain savings accounts. Their savings in turn have been invested by the bank in useful community projects in order to earn income adequate to pay an attractive rate of interest return to the savers.

I shall not at this time go into detail but it is a matter of interest that where mutual savings banks exist, the per capita rate of savings has been higher than in places that lack mutual savings bank facilities. It is also interesting to note that in the areas where mutual savings banks are located, the interest rates charged for lending money on home mortgages and other investments are among the lowest in the Nation. Mutual savings banks exist today in 18 States and one possession. Yet their benefits extend far beyond the borders of the States in which they are located because they invest in out-of-State mortgages and other obligations. The passage of the proposed legislation will enable all sections of the country to enjoy to a fuller extent the many benefits that flow from mutual savings bank operations.

Previous bills on this subject matter have received favorable comment from the Housing and Home Finance Agency and the Veterans' Administration. The Board of Governors of the Federal Reserve System in the past has stated that the proposal deserves careful consideration. The Commission on Money and Credit, a private group of financial experts, has also recommended that Federal charters be authorized for mutual savings banks. It is understood that this position is also being adopted by the Committee on Financial Institutions, a Presidential group appointed to study the recommendations of the Commission on Money and Credit. The National Association of Home Builders, an organization with understandable interest in the increase of home construction, has added its endorsement to the proposed legislation.

The study of this proposal is also underway in several Federal agencies in addition to those named above. Their reports on the legislation may be expected to be received at an appropriate time. Many leaders in the savings and loan industry have expressed their support of the proposal to grant Federal charters to mutual savings banks. Last session, immediately following instruction of the bill, leading savings and loan executives commented favorably on the bill. I would like at this point to reinsert those remarks in the RECORD.

In the Midwest, Mr. A. D. Theobald, president of the First Federal Savings & Loan Association of Peoria, Ill., made the following observations on October 3:

For the past year or so, several other savings and loan industry representatives and I have had an opportunity to work closely with mutual savings banking leaders in the preparation of proposed legislation to authorize the establishment of Federal mutual savings banks. Many of the ideas suggested by savings and loan leaders, arising from their intimate experience with the field of thrift and home financing, have found expression in the Federal mutual savings bank bill being introduced in both Houses of Congress today. I believe that upon careful study, others in the savings and loan industry will find this proposed law to be of interest to them as well as advancing the public interest. I commend it to the attention of my colleagues in the savings and loan industry.

In the South, Mr. Wallace O. DuVall, president of the Atlanta Federal Savings & Loan Association of Atlanta, Ga., stated:

I am pleased to note that a revised Federal mutual savings bank bill has been introduced in Congress. As one always interested in making the thrift institution I serve more useful to the community, I have watched closely the development of the plan for Federal charters for mutual savings banks, because of the opportunity it offers for increased service for mutual thrift institutions. Many savings and loan leaders have outlined suggestions for building an extremely strong institutional system for savings through the combined patronage of savings and loan associations and mutual savings banks. These ideas have been incorporated in the bill introduced today. It is my hope that serious study will be given to this proposal.

In the New England area, Mr. James E. Bent, president of the Hartford Federal Savings & Loan Association in Hartford, Conn., and former president of the National League of Insured Savings Associations, recalled that in 1960 he had encouraged then Senator Prescott Bush, Republican of Connecticut, to support legislation authorizing Federal charters for mutual savings banks. Said Mr. Bent:

I am happy to see a revised version of a Federal mutual savings bank bill introduced at this time. The savings and loan industry will now have an opportunity to study the proposed legislation before it is reintroduced with the prospect of early Congressional hearings in 1963.

From the far south, Mr. Oscar R. Kreutz, chairman of the board and president of the First Federal Savings & Loan Association of St. Petersburg, Fla., and past president of the National League of Insured Savings Associations, and chair-

man of its legislative committee, asserted that the new Federal mutual savings bank bill offers a fine opportunity to those interested in the mutual thrift industry to give some deep thought to the future of that industry. Mr. Kreutz said:

This new bill contains many ideas combining the best features of the savings and loan and mutual savings bank industries. It should serve as an excellent vehicle to prompt thrift and home finance leaders to consider the best means of developing mutual thrift institutions in a way that will best serve their communities.

I would also like to insert at this point recent speeches on this subject delivered by Mr. A. D. Theobald, president of the First Federal Savings & Loan Association of Peoria, Ill., and Mr. Morris D. Crawford, Jr., president, the Bowery Savings Bank, New York, N.Y.:

PARTNERS IN PROGRESS

(Address by A. D. Theobald, president, First Federal Savings & Loan Association, Peoria, Ill., at the 16th midyear meeting, National Association of Mutual Savings Banks, December 4, 1962, New York City)

BUSINESSMAN, AUTHOR, TEACHER, SCHOLAR

Excerpts from the introduction of Mr. Theobald by John W. Kress, president, National Association of Mutual Savings Banks: "Our guest speaker is a businessman, author, teacher and scholar—a combination hard to beat. He holds degrees from the University of Akron and from Northwestern University. He has taught economics and real estate financing for more than three decades. He is the author of basic textbooks on the savings and loan and the real estate industries. For 8 years he was director of education and research for the American Savings & Loan Institute. From 1935 to 1946 he was on the executive staff of the United States Savings & Loan League—first as assistant vice president and later as vice president. In 1934 he put his academic theories into practice by becoming vice president of the First Federal Savings & Loan Association of Chicago. In 1946 he became president of the First Federal Savings & Loan Association of Peoria, Ill.¹ He is presently a member of the legislative committee of the United States Savings & Loan League and he serves on the task force of the Federal Home Loan Bank Board. Also, he has worked with representatives of both savings and loan and our savings bank industry to develop a sound legislative basis for a united and nationwide thrift system."

I want to visit with you about some things that are close to my heart, and which I think maybe are close to your hearts.

I'd like for a moment to stroke my long gray beard and take a throwback some 31 years to the summer of 1931, and my first contact—actually the first time I was really conscious of the fact that there was such a thing as a mutual savings bank.

In July of that year, I had been hired to work for the American Savings and Loan Institute—actually for the United States Savings & Loan League. I went to work for them because I had to eat. Nineteen hundred and thirty-one, the year in which I had been awarded a master's degree, was not an easy time to get a job. My intention then was to work only during the summer and continue work on a Ph. D. that fall and eventually wind up teaching at the collegiate level.

Well, that was changed in about 2 months for two reasons: One of them, I found the work fascinating; the other was, I got mar-

ried, and continuing to hold a regular salaried job became of real importance.

In August of that year, the United States Savings & Loan League convention was held in Philadelphia. Several things stand out in connection with that convention. One of them was that the secretary treasurer of the league, who kept whatever statistics there were, was able to announce that in the year 1930 (and the figures were just out in the summer of 1931), the total assets of the savings and loan business had increased. And the second one, pertinent to the savings bank business, was that in the year 1930 the total assets of the savings and loan business had for the first time passed the total assets of the mutual savings bank business.

Well, I was on the staff of the national organization, and we corrected that whole situation real quickly. The total assets of the savings and loan business decreased for approximately 8 years until they got down to something under \$6 billion. They stayed under the total assets of the mutual savings bank business for some 15 years beyond that period.

The next occasion that I had to look at the mutual savings bank business was in 1934. John Kress has referred to the fact that I became vice president of the First Federal Savings & Loan Association of Chicago in that year. That was a newly chartered Federal savings and loan association, organized primarily by Morton Bodfish, the executive vice president of the United States Savings & Loan League. I recall that in rounding up a group of outstanding citizens in Chicago to be directors of that association, he received a letter from one gentleman whose name many of you, I'm sure, would recall, asking what are the prospects for this sort of operation—savings and loan association—in Chicago. Morton asked me to prepare a reply for him. I prepared a rather long reply, and I said it seemed to me very probable that the total assets of that institution would in our lifetime pass a hundred million dollars.

SAVINGS BANK BASIS FOR FORECAST

The reasoning I applied to it was first the record of the mutual savings banks in the major mutual savings banking cities. That record suggested that this type of institution could have that sort of performance. So also did the record of the building societies in Great Britain, where they had long been substantial organizations.

I know Morton didn't believe that, but he was busy, and he didn't have time to argue with me—and he sent the letter out. It wasn't a very good guess because although I expect to have a further lifetime, the assets of the First Federal of Chicago are now around \$400 million.

I bring this out because in 1933 it seemed to me that there was such a close relationship between the operation of mutual savings banks and mutual savings and loan associations that the performance of one could well be a pattern for the performance of the other.

TWO PERIODS COMPARED

I'd like to take you back to 1931-34 for reasons other than my own personal recollection of them. It seems to me that the period that we are now in, the period, let's say, of 1962 through 1964, in many, many ways resembles that crisis period in the middle part of the depression. That was a period of flux, crisis, danger, change—but the thing to emphasize is that it was also a period of opportunity; a period of opportunity missed in some cases, seized and taken advantage of in others. To a very substantial extent, the question of whether or not opportunity in the changing world of the financial systems of that time was seized or missed rested on the dynamics of trade association leadership.

By trade association leadership, I don't mean just the typical service that we all expect from a trade association, but the leadership which is inherent in the staff of the association itself: developing ideas, concepts, programs—and carrying them through. There are dynamics to that sort of leadership which I see at the present time and which seem to me very significant.

Let's start first with the Federal Home Loan Bank System, which grew out of the President's Conference on Home Ownership called by President Hoover in October of 1931.

As nearly as I can recall, the savings bank industry took very little part in the legislative struggle which took place with regard to the Federal home loan bank system. Among other things, mutual savings banks were integral parts of the American Bankers Association; the ABA opposed the Federal home loan bank idea. The bankers were not too popular, and they were not very effective. The most effective opposition came from the insurance companies using the Mortgage Bankers Association as their particular vehicle.

The push that carried it forward in the private industry field was the United States Savings and Loan League. Now I want to point out to you something that very few people know, because there are not too many of us left who had an active part at that time: at this same United States League convention in Philadelphia in the fall of 1931, a committee report which had been the result of a good many years' study, advocating a Federal home loan bank system of some kind, and advocating a system of Federal savings and loan associations, was rejected by the convention membership by a rather substantial majority. The savings and loan business was not, in itself, pushing for a Federal home loan bank system. But within 6 months, the development of a Federal home loan bank system was a principal activity of its trade association.

SAVINGS AND LOAN INSURANCE STRATEGY

Let's carry on for 1 more year, the year in which the Federal Savings and Loan Insurance Corp. was created. At the executive committee, which was the broad policy group of our national trade association, the leadership of the organization never permitted a vote on the question of whether we should or should not have a system of insurance of accounts for savings and loan associations. The discussion was pointed entirely toward the question of what, if we had to have one, the nature of the system would be. After all, the FDIC already had been enacted. The question discussed was what would be the nature of the savings account insurance corporation that might be set up.

Mutual savings banks, of course, had little interest in the Federal Savings and Loan Insurance Corporation. So far as they felt that insurance of accounts was useful, they found it through the FDIC, and the Federal Savings and Loan Insurance Corporation became entirely a savings and loan vehicle.

One year later there came the opportunity to develop a Federal system of savings and loan associations. By this time, while there was some real difference of opinion as to the advisability, that difference of opinion was not so effective as to be found in any official position. The development of a system of Federal savings and loan associations was definitely a part of the program of the United States Savings and Loan League.

Now, How many of you know what follows? It was not widely discussed anywhere in the industry. The home mortgage system of the country was prostrate. It became a matter of administration direction to the Chairman of the Federal Home Loan Bank Board that something should be done about it; some vehicle should be created to revive the home

¹ First Federal Savings & Loan Association of Peoria, Ill., has assets of \$93,006,332.

mortgage market throughout the country. The mutual savings bank industry was first approached to see whether it would be interested and would sponsor the development of a system of Federal mutual savings and mortgage institutions.

SAVINGS BANKS MISSED OPPORTUNITY

They were not interested. Then the savings and loan associations had their opportunity. Up to that time, the idea of a dual system in financial systems was, of course, confined to the commercial banking system. We now had a dual system of financial institutions in the savings and loan field also.

Here I think that some of the things that a dual system—and I emphasize first the Federal part of it because it was the new part—did for our business.

Let me say that, prior to that time, operating under different laws in 48 States, it was hard to say that there was a system of savings and loan associations. There was terrific diversity in name, in practice—in almost anything that you could use to describe a savings and loan association.

The federal system gave us an opportunity to develop common terminology, to borrow from the practices and the laws of the most advanced States—and for the first time in a way that would not have been possible in any other way—to develop a modern savings and loan association; at least modern in its time.

It brought compulsory insurance of accounts to those institutions that chose to and could operate under Federal charter, and insurance of accounts was vital to the restoration of confidence in our business. It brought full time operation of thrift institutions to many States where part time operation had been characteristic before.

And I think it brought the full advantage of the dual charter system to all savings and loan associations throughout the country. From that time on there wasn't exactly competition between them, the State-chartered system and the Federal-chartered system, but there was constant progress, first on the one side and then on the other. In some States a modernizing factor would be followed by the Federals, then followed by other States—all the very real advantages, including continual modern community service, that the dual system is supposed to bring.

POSTWAR GROWTH OF INDUSTRY

Since the war, all financial institutions have grown fantastically. Commercial banks have grown, dollar-wise, more than any other type of financial institution. But by, I suppose, 1955, the end of that period of growth, insofar as it came from the commercial or demand deposit side of the business, was in sight. After all, the growth of a demand deposit, money-creating system is limited by the monetary needs of the country, and we had had an adequate development of the strictly commercial banking, money-creating side of our financial system.

Insurance companies grew. Mutual savings banks grew, and very substantially. I'm willing to bet that few of you 15 years ago could have forecast within even a reasonable percentage the amount of your growth during the past 15 years. Savings and loan associations grew, and they grew much more rapidly than did the mutual savings banks.

Part of this faster growth was due to the fact that they were operating all over the United States, in a much broader field. Sometimes we like to attribute at least a part of that growth to the fact that we felt that we had pretty vigorous, aggressive management. But basically, it seems to me that the savings and loan associations grew because they were fulfilling a fundamental national need.

The tremendous increase in home building and home ownership after the war necessitated the development of vast amounts of

capital. I don't think anyone foresaw how much, immediately after the war. The institutions that were set up and specialized in that field had to grow, and if they hadn't, some other type of setup to do the same sort of job would have had to be created.

We have a busy time, and I really didn't have much time to pay attention to the mutual savings bank business until about 3 years ago. I think my attitude toward your great industry at that time would have been fairly typical of that of a great many savings and loan managers. It was something like this: I didn't even realize that John deLaitre had a big mutual savings bank in Minneapolis. I was barely conscious that there was a substantial mutual savings bank in Cleveland. But basically I thought the nearest mutual savings bank to my city of Peoria was 500 miles to the east and 2,000 miles to the west, and that was a real good place for them.

THRIFT INDUSTRIES BEGIN TO CONVERGE

As I did think of them and began to see how closely our two types of institutions were growing together, I still liked our emphasis on purpose, mainly of home financing, as contrasted to what I conceived to be your emphasis on purpose, mainly the development of thrift. And I concluded rationally, whether correctly or not, that our emphasis on purpose in home financing was more likely to survive than an emphasis on the development of thrift because there were so many places where people could save money, and there were not so many places that really specialized in this growing demand for home financing.

For some reason, however, about that time—3 or 4 years ago—I subscribed to your national publication and started reading it. One of the first articles that I read, and it is still very much in my mind, was an analysis by a student of your field of the extent to which a mutual savings bank could take advantage of membership in the Federal Home Loan Bank system and could take advantage of the advance powers—the securing of money and the repayment of that money—from and to Federal home loan banks. The thing that impressed me was, that was exactly what the First Federal of Peoria had been doing for more than 10 years.

If that sort of financial policy seemed reasonable to a student in your business, it seemed to me that mutual savings banks might be much more like what I was doing than I had previously supposed.

TAX FIGHT UNITES THRIFT INDUSTRIES

About that time some disturbing elements started entering into all of our pictures. Mutual savings banks and savings and loan associations became very conscious of the fact that we had a real common enemy—an enemy which, using the taxing power of the Federal Government, had set out to, if not destroy us, certainly to clip our wings. I felt then, and I feel now, that the tax fight which was concluded this year was never an end in itself, at least in the minds of a great many of the people in the commercial banking business, but rather a means to a more basic objective. It became apparent that you and I had a lot of things in common if we were going to see anything like a reasonably satisfactory settlement of that issue.

Another disturbing fact was that it became apparent that there were some pretty slippery customers in the savings and loan business and that more and more we were receiving publicity of a type which was certainly not desirable from the point of view of a good many of us.

With that background, about 3 years ago, I happened to be one of the rather small group of savings and loan managers on whom this idea of a Federal charter for mutual savings banks was tried out. I'll be frank to say my first reaction was a very hostile one.

However, I was exposed to about as effective a group of salesmen as I have ever encountered anywhere. You will agree when I identify them. Those salesmen were Rusty Crawford, John deLaitre, and Grover Ensley. They were so effective that they made me and some other savings and loan managers examine this whole question carefully, as much as possible away from our original prejudice. We learned some things.

We learned, for example, that there were substantial degrees of difference in the operations and concepts of some mutual savings banks, that they were not nearly identical in concept and type of organization. We knew that that was true of the savings and loan business—that there were real differences in the point of view and the operation of the different savings and loans.

DIFFERENCES IN INSTITUTIONS

We learned that there are some savings and loan associations more like some mutual savings banks than they are like some other savings and loan associations, and that the same thing was true on the mutual savings bank side of the picture. This ran through a great many things, including your relations with your depositors or our members; your concept of trusteeship as related to what many of us feel is the fiduciary relationship of the directors and management of a savings and loan association. I became convinced that I could operate First Federal of Peoria under the mutual savings bank charter of a good many States and not really tell very much difference, and that a good many of your managers could operate their institutions under a Federal savings and loan charter and not really tell a lot of difference; and that both of us could operate under a Federal mutual savings bank charter, as it is conceived in the law now introduced, and not tell very much difference in day-to-day operations—that the only real difference on both sides would be a wider concept of services.

So it seems to me that, as in 1931, we have in 1962 an opportunity, a great opportunity for modernization, for renewed development, for redirection in expanded service under the Federal savings bank law as we in the savings and loan business had under the Federal savings and loan law 31 years ago.

OPPORTUNITY FOR PARTNERSHIP

It isn't often that we get an opportunity as I have had in one generation to have two chances like that. I believe that the mutual savings bank business and at least a substantial portion of the savings and loan business does have a situation in which it can and should be partners in progress, and that we also run the risk of being partners in liquidation.

There are some great forces operating in the financial systems of our country which affect that conclusion, which I'll grant is a personal one on my part. Rusty Crawford mentioned some of them. But some others occur to me.

One of them is the emphasis on national economic growth. That is not a partisan matter. It is not confined to either Republicans or Democrats. A great many people in this country—I suppose all—feel that it would be desirable if the rate of economic development in this country were more rapid. We are distressed by unemployment. We are distressed by the fact that we are not making maximum use of our economic resources.

We are convinced that there are going to continue to be efforts to do something about that, and that they will be primarily Federal efforts. To a major extent, Federal vehicles will be used to implement them.

We are confronted with great national flows of capital, and changing demands in these flows of capital. The commercial banks can adjust to those changes much more easily, much more rapidly than can we, and it seems to me important that we do what we can to be a part of those adjustments.

We are involved in the economic forces inherent in the vast movements of people on a regional basis and into urban and suburban areas within regions. They create capital demands far beyond what we have ever experienced before. This requires constant adjustment on the part of the institutions that are to serve them.

Again I return to the dynamics of trade association activity. We are confronted—and possibly the nation is assisted—by the dynamics of the American Bankers Association. That organization is a vastly different one than it was 8 or 10 years ago. You know that it is a tremendously more dynamic one represented by dynamic personalities and dynamic programs.

INFLUENCE OF THE COMPTROLLER

We see the Comptroller of the Currency taking an active part in the program for the development of the commercial banking system, more active, it seems to me, than any other supervisory authority that I have yet seen, and active in the development of the national banking system.

