Development of Nations: A Challenge of Our Times—Address by M. J. Rathbone

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 23, 1963

Mr. MUNDT. Mr. President, last October Mr. M. J. Rathbone, president of the Standard Oil Co. of New Jersey, delivered the Founder's Day convocation speech at Lafayette College, Easton, Pa. His address, "Development of Nations: A Challenge of Our Times," provides much food for thought.

Mr. President, I ask unanimous consent that an edited version of this talk be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today, there are new and great demands on our educational institutions. One of these is the instruction and motivation of our own people in greater numbers than ever before so that they will be equipped to deal wisely and resourcefully with the challenges and opportunities of an era of unprecedented change and danger. Another is to help provide education and training to people abroad, especially in the less developed areas, who having seen what free enterprise has achieved here, are now demanding more rapid advancement for themselves.

We in this country might assume it logical that if people in other lands are impressed by our standard of living, they would follow our political and economic system. Such unfortunately is not the case. Each nation has its own unique problems, its own heritage, its own customs.

It seems to me that the developing nations have four basic needs: First, capital for industrial development, for modernization of agriculture, and for public facilities. Second, education and training to adapt themselves to industrialized society. Third, the motivational force generated by rewards for accomplishment that can best be provided, I believe, by a free enterprise system. Fourth, a stable and fair system of government.

I think it important to realize that some of these requirements must largely be met by the developing nations on their own. The developed nations must give them all the help we can, and it must be substantial in several areas. This is a challenge. It is a challenge to all our institutions—especially to education, government, and business. This is what I want to talk about today. It is not my intention, however, to do more than underscore the importance of education and government aid. This is simply because I feel better qualified to give you my thoughts on the contributions a free and responsible business enterprise can make to the development of emerging nations.

As we assess the needs of the developing countries, one fact is inescapable. Economic growth cannot be achieved without an infusion of vast amounts of capital. Capital is needed for housing, hospitals, roads, schools, irrigation, sanitation systems, factories, shops, farm equipment, power plants, oil refineries, and all the other material things that sustain life or make for a better one. The need is staggering. For example, here in the United States, government, industry, and agriculture have invested about \$9,000 per capita. In the European Common Market it is less than half that amount. What is a realistic goal for the one and a quarter billion people in the 100 countries that Paul Hoffman refers to as underdeveloped? Let's say the goal is to raise the level of development to about one-fourth of that of the European Common Market. Then the capital infusion needed is about one trillion dollars. This obviously dwarfs our U.S. aid programs of \$4 billion per year.

What is the answer?

In the long term most of the capital for the development of any country must come from its own savings—private and government. Most must come from the private sector, unless, of course, it is accumulated as in the Soviet Union—by the ruthless exploitation of its people.

Outside sources of capital, while relatively small compared to the internal sources, are vital because of their germination effect on the economy. The world's requirements today for such external sources of capital are so large that governments alone cannot supply them, either as aid or loans. The result is that most nations have a pressing need for foreign private capital. This is not a new development. Private foreign investment capital has already played an important role in world development, but little recognition has been given it. In the case of the United States, private capital expenditures abroad amount to twice as much as U.S. Government economic assistance. Furthermore, it should be noted that since World War II about 40 percent of these investments have been made in the underdeveloped areas.

But private overseas investments are not without opposition. There are some in many countries who oppose it for a variety of reasons. One claim is that it leads to an unfavorable balance of payments for the host country because of the withdrawal of earnings on the investment. The opposite is true. Incoming capital usually brings with it a flow of capital equipment which would otherwise have to be paid in scarce foreign currencies or would not be available at all. The creation of local industry results in products that would otherwise have to be imported at the expense of depleting foreign exchange reserves. The withdrawal of earnings is only a small fraction of the foreign exchange cost of importing equivalent products.

Also in many cases this capital creates commodities or goods for export that directly generate foreign exchange and permit the country to meet its external obligations. This is certainly true of those investments in the extractive industries. Yet this is the area most open to attack. Countries with vast amounts of minerals or commodities have a simple choice. They can, if they wish, hoard these for local consumption within their borders, or they can develop them for export and buy in return

goods and services that are directly needed to supply the wants of their people. The latter course is the only one that makes economic sense.

The alternative to private foreign investment that many countries have for the development of their industries is to provide capital from their own public funds. However, if capital comes from this source, other segments of the economy—particularly vital public works—are deprived of needed funds. It is difficult to escape a conclusion: So much capital is required that there is plenty of room for private foreign capital.

There are additional advantages to a country in promoting the use of private foreign investment.

Private industry, wherever it has competed directly with government corporations, has proven itself far more efficient. No one has yet found a satisfactory substitute for the competitive system. Those who favor socialism and the resulting state monopoly tend to overlook this fact.

Though it may sound absurd—one of the principal advantages of private investment is the opportunity to fail. When there are failures in government industrial investments, they are invariably concealed by one means or another. The result, of course, is inefficiency and higher costs. But risk by private capital is a constructive force—it drives men and corporations to strenuous efforts to succeed.

The decision to make a foreign investment by the private owner comes only after he has carefully studied all the alternatives in the light of his own experience—usually in many other countries of the world.

Private foreign investment—made on the basis of commercial consideration—has advantage in that it is free of political ties or influences and of government-to-government obligations.

These, then, are some of the more obvious advantages of private investment in developing an economy. Though governments can provide general education to their people, they are often not equipped to provide the training and business skills required to run an industrial society. It is in these latter crucial areas that private investment is making and will continue to make a contribution—perhaps the most important contribution of all.

I know from experience that international business such as the one with which I am associated has devoted much energy to the training and development of people throughout the world. We try to encourage concepts of leadership, business management, and the spirit of free enterprise. These are ingredients essential to the successful development of any nation.

Satirical comments about the "organization man" notwithstanding, the really significant features of the free enterprise system are: Management independent of political dictation and free to concentrate on economic functions, multiple sources of initiative, delegation of responsibility, encouragement of ambition, recognition of men on the basis of ability, and reward for individual accomplishments.

A basic policy of all our operating affiliates throughout the world is to provide training programs for the development of skills and abilities. Most all of our employees, at one time or another, have participated in either formal training programs or on-the-job training. These cover a wide spectrum of

activities ranging from welding, to analytical laboratory work, to operating refineries, to management. As a basis for this training, we send skilled people into a country when needed. Most of these "educators"—and I really believe they are educators—return to their homeland as soon as they have trained replacements. In a sense, we and other businesses have had our own "peace corps" for a number of years.

I am reminded of this because our company operates two training centers abroad that specialize in accounting, sales, engineering and business management. One is at Abingdon, England, and the other at Cali, Colombia. During the past 5 years, over 2,000 employees have attended courses there.

The outcome of such programs is reflected in the makeup of our oversea management. In 20 of our principal operating affiliates abroad, 11 of the chief executives are nationals of the countries in which these companies operate. In these same 20 companies, there are 116 full-time directors of whom 79 or almost 60 percent are nationals. In managerial positions below the directorate level in these companies, the proportion of nationals is very substantially higher and in many cases is nearly 100 percent.

Let me give you some other examples of what a foreign corporation can do to help stimulate the economy of a host country. One of our affiliates, Creole Petroleum Corp., operating in Venezuela, recognized that there was a lack of adequate investment funds for industrial and agricultural development in that country. Creole created a subsidiary company with the basic objective to help solve this problem through selected investments. This company does not make loans. Rather, it provides new risk capital for business ventures outside the oil industry, and it limits its participation to less than 50 percent ownership since its purpose is not to control but to stimulate.

Skilled management and technical people from Creole's staff are appointed to the boards of directors of the companies in which investments have been made. An important part of the job of these directors is to help the newborn company on matters of broad policy, to analyze problems correctly, and to adopt all the modern techniques of organization and management that we know.

Results, after a year's operation, have been remarkable considering that this was an entirely new field for Creole. Investments have been authorized in 16 companies, for a total of \$4 million. Individual subscriptions vary from \$55,000 in a mushroom growing and canning project to \$660,000 in a cattle ranch, and holdings in each company range from 7 percent to 49 percent. These investments are creating direct job opportunities for about 1,260 workers, and several thousand other new jobs indirectly.

Another recent example of the ability of private investment to provide income to a nation and thus raise living standards is clearly evident in the United Kingdom of Libya. In 1955 the Libyan Government, with keen foresight, opened the country to foreign capital for the exploration of oil. I'm sure you'll believe me when I say that I could talk for hours about the hazards and risks, the adventure and romance, connected with the search for oil. But to make a long story short, oil was discovered in Libya in 1959.

What has this meant to the country? From 1955 to 1959, several thousand Libyans were hired and trained in the job of exploring for oil. Since 1959, additional thousands have been employed in the construction and operation of facilities required to produce, transport, refine, and ship the oil.

Business and residential building have increased, schools have been constructed, roads built, and a myriad of businesses started to provide the oil industry with serv-

ices and materials required to carry out its work in continued search for and production of oil. The per capita income of the Libyan nation has nearly doubled since the country was opened to oil exploration. During the last 2 years the national budget has more than doubled.

Training programs have been set up to teach the skills required in operation and maintenance of machinery, basic mathematics, and laboratory techniques. Some of the employees with high school and university education have been provided scholarships to specialize in law, employee relations, business administration, geology, and engineering. From this latter group will come candidates for management.

Other companies as well as the oil industry have stimulated similar activities the world over. We have all learned, however, that the process of developing economic and human resources tends to be lengthy and fraught with problems. One such problem, for instance, concerns the training of our own foreign nationals, many of whom, once they attain proficiency, leave us to join other enterprises or government service. This creates momentary headaches for local management. But from a long-range point of view it isn't quite so bad as it seems since what helps the overall economic development of other nations helps us. The talent we lose can help speed up that development.

In view of increasing world pressures, many of us are concerned with the question of what more we can do to accelerate the development of emerging nations. As a businessman searching for solutions, I'd like to suggest several ideas that might be worth exploring:

1. Where practicable, and where there is no question of conflict of interest, business organizations might undertake a lend-lease program of personnel to governments to carry out special assignments for which they are uniquely qualified. Our needs in this area are so urgent that we must find some way to bring about a spirit of coordination and cooperation between business and government, something like that which existed during the crucial days of World War II.

2. International companies should encourage their management teams abroad to look more closely at additional business opportunities outside their usual scope of activity that will benefit a host nation.

3. Business can assist educators, social scientists, and others interested in the behavioral sciences in searching for ways to teach modern management ideas to qualified people in the developing nations.

4. International business can do more to speed up the tempo and improve the quality of many of the programs already being carried out. While, as I have reported, great work has been done in the training and development of people, too often we find examples of failure and needless delays in preparing nationals for positions for which they are potentially qualified. One of the best jobs an American can do overseas is to help develop a national as his replacement.

5. Industrial research programs can give more emphasis to the needs of developing nations, particularly in the field of agriculture.

Finally, I'd like to suggest that international business should look objectively at that widely prevalent manifestation of our times that we call nationalism. It need not be a negative factor. Historically it has been associated with new and developing nations and our own country was no exception. The pride of a new nation in itself, its desire for independent achievement, the willingness to work hard for accomplishments, can constitute a very constructive force. Nationalism, of course, can, and too often does, take an unreasoning and destructive form.

I hope I have shown here today some of the unique contributions that private foreign enterprise can make and is making to help speed the development of nations. But I should not close without mentioning that there is much these nations themselves can and must do to help themselves. First and foremost they can create a favorable climate for investment through economic and political stability. They can promulgate laws that are fair and that give equal opportunity for all—whether national or foreign investor. With such a basic framework, not only will foreign investment be attracted but domestic capital will not flee.

With such an environment, I believe that all sectors of society—particularly government, education, and business—can provide a concerted and effective effort to expand the economic development of the world. None of the particular problems of any nation would be unsurmountable.

Landmark Decision by Supreme Court

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. ROOSEVELT. Mr. Speaker, on Monday of last week, the Supreme Court in a unanimous decision in the case of FTC against Sun Oil Co. ruled that petroleum suppliers, under the Robinson-Patman Act, can cut prices selectively only in competition with their own competitors. They may not cut prices in order to meet the competition of their dealers' competitors.

This is an historic landmark decision. It establishes new limits on the use of discriminatory price cutting by suppliers. It will be of invaluable assistance in eliminating costly and destructive price wars. This decision is one that will have great impact not only upon the petroleum industry, but upon the entire framework of American commerce and the consuming public, as well.

This case arose from a price war in Jacksonville, Fla., in the summer of 1955. At that time, the Super Test Oil Co., an independent retail chain, by virtue of its lower retail prices was drawing substantial business away from a Sunoco station. To help their dealer meet this competition from the independent station, Sun granted certain price concessions. The Federal Trade Commission charged that this was a violation of law for the reason that the Sun Oil Co. had not offered similar price reductions to their other dealers in the Jacksonville area.

The Sun Oil Co. interposed the defense that it was meeting competition in good faith. This was rejected by the Federal Trade Commission on the grounds that discriminatory price cutting can be used only to counter direct competition at the same level; that is, suppliers versus suppliers and retailers versus retailers, not, as in this case, suppliers versus retailers.

The Fifth Circuit Court overruled the Federal Trade Commission, but the Supreme Court sided with the FTC in reversing the circuit court decision. In

the Supreme Court's decision Justice Goldberg said:

Since there is in this record no evidence of any such (lower) price having been set or offered to anyone by any competitor of Sun, Sun's claim to the benefit of good faith meeting of competition defense must fail. To allow a supplier to intervene and grant discriminatory price concessions designed to enable its customer to meet the lower price of a retail competitor who is unaided by his supplier would discourage rather than promote competition.

The decision does not apply to those cases where a competing supplier distributes his products at the retail level through company-owned stations. It is likewise noted that the record was less than completely clear on whether the independent chain competing with Sun's retailer had received price concessions from a major supplier. It was pointed out that if such evidence was forthcoming the FTC could reopen the case.

The reopening of this case by the Federal Trade Commission could conceivably establish that one of the major companies had supplied the Super Test Oil Co. with its petroleum products. It might even establish that price concessions were made which would give the Sun Oil Co. the right to use the "good faith" defense. But, even assuming this to be so, where does this leave the major oil companies?

There has long been speculation as to the extent to which the major petroleum companies control the prices on both sides of the trenches during price wars. Many independents, of course, obtain their petroleum products from the majors. Thus, the majors are in the position of acting as supplier to both sides—company stations and independents—during many price wars.

If the Sun Oil case is reopened by the Federal Trade Commission, one of the byproducts could be full disclosure as to whether there is agreement within the petroleum industry regarding the wholesale prices to be charged when major companies sell their products to independent stations for resale under an independent brand name. If this should prove to be the case, the possibilities of both antitrust violations and unfair competition are certainly great.

This entire question of price wars and price structure is of vital importance to the many thousands of small businessmen engaged in the distribution of petroleum products.

Every week—virtually every day—I receive letters from throughout the country in which service station operators tell me that if price wars and discounting are not stopped, they will be driven out of business.

Yesterday I received a petition signed by 280 service station operators in the greater Kansas City area, asking that I forward it to the Federal Trade Commission. The petition requested that the FTC "hold an on-the-spot investigation of the gasoline pricing structure for the purpose of determining whether there is price discrimination and price fixing in the area" and "to protect us as small businessmen as is guaranteed under the Robinson-Patman and Clayton Acts."

I have forwarded this petition to the Federal Trade Commission with the urgent request that action be taken at once.

But more is needed to combat price wars than sending investigators to the scene of the latest outburst. We must also examine the entire structure of petroleum pricing practices. We must find a way to stop these costly and destructive gasoline price wars. The very existence of thousands of small businesses throughout the country depends upon the prompt solution of this pressing problem.

Tribute to Dow Henry Drukker

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, January 23, 1963

Mr. WILLIAMS of New Jersey. Mr. President, New Jersey mourns the passing of one of its most beloved, constructive citizens. Mr. Dow Henry Drukker, who once served the Nation in the House of Representatives, was still at work as publisher and chairman of the board of the Passaic Herald News this week when, a few weeks before his 91st birthday, he died in Lake Wales, Fla.

Immediately, thousands of his good friends from New Jersey, throughout the Nation, and abroad responded with heartfelt messages of bereavement. They paid tribute to Dow Drukker for many reasons.

Only a few years after he came to New Jersey in 1897 from Grand Rapids, Mich., Mr. Drukker built a reputation as a businessman, a banker, and a newspaper owner. His fellow citizens found him so much to their liking that they elected him as their Congressman in 1914. He served in the 63d, 64th, and 65th Congresses. When he left Congress in 1919, he announced that he would not run for elective office. Neither would he accept appointive office. As one writer has said:

He felt that as a newspaper owner he wished to be free of partisan compulsions.

In the years that have followed, Mr. Drukker made the Passaic Herald News a newspaper of direct service to his community and to the State. Even as he contributed to the financial vitality of his community, Mr. Drukker also set high standards of journalistic service.

Many honors were given to him over the years. One of the most treasured was the award of the Officers Cross of the Orange-Nassau from the Government of the Netherlands in June 1955. Mr. Drukker, who was born in the Netherlands, had conducted an Operation Holland campaign in 1954 to help the victims of the floods of that year. Mr. and Mrs. Drukker were later received by Queen Juliana at a private audience.

Other heartfelt tributes were given at recent birthday celebrations. There seemed something permanent and con-

tinually young about Mr. Drukker. His energy and optimism never left him, even in his final years.

Many additional tributes have been paid in recent days to him. I ask unanimous consent to have two of them printed in the RECORD at this time. One is an editorial which appeared in the Passaic Herald News, and it expresses the high regard felt for him by those who worked on this newspaper. The other is a news article which reports the comments made by Governor Hughes and the legislature of our State.

Mr. President, I am sure that many persons throughout our Nation share the sadness we feel in New Jersey. A great citizen has left us. We miss him. We shall not forget him.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Passaic Herald-News,
Jan. 12, 1963]

DOW HENRY DRUKKER: 1872-1963

This man passed this way.
His journey was not hurried; there were long and fruitful years, with ample time for touching hearts and people and for influencing events.

But his steps were vigorous and purposeful, as indeed were his mind and his deeds.

There was humility in his manner, born of genuine interest in and respect for those he met.

There was fairness in his dealing, born of an affection for fellow mortals that would not let him take the unfair advantage, say the unkind word, do the shoddy deed.

There was brilliance in his planning for better things for his country, his State, his community, his neighbors. He served them in government at high and low levels, at personal sacrifices he never would have acknowledged. He served them in enterprise, at profits that were shared generously with those who helped.

What he touched grew brighter, what he stimulated and encouraged grew more useful, what he accomplished was lasting.

This man shunned evil, labored at good works, and walked humbly with his God.

This man passed this way and now is gone.

And although these hearts are heavy, this place is better for having had this man.

[From the Passaic Herald-News, Jan. 15, 1963]
BOTH LEGISLATIVE HOUSES JOIN GOVERNOR
HUGHES IN TRIBUTE TO MEMORY OF DOW H.
DRUKKER

(By Edward J. Mullin)

TRENTON.—"The book closes on a notable career of public service."

That was the phrase used by Gov. Richard J. Hughes yesterday in his statement on the passing of former Congressman Dow H. Drukker. Mr. Drukker, publisher and board chairman of the firm which publishes the Herald-News, died Friday at Lake Wales, Fla. The funeral was yesterday.

Both legislative houses joined the Governor in memorializing Mr. Drukker.

Identical resolutions were introduced in the senate by Senator Anthony J. Grossi and in the assembly by Joseph M. Keegan, Mrs. Betty M. Kordja, Samuel L. Biber, and Robert Wegner, Passaic County's delegation. Both houses passed the resolutions unanimously.

"Not only does New Jersey mourn the passing of this distinguished American," Governor Hughes said in his statement, "but his loss will be felt throughout the Nation and elsewhere in the world, particularly in his native Holland."

The statement and the resolutions eulogized Mr. Drukker as a humanitarian and a legislator in addition to his work as a newspaperman.

"As a young man," the Governor said of Mr. Drukker, "he achieved broad public recognition in his service in Congress. As a master builder, Congressman Drukker has left his imprint on the face of America. As a publisher, he was a practitioner of objective journalism combined with a belief that it is the duty of a newspaper to advance editorially the principles it believes are in the public interest.

"I would like to express my condolences," Governor Hughes continued, "to Mrs. Drukker and the other members of the family. Perhaps it will come as a consolation that Mr. Drukker will not be forgotten."

The text of the resolution passed in the legislature follows:

"Whereas Dow H. Drukker, one of New Jersey's distinguished elder citizens, died on January 11, 1963, in his 91st year; and

"Whereas Mr. Drukker was long recognized as the guiding genius of one of New Jersey's great newspapers and is remembered in the field of business as a builder and in the area of government as a county freeholder and a Member of Congress; and

"Whereas Mr. Drukker's services in many different departments for public and private activities have left an indelible imprint on the history of his times; and

"Whereas Mr. Drukker in his work as a humanitarian has won international acclaim including recognition with a decoration from the Queen of his native Netherlands: Now, therefore, be it

Resolved by the senate, That this body give recognition to Dow H. Drukker's services and achievements and extends to his family sincere condolences and sympathy; and be it further

Resolved, That this resolution be spread upon the journal of the senate and a copy signed by the president of the senate and attested by the secretary of the senate be forwarded to the family of the late Dow H. Drukker."

How Much Government Can We Afford?

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. CURTIS. Mr. Speaker, shortly before the opening of the 88th Congress I had the chance to address the New York Chamber of Commerce on an issue, the increasing cost of Government, which has been thrust even more importantly into public focus by the President's plans for a tax reduction and his budget for fiscal year 1964. I should like to place this speech, with its comments on these very current questions, in the RECORD at this point:

HOW MUCH GOVERNMENT CAN WE AFFORD?

"Fellow citizens, we cannot escape history. We will be remembered in spite of ourselves." Abraham Lincoln once used those words to admonish his countrymen. The import of those words inescapably confronts us today. History will remember us in spite of ourselves—and because of ourselves.

Today I would ask the question, "How Much Government Can We Afford?" Asking the question, I suppose, imposes an obliga-

tion to try to provide an answer. This I will endeavor to do in the next few minutes.

First, let me express my appreciation to this group of business leaders for inviting me to New York City to join in this chamber of commerce meeting. Much of what I will say this noon will be meaningless unless the people who belong to organizations such as yours take an informed stand on the issue of how much government we can afford; how much our economy can pay for and still be free and enterprising.

You will notice I said "people" must take the stand. An organization undertaking is only as good as the effort by the people who belong to that organization. How much zeal, how much knowledge, how much patriotism, how much conviction, how much principle do the people of an organization bring to their organization objectives and endeavors? When our zeal, our knowledge, our patriotism, our convictions, our principles are too little or too casual we risk having the words "free" and "enterprising" lost as being descriptive of both our economy and our way of life.

I am not here to preach on patriotism nor to speak partisanly. However, I have strong feelings on the urgency of citizen action and organization responsibility; I have strong basic disagreements with others who have recently used New York forums to espouse economic and political views which I believe hold danger for our Nation.

How much government can we afford? Over the past three decades our Federal Government has tried and failed in the effort to spend our Nation rich. With budgetary deficits 80 percent of the time in this period, our economy has grown in fits and spurts. We have failed to produce sustainable economic growth. We have produced a fiscal environment of constantly rising and mounting tax burdens; burdens that consistently proved inadequate to pay the Government bills we incurred.

We have justified our extravagant and profligate ways by giving recognition to a fiscal tenet that just does not work, this tenet says that it is not necessary to worry about a budget imbalance in any particular year so long as it is balanced over a period of years. The resort to expediency implicit in this philosophy has led us to what can only be termed fiscal immorality—the consequences of which can only be measured in a trillion dollars of debt, in a burgeoning Government bureaucracy, and in a curtailment of human liberty.

Thus, one of the answers to the question of how much government can we afford is that we apparently cannot afford as much as we have. The last time we succeeded in even paying our way in a fiscal year was in 1960, and it now seems almost certain that at least a half a decade will elapse from then before we again have a chance of a budget balance. In those intervening 5 years we will add a minimum of between \$25 and \$30 billion to the Federal debt even if we succeed in stemming the rising tide of annual total spending. In the past three decades we had no program for debt retirement and we have none for the future—as citizens we are content to be prodigals.

The continuing budget deficits of the last 30 years did not occur in times of depression nor in times of little or no change in Government fiscal affairs. Indeed, relative prosperity has marked the post-World War II period and the Government's fiscal experience has found budget expenditures and tax collections increasing more than twentyfold in the last three decades. We have had the opportunity to do something about paying our way, but we have instead chosen a course of Government on credit—we have chosen to let our children be the fall guys for our fiscal imprudence.

But we need not go back three decades to measure an alarming growth in levels of spending and taxing. I will not belabor you with endless statistics but the facts are there as conclusive proof that our spending increases for civil matters exceeded the relative increase in military spending.

If these spending increases had been for Government goods and services that were provided within the framework of a balanced budget, they would have represented expenditures which we were willing to pay for rather than pass on as a charge to succeeding generations. The fact is we did not pay for the cost of those goods and services and, as a consequence, we have a Federal statutory debt in excess of \$300 billion. The present annual interest charges on that debt, without providing for any debt retirement, are more than double the total budget expenditures for all purposes by the Federal Government three decades ago.

But this \$300 billion figure does not tell the whole story. The truth is that our Federal indebtedness today exceeds \$1 trillion, and it means that every American family of four has a share of \$22,000 of this debt. This trillion-dollar debt includes such items as \$250 billion for unfunded obligations of the social security system, \$70 billion for unfunded obligations of Government retirement programs, \$300 billion of commitments to veterans, \$150 billion for unfunded public works and similar charges to the statutory debt. These are currently accruing obligations of our Government that we are not paying for and that will represent demands on the productivity of succeeding generations.

As bad as these fiscal facts are, I feel that future events will pale our past experience to insignificance. Under the present administration we have found that new spending authority has risen from \$80 billion in fiscal year 1960 to \$100 billion for fiscal year 1963. It is inevitable that this fact will produce increased spending pressures in future years. The distinguished chairman of the Senate Committee on Finance has predicted that by the year 1965 the Federal budget figures will exceed \$135 billion, including \$30 billion of trust fund expenditures. I call to your attention the fact that this budget event, if it materializes as predicted, is only 2 years away. Now would seem to be the very latest moment for an all-out program to call a halt to this compulsive spending unless we as taxpayers are willing to pay for it.

In an inaugural speech of not too long ago we were encouraged, if not reassured, by a reiteration of the principle that individuals should concern themselves with what they can do for the state rather than being preoccupied with what the state can do for them. As recently as a few weeks ago we were told, "If Government is to retain the confidence of the people, it must not spend more than can be justified on grounds of national need or spent with maximum efficiency." It seems paradoxical to me that such statements are made by a political leader who since taking office has sent to the Congress 262 different spending proposals which, if they had been enacted by the Congress would, in my judgment, have done much to destroy private enterprise and individual liberty.

Regardless of the fact that our Federal Government is the biggest spender, the biggest employer, the biggest property owner, the biggest tenant, the biggest insurer, the biggest lender and the biggest borrower in all the world, we find a growing impatience on the part of many holding high office in our land to make government even bigger. Thus, we are told that it is the Federal Government which must grant aid to schools, compulsory medical care, a permanent system of extending unemployment compensation

benefits, an expanded food-stamp plan, an expansion of area redevelopment and public works, enlarged public assistance programs, increased public power projects, enlarged housing programs, increased subsidies and other items on a staggering list of so-called Government giveaways—giveaways that inescapably cost the taxpayers of today and tomorrow for programs that involve the massive Federal intervention urged by the Government spenders.

In this tragic failure to control and manage our fiscal affairs within the limits of what we are willing to afford, we have essentially departed from a basic philosophy of our Founding Fathers who believed that it was our citizen duty to support our state and not our country's obligation to support its citizens. To this end, the patron saint of the Democratic Party, Thomas Jefferson, once said:

"I place economy among the first and most important virtues, and public debt as the greatest of dangers to be feared. * * * To preserve our independence, we must not let our rulers load us with perpetual debt—we must make our choice between economy and liberty, or profusion and servitude. If we can prevent the Government from wasting the labors of the people, under the pretense of caring for them, they will be happy."

In our time we have disregarded the wisdom of Thomas Jefferson. We have also rejected the prophetic admonition of the French philosopher deToqueville who warned us in the early history of our country that if the time should ever come when people conclude they can vote themselves benefits out of the public treasury, self-government by responsible men will be an impossibility.

I need not tell a sophisticated group such as this that the implications of our failure to do better in handling our fiscal affairs are of concern not only to ourselves and our children but also to any person now living, or to live in the future, who might aspire to be free of political domination. The truth of the matter is that we are the free world's banker; on the strength and stability of the American dollar rests the economic vitality and monetary security of the non-Communist world. In the past 12 years we have had 11 deficits in our balance of payments and our gold supply has dwindled to approximately \$16 billion. Our commitments against this gold supply included our obligations of \$12 billion of legal monetary reserves and obligations of a considerably greater magnitude held by foreign governments and foreign nations.

The simple fact that as the world's banker we borrow short and lend long demonstrates the importance of confidence in our ability to conduct our fiscal and monetary affairs in such a way as to avoid debasing the purchasing power of the dollar.

Against this backdrop of debt, deficits, and declining gold supply, we are now told that the cure for virtually all our problems is to be found in a tax cut. This proposal makes me wonder whether this issue should be decided by the votes of those American citizens who are now of voting age or by the votes of those young people whose age does not now qualify them for voting status. Indeed, it is the latter group that we will be taxing to make up the deficit from the tax reduction that we give to ourselves. Americans have always felt strongly against the idea of taxation without representation; hence, my suggestion that Americans under age 21 should be allowed to ballot on the question of a tax cut at this time of needlessly high spending and uncontrolled deficits.

There is no one who is more concerned than I am over the stifling effect of our present tax structure on economic growth and national strength. Our tax laws repre-

sent a peculiar tax policy for a country that relies on individual initiative for progress. Tax receipts of Federal, State, and local governments take almost one-third of our net national product, and most of these receipts are derived from assessments on earned income and on capital accumulation. The more productive and venturesome a person is, the higher tax he pays.

The result is that our present tax system has an impact that is not conducive to economic growth. We have a sharp progressivity of tax rates that is self-defeating. The complexity of our tax structure discourages enterprise and impairs venture taking. In short, I agree wholeheartedly with those who say tax reduction and reform are long overdue. I wholeheartedly disagree with those who say we can have high deficit spending as usual and still have lower tax burdens across the board. I disagree with those who believe that foolish outlays for untested and unwanted Government programs can be continued even though we are going to tax less to pay more for those programs. In short, I support a major program of tax rate restructuring and reform to stimulate incentive and capital formation, but only within the bounds of fiscal responsibility and monetary prudence.

Tax reduction should not be enacted at this time without a commitment from the administration and a pledge by the Congress to hold spending over the next 2 or 3 years at a level that does not exceed the 1963 figure. Tax reduction should not be enacted unless it is designed to increase productive incentive and to enable the capital accumulation needed to undertake the entrepreneurial risks. Tax reduction should not be enacted if it is designed for a mere short-term stimulant that would not result in sustainable economic growth.

Thus, I think it can generally be agreed among this group that our tax reduction objective (1) must be sought under conditions of our regaining control over our spending activities, (2) must be directed toward the attainment of long-term economic progress, and (3) must have as its focal point the easing of tax burdens from those critical rates and substantive provisions that, under present law, make tax saving more important than taxable earnings. In short, we must free our tax structure from its inhibitors against growth and efficiency. How do we do this?

First, we must realize that as long as we are spending for more Government than we are willing to afford, we cannot have tax reduction solely for the sake of making the cost of Government generally less on our citizens. Any tax reduction must be so planned and designed as to achieve maximum incentive benefit at minimum revenue loss. We must not have a tax reduction that seeks to solve our growth and full employment problems merely by increasing the size of the deficit that would have to be financed by added Government borrowing and bank-created funds.

Second, we must recognize that the economic progress from tax reduction at this time finds its key in the vigorous expansion in business investment in new plant and equipment and in the growth of small business. In our last two recessionary periods business capital investment has lagged and, as a consequence, we have had a recovery in each instance that fell short of expectation. This supports the view that our tax reform at this time and under present circumstances must emphasize easing the tax burdens on savings and investment.

Parenthetically, on this second point, I would observe this fact: Anything we may do in the area of tax reform, revision, and reduction will be to no avail if our people do not have confidence in Government administration and policies. Therefore, we must not repeat the self-defeating mixture of bad

and good tax changes that comprised the administration's tax package of the last Congress. We should avoid seeking through tax legislation the accomplishment of nonrevenue objectives such as social reforms and curbs on foreign investment by American free enterprise. We should strengthen, not weaken, confidence in the integrity of government. We should base our tax reform on the hard realities of sound economics and competitive advancement and let the politics be damned.

A third factor that we must take into account as we seek tax reform conducive to growth and efficiency is our present undue reliance on taxes on earned income to produce our Government revenues. The statistic and comparative tax tables on this point are well known, and the details need not detain us here. The effect is that our tax structure with its steeply progressive rate schedule and high corporate rate discourages risk and productive effort and even brings about what I will term the "economic withdrawal" of some of our most promising and able producers.

Tax reduction involving minimum revenue loss and maximum economic benefit will take account of those factors which will encourage utilization of technological innovation and which will sustain in our people a desire to work hard for enlarged incomes and a willingness to accept the risks of entrepreneurial activity. This sort of tax reduction can help us to afford the government we need; government whose every expenditure meets the test of absolute essentiality and government whose every service and good is provided to the people only because the people cannot do it for themselves.

I would close this discussion of how much government we can afford by recalling the words of President Eisenhower in his last budget message presented to the Congress in which he said:

"In summary, if we plan wisely and allocate our resources carefully, we can have both public and private advancement. Sound fiscal policies and balanced budgets will sustain sound economic growth and, eventually, will make possible a reduced tax burden. At the same time, we can have necessary improvements in Federal programs to meet the demands of an ever-changing world.

"If, however, we deliberately run the Government by credit cards, improvidently spending today at the expense of tomorrow, we will break faith with the American people and their children, and with those joined with us in freedom throughout the world."

My friends, the government we can afford is only that which we are willing to pay for in the tax burden we are willing to sustain. If we seek more government than that, the price we will pay will be in more than dollars—it will be in terms of lessened individual liberty and curtailed economic opportunity. In answering the question of "How much government can we afford," we should do so in the context of how do we wish to be remembered by history in spite of and because of ourselves. Thank you.

John Duncan: Georgia's Big Man in Agriculture

EXTENSION OF REMARKS
OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 23, 1963

Mr. TALMADGE. Mr. President, the State of Georgia is proud of John P. Duncan, Jr., Assistant Secretary of Agri-

culture, for his indefatigable efforts to better the lot of American farmers. Recently, Mr. Duncan was distinctly honored by the Progressive Farmer magazine, which selected him as an Agriculture Man of the Year for 1963.

The Atlanta Journal-Constitution magazine, on January 20, 1963, also pointed with pride to Mr. Duncan. Miss Margaret Shannon, Washington correspondent for the Atlanta Journal, wrote a discerning article on Mr. Duncan, tracing his career from a Quitman, Ga., farmer to president of the Georgia Farm Bureau and to national prominence in the U.S. Agriculture Department.

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOHN DUNCAN: GEORGIA'S BIG MAN IN AGRICULTURE

(By Margaret Shannon)

WASHINGTON.—One day last month John P. Duncan, Jr., of Quitman, Ga., and Alexandria, Va., got a four-line memorandum from Secretary of Agriculture Orville L. Freeman. It didn't amount to much in wordage, but it just happened to mean that the one-time south Georgia farm boy had 14,000 additional employees to look after for a while.

Mr. Duncan is Assistant Secretary of Agriculture for Marketing and Stabilization. The memorandum assigned responsibility for the Cooperative Extension Service to his office temporarily. It was the sixth agency of the U.S. Department of Agriculture to come under his wing. Evidently somebody up here likes him.

Secretary Freeman must. He continues to pile work on him, and the 45-year-old former president of the Georgia Farm Bureau Federation seems to thrive on it. His hair is almost white, but it has been that way for years. He keeps fit by playing squash with Secretary Freeman at the Pentagon or golfing in the eighties on a Virginia course when he has time.

The highest and best evidence that John Duncan is a success is the shift within the Department last March that put him in charge of the Agricultural Stabilization and Conservation Service right at the time of the Billie Sol Estes scandal. Actually ASCS had been taken away from James T. Ralph shortly before the scandal broke, and it fell Mr. Duncan's lot to straighten out a mess he hadn't made.

"We came out all right on Estes," Mr. Duncan said. "The Department didn't lose a nickel on him, and that's more than can be said for anybody else who dealt with him. We have all our grain, and we are holding \$2 million in escrow until final disposition of the case."

His presence in Dr. Ralph's old job at a time like that made him a target, too, and last July a Washington newspaper reported that Mr. Duncan once went to speak to the Texas Cotton Ginners Association and accepted free meals and hotel rooms from the organization.

Since Billie Sol's spreading of largess among agricultural workers had been much talked of and testified about, this was news. Mr. Duncan at once asked the Agriculture Department auditor to check all his expense accounts. It turned out the Government owed him \$150 in unpaid per diem. Mr. Duncan also said that accepting room and board while on speaking engagements is a common practice for Government officials and lies within the code of conduct promulgated by the President.

Another kind of trouble came Mr. Duncan's way—or he came its way—when he went to Atlanta in December during the American Farm Bureau Federation convention. He didn't go to the convention; he wasn't invited. He went to try to counteract on the scene some of the drastic Farm Bureau criticism of the Government's farm program.

Around the Department, they refer to Mr. Duncan in this role as a one-man truth squad. When the Farm Bureau president said the administration's farm program isn't working, Mr. Duncan fired back that it is, too, working and furthermore, farmers like it.

Such headaches—scandals, bad publicity, powerful opposition—are unpleasant, but they are minor compared to the one that Mr. Duncan calls the biggest of all: "Trying to find some way to cope with the capacity of the American farmer to produce."

"If you turned the American farmer loose to grow all he could, I don't know whether the oceans would hold it," Mr. Duncan said.

It seems an incurable headache. As Mr. Duncan sat talking about it, he'd just learned that the wheat crop estimate was up 25 percent even with thousands of acres taken out of production since the last crop. "That's a lot of wheat," he said.

So Mr. Duncan goes forth to battle with opposition to the Government farm program. Sometimes the battleground is Capitol Hill, sometimes a convention hall, sometimes a press conference. He works, too, at his office—to make the program work.

A large part of the job of crop controls and surplus storage is carried on by the Agricultural Stabilization and Conservation Service, one of the agencies that comes under John Duncan's supervision. It is in a sense not only the center of the Government's farm program, but also the heart of American agriculture.

When Mr. Duncan left his 807-acre Brooks County farm and the presidency of the Georgia Farm Bureau to become Assistant Agriculture Secretary at the start of the Kennedy administration, he was placed in charge of the Foreign Agricultural Service. This was new stuff to him. He held the assignment for 15 months, and became a well-traveled man in that time.

He went to Punta del Este, Uruguay, in August 1961, and took part in drafting the Alliance for Progress. He went to Rome in November that year and to the Philippines later. He visited U.S. agricultural attachés around the world. Once he flew to London one day and back the next after opening an agricultural trade center there.

What impressed him most, he says, is the part food can play in America's efforts to stop communism and win the peace throughout the world.

"We can talk satellites and sputniks and all that, but the hungry man is more interested in feeding his children. And we have got so much more food to offer the world than have the Russians and other Communists."

"The hungry people in Africa, in South America, and in east Asia, where I visited, were not much interested in whether we or the Soviets put the first man in orbit or which of us was ahead in space. They are chiefly interested in getting food for themselves and their families, and that's where our food-for-peace program is winning us friends."

"I believe we can whip the Russians in the fight for men's minds if we can just put the food where it is needed. And the men who have given leadership to this fight are the American farmers with their abundant production."

Last May, delegates from 38 countries, meeting in Washington, elected Duncan as chairman of the International Cotton Advisory Committee, representing 95 percent of the world's cotton production.

In the departmental reshufflings last spring Mr. Duncan was given supervision over the Commodity Exchange Authority, the Federal Crop Insurance Corporation, the Agricultural Marketing Service, as well as ASCS, and was placed on the Board of Directors of the Commodity Credit Corporation, largest Corporation in the world. The Foreign Agricultural Service was assigned to someone else.

He didn't mind the change. "I'm kinda in a shop now that I'm familiar with," he said.

John Duncan learned the "shop" as a farmer who has never farmed except in the time of Government controls and price supports. In 1939, the year after he finished Emory University, tobacco growers decided they'd do better without the Government program. The result was a glut of tobacco on the market and a poor price for all.

"We have opposition now that wants the Government out of the farm business," he said. "The Government would like to get out, but you have to be realistic about it. The problem is not whether to have controls, but to get legislation that would do a better job at a lower cost to the Government."

The big farms could survive, but the family farms couldn't, and Mr. Duncan is concerned about family farms. "You can't say to these people, 'Look, we're going to wipe you out just because you're not big,'" he declared. "We just don't do things that way in this country."

As the 88th Congress proceeds and the administration sends its farm proposals to the Hill, Mr. Duncan will be among the Agriculture Department's salesmen seeking support among the lawmakers. He gets a good share of the credit for saving the administration farm legislation from complete disaster last year. There was a series of cliff-hanging votes, and the Duncan influence helped to turn the tide.

Mr. Duncan averages about a trip a week to the White House to discuss farm problems with presidential advisers and, on occasion, from President Kennedy himself.

There have been reports from time to time that the President is bored with farm problems and doesn't know much about them. Mr. Duncan does not agree.

"I'll say this—he's a lot more interested than President Eisenhower ever was," the Assistant Secretary says.

When the Cuban crisis threatened to develop into nuclear war, Mr. Duncan took part in high-level conferences on how to meet the Nation's food needs under enemy attack.

He also spends some time on the convention circuit, usually as the invited guest. His foray into Atlanta for the Farm Bureau convention was an unusual approach. Most of the time, farm-related organizations want to hear the Government's side.

One of Mr. Duncan's most powerful jobs is on the Board of the Commodity Credit Corporation. The Corporation has borrowing authority of \$14.5 billion. It makes decisions about commodity transactions that greatly influence prices. Outside traders make and lose fortunes in commodity dealings. The CCC has a tremendous responsibility.

How does it feel to have this responsibility and all the others involved in being Assistant Secretary of Agriculture for Marketing and Stabilization?

"It gives you the feeling of wanting to be pretty doggone careful before you make a decision," Duncan says.

Any decision of his will come from a lifetime of association with farming. His agricultural education began on the family farm 4 miles north of Quitman. Now rented out, it produces cotton, tobacco, peanuts, and livestock.

After finishing at Emory, he took graduate work in agriculture at the University of Georgia. He played professional base-

ball for a short time, but went back to farming.

His wife is the former Branch Ellis Orr of Macon. They and their four children—Judy, 20; John, 15; Ellis, 8, and Nancy, 5—live in a brick split-level house in Alexandria.

Mr. Duncan goes to work at 7:30 every morning and gets home after 7 every night. Often he is in his office even on weekends.

He intended to go back to being Georgia Farm Bureau president after 2 years in Washington, but it didn't work out that way. The administration wanted him to continue. He was on leave from the Farm Bureau office, and staying here meant he had to resign the post. So it won't automatically be his when he does leave the Government.

"I don't know what I'll be doing 2 years from now," he said. "If President Kennedy is reelected and the administration wants me to stay, I might do that. I might go back to the Farm Bureau; I think I could."

"Or"—he was answering a question on this point—"I might run for Congress. It's too soon to say. I didn't think 2 years ago that I'd still be here, but here I am."

W. A. Boyle, New President of United Mine Workers of America

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 23, 1963

Mr. METCALF. Mr. President, Monday's issue of the Evening Star noted that a distinguished Montanan, Mr. W. A. (Tony) Boyle, is acting president of one of this Nation's major independent unions, the United Mine Workers of America.

About 2 months ago, President Thomas Kennedy appointed Mr. Boyle, then vice president, acting president. With Mr. Kennedy's death, Mr. Boyle will serve out the remainder of the term ending late next year.

Born in a Montana mining camp, Tony Boyle lived in Billings from 1940 to 1948 when he was president of UMW District 27. He is credited with drafting the Montana Mining Code enacted by Montana's legislative assembly.

I ask unanimous consent that the Associated Press article, headed "New UMW President Reminiscent of Lewis," published in the January 21, 1963, issue of the Evening Star be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW UMW PRESIDENT REMINISCENT OF LEWIS

The death of Thomas Kennedy brings to the presidency of the United Mine Workers another heavy-browed folksy-talking union leader of the John L. Lewis school.

W. A. (Tony) Boyle has been, in effect, the president of the big independent union for nearly a year because of the 75-year-old Mr. Kennedy's illness.

As vice president, Mr. Boyle assumed most of the administrative duties of the office last spring when Mr. Kennedy first became gravely ill. About 2 months ago, Mr. Ken-

nedy named his top lieutenant acting president.

Mr. Boyle will serve until the end of Mr. Kennedy's 4-year term in late 1964 and it is assumed he will seek reelection.

Mr. Boyle is a native of Billings, Mont., and comes from a long line of Irish miners. His father began work in the mines in Scotland at 9 and his maternal and paternal grandfathers and great-grandfathers all worked in English mines.

STYLE IS REMINISCENT

The 58-year-old Boyle has a fine set of red eyebrows and a gift for direct, plain, and vigorous speech. He hardly compares in either department with his mentor, the 82-year-old Lewis, but his appearance and style are reminiscent of the almost legendary builder of the UMW.

Although long retired as UMW president, Mr. Lewis looms large in the background of coal industry affairs and is believed to have had a part in guiding Mr. Boyle's widespread activities in recent months.

Both men differ markedly in manner and appearance from Mr. Kennedy, a quiet persuader who labored for years under the shadow of the forceful and hard-hitting Lewis.

MEMBERSHIP DWINDLES

For years relations between the larger mines and the UMW have been serene but the union has been having increasing troubles with smaller operators, as coal has been harder and harder pressed by competing fuels.

Nonunion production has increased from 20 to 27 percent of the national output and under the impact of automation UMW membership has dwindled to 160,000.

Mr. Boyle has been attacking these problems, with the advice and counsel of Mr. Lewis, whom he served for 12 years as special assistant at the union's Washington headquarters.

Like Mr. Lewis, Mr. Boyle occasionally shows considerable disregard for both major political parties.

After public schooling in Montana and Idaho, Mr. Boyle studied law at LaSalle University and became active in union affairs at the local level more than 30 years ago. In 1940 he was elected president of District 27 of the UMW and while in that office also served as regional director for the CIO in four Western States. He later was regional director of the UMW's District 50 in the same territory.

ON U.S. COMMITTEES

During World War II, Mr. Boyle represented the union on various Government and industry committees, manpower councils, and War Labor Board panels. He was the first labor representative on Montana's advisory council to the State unemployment compensation commission.

He married a schoolteacher, Ethel V. Williams, and they have a daughter, Mrs. Daryl E. Engebregson, who practices law in Montana with her husband.

Ukrainian Independence Day

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. ROOSEVELT. Mr. Speaker, in the great tradition of the gallant and gifted Ukrainian people there are many

glorious events, but the event that marked the rebirth of the Ukraine and the rise of the Ukrainian Republic early in 1918 stands out most significantly in its history. On January 22, 1918, after enduring the oppressive yoke of Russian autocracy for more than 250 years, Ukrainians proclaimed their independence and founded their Republic. From the time of its very birth, however, this weak state found itself in the midst of insurmountable difficulties. And it was surrounded with enemies whose aim was to put an end to its very existence. After struggling for a little over 2 years against formidable odds, the country was invaded by the Red army, and the Ukrainian Republic was no more. The land became part of the U.S.S.R. and its unhappy people fell under the tyranny of the Kremlin.

Today there are no free Ukrainians in that fair land, but even under totalitarian tyranny a stout-hearted and freedom-seeking people cherish their national goal, their freedom and independence. On this 45th anniversary celebration of their independence day let us all hope that they attain that goal.

Gov. Bill Scranton's First Message

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. FULTON of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I wish to include the following message of Gov. William W. Scranton, of Pennsylvania:

LEGISLATIVE MESSAGE OF GOV. WILLIAM W. SCRANTON, OF PENNSYLVANIA, JOINT SESSION OF THE GENERAL ASSEMBLY, JANUARY 22, 1963

Mr. Lieutenant Governor, Mr. Speaker, ladies and gentlemen of the general assembly, we gather here today at the beginning of a great adventure; an adventure of the heart and mind.

Our aim can be no less than to create a sounder, more effective, more enlightened framework of government in Pennsylvania. A framework so sound, so effective, so enlightened that it will substantially help a revitalized society to grow and flourish in our Commonwealth.

It is time for Pennsylvania to lead the Nation. To be a pacesetter. A progress-maker. Together, we the legislative and executive branches of this government have it within our power to do just that. We can produce here models in the practice of government that our sister States will hasten to copy.

I look upon this as a joint effort. A blending of the ideas, imaginations, hopes and labors of both the executive and legislative branches. Having served as a legislator myself—on the Federal level of Government—I have understanding for your problems and concerns as members of the legislative branch.

It seems to me that the proper role of the executive is to lead, not to dictate.

In line with this belief, many weeks ago I asked the majority leaders of both houses

to join with me and the Lieutenant Governor in developing a legislative program to carry out the mandate that was given to us last fall by the people of Pennsylvania.

As a result, the program I am about to present to you is a product of the combined efforts of both the administration and the majority leaders in the legislature.

As for the minority party in the legislature, I am sympathetic with their role, too. After all, my legislative experience was obtained on the minority side of the aisle. I expect them to scrutinize the program most carefully. But, just as I voted when I was a legislator with the majority on proposals which were for the good of the Nation, so I am confident that the minority here will give us its support for the good of Pennsylvania.

In this message today it is my plan to offer highlights of our program. Some vital items I will not treat at all today. They will be the subject of full-scale special messages in the next 6 weeks. Other items I will touch on only briefly, fully developing our position in later special messages. Fiscal matters will be handled in a budget message which is planned for early March.

Specific legislation to improve our industrial development program and wage war on unemployment is one of the items which I will discuss in a special message.

But, in a larger sense, every item I mention today is tied to industrial development. Government which does a good job in providing necessary services for people is one of the first essentials demanded by modern industry. If our legislative program were to be defeated, it would be a real defeat also in our battle to build an economically stronger Pennsylvania.

A vote against most of the items I am proposing today, is a direct vote against the jobless men and women of our Commonwealth.

One pressing need in the field of industrial development, however, does require your immediate attention, so I will mention it today rather than wait for the special message.

The loan fund of the Pennsylvania Industrial Development Authority is at present almost completely exhausted. In order that there shall not be the slightest slowdown of the essential activities of this agency, I recommend that you grant a deficiency appropriation of \$4 million for industrial development purposes.

Education is another subject so vast as to require a full-scale special message. Two specific recommendations on education are, however, in order at this time.

First, I commend those members of the legislature who on opening day introduced a bill to declare a 1-year moratorium on all deadlines in School Reorganization Act 561.

Considerable confusion exists in the Commonwealth over application of the act, which even its warmest advocates admit is incomplete. Many others describe it as unworkable, both because it is incomplete and for other reasons.

Since opening day, the moratorium has been praised by both educators and laymen in all parts of Pennsylvania. It should be enacted.

Second in the field of education, it is imperative that we move immediately to separate the policymaking from the administrative function. All further progress in Pennsylvania education depends upon this.

To do this, we should set up a State board of education. It would be responsible for formulating general education policy. The department of public instruction would operate under the supervision of the board of education. It would stop making policy. It would administer the policy formulated by the board.

Working with the board of education would be a council of higher education and a council

of basic education. Each would exercise primary responsibility in its own field. Among other things, the council of higher education would develop a master plan for college education in Pennsylvania. The council of basic education would be responsible for achieving elementary and secondary education of uniformly high quality throughout the Commonwealth.

In areas where the concerns of basic and higher education overlap, and in budget matters, the State board of education would retain authority.

Each of the councils should have six lay members. Each should be provided with a staff. Members of the two councils, plus three at-large members, would make up the State board of education.

After industrial development and education, the next important need of Pennsylvania is reform of the laws and machinery through which government itself is administered.

I am proposing five actions in this field:

First, we should establish a new department of mental health of cabinet rank. This will take over—without additional cost—the duties of the present bureau of mental health in the department of public welfare. A new department will give our mental health program new emphasis. This is necessary since mental and emotional disorders are our greatest single health affliction today. Moreover, it will assure the complete freedom of our mental health program from political interference. We want no politics in the wards of mental hospitals.

Second, I intend to establish by administrative action a council of human services. Members will include the secretary of public welfare, the secretary of health, the secretary of mental health, and the directors of other State agencies which deal with the problems of those who suffer disease and privation.

This council, while giving us direct and independent action in each area of human services, will also give us coordination of all of these governmental services. This we need to avoid present overlapping and confusion.

Third in the field of governmental reforms, I call for establishing a cabinet-rank department of community development.

The problems of our cities—whether large or middle sized—require expanded attention from the State government.

We have a clear choice here. Either the State government will come to the assistance of cities in such challenges as mass transportation, urban renewal, housing, and the rejuvenation of community life, or the Federal Government will do it.

The Federal Government cannot do it as well as we can. What is more, in the trying, the Washington bureaucrats will destroy the historic relationship between the State and its member communities. If we believe in the Federal principle—the principle whereby the States retain the duties not expressly given to the Federal Government in the Constitution—this is our chance to prove it.

Fourth in the field of governmental reforms, I call for formation of a commission of professional affairs.

Presently, 16 boards, attached with little rhyme or reason to the department of public instruction, handle professional licensing. These duties should be assumed by the new commission, headed by a commissioner appointed by the Governor. For administrative purposes the commission should be assigned to the department of state.

Fifth in the field of governmental reforms, I recommend enactment of strict penalties against fraud in obtaining professional licenses. Proposals to put real teeth in our laws against fraud in this area will be placed before you. They should be enacted. We

cannot afford even the breath of scandal in our licensing procedures.

The next major area with which this legislature should be concerned is medical care for the aged.

Once and for all we must eliminate the stigma that this State program is "for paupers only."

Proposals to make the dramatic first steps toward this will be placed before you.

We must increase substantially the limits on assets of eligible elderly persons contained in the present law. We must eliminate completely the cruel liens which the State now files against the estates of persons who have received medical aid. We must establish machinery whereby the eligibility of elderly persons to receive aid can be determined before illness strikes. A system of determining eligibility in advance will remove the additional suffering needlessly imposed by the present law.

Improving medical care will cost money. But the sums involved are comparatively modest when measured against the relief they will bring to our older citizens. When measured against the debt we owe to those who have labored long in the struggle of life, they become very modest indeed.

Improvement of civil service is another area of vital importance in Pennsylvania. Our Commonwealth now suffers from the worst system in the Nation.

First of all, we must write a uniform Civil Service Act. This must replace the current bewildering hodge podge of inconsistent statutory and executive programs. Every employee covered by civil service should be governed by the same laws and regulations. The best aspects of all existing programs should be included in the new uniform act.

The same act, along with covering all jobs now under present forms of civil service, should extend complete coverage to certain vital departments. Among these should be: Complete coverage for the department of public instruction; complete coverage for the public utilities commission; complete coverage for the department of banking; complete coverage for the insurance department; complete coverage for the department of health; complete coverage for the boards which will make up the new commission of professional affairs; and complete coverage for the new department of mental health.

Under the new uniform act, so-called executive civil service will be superseded and jobs now under this status which require civil service protection will be covered by the new act. Persons in these positions, who have qualified under genuine civil service competition, should be protected in their jobs. For the sake of governmental efficiency, as well as out of common fairness, however, it will be necessary that the Governor shall for 1 year have power to review the records of performance of such employees. If necessary, he should have the power to remove these persons who receive their jobs on a political rather than on a professional merit basis. Their replacements should be employed through civil service competition and examination.

Another area in which I urge the attention of the legislature is in the maintenance of fair and honest elections. This is fundamental to our system of Government. We will seek enactment of laws which will prevent an entrenched political machine of either party from completely dominating the election procedure in a given area.

In a separate message I will offer proposals to make it possible for all parties to maintain adequate watchers at every poll, to free election officials of political ties, and to safeguard the use of absentee ballots.

Regarding the problem of bituminous strip mining, I have four recommendations to make.

The strip mining industry has made a valuable contribution to our State's economy. In the future it will continue to do so. I do not, however, accept the argument that the industry can only survive by completely sacrificing beauty and safety.

Therefore, I recommend shifting authority to enforce laws regulating reclamation of strip mined areas from the department of mines to the department of forests and waters. Five of the seven major coal mining States already invest this authority in their departments which are responsible for conservation, and I believe we should join them.

Second, more backfilling of strippings is essential. The law should strictly require restoring terrain to a condition so that farm equipment may move across it or so that new recreation benefits are created.

Third, the amount of the bond posted per acre by strip operators should be increased.

Fourth, I recommend that you pass legislation which would limit both the time which a bituminous strip mine may remain open and the length of the strip that may be exposed at any one time. By such strict limitations we will not only reduce the problems connected with the mines themselves, but also will prevent the accumulation of acid polluted water. No other state has such laws. If they are enacted, Pennsylvania will once again be pioneering in constructive regulation of the strip mine industry.

Also in the field of conservation, I recommend that you approve Project 70 for the second time. It is essential that you do this so that this long-range project for development of the natural beauty and resources of Pennsylvania can be submitted to the voters this November.

In the field of harness racing, I have three recommendations:

First, legislation should be passed prohibiting admission of minors to track grounds.

Second, it should be made unlawful for either public officials or officers of political parties to participate in the ownership of tracks.

Third, to improve administration and cut cost, the harness racing commission should be returned to the department of agriculture.

Another major field of concern for the legislature is the matter of reapportionment. The membership of both houses must be brought into conformity with population shifts. This is primarily a matter for the legislature itself. I am pleased that I have been informed by your leaders that the house and senate committees on elections and apportionments will soon begin to hold joint meetings on this difficult problem.

Next, we must make it possible for residents of our largest city to carry out a long-needed reform in their local government. I recommend that you approve legislation which will permit the people of Philadelphia to achieve, at long last, the final city-county consolidation which was envisioned in the city charter of 1951.

Another matter you have before you is an amendment to the U.S. Constitution to outlaw the poll tax. This device was repealed many years ago in Pennsylvania. It survives today in only a few States where it is used to keep Negroes from exercising their rights of suffrage.

I urge you to swiftly approve the amendment passed last year by Congress so that it will become part of the law of the land.

Next, I urge you to adopt amendments to the uniform commercial code which have been proposed by the permanent editorial board for the uniform commercial code.

Pennsylvania has long led the Nation in this field of legislation. We were the first State to adopt the code. We ought to modernize it now.

Another matter for which I urge your support concerns the blind veterans of the Commonwealth. I recommend enactment

of an additional pension of \$50 per month to every honorably discharged Pennsylvania veteran suffering service-connected blindness.

Finally, I urge you to take action on the need of Pennsylvania to revise its constitution.

Fundamental inadequacies and anachronisms plague the operation of our government. These can be cured only through the drastic surgery of revision of our State constitution. The unwieldy incubus of dead law and outmoded rules contained in our present constitution is the greatest single deterrent to progressive government in Pennsylvania.