The Saxon report can develop a great many differences of opinion, but it's going to be referred to, and it's going to have influence. The Committee for Economic Development and its Monetary Commission have recognized the fact of change and have made recommendations as to very basic changes. Those we cannot ignore.

In connection with these changes, where they affect our system, where they affect the commercial banking system, we have a responsibility to present our concept of the public interest and to present it as effectively as we possibly can.

We see changing attitudes with regard to the merger of financial institutions. We see changing attitudes with regard to branch policies. There is no part of the financial system at which you can look without being conscious that we are being swept along by some real fundamental changes in thinking.

The question is: Will we see these changes as an opportunity, or will we be swept along blindly by them? Will we help direct them?

Part of this picture, it seems to me, lies in the nature of the commercial banking system. My opinion is that the commercial banking system is a deadly enemy of the thrift institutions, although only in part as the result of a conscious purpose of some individuals. Of course, it's perfectly obvious that some individuals in the commercial banking business seek the elimination of your type of institution and of my type of institution.

COMMERCIAL BANK HISTORY CITED

But beyond that, it is the nature of the commercial banking business to engulf and submerge and eventually get rid of other types of institutions in the fields of activity in which that system takes an important interest. May I remind you that trust companies, beginning in the 1870's, were very important as independent types of institutions; that the national banks were not permitted to have trust departments until as recently as 1913; that very few State banks were permitted to have trust departments until after that time.

Since the enactment of that legislation in 1913, the independent trust business is no longer of any significance; it is a part of the commercial banking system.

Industrial banks, designed specifically for true consumer financing, began to be significant around 1911. Commercial banks were uninterested in the field. Subsequently they became interested and the independent industrial bank is almost gone. The possibilities of very much the same sort of development are inherent in our type of institutions emphasizing thrift and home financing.

This whole situation creates a great mutual interest between your industry and mine. We must find some more effective means of working together to take advantage of opportunities on the one hand and to protect the mutual thrift and home financing idea to which we are all dedicated on the other hand.

We can work together. The tax fight indicated that we can and that we have worked together effectively. However, it seemed to me that on a number of occasions during the past 2 years, it was really a nip-and-tuck proposition as to whether we could keep that unity of interest. To a very great extent the fact that we were able to maintain it rested on the broad and compatible personalities of a rather limited number of people on the staffs of our two great national organizations.

I hope that that will continue. But it does seem to me that it is something on which we should not wholly rely. We must be thinking of how we can make more certain that, in the great fields in which we do have completely mutual interests, we will have a vehicle—some type of organization for working together.

LOCAL COOPERATION IMPORTANT

That question goes to other levels; it goes to the State level and it goes to the city level where there are both of our types of institutions operating together. As an old pro in the trade association field, I know that at that level the problems of working together are more difficult. You are really close to the individual, competitive problem. But I submit to you what I think is the case, that in a given city or a given State, the competition between mutual savings banks on the one hand is more vigorous than their competition with savings and loan associations, and that the competition between savings and loan associations—between themselves—is more vigorous, frequently more personal, than is the competition between the mutual savings banks and the savings and loan associations.

We find ways of having competitive institutions work together for common purposes under the same type of charter in our city and State organizations. I wonder if we can't be giving some thought to a more effective way of having those under different if similar charters work together at city, State, and National levels. Convinced as I am of the importance of dynamic trade association leadership, it seems imperative that we start evolving some way of doing that.

The last thing I'd like to visit with you about is the importance of membership in the Federal Home Loan Bank System. Not very many mutual savings banks belong. I can tell you that for every reason that mutual savings banks have for not joining the system, many savings and loan associations have had exactly the same reasons. However, over a period of time economic forces have brought membership in the Federal Home Loan Bank System almost universally, so far as savings and loan associations are concerned. I think that this might very well be true so far as mutual savings banks go.

BANKS STAKE IN FHLB SYSTEM MEMBERSHIP

It has been suggested that you join the system to show how interested you are in the Federal charter idea. I think that's important. But I'd like to submit that there are other reasons, maybe more important, that go to the heart of the welfare of your bank and of its depositors; that go really to the immediate interests of your institutions.

All of you, like all of us in the savings and loan business, have a responsibility of providing liquidity to take care of the needs and maybe merely the willful demands of our depositors or savings account holders. All

of us have, as a part of our liquidity policies, some assets which could be earning at a higher rate, except that we have to make provision for this unknown emergency.

Membership in the Federal home loan bank is not going to take that responsibility from you, but I think it can help your planning, and therefore the administration of your portfolio assets, if you do have this access to emergency liquidity. Certainly pooled access to the capital markets in an emergency is likely to be much more effective than that of the individual institution.

You, like us, have seasonal flows of money. You, like us, have times when the savings are coming in more rapidly just for seasonal reasons than the outward flow of funds in connection with your lending and investment opportunities. We, in the savings and loan business, have learned to use the Federal Home Loan Bank System to make adjustments to those facts.

You, like us, have cyclical flows. Your net inflow of deposits or savings is relatively low at a period of high mortgage and other loan demands; you must necessarily restrict the amount that you can put into earning assets at a higher earning rate than you will find at any other phase of the cycle because that's the period in which relatively your savings are down. Like us, you've witnessed the other part of that picture. When your mortgage demand and other loan demands are relatively down, and rates are relatively low, you have the most money to invest.

And you can't very well adjust it through the security portfolio because in the period when you need the money your bond accounts are selling at the lowest figures and at the period when you don't need the money, when you are investing, they are at the highest figures. That is an automatic loss situation.

This is the sort of analysis which I encountered in one of your publications some years ago. It points to the way in which we at First Federal Savings of Peoria have been using the Home Loan Bank system for a long time. It helped us to have a more productive policy in connection with our entire investment, mortgage, and security portfolios.

Membership in the bank system would make you somewhat less dependent on the commercial banking system, and I think that generally is desirable.

BROAD APPEAL OF FEDERAL CHARTERS

Now, may I refer for a moment to the Federal charter idea. I don't know whether I have indicated strongly enough my belief that this idea is vital to the development of your business. I think it is vital to the continued development of the mutual thrift idea—either savings and loan or savings banks.

I think it is a vehicle which many of you could use. I think it is a vehicle which many savings and loan associations could use. The strength of my convictions goes to this: If the Federal charter law is adopted in approximately its present form, the First Federal Savings & Loan Association of Peoria will convert to a Federal mutual savings bank charter. That is not merely the irresponsible opinion of its president. It is the considered judgment of its board of directors, who have been kept rather constantly informed of the developments in this area; and it seems to me the benefits to the whole central Illinois area, to our members, as we call them now, our depositors as we would call them then, are so obvious that there would be no question about our members concurring in that decision should the opportunity come.

Maybe there has been some reason why the president of a little savings and loan

association in the Midwest should visit with you. I know that my contact and experience with your business has been a most enlightening one to me. It has, I think, made me a better president of a savings and loan association, and—if, as the result of this conversation, I never see you again—it's been nice knowing you.

FEDERAL CHARTERS NOW

(Address by Morris D. Crawford, Jr., president, the Bowery Savings Bank, New York City, at the 16th midyear meeting, National Association of Mutual Savings Banks, December 4, 1962, New York City)

MORRIS D. CRAWFORD, JR.

(Mr. Crawford, who is now in his 4th year as chairman of the committee on Federal legislation of NAMSB, has been in the forefront of activity on behalf of Federal charters for mutual savings banks since the current legislative effort got underway in the summer of 1958. He serves on the Federal Home Loan Bank Board Task Force, composed of both savings and loan and savings bank leaders, and he has worked with representatives of both industries to develop a sound legislative basis for a united nationwide thrift system.)

On October 2 and 3, a Federal mutual savings bank bill was introduced in the Congress for the third successive year. I am delighted at these tangible results of our long years of effort. In previous years, we have proceeded deliberately. Our approach has been one of caution, of probing. We wanted to test the reactions of Government agencies and of the other financial industries and associations; we were always mindful of the demands of the tax struggle; we wanted to provide time for the study of this legislation; we wanted to gather our allies; and we wanted to identify our opponents.

This process, I am happy to announce, has now been largely completed. The opinions of all interested groups have been sought. Based on the results obtained, the board of directors of the association believes that we are ready to present our case to the Congress. This belief is shared by the congressional sponsors of this legislation. They have counseled us that the legislative climate is favorable and that if we are serious and determined in our purpose—the time to proceed is now.

But even absent this generous counseling—we have only to consult the evidence of our own senses. No banker today needs a seismograph to detect the rumblings of change in the entire banking industry. The commercial banking industry is making its massive presence felt in the savings and mortgage markets. The savings and loan industry, faced with this new competitive pressure, is chafing at its narrow statutory bonds. The Comptroller of the Currency and the State supervisors are confronting one another in a controversy the results of which may change the entire profile of American banking.

Gentlemen, the winds of change have blown through banking once before in our time—the early 1930's—and while they raged, the savings bank industry rode out the gale at anchor, moored in the good ship "Status Quo." That ship is now as obsolete as the *Bounty*. We cannot afford to remain immobile this time. We can and must become part of the reorganization and modernization of the Nation's financial system through achieving our goal of Federal chartering.

In our efforts we will find that we are not alone. The Commission on Money and Credit, established to review the Nation's monetary and credit structure, has completed its studies. Its position on Federal charters is one of unequivocal support. In his 1962 economic report to the Congress, the President characterized the findings and

recommendations of the Commission on Money and Credit as deserving of careful consideration by the Congress, the Executive, and the public. It is important to note that the President has established a Committee on Financial Institutions composed of 11 key members of the administration to consider changes in Federal policy that will promote stability, growth, and efficiency of private financial institutions. The Federal chartering of mutual savings banks is included in the agenda of this committee. It is hoped that the committee will favor Federal chartering of mutual savings banks when it submits its recommendations to the President shortly.¹

FEDERAL AGENCY SUPPORT

The Veterans' Administration and the Housing and Home Finance Agency are also in favor of Federal charters for mutual savings banks. During the last year the Federal Home Loan Bank Board, originally opposed to the bill, has now indicated its informal approval. Chairman Joseph P. McMurray of the Federal Home Loan Bank Board has stated that the task force which he appointed to advise him on a wide scope of issues has given its support to the idea of Federal charters for mutual savings banks. The Federal Reserve Board has agreed that the idea merits careful study.

We have received the support of that great American trade group, the National Association of Home Builders.

The findings of a study by an academic team at the University of Chicago strongly support the economic advantages of extending mutual savings banking beyond its present confines.

The National Association of Supervisors of State Banks, which has repeatedly emphasized its support of dual banking, will maintain, we would trust, a neutral position on this national issue.

Perhaps the most heartening development of the last 2 years has been the work of the savings and loan and savings bank exchange groups—unofficial committees composed of savings bankers and savings and loan executives. This group has worked hard and long, and in an atmosphere of growing understanding and alliance, to perfect a Federal mutual savings bank bill which would combine the best features of both our industries. I would like you to know that the Federal mutual savings bank bill now before the Congress represents invaluable contributions from our savings and loan friends. These men, although not official representatives of the savings and loan trade associations, are important figures in their industry, and they are men committed to the goal of a new, united thrift system through Federal mutual savings banks.

At this gathering of savings bankers, I do not believe that I need review at any length the merits of this legislation for our own industry and its depositors—the increased growth it offers, the greater access to national forums through which we may hope at last to be able to aid in determining the outlines of our future, the potential ability a Federal charter bill will give us to respond to oppressive supervisory practices and the enjoyment of 20th-century powers for 20th-century institutions.

WHY FEDERAL CHARTERS

To persons other than savings bankers, however, I would also urge the support of this bill on the following grounds:

First, A system of Federal mutual savings banks would result in an increased and evenly distributed flow of savings, savings which will become the ultimate source of

that capital expansion so necessary to meet the demands of our country and the competitive challenge of the Common Market.

Second, The increased availability of mortgage and other long-term credit with a consequent reduction in costs of borrowing and in regional mortgage yield spreads.

Third, The ending of restricted entry into financial markets for savings banks, which has led to insufficient savings facilities, inefficient allocation of resources, and limited credit availability.

Fourth, The introduction of new equality of competitive opportunity leading to progress for all competing financial institutions. Mutual savings banks may not be organized in 32 of our States. Recent efforts to have the merits of savings bank legislation considered in these States have been frustrated by short-sighted competitors at the expense of the public welfare. It is clear that extension can best be achieved through Federal charter legislation.

Fifth, The modernization of investment powers for other savings institutions. The savings and loan industry, over the past 30 years, has developed mature, progressive institutions quite capable of investment powers beyond the archaic confines they now must endure. The Federal mutual savings bank bill provides for the optional conversion of such institutions into Federal mutual savings banks—into banks capable of performing brilliantly their traditional role in home financing and at the same time enjoying the flexibility to provide capital to many new areas of the investment spectrum.

These reasons are at the heart of our Federal charter program. We believe in them and we are prepared to go before the Congress and defend them—now.

CENTENNIAL OF DUAL BANKING

No talk on banking would be complete without the mention of the centennial of dual banking: In 1963, the Nation's financial industry is honoring the 100th anniversary of dual banking, that extension to banking of the Federal concept of government found in our Constitution. Dual banking provides for a system under which banks may operate under the authority of either the State or Federal Government.

Dr. Charles E. Walker, executive vice president of the American Bankers Association, has stated this analogy between our system of government and our system of banking as follows:

"Indeed, there is in my mind a close if not inseparable relationship between the dual banking system and the concepts underlying the division of powers and responsibility between our States and the Federal Government."

Expanding on the constitutional analogy, and on the system of checks and balances so basic to this Government, Mr. Robert Myers, Jr., secretary of banking for the Commonwealth of Pennsylvania, has stated:

"The dual banking system is the unique feature of American banking. It comprehends two separate and distinct systems of banks, one chartered, regulated and supervised by the States, and the other chartered, regulated, and supervised under Federal law. It is the product and result of the American plan for the division of governmental responsibilities and powers between the States and the National Government. It is in harmony with American ideals and our traditional concept of government."

It is not often so easy to find such unanimity. And that is fortunate for us, for we have always wholeheartedly subscribed to dual banking, and we demonstrate this continually by our efforts to expand mutual savings banking on a State as well as a National level. This industry joined with the State of Alaska in bringing mutual savings banking to that great area. Our committee on extension con-

¹ On December 14, the American Banker reported approval of Federal charters in the staff report of the committee.

tinues to give its entire effort to spreading further our State system.

WHY NOT US?

In our support of dual banking and its benefits, we have often wondered: "Why not us?" Every other form of banking and savings institution enjoys dual chartering. There are National and State commercial banks, there are Federal and State savings banks and loans, there are Federal and State credit unions. Existing side by side, both systems have continued to flourish and to contribute to one another's progress. Mutual savings banking, alone, though it represents more than \$40 billion of the deposits of Americans, does not enjoy membership in the dual banking system. We ask, for the benefit of the country as well as for mutual savings banks and their depositors, that our long exile from dual banking be ended—and that it be ended now.

The sponsors of the Federal mutual savings bank bill, Senator Sparkman, of Alabama; Representative Multer, of New York; Representative Rains, of Alabama, and Senator Bush, of Connecticut, recognize that dual banking presupposes that both the States and the Nation have a vital interest in the strength of American financial institutions. The independence of both necessarily means independent responsibility and so individual conclusions on how best to serve those responsibilities.

Thus, the decision of the States of Alaska, Massachusetts, and New York to regard mutual savings banking as crucial to their banking needs does not dictate that the Federal Government must decide, in its independent appraisal, that Federal mutual savings banks are vital nationally.

By the same token, the decision of other States that mutual savings banks are not needed in their banking structure should not prevent the Federal Government from making a different decision in pursuance of its own responsibilities.

This is the very essence of a dual system. It presupposes two independent judgments as to the best fulfillment of independent responsibilities. Some argue for maintenance at all costs of a delicate balance between State and National banks. They would apparently argue that the goal to be pursued is absolute agreement in the conclusions of 50 States and the Federal Government as to what response to make to banking needs. This kind of search for monolithic uniformity doesn't seem to be in keeping with a dual system concept nor with the basic economic fact that competitive uniformity inhibits progress. The most cogent presentation of this basic fact has come from the Comptroller of the Currency, Mr. James J. Saxon: "The only sense in which the duality of a banking system can be made truly meaningful is to regard the authority of each segment as separate and distinct, and not subordinate one to the other. Far from posing a threat to the duality of our banking system, this separation of power is the only means by which the dual banking system may be sustained. Under any other approach one authority would become predominant, and duality in any practical terms would disappear." And: "It is no threat to a dual banking system, but merely the natural expression of such a system, to allow the Federal and the individual State authority to be separately and independently exercised in full."

CONGRESSIONAL HEARINGS

The congressional sponsors of the Federal mutual savings bank bill have said that they will urge hearings on this bill within the next 2 months. We must support them every step of the way in what will be a long and closely contested struggle.

I want to impress on you that what is demanded of us is action now. If our years of urging Federal mutual savings banking have

been only an academic exercise, then I submit we have done a disservice to our depositors and to the Nation.

This will be an exacting process for all of us, and, as the proponents, we will have to carry the burden of proof as to the merits of the bill. That proof is now being assembled by the national association's leadership and its research and legal departments. Documents substantiating our claim that economic and other public benefits can be expected to flow from enactment of the Federal mutual savings bank bill are nearing completion. They will be of primary importance at the congressional hearings.

CALL TO ACTION

In the meantime, what can each of us do to advance the day when mutual savings banks will be permitted throughout the Nation? You have already received materials analyzing the present bill and presenting the salient arguments. The national association, in coordination with the nine State associations and with designated board members in the rest of the States, is conducting an action campaign to be certain that every Congressman and every U.S. Senator in every mutual savings bank State is well informed about our industry and its extension objectives via the Federal charter route. The materials which member banks have received furnished the basic guide lines for your communications with your congressional representation. If you need further assistance, the national association's officers and staff are immediately available to you. We must first achieve the support of Federal legislators in the 18 mutual savings bank States before we can expect anyone else's support.

When you enlist in this campaign, there will be no jobs for generals. All of us will be on the firing line. Each of us must speak to our Congressmen, our State supervisors, our trustees, our depositors, our local civic and business groups. And this campaign must begin immediately. Gentlemen, the time is now.

Mr. Speaker, the proposed legislation presents the possibility of two-way conversions between savings and loan associations and Federal mutual savings banks. Many of the specific provisions in this bill result from suggestions made by savings and loan leaders.

The most recent legislation on this subject was introduced by several of my colleagues and me in October 1962. My bill was H.R. 13318. The present bill contains a few comparatively minor changes from the form of the bill introduced in October 1962. Basically the two bills are alike and, therefore, the study given to H.R. 13318 will produce conclusions valid with reference to the new bill. As an original sponsor of this type of legislation, I recommend it highly to my colleagues. It will represent a major stride forward toward reaching maximum economic growth by providing the country with a major source of capital to finance home purchases, industrial development, and public works.

After a reasonable period of time has been afforded for study of this proposed legislation, it is my hope that the Committee on Banking and Currency will arrange for public hearings to be held later during the present session. I fully expect that these hearings in turn will lead to the enactment of a practical piece of financial legislation that will add a substantial number of thrift facilities to the present dual banking system in the United States.

Mr. Speaker, I also include a summary and section-by-section analysis of H.R. 258:

SUMMARY OF FEDERAL MUTUAL SAVINGS BANK ACT (H.R. 258)

The declaration of policy asserts that to increase the savings necessary for capital formation within the dual banking private enterprise system, Federal charters should be authorized for mutual savings banks. Thereby the vitality of State-chartered mutual savings banking will be maintained and strengthened. Home financing and business enterprise in the area where Federal mutual savings banks are located will be encouraged through new sources of long-term credit. Efficiency requires insurance of savings in federally chartered thrift institutions by a single Federal agency.

Title I provides that 5 to 21 members (who may be designated corporators or trustees) may apply to the Federal Home Loan Bank Board for a charter. The Federal Home Loan Bank Board will issue a charter upon finding that the savings bank will serve a useful community purpose, have a reasonable expectation of financial success, and will not unduly injure existing savings institutions. Federal mutual savings banks must belong to the Federal Home Loan Bank System and have savings insured by the Federal Savings Insurance Corporation. Members of a Federal mutual savings bank elect the board of directors, or a board of directors may be elected by applicants for a charter in a savings bank without members. Directors manage the savings bank. Statutory restrictions control any self-dealing by directors with the savings bank.

Savings bank borrowing is controlled by the Federal Home Loan Bank Board. A savings bank may issue passbooks or other evidence of savings, and provide for bonus accounts.

Investments authorized include among others Federal obligations, municipal obligations, real estate mortgages under specified restrictions, and corporate securities under the prudent man rule. A savings bank may also make consumer loans. It may establish branches to the extent that financial institutions accepting funds from savers on deposit or share accounts enjoy such privilege.

State-chartered mutual savings banks and State or federally chartered savings and loan associations may convert to Federal mutual savings banks and vice versa. Federal- or State-chartered mutual savings banks may merge or consolidate with one another. Among other general powers, a Federal mutual savings bank may exercise in its State of location all powers of a State-chartered mutual savings bank in such State. Savings banks must be examined at least annually. The Federal Home Loan Bank Board has general regulatory authority. Provisions against discriminatory State taxation are set forth. Conservators and receivers may be appointed as provided in the bill.

Title II creates the Federal Savings Insurance Corporation out of the FSLIC and constitutes the Federal Home Loan Bank Board its board of trustees. Insurance premiums are the same as for FSLIC. A State-chartered savings bank insured by FDIC shall take with it a pro rata share of FDIC insurance reserves if it should become a Federal mutual savings bank, and thereafter ceases to be insured by FDIC.

Title III requires an annual report by the supervisory board to the President for transmission to the Congress.

SECTION-BY-SECTION ANALYSIS OF THE FEDERAL MUTUAL SAVINGS BANK ACT (H.R. 258)

Section 1. Title: Federal Mutual Savings Bank Act.

Section 2. Declaration of policy: To encourage increased savings to finance new

housing and other capital formation, privately managed, federally supervised mutual savings banks should be authorized to be chartered by a single agency of the Federal Government. Accounts in such savings banks should be insured by a Federal agency. Such savings banks will aid in executing the constitutional duty of the Federal Government to regulate the value of money and will provide a depository for public money.

TITLE I

Section 101. Definitions: The following terms are defined: "Board," "conventional loan," "doing business," "financial institution," "first mortgage," "first deed of trust," "first lien," "savings bank," "State," "State of domicile," "domiciliary State," and "thrift institution." "Thrift institution" includes Federal- and State-chartered savings and loan associations and like organizations, and Federal- and State-chartered guarantee savings banks. "Financial institution" includes thrift institutions as so defined, commercial banks, trust companies, and insurance companies.

Section 102. Chartering: 5 signers from 21 or more individuals acting as members (usually known as incorporators or trustees in the mutual savings bank system) may apply to the Federal Home Loan Bank Board for a charter. The Board will issue a charter when it finds the savings bank will serve a useful community purpose, enjoy reasonable expectation of financial success, and in operation will not unduly injure thrift institutions or commercial banks accepting savings deposits. Savings banks so chartered must have the words "Federal," "savings," and "bank" in their titles. Each must become a member of the Federal Home Loan Bank System, and have deposit insurance with the new Federal Savings Insurance Corporation, successor to Federal Savings and Loan Insurance Corporation.

Section 103. Members: Qualifications for members are prescribed. They serve for staggered terms of 10 years. (They elect directors.)

Section 104. Directors: Qualifications for directors, who manage and control the savings bank, are prescribed. They number from 7 to 25 and hold office for staggered terms of 3 years. Controls over self-dealing by directors with the savings bank are specified.

Section 105. Commencement of operations: Savings banks must qualify as insured banks in FSIC before commencing operations, and must maintain such status to continue operations. Before operating, a cash expense fund satisfactory to the Board must be raised by sale of transferable deferred payment certificates.

Section 106. Reserve fund: Before obtaining a charter, a savings bank must also have in cash an initial reserve fund of at least \$50,000, evidenced by transferable deferred payment certificates. The reserve fund can be used only to meet losses. The savings bank may retain additional reasonable amounts for any corporate purpose.

Section 107. Borrowing: A savings bank may borrow funds subject to Board regulation.

Section 108. Deposits: A savings bank may handle usual passbook savings accounts and bonus accounts. It may decline or repay deposits at any time. Interest on savings may be paid as approved by directors. The savings bank may invoke up to a 90-day advance notice of withdrawal. The board may extend this period in an emergency. FSIC may take action necessary to make a savings bank sound and solvent either before or after closing.

Section 109. Investments: A savings bank may invest in Federal obligations, municipal securities, property improvement loans, certain Canadian obligations, World Bank obli-

gations, Inter-American Development Bank obligations, first mortgage loans on real property under specified restrictions of dollar amounts, class and loan, maturity, loan-to-value ratio, and geographical limits. Broad participation powers are granted. Savings banks may also invest in bankers' acceptances, corporate securities under the prudent man rule plus stated restrictions, obligations of mutual savings banks, and certain promissory notes, both secured and unsecured.

Section 110. Branches: With Board approval, a savings bank may establish in-State branches only to the extent any savings institutions can. The Board must first make findings required for issuance of a charter. A savings bank resulting from conversion, consolidation or merger, may retain existing offices and unexercised branch rights.

Section 111. Conversion: With Board approval and subject to new charter provisions, any thrift institution may convert into a Federal mutual savings bank, under specified procedure, but not in contravention of the laws under which the converting institution is organized. Minimum requirements for members and directors are excused for a savings bank formed by conversion. The Board must find the converting institution can observe the duties and restrictions of Federal mutual savings banks, and conform to this act's requirements. A converted savings bank may retain and service all accounts and assets lawfully held on the date of conversion.

A Federal mutual savings bank may convert into any nonstock thrift institution, with approval of the authority regulating the resulting institution, and consent of FSIC. Any resulting savings and loan association shall have its share accounts automatically insured by FSIC.

Section 112. Merger and consolidation: Federal mutual savings banks may merge or consolidate with each other or with in-State, State-chartered mutual savings banks. State approval is required if the resulting bank is State chartered; Board approval if the resulting bank is federally chartered. The Board must consider the act's purposes, the prospects for financial success, and ability to meet the duties of and restrictions of a Federal mutual savings banks. Corporate existence of the combining institutions continues in the resulting one, and rights and obligations are transferred to it pursuant to terms of the merger or consolidation agreement.

Section 113. General powers: Express operational powers are granted to Federal mutual savings banks. Included is authority to exercise all powers of State-chartered mutual savings banks in the same State. Powers reasonably incident to express powers are also conferred.

Section 114. Examination: Annual examinations by the Board are required with expenses assessed to cover costs. The Board may conduct additional examinations.

Section 115. Regulatory authority: The Board is granted general regulatory authority and supervision over Federal mutual savings banks.

Section 116. Taxation: No State shall tax Federal mutual savings banks more than the least onerous tax on any other local financial institution. No State other than the domiciliary State shall tax such savings banks for transactions in the State that do not constitute doing business, but foreclosed properties are subject to ad valorem or income-on-receipts taxes.

Section 117. Conservators and receivers: The Board by resolution shall state any alleged violation of law or regulation and notify the Federal mutual savings bank involved. The bank has 30 days to cure the defect, else the Board shall give 20 days notice of charges and of a hearing by an examiner as provided

by the Administrative Procedure Act. The Board is given subpoena powers enforceable by the U.S. District Court. Appeal lies from the Board decision, with court review based on the weight of evidence.

When notice of the alleged violation is given, the Board or the savings bank may within 30 days apply to the U.S. district court for declaratory judgment and injunctive relief. The court may enforce Board orders on request. The Board is made subject to suit and may be served through any of its agents and registered mail at its District of Columbia headquarters.

On giving notice of an alleged violation, the Board may issue a cease and desist order effective until the end of the hearing and enforceable by the U.S. district court. The Board can't bring charges on an act over 2 years old or known to the Board over 1 year. Charges must be dismissed if the Board doesn't adjudicate them within 1 year after they are filed.

Grounds for conservatorship of receivership are violation of an order or injunction final because time to appeal has expired or an unappealable order or impairment of capital. On such a ground the Board shall petition the U.S. district court for a conservator or receiver. With savings bank consent, the court may name either one without notice or hearing.

In any event, the court may appoint a conservator after notice and hearing. The person appointed as temporary or permanent conservator must be a Board officer or agent.

If liquidation seems necessary, the FSIC shall be named receiver, and may liquidate the savings bank in addition to having all powers of a conservator.

A temporary conservator may operate the savings bank as in normal course of business, subject to court limitations. A conservator may also reorganize the bank or organize a new savings bank or merge the bank with another savings bank or sell its assets.

Remedies in this section are exclusive. Orders or injunctions expire within 3 years unless extended for cause. Savings banks in custody continue to make reports and the Board must give Congress detailed reports of seized savings banks and of general enforcement under this section. Savings bank officials may contest any proceeding and be reimbursed from bank assets.

In an emergency, the U.S. district court ex parte and without notice, upon Board petition, may name a temporary conservator. The petition under oath must allege facts requiring prompt action to prevent irreparable injury. The Board must promptly proceed to correct the alleged defects or move to appoint a conservator or receiver. The temporary conservator must be removed when the defect is cured or the motion for a conservator or receiver has been adjudicated.

TITLE II

Section 201. Federal Savings Insurance Corporation: The name of the Federal Savings and Loan Insurance Corporation is changed to the Federal Savings Insurance Corporation. The Federal Home Loan Bank Board, as the board of trustees for FSIC, is given power to manage its affairs, and the chairman of the board of trustees has the same type of powers he has as Chairman of the Board. Federal- and State-chartered mutual savings banks are made eligible to apply for FSIC insurance, and shall pay the same insurance premiums as do savings and loan associations insured by FSIC. Federal mutual savings banks cannot voluntarily withdraw from insured status with FSIC.

Section 202. Transfer of funds from Federal Deposit Insurance Corporation. When a State-chartered mutual savings bank insured by FDIC becomes a Federal mutual savings bank by conversion, merger or con-

solidation and becomes insured by FSIC, it takes with it a pro rata portion of FDIC insurance reserves calculated according to a formula based on assessments the savings bank has paid to FDIC. Amounts so transferred go to the primary reserve fund in FSIC. With the transfer the savings bank ceases to be insured by FDIC, but outstanding obligations to all parties are protected. The same procedure applies to a State-chartered mutual savings bank choosing to change deposit insurance to FSIC from FDIC.

Section 203. Miscellaneous: FSIC is made subject to Budget Bureau control, as is FSLIC.

TITLE III

Section 301. Annual report: The Board must submit an annual report of its operation to the President for transmission to Congress.

Section 302. Separability: The rest of the act stays valid even though a provision or its application to any person or circumstance is held invalid.

Section 303. Right to amend: Congress reserves the right to alter, amend, or repeal this act.

A Lavish Lunch

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. MINSHALL. Mr. Speaker, this morning's Wall Street Journal carried as its lead editorial an attack on the new expense account regulations drawn by the Internal Revenue Service. Mindful that everyone's thoughts are turning toward tax reform, I submit the editorial for the attention of my colleagues:

A LAVISH LUNCH

When we were younger and had more hair we used to walk several blocks from the office to eat in the Automat.

Now that some of the younger people show an embarrassing deference to our age, we eat at a nearby restaurant where the checks are somewhat higher. The place isn't noted for the smoothness of its service or the tranquility of its atmosphere, but despite the hubbub it seems luxurious beside those days of long ago.

Of course sometimes, nowadays, we get invited out to lunch and the other fellow even pays the check. Just the other day we lunched at one of the leading banking establishments of the country where half a score of economists gathered to discuss the state of the Nation's economy and such things as taxes, cut and uncut.

We had eggs Benedict, which we don't get at home, and the service was refreshingly quiet; more so than the conversation. A Rockefeller or a Kennedy wouldn't have been impressed by the lunch, but we suspect that some young fellows around our shop would have thought it lavish.

Anyway, whether it was or not has now become a matter of State. The Congress in its infinite wisdom has decided that while it's all right to entertain economists at lunch (provided they talk economics) the entertainment must be economical. Otherwise the economists, eating better than is their custom, would be getting an untaxed benefit and the solvency of the U.S. Treasury would be impaired.

And so the metaphysicians of the Internal Revenue Service, poor fellows, are now trying to lay down a rule as to just what is

and isn't lavish. Apparently they are finding it no easier than the metaphysicians of the Puritan past who tried to decide how many inches of lace on a lady's petticoat constituted a lavish—or lascivious—display.

Do you measure lavishness by the size of the check; i.e., can you have roast beef at Longchamps but not at "21"? Or by the number of forks for the dinner plate? Is a restaurant with Muzak within the pale while one with its own piano is beyond it? Must the president of General Motors observe the same frugality as a poor journalist—and if not, why not?

The questions are patently ridiculous. Yet it is just such silly questions that sane men must now gravely debate. Unfortunately, however, the consequences of foolish answers are not trivial. For after everybody has laughed at all the jokes, a serious question remains.

Curiously, everyone would see it readily enough if it involved anything but "entertainment," a word that conjures up visions of wickedness. Is the Government going to decide for every businessman in the land what constitutes a good business expenditure?

Let us suppose that the XYZ company is having some trouble with its Chicago business and decides that the thing to do is to send an official there, find the trouble and cure it. Let us suppose the company decides that the easiest, quickest, and cheapest way to approach the knowledgeable people who can help is take a hotel suite, open a bar, and dine them in an informal and relaxed atmosphere. In business as in world diplomacy, sometimes more is accomplished in an hour of civilized socializing than in days of formal meetings.

Now since one man's dally fare is another man's lavishness, who is to say whether the company should buy hamburger or pheasant under glass? Or whether, like the Japanese, it should exclude the ladies from a man's world or have the company official's wife play hostess to the ladies of the guests?

The variations of this problem in business are many, and the truth is that circumstances alter cases. The IRS chief, Mr. Caplin, is well aware of this and he doubtless wants to be reasonable. Still, what is proposed is that Mr. Caplin and his conferees, not the managers of the XYZ company, decide what is "reasonable" under what circumstances.

No one would allow them that arrogance in any other aspect of business decisions. This newspaper, for example, must buy newsprint—no newsprint, no business—and newsprint comes in various qualities at different prices. No one argues that IRS agents should decide what quality is appropriate for our business needs or that they should order us to be no more extravagant in our newsprint expenditure than any other newspaper.

Yet who can be sure they won't try? What's to stop the Government from deciding the limits of extravagance for all business expenses—once it's accepted these all-wise men can tell every man what kind of a lunch is lavish?

Ukrainian Independence Day

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. BECKER. Mr. Speaker, 45 years ago there emerged in Eastern Europe a

new, free and independent nation, the Ukrainian National Republic. The breath of freedom was soon squeezed out of this new nation by the tyrants from Moscow who, through subversion and outright conquest destroyed the Republic. The Communists went further than that; they made of the real Ukrainian Republic a mockery and included that name as one of the many so-called Soviet Republics.

Since 1920 the people of the Ukraine have slaved under Communist domination. Indeed, they were the first people to be conquered by the Communists, the forerunner of many millions more who have been forced into slavery and worse by the Reds.

Mr. Speaker, the date, January 22, is well worth remembering. It should be a goad to the conscience of all freemen everywhere in the world—a reminder that their freedom is precious and a noble thing. This date should serve to remind freemen of the conditions under which their brothers must now live, of the slavery which exists in the world, of the police state and of totalitarian governments.

Although the people of the Ukraine are under the domination of the Communists, I know that there still burns deep within them a spirit of freedom. This may today be only a candle flickering in a great darkness. But if those of us in the free world can act together, perhaps one day this tiny flame will spring into a roaring conflagration which will consume communism itself.

We who today can count ourselves among the fortunate few who are free must also realize that so long as there is one person alive in this world to whom freedom is denied by ruthless, lawless and Godless tyrants, some small part of our own freedom is eroded away from us. We cannot count ourselves totally free if there are those existing in the dark misery of slavery.

Mr. Speaker, the United States must dedicate itself not only to the preservation of freedom here and throughout the world, it must dedicate itself as well to the restoration of freedom for those millions who have been engulfed in communism.

We must each shoulder this responsibility and make this our goal. We cannot sit idly by while slavery continues to exist. We must take every step and follow every course that a rational man can to achieve this ultimate goal.

If as a Nation and as individuals we do dedicate ourselves to these principles, then the goal of freedom for all mankind must inevitably be reached.

Medicare Versus Private Medicine

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. DERWINSKI. Mr. Speaker, we fully understand the political nature of

the administration's so-called medicare program. We recognize that we must face this issue with unfortunate emphasis on the vote-purchasing aspects of the administration's scheme, as opposed to a solution which would provide long-range benefits to the public and produce increases in our already high medical standards.

The relationship of the Congress to the issue is very effectively discussed in an editorial of Thursday, January 3, in the Blue Island Sun-Standard, which I insert in the RECORD:

MEDICARE VERSUS PRIVATE MEDICINE

The new Congress, to say what everybody who reads the newspapers knows, will have plenty of business on its hands. Much of it, in a sense, will be unfinished business. It will consist of those major measures which the administration proposed in 1962, and which either fell by the wayside when the vote was taken, or did not reach the voting point at all.

The November elections, as always, brought about some changes in the dramatis personae of Congress. The Democrats made small Senate gains, the Republicans did the same in the House. But party labels blur nowadays and there is rarely such a thing as a solid party phalanx for or against any particular piece of legislation. The various commentators have discussed at great length what they think—or hope—the majority in the two branches will stand for. We will know that, for sure, 8 or 10 months from now. Meanwhile the lines form and the battles are readied.

In this, we need not consider foreign policy in its principal aspect—here, by constitutional authority and general agreement, the President is supreme. In the cold war, the Nation must speak with one voice, and that voice is his. But domestic policy is an entirely different matter. For example, it is likely that the administration will throw all the weight and authority it can muster behind medicare—the plan whereby everyone drawing social security benefits would become entitled to a wide range of government-provided medical services. The medicare bill failed last session, and it is common knowledge that the President felt deep anger at the rebuff. It is also likely that the new medicare bill will be broadened, to provide the same benefits for several million people in the 65-and-over age group who are not within the social security program.

Some of the supporters of medicare—and, to look at the problem more broadly, of other possible programs which would require more and more government involvement in the national health picture—have chosen as a weapon of argument that private medicine has failed to rise to the need. The other side of this story was recently told by Dr. George M. Fister, the new president of the American Medical Association. In his words, "Hippocrates, the great Greek physician, once said, 'Strong maladies require strong medicine.' These words have special meaning for the medical profession today. * * * We must diagnose the malady and treat it with truth."

Dr. Fister then said that "medicine stands as a proud symbol of the finest achievements of our competitive enterprise system," and reviewed a few pages of the records. Here are some of those pages:

About 4.5 million Americans are alive today who would be dead if the mortality rate of 25 years ago still prevailed. For the first time in history the life expectancy of Americans has exceeded the Bible's three-score-and-ten—it is 70.2 years. Eighty percent of the drugs

commonly now used were unknown a mere 10 years ago, and in the last two decades the United States has been responsible for more important drug discoveries than all the other nations of the world combined. Last year the prescription drug industry spent a record \$245 million in research—triple that of the average industry. There is now a record number of hospital beds in this country, and the average hospital stay is the lowest in history. A record number of new physicians—7,168—graduated from medical schools in 1962. In that year, infant mortality rates declined to a new low of 25.3 deaths per 1,000 births. A record number of Americans—about 136 million—are covered by voluntary health insurance prepayment plans.

So the story goes. Dr. Fister does not think that our medical system is anywhere near perfect. He knows better than most of us how much more needs to be done. But he is convinced, as are legions of other authorities, that it can best be done, and done most surely and effectively, under a free system, not a government-dominated system. So, he urges that the principles involved in the fight be stressed to the limit, and every legitimate means be used to acquaint the American people with the record of achievement of American medicine in all its varied phases. For, he believes, "The people will respond to the truth."