While there is wide agreement that revision is necessary, there is less agreement on how such revision should be achieved. Some suggest that the legislature itself should call a constitutional convention. Others argue that the legislature should submit the convention to a referendum of the people. Still others favor a comprehensive process of amendment such as that which will be proposed next week by the Pennsylvania Bar Association.

Bluntly, I say this to you:

I am not so concerned with the method as I am with getting the job done. To do this, two things are necessary: legislative action and strong leadership in obtaining the support of the people of Pennsylvania.

If it be the will of the legislature to call a convention without a referendum, I shall lend my wholehearted support to such action.

All things considered, however, it is my own judgment that the method by which we stand the best practical chance of seeing a new constitution through to final acceptance is by asking the people to approve in a referendum the calling of a convention.

I recommend that you act immediately to set up machinery for this referendum and convention.

In addition, certainly the legislature should study and take appropriate action on the bar association's amendments. In this way all progress would not be lost if the convention method should fail.

Let me make one thing absolutely clear: I shall devote every ounce of leadership within me to persuade the people of Pennsylvania of the crying need for constitutional revision and to follow through on whatever positive action you take. This is a must for Pennsylvania.

Though this completes my message to you today, it by no means completes the legislative program of the administration.

I will be sending you other special messages. I will be conferring weekly with your leaders. I will welcome all suggestions and criticisms that any of you may individually make.

If the program so far recommended is enacted we will have gone far toward transforming Pennsylvania. Toward restoring her old vigor. Toward once again being the model of her sister States—an example for all men and women who are enrolled in the long struggle to help make government good.

Why Not Reverse Tax Program of President?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 23, 1963

Mr. MUNDT. Mr. President, the editor of the Washington County (Pa.)

paper known as the Washington Observer has come up with an interesting formula concerning the manner in which tax reduction and fiscal reform by the Federal Government might most appropriately be implemented. He recommends expenditure reform first; tax reform, second; and tax reduction, third.

An old and valued friend of mine, L. D. Schreiber, of Dunns Station, Pa., sent me this editorial with his own endorsement supporting the economic concept that expenditures should be reduced before revenue returns are diminished. Borrowing money to reduce taxes does, indeed, seem a strange form of fiscal alchemy which could lead to Federal fiscal disaster if the theorists favoring this strange, new concept should be proved wrong.

I ask unanimous consent to have the Washington Observer editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY NOT REVERSE TAX PROGRAM OF PRESIDENT?

The principal significance of President Kennedy's budget message, delivered Thursday to the Congress of the United States, is that it calls for tax reductions he very likely will not get.

The only way most Republicans, and quite a few Democrats, will vote for such a reduction of revenue will be to make an approximately equivalent reduction in expenditures and outgo. Otherwise, they already feel, the deficit will be so large it will be too dangerous.

The President thinks the cuts will in the end bring about enough more revenue to bring the budget back into eventual balance—after some years. But during those years the Government will operate under such heavy deficit financing that the stability of the currency of the United States will be endangered. This must not happen. It could destroy the Government, bankrupt every citizen of the Nation, and possibly bring about a dictatorship. It would be exactly what such men as Lenin and Stalin and Khrushchey have predicted and wanted, and they would have the achievement of their highest goals.

There is a chance for the tax cuts, however, and every American would like to benefit by them.

That chance is that Congress—or enough Members of both Houses of that body—would have the courage to defy the President and to cut his budget very sharply. They would have to examine and audit it for unnecessary (not merely undesirable) spending proposals and to eliminate them. There are such items. Much of the welfare program has called for pouring money down the drain, the foreign aid program contains provisions for helping peoples who no longer need help or who never used our money for the purposes for which it was given. Congress would not have to search hard to find other actually undesirable items of expenditure, if the Members of the two Houses would discard politics for the national good.

It is true, as the President says, that there are loopholes through which many taxpayers are escaping from their tax liabilities. That kind of tax reform is needed. There is reason to believe also that unfairness in the tax setup forces some to pay taxes they should not have to pay.

In other words, thorough tax reform is needed, as well as tax reduction and spending reform. But the President himself points out that closing the loopholes will not recapture enough taxes by several billions of

dollars to balance the reduction in revenue he proposes.

We would like to reverse his order of procedure and put it in this order: Expenditure reform, tax reform and then tax reduction. And we're inclined to think the most important of the three is the first.

**Hon. Burris C. Jackson, President
National Cotton Council**

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the address delivered by the Honorable Burris C. Jackson, president of the National Cotton Council to the 1963 Beltwide Cotton Production-Mechanization Conference in Dallas, Tex., January 10, 1963.

Mr. Jackson is from Hillsboro, Tex., and is a resident of my congressional district. He has been associated with the commodity of cotton all of his life, and is probably as well versed on the subject as anyone I can think of.

It gives me pleasure to include this address:

**COST REDUCTION: THE BIG KEY TO A BIG
FUTURE FOR COTTON**
(By Burris C. Jackson)

As some of you may know, the National Cotton Council is going to have its 25th birthday this month.

This occasion of our silver anniversary means quite a lot to me as one of the council's founders and one who has been officially associated with it ever since.

As I look back over the last quarter century, I can see many things in the council's record that I am intensely proud of. The council has a record of serving good causes—causes which not only operate in behalf of cotton, but of the country as well. And if there is one great cause that the council has given its all-out support from the very beginning, it is the cause of agricultural research and education.

Throughout its whole existence, the council has championed and built support for the programs in which this group is engaged—programs which seek to advance cotton and agriculture through the use of science and technology.

Those of us in the council have always done our dead-level best to build more adequate programs of research—and research application—for cotton and for agriculture.

We have consistently said that our industry's basic problems cannot be solved by any panaceas to be found in Government price and production control programs.

We have said that in meeting competition for markets, there is no substitute for developing a better product at lower cost.

We have said that science and technology must be at the very heart of any program capable of saving and advancing the American cotton industry.

That is our philosophy, and we have pushed it with all the power at our command. In cooperation with other groups, we have helped win some very significant increases in the total level of cotton research. There have even been a few cases in which we have helped generate an all-out research

attack on a particular problem—the new Central Boll Weevil Laboratory in Mississippi being a prime example.

Through the combined efforts of the various groups which do cotton research and education, our industry has made an awful lot of progress in quality improvement and efficiency. And to all of you who have had a part in this accomplishment, I want to say that the council and the cotton industry are indeed grateful.

Yet my principal message to you today is that the total cotton research effort—as productive as it's been—has still fallen woefully short of meeting the industry's needs. The consequences of this are tragically evident today. They will soon become utterly disastrous unless we achieve a big, a fast, a crash buildup in research in the near future.

Just look at the situation we are in today in terms of price competition. We face the most rugged kind of opposition both at home and abroad. And with our production costs where they are, we are in very poor shape to try to stand on our own feet in meeting this competition.

Overseas, American cotton seems to be reasonably competitive with foreign growths and foreign rayon, but only because our Government gives us an export subsidy, which currently comes to 8½ cents a pound. Without the subsidy—which we have no assurance of keeping—we would quickly lose our export market and growers would face the impossible task of trying to adjust their production down to the domestic consumption level.

Remember, too, that the export subsidy—as vital as it is to us at this time—is by no means an unmixed blessing. It permits foreign mills to buy raw cotton at \$42.50 a bale less than our domestic mills. This is a huge advantage—especially when you couple it with the fact that the wages paid by foreign mills are only a fraction of those paid in the United States.

The net result of this is that foreign-made cotton goods have been flooding into this country at an ever-increasing rate. Last year, manufactured goods were imported at a rate equivalent to more than 650,000 bales of raw cotton. They took that many bales of consumption away from us in our domestic market. They are going to take over a still larger part of our domestic market unless we do something about the raw cotton cost advantage enjoyed by foreign mills.

But our troubles in the domestic market don't begin and end with imports. Rayon, our biggest and oldest enemy among the manmade fibers, is beating us over the head with the largest price advantage it has ever had. Today, in net cost to domestic mills, rayon is 12 to 15 cents a pound cheaper than cotton. Over the last couple of years, and largely because of rayon's price advantage, we have lost hundreds of thousands of bales of consumption to this competitor.

But this still doesn't tell the whole story. Some of the more expensive fibers such as nylon, Dacron, and Orlon—fibers which have previously competed more on special qualities than on cost—are definitely trending downward in price. There seems little doubt that this downtrend will continue. And as it does, price will become an ever-more-critical factor in competing with the noncellulosic fibers.

The situation we face is not just serious, it's desperate. We have been losing markets fast over the last 2 years. The carryover of cotton has already risen some, and could very well be up sharply by next August 1. The national acreage allotment for 1963 has been reduced by about one-tenth below last year's level. Actually, the allotment is at the legal minimum. And how long can we keep even this legal minimum allotment if it produces more cotton than is consumed?

Now, what are we going to do about all this? What can be done?

An obvious part of the answer—and the only immediate solution—is a revamping of the Government's price and production policies on cotton. This is a must, and there's no question about it.

We must have a Government policy aimed at competitive pricing for U.S. cotton. We must have a policy aimed at doing away with the inequity of the two-price system which we have had for the last several years.

I am extremely hopeful that we will soon see a new Government policy calculated to permit a competitive, one-price system. I can assure you that a determined effort to achieve this goal is underway—and has been underway for the past several months.

President Kennedy has publicly recognized the need for a new cotton program. So have many of our key leaders in the Congress. And of course, the cotton industry itself is mustering every resource it can in the drive for new constructive legislation. Let's hope that this drive will be successful in giving us something that cotton needs—and that success will not be long in coming. To that end, we all pledge our best efforts.

At the same time, let's remember that no government program is going to underwrite and guarantee a big future, or any future, for American cotton.

We are fooling ourselves if we think the Government is going to commit itself to perpetual and massive assistance to cotton in meeting price competition. Certainly the Government has a deep interest in maintaining cotton as a big and vital part of the national economy. But there is bound to be a limit on how far and how long the Government can go in balling cotton out of trouble. We must, therefore, make plans for the future.

There is really only one long-range solution to our price problems. We must do the things that will permit us to stand on our own feet in meeting price competition. And this means, of course, that we must mount a massive, all-out effort to reduce the cost of producing cotton.

Cost reduction is the key. It has to be the key. In the long run, there is no other way to meet price competition without ruining the producer's profits and driving him out of cotton.

Fortunately, we have a terrific, an enormous potential for getting down the unit cost of producing American cotton, and it is most gratifying to me that the emphasis in this conference program has been placed on exploiting that potential.

One of the ways we can get costs down is simply to do a better job of putting to work the techniques and know-how that have already been developed and proved by research. I would not want to hazard a guess on how much we could reduce the average cost of production by making maximum use of existing technology, but obviously we could make a substantial gain.

How many farmers do you know who are careless about insect control? Farmers who fail to get anything like the full benefits out of mechanical harvesting? Farmers who don't fertilize properly? Farmers who could profit from irrigation? Farmers who should but who haven't tried chemicals for weed control?

What I am saying here is that those of you who work directly with farmers—those of you who have the job of helping farmers apply the results of research—have a tremendous opportunity to help with the vital task of bringing down production costs. This is an opportunity that needs to be exploited with every bit of speed and urgency and resourcefulness that can be applied to it.

Then there's the huge and even-more-difficult task of beefing up our cotton research efforts so they will give us bigger and faster breakthroughs in cost reduction.

Up to now, in spite of a great deal of effort, we have been terribly slow in achieving a buildup in the overall level of cotton research. This has been particularly agonizing in view of the fact that an adequate level of research could in all likelihood reduce the cost of growing cotton by 10 or 11 cents a pound within a reasonable period of time.

If we had had a massive buildup in research several years ago, I am fully confident that farmers would not only be able to meet price competition today, but would be making greater profits to boot. But we didn't get it. Today we still face a great deficit in research. And, in my judgment, we are fast running out of time in which to overcome that deficit.

One of our big hopes for bolstering research lies in the program of self-help that farmers are mounting through the cotton producers' institute. Through the institute, producers are already putting hundreds of thousands of dollars directly into crucial research projects, as well as other hundreds of thousands into cotton promotion, where we also are running a big deficit.

Within a short period of time, the producers' institute expects to be spending millions on research, because this self-help, voluntary program has been splendidly received in all the areas where it has been introduced up to now.

But it is just a plain fact that producers want and need all the help they can get if the total cotton research buildup is to be big enough and fast enough. They need the help of government. They need all possible help from private businesses and industries which are allied with cotton.

I am especially hopeful that the Federal Government will see the wisdom of a sharp step-up in its cotton research efforts. This kind of step-up would involve just a few million dollars, only a minute fraction of what the Government is spending on price and production programs.

Actually, an additional investment in research would be the smartest kind of spending the Government could do for cotton. It would help maintain cotton as a big, dynamic part of the Nation's economy. It would permit farmers to go it on their own in meeting price competition. It would help eliminate any need for heavy subsidies from the Federal Treasury.

In any event, whatever we must do to achieve it, there is no alternative to a crash program to reduce cotton production costs. Without this kind of program, cotton can have no real hope for surviving as a major industry. With such a program, cotton can not only survive but move forward into the healthiest and most prosperous era it has ever known.

There is no question, absolutely no question at all, about our tremendous potential for reducing costs, for meeting price competition, and for increasing the farmer's profits. The only question is whether we are going to move far enough and fast enough in capitalizing on it, and I am confident we will. We simply cannot afford to do anything else.

Ukrainian Independence Day

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. RHODES of Pennsylvania. Mr. Speaker, I am proud to join with Americans of Ukrainian descent in celebrat-

ing the 44th anniversary of Ukrainian Independence Day and in paying tribute to these freedom-loving people who have a history of a great struggle for independence.

Their dedication to the principles of freedom and the dignity of the individual, in the face of the oppression to which they have been subjected, is a shining example to all of us in our efforts to see that every country has the right to determine its own form of government.

To those of us who are free, the flame of Ukrainian liberty should renew our desire to maintain and strengthen the cause of freedom everywhere.

It is a pleasure to join my colleagues in commemorating the 44th anniversary of Ukrainian Independence Day and to assure the captive people of that country that we in America join in their prayers and hopes that freedom will again shine in their land and they will be given the opportunity for a free and just form of government.

Foreign Economic Policy: The Herter Lecture Series

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. CURTIS. Mr. Speaker, I was greatly honored shortly before the opening of the present session of Congress to be invited to initiate the Christian Herter lecture series at Tufts University. In recognition of the services which Herter has given as Congressman, Governor of the State of Massachusetts, and Secretary of State of the United States and in the understanding of the difficult job which lies ahead of him as Chief Trade Negotiator under the new American Trade Act, Tufts has begun a lecture series to look into the difficult area of trade policy and foreign economics. I join with Tufts and the entire Nation in wishing Christian Herter well in his new job, so important to our economic future.

I was very much in favor of personalizing the job of Trade Negotiator as the considerations of the Trade Expansion Act were in progress and I believe both the job and the man offer the greatest promise.

My speech in the lecture series concerned trade, economic policy, and Herter's job as Chief Trade Negotiator.

It is set out below:

FOREIGN ECONOMIC POLICY

(Remarks of the Honorable THOMAS B. CURTIS, Republican, Second Missouri District, at the Herter lecture, Tufts University, Boston, Mass., Monday, Jan. 7, 1963)

It is a privilege to be a participant in the Christian Herter lecture series established at this great university. It is appropriate that I should discuss foreign trade on this occasion as Christian Herter, the first Chief Trade Negotiator of the United States, pilots

this Nation on a new and an uncharted course in the altered archipelago of foreign trade.

I would be remiss if I did not take note of the appearance of Walter Hallstein, the President of the European Economic Community, here at Tufts in April of 1962, to lecture on the dramatic economic developments occurring in Western Europe in the 5 years since the Rome Treaty was signed. This massive emergence is one of the major reasons that old charts and old courses must be abandoned and new ones charted.

The most important provision of the Reciprocal Trades Act of 1962 (Trade Expansion Act) was the creation of the position of Chief Trade Negotiator requiring Presidential appointment and Senate confirmation, carrying with it the rank of Ambassador Plenipotentiary, and investing in it the basic powers of negotiating our trade treaties, and chairing the newly designed Intercabinet Trade Policy Committee.

There are two basic reasons for the importance of this provision. First, it raised the stature of trade negotiating throughout the world. Other countries sent their trade negotiating teams to Geneva headed by top Cabinet officers or other top governmental official. The United States, on the other hand, frequently and usually sent a team headed or directed by a top civil service employee, a highly competent person with highly competent people to assist him, but one with no stature of his own. His decisions were subject to telephone approvals sought from other faceless officials back in Washington, D.C. Now this has been changed. The decisions now will be made on the spot backed by the authority and integrity of one of the highest officials in our Government, one who is directly responsible to the President.

Second, it raises the stature of trade negotiating in the United States. Personally, I favored the creation of a new Department of Foreign Economics headed by a Cabinet officer who would be the Chief Trade Negotiator, and who would draw together in one place all the various important points where foreign economics impinge upon our domestic economics. As it is, the contact points of foreign economic forces are spread in an uncoordinated fashion throughout our Federal departments, bureaus, and agencies.

I believe foreign trade or, to use the broader terms, foreign economics, has assumed such great importance to our Nation, even though trade itself amounts to less than 10 percent of our gross national product, that we could not possibly deal with the problems it creates under our former administrative setup.

However, I believe it is possible for the Chief Trade Negotiator to develop the powers that are entrusted to him in the Trade Expansion Act of 1962 so that he can deal with the most important of the foreign economic contact points.

The powers that go with preparing for trade negotiating are vested in this newly created office. The powers of conducting the negotiations of course are vested here. Furthermore, if the concept of the Intercabinet Trade Policy Committee that some of us had, and tried to spell out in the committee report and during the congressional debate, is carried out, the compliance with the treaties and agreements negotiated will be supervised by the Chief Trade Negotiator. Finally, the Committee has authority to develop procedures for receiving, hearing, evaluating and recommending remedial action to the President on allegations of unfair trade practices which bear on foreign trade agreements, even though not specifically a part of them.

These charges of unfair trade practices may be directed against foreign or domestic businessmen, I hasten to point out.

At this point, let me state that President Kennedy by appointing a former U.S. Secretary of State to the position of Chief Trade Negotiator has captured the full significance of upgrading the place foreign trade should hold in the council of nations and in the United States. Let me further state that by appointing a person with the wisdom, experience, imagination, and integrity that Christian Herter possesses, we are most likely to develop the governmental machinery the new law makes possible for dealing with the problems presented in the field of foreign economics.

It is in these areas that the Trade Expansion Act of 1962 deserves the oft applied cliché, bold and imaginative. At the same time I make this point I want to make the point that what has been hailed as bold and imaginative in the Trade Expansion Act—the granting to the President of additional trading material to further reduce tariff rates and eliminate many altogether—is shirking and stereotype. This is no more than the last possible move remaining that could be made under the provisions of the Smoot-Hawley Tariff Act of 1930. Too many people have forgotten that the Reciprocal Trade Acts were mere amendments to this basic act which remains on the books today. By starting from a level of high tariff rates, we were able to negotiate downward as Congress intermittently gave the President power to do so. Incidentally, the original Reciprocal Trade Act and most of those that followed permitted the President to negotiate upward if he had been so inclined, and so does the present law. This point has not been overlooked by many people who are unsympathetic with the doctrine of freer trade and may have a great significance. Time will tell.

What our trade policy will be, once we have used this last bit of tariff trading material the President now has is one of the questions not yet resolved.

I have said that in this area of trading material the act is shirking, not bold. I justify my choice of words for the following reason. Today tariffs are among the least of the trade barriers that hamper free trade. Quotas, licenses, embargoes, internal excises, monetary policies, exchange rates, governmental subsidies of an infinite variety, state trading, Government sponsored or unrestrained cartels, health and other regulatory laws perverted to embargoes are the major barriers in international trade today. The United States is an offender in these areas, along with the other major trading nations, yet nothing meaningful is said in the Trade Expansion Act about these trade barriers. The GATT, which seeks to eliminate all trade barriers, remains unmentioned in the Trade Expansion Act, either by name or by reference to its principles.

As a matter of fact, the most liberal of all trade barriers is the much abused tariff which is now being abandoned in toto. A tariff at least is a law for all to read, determine, and apply, and courts have been set up to resolve differences of interpretations in accordance with established laws and procedures. The other types of trade barriers I have listed almost without exception require administrative determination without established laws, procedures, or courts. Who gets a quota, and how much, and into what ports in what quantities is the subject of administrative negotiation. This is government by men, not government by law. In this process we betides the little operator and fortune bleases the operator with political connections and power.

The trade adjustment features in the Trade Expansion Act deserve no such accolade as bold and imaginative. Redundant and defensive are the adjectives that come to my mind to describe them. The adjustment

features for the unemployed duplicate the provisions in our unemployment insurance laws, our Manpower Training Act, and our depressed areas legislation. These new provisions can only confuse and damage established programs and do little or no good. The adjustment features which relate to employers are unnecessary for large corporations which can adjust their line of products and services within their own structure, and duplicate for smaller businesses the loan provisions of the Small Business Act. I used the adjective "defensive" because these provisions were placed in the law as a defense mechanism against those who had been claiming for years that foreign competition damaged their business or their jobs. The same reasoning could be applied to any form of competition. The proponents of this defense mechanism fell back on the thesis that this economic damage results from the governmental action in reducing tariff rates and, therefore, the Government should compensate. The same reasoning should then apply when Government moves its contracts from certain businesses in one area to businesses in other areas, or when Government takes any action which has an impact upon the marketplace. This would be quite an undertaking for a Government with an annual expenditure of \$100 billion.

At this point I would like to make an observation that I have been making for the past few years. I am convinced that most of our people who think they want protection really want fairness in trading—not protection, not an advantage, and definitely not a handout. I have listened for years to the testimony of businessmen, labor and farm groups who have appeared before the Ways and Means Committee in opposing the Reciprocal Trade Act extension. I have dug into what seemed to be bothering them. Most of their troubles arise from lack of fairness or reciprocity in trade matters on the part of their foreign competitors, from a State subsidy to their competitor, or an embargo, or a quota system, or an unhealthy wage scale—unhealthy to the overall economy of the country which permitted it.

I recall a statement from one of our exporters to Venezuela. He said his company was unable to compete with the Western German companies in that market because the German companies could offer more liberal credit terms financed by the German Government. I posed this case to Secretary of Commerce Hodges during the public hearings on the Trade Expansion Act last year. The Secretary's response worried me. He said, "Well, we will look into that and perhaps we (meaning some governmental agency) can enable the U.S. companies to match this liberal credit extension." My expressed thought was, if we really are talking about freeing up trade, why not negotiate with the German Government to quit subsidizing their businesses? Don't compound the error by subsidizing ours.

Another matter coming out of the hearings comes to my mind which illustrates the point in a somewhat different way. The Secretary of Interior pointed with some pride to the fact that Government loans had been extended to some of our west coast fishermen who otherwise would have been forced out of business by the Japanese. The point was that our fishing boats were obsolete and needed renovation. I asked why the tariff on fish was not increased, if there was to be protection. In that way the most efficient of our fishermen would do the renovation. By a subsidy, the fishermen who were most efficient in presenting their case to the Small Business Administration for the guaranteed loan, not necessarily the best fishermen, would do the renovation. Either way, however, we were not freeing up trade and by the subsidy method we might even be keeping

an inefficient operation alive which would be coming back for more subsidy. As a not too irrelevant side point, there was testimony to the effect that it was not the efficiency of the Japanese fishing boats as much as it was the noncompliance by the Japanese with the international fishing agreements set up for conservation purposes which kept our fishermen from competing.

If this latter point turned out to be true, the gravamen of our fishermen's case was not protection of an American industry, but rather, insistence on the mutual observance of good conservation laws. By protecting instead of insisting that a violation cease, we compounded the error and impeded the expansion of trade.

I want to express one other specific point of concern I have about our foreign trade policy. Section 203 of the Agriculture Act which authorizes the President to enter into international cartel agreements in respect to agricultural products and products manufactured therefrom with other nations was not only not repealed by the Congress, but at the request of the administration, its authority was broadened to provide that these agreements would be made binding on nations not party to the international agreement. It was this authority, incidentally, that lay at the base of the international textile agreement entered into in Geneva in January of 1962.

I asked Secretary of Commerce Hodges how it was determined how much textile, of what varieties, from what companies, from what countries were to come into what U.S. ports. He replied straight-facedly that they were going to use the 1960 census figures. In other words, we are going to freeze the trade pattern as of that date. How expansive and progressive can we get? I know of nothing that more dramatically drives home the point I seek to make of the regressiveness, the stifling aspects of the license-quota type trade barrier. Is this what we are coming to once we have run out of the tariff-rate trading material set up in the Smoot-Hawley Tariff Act? This is not an isolated example of our use of quotas and licenses or international type cartel agreements. The Sugar Act is an example. Many of our agricultural products are state traded, under Public Law 480. Indeed, very few agricultural products move without knocking against these kinds of trade barriers and government subsidies. Recently we have been utilizing the quota system instead of tariffs for oil imports.

And now I must relate another important piece of legislation affecting foreign economics which was passed the last session of Congress. I refer to the Revenue Act of 1962; that part which altered the tax treatment of American enterprise abroad. It has been my observation that we cannot separate trade from foreign investment and that anything that deters foreign investment will deter trade. I think this is particularly true in face of the development of the European Common Market. Much has been made of the efficiencies the EEC countries will derive from manufacturing for a mass market. However, these are efficiencies that they should be able to put into effect without too much to do. However, mass manufacturing is based upon mass distribution and mass servicing, a point that seems to escape many economic planners. It requires the economic infrastructure of power, communications, transportation, and education. The United States is just about the only society that has developed the techniques of mass distribution and mass servicing. For this reason I have suggested that the greatest opportunities open to U.S. enterprise in the European Common Market lie in the field of distribution and servicing.

If some question this point, let me give just a practical illustration which may drive

it home. I have a friend who mass-produces special pallets to be used in mass warehousing where turnover is fast and handling must be made as efficient as possible. There is no market in Europe, as yet, for his product, because warehousing has not been developed to this point and probably will not be for many years.

We have had so little regard for the distributive and servicing sectors of our economy, probably as a result of what seems to be our mesmerization with mass production, that we really have been unaware of what is going on. We accept packaging as routine and actually curse advertising with an unawareness of the vital economic part they both play in obtaining the efficiencies that can be had in a mass market. Perhaps this point will drive the point home; while employment has been steadily declining in manufacturing in the United States, employment in the service and distributive fields has continued to climb, even during our post-World War II recessions.

Now, to get back to the point I sought to make about foreign investment. If we are going to avail ourselves of the opportunities offered in the European Common Market in the service and distributive fields, we must encourage, not discourage, our capital to move there. All the talk about our manufacturing processes moving to Europe is largely unanalytical. What movement there has been is largely to gain the efficiencies derived from having a crucial part of the manufacturing process nearer to the market for distributive and servicing efficiencies. Actually this process creates more jobs in the United States than it displaces, not less. However, it is true the jobs will be shifted out of manufacturing into distribution and servicing, but they will become better paying and requiring less brain, but a little more brains.

It certainly is a shortsighted policy which seeks to solve a balance-of-payments problem through discouraging healthy and remunerative private investment going abroad. This is sacrificing gain over the long haul for a very temporary short-term benefit. One of the strongest items in our balance of payments is the income we derive from our foreign investment. And yet government policy seeks to weaken it.

I do not introduce the subject to argue its merits or demerits. I brought it up primarily to emphasize its inseparable relation to our trade policy. In trade we talk of going one way, toward expansion, to help our balance of payments, and in investment we talk and promote contraction, allegedly for the same purpose. This is a grave inconsistency.

I do not like to mention the relatively trivial items the administration sponsored in the previous Congress, such as increasing the tariffs on the most person to person of all foreign trade, the trade between our tourists and the foreign shopkeeper, and cutting back on military personnel purchasing abroad, but they are straws in the wind which reflect the way the trade policy really is blowing. These two pieces of legislation were also promoted in the name of balance-of-payments problems.

I must mention a major administration policy not referred to the Congress but set by Executive decree. This is the buy American program adopted by the Defense Department. This policy requires purchases of military goods to be made in the United States if the United States price is not 25 percent greater than the foreign price. Already this has cost the Military Establishment over \$100 million, at least, that is the boast of the Defense Department and the administration when they were toting up the effective job they claimed they had done in respect to the balance-of-payments problem.

While the administration talks freer trade

every policy it has followed to date indicates it is pursuing a course of more restricted trade—all in the name of balance of payments.

From this discussion you may be gaining the impression that I am the greatest free trader since Adam Smith. In theory, I guess I may be, but in practice I am a fair trader which puts me in bad with the so-called protectionists with some frequency. I happen to believe that increased trade depends upon free trade and free trade depends upon fair trade. The points at issue revolve around the definition of fair trade. For a starter I will take the definitions set forth in the GATT. What my protectionist friends call protection I find, on analysis, to be usually a differential reflecting some subsidy or impact of a trade barrier set up on the other side by the competitor. The policy I would have us pursue is to remove the subsidy or the barrier which is the justification for the differential. However, if a differential is to be used, I would recommend that the most liberal differential possible be used; this happens to be also the most flexible—it is the tariff. I would adopt only as a last recourse the other differentials—those regressive devices of licenses, quotas and subsidies. I would eschew without equivocation health and other regulatory laws used as subterfuges for economic differentials.

I would oppose any differential that created a preference, that is, any differential which went beyond the economic difference sought to be measured for adjustment.

I think our foreign economic policy should be trade wherever possible, not aid; when trade is not possible, then loans rather than grants; where loans are not possible, then know-how rather than money; and when know-how is not possible, then outright gifts, rather than money with a string tied to it. When we get to money with strings tied to it, we move out of economics into diplomacy which is the realm of the State Department.

I am happy that foreign economics is being taken out of the hands of the State Department and is being placed, to some degree, in the hands of a new, independent and possibly coequal agency headed by the Chief Trade Negotiator. This new law serves as the authority to do this. I believe our State Department should be relieved from any control of the details that go to make up our economic arm, just as they have no control of the details that go to make up our military arm. Diplomacy is the area of endeavor of the State Department. In implementing our foreign policy, exercising diplomacy that is, we must be able to utilize the strength of either and both arms, military and economic. To make and keep them as strong as possible, they must be under the direction of their specialists, not specialists in diplomacy who sometimes are tempted, like Xerxes, to whip the seas when the laws of nature fail to respond to their pleas.

Freedom and Union Publication

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. LINDSAY. Mr. Speaker, I am pleased to insert in the CONGRESSIONAL RECORD a copy of an article that appeared in a publication entitled, "Freedom and Union," edited by Clarence Streit. The article concerns the splen-

did election victory of our colleague Representative, PAUL FINDLEY, of the 20th Congressional District of Illinois.

It will be seen that Streit's basis is his article around PAUL FINDLEY's superb speech on the subject of World Federation. The title of the gentleman from Illinois [Mr. FINDLEY] address is "America's Greatest Invention—and How Best To Use It Now." Its theme is that the United States made a contribution to the world when it fashioned a Federal union plan for government as embodied in the U.S. Constitution. Why should not, then, this concept be applied to world unity?

Full text of the gentleman from Illinois, PAUL FINDLEY's, speech is attached along with the introductory article that appeared in the magazine, Freedom and Union:

CONSERVATIVE FINDLEY WINS CRUCIAL SEAT IN CONGRESS, BACKING ATLANTIC FEDERATION

With Atlantic federation as the most distinguish plank in his platform, PAUL FINDLEY, a freshman Republican Congressman, roundly defeated on November 6 Peter Mack, liberal Democrat, who had the advantage of having served seven terms in Congress. Mr. FINDLEY won by a majority of 10,871, in a total vote of 190,209. His victory is the more significant since it came in the heart of the Middle West, in the 20th District of Illinois.

Before the election, Robert C. Albright, political correspondent of the Washington Post, made a special visit to this district. In a column-long report his paper published November 5, he said this was "1 of the 12 House contests that the two political parties consider crucial." Mr. Albright explained:

"Representative Peter Mack, 46, the Democratic loner with the Houdini flair for winning in gerrymandered congressional districts is walled in again but he hopes not for long. In 1952 he confounded Republicans and his own machine leaders by escaping from a similar reapportionment lockup. The big question is: Can he duplicate that difficult feat in Tuesday's election?"

"Representative PAUL FINDLEY, 41, a deeply conservative Republican freshman, was thrown into the same district with the Kennedy-endorsed Mack by the Illinois Legislature. The two are grappling for holds in one of the tightest of off-year races. Some say it could be decided by less than 1,000 votes. The statistics narrowly favor Mack's Republican opponent, as they did in 1952 when the dexterous Democratic independent bucked the Eisenhower landslide to hold on to his seat. * * * The 14 counties now comprising the new Mack-Findley (20th) district went 51.6 percent Republican in 1960."

That Mr. FINDLEY's victory was not due to gerrymandering would seem evident from the fact that he gained 53 percent of the votes and a majority 10 times greater than the experts had expected. Moreover, President Kennedy had gone out of his way to endorse Mr. Mack to quote the Albright report.

"At the Illinois State Fair Colosseum in Springfield, Mr. Kennedy singled Mack out from his colleagues. 'I'd like to have him stand up,' the President said. 'He is a great Congressman.'

"FINDLEY said he was delighted the President had plumped for Mack. 'It helped identify Mack as a New Frontiersman,' said FINDLEY. 'He's been trying to dodge it. Now everyone knows.'

"FINDLEY, rated by some as 'to the right of GOLDWATER,' goodnaturedly denies it. 'I'd class myself somewhere between GOLDWATER and Senator EVERETT DIRKSEN,' he said. In fact, he is one of the few Republicans able

to produce letters from both GOLDWATER and Gov. Nelson A. Rockefeller, strongly endorsing his candidacy.

"FINDLEY goes along with some of Rockefeller's foreign policy views, including his belief in a Federation of Western Nations. He said as a youth he won a prize for an essay contest on an almost identical theme. The contest was sponsored by Clarence Streit.

"FINDLEY makes no bones about differing with Rockefeller's domestic views, however. He takes pride in his 100 percent rating with the conservative Americans for Constitutional Action."

The essay contest referred to was one sponsored by the Federal Union Association about 1940, the prize being a trip to Washington and lunch with Mr. Streit at the National Press Club. Mr. FINDLEY was then one of the organization's collegiate Student Federalists. When the association founded Freedom and Union in 1946, Mr. FINDLEY, back from the Guam invasion, was assistant editor through its first year. He left to become publisher and editor of the Pike County Republican in Pittsfield, Ill., and later acquired another weekly. He graduated from Illinois College a Phi Beta Kappa, and married his charming wife, née Lucille Gemme, while on the staff of this magazine. They have two children, Craig and Diane.

Congressman FINDLEY is, so far as we know, the only candidate for either House of Congress who made Atlantic Federal Union a feature of his campaign. Like Governor Rockefeller, he not only shares a widespread view that it is right but he—unlike timid politicians—believed there were votes in it. He seems to have proved it. For he won a resounding victory in what the experts deemed the hardest kind of district in which to test this belief, while Governor Rockefeller, who, after making a bold stand for federation in February, did not speak of it in his campaign because his advisers urged it was not a State issue, was reelected with a smaller majority than before.

We reprint below Congressman FINDLEY's opening speech on Atlantic Federal Union which he delivered at Carthage College in his district September 28, to show the way in which he stepped forward "where devils feared to tread."

"In television statements late in the campaign," Mr. FINDLEY said, in response to a question on whether he supported the U.N., "I have always believed in the U.N. I want it to continue to function. It has performed valuable services in the past and can do so in the future. It is primarily a meeting place for representatives of sovereign nations, and affords a mechanism through which member nations can carry forward projects over which there is little controversy.

"I do object to efforts being made by some groups to transform the U.N. into some sort of world government. Such an effort would surely destroy the U.N. My suggestion is to permit the U.N. to continue to provide the limited but valuable function as a meeting place.

"I do strongly recommend, however, that a new unity—indeed an organic union—be formed among the U.N. members that have demonstrated over a period of years their ability to govern themselves and protect individual liberty. These would be the United States, British Commonwealth nations, France, the Low Countries, and a few others. Such a union would be the greatest possible step forward in the cause of liberty, and the best possible news for the U.S. taxpayer. The cost of armament and space activities would be shared with millions of others. I also referred briefly to the Federal Union idea in several other brief appearances on television.

"I kept this up through my final TV broadcast. Mr. Mack never challenged me on this issue. I don't believe I had even one mur-

mur of criticism on this issue. Which is astonishing. But I learned my lesson before the campaign when I made a speech in favor of Atlantic Federal Union at a DAR meeting in my district and found that, when they understood the proposal, none of them expressed any opposition."

The only part of Representative FINDLEY's Carthage speech which he gave in his press release on it was the lesson he drew from U.S. history at the end, which we have put in boldface type. His full speech follows.—EDITORS.

AMERICA'S GREATEST INVENTION—AND HOW BEST TO USE IT NOW

(By Congressman PAUL FINDLEY, Republican, of Illinois)

"Have you ever considered this question: What was America's greatest invention?"

"Was it Alexander Graham Bell's telephone, which opened a new era in communications?"

"Was it Thomas A. Edison's electric light, which turned a world of flickering nighttime into one in which night can be as brilliant as day?"

"Was it the Wright brothers' airplane, which gave mankind wings, for good and for ill?"

"Was it Henry Ford's assembly line which led to mass production and a sharply rising standard of living?"

"Was it atomic energy, which ushered in an age that is now only beginning to unfold?"

"Each has a claim to greatness. Each is uniquely American. Each has contributed immensely to progress. Which would you choose?"

"My choice may surprise you. It is none of these. My choice is nothing more tangible than a manuscript, and yet it has become the most vital force for freedom and progress history has known. It is uniquely an American invention. It is the Federal Union plan for Government as embodied in the U.S. Constitution.

"The laboratory where Federal Union was created was Independence Hall in Philadelphia. The year was 1787. In the same Hall 11 years earlier had been signed the Declaration of Independence, the vital spark that was to ignite this torch of freedom.

"The inventors were farmers, professors, businessmen, lawyers—39 men representing 12 American States.

"In 3 months they created the Federal Union idea, an accomplishment which historian John Fiske called 'the Iliad, the Parthenon, the fifth symphony of statesmanship.'

"You have all seen Christy's massive painting of the signing of the Constitution. It shows a room filled with distinguished bearded gentlemen. At the speaker's desk with austere bearing is George Washington. One has the feeling that here were the beloved statesmen of the colonies commissioned by a grateful people to fashion a new government, now that the British yoke had been lifted. It is an illusion of peace, unity, good feeling, solidarity, confidence, and high purpose, untainted by usual human frailties.

"The true picture was one of disunity, open warfare between States, rebellion within States, bitterness and sectional strife, and, in Independence Hall itself, a constant struggle between lofty purpose and provincialism, between freedom and slavery. The American States were on the verge of anarchy.

"The Central Government—the 'League of Friendship' organized under the Articles of Confederation—was weak, nearly bankrupt and without support abroad.

"The league was unable to meet its own current expenses and too weak to enforce payment of debts, public or private.

"The league was so weak foreign governments refused to enter into agreements.

Barbary Coast pirates were seizing American ships and American citizens. The league was too poor to build a navy, and too poor to buy off the pirates.

"The States erected a maze of foolish discriminatory tariff walls among themselves. New York levied a high import duty on Connecticut firewood, for example, so Connecticut voted to forbid all trade with New York.

"Connecticut and Pennsylvania quarreled over a river valley. One winter and spring was especially rough on the valley. Floods, ice floes, and storm were almost devastating. Under the pretext of helping the population of Connecticut 'Yankees,' Pennsylvania sent militia into the area. Their conduct would have disgraced barbarians. They stole and plundered, naturally got violence in return. On one occasion, the militia emptied a Connecticut town of 500 people, burned the homes and at bayonet point forced the inhabitants, children and all, into the wilderness.

"Currency collapsed in most of the States, and efforts to establish fiat paper currency led to rebellion, a new high in bitterness, hatred. The only sound currency was a meager and assorted supply of foreign coins, called specie. Clipping of coins was so common, many people carried scales with them to verify weight of gold coins before accepting them.

"In Rhode Island, money-hungry citizens forced the legislature to issue paper money, even though it was doomed to failure. Realizing there was no public confidence in paper money, merchants refused to accept it at the same value as hard money, or specie. Laws were passed providing fines or imprisonment for refusing to accept paper money at the same value as hard money. Rather than go to prison, merchants shut up shop.

"In defiance of the merchants, farmers dumped their produce, burned corn for fuel, and tried to starve city people into accepting paper money at face value. All trade, except on a barter basis, stopped. In 6 months, paper money dropped in exchange value from \$1 to 16 cents. There was virtually no money to pay debts, and imprisonment for debt became commonplace.

"In Massachusetts, a mob angry over the collapse of that State's currency, took it out on established authority. The mob stormed the courts and forced the State supreme court to leave town. Rebels seized leading citizens as hostages in other communities.

"Such was the American mood in 1787, on the eve of America's greatest invention.

"An impotent Central Government, unable to defend American rights abroad, or to make foreign agreement, unable to meet its own expenses.

"Bloody warfare between States, and rebellion within States. A maze of tariff walls separating one State from another.

"Looming anarchy because of the collapse of currency.

"Jealousy, hatred, chaos, rebellion, anarchy.

"What was the mood of delegates at Independence Hall? The mood was despair. A year earlier a Convention had been called for the purpose of strengthening the Central Government. The Convention ended before it began, because only five States sent delegates.

"The Second Convention was called to meet in Independence Hall on May 14. There was very little interest in it among the State governments. Indeed, New York thought so little of it that that State did not send its best men as delegates. John Jay, who could have added strength to the Convention, was left at home.

"The one fact which added hope to this Second Convention was the news that Gen-

eral Washington was to be in the Virginia delegation.

"Washington arrived at Independence Hall on schedule. So did a few other delegates. They had to wait 11 days before delegates from the seventh State arrived, providing a quorum. Before the Convention was concluded, 12 States participated. Rhode Island never did send delegates.

"The night before the Convention was to have its opening session, some of the delegates were gathered before the fireplace, 'shooting the breeze.' The Convention was called for the purpose simply of revising the Articles of Confederation, and several delegates warned that the country was in no mood for any radical changes in the Central Government. It would be better for the Convention to deal with mild changes, and avoid anything very sweeping.

"Washington could not bear this talk in silence. He rose and delivered his shortest and one of his greatest speeches. He said, 'It is too probable that no plan we propose will be adopted. Perhaps another dreadful conflict is to be sustained. If, to please, we offer what we ourselves disapprove, how can we afterward defend our work?'

"Perhaps thinking of the border warfare, the low estate to which America had fallen in the eyes of the world, the rebellion in Massachusetts and the crying need for a strong Central Government, Washington added: 'Let us raise a standard to which the wise and honest can repair. The event is in the hand of God.'

"But in the Convention, the outlook fell from bad to worse. Big States vied with little States. Southern interests opposed New England. The longer the delegates debated, the more remote seemed agreement.

"After 6 weeks, Washington wrote a note to Alexander Hamilton, who had left the Convention for business in New York. In the note Washington said, 'I almost despair seeing a favorable issue to the proceedings and do therefore repent having had any agency in the business.'

"At a critical moment when the Convention appeared to be on the verge of collapse, Ben Franklin had this to say:

"In this situation of this assembly, groping as it were in the dark to find political truth, and scarce able to distinguish it when presented to us, how has it happened, sir, that we have not hitherto once thought of humbly applying to the Father of lights to illuminate our understandings? In the beginning of the contest with Great Britain when we were sensible of danger, we had daily prayer in this room for the divine protection. Our prayers, sir, were heard, and they were graciously answered. All of us who were engaged in the struggle must have observed frequent instances of a superintending providence in our favor. To that kind providence we owe this happy opportunity of consulting in peace on the means of establishing our future national felicity, and have we now forgotten that powerful friend? Or do we imagine that we no longer need His assistance?

"I have lived a long time and the longer I live the more convincing proofs I see of this truth: that God governs in the affairs of men. And if a sparrow cannot fall to the ground without His notice, is it probable that an empire can rise without His aid? We have been assured, sir, in the sacred writings that 'except the Lord build the house, they labor in vain that build it.' I firmly believe this; and I also believe that without His concurring aid we shall succeed in this political building no better than the builders of Babel: we shall be divided by our little partial local interests; our projects will

be confounded, and we ourselves shall become a reproach and byword down to future ages. And what is worse, mankind may hereafter from this unfortunate instance, despair of establishing governments by human wisdom and leave it to chance, war, and conquest.

"I therefore beg leave to move—that henceforth prayers imploring the assistance of Heaven, and its blessing on our deliberations, be heard in this assembly every morning before we proceed to business, and that one or more of the clergy of this city be requested to officiate in that service.'

"Tempers were snapping. Angry words were heard. Delegations threatened to go home. But out of desperation and adversity, one by one, were hammered out the great principles which formed America's greatest invention.

"The United States was to be a union of people, not a union of States. The citizen was to be the sovereign power, and he was to have dual citizenship, being a citizen of a State and a citizen of the Nation.

"The Central Government was to have strictly limited powers, with a balance of these powers among the two Houses of Congress—the executive and the judiciary.

"Senators and Congressmen were to vote individually and not by State blocs. This permitted a vigorous party system to develop in the United States.

"States were to have equal representation in the Senate, and Congressmen were to be chosen on the basis of population. This was the result of compromise, and the agreement was reached only after long dispute.

"Laws and treaties of the Central Government were to be supreme.

"Free trade was to be established throughout the area of the Union. It was the first time a group of sovereign States had agreed to abolish all tariffs. This act made possible America's tremendous economic growth and our sharply rising standard of living.

"But it was a gain not without cost. The price paid for free trade and for the right of the Central Government to control foreign commerce was a grisly deal that later was to haunt the United States.

"Involved was the problem of the slave trade. Ten of the twelve States—including Virginia—favored stopping import of slaves, and many freely predicted that slavery would soon be abolished.

"Only South Carolina and Georgia resisted. There, rice was the principal crop, and the death rate in the sickly rice swamps was so high, the planters needed a steady supply of new slaves to replace those who died.

"So a compromise provided that import of slaves could not be halted for another 20 years. By that time, the cotton gin had changed the principal crop of the South to cotton, and a new expanding demand for slaves was created.

"It is ironic that much of the opposition to the deal was from Virginia, soon to become a center of slave activity. George Mason was so incensed that he refused to sign the Constitution, despite Washington's fervent appeal for unity. Said Mason, 'I would sooner chop off my right hand than put it to the Constitution as it stands.'

"Yet, without this and other compromises, the Federal Union would not have been created in the summer of 1787. America would likely have gone the way of Europe with numerous small warring states. Instead of one war on a great moral issue, there would have probably been several wars on petty issues.

"But for this slave deal, a mighty force for freedom might never have been created.

"And who is to say it was a wrong compromise?

"America's greatest invention was a creature of compromise from start to finish, and yet the invention created a strong central government, and protected the liberty of citizens and retained the authority of the States.

"William Gladstone said the U.S. Constitution was the greatest work ever struck off by the mind of man.

"Considering the obstacles, the rivalries, open warfare, suspicion among the States, it is all the more remarkable that the Convention of 1787 should have produced this fifth symphony of statesmanship. As Washington had predicted, the event was in the hand of God.

"Surely a power greater than man contrived to resolve the antagonisms of the day and to inspire those 39 men to create in this greatest of all American inventions a shield for liberty that would survive the test of time and become an example for others to follow.

"Here, indeed, was raised a standard to which the wise and honest can repair—in 1787—and in 1962. How fully we understand and appreciate this great charter will determine in large measure how well we fulfill our stewardship in keeping high the torch of freedom.

"The great historian of this period, John Fiske, concluding his study entitled 'The Critical Period of American History,' had this to say: 'In some future, still grander convention, we trust the same thing will be done between States that have been wholly sovereign, whereby peace may gain and violence be diminished over other lands than this which has set the example.'

"Fiske wrote these words 80 years ago. And today leaders in both political parties speak hopefully and confidently of this still grander convention Fiske foretold. As Longfellow wrote:

"Sail on, O ship of state,
Sail on, Union strong and free.
Humanity in all its fears
In all its hopes for future years
Hangs breathless on thy fate.'

"What is the lesson for us now? The United States should take the lead in sponsoring a convention of delegates to take up the proposal, just as delegates met 175 years ago in Philadelphia to construct the American Federal Union. The barriers which keep the free nations from uniting today are no more formidable than those which separated the Original Thirteen States in 1787.

"I would limit union to nations which have demonstrated over the years capacity for self-government and protection of individual rights, and a willingness to stand up and fight for freedom.

"This federation would lighten for U.S. taxpayers the crushing burden of the arms race, make impossible for Khrushchev and future dictators the ancient game of divide-and-conquer, and offer untold opportunities for material progress.

"It would be the most impressive action possible to meet the Communist threat, and might well usher in a millennium of peace.

"It would not replace the U.N. but would create a new union of some of the nations now in the U.N. The U.N. is essentially a meetingplace for representatives of sovereign nations. It is valuable as such, and should be kept alive. The U.N. is not capable of meeting the Communist threat, and in my opinion it is unwise to give the U.N. the powers of government.

"In recent weeks President Kennedy Governor Rockefeller, and former President Hoover have each spoken of the need for a new unity of free nations. Certainly there could not be an hour of greater need."

Former Weaver Coach Retires—Gipson Began Hoop Hoopla

EXTENSION OF REMARKS OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. DADDARIO. Mr. Speaker, I want to commend to the House a recent story which appeared in the Hartford Times marking the career of one of the outstanding athletic coaches in the Greater Hartford area.

In the formation of youth and character the time spent in high school sports plays an important role. When a young fellow is learning the skills of varsity football, basketball, or baseball he is also learning how to play the game. The attention given him by his coach, the lessons he learns, the attitudes which are encouraged, and those which he is warned to discard become lessons which he often retains throughout his lifetime. We have often heard of the influence of the playing fields of Eton upon British skills of the last century and we know of General MacArthur's high regard for collegiate sports while he was superintendent at West Point.

In recent decades in Hartford, all of our schools have had fine coaches. Often the men they have taught have taken over the reins of athletic instruction to carry on in the present day. One of the best of the pace-setting coaches was Charles Gipson who was the first to bring a Hartford basketball team through the grueling competition of Connecticut sports to the New England championship finals at Boston.

A summary of the record he achieved is contained in this article, and I believe it is most fitting that we recognize the work he did in building great teams and fine young men. Under consent, I include this article in the Appendix of the RECORD:

FORMER WEAVER COACH RETIRES—GIPSON
BEGAN HOOP HOOPLA

(By Frank Cline)

Retired from the teaching and coaching ranks of the Hartford school system this week was Charles Gipson. The name may not ring a bell with relative newcomers to the scholastic sports scene, but older fans will recall him as a former Weaver High coach.

Sending teams to the New England basketball tournament had become "old hat" to followers of the three city high school teams. Hartford High won the last two New England crowns and Weaver was top dog in 1957. Bulkeley has never picked up all the marbles but had a contender up there in 2 of the last 4 years.

Know who the fellow was who started all this New England tournament business as far as Hartford teams are concerned? None other than this same Mr. Gipson.

Both a teacher and coach in the Hartford system since 1932 until last week when he retired the first of the new year, Gipson served as head football, basketball, and track coach at Weaver from 1941 through 1948.

His teams were always well coached and almost every year won more games than they lost. Gipson's 1944-45 quintet was the best of them all posting a 10-3 regular season's record and taking three of four in the State tournament before bowing in the finals to New Haven Hillhouse.

In its first New England hoop start this Weaver quintet, made up of Bruce Rosow, George Sottile, Bill Griffith, Everett "Chick" Ciccone and Bill Barnard, caught a tartar in defending champion Waterville, Maine. Waterville went into the game with a 6-0 game winning streak and made Weaver its 61st victim in the opening round at Boston.

"That was a real good ball club," Gipson declared as he recalled his only tournament team. "Lots of hustle and desire along with plenty of ability. Rosow was a real leader and one of finest defensive players I ever coached."

Nor did Gipson, who is a graduate of the University of Illinois, have any mean record as a football mentor. During his 8 years at the helm Weaver gridiron squads scored 33 victories, lost 21 and were involved in 4 ties.

He had undefeated teams in 2 of his 8 years as head football coach. Gipson's 1941 team went 6-0-1 with only a 7-7 tie with East Hartford spilling a perfect campaign which his 1945 club won all six of the games they played.

Of his 1941 team, which was Gipson's first year as head coach, he said, "Their fine record was accomplished on mostly team effort. That and the fact I had Connie Nappier who is probably the finest athlete I ever coached."

Nappier was a fine halfback while Bob Yellen was the fullback and Bob Christino the quarterback, to mention a few on that fine squad.

"But," declared Gipson, "no question about it, the best team I ever had at Weaver was that 1945 football squad. It was great both offensively and defensively. It scored 222 points while holding its opponents to a mere 25."

One of the highlights of that season was the Bulkeley clash. Both teams went into the game with undefeated and untied records and Weaver came away a decisive 25-0 victor.

Quarterbacking that fine 1945 Weaver club was Leo Yaconello. Fullback was Frank Mangini with George Sottile and Paul Grisovitch the halfbacks. At the ends, two of the best ever to pay in the city were Frank Toro and Bill Griffith. Capt. Moe Romano and Jeff Sklar were the tackles with Nick Tosca and Max Skol the guards and Andy Jenks the pivot.

In recent years Gipson has been serving in the elementary and junior high systems being on the staffs at Burns, Kinsella, and Jones.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Imperative Need To Examine the Social and Economic Implications of Automation

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 24, 1963

Mr. RANDOLPH. Mr. President, I noted with interest the information in the RECORD regarding the introduction by the junior Senator from Delaware [Mr. Boggs] of a bill to provide for a White House conference on the impact of automation, to be called by the President within a year of the enactment of the measure.

The social and economic implications of automation have long been an area of particular concern to me. As Vannevar Bush stated last year in an article, "Automation's Awkward Age," there is "nothing new about automation, except the term itself." The process of technical innovation in the methods and machines of industrial and agricultural production, has been going on for generations.

But the impact becomes more severe as the rate of change accelerates. And as technological developments now reach what the experts term an "exponential" rate of change, they hold the prospect of severe dislocations in our society unless they are accompanied by social, economic, and political innovations as well.

It was such considerations as these that first prompted my efforts as a Member of the U.S. House of Representatives to confront some of the problems that follow in the wake of technological developments. It was in the 75th Congress, in 1917, that I first introduced a bill to provide for the promotion of the general welfare in relation to the economic effects flowing from scientific and technological developments. Prior to our entry into World War II, I introduced some five bills and resolutions in this general area.

Since that time we have entered virtually a new technological world dominated by developments in the fields of nuclear science and electronics. Yet our legislative efforts to cope with the impact of automation have been largely piecemeal and ameliorative and have failed to come to grips with the central elements of the problem.

It would not be amiss to indicate that if any one of my earlier measures had been enacted by Congress, and if Government, industry, and labor had given more systematic attention to the long-range effects of automation, the coal-producing regions of the Appalachian

area would not now find themselves in conditions of severe economic distress.

Mr. President, we cannot meet the problems by simply decrying the advent of more efficient and more highly automatic means of production. Nor can we solve the problem simply by lowering the workweek to 35 hours. The pressure of economic competition from abroad impels us to raise our own productivity. And, indeed, the Federal Government is itself engaged in a major effort toward this end.

According to an authoritative recent study which draws heavily on the National Science Foundation's report, "Funds for Research and Development in Industry, 1959," our national investment for that year in the field of research and development—to increase productivity—amounted to \$1.4 billion. Of this total, the Federal Government supplied almost \$500 million; that is, in 1959 the Federal Government alone spent almost \$500 million in research and development activities to accelerate the technological development that is broadly covered by the term automation.

It is my contention that we must begin to display at least as much ingenuity in the fields of social, economic, and political innovation if we are not to suffer severe dislocations in American society and impose grave hardships on hundreds of thousands of our working men and women.

A cogent editorial in the Charleston, W. Va., Gazette points to the need for such long-range planning, and I ask unanimous consent that it be printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KENNEDY NEEDS A PLAN TO HANDLE AUTOMATION

Commenting on President Kennedy's budget message to the Congress, AFL-CIO President George Meany said:

"The President's budget is based on a 3½-percent rate of national economic growth. That is not good enough. It leaves our economy stalled on the side of the mountain just where the President said we stood last Monday. Such a growth rate would insure 6 percent and more unemployment in 1963. Idle men and idle plants mean an idling economy. That is the deficit that should alarm us—the deficit in unused resources."

With a statement reminiscent of President Coolidge (unemployment results when a lot of people are out of work), Representative CANNON, Democrat, of Missouri, the crusty chairman of the House Finance Committee, decries the Kennedy budget:

"Spending money we do not have for things we could get along without—that is what invariably unbalances our budgets." Regrettably, CANNON neglects to detail what it is the Nation can get along without. Suffice it to say it wouldn't be any pork barrel project in CANNON's district.

Between CANNON's and Meany's view of the Presidential budget, there is no choice. Meany wins hands down.

The corrosive agent rubbing away at today's economy is hard core unemployment. It is the same corrosion which has been wearing the economy thin for the past 5 years. The higher than 5-percent chronic unemployment rate is too much. It is too wasteful of the Nation's manpower, too injurious to democracy's case in its constant contest with the challenge of communism.

The lamentable fact is that the problem of persistent unemployment started at least a decade ago in the backwash of the technological revolution that saw machine after machine in industry after industry replace men.

At that time the danger of what was to happen—what did happen—was apparent, but government, business, and organized labor neglected their responsibilities and let it happen without fighting back. There were some industries and labor unions which made preparations and softened the impact of automation for employees and members, but they were too few and too insignificant.

The cause of hard core unemployment still defies solution. Automation has triggered most labor-management disputes of the last 4 years, especially those involving transportation workers. Strife and long work stoppages, to the detriment of the whole economy, have replaced hard thinking and creative ideas.

President Kennedy's budget with its substantial tax cuts is a new approach, if nothing else. It deserves to be tried, but, like Meany, we fear it isn't enough. The President must develop a modus operandi to deal with automation, some arrangements which will preempt the necessity for the crippling strike, so harmful to the total economy.

Lowering taxes will not do the job, unless there can be peace on the economic front in those critical industries that contribute so much to the Nation's prosperity.

Ukrainian Independence Day

EXTENSION OF REMARKS

OF

HON. NEIL STAEBLER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. STAEBLER. Mr. Speaker, this week marks the 45th anniversary of the short-lived Ukrainian independence, a period of but 2 brief years beginning in 1918 after some 300 years of oppression.

We all know the tragic course of events which saw the Ukrainian people trampled anew under the heel of Russian Communist aggression. This brought to a swift end the Ukrainian National Republic, snuffing the flame of freedom and silencing the voices of brave men.

Yet the fierce spirit of independence and freedom lives on; it lives among the 45 million Ukrainians who today are the captive people of Russia; among the many thousands of Ukrainian-Americans who carry the battle forward in this

country, and among the rest of us who add our voices of comfort and hope.

It is proper during this anniversary observance for us to pay tribute to the Ukrainian people who, in the spirit of their great poet, Taras Shevchenko, continue their resistance to oppression and their dedication to freedom.

Let us hope that one day soon the Ukraine will take its rightful place in the world community as a free and independent nation.