Philadelphia Federal Executive Board

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. TOLL. Mr. Speaker, I had the opportunity on January 4, 1963, to attend a very interesting meeting of the Federal Government Accountants Association which was held at Kugler's Restaurant in Philadelphia. The meeting notice and newsletter, which I have attached, shows the nature of the subject of the meeting and the agencies represented in the messages which were presented to the accountants who were present. If other large civil service areas operate with Federal executive boards like this one, the future of coordination of government activities will be very successful:

FEDERAL GOVERNMENT ACCOUNTANTS ASSOCIATION, PHILADELPHIA CHAPTER—MEETING NOTICE AND NEWSLETTER, FRIDAY, JANUARY 4, 1963

FEDERAL EXECUTIVE BOARD

HON. HERMAN TOLL, Congressman, president, Philadelphia Federal Bar Association.

Frank Matejick, coordinator of career development activities, third U.S. Civil Service region.

"I want coordination of Government activities outside of Washington significantly strengthened." The above words are those of President Kennedy and are contained in his memorandum of November 10, 1961, to heads of all departments and agencies. He directed the Chairman of the Civil Service Commission to arrange for a board of Federal executives in each of the Commission's administrative regions. A glance at the partial composition of our Philadelphia Federal Executive Board as displayed in this notice will indicate the stature of the Philadelphia Executive Board with which we are favored.

We have an outstanding program introducing us to the constructive work which this group can do.

Our social was a smashing success and particularly smashing at the conclusion when we struggled for the attention of the hat check girls. Fifty-nine members, wives and friends had a very enjoyable evening at the Latin Casino. The only sad note was the absence of Jack Barash, who has been confined to Lankenau Hospital, room 211, since about a week before the social. Although he cannot have visitors, we understand he is coming along nicely. It is expected he will remain in the hospital for another month. We hope he will improve rapidly and that we will be seeing him at one of the meetings in the near future. You may want to send him a get-well card.

OUR FIRST MEETING IN 1963

Date: Friday evening, January 4, 1963.

Time: 5:30 p.m., FGAA conviviality; 6:30 p.m., dinner; 7:30 p.m., Sing Along With Mitch Patchell; 7:45 p.m., technical program.

Subject: "Philadelphia Federal Executive Board."

The message: Stephen P. Ryder, Director, Civil Service Commission, third region (vice chairman). Dean J. Barron, regional commissioner, Internal Revenue Service (director finance management committee). Edward N. Rosa, regional director, Small Business Administration (director, interdepartmental and community liaison committee). Sedrik W. Melidosian, manager, Veterans' Administration Insurance (member, personnel management committee).

The panel: Joseph R. Hock, former Washington chapter president, Comptroller, Maritime Administration; James A. Robbins, former national president, Deputy Chief, Headquarters U.S. Army Audit Agency.

Our esteemed guests: Gordon R. Elliot, regional manager, Veterans' Administration (chairman, Philadelphia Federal Executive Board); A. S. Harzenstein, regional commissioner, Alcohol and Tobacco Tax Division (chairman, subcommittee government associations liaison).

OFFICERS FOR 1962 AND 1963

President, Harry Levine.
First vice president, Albert M. Greene.
Second vice president, George F. Budd, Jr.
Treasurer, Charles J. Patchell, Jr.
Assistant treasurer, Michael A. Prendergast, Jr.
Secretary, Barbara B. Wright.
Assistant secretary, Ann Lewun.

ADVISERS

Francis G. Green.
Paul N. Righter.
Milton J. Savar.

DIRECTORS

Isadore E. Axler.
Louis W. Mangene.
Arthur W. Miller.
Max Minkin.
Paul F. Peterson.
Willis T. Porch, Jr.
Leonard J. Shackelford.
Joseph Sternberg.
William D. Sullivan.

AGENCY REPRESENTATIVES

Army Audit Agency, Glorio J. DiSepio.
Auditor General, U.S. Air Force, George A. Warner.
Defense Clothing and Textile Supply Center, Charles E. Campbell.
Federal National Mortgage Association, James R. Riley.
FGAA members not in government, Leonard M. Tucker.
Forest Service, Department of Agriculture, Russel E. Vance.
Frankford Arsenal, Charles Belsterling.
General Accounting Office, Victor Antelman.

Headquarters, Air Force, Contract Management District, Edward T. Diviny.
 Internal Revenue Service, Harold M. Schwartz.
 Marine Corps Supply Agency, Edward J. Sweeney.
 Maritime Administration, Charles J. Millard.
 Navy Area Audit Office, E. A. Phillips.
 Philadelphia Naval Shipyard, Charles K. Valutas.
 Philadelphia Ordnance District, Mark J. Alton.
 Philadelphia Veterans' Administration, Edmund Murphy.
 Post office, Edward S. Evans.
 Signal Supply Agency, Abraham L. Jasner.

PAST PRESIDENTS

S. C. F. Metzgar, POD, 1952-53.
 L. N. Teitelbaum, AF-AG, 1953-54.
 Frank G. Green, AAA, 1954-55.
 Daniel L. Ryan, NAAO, 1955-56.
 Scott R. Tyree, GAO, 1956-57.
 E. A. Phillips, NAAO, 1956-57.
 Charles W. Gissell, NAAO, 1956-57.

 Paul N. Righter, NAAO, 1961-62.

H.R. 2158

EXTENSION OF REMARKS
 OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. PELLY. Mr. Speaker, I have introduced a bill, H.R. 2158, to provide for recognition by law of organizations of postal and Federal employees.

This legislation is the same as I sponsored in previous sessions of Congress, and it is submitted notwithstanding the fact that it is almost precisely a year since President Kennedy, on January 17, 1962, signed Executive Order 10988 to provide for "employee-management cooperation in the Federal service."

Mr. Speaker, I am told that the postal unions are concluding a basic agreement to apply to all postal employees throughout the country. In an election which was held several months ago, the employees chose six national organizations for exclusive recognition under the terms of the President's order. Listed in alphabetical order, those six organizations are: National Association of Letter Carriers, AFL-CIO; National Association of Post Office and General Services Maintenance Employees; National Association of Special Delivery Messengers, AFL-CIO; National Federation of Post Office Motor Vehicle Employees, AFL-CIO; National Rural Letter Carriers Association; and United Federation of Postal Clerks, AFL-CIO.

Spokesmen for these organizations tell me that the negotiations with the Post Office Department have in the main been very wholesome, and that an overall agreement covering grievance procedures disciplinary action, appeals from adverse action, and advisory arbitration will be signed no later than mid-February.

Even though we have no doubt of the genuineness of the Post Office Department's intentions to fulfill a farsighted Executive order, I feel that the country still needs the law which is envisioned by my legislation.

I feel for example that we may need to improve on the arbitration procedures which are allowable under the Executive order. I have very genuine doubts over whether the language of the Executive order, section 8b, on arbitration goes sufficiently far. That language specifies:

Such arbitration (1) shall be advisory in nature with any decisions or recommendations subject to the approval of the agency head; (2) shall extend only to the interpretation or application of agreements or agency policy and not to changes in or proposed changes in agreements or agency policy; and (3) shall be invoked only with the approval of the individual employee or employees concerned.

Furthermore, I feel that the Executive order does not go sufficiently far in the area of coverage for negotiation purposes. The Executive order specifies that in making rules and regulations, agencies are to be aware of their obligation to consummate agreements with employee organizations but that the obligation to bargain with employee organizations "shall not be construed to extend to such areas of discretion and policy as the mission of an agency, its budget, its organization and the assignment of its personnel, or the technology of performing its work."

In the Post Office Department expressly, I question whether the Administrators are omnipotent, and I feel that certainly the promotion policy to be followed in various post offices should be the subject of hard and fast agreements with employee organizations, thereby eliminating the multitude of complaints received each time political favoritism is shown or some other kind of special consideration is shown to a candidate for promotion to a supervisory position.

Mr. Speaker, because of considerations such as these, I decided again to reintroduce my legislation governing recognition of employee organizations and I hope that early and favorable action may be taken.

How Taft Did It

EXTENSION OF REMARKS
 OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. DERWINSKI. Mr. Speaker, since the Cuba crisis is growing more, rather than less, complicated, and the apparent victory of October appears much less realistic now, is it practical for us to turn back the pages of history to compare successful programs of the past. The Lansing Journal, did just that in a fascinating and concise editorial, which I

insert in the RECORD, entitled "How Taft Did It":

HOW TAFT DID IT

Fifty years ago, President William Howard Taft ordered the U.S. Infantry to Nicaragua to protect American lives and property during a revolution in that country. He did not try to stop the revolution, but its hostile effect on the United States.

Today, that would be resented as interfering with the internal affairs of a foreign country. But it kept order even while a revolution was being fought, and without taking sides.

There is something to be said for that era.

Bill To Assist Public and Private Non-profit Hospitals and Nursing Homes

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. MOSS. Mr. Speaker, I have introduced a bill, similar to one I sponsored in the 87th Congress, to assist public and private nonprofit hospitals and nursing homes to undertake badly needed modernization and replacement projects. The bill provides for establishment of a combination matching grant and loan program. The need for such legislation was contained in the President's budget message.

Modernization, rather than construction of new bed capacity, is the primary health facility need of today. This situation, not generally recognized by the public, has come about because of the prolonged concentration on important hospital needs accumulated during the depression and World War II. I want to cite the particularly critical shortage of bed space in rural areas of a few years ago.

Federal aid for construction of new hospitals, through the existing Hill-Burton program, has been instrumental in helping to reduce greatly the Nation's deficiency of hospital bed space. However, in recent years there has been a growing obsolescence of the hospitals that were already in existence and, for the most part, located in urban areas, when the Hill-Burton new construction program was begun in 1946.

In 1960, a U.S. Public Health Service survey of 25 metropolitan areas and 32 sample rural-urban areas showed a projected national cost for needed modernization and replacement of \$3.6 billion. That figure is almost four times the current rate of annual construction expenditures in the entire health facilities field, and only a fraction of that is spent on modernization and replacement, which does not add new bed capacity.

This, as the survey showed, is a nationwide problem. I wish to point out that my home State, California, has an estimated modernization need backlog of \$513 million.

The bill would authorize the Surgeon General, acting through State Hill-Bur-

ton agencies, to make grants up to 50 percent of the cost of qualified modernization projects, or loans as a supplement to grants or in lieu thereof. The total Federal share may not exceed 80 percent of the cost of the project. Also, assistance would be provided for development of comprehensive regional health facilities plans. The amounts to be authorized are left blank in the bill pending the development in committee hearings of information on the optimum size of the proposed program. The program would be effective July 1, 1964, meaning no budgetary impact until fiscal 1965.

The program in my bill is to complement and not interfere with the existing Hill-Burton construction program. It would be administered similarly. State agencies now involved in the Hill-Burton program would process the new applications and the Surgeon General would employ administrative procedures similar to those presently in effect for the construction program. Modernization assistance funds would be eligible only for projects that would not increase bed capacity by more than 5 percent.

Mr. Speaker, this legislation deals with an important national health facility need. Under existing programs, much progress undoubtedly will be made in rapidly adding to the current number of hospital beds. However, modernization and replacement of many facilities is required to improve patient care by increasing adequacy of services, safety and efficiency, and to adapt present facilities to new hospital and related medical needs.

Foreign Tourism for Philadelphia

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. TOLL. Mr. Speaker, I read in the Philadelphia Inquirer, of Monday morning, January 21, 1963, an editorial relating to the examination by representatives of the U.S. Travel Service of Philadelphia's tourist attractions and facilities.

The advantages of using Philadelphia as a port of entry and/or departure for most visitors from Europe are very great. I have attached the editorial to my remarks so that my colleagues can see why Philadelphia is so attractive:

FOREIGN TOURISM FOR PHILADELPHIA

Representatives of the U.S. Travel Service, a Federal agency, took a firsthand look at Philadelphia's tourist attractions and facilities over the weekend preparatory to telling prospective foreign travelers why they should come to America. We believe that Philadelphia should rank near the top of the list of must places for foreigners to visit.

Historic shrines in and around Philadelphia, together with the seashore resorts in nearby New Jersey, are made-to-order tourist attractions. This city's proximity to both New York and Washington, which most visitors want to see, is another asset.

Moreover, Philadelphia should be the port of entry and/or departure for most visitors from Europe, whether they come by sea or air. The multilingual welcome signs to be installed at International Airport is a good idea which well might be adopted by hotels, restaurants, and so forth.

It is planned to tell the prospective tourists about reasonable costs of travel in America. The information ought to be realistic. Underestimating costs may lure visitors to our shores but it won't send them home happy.

A foreigner can't see all of the United States in 10 or 15 days—any more than an American can. Let's try to inform and entertain visitors, not exhaust them. Because of time and money limitations many Europeans will need to confine their touring to the eastern part of America.

work with skill and daring to report and to defend the people's right to know.

Today the Associated Press, a mutual, cooperative association, serves some 7,000 newspapers, radio stations and television stations in 100 nations. It laces the earth into a web of enlightenment.

To be chosen for the presidency of such an organization is almost a frightening responsibility. It is not given lightly. And before it is given, many dedicated newspapermen, the Associated Press' directors, must agree that there is not the slightest doubt as to the capacity of the man to do the job. In this case there was no slightest doubt. Of course Paul Miller's selection is a matter of pride to the Gannett group of newspapers, but more than that, it should be an item of pride to Rochesterians and to all readers of newspapers in this group.

Paul Miller Heads Associated Press

EXTENSION OF REMARKS

OF

HON. FRANK J. HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. HORTON. Mr. Speaker, the board of directors of the Associated Press, meeting in Phoenix, Ariz., last week, elected as their president, Mr. Paul Miller, president of the Gannett Newspapers, the home office of which is in Rochester, N.Y., a city I am privileged to represent in the Congress. A source of pride for Rochesterians and a source of assurance for the Nation is to be found in Mr. Miller's election.

A free press, as guaranteed by the first amendment to the Constitution, is only as desirable as the competence of those who implement its freedom. The expression, "Associated Press, the byline of dependability," is more than a slogan; it is a way of life.

A recent editorial in the Rochester, N.Y., Democrat & Chronicle, in commenting on Mr. Miller's election, described the vital role this news service plays in the advancement of humanity.

Under unanimous consent, I insert it in the Appendix of the RECORD:

A NEWS NETWORK'S MIGHTY CHALLENGE

A Rochesterian, Paul Miller, president of the Gannett Newspapers, has been elected president of the Associated Press.

This is more than institutional news for the newspaper business in America.

If it were necessary to name the single factor contributing most to humanity's advancement, the selection would have to go to the growing worldwide distribution of complete, honest, factual news. For there is no way of calculating the power of the simple word to spread the details of a life-saving medical discovery, to warn of warmongers, to expose demagogues, to spread the techniques of peace, to tell of the rights of man, to report the spiritual greatness and the lunatic lapses of mankind.

In this thrilling work of news gathering and news distribution, the Associated Press is regarded as the world's greatest agency. Its multilingual reporters risk prisons and worse to cover riots in South America or savagery in Africa, to write of the wars of the earth and the antics of dictators. From No. 10 Downing Street to Israel, and from Washington to Hong Kong, Associated Press men

Washington Report

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following newsletter of January 19, 1963:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas, January 19, 1963)

BUDGET, FISCAL YEAR 1964

The budget, by definition and practice, is both a financial report and a plan for the future. It is also a request for legislation, and an administrative guide to Government—all based on congressional approval. The President proposes; Congress disposes. The budget is presented to Congress each January, 6 months before the start of a new fiscal year (July 1 to June 30). The fiscal 1964 budget is approximately 1,200 pages and outlines both receipts and expenditures, also the comprehensive overall legislative program for the year of both appropriation by program and revenue by tax measures. The President's message accompanied the budget and described it, a truly amazing, unbelievable statement. Some of his statements should be remembered.

The President said: (1) "This budget presents a financial plan for the efficient and frugal conduct of the public business."

(2) "We have substantially reduced the deficit in our balance of payments."

(3) "I have felt obliged to limit severely my 1964 expenditure proposals."

(4) "The expenditure program is the minimum necessary."

(5) "The Federal deficit which will be incurred in the fiscal year 1964 should neither raise fears of inflation nor cause increased concern about our balance of international payments."

(6) "The total of administrative budget expenditures for all other programs, combined, has been held slightly below the 1963 level."

(7) "Other moderate expenditure increases being proposed . . . are offset by decreases in other administrative budget expenditures. For example, lower expenditures are estimated for the postal service, for certain housing, international and other lending programs, through substitution of private for public credit and for agricultural price supports."

(8) "Our practical choice is not between a deficit and a budgetary surplus. It is instead between two kinds of deficits; a chronic deficit of inertia due to inadequate economic growth—or a temporary deficit resulting from a tax and expenditure program designed to provide for our national security, boost the economy, increase tax revenue, and achieve future budget surpluses. The first type of deficit is a sign of waste and weakness. The second is an investment in the future."

(9) "As the tax cut becomes effective a substantial part of the revenue increases must go toward eliminating the transitional deficit."

Then an administrative digest from the Executive called the budget in brief speaks of the budget as "strengthening freedom" the debt as "our paying for the continuing costs of past war" and that "efficiency is increasing in Government," and that "payments to the public from Government are 20 percent of the gross national product."

THE FACTS

The facts and sound economic interpretation are, of course, just the opposite of the above statements. Let's examine these statements and the facts.

(1) The cash budget outlines expenditures of \$122.5 billion (not \$98.8 billion of the administrative budget) of expenditures and \$112.2 billion receipts (not \$86.9 billion of administrative budget) and no one, not even the radical-liberals will deny there is waste and extravagance. The deficit will be \$10.3 billion in cash budget. Frugality? Efficiency?

(2) The balance of payments, or gold outflow and accumulating pressures are greater, not less, and the danger more acute. Devaluation of our money is now a real possibility.

(3 and 4) How can the biggest peacetime budget in history, an increase of \$5.7 billion over the 1963 budget (which itself ran \$8.3 billion in the hole) be called a "minimum or severe limitation in spending"?

(5) Here the President disquiets all sound economic students because he clearly recognizes though decries the two clear and present dangers directly resulting from his profligate spending—*inflation and gold outflow*—both calculated to destroy our currency value, the purchasing power of U.S. money.

(6) This is a flat misstatement of fact. The nondefense expenditures will soar above the 1963 level, because of (A) increases in almost every existing program, (B) new programs started:

(1) Youth Conservation Corps, (2) aid to education, (3) mass transit aid, (4) medicare, etc.

(C) Usual additions as unanticipated expenses result from domestic and foreign problems that arise. The Appropriation Committee chairman in debate specified a \$2 billion increase immediately and more to come. Then he outlined the 27 percent increase in nondefense expenditures compared to 17 percent defense spending increase since 1961.

(7) The alleged decreases specified by the President are fallacious. Agriculture spending goes up, in his budget, not down as he said in his message. Postal spending goes up, not down. REA spending goes up, not down. Public works up, not down. Certain international, and housing and lending programs are mentioned as down only because the President hopes to sell for cash some of the existing Government loans. We have figure juggling, inaccurate bookkeeping methods, and wishful thinking instead of facts and truth.

(8) The choice is not between deficits. It is between profligate spending, wastefulness,

Federal control, and aid on the one hand, or reduced Federal spending and a return to limited Government of freedom, incentives, and the Constitution on the other—a choice the President apparently neither recognizes nor understands.

(9) The recognition of a tax cut being a business stimulus is illusory and dangerous if not coupled with reduced Government spending. Inflation may produce more dollars later in taxes, but will destroy our whole economy. The budget in brief calling such extravagance and deficit as strengthening freedom and increased Government efficiency is worth only a laugh, if it weren't too painful a subject over which to laugh. It isn't laughable, it's tragic. We are indeed witnessing and being asked to take a path to fiscal suicide—the bankruptcy of the United States by our own hands—a prediction by the Communists years ago.