Mr. Speaker, I would now like to call the attention of my colleagues in the Congress to the remarks of Councilman Mary V. Beck of Detroit, Mich., a prominent leader in the Michigan Ukrainian-American community, on this occasion. I also support her in urging the creation of a Special Committee on the Captive Nations. Her remarks follow:

UKRAINIAN INDEPENDENCE DAY

(By Mary V. Beck)

On January 22, 1963, in every major city and in hundreds of other cities and towns in these United States, and in the Capital of our Nation, the blue and golden Ukrainian banner will be raised to commemorate Ukrainian Independence Day of 1918. Proclamations issued by many Governors and mayors will be read at commemorative ceremonies acknowledging the sad plight of 42 million Ukrainians enslaved by Russia. Warm words of sympathy, understanding, and encouragement will be uttered profusely.

And even in the Halls of Congress, distinguished Senators and Representatives will rise to make appropriate remarks on this occasion, displaying their awareness of the yearning for freedom of these Ukrainian captives, and expressing their agreement that the denial of liberty to an entire nation whose history and culture precedes that of Russia itself, is a tragic miscarriage of justice and not to be ignored or forgotten.

Yet as gratifying and heart-warming as these manifestations of sympathy may be, alone, they offer no real solace, no solid comfort, nor even the slightest ray of hope to the unhappy victims of Soviet aggression, on whose behalf no voice of protest is raised nor to whom a hand of aid is extended, particularly at a time when throughout the world the need for freedom is being recognized as a deep-seated and undeniable craving of every human being.

Since peace, too, is a natural and basic human aspiration, military warfare as a course of action is abhorrent and unwise, except as a last resort measure when no other alternatives are acceptable or possible. And it is not being suggested that military action is the manner in which our Government should now give meaning and substance to the sentiments expressed by our governmental officials in statements relating to the captive nations and their justified demands for freedom and independence. There is a simpler and easier way.

We Americans are already engaged in a global struggle between two ideologies and have committed ourselves to the prevention of communistic conquest of the world. Would not our own burden of the cold war, and perhaps even of the hot war, if such ever became an eventuality, be lessened and our effectiveness increased by the recognition and the enlistment of the potential strength that exists in the anti-Communist fervor, deeply hidden but always nurtured in the hearts of the captive peoples? And, by the same token, would it not offer them the hope, the encouragement, the inspiration to carry on their own efforts in what must often appear to be a vain struggle in view of the overwhelming odds?

An earnest beginning has already been made and a solid foundation laid for that kind of action by the congressional resolu-

tion and the President's proclamation establishing the Captive Nations Week. But to make our political warfare with the Soviet Union and the communistic world a dramatic success there is an urgent need for further constructive action along the same lines.

I share with many others who are well informed on this matter an abiding conviction that the immediate creation of a Special Committee on the Captive Nations could be the most significant step taken to reveal to the world the Soviet Union for what it is and not what it is purported to be—its skillful propaganda machine notwithstanding.

Continuous and rapid-fire exposure of its colonial system which is sold as a voluntary union of free and independent republics; its widespread persecution of religious groups, which is disputed by pointing to a few churches that are allowed to remain open; its mass exportation of people to Siberia who exhibit the slightest aversion to nonconformity to the Communist Party; its warmongering and aggressive acts while parading as a promoter of peace; and its denial of basic human rights and exploitation while arrogantly labeling the Prison of Peoples the "Peoples' Paradise."

What better way, except by truth and its dissemination, to destroy the U.S.S.R. image that has no foundation in fact? What better way to impress the Communists with the wisdom of the words that, "those who live in glass houses should not throw stones?" What better way to engage them in dealing with the problems on their own doorstep, leaving little or no time for meddling or creating artificial problems where there are none?

Real progress, in my humble opinion, can and should be made in the above-mentioned manner—not only in the cause of halting the expansion and influence of communism, but striking at its very roots with repeated, telling blows and thus sowing the seeds of its own ultimate destruction.

In the interest of our own national security and the preservation of our American way of life; in the furtherance of our own dedication to the promotion of a free world and the right of self-determination for all subjugated and oppressed peoples; in support of our own devotion to the achievement of a just and lasting peace; and in the honest belief that a token commemoration of Ukrainian Independence Day or the independence day of any captive nation can only be interpreted by the U.S.S.R. as meaningless lip service, I respectfully urge your serious and favorable consideration of the establishment of a Special Committee on Captive Nations.

Such affirmative action would be the finest and most fitting tribute to accord the countless and valiant people of the Ukraine, past and present, who have never allowed the flame of liberty, no matter what the sacrifice, to expire even though frequently forced to secrete it in the depths of their hearts; and, who, in concert with their neighbors and covictims of Russian aggression massed in other captive nations, are pledged to keep it burning forevermore.

Address of Welcome Honoring New Members of the 88th Congress

EXTENSION OF REMARKS

OF

HON. ALAN BIBLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, January 24, 1963

Mr. BIBLE. Mr. President, the local governmental housekeeping problems of

Washington, D.C., have beset the National Capital City since the cornerstone of this building in which we are assembled was laid in 1793. From the day Pope's mansion on this site was torn down 169 years ago to make way for the Capitol Building, the problems and plight of local government here have not been easy in this federally owned city.

One week ago the President of the United States sent a special message to the Congress urging legislative and budgetary steps to place the District's local government on what I believe would be a sound, businesslike fiscal basis for the first time in many years.

Since each Member of Congress is a city councilman for Washington, D.C., may I urge that the membership of the Senate and the other body read a most interesting thumbnail history of Washington, D.C., given by the Honorable Charles E. Phillips, president of the Metropolitan Washington Board of Trade, before a dinner tendered by that organization on January 16 at the Sheraton-Park Hotel honoring new Members of the 88th Congress. The historical tidbits of Washingtonia are both fascinating and thought provoking.

Mr. Phillips, a native Washingtonian and an outstanding civic leader for many years, points up the growth problems of the past. All of us may anticipate those of the future as this metropolitan area continues its growth to an estimated 3½ million residents in less than 20 years and 5 million residents within 40 years. If the larger growth problems of tomorrow are to be less gigantic for this unique central city in this second, fastest growing metropolitan area of the country, one important growth problem of today—fiscal responsibility—should be faced squarely by Congress with the realistic approach suggested by the President as a guide.

Mr. President, I ask unanimous consent that Mr. Phillips' address be printed in the Appendix of the RECORD together with a statement I issued as chairman of the Senate Committee on the District of Columbia in connection with the President's District of Columbia special budget message.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF WELCOME BY CHARLES E. PHILLIPS, PRESIDENT, METROPOLITAN WASHINGTON BOARD OF TRADE, AT THE SHERATON PARK HOTEL, WASHINGTON, D.C., JANUARY 16, 1963

Honored guests, ladies and gentlemen, it is a rare privilege, a real pleasure and a great honor to have this opportunity of welcoming recently elected Members of the Congress to Washington. The several hundred residents who are your hosts this evening express warm greetings not only from the 7,000 members of the Metropolitan Washington Board of Trade but also from the more than 2 million people who live and work and take delight in this great National Capital community. On their behalf, let me also say "Welcome home" to our old friends from the District of Columbia Committees whose fine work in the Congress has merited the faith and continued support of the voters at home.

There was a time—not too long ago—when many new Members of the Congress got their first glimpse of this unusual city when they came to claim their seats. In such circumstances, old-time Washingtonians endeavored to show them the sights and explain to

them the mores and the facts of life in Washington, D.C.

Happily, this is no longer true. I would be surprised if there is a single new Member who has not visited Washington before. In fact, there are many who have made frequent trips, and quite a few who have been residents—some for years—before being elected to the Congress.

All of you know where the White House, the Lincoln Memorial and the Smithsonian Institution are, and what is done in them. You have visited our principal hotels and are well acquainted with Washington's many fine restaurants and stores and, perhaps, even its limited night life.

You know that Washington has been first in war and first in peace and often last in the American League.

Perhaps you may come to feel, as one new Congressman did during the Arthur administration, when he said, "On my first day in the House I looked around on that magnificent body of men, and wondered how in the dickens I got there. But after I had been here a few months I looked around again. Then I wondered how in the dickens those other fellows got there."

In these circumstances, it seems advisable to abandon the posture of the native welcoming strangers to their new and unknown home this evening and to devote instead a few moments to some observations concerning the past and future of this community which are unknown or little known to most of you. I have, therefore, assembled some comments from my background as a native and have done a little reading of Washington's history.

A wit once remarked that stealing from one person is plagiarism but stealing from many is research. The material in this brief talk was collected by light-fingered research from guidebooks, histories, newspapers, and the like.

Early records show that Capitol Hill was probably always an important site. Before 1700 the mighty Algonquin Indians selected it for their tribal council house.

One of our earliest settlers, Francis Pope, built a mansion where the Capitol Building now stands. He named it "Rome," and the hill, "Capitoline Hill." The stream at its foot, which is still there but covered over, he named the Tiber.

The eighth section of article I of the Constitution states, "Congress shall have power to exercise exclusive legislation in all cases whatsoever, over such district (not exceeding 10 miles square) as may, by cession of the particular States, and the acceptance of Congress, become the seat of the Government of the United States."

In pursuance of this provision, President Washington on July 16, 1790, signed the bill establishing the National Capital on the banks of the Potomac. Commissioners were appointed to proceed with the task and, after some delays, signed an agreement with the 19 proprietors of the land for the original city of Washington. It provided that the United States would receive one-half the lots laid out and would retain public squares and streets. The agreement stated, "For the streets the proprietors shall receive no compensation but for the squares or lands in any form which shall be taken for public buildings or any kind of improvements or uses the proprietors whose land shall be taken shall receive at the rate of 25 pounds per acre to be paid by the public."

George Washington selected Pierre Charles L'Enfant to plan the city. L'Enfant, his associates and his successors—who soon supplanted this eccentric Frenchman—were men of bold imagination who stood among the swamps and briar patches at the head of navigation of the Potomac and visualized a city of half a million people.

They laid the foundation stones, not of a small town, but of a world capital, and they suffered the fate common to genius—of being laughed at while they lived and derided for

many years after they had gone to their graves.

They have now come into their own. A full century was required for this great city to prove itself equal to its destiny. For a long time—really until after the Civil War—there was uncertainty as to whether the Capital would stay here.

L'Enfant first selected sites for the White House and the Capitol Building. Since the latter is where you now work, let us quickly note a few interesting facts about it.

The cornerstone of the Capitol was laid September 18, 1793. The original Senate wing, until a few years ago the Supreme Court Chamber—was completed in 1800. The House wing—now the Hall of Statuary—was not completed until 1811; and then soon after, during the War of 1812, the British invaded Washington and set a torch to it. After this humiliating incident, the two wings were rebuilt, and the central segment joining them was completed in 1825. The present House Chamber was finished in 1857 and the Senate Chamber 2 years later. Then, toward the end of the Civil War, the cast iron dome supporting the Statue of Freedom was dedicated. Since then, the only major addition to the Capitol was the extended east front completed just before the last inauguration.

Commenting on Washington in 1800, Oliver Wolcott described conditions like this: "one good tavern 40 rods from the Capitol, and several other houses * * * building * * * but I do not perceive how the Members of Congress can possibly secure lodgings unless they will consent to live like scholars in a college or monks in a monastery, crowded 10 or 20 to a house and utterly secluded from society."

Then, in 1838, a visitor, Captain Marryat, wrote, "Everybody knows that Washington has a Capitol, but the misfortune is that the Capitol wants a city. There it stands, reminding you of a general without an army."

Over the years, many interesting anecdotes and bits of history were recorded. Members wore their hats in the Chambers, and female visitors sat on the Senate floor until about 1838.

Senator Sam Houston was a whittler. Page boys filled his desk with white pine sticks every morning so that he could whittle souvenirs and send them up to the ladies in the galleries.

Styles changed too. It is recorded that in 1853 not more than four Senators wore mustaches; but, in January 1861, there were only four men who didn't have mustaches or beards.

In early days, Congress sat for only a few months each year, and when it adjourned, the city literally came to a standstill. In 1811, Washington Irving wrote, "You cannot imagine how forlorn this desert city appears to me, now that the great tide of casual population has rolled away."

The city of Washington was developed very slowly too, and for years was the butt of jokes both at home and abroad. It was known as the City of Magnificent Distances or the City of Miserable Morasses.

Tom Moore, a visiting Irish poet, composed these satirical lines:

"This embryo Capital, where fancy sees
Squares in morasses, obelisks in trees,
Where second-sighted seers, e'en now adorn
With shrines unbuilt and heroes yet unborn,
Though naught but woods and Jefferson
they see
Where streets should run and sages ought
to be."

But all were not critical, as evidenced by the words of Lafayette during a visit in 1824: "The city of Washington, the central star of the constellation which lights the world."

Charles Dickens was not impressed. In 1842 he said, "It has spacious avenues that begin in nothing and lead nowhere; streets a mile long that only want houses, roads and

inhabitants; public buildings that need but a public to be complete; and ornaments of great thoroughfares which only need great thoroughfares to ornament."

And soon after Andrew Jackson took his place in Lafayette Square, Thackeray commented that "the hero is sitting in an impossible attitude on an impossible horse with an impossible tail."

But, as has previously been noted, this unique planned city was planned well. Alexander Shepherd paved the streets, built bridges and public works rapidly after the Civil War; and, a consequence, the District was impoverished and unable to pay its debts. Then the Congress, through the Organic Act of 1878, provided for Federal financial help and established the commission form of government, which has been effective ever since. At the same time, the Congress assumed the legislative and budget-making functions which it still exercises and which many of us wish will continue in the future.

After the Civil War, more Senators and Congressmen began moving their families to Washington. They became more familiar with local needs and problems, and in 1901 Senator McMillan and his commission unfolded their plan which revived the original L'Enfant concept and has guided the development of the District of Columbia ever since. We are proud of the part local citizens played in this important activity, for it was the Washington Board of Trade which encouraged Senator McMillan to undertake this effort.

From the period of the McMillan report, Washington has continued to grow in beauty and activity. No longer does the city fold when the Congress adjourns. World War II changed the pace forever. As the capital city of a great nation and center of the free world, Washington has become a dynamic metropolitan community of more than 2 million people. It is the seat of institutions—governmental and nongovernmental—which significantly influence the affairs of men throughout our Nation and throughout the world.

But Washington, the city of all the people, has continued to be criticized by many of them. Two highly critical commentaries of the Nation's Capital have just been published by the American Institute of Architects and by the Architectural Forum. It almost appears that these were timed to coincide with your arrival in the Congress.

While we do not subscribe to many of their observations and conclusions, we recommend them to you for early and careful reading. Just as it is fair game and standard procedure for those from afar to criticize and be vitriolic about the city—particularly those who do not understand it—it is standard practice to criticize Members of the Congress for what they do or might not do. These publications I have mentioned do not neglect you.

The Architectural Forum refers to Washington as a "company town" and the American public as stockholders in the company, and then suggests that the stockholders should correct the undesirable conditions. Perhaps you will be hearing from some of them from home.

Every major city in America has its problems. In fact, I know of some of them which deserve a more vigorous raking over hotter coals than this one does. But this is the only one which is the Capital of the United States of America, which was planned, designed and built from the start for that purpose. This is the only one which the Congress rules in accordance with the terms of the Constitution. Truly it is a "company town" and must concern you. Moreover, history has shown, and logic will support our conclusion, that you cannot successfully divest yourselves of the responsibility for this great and glamorous headquarters establishment and showcase of American democracy.

The United States is, was and presumably always will be Washington's principal employer. But, it is by no means the majority employer. More than twice as many people in Metropolitan Washington work for others. The ratio of Federal to other employment has been decreasing and our forecasters predict a continuation of this trend.

We are a great and growing retail market. The number of visitors to the Nation's Capital is increasing year by year and totaled about eight million last year. The \$380 million we estimate they spent is a powerful economic force, second only in importance to the Federal payroll.

National organizations—patriotic, fraternal—labor, business and scientific—account for a large payroll and are an important part of the economy.

During the last few years we have also become one of the world's great scientific centers. Some 200 private research and development companies, which have opened here in recent years, importantly supplement the well-known Government scientific agencies which have been on the local scene for many years.

Metropolitan Washington will continue to be one of the fastest growing major urban areas in America. By 1980 we confidently anticipate a population of about 3½ million, and by the year 2000 about 5 million. Most of this growth will be outside the District of Columbia. Its impact may be more readily pictured if I say that it will require urbanization of 100 square miles of rural land in nearby Maryland and Virginia to provide housing and workplaces for the 1½ million more people expected in 1980.

As it has been since 1800, Washington will continue to be a fascinating, dynamic, rapidly changing community. Perhaps you will criticize it, but you will love its excitement, its tempo, its sights, and its people. In the pattern of your predecessors most of you will never return to your homes permanently. While you will maintain close ties, most of you will spend more time in Washington in the years ahead than you will at home. It behooves you, therefore, to give more than passing consideration to its affairs.

We earnestly hope that you will.

One of the reasons you will enjoy the Federal City is the fine people you will meet and get to know here, those who will be your friends and neighbors. Many of them have been here for generations, most of them came from some other place—your home city—your State—Europe or even Timbuctoo. They will respect you because of your position, but I think you will enjoy most their cordiality and neighborly concern for your welfare.

Certainly we of the board of trade, which includes a large number of the community's business, professional, and civic leaders, want to extend a cordial, helping hand to you and your families. We earnestly hope we have made that clear, and urge you to call on some of those you have met this evening if there is something we can do to make you feel more comfortable in and enjoy your new home.

position of the United States in the nuclear test ban conferences. Printed herewith is a summary table of the burden of this discussion comparing circumstances and our positions when the conferences began in 1958 with what they now are, in 1963. It is emphasized that the subject of a test ban treaty was placed in a frame of reference by former President Eisenhower when negotiations began as aiming at a treaty, self enforced by adequate machinery to detect viola-

tions and inspection machinery to confirm their occurrence or nonoccurrence. Today the discussions proceed on a basis which would provide neither adequate detection machinery nor adequate inspection procedures. As a consequence, any treaty arrived at on this basis will not be cheatproof. Thus, it cannot be expected to forward the national security interests of the United States, rather it could imperil them.

TABLE ILLUSTRATING DETERIORATION OF CIRCUMSTANCES AND U.S. POSITIONS DURING NUCLEAR TEST-BAN NEGOTIATIONS BETWEEN THE YEARS 1958-63

1958	1963
(1) United States began negotiations:	(1) United States carries on negotiations:
(a) After completion of adequate series of nuclear weapons tests.	(a) After series of U.S. tests in which several planned events had to be canceled.
(b) After sufficient time to analyze preceding Soviet test series for possible nuclear weapons breakthroughs.	(b) Unlikely sufficient time has elapsed to discover any breakthroughs in the Soviet test series which lasted until late December 1962.
(2) Area of Soviet Union demanding adequate detection machinery and adequate inspection procedures spans 2 continents, encompasses 8½ million square miles, and comprises one-sixth of the world's land area.	(2) No change.
(3) Detection machinery:	(3) Detection machinery:
(a) Network of 180 internationally manned and controlled seismic detection stations.	(a) International network replaced by scheme in which cheaters are relied upon to submit seismic evidence of their own crimes.
(b) Nineteen of the one hundred eighty internationally manned and controlled seismic stations to be built at necessary locations within the Soviet Union.	(b) Three unmanned, tamper-prone "black box" seismic devices (as yet undeveloped) for entire Soviet land mass—to be shuttled to and fro by Soviet airplanes and installed by Soviet personnel.
(4) Onsite inspections:	(4) Onsite inspections:
(a) 20 inspections annually on Soviet territory.	(a) Khrushchev's low of 2 annually, Kennedy's high of 10 annually, or something in between.
(b) Mandatory inspections on independent initiative of International Control Commission.	(b) Inspection only upon "invitation" of the U.S.S.R.
(c) No limitation on size or composition of inspection teams.	(c) Size and composition of teams subject to availability of Soviet-furnished transportation and logistics. Soviets may screen windows of transporting vehicle and impose "prohibitions to carrying photocameras, etc."
(d) Inspection methods to include aerial photography, physical above and under the ground surveillance, radiation monitoring equipment and the like.	(d) Again, dependence on Soviet-furnished transportation can limit, delay or "misplace" equipment needed by inspection teams.
(e) Any part of Soviet Union subject to inspection on detection of a suspicious event.	(e) Inspection teams subject to restrictions on or complete denial of entry into an area of suspicion on grounds of "danger to the security interests" of the U.S.S.R.
(5) Objective of negotiations to pose such serious risk to cheaters of getting caught that cheating will be deterred.	(5) Reference frame of current negotiations will encourage cheating by posing only nominal risks of getting caught.
(6) Possibility of France and Red China becoming subject to test ban.	(6) France and Red China have declared unwillingness to forego nuclear testing in any environment.
(7) Negotiations proceed from "safe" basis for U.S. national security.	(7) Negotiations proceed from "unsafe" basis for U.S. national security.
(8) Communist dogma decrees destruction of all that is non-Communist and Communist worldwide domination.	(8) No change.

Space Explorations

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, January 24, 1963

Mrs. SMITH. Mr. President, last week I made a speech to the Columbian Women of George Washington University in which I discussed the subject of space. I did not anticipate that there would be any interest in my speech beyond the group to which I spoke.

Surprisingly, I have received several requests for copies of that speech—and with most of the requests coming from the Pentagon. It makes me somewhat curious as to what I said that so interested the people, particularly in the Office of the Secretary of Defense and in the Air Force.

I have received so many requests that I think the only practical thing to do is to place the speech in the RECORD. I, accordingly, request unanimous consent that the speech be placed in the Appendix of the RECORD so that it may be available to all interested parties.

Deterioration of U.S. Position in Nuclear Test Ban Conferences

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. HOSMER. Mr. Speaker, in the body of today's RECORD will be found my discussion of the steadily deteriorating

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPACE EXPLORATIONS

(By Senator MARGARET CHASE SMITH, of Maine)

It is a pleasure to be with you this morning. With George Washington University having honored me with an honorary doctor of laws degree and thus made me an honorary alumna of your fine institution, I feel somewhat as though I was a member of the family—a sort of an in-law.

The subject of my discussion is prompted by something that I read in the newspapers recently. To my way of thinking it was big news—but it was buried in the news. It was the statement of the Russian Astronaut Popovich that the Russians would soon send a woman into space and would have the distinction of having the first woman astronaut.

Now I am not going to talk about women astronauts. I think time will take care of that. But I am going to talk about space. I don't profess to be an expert on the subject since I am not a scientist—but this month I became the highest ranking Republican on the Senate Space Committee—and through the years in rising to that position inescapably I have absorbed some information, knowledge, and sophistication about space.

The first difficulty one encounters in discussing space is to comprehend its dimensions. The distances involved are so enormous, so much greater than those we meet in everyday life, that they are practically meaningless. As speeds of aircraft have increased, so has our sense of distance altered.

In the same way our mental attitude in dealing with interplanetary distances must change, even if the mind can never really envisage the vastness of it all. Space extends in all directions and has no known limits or outward boundaries. But in this decade we are determined to explore this vast unknown.

Our prime goal in the 1960's is the moon, and while this is extremely ambitious, it is only the beginning. Our ultimate goal will be the stars and to quote the British astronomer, Sir James Jeans, "There may be as many stars in the universe as there are grains of sand on the beaches of the world."

Thus it is readily apparent that we are engaged in what can truthfully be described as the greatest of pioneering efforts. I would like to talk to you in some detail about the imminent goals we have set for ourselves in this decade and why this effort is necessary.

I am sure you recognize that the United States needs to lead in space for several reasons, each of which will contribute to the scientific, technological or economic advancement, or to the peace and security of the free world.

We must lead because of our basic responsibility for the broadening of our understanding of the universe and our obligation to make available to ourselves and our descendants the resources of the universe which our expanding knowledge will permit us to utilize.

Second, we need to lead because of our desire to realize the direct and immediate benefits from the application of satellites into operational use, and the technological advances and stimulus to our economy which will emerge from our space effort.

Finally, we need to lead because of the potentially hazardous consequences to ourselves, and free peoples everywhere, were a hostile power to surpass us in the race in space. These needs are the impetus for what will be the greatest technological achievement man has ever attempted, manned flight to the moon.

The moon is our first objective, mainly because it is our closest neighbor. It is only 240,000 miles away, or a 3-day trip in the Apollo spacecraft. Also, since it is so close

to us—speaking in space terms—there is much we have already learned about the moon through the astronomers.

A day on the moon consists of 14 earth days and since there is no sky to reflect the sun's afterglow, night descends suddenly. The temperature variation goes from about 212° Fahrenheit, which is equivalent to about that of boiling water, to a night temperature of 200° below zero. This compares with the highest earth temperature ever recorded of 136° Fahrenheit and 125° below zero.

It is because of these extreme temperatures and the lack of an atmosphere that it is assumed there is no life on the moon. However, there are some astronomers who dispute this and believe that some lowly forms of plant life may have adapted themselves to the moon's environment.

In any event we cannot tell with any degree of certainty what the moon is composed of and how it was formed without detailed observation. It is to that end that our Ranger program is addressing itself. The Ranger program consists of nine flights which will, among other things obtain high resolution television pictures of the lunar surface and perform scientific investigations of the moon's surface.

The Ranger program will be followed up by the Surveyor program, which is designed to land a package of instruments on the moon's surface. These instruments will return information concerning physical, chemical, and biological properties of the lunar surface, the general environment as well as pictures of the local terrain.

Additional programs will call for the placing of a space platform to orbit around the moon containing instruments for monitoring radiation, determining the properties of the moon's gravitational field and finally to provide information concerning possible sites for the manned landing on the moon. All of this must be done before we can attempt to land a man on the moon with any degree of safety.

The lunar exploration phase of the manned program will be conducted, as part of Project Apollo, in a capsule carrying a crew of three. The Apollo program requires space techniques far in advance of those that were needed in the Mercury program. The Apollo spacecraft must be built for flights of 2 weeks duration. It must be capable of guidance toward the moon and a gentle landing on the moon.

For man to land and remain in this hostile environment the establishment of a manned lunar base will be required. Supporting a base on the moon compared with one at the North Pole is almost like comparing pears and potatoes. While both are edible the similarity thereafter is less evident.

While food, shelter, and fuel can be supplied with comparative ease to the North Pole or any place of the earth's surface the life supported requirements for the moon present a problem of far greater magnitude.

For example, a specially designed space suit with built-in air pressure to offset the moon's airlessness and the streams of ultraviolet and X-rays spewed forth by the sun, must be worn by the astronaut. A two-way radio is also necessary to converse since without air, sound cannot travel.

There will be many other aids for his protection but those I have mentioned provide some idea of his support requirements. One compensating feature for the astronaut is that he will be able to move about freely with all this equipment for his weight will be only one-sixth of what it would be on earth.

Simultaneous with our preparation to explore the moon, programs are underway to venture out to Mars and Venus. Ever since astronomers first reported "canals" and polar snowcaps upon Mars it has been the subject

of much speculation. Is it a dead planet? Is it strewn with the remnants of ancient civilization? Does life exist there?

As for Venus, what mysteries lie behind its swirling clouds? Does it hide a lush tropical climate as some believe, or is it a watery waste, or perhaps a desert swept by dust storms. Venus and Mars, though the nearest planets to earth, are 100 times further away than the moon.

One important factor in planning a trip to either Venus or Mars is proper timing. To go to either planet we should plan our departure from earth when those planets will be nearest to us. In the case of Mars that period would occur about every 2 years while Venus comes to within 26 million miles of the earth periodically.

The little we know today regarding these neighbors of ours is from the astronomers. More has been learned about Mars than any of the other planets, since the atmosphere on Mars is thin enough to make telescopic observation easy.

It is from these observations that some scientists have deduced that there could be some form of life on Mars. However, it is doubtful that life exists there that can be compared with that found on earth, because of the scarcity of oxygen.

Venus, though the nearest of our neighboring planets, is called the mystery planet. The Venus' atmosphere is so dense, our astronomers have not been able to see through it, as they have in the case of Mars. Here again we are relying on our Mariner program to penetrate some of the enigma that surrounds Venus.

From all of this space research and exploration will come knowledge—knowledge about the universe and its physical laws; knowledge about the earth on which we live, and knowledge about life itself.

The space program will stretch the abilities and minds of our people for years to come. It will provide a continuing, long-term stimulant to our economy. The magnitude of the task will test the resources and cooperative will of all major elements of our society. Still, space exploration, and manned space flight in particular, offer the United States the opportunity for unparalleled progress in the future.

Ultimately, within this century, the sum of all our efforts will give us the equipment, the knowledge and the skill to utilize space as we now utilize the seas and the air.

This then is our motive—our objective. To develop superior competence in space which will be available for any national purpose which may be required, whether it be for the peaceful use of space for the benefit of all mankind or to keep the peace.

Past experience has shown that the most important benefits of basic research are probably unforeseen. Yet there are many areas in which we can predict direct benefits. The results of materials research—ceramics, metals, and plastics, for example, will inevitably find their way into industry and to the consumers. The values of new fuels, new methods of power generation, and supersonic transportation are clear.

Weather satellites have already shown vividly what can be done to aid in weather surveillance and forecasting. The improved Nimbus satellite is being developed by the United States to succeed Tiros. This will provide the basis of an operational weather satellite system.

Eventually we will be in a position to predict weather anywhere on the globe with precision. The human and monetary values of being forewarned about approaching hurricanes and typhoons will prove invaluable. It has been estimated by authorities in this field that in 1 year alone we could be completely repaid for the initial outlay of the entire program.

Then there is the communications satellite. On July 10, 1962, the whole world knew of Telstar. The telephone company's ground station at Andover has been described as the granddaddy, the champion of them all.

Eventually, of course, there will be many more, some big and some small, depending upon requirements. But I would always hope that this Nation will have not only the grandfather ground station, but the biggest and the best.

What the Telstar can do is only the beginning of what we can expect in improved worldwide communications. Since one of the major problems in the struggle between ideologies is the problem of communication between peoples it is intriguing to contemplate the effect on international understanding and cooperation that could result from instantaneous radio and television presentations.

The communication satellite experts point out that a tremendous increase in global communication capabilities is in the offing. Hundreds of times the number of presently available overseas channels will be opened and service to points where present-day cable and microwave systems do not reach will become feasible.

Lower costs for overseas services should be realized, and such techniques as the use of closed circuit television conferences to obviate the need for some transatlantic travel should come into being. The satellite system will also open the possibility of establishing local communications networks centered on a satellite terminal in areas which now have little or no external communications services.

The technology we are developing in our space program is certain to have immense and growing effects on the national economy, the professions and on everyday life. Already industry is profiting from new techniques, alloys, plastics, fabrics, and compounds of many kinds, originally created to do space jobs.

We are merely at the beginning of an era of profound technological change, whose end no one can foresee. Today, far more than in the past, scientific progress determines the character of tomorrow's civilization.

There are many, many other benefits that will be realized from our space efforts, but basically it will be knowledge, knowledge that will put mankind in a position to develop applications to human progress and welfare, to make new consumer goods, and to build up our standard of living.

We are doing this for ourselves right now with the legacy of knowledge given to us by our forebears. Some of the knowledge that we are now gathering, we will ourselves use for our own gain. But more important than that, it will be our legacy to our children and grandchildren, for them to use in furthering their own welfare.

Analysis of H.R. 265 and H.R. 348, Providing for Basic Reform of Federal Tax Rates

EXTENSION OF REMARKS

OF

HON. HOWARD H. BAKER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. BAKER. Mr. Speaker, on January 9, 1963, my distinguished friend and fellow member of the Committee on Ways and Means, A. S. HERLONG, JR., and I introduced H.R. 265 and H.R. 348. These bills are the reintroduction of

measures originally submitted in the 87th Congress which call for basic reform of Federal tax rates over a 5-year period.

These bills strike at the graduated rates of personal income tax, particularly in the middle and upper income ranges, and the high corporate tax rates which restrict the development and use of capital and thereby restrict economic growth to a rate far below that which is actually possible. Tax rates for individual and corporate taxes would be reduced over a 5-year period, unless budget imbalance and current fiscal year domestic and foreign economic assistance spending in excess of the previous fiscal year required postponement of scheduled rate reductions which could prolong the period of reduction over an 8-year maximum span.

The mounting interest in the reform of tax rates as embodied in our legislation has prompted my cosponsor and I to prepare an analysis of each section of the bills.

SECTION 1. REDUCED RATES OF TAX ON INDIVIDUALS

Annual reductions in individual tax rates applicable to the years beginning January 1, 1963, through January 1, 1967, are contained in this section. Over this period the minimum rate would be reduced from 20 to 15 percent, top rates would be reduced from 91 to 42 percent and all other rates would be reduced correspondingly, subject only to the postponement features covered in section 5. The individual tax rate reductions are shown in the table below:

Reform of individual tax rates

Taxable income bracket (thousands) ¹	Present rates	Original rates, Jan. 1, 1963	Amended actual rates, Jan. 1, 1963	Jan. 1, 1964	Jan. 1, 1965	Jan. 1, 1966	Jan. 1, 1967
0 to \$2.....	20	19.0	19.5	18.0	17.0	16.0	15
\$2 to \$4.....	22	20.5	21.25	19.5	18.5	17.5	16
\$4 to \$6.....	26	24.5	25.25	23.0	21.5	20.0	17
\$6 to \$8.....	30	28.0	29	26.0	24.0	21.0	18

\$100 to \$150.....	89	78.0	83.5	68.0	58.0	48.0	38
\$150 to \$200.....	90	80.0	85	70.0	60.0	50.0	40
\$200 and over.....	91	82.0	86.5	72.0	62.0	52.0	42

¹ After deductions and exemptions. Applies to single persons, married persons filing separate returns, and "split income" of husbands and wives filing joint returns.

The bills are drawn up in contemplation of enactment after January 1, 1963, but in time to make the first reduction in the withholding rate effective July 1, 1963. Since taxpayer returns are on a calendar year basis, the actual 1963 tax rate cuts apply to the entire year but with a reduction in the withholding rate applying for only the last one-half of the year. The practical effect of the first year cuts is to provide a new scale of rates ranging from 19 percent in the first bracket of taxable income to 82 percent in the over \$200,000 taxable income bracket during the last 6 months of the calendar year in place of the present rates ranging from 20 to 91 percent. However, because all individual tax rates resulting from reduction are levied against the incomes of individuals for a full year, the rates applying to the entire year 1963 must actually be one-half of those which, in practical effect and due to withholding, apply from July 1 on. The rates of individual tax, effective January 1, 1963, therefore, range from 19.5 percent at the first bracket of taxable income to 86.5 percent at the top bracket. All other rates are reduced in a consistent manner.

The scheduled second year personal tax rate reductions would remain unchanged from the original version of our bills introduced on July 20, 1962, that is, the range of rates would be from 18 to

72 percent. However, the difference between the personal tax rates effective January 1, 1963, and January 1, 1964, appears as a combination of the half a year's cut carried over from 1963 with the full reduction otherwise scheduled for 1964 or a year and a half reduction compressed into a 1-year period.

On a calendar year basis this is the case but viewing the rates as applied through withholding during the last 6 months of 1963, that is, a tax rate range of from 19 to 82 percent, the net effect is one of lowering the rates from 1963 to 1964 on a basis identical to that contained in the original series of scheduled reductions as contained in the table above.

SECTION 2. REDUCED INDIVIDUAL RATES APPLICABLE TO HEADS OF HOUSEHOLDS

This section sets forth the reduced rates which apply to heads of households during each year of the period in which scheduled reductions would take place. Rates are comparable to those set forth in section 1.

SECTION 3. REDUCED RATE TABLES FOR OPTIONAL INCOME TAX

Taxpayers with adjusted gross income of less than \$5,000 would adhere to the rates shown on this section from the period beginning January 1, 1963, to January 1, 1967, and beyond. Rates follow those stated in section 1.

SECTION 4. REDUCED RATES OF TAX ON CORPORATIONS

This section would amend section 11 of the Internal Revenue Code which currently provides for a normal tax rate on corporations of 30 percent and a surtax of 22 percent on taxable income in excess of \$25,000. Five annual reductions applicable to the years beginning January 1, 1963, through January 1, 1967, would be spread between normal and surtax rates.

Due to the halving of the personal income tax rate reductions in 1963, the originally scheduled corporate tax rate reductions of 2 percentage points in the first year also have been halved. Therefore, the corporate tax rate applicable for the full 1963 year is 1 percentage in the normal tax rate, reducing it from 30 to 29 percent. To keep the corporate tax rate reductions for the second year consistent with the original 5-year schedule, that is, reduction in the normal corporate rate to 26 percent, the 1964 corporate reductions would merge the additional 1 percentage point of reduction unapplied in 1963 with the regularly scheduled 2 percentage point cut scheduled for the second year thereby bringing the total corporate tax rate reduction in the normal tax down by 3 full percentage points. The normal corporate tax rate would be further reduced by 2 percentage points during the third year and 1 additional percentage point in each of the last 2 years of the plan. The surtax rate also would be lowered by 1 percentage point in each of the last 2 years of the 5-year schedule or a combined normal and surtax rate reduction of 2 percentage points in each of the calendar years 1966 and 1967. At the end of the 5-year period the normal tax rate would be lowered from its present rate of 30 to 22 percent and the surtax rate would be reduced from 22 to 20 percent or a total reduction of 10 percentage points from the present 52 percent combined corporate tax rates. The following summary illustrates the corporate tax reductions:

	Percent
Jan. 1, 1963:	
Normal tax.....	29
Surtax.....	22
Combined.....	51
Jan. 1, 1964:

Surtax.....	21
Combined.....	44
Jan. 1, 1967:	
Normal tax.....	22
Surtax.....	20
Combined.....	42

SECTION 5. POSTPONEMENT OF SCHEDULED TAX REDUCTIONS

The language of this section is appended hereto. It incorporates two changes from our earlier bills.

The first change is to make postponement effective only as to rate cuts scheduled for the third and later years, as contrasted to the second and later cuts as originally provided.

The second change is to add to the original postponement test of budget unbalance a new test in regard to expenditure control. Postponement would be applied only if the budget is out of balance and if what are described as "subordinate expenditures" are higher in the current fiscal year than in the preceding year. "Subordinate expenditures" are defined to include all expenditures of the Federal Government except those related to military preparedness, space research and technology and interest on the public debt. As a general positive description, "subordinate expenditures" cover those generally known as domestic spending programs plus foreign economic assistance.

The postponement procedure sets up a series of decisions and acts which if carried through to the final step would result in postponement of the affected cuts for 1 year, moving forward by 1 year all subsequent cuts.

The first step takes place as of November 15. No later than that date, the President is obligated to determine whether a state of budget unbalance would exist for the current fiscal year if the cuts scheduled for January 1 next go into effect and, if his finding in this respect is "yes," then he makes the further finding of whether "subordinate Federal expenditures" for the current fiscal year are in excess of those of the previous fiscal year. If the findings in both respects are "yes," then he has no alternative but to postpone the January 1 cuts for 6 months.

The second step takes place when the President submits his annual budget message to Congress in the following January, in which he is required to recommend to the Congress whether the cuts postponed to July 1 shall take effect on that date or should be further postponed for an additional 6-month period.

The third step is permissive as regards Congress. It may, by joint resolution enacted into law prior to May 15, put the cuts back into effect as of July 1 or postpone them to the following January 1.

The fourth step is dependent upon whether the Congress takes action. If the Congress does not, then the President is obligated to make the further postponement of 6 months.

Regardless of whether the final 6 month's postponement takes place by congressional resolution, or Presidential action, the effect as indicated above is to move forward for 1 year all subsequent proposals. The statute provides however that one set of cuts can be postponed for only 1 year. Hence, the last three scheduled cuts under the bills could be spread over a maximum of 6

instead of 3 years, without substantive change in the legislation.

The budget balance test remains an important benchmark of the postponement objective. It was originated when inflationary pressures were great and when the budget was in balance, as contrasted to the present situation in which most prices have been relatively stable for several years but the budget is substantially out of balance. If tax rate reform is to be accomplished, it has to be done within the realities of the present prospective budget situation, which is the reason for adding the new expenditure test. However, should an easing of world tensions permit a significant cutback in military spending, there would be no reason why the budget should not be quickly brought into balance. If the budget were balanced, the postponement test would be met in this respect, even though there were some increase in domestic expenditures. In short, the two tests together assure that there will be effective control over domestic and foreign aid spending at the minimum, and budget balance at the optimum, while the last three steps of rate reform are being put into effect.

SECTION 6. REDUCTION OF WITHHOLDING TAX

This section would amend present withholding provisions of the Revenue Code to permit reductions in the amounts withheld in accordance with the individual income tax rate reductions scheduled over the 5-year period commencing on July 1, 1963.

REDUCTION OF WITHHOLDING RATES

	Percent
Current withholding rate.....	18.0
Withholding rate after—	
June 30, 1963.....	17.1
Dec. 31, 1963.....	16.2
Dec. 31, 1964.....	15.3
Dec. 31, 1965.....	14.4
Dec. 31, 1966.....	13.5

SECTION 7. DECLARATION OF ESTIMATED TAX BY INDIVIDUALS

This provision makes it clear that declarations of estimated tax filed by individuals can be based on the tax rates in effect on the last day for filing such estimate.

SECTION 8. DECLARATION OF ESTIMATED TAX BY CORPORATIONS

This section extends the same right to corporations as is provided for individuals in the immediately preceding section.

POSTPONEMENT PROVISION—(SEC. 5) OF H.R. 265 AND H.R. 348

Section 5, part III of subchapter A of chapter 1 of the Internal Revenue Code of 1954 is amended by the addition of a new section 22 to read as follows:

"SEC. 22. POSTPONEMENT OF TAX REDUCTIONS.

(a) SIX-MONTH POSTPONEMENT OF REDUCTION OF RATES.—The President by November 15 shall determine, if the reductions in taxes under sections 1, 3, and 3402 (relating to income taxes on individuals) and section 11 (relating to income taxes on corporations) scheduled for January 1, 1965, and subsequent dates take effect, whether an imbalance in the budget of the Federal Government for the current fiscal year would exist and, if so whether the subordinate Federal expenditures for the current fiscal year as

defined in subsection (f)(2), will exceed the subordinate Federal expenditures of the previous fiscal year. If the President determines that an imbalance in the budget would so exist and that the subordinate Federal expenditures for the current fiscal year exceeds that of the previous fiscal year, he shall, stating his reasons therefor in an Executive order, postpone until July 1 the date upon which such reductions of taxes are otherwise scheduled to take effect. In the next annual budget message to the Congress the President shall recommend whether any reduction in a rate of tax postponed under this subsection should become effective on July 1 or whether such reductions should be further postponed until the following January 1.

"(b) CONGRESSIONAL ACTION ON RATE REDUCTIONS POSTPONED UNDER SUBSECTION (a).—Congress may by means of a joint resolution which has become law before May 15 act—

"(1) to make effective upon July 1 next the rate reductions scheduled under sections 1, 3, and 3402 which have been previously postponed under subsection (a) or to postpone further such rate reduction dates until January 1 and/or

"(2) to make effective upon July 1 next the rate reduction scheduled under section 11 which has been previously postponed under subsection (a) or to postpone further such rate reduction date until January 1.

"(c) FURTHER PRESIDENTIAL ACTION ON RATE REDUCTIONS POSTPONED UNDER SUBSECTION (a).—With respect to any rate reduction postponed under subsection (a) as to which Congress has not acted under subsection (b) by means of a joint resolution which has become law before May 15, the President shall, by May 15, further postpone until January 1—

"(1) any rate reduction scheduled under section 11 which has been postponed previously under paragraphs (a) (1) or (2), or

"(2) any rate reductions scheduled under sections 1, 3, and 3402 and section 11 and which have been postponed previously under paragraph (a) (2).

"(d) TOTAL POSTPONEMENT NOT TO EXCEED ONE YEAR.—Under this section the date upon which a rate reduction is scheduled to take effect under section 1, 3, 11, or 3402 cannot be postponed under subsections (a) and (b) or (c), for more than one year.

"(e) EFFECT OF POSTPONEMENT ON SUBSEQUENT REDUCTION DATES.—When a rate reduction date otherwise scheduled to take effect under section 1, 3, 11, or 3402 has been postponed under subsection (b) or (c) until January 1, then as to the tax whose rate reduction date has been so postponed, the rate reduction dates not affected by such further postponement shall be deferred for one year upon the occurrence of each such further postponement.

"(f) DEFINITIONS.—When used in this section:

"(1) 'Imbalance in the budget' means the existence of a situation where 'budget expenditures' exceed 'budget receipts' as those terms are used in the 'Annual Budget Message of the President' as submitted to Congress.

"(2) 'Federal subordinate expenditures' means budget expenditures as classified in 'The Budget of the United States Government for 1963' except expenditures for the following functions:

"I. MILITARY FUNCTIONS.—Military expenditures by the Department of Defense including foreign military assistance but excluding expenditures for civil defense; expenditures for atomic energy activities directly devoted to military purposes; and expenditures by other Federal agencies for specific defense activities.

"II. SPACE RESEARCH AND TECHNOLOGY FUNCTIONS.—All expenditures by the Na-

tional Aeronautics and Space Administration, and expenditures by the Atomic Energy Commission directly devoted to space efforts.

"III. INTEREST.—Expenditures for interest on the public debt, interest on refunds of receipts, and interest on uninvested funds. "Additions or deductions for interfund transactions shall be taken into account in arriving at the total amount of the subordinate expenditure level.

"(3) 'Rate reduction date' means the date upon which would become effective a reduction in the rate of a tax imposed by sections 1, 3, 11, or 3402.

"(4) 'Current fiscal year' means the fiscal year used for Federal Government accounting purposes during which a postponement provided by this section is or can be made.

"(5) 'Previous fiscal year' means the fiscal year used for Federal Government accounting purposes immediately preceding the current fiscal year against which the Federal subordinate expenditure level is compared for purposes of determining postponement.

"(6) 'Following fiscal year' means the fiscal year used for Federal Government accounting purposes which immediately follows the fiscal year during which a postponement provided by this section is made."

Tribute to Hon. Jose E. Benitez, Deputy High Commissioner, Pacific Trust Territory

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, January 24, 1963

Mr. SMATHERS. Mr. President, I was particularly pleased to note in a recent press release issued by the Office of Emergency Planning of the Executive Office of the President that a certificate of appreciation award was presented to the Honorable Jose A. Benitez, Deputy High Commissioner, Pacific Trust Territory, for the invaluable service rendered by him in connection with the rehabilitation of the Territory of Guam, following typhoon Karen of November 11, 1962.

This honor by the Government of the United States was conferred upon Mr. Benitez by Mr. Edward A. McDermott, Director of the Office of Emergency Planning.

Mr. Benitez, present during the storm which was one of the severest in the history of Guam, was commended by Mr. McDermott for "his on-the-spot actions and subsequent counsel and guidance which were invaluable to Federal officials working to restore and rehabilitate the territory" which comprises some 70,000 people.

Many of us will recall that there were many casualties as a result of this storm and over \$100 million of property damage.

It is interesting to note that Mr. Benitez, who was appointed Deputy High Commissioner of the Trust Territory of the Pacific Islands in March 1961, was exceptionally well qualified to render such assistance in the Guam dis-

aster because he has held important administrative posts in the executive and legislative branches of the Puerto Rican Commonwealth where he was confronted with numerous social and economic problems.

I have known Mr. Benitez for a number of years. He is a man of high character, integrity, and outstanding ability. I know that many of my colleagues here certainly join with me in congratulating him for the outstanding service he has rendered and are particularly pleased to note that this service was recognized by the award which was conferred upon him by the Government of the United States.

Patman Report Disputed

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Winston-Salem Journal of January 16, 1963:

PATMAN REPORT DISPUTED

(NOTE.—Early this month a report from a congressional committee headed by Representative PATMAN, of Texas, indicated that many philanthropic foundations, including five from Winston-Salem, were using only a small portion of their income for philanthropic purposes. Since the figures released by Patman seemed out of line with the known grants of the local foundations, the Journal assigned staff reporter Chester Davis to check the committee figures against foundation reports. This is what he found.)

(By Chester Davis)

The woes in giving away money are legion and not the least of these is Representative WRIGHT PATMAN, a Democrat from Texas.

PATMAN heads a congressional committee that is investigating the operations of the Nation's tax-exempt trusts and foundations. Periodically PATMAN releases reports on his investigations. These reports invariably are so shocking they claim front-page headlines. And PATMAN's reports are customarily so misleading they require a careful second look.

During the first week of January, for example, PATMAN announced that 534 foundations, including 11 in North Carolina, gave less than half of their earnings to philanthropic good works.

FIVE IN TWIN CITY

Five Winston-Salem trusts and foundations were named in the Patman report. According to the figures released by PATMAN these five local philanthropic agencies had a combined income that ran into many millions of dollars during the 10-year period of 1951-60.

PATMAN's figures seemed to show that these five Winston-Salem trusts and foundations spent only a small part of that income on the purposes for which they were created and for which they were given tax exemption. According to PATMAN's figures, the great bulk of this vast income was squirreled away, unallocated and tax free.

PATMAN, for example, reported that from the time of its creation late in 1953 until

1960 the Mary Reynolds Babcock Foundation showed the following financial profile:

Receipts	\$20,661,847
Expenses and administrative costs	260,821
Gave away	4,680,387

The implication is that the Babcock Foundation earned some \$20.6 million and spent—in grants and operating costs—only about \$4.9 million. The remainder—some \$15.7 million—presumably was tucked away in a tax-free corner against some rainy day.

The records of the Babcock Foundation show quite a different story.

This foundation was created in September 1953. At that time \$12 million was placed in the foundation under the will of Mrs. Babcock. Since then the corpus, or body, of this trust has appreciated greatly in value because of stock splits and a general rise in the value of the securities and other assets held by the foundation. As of August 31, 1961, the corpus of the Babcock Foundation was valued at \$20,561,619.93.

Under the loose head, "Receipts," PATMAN has included the original gift the foundation, the appreciation in value of that gift over the 8-year period, and the income earned by the foundation in that same period.

CONTRADICTED

The charge by PATMAN that this foundation has not spent anything like the income it has enjoyed on philanthropic purposes is flatly contradicted by the published records of the Babcock Foundation. A table accompanying this story reports the financial story of the Babcock Foundation for the period of September 11, 1953, through August 31, 1961.

The fact that the Babcock Foundation actually made grants that were larger than current income is not unusual. Foundations of this type frequently make grants which run over a period of years. In so doing the tendency is to anticipate future earnings and to assume long-range obligations in excess of current income.

PATMAN's report on the John Wesley and Anna Hodgin Hanes Foundation presented the following financial picture of that foundation for the period 1951-60:

Receipts	\$2,825,638
Expenses	20,142
Grants	411,433

Here again the great bulk of the "receipts" reported by PATMAN—actually \$2,182,769.63 of the \$2,825,638—consisted of gifts made by James G. Hanes, Ralph Hanes, and the late Robert M. Hanes to the foundation. (And to this you can add another \$159,790.89 that came over the 10-year period in the form of an appreciation in the value of the corpus on the foundation.) The rest of the difference—actually well under \$500,000—was earned income.

In the period 1947, when the Hanes Foundation was established, through 1960 the total earnings of the foundation came to \$483,077.15. And in this same period the Hanes Foundation made cash grants of \$411,433.58. As of October 31, 1962, this foundation had, in addition to its cash gains, outstanding pledges of \$159,000.

Here again you have a foundation which in the form of cash grants and pledges, actually has overspent its current income.

At least on first glance the most shocking of the Patman disclosures related to the various Reynolds trusts and foundations.

Here is how the Congressman presented that story to the press:

The Z. Smith Reynolds Foundation (1951-60):	
Receipts	\$13,513,340
Expenses	40,909
Grants	12,841,545
The W. N. Reynolds Trust:	
Receipts	9,039,029
Expenses	614,152
Grants	6,206,661
The Zachary Smith Reynolds Trust:	
Receipts	8,067,757
Expenses	178,084
Grants	None

Accepted at their face value, these figures imply that the three operations enjoyed a total income of about \$30.6 million for the 10-year period and that in this same period they spent, in expenses and grants, only about \$19 million. In the case of the Zachary Smith Reynolds Trust, PATMAN charges that there was an income of just over \$8 million and that no grants whatsoever were made.

Actually, the two trusts were established to receive and administer gifts made by members of the Reynolds family. Income from these trusts then went to the Z. Smith Reynolds Foundation to be distributed for a variety of philanthropic purposes.

TERMS

The terms under which the two trusts were established differed somewhat:

1. The W. N. Reynolds Trust was to hold back 20 percent of its income until the aggregate of the two trusts reached \$50 million. After that, 100 percent of its earnings were to go to the Z. Smith Reynolds Foundation for distribution. The aggregate of the two trusts reached \$50 million several years ago. In recent years 100 percent of the income of this trust, therefore, has gone to the foundation.

2. The Zachary Smith Reynolds Trust was to withhold 20 percent of its income until the corpus in this particular trust reached \$50 million. This point has not yet been reached. As a result, this trust is paying 80 percent of its income to the foundation and plowing the remaining 20 percent back into the corpus.

So, with the exception of the 20 percent of the earnings of the Zachary Smith Reynolds Trust that are plowed back, all of the earnings of these two trusts go to the foundation for distribution. Neither trust makes any other grants.

The record is plain that the Smith Reynolds Foundation has distributed the earnings of the two trusts as fast as these earnings have been transferred to it. PATMAN's figures—which show receipts of \$13.5 million and grants of \$12.8 million for the Smith Reynolds Foundation—reflect this fact.

Along with these cash grants the Z. Smith

Reynolds Foundation also has taken on some sizable long-range obligations. These include a \$500,000-a-year gift in perpetuity to Wake Forest College. When you add these long-range obligations to the actual grants you find, again, a picture of a foundation which is spending its income right up to the hilt and even a little bit more.

At the time PATMAN blasted the Nation's tax-exempt foundations and trusts for spending less than half their income on philanthropic purposes, the Congressman also released a letter from William A. Johnson, North Carolina's commissioner of revenue.

On its face Johnson's letter appeared to be a strong endorsement of both PATMAN's investigation and of the broadcast charges he leveled against North Carolina trusts and foundations.

REPLY

Johnson's letter, written in November 1962, was in reply to a letter from PATMAN's committee which asked 7 questions relating to the manner in which North Carolina administered tax-exempt foundations.

As a matter of fact, this State has no effective control over tax-exempt foundations and trusts. When these operations are granted tax-exempt status by the Federal Government they automatically receive the same concession from the State.

"But," Johnson says, "these trusts and foundations make no reports to us. From year to year we have no way of knowing whether their tax-exempt status continues to be justified. There are 265 tax-exempt trusts and foundations in North Carolina today. We know that some of them—usually small trusts or foundations set up by individuals—have been used to circumvent income taxes.

"Because this is true," Johnson continued, "I feel strongly that some more effective method of supervision must be established. And in that sense I heartily endorsed the Congressional investigation Representative PATMAN heads.

IMPORTANT SERVICE

"But," Johnson added, "I am fully aware that the largest trusts and foundations in this State—the Duke, Reynolds, Babcock, Hanes, Morehead, and Richardson foundations, for example—are doing a great and very important service for North Carolina.

"For foundations of that type I have nothing but admiration and the warmest feeling. The danger is, however, that we risk getting too many trusts and foundations, some of which are not legitimate and which are used for purposes of tax evasion. My fear is that the few bad apples will cause Congress or the general assembly to adopt punitive legislation which will be harmful to the legitimate and important work of the truly philanthropic foundations."

In making this statement Johnson emphasized that in his letter to PATMAN he did not single out any specific trusts or foundations for either praise or criticism.

Babcock foundation grants

Fiscal year ending—	Net income	Total grants committed for payment	Excess or (deficiency) of income	Grant payments
1954.....	\$41,017.69	\$129,500.00	(\$88,482.31)	\$39,000.00

Newsday Contest Winners

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, January 24, 1963

Mr. KEATING. Mr. President, Newsday of Long Island has been conducting an excellent and worthwhile American history contest for students of all senior high schools in Nassau and Suffolk Counties. Each month a new topic is chosen and a boy or girl winner selected. The essays and winners for the month of December have come to my attention, and I am very much impressed with the high caliber of thinking and writing that is shown in these essays by Long Island students. The topic for December was "America's Greatest Military Leader." The two winners were Barry Michael Mitnick, who is a junior at Plainview High School; and Susan Carr, who is a junior at Seton Hall High School in Patchogue. Barry Mitnick chose Nathaniel Greene and defended his choice with an impressive array of Revolutionary War research. Susan Carr nominated Gen. Douglas MacArthur, making an important and perceptive distinction in what constitutes a brave man and a good leader.

Mr. President, I commend these two winners on their good work and I commend Newsday on the stimulating contest it sponsored. I shall look forward to reading more of these winning essays in the future. I hope that when some of these monthly contest winners come down to Washington in June on the all-expense trip, which will be one of their rewards, I will have a chance to congratulate them in person. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD these two essays and the contest rules.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

PRIZE-WINNING ESSAYS IN NEWSDAY CONTEST
PICK "AMERICA'S GREATEST MILITARY LEADER"

(By Barry Michael Mitnick—junior,
Plainview High School)

What makes a great military leader? He is a man who can consistently snatch victory from the jaws of defeat, triumph from the mouth of tragedy. He is an inspiring leader of men and a model for the men he leads. He is the light in the darkness of despair, the Galahad of the partisan round table, the staunch Gibraltar of determination.

Who was America's greatest military leader? I say Nathaniel Greene.

Nowhere in the Colonies was the struggle more fierce, more desperate, and perhaps more vital than in the South in 1781. Here lay the key to the Revolution, the crutch without which Washington's valiant stand in the North was inevitably doomed. To save the South was to save the Colonies—French aid was penning the British in New York. The South thus became the crux of the Revolution.

Greene directed the Americans here. Replacing inept Horatio Gates in 1780, he brought a remarkable spirit and drive to his task.

On January 17, 1781, Daniel Morgan's detachment routed hated Lord Tarleton's light forces at Cowpens, N.C. Lord Cornwallis' regulars moved to revenge this affront to English arms. Greene, with the rest of the patriot army, joined Morgan, hotly pursued by Cornwallis, and raced for the Dan River. The American general entered Virginia on February 14, just ahead of John Bull.

The South belonged to the king—or did it? The English lord commanded a starving army in the midst of a hostile, aroused country. Greene had outwitted him, for in Virginia, the militia flocked to patriot colors; the army swelled from the influx. Cornwallis' subsequent withdrawal was a desperate search for supplies. The race to the Dan was the turning point of the war in the South—a British army defeated in victory.

GREENE WON THE DAY

At Guilford Court House, on March 15, history repeated itself. Cornwallis won the field of battle, and Greene the day, for the English were forced to fall back to their stronghold at Wilmington for supplies. Greene's was a cat-and-mouse game—he wisely chose not to risk losing the only American Army in the South in a do-or-die fight. His shrewd planning, however, changed a technical British victory into a harrowing strategic disaster.

Daringly, Greene decided to invade South Carolina, a fortress of British strength. Forts Granby, Motte, Watson, Georgetown, and Augusta fell to the partisans. Only General Stewart stood in Greene's way.

On September 8, in a brilliant tactical maneuver, the American general surprised the English at Eutaw Springs. Although twilight saw the field of honor in his hands, Stewart fled to Charleston's safety the very next day. Only Charleston and Savannah still waved the Union Jack in the colonies south of Virginia.

But what of Cornwallis? He did what Greene had foreseen and prepared for by meticulously guarding his rear in South Carolina. Cornwallis marched into Virginia where Lafayette, Steuben, and Yorktown awaited him.

In Greene's startling, masterful campaign, genius and sly cunning turned sorry defeat to smashing victory. This is the quality that great military leaders must possess—the ability to make the most of the situation at hand. Greene exhibited this without winning a single major battle—he had merely freed the South and provoked Cornwallis' march to infamy.

The South boasted many outstanding fighters: Marion, the "Swamp Fox," "Light Horse" Harry Lee, Morgan of Cowpens and Saratoga—but Greene was the brightest star of them all. He is little known, it is true, but it may be that because of his efforts our country exists today.

(By Susan Carr, junior, Seton Hall High School, Patchogue)

A coward cannot be a good military leader but a brave man does not necessarily make a good leader, either. Leadership encompasses more than just a show of bravery. Good leadership can galvanize men into feats above the call of duty. In contrast, however, poor leadership can confuse and bring panic into the heart of the most courageous soldier.

Defining leadership is not easy. What really is this quality? West Point has developed a preferred definition. "Leadership is the art of influencing and directing people to an assigned goal in such a manner as to command their obedience, confidence, respect, and loyal cooperation." In light of this definition, many men have been generals, admirals, and commanders in chief but few have been considered great leaders. There is, however, a small group from which one can choose the greatest military leader.

In my opinion, Gen. Douglas MacArthur would be this choice.

General MacArthur certainly acquired one important trait of leadership—a good background in and a firm knowledge of military skill. He was exceptionally brilliant as a graduate of West Point and an officer in the Army's Corps of Engineers. His rapid rise to high rank although still a young man attests to his capabilities. Also, the fact that the general reached the top rank of the Army and successfully led a great army in battle can be counted as evidence of his military prowess.

A second measure of leadership is the thorough understanding of the men under command and of their abilities and limitations. As commander of all the United States and the Commonwealth forces in the Philippines during World War II, General MacArthur realized that he had a total of one Regular Army division and four sketchily trained and inadequately equipped Reserve divisions with which to work. His greatest need was for highly trained men to act as instructors. Another 50,000 men were at his disposal, but they were useless for they lacked training and equipment. The men, themselves, were brave and willing to fight so the general used this to the best advantage. He spread the trained men throughout the units and made sure that all the officers were well-trained men. With proper leadership the ill-trained natives became good fighting men, perhaps the best in the Pacific.

A NATURAL LEADER

Few people who have met General MacArthur come away without having the impression that they have been talking to a natural leader. The effect of the general's immortal words, "I shall return," on the people of the Philippines characterizes the faith he can inspire in those under him and around him.

One of the most vital qualities of leadership is personal courage. Personal courage is more than superficial bravery; it goes far deeper. A person has to conquer his own inner problems and have some strong, tangible source from which to draw strength. For most this takes the form of a strong religious belief. General MacArthur certainly has a strong religious belief and he firmly believes that it is necessary in every society.

"I am absolutely convinced that true democracy can exist only on a spiritual foundation. It will endure when it rests firmly on the Christian conception of the individual and society."

The general's personal courage has been shown in his wartime exploits, when he frequently exposed himself to enemy fire.

There have been many courageous men but few great military leaders. Brave men are not necessarily good leaders. However, great leaders are brave men in every respect of the word.

AMERICAN HISTORY CONTEST RULES

1. The Newsday American history contest is open to students of all senior high schools in Nassau and Suffolk Counties. Members of the families of Newsday employees may not participate, but Newsday carriers are eligible.

2. Every month, October through May, contestants may submit essays on a subject in the field of American history, selected by Newsday. A new subject will be announced each month for the following month. The subject for January is "The Three Greatest American Inventions."

3. Essays must be original and not more than 600 words in length, typed or written in ink on one side of the paper. The name, address, and telephone number of the contestant and the name of his or her high school should appear in the upper left-hand corner of the first page. All entries become

the property of Newsday and any or all may be published. None will be returned.

4. Each month, a board of judges will select the best essay submitted by a boy and the best essay submitted by a girl. In all matters relating to this contest, the decisions of the judges will be final.

5. The winning essays on each month's subject will be published in Newsday the following month with pictures of the winners. Each of the monthly winners will receive a wristwatch as an immediate award.

6. During the last week of June, the 16 monthly winners of the previous 8 months will receive an all-expense-paid trip to Washington, D.C., as the guests of Newsday, accompanied by members of Newsday's staff.

7. All entries should be addressed to American History Editor, Newsday, 550 Stewart Avenue, Garden City, N.Y., and must be in the Newsday office by midnight of the last day of each month.

Hon. Chet Holifield on Quality Stabilization

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. MADDEN. Mr. Speaker, our distinguished colleague from California, the Honorable CHET HOLIFIELD, recently was keynote speaker to the annual convention of the National Appliance & Radio-TV Dealers Association in Chicago.

Congressman HOLIFIELD, speaking as the owner-operator of CHET HOLIFIELD'S store for men in Norwalk, Calif., as well as a 20-year veteran of Congress, addressed his audience of more than 1,000 merchants on, "The Essence of Competition." He directly linked this straightforward talk with the quality stabilization bill.

This legislation was sponsored in the last session by a number of House and Senate Members. It was favorably reported by the House Committee on Interstate and Foreign Commerce and also acted upon favorably by the Rules Committee of the House. Owing to the impending adjournment of the House and to the congested legislative program in the Senate previous to adjournment, it was decided by the sponsors to postpone legislative action until this session of Congress.

With minor changes, this legislation will be reintroduced by the original and also additional sponsors.

Under unanimous consent I include the speech in the Appendix of the RECORD, as follows:

In previous talks with businessmen, I have asked my audience to look on me as the owner-operator of CHET HOLIFIELD'S store for men in Norwalk, Calif., rather than as Congressman CHET HOLIFIELD. However, this evening, since I have a specific legislative challenge in mind, I'm going to ask you to consider me both as a dealer in men's wear and as a Member of the House of Representatives.

These two roles represent an essential need if our country is to win a desperately needed victory. That need is understand-

ing, communication and teamwork between the business community and Congress because at stake is the health of our distributive economy—a vital part of our free competitive enterprise system.

We must remember that this country has really been built on the foundation that the Government doesn't do everything; that the neighbor helps the neighbor; and together, the neighbors help the Government. We must, in this country, be awake to the dangers of blindly relying entirely upon government. But we must be alert to the principle that government justifies itself only on the basis that it shall be the servant of the people, and not the master of the people.

When George Washington took his oath of office in 1789, Congress was elected from only 13 States and it "looked after" the national welfare of only 4 million people. Today, 173 years later, there are 50 States and over 185 million people.

Washington's time was an era of rugged individualism. A man's home State was more important than his National Government. His battle to succeed was more with nature, than with man or science.

Today we live in an unusual universe. Man is increasingly separated from all nature. As a result he himself becomes somewhat artificial. An electricity failure today is as painful for man as lack of bread. A disorder in our economy is the failure of his crop. Man's independence, opportunity and reward today depend on his ability to cope with manmade adversities more than nature's. Laws governing his freedom must be made, in consonance with our Constitution, to help him solve new economic and social problems as they arise. Though life today is different, the aims, ambitions and loyalties should remain the same.

The strength of any society rests, as it did in Washington's time, upon the ability and initiative of its people. If ever there was a time when the Government need responsible people and the people need responsible government, this is the time.

Yes, I wear two hats—the businessman's and the Congressman's. I hope that I wear them well. We face ideological, economic and military challenges to our way of life. The best way I know to preserve the American system is to remain militarily strong and economically strong. To keep our economy strong, we must correct the abuses in our distributive system and make it work on stable principles. If we meet the ideological challenge of communism with resolution, we need have no fear of the future.

This Nation's greatness was built on a foundation of small business. From that base the capability of continually producing and distributing more and better goods at competitive prices has developed. The small businessman has been the backbone of America since colonial days. Even with our modern giant industrial corporation, he still comprises in number about 85 percent of the Nation's business firms. The tragedy we now face is the accelerated decline of those small businesses which have formed the backbone of our free enterprise system.

It seems to me, while we agonizingly face the uncertainties of this nuclear age, we must diligently protect the basic sources of our strength. Otherwise chaos is certain, not from nuclear destruction but from our own moral breakdown. And a primarily source of our inherent strength is our free competitive enterprise system.

Everywhere we turn we find evidence that, as we move into the atomic age, the competitive price is being singled out as the dominant element in today's free competitive enterprise system.

In fact, in an increasing majority of business circles, "to be competitive" has come to mean only that one sells at the lowest price

in the particular trading area. Unless quality and service is tied to price, then price becomes deceptive.

And is it any wonder when our own Federal Trade Commission in a recent case involving the Snap-On Tools Corp. said; and I quote, "Playing off" one dealer against another "in the hope of obtaining a lower price" is the essence of competition."

The Honorable Paul Rand Dixon, Chairman of the Federal Trade Commission, last May used the platform of the National Electric Manufacturers Association to give added publicity to the above quotation.

Now I do not know whether or not the manufacturers in your industry have left the above quotation unchallenged, but I am delighted to use the platform of the National Appliance and Radio-TV Dealers Association to challenge the quotation. If we have reached the point that the "playing off" of one dealer against another in hope of obtaining a lower price is in fact the essence of competition, then we have pushed into the background all of the wonderful constructive marketing practices that have played such an important part in the growth of the most prosperous country on the face of this earth.

ESSENCE OF COMPETITION IS PROFIT INCENTIVE

To be blunt, in my opinion as a businessman, in my opinion as a Member of Congress, the Federal Trade Commission has not selected, as the essence of competition, the necessary element that must prevail in order to preserve our free democratic form of government. The essence of competition is unequivocally the incentive. I'm speaking of the incentive that causes us to do all the constructive things that we do to bring to market the splendid products of industry. I'm speaking of the fair reward for those constructive efforts.

In this way the essence of competition is tied to the right to earn a profit, with emphasis on the word "earn."

In exercising your right to earn a profit, you put forth a true competitive effort when you do those things that have built your business into a vital force in your community and have helped build your industry and your country.

As you engage in your right to earn a profit, you have certain prerogatives. Perhaps your organization doesn't exercise all of them. Some you may abandon to manufacturers who confront you with an attractive proposition, perhaps it is necessary to do so to stay in business. Some you plan to undertake tomorrow. Some are an immediate burden but a long-range necessity. By prerogatives we mean the things that you are doing, or that are possible for you to do, to earn a profit:

1. There's your investing in fixed assets.
2. There's the building of an effective personnel organization.
3. There's your investing in merchandise. You abandon your prerogatives in this area when, in order to keep up with competition, you accept floor plans, and special sales and display franchises.
4. There's the physical act of bringing merchandise to your trading area.
5. You advertise this merchandise. Guard this prerogative carefully as you accept cooperative advertising money because you are actually yielding control and authority to your resources.
6. You display.
7. You sell. Here's where the demand-creating function should be at its best.
8. You offer credit, and do so in a responsible manner.
9. You deliver.
10. You install, or take complete responsibility for the installation.
11. You clarify for your customer the warranty or guarantee involved.

12. You service for the most part what you sell.

13. Finally there is the prerogative of spending, saving or reinvesting the resulting profit.

How many of these 13 prerogatives did you exercise?

How many of them did you abandon to others?

You can measure the degree of independence you have—yes, the degree of control you have over your business by checking this list.

There is undoubtedly a trend toward eliminating the retail link in the chain of distribution. To the extent that you answer in the negative when you check these 13 points, I believe you are helping that trend. Of course it is your prerogative to commit business suicide. You can do it by gradual abandonment of the basic practices and responsibilities which justify your link in the chain of distribution. Or you can call a halt in this trend by improving your ability as a free advertiser, as an aggressive merchandiser, a real credit sales manager, a service manager directly interested in customer satisfaction and last but not least the business manager of your own business.

SUPPORT URGED FOR QUALITY STABILIZATION

On the other hand, to what extent is your disappointment with your profit directly attributed to accepting the proposition that price is the dominant element in today's competitive free enterprise system? It's at this point that I recommend that you should exercise the 14th principle, another prerogative. I recommend that you support legislation before this Congress that will restore the competitive price factor to its proper perspective; legislation that will take a big step toward helping you do all those things that you are anxious to do to earn a profit. I refer to a legislative proposal known as the quality stabilization bill.

It's not the Federal Trade Commission, nor the courts, nor the predators in the marketplace that make our laws. It is the U.S. Congress expressing the will of the people that has the power to make the laws in this area.

Congress is the only constitutional arbiter with respect to conflicting views of national economic policy. By enacting the quality stabilization bill, Congress will express its intent, that orderly marketing practices may have an opportunity to prevail, thereby countering the all out price and gimmick trend.

And, in careful study of it, I have noted that virtually every national trade organization representing consumer products, including this impressive association, has endorsed this measure which I feel, for the safeguarding of our basic business pattern, must be enacted quickly in this session of Congress.

No governmental administrative agency or bureau is involved in any way with the quality stabilization bill.

Salesmanship consists of transferring a conviction by a seller to a buyer. You are the seller. Congress is the buyer. There are 535 customers. If the sale of quality stabilization is not made this year, blame no one but yourself. I said 535 customers, but a considerable number of Congressmen are already sold on the bill.

I am sold. I am sold because I am a veteran Congressman of 20 years, who believes my solemn duty is to my constituents.

I am sold because for 35 years I have been a retail clothier in a small town, and have had personal experience in seeing small businessmen—my constituents—destroyed by unfair sabotage of trademarks and brand name merchandise.

I am sold because that which is hurting my business, is hurting every other merchant dedicated to selling brand name merchandise, and is hurting so badly that it

is threatening traditional business procedures.

I am sold because I believe freedom under this legislation, would be reserved for the man who lives by his own work, and directs his own business, to protect that business from those who would destroy it.

I am sold because I proudly say I like my life in this country and I want to keep it that way for my constituents as well as my own children and grandchildren. I know it can be so maintained, only by continually defending sound business principles and by constant willingness to do more than sometimes seems necessary.

I am sold on the quality stabilization bill because this bill, studied without prejudice, is basic, simple truth, spelling out a precise remedy for a recognized malady.

I built my retail business on lines of nationally known brand merchandise. If the predators continue to acquire such brand merchandise and slash normal retail prices, I am threatened with destruction to my traditional way of doing business. Much more important than my personal business fate, is the fate of millions of producers and retailers of brand name merchandise.

TRIBUTE PAID TO JOHN W. ANDERSON

I want to take just a minute here to pay tribute to an American businessman. This country is more in need of guided leaders than guided missiles and there would be no quality stabilization bill were it not for the principles and dogged determination of one such leader. He is a man of infinite patience.

His fight for his rights as a manufacturer of high quality brand name automotive parts and for integrity in the distribution of those products has been in essence a fight for you as well. All of us, whether in manufacturing, wholesaling or retailing, or in the Congress, owe John W. Anderson, founder-president of the Anderson Co., of Gary, Ind., a great vote of thanks. He is the mainspring of the Quality Brands Associates movement.

The case for quality stabilization has been well established. The need is now. Victory is in sight. It will take work by you and the only substitute for work is a miracle. Your business cannot await a miracle.

If support comes to each Congressman from his voting constituents, Congress will express its intent for business to have the right to develop a quality product and protect that quality against the cannibalism of price debasement.

In this way, Congress will affirm that the true essence of competition, is the profit incentive. In so doing, Congress will be helping you to preserve your right to earn a profit.

The Hanford Atomic-Steam Generating Facility

EXTENSION OF REMARKS OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, January 24, 1963

Mr. JACKSON. Mr. President, culminating a long, hard legislative battle, the Congress voted its approval of the Hanford atomic electric facility last summer. The Congress authorized the Washington Public Power Supply System to enter into contract with the Atomic Energy Commission for the production of electric power, utilizing waste steam at the Hanford, Wash., New Pro-

duction Reactor. The WPPSS, an organization of public power bodies, agreed to finance, construct, and operate the facility at no cost to the taxpayer. Today I am most pleased to request to have printed in the RECORD the text of two editorials written in prominent Northwest newspapers, the Tri-City Herald of Kennewick, Wash., and the Sunday Oregonian of Portland, Oreg., which deal with developments since congressional approval was realized.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Kennewick (Wash.) Tri-City Herald, Jan. 9, 1963]

IT LOOKS BETTER ALL THE TIME

The question of "What are you going to do with all that power?" which was asked often by opponents of the Hanford steam project, has been answered.

The big plant, to be the largest atomic steam generating facility in the world, can't produce enough power to satisfy the appetites of public and private utilities. The 800,000 kilowatts it will produce have been oversubscribed.

Yesterday a big event was the long delayed announcement by private power companies that they want the 400,000 kilowatts which Congress said they could have.

During their bitter and intense opposition to the plant, private power used as one argument that there was no market for the power. It was a sham which enough Congressmen fortunately saw through and the steamplant won.

As a matter of fact a host of charges made against the project by private power have already been shot full of holes.

The further the Hanford steam plant progresses the more feasible it appears.

Last week steamplant supporters got another giant shot in the arm when bids for the plant's turbines were \$12 million less than the engineer's estimate.

Those close to the steamplant picture knew its backers had been conservative in their estimates and that the plant could be constructed for less than \$130 million.

But the \$12 million saving in turbines wasn't entirely anticipated and it was—to use the masterpiece of understatement by Owen Hurd, managing director of WPPSS—"a very pleasant surprise."

Another pleasant surprise came a few weeks earlier with the low-interest-rate bid for interim financing. This was an expression by banking interests in the merit of the PUD's banding together to build the plant.

Many weeks ago we predicted in this column that private power would participate in the steamplant's output but that it would wait until the very last minute. The object was to first place every conceivable obstacle in the path of those who sought to construct it.

Perhaps now bygones can be bygones. Charles Luce, Bonneville Power Administrator, announced in Spokane in September that he was going to carry no grudges about private power's position and he hoped private power would do likewise.

Public power, however, would do well to always keep its powder dry.

Happily for all, the steamplant was sold to Congress on the merit basis and now the merits of the steamplant are selling the project to everyone.

[From the Portland Sunday Oregonian, Jan. 13, 1963]

GOOD POWER AFTER ALL

It should surprise no one that five privately owned public utilities of the Pacific Northwest who followed the national electric

utility-U.S. Chamber of Commerce line in fighting the Hanford power project are now exercising their congressional option to take 50 percent of the 800,000 to 900,000 kilowatts of energy to be produced at Hanford from nuclear-generated steam.

Where else could they buy 400,000 or more of firm power on a 30-year contract not subject to public power withdrawals at the going Federal rate of the Bonneville Power Administration?

We leave it to the public to figure out why the Northwest utilities lent their lobbying aid, though quietly, to the efforts of the national utilities and coal industries to bushwack the Hanford power project. The generators were first to have been built by the Federal Government. But that bill was killed in the House of Representatives. Now they are to be built by Washington Public Power Supply System (16 public utility districts), and ideological opposite of the privately owned utilities. WPPSS will sell \$130 million in revenue bonds on the open market (to private investors, note) to finance the project. WPPSS is a competitor of four of the region's private utilities in application for licenses to build mutually exclusive dams on the Snake River—Nez Perce and Mountain Sheep. But the private utilities did not seek congressional approval to build the nuclear-powered generators at Hanford themselves. Their line was that the world's largest nuclear powerplant was infeasible.

The Federal Bonneville Power Administration will assume full responsibility for delivery of Hanford power to private and public customers. Because of congressional approval of Hanford power, BPA now has firm power to sell from the hydro supply held in reserve to meet commitments under the Federal preference clause to public agencies. But there has been no rush of big industries to establish new plants. Perhaps that will come. But whether there is an industrial surge or not, the power from Hanford as well as power from Mountain Sheep Dam will be needed in the late 1960's to meet normal demand increases.

The barely undercover flight of regional private utility spokesmen to prevent congressional approval of the use of wasted steam from the new plutonium production reactor at Hanford now has been exposed for what it was: First, an ideological fight against Federal entrance into nuclear power production; second, an ideological fight against regional public power agencies. The Portland Chamber of Commerce, which did not join the campaign in support of Hanford development in Congress, may well consider, now, the validity of the arguments which dissuaded it. The private utilities are ready and eager to sign on the dotted line.

Any needed power development which adds strength to the economic sinews of the Pacific Northwest is certain to help everyone, private utility investors included. There will be more power for everyone as a result of the Hanford victory.

Deepwater Harbor for Northern Indiana

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. MADDEN. Mr. Speaker, the following resolution, passed by the AFL-

CIO, of Lake County, Ind., comprising the great industrial Calumet region of Indiana, which I include in the Appendix of the RECORD, speaks for itself: LAKE COUNTY, IND., CLU OPPOSES BURNS DITCH HARBOR—RESOLUTION PASSED ON INDIANA DEEPWATER PORT

Whereas the question of construction and location of a deepwater port in Indiana is of vital interest to our members and their families; and

Whereas this question of a deepwater port has been vigorously debated for many months; and

Whereas the AFL-CIO has adopted sound and constructive policy resolutions pertaining to conservation, slum clearance, and redevelopment programs; and

Whereas the basic issue in dispute revolves around the present contemplated dunes location of the port: Therefore be it

Resolved, That the Lake County AFL-CIO Central Labor Union hereby goes on record advocating a local program of slum clearance, area redevelopment, conservation, and deepwater port in a package arrangement designed to implement the policies of the AFL-CIO; and be it finally

Resolved, That:

1. We are in favor of the construction of a port on Lake Michigan;

2. We believe it to be in the best interests of our members and their families to preserve as much as possible of the dunes that remain. This should be done in the form of a national park.

3. We believe that the best interests of our members, their families, and the taxpayers can best be served by locating the port between East Chicago and Gary so that it can serve the highly industrialized East Chicago-Gary area and will also be favorably located to service the Midwest Steel Co. and other industrial operations in Portage, thereby concurring with and implementing the resolutions adopted by the national AFL-CIO on conservation, slum clearance and area redevelopment.

The above resolution was passed by one of the biggest attended meetings of the Lake County AFL-CIO Central Labor Union Tuesday evening at the Steelworkers Building in Gary.

Will a port at Burns Ditch cure the unemployment problem or will it rob the working man for the benefit of special interests?

Will the port and the mills bring prosperity or will they destroy all possibility of developing the richest, job-producing tourist industry in the Middle West?

Jobs in the steel industry depend on two basic factors, first, the market demand for the steel, and second, the labor time needed to produce the steel. Layoffs result when market demands drop or when a new development, such as automation, cuts down the needed labor time.

Are new mills needed to satisfy new market demands? According to figures in Iron Age, existing steel mills can meet all market demands for the next 30 years. Existing mills are working at only 50 percent of capacity, producing only half as much steel as they could if they could find a place to sell it—employing only half as many workers as they would if they could market the steel.

The new, automated steel mills will take markets now held by the existing, older mills. The older mills, suffering a loss of customers, will be forced to lay off more workers. Joblessness in the older steel-producing areas of Indiana will jump to new levels.

Will the new mills hire the workers laid off by the older mills? New mills are built

with advanced operating procedures and automated processes that require only a fraction of the workers formerly needed.

In a survey of the steel industry by Frank Lynn of the Armour Research Foundation, it is indicated that for every 150 workers hired by the new mills, 250 workers will be laid off by the older mills.

In order to compete with the new, automated mills, the older mills will be forced to adopt more automated operations. The older mills will need still fewer workers. Unemployment will rise again.

Since the percentage of automation in the total steel industry will be greater, the number of employed workers in the total steel industry will be less—much less.

Unemployment spreads like cancer. Decreased purchasing power means smaller markets for consumer goods and more layoffs in other industries.

But won't the Burns Ditch Port make jobs? The Burns Ditch Port will be paid for by taxes on working men and women—it will benefit only the private owners of the two steel companies it will serve.

Indiana already has four ports on Lake Michigan. If we need more ports, a bigger port in the Tri-City area of Indiana (Hammond, Whiting, East Chicago) would cover 16,000 acres—over 20 times the size of the 750-acre Burns Ditch Port—and would provide over 20 times the jobs.

Can we lose anything by building mills and a Burns Ditch Port in our Duneland? Can we lose anything besides picnics?

Steel mills and a port in our Duneland will destroy forever the greatest paycheck-producing opportunity in our State. Yes, our incomparable Duneland can make jobs—if we use it wisely.

The market demand for outdoor recreation grows bigger every year. Areas that offer outdoor recreation also develop steady, long-term employment.

In the words of the Outdoor Recreation Resources Review Commission, "consumer spending for outdoor recreation is now estimated to be in the neighborhood of \$20 billion annually." The Indiana Duneland offers the greatest outdoor recreation attraction in the Middle West. Our Duneland has what other States are spending millions to build—good beaches. New Jersey expects to invest \$28 million to renew washed-out beaches. Our Duneland has miles of the finest, self-renewing beaches in the world.

In Jackson, Wyo., before Teton National Park was established, bank deposits were \$395,000. In 1959 deposits had jumped to \$4,500,000. In the vicinity of the Cape Hatteras National Seashore Recreation Area, trade doubled after the recreation area was established.

If we have the wisdom to establish a national park that will save all that remains of our unique Duneland and beaches, we will boost our entire State economy. Millions of tourists from throughout this country and Canada will flock into Indiana to spend their money.

Taxes? The tourist dollar is a profit dollar. The tourist spends his money and returns home. We do not pay taxes to build schools for the tourist's children. We do not provide unemployment compensation or relief for tourists. In 1960, Gatlinburg, Tenn., gateway to the Smokies National Park, had 3½ million visitors. With an assessed property investment of \$25 million, Gatlinburg had a tax rate of only 85 cents.

Jobs? Jobs providing tourists with food, lodging, clothing, roads, housing, automotive and recreational facilities, and jobs providing a host of related services will raise employment levels.

Payments in Lieu of Taxes and Shared Revenues

EXTENSION OF REMARKS

OF

HON. ALAN BIBLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, January 24, 1963

Mr. BIBLE. Mr. President, the National Association of Counties held its grazing, water, and revenue conference in Las Vegas, Nev., in mid-December of last year.

Mr. Robert E. Wolf, a professional staff member of the Senate Committee on Interior and Insular Affairs, presented an outstanding paper entitled "Payments in Lieu of Taxes and Shared Revenues."

I ask unanimous consent that Mr. Wolf's paper be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PAYMENTS IN LIEU OF TAXES AND SHARED REVENUES

(By Robert E. Wolf, professional staff member for public lands, U.S. Senate Committee on Interior and Insular Affairs, given at the western regional district of the National Association of County Officials, December 13, 1962, Las Vegas, Nev.)

It is again a pleasure for me to come before your association to discuss with you a subject of vital interest. Before I become too deeply involved in the topic, I would like to say that the work of the county officials, your organization and your staff has been both constructive and useful on the national scene. The fact that the chairman of the committee for which I work, Senator ANDERSON, has authorized me to come here at your request, emphasizes this point.

My major staff responsibility is with our Public Lands Subcommittee and Senator BIBLE, of Nevada, your host State, is its chairman. In Washington, I have often heard it said of Nevada's two Senators, "In Nevada you have your choice of getting a job done with a CANNON or a BIBLE."

The subject which I have been asked to talk about—Payments in Lieu of Taxes and Shared Revenues—is indeed a complex one. I took the opportunity to go back to review some of the work that has been done during the last decade. When Paul Carlin asked me to operate in the cleanup position on this panel, I wanted to try my best to avoid either striking out or hitting a pop fly. I must confess, however, that I approach this turn at bat with some concern. My review establishes that while many have come up to the plate, few hits have been made.

Despite all the commission-type activities of the last decade, today all there is to show in the way of change on this subject is another relatively inactive Advisory Commission on Intergovernmental Relations which was established in 1959.

Rather than attempt to recite figures on the vastness of the Federal holdings and their relation to State and local governments, it perhaps would be more useful to discuss the broad policy implications surrounding payments to local governments. This, in turn, may lead you to decide why this is one of those topics on which there has been so much discussion and so little action.

Over the last several decades there have been certain structural changes in Federal, State, and local governments.

Counties have grown in the responsibilities that they shoulder. The demand for services has increased and they collect more taxes. The property tax, as such, while it is up, has actually decreased in relative importance as a source of local revenue. It is this tax, or its equivalent, and the Federal-local arrangement which is the subject of our discussion today.

In addition to what the States do, the Federal Government also has developed a number of programs which distribute money to the counties and to the States. Therefore, it can be said that there is today a greater interconnection and interdependency on the part of all levels of government.

At the outset, I want to dispose of the terms "exclusive jurisdiction" and "retrocession." First, the great bulk of the Federal properties—the national forests and public lands—are not exclusive jurisdiction lands. Second, to the extent that there is private property on Federal lands, that property may be subject to local sales, use, and income taxes.

As you are aware, it is the property tax that may not be levied on private property on Federal lands, nor may it be levied against the Federal lands themselves.

With the exception, then, of the property tax, private developments on Federal properties are subject to taxation.

Your concern, just now, revolves around payments in lieu of taxes and shared revenues on Federal lands.

There are five basic policies that may be followed by the Federal Government:

1. Make no payment.
2. Pay taxes or an equivalent amount.
3. Share income or revenue.
4. Compensate local government in whole or in part for services rendered or hardship caused.
5. A combination of 2 or 3 with 4.

There are examples of all these situations in operation today. The Federal Government has devised a series of compensatory payments to States and local governments and several of these compensatory payments take into account the acreage of Federal land within the State or county. For example, both in the field of education and highways the Federal Government has also made direct payments. Various highways are eligible for up to 100 percent Federal financing.

The most common arrangement for payments directly to counties, in the nature of taxes, are shared revenues. There are numerous techniques that have been devised. In at least one minor case, the Coos Bay Wagon Road lands in Oregon, payments are on a tax-equivalent basis. In another case part of the Minnesota National Forest, payments are set at three-quarters of 1 percent of the Federal Government's estimate of the value of the lands. Usually, the Federal Government has used a system of paying a percentage of revenues to the local government.

A few pertinent figures here might be enlightening: In 1960 the Federal Government paid to States and counties property taxes, payments in lieu of taxes, and revenue-sharing payments totaling \$103 million, of which \$85 million came from the last category.

In addition, \$516 million was paid in cash, or in kind, to supplement services commonly considered basic to local government operations.

Included here are: \$258 million in education funds for impacted areas; \$120 million, a credit in the Federal highway formula because of the presence of Federal lands; and at least \$140 million representing the direct Federal expenditure for roads on Federal lands, such as national forests, parks, public lands, and Indian lands. The total is about \$630 million. It is important to note that the indirect payments are five times greater than the direct payments for tax or tax-equivalent purposes.

You are the people responsible for conducting the affairs of local government and, thus, there falls upon you the direct responsibility for raising the taxes needed to support the local services demanded. The need for operating revenue exerts a constant pressure upon you. It is not surprising that where Federal lands are a significant part of a county you look to these lands to help supply a proportionate share of needed local revenues.

It is not unusual to hear people exclaim that Federal lands should be "put back on the tax rolls." However, this statement is often erroneous because most of the Federal holdings are original public domain lands which never have been on the tax rolls. Only the acquired lands were on the tax rolls. The submarginal lands purchased in the thirties usually were not producing tax revenue and were tax delinquent. It is only after these lands are rehabilitated at Federal expense and again productive that a "tax loss" argument begins to be heard.

In cases involving defense and other related activities, lands have been taken from the tax rolls. Where lands are acquired for Federal or State purposes, as you know, direct and indirect payments are usually made.

In almost every case of Federal acquisition there has been consultation with and approval from the local government. Nonetheless, the contention is often made that the tax roll has been reduced, despite the welcome that has often been given to the original Federal acquisition.

Another concept which is often urged is that the public lands be placed on the tax rolls through sale to private individuals. Despite the archaic nature of the public land laws, it has been possible for private citizens to acquire public lands. The fact that they are not under private ownership stems as much from the lack of sufficient private interest in their acquisition as it does from any alleged interest on the part of the Federal Government in holding these lands. There is some reason to believe, for example, that on the Taylor grazing lands, which approximate 180 million acres, it would be more costly to the ranchers to own the lands in fee than to use them under the current system of grazing fees.

A few years ago, the Senate Interior Committee was told that the woods were full of lumber companies eager to purchase one of the finer ponderosa pine forests in the West, the Klamath Indian Reservation. The great bulk of these lands were added to the national forest, due to a lack of private buyers.

It is interesting, when reflecting upon the "value" of these lands, while private buyers were hard to find, some of the Klamaths now are suing the United States for not paying enough for the lands. From the standpoint of the counties, there is reason to believe that the revenue-sharing payments will equal the taxes that would have been paid in private ownership and there is the assurance that the resource will be productive in perpetuity.

Certainly, it is evident in the field of mining claims on public lands and national forests, where there is a clear device for securing a patent, that many claims have been held, worked and dropped without ever an effort to obtain a patent. The improvements made by the claimholder may be taxed by local government because these are not exclusive jurisdiction lands.

County officials should be well aware that if citizen can get the fruit of title without the capital investment, and in the process can escape local property taxes no matter how modest they may be, he may feel impelled to do this. When one urges private acquisition he may be talking into the wind because the sum of the private interest in acquisition may be so small that nothing concrete can be expected.

There are others who talk about Federal lands and their resources in terms of an argument for "tax equality," contending that some existing shared revenue provision, such as that in the Mineral Leasing Act, is not equitable to the State or local government. This group runs into a different situation. First, the division of mineral leasing revenues is 37½ percent to the State and the balance to the Federal Government. However, 52½ percent goes to reclamation and only 10 percent finds its way into the Treasury. Any reduction of the Federal share would adversely affect the reclamation fund. Since legislation to change the mineral leasing formula must proceed through the same committee which is most concerned with reclamation legislation, the difficulties presented should be obvious. In addition, the mineral leasing revenues go directly to the States and it is up to the States to decide the extent to which individual counties receive a share of the revenues.

In fact, in most of the shared revenue formulas the Federal funds are granted to the States. They decide how the counties shall use the funds and, in some cases, they can decide whether or not the counties will receive any money.

However, the major factor to consider in something as substantial as the Mineral Leasing Act is whether there is any rationale for changing the formula. Thus, now the Western States not only ultimately get 80 percent of the mineral leasing revenue, but also they are further strengthened by the presence of this account in the reclamation fund. This ensures that this program is better able to provide the wide benefits of water resources development for the arid West.

The complex interrelationship between the Mineral Leasing Act and the reclamation fund, coupled with the fact that the Mineral Leasing Act makes a most substantial payment to the States, certainly suggests that there is more involved than a simple question of tax equality.

The public domain land and timber disposal laws provide that but 5 percent of receipts be granted to the States and counties. On the other hand, the balance, 95 percent, goes into the reclamation fund. Here again the same set of relationships exist, as is the case in mineral leasing.

On the national forests there is a direct revenue-sharing of 25 percent of receipts, plus an additional 10 percent of receipts allocated to the Secretary of Agriculture to spend on roads. The cause of some concern in western counties has been the reservation of revenues—I might add, fully authorized by law—for such things as brush control and timber stand improvement. When these revenues are kept for the purposes authorized by law they provide for substantial local investments in continued forest productivity which, in turn, protects the economic base of the communities.

If my talk, so far, seems to have rambled and is a bit incoherent, this should not worry you too much, except as to my speaking ability. The fact is that the whole system of payments in lieu of taxes rambles and is filled with inconsistencies. If you are seeking a consistent approach, you won't find it in this field. But there is evidence to suggest that the inconsistencies are not necessarily fatal.

The problem that faces the counties is finding adequate local revenues. It brings you small comfort to recognize that more direct and indirect Federal expenditures occur locally because of the presence of Federal land than is apparent in examining the shared revenues available to the counties. Your interest is in maximizing direct income. Proceeding from this thesis, I would like to lay out a few of the policy implications that you may wish to consider.

Many of the shared revenue formulas require that the money received be spent on schools and roads. This has been a continuous aggravation. But, is it a real problem? The Federal legislation usually provides that the State legislature will decide the proportion allocated to schools or roads. As you know, in each State the school and road people rather jealously guard the proportion of the particular shared revenue allocated to their function.

If, in reality, the total amount expended on either of these programs is substantially greater than the amount in shared revenues, the presence of the restriction is not damaging. It is only when such a restriction would force spending more on schools or roads than the county contemplated that a problem exists.

One of the major suggestions of the 1955 Commission in Intergovernmental Relations was that the limitations on the spending of money for schools and roads, found in many revenue-sharing formulas, be eliminated. I suggest that the counties view this recommendation in the light of fiscal reality.

Another type of suggestion is one which would result in a better definition of the funds which should constitute receipts for the purpose of determining shared revenues. Suggestions are made from time to time as to the effect of brush control and timber stand improvement programs, the effect of exchanges of land and the cost of constructing roads through deductions in the price of the timber on national forests and public lands. These are all claimed to have an impact on the payments to the counties. While it may be true that there is an impact on the payments to the counties, it is also true that these funds are spent locally and, thus, totally benefit the local economy. In other words, if it were reasonable to revise the law so that these expenditures would be treated as revenue for tax purposes, would the result be consistent with the treatment of similar private property?

This year the Federal Government will spend \$96 million on forest roads and highways. In addition, \$40 million worth of roads will be secured by the deduction in the price of timber which has its effect upon the counties. For reforestation and stand improvement the direct Federal expenditures will total \$15 million while timber sale expenditures will be on the order of \$14 million. Viewed in balance, what should be the arrangement and the proportions so as to fairly recognize the impact on shared revenues?

One of the more substantial problems in shared revenues stems from the fact that almost universally the payments are made as a percentage of income. If the sale of public land goes up or goes down, or the sale of resources—such as timber, grazing privileges or minerals—varies, the income of the county varies accordingly.

There is a paucity of information on the relation between the location of revenue production and local burdens, as well as whether there is a direct tie between economic activity and local costs which is not properly treated by present formulas.

There is also the issue of whether payments should be better stabilized and made more regular.

The only two public land formulas which produce stability of income are those on the Coos Bay Wagon Road and the Superior National Forest lands. The former pegs the payment to the two counties involved at the equivalent of taxes on comparable private land. The latter approach makes the payment on national forest land three-quarters of 1 percent of the value as determined by the Federal Government. In both of these approaches and appraisal is made every 10 years which forms the basis for payments in the subsequent decade.

There have been various alternatives offered for stabilizing shared revenue payments. One device suggested to produce stability is the use of a 5-year moving average. This would tend to smooth out some of the irregularities in payment.

There are approaches in addition to the Coos Bay lands or Minnesota lands systems. Certainly, it is a fact that a revenue-sharing formula applied to a county where no revenue develops hardly compensates that county. Five, twenty-five, or seventy-five percent of nothing is still nothing.

However, equally important is the question of whether the counties wish to examine the rationale upon which payments are made. In the case of public domain timberland, the direct payment to the counties is 5 percent of income. For the Coos Bay lands it is a tax equivalent. For the national forest, generally, 25 percent of income. All four of these classes of land can be found side by side in the State of Oregon and each of them returns different amounts to the counties in which they are located.

There is no evidence which suggests which formula, in and of itself, whether you take into account other indirect Federal benefits or you do not, produces a fair sharing of revenue with local government. The same thing can be said for the formulas dealing with other types of land and with resources.

As far as I know, while there have been many studies made by the Federal Government, the counties themselves have not made their own analysis of the situation. Despite all the studies and talk, virtually nothing has been done to change these formulas, some of which are now 60 years old.

There is no doubt that some shared revenue formulas produce hardships for some local governments because if there is no revenue or if the revenue is very small, the payment to the county is nonexistent or minute.

There is little doubt that the formulas are not only uneven in similar land and resource situations, but, also, that they are not consistent in meeting the tax needs of local governments.

Canada devised a rather interesting approach to the situation, which has been both commended and condemned because of its simplicity. Virtually all national property in Canada exceeding in value 4 percent of the total property evaluation in any municipality pays an amount not to exceed three-quarters of the amount that the local tax would be if it were privately held. In addition, the Canadians, like ourselves, have developed various additional grant-in-aid programs.

Certainly, any consideration of the national revision of our own system could well include a careful review of the procedure which Canada has apparently found meets her needs.

Where you are dealing with the concept of payment in lieu of taxes as a tax equivalent or as a shared revenue, the realities of the situation require recognition. Under the Constitution, the Federal Government is not required to make tax or tax equivalent payments to local government. It has long done so and there is virtually no Federal property which does not, in some way or other, make a direct cash contribution to local government. In 1960 these payments totaled \$630 million.

The States carry the same immunity from local taxation and it is not possible for a county to tax the capitol dome in any State. It is hardly likely, within the scheme of things, to expect either the Federal or the State government to submit the property under their proprietorship to local taxation. In fact, there is some evidence which indicates that, in some instances, the States are more restrictive than the Federal Government.

Any substantial effort to achieve the ultimate goal set by some spokesmen, which would have the effect of placing all Federal

and State property on local tax rolls, probably could only be achieved if, in the process, the entire structure of other grants-in-aid were upset. This is true because the rationale for a great deal of Federal aid is that the Federal Government does not pay local taxes and supplementary assistance is necessary because of this fact.

In the years that lie ahead, local governments are going to continue to find that their sources of revenue are more difficult to tap. No doubt, one of the factors which has led to increased action in State legislatures and in the National Legislature to plow back State and Federal income through grants of various types to local government, is the recognition of the political difficulty local government has in raising taxes. Citizens who are interested in schools, roads, mental health and various other governmental functions, appear before you as county commissioners asking for these services. At the same time, they will often rebel, when you institute the necessary increases in property taxes, to provide the services they ask. In the Washington, D.C., area, in one of the wealthiest counties in the Nation, the taxpayers threw out all the incumbents because of a 37 cents tax increase announced a few weeks before election. Intuitive recognition of this possibility has led both those who want increased services by government and those who are responsible for administering local government to turn to State and National Legislatures with the request that they collect taxes and devise programs which indirectly do what is not considered feasible locally.

Particularly in our Western States where there is so much Federal land, there is always a warm interest in maximizing the shared revenues from the Federal holdings. This, too, is a natural because it represents a way to increase county income without levying a direct tax on the local voters.

What I have endeavored to do today is to lay out for you, as best I can, some of the considerations which come into play when you enter into a realistic appraisal of what may be done on payments to local government.

If this is a subject worth doing something about, it deserves a far different type of approach and effort on the part of the counties in the future than it has had in the past. Because of the complexities of the subject, it would be unrealistic to expect any results if you did not gather substantial data and facts and look at the question from the standpoint of the likely reaction from those whom you are asking for a change.

Federal lands and private developments on Federal lands are not automatically subject to property taxes. Federal land holdings, then, produce this sort of picture. Where there are private facilities on Federal lands you may collect sales, use and income taxes, if the lands are not subject to exclusive Federal jurisdiction. Purposely, I have only touched lightly upon the question of levying property taxes upon private property on Federal lands, for this broad and complex issue really is not a part of the subject before you.

Interwoven with the shared revenue formulas is the system of grants-in-aid. These are certainly related subjects.

The problems that most affect the counties with Federal lands are the adequacy of shared-revenue payments in relation to similar taxes on like lands; the stability of income; the basis upon which Federal receipts are classed as income for revenue-sharing purposes; the rationale for applying different formulas to lands which have the same economic purpose; and the question of compensating counties where no Federal income is developed to share with the counties.

To the extent there is disagreement within your ranks on what the basic issues are and

what the solutions should be, your ability to close ranks and move forward together will be hampered.

The Congress usually acts in a comprehensive field such as this only when there is some agreement among the proponents for the change.

If the recent past suggests anything, it is clear that a need for more money—a greater share of the Federal revenue from these lands—has not brought about a change.

The National Association of Counties has become a revitalized organization over the past few years. There is considerable evidence to suggest that after you have considered this subject and assigned to it a priority, you will proceed in a careful and comprehensive approach. Certainly you can then expect the Congress to listen attentively to your views and to endeavor to chart a route responsive to your real needs.

Dick Shelton

EXTENSION OF REMARKS

OF

HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. WHITENER. Mr. Speaker, on Monday, January 21, 1963, Richard L. Shelton, editor of the Shelby Daily Star, Shelby, N.C., passed away as the result of a severe heart attack. The passing of this outstanding citizen of North Carolina constitutes a great loss to his family, his community, and the newspaper profession.

Dick Shelton was only 37 years of age at the time of his unfortunate death. It can be accurately said that he had just arrived at his most productive stage as a member of the profession of newswriting. His work had been recognized by the North Carolina Press Association through awards for outstanding editorial and news work that he had done.

Dick Shelton was my close personal friend and his passing constitutes a great personal loss to me.

Under unanimous consent I include an editorial from Shelby Daily Star of January 22, 1963, entitled, "Cleveland Has Lost Talented and Dedicated Adopted Son," and an editorial from the Gastonia Gazette of January 22, 1963, entitled "Dick Shelton, Editor, Shelby Star," in the Appendix of the RECORD. [From the Gastonia (N.C.) Gazette, Jan. 22, 1963]

DICK SHELTON, EDITOR, SHELBY STAR

The death of Dick Shelton, editor of the Shelby Star, left this entire area shocked yesterday.

Mr. Shelton, a personal friend of us at the Gazette, was deeply loved by those who knew him. He had fine qualities of leadership and his ability to determine the truth and follow after it vigorously do not come often to a person.

Dick was only 37 years old, young by any standards. He had proved himself a capable newspaperman in the past. His future was bright. He brought to the profession an unusual understanding of problems all the way from the community level to the international scene.

He wrote with clarity and purpose. His editorials marched along with a commanding cadence; yet, they were interesting to

the point that caused continued reading and later comment when friends would meet on the street.

Shelton was an amiable man who smiled easily. For his friends, he would do anything; for his enemies, he was tolerant.

The Shelby Star and the entire area it served will miss Dick Shelton sorely.

We extend our sincere regrets to his fine family.

[From the Shelby (N.C.) Daily Star, Jan. 22, 1963]

CLEVELAND HAS LOST TALENTED AND DEDICATED ADOPTED SON

No native-born son could have felt more responsible for the overall well-being and future progress of this city and county than Dick Shelton.

His span as an adopted son was brief. But in the few years that he called Shelby and Cleveland County home, Dick Shelton delved to the very core of this community's being, studied its past, planned for its future, made its needs his needs and its hopes and aspirations his hopes and aspirations.

He was dedicated to the end to giving as much of himself as possible toward helping guide the community, slowly, gently, and wisely along a course of justified growth and progress.

Dick Shelton was a every inch a newspaperman.

He lived and worked clutching the deep-seated belief that a good newspaperman and his newspaper justify their existence only by accurately and fairly reporting both good and bad in the news columns and dedicating the editorial columns to unselfish public service.

He made that his unqualified goal.

First as associate editor of this newspaper and finally as editor, Dick Shelton used his uncanny ability for penetrating thought, discerning decisionmaking and powerful writing to give editorial leadership to a score of justified and successful projects.

He nurtured a profound belief that his daily mission was to make his editorial columns, as nearly as humanly possible, the printed conscience of this community.

A community victory in some prodigious undertaking could spur him to hearty, satisfied laughter. A decisive defeat of what he considered a community necessity struck sharply at the very core of his being.

There were occasions when time and events proved him wrong in an editorial stand. He was the first to say, "I goofed." But when he erred, and it was seldom that he did, it was because of a sincere misjudgment. There was nothing petty or narrow about the man.

There was nothing pretentious about Dick Shelton. He never attempted to give the impression that he was anything other than a happy, hardworking newspaperman.

His friends and associates will long remember that he also was an alert, dedicated, conscientious, strongly opinionated and colorful husband, father, editor, and civic leader.

He was a Christian gentleman who loved his church and channeled much of his energy in its direction, serving as a member of the choir, a Sunday-school teacher and as a member of the board of deacons.

He confided to those closest to him on occasion that he never took a profound interest in the church until he moved to Shelby. It was here that he made himself useful and important to his church and made it a significant part of his basic existence.

Dick Shelton's sparkling brand of writing won him statewide acclaim in newspaper circles and his earnest desire to be a part of this community placed him at the forefront of activity at his church, in the Shelby Chamber of Commerce, the United Fund, civil de-

fense, industrial procurement and community betterment projects.

Dick Shelton was a many-faceted talent. His death leaves a gaping hole in the community which will not soon be adequately filled.

A Legacy From George Y. Loveridge

EXTENSION OF REMARKS

OF

HON. JOHN O. PASTORE

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, January 24, 1963

Mr. PASTORE. Mr. President, on the 17th of January, suddenly, in the city of Providence, R.I., George Y. Loveridge passed on.

He was a writer, and a great part of his career, after Brown University days, with the Providence Journal-Bulletin, though a goodly part expressed in books and stories sought after by national publishers.

The requiem of a writer is in the legacy of the literature born in his mind, heart, and soul. Man loves to linger on the beauty of thoughts framed in lovely language, though that language may still have the humility of simplicity and the homeliness of a hand shake.

George Loveridge had the rare gift of thinking thoughts that would echo in the reader's consciousness as something the reader himself felt but never with the poetry of the prose that George Loveridge fashioned.

His themes of yesterday will be read and reread. And we are further promised themes he had readied, but not released when the pen fell from his hand.

"I Appointed Myself To Enjoy a Tree" is just such a treat. We sense the appraisal of his fellow writers in the introduction they prepared.

That each and all may have the personal experience of wandering and wondering with the splendid mind of a splendid man, I submit the theme in its entirety, "A Legacy From G.Y.L."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A LEGACY FROM G.Y.L.—I APPOINTED MYSELF TO ENJOY A TREE

(George Y. Loveridge, one of the finest writers ever to have worked on these newspapers, died suddenly Thursday night. A number of pieces on people and things that caught his perceptive eye in Rhode Island were still unpublished at the time.)

(By G. Y. LOVERIDGE)

Many men and women know what a tree is, but few, I think, have the time to stop and enjoy one, so I appointed myself, the other morning, a deputy to enjoy a tree for busier people.

There are thousands of tax-supported trees in Roger Williams Park, and any citizen is eligible to go, as I did, and look at them.

The tree I looked at was a beech, like a great silver candelabrum. It was not the most handsome tree in the park, nor the

mightiest, but it was evidently the tree that destiny had directed me to, and I was well satisfied with it.

Its span, estimated by pacing, was 60 feet. Moving around it with outstretched arms, I found its girth to be about 10 feet.

Then I drew away 150 feet and sighted at the tree with a fountain pen, like an artist measuring the tree's height before sketching. Making use of some not very abstruse triangulation, keeping in mind that the product of the means equals the product of the extremes, I calculated the height of the beech at about 60 feet.

From the short, thick, silvery trunk, at a height of about eight feet, there gushed a great number of smooth branches, dividing, dividing, dividing until they ended in thin, sharp, dark reddish needles.

Some of the branches had rubbed and wounded others, some bore eye-shaped blemishes, but most of the branches were clear and vigorous. Hardly a bedraggled score of leaves remained, shivering at intervals. A few dead twigs lay under the tree.

The roots plunged into the turf like powerful fingers, performing out of sight of man their prime, mysterious function. From an orifice in the trunk, a thin liquid flowed, staining the bark.

Many a jackknife had been at work in the years of the tree's maturity. Here R.G., D.C., N.Y., N.K., and others had cut initials that have perhaps outlived them—in rectangular plaques, in hearts, some without borders, not only to the height of the first branches but up among the lower branches themselves.

Bordering the turf was a curb of concrete, in which was embedded a small bronze shield. It was the trademark of the thirties, "1935 WPA 1938."

The beech itself was asleep, and there was little life among its branches. A lone starling, staggering back from a sociable night in town, set for a few moments on a limb. A gray squirrel darted onto the trunk, changed its mind, and undulated away over the grass. Scores of cars, taking a short cut to work, swished past.

The morning sun lay warmly on the east side of the tree, draping shadows across the western limbs, leaving that side of the trunk dark; the trunk, its shadow and the lawn formed a sundial from which a person with sufficient knowledge might have read the time of day.

Through bare, innumerable twigs and branches one could see such various things as a white cloud, blue sky, Brig Gen. Casimir Pulaski seated on a spirited horse and flourishing a bronze sword, and the Betsey Williams Cottage.

On the opposite side, wild ducks skidded down onto a pond, and geese honked and swam in truculent armada. The water winked and blinked as it flowed out of the shadow of a granite bridge into the sunlight. Now an athlete appeared, a boy in white pants, sweatshirt, and glasses, trotting along the margin of the pond. Geese waddled on the grass, while pigeons got out of their way.

I wondered how old the tree was. A hundred years, perhaps. I saw it as a seed, a seedling, infallibly selecting what it needed from earth and air, building itself into a splendid structure.

Like the steadfast tin soldier, it had stood in snow, in rain, in sunlight, in moonlight, through hurricanes and thunderstorms, now magnificently dressed, now naked, fulfilling an inscrutable destiny. From nothing it came, and to nothing it would someday return, but its elements would rise up again, as grass, insects, birds, flowers, other trees.

I walked once more around my beech, saluted it, and left.

The Future of Antisubmarine Warfare

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. BOB WILSON. Mr. Speaker, through the past years the Congress has been genuinely concerned with respect to the antisubmarine warfare capability of our country. One of the most persuasive advocates for increased concentration in this field has been our distinguished colleague from Wisconsin [MELVIN R. LAIRD].

Those of us in San Diego have a unique opportunity to see and hear at first hand the work being done in antisubmarine warfare and also we are very much aware of some of the shortcomings that we have in this very vital segment of our defense.

A very penetrating article has been written by MELVIN LAIRD entitled "The Future of Antisubmarine Warfare." I respectfully submit that this is must reading for all of our colleagues.

Under unanimous consent, I include Mr. LAIRD's article that appeared in the December 1962 issue of Data, the magazine of research and development management, herewith in my remarks:

THE FUTURE OF ANTISUBMARINE WARFARE

(NOTE.—Biographical sketch of MELVIN R. LAIRD, Republican Congressman from Wisconsin: A veteran of 10 years in the U.S. House of Representatives, 40-year-old Congressman MELVIN R. LAIRD, of Wisconsin's Seventh District, is considered an outstanding young national leader by Republicans and Democrats alike. As a member of the Appropriations Committee, the Defense Appropriations Subcommittee, and as a Navy veteran, Congressman LAIRD is well qualified to air his viewpoint in this undersea warfare edition of Data.)

(It was LAIRD's amendment 4 years ago that increased funding for the Polaris submarine program over and above the recommendations of the Department of Defense. Without LAIRD's Polaris amendment we would currently have only two Polaris submarines instead of the eight which are on station today. But not one to favor only one service, LAIRD introduced a similar amendment for more funding for the Air Force's Dynasoar program during the 1962 session of Congress in order to make possible the first orbital flight of this Air Force manned military space vehicle early in 1965.)

(By Hon. MELVIN R. LAIRD, of Wisconsin)

The Congress, for many years, has stressed the need for an improved and accelerated antisubmarine warfare (ASW) effort. Unfortunately, the general public is unaware of the immense potential, as well as actual, threat the Soviet submarine poses to the United States. Nor, I am afraid, is the public cognizant of the inadequacy of our response.

Outer space today is the center of public and official attention.

Inner space, though not neglected, has not been adequately funded or explored.

In fiscal year 1963 we will spend \$5.5 billion for all of the various space agencies.

Our expenditures for ASW and oceanographic research, however, will be less than a half billion dollars. (See table 1.)

It is not my intent in this article to advocate abandonment of our space effort. Rather, I am suggesting that we take a closer look at inner space from a very pertinent perspective; the long-range security and defense of the United States.

We may reach the moon and control it, but in so doing we may lose control of the seas. And as B. D. Thomas, president of the Battelle Memorial Institute, so aptly phrased it, " * * * the power that control the oceans can control the power that governs the moon."

The reasoning that gave rise to Mr. Thomas' above-quoted remark is worth repeating if only to stimulate discussion in an otherwise little-pursued direction:

"It is a sad commentary on our national support of science that much of it derives from a superficial response to Russian prodding. The Russians launch a satellite, and we rocket into a headlong race into space. It is a fair question to ask: Can this be a ruse? I am not suggesting that our space program should be whittled down; I am merely asking that we consider for a moment the hypothesis that the next war will be won not in outer space but on the bottom of the sea. The Russians boast about their missiles and their 100 megaton bombs; they are very quiet about their submarines. They make a lot of noise about their men in space; they are very modest about an effort in oceanography several times as large as ours. What a brilliant military exploit it would be to send us off to the moon, while they seize the ocean. By some logic I have never been able to understand, it has been asserted that the power that controls the moon can conquer the earth. We might add * * * that the power that controls the oceans can control the power that governs the moon."

How pertinent or prophetic this may be must be left to future historians, but we cannot afford to deny its seeming logic today.

Our Polaris submarine has already demonstrated its potential as the almost invulnerable weapon of the present.

Almost invulnerable because we can neutralize this weapon—but only by destroying the submarine that carries it.

Thus, the very compelling reason for a vigorous ASW program.

PROBLEMS IN ASW

The problems confronted are admittedly numerous, complex, and in many cases, almost defy solution. But then, so is space complex. The phenomenal advances we have made in the space environment in so short a time however, demonstrate that if there is a solution in ASW, given proper leadership, incentive and funds—the solution can be obtained.

First however, the urgency in developing adequate ASW techniques must be demonstrated.

The tendency today is to give the ICBM first place in the litany of deadly weapons. Secretary of Defense Robert S. McNamara told our committee in 1961 that " * * * only a year or so ago the principal general war threat to our security was a surprise attack by large numbers of nuclear-armed manned bombers. A year or two from now our principal concern will be a surprise attack by large number of nuclear-armed ICBM's."

I would agree with the Secretary that we face a dire threat from ICBM's but I would not call this the principal general war threat for the immediate years ahead.

The reason is that the nuclear submarine—the so-called absolute submersible—wedged as it is to a ballistic missile that can be launched from almost any position or any direction in the 70.8 percent of the world's surface that is ocean, is harder to detect, defies surveillance, and is highly mobile.

Further, it must be assumed that—

1. The Soviets have our hardened missile sites pinpointed and under constant surveillance.

2. The Soviets can track such a missile when launched, and either now or soon bring it down.

3. The Soviets have inaugurated a crash program in the U.S.S.R. to improve the quantity and quality of their Polaris-type nuclear submarines.

Ladislav Farago, in his recently published "The Tenth Fleet" (Ivan Obolensky, Inc., New York, 1962) tells us that " * * * the most significant new development in the Soviet Navy, that began in 1958, was a shift of emphasis from the quantitative buildup to a qualitative improvement."

Today, although we have the edge because of our Polaris submarines, it is quite conceivable that we will lose this edge.

In my new book, "A House Divided: America's Strategy Gap" (Regnery, Chicago, 1962), I pointed out that the cries of "missile gap" in the 1958-60 period were without foundation, but that a gap could develop if the Soviets got a breakthrough in their missile and missile defense development programs before we did.

This also holds true for any antisubmarine warfare gap. There is little likelihood that the Soviets will overtake us in offensive submarine warfare in the immediate future. But on the defensive side, the picture is not so reassuring.

In our committee report for 1961 we stated: "It is obvious that in this field, as in others, offensive capabilities have far outstripped the known defensive measures."

In that same report of our Defense Appropriations Subcommittee, we quoted what Adm. John T. Hayward, Deputy Chief of Naval Operations (Development), told us in his testimony that by 1970 "every submarine, not only special submarines such as the Polaris, will be able to carry a missile and thus pose a substantial threat to our homeland against which defense methods must be developed."