WHAT OTHERS SAY

Perhaps others in critical analysis, rather than in blind acceptance, will focus enough attention in days ahead so that Congress will compel our President to return to fiscal solvency and the balanced budget. Here are some comments: "The President's budget can only be termed a radical proposal"—Congressman JOHN BYRNES of Wisconsin. "The most inconsistent budget ever submitted by a President"—Congressman HALL. "For 40 years I have never seen or heard a budget message like this one, and neither have you, nor has anyone else"—Congressman CANNON, chairman, Appropriations Committee. "Mr. Kennedy's economic proposals are straight out of the dream book"—Chicago Daily Tribune.

CONCLUSIONS

As I see it this budget clearly shows the President and his advisers' clear lack of understanding (1) the basic economics of a private market economy, (2) the role of constitutional limited government of a free society, (3) human nature, that people will work better for themselves than they will for Government. Now, who is negative and positive? Is it negative for a Member of Congress to vote against deficit spending? Is it positive to be for a balanced budget?

Public works and the Dallas Federal building

Finally, are new and expanding public works justified during times of deficit financing? Of course not. Yet on page 710 of the budget are listed many new Federal buildings. The Dallas Federal building is omitted, no reasons given. This poses two problems and decisions for the people of Dallas:

(1) Are the people of Dallas willing to lead the way to sound, balanced budget economics and constitutional government, asking others to join in, or are we ready to capitulate and join liberals in the race to bankruptcy.

(2) Can we be coerced, bribed or intimidated politically by Federal leaders who do not grade the Federal projects on merit but on political dictation? To pose the questions gives the answer, which a sensible, intelligent constituency will support. The Kennedy administration should disavow the Dallas Federal building because it has not been proven meritorious, if that is the case or it should be given number one priority over all other Federal buildings approved in the current budget. Or to say it another way, in a period of deficit financing there should be no public works and Federal buildings, but if there are going to be such projects, the Kennedy administration cannot morally deny a Federal building to Dallas while approving others of less priority and merit.

Supported by the people of Dallas, who have always supported sound principles, I shall continue my efforts for fiscal solvency and sanity and constitutional government. Your views are always welcome.

Protest Against Apartheid

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. ROOSEVELT. Mr. Speaker, last month I received a letter from Mr. Melvin Rotblatt, president of London Lamps, of Los Angeles, in which he advised me of his communication with Falks Electrical—S.A.—Ltd. of Johannesburg, South Africa. In his letter Mr. Rotblatt refused to do business with the South African firm because of the policy of racial repression currently followed in that country.

I have commended London Lamps for their courageous action and praised them for their stand which is in full accord with the resolution of the United Nations passed during the 17th session of the General Assembly. That resolution condemned South African racial policies; asked U.N. members to break diplomatic relations with South Africa, to boycott its exports, to close their ports to shipping from South Africa, and to prohibit their ships from sending goods to South Africa.

It is not enough for us to piously condemn the racist policies of South Africa, for such declarations have done nothing to change her actions. However, if sufficient economic pressure is brought to bear, her industrial and business leaders will undoubtedly pressure the government to enact much more moderate policies, and hopefully, to grant equal rights to all the peoples of South Africa.

We have seen in our own country that sometimes pressure is the only means to bring about the vitally important right of equal service or equal access to educational facilities. Hopefully, this de facto integration will eventually result in those who oppose equal rights accepting integration as a moral good.

Therefore, the London Lamps Co.'s action, which might very well deprive it of a profitable contract, is to be commended both for its attempt to help change the racist policies of South Africa, and as an example for other American businesses to follow in refusing to support inequality, whether at home or abroad.

London Lamps has demonstrated the spirit of true Americanism in its letter, which follows:

LONDON LAMPS,
Los Angeles, Calif., December 10, 1962.
Mr. M. KRAMER,
Falks Electrical (S.A.) (Pty.) Ltd.,
Johannesburg, South Africa.

DEAR MR. KRAMER: It has come to our attention that there have been negotiations with your company, with your placement of an order for lamps with our company to be shipped to the Union of South Africa.

Since you are in a country whose national policy is abhorrent to our feelings of morality and common decency, we do not wish to do business with you, and, therefore, cannot accept your order.

We, in this manner, advise you of our protest against injustice, restriction of civil rights, and racial prejudice as a national

policy of your government. We consider this policy and the measures that your government has taken as illegal in the eyes of international morality and law. We agree with the United Nations in the condemnation of these activities and the necessity of making the protest effective by economic isolation.

Very truly yours,

MELVIN ROTBLATT,
President.
GERALD ROTBLATT,
Chairman, Board of Directors.

John W. Tramburg, Devoted Public Servant

EXTENSION OF REMARKS
OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. KASTENMEIER. Mr. Speaker, on January 14, the cause of social work and public welfare was dealt a great loss—John W. Tramburg, former Director of Public Welfare of the District of Columbia and of the State of Wisconsin, died at the age of 49 after suffering a heart attack.

Mr. Tramburg, a native of Fall River, Wis., and graduate of Whitewater State Teachers College in 1935, taught at Norwalk, Wis., and had been recreation and athletic director of a CCC camp in northern Wisconsin. He then attended the University of Chicago, where he received a master's degree in social service. During World War II he served for 3 years in the Navy.

Mr. Tramburg was the head of the District of Columbia welfare program in 1950 when he was hired to run Wisconsin's multimillion-dollar public welfare department. He remained in this post until 1955, except for a 1-year interruption to serve as the first Federal Commissioner of Social Security under President Eisenhower in Washington, where he had charge of drafting revisions in the social security system.

In 1955 Mr. Tramburg left Madison to become New Jersey State Commis-

sioner of Institutions and Agencies, a post he held at the time of his death.

During his service in Wisconsin, Mr. Tramburg began a widely copied series of penal reforms for both adult and youthful offenders and he continued his efforts in this field in New Jersey.

Mr. Tramburg gave unstintingly of himself in positions of leadership to the field of social work through working as chairman of the Commission on Social Policy and Action of the National Association of Social Workers. As a member of the ad hoc Committee on Public Welfare appointed by Secretary of Health, Education, and Welfare Ribicoff, he played an important role in developing the Public Welfare Amendments of 1962.

His contributions to, and concern for, health and welfare issues were signally recognized when he was elected president of the National Conference of Social Welfare for 1963.

The dedication and service to people of Mr. Tramburg crossed party lines—a Republican, he left his Wisconsin post to serve under New Jersey Democratic Governors Meyner and Hughes. In his death, the underprivileged and forgotten people have lost a staunch friend and advocate.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent; *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

Appendix

Harris County and Texas Lose Dedicated Leader in Death of Mayor Philpot

EXTENSION OF REMARKS

OF

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 22, 1963

Mr. YARBOROUGH. Mr. President, Texas has lost an able and distinguished citizen in the death of William J. Philpot, who served the thriving and industrious city of Galena Park, Tex., as mayor for 8 years. Mayor Philpot was my close personal friend. He was at my side in five statewide campaigns for good government in Texas. He was a leader in Harris County and in Texas for better government at all levels.

Mayor Philpot was once honored by his fellow citizens as Man of the Year in Harris County. Because of the high esteem in which he was held by all who knew him, I ask unanimous consent that the following editorial from the January 11, 1963, Houston Press, captioned "William J. Philpot," and the article from the January 11, 1963, Houston Post, captioned "Ex-Mayor Philpot's Rites Today," be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Houston Press, Jan. 11, 1963]

WILLIAM J. PHILPOT

For eight terms, William J. Philpot led Galena Park as its mayor as it grew from an off-the-beaten-path north shore village crowded by World War II ship channel operations to a bustling city of 10,852 (1960 census).

Mr. Philpot managed to handle his mayoralty duties along with many other civic activities while serving full time as supervisor of plant security in the big Champion Paper & Fibre Co. installation across the channel.

It couldn't have been too easy to handle everything. Yet his remarkable energy and purpose permitted him to accomplish it.

Bill Philpot's death at 58 years of age is a grave loss not only to Galena Park which last year named him its Man of the Year but to all Harris County.

He was a wheelhorse who worked the hardest when the going was toughest.

[From the Houston Post, Jan. 11, 1963]

EX-MAYOR PHILPOT'S RITES TODAY

Funeral services will be at 2:30 p.m. Friday for William J. Philpot, 58, one of Harris County's most colorful politicians and a mayor of Galena Park for 16 years.

He vacated the mayor's office last spring and was drafted by the Harris County Mayors & Councilmen's Association to run for the State legislature under its sponsorship. He was unsuccessful in that.

The services will be held at First Baptist Church with the Reverend Ed Stewart,

pastor, and the Reverend L. A. Vermillion, pastor of the Peach Creek Baptist Assembly, officiating. Burial will be in Forest Park Cemetery.

Philpot, who served as mayor of Galena Park from 1944 to 1948 and from 1950 to 1962, died of a heart attack about 1 a.m. Thursday at his home.

The present mayor, Alvin D. Baggett, said the Galena Park City Hall will be closed all day Friday in honor of Philpot and that the American flag will be flown at half mast for the second consecutive day.

He was the supervisor of plant protection for Champion Papers, Inc., and was named Man of the Year for 1962 at Galena Park by the Galena Park Chamber of Commerce at a banquet last month.

Philpot was a past president of the Harris County Mayors & Councilmen's Association and a onetime candidate for county commissioner.

He was a frequent critic of the association because he felt it did not carry enough weight with the Harris County legislative delegation.

Philpot was a member of the First Baptist Church and Masonic Lodge, A.F. & A.M., 1290. He is survived by his wife Mrs. Cornelia Philpot; a son, W. J. Jr., both of Galena Park; five daughters, all of Houston: Mrs. Lois Zinnecker, Mrs. Nelle Patton, Mrs. Inez Dickey, Mrs. Betty Anderson, and Mrs. Betty Reeder; his mother, Mrs. Sophia Philpot of Arkansas; six brothers and eight sisters.

Defense Supply and Savings

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. CURTIS. Mr. Speaker, January 1 marked the completion of the first year of operation of the Defense Supply Agency, an innovation in defense procurement and support that has grown out of the McCormick-Curtis amendment to the Defense Reorganization Act of 1958. This Defense Supply Agency was created by the Secretary of Defense, Mr. McNamara, as the administrative body through which common supply and service functions of the military services could be handled jointly rather than being handled, as before, on a separate basis by each service.

The key to the operation of the Defense Supply Agency is savings. Its justification for existence is that it can, through centralizing the administration of these common functions, save the taxpayers many hundreds of millions of dollars each year. I believe that the DSA has shown great promise in its first year of operation in achieving the goal for which it was created. With the continued support and interest of the Con-

gress and the people of this country, it will be able to effect substantial savings in our annual military budget.

A rundown on the first year of DSA was recently published in the Washington Star. Written by Mr. Allen Smythe, this article shows the scope and promise of the Defense Supply Agency. To help give a better understanding of the DSA, I am placing Mr. Smythe's article in the CONGRESSIONAL RECORD:

YEAR-OLD DEFENSE SUPPLY AGENCY SAVES MILLIONS AT PENTAGON

(By Allen M. Smythe)

The performance of Defense Secretary McNamara's pet project—the Defense Supply Agency—may serve him well when he goes to the new Congress to defend the military budget. The ex-president of the Ford Motor Co. has been using his executive and production talents to install some business policies in the Pentagon.

Many congressional leaders had been urging a "fourth service of supply" for the last 10 years in an effort to eliminate waste and duplication in Defense procurement. Senator DOUGLAS, Democrat, of Illinois, and Representative CURTIS, Republican, of Missouri, sponsored an amendment to the Defense reorganization bill of 1958 which gave Mr. McNamara a free hand in unifying supply purchases and services.

The DSA—1 year old on January 1, 1963—makes modest claims of savings of \$50 to \$100 million. Mr. CURTIS thinks these claims are far too low and prophesies that savings in the billions will result when DSA expands to take over all noncombatant supply and related services.

Among the latter, Mr. CURTIS would include aerial surveys, photography, communications, public relations, recruiting activities, engineering efforts, and legal work.

ACTIVITIES FAR REACHING

DSA began operations January 1, 1962, taking over six existing commodity management agencies from the Army and Navy and a traffic management service which supervises the transportation of Defense freight and passengers in the United States. It also began the organization of two new activities centers, one to manage supply of electrical and electronic items, and a second to maintain the Federal Supply Catalog and administer Department of Defense material utilization and surplus property disposal programs.

By July 1, 1962, DSA had taken over two more activities, one managing industrial supplies and another managing automotive parts. Thus, after 6 months in business, DSA became responsible on a phased basis, for food, clothing, petroleum, medical, general, construction, industrial, automotive, and electronic items of military supply.

NEW RESPONSIBILITIES

New management responsibilities assigned to the agency during the year by the Secretary of Defense included:

1. Management of 6,000 items of common chemical material. Apparatus will be added to the items managed by the Defense Medical Supply Center, Brooklyn, N.Y., and chemicals, dyes, compressed gases, and coal to the items managed by the Defense Petroleum Supply Center, Washington, D.C.

2. Designing and establishing a central inventory of machine tools owned by the Department of Defense and management of \$1 billion worth of this equipment which is in idle status. Records of the \$2 billion of equipment in active use are handled by DSA.

3. Operation of an integrated wholesale distribution system, beginning January 1, 1963, which will involve the use of a network of depots maintained by the military services.

DSA is currently responsible for material management of 241 Federal supply categories while the military services manage the remaining 320 categories including weapons, ammunition, explosives, aircraft, ships, motor vehicles and other end items of combat equipment.

By June 30, 1963, the 21,000 employees of DSA will be responsible for 1,100,000 items of military supply with estimated inventory value of \$3.1 billion and annual procurement of \$2.9 billion.

Voice of West Rarely Heard in White House

EXTENSION OF REMARKS OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 22, 1963

Mr. MUNDT. Mr. President, Richard Wilson's column in the January 17, Sioux Falls Argus-Leader offers constructive suggestions for the leaders of the present Democratic administration. In hopes that a word to the wise will be sufficient, I ask unanimous consent that this column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAYS VOICE OF WEST IS RARELY HEARD IN WHITE HOUSE

(By Richard Wilson)

WASHINGTON, D.C.—The westward surge in the country exposes a narrowness of view in Washington unbecoming to a large central government.

Attitudes of mind and behavioristic patterns in the Capital are out of date. Left largely out of account is the westward swing, a population movement dwarfing the opening of the western lands a century ago.

The move west is often regarded in Washington as something remote, as if it were happening in another country. The East remains, it is thought, the financial and cultural heart of the country and the seat of Federal governmental authority, though comparatively less populous.

ADMINISTRATION PAROCHIALISM

This seems quite unrealistic when one returns to the Capital after extensive travels in many sections which are regarded in Washington as fairly remote. But even 3 weeks of such travel does not reveal the scope of the country to the native traveler, for, he has missed many sections and others he has seen too briefly.

The Kennedy administration—with major exceptions, of course—has in general brought to Washington the flavor of eastern parochialism. Its political methods are eastern urban. The Chairman of the Democratic National Committee, for example, ventures

rarely into the West where he is not well understood.

The voice of the new West is not much heard in the White House. The Kennedy advisers in the main are oriented to the academic thought processes, and behavioristic standards of Harvard.

Where this is not literally the case, the President's advisers are classically eastern. His chief advisers, McNamara, Rusk, and Dillon, are wholly conditioned by eastern standards of thought, behavior, and even dress. This may not necessarily be bad. In fact it may be good, but it is not representative of the whole Nation.

Something more of western flavor would give the Washington government a more national character. Such reflections occur to a traveler as he idles in a jeweled western city lying immaculate under the desert sun within a protecting circle of hills and peaks, some snowcapped, some golden glowing in the fading light of evening.

Somewhere in Washington, the traveler reflects, there ought to be room for the spirit of the new West.

THEY SEEK THE SUN

Giving the Government a more national character by the introduction of western modes of thought and behavior might have seemed a few years ago to be merely a nod to the West for political reasons. But today more is involved. The Nation has moved and is continuing to move west as the conditions of life and employment make the western areas more suitable for large urban populations.

Whether these areas are suitable or not the westward surge continues. People seek the sun. They seek also to escape the heavy pressures of eastern urban life, the abrasions of closer and closer contact with their fellow man, and the limitations and burdens of a fixed status of which they are tired or consider hopeless.

The West beckons again as it did a century ago to the jaded easterner, to the dispossessed farmer and displaced industrial worker. It has created new opportunities for the technician and the skilled worker. It has gathered a great reservoir of scientific brains around its universities to spawn and nurture the new industrial technologies.

A strange corollary of this is that in the Capital the western influence remains so feeble. Neither in Congress nor in the executive departments is the western influence strong. The sons of the Nation's most populous State, California, play no major part in the large affairs of Government in this administration. Only one holds a truly high place, the Chief Justice of the United States, and he was appointed in the previous administration.

As for the great and growing cities of the new West—Denver, Salt Lake City, Phoenix, Albuquerque, San Diego, Los Angeles, Dallas, Houston, yes, even Reno, Boise, Tucson—so little is heard that they might be in another country.

And for that matter, who would know in Washington that Sioux Falls, S. Dak., and Mount Pleasant, Iowa, offer a cultured way of life of which the average eastern urbanite is not even dimly aware?

CULTURAL DESERT

Lately there has been much emphasis on the new culture in Washington on the assumption that the Capital is a cultural desert, and that the greatest library in the world and one of the greatest art galleries are not enough. Washington must be more like London, Paris, and Rome. The Capital must duplicate cultural facilities already existing in New York, Philadelphia, Chicago, and elsewhere in this country though, in fact, Washington's overriding preoccupation is and always will be with public affairs.

It seems that no place is really cultured without a \$30 million structure in which to perform the ballet, to say nothing of a \$10 million aquarium in which to display fish which somehow slipped through Congress.

It would be heartening if, with all this culture, some way could be found also to invest Washington with a more nearly national flavor imported from what is soon to be, or is now, the greatest section of the country, the Golden West.

Repeal Automobile Excise Tax

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. CHAMBERLAIN. Mr. Speaker, I would like to point out to the Members a very gratifying expression of support for my effort to repeal the 10-percent automobile excise tax. I have received from the Flint, Mich., City Commission a resolution condemning the excise tax as a "highly discriminatory and exceedingly depressive" measure that endangers the financial welfare of all individuals and communities dependent upon automotive production for an economic base.

The city commission has reached the heart of the matter, pointing out the unfairness of continuing a tax that was designed to restrict production and consumption of new automobiles, when the need for restriction has been removed. But besides being an inequity, this tax holds back the full expansion and capacity of the economy. If the tax this resolution decries were repealed, business activity and employment in the steel, rubber, and other related industries would be stimulated by further demand for new cars. As we consider action on the President's request for tax reduction and reform to encourage economic growth, I feel this is a matter that should have our most careful attention. I submit the resolution to the consideration of the Members, and for inclusion in the RECORD:

Whereas current U.S. tax legislation requires the levy of a 10-percent excise upon every automobile sold at retail throughout the country; and

Whereas said tax was an emergency measure passed during the Korean crisis but has been given an extension by the Congress every year since that time; and

Whereas by its very nature and conception said tax is highly discriminatory and exceedingly depressive on the automobile industry and all its suppliers, constituting a direct threat to the financial welfare of all individuals and communities dependent upon automotive production for an economic base; and

Whereas previous Flint City commissions have voiced strong and continued opposition to this unfair levy and have endorsed the efforts of our Congressman, and other State representatives to the Congress, to repeal, or as a bare minimum to reduce substantially, the 10-percent excise: Now, therefore, be it

Resolved, That this city commission reiterate previous appeals for relief of the 10-

percent excise on automobiles as a long needed tax reform and as a stimulant to the economic vitality of the automotive industry and the diverse industries which depend wholly or partially upon it; and be it further

Resolved, That a copy of this resolution be forwarded to Congressman CHARLES CHAMBERLAIN, Congressman-elect NEIL STAEBLER, and Senators PATRICK McNAMARA and PHILIP HART, of the State of Michigan, as a reassurance of our support of their efforts to have this odious excise repealed.