If this is true, and there is little reason to doubt it, the present Soviet fleet of some 497 submarines (see table 2) will pose an almost intolerable threat. If by then we have not developed adequate ASW measures. This is particularly noteworthy when one realizes that our submarine force, by the end of 1962, will number just over a hundred not counting the Polaris and Regulus.

As I pointed out earlier, a submarine-launched ballistic missile poses a more complex, and therefore greater threat to our defenses than the ICBM. Without knowing the precise location of the launch point, the mathematical computation of the trajectory becomes extremely hard to determine. In fact, it cannot be solved within the short time a submarine-launched missile will be in the air.

R.D.T. & E. TO COUNTER THE ASW THREAT

How then do we counter such a threat? Obviously, by increased efforts in ASW, especially in the area of research and development. We cannot rely solely on developing an effective antimissile missile in time to defend against the coming Soviet proficiency either in ICBM's or in submarine-launched Polaris type missiles.

The first major problem—one in which my committee has long been interested—is proper management of a coordinated ASW program. I was, and still am, convinced that the best solution would be to have a single manager similar to that provided for the Polaris system. According to the Navy, however, this could not practically be implemented. Instead the Navy came up with a compromise in the establishment of the Office of the Director for ASW research and development programs within the Office of the Chief of Naval Operations. The highly qualified Rear Adm. William H. Groverman

was assigned to this position to act as czar for the R.D.T. & E. aspects. I am sure our committee will give Admiral Groverman its full support.

Procurement too is a major problem. Modern ASW equipment is costly to procure and difficult to operate. Even with expanding defense budgets, we cannot afford all of the funds required to equip fully all of the ASW forces needed to combat the submarine threat. But substantial increases should be in order.

In fiscal year 1962, the total ASW budget in R.D.T. & E. and procurement amounted to \$236 million and \$1,734 million respectively. In fiscal year 1963 they both increased to \$293 million and \$1,924 million.

By themselves, these are substantial amounts. And the fact that we have added funds in this area in recent years shows that we are not complacent; but at the same time, the total amounts allotted have not sufficiently demonstrated the urgent concern such a threat should give rise to.

Alongside the space effort, ASW figures pale in comparison. For fiscal years 1960 to 1963 inclusive, we will have spent approximately \$12 billion for space research, development, and procurement as opposed to just under \$1 billion for our ASW efforts.

Surely, if what was pointed out earlier about the submarine threat is true, we can afford to devote more than one-twelfth (8.3 percent) the amount given to space for an adequate defense against the great threat from the sea, especially when we allude to the fact that \$4 billion of the \$5.5 billion in our space budget is devoted to the non-military aspects of space. This fact should give rise to a searching dialogue on priorities within the total defense picture.

To date, however, even operating under the handicaps imposed both by a lack of sufficient R.D.T. & E. funds and the diversified efforts in the Naval Establishment, now partially corrected, our advances in ASW have been impressive and gratifying.

PROMISING WEAPONRY

A year ago, Representative GLENARD P. LIPSCOMB, of California, and myself took part in Operation Slamex, which was the first full-scale testing of our newest ASW equipment. We were extremely pleased with the development we witnessed, but the fact remains that this new equipment will do our ASW efforts little good if they are not introduced into the fleet at a fast enough rate.

One of the problems that costs time is testing new equipment. The instrumented test ranges being constructed, such as AUTEC, will do much to improve and expedite our evaluation techniques, and hopefully will speed up introduction into the fleet.

The primary purpose of ASW is to detect, classify, locate and destroy enemy submarines. Destruction is the easiest part. In the field of weapons development we are making excellent progress. New propulsion techniques combined with new sensors for acquiring and following a target enable us to destroy submarines at ranges compatible with the new increased sonar ranges we have developed. Our new weapons will include Asroc, Subroc, Dash, MK-46 torpedo, and a complete variety of ASW mines.

I have been highly interested in the MK 46 torpedo because of its versatility. It is a lightweight torpedo, still under development, that will provide both our ships and air ASW forces with a weapon payload designed to cope more effectively with the predicted threat of potential enemy submarines. Our committee added \$7 million to the funds requested for the MK-46 to insure successful completion on schedule.

As to the Asroc and Subroc programs, I was fortunate enough to take part in the first firings and evaluations of these systems against nuclear submarines. The antisubmarine rocket system (Asroc) has already reached completion and is being installed

In our surface ASW ships. With this system, they can attack and destroy submerged enemy submarines many miles away as soon as they are detected and identified. Its payload can be either a nuclear depth charge or a lightweight homing torpedo.

One other weapon, especially current today, is the Drone antisubmarine helicopter (Dash). It will be introduced into the fleet this month. Dash can be launched within seconds from a specially constructed platform on the deck of a destroyer. It can then be swiftly and accurately guided to the immediate vicinity of the enemy submarine, drop a homing weapon and then return to the controlling ship. Though it has been likened to a guided missile, it has the unique feature of being recoverable with its weapon load intact. This simply means that the tactical commander has a degree of flexibility unavailable in any other system. He can react instantly without being committed to attack. With this capability of destroying an enemy submarine before it is within the torpedo range of our ships, Dash provides the fleet with a revolutionary ASW weapon.

However, no matter how sophisticated our ASW weapons, no matter how accurate, they are without utility if our detection, classification and localization systems are deficient or inadequate. Even in this obstacle-ridden area, we have made significant progress. The sonars being developed, as I mentioned above, have a tenfold increase in range over those now in the fleet. Helicopter-towed sonars, as well as fixed and mobile installations are being developed which will tremendously improve our present capabilities. Unfortunately however, when we go for longer ranges, environment becomes a controlling factor. For example, an increase in power will give an increased range but only up to the point of cavitation. Beyond this there is no gain to be achieved by using increased power. Another crucial point in this regard is that oceanic conditions such as changes in salinity or temperature between the attack ship and the target will bend the sound ray by presently unknown amounts. We must therefore continue to improve our support of an increased oceanographic effort so we can learn just what effects the oceans will have on our future systems.

MORE TIME AND MONEY NEEDED

What can be done to improve our ASW capabilities? The two most important ingredients are time and money. Our Nation has the resources and our Navy has the technical competence to develop, evaluate and procure the systems necessary for an adequate ASW defense. To date, however, we have not been giving the ASW program proper support.

A long-range plan is an absolute must to develop and procure the weapons and associated equipments required for future

ASW. Such a plan should delineate in great detail our present capabilities and our future fleet requirements. Once these are known a program should be developed which will meet the fleet's requirements and at the same time be capable of implementation within our available technical and manpower resources.

Too often in our planning do we let available funds determine the actual program. This results in a hodgepodge of unrelated projects that are designed to meet a certain budget. In my opinion, once a program is established, the only thing that will change it are new developments which modify the state of the art or new requirements to meet a different type threat. Funding limitations control only the rate at which the program is to be accomplished, or in other words, the schedule. If a job can be completed in 1 year with \$1 million but R.D.T. & E. only get \$500,000 for that year, then it will obviously take 2 years to complete the project. In such a case, the program is not changed, only the schedule.

But in the area of ASW, if a project that will add to our ASW capabilities can be accomplished in a certain period of time, fund limitations should not be allowed to interfere with the most accelerated schedule possible. For in this area we are not dealing with desirable items, but with necessities for our very survival.

In my book I advocated the establishment of a priorities review board for defense mat-

ters. A realistic priorities system that cuts across all of our defense efforts is the only meaningful way to get the necessary job of defense done. Many programs in the Defense Establishment get top priority rating. ASW, the Navy assures me, is one of these. And yet, in last year's hearings, Adm. George Anderson, Chief of Naval Operations, told our committee that " * * * we see no major breakthrough on the horizon for antisubmarine warfare, no panacea to solve our problem."

We were also told by Admiral Anderson earlier in last year's hearings that "the particular threat which we recognize as increasing—and I would not minimize in any degree the fact that this threat is increasing—comes from the Russian submarine." He then said that in his opinion this means that "we have a limited period of time in which we can greatly increase our own anti-submarine capabilities, particularly as they pertain to coping with this threat of the missile launching submarines."

Clearly then, accelerated, improved, and inspired efforts in the areas of ASW are needed now. The Navy has done an outstanding job as far as they have gone, but they have had neither sufficient funds nor the proper official and public support to give to their efforts the inspiration and urgency so vitally needed to produce the miracle of an adequate antisubmarine capability.

A reorientation of our thinking in this area is long overdue.

¹ The Russian submarine effort as delineated in "Jane's Fighting Ships, 1959-60," shows the Soviets to have the vessels shown above totaling 497 submarines of which over half are capable of extended operations at great distances from their home ports. Approximately 50 submarines are now under construction, all of which will be equipped with schnorkel and include the following classes: (1) Large long-range nuclear powered; (2) large high speed with guided missiles; (3) long-range patrol type (anti-shiping); (4) high-speed mine layers; (5) long-range, killer type subs (antisub HUK-type).

House Agriculture Committee Republicans
Urge Action on Common Market

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. HOEVEN. Mr. Speaker, one of the most important problems facing American agriculture today is the threat to our export markets in Western Europe. It is in this regard that I joined with my 13 Republican colleagues of the House Committee on Agriculture in urging the chairman of our committee to take some immediate steps to promote U.S. farm exports and to offer our complete cooperation on the minority side of the aisle in a unified effort in behalf of the American farmer. I therefore under unanimous consent include at this point in the RECORD a copy of the letter which the minority members of the House Agriculture Committee sent to the gentleman from North Carolina [Mr. COOLEY], this week, as follows:

JANUARY 21, 1963.

HON. HAROLD D. COOLEY,
Chairman, Committee on Agriculture,
House of Representatives,
Washington, D.C.

DEAR MR. CHAIRMAN: We, the undersigned members of your committee, would like to take this opportunity to express our concern about current economic trends in the European Common Market and the discrimination against American agricultural exports and to offer our full cooperation in a unified committee effort to meet this serious challenge to our agricultural economy.

As you know, the full impact of the loss of substantial dollar markets for farm commodities in Western European markets goes far beyond the interest of the agricultural community alone and presents a serious threat to the Nation's balance-of-payments problem.

As the President pointed out in one of his recent budget messages to Congress, "During recent years this country has paid more abroad (for imports, investments, military expenditures, and other Government programs) than it has received from abroad (for exports, earnings on its investments, and repayments of loans)."

If American agricultural exports for dollars are materially diminished the result will be not only an aggravation of our balance-of-payments situation, but also a direct and immediate loss to American farmers who now raise 1 acre out of 7 for export markets.

It has of course been generally acknowledged by administration spokesmen and been extensively reported by the press that the restrictive and protectionist variable import fee tariff plan of the Common Market is already costing American poultry farmers a \$50-million annual market in addition to shutting the door of opportunity for the development of new Western European poultry markets. Serious and immediate threats also exist for American wheat, feed grains, and certain fruits and vegetables, and there exist many ominous implications for the long-term growth of European markets for cotton, soybeans, tobacco, and a host of other U.S. farm commodities.

We therefore recommend that in order for American agriculture to hold and expand its markets in the Common Market (which in 1961 took 23 percent of the total U.S. exports

to all destinations and accounted for 81 percent of all U.S. agricultural exports sold for dollars) that the Committee on Agriculture take these immediate steps:

First. Give this serious situation immediate and intensive study, starting with a thorough review of the developments which have led up to the present conditions.

Second. Keep a continuing account of these developments and trends, particularly in regard to the economic trade posture of Great Britain.

Third. Emphasize by committee resolution the urgent need for vigorous and effective agricultural representation not only on the President's Committee To Review Foreign Aid, but also and more importantly at the highest levels of tariff negotiations conducted by representatives of the United States and the European Economic Community.

Looking forward to your cooperation in this effort, we remain,

Sincerely yours,

CHARLES B. HOEVEN, PAUL B. DAGUE,
PAGE BELCHER, CLIFFORD G. MCINTIRE,
CHARLES M. TEAGUE, ALBERT H. QUIN,
DON L. SHORT, CATHERINE MAY, DELBERT L. LATTI, RALPH HARVEY, PAUL FINDLEY, BOB DOLE, RALPH F. BEERMANN, BEN REIFEL.

The Return of the "Square"

EXTENSION OF REMARKS

OF

HON. HENRY C. SCHADEBERG

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. SCHADEBERG. Mr. Speaker, to preface the following remarks with concurrent comments of my own would be as futile as trying to gild the lily. It is enough to say that the message falls into that category of things I wish I had authored. It is from a speech by Charles H. Brower, president of the advertising firm of Batten, Barton, Durstine & Osborn, Inc., as it appeared in the January issue of VFW, the monthly magazine of the Veterans of Foreign Wars of the United States. Under unanimous consent, I insert the following speech in the Appendix of the RECORD:

THE RETURN OF THE "SQUARE"

Back in Mark Twain's day, one of the finest words in our language was "square." You gave a man a square deal if you were honest. And you gave him a square meal when he was hungry. You stood foursquare for the right, as you saw it, and square against everything else. When you got out of debt, you were square with the world. And that was when you could look your fellow man square in the eye.

Then a lot of strange characters got hold of this honest, wholesome word, bent it all out of shape and gave it back to our children. Convicts gave it the first twist. To them a square was an inmate who would not conform to the convict code. From the prisons it was flashed across the country on the marijuana circuit of the bopsters and hipsters. Now everyone knows what a square is. He is the man who never learned to get away with wrongdoing. A Joe who volunteers when he doesn't have to. A guy who gets his kicks from trying to do something better than anyone else can. A boob who gets so lost in his work that he has to be reminded

to go home. A fellow who laughs with his belly instead of his upper lip. A slob who still gets choked up when the band plays "America the Beautiful."

His tribe isn't thriving too well in the current climate. He doesn't fit too neatly into the current group of angle players, corner cutters, sharpshooters and goof-offs. He doesn't believe in opening all the packages before Christmas. He doesn't want to fly now and pay later. He's burdened down with old-fashioned ideas of honesty, loyalty, courage and thrift. And he may already be on his way to extinction.

He and all the rest of us are living in a country today that is quite different from the one that we were taught to love. Parents have successfully defended in court their children's right to ignore the flag salute. Faculties and student bodies have found it distasteful to publicly take an oath of loyalty to their country. And the U.S. Military Academy has found it necessary to place a sign beside its parade grounds at West Point reminding spectators that it is customary for men to remove their hats at the passing of the banner that was once unashamedly referred to as "Old Glory."

What has happened? I think we have changed from an exporting country to an importing country.

I do not mean that we have let the world drain all of our gold away, although that is bad enough. I do not mean any imbalance of trade, as threatening as that may be. I mean that we have been importing, instead of exporting, ideas.

The United States of America was once the greatest exporter of ideas the world had ever known. We created and sold abroad the idea of individual dignity, responsibility and freedom. We created and sold the idea of government of the people, by the people and for the people—an idea that is still being bought today. We exported the idea of freedom of worship * * * the idea of an unfettered press * * * the idea that those who are taxed should be represented. * * *

It is hard to find a basic idea that America has recently exported. We have bought in the bazaars of Asia Minor the idea that an honest man is either a fool or a liar. From our most mortal enemy we have bought the idea of a strong government for weak people. We have bought abroad the ideas of "Let George do it"—or "What's in it for me?"—and the gesture of the neatly shrugged shoulder.

But, most significant of all, most of us have been gullible patrons of the export firm of Sigmund Freud, who has sold us the idea that all men are born feeble, that we should abandon our ancient disciplines as too stark for the poor souls that we are, and seek our salvation through group support. Freud's discovery that man was not adjusted to his world, and could never be truly adjusted, seemingly justified the lazy cynic and condemned the square. For if you can't win, what is the use of trying? And here was the first great authority who said, You cannot win.

This country was discovered, put together, fought for, and saved by squares. It is easy to prove that Nathan Hale, Patrick Henry, Paul Revere, George Washington, Benjamin Franklin, and almost anyone else you care to include among our national heroes, were squares. This can be proven by simply thinking what they might have said had they not been squares.

Nathan Hale: Me spy on those British. Are you trying to be funny? Do you know what they do with the spies they catch? I'll give you a news flash, chum. They hang them.

Paul Revere: What do you mean—me ride through every Middlesex village and town? And in the middle of the night, yet. Why pick on me? Am I the only man in Boston with a horse?

Patrick Henry: Sure, I'm for liberty. First, last, and always. But we've got to be a little realistic. We're a pretty small outfit. If we start pushing the British around someone is going to get hurt.

George Washington: Gentlemen, I am honored. But I do wish you would try someone else. Let's say, General Gates. I'm just getting things organized at Mount Vernon.

Benjamin Franklin: Who we really need, for Ambassador to France, is a young man. I'm 70 years old. It's time a new generation took over.

It is perhaps a significant fact that what such men actually did say has been quietly sneaked out of our schoolbooks. This Week magazine made a survey recently of school history books issued before 1920, compared with those issued since. That Nathan Hale said, "I regret that I have but one life to lose for my country," was in 11 of the old texts, and only 1 of the new texts.

Patrick Henry was quoted: "Give me liberty or give me death," in 12 of 14 earlier texts, and in only 2 of 45 more recently published ones.

But John Paul Jones set the record. His once famous reply to a British demand for surrender: "I have not yet begun to fight."—is in nine of the old books, and in none of the new ones.

Maybe cutting down a cherry tree is a square thing to do, and maybe throwing a dollar across the Rappahannock River is a waste of money rather than a test of strength, and maybe nobody stands up in boats anymore (especially in midwinter), but there are lessons to be learned in all of these acts by George Washington and schoolbooks are for learning.

Maybe aggressive and nationalistic statements by our country's early heroes have gone the way of contact games and sports. They have been largely abandoned on our school grounds. Maybe the educators thought our children would be more interested in Peter Rabbit, who goes hippety-hop. Or maybe it is just because our national heroes, and their ideas, are square.

When Dwight D. Eisenhower was President, he appointed a Committee on National Goals to decide where we were all going. Perhaps a first step should be a commission on national heritage, to make sure that some of us at least remember where we have been.

Arnold Toynbee, the famous historian, says, that of 21 notable civilizations, 19 perished, not from external conquest, but from the evaporation of belief within.

Today, our country still has a choice. I believe it has already begun to make that choice. I believe it is going back to its old beliefs in such things as ideals, pride, patriotism, loyalty, devotion, and even hard work.

We have a whole new set of heroes. Their names are Glenn and Grissom, Shepard, Carpenter, Cooper and Schirra. They are named Crews, Bock and Twining; Smith, Sorlie and McIntosh; Knolle and Hoover. The towns they came from have nice, small town names, like Sparta, Boulder, East Derry, Mitchell, Shawnee and Brownwood.

These lads apparently lived too far from the big city and grew up to be squares. For who but a square would volunteer his life for his country's good?

They are not even ashamed of their feelings.

John Glenn says he gets a tingling feeling down inside when he sees the flag go by. Imagine that.

He is proud of his small town and proud of his small college. He is proud that he belonged to the Boy Scouts and the YMCA.

I hope that some of him rubs off on the next generation.

The forces of conformity are still strong. Too many of us are still sitting it out instead of sweating it out. Too many of us haven't got the guts to stand up straight and dare to be square. Because the opposite of square is round, and being round is so much simpler. Responsibilities and problems roll off nice and easy. And we can just roll down the path without any bumps, being careful to stay in the middle, because that's where the most comfortable ruts are.

How shall we fight for personal independence? How shall we avoid the group poop; the vortex of mediocrity; the great nothingness of cynical sophistication and bored nonparticipation?

I suggest that we all join the S.O.S. The S.O.S. is the Society of Squares. It doesn't exist, but it could. Not a leftwing organization. Not a rightwing organization. Just an organization with wings.

We might have to go underground for awhile to avoid being trampled to death by the coast-to-coast, rat-packs of cynical saboteurs and the canned-wit commando whose devotion is to destruction.

But we would come out.

We might even have a secret handshake—grabbing the other guy's hand as though we really meant it, and looking him squarely in the eye.

We would be for participation and against sitting life out, for simplicity and against sophistication, for laughter and against sniggering, for America and against her enemies, for the direct and against the devious, for the honest way and against the easy shortcut, for a well-done job and against the goof-offs, for education and against the tearing down of ideals.

We have, at least, the satisfaction of knowing that our problem is not new.

When Benjamin Franklin was told that the war for independence was over, he said: "Say, rather the war of the revolution is over—the war for independence has yet to be fought."

And today—179 years later—this war has still to be fought.

The FBI Report

EXTENSION OF REMARKS

OF

HON. SAMUEL L. DEVINE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. DEVINE. Mr. Speaker, under leave to extend my remarks, I am happy to submit an editorial which appeared in the January 3, 1963, News-Press, of St. Joseph, Mo., concerning the FBI's annual report. If the efficiency of J. Edgar Hoover and his Bureau would be emulated by other agencies of the Federal Government, our problems would greatly diminish.

The editorial follows:

THE FBI REPORT

FBI Director J. Edgar Hoover has presented his annual year-end report to Attorney General Robert F. Kennedy. The statistics show that in FBI operations last year marked increases were recorded in all major categories of FBI accomplishment.

There were more than 12,700 convictions in FBI cases compared with 12,418 the previous year. The apprehension of some 11,400 FBI fugitives topped last year's 10,668. Fines, savings and recoveries totaled

well over \$200 million compared with \$148,-421,690 in 1961. The sum far exceeds the amount of money spent to operate the FBI during 1962.

Director J. Edgar Hoover cited the steep increase in violations of the Federal bank robbery and incidental crimes statute. Last year saw a 25-percent increase over the number committed in 1961. One of the FBI's notable achievements in 1962 was the smashing of an international narcotics ring. The seizure of illicit drugs at that time brought in a cache of more than \$20 million.

In presenting a résumé of the FBI's past year's work, Mr. Hoover expressed appreciation for the assistance accorded the FBI by other law enforcement agencies. And this is a compliment that well could be turned around. Law enforcement officers, including Police Chief Edward C. Burke's men here in St. Joseph, always have high praise for the wonderful cooperation given to them when the FBI is called in to help on a case.

We are truly proud of the FBI and its law enforcement activities. It is a credit to our Nation and credit for this goes to its Director, the Honorable J. Edgar Hoover.

James Patrick McGrannery

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. WALTER. Mr. Speaker, the recent death of the Honorable James Patrick McGrannery has removed from the Washington scene one of the finest gentlemen that ever served his God and country.

Judge McGrannery was a personal friend with whom I had the great privilege of serving with in this distinguished body, the House of Representatives, as well as on our State Democratic Committee of Pennsylvania.

Judge McGrannery was a humble man, always interested in helping others, regardless of his or her social standing in a community.

Much of his time had been spent in the service of his church. Repeatedly he was recognized by the hierarchy of the Roman Catholic Church including two pontiffs, Pope John XXIII and Pope Pius XII.

After he served in the House of Representatives, from the 75th through to the 78th Congresses, Judge McGrannery became an Assistant Attorney General of the United States. He later served as a Federal district judge and still later as the Attorney General of the United States during President Truman's administration. For the past 8 years, until the time of his death, Judge McGrannery maintained a general practice of law here in the District of Columbia.

Mr. Speaker, here was a great man, James Patrick McGrannery, who served his fellow man and served him until his death. I join other Members in heartfelt condolences to his family and pray that God will comfort his wife and children in their loss as only He can do.

George Maurer

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. WALTER. Mr. Speaker, we embark on a new session of Congress without a familiar voice to intone our names on roll calls, or to read the contents of the bills brought to the floor.

Since adjournment of the preceding Congress, death has taken from our midst George Maurer, whom all of us regarded as a close friend aside from being a highly competent reading clerk in this great body.

George's sudden death indeed was a shock to all of his friends around the Capitol, but possibly the blow was a bit more severe to me as he had been a resident of my hometown and there naturally were close personal ties.

George came to Washington with his wife and two small children, leaving employment as a stenographer and bookkeeper in his hometown to become a Government employee.

He served for a time at the Library of Congress and later was assigned as a clerk in the office of the late Speaker Bankhead.

While working at the Capitol, George attended George Washington University and there received both his bachelor's degree and doctor of laws. It was a protracted and weary road George took to achieve the goal that was reached May 28, 1952, when he received his doctorate of laws degree.

While sandwiching in his law studies after working hours, George continued to move forward here in the House of Representatives.

To improve as a reading clerk, George attended special voice training classes. He was a perfectionist in every sense of the word.

His death prompted Geoffrey Gould, Associated Press reporter, to write:

The voice of the House of Representatives for nearly 20 years is gone.

The death of George Maurer, 56, senior reading clerk of the House, left a gap that may not be filled for a long time, at least not with such an authoritative and melodious voice as his.

Maurer died in Westfield, N.J., Friday night while making arrangements for his mother's funeral.

The voice of George Maurer was the voice remembered by the average visitor to Congress.

It was deep and penetrating. One old-timer who predated the present microphone system in the House said Maurer could be heard just about as clearly before electronics as after.

Maurer developed a flair and style that others complimented by copying. He could call the roll of the House—435 names—faster than anyone who had gone before him, completing the chore in less than 20 minutes, then swinging into a second call for those who didn't answer the first time.

As each Member voted, Maurer repeated either "aye" or "no" and his way of intoning "Noooo" became a byword in the House galleries. He could hold the note as

long as necessary to let the tally clerks catch up.

A dialy ritual at the beginning of each session of the House is the reading of the Journal, a brief summary of the previous day's session.

As Members milled about and a hum of talk filled the Chamber, Maurer would read the Journal and then serve notice that things were about to get started by a little trick at the end.

The Journal always ends with the words, "And then, at such and such o'clock, the House adjourned." Maurer always leaned into the words "and then" with such emphasis and loving enunciation that it served as a signal.

Maurer was noted for the lightning speed with which he could plough through a 90-page bill, reading only a few words from each section, but so smoothly that a casual listener would think he was hearing every word.

Since he became a reading clerk in 1943, his associates never heard him stumble. "He was a perfectionist," said one. "He was like a machine that never made a mistake," said another.

But the reading clerk's job is more than mechanical proficiency at reading. He must have a deep knowledge of parliamentary procedure, and he must know the face of every Member instantly.

Maurer spent long hours before each new session of Congress poring over photographs of new Members, and often was the first House official to greet the new arrivals by name.

Another associate recalls that Maurer had an uncanny knack for identifying persons by their voices. As he bent over his rollcalls, he could place without fail a muffled shout from the back of the Chamber.

Maurer read state of the Union messages to joint sessions of Congress for three Presidents—Franklin D. Roosevelt, Harry S. Truman and Dwight D. Eisenhower. President Kennedy read his own first messages to Congress.

I extend to his lovely wife and his two fine daughters my deepest sympathy. Husband and father, George was an extraordinary man, a man of great brilliance, but more than anything else, a deeply religious person.

Ozark National Rivers

EXTENSION OF REMARKS

OF

HON. EDWARD V. LONG

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, January 24, 1963

Mr. LONG of Missouri. Mr. President, on Monday, January 14, my colleague, the senior Senator from Missouri, and I joined in the introduction of S. 16 to establish the Ozark National Rivers. This proposal would bring under the control of the National Park Service 94,000 acres of rare natural beauty. The area would extend along 100 miles of the Current River and 39 miles of the Jack's Fork River.

For the sake of our children and our children's children, the Congress must act quickly to insure the preservation of the wooded beauty of this Missouri area with its springs and free-flowing streams.

Mr. President, I ask unanimous consent that editorials recently published in the Columbia Tribune and the St. Louis Post-Dispatch relating to this bill be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Columbia (Mo.) Tribune, Jan. 14, 1963]

TO PRESERVE OZARK BEAUTY

It is to be hoped that Missouri's two U.S. Senators, STUART SYMINGTON and EDWARD LONG, and central Missouri's Congressman, RICHARD ICHORD, have struck upon a feasible plan in the legislation which they are scheduled to introduce in the Congress today for preserving the native beauty of a considerable Ozark area along the Current and Jack's Fork Rivers. If their compromise of the controversy over the project, which now leaves out parts of the Jack's Fork River in Howell County, the lower part of the Current River in Ripley County, and the Eleven Point River in Oregon County, but includes the Jack's Fork and Current in Carter, Shannon, Dent and Texas Counties, succeeds, they will have saved for posterity a sizeable area of Ozark beauty. The project would include 100 miles of the Current and 39 miles of the Jack's Fork and 94,000 acres bordering the two streams.

The legislators worked out the compromise, which includes a change in the proposed name to "Ozark National Rivers" and if approved it will be the first of several national scenic regions envisaged by the Park Service. The new plan provides for easements rather than purchases, which would make it possible for present owners in the area to keep their property while at the same time retaining the natural beauty of the Ozarks.

The project seems to be an important step in saving nature's beauty from the inroads of commercialization which could range from honky-tonks to high level dams and include ruthless destruction of its forest areas. Missouri, for all of its natural resources, has lost much of the beauty of its forests, fields and streams to so-called progress. What we have left should, so far as possible, be preserved. When it is gone it will be too late to do anything about it.

[From the St. Louis Post-Dispatch, Jan. 14, 1963]

FOR THE OZARK NATIONAL RIVERS

A rose by any other name still would sweeten the air, but that is no reason for being indifferent to the suitability of a name. So Senators SYMINGTON and LONG and Representative ICHORD get an extra clap of the hands for substituting "Ozark National Rivers" for "Ozark Rivers National Monument." The latter does have overtones of the firm, the fixed, the rocklike—not quite right for flowing streams.

The heavy applause, however, is for the introduction of legislation to preserve Missouri's scenic treasure. There is a bow, too, for the good work which has enhanced its prospects in Congress. Representative CURTIS gets credit for deference to the amenities which call for sponsorship of the bill by Mr. ICHORD, who represents the river country. Support by Mr. CURTIS would be logical since he wrote the original bill to entrust the area to the National Park Service, though he later sought to transfer it to the Forest Service. The new bill also recognizes his advocacy of scenic easements by making this device available to the Park Service.

A united stand by the Missouri delegation also is more likely due to the elimination of the area in the district of Representative JONES, who says his constituents oppose the project—contrary as this may be to their longrun interests.

All this comes within the bounds of practical political compromise. It is deplorable, however, that the 34-mile reach of the Eleven Point in Oregon County is excluded. Of all the rivers, this stream and its bank most nearly retain their wilderness beauty, and the adjacent land is sparsely populated. There should be long second thoughts about the Eleven Point.

Also helpful will be the enthusiasm of Interior Secretary Udall, who has jurisdiction over the Park Service. And Secretary of Agriculture Orville L. Freeman has instructed the Forest Service, which is in his Department, to refrain from bureaucratic competition for the project. Productive as its multiple-use philosophy may be, it is not suited to these narrow strips of land. They call for management under the Park Service policy of preservation in the face of population pressure.

The Ozark rivers cannot be given back to the Indians. Nor can their increasing attraction for visitors be reversed. They cannot be contained in a barricaded refuge for the few. They must be guarded for the people, not against the people. Missouri Governors and legislators have recognized that this can be done by the Park Service. Surely Congress, persuaded by its Missouri Members, will issue the mandate.

Private Power Comparison Backfires— TVA Is National Asset; Skybolt a Dud

EXTENSION OF REMARKS

OF

HON. ROSS BASS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. BASS. Mr. Speaker, a rather ridiculous comparison has been made in the Nashville Tennessean relating Tennessee Valley Authority and Skybolt. A thought-provoking propaganda game is once more being played; the pawns being used are public power and private power.

Again the offender has proven its inability to compete. In the immediate editorial I would like to call to your attention the ludicrous collation:

PRIVATE POWER COMPARISON BACKFIRES— TVA IS NATIONAL ASSET; SKYBOLT A DUD

The private power interests have renewed their age-old attacks on public power, using their unlimited cash resources to manufacture phony charges and circulate uninformed criticism. As usual, the propaganda peddlers have singled out the Tennessee Valley Authority.

Year after year TVA continues to serve its customers, neither feeling the need nor having the funds to engage in propaganda warfare with rich private power. But this time the antipublic power crusade has backfired demonstrating the low level to which its promoters are willing to stoop.

In current issues of national magazines a full page color advertisement appears showing missiles on the wing of a bomber. The accompanying text reads:

"When Skybolt rides a bomber your tax dollars buy defense, but when your tax money is used to build more Federal-Government-owned electrical plants and transmission lines it is spent needlessly."

This obviously was to have been the mighty opening gun in a winter offensive against public power. It also represents a

little flag waving and a degree of false patriotism on the part of private power interests.

It is a wrench of logic to compare a resource development program with a missile project, but the tricksters employed by the wealthy power corporations didn't hesitate to invent a comparison, pitting the value of Skybolt against the value of TVA.

Therefore, let the real values speak for themselves. Skybolt was a flop. Obviously it did not represent a good investment of tax dollars. The administration wisely canceled Skybolt after many unsuccessful tests, concluding that any future outlays of funds would be spent needlessly.

The Government during two administrations already had poured \$353 million into Skybolt.

It is ironic that since its beginning in 1933 TVA has returned to the Treasury of the Federal Government \$348 million from power revenues and \$42 million from nonpower revenues. This total of \$390 million is enough to have paid for the now impractical Skybolt with \$37 million left over for some worthwhile defense project.

This \$390 million, incidentally, does not include payments of \$190,500,000 TVA has paid in lieu of city, county, and State taxes during its lifetime.

Interesting too is the fact that the Skybolt development project calls for a thousand missiles for the Air Force and another 100 for Great Britain—at an estimated total cost of \$2.5 billion.

Again ironic, since the effort to compare missiles and resource development has been made, is the fact that during the 30-year history of TVA, appropriated funds for all valley projects—dams for navigation, dams for flood control, power itself, experimentation, fertilizer production and the rest—amounted to \$2.5 billion, or precisely the amount estimated necessary to make Skybolt operational.

Even these figures ignore many other facts about TVA: Resource development creates a climate favorable to industry. This means more jobs and more productivity for the area affected. It brings about general growth and added revenue to State and local governments as well as to the Federal Government. In addition, atomic energy plants and other Federal defense agencies use electricity from TVA at a special reduced rate, saving taxpayers millions of dollars each year—\$50 million last year alone.

If the power interests want to make comparisons they should take note that the savings the Federal Government has realized from this reduced rate during the last 9 years have amounted to enough money to have built the U.S. portion of the St. Lawrence Seaway, or more than all the funds spent thus far on Skybolt.

The reason private power interests launched these bitter and frequently uninformed blasts at TVA is because TVA rates force them to hold their own electric power prices down. Millions of electricity users elsewhere in the country are paying lower electric rates because of TVA's "yardstick" policy.

Surveys show that residential electric rates grow progressively higher as the distance from TVA increases.

Yet private power blithely asserts "when Skybolt rides a bomber, your tax dollars buy defense, but . . ."

The truth is that Skybolt was a skyburst and the private power interests, not realizing it, fell into their own pit of quicksand.

From the beginning, the people of the Tennessee Valley have seen through the gross huckstering and stupid misstatements of fact of the rich utility corporations. Now perhaps others will recognize the brain-washing tactics for what they are—hog-wash.

Ukrainians and Their Struggle for Freedom

EXTENSION OF REMARKS

OF

HON. DOMINICK V. DANIELS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. DANIELS. Mr. Speaker, January 22, 1963, marked the 45th anniversary of the independence of Ukraine. The history of the Ukrainian people in modern times is the story of a large group of gifted, gallant and industrious people ceaselessly struggling for their inalienable birthright, their freedom and independence. These hardworking and tenacious folk of the fertile steppe land in Eastern Europe tilled their bountiful farmlands for centuries, and enjoyed the fruits of their labor in full freedom when they were masters of their destiny.

After enduring the czarist autocracy for some 2½ centuries, they witnessed the birth of the independent Ukrainian National Republic early in 1918. January 22 of that year, the birthday of that Republic, was just as momentous in the history of the Ukrainian people as was the 21st of November of 1920, when the Red Army overran the country and ruthlessly put an end to the Ukrainian National Republic.

The last tragic event took place 42 years ago, and since then these devotees of freedom and liberty, these dauntless and daring fighters for their national independence, these tough and tenacious toilers of their fair and fertile homeland have not known freedom. They have been fated since then to suffer under Communist totalitarian tyranny. Misery and misfortune, oppression and endless suffering have been the lot of these helpless and innocent Ukrainians for centuries. Long before the rise of czarist Russia, they had suffered under Asiatic invaders, and their country was ravaged by these hordes, but when the wave of these invaders receded late in the Middle Ages, the Ukrainians had managed to recoup some of their losses, had succeeded in rebuilding their ravaged homeland, had real hope of enjoying some peace.

In 1918, after attaining their national goal, when they were about to embark upon the task of creating anew a free and independent life in their homeland, their hopes and their dreams were shattered by the aggressive and oppressive policy of the Soviet Union. Today these people, living in one of the most fertile parts in Eastern Europe, are denied their most cherished birthright, the freedom to live according to their wishes and to work for their own welfare in their historic homeland.

It is paradoxical and tragic that some 45 million Ukrainians, brave and courageous fighters as they are, have been forced to submit to the ruthless regime of ungodly Communists for so long in their homeland. But in this age of paradoxes, full as it is with human tragedy, the unhappy Ukrainians, unarmed,

helpless, and living in constant terror of the agents of the Kremlin, are unable to cope effectively with the massive might of the Soviet Union Government. That is a sad legacy of our age.

In observing the 45th anniversary of the independence of Ukrainians, this event will also serve as an excellent occasion to urge the formation of a desperately needed Special House Committee on Captive Nations in the 88th Congress. Such a committee—in stature and purpose appropriate to the scope and value of all the captive nations—would strongly symbolize to the world the determination of the American people never to forget the captive nations and their struggle for liberation and independence.

Shameless Extraction

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. GROSS. Mr. Speaker, it is hard to believe that the Kennedy administration and its lackeys could remain silent and unconcerned about the coercive tactics that were used in the shameless extraction of funds from career Federal employees for the Democratic Party's political coffers.

As of this date it is clear that neither President Kennedy nor his brother, the Attorney General, who ostensibly is in charge of the Department of Justice, is interested in ascertaining whether this brazen fund-raising drive is in violation of the Hatch Act, the Corrupt Practices Act, and destructive of the civil service system.

The silence of almost all Federal employee organization leaders is also incredible.

The apparent attitude is that "the King can do no wrong."

In the Washington Evening Star of January 18, 1963, are two excellent articles on this subject. One is from the column, "The Federal Spotlight," written by Mr. Joseph Young, who daily covers the field concerning Federal employee activity in the Nation's Capital, and the other is an editorial entitled "Down the Hatch."

I submit both for printing in the RECORD:

EMPLOYEE GROUPS' SILENCE VIEWED AS STRANGE IN \$100 TICKET PRESSURE

(By Joseph Young)

Perhaps the strangest aspect of the entire spectacle of unashamed Democratic pressure on Government career employees to attend tonight's \$100-a-ticket gala is the complete silence of Government employee unions and the National Civil Service League on the matter.

Not a peep has been heard from any of the major unions or the nonpartisan league, which came into being 80 years ago to uphold the merit system, since this reporter and the Star on December 6 first disclosed the pressure on career employees to purchase the \$100 tickets.

The employee leaders appear too intent on such unattainable pie-in-the-sky objectives as a 35-hour work week, etc., to bother with the unprecedented pressure on career employees by the Democratic National Committee and officials of the Kennedy administration. Only the recently formed National Society of Federal Engineers, Scientists, and Allied Professionals have criticized the goings-on.

The unions' excuse is that not many career employees in the upper-middle and top grades are members of their organizations, and hence they don't want to get into the fray. The long-range adverse implications on the merit system seem to escape them.

The silence of the National Civil Service League is even more puzzling. The main purpose of the nonpartisan business-supported league is ostensibly to protect and support the merit system.

The failure of Government employee unions to protest the situation may stem from the close relationship the groups have with the Kennedy administration, and their reluctance to do anything to endanger this alliance. Under President Kennedy, the unions have won formal bargaining rights, pay adjustments, support for a union dues checkoff, etc.

Another reason may be the unionists' indifference to groups of career employees who generally aren't found in their memberships.

This could be very shortsighted on the part of the unions.

The Kennedy administration won't last forever, and the next administration—if it is Republican—isn't likely to forget how the unions backed the Democrats by their silence.

This year's pressure was put on grade 12 and above career employees. Next year the pressure could be put on employees in grade 9 and above, and on even lower grade employees in the years ahead. The Kennedy administration is not bashful in telling employees it is responsible for their latest pay raise and the upcoming one next year, and probably doesn't have many qualms in "selling" \$100 tickets to as many career employees as the traffic will bear.

As for the Civil Service Commission's silence until now on the situation, this is rather understandable. CSC officials privately are most unhappy over the situation. But there are only two men in Government who could have done something to stop it—President Kennedy and his brother, Attorney General Robert Kennedy, who could have ordered such practices stopped on threat of Justice Department prosecution under the Corrupt Practices Act. Under the circumstances, the CSC could do little but remain silent.

Meanwhile, the performers at tonight's gala—stellar stars though some of them may be—will have to be extra good to get any kind of ovation from the many Federal career employees who have reluctantly shelled out their \$100 to attend. And without Frank Sinatra yet.

DOWN THE HATCH

An undetermined number of unhappy civil service workers having put up \$100 for the greater glory of the Democratic Party, will toss down a drink or two tonight as guests of their bosses.

The Civil Service Commission, with no pun intended, says that it cannot treat this thinly disguised form of coercion as a violation of the Hatch Act unless it receives complaints from Government workers. We would rather doubt that any worker who has sense enough to find his way in and out of the building is going to be foolish enough to file such a formal complaint. So this throws the whole shabby business back into the realm of the Corrupt Practices Act, which is enforced by the Department of Justice, not

by the CSC. Of course, one may always be mistaken in a judgment. But it is our guess that no Justice Department bloodhounds will be sent off on the trail of Democrats who have resorted to this device to raise funds for other Democrats. And if our estimates in this respect should be erroneous, we are willing to bet Robert Kennedy a \$100 dinner that any bloodhounds unleashed in this cause will not be young and eager, but, rather, will be of that variety which is old, tired, and quite ready to call it a day.

All of this has prompted some Republicans to rise up in righteous wrath, a circumstance which, we think, should be put in some perspective. In former administrations, both Republican and Democratic, there has been a certain prodding of the Federal worker to kick into the party coffers. But nothing in the past has rivaled the brazenness or the scope of what the New Frontiersmen have been doing. As our "Federal Spotlight" reporter, Joe Young, puts it when speaking informally: "The civil service worker is damned if he doesn't, because his promotion prospects may be adversely affected. And, should the Republicans come in, he is damned if he does, because his new GOP bosses are not apt to look with understanding and tolerance on the fact that he tossed a hundred bucks into the Democratic war chest."

By tomorrow this affair will be over and done with. But the bad smell will linger on. People who make a career of working for the Government ought not to have their shins kicked or their arms twisted to force them to put their money on the line. Nor should they be subjected to the slightly more subtle pressure of not having a drink with the boss unless they pony up.

The Kennedy administration speaks in noble terms to the American people of virtue, dedication, high purpose, etc. If the President, by chance, doesn't know what has been going on recently, he ought to take time out for a closer look.

Teachers' Salaries for 1962-63

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. PUCINSKI. Mr. Speaker, Dr. George S. Reuter, Jr., was recently the author of "Survey of Teachers' Salaries, September 1, 1962." He wrote a summary for the American Teacher, which was published this month under the title "Teachers' Salaries for 1962-63." Because of the great national interest in salaries of teachers and programs for further improvement of same, under unanimous consent to have printed in the Appendix of the RECORD, I include Dr. Reuter's summary:

TEACHERS' SALARIES FOR 1962-63

(By Dr. George S. Reuter, Jr., research director American Federation of Teachers)

INTRODUCTION

The study this year of teachers' salaries includes 853 districts and 4 territories, or a total of 857. Of the 853 districts of the United States, 233 are in the Northeastern States, 381 in the Central States, 106 in the Southern States and 133 in the Western States. The four territories included are Puerto Rico, Guam, the Canal Zone, and the Virgin Islands.

TABLE I.—National averages

	1961	1962
Bachelor's.....	\$4,328-\$6,228	\$4,428-\$6,468
Master's.....	4,867- 6,819	4,730- 7,083
Master's plus year.....	4,839- 7,256	5,135- 7,724
Doctorate.....	5,124- 7,887	5,366- 8,126

Salaries have increased on an average throughout the Nation during the past year. The average salary of all types of public school teachers, ranging from the bachelor's degree through the doctorate, is currently \$6,133, with the average bachelor's salary of \$5,448, which includes all teachers in the bachelor's area. Using the same measurement for the master's it is \$5,907; for one year beyond the master's, \$6,430; and the doctorate, \$6,746.

Table I shows the complete breakdown for 1961 and 1962. Fairbanks, Alaska, has the highest beginning salary in the United States, which is \$6,780, and the lowest is Anniston, Ala., with \$3,100. For the master's degree Fairbanks, Alaska, leads again with a beginning salary of \$7,340 and the lowest is Columbia, S.C., at \$3,336.

MAJOR CITIES

Thirty-four major cities with a population ranging from 401,500 to 7,781,984 are considered separately. Also, Phoenix, Ariz., is divided into two parts, as they have separate elementary and secondary schools with varying salaries.

TABLE II.—Major cities

	1961	1962
Bachelor's.....	\$4,500-\$7,176	\$4,753-\$7,404
Master's.....	4,993- 7,659	4,997- 7,928
Master's plus year.....	5,186- 8,285	5,396- 8,456
Doctorate.....	5,274- 8,309	5,560- 8,888

Table II shows an increase in average salaries in all categories for 1962. This is true for each beginning salary as well as each ceiling. New Orleans, La., is the low city for the beginning bachelor's salary, which is \$3,600 and Chicago, Ill., is the high city in this category with \$5,350.

REGIONAL SUMMARIES

The Western States lead the Nation in regional averages. This section is composed of 13 States. The central region, which is composed of 12 States, is in second place, and the northeastern region, which is composed of 9 States, is in third place. This leaves the southern region, which is composed of 16 States and the District of Columbia in the lowest category. Table III shows the regional breakdown for beginning salaries.

The highest State average for a beginning teacher with a bachelor's degree is Alaska, which is \$6,456. This is an improvement of \$259 over 1961. The lowest average is Alabama with \$3,344, which is \$103 higher than last year.

TABLE III.—Regional averages

	1961	1962
Northeastern States:		
Bachelor's.....	\$4,181	\$4,337
Master's.....	4,455	4,634
Master's plus year.....	4,733	5,027
Doctorate.....	5,015	5,385
Central States:

Table IV shows the breakdown of the 50 States concerning improvement over 1961. The average increase is \$156. The State with the highest increase over last year is South Carolina with \$617, but the State average is still only \$3,433. At the other extreme, Hawaii was the only State reporting no change, which keeps the average salary at \$4,020.

OTHER FEATURES

The new edition of the "Survey of Teachers Salaries" includes a summary of a recent study by past American Federation of Teachers vice president, Charles E. Boyer. Mr. Boyer's complete study is entitled "Report of the School Fiscal Survey in Major Cities," and was done for the Minneapolis Federation of Teachers. This feature is cited so that various locals of the American Federation of Teachers can more nearly determine how the tax dollar is spent.

The second feature includes a breakdown of the major educational foundations by States for the year 1960, which includes the latest data available. It shows a total net worth of \$9,810,467,852. This feature is cited as a possible source for securing additional finance for public education.

The third feature is entitled "Points for Discussion," and is a quotation from data prepared from the American Federation of Teachers workshop in Connecticut. This feature is cited so that the best possible presentation can be made of the salary issue.

Finally, the minimum wage laws for certified teachers, by States, are included again this year.

Your Money and You

EXTENSION OF REMARKS

OF

HON. BURT L. TALCOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. TALCOTT. Mr. Speaker, I recommend to my colleagues the reading of two editorials from the January 15, 1963, edition of the Salinas Californian discussing fiscal policy. Particular attention should be paid to the final outcome of deficit financing. So-called benefits to our citizens which are purchased with deficit dollars actually cost us more by reducing the present value of our money. Those hardest hit are our older citizens living on pensions and fixed retirement incomes who generally are not in a position to bargain for a larger income.

Placed in proper perspective, Government spending programs may not be quite so alluring.

Under leave to extend my remarks in the Record, I include the editorials, as follows:

AT LAST J.F.K. RECOGNIZES SPENDING

Although he still has a long way to go, President Kennedy yesterday finally made a tax cut proposal which recognized, at least on the domestic side, that spending is related to revenue trimming.

Although increased spending for defense, space, and interest on the national debt will mean an increase in total Government spending next year, the President has called for a cut of all other Federal outlays. The latter fact, though not decreasing the total picture, unless Congress acts itself, is heartening in the battle to make fiscal responsibility out of overspending.

No interested person, except possibly a welfare-stater, can be displeased with the President's stated intention of budgeting less spending, for domestic programs for the next fiscal year. Such a plan long has been sought by groups interested in the fiscal condition of the U.S. domestic spending, not defense spending, contrary to popular belief, in recent years has been the inflationary factor via its leapfrog increases.

Defense spending, actually, hasn't risen at the same rate as domestic. In fiscal 1954, military and related national defense items cost \$46.9 billion. Seven years later, in fiscal 1961, military and related defense items cost \$47.3 billion, up only \$500 million. For the period, all other items of Government rose \$16.2 billion.

It is this 80 percent hike in nonnational defense costs in 8 years that most smart-thinking citizens have been shooting at. We are pleased the Government, and particularly the President, has recognized this economic fact of life. And, if through some Merlin-like power, we can lop off some defense and space costs, we don't even want to talk about the interest on the debt, through superior administration and avoidance of duplication, we really will have begun to solve the plague of deficit financing and fiscal irresponsibility.

WHERE THE MONEY'S COMING FROM

The pattern is clear. From the power centers of Washington, D.C., and Sacramento, Calif., the word is that taxes are going to be lowered, not raised, and that Government expenditures are going to be raised, not lowered.

Both President and Governor are offering a variety of new spending programs. The

President proposes to finance his by cutting the income tax; the Governor says he will honor his "no new tax" campaign pledge and that something must be done to relieve the property taxpayer.

In this Alice in Wonderland atmosphere, there are a few voices of commonsense to be heard, to be sure. Democratic State Senator George Miller, for example, asks: "It's nice to make local property tax payers happy but where are we going to get the money?"

If the past is prolog to the future, the answer isn't too hard to discern. We'll get the money by cheapening the value of what we already have, by a new round of inflation by dipping in the pockets of pensioners, widows living on annuities, and old-fashioned frugal folks who try to save for their old age.

Time for Sober Reflection

EXTENSION OF REMARKS

OF

HON. ROBERT T. McLOSKEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. McLOSKEY. Mr. Speaker, irrespective of our economic status, whether we are a lowly wage earner or whether we are shareholders of a large corporation, I feel all of us should soberly reflect on the three messages which have been sent to Congress in the past 2 weeks.

First, the President's state of the Union address, then his budget message, and finally Monday of this week his message on the economy of this great country.

As a newcomer to this illustrious body I must admit I have become somewhat befuddled. Likewise, I am sure, the senior Members of this 88th Congress must share with me some deep concern as well as considerable confusion.

We were led to believe in the state of the Union message that while the seas are not completely calm, by and large, we are on a safe course, and we shall be guided safely into port.

In his budget, incidentally, the largest ever proposed in time of peace—reaching the astronomical figure of \$98.8 billion—his excellency proclaimed a vigorous Federal job economy program. Then, upon careful perusal I find a request for 36,500 more Government jobs. This, added to the 200,000 increase in Federal workers since the New Frontiersmen came into power, gives considerable cause for alarm.

The question may well be asked, has not the President proposed any cuts in Government jobs? In all honesty I must answer this question in the affirmative. He is asking an overall reduction of 30 jobs out of the Army's present 345,284 civilian employees. Big deal—instead of 345,284 employees there would be 345,254. Then I find the Agency for International Development is going to eliminate 48 jobs from 16,588—down to 16,540.

I merely point out these examples to call attention to the inconsistency of this administration's fiscal policy.

Most certainly the proposal for tax cuts is a noble purpose and I am sure all

of us would like to see substantial cuts in our income tax. It is, however, difficult to reconcile a \$13 billion tax reduction and at the same time increase our deficit by \$12 billion.

It is my honest feeling that this program should be approached with honesty and candor, and if we propose substantial tax cuts, then like reductions should be made in Government expenditures.

I am afraid that under the program proposed by the President what we make on the popcorn we shall lose on the peanuts.

Federal Tax Problems

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following three editorials dealing with the current Federal tax problems facing the country:

[From the Shelbyville (Ind.) News]

AS THE YEAR BEGINS

There's always much for which we can be thankful as this new year begins and, as the old saying goes, things are never so bad that they couldn't be worse. But still, we can't very well avoid reminding ourselves, unless we choose to live in some kind of fool's paradise, that, financially speaking, the situation with the Federal Government is about as close as it can get to national bankruptcy without actually tumbling over the brink.

We're about \$8 billion short of a balanced budget in the present fiscal year and the national debt is at a peacetime record high. And it's proper to point out once more that the interest we're paying annually on that debt is around \$9 billion—a sum that would have covered the entire cost of the Federal Government not too many years ago.

But still, and aside from the big cost of national defense, we're continuing to spend increasingly huge amounts of tax money for a whole passel of welfare state domestic items, a few of which may seem desirable but all of which we could do very well without. But does this bother official Washington? No, sir, not in the least. On the contrary, the welfare staters are preparing a brandnew packet of goodies for congressional consideration when that august body opens its new session in a few days.

But for immediate consideration in the realm of the public purse, come what may, you're going to take a sizable pay cut with your first paycheck of the new year—your social security tax is going up.

Beginning today, for an employee, the social security tax in 1963 goes up from 3½ to 3¾ percent on the first \$4,800 of salary or wages. That is matched by the employer. This means that the total increase is a full percent. Thus, the maximum tax in a year rises from \$150 to \$174 each for employee and employer. That's an increase of 16 percent.

There's a similar increase in the tax on the first \$4,800 of earnings of a selfemployed person. The rate rises from 4.7 to 5.4 percent. Thus the maximum tax increases by nearly 15 percent—from \$225.60 to \$259.20.

The increase effective with the first paycheck in January, is the ninth since the social security program was adopted, and two more increases are scheduled even if the

law is left as it is. The rate on employer and on employee is due to rise to 4½ in 1966 and to 4¾ percent in 1968. The rate for a selfemployed person will go to 6.2 percent in 1966 and to 6.9 percent in 1968.

But just keep in mind that any increases in benefits, of course, would require rate increases beyond those now scheduled. And the proposal to provide hospital care for the aged under social security, which was defeated by Congress last summer but which will come up again this year, would hike the rate on employee and employer by one-fourth of 1 percent and the rate on the selfemployed by four-tenths of 1 percent—just at the beginning. And it also would have applied the entire tax on the first \$5,200 of earnings instead of \$4,800.

Now we don't want to make you feel bad on the first day of the year. But it's a mighty good thing to have your feet on the ground at the beginning of anything. You might even want to let your Congressman (RALPH HARVEY) and your two Senators (VANCE HARTKE and BIRCH BAYH, Jr.) know how you feel about things. Congressman HARVEY can be reached at the House Office Building and Senators HARTKE and BAYH at the Senate Office Building, both at Washington, D.C.

HERLONG-BAKER BILL FOR TAX REDUCTION GAINS WIDE APPROVAL—CAN THE CHAIRMAN OF HOUSE COMMITTEE BLOCK CONSIDERATION?

One way of cutting taxes sure to come before House Ways and Means Committee at the 1963 session of Congress is a proposal for a progressive reduction in rates over a 5-year period. The idea has long been pressed and has the approval of leading business groups. Its most attractive form probably is the so-called Herlong-Baker bill.

Representative A. SYDNEY HERLONG, of Florida, and Representative HOWARD H. BAKER, of Tennessee, both are members of the Ways and Means Committee; BAKER is the second ranking Republican. Their plan is to reduce personal income tax rates from the prevailing 20 to 91 percent range to a range of 15 to 47 percent. For the first bracket, up to \$2,000 of taxable income, the rate would drop 1 percentage point, from the present 20 percent, each year for 5 successive years. Similarly, the rates in higher brackets would be reduced progressively, with the maximum rate going from 92 to 47 percent.

At the same time, the 52 percent corporate tax rate would be reduced by 1 percentage point a year, reaching the 47 percent level at the end of 5 years. In previous years the Herlong-Baker bill also would have permitted faster depreciation of business capital investments, eased capital gains taxation for individuals, and reduced gift and estate tax rates.

The First National City Bank 3 years ago described Herlong-Baker as "forward looking" and observed: "The essential goal, upon which everyone should be able to agree, is to lighten the burden of taxation on the creation of income and wealth, to bake a bigger pie for all to share." Last year the bank's survey repeated this recommendation, calling the scheme "the most imaginative plan to reform personal income tax rates."

Two years ago the authors of the bill estimated that the tax cuts would amount to \$17 billion over the 5-year period. They insisted that national production resulting from accelerated investment in plant and equipment and higher productivity would offset the tax cuts with new revenue.

President Kennedy in his appearance before the Economic Club in New York on December 24, repeated his pledge of last August of a substantial tax cut in 1963. In reply to a question which quoted, in part, rates similar to those of Herlong-Baker, he said: "I would suggest that details of the tax reduction should wait on the presentation to the Ways and Means Committee."

There's the rub, for Herlong-Baker or any other reduction this year. Chairman WILBUR D. MILLS, Democrat, of Arkansas, made clear his opposition in a recent copyrighted interview: "I've been unable to conclude that the situation at the moment justifies a rate reduction alone, with the resulting increase in deficit * * * and the public debt."

[From the Wall Street Journal,
Jan. 23, 1963]

CHALLENGE TO THE CITIZEN

We realize that many people are by now inured to heavy Government spending, but that is no excuse for anyone's shrugging off the new Federal budget. It is a challenge not only to Congress but to everyone who believes citizenship entails responsibilities.

That is so not only because of the towering spending of just under \$100 billion and the promised deficit of nearly \$12 billion. Such monstrosities a rich nation can perhaps tolerate for a time.

A budget is more than figures; as President Kennedy says, it is a plan for the conduct of the public business. And what the Nation may not be able to tolerate indefinitely is the philosophy behind the planning.

It is, to begin with, a philosophy of deliberate, planned deficits, not just for fiscal 1962, 1963, and 1964 but seemingly for always. The Secretary of the Treasury, presumably the guardian of the people's money, does not even think in terms of a balanced budget much before fiscal 1967, and that faint hope rests on nothing more than anticipation of some kind of super-boom in business.

In fact, the deficits could grow much worse with the greatest of ease. If the President were to get his tax cuts exactly as he wants them to apply in the 1964 period, and if business does not improve as he hopes, the planned deficit would almost automatically go to \$15 billion or more. If a recession occurred, it would be likely to go to \$20 billion or more.

In such circumstances there is every reason to believe that the Government prescription would be still bigger deficits. For nothing this Government has ever done suggests that it is aware of any answer to economic problems, whether of inflation or of economic growth, other than more spending and larger deficits.

As befits a philosophy of deficit, this is also a philosophy of waste. The Government, for a glaring example, promises to add billions to the military and space budgets. The Director of the Budget proclaims, as though it were a virtue, that these agencies got every nickel they asked for.

Such an attitude is a blank check for waste and hence weakness in areas vital to the national security. There is already appalling waste in these areas; in the considered opinion of experts who have studied the Pentagon, the only way to cut the waste, get the place under control and strengthen it is to slap a flat ceiling on defense spending and tell the military to start giving the taxpayer real value for his dollar.

But that is not the way of this Government, for its philosophy is also one of non-priority, of everything for everybody all at once. Defense and space are privileged preserves, but so, it turns out, is the whole sprawling, messy, wasteful political-welfare-spending program. A Mack truck can be driven through the contention that these projects are being held back; the budget itself belies the claim.

Plainly it is directly up to Congress to begin getting the Government down to earth, and this budget is such a thoughtless hodge-podge that Congress may conceivably put its spending foot down. The chances of that happening will be immeasurably increased if the citizen at last finds his too-long-silent voice.

Kings Point: The Story of the U.S. Merchant Marine Academy

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. BECKER. Mr. Speaker, I am delighted, under unanimous consent, to insert in the RECORD "The Story of the U.S. Merchant Marine Academy," located at Kings Point, Nassau County, Long Island, N.Y.

This article, together with the accompanying pictures of the Academy and its campus, was published in the October issue of the magazine called the Compass, published by the Mobil Oil Co.

Those of us from Long Island are very proud of Kings Point, and the young men it has turned out for the U.S. merchant marine. The record is a splendid one, and I am sure all Members of Congress can feel proud that they have had a part in securing permanency for this great institution.

The article follows:

KINGS POINT: THE STORY OF THE U.S. MERCHANT MARINE ACADEMY

On the southern shore of Long Island Sound, not very far from the narrow neck that separates it from New York's East River, is Kings Point, locale of one of the United States famous service academies, the U.S. Merchant Marine Academy. Actually there are five Federal Academies—the others being West Point, Annapolis, the Air Force and Coast Guard Academies—all run by their respective services. Kings Point, on the other hand, is maintained by the U.S. Department of Commerce, under the direction of the Maritime Administration. The setting is superb—a 65-acre campus that slopes gently from a knoll to the waterfront where docks and blue water provide atmosphere and egress to the sea lanes of the world.

Kings Point, as the Academy is more familiarly known, can well trace its origin to a survey conducted in 1931 by the then National Conference on the Merchant Marine. The Conference polled America's maritime industry on the subject of officer training; the responses from more than 6,000 interested people indicated a definite need for such training and that a national system should be created to handle it. But those were depression times. Ships were laid up and many licensed people were on the beach scrambling for the bare necessities to survive.

For 5 years, the concept lay dormant. Then after final passage of the Merchant Marine Act of 1936, the Federal Government provided the necessary funds that established the U.S. Merchant Marine Cadet Corps, March 15, 1938. The first young men who applied were sent to sea for their training. Then, a little later, temporary establishments were set up ashore. But war clouds were gathering and the need for an expanded Academy, fully equipped to handle the job of furnishing trained officers for American flag merchant vessels, became an absolute necessity.

Shortly after war broke out, the U.S. Government acquired the magnificent Walter P. Chrysler estate plus a few other choice properties on Kings Point and started building the Academy's physical plant. Construction was completed during the fall of 1943. The simultaneous creation of the entire

physical structure, even though wartime built, provided a simple uniformity of design that is maintained to this day. The only architectural variation is the old Chrysler mansion. It became the administration center. Since then, another building has been added at the Academy. It is The U.S. Merchant Marine Memorial Chapel, dedicated May 1 as a national memorial to the more than 6,000 officers and men of the U.S. Merchant Marine who gave their lives at sea in wartime.

It is an interfaith chapel with a revolving altar. Of early American design, it can accommodate 500 people. President John F. Kennedy, in his dedication day message said, in part, "it is fitting that the interfaith chapel, in memory of the American seamen of all faiths who gave their lives at sea, be established at Kings Point."

Candidates applying for admission to the Academy must obtain a congressional nomination and then take rather searching entrance examinations designed to test both their aptitude and physical fitness. Once admitted, they are subjected to strenuous academic training, rigid military discipline and a rugged physical conditioning program. The average "on board" enrollment at the Academy is about 750 not counting some 250 cadet-midshipmen who are at sea aboard U.S. flag merchantmen, working out what is called the "sea year."

The Academy offers a 4-year technical training program in nautical science or marine engineering. Cadets make the decisions as to whether they will become either deck or engineering officers and then follow the prescribed courses in the field chosen. While professional education makes up a significant part of the curriculum, cadets also receive a good general background in the humanities, social, and physical sciences plus special courses pertaining to operations within the shipping industry.

After finishing their plebe or first year at the Academy, cadets go to sea for their "sea year." They are assigned to merchant ships for practical experience and are fitted into each vessel's bill to develop the technical skills that will be required of them as officers. In essence, the ship serves as a sea-going laboratory where the cadets learn what comprises the day's work and routine of a ship. In addition the student-officers are given a laboratory manual known as the "Sea Project," to guide them in their investigations concerning the ship's structure, equipment, and practices. The manual, after completion, check, and grading becomes a vital part of each student's future reference material—material that he will use continually during his professional career. As a sidelight of this year at sea, it is not uncommon for some cadets to log 40,000 nautical miles and serve aboard three or four different vessels. And they receive pay, \$111 per month, from the shipowners for this sea duty.

During the final year, cadets spend some time in making field trips to various offices and industries where they see first hand many of the things they learn in their classroom work. Your editor had the pleasure of addressing a small group of them last year, a group that was spending some time with Socony Mobil Oil Co.'s marine transportation department to see how our company operates its tanker fleet.

The balance of the 4-year course, which runs for 11 months each year, is spent "on board" following a full professional and academic curriculum. In addition, there is a program of extracurricular activities plus intercollegiate and intramural sports.

Upon graduation, cadets receive a bachelor of science degree, sit for the U.S. Coast Guard licensing examinations, and are commissioned ensigns in the U.S. Naval Reserve.

The Academy's physical plant is first class. A great deal of attention has been paid to

setting up and equipping a wide variety of laboratories and shops where cadets spend much of their time. Besides the usual chemical and physical laboratories there are laboratories and shops covering all phases of marine engineering and the nautical sciences plus a waterfront training area for practical seamanship. Of particular interest is a laboratory placed in operation just last year. In it is a small atomic reactor that is used to instruct future officers, some of whom may well serve aboard an atomic powered ship. And all the buildings are named after men whose deeds brought fame to the U.S. merchant marine or to the Academy.

The U.S. Merchant Marine Academy at Kings Point is performing a very special mission and doing it superbly. The highly trained and extremely capable men it graduates every year are to be found in virtually every facet of the maritime industry, serving in what rightfully has become known as America's "fourth arm of defense." What is more, they are in an industry that has many exceptional career opportunities which they are well equipped to vigorously pursue. Indeed, any young man who is lucky enough to attend this excellent institution can consider himself extremely fortunate; for Kings Point is one of America's great schools whose graduates are much in demand by the entire U.S. maritime industry.

An Editor Views the Alliance for Progress in History

EXTENSION OF REMARKS OF

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. UDALL. Mr. Speaker, we are fortunate in Arizona to have available to us every day the observations of one of the Nation's best informed authorities on world affairs, Mr. William R. Mathews, editor and publisher of the Arizona Daily Star in Tucson. Recently Mr. Mathews addressed the Agricultural Men's Club of the University of Arizona on the importance of the Alliance for Progress in advancing the security and welfare of the United States. I found his speech so stimulating that, under unanimous consent, include it in the RECORD for the benefit of my colleagues who may have doubts about continuing a program which admittedly has only modest accomplishments to its credit at this moment in history. The text of the speech follows:

When President James Monroe proclaimed the Monroe Doctrine in 1823, he made Latin America a matter of primary interest to the United States. A matter involving national security. The record through the next 113 years, to 1936, reflects this. Never was this doctrine comprised. To the contrary, it was enforced. While our Government had to accept the French invasion of Mexico in the 1860's, as soon as the Civil War was over, we used our influence to bring an end to that French expansion of imperial power.

Under President Grant we toyed with the idea of annexing what was then Santa Domingo, but which is now known as the Dominican Republic. In 1896, President Grover Cleveland spoke out emphatically declaring that our word was flat on international

matters affecting the Western Hemisphere. Two years later we went to war to break Spain's power in Cuba, and also in the Pacific.

We acquired the Guantanamo Naval Base from Cuba. We made Puerto Rico a kind of principality which might become our 51st State. We bought the Virgin Islands in 1915 to keep them from falling into the hands of imperial Germany.

We built the Panama Canal primarily as a naval effort. We intervened in numerous Central American Republics, including Cuba, Santa Domingo and Haiti.

The Panama Canal is an artery of life, whose security should never be compromised. It should never be internationalized. Never should we tolerate any interference in its operation, in an effort to please some hungry politicians of Panama. Our record in making certain concessions in recent years has not made us any better liked. Respect for us has been reduced, rather than enhanced. The time has come to stop such trifling with its security and without any apologies to anyone, let the world know that it belongs to us, and that we are going to keep it and protect it.

In 1936 President Franklin Roosevelt sent Secretary Hull to Buenos Aires to negotiate what became known as the Treaty of Buenos Aires. It forbade intervention in any form, either direct or indirect, unless it was done after receiving full consent of the various signatories.

This Treaty was an unfortunate one. It compromised a matter of primary interest which has through time become clearly recognized as the Caribbean area, as distinguished from Latin-America. Today in Cuba we are paying the penalty for the compromise this Treaty imposed on both the Eisenhower and Kennedy administrations. Not until the danger assumed the proportion of threatening our destruction, did our political leaders feel free to mobilize our military power and challenge Moscow with a timed ultimatum.

For the future it seems to me that we Americans should distinguish between the Caribbean Sea area, and South American south of the equator. The former is vital to our security, while the latter has relatively little strategic importance. We must never compromise our control of the Caribbean and the Panama Canal.

This brief outline of the impact of the past on what we face today is necessary as a background to answer that question, "Where does America go from here in her relations with Latin-America?" Our first task is to take care of our security.

Events of the past few years have spectacularly emphasized that we Americans, as a part of our destiny, have a job to do in the whole of the Western Hemisphere. The Alliance for Progress is our first organized effort. The job is a difficult and delicate one. It must at all times acknowledge scrupulously the independent sovereignty of all of these nations, large and small. At the same time it requires a huge aggregation of capital, and the best brains and administrative ability to make the mountains, jungles, deserts and plains yield the hidden resources of this vast area.

Any discussion or planning on what we should do, or can do, must be based on the stern realization that it is the job of a lifetime. It will probably last as long as we are a great power. We might as well realize that there is no miraculous quick solution that mere money can buy, although billions of dollars will be needed. Latin America is not a vending machine where one can drop in some coins, press a button or pull a lever, and get what we want to buy.

Two basic challenging facts confront us. We must deal with people who have a dif-

ferent culture, heritage, ambitions, and outlook than our own. Secondly, we begin this job at a tough period in history when throughout the world a great historic change is taking place, and particularly in Latin America. What has been a civilization, based largely on an agricultural economy with aristocratic governments of a relatively few people doing the governing, is now going through a transition into an industrial civilization, governed by a rising middle class.

There is a wide variation of this transition in the many governments of Latin America. Such a situation means that governments in Latin America are going to go through many phases of instability as they strive to meet this change. Their cultures reflect wide differences in literacy, competency, ambitions, aptitudes, and skills. No one rule can be laid down that can be applied uniformly to all of them.

Bolivia, for example, is a relatively primitive nation composed largely of Indians with only a small intelligentsia of Spanish origin. We Americans with our know-how could make Bolivia bloom because we have the know-how and the capital to make the jungles and the mountains of that country yield their hidden wealth. The first thing we would do would be to start educating the Bolivians by training and educating them, while we went ahead with development projects by the efforts of individuals, rather than government. As it is we have been in Bolivia for 10 years, but so far we have little to show for what we have done.

Uruguay on the other hand is a highly developed social welfare state that needs no help whatever. Its people have probably the highest standard of living in all of Latin America, and the most stable government. But the Uruguayans are a nation of homogeneous people of Latin heritage. They have no Indians. As a nation of well educated people they can take care of themselves just as easily as Switzerland does.

Peru has nearly 5 million Indians living in the High Andes. That is nearly one-half of Peru's population. Who are we to tell the Peruvians how to treat their Indians? The American Indians are not integrated in the life of our Nation despite all of the money we have spent on them.

We must not be too gullible in swallowing that old, old issue of "agrarian reform." Certainly large, unproductive estates, whether they are owned by the Catholic church or private individuals, should be broken up. On the other hand, should large areas of productive land be broken up into small plots, experience elsewhere in the world shows that productivity will decline sharply. As we Americans have proven, the greatest productivity comes from large scale production. Since the vast eastern areas of Columbia and Bolivia, which are nearly uninhabited, do offer an opportunity for development, the lack of initiative, lack of willingness to adventure and pioneer, creates the ironic situation of poverty amidst a potential abundance. If agrarian reform is to better the peasantry and the country as a whole, it must be carried out by agricultural experts and not by political experts, or do-gooder reformers.

These wide disparities in a basic culture we will be compelled to recognize. We must remember to be cautious about assuming that perfectly constructed and other legal institutions and reforms, that work well with us, will not necessarily bring peace, stability, democracy and prosperity to these many nations.

The fact that most of their constitutions have been modeled after our own, but have failed to work continuously should caution us that we cannot impose American ideas of government on them. We must expect ups and downs with periods of democratic gov-

ernment followed by periods of dictatorial government.

Since the education of most of the intellectuals has been European, the doctrine of socialism has wide acceptance as a guiding gospel to follow. Too many of the intellectuals think in terms of national socialism as a means of national independence. Freedom means national freedom as distinguished from the individual freedom we cherish. We will have a difficult job inspiring the free enterprise that we take for granted at home.

Latin culture has a different standard of morals than our own. It teaches respect for authority and by implication teaches that the will of a majority is so righteous that it can scorn the rights of minorities. Most of the people do not know how to make a parliamentary government work. They respect strength and have only contempt for weakness. Too often they take generosity and extreme patience as a sign of weakness.

Because socialism has the reputation of promising the ideal society of abundance for all with peace and prosperity, it naturally makes a moving appeal to politicians in search of a campaign issue, and masses of people looking for an easy answer to their ills. Therein lies the appeal of communism with its promise to build Socialist societies, but instead of doing it peacefully, do it by creating the dictatorship of the proletariat. Its glorification of the use of dictatorial power makes an attractive appeal to Latin American politicians.

We must foster public education as a basic necessity in developing workers who can take their necessary place in the development of modern industrial societies. The same muscle and energy that have gone into the building of churches should now be called upon to build schoolhouses.

The increase in wealth production must be our main goal. Only by that means can the lot of the masses be improved. That will require not only enormous aggregation of capital from abroad, and the best technicians and administrative talent, it will require much harder work on the part of the people themselves. It cannot be achieved with a 6-hour day, and 5-day week that prevails today in too many places in Latin America.

We can no longer tolerate expropriation of wealth creating American investments. Such action nullifies the fact that unless foreign capital is attracted, the Alliance for Progress program will languish. All help should be withdrawn immediately from any nation that carries out expropriations. It is just as necessary to help create a climate that will attract foreign capital as it is to furnish help by our Alliance for Progress program. The latter cannot do the job alone.

We must see that all funds granted by our Government or its agencies be wisely spent. It is not enough to make grants and assume that each government will spend such money wisely.

The population explosion that has been going on throughout the world is taking place in Latin America with more increase than perhaps any other locality in the world. That means increased number of mouths will have to be fed. Increasing importance requires the means to earn a livelihood, which must come from increased industrial production. Certainly, there are needs that will require the toil of every adult worker available.

Where is the capital and technical and administrative ability coming from to make this possible? Without an enormous increase in productivity 30 years from now people will be less better off. We will have to run in order to stand still, as Alice would say.

Consequently, if the Alliance for Progress is to be successful we must approach this job with a fair but firm attitude and our eyes open. We must expect, and have, full cooperation of those whom we plan to help. We must take steps to see that the dollars we provide are not used to finance the flight of monetary wealth of wealthy people of these countries. There is good authority for the statement that some \$10 billion have been sent by the wealthy people of Latin America to Switzerland.

The most encouraging thing I can say about the Alliance for Progress is that so little appears to have been done during its first year. That is a welcome sign that we are making progress. It will take time, several years, for wealth-creating projects to take form, and still more years to make their productivity available to the masses.

All of what we might try to do, in both the economic and social welfare fields can be defeated, unless the political and intellectual leaders of Latin America zealously assume a financial responsibility that can bring the widely present inflation under control. Only where this is done should funds be advanced to finance economic development. Unless we are willing to act with such realism, we will be wasting our taxpayers' money.

Spending a few billion dollars as a kind of dole to individuals would be spectacular while it lasted, but it would obviously be unwise and harmful. Our job is a tough one but it is a wonderful challenge to our own heritage. Out of it we can hope will emerge the American substitute for what in the past has been known as imperialism. We will not be plundering. We will not be colonizing. We will be trying to prove that by helping others we will help ourselves.

Ukrainian Independence Day

EXTENSION OF REMARKS

OF

HON. CHARLES S. JOELSON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. JOELSON. Mr. Speaker, before World War I, tens of millions of people in Europe found their homelands under foreign control, among them the Ukrainians who for some 250 years suffered under the autocratic regime of czarist Russia. Then in the course of the Russian Revolution in 1917 the czarist regime was overthrown and the chains holding its subject peoples in check shattered. The Ukrainians broke free, proclaimed their national independence on January 22, 1918, and founded the Ukrainian Republic. But oppressed and helpless Ukrainians were ill-prepared and unable to fend off all their powerful foes to safeguard their new state. In 1920 the republic was destroyed by the Red army and the Ukrainians robbed of their freedom.

Since the destruction by the Red army of that short-lived Republic 45 years ago, the people of the Ukraine have suffered even more than their ancestors had under the cruel agents of the czars. They have been dispossessed of their worldly goods and reduced once again to the status of serfs. They have been denied

all forms of freedom, and have been sealed off from the free world. And they are being driven to work for the benefit of their alien overlords.

In the midst of all this misery and misfortune, however, the Ukrainians have kept faith with their tradition. They still fervently cling to their ideals and cherish freedom in their homeland. In the sad history of the Ukrainian people during the last several decades this is the one encouraging fact. On the 45th anniversary of their independence day we in the free world wish them fortitude and power in their struggle for their righteous cause, for their freedom and independence.

The Congo Civil War and Our Connally Reservation

EXTENSION OF REMARKS

OF

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. SHORT. Mr. Speaker, one of the most controversial issues for the past few years in this country has been our support and encouragement of the armed intervention by U.N. forces into the Congo civil war.

Aside from the Cuban affair or, as some term it, "debacle," the Congo-United Nations issue has been the most divisive issue in that our American citizens have more or less ranged themselves into opposing camps when the subject has come up.

Many feel the United Nations was justified in its action, that is, becoming an armed and active force rather than merely a guiding force through debate and vote in the U.N. On the other hand, many of our American citizens feel the United States not only should not have joined in support of the action because it was interfering in the internal affairs of the Congo after it had won its independence from Belgium—but that most of all, we should not have allowed ourselves to be placed in the position of almost singlehandedly financing this armed intervention.

One of our North Dakota editorials, written by Haakon Stockman in the Williston Plains Reporter of January 16, 1963, makes some rather pungent statements in the article entitled "This and That." Some of the points Mr. Stockman made are well taken. Would we deny the privilege of self-determination to the Congo Government, when we enjoyed this privilege in our own country? Would we have been allowed to break away from our mother country, England, had the United Nations been in existence at that time? What would have been the end result of our own Civil War had the United Nations been in existence at that time?

Many have expressed the belief that if we were not careful we might one day

find ourselves in the position of having the United Nations vote on some of our internal domestic affairs, and the prospect of this taking place in a United Nations dominated to a large extent by the Soviet bloc is not very cheerful.

As far as I can determine, the only thing that might prevent such a catastrophe is the Connally amendment, or reservation, which has been the subject of many legal debates concerning whether it should be weakened or entirely eliminated. There have been many who have beaten the drums for such elimination.

The Connally reservation, for those not familiar with its provisions, in effect protects the rights and liberties of 185 million American citizens, and future generations of Americans yet uncounted. On August 3, 1946, by a 51 to 12 vote, the Senate of the United States wrote into the resolution of adherence to the International Court of Justice—the World Court—eight words which are “as determined by the United States of America.”

This means that adherence of the United States of America to the jurisdiction of the World Court contains the complete reservation that “it shall not apply to disputes with regard to matters which are essentially within the domestic jurisdiction of the United States of America, as determined by the United States of America.”

Those last eight words are, in essence, the Connally amendment.

Opponents of the Connally amendment insist that the wording which they supported—which I have quoted above—should not have added on the last eight words “as determined by the United States of America.”

Supporters of the Connally amendment, on the other hand, feel that those eight words are our safeguard against future interference by the International Court of Justice in our domestic affairs.

The mere fact that legal debates have been waged over these eight words makes it clear that they are important to the United States. Let there be no mistake about that.

I believe I can truthfully state that the majority of the people in the United States do not wish to trust the United Nations with the safeguarding of our domestic legal rights.

The International Court of Justice advisory opinion, handed down on July 20, 1962, to the effect that the United Nations financial obligations should be borne by all member nations, has been ignored by the Soviet bloc, and others as well. This should be warning enough that we should not let those eight words which safeguard our legal right to determine what matters fall within the domestic jurisdiction of the United States be either weakened or eliminated.

We do not want to become a Congo at some time in the future. We do not want to become a divided Korea. And we have no intention of ever becoming a Soviet satellite, such as Hungary, Poland, Czechoslovakia, East Germany, Rumania, Bulgaria, Latvia, Lithuania, and Estonia, and last, but not least, Cuba, have become.

Therefore it appears our salvation lies within ourselves, and I do not feel it is a matter of national pride for us to hold up the United Nations victory over the Katanga Province of the Congo as an example of our clear thinking and fairness as a nation.

In fairness, however, we must grant that the United Nations indeed launched its operation in the Congo at the express request of the legal Congolese Government. The Security Council resolution to send a U.N. force into the Congo was indeed taken without a dissenting vote on July 14, 1960, and reaffirmed by the Security Council on July 22, 1960, August 9, 1960, February 21, 1961, and November 24, 1961, and this was upheld as far as legality is concerned by the International Court of Justice. All this we grant.

But this does not change our personal gratitude that we have a Connally reservation which will preserve our right to self-determination in domestic matters. Indeed, it should increase this gratitude, and cause all of us to inwardly and outwardly thank those Members of the Senate who so wisely voted on August 3, 1946, to include those “eight words” in the World Court resolution.

Mr. Speaker, under unanimous consent I ask that the editorial I mentioned, “This and That,” written by Haakon Stockman and published in the Williston Plains Reporter of January 16, 1963, be included with my remarks as an expression of the feelings of many American citizens on the Congo affair.

The editorial follows:

[From the Williston (N. Dak.) Plains Reporter, Jan. 16, 1963]

THIS AND THAT

(By Haakon Stockman)

Congo was given its independence some years ago and was supposed to be left alone to work out its destiny as best it could. It wasn't.

As several factions in the liberated country rose and part of it succeeded, from the Central Government, wanting to become an independent part of it, certain foreign countries found this undesirable and the United Nations interfered by sending troops to Congo to fight the rebels.

I happen to be one of those perhaps misguided people who think that Congo should have been left strictly alone to settle its disputes, even if it seemed as the Congolese weren't as yet fully ready to do so. But what if so—it is through trials and errors that nations as well as individuals find themselves at last.

When the United States declared its independence some 187 years ago, if there at that time had been a United Nations sending its troops here to mix into our country's internal affairs, wouldn't that have been as un-called for and as highly resented as the present foreign interference with the Congolese secessionists is?

Or if when the Southern States in the United States in 1861 seceded from the Union, what about it if European powers had sent powerful forces to fight either for or against secessionists?

It would have been an intolerable interference.

Belgium, after having exploited the Congo for so long, although in doing so also civilized and developed it greatly, was finally obliged to give it self government and from there on it should have been left strictly on its own.

Civil warring is of course a most deplorable thing, but if part of the Congolese found it to their advantage to secede, why shouldn't they be allowed to do so without interference by foreign powers? Doesn't independence give certain factions the right to rebel against what they find is an objectionable form of home rule by the central government?

What has been accomplished in the Congo so far, but unnecessary bloodshed and destruction, and what about it if Katanga is forced for the time being to capitulate? Surely its desire for home rule will blaze up again as did the Irish when they were fighting for home rule and finally got it.

Isn't it about time to let all Africa do as it pleases and find its own way around? For hundreds of years the so-called civilized world has taken advantage of the African continent and hated to let go of it, but had to.

If the many new countries there shall have their internal differences and many a bloody fight occur, let them handle their affairs as best they can—they are on their way and should be left alone.

And if they in striving to form the government they desire should have to shed a lot of blood—why, that is what the whole cockeyed world has been doing since the beginning of time, and presumably always will.

Corn Flakes to Caviar to Bologna—The Economic Collapse of Socialism

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mrs. ST. GEORGE. Mr. Speaker, the following article by Alice Widener, which appeared in U.S.A. of January 11, brings out some very interesting comparisons. We are constantly being told of the great progress of the U.S.S.R., which is usually pictured as being many percentage points ahead of the United States.

Of course, what we are never told is that 10 percent above zero is not quite as much as 5 percent of a hundred. It also occurs to the student of Russian history that it is strange and interesting that in the days of the czars, Russia was a great exporter of wheat, whereas today she can barely feed her own people.

While it is probably quite true that the U.S.S.R. is amply supplied with missiles, they still lag, even according to their own figures, behind the United States. They spend far less than we do on defense, \$24,025 million at the official rate, whereas we will spend roughly \$53 billion to keep up. This appears to be their one big success—to get us to spend ourselves into bankruptcy.

CORN FLAKES TO CAVIAR TO BALONEY—THE ECONOMIC COLLAPSE OF SOCIALISM

(By Alice Widener)

In a report from Moscow which appeared June 1, 1959, in the Washington (D.C.) Evening Star, W. Averell Harriman wrote, “New apartment buildings, bright cheerful clothing, shop windows filled with food and household goods make Moscow all but unrecognizable. * * * In the grocery stores the wooden hams and sausages, which were the only decoration a decade ago, have been re-

placed by attractive displays of a variety of foodstuffs from corn flakes to caviar, which, though expensive, are more abundant than at any time in Soviet history."

This glowing Harriman report is only one of thousands such naive and superficial estimates from which the myth of Soviet economic and agricultural might was created. Probably, it has been the costliest myth ever propagated. American belief in it created a sense of urgency to meet the threat of alleged Soviet economic and agricultural competition. In turn, this feeling was largely responsible for our Nation's having incurred a national debt of \$302 billion—the most colossal financial obligation ever put upon any people in the history of the world.

How did the myth of Soviet economic and agricultural might come to be believed in our age of science, when, one would logically assume, economic assertions should be based on probable evidence?

There is only one credible explanation. The Communists achieved indisputable mastery in the field of propaganda. Through this mastery, they used sympathetic socialists as collaborators and dupes. These intellectual supporters were able, in turn, to persuade extremely prominent men and women, who should have known better, that things were thus and so because the socialists said they were thus and so.

The closed socialist society was kept tight shut, except for peek-a-boo inspections conducted by circus-barker guides calling out pink balloon statistics of projected but never fulfilled 5- and 7-year plans.

It is acutely embarrassing for an American to dig into files and take a look at the U.S. historical record. Yellowed clippings from newspapers and magazines tell a tale of big mistakes made by big men in high places.

"I have a suggestion," Nell McElroy of Procter & Gamble said to John Scott of Time magazine, in Cincinnati, spring 1960. "Why don't you look into the question: When are the Russians going to begin to compete with us selling soap?"

To find the answer was John Scott's 1961 assignment for Time. In an introduction to his final report—"The Soviet Economic Offensive," issued November 1961 by Time—Mr. Scott wrote, "Before I had gone far in my early studies, I saw that on the surface at least my assignment would be an easy one. Even before I left on my trip, I could have answered Nell McElroy's question. Soviet soap would not compete with Procter & Gamble in the world market for at least a decade. Indeed, the entire Soviet trade picture was singularly unimpressive. * * *

What about Mr. Harriman's "corn flakes to caviar" Moscow observation of 1959?

"I had not been in Moscow many hours," reported Time Writer John Scott about his 1961 visit there, "before I encountered what Nikita Khrushchev later referred to in an official speech as 'certain difficulties in food supplies. * * *'. Indeed, on a number of occasions Moscow stores had run short of meat, milk, vegetables * * *. Several times I ran into block-long queues for meat, and several times I was told that 'there is no milk at all in Moscow now.'"

The city of Moscow—Scott reported—is the home of the Soviet "elite." In 1961, Mr. Jacquet-Francillon of the Paris newspaper Le Figaro reported, after a trip to nonelite places such as Soviet Siberia, that the food stores were guarded at night by women with shotguns.

RED DEAD END

What about Soviet trade?

It was not until 1957 that the Soviet Union furnished figures to the United Nations. Unreliable as Red figures are, they appeared in the U.N. Yearbook of International Trade Statistics for 1957 (published in 1958), and showed, even so, that the Red bloc was doing less than 2 percent of world trade. Yet a few

years earlier, on March 30, 1953, the New York Times had headlined, "Red Nations Show Big Gains in Trade—U.N. Report Also Notes Sharp Rise in Their 1952 Production—World Output at Peak."

On seeing this Times headline, how many people took the trouble to read what followed it? Those who did read the text found out that the Reds' "big gains" were confined to trade among themselves, and East-West commerce had shrunk to one-half or less of prewar volume.

All during the 1950's the myth of Soviet superiority was engendered by American and British intellectuals and by politicians pleading for billions of U.S. dollars to hand out in bilateral and multilateral foreign aid. Anyone questioning Soviet Socialist supremacy was described as a "know nothing" or "isolationist" or "ostrich."

On March 23, 1957, the Washington (D.C.) Post and Times Herald reported that "Max F. Millikan, economist and foreign affairs specialist," was the first witness to appear before a special Senate Committee on Foreign Aid. The late Senator Theodore Francis Green, of Rhode Island, asked Mr. Millikan (who urged Congress to appropriate \$10 billion for a 10-year loan-and-grant aid program to underdeveloped nations) what would happen if the United States were to end all its development aid for such economic essentials as transportation, electric power, and the like. Professor Millikan, director of the MIT Center for International Studies and coauthor of the Millikan-Rostow (Walt W.) report, replied that underdeveloped nations "would turn increasingly to the Soviet bloc," and would be encouraged to adopt "totalitarian methods" of government to squeeze more resources from their own subjects.

Not a single hint was offered to the Senate committee by Economist Millikan that any turning for aid by underdeveloped nations to the Soviet bloc would be a turn leading to an economic dead end. Of course, Mr. Millikan disagreed entirely with Mr. Benjamin Fairless, who had advised President Eisenhower that private capital could take over a main share of the economic development load.

Only a month after Mr. Millikan's mumbo-jumbo, Ned Rochon of the New York World Telegram & Sun said in a report culled from United Press and Associated Press dispatches: "A most compelling argument in behalf of superabundant foreign aid in these casual days of the \$72 billion budget runs like this: Russia is spending vastly more than we are.

"Let one moderate among Senators question the enormity of America's outlay and a strident coterie of internationalists arises in full bellow across the land. They depose fierce testimonials to the generosity of Russia's effort. Estimates soar into the stratosphere to trigger clouds of inflated statistics, and the economy advocate is drowned in a rain of 15-digit statistics.

"It was in this atmosphere that a British publication dared to take a look at actual Soviet aid, and what it found was revealing indeed. A Royal Institute of Affairs publication, the Chatham House Review, disclosed that Russia's total program for undeveloped nations amounts to \$1.4 billion for the next 5 years. That's about one-fifteenth of the rate at which U.S. spending is running in neutral lands.

"The analysis further revealed that no more than one-tenth to one-fifth of Mr. Khrushchev's aid is being delivered, and that is in commodities, not cash."

BETTER BLIND THAN DELUDED

On May 3, 1958, Dean Acheson, former U.S. Secretary of State, delivered a Jefferson-Jackson Day address in Detroit and called on our country "to export capital" to the underdeveloped nations. "Peoples everywhere demand an expanding life," said Mr.

Acheson. "Khrushchev promises the faithful and the uncommitted that Communist economics will produce this result. Only a blind man can doubt that it is turning out an impressive performance."

Yet on December 24, 1962, only a few years after Dean Acheson's tribute to socialist economic accomplishment, Barron's Financial Weekly carried the front page headline, "Bankrupt Socialism—State Planning, the Kremlin Has Confessed, Is a Failure."

Perhaps the most ardent and characteristic of all socialist minded American myth-makers about Soviet economic might is Pulitzer prize winning historian Arthur M. Schlesinger, Jr., the man who publicly called the brilliant Henry J. Taylor an idiot.

In 1960, a pamphlet marked "For Private Circulation Only" was issued with the title "The Big Decision—Private Indulgents or National Power?" by Arthur Schlesinger, Jr. The Harvard historian wrote that "the American people are growing restlessly aware that the United States is losing ground in the great world competition with the Soviet Union. We are still ahead in many ways, but this is mainly because we had an excellent start. As fast as we continue to move, the Communists seem to be moving even faster. As a result, they are steadily narrowing the gap between us. Even more alarming, in certain decisive categories of national strength—in new weapons, in the contest for space, in technical education, and in the rate of economic growth—the Soviet Union appears already (in Prime Minister Khrushchev's favorite phrase) to have 'overtaken and surpassed' us."

Not content with this, Professor Schlesinger—who was a top adviser to Mr. Adlai Stevenson and became a White House advisor to President Kennedy—went on to the following hysterical assertion in his privately circulated 1960 pamphlet:

"This decade of American decline has equally been the decade of Soviet rise. What accounts for the extraordinary progress made by the Soviet Union in the fifties? The gross national product of the Soviet Union is still only about 45 percent of our own. Yet it has been making faster relative progress than we have in nearly every critical field of national power. There is here no 'riddle wrapped in a mystery inside an enigma.' The answer to the Soviet success is as plain as day. It lies in the power of the Soviet Union to focus its national energies. The visitor to Soviet Russia finds it frightening to see what energy a great nation can generate when it allocates its talent and resources according to an intelligent system of priorities."

Two years after this Schlesingerian punditry, which contained several references to the missile gap, Vermont Royster, editor of the Wall Street Journal and an educated, perceptive visitor to Soviet Russia, testified before the Joint Economic Committee of Congress:

"The Soviet Union, by the standards of advanced Western industrial countries, is an economically backward country. This is so, I believe, whether the test be industry, agriculture, technology, labor skills, or the standard of living of the people. * * * Soviet economic power today is actually less than that of many other countries with a smaller potential: West Germany, for example, or France."

On January 5, 1963, Richard L. Strout, Washington correspondent of the Christian Science Monitor, reported that President Kennedy is seen as "emerging into a more mature second wind."

Part of this new-found maturity may come from Presidential discovery of "Junior" Schlesinger's immaturity. Mr. Strout went on to report that coupled with President Kennedy's mature second wind "is the discovery that the so-called missile gap, which played so large a part in the 1960 election

speeches, does not exist. While perhaps embarrassing to a politician, the misjudgment probably renews confidence in the American defense position to a president."

You see?
The missile gap was all a matter of misjudgment by Professor Schlesinger and his very intellectual associates, such as Walt W. Rostow, now a policy planner in the State Department, and others. The truth is that the Soviet Union was not ahead of us militarily, economically, agriculturally, industrially or technologically.

Wherein, then, does Soviet strength lie? The correct answer seems to be—

(1) In nuclear blackmail, i.e., the publicly expressed and reiterated Soviet willingness to strike first and without warning against the West.

(2) In socialist propaganda.
Of these two Soviet assets, the second is much the more useful.

After all, it is a neat trick to be able to dupe Harvard University's most eminent historian into believing that failure is success, especially when the dupe is able to progress from a campus classroom to a White House inner sanctum.

BUTTERED-UP TALES OF BUTTER, GUNS

It is interesting to analyze a case history of myth-making about the Soviet economy. Though Khrushchev was forced in the summer of 1962 to announce a 25 percent increase in the price of Red butter, several leading newspapers in New York City (including the New York Herald Tribune) carried a story June 20, 1962, headed, "A Red First—Butter." This story asserted that the Soviet Union leads the world in butter production. The tale was based on a single statistic taken out of edible fats context from the United Nations Statistical Yearbook for 1961.

As all serious economists know, Red production and consumption statistics in the U.N. Yearbook are furnished by the Soviets themselves from within their tightly shut society, are unverified by outside sources, and are cited at entirely fictitious official ruble-dollar exchange rates.

The U.N. Yearbook carried the following relatively meaningless figures for butter production in 1960 in thousand metric tons:

U.S.S.R.-----	737.0
U.S.A.-----	622.7

The United States has a total area of 3,628,130 square miles; the U.S.S.R. total is almost 2½ times greater—7,877,598 square miles. The Soviet population is at least 20 million greater than ours. In America, only 5 percent of the population are farmers; in the U.S.S.R. 40 percent or more of the population are at work tilling the soil.

A much truer picture of relative United States-U.S.S.R. agricultural strength is in the following table compiled by this writer from the U.N. Statistical Yearbook for 1961:

<i>Edible fats production for 1960</i>	
[Thousand metric tons]	
U.S.S.R.-----butter..	737.0
U.S.S.R.-----margarine..	431.0
Total-----	1,168.0
U.S.A.-----butter..	622.7
U.S.A.-----margarine..	619.7
Total-----	1,242.4

So—in an area less than half as large and with a much smaller population, 5 percent of Americans outproduced more than 40 percent of Russians in edible fats during 1960.

But this is not by any means the world picture. The real one shows clearly why Khrushchev shouts diatribes against a European Common Market (EEC) which is reducing to absurdity his claims of Socialist economic superiority. EEC figures in the U.N. Yearbook for 1961 show:

<i>Edible fats production for 1960</i>	
[Thousand metric tons]	
France-----butter..	398.0
Do-----margarine..	115.0
West Germany-----butter..	406.0
Do-----margarine..	588.0

The French and West German total of 1,507 is much more than that of the Soviet Union, though the combined area of the two Common Market countries is only 212,659 square miles as compared with the Soviet area of more than 7 million. Moreover, the combined population figure of France and West Germany is less than half as great as the Soviet total.

When the butter production figures for other Common Market countries are added to those of France and West Germany, the total shows that the EEC outproduced the Soviets in butter by 1½ times. Also, France and West Germany produced almost twice as much as the combined production of Bulgaria, Czechoslovakia, Hungary, East Germany, Poland, and Yugoslavia.

PEONY RUBLE-DOLLAR FIGURING

As in the case of butter, a lot of baloney figures about Soviet military expenditures have been issued to the American people by the press and to Congress by scholars and U.S. Government officials.

On December 6, 1961, the Soviet Government announced revision of its 1961 military defense (aggression) budget. Next day, the New York Times reported on its front page, "Last July, Premier Khrushchev disclosed that military appropriations budgeted for 1961 had been increased by 3 billion rubles (\$3,300 million) because of growing East-West tension in the Berlin dispute. The Soviet Union's defense expenditures, which had been gradually decreasing in recent years, thus jumped from 9,300 million rubles (\$10,323 million) originally planned for 1961 to 13,400 million rubles (\$14,874 million) for 1962. This represents an increase of 44 percent."

How frightening. And please note that the Times converted all ruble figures into dollar figures at the fictitious official Red exchange rate of 1 to \$1.10.

Now let us consider this: On October 28, 1959, UPI cited the Soviet-issued defense budget figure for 1960 as 96 billion rubles or \$24.025 billion calculated at the then official Red exchange rate of 4 rubles to 1 U.S. dollar.

A comparison of the 1959 figure with that for 1961 would indicate, at first glance, that the Soviet military budget decreased (in round figures) from \$24 billion in 1960 to \$14 billion in 1961. Of course, this was not the case. On January 1, 1961, the Soviet Union devalued its currency by taking the artificial 1961 tourist ruble-dollar exchange rate of 10 to 1, dividing it by 10, adding a 10-cent gold content, and declaring 1 ruble equals \$1.10 of U.S. currency.

When the 1960 Soviet ruble defense budget figure is converted at the 1961 rate, then the comparative ruble figures are:

1960 defense total-----	9.6 billion
1961 defense total-----	13.4 billion

Thus the ruble increase for 1961 seemed to be 3.8 billion or 23 percent over 1960.

But what is the dollar figure?

There is none. The Soviet currency is not convertible outside the U.S.S.R. The so-called official rate of ruble-dollar exchange is purely arbitrary and is not established according to supply and demand on the international money market. There is, however, a somewhat indicative way of figuring out an approximate value based on the extremely limited but highly significant black or free market in rubles outside the Soviet Union. Reputable foreign exchange firms in Switzerland, the United States, and elsewhere engage in negligible but nevertheless actual ruble-dollar transactions.

In 1960, the reliable foreign exchange firm of Perera & Co., Inc., New York City, said that a conservative ruble-dollar rate was 24 to 1. On December 7, 1961, Perera's rate was 35 cents in exchange for one new (devalued) ruble.

Now let us take a look at the Soviet military defense (aggression) budget (which does not include sums for Soviet scientific research and many other items of a kind included by the United States in its defense budget):

<i>Soviet military budget</i>	
1960 in rubles-----	96,000,000,000
1960 in dollars at official	
4=1 rate-----	\$24,025,000,000
1960 at Perera's 24=1 rate-----	\$4,004,166,666
1961 in "new" rubles-----	13,400,000,000
1961 in dollars at official	
1=\$1.10 rate-----	\$14,874,000,000
1961 at Perera's rate of	
1=35 cents-----	\$4,680,000,000

The foregoing table shows—at the black or free market ruble rate—a Soviet 1961 increase in military defense (aggression) budget of only 17 percent over 1960, not of 44 percent as claimed in The New York Times.

If it be taken for granted that the Soviets concealed a military expenditure equal to what they revealed, i.e., of approximately \$4 billion, it nevertheless appears that the Soviet outlay of \$3 billion was about one-fifth of ours. And this Soviet outlay imposed such a heavy strain on the Soviet economy that Khrushchev was forced to declare that for 1962 his country could not invest any capital in new industrial undertakings.

SALIENT FACTS FOR 1963

Indisputably, the Soviet Union has a first strike nuclear capability. Indisputably, too, the Soviet Union has an almost unlimited propaganda capability. These two capabilities are the only substantial Socialist successes.

The first of these could be better frustrated now and for the near future by an American announcement that since the Soviet Union never has pledged itself not to start a nuclear war, the United States cannot be bound by a pledge not to start such a war if its vital interests are endangered. (In essence, this is what President Kennedy said and did when he covered the Soviet nuclear bet in Cuba last October.)

The second successful Soviet capability—that of propaganda—can be thwarted only when American taxpayers quit subsidizing it. They do this mostly through their Congress. It swallows all the corn flakes to caviar baloney about Socialist economic successes fed to it by Socialists and their dupes. As a result, Congress appropriates billions upon billions of dollars to fight a mythical economic challenge, thus seriously weakening the financial structure of the United States, bastion of capitalism.

As the year 1963 begins, there emerge some salient facts about the second half of our century:

1. Marxism is a dead-duck theory everywhere except in some academic and intellectual circles. Even European Socialists have renounced Marxism.

2. Only those national economies in which there is substantial private capitalist enterprise are thriving.

3. The collapse of Socialist economics will cause upheavals within the Socialist bloc countries leading their rulers to embark on intensified programs of military aggression and political subversion abroad.

4. The Achilles' heel of the West is U.S. fiscal folly.

George Saintsbury, essayist and author, said, "Poor scholarship is the endless repetition of other people's mistakes."

Unfortunately, the American Congress has heeded too many experts of poor scholarship endlessly repeating Socialist mistakes.

Members of Congress would do better in 1963 and thereafter to heed their own good commonsense and innate patriotism.

Why Does the President Seek Advice From Socialist Economists Regarding Our Way of Life?

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. ALGER. Mr. Speaker, for what purpose does President Kennedy seek the advice of a Socialist in planning our economy? For that matter, why does the President continue to base his economic planning for the United States on the advice of Walter Heller who contributed greatly to the prosperity and economic growth of West Germany when that nation refused to adopt his program. Under unanimous consent I include in the RECORD and I commend to my colleagues the following editorial from the Wall Street Journal to show what lies ahead for the American economy if we continue to follow the economic theories of President Kennedy and his Socialist advisers:

ROAD TO CONTROL

Whenever the subject of price controls comes up in Washington, the customary reaction is to deny any intention of imposing them. That sounds all right, but maybe we should listen to some other views.

The Swedish economist, Gunnar Myrdal, for example, pays a lot of attention to the American economy and his thinking parallels that of the advisers in Washington. He emphatically advocates greatly increased Federal spending, and in a speech excerpted in the New Republic he concedes this course runs a real risk of inflation.

The danger could be minimized or removed, however, particularly if the Government is prepared to extend its controls over investments and, perhaps, over prices. In regard to price control, I sometimes ask myself whether the American Government should not be prepared to tone down its rather fruitless fight against monopoly but instead ask for a share in controlling administered prices, which are so decisive for the general trend of prices.

The prices Mr. Myrdal has in mind are in basic industries, which some people mistakenly allege to be administered without regard to market conditions. What he implies is that Government control of these prices would be tantamount to control of all prices, and that is to be desired. In short, we don't have to worry about inflation because we can always go to price controls.

Such controls historically do not work, of course. They do not attack the inflation itself; in practice they do not necessarily even put a lid on the rising prices which may be a symptom of the inflation. They do distort the economy and place it under burdensome regimentation. They represent by definition the antithesis of the free-market economy.

But the interesting thing is that if anyone were trying to get the United States back to price controls, the present policy of unlimited spending and deficits charts the right course. For an ensuing inflation would

then become the justification for the controls.

Mr. Myrdal, at least, is honest enough to carry the theory to its logical conclusion. And what a dismal one it is.

Cuban Appeasement

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. DEROUNIAN. Mr. Speaker, because of the apparent deceit with which this administration has explained the Cuban invasion failure, under unanimous consent, I include in the RECORD an article, "We Were Betrayed," written by one of the veterans of the Cuban invasion, as it appeared in the U.S. News & World Report of January 14, 1963.

It is hard to believe that Mr. Penabaz and the all around expert, Bobby Kennedy, can both be right. The article follows:

CUBAN APPEASEMENT

(How do Cubans who fought at the Bay of Pigs feel about the U.S. role in that fiasco? This is the story of one Cuban invader, told in his own words. Manuel Penabaz tells of assurances made by representatives of the U.S. Government that the invasion against Castro would have U.S. support. Then, he relates, just when the invaders needed help most—and might have won—they were told: "We cannot give you any further support." Many veterans of the invasion, just ransomed from Castro prisons, say they hold no rancor against the United States. But Penabaz says: "We did not fail. We were betrayed.")

(By Manuel Penabaz)

"Keep advancing. Keep advancing—and wait."

So long as I live, I shall never forget those words. They sounded out from an American ship, from the officer who directed our landing operations at the Bay of Pigs on the coast of Cuba, where 1,500 of us Cubans offered our lives in the hope of liberating our beloved country from the rule of the bearded despot, Fidel Castro, on April 17, 1961.

"Keep advancing and firing. Take the area ahead—and wait."

To us who had struggled ashore from our landing barges, the words "and wait" meant only one thing: "Help is on the way."

When we were recruited for this perilous mission, and during our exhaustive training in Guatemala—even while on the slow, ancient freighters that brought us from our embarkation port in Nicaragua—we were promised the support of the armed forces of the United States.

"Over you will be air cover," we were told, "and back of you the Navy and land forces of the United States and other free nations of the Americas. You cannot fail."

We did not fail. We were betrayed.

After 3 days of fighting, we heard again that same American voice that had exhorted us to "keep advancing—and wait." Only this time it said:

"We cannot give you any further support."

The whole invasion operation that had been planned and directed by agencies of the U.S. Government had been abandoned by that Government at the moment when victory could have overthrown Fidel Castro.

Of the 1,500 who began the assault at the Bay of Pigs on that warm April morning, about 100 were killed; 60 later died of wounds, starvation, torture and executions; most of the others were captured.

I was among the lucky. I escaped. Four of my comrades and I found a raft and, after 5 days afloat, were rescued.

Now my surviving comrades of that invasion also have been freed—ransomed from Castro's prison cells. Many of them have told me since their arrival in Miami that their lips are sealed because they have relatives still in Cuba. I, too, have relatives in Cuba. But my lips are not sealed. I will tell the story of what happened at the Bay of Pigs, because I believe that such a mistake must not be made again by any government or people of the free world.

For me, the story of the invasion began in Miami, Fla., when I heard the words: "Recruits are needed—recruits to overthrow Castro."

The Central Intelligence Agency of the U.S. Government, headed by Allen Dulles, was the recruiting and training group for our volunteers.

Several officers of the Central Intelligence Agency were operating in the Miami area, seeking out the leaders among the Cuban exiles and encouraging them to select the likeliest young men for the adventure. I was told that there would be an invasion of Cuba "fairly early in 1961," backed and supported by the United States.

The first airlifts of volunteers to training camps began in late summer, 1960. Any recruits who doubted that the United States was back of the operation were assured that, when we reached our training camps, we would find American officers in charge and there would be the best of American weapons to carry into battle.

Sure enough, when we arrived at Trax Base, high in the mountains of Guatemala, American officers were in charge of the camp, and our weapons were among the best the United States had to offer.

At Retalhuleu, Guatemala, a splendid airstrip had been laid down by American engineers. All about were huge accumulations of war material—aircraft, mortars, tons of bombs and other ammunition.

Over the whole operation, there was an air of great secrecy. Our instructors, American officers, wore only fatigue uniforms, with no markings. We knew them only by first names. But it was apparent that they were experienced and efficient.

It did not take us long to learn that "Frank," the man who gave the orders for both Americans and Cubans, was a colonel. The American subordinate officers were all experts in their fields. "Ray" was our rifle and pistol instructor. It leaked out that he was from California and a pistol champion. "Sam," chief trainer of the parachutists, was plainly a veteran of many combat jumps. "Nick," from New Mexico, was our instructor for intelligence operations. "Bob" demonstrated all there was to know about mortars and machine guns. "Pat" was a security officer.

There was no secrecy about the CIA man in charge at the camp. He was Frank Bender, a man of German descent who had fought in the French underground during World War II. Bender was everywhere—shuttling back to Miami to check on recruiting, going to Washington and New York to try to bring all the Cuban exile leaders together into one united front.

Trax Base was a regular little city, built by the U.S. Government. It had modern paved streets, electric lights, and barracks for about 500 men. As our numbers grew, we had to disperse to four other training bases.

All the training bases were leased from Roberto Alejo, brother of the Guatemalan Ambassador to the United States and a

trusted friend of Guatemalan President Miguel Ydigoras Fuentes.

For rifles, we had that infantry workhorse, the M-1 Garand, firing eight shots. Officers carried carbines. We learned to use machine-guns and bazookas, 57-millimeter guns and 4.2-inch mortars.

One prized piece of equipment was an electronic communications-control center—a device so new that it had never been used in combat. It was manned by six men, who could relay messages to artillery, aircraft, and other combat units. The American officers warned us that it should be destroyed rather than be permitted to fall into the hands of the enemy.

Training was rugged, but we endured it cheerfully. We were preparing to free our land of Marxist dictatorship. We understood that our brigade would be the initial attacking party backed by the might of the United States. There would be ample ammunition to stop Castro's tanks and his land forces. Every effort would be made to win the support of the Cuban people. Exile leaders would be formed into a provisional government and would receive the recognition of the United States and of Latin American countries. Such were our assurances.

Our brigade commander, Col. José Pérez San Roman, and his headquarters staff hoped that, before embarking, they could have printed thousands of leaflets to be dropped all over Cuba by planes calling upon the people to rise against their oppressor, Fidel Castro.

At the last moment San Roman was informed that the U.S. Government could not approve this plan.

On the morning of April 10 we were flown to Puerto Cabezas, Nicaragua. At the dock we saw the invasion fleet that the CIA had mobilized. There were six ancient craft. Three were Liberty ships of World War II vintage. The other three were old fishing yachts. Most of the officers were Spanish or Cuban, with crews filled out from men of the U.S. merchant marine—among them many drunkards and misfits. We soon discovered that the crews did not want to mix with their live Cuban cargoes, and couldn't have cared less whether the expedition succeeded or failed.

"We carry you, land you and leave you," a crew member explained. We took this as added assurance that we would be covered by air and naval support, for it was unthinkable to us that any civilized government would send men to battle without ample means either for complete victory or honorable retreat.

On the night of April 11, in moonless darkness, we sailed. On the fourth day at sea, we were given our final briefing on our invasion plan. Each man received a mimeographed copy of the operation in detail. The landings would be made on April 17 at Bahía de Cochinos, the Bay of Pigs, about 90 miles southeast of Havana. Battalions 2 and 5 would land first, at Playa Larga, deep in the bay, under command of Eneido Oliva. All other units would land at Playa Girón. Soon after our landings, the parachutists would drop some 12 miles inland to seize the airport of Jagüey Grande.

On the morning of April 15, planes from the Nicaraguan bases would begin bombing Castro's airfields and hangars, to be followed by heavier strikes on the sixteenth and seventeenth. Some of our units would move southeastward to join rebel groups in the Escambray Mountains, and others would move westward to take Havana.

Most important of all, our leaders had been assured of U.S. air cover, the backing of the U.S. Navy, and—if needed—of U.S. land troops as well. No one expected our 1,500 volunteers alone to conquer Castro's forces of 300,000 militia and regulars.

But we did expect that, with our American equipment plus American battle support, we would move inland steadily until we had cut Cuba in two. Castro's forces would then realize resistance was hopeless. Defections would begin and rise like a tide.

Soon we heard the Cuban radio announcing angrily that several planes were bombing the airports of Santiago and Havana and various military bases. We were elated. The bombings by our planes from Nicaragua had gone off on schedule. But Castro's broadcast was followed by a rebroadcast from the United States that chilled us to the bone. It was a speech by President Kennedy in which he affirmed that the United States would maintain a policy of strict neutrality in Cuba's internal affairs. Specifically, said the President, his Government would not intervene in the events shaping up in that island.

"He must say that, to deceive Castro," we finally decided, for all of us had heard Mr. Kennedy, during his campaign for the Presidency, advocate full support of Cubans opposing Castro. Yet doubts assailed me. It was the President speaking now—not the candidate.

On the morning of the 16th we were heartened by the sight of two U.S. destroyers, one on either side of our slow-moving flotilla. They were greeted with cheers. At least, we thought, we would have naval support. And in case of setback, we would be evacuated and saved from capture.

All through that April 16 we waited for news of the second bombing strike. No news came.

That night we saw the lights of Girón Beach, Bay of Pigs, on the horizon, like shimmering pearls. The ships carrying Oliva's units had veered to our right, and his men would be landing soon. As the first shots from Playa Larga sounded, I looked at my watch. It was 20 minutes past midnight, April 17. The tragic invasion had begun.

Oliva and his two battalions met little resistance on their landings—only a small patrol of Castro's militia.

Our ships drew up about 1 kilometer—0.6 of a mile—from the shore and anchored. Landing barges were quickly floated, and all hands began unloading the weapons.

The firing on Playa Larga had ceased. Back and forth from all the ships shuttled the motorized landing barges. As dawn broke, our radios picked up the first message of the American officer, stationed farther out at sea on a U.S. warship. He said:

"The whole bay is ours. The enemy has disappeared."

We learned later that morning that the officer was on the aircraft carrier *Boxer*. How comforting to know that the might of the greatest navy in the world was standing by to support this blow for freedom.

Our ship's captain stuck his head out of his cabin and shouted: "The sky is ours, too." Every man raised a cheer, for surely this meant that the bombing of the 15th had destroyed Castro's air force.

"WE CHEERED TOO SOON"

But we cheered too soon. At 6 a.m., a B-26 bomber flew toward us at low altitude. We supposed it came from our Nicaragua base. But suddenly it swooped low and began firing at the barges unloading their cargoes on the beach.

"Shoot," I shouted to the men still on my ship, the *Atlantico*. There was also firing from other ships. The B-26 sped away. It had given our men their first baptism of fire. But, most important to Castro, the pilot had learned that there was no air cover for the landing.

Two other B-26's appeared from over the sea. Several of our guns started firing. Then the planes identified themselves as ours, from the Nicaragua base. They circled over our landings for a while. Then, with

feelings of despair, we saw them head back toward Nicaragua. The pilots said they had fuel enough to cruise over the Bay of Pigs for only about 20 minutes.

Suddenly a Sea Fury appeared. I recognized this British-made fighter plane at once, for Batista had used them against us when I was fighting with Castro in the hills. This one made a pass or two, then zoomed away.

As our landing barge was on its way toward the beach, another Castro B-26 appeared, swooping directly over us. Our guns fired. The plane plunged into the sea.

We waded ashore, through the warm Cuban waters, onto the beach of our native land. Soon we were under terrific fire from several enemy aircraft. Flat on our bellies, many of us crawled into the village of Girón. Some of the inhabitants had fled. Many others ran toward us with welcoming shouts.

HOW "PRECIOUS CARGO" WAS LOST

I looked back toward our ships. One was in flames and sinking rapidly. It was the *Houston*—with most of its precious cargo still unloaded. The stacks of mortar shells, the armored trucks, the electronic communications-control center—all were going down. Another ship burst into flames. It was the *Rio Escondido*. Soon it, too, sank. All the other ships were moving rapidly away. We watched a Sea Fury bring down a B-26 from our base. We asked:

"When will our air cover come? When will those fast U.S. jets go into action?"

The news from Playa Larga was good. Oliva had moved inland; destroying seven enemy tanks and numerous trucks, along with hundreds of enemy soldiers. The news from the parachutists was less hopeful. They had dropped early in the morning, but, for the most part, had landed in the swampy terrain north of the bay. Now they were fighting their way back to join our main force. By midafternoon, we were moving steadily forward.

"Keep advancing. Move inland—and wait" the American officer's voice kept broadcasting.

Late in the day we encountered the first battalions of Castro's militia, advancing among 10 or 12 tanks. How we needed those antitank mines that went down with the *Houston*. But our mortars were ready. We let go our barrage. Our fire was devastating. Castro's poor militiamen fell in heaps. Men? The majority were mere boys—many no more than 14 years of age. Only an insane sadist would have drafted those adolescents to fill his military machine.

As one after another of their tanks were knocked out, the Castro infantry ran like crazy from side to side. Our men got tired of shooting at them. The butchery that went on is impossible to describe. By nightfall, the survivors of Castro's forces were in full retreat.

The U.S. radio "Swan" had kept up a constant chatter all during the day, filled with exaggerated statements that I can now brand as deliberate lies. It said:

"The invaders are steadily advancing on every front."

"Throughout all Cuba, people are joining forces with the underground rebels fighting Fidel Castro."

"Castro's forces are surrendering in droves."

"It is reported that Raúl Castro has committed suicide."

That night our men slept in the open, close to the soil of our Cuba. Next morning we ate what rations we could gather from the villagers. We were set for another battle. But all was quiet for a time—except for the quarreling of vultures over the bodies of Castro's slain militiamen.

From Playa Larga, Oliva and his battalions had advanced more than 12 miles, fighting all the way. They had stopped 3,000 of Cas-

tro's militia, flanked by Russian tanks and covered by British-made Sea Fury planes. Our units had advanced almost that distance to the northeast. Realizing that our lines were too extended, San Roman ordered them pulled back.

Oliva began his withdrawal to join our forces north of Girón.