The Reasons Why California Is First in Defense Work

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 22, 1963

Mr. ENGLE. Mr. President, in recent years, California has come under heavy attack because a substantial slice of the Nation's defense and space contracts has gone to California industries and universities. I have taken the floor several times to answer these attacks, particularly to fight back a misguided plan to divert this critical work to depressed areas unqualified for the job.

Today I wish to commend to the attention of my colleagues an editorial by the Los Angeles Times, dated December 20, 1962. The Times editorial forcefully spells out the principal reason why California has year after year earned billions of aerospace dollars; namely, California's outstanding educational system and intellectual climate. Those envious of California's share of this vital work would do well to examine the evidence at hand.

I ask unanimous consent that this excellent Los Angeles Times editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY CALIFORNIA GETS THE WORK

Anyone can get from the Pentagon a list of the Defense Department's outlays, by companies and States, to the aerospace industry. Eastern Congressmen use it when they complain that California gets much more of the money than any of the other States.

If these envious Congressmen knew the full statistical accounting their cries would ascend like a siren's. For the fact is that California eventually gets more of the work than the Defense Department's figures show. This is not because the Pentagon has tried to deceive anybody; it lists prime contractors. But it does not attempt to account for (or map) all the crosscurrents and eddies of subcontracting, which is a labor to be compared with graphing the wriggles of eels in a bucket.

This monumental work was undertaken by the magazine Aerospace Management. It found that for 1961 California did more than a quarter of all the aviation and space work in the United States (\$5.2 billion of \$18 billion), public and private. A California prime contractor could, and often did, subcontract for work outside of this State (and California manufacturers have often pointed this out), but the subcontractors subcontract, too, and

the subsubcontract might very well come home to California to roost. This phenomenon serves to extend the argument we have made here on several occasions, that aerospace work should be done where it can be done most efficiently. That place obviously is California.

The explanation is easy, although it is not a part of the strict analysis of work done and paid for with which Aerospace Management is concerned. More than one-fourth of the money was ultimately spent in California—but California is also the dwelling place of more than one-third of the relevant experts.

These experts are in California not only because the physical climate tempts them but because the intellectual climate is one of the most salubrious in the United States and the world. California attracts some of the experts from other places, to be sure, but it grows many of them at home—and keeps them, for the greater glory and prosperity of the State.

This is a testimonial to California education, which is a regenerative, or feedback, system. If one seeks to justify a system of education by the account book, California's has surely paid off. Forty percent of State revenue goes to education at all public levels but the dividends on the investment are terrific—at least to the materialist assessor. Here are a few statistics gathered and checked by the California Bankers' Association:

California leads the Nation in elementary and secondary school enrollment. It spends more on public schools than 43 other States combined. One-fourth of the population is in school.

With its universities, its "think factories," its libraries, and laboratories, California is the center of a scientific ferment that may be unparalleled elsewhere in the world.

California has 161 private and public institutions of higher learning. Among these are five universities that confer doctorate degrees. In the fall of 1961 these institutions had 600,000 full- or part-time students—13 percent of the State population between 15 and 34.

About 47 percent of the total U.S. enrollment in junior colleges is in California.

More than one-fifth of the members of the National Academy of Sciences (137 of 643) live in California and are associated with one or another of its universities and colleges. (New York has 104.)

Twenty Nobel laureates are associated with these same institutions. The University of California alone has 11 of them, more than all those Russia has had since the Nobel awards began in 1901.

The educational statistics clearly explain the aerospace statistics. The envious eastern Congressmen need more than Federal money, they need talent—and they can't get that by voting for it or soliciting sympathetic testimonials from the President and the Vice President of the United States.

Ukrainian Independence Day

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. DENT. Mr. Speaker, the fair and fertile Ukraine has been a borderland between East and West, between Europe and Asia, and its sturdy inhabitants have borne the brunt of all invaders in either

direction throughout centuries. For more than 300 years in modern times it has been submerged in the Russian landmass, and during all that time autocratic czars and Communist tyrants have done their utmost to suppress and crush all distinctive Ukrainian national traits: their desire for freedom, their boundless love for their homeland, their undying yearning for political independence, and their willingness to sacrifice their worldly possessions as well as their lives for the attainment of their national goals. Only once in the course of their centuries-long subjugation to alien rulers have they had the chance of attaining their freedom. That was in 1918. When the czar's decrepit autocracy was overthrown, and Austria no longer ruled over western Ukraine, they seized upon the occasion and proclaimed their national independence. That was done on January 22, 45 years ago.

That significant landmark in the recent history of the Ukrainian people has become their national holiday. They celebrate that day in due solemnity, even though the freedom which was ushered in on that day has long ceased to exist. Nearly 43 years ago they were robbed of their freedom by the Red army, and since then these sturdy and stout-hearted peasants have been subjected to the callous and cruel regime of the Kremlin.

To this day the Ukraine remains a province of the Soviet empire, and for more than four decades some 42 million Ukrainians have been living in their homeland as prisoners in a large prison camp, working there mostly for the benefit of their heartless taskmasters. They are separated from the free world by the unspeakable Iron Curtain and they are sealed off from the outside world. Of course, they cannot enjoy any of the freedoms which we in the West regard as our birthright. Under such conditions, of course, they do not and cannot celebrate their national holiday, their independence day. Fortunately hundreds of thousands of Ukrainians who live in freedom in the free world celebrate that holiday, and Ukrainian-Americans solemnly observe the anniversary of this memorable day in an effort to keep alive the undying spirit of an independent Ukraine. I am indeed glad to join them in the 45th anniversary celebration of the Ukrainian Independence Day.

International Printing Week

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 22, 1963

Mr. METCALF. Mr. President, last week was International Printing Week, during which we recognize the influence of printing on the course of history.

In marking the observance of the week, President Kennedy pointed out that "print is the true international currency of the modern world. The printer's art has built the vast array of secular and religious thought, of technical and scientific achievement, which knows no national frontiers and which forms the fabric of today's dangers and possibilities."

He added that printing is "a human achievement which has demonstrated far greater power to shape the world than all the force of modern weaponry."

He called it "appropriate that you have chosen the birthday of Benjamin Franklin for this celebration. That great scientist, philosopher, statesman—and printer—embodied for all time the tremendous fact that to affect the thinking of man is to influence the course of history."

Mr. President, Columnist Bill Gold, of the Washington Post, devoted a major section of a recent column to International Printing Week. I ask unanimous consent to have a portion of this column, as published in the January 14 Washington Post, printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

It is fascinating to recall the evolution of communication among men. From a beginning of ideograms painted on the walls of caves we progressed to hieroglyphics on man-made structures and on tablets of clay. We developed phonetics, and languages, and papyrus on which to record these symbols.

But for thousands of years the spoken word remained the principal means of transferring an idea from one mind to another. While the scribe copied his texts laboriously by hand, reading and writing remained specialized skills reserved to an elite minority.

The average man got his ideas chiefly from the folklore of his people. Naturally, his cultural horizons were circumscribed by the limitations of oral communication. Man's memory is not always accurate, nor is his capacity for remembering adequate.

Johannes Gutenberg changed all that with the invention of movable type. He made printing easier and cheaper, and thereby enabled each new generation to distribute the fruits of man's intellectual progress among an ever-growing number of people.

The elite minority became an elite majority, and such a great flood of printed information became available that no man could keep pace with more than a fraction of it. Indices were devised to make these mountains of printed matter useful to those who sought specific information. And finally machines were built to store hundreds of thousands of printed pages on a roll of film, and to reproduce any desired page within seconds at the push of a button or the spin of a dial.

But what does it avail us to have all this knowledge at our fingertips if we have not disciplined ourselves in the wise use of it?

Franklin said: "Printers are educated in the belief that when men differ in opinions, both sides ought equally to have the advantage of being heard by the public, and then when truth and error have fairplay the former is always the overmatch for the latter."

Some 200 years have passed since then. Franklin's goal should have been realized by now. Sagas and crackpots have had their opportunity to be pamphleteers, and truth should long ago have put error to rest.

How is it, then, that there is still doubt as to which ideology will bury which?

Perhaps it is because some people learn the mechanics of reading without ever mastering the art of reading with discernment.

Many phases of communications are automatic now. A man sits in New York and operates a machine that sets type automatically in Washington. Another man touches a button that activates an information retrieval system that automatically reproduces what was printed 10 years before. Electric eyes adjust high-speed presses automatically. But none of these technological marvels becomes meaningful until human thought is brought to bear upon the end product. And thinking has not yet been automated.

It is not enough to read, and to expose ourselves to both truth and error. We must read with active and inquiring minds, alert to the blandishments of error, zealous in our pursuit of truth. We must read with the verve and intentness of a bloodhound following a scent.

Understanding does not come to a man; he attains it by going after it. And I suspect that if we could speed up our understanding as much as we have speeded up our reading pace of late, we'd all be a lot happier.

Elks' Declaration of American Principles

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. ROGERS of Florida. Mr. Speaker, Mr. Tad Wilcher, chairman of the Know Your America Week program for the Arlington-Fairfax Lodge No. 2188, Benevolent and Protective Order of Elks, has called to my attention a declaration of American principles of the Elks.

Because its message will be of interest to all Members and citizens, under unanimous consent, I insert it at this point in the RECORD:

A DECLARATION OF AMERICAN PRINCIPLES OF THE BENEVOLENT AND PROTECTIVE ORDER OF ELKS

The Benevolent and Protective Order of Elks is dedicated to the welfare of the United States of America. One of our order's purposes is to quicken the spirit of American patriotism. To that end our order has striven to advance the principles that guide our Nation, and has opposed all attacks upon them from whatever quarter.

Freedom, the historic goal of mankind, is our Nation's basic principle. Freedom has been under steady attack by international communism for many years. Now, freedom and communism are engaged in a struggle for survival. This struggle is not of our choosing but has been forced upon us. Free men have no choice but to accept the challenge.

The Americanism Committee of the Grand Lodge of Elks believes that freedom too long has stood on the defensive. The time has come for us who believe in freedom to take the initiative; fight for what we believe in and stand against those who are against us until freedom has defeated those who would destroy it. To rely on military power alone in this ideological struggle would be illusory and fatal. Our paramount necessity is internal strength which can come only from unity of understanding and purpose and a willingness to place our Nation's safety and welfare above personal interest.

Appealing, as did our Founding Fathers, to the Supreme Judge of the World for the

rectitude of our intentions, we submit to our brothers this declaration of American principles on which we shall challenge the enemies of freedom, and to which we invite our fellow citizens to subscribe:

1. Moral values are the basis of our society, and the responsibility of each citizen to live by these moral values is fundamental to the welfare and progress of our society. These moral values include honesty of word, deed and purpose; brotherly love that requires us to be fair with our fellowmen and just in our relations with them; faithful performance of our labor in every honorable calling; and a recognition that each of us has the duty to contribute to the best of his ability to the advancement of the general welfare.

2. Freedom has made America. Not just political freedom, but the whole environment of freedom is responsible for the tremendous progress of our Nation since its revolutionary birth in 1776. Freedom encourages initiative, experiment, invention, enterprise. Freedom lets citizens choose their work, encourages individuals to discover their talents and make the most of them. In consequence we have a standard of living higher than any nation has enjoyed, a material abundance more widely shared among all our people than ever before, and a high level of intellectual and cultural attainment. Every citizen is the beneficiary of the freedom that has unleashed the abilities of the American people and provided the incentive for their maximum use.

3. Inherent in the American concept of freedom is the integrity of the individual. Individualism makes each person primarily responsible for himself, his welfare, his success or failure. Freedom lays upon each person the individual responsibility and duty of citizenship. A free society will emphasize individualism and individual responsibility as the sure way to produce democratic leadership and preserve freedom.

4. Self-government presupposes the duty of every citizen to obey the established government and to employ only those lawful methods of reason and persuasion that are open to all of us to achieve political action. It follows that government by the majority must be reasonable in the exercise of its authority and protect the rights and interests of the minority.

5. Our ability to change our institutions and practices, through orderly process of law, to accommodate to changing needs has helped our Nation to develop, as it will in the future. All proposals for change in our institutions should be weighed carefully by all citizens to determine whether such change will reduce or add to our freedom. Our goal should be more freedom, not less. We must guard against the growth of governmental power through surrender of civil right and individual freedom for contemporary gain at the expense of future generations.

6. The tendency of groups to seek preferential treatment from government breeds rivalries dangerous to political stability, is harmful to genuine economic growth and leads to fragmentation of society rather than to unity and strength. All groups of citizens ought to measure political and economic proposals advanced in their own interest against their effect on the whole Nation.

7. We believe that the time has come when all citizens who believe in these principles should speak up for them, and set an example by applying them fully in their daily lives. We urge those in positions of leadership and influence—clergymen, educators, business executives, holders of public office, leaders of labor, intellectuals, editors, radio and television producers, motion picture producers and all others—to assume a greater responsibility for the wider understanding of these principles and their practical application in the day-to-day lives of the people.

Inaugural Address by Gov. William W.
Scranton, of Pennsylvania

EXTENSION OF REMARKS
OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 22, 1963

Mr. SCOTT. Mr. President, last week I participated in the ceremonies in which the Commonwealth of Pennsylvania inaugurated a new Governor. William W. Scranton, until recently a Member of the U.S. House of Representatives, was sworn in at noon on January 15 at the Farm Show Arena in Harrisburg.

The new Governor then delivered an inaugural address that was deeply moving in its simple eloquence. He spoke to all of us in urging that we look to the past for inspiration in doing what needs to be done. And he spoke for all of us in expressing the hope that we may use our latent resources, imagination, fortitude, and faith to make a better life for all our people.

Since others in the Congress will want to read this address, I ask unanimous consent that it be printed in the Appendix to the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INAUGURAL ADDRESS OF WILLIAM W. SCRANTON
OF PENNSYLVANIA

My fellow Pennsylvanians, nearly 300 years ago a God-fearing man carved the first bits of civilization out of the land that lay west of the Delaware.

His name was William Penn. He had an idea. It took root in our soil. His idea was that men and women are resourceful and imaginative. He believed that, given a chance, they could turn back a wilderness, chisel out a monument to human dignity, and live in peace and prosperity.

In an age rife with human hatred, with religious bigotry, with political persecution, he had the wisdom, and the courage, to launch a holy experiment. He made Pennsylvania the bastion of freedom—the temple of tolerance, the showcase of economic enterprise. He believed freedom is more than a cliché. He believed courage is more than a slogan. He believed human will power more than a match for all the obstacles of nature or economics. He believed human ingenuity capable of solving human problems. He believed indifference and despair can be put to rout by human hope.

But, most of all he believed in himself, he believed in his fellow men, he believed in Pennsylvania.

That was three centuries ago.

Three months ago I was campaigning through a Pennsylvania town. The day was dreary. A cold rain had drizzled down all morning.

A young man with tired eyes, a sad voice, and a scared handshake told me: "Pennsylvania is no place for me."

And, a day later, I campaigned through a sun-drenched suburb. Other people with other, quite different, problems.

Another young man, this one with a kind of "I'm going places" look about him grasped my hand. He looked me in the eye. He said: "I can't for the life of me figure out why anybody would want to be Governor of this State."

And he explained, "Pennsylvania is going nowhere."

That was 3 months ago.

Three days ago I pondered what to say on the day that I became Governor of this State. I thought of William Penn 300 years ago. But I remembered the young man of 3 months ago.

With this memory the vim and vigor of the campaign seemed to sour. The flush of election victory paled. The brave hopes of just yesterday seemed puny. The awful responsibility seemed to dwarf the high honor of the office I was about to assume.

But then more of Pennsylvania came to mind. More of what we have been taught and know of Pennsylvania. More of her heritage. More of her people, and their pride and their faith, the hands I had clasped, the warmth of their welcome.

I remembered the face of the woman. Woman of a town blasted by industrial migration. Plants closed. Gates locked. Menfolk idle. I remembered the courage in the face of the woman.

I remembered the eyes of the man. Man out of work. Tiny worry lines around those eyes. The haunting fear that self-respect might flee, but even stronger, the challenge: "Give me a chance, and you'll see what I can do." I remembered the hope in the eyes of the man.

I remembered the hands of the farmer. A sower of seeds. A cultivator of life. A man close to God. Hands flicked with soil, so the tan of the skin seemed almost one with the tan of the earth. Hands that make things grow. I remembered the pride of those hands.

I remembered the arms that swung a lunch pail. Skilled arms. Strong sinews. A cadence to his walk that said: "I do a day's work. I do it well." Perhaps the proudest boast of man. I remembered the fresh, pungent smell of independence.

I remembered the frown of the young college student. Inquisitive. Prove it or I won't believe it. Why can't Pennsylvania move ahead? Who says my only opportunities lies elsewhere? Is it wrong to care? What are you going to do about it? Yes, I remembered the anxious student.

And, I remembered the brow of a businessman. Furrowed? Yes, but perhaps even more accurately, concerned "I have a duty here. A role to perform. I want Pennsylvania to climb to the top. I'm busy and it's easy to find excuses, but point the way and I'll do my share." Yes, I remember the concern, the willingness, in that face.

And, suddenly, I knew that Pennsylvania today is not really very different than the Pennsylvania of three centuries ago.

Yes, the challenges wear different faces. Problems assume different guises. But truly, we hold the same trump cards.

Resourcefulness, imagination, fortitude. And one more—faith.

The Pennsylvania that responded to the 17th century promise of William Penn's Holy experiment.

The Pennsylvania that nurtured an 18th century Ben Franklin and became the Cradle of Liberty.

The Pennsylvania that was strengthened by a 19th century influx of brave, stout hearts from the Old World.

The Pennsylvania that in the 20th century has remained basically strong and vital, despite a buffeting from history's greatest technological revolution.

That Pennsylvania—don't tell me that Pennsylvania can't lick its problems, because I know it can.

We still have the same God-given natural resources, the same advantages for commerce and industry, the same progressive spirit that brought us greatness in other years, in other ages.

But, these things must be tapped. Resources and advantages and spirit must be put to work. Human courage and human hope must drive the motors of human effort and human toil.

Some of Pennsylvania's problems can be solved soon, others can only be solved in time. But nothing will happen, nothing will move, unless the labor begins today.

The State government has an obvious and vital role in that labor. As a Pennsylvanian, no one can convince me that our State is incapable of that labor. No one can convince me that other States and other governments are more capable.

Of course, there are those who would prefer to dwell more on our fears than on our hopes.

There are those who would prefer to curse the darkness, rather than light a candle. Blame the past, rather than work to assure the future.

There are those who would prefer to gossip of yesterday's divisions, rather than work on today's need for unity.

Show me a Democrat who was wrong or shortsighted, I will show you a Republican who was. And vice versa.

Show me a businessman who was selfish, I will show you a labor leader who was. And vice versa.

Show me a citizen in Pennsylvania who has suffered by someone's lack of concern, and I will show you another citizen who has caused suffering by his lack of concern.

But let us hope that in the showing, both you and I will grow wiser and learn that today's opportunities are far more important than yesterday's mistakes.

With these opportunities, Pennsylvania is on the march. Toward greatness for herself. Toward progress, for her people.

Our Commonwealth has the resources, the human strength, the get up and go from which greatness is made. There is work to do, lots of it, but Pennsylvanians have never shirked from that prospect.

In both the executive branch and in the legislature, all of us must vow today to do our part to bring about a new era in Pennsylvania progress. We must have the wisdom to keep what should be kept; the courage to change what should be changed.

With the help of God let us embrace the challenge, let us welcome the labor.

Let us stand tall—as Pennsylvanians.

Let us walk proudly—as Pennsylvanians.

Comparison of Budget Deficits Under
Eisenhower and Kennedy Administra-
tions⁷⁶

EXTENSION OF REMARKS
OF

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. ANDERSON. Mr. Speaker, under leave to insert my remarks in the RECORD, I enclose a copy of a letter which I have addressed to Mr. Walter Scott, columnist for Parade magazine, and to the president and publisher, Mr. Arthur H. Motley.

I think that particularly in the context of today's events, it is essential that the American public not be hoodwinked into believing that there is anything like the comparison between the fiscal policies pursued under the Eisenhower ad-

ministration and the squandermania which is now the fixed policy of the Kennedy administration.

Mind you, Mr. Speaker, by way of comparison, during the last 3 years of the Eisenhower administration, not counting the fiscal year 1961 which was a transitional fiscal year under both Presidents, the Eisenhower administration had a total of \$257.6 billion of revenue at its disposal and during this period incurred a net overall deficit of some \$12.9 billion.

However, during a like period; namely, the 3 complete fiscal years under the Kennedy administration, the Kennedy administration will have had 25 percent more to spend than Eisenhower—a total of \$322.3 billion, but yet with more money to spend the figures reflect a net deficit of some \$27 billion for the Kennedy administration.

Mr. Speaker, my letter to Parade magazine follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., January 21, 1963.

Mr. WALTER SCOTT,
Parade Publications,
New York, N.Y.

DEAR MR. SCOTT: As usual, I read your column, "Personality Parade," which appeared in the Washington Post on January 20, 1963. The introduction to your column states that it is for readers who want the facts and want to spike rumors. It is now apparent to me that your column is more than that. It has apparently become a vehicle for those who are trying to justify the spendthrift policies of the Kennedy administration.

You published a question in the issue to which I refer from a Mr. Harrison Cutler, who asked for a comparison of the budget deficit under Kennedy and Eisenhower and then said, "Take a year like 1959." One would have to be completely naive not to assume that the author of this question knew the answer before he even asked for it, for it has been widely publicized that 1959 was the year of the largest peacetime deficit in our Nation's history. However, it should be pointed out that we were in the depths of a recession and it was because of the curtailment of Government revenues that this extraordinary deficit occurred. On the other hand, the Kennedy administration in a period which they proudly claim is one of the most prosperous in our history will show us a deficit of more than \$8 billion in fiscal 1963 and they are already predicting a budget deficit of \$11.9 billion for the fiscal year not yet begun. You might also inform Mr. Cutler that the Kennedy administration, during the 3 fiscal years for which it has been responsible, has achieved or will achieve budget deficits approximating \$27 billion. During the 8 years of the Eisenhower administration, budget deficits totaled \$23 billion.

To conclude, I certainly hate to see your column used for the very obvious purpose that it was used when you published the question by Mr. Cutler. We who constitute the loyal opposition have enough trouble already with the managed news policies of this administration. We therefore sincerely hope that editors and columnists like yourself will not become the foils of those who blandly justify anything and everything that this administration has done.

Very truly yours,

JOHN B. ANDERSON,
Member of Congress.

Tribute to Mrs. C. L. Blanton, Sr.

EXTENSION OF REMARKS OF HON. EDWARD V. LONG

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, January 22, 1963

Mr. LONG of Missouri. Mr. President, a grand and inspiring lady—Mrs. C. L. Blanton, Sr.—whose life and works have helped shape the history of Missouri, was the special center of attention in Sikeston, Mo., last night, when scores of friends and relatives gathered to join with her in celebrating her 91st birthday.

Born in Tennessee just after the close of the Civil War, she has been a Missourian by choice since near the turn of the century. For 35 years, she and her husband, Col. C. L. Blanton, Sr., worked shoulder to shoulder in publishing the Sikeston (Mo.) Standard. Although this wonderful relationship ended with Colonel Blanton's death in 1948, Mrs. Blanton remained active in the newspaper, and is today still president of the Sikeston Publishing Co.

Mr. President, I would like to incorporate as part of my remarks, an article from the January 19 edition of the Daily Sikeston Standard, which traces the full and active life of this amazing lady, of whom it is said: "To her, each new year is another memory and another opportunity to be doing something."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Mrs. C. L. BLANTON, SR., TO CELEBRATE 91ST BIRTHDAY AT DINNER MONDAY EVENING

Mrs. C. L. Blanton, Sr., of 305 Tanner Street, widow of the late Col. C. L. Blanton, Sr., editor and publisher of the Sikeston Standard from 1913 until his death in 1948, will be celebrating her 91st birthday Monday, January 21, not looking a day older than she did last year.

Mrs. Blanton's many friends here and at many points in the United States will join her children, grandchildren, and great grandchildren in wishing her a most happy birthday.

Mrs. Blanton, one of Sikeston's most honored and certainly most beloved citizens, does not spend her days being idle and dreaming. She, unlike some to whom the passing years seem to age them and dull their faculties and are content to just sit, takes an active part in several activities. To her, each new year is another memory and another opportunity to be doing something.

Mrs. Blanton is the only surviving member of the group of women who organized the Woman's Club years ago who is still active. She attends most of the meetings and takes a lively interest in its activities.

She is a faithful communicant of the St. Francis Xavier Catholic Church and also of its Ladies Altar Society and the Catholic Ladies Canasta Club.

Mrs. Blanton was born Mary Agnes Cullen, January 21, 1872, in Nashville, Tenn., daughter of the late James F. and Mary Thompson Cullen. She moved with her family to Hot Springs, Ark., where her father operated a hotel until the great fire of 1876 wiped out most of the town.

When that happened three of the children—Mrs. Blanton, and a sister and brother—were sent back to Nashville to go to school and the rest of the family followed shortly after. In 1882 the Cullens moved to Washington, D.C., where Mr. Cullen was employed in the War Department.

On September 17, 1890, Mary Agnes married Charles L. Blanton, then working for his father, Benjamin Franklin Blanton, on the Monroe County Appeal at Paris, Mo., which the elder Blanton had established in 1865 immediately following his discharge from the Confederate Army.

In 1892, Mr. and Mrs. C. L. Blanton, with their first son, Harry, moved to Washington, D.C., where Mr. Blanton was employed by the Government. But, in 1909, they returned to Paris, Mo., where Colonel Blanton worked on the Appeal until 1913 when he came to Sikeston and bought the Sikeston Standard from the Naeter brothers and published it until his death in 1948.

Mrs. Blanton took over the task of handling the business affairs of the paper while her husband gained fame as a fearless editor and known far and wide for his famous "Polecat Column."

With the organization of the Sikeston Publishing Co. to continue the publication of the paper, now the Daily Sikeston Standard, the acquisition of the Sikeston Herald and the Scott County Democrat, Mrs. Blanton became president of the Sikeston Publishing Co., a position she still occupies.

During 58 years of marriage, Colonel and Mrs. Blanton became the parents of eight children. Four of the children are expected to attend a dinner to be given in Mrs. Blanton's honor at the Rustic Rock Inn, Monday evening. Host and hostess for the dinner will be Col. and Mrs. C. L. Blanton, Jr. Others who are expected are Mr. and Mrs. Harry Blanton, Mr. and Mrs. David Blanton, and Mr. and Mrs. N. C. Watkins of Benton (Mary Blanton).

Other children include Edna, now Mrs. Edna M. Payne of Arlington, Va.; Catherine, now Mrs. J. O'C. Roberts, Washington, D.C.; Milton W. Blanton of Atlanta, Ga.; and James Benjamin Blanton of Dallas, Tex.

Mrs. Blanton has 22 grandchildren and 52 great grandchildren.

Although many of her immediate family and many, many friends will not be able to attend to give their best wishes in person, there will be many messages from the absentees who will join all Sikeston in wishing one of its most respected citizens a happy birthday.

Pensions and Employee Benefits

EXTENSION OF REMARKS OF HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. CURTIS. Mr. Speaker, late last year I had the opportunity of addressing the American Pension Conference in its meeting in New York. At that time I reviewed the work of the 87th Congress in the field of legislative activity in this important area of interest and prospects for further developments in the 88th Congress. I am placing this speech in the CONGRESSIONAL RECORD to indicate the ways in which I believe we can move forward and improve legis-

lation in this area by a better understanding of the economic and political philosophy which lies behind the laws and proposals on pension and employee benefit programs.

The speech follows:

PENDING LEGISLATION IN THE PENSION AND EMPLOYEE BENEFIT AREA

(By Hon. THOMAS B. CURTIS, of Missouri)

I am going to renege somewhat on the title of my address. Actually, there is no pending legislation on any subject once a Congress has adjourned its 2d session sine die, as the 87th Congress finally did on October 13, 1962. However, I shall discuss what legislation might be introduced in the 88th Congress, and I shall refer to four measures passed by the 87th Congress which will have considerable influence in the future on pension and employee benefits. Essentially, however, I would like to discuss some of the economic and political philosophy behind legislation in this area of pension and employee benefits.

The bill passed by the 87th Congress which dealt most directly with pension and employee benefits was the Welfare and Pension Plans Disclosure Act. After a rough road it finally passed the Congress in March of 1962. I am hopeful that those responsible for imposing additional regulations on the pension trustees will bear in mind the primary objectives of pension plans and not burden them with undue costs and strangling red-tape. Frankly, I was opposed to this act because I thought the record was quite clear that there had been little abuse and that present law was available to take care of what abuse might exist. On the other hand, we are talking about \$50 billion of investment and this fund will continue to increase with great rapidity for many years to come. A great trust has been imposed upon those charged with the care of these funds and, because the Federal Government has given tax-exempt status to payments into these funds the Government has a proper concern to see that the trust is not abused.

I authored a bill which was signed by the President after the Congress adjourned which also directly affects pension funds. My bill, unlike the previous bill, liberalizes rather than restricts pension funds. It permits funds to be accumulated for health benefits and to be included in pension plans without endangering their tax-exempt status, provided such funds are accounted for separately. The Curtis bill, after being passed out of the Ways and Means Committee unanimously, almost met an untimely death because it was heralded publicly by some of the promoters of the King-Anderson bill, which proposed to utilize the Federal social security system to pay for limited medical costs of the aged social security beneficiaries, as legislation in lieu of King-Anderson. Well, there is no question that the Curtis bill will help to alleviate whatever problem exists in older people meeting their medical costs and, to that extent, it cuts down on the political pressures that are, or might be, built up for King-Anderson-type legislation, but it was designed for a positive purpose, not a negative purpose.

I was able to divert the force of this oblique attack, only to run into problems from the promoters of H.R. 10, the Keogh bill, who were reluctant to give further latitude to corporate pension plans until something had been done for the self-employed and professional groups to bring about an equalization. I was in a vulnerable position because, although I was a strong supporter of the equalization principles embodied in the Keogh bill, as far back as the days when it was the Reed-Keogh bill, each time the issue came before the House those in charge of managing it brought it out unbudgeted.

It frequently was scheduled as the first budget busting bill. As a member of the economy bloc, I was not about to bust the budget and, accordingly, I have voted against H.R. 10 in the past on several occasions. However, I was able to persuade the zealots behind the Keogh bill that the budget having been long since badly busted I was not going to stand in the way of the progress of the Keogh bill on these grounds at the tail end of the Congress. Even with these opponents satisfied, the Curtis bill ran into further difficulties. At the end of this last session of Congress I was trying to make a strong stand—largely effective, I am happy to state—against the Senate placing non-germane amendments on the House passed revenue bills. This resulted in the word being passed back to me that certain powerful Senators would provide a dire fate for the Curtis bill unless I desisted. My response was, "Then woe is me, and woe is my bill, but I will not alter my position." Incidentally, the Curtis bill remained the subject under discussion on the Senate floor for many days as we moved toward adjournment. Indeed, it may have still remained the subject on the Senate floor when the Senate finally adjourned. I have not checked to see. However, the substance of the Curtis bill was tacked on as a non-germane amendment on another House bill which passed and was sent to the President for signature. So, in this oblique fashion, it became law. I suppose this fine bit of irony was employed to teach me not to insist so strongly on the constitutional prerogatives of the House of Representatives. If so, it has been wasted. I am a humorless man.

H.R. 10 became law, as you know. However, it has been so watered down that I am watching with considerable interest to see the extent to which it is going to be used. However, the principle has now been established in the law, and I believe it is quite probable that it will be liberalized in the next session of Congress. Certainly, it will be liberalized in ensuing sessions.

Three pieces of legislation passed the last Congress which should have great impact in the area of employee benefits. The tragedy is that these three new programs are redundant and conflicting, to some degree, with each other. They have not been carefully coordinated with the existing programs established in the Federal-State unemployment insurance system. I am referring to the new laws in respect to employee training and retraining. The act which deals with the subject directly is the Manpower Training Act of 1962. This act, in my judgment, has been long needed and too long in coming. Its primary feature requires the Departments of Labor and Health, Education, and Welfare to report back to the Congress within less than a year the progress made in identifying the problems with concrete recommendations of what can and should be done. Only until we receive these reports will sizable sums of money be spent, but it is my prediction that the reports will demonstrate that it is ideas rather than money which are primarily needed.

The two acts having redundant provisions which will complicate and endanger the proper development of the Manpower Training Act are the Depressed Areas Act, passed in March of 1961, and the Trade Expansion Act, passed in October 1962. However, the Depressed Areas Act fortunately only has a limited ability to damage retraining and the unemployment insurance programs, because it gives only a lick and a promise to retraining and sets its sights primarily on public works spending to solve unemployment. It is a shame to waste money so futilely on public works in the vain hope that this kind of pump priming will solve unemployment but, at least the damage that

the Depressed Areas Act can cause is limited mostly to this kind of unthinking extravagance. I wish I could say the same about the trade adjustment provisions of the Trade Expansion Act. Regrettably, this act can create real mischief for both the unemployment insurance programs and the Manpower Training Act. There are real incentives in these provisions to try to establish that one's unemployment came as the result of foreign competition. I would hate to have to administer laws which set up different benefits to unemployed people based, not on the needs or future of the unemployed person, but rather, on what caused his unemployment. What difference does it make in the remedy of what was the cause?

It is my own judgment that we should do a much more effective job of getting manpower training into the Federal-State unemployment insurance system. For example, I have urged that instead of a worker going off unemployment insurance if he is being trained for a skill in demand to replace the obsolete skill he possesses, he should go off unemployment insurance if he does not train or retrain for a skill in demand. Less than 20 States have seen the wisdom of this approach, and there has been little encouragement at the Federal level for the States to take this approach. Furthermore, the States should encourage the employers who will get into this business of retraining for the new skills in demand to replace obsolete skills by giving them credit in experience ratings in the unemployment taxes and direct payments for part of the cost of retraining, if the business finds it is not going to be able to employ the worker in the skill for which he is being retrained.

Perhaps I should explain more clearly what I am talking about. An employer contemplates buying a new set of machinery which will replace, say, 100 workers. He reviews his own demand for skills to see if he can use these employees in other jobs in his employ, but finds that this is impractical. On the other hand, he has, in most cases, considerable flexibility at his command because he knows some months ahead of time what employees and how many will be laid off and that he cannot employ them in other capacities. During this terminal period it is frequently feasible to start training programs for these men in skills which are in demand by other employers. It is not reasonable to expect him to undergo the cost of retraining these employees for skills he will never utilize, but it could be made economically feasible if he received (a) credit on his experience rating for unemployment tax and (b) some of the actual cost for doing the retraining at his plant.

I might state that a great deal of understanding and cooperation is needed on the part of the labor unions to make this kind of forward looking program work. The unfilled jobs in demand are frequently in a field outside the original union's jurisdiction. The union leader is anxious to retain the employee as a dues-paying member in his union, so he encourages featherbedding or starts talking about splitting the work remaining among the same number of employees by advocating a 30-hour week.

While on the subject of unemployment insurance, I want to point out that there is active promotion going on by those who seek to eliminate the present Federal-State system and substitute in its stead a Federal system of uniform Federal standards. This might well become one of the major issues in the 88th Congress. I think the present unemployment system is excellent and only needs modification, not radical change. Aside from the modification I have mentioned of placing a new and greater emphasis on retraining, I would like to see other States follow California's example of

triggering into the system extended periods of benefit payments during the cycles of high unemployment. This is good insurance and good social economics, because it takes the energetic employee between jobs somewhat longer to get relocated in a new job during periods of high unemployment than in the three other periods of the economic cycle * * * the period of low unemployment and the two transition periods from low to high and high to low.

Essentially, we must preserve the unemployment system as an insurance system in which the premiums paid relate to the benefits paid. To have a good insurance system, we must have the tax premiums paid based upon experience rating. It is noteworthy that the attack against the present unemployment system by those who want Federal standards is directed against experience rating. The great danger arises from allowing the unemployment insurance program to be confused with welfare programs. Most of the arguments advanced attacking the unemployment insurance program are based upon arguments that relate to welfare programs.

However, one of the important ways to preserve a good unemployment insurance program is to be certain that it is backstopped by, but not confused with, a good welfare program. Employers themselves often think of unemployment insurance as welfare. They are wrong for two reasons. They support, instead of contest, the basic thesis of those who wish to convert it into a welfare program. They don't keep their eyes on those programs which really are welfare programs and take an interest as taxpayers, more than employers, in being certain that the welfare programs are adequate.

To maintain politically the position that I take, I must be able to say with truth that when unemployment insurance benefits run out we are not talking about leaving a worker and his family destitute. We are only talking about the system under which he derives his income, insurance, or welfare. So, in the last Congress we modified and, I believe, strengthened the welfare programs under the Social Security Act and so strengthened the unemployment insurance program. In the true sense of the word we liberalized these essentially illiberal programs by giving the States and local governmental units more authority in setting up their ideas of what welfare programs they wished and forbade the Federal officials from interfering with these local decisions.

The next Congress will undoubtedly see further pressure to extend the social insurance aspect of the Social Security Act to include payments for some health costs for the aged. I see two basic errors in so doing. One, this proposal radically alters the theory of social insurance which is an advancement over old-age assistance and previous welfare programs.

Parenthetically, I must stress that social insurance is not true insurance in the sense that the unemployment insurance program is or in the sense of private insurance. Social insurance does not relate benefits paid to the individual to the premiums paid in taxes by or in behalf of the individual. Social insurance is not fully funded. Social insurance is really an attempt to make welfare more like true insurance. To this extent, I think it is good, provided it is not done deceitfully. I must say there is much deceit, intentional or otherwise, in our social insurance program under the Social Security Act. The true advancement of social insurance over old age assistance was the fact that cash was given to the beneficiary, unbudgeted by a governmental bureau. The administration proposals to add health benefits under the social insurance title of the So-

cial Security Act do not provide for cash payments to the beneficiary. Instead, it provides a budget for a limited number of health costs and requires that the Federal Social Security Administration enter into contracts with the vendors of health services in respect to their fees and the kind of health services they may provide for the older person. Under the King-Anderson bill the bundle of health service amounts to less than 25 percent of the average health costs an older person experiences. If the old people on social insurance pensions need more cash to meet their total budget, why not give them more cash, not give them cash for all items but one and budget them on this one item—health costs?

The second basic error of the King-Anderson approach is that it seeks to establish a system of prepaid health costs for the future. For the present, all people over 65 are given the benefits without paying a cent into the program. In other words, the political appeal for the social insurance health program is not insurance at all, social or otherwise, but welfare. The insurance aspect, such as it is, is only in the future.

Prepaid noncancelable health insurance is the proper and ultimate answer to the cost problem of the aged for health care. This is the essence of the Curtis bill. It permits company pension plans to move into the field of prepaid health insurance. It is the coming thing in private health insurance, group or individual policies. Why then do I regard it an error for government to get into prepaid health insurance? Here is the reason. Any insurance system which provides prepayment requires creating a fund and the longer the period of benefits is from the payments, the greater the fund. In order to make the costs of any prepayment program as low as possible, the fund must be wisely and productively invested. Government can only invest in sterile and low return investment, Government bonds—bonds which were sold to finance in the main military and related expenditures, not expenditures on economic growth. On the other hand, private pension plans, private prepayment insurance programs can and do invest their funds in the productive and growing economy—into plants, into machinery, into training manpower. These funds bring true economic return on the investment. The earnings are greater than those derived from Government bonds. It is the wise investment of these funds which make prepaid health insurance economically feasible and keep the premiums within the budget of the average American family. Furthermore, there is some opportunity through judicious equity investments to hedge against inflation.

Texas Jewish Post Calls for Vital Community Center in Fort Worth, Tex.