By noon of that second day, all officers and men realized it was then or never for victory. We had demoralized Castro's infantry with our deadly mortar and machine-gun fire. A few more days of pounding like that, and his forces would be surrendering in droves.

Colonel San Roman communicated with the American ship: "Where is our support?" he asked. "We must have jet cover immediately."

The answer he got was nothing new—simply that we should advance and wait.

"WE LOOKED IN VAIN FOR AIR SUPPORT"

All afternoon the enemy B-26's strafed and bombed us, while we looked in vain for the air support that could have knocked Castro's planes from the sky.

By nightfall, our forces had retreated from the Jagüey Grande area. Despite the terrific punishment from the air, we still held the terrain for 6 miles north of the bay, including the road junction at San Blas. We still stood guard over the airstrip on Girón Beach.

But we were running out of ammunition. Every battalion reported it was running short of mortar shells, and even the small-arms bullets would soon be exhausted.

Meanwhile, from our advanced sentinels, we learned that Castro's forces were concentrating in huge numbers, with scores of tanks, hundreds of cannons and armored trucks, forming a ring of steel around the Bay of Pigs and getting ready to mount an attack.

Not a single plane from our bases had engaged the enemy during that second day of fighting.

At midmorning of the third day, we saw two of our B-26's winging in from over the water. Two Cuban planes zoomed out to meet them—one a Sea Fury, the other an American-made jet fighter—and within seconds our planes fell into the sea.

Soon afterward, three more of our planes flew over the beach and across the battle area. Two left quickly, but the third swooped down and began strafing the advancing Castro columns. Antiaircraft shells converged on that plane and it crashed. We found later that the pilot was Leo France's Berle of Boston, an American instructor from the Nicaragua base. Early that morning he had learned that the invasion forces were to be abandoned to their fate. Apparently, in anger and frustration, he had determined to uphold his own honor, at least.

One of Oliva's radiomen kept repeating this message: "This is Cuba calling the free countries. We need help in Cuba—now."

Like the coils of a great python, Castro's columns, with thousands of men supported by Russian tanks and bombing planes, were encircling our units and pressing them back toward the beach. We were outnumbered 40 to 1.

There can be no adequate description for the emotions that gripped us as we thought of what those planes on the U.S.S. *Boxer*, those guns on the two destroyers that had escorted us, and all our sunken mines and ammunition could do for us.

Manuel Artime Buesa and I were close by Col. San Roman during the final hours of our defeat. We heard him make his last anguished plea for help.

"Where is our support?" he asked.

From far away in the ocean came the reply:

"We cannot give you any further support. You are on your own."

Quickly, in the anger of a leader forsaken, San Roman replied:

"And you, sir, are a ———."

As the coils of Castro's python strangled us, one of our men shouted: "Headquarters says it's every man for himself."

I had resigned myself to being captured when I ran into Rene Salvia, a boyhood friend from my hometown. "Follow me," he shouted. We ran to the beach. Several lifeboats were filling with men and pushing out to sea. Howitzer shells were falling all around us. We spied a rubber raft floating near the shore—one used by frogmen to mark the route for our landing barges. It had an outboard motor and three oars. Rene and I piled into it, followed by Pepin Casals, Gardo Orlando, and Perez Jemenez. The motor refused to start, so we rowed out to sea.

For 4 days we paddled and drifted. About 5 o'clock on the fifth afternoon a freighter, the *Luisse*, bound for Corpus Christi, Tex., plucked us from the sea. Eventually I returned to Miami.

Since then, I have learned much from my friends in the revolutionary council about the invasion at the Bay of Pigs. I have learned that no preparations were made for our cooperation with the underground in Cuba. No campaign of civilian uprising and sabotage had been planned.

Both the U.S. military chiefs and the CIA blandly assumed that there was enough opposition to Fidel Castro inside Cuba to overthrow his regime, once the movement had been sparked by our invasion.

Our exile leaders reflect with great sorrow upon the fact that the U.S. decision to cancel the promised help to our invading forces included also a refusal to rescue our men and prevent their capture. Not even those in lifeboats or struggling in the water could be rescued. American naval personnel at Guantanamo heard our pleas for help, but, on orders from Washington, they could not move a vessel to assist.

It is known that Castro salvaged every item that went down with the *Houston* and the *Rio Escondido*—including our new secret communications system which, doubtless, now has been duplicated by every Communist military command in the world.

"NO RANSOM WAS NECESSARY"

Fidel Castro convicted 1,179 of the captives of treason. Now his demands for ransom have been met.

From my comrades of the invasion I have had my belief confirmed that no payment of ransom was necessary. The cowardly dictator had his plane all warmed up and waiting during the recent missile crisis, ready to flee the country at the first military move by the United States.

For me and for my comrades, the question still remains unanswered:

Why were we denied the help that would have uprooted the seedbed of Communist power in the Western Hemisphere?

Dr. Frank L. DeFurio, Distinguished Surgeon and Educator of Auburn, N.Y., Announces His Retirement From the City of Auburn Board of Education

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. STRATTON. Mr. Speaker, last week Dr. Frank L. DeFurio, a distin-

guished physician and surgeon from Auburn, N.Y., in my new congressional district, announced his intention to retire from the board of education of the City of Auburn after a long and distinguished service of 15 years.

Dr. DeFurio has long been an active and outspoken leader in the great city of Auburn. His wisdom, his energy, and his dedication have been reflected in the schools of the city.

In tribute to Dr. DeFurio's service on the board of education, the Auburn Citizen-Advertiser saluted him in its editorial page, and under unanimous consent I include herewith a copy of that editorial, which appeared on January 19, 1963.

The editorial follows:

DR. DEFURIO RETIRES

With the retirement of Dr. Frank L. DeFurio from the Auburn Board of Education, the Auburn board will lose a man who has been a strong supporter of good schools for Auburn.

The doctor has served on the unsalaried nine-man board for 15 years, and these have been busy years for the board. During this time Herman Avenue School, Genesee Street School, Owasco Elementary School, Auburn Community College have been built. Thornton Avenue School is under construction. The way has been cleared to start construction on Casey Park School and a new library for the college. Plans are being made for a new junior high school.

As a professional man Dr. DeFurio has appreciated the importance of good education and has been willing to spend money to see that Auburn children received this kind of education.

A Complaint Against Postal Regulations Inaugurated January 7, 1963

EXTENSION OF REMARKS

OF

HON. M. G. (GENE) SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. SNYDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter addressed to H. W. Brawley, Deputy Postmaster General, which was sent to me from the Voice of St. Matthews, a very highly respected newspaper in my congressional district, in which they outline a complaint against postal regulations inaugurated January 7, 1963, which complaint I feel should be brought to the attention of this body:

THE VOICE OF ST. MATTHEWS
AND THE HIGHLANDS,
Louisville, Ky., January 21, 1963.

Mr. H. W. BRAWLEY,
Deputy Postmaster General,
Washington, D.C.

DEAR MR. BRAWLEY: We would like to call your attention to what we believe to be a grievous wrong caused by your issuance of Post Office Services Transmittal Letter 120, of January 7, 1963.

The particular wrong is section 134.82 and the wording "All sealed pieces mailed at the third-class postage rates must be legibly marked with the two words, 'third class.'"

Millions, perhaps billions, of shipping labels have been printed for general use during the past years with the wording: "Postmaster, contents, merchandise. This parcel may be opened for postal inspection if necessary. Return postage guaranteed."

To our own knowledge third-class matter bearing this slogan is now being marked postage due at the first-class rate. The most grievous part of this is that the postage-due balance is being collected from the intended recipient.

Clearly this is an injustice. This section of the Postal Manual hamstrings post offices throughout the Nation into the legal thievery of charging postage-due rates for all such third-class matter including any sealed packages up to 1 pound.

Sealed bulk mail which does not carry the marking "third class" is likewise charged, even though it is obvious by the very use of the bulk mail permit that the intent of the sender is to post the pieces third class rather than first class.

It is our deep conviction that this little-known section of the postal regulations is being used to glean untold amounts of moneys deviously milked from unsuspecting business firms and general patrons of the U.S. postal service.

Sincerely,

AL. J. SCHANSBERG,
Publisher.
C. ROGER GERNERT,
Circulation Manager.

The Sculptor of Liberty

EXTENSION OF REMARKS OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. JENSEN, Mr. Speaker, under unanimous consent I wish to express what I believe to be the satisfaction of this House that a citizen of this country, Oskar Hansen, after whose name we appended a noble phrase, "sculptor of liberty," on the cornerstone of the monument to the alliance and victory, at Yorktown, Va., has now been accorded similar, signal honors, abroad.

His name has been inscribed among the Immortal Four Hundred, as a life fellow of the International Institute of Arts and Letters.

I have long felt that Oskar would inevitably bring this, and other similar honors, to add luster to our country. In order to underscore the many reasons why this should be so, I extend my remarks by including in the RECORD quotations from the book, "Beckoning Desert," Prentice-Hall, Inc., publishers, by the distinguished critic and author, on the staff of the Los Angeles Times, Edward Maddin Ainsworth.

I include the quotations from the writings of Edward Maddin Ainsworth in the RECORD, as follows:

THE STALLION'S HEAD

At the entrance, in the place of honor, where every visitor to the gem room of the Smithsonian Institution in Washington must see it, stands a special pedestal with a glass case upon it. In the glass case is the head of an Arabian stallion, carved in turquoise. The large size of the carving, to those who know turquoise, is unbelievable. Yet there

it is, the fiery embodiment of the king of horses, nostrils flaring, great eyes ablaze, the inward curve of the face emblematic of the breed, the whole statue bespeaking the bursting arrogance of the triumphant male from the ancient deserts of the Mohammedan world.

I know a story about that piece of turquoise.

Oskar J. W. Hansen, for me the peer of American sculptors and a transplanted Norseman of such gargantuan attainments that I often wonder whether he leaped through space to our century from a more heroic age, was catapulted into my vision for the first time on a day of splendid sunshine in the Arizona desert in 1939-40. I say catapulted advisedly. Oskar Hansen cannot merely move. He projects himself. He becomes a missile. Life is his target.

As he was catapulted into my sight, at Boulder City near Hoover Dam on this particular summer day, he was heading with our mutual friend John Hilton for an obscure spot known as Chloride, Ariz. Into the whirlwind preparations for this impromptu expedition I was sucked as into a vortex. Before I quite realized what was happening I was introduced to Hansen by Hilton, provided a seat in a truck, handed a miner's pick, and whisked across the countryside through Joshua trees toward our objective. Oskar Hansen, with his large, animated face, flashing eyes, expressive tongue and slight accent, swept us along in a torrent of conversation.

It developed that we were in search of mineral specimens.

As we proceeded, I began to become aware of the stature of the man whom I had just met. His booming laugh and devastating wit alone were enough to inform me that I was in the presence of no ordinary mortal. When he lapsed into serious discussion it was as though he walked through the wide doors of the world's knowledge and handed out largess to his listeners with kingly gestures. Never have I met one who so humbly shared the greatness of his spirit with those around him. Never have I seen him condescend, never seek to shame one who knew less than he.

He was engaged at that particular moment upon two projects of extraordinary nature. One was the completion of the placing on the Nevada side of Hoover Dam of two 32-foot winged bronze figures typifying the American Republic and the achievements of the engineering profession in creating the dam and Lake Mead. These figures, the largest single-cast bronzes in history, he had created after winning a national competition of U.S. leading sculptors.

His other undertaking was the making of a bronze and marble "Timetable of the Universe" at the base of the statues, to anchor for posterity the exact moment at which Hoover Dam had been dedicated. * * *

Chloride itself is situated at the entrance to the so-called Mineral Park between Boulder City and Kingman. Mineral Park is one of the Nation's most productive areas, boasting the possession of gold, silver, lead, zinc, copper, turquoise, amethyst, and other metals and gems, all within a few miles of each other. Many of the turquoise mines are said to have been worked by the Aztecs, and even perhaps their predecessors, way back in prehistoric times.

The combination of so many minerals and gems, all raw materials for sculpture or figure casting, had stirred the artistic feelings of Hansen despite the unromantic nomenclature of Chloride itself. On this day he was scouting for any sort of material which might look promising for sculpture.

As we drove through the increasing heat, Hansen disclosed to us his concept of basic sculpture.

"I can always see the figure I want to carve inside the stone," he said. "It is just a mat-

ter of peeling the outside, like taking the skin off an orange."

I was trying to absorb the simplicity of this idea, incidentally trying to make up my mind whether Hansen was serious or joking. * * * We embarked with added enthusiasm on the search of sculpturing materials. I had no idea what we were looking for, but by now I was beginning to enter into the spirit of the occasion. * * *

Within an hour we were hot on the trail of something which sounded too fantastic to be true. A grizzled ex-miner, who had lost all his teeth but not his powers of description, told us he knew where there was a piece of turquoise as big as a football. Allowing for the inevitable exaggeration expected from the mining gentry, we were still intrigued enough to ask its location. * * *

It all happened within 5 minutes then. Hansen spoke to the resident of the shack, a patriarchal character who looked as if he should be playing Moses in a film rather than living in Chloride. The old fellow nodded, went to some secret hiding place and came back with a burlap sack.

From this he carefully extracted an object. It was the turquoise, living up to advance billing. Here it lay, before our eyes, gleaming with that unmistakable color halfway between sky and sea. It was as large as the two doubled fists of a large man. * * *

The patriarch was reasonable under the Hansen persuasion. Money passed. We reentered the car.

"Drive like hades," urged Hansen in a whisper, "before he changes his mind."

Fondly, Hansen held the unbelievable piece of turquoise in his hand and looked at it with a faraway expression on his face. Hilton and I watched him curiously.

"I see the head of an Arabian stallion in here," Hansen said, almost to himself. * * * This is what he saw. It is now in the place of honor in the national gem collection. * * *

The next day I saw the two heroic bronze sculptures at the Hoover Dam. Set against the sky and rocky cliff which serves as a backdrop, they are identical, Hansen explained, because "they represent the rulers and the people, and in this American democracy the rulers and the people are the same."

The figures look down on the astronomical chart.

This amazing creation, spread out over a large marble mosaic floor was intended to anchor in time the exact moment of the dedication of Hoover Dam, September 30, 1935, so that future astronomers could tell the conjunction of the planets and stars and, from them, calculate the date. The dedication, though, was far from being the only event chronicled. Every important happening for 5,000 years of recorded history, including the age of the pyramids, the beginning of the Christian era and other "time spots" was included. In addition, the course of the earth for the next 20,000 years was charted.

The mosaic floor on which the stars and planets were laid out was made up of black, white and grey marble and the heavenly bodies were represented by bronze castings made by Hansen himself. The path of the earth during a platonian (or great year) was traced in relation to events, planets and solar systems. A platonian year consists of 25,994.8 ordinary years.

Hansen had made hundreds of thousands of intricate astronomical calculations during the 5 years required to evolve the map of the heavens. He explained that at the end of a platonian year the earth would be in the same relative position as on the date of the dedication of the dam.

I was curious to find out why a sculptor also was so avid an astronomer. Hansen gave most of the credit to his longtime friend, the late Dr. Albert A. Michelson of Chicago, who was internationally known for

his experiments in calculating the speed of light. * * *

Naturally, I did not obtain the full story of Oskar Hansen in the few days of my assignment at Hoover Dam. Even now, after nearly three decades, I still have not been able to absorb all the multitudinous details of his crammed and achievement studded career. Through those decades, though, I have learned enough to list him as the only genius I have known. * * *

Then, before long, the desert interlude did indeed come to an end for all of us. Each went back to his own task, regretting that there were no more opportunities to participate in desert trips and campfire sessions. * * *

Oskar returned to Virginia to take up other creative tasks. He acquired a vast tract of ground of tremendous historical and sentimental value, a mountain portion of the original Thomas Jefferson estate, across the highway from Monticello. He designed and largely built a futuristic structure containing delicate electric ovens for the gem work which he liked to do, such as enameling on gold with pulverized gems—a virtually lost art dating back past medieval times. * * *

Included in the decorations were cacti of all kinds from the Arizona desert, nurtured in a huge solarium.

I heard of his works and his progress through various channels, but the years slipped by without the opportunity presenting itself for us to meet again. At last I heard that Oskar was embarked upon the most prodigious undertaking of his career. He had been granted a contract, by the Congress of the United States, to create a gigantic new figure of liberty for the top of the monument to the Alliance and Victory, at Yorktown, marking the successful conclusion of the American Revolution on the site of the last battle where General Cornwallis surrendered.

On a trip East I went to see Oskar in his studio to observe the almost unbelievable task of the carving of Liberty from two solid blocks of granite, one weighing 23,000 pounds, the other 11,489.

I asked him to put down in writing what Liberty meant to him. This is his reply, penned in the solarium amid the desert cacti:

"I like to remind you that the brute strength of this granite block from the primal crust of the earth which we quarried at Mount Airy is also the result of the thought and spirit of the Great Sculptor and was fashioned by His mind while 'darkness lay over the bosom of the deep.' A granite block is, therefore, more than just a large stone; it is a form of capital asset of the spirit, His spirit, which remains with us always.

"What is the face of Liberty? What character molds her features? On this Pantop Mountain in the Albemarle, on soil once hallowed by the feet of Patrick Henry and Thomas Jefferson, it is more likely that the true nature of Liberty may be perceived than on any similar spot on earth, outside Mount Sinai.

"The victory at Yorktown was a victory of the spirit. There is spirit in the face of the Liberty which will stand again at Yorktown.

"This figure of Liberty which I am bringing out of the granite is larger than Michaelangelo's David. One may accomplish, out of this 4-billion-year-old matrix, only that which has made a well-nigh indelible impression upon one's own mind.

"It is not completed, in a moment of sudden inspiration, with a line of the pencil or the stroke of a brush. Required is the iron will of a consistent and wholly dedicated purpose. Day by day and chip by chip, one must grow to the stature of the image one brings into form. The emotions which she may evoke in the beholder must be questioned in turn.

"When the Liberty of America again graces her shaft at York, it is my prayer that every American may search her face and find there the suggested presence of his own mother and of the mother of his sons. In the face of that reality men have ever sought reassurance for doing that which life requires and for the approval which shapes our conduct for that day when we may stand with clean hands and a shining face before the Great White Throne of God."

Hansen did not elaborate upon his mention of Michaelangelo's David, but he could have done so. Actually, "Liberty" was the largest single figure carving ever undertaken by one man alone in the history of the world, according to any historical records now known. Liberty measured 14 feet and 2 inches. Her completed weight was 25,000 pounds. She weighed much more than stated, in the rough.

When I heard Oskar speak of what Liberty meant to him, when I sensed the full force of his mental and physical powers going into the creation of the symbolic statue, I realized fully for the first time what genuine freedom has meant to Americans who have come here from other lands and gained citizenship in our Republic.

I went up to Washington from Oskar's studio and took time for a visit to the Smithsonian Institution.

At the entrance to the gem room I encountered the Arabian stallion.

It, too, spoke of Liberty in its own way. The proud, unconquered head burst upon view as the embodiment of freedom in the desert, the incarnate spirit of the untamed.

I closed my eyes and seemed to be transported at once to the brilliance of an Arizona day—to be surrounded by sun and sage, hearing the booming laugh of Oskar.

Then, once more, I gazed upon the stallion's head.

I knew a story about that piece of turquoise. * * *

J.F.K.: The Job Abroad

EXTENSION OF REMARKS OF

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. EDWARDS. Mr. Speaker, there is a most thoughtful editorial analysis of the President's state of the Union message in the January 15, 1963, edition of my hometown newspaper, the San Jose Mercury.

Under unanimous consent, I present the editorial for inclusion in the RECORD herewith and commend it to the attention of my colleagues and other citizens throughout the country:

J.K.F.: THE JOB AHEAD

President Kennedy's state of the Union message lived up to its advance billing; it dwelt heavily on the necessity for a tax cut this year and for maintenance of cold war military strength.

This, it seems to us, reflects a reasonable reaction to the state of the world and of the Federal Union as they exist today, not as theorists might wish them to exist.

It is, of course, too early to criticize the President's program in detail; it hasn't been submitted in detail. But the hints contained in yesterday's state of the Union message provide reason for cautious optimism.

For example, President Kennedy appeared to recognize that congressional conservatives

will give his tax cut proposals short shrift unless there is a companion effort to reduce Federal spending. He promised, therefore, to keep domestic programs for next year under this fiscal year's spending levels. This is a step in the right direction.

It is also a step in the right direction when the President says, as he did in the state of the Union message, that labor pressure for a shorter workweek is inimical to economic growth and will not receive White House support.

In this regard, President Kennedy noted that his proposed net tax reduction of \$10 billion over the next 3 years would "mean tens of billions of dollars more each year in production, profits, wages, and public revenues."

"It would mean an end to the persistent slack which has kept unemployment at or above 5 percent for 61 out of 62 months—and an end to the growing pressures for such restrictive measures as the 35-hour week, which alone would increase hourly labor costs by as much as 14 percent, start a new wage-price spiral of inflation, and undercut our efforts to compete with other nations."

We concur most heartily in these sentiments.

We concur, too, in the President's observation that internal strife in the Communist world gives the West cause for hope which must be tempered with caution.

"A dispute over how best to bury the free world is no grounds for Western rejoicing," is the way the President put it. We agree.

In light of this, it is sensible that the budget to be submitted later this week contains an estimated \$50 billion for defense expenditures out of a \$99 billion total.

And the President spoke sense, too, when he in effect urged our NATO allies to concentrate on developing their own conventional forces as a complement to the U.S. nuclear strike capability. In the President's words:

"Threats of massive retaliation may not deter piecemeal aggression—and a line of destroyers in quarantine or a division of well-equipped men on a border, may be more useful to our real security than the multiplication of awesome weapons beyond all rational need."

Take it all in all, President Kennedy's state of the Union message is a hopeful statement.

All Americans hope the President's optimism proves to be justified. A more meaningful appraisal must await the details.

Robert S. Kerr

EXTENSION OF REMARKS OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. WALTER. Mr. Speaker, the sudden death of the distinguished Senator from Oklahoma, the Honorable Robert S. Kerr, has left a deep mark on all of us.

This past session of the 87th Congress, all of us marveled at the stamina and skill of this great Senator as he directed the fate of the most important pieces of legislation to come to the floor of the other body.

There is no question that Bob Kerr was a self-made man, a go-getter. At times his foes sharply criticized his actions, but Bob Kerr feared no man.

He was, as one newsman wrote, "beyond doubt, the most powerful single Senator—and by himself more powerful than most of them in groups."

It did not take one long to know where Bob Kerr stood on a certain piece of legislation. All he needed was an explanation of the legislation and he would form his own opinion on its merits, and immediately would become its champion if he thought the bill was worthwhile.

This was brought home repeatedly in my own personal dealings with Bob Kerr. In the 1st session of the 87th Congress, Senator Bob Kerr, as chairman of the Public Works Committee, became one of the strongest advocates for the Delaware River Basin compact and helped lead the fight for its enactment by that body when it was threatened by a battle over public versus private power.

Outside of the Halls of Congress, Bob Kerr was a personable, knowledgeable individual who commanded the respect of a multitude of friends.

His every action was made in behalf of his constituents in that great State of Oklahoma, where he was born in a log cabin. His unique talents brought him widespread acclaim and his climb politically was compared with that of President Lincoln.

All of us, and the people of Oklahoma, will greatly miss this distinguished Senator. I join my colleagues in extending heartfelt condolences to Senator Kerr's devoted wife, Grayce Breene, and his daughter and three sons. Their grief is shared by all of us who had the good fortune and privilege to serve with this outstanding American.

What Is the Administration Covering Up Regarding Our Foolish Policy in Cuba?

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. ALGER. Mr. Speaker, the news and editorials of the past several days are fraught with terror as to what is happening to the once powerful United States in our policy regarding Cuba. The President continues to tell the country what a great victory he has won there, but his brave words are followed by a rewriting of the historical record of what happened at the Bay of Pigs by his brother, the Attorney General, and by Communist boasts of how they took the United States in on the Cuban deal, and the worried questioning of talented newspapermen who are bringing to light that there was not indeed a victory in Cuba, but what may be a tremendous defeat. Mr. Speaker, I think it is imperative that Congress investigate our Cuban policy and demand of the administration a true statement of what has been accomplished and what we intend to do about increasing Soviet military expansion there.

As a part of these remarks, under unanimous consent, I would like to include a powerful column by Henry J. Taylor in the Dallas Morning News, an equally powerful piece by David Lawrence in the Washington Evening Star. I would also like to include the lead of a news article written by William L. Ryan, Associated Press staff writer in Berlin, in which the German Communist leader Walter Ulbricht tells of Communist plans for Cuba and the rest of the Western Hemisphere. Finally, to complete this dismal picture, I include a new article by Earl H. Voss, staff writer for the Washington Evening Star, telling of our abandonment of low-level aerial reconnaissance of Cuba. Mr. Speaker, in heaven's name, what is the administration trying to do?

The articles follow:

[From the Dallas (Tex.) Morning News, Jan. 21, 1963]

ABOUT SOVIET TROOPS—PENTAGON WHISPERS CUBA CONFESSION

(By Henry J. Taylor)

The Pentagon has whispered a confession; whispered it to achieve minimum notice and yet amend the rigged record in Washington's manipulated news.

This column repeatedly stated that throughout the White House campaign to call the Russians in Cuba "technicians," Mr. Kennedy knew these were heavily armored, fully equipped Soviet combat troops, more than 10,000 strong. Our Central Intelligence Agency had even identified the troops' shoulder patches. Our Moscow Embassy's military attaché had confirmed these designations as elite elements of the Red army. Moreover, Castro had (and still has) an estimated 144 missile launchers, 24 bases, and at least 500 anti-aircraft missiles, including many as "hot" and intricate as anything we possess.

Soviet submarine fishing base construction on the Isle of Pines, Segueana Bay, continues apace. So does the military adaptation of the great Caverna de Santo Tomas, Caverna del Sulsenor, Escaleras de Jaruco and Caguane Caves, undetectable from the air.

MISSILES BEGAN ARRIVING IN 1961

In addition, the big missiles began arriving as early as November 1961—a fact the White House no longer denies but has never admitted.

Impeccable Cuban underground sources, dead right from the very beginning, still insist Khrushchev placed 86 long-range atomic missiles there, balanced against the 42 that the Pentagon "is sure" Khrushchev took out. But the whole charade was supported by the governmental brigade of tax-paid publicity agents pumping out misinformation like bouncing nymphs or charging Valkyries in yellow braids and 10-league boots.

That is what happened and that is the noisy side of the manipulated news technique. Now the manipulator's problem is to square up the noisy record as quietly as possible and thus ultimately challenge those who claim the public has been misled.

As the French would say, they have a sea to drink up.

Notice the method regarding the Soviet troops still in Cuba: No press release. No public statement. No leaks to "fill in" newsmen or a TV interview to bring the people closed to the Presidency. Why, even the state of the Union message reveals nothing about how Cuba remains a looming bastion fringed with fire or the downhill negotiations that still allow this result 90 miles from our shores.

HOW THE STORY SHIFTED

First was the White House insistence that there were no Soviet soldiers there. Then the President's, oh, well, perhaps there are "two or three thousand." Finally, months later, the Pentagon confirmation that the 10,000 was true. And now the Pentagon has been instructed to state, but only in reply to inquiries, that yes, Mr. Kennedy's estimate of Cuba-based Soviet combat forces is "some-what higher than had been thought."

How much higher, you ask? Oh, quite a bit. The Pentagon's official admission as of the day of the President's State of the Union message is 17,000. That message stated "while danger continues, a deadly threat has been removed." Has it?

Moreover, Assistant Secretary of Defense Arthur Sylvester finally agreed to reveal that at least 20,000 Soviet soldiers were in Cuba at the hurry, hurry why? moment of lifting the blockade. By the Pentagon's own calculation less than 3,000 have left. Why?

Secretary of State Dean Rusk, in turn, falls right in line with the whole news-manipulation program. Testifying before a Senate Foreign Relations Committee closed session on January 11 he kept up the same old charade—the hair-splitting fiddle-faddle that the President hadn't given a commitment not to invade Cuba. Stalwart Senators FRANK J. LAUSCHE, Democrat, of Ohio, and KENNETH B. KEATING, Republican, of New York, protested Mr. Rusk's "ambiguities."

CYCLE STARTS WITH RATIONALIZED LIE

The truth seldom bounds out of any political forest like a leaping deer. It must be sought. This is the function of the free press. And under the administration's manipulation policy it is admittedly impossible to accept even our highest officials' statements at face value.

The rationalized lie starts the cycle. Then the denial compounds the felony. Then the adjusted lie adds to the crime. Finally the ultimate confirmation that it was all false from the beginning is forced out only by exceedingly unfashionable persistence.

The Communists are ideologists but they are not idiots. Khrushchev, of course, knows the truth. The only people being fooled are the American people.

[From the Washington (D.C.) Evening Star] UNITED STATES AND THE BAY OF PIGS FIASCO—QUESTION OF MILITARY COMPETENCE OR CIVILIAN INTERFERENCE IS RAISED

(By David Lawrence)

The American people are entitled to know whether the Chiefs of their armed services are incompetent or whether, in strictly military operations, they are being interfered with by civilians in the Government.

A congressional investigation of just what happened before the Bay of Pigs invasion of Cuba took place in April 1961, is more than ever necessary now, because of what is being disclosed as the "true story" of the fiasco. For unless the responsibility of the U.S. Chiefs of Staff during military operations is clearly fixed, the capacity of the United States to prevent or resist armed attacks in this hemisphere may be open to question.

More than 300,000 men of our armed services were mobilized last October inside the United States for a possible invasion of Cuba in order to get rid of the Soviet missile bases there. But there is no way to judge whether the military Chiefs even then had the full authority to act and just what restrictions were placed upon them which could have affected the success of that expedition.

Attorney General Robert F. Kennedy, who, because he is a brother of the President, is regarded as the administration's authoritative spokesman in many matters outside his own department, has just given two interviews on the Cuban fiasco, one to the Knight

newspapers and the other to U.S. News & World Report.

The two interviews dovetail, though they do not cover all of the same points. The Attorney General told David Kraslow, Washington correspondent of the Knight newspapers, that there had been no invasion plan completed during Mr. Eisenhower's term. He said: "There was just a general concept. The logistics and the details were worked out after the President [Kennedy] took office."

Added interest has developed now in this whole subject, because many of the Cuban officers of the invasion force, who were recently ransomed have been telling Americans that the United States had assured them of air cover. Attorney General Kennedy makes quite a point of the fact that "no U.S. air cover" was ever promised. Technically, this is correct. But the United States was fully cognizant of the air support the Cubans were supposed to have. Yet this was inadequate. Attorney General Kennedy said in his interview in U.S. News & World Report:

"The first point is that there was not U.S. air cover and none was withdrawn. In fact, the President didn't withdraw any air cover for the landing forces, United States or otherwise.

"What happened was this: One air attack had been made on Saturday on Cuban airports. There was a flurry at the United Nations and elsewhere and, as a result, U.S. participation in the matter was coming to the surface. This surfacing was contrary to the preinvasion plan. There was supposed to be another attack on the airports on Monday morning.

"The President was called about whether another attack which had been planned should take place. As there was this stir about the matter, he gave instructions that it should not take place at that time unless those having the responsibility felt that it was so important it had to take place, in which case they should call him and discuss it further. And that's what was postponed. It wasn't air cover of the beaches or landings. And, in fact, the attack on the airports took place later that day."

The air cover provided was from a base in Central America. What part the U.S. Government played in organizing it is not disclosed. In the middle of a military operation, however, you can't make a long-distance call to the White House and discuss the next move. The anti-Castro forces were sure air cover was coming from somewhere.

The Attorney General was asked who did the planning. He declared that "the plan that finally went into effect was approved by our military—the Pentagon, the Joint Chiefs of Staff, as well as the Central Intelligence Agency." He added that, while the Joint Chiefs "approved" the plan, "the responsibility for the planning lay primarily with the CIA," and that, since the President had to give final approval to the plan, he had accepted the blame.

In both interviews, the Attorney General said that U.S. air power was to have been used only if the ships transporting the Cuban invasion force had been detected by Castro before they reached the target area and were attacked on the high seas on their way back to Central America. This is the explanation given for the presence of U.S. warships, including an aircraft carrier, in the vicinity of the Bay of Pigs on the day of the invasion. Yet it is asserted that before the invasion the President had "made it clear" that U.S. armed forces, including airpower, would not be used.

In the interview in the Knight newspapers, the Attorney General said, "The plan that was used was fully cleared by the CIA and the Joint Chiefs of Staff."

But what does "cleared" mean? Do the Joint Chiefs take responsibility for any such plan as was employed?

Listing the major "mistakes," Mr. Kennedy added: "There was not sufficient air cover at the beach. That was a mistake. There were not enough men and equipment. That was a mistake. Underestimating the T-33's (Castro's airplanes) that was a serious mistake. The planning was inadequate, just inadequate."

But who did all this planning, and why wasn't someone in the U.S. Air Force able to say in advance whether the T-33's had the capacity to carry rockets? These were the U.S. planes originally given to the Batista regime in Cuba.

The important "details" have never been divulged, as there has been a constant cover-up. But if Congress now fails to make a searching inquiry, with testimony available to the public, another military fiasco could occur, especially if the same "military planners" are still in command at the Pentagon or elsewhere.

REDS WILL FLOURISH IN CUBA AND EXPAND, ULRICHT SAYS

(By William L. Ryan)

BERLIN, January 15.—East German Communist Leader Walter Ulbricht told world Communist chieftains today that communism will continue to flourish in Cuba and intends to extend itself in the Western Hemisphere.

With Soviet Premier Khrushchev listening from the platform, the spade-bearded East German denounced Red China's attacks on the Russian leader's policies. He credited him with saving the world from nuclear war by compromising the Cuban crisis with President Kennedy.

In his opening address to East Germany's Sixth Communist Party Congress, Mr. Ulbricht also proposed a vague solution for the problem of divided Berlin. He said the United Nations flag should replace the NATO flag in West Berlin, but that any such arrangement must recognize East German sovereignty, especially access routes on the land, water and in the air.

ASNS INDIAN SETTLEMENT

Mr. Ulbricht also called on Peking and India to settle their border dispute at once. He criticized the Chinese Reds for launching their border operation against India in October without consulting other Communist states.

Mr. Khrushchev's handling of the Cuban crisis, Mr. Ulbricht said, prevented the world from experiencing the horrors of nuclear war. Mr. Khrushchev nodded agreement.

Mr. Ulbricht maintained Mr. Khrushchev kept communism alive in Cuba and gave it an opportunity to spread in the Western Hemisphere.

"There was a compromise," he told the party congress. "President Kennedy had to abandon his idea of aggression. * * *

"Cuba was freed of the threat of aggression and is now able to build up its country on the basis of socialism."

[From the Washington (D.C.) Evening Star] LOW-LEVEL CUBA FLIGHTS DISCONTINUED BY UNITED STATES

(By Earl H. Voss)

The United States has ended low-level aerial reconnaissance of Cuba and now relies exclusively on high-flying U-2's to keep an eye on Soviet and Cuban military moves in the Caribbean, according to American officials.

It was new evidence gathered by U-2's that caused American analysts to raise their estimate of Soviet forces in Cuba from upwards of 10,000 to 16,000 to 17,000.

Soviet-manned anti-aircraft missile batteries in Cuba, which proved they can reach the unusual altitudes at which U-2's fly by knocking one out of the sky, are not now firing at the planes on their regular reconnaissance flights over the island.

The administration has not felt so sure, however, that the low-level Cuban anti-aircraft weapons, supplied by the Soviet Union but believed to be under Prime Minister Castro's control, would hold their fire indefinitely if low-level reconnaissance were continued on a daily basis.

For this reason, the low-altitude flights have been suspended. They could, of course, be resumed if U-2 or other intelligence tips should acquire it.

Soviet Premier Khrushchev apparently is hoping to set an example, by withholding fire on the U-2's, in avoiding a direct clash between Soviet and American military forces.

President Kennedy ignored this principle which the Kremlin apparently hopes to establish, when he discovered Soviet nuclear missiles in Cuba. He interposed a U.S. naval blockade in the path of Soviet ships bound for Cuba.

The possibility of a clash between Soviet and American military forces again would be posed if there were an anti-Castro uprising in Cuba. The United States hardly could avoid a fight with Soviet forces if they tried to prop up Castro by crushing Cuban freedom fighters.

The range of other contingencies in which the United States might be forced to move against Soviet troops is being canvassed now.

President Kennedy's unwillingness to risk incidents between a low-level American plane and Castro-controlled anti-aircraft batteries indicates, however, that the administration wants to choose carefully the circumstances under which it again directly challenges Soviet military power, if this ever is found to be necessary.

Spending

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. CURTIS. Mr. Speaker, an article in the October 1962 issue of Fortune magazine entitled "The Priority of Politics Over Economics," casts considerable light on the fallacies of the economic theories of the New Frontier. In its emphasis on Government planning and direction of the economy as well as on heavy Federal spending, the New Frontier economic theorists misunderstand the dynamic nature of the free-market economy and the intricate functioning of the price, wage, and profit system. It is this free system that creates wealth and economic progress, as well as serving as an indispensable buttress to individual liberty. Government must maintain institutions and a climate favorable to growth, but healthy economic growth cannot be imposed from the top down. It must grow from the bottom up.

The Kennedy administration appears to believe that Government spending and control can bring faster economic growth and solve our still serious unemployment problem. Since the last fiscal year of the Eisenhower administration, Federal expenditures have increased from \$76.5 billion to an estimated \$93.7 billion in fiscal 1963. Yet the economy is still afflicted with an unsatisfactory rate of economic growth and a very high level of 5.8 percent of the civilian labor force unemployed.

As this article by John Davenport points out, Government spending may be regarded as the flywheel of the economy, but it cannot supply the motive power. That motive power resides in the creative energies of the people, and the most Government can do is help to release it. Under unanimous consent, I include the article, as follows:

THE PRIORITY OF POLITICS OVER ECONOMICS
(By John Davenport)

This month the anxiety that overhung the Nation's economy all through the summer will give way, at least momentarily, to the turbulence and excitement of a political campaign. Even as an off-year election, it will be an enormous expression of the national will: all the House seats (435) are at stake, 39 Senate seats, and 35 governorships. Parochial arguments in States and cities and the racket of personal political feuds will fill the air. But the man to whom the outcome will be most important, is the man who isn't running, President John F. Kennedy.

For while local issues will be mainly in the forefront, below the surface will always be the big, rocklike questions: the questions of jobs, of prices, of profits, of Government spending, of taxes. No one is more aware of this than the President, who is taking his case directly to hundreds of thousands of people, attempting to resell his various programs of medicare, urban renewal, and electric power expansion. It could be said that he began his campaign in August in his televised report on the economy. Then he found the economy good enough so that no immediate tax cut was needed. But he promised that in 1963 he will present a bill to Congress that will include an "across-the-board top-to-bottom cut in both corporate and personal income taxes," and will also include "long-needed tax reform that logic and equity demand." This promise of tax reduction obviously has enormous political appeal. It will also be one of the most bitterly debated issues in the new Congress that will be elected this fall.

For quite apart from their obvious and necessary function in government, taxes have become in the last quarter of a century an instrument of social welfare, a weapon of intervention in the economy, a pervasive factor in business decisions, and a demonstration of the intent and power of Washington, and it is impossible, of course, to separate tax reform from the issue of Federal spending. When Harry Hopkins said, "We shall spend and spend and tax and tax and elect and elect," he expressed a cynicism that must pervert and defeat any effort to remedy the tax structure. One test of John F. Kennedy's sincerity will be whether he has left this kind of cynicism behind.

But the greater test of the President's promise of tax reform and of his domestic policies turns on the question of whether he understands the nature of the American enterprise system and the unique system of government that has allowed enterprise to flourish. During the fifties, President Eisenhower clung to the salty philosophy that it was the function of Government to build the framework and to create the atmosphere in which business could prosper and so provide jobs and rising living standards. Ike was not too articulate in this belief; sometimes his metaphors about frames and atmosphere got pretty mixed. And in the end Federal expenditures got out of hand. Nevertheless, Eisenhower's attempt to delimit the functions of Government and relate them to the profit system was welcome and constructive after the Truman years. Now under John F. Kennedy there has been a "shift" in a different direction. How far has this shift gone? And, more important, on what kind of philosophy is it based?

JAMES MADISON PUT THE QUESTION

One paradox that must strike the inquirer at the beginning is that while Kennedy is the most politically minded of men when it comes to gathering votes, he has laid little emphasis on political theory as such. While doubtless an admirer of the Federalist papers, he has not in public, at least chewed over the great questions therein raised as to how a government, endowed with coercive power, can be prevented from misusing it and, in James Madison's phrase, can be obliged "to control itself." Nor does the President seem to have noted that to the architects of the republic, politics in the philosophic sense of the word had clear priority over what we today call economics. Because they took a certain view of man and his liberties, they favored strong but limited government, and in favoring such government, they more or less took for granted the virtues of a free economy. In a curious way the pragmatists and activists of our day have reversed this order of thinking. President Kennedy's politics seems to flow from his economics and his economics in turn forces the Government into a positive and expansive role.

Such expansion breathes through most of the multiple messages that the President has fired at Congress. It is also implicit in his constant talk of "moving America ahead." Under the elms of New Haven last June the President stated that the central problem of our time was "the practical management of the modern economy." And he then asked almost plaintively, "How, in sum, can we make our free economy work at full capacity—that is, provide adequate profits for enterprise, and adequate wages for labor, and adequate utilization of plant, and opportunity for all?" But who is the "we" of this strange, tortured question? And just how is a free economy to be made to do something? And is it really a prime function of such an economy to provide profits for enterprise? Surely matters are the other way around: in the right environment businessmen will as a matter of course seek a profit as the reward of risk taking and the producing of goods that the people demand, and this in turn will expand the economy.

NEW EXPERTS FOR OLD PLANS

Direct interference of the government in the economy is associated with another tendency—namely, reliance on "experts" and expertise. While calling for a dialog, the President said that the central domestic problems of our times "relate, not to basic clashes of philosophy or ideology, but to ways and means of reaching common goals—to research for sophisticated solutions to complex and obstinate issues." The idea implicit in this kind of statement is that economic problems should be left to technicians to solve without the emotional debate that has stirred the country in the past. The President himself doesn't always follow the rule: witness his impassioned plea for medicare. But, beyond this, it must be asked whether research and experts can really resolve basic issues without some kind of guidance. If experts are told to help solve the farm problem within the limits of freedom for the farmer, they will come up with one kind of solution. If they are given no directions they are all too apt to smuggle in their own values, and suggest some elaborate schemata of their own. It so happens that reliance on expertise has usually gone hand in hand with government planning of one kind or another. An expert who tells the government just to let things alone and let the free market take its course will not be earning his salary very long. The Russian Government is full of experts, precisely because it seeks to control every aspect of the economy.

There is nothing new, of course, about Government planning and interference with the market. Its famous practitioners can be

traced through history. The Emperor Diocletian, for instance, tried price controls in Rome. King Richard started England on its long experiment with the Corn Laws. One of the great planners was Colbert, minister to King Louis XIV. It was against Colbert and his school that Adam Smith revolted in his "Wealth of Nations" published in the same year as the Declaration of Independence. In the United States, also, planning has a history. It was not so long ago, in the thirties, that the Technocrats under Howard Scott were preaching that modern economic problems are too complicated for the politicians or the population, and should be left to engineers. At about the same time the historian Charles A. Beard was calling for a "single national authority" that would, among other things, fix a "standard of life budget" for the American people and implement it with the aid of production experts. And the idea of planning dominated the NRA, with its codes for controlling prices, wages, and output, which the well-remembered Gen. Hugh (Iron Pants) Johnson strove mightily to uphold. Fortunately the codes were finally declared unconstitutional.

One person who saw through this whole cult of planning very early and tried to change things to a more hopeful direction was President Kennedy's good friend, Walter Lippmann. In his wonderful book, "The Good Society," published in 1937, he made a devastating attack on the planners of his day, arguing that they had missed the central economic development of the modern world. That development was the division of labor, which requires that the specialized work of one man be coordinated with that of another, and that the production of both be somehow linked to the freely choosing consumer. Such coordination, Lippmann held, cannot possibly be achieved by government directives, and those who believe it can are in a literal sense reactionary. Rather, the division of labor necessitates the very market economy that planners scorn, and requires a government that rules by law rather than by arbitrary decree. Wrote Lippmann: "It is no accident that the ideal of labor, common laws, the ideal of equal justice, the restraint of prerogative and privilege . . . should all have evolved together in the same regions of the earth. They are merely different aspects of the momentous change in which men have been passing out of their primitive self-sufficiency into the intricate interdependence of the great society."

THE VITAL CONNECTION

These philosophic reflections are of immense importance in judging various tendencies and programs put forward in the name of the New Frontier. For if the philosophy of the good society is right, the trouble with the New Frontiersman is not that he is too radical, but that he has missed the bus—or shall we say the jet?—of modern history. In our day government must wield great power in the national defense, in the maintenance of internal law and order, in the provision of a sound and dependable currency system; the functions of government are not fixed and immutable. But the dynamic force of progress is the free collaboration of individuals made possible by the widening of the competitive market and the intricate functioning of the price, wage, and profit system. It is this system, not the directives of government, that creates wealth and work in the modern world. And it is this system, with its wide dispersion of power and decision, that serves as an indispensable buttress to human liberty.

The President has never given sufficient stress to this vital interconnection of political and economic liberty. While his administration has blown cold and hot toward businessmen as a group, it has not consistently upheld free-market principles. The admin-

istration favors freer trade abroad, and in his message on domestic transportation the President recommended less, not more, government interference. But in general the New Frontier's domestic policy points in a different direction. The newly elected President placed great emphasis on setting up national goals for the United States, which always somehow implied more government power and decision. A theme song of the campaign was that the United States had been growing too slowly and that the Democrats would take measures to speed things up.

Growth and economic progress have always been characteristic of the American economy, but there are two ways of approaching these desiderata. One is to assume that healthy economic growth basically comes from the bottom up rather than being imposed from the top down. On this view it is the function of government to maintain institutions favorable to growth—for instance, property rights, contracts, and sound money—letting the growth itself occur as the result of the activity of the citizens of the country. The other approach is to make government itself responsible for economic growth and to set up definite "targets" for this performance, which, if not achieved by private action, must be achieved by more massive doses of government intervention.

The New Frontiersmen favor the target approach, and there has been endless argument about output gaps, defined as the difference between what the economy has done and might have done going full blast. In the process the true meaning of growth has been obscured. It is the assumption of many calculations in this area that growth is simply the piling up of goods and services as measured by the gross national product. But if this is all there is to progress, then a society that simply built pyramids by the use of slave labor might be said to be growing just as fast as a society that put its resources to more constructive use. Again, many economies have grown rapidly in wartime if one counts the output of munitions as economic goods. The fact is that the whole concept of growth is meaningless unless one allows purposes and values into the equation. True growth involves, not just the piling up of goods, but the widening of human options. It means producing goods that people want and freely choose, and the virtue of the market lies precisely in giving the consumer this vote.

A CARTEL FOR AGRICULTURE

The planned economy by definition denies that such choice is important. Russia grows—by producing the goods its government thinks will be best for the population. The Kennedy administration came closest to advocating this kind of specific planning in the case of agriculture. Ever since the depression thirties the Government, of course, has been propping various farm prices above market levels and creating surpluses by so doing. Under the Eisenhower administration there was recognition at least of the fact that the proper solution to the so-called farm problem was to lower support prices and to reduce the number and extent of specific controls. This policy, strongly endorsed by the Farm Bureau, was never given a fair trial or enough fighting support by Eisenhower and Secretary Benson, but at least the direction of the thinking was correct.

The Kennedy administration in its first 2 years simply abandoned any idea of returning agriculture to the marketplace. Its program was to hold price supports high and to extend them to more and more commodities. Then, in an effort to prevent overproduction and surplus, it asked for more and more controls on the number of acres to be planted and the amount of each crop

that could be marketed. Such a program, if ever finally enacted, would collectivize or cartelize agriculture completely. Moreover, its benefits, if they can be called such, would tend to go, not to the farmer who might need help, but to the richest producers. The whole history of price-support operations is that they put money in the pockets of the well-to-do commercial farmers. They do little for the marginal family that consumes most of what it produces on the land. (And as the Billie Sol Estes case dramatizes, even the present system of Government controls is a haven for sharpers and speculators and just plain crooks.)

Congress refused to go along with the New Frontier's more stringent controls, and the farm mess remains as bad as ever. The point is that the Kennedy-Freeman plan aims in the wrong direction. Running through the President's initial message to Congress on agriculture was the old, tired idea that there is a fair income for the American farmer and a fair price for what he produces, and that Government can somehow guarantee both. These concepts quite literally come out of the Middle Ages. They imply a completely static view of society in which classes are fixed and each class deserves a certain cut or share out of total income. But America is not like that. The farmer of yesterday is the mechanic of today and maybe the lawyer or entrepreneur of tomorrow. As the result of this constant change farm families now constitute only 7.7 percent of all families as against 30.7 percent in 1910, and meanwhile farm output per man-hour has quadrupled through mechanical invention and advances in chemistry. The Government should not interfere in this process by tampering with prices. For in doing so it jams the mechanism through which progress is made; and its controls strike directly at individual freedom. In agriculture the Kennedy administration was trying to turn the clock back all the way.

Elsewhere in the economy the New Frontier was less committed to specific planning but some of the fallacies inherent in its farm program reappeared. As in the case of agriculture, the administration seemed to conceive of both industry and labor as constituting separate and almost hermetically sealed groups in our society, forgetting again that individuals from one group are constantly passing into the other, and likewise forgetting that the rational purpose of the economic process is to serve the consumer, who is literally everyman. This group approach is reminiscent of the kind of thinking that pervaded both the New Deal and the Fair Deal. Society is thought of not as a coherent whole, in which individuals and their basic rights are important, but as a series of powerful producer pressure blocs. Besides the farmer there is big business and big labor, and, of course, big Government, which somehow must reconcile conflicting group claims.

But whereas the administration has been trying to shove agricultural prices up, it attempted in industry to hold "strategic" prices stable, while putting only a nominal pressure on wages and costs. The most dramatic expression of this, of course, occurred in steel where the President intervened to bring about a wage settlement, and apparently took it for granted that there would be no price increase. When Big Steel attempted to raise prices, he launched the attack which shook all of industry, and was a cause—though probably not the main cause—of the stock market break in May.

Administration spokesmen professed to be astonished at this reaction from the country, thereby showing themselves to be somewhat naive. For businessmen saw the intervention as an attack on the whole price-and-profit system, and as a blatant misuse of executive power. As Charles Reich of

the Yale Law School wrote in the *New Republic*: "The evidence is overwhelming that the actions taken by the President were primarily for the purpose of intimidating and coercing the steel industry. * * * Such use of power, whether its objectives are good or bad, is dangerous. * * * It means that people offend the President at their peril."

THE WOBBLY GUIDEPOSTS

While reacting violently to the attempted increase in steel prices, the administration was far more tolerant as regards wages. In this matter its Council of Economic Advisers last January staked out its famous guideposts for noninflationary wage and price behavior. The central guide was that wages in all industries could rise with overall, or national, productivity without producing inflation. As noted last month, this guide was surrounded by many modifications and was promised on the idea that the economy was actually nearing a state of full employment. Few labor leaders or, for that matter, businessmen troubled to read this fine print. They simply assumed that the Council said wages could rise with normal productivity, and they assumed that this productivity was 3 percent. It is no coincidence that wage settlements so far this year have averaged about 3 percent, with fringe benefits piled on top. Meanwhile, productivity, which spurted sharply in mid-1961, has tended to level out.

These are scarcely the conditions that favor a rapid rise in employment and a diminution of unemployment, which is one of the chief goals of administration policy. For employment depends on profits and profit expectations on the part of employers, and profits in turn are the margin between costs and prices. It was the argument of Lord Keynes, whose thinking has strongly affected New Frontiersmen, that the best way to produce more employment is to have prices rise faster than wages, and this was the whole point of his "reflationary" spending theories. Again, if wages and prices are both stable over a period when productivity is advancing, then the latter may improve profits and so improve job opportunities. But where prices are stable and wages rise with or faster than productivity, as they have been doing, it is very difficult to put more men to work.

THE SPENDING CURE-ALL

The uncomfortable truth, which few people like to acknowledge, is that maladjustment in wage rates is a positive cause of unemployment, perhaps its most important cause. Labor is not a commodity, but man's work certainly is a commodity, and in this sense a wage is a price. It is perfectly evident that if a businessman sets his price too high he loses his market. It should be equally evident that if wages are pushed too high by union monopoly action, unemployment will follow, unless the government takes countervailing action, by trying to "float off" the unemployment through easy money and doses of government spending.

The administration from the beginning placed great emphasis on these monetary cures for unemployment but with indifferent success. For unemployment is still well above the 4-percent level, which the administration considers as its logical target, despite a big rise in spending. In the last budget year of the Eisenhower administration, fiscal 1960, Federal expenditures ran to \$76.5 billion and the budget showed a surplus of \$1.2 billion. In the first full budget year of the Kennedy administration, fiscal 1962, Federal expenditures ran to \$89 billion and the deficit to \$6.3 billion. Nor do these figures tell the whole story. In addition to expenditures reflected in the formal budget are the cash outlays of the social security funds. And in addition to all this Federal activity there is the spending of the States

and local communities. In the calendar year of 1961 the total of all this spending ran to a colossal \$150 billion or to 28 percent of the gross national product. This compared with total Government spending of \$61 billion in 1950, when expenditures ran to only 21 percent of product.

Surely if Government activity was the whole cure for unemployment and the harbinger of prosperity, the United States would be in prime condition. In fact, while the size of Government has been increasing, the pace of growth has been slowing down. Says Raymond Saulnier, head of the Council of Economic Advisers under Eisenhower: "What recent history tells us about the effect of increases in Federal spending is not very favorable to the view that an economy such as ours can spend itself into prosperity via the Federal budget. * * * What this experience tells us is that if the environment is not favorable to an increase in private spending, an increase in Federal spending, even a large increase, is a well-nigh futile exercise."

A WORLD AT RISK

It can also be a dangerous exercise in view of the condition of the U.S. balance of payments abroad. If the United States were a closed economy, isolated from the rest of the world, then government spending, however wasteful, and government deficits, however potentially inflationary, might not matter so much. But this is, of course, not the position. The dollar is still the world's key currency, and foreigners hold some \$19.5 billion worth of short-term claims, which theoretically could be presented for payment in gold. These claims have steadily increased because the United States has been unable to earn enough abroad to cover its outpayments. Last year the U.S. deficit ran to nearly \$2.5 billion and the loss of gold to \$857 million, and the drain continues.

The administration has taken a number of specific measures to correct the foreign balance and to staunch the gold flow—some good, some bad, and some indifferent. It has rightly tried, for instance, to persuade foreign governments to step up their own defense spending, thus allowing the United States to shave its enormous expenditures for oversea troops and installations. At the same time, however, it has continued to pour out foreign economic aid in profusion, much of which is wasted, while suggesting changes in the tax laws that would tend to restrict U.S. private foreign investment. Meanwhile Washington has tried to throw up an elaborate series of defenses for the dollar, including currency swaps and endless talks with foreign bankers. And the U.S. Treasury has begun maintaining positions in the forward exchange markets of the world to counter speculation against what was once supposed to be the world's strongest currency.

Whatever the merits of these latter stratagems, they fall to come to grips with the question: why should foreigners distrust the dollar and want to reduce their holdings? One reason undoubtedly is that in an effort to stimulate economic activity at home the United States has tended to maintain lower interest rates than prevail abroad. The second and broader reason for distrust of the dollar and indeed for the balance-of-payments gap itself has been a continuous inflationary bias within the United States due in part to its farm program, in part to labor demands, and in part to a succession of unbalanced budgets. In the long run a nation's foreign accounts simply mirror its internal policies. This is what the United States has preached for many years to other nations, and it is time it swallowed some of its own advice. As David Rockefeller wrote to the President last spring: "I would urge upon you a more effective control of expenditures and a determined and vigorous effort to balance the budget. Such measures

would act to place our economy in a much stronger position for real economic growth in the period ahead; they should increase our ability to expand exports, and they will strengthen confidence everywhere in the future of the dollar."

A NEW DIRECTION

What all this comes down to is that, given the realities of the modern world, the U.S. economy needs very different policies from those that have been recently in evidence along the New Frontier. While Government spending can perhaps be regarded as the flywheel of the economy, it cannot supply the motive power. The motive power resides in the creative energies of the people, and Government can at best help release it. In his report to the Nation last summer on the state of the economy President Kennedy told the story of a displaced Pennsylvania miner, George DeMart, who had found a new job with a trailer company through the good offices of two Government agencies. Asked for comment by the press, Mr. DeMart blurted out: "Why did they pick on me?" And his question unintentionally packed a lot of significance. For while Government may assuage distress, it is all too easy to over-emphasize this role, and to lose sight of what keeps America at work and moving. It is the private economy that today yields employment to some 60,700,000 men and women and will provide expansion in the future.

The vital juice here is no doubt profits, which encourage firms to maintain present levels of output and to invest in new plant. Significantly, the slowdown in the growth of the U.S. economy over recent years has been accompanied by profits taking a declining share of the national income, and by a squeezing of profit margins both on sales and on investment capital. Emphasis on this point should not be taken to mean that there is some predetermined level of profits to which businessmen are entitled and which Government must help them achieve; for this all too easily becomes one more invitation to statist intervention. But profits do play an indispensable role in the free society since they are the reward for risk taking, and for bringing together at the right time and place the elements of production—labor, materials, and capital. Someone must undertake this organizational function. And the alternative to a profit-and-loss economy is either socialist planning or plain chaos.

Once the social significance of profits is understood, the Government's role in an enterprise economy comes clear. This role is assuredly not to butter up the businessman as one more pressure group, but rather to lay down firm and dependable rules under which he, like any other citizen, can operate. One contribution the Kennedy administration could make right now is to make it clear that such interference with the pricing system as occurred in steel won't happen again. Businessmen must be allowed to make their own decisions and their own mistakes if need be—if a mistake is made, competition and the market will soon enough correct it. The Government's job is to see that competition is enforced and here it is amply armed (perhaps too amply) by the antitrust laws.

But sauce for the goose should be sauce for the gander. The obvious threat to the market economy today is not the big corporation but the big union, which wields enormous power as the result of privileges granted to it by the Government. This power needs trimming down. One place to begin is the rigorous enforcement of State and local laws against violence. It is one thing for men to strike; it is quite another for them to prevent men who want to work from working. Secondly, unions should become purely voluntary organizations, which would preclude the union shop, the closed

shop, and all variants of the same. And in addition union exemption from the Sherman Act should be reconsidered. Whatever the reforms, the objective should be to bring unions within the framework of law as it applies to other voluntary associations. Such reform would protect the freedom of workers and have a beneficial effect on the whole economy. We would begin to break the vicious cycle wherein wage maladjustments cause unemployment, the Government spends to alleviate unemployment, and this in turn touches off a new round of wage and price pressures leading to direct Government intervention.

THE LOGIC OF TAX REFORM

Finally, Washington will contribute to growth and economic expansion as it combines fundamental tax reform with putting its own sprawling house in order. A general cut in Federal taxes—a kind of handout to the people—will accomplish little or nothing. What is needed is to cut the corporation-tax rate from its present 52 percent to, say, 45 percent and to start, at least, to reduce the ruinous rate of progression in the personal income tax (setting an upper limit of, say 60 percent as against the present confiscatory rate of 91 percent). Such reform, encouraging both saving and investment, might in the long run yield a revenue dividend to the Treasury, but this should not be counted on. Tax reform can easily turn into demagoguery unless accompanied by Federal retrenchment.