EXTENSION OF REMARKS

OF

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 22, 1963

Mr. YARBOROUGH. Mr. President, a recent page 1 column in the Texas Jewish Post edition of Thursday, January 10, 1963, was written in support of a community center in Fort Worth, Tex.

The report cited the success and value of a center program in Dallas, and in many other parts of the world. Since

this article speaks eloquently of the community need as well as the high civic value of such a center, which has worldwide significance, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

One of the most needed and progressive types of community organizations is the Jewish Community Center. This has been recognized by community leaders in cities all over the world.

Dallas' center program is vibrant and has achieved marked success with the development of its center building and facilities in the ever expanding northern end of town.

Fort Worth Jewish leaders and many members of the community have been pressing for the construction of a center building for several years now. Many interested community members have pledged funds for this building and the Dan Danciger Foundation has pledged the considerable part of the cost for the completion of this project.

A center building in Fort Worth is within view.

In keeping with the development of a center program, the Dan Danciger Community Center Association has activated a program that has included activities for nearly all the segments of the community. For this they are to be complimented.

However, compliments are not enough.

What we'd like to see start—and soon—is a membership campaign to enlist every family who wishes to become a participant in the center's activities.

This can and should be on a nominal basis to enlist all who can possibly benefit from the center, and others who certainly can appreciate the high civic values and purpose behind a vibrant center program.

Recently, in time for Chanukah, the new Jewish Community Center of Goteborg, Sweden, was dedicated as "a symbol of the rebuilding of the Jewish community institutions of Europe which were destroyed during the Nazi years."

Herbert Katzki, assistant director-general of the joint distribution committee, made these remarks to a large audience which included M. R. Henriques, president of the Jewish community of Goteborg, and Julius Huttner, chairman of the Goteborg Center's Building Committee.

There were many others in the audience, however.

Approximately half of the 1,500 Jews now living in Goteborg were victims of the Nazis. And, since Sweden was not occupied by Hitler's madmen, these victims of Hitlerism were lucky to have found refuge in Goteborg.

Out of the 13,000 Jews in Sweden today, half came following World War II.

And, oh, the tales they could recite.

The center in Goteborg was built through the aid of JDC and the Conference on Jewish Material Claims Against Germany. But the highlight of the story is that the Jewish community of Goteborg provided most of the funds.

Centers have been built in Athens, Brussels, Berlin, Lyons, Amsterdam, Helsinki, Barcelona, and other cities in Western Europe.

Hundreds of centers have been built in the United States.

Fort Worth will soon have its chance.

Let's join ranks and make certain that the Danciger Jewish Community Center will be a vital, living utility for all the citizens of this wonderful city.

We can do it.

We will.

Address by the Vice President Before
Democratic Workers

EXTENSION OF REMARKS
OF

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 22, 1963

Mr. HARTKE. Mr. President, last Saturday, January 19, I was privileged to attend a luncheon at the Sheraton-Park Hotel where the Vice President spoke.

As always, LYNDON JOHNSON captivated and inspired his audience. He outlined for a large group of Democrats from all corners of the United States the principles upon which the Democratic Party was founded, and then he showed how these principles have been practically applied through the years in successful and forward-looking foreign and domestic programs.

Mr. President, I believe the Vice President's excellent address will be of great interest to the Members of the Senate and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY VICE PRESIDENT LYNDON B. JOHNSON AT THE DEMOCRATIC LUNCHEON, SHERATON-PARK HOTEL, WASHINGTON, D.C., JANUARY 19, 1963

I have never ceased to be amazed by the dedication of the loyal Democratic Party workers who give so freely of their time and their energies to a cause. To me, this is one of the true strengths of a free people.

You have put aside your affairs and traveled hundreds, and even thousands, of miles to strengthen the party. And you have done so only because you believe in goals which are over and beyond your own, individual interests.

A democratic form of government can exist in the modern world only if people organize themselves to make a point of view effective. Without that organization, government becomes the exclusive province of a small group of officials who have succeeded by one means or another in capturing power. And government that is exclusive is exclusive of the people.

There is a cynical view which holds that politics is the art of organizing to seize power. In our country, I believe, it is the art of organizing to achieve goals that will serve the people.

You and I have chosen the Democratic Party because we have faith in its dreams and aspirations. And, as we close out the books on the first 2 years of a Democratic administration, I feel we can conclude that our faith has been justified under the leadership of John F. Kennedy.

President Kennedy likes to trace our party's beginning back to 1791, when Thomas Jefferson and James Monroe went from Virginia to New England on what they called a "botanizing excursion." The seeds they planted on that trip blossomed almost immediately and the plant still bears fresh fruit every year in the form of new leaders, new ideas, new accomplishments, and new victories.

We are here as members of the world's third oldest political party—and we were a concern when the English Whigs and Tories were merely the political arm of a few established families.

I never tire of telling people why I think we have remained in good shape for so many

years. There is a lesson in this great political success story, and the better we remember it, the more effective we will be when we leave Washington and return to our homes and the voters, the real source of our party's strength.

Franklin Roosevelt once said that the Democratic Party would be the major party as long as it belonged to the people. He went on to describe our party as one that believes "in the wisdom and efficacy of the great majority of the people, as distinguished from the judgment of a small minority."

"Our party," Roosevelt said, also "believes that, as new conditions arise beyond the power of men and women to meet as individuals, it becomes the duty of the Government itself to find new remedies with which to meet them."

These are principles of constant change—as man's needs are constantly changing. But they are firmly rooted in stable and fruitful soil.

To begin with, we Democrats are not an exclusive party. If this country was founded as a haven where all who believe in liberty could come, live together in harmony, and try to make their lives better, then it follows that a party which hopes to lead the country must believe in these things, too.

So we Democrats have always been the one great national political party, made up of people from all sections, all classes, all races, all religions. From the outset, we have been the party that has met the immigrant at the dock and helped him to become a citizen—just as it reached out a helping hand to the sharecropper, the workingman, the student, and the businessman.

But we knew that this was not enough. Jefferson said that the only healthy republic was one of educated citizens, each with a stake in his country's welfare. So we believe in educating each American to the utmost of his capacity. So we believe in the right of every American to have an equal chance to contribute his talent to our country.

Our foreign policy has been equally uncomplicated down through the years. We Democrats, of course, believe that in a world of aggressors our country can only remain free by remaining brave, by remaining strong. But we do not arm for conquest. We arm to maintain freedom and preserve peace.

But we also believe that the best way to have a good neighbor is to be one. This is the basis of our historic reciprocal trade policy, which encourages commerce among all the nations of the globe. It is the basis of our support of the United Nations in its painful quest for world order, and of our support of programs which help others to help themselves.

These principles, as you can see, are neither numerous nor hard to understand. But they have lasted, and our party has lasted with them.

When I entered politics, some 30-odd years ago, I found my natural home in the Democratic Party. It wasn't hard for me to join—I was born one.

I found it easy to remain in the Democratic Party because my deepest personal political principles were at home there.

I believed that it is the politician's first duty to hold his country together, to appeal to the forces that unite us, and to channel the forces that divide us into paths where a democratic solution is possible. It is our obligation to resolve issues—not to create them.

None of us will ever live to see our country perfect, just as we will never live to see ourselves perfect. But we can try—and if we leave the world a little better than we found it, and if we die with a little more understanding than we had when we were born, we are doing all right. I have found that being a Democrat has helped me to try to do both.

Our work is made easier because during the past 2 years, we have had a man in the

White House who has dedicated his life to advancing the cause of freedom and social justice in every corner of our land and in every corner of the globe.

John F. Kennedy has taken the principles of the Democratic Party and has applied them to solving the world's problems.

Because our administration believes in strength, freedom is stronger everywhere in the world. We have pulled the fangs of the Cuban rattlesnake—and made it clear there were no limits to our determination to defend our security.

By calling the bluff in Cuba, we made freedom in Berlin and southeast Asia that much surer. And, where a few short years ago the Communist world was solid and united, its major preoccupation today is a bitter internal quarrel between its two most powerful leaders.

Because we believe in collective security and in being a good neighbor, we have supported intelligent trade, the Alliance for Progress, the Peace Corps, and the United Nations.

Because we believe in solving problems, we are seeking to bring our economy to full capacity, so that every American capable of holding a job or a place in college attains those goals; so that the senior citizens among us need no longer feel the crippling financial effects of lingering illness, and so that our great metropolitan areas are made livable for the overwhelming majority of Americans who reside in them.

The Democratic Party has grown in recent years because the people know it is the best vehicle for carrying out their hopes for a better world. We have gained this confidence for three reasons.

First is our history, our principles, and our present program.

Second is our willingness to work long and hard for what we believe in. We know that human needs change, and we must plan for the future. But also we know that current needs must be solved. We are trusted because we have the eyes to see what must be done and the courage to do it.

Third is the kind of people our party attracts. I mean more than the tens of millions of voters—a vast majority, by the way—who consider themselves Democrats. I mean the kind of people—the hundreds in this room and the millions of people to whom we will carry the message when we leave here—who hold our party together.

So I would like to thank you again, in behalf of the President and myself, for what you did for us in 1960; for what you did last year; and for what you will do next year to help elect the Democratic candidates for President and Vice President—whoever they might be.

We will meet again next year to choose those candidates. If the Democratic Party holds true to the country, and if we hold true to our party, we will have doubly earned the victory that will be ours.

The 45th Anniversary of Ukrainian
Independence

EXTENSION OF REMARKS
OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 22, 1963

Mr. YOUNG of North Dakota. Mr. President, the 45th anniversary of the independence of the Ukrainian National Republic is being marked today throughout the free world. Beginning in 1918 this free Republic endeavored to live in

peace and harmony with all nations. The struggle for survival lasted only 2 years as Soviet Russia overran and suppressed their freedom. The free people of the word celebrate this anniversary with the hope that the Ukrainians will again live in a free republic. The courage these enslaved people demonstrate and the struggle they wage is an inspiration for the thousands of people of other countries behind the Iron Curtain.

A strong group of outstanding Americans of Ukrainian descent has been organized for some time to help their relatives and friends achieve this goal of freedom. The North Dakota Branch of the Ukrainian Congress Committee of America, Inc., whose president is Dr. Anthony Zukowsky, a longstanding friend of mine, expresses the determination of these enslaved people who cannot make their desire for freedom known by public speech or printed papers. As a part of this anniversary celebration, Dr. Zukowsky has written an excellent letter in which he presents the history and development of the struggle experienced by the Ukrainian people.

Mr. President, I ask unanimous consent that Dr. Zukowsky's letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UKRAINIAN CONGRESS COMMITTEE
OF AMERICA, INC., STATE BRANCH
OF NORTH DAKOTA,
Bismarck, N. Dak., January 17, 1963.

HON. MILTON R. YOUNG,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR YOUNG: On January 22, 1963, 45 years will have elapsed since the historical date of the proclamation of the full independence of the Ukraine. This date is one of the greatest in the modern history of the Ukrainian people, as on that day the historical right of the Ukrainian people to their freedom and national independence was again reaffirmed by the democratically elected Ukrainian Parliament—Central Rada—in their official proclamation. A year later, on January 22, 1919, the Act of Union was issued, uniting the Western Ukrainian National Republic and the Ukrainian National Republic, and establishing the united and sovereign State of the Ukraine.

The young and democratic Ukrainian National Republic was recognized by several European governments, including that of Soviet Russia. It endeavored to pursue its own course in harmony and peace with other nations, but Communist Russia, despite its solemn pledge not to interfere in internal affairs of the Ukraine, attacked the Ukrainian Republic and tried to impose the hateful Bolshevik regime upon the Ukrainian people. For almost 4 years the Ukrainian nation struggled gallantly to preserve its independence, but deprived of military, economic, and diplomatic support by the Western nations, it succumbed to the numerically superior military forces of Communist Russia. In 1920 the free Ukrainian State was destroyed and the puppet regime of the Ukrainian Socialist Republic was installed, which in 1923 became a member of the Soviet Union.

Although Moscow claims that Ukraine and other non-Russian Republics of the U.S.S.R. are free and sovereign states, and Ukraine and Byelorussia are even charter members of the United Nations, the fact is that the Ukraine is a colony of Communist Russia. Its human and economic resources are being exploited by the Kremlin for the purpose of spreading the communization of the world

and subverting the once free nations, as is the case of Cuba, to which Khrushchev and his Communist chieftains had sent their missiles and other offensive weapons that had been manufactured from economic resources of the Ukraine and other captive non-Russian nations.

During the entire Soviet-Russian rule in the Ukraine, Moscow has tried every way to destroy the spirit of the Ukrainian people, by persecuting the Ukrainian churches, arresting their leaders and clergy, by forced collectivization, mass deportation, executions, inhuman and cruel genocide, and many other inhuman methods. However, all these efforts have failed dismally, for the Ukrainian people have never submitted to the alien rule of Moscow and continue to wage an incessant struggle for the recovery of their freedom and national independence. Also the Soviet Government sends special agents to kill Ukrainian leaders in the free world, as was the case of Stepan Baudera and Dr. Lev R. Rebet, whose killer was recently sentenced by the German Supreme Court in Karlsruhe to 8 years of hard labor.

Both the U.S. Congress and the President of the United States of America have recognized the plight of the Ukrainian people by respectively enacting and signing the Captive Nations Week resolution which listed the Ukraine as one of the captive nations held in enslavement and captivity by Moscow.

Americans of Ukrainian descent in our great State of North Dakota are planning to celebrate the forthcoming 45th anniversary of the Ukrainian independence on January 22, 1963, in a fitting and solemn manner. We firmly believe that you are fully aware of the importance of the Ukraine as an ally in the common struggle against Russian-Communist imperialism. Therefore, the U.S. Congress and U.S. Government can contribute greatly to keeping the spirits and hopes of the enslaved Ukrainian nation high, by approving Senate Concurrent Resolution 82 and House Resolution 718, by favoring action of persecuted Ukrainian Catholic and Orthodox churches, by creating a special House Committee on Captive Nations, and by issuing a special Shevchenko, Champion of Liberty, stamp in connection with the forthcoming Shevchenko memorial celebration in Washington, D.C., in 1964. A free and independent Ukraine is in the interests of the United States as well as the entire free world.

The entire world, including the enslaved Ukrainian people, is looking toward the United States of America as the true citadel of freedom and hope for the oppressed people everywhere. Therefore the 45th anniversary of Ukrainian independence provides an appropriate occasion for the American people and the U.S. Government to demonstrate their sympathy with and understanding of the aspirations of the Ukrainian nation to freedom and independence.

Respectfully yours,

DR. ANTHONY ZUKOWSKY,
President, U.S.C.A. State Branch of
North Dakota.

Mrs. Sam Speir, of Texas, Honored as Outstanding Woman Leader in 4-H Work

EXTENSION OF REMARKS

OF

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 22, 1963

MR. YARBOROUGH. Mr. President, Mrs. Sam Speir, of Manchaca, Travis County, Tex., has been selected as the

recipient of the Travis County 4-H and District 10 4-H Alumni Award for the outstanding woman leader of 1962.

The December 7 issue of the Austin American contained an excellent article about Mrs. Speir's meritorious work with 4-H youth. Mrs. Speir, a longtime employee of the U.S. Internal Revenue Service, exemplifies the outstanding community work being performed in Texas and throughout the Nation by employees of the Federal Government.

Although employed full time by the Internal Revenue Service, which has presented her with several sustained superior performance awards, she has given her own time to serve as a director of the Training Union of Mar-bridge Boys' Ranch, Travis County rural chairman for the Mothers' March for Polio for 3 years, a member of the Governor's committee on children and youth, a member of Delta Kappa Gamma, honorary society for outstanding women teachers, a Sunday School teacher and former president of the Women's Missionary Union of the Manchaca Baptist Church, and has held every office of the Travis County Home Demonstration Council. These are merely a few of the achievements of Mrs. Sam Speir.

I knew her late husband as a devoted fighter for clean government in Texas, and against the entrenched power structure which had so long misgoverned the State. I valued his advice, and especially his judgment of people, highly.

Mr. President, I ask unanimous consent that the article entitled "Mrs. Sam Speir Gets 4-H Award" from the December 7 issue of the Austin American to be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MRS. SAM SPEIR GETS 4-H AWARD

(By Mary Lou Rowland, assistant home demonstration agent)

Mrs. Sam Speir has received the Travis 4-H and District 10 4-H Alumni Award for the outstanding woman leader for 1962.

Leonora Elizabeth Stanford spent her childhood in Williamson and Burnet Counties where she was a 4-H Club girl for 4 years participating in the demonstrations and activities that were offered to 4-H Club members at that time.

4-H had a great influence on her adult life for it was the beginning of the training she needed to start her education away from home. She finished high school at the Baylor College Academy at 15 and remained in Belton to complete 2 years of college work at Mary Hardin-Baylor. With a teacher's certificate she was qualified to teach, but the State law says that a teacher must be 18 years of age. She had to wait for a couple of months for that first teaching job.

After teaching 5 years in the rural schools of Travis County, Lenora Elizabeth Stanford married Sam Speir who was with the Texas Rangers, the department of public safety, a rancher and, at the time of his death, a dairyman in Travis County.

Mrs. Speir says that hers was education in reverse. Now, the wife works and sends the husband to school, but her husband sent her to school, and it was after her marriage that she received both bachelor's and master's degrees from the University of Texas.

Thirteen years ago the Speirs became parents of a son, Sam, Junior, who is among the most active 4-H boys in the county, and

now holds the title of Mr. 4-H in Travis County.

Mrs. Speir is—

1. A director of the Training Union of Marbridge Boys' Ranch, a ranch for retarded boys in Travis County.

2. Travis County rural chairman for the first Mother's March on Pollo, serving in that capacity 3 years.

3. A member of the Governor's committee on children and youth, attended the Governors' conference on children and youth. At present she is tax technician for the Internal Revenue Service and has received two cash awards for sustained superior performance in Government service. She has been with the Federal Government for 18 years.

4. Is a member of Delta Kappa Gamma honorary sorority for outstanding women teachers, whose membership is by invitation only and is limited to one-tenth of all women teachers. She taught school for 15 years.

5. Is an active member of the Manchaca Baptist Church where she has been teaching Sunday School classes, president of the Woman's Missionary Union, church pianist, and training union director and church educational director.

6. Has been a Home Demonstration Club member 30 years and has held every office in both her club and the Travis County Home Demonstration Council, has served as the county chairman of the Texas Home Demonstration Association, district director; editor of the official organ of that organization, and at the present time is State chairman of the 4-H Committee for the Texas Home Demonstration Association.

7. For many years has been active as a leader in 4-H Club work in Travis County—intermittently from 1936 to 1962. Leader in countywide public speaking, subject matter leader for home management, superintendent and judge at 4-H contests; secretary and chairman of Travis County 4-H Leaders group, and members of the 4-H County Finance Committee.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer shall arrange the contents of the daily Record as follows: The Senate proceedings shall alternate with the House proceedings in order of placement in consecu-

tive issues insofar as such an arrangement is feasible, and the Appendix and Daily Digest shall follow: *Provided*, That the makeup of the RECORD shall proceed without regard to alternation whenever the Public Printer deems it necessary in order to meet production and delivery schedules.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. _____ addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10(a). *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the sine die adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

10(b). *Makeup of the Appendix.*—The Appendix to the CONGRESSIONAL RECORD shall be made up by successively taking first an extension from the copy submitted by the official reporters of one House and then an extension from the copy of the other House, so that Senate and House extensions appear alternately as far as possible throughout the Appendix. The sequence for each House shall follow as closely as possible the order or arrangement in which the copy comes from the official reporters of the respective Houses.

The official reporters of each House shall designate and distinctly mark the lead item among their extensions. When both Houses are in session and submit extensions, the lead item shall be changed from one House to the other in alternate issues, with the indicated lead item of the other House appearing in second place. When only one House is in session, the lead item shall be an extension submitted by a Member of the House in session.

This rule shall not apply to extensions withheld because of volume or equipment limitations, which shall be printed immediately following the lead items as indicated by the official reporters in the next issue of the CONGRESSIONAL RECORD, nor to RECORDS printed after the sine die adjournment of the Congress.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.