Given the necessities of defense the budget will inevitably be big, but precisely for that reason cuts should be sought elsewhere. The place to begin is agriculture, where the policies advocated by the Kennedy administration should be reversed. There should be a gradual unwinding of the whole price-support mechanism, which, besides costing over \$2 billion a year, is doing incalculable harm. Price supports would have to be lowered in stages, say, over a 10-year period, until prices for the great commodities reflected true market values. This is less of a job than it is sometimes made out to be. Over 50 percent of all farm income is still received from products having no direct price supports. The prices of most vegetables, to take a small example, do not sink to zero because they are unsupported by Government. What happens is that supply and demand make their own adjustment to the great benefit of the consuming public as well as the taxpayer.

Beyond this the Federal Establishment could be cut down to size by recognition of two broad principles. The first is that of federalism, under which the States and local communities can be responsible for many government services at their own levels. The prime example is education. When all is said and done, responsibility for education is a local one. Money taxed away by Washington for aid to education leaves that much less in State and local treasuries. The second path to Government limitation is to recognize that many public ends are best served by private initiative and enterprise. Talk about the need for enlarging the public sector largely overlooks this fact. This is not an appeal for private initiative to build State roads or to run the city garbage-disposal units. But the fact is that the toll road, privately financed and paid for by those who use it, is based on a sound principle. In the matter of health it is already an enormous achievement that 74 percent of U.S. citizens have adopted some form of private insurance. The whole argument that government functions must be enlarged as an economy grows larger and richer is really a reversal of the truth: the richer an economy becomes the more citizens may be able to do for themselves.

THE LIBERAL AGENDA

This kind of agenda, including both tax reform and retrenchment, is liberal in the sense that it looks to the enlargement of

human liberty. It also takes account of two great developments that have helped shape the modern world. One is the rise of government by law rather than by decree. The second is the evolution of the market process, which makes government by decree unnecessary. In his moving inaugural address, President Kennedy spoke of "the belief that the rights of man come not from the generosity of the State but from the hand of God." This is in the great American tradition. The trouble has been that the President seems to have no political or economic philosophy to support this moral insight.

Yet the elements for both are surely at hand and follow logically from the premise. It is because the rights of man are inalienable that limited, as against unlimited, government is a necessity. And if government is to be limited, then in its turn the free competitive market is the only possible solution for man's economic problems. Fortunately, it is also the solution that accords with hard common sense and realism. The United States is too big and varied to be managed or manipulated or pushed around. And its basic institutions are premised on precisely that blend of the practical and ideal which the President admires.

Remarks by the Honorable Robert T. Murphy, Vice Chairman, Civil Aeronautics Board, at the Panel Session, Second Annual Transportation Workshop, District of Columbia Chapter, American Society of Traffic and Transportation, Shoreham Hotel, Washington, D.C., November 15, 1962

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. FOGARTY. Mr. Speaker, during the course of the 88th Congress there will probably be need to give renewed attention to the President's transportation program which was outlined succinctly in the President's transportation message of last year.

In this connection, I would invite attention to the remarks of Hon. Robert T. Murphy, Vice Chairman of the Civil Aeronautics Board, made at the Second Annual Transportation Workshop of the American Society of Traffic and Transportation, held in Washington, D.C., on November 15, 1962. Significantly, Mr. Murphy notes that the President's message was the first effort by any President to deal directly with the complex and confusing transportation problems from the viewpoint of a coordinated national system, and that it suggests a policy of equity and justice which protects the interests of both the industry and consumers. The translation of the philosophy of the President's message into necessary amendments to existing law will, undoubtedly, require careful examination and full discussion in this session of the Congress, but I share the hope expressed by my fellow Rhode Islander, Vice Chairman Murphy, that its imple-

mentation will not be frustrated by the petty dissents which may arise in various diverse quarters in the transportation industry. The President is to be congratulated upon focusing our attention upon some areas for improvement in our patchwork transportation laws. I believe the remarks of Mr. Murphy may be timely and helpful in this connection.

President Kennedy's message to the 87th Congress relative to the transportation system of our Nation is a significant milestone in transportation history for more than several reasons.

It is the first effort by any President to deal directly with widely divergent transportation problems from the perspective of a coordinated national system.

It realistically recognizes that many of the ancient ills afflicting one or another mode of transport cannot be simply solved by Federal regulatory elixirs—yet it poses a well-reasoned program of fundamental reforms in transportation policy in clear and concise terms.

Federal regulatory laws were passed for each mode of transportation individually, primarily to solve a major problem for that mode at a particular point in its own history. The reasons for each, and the motives behind them, were quite different. It is therefore no wonder that the regulatory and promotional functions of the Federal Government, individually justified at the time each was passed, may have the appearance of a patchwork as far as concerns a uniform Government philosophy for a transportation system. However, a foundation upon which to build a national transportation philosophy already exists and the President is asking us to get on with the construction.

I sincerely believe in and support the philosophy of the President's message since it suggests a policy of equity and justice which protects the interests of both industry and the consumers and, hence, advances our common welfare.

From my point of view, foremost in our thinking should be the President's stated conviction that less Federal regulation and subsidization is desirable in the interest of a healthier intercity transportation network. This decreasing Federal regulation and subsidization is to take effect with a correlated increase in the role of normal American competition and normal economic motives. In fact, a primary objective of regulation appears to be to have the regulated industry play the part it would if it were subject only to normal free competitive influences. However, because the industry, at a critical point in its development, failed to produce the desired results of our free competitive enterprise system, and failed by such a wide margin in a field of prime public interest, it was made subject to Federal regulation. Still, we hope that it will produce, approximately, the good effects for the public and for its stockholders that it would if unregulated.

Implementation of the President's message obviously will require examination and debate in all quarters in the months ahead; however, implementation must not be frustrated by petty dissents on the minutiae of legislative proposals. The transportation industry, including the airlines, have reason to support the substance of the message.

I have too often seen extremely important programs fail to be adopted because of relatively minor points. Sometimes its opponents kill it by diverting emphasis from its extremely valuable central thrust to little flyspecks around its edges. Sometimes, unfortunately, its supporters become so absorbed in achieving utopian perfection that they wrangle the main objective into futility.

I say, this program is so important to the public, to the entire national economy, and

to the Federal Treasury—don't "nickel and dime" it to death.

The policy of limited control of minimum rates and the tolerance of experimental rates, particularly in the freight and cargo field, has a particular application to air transportation and is in line with current Board policy. The Civil Aeronautics Board and the industry are presently trying to work out an approach to cargo costs which we hope will become generally recognized and defined for practical use. These costs would then give us a common ground upon which to build our ratemaking principles and policies. If industry and Government follow reasonable costing and pricing principles, the need for minimum rate regulation would be lessened, and the likelihood of ill-advised experimental rates would also be considerably reduced.

Reduction of aviation subsidies is a principle which has underscored many of the Board's actions in recent years and the new impetus given by the President's pronounced policy requesting a specific step-by-step program is both welcomed and desirable and in accord with the policy of Congress. The questions of how far and how fast subsidy should be reduced are matters of judgment. Agreement on the overall objectives of the Executive and the Congress seems clear. However, possible detailed disagreements on the precise level of subsidy to be paid, and during exactly which years, should not interfere with attaining the primary result.

The public benefits flowing from increased emphasis on through routes and joint rates have particular significance in the field of air transportation; the recommendations of the President have already stimulated additional efforts in this field. The expanded highway building program facilitates improved surface-air services, particularly of freight, which must be fostered by the agencies and which are under careful study at this time.

Transportation is more and more considered in terms of door-to-door service. We in the Board realize to an increasing extent, as is probably true of other transport media, that both passengers and shippers want service from ultimate origination to ultimate destination. The total quality of service, and the total elapsed time, are from the door of your home to the door of your destination, or from the door of your factory to the door of the customer. Complete and satisfactory air service is not simply from one airport to another, where the customer is left to his own devices to beat his way through traffic jams to the real end of his journey. Many problems in this area must be solved.

Added emphasis on coordinated research is likewise significant and the Board is ready to cooperate in making its extensive research activities available to all Government agencies through a central clearinghouse. Basic information and research should be interchanged, so that we in the Government and industry can be mutually self-educated on the more commonly agreed facts and theories.

Already, the Board has availed itself of information relating to highway development as it relates to air service and, through its regional airport programs, will continue to seek to properly relate the Federal investment in highways to reducing Federal investment in air transportation wherever justified.

In conclusion, I should note that the transportation message coincides in purpose with the President's equally important message stating the national policy of protecting the interests of consumers. Viewed as a whole, the President's transportation message states a solid beginning point for coordinated Government effort in moving toward a more rational and practical policy for all of the carriers of the Nation's freight and passengers.

Percy B. Ruhe

EXTENSION OF REMARKS
OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. WALTER. Mr. Speaker, since adjournment of the 87th Congress, this Nation lost one of its top newspapermen, a man admired for his unceasing devotion to his community.

I refer to my good friend, Percy B. Ruhe, editor emeritus of the Allentown (Pa.) Morning Call, who died November 28 at the age of 81.

His death was noted on all the news service wires of the country for Percy Ruhe was one of this country's most respected editors as he strove constructively to aid all walks of life.

Quiet spoken, thorough, industriously devoted to duty, he was nevertheless in quick and easy touch with life's lighter moments. His approach was earnest and responsible but—enriched with a tasteful, intellectual sense of humor—by no means dour.

Percy Ruhe exuded a fierce determination in calling for good government at all levels, better schools, more health services, improved parks and recreational outlets, wider cultural facilities, industrial development and cohesive community facilities. He was known as "The Father of Allentown's Playground System," one of the finest in Eastern United States.

May the great heritage that he has given to his lovely wife and children give them strength in this their greatest trial and sadness. May the Almighty reward him with the blessings of faithful life in the service of his fellow man and his adherence to the tenets of a religious life.

Also, I wish to have included in the CONGRESSIONAL RECORD a copy of the editorial that appeared in the Morning Call the morning after this brilliant editor died:

THE MEASURE OF THIS MAN

Regardless of where they lived or the positions they held, few men had the impact on any community for so many years that Percy B. Ruhe had on Allentown and the Lehigh Valley, their people and institutions and progress.

For 50 years this was his page of a growing newspaper. For a half century he used it to challenge and inspire and inform, to encourage and admonish, to laud notable achievements and at times to criticize what he considered the frailties of men or their shortcomings.

Here, in daily thought-provoking columns of comment that could be read and reread, he applied the measures of history and philosophy and religion and ethics in evaluating the significance of the eventful news that poured across his desk. Here he sought to give this community sound and valid judgments and the vision to strive toward its full potential.

The assignment he held for so many years as editor of a newspaper that in his time became a daily visitor in some 85,000 homes is one of the most responsible in any community with such a vehicle of communication. Self-seekers and those with special

causes to plead covet its power and prestige. Some would use the position to attain their own objectives, regardless of the broader consequences. Many would influence it, not always with selfless motives.

Percy Ruhe detached himself completely from these prejudices and pressures. He brought to the editor's desk an uncommon sense of fairness and values, a thorough knowledge of the community that was his lifelong home, a broad familiarity with national and international goals and issues, and an understanding of people and their nature gained from his countless and continued contacts all hours of the day and night with men in all stations and situations. He was close to those who made the news and those affected by it, yet able to detach himself from any personal association for a penetrating and perceptive view on the editorial page.

Although books were among his important tools, he needed few for reference, particularly on local affairs. He knew the admonitions of Scripture, the wisdom of philosophers, and the lessons of history. His mind was a storehouse for the facts and situations of the age in which he lived and worked, both those recorded and the more intimate ones that never reached paper. Throughout his life he trained himself to remember what was worthwhile or important, to quickly forget what was shoddy or petty.

The monuments he helped build for this community are many and will keep his memory alive. Better schools with their junior high division and vocational shops and art courses, activities to stimulate and recognize youth, playgrounds and other recreational facilities in an expanded park system, the Baum Art School and the creative talents many hundreds discovered and nurtured through it, a strong and active Humane Society, better government at all levels than many communities have, are just a few. The broadening concept of a more closely integrated Lehigh Valley community is another. He argued convincingly for these and other worthwhile objectives and in many instances joined in taking the progressive steps that made them realities.

Through his lifetime of service to his fellows as the editor of this newspaper and in so many other capacities, Percy Ruhe asked little for himself but the privilege of working as he did to advance noble and worthwhile causes. His own needs were simple and not given to ostentation. They centered primarily about his occupation and his family. In their own right, his children are another monument to his achievement.

Like the late David A. Miller, with whom he worked so closely and devotedly to build this newspaper and make it a constructive force in the broad community it serves, his name will live not for what he had but for what he did for others. This, after all, is the lasting measure of a man.

Spraying With Poison

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I am including a letter to me from a well-informed friend of mine, L. L. Henderson, of Corning, Iowa, in which he points out the destructive effect of poisonous spraying:

CORNING, IOWA,
January 18, 1963.HON. BEN F. JENSEN,
Member of Congress,
Washington, D.C.

DEAR MR. JENSEN: First, I want to compliment you on your speech, January 10, "American at the Crossroads." As usual, it was to the point, factual and timely.

I have read the book "Silent Spring" which so forcefully and factually presents the case against wholesale, indiscriminate spraying of crops, meadows, forests, shade trees, fruit trees, rivers, lakes, wildlife and people. I was glad to see that the Congress is making preparations to look into the matter. It deserves most serious study. One should by all means read the book carefully and then decide whether its critics speak with authority or prejudice, or from purely selfish reasons. The review appearing in Time and also copies by Reader's Digest is far from satisfactory; it is biased in favor of the powerful chemical corporations.

A news item by George Mills appeared in the Sunday Des Moines Register January 13 which told of a recent experience with DDT which was mixed in a spray but not indicated on the label, or if it was, it was listed under a high-falutin name which Lavern Osterson of Paton, Iowa did not understand. Result: he sprayed his laying flock of 5,700 birds; the Department of Agriculture quarantined his flock; he had to destroy the entire flock and 100 cases of eggs in addition. The fat tissue in the hen's bodies was found to have up to 40 parts of DDT per million. Seven PPM is the maximum permitted in meat by the USDA. Loss, \$18,000.

The book "Silent Spring" explains clearly how the poisons in sprays (many of them being in fact synthetic with no known antidote) builds up in the tissues of people, birds, worms, and animals to the lethal point, even though the original spray was only one to two PPM. Hence, a fish which died from absorbing the poison in its fatty tissues would, when eaten by a bird or animal, be more deadly than arsenic. Birds that eat worms (as most do) which live in the ground that has been sprayed with a 1 PPM mixture will eventually store up enough poison to kill them—and also the birds that eat their bodies.

Sorry this is so long. You probably don't have time to read books. But I think it is high time something be done to control this wholesale spraying. Surely there are more good insects than bad ones; and more good weeds than bad weeds. Surely the Good Lord saw to that.

Yours truly,

L. L. HENDERSON.

Mississippi Sets National Pace

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am including an editorial which appeared in the January 20 issue of the Jackson (Miss.) Clarion-Ledger, which I am pleased to call to the attention of the House:

STATE SETS NATIONAL PACE

Folks, make way for Mississippi. Our great State is fast speeding toward bigger and better things. This State's rate of economic

gain and financial improvement is among the highest in the United States.

The Economic Research Service of the U.S. Department of Agriculture in a study of population and occupational changes in rural areas reports that on the basis of the 1950 and 1960 censuses Mississippi led all of the States of the Union during the past decade in the percentage of increase in median income of all families.

The gain in the 10-year span for Mississippi was 96.7 percent. This compared with 50.5 percent for the United States. Second highest gain was made by Georgia with 81.1 percent. Alabama was third with 77.3 percent. The South raced ahead of the North, the East, and the West.

Why has Mississippi led the Nation in increasing family income? From 1950 to 1960, nearly one-half of all male workers on Mississippi farms shifted to employment in industry or other off-farm work where they made more money. The percent of all male workers on farms declined from 48.1 percent in 1950 to 26.3 percent in 1960.

But despite this shift of workers from farms to off-farm work, Mississippi farm income continued to climb as farms increased in size and farmers used more machinery and other means to handle more acres per worker and to increase production and income per acre.

In interpreting the revolutionary changes in farm employment, John H. Southern, farm economist of USDA, says "It is probable that we have not yet faced up to the real extent of adjustments of the labor resource out of agriculture. Of all employed males in the United States in 1960, only 8.3 percent were in farming, or 1 out of 12 workers. This was a decline from 15.2 percent in 1950."

But Mr. Southern then referred to the sharper change in Mississippi and predicted that "in Mississippi, the decline in farm workers is so rapid that probably by 1965 it will be more nearly in line with other Southern States, that is, 15 percent or less of the employed males will be doing farmwork."

Only four other states have so large a proportion of its male workers engaged in farming. These States are North and South Dakota, Nebraska, and Iowa.

It is clear that one of Mississippi's most important resources is its people. Our State still has a large farm population with a surplus of fine men, women, and young people available for employment in industry, while at the same time retaining enough workers on the farm to maintain and even increase our farm production and income.

If Mississippi can accelerate its industrial growth fast enough to provide employment for all of our rural people who are seeking off-farm work and at the same time begin to provide technical training for these workers, our State will increase its speed toward a higher and higher ranking among all of the States in total family income and better living.

No State has a brighter future than Mississippi. We have the climate, the resources, the people. We predict that you can look for more and more investment in Mississippi.

Small Business Problems in the Poultry Industry

EXTENSION OF REMARKS

OF

HON. ROGERS C. B. MORTON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. MORTON. Mr. Speaker, under leave to extend my remarks in the Ap-

pendix of the RECORD, I call the attention of my colleagues in the Congress to a statement of the Grower Committee of Delmarva Poultry Industry, Inc., concerning the recent report of Small Business Problems in the Poultry Industry issued by the Select Committee on Small Business.

The statement appears, as follows:

STATEMENT OF THE GROWER COMMITTEE, DELMARVA POULTRY INDUSTRY, INC., CONCERNING THE REPORT OF THE SMALL BUSINESS PROBLEMS IN THE POULTRY INDUSTRY

During a recently held meeting of the grower committee of the Delmarva Poultry Industry organization, this group took strong issue with the committee report of the U.S. House of Representatives on "small business problems in the poultry industry," according to Paul Phillips, a broiler grower of Mardela Springs, Md., and chairman of the DPI Grower Committee.

"Our group," said Mr. Phillips, "believes that for most of our growers the advantages of contract growing offset the disadvantages of this method of raising broilers." Continuing, the DPI chairman said, "Our people realize that growing broilers under a contractual agreement, with a minimum guarantee to the grower by the feed manufacturer-contractor who assumes the financial risk, is for all practical purposes an insurance plan. While we do have some people here in our area who continue as completely independent growers, most of us prefer to have our feed companies assume the risk of financial loss on our flocks; they can better afford to spread this risk among many growers and many flocks than we can spread any loss encountered among four flocks that most of us grow during any year."

It is further realized that competition is sufficiently keen between feed manufacturers and grow-out contractors that an individual broiler raiser has plenty of opportunity to shop around and grow for the company of his choice. Best of all, he can grow independently or on a contractual basis with any feed manufacturer within this area.

This attitude of Delmarva's broiler people toward contractual growing is similar to that found in a study conducted by the Maine Agricultural Experiment Station. According to this study, reported in Bulletin No. 571 and released in May of 1958, most of the growers indicated they would not like to raise broilers on an independent basis, even if they could obtain the necessary financing. Practically all of their reasons for this preference relate to the element of risk involved in producing broilers independently.

A more recent report, prepared by Washington College for the Small Business Administration, Washington, D.C., reveals that vertical integration (which often is associated with contractual growing) is a natural move for a well-financed and aggressive firm and has in many cases helped to improve efficiency. This Washington College study further pointed out that "growers also gain, not only from the integrator's aids to efficiency, but also from his assumption of an important portion of the risks of disease loss and of a poor market."

DPI grower committee members, as a result of their evaluation meeting of the congressional report on "Small Business Problems in the poultry industry," took issue with other conclusions and recommendations. Referring to the statement found in the congressional report that, "Existing data indicates that an unhealthy trend has developed and may be continuing. DPI's committee members, on this point, had this to say: 'We fail to agree that there is an unhealthy trend or a bad situation of the broiler industry within this area.'" The DPI group points out that more houses, and better ones than ever before in the history of our broiler

industry, are currently being built on our farms; processing plants are being enlarged; new feed mills erected; and soybean processing is being increased. Such developments indicate strength and confidence rather than weakness and discontent.

The fifth recommendation contained in the congressional report stated: "The broiler industry, universities, and the U.S. Department of Agriculture should devote serious efforts to increasing the demand of broilers." The DPI committee heartily concurs with this statement and the five specific practices suggested:

(a) Expand sales abroad where the consumption is far below that of the United States;

(b) In connection with the above, make every effort to protect agricultural interests when negotiations are conducted with the Common Market nations and the governments of other nations;

(c) Where possible, increase purchases by the Federal Government for the military and school lunch programs;

(d) Increase research in broiler freezing methods so as to enhance the industry's bargaining power;

(e) Increase research into new ways of marketing broilers and new methods of serving broilers."

At the same time, DPI's group wants to remind the congressional committee that the USDA, universities, many industry associations, retailers, and other members of the poultry trade have for years been doing a tremendous job in promoting the use of poultry meat. These poultry promotional programs have been done through poultry industry initiative, on strictly a voluntary basis, in contrast to regulated, or compulsory, checkoff plans.

A most creditable example of a self-help promotional program has developed right in the shadows of our Nation's Capital. Poultrymen and civic leaders of the Delmarva Peninsula, birthplace of today's commercial broiler business, from a modest beginning, back in 1948 with an annual budget of approximately \$7,000, has continued to expand its activities into what is now a year around program in the interest of both production and utilization. This program is conducted by an association, the Delmarva Poultry Industry, Inc., and is commonly spoken of as DPI. For the past few years, their annual budget has exceeded \$100,000. Funds are obtained through a self-help approach in the form of the now famous Delmarva's poultry booster day banquet (\$100 a plate dinner). Last year's campaign for funds resulted in exceeding their quota of \$135,000, obtained entirely by voluntary workers interested in the future of the Eastern Shore's poultry industry.

One of the principal promotional projects conducted by this industry association is the staging of the national chicken cooking contest, held as a highlight of the annual Delmarva chicken festival. The 1963 festival will be held in Salisbury, Md., June 13, 14, and 15.

The national chicken cooking contest is cosponsored by the Delmarva Poultry Industry organization and the Poultry and Egg National Board. Since its inception 15 years ago, over 6,000 chicken recipes have been submitted, with approximately 2,500 men, women, boys, and girls taking part in the final cookoffs. The contribution of the national chicken cooking contest, resulting in tremendous volumes of follow-up publicity focusing attention on many different ways of preparing and serving chicken, has been of inestimable value to the entire poultry industry. At the same time, consumers everywhere have benefited greatly as they use chicken more often in trying out the many winning recipes printed and distributed coast to coast following each year's contest.

The best evidence that a phenomenal product-promotional job has been done through cooperative efforts of industry people, agency personnel and members of the retail trade is found in the rate at which broiler consumption has increased. During the 20-year period, 1940 to 1960, the per capita consumption of broilers increased from approximately 2 pounds to 23.4 pounds.

DPI's grower committee does not mean to infer that promotional efforts alone are responsible for such progress in the eating habits of our Nation's population. Technological developments of the poultry industry have made the progress of commercial raising of broilers and fryers the envy of all branches of our country's agriculture. Back in 1927, it took 16 weeks and 12 pounds of feed to produce a 2¼-pound chicken. Three decades later, it took only 9 weeks and 8 pounds of feed to raise a 3¼-pound broiler. Currently, Delmarva growers are disappointed if their chickens do not weigh 4 pounds in 9 weeks of age.

In completing their evaluation of the congressional report, DPI's grower committee went on record favoring this regional poultry association's oft-repeated stand as being opposed to Government controls, including marketing orders.

"Delmarva poultrymen are not satisfied with their plight or content to settle for the present situation," said Chairman Phillips. "New heights in efficiency of production must be reached, hard work is needed as we encourage people to eat more chicken, and, of course, we'd like to see chickens sell at a higher price; however, marketing orders and other forms of restrictions would retard continued growth and efficiencies in the production and marketing of poultry meat and would adversely affect millions of consumers through increased consumer prices. We sincerely believe that judging from the rate of growth of our industry, the low cost of production, and through the wide acceptance by consumers everywhere of our young, tender chickens, broiler production will continue to be one of our Nation's most important agricultural enterprises," concluded Mr. Phillips.

The Delmarva Poultry Industry leaders have frequently commended Federal and State agencies for their efforts in assisting the poultry industry in the fields of research, education and market development. However, they continue to believe that the growth and vitality of the poultry industry in the years ahead will depend on the free enterprise system of production and marketing. Admittedly, there are risks involved, but with responsible and intelligent action, sound management practices, and exerting rights as free leaders, it is believed that an efficient poultry industry will continue to benefit both producers and consumers.

Delmarva's position is not an opinion at which they have quickly arrived. Instead, it is truly a reemphasis of their position over the years. Opposition to governmental controls has been repeatedly stated to Members of the Congress and to officials of various agencies.

"Such a philosophy is one of the big reasons why DPI's organization is currently busy, through its fund drive committee chaired by William R. Murray, one of the pioneers of our industry, selecting dozens of its members on a voluntary basis to meet its 1963 fund drive goal of \$140,000," said A. E. Bailey, president of the Delmarva Poultry Industry Association.

A. E. BAILEY,

President, Delmarva Poultry Industry, Inc.

PAUL PHILLIPS,

Chairman, DPI Grower Committee.

Walter L. Meyer Spreads Friendship With Song

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD I include an article which appeared in the January 3, 1963, issue of the Home Journal, daily newspaper published in St. Thomas, Virgin Islands. The article concerns the recent appearances in the islands of Milwaukeean Walter L. Meyer, the world-known professional song leader:

WORLD-KNOWN SONG LEADER DELIGHTS GROUPS

Milwaukee's world-known song leader, Walter L. Meyer, on Monday night gave a demonstration of his "Songobatics" (community singing fun), before a delighted audience of Girl Scouts and Boy Scouts at the Catholic school auditorium.

Being his first appearance in the Virgin Islands, Monday night's program marked the 58th country or territory in which the Milwaukeean has entertained. "Music is an international language," remarked Mr. Meyer. "And when you combine it with laughter, you have a wonderful medium with which to spread friendship and good fellowship around the world."

He appeared in two school assembly programs Wednesday, one at the Charlotte Amalie High School, and the other at the Sugar Estate Elementary School.

Possibly no one other person has conducted as many people of all ages in group singing, in as many nations of the world, as has Mr. Meyer. He is active in scouting in Milwaukee, and because of his participation in world jamborees, trekorees, camporals, and meeting events of all kinds—has become known as an "international scouter."

In addition to scout songs and yells, Mr. Meyer included several folksongs from Denmark and Austria and the United States rounds and fun songs. For extra audience participation merriment there was the "Hukilau" from Hawaii in which several scout leaders were brought to the stage to perform the hula.

A professional song leader at home, Mr. Meyer's services are available on his good-will tours to a variety of charitable, educational and religious groups or institutions without charge. He is unsponsored and pays his own travel expenses. He has been doing this since 1948 when as a graduate student at Columbia University's Teachers College he made his first trip abroad to England, Scotland and France. His present good will song tour which started last week in Puerto Rico, and, and now the Virgin Islands, is his 13th.

As a world entertainer he has succeeded in bringing song and laughter to many orphanages, old folks homes, hospitals, refugee camps, and other welfare institutions where entertainment is seldom received from the outside.

His biggest contribution, through song, comes, Mr. Meyer feels, from the carryover benefits to groups whose leaders learn new techniques for group participation. "This is the best thing that could have happened for

our seamen," an officer aboard the World War II famed British aircraft carrier *Ark Royal* stated following an evening singsong attended by 500 of the sailors in the ship's dining room. "We're going on maneuvers in the Arctic waters where they will receive no leave for several weeks. Tonight's experience has shown them the way, namely, how they can create their own group entertainment."

The globetrotting songster has conducted many special workshops in song leading and group fun, and it is because of this teaching and guidance at the grassroots level that he has been described in several sources as a musical one-man peace corps. One of Mr. Meyer's boosters in Washington is Congressman REUSS who is generally credited as being a founder of the Peace Corps idea.

SONG LEADER

From St. Thomas, Meyer returns to Puerto Rico where today, January 3, he is scheduled to spend the day at the YMCA camp. The Dominican Republic is another country in which the songleader has not yet appeared, and he hopes to include it in his present itinerary before returning to Milwaukee.

Len Stine of WSTA interviewed Mr. Meyer for broadcast Monday night at 4:45.

Under Secretary of Agriculture Murphy Addresses Meeting of the Virginia Association of Soil Conservation Districts

EXTENSION OF REMARKS

OF

HON. W. PAT JENNINGS

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. JENNINGS. Mr. Speaker, Under Secretary of Agriculture Charles S. Murphy addressed the annual meeting of the Virginia Association of Soil Conservation Districts, which was held here in the Washington area a few days ago. His remarks, which I herewith extend in the Appendix of the RECORD, are very pertinent to our Nation's relationship to the Common Market countries. We in Virginia, as do many other States, have a vital stake in our export market. We want to keep it.

Under unanimous consent, I commend Under Secretary Murphy's comments to my House colleagues for insertion in the Appendix of the RECORD.

It is indeed a pleasure to be here this morning. First, it gives me an opportunity to thank personally those of you who actively supported the Food and Agriculture Act of 1962.

Second, I would like to discuss a matter that is of growing concern to the U.S. Department of Agriculture. I refer to the European Common Market and its possible impact on our farm economy.

Finally, I would like to look ahead at conservation's opportunities under the rural development program.

I believe we have here this morning a number of the Virginia supervisors who called on their Congressmen, urging endorsement of the 1962 Food and Agriculture Act. The Secretary and I, in fact, everyone in the Department, deeply appreciate this support.

It exemplifies the positive leadership and readiness to act that have made soil conservation districts such a vital force in rural America.

Too often organizations who would support certain legislation hang back and do nothing. This cannot be said of the Virginia Association of Soil and Water Conservation Districts.

I hope you will continue to take an active role in agricultural affairs. The Department earnestly seeks your guidance, understanding, and support in its operations.

This support and guidance is especially needed in 1963.

As you know, one-fifth of our agricultural output goes to overseas markets. During the past year, we exported more than \$5 billion worth of farm products. Some of this was provided at low cost to underdeveloped nations through our food-for-peace program. But nearly \$3½-billion worth was sold abroad through regular commercial channels, one-third of it to the six Common Market countries of Western Europe. These countries—France, Italy, West Germany, Belgium, the Netherlands, and Luxembourg—are our biggest and best overseas customers, for industrial items as well as farm products.

Under the 1957 Treaty of Rome, these six nations agreed to merge their economies into a single customs union, or common market.

Our Government has applauded the move. No doubt history will show that formation of the Common Market, or the European Economic Community, as it is more properly known, was one of the greatest things that could happen to Europe. It is a catalyst that can, in fact, already has, injected new vigor into the Old World. Tariff walls have been drastically lowered between member nations, and they are to be removed completely before 1970. Capital and labor flow freely over what used to be closely guarded boundaries. Train passengers, for example, can now ride between Belgium and Germany without stopping for inspection of passport and luggage. National feelings and prejudices are giving way to common overall interests.

The United States has supported the EEC concept in the belief that closer economic cooperation may ultimately lead to political union, a United States of Europe. This, in turn, could be an essential part of the foundation on which East-West peace is built.

But in recent months, we have become increasingly disturbed by evidence that the Common Market countries are leaning toward a highly protectionist policy for agriculture that could seriously impair the prospects for the success of this whole enterprise.

They have drastically increased the import levies on some of our major commodities, to an extent that threatens to choke off a large share of our agricultural exports to these countries. The duty on our poultry going into West Germany, for example, has been increased from less than 5 cents a pound to more than 12 cents.

Virginia's \$28 million-a-year broiler industry already is feeling the pinch of these higher import duties. Our exports of frozen poultry to West Germany have dropped to less than half their prior volume. And if it were not for the lingering effect of a devastating attack of blue mold on the French, Italian, and Greek tobacco crops, your State's \$83½-million-a-year tobacco industry might be losing customers because of the new common tariff imposed last winter.

It goes without saying that our agricultural exports are of the utmost importance, not only to you as farmers, but to our Nation as well. Loss of our European agricultural markets would jeopardize our security and foreign aid commitments around the world.

Two decisions are expected this year which will have great impact on the future of the Common Market and international trade itself.

One is the question of Common Market membership for the United Kingdom. The other is the setting of grain prices for the Common Market countries under their common agricultural policy.

For 14 months, the United Kingdom has been negotiating for Common Market membership. Pressure is mounting for a decision this year.

I need not dwell on what it would mean to us, or to the Common Market, to have Great Britain become a member of the European Economic Community. She is the world's largest importer of agricultural products, and one of the leading producers of consumer goods.

A Common Market which included Great Britain and other European nations now seeking membership would be an economic colossus with a population of 250 million. This exceeds the United States population by nearly 70 million.

Moreover, it is what is popularly called a seller's market. Individual buying power in the Common Market is on the increase, and there is a great, unsatisfied demand for automobiles, television sets, and other consumer goods.

The United States could ill afford to be walled from a bloc of nations with such vast buying potential. And by 1970, economists estimate the gross annual output of an expanded Common Market will increase \$170 billion.

The second decision I mentioned, the grain price issue, will have a profound effect on the course of history.

The Common Market may fix its internal price for wheat early this year. This is a critical decision. If the price is moderate, it will temper the movement toward an isolationist policy for agriculture, and perhaps signal the start of an expanded level of free world trade. If the price is excessive, and high protectionist walls are erected to limit competing imports, the expansion of uneconomic production inside the Common Market would be accelerated sharply. This could lead to indiscriminate "dumping," or even an international trade war.

The six common market countries are, of course, trying to protect the income of their farmers. We can understand that. We do the same thing ourselves. Virtually every industrial nation has experienced a growing disparity between farm and nonfarm income, and has had to undertake corrective measures.

However, in trying to protect and improve farm income, responsible nations must take into consideration the effects that their actions will have outside their own boundaries. The United States has used export payments to keep certain commodities moving on the open market. But we have used these payments only to maintain our fair share of the world trade. We have not tried to undercut other nations, or take away their markets.

As Secretary Freeman has said, "If we expect others to act responsibly when it comes to setting agricultural policies, we must continue to do so ourselves." And he added: "We are in complete sympathy with measures to protect the income and economic well-being of the farm segment of the European economy. We don't believe it necessary, however, to sacrifice international trade in the process."

The United States recently revamped its international trade policy to meet the jet-age needs of the sixties. This was done through passage of the Trade Expansion Act of 1962. This act gave the President the power to reduce our tariffs on imports from the Common Market in exchange for greater access to their markets.

In the debate which preceded enactment of the law, the Congress made it clear that we were to negotiate trade agreements which benefit our agricultural as well as our industrial products.

One section of the act directs the President to take all necessary and feasible steps to eliminate unreasonable trade restrictions that any country, or group of countries, imposes on our farm products. These steps include withholding of concessions and most favored nation treatment, and if necessary, retaliatory action.

The President has clearly indicated his firm purpose to see that the channels for agricultural exports are kept open, and you may be sure that one of the major purposes of the Department of Agriculture this year will be to support the President's efforts in this field.

Another of the Department's major goals for 1963 is to inject new vitality into rural America through creation of new economic opportunities and elimination of wasteful, outmoded land use patterns.

In formally putting the new Rural Areas Development program into motion last November, Secretary Freeman announced that local initiative and leadership would be "the first criterion" for departmental help.

And he invited soil conservation districts to provide this motive power and leadership. I would like to emphasize the word "invited." You supervisors will determine the role played by the districts in developing and using the new conservation and rural development tools. This role can be as large, or as small, as you choose to make it.

We hope you will select the first course. Rural development is a vast undertaking, one that calls for talents and knowledge often unique to local soil conservation districts.

Think for a moment. How many organizations do you know that have your knowledge of what the local soil can do, what it is capable of? How many organizations know the resources that exist in your area? And by resources, I mean both human and natural resources. What other groups in your community know the area's problems, and have the organization and leadership to cope with them? Consider the difficulties a city engineer would have planning land use changes for a farming community.

As you can see, soil conservation districts possess some unique qualifications. I hope you will put these talents to work and make rural development a success.

One of the first things that I would suggest you do is to modernize your working agreement with the Department of Agriculture as suggested by Secretary Freeman.

Many of these agreements were written more than two decades ago, and do not reflect the advances that have occurred in this field of soil and water conservation.

Today we are faced with new problems and new complexities. To cope with the resource problems of the sixties, we must re-evaluate our programs, and bring them up to date. We must use the new tools, as well as the old, if we are to create a better way of life in rural America.

When I say "rural areas," I mean more than farm country. Rural America is people, people in towns and small cities as well as on farms and ranches. It is land, rivers, small streams, and forests. It is north, south, east, and west. It is, in fact, all our land, all our people, and all our wealth outside our urban centers.

Today many areas of rural America are in serious trouble. Their farmers and ranchers are living in a state of chronic depression. They work from dawn to dusk, producing more than ever before on fewer acres, but they are unable to buy the equipment they need to expand, or to make their operation more efficient. The land has been drained of its wealth by erosion and unwise use. The

nearby towns and cities long ago stopped growing, and fell into economic stagnation. With no job openings in the area, the brighter young adults move to faraway cities to find work.

The goal of the RAD program is to help the people in such local communities determine exactly what resources they have, then help them develop a plan that will make full use of these resources. Only in this way can we close the gap that exists between our urban and rural economies.

Farmers and ranchers are the backbone of our rural communities. The economy of the area revolves around them. If the farmer is prosperous then the rural community where he shops is prosperous. If the farmer is in financial straits, then the town is, too.

But we must do more than develop family farms to get rural communities moving again. It takes new enterprises, expanded business opportunities, modern rural electrical systems, watershed development, rural housing, water and sewerage systems, new outdoor recreational facilities and better schools.

One of the best ways to revitalize a community, short of a complete rural renewal job, is through a multipurpose watershed project.

These multipurpose projects can stop destructive floods and provide water for irrigation, municipal, and industrial use. They attract new industries, create water-based recreational areas, increase land values and protect and improve farmland.

You have an outstanding example of what a watershed project can do right here in Virginia in the Mountain Run watershed project.

Mountain Run used to flood the city of Culpeper in the spring and fall, then dry up and leave her without water in the summer. The floods were bad, but the summer droughts were even worse.

Culpeper needed a new hospital, but the city couldn't build it, because it couldn't provide water for it. The chamber of commerce had been trying to get new industry to come to Culpeper. But with flooding in the winter, and droughts in the summer, industry wasn't interested.

Late in 1954, the city filed application for a watershed project. Five years and \$545,000 later, the project was completed. One multipurpose structure stores 190 million gallons of water for municipal use, better than half a year's supply at the present rate of consumption.

The hospital has been built. Three new industries employing more than 400 people have moved to Culpeper, and other industries are making inquiries. Culpeper didn't have to go after those plants. They came to the city, once the flooding and water shortage problems were licked.

Now that the water mains have been extended, new homes are going up. The former unoccupied floodplain has become a shopping center, adding to the city's tax base. Conservation measures have put Culpeper's farmers on a sounder financial footing.

A 4-acre park was developed bordering one of the watershed structures, giving Culpeper citizens and visitors a place to fish, boat, and picnic.

The success of the Culpeper project is known far and wide.

There are already more than 70 small cities and towns like Culpeper benefiting from watershed projects. Another 453 communities have started similar projects, and 1,294 others have filed application for the same treatment. Our land is, and will be, so much the better.

Recreation is emerging as a use of the land that shows great economic promise. At the regional land and people conferences, and in surveys conducted by the Soil

Conservation Service and Forest Service, thousands of farmers described how they switched from conventional farming to outdoor recreation, and made it pay.

It is not surprising. The Outdoor Recreation Resources Review Commission reports that our parks, camping grounds, lakes beaches, and highways are jammed with people searching for outdoor fun. Furthermore, the Commission says this demand will continue to grow, outstripping even our population boom. Where can they turn, but to our privately owned farm and ranch lands?

The Department can now help farmers and ranchers develop recreational enterprises on their land. We also can cost-share on recreational developments in watershed projects.

Just 1 month ago, the Agricultural Stabilization and Conservation Service announced plans for a pilot program to convert unneeded or unsuited cropland to other uses. These activities will be based on the basic farm conservation plan, and they will be carried out under long-term cost-sharing agreements negotiated with the Department of Agriculture.

These are just a few of the new conservation and rural development tools provided by the past Congress. Loan authorities were expanded to include recreation and cropland conversion projects. ASCS was authorized to expand its list of cost-sharing practices in certain areas. The watershed program was enlarged to add as a purpose both recreation and water storage for future municipal or industrial uses.

I urge you to study these and the other new authorities and see how they can be fitted into your existing district program. They represent an orderly step forward in our efforts to keep soil and water conservation dynamic and attuned to the needs of a modern society.

This is the 25th anniversary year of the district movement in your State, the Tidewater district being the first in Virginia to sign a memorandum of understanding with the Department on December 16, 1938.

You have done much to make your rural communities a better place to live. Today you have an even greater opportunity for service. I urge you to seize this opportunity to help yourselves, and your community. Let us push forward together until we have built a firm foundation for permanent prosperity in rural America.

Text of a Speech by U.S. Senator Barry Goldwater, Republican, of Arizona, Before the Air War College, Maxwell Air Force Base Montgomery, Ala., January 17, 1963

EXTENSION OF REMARKS

OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. MATHIAS. Mr. Speaker, every Member of the legislative branch of Government has a responsibility to maintain the prerogatives and the obligations of the Congress. To fail in this duty is to upset the balance of power in our constitutional system. The distinguished gentleman from Arizona, a Member of the other body, Senator BARRY GOLDWATER, has spoken forcefully on this subject in words that merit the attention of the Congress and the country:

Once, when the architect, Frank Lloyd Wright, was asked to give an address to a distinguished audience, he rose, said his address was Paradise Valley, Phoenix, Ariz., and sat down. I could, just as accurately, say that my view of national security policy today is that it tends to be wrong, and sit down. This, however, would give you an overabundance of leisure and would undoubtedly result in a traffic jam at the library as you rushed to fill the time constructively.

It would also leave us where, unfortunately, many supposedly important national debates leave us—understanding fully who says yea and who says nay but still totally unaware of the process by which the disagreement was reached. It is the process about which I should like to speak today. I will not be able to avoid, because of a personality quirk perhaps, some discussion of specific disagreements, but I will begin, at least, with the broader topic.

My address to you today is supposed to increase an understanding on your part of the role performed by the American party system in developing, supporting, approving, and evaluating national policies. I wish that I could do this, but unfortunately, the American party system no longer plays a major role in these activities affecting national policies.

During the past 30 years of this century, both parties have seemed to recede from positions of principle and have taken attitudes closer to each other to the point that in the last elections, we saw an almost wholesale disregard for the party label and a voting for the man. The party historically in this country is a vehicle by which the citizen has been able to participate in the formation of national policy.

To a great extent, the policies of both parties as enunciated in their platforms have grown so close to each other, that it is difficult for the citizen to distinguish between them.

I suggest then, the proper question for Americans today is not so much what can America's policies do for the citizen, but what in the world can the citizen do for the policies. There was a time when the answer, very simply, would be: he can participate in the formulation of those policies.

As a matter of fact, we fought a Revolution to provide access for him to do just that. We brought representative government to its fullest flower for that purpose.

But, we did it in such a way that government always would be representative—of all the people—and not just of simple majorities. Only thus does representative government remain representative and not become repressive.

Basic in the equation is the balance of power between the three major branches of the Federal Government: The legislative to make laws; the executive to administer them; the judiciary to test them against the great legal framework of the Nation.

Now patience and principle are tested by new demands on this old balance. Congresses are criticized when they resist executive programs, not so much on the basis of why they resist but simply because they resist. The judiciary is caught in a boiling debate about whether it should judge the constitutionality of laws or whether it should also interpret them for maximum social benefit. States are criticized for their differences in approach or standards or wealth whereas they once were felt to be inviolate basically to preserve the opportunity for regional and cultural differences. Big cities, emerging as city states rather than as state units, look past the State capitol to the National Capitol for solution of their problems.

Federal regulation of trade practices has moved from the protective—which prohibits malpractices—toward the coercive—which

demands conformance with practices decided upon administratively.

We are larger and more populous, it is said, than when the Federal system was developed. Old ways are not adequate. Old balances are not meaningful. Does this mean that there is a population limit on liberty? That when 100 million persons live together they can maintain free markets and free and balanced institutions but that when 200 million persons live together they must delegate their local institutions to central authority? There is, at the root of it, no other explanation advanced for the movement today away from the Federal system of balanced powers toward an executive system of concentrated powers.

Now, is it proper for you, as members of the executive branch of government to consider these matters? As a member of the legislative branch, I think so. I think so, among other reasons, because of the essence of our civil-military relationship in this country, the essence of civilian control, directly through the civilian Commander-in-Chief but, as importantly, through the legislative branch which funds the military, makes laws broadly governing it, and to which the military must account when called upon to do so.

It follows that, to the degree that the legislative branch of government loses its weight as part of the balance it also stands to lose its power in relation to the military services. We do not want that to happen. Nor, despite the annoyances sometimes occasioned, do most military men.

Let me elaborate just a bit, lest anyone get the notion that I am urging some sort of political activity on the part of the military. I am doing quite the opposite. I am discussing a system which should make it possible for the military to devote itself fully to its professional mission. And I am discussing developments which threaten to introduce political disruptions into that professional role.

But first let me round out the basis of my argument—that a serious shift is, in fact, taking place in the way in which policy is made and in the way that the Federal system is brought to bear upon the policymaking process.

Some years ago, in his book, "Why England Slept," the then student, now President Kennedy, wrote at some length about the difficulties of preserving free institutions in times of stress and strain. He concluded, however, that despite the obvious advantages of efficiency enjoyed by a totalitarian government, the free institutions work best in the long run and must be preserved even though they might have to be sharpened or refocused in time of crisis.

Last month, speaking to a nationwide television audience, however, the President shifted his position basically. Commenting on the efforts to change the makeup of the House Rules Committee, he said that a failure to do this would "emasculate" the administration's program. This, by clear inference, was the reason that he was giving to change this particular legislative procedure.

There are certain technical reservations I would take to his statement—the House Rules Committee cannot, as so often said by those unfamiliar with the situation or trying to make a special case, the Committee cannot absolutely block legislation by preventing it from getting to the floor. There are no less than four established ways of bypassing the Committee. All are practical, all are available.

My major difference is with the President's reason. And, again, it is a difference based upon my membership in and regard for the legislative branch of government and my deep belief that it is this branch which most constantly, most closely makes a reality of

representative government and provides proper access to the formulation of policy.

It is a blow at the very concept of representative government to say that a procedure of the Congress should be revised in order to permit untroubled development of the program of any administration.

In the first place, the elected chief executive of the United States supposedly is representative of the entire Nation, not just the citizens who cast ballots for him. To say otherwise is to suggest, in this particular time, a disenfranchisement of almost exactly half of the population of the United States.

If the programs and policies of any administration are opposed by the legislative branch it is just a sharp reminder of that fact—of the fact that this is a representative government and that the direct representatives of the entire electorate are expected to do their work regardless of which party or person is in power.

Interestingly enough, spokesmen for a particular administration program had gone just as far in another direction a few months earlier. After the Senate defeated the administration's social security medicare program, a medicare proponent figured out, and the President echoed in a press conference, that the Senators who voted against the bill did not represent a majority of the citizens of the United States; that is, the States they represented did not contain a majority of the electorate.

Again we have a colorful new view of representative government. The Senate was never designed to represent equal numbers of people. Two Senators are elected from every State despite population. They represent the State. They represent, also, a basic part of the Federal system's great balance of powers. To discuss the Senate on a numerical basis cannot be the result of simple ignorance of the Constitution. It must be on the basis of a simple disagreement with or misunderstanding of the Federal system itself.

On the other hand there are evidences that some supporters of the administration do not hold at all with majority representation—when a majority might interfere with a policy. The now famous memorandum on anti-Communist educational efforts issued by Senator FULBRIGHT, contained the frank statement that there could be too much public involvement with policy. It cited foreign aid, saying that if the program were submitted to direct ballot by all the people, it would probably fail. But this sensitivity to a representative government that makes it possible to balance policies between majority and minority measures—and still accomplish wonders—does not seem to be generally applied.

We have another indicative situation, which bears directly on policy formulation, in the Senate and in the House of Representatives today. It is the matter of staffs for the committees of Congress. Let me first describe why they are important.

Just as generals must, so must Senators and Representatives depend upon staffs to do the real digging and much of the work of putting together the background on which a policy decision can be made. What witnesses will a committee hear, what precedents should be reviewed, what is the status of similar legislation, what are the needs for proposed legislation, and so on and on—all this is the work of the committee staff.

Today, of course, the majority party, which is the Democratic Party, expects a substantial share of the staff to be working for them and to be appointed by them. Republicans would feel the same way.

On committee after committee, however, the minority party has not been able to appoint any staff member at all. On most there is at least a disparity of staff appointments that is far beyond the disparity in

party representation. And this disparity, to raise this beyond a mere quibble between the in-party and the out-party is several times more pronounced than under the previous situation of a Republican majority.

Again, the point is simply that less attention than ever before is being paid to the essential role of the legislative as a forum for the views of all the people and as the great molder of policy on their behalf.

Insufficient minority staffing makes the legislative more dependent than even upon the statistics, the witnesses, the proposals of the administration as transmitted through the majority. I would make this point as emphatically, I assure you, if the situation were to deny proper committee staffing to the Democrats.

The need is for proper policies, properly arrived at, properly researched and understood above and beyond the desires of the particular administration running the executive branch.

But what of defense policies in particular? Part of my assignment today was to discuss the role of the two parties in forming these policies. I want to disobey the assignment simply because that role is nowhere near as significant today as is the role of the executive branch operating with virtual autonomy, particularly through the Department of Defense.

It should come as no surprise to you gentlemen to be asked to consider, for instance, the policy implications of the existence of counterpart civilian research or consultative groups for virtually every operational function of the Armed Forces. This shadow Department of Defense is a fact of your everyday military life. It is a reflection, I think, of the new direction in policymaking, the direction away from the process of representative government and toward government by expert, specialist, technician, or even computer.

Policies evolved by these outside research groups can have the most profound and direct impact upon our national defense policies. Often, their policies are our national policies. And this is not to debate the point of whether the policies are right or wrong. It is to state, however, that from my position as a member of the legislative branch, responsible to an electorate, the process of forming those policies is wrong, dead wrong.

Policy formation should never be far removed from policy responsibility. By creating this shadow Department of Defense, however, authority and responsibility are widely separated. You might call it a responsibility gap in our policy structure.

Most serious, however, is the possible politicization of the military services themselves. Let me cite an example. One of the branches of the shadow DOD, a research and analysis group, has been going quite deeply into the question of disarmament. This suggests a possible effort to stress, in our defense policies, actions that will enhance the purely political efforts toward disarmament. This, I hold, is improper. It is not the function of the Armed Forces to beat their swords into plowshares—no matter how devoutly they may cherish the notion. Nor is it the function of defense policies to become an adjunct of particular partisan political policies—such as a particular administration's proposal for disarmament. The implications are obvious and shocking.

Political decisions, of course, must guide the use of the Armed Forces. They should not guide the purely internal and professional decisions and composition of the Armed Forces. For instance, the decision to scrap any particular weapons system should be made on the basis of technology and strategy. It should not be made on the basis of partisan political plans.

Yet, today, the scrapping of Skybolt and the offer to place Polaris missiles at NATO's disposal is essentially the politicalization of what should have been a professional military decision.

As far as I have been able to ascertain in the short time that I have been in Washington since the opening of this Congress, not one member of the Senate Armed Services Committee was apprised of the decision to scrap Skybolt and to offer the Polaris missiles to NATO. Yet, the Senate Armed Services Committee and the Subcommittee of the Appropriations Committee, which handles military appropriations, have an interest in these decisions and how they are arrived at, because of their overriding interest in what is good for the Republic. From the exercise of this interest comes the decisions of the committees, and secondly of the Congress, that enable the Department of Defense to build their weapons systems. I might inject at this point that the present disarmament proposal offered at Geneva by the United States, which contains in my opinion the mechanics of unilateral disarmament, was not discussed with the Foreign Policy Committee of either House or with leaders of the Senate who would have a natural interest in any such proposal.

Again we see the emphasis on centralization that characterizes our own domestic situation.

News emanating from the Department of Defense is another familiar example of the way in which policy support is attempted by executive management rather than by representative persuasion.

Suppression of news, I would admit, is a conceivable necessity of a national emergency. But when a spokesman for the Department of Defense argues, publicly, that it is the inherent right of government also to lie in its own defense, then I say that we have moved another giant step away from representative and toward repressive government.

How ironic it is that many of our citizens today are worried by such hyperthyroid considerations of a military coup d'etat as that contained in the book, "Seven Days in May."

How much more to the point would it be to worry about the tiny coups d'etat which take place everyday so that the federal system is being reshaped into a lopsided monster that is virtually all executive in the way it walks, thinks, talks, and cannibalizes the other two branches.

Americans of all political hues were particularly sensitive to a single manifestation of this when another administration attempted to pack the Supreme Court with justices favorable to a point of view rather than dedicated to points of law.

The situation today is far more striking and far more obvious. Our 7 days in May, in truth, are ticking off not in the duty rooms of military stations but in the paneled cloisters of executive offices.

I believe it to be common knowledge across this country that the membership of the 87th Congress almost unanimously supported additional appropriations for the B-70 program and that the Department of Defense has consistently refused to recognize the will of the people as expressed through the votes of the Congress. It is true that a rather piddling sum has been applied to this project, but it is also true that the uninformed civilian researchers in the Pentagon resist this program and are determined to see it fail. This, I suggest, is a very obvious example of the growing determination of the executive to ignore the wishes of the legislative. I stress this balance and point to a lack of it as a principal reason why I could not direct my remarks as suggested by the

school toward the methods of solutions of problems by the two-party system.

Policy formulation, in a representative form of government, is like a man. It works less well if its limbs are lopped off. It needs a mind and it also needs heart. It needs eyes and it needs ears. It needs muscles and bone structure linked, balanced, and functioning. Starve the sinews and it collapses. Close the eyes and ears and it risks collision.

And we do starve the sinews and close the eyes and ears when we deny representation and rely overly on administration.

Actually, the situation I have been describing is a direct comment also on the question of how political parties form, support, and press policy positions. They do it less and less as parties and more and more as reflections of particular administrations. The administrations, in turn, do it less and less as representative bodies and more and more as the reflections of their particular sets of policy specialists.

And why? Basically because the keystone of the great arch of representative government, the legislative, is subordinated in policy considerations and more and more asked only to approve what the executive technicians have developed. In the case even of the opposition there is less and less opportunity to speak out for a new formulation of policy. Opportunity usually is left only to oppose.

A domestic example would lie in the medicare proposal to which I referred previously. The Congress already has passed legislation establishing certain means of obtaining medical attention for elderly persons, the Kerr-Mills bill. In short, it has said that there is another way to reach the goal of medical care. But, because this representative expression does not please this executive branch, its operating agency in the field, the Department of Health, Education, and Welfare, is deliberately using its powers to stultify the Kerr-Mills procedures and thus pave the way for a new attempt to obtain congressional surrender to an executive proposal. It is not enough for representative government to agree on the goal and then work out a consensus on how to reach it. Executive emphasis in government, says, instead, that the legislative must also agree to, accede to, the exact wording, the punctuation, and the procedures of the Executive plan.

In international policies it is even more pronounced. Time and again, the legislative branch has sought to hammer out a broad base of policy that could guide us as a Nation. Time and again, the executive branch in this and in previous administrations has moved ahead unilaterally to positions that may solve a momentary problem but beg the whole broad issues of national objective.

There is no doubt, for instance, that the consensus of the Congress is opposed not just to missiles in Cuba but to the toleration of a Communist base there at all. Executive policy, operating behind a nearly total black-out of information regarding even the invasion prisoner negotiations, takes a different tack, offering no-invasion pledges, pinning policy to offensive weapons and not to offensive doctrine, and so forth.

Skybolt and the RS-70, the whole elimination of the manned bomber program is one of executive engineering and too little congressional debate—and information.

The pause theory, the no-cities theory of nuclear attack are executive decisions. They have not passed any of the tests that should be applied to major decisions in representative government. They have passed the review only of the executive's technicians. And these technicians, supposedly representative of the Nation as a whole, are in obvious fact representative only of a faction of a fraction.

There may be, in all of this, instances of bipartisanship. But it is a bipartisanship only of convenience and of detail.

Half of this Nation has been, in effect, disenfranchised. The half that seems to believe, by its voting record, in policies of lessened centralization of government at home and in a strategy of initiative rather than reinforcement of the status quo abroad, are disenfranchised by an executive branch that is out of sympathy with their position and all too sensitive to and resentful of efforts to redress the balance in the legislature which is the only ameliorating body available.

True bipartisanship would, at least, find the executive appreciative of and not laying siege to legislative prerogative.

Properly this is the only way to focus the policies of the two parties upon the debates from which the single policy of national statement should emerge.

Your interest in the actions of the two parties must be counted partially academic. Until the balance between executive and legislative and judicial is fully restored, policy will remain essentially a possession—not of a party or people, but of an Executive. Only when the balance is restored can it again become a process and a participation.

What has been taking place in America is a revolution directed at the piecemeal changing of our concept of government. One might say that the revolution was based upon the concept expressed in our Declaration of Independence, "all men are created equal," for the proponents of the revolution intend to see that man is not only born equal, which is the true meaning of the words in the Declaration, but that he remains equal in material things all through his life. This material equality would be maintained by taking from the ambitious their property to be distributed among the lazy. To do this—to either take property without the due process of the law—or to change the laws through Executive edict to ignore that prohibition of the fifth amendment—would require a thoroughly controlled centralized government. The revolution, of course, has been a bloodless one. We have had no fighting in the streets, no bombings, no assassinations, but no one can successfully argue today that the revolutionists have not been successful. Actually, when we discuss conservatives and liberals today we are discussing the opponents in this revolution. The liberals believe that the power of a central government can best regulate the lives of men regardless of what it does to their freedom. The conservative believes that the closer government remains to the people, the more the people have to say about policies of their government, the more can be gotten for all of the people, including that most important point, the preservation of freedom.

Had I felt it possible to discuss this broad problem within the confines of a two-party system, it would have been an easy assignment and I could have accomplished it in length of this paper. It is not an easy assignment, however, because as I said at the outset, we in effect have drifted away from the two-party concept, and while we still do not have a one-party mechanism which might be called the alternative, we do find a terrific growth of power in one branch of our government, which, if allowed to continue, will successfully stamp out both parties. And I am afraid also that the legislative and then the judicial branch of government will fade further leaving only the executive. This process of deterioration, I might remind you gentlemen, has been experienced by nearly every government in the history of the world and the experience has caused their ultimate undoing.

I look forward, therefore, to the question period so that we might develop in a more specific way questions that I might have placed in your minds.

How an Iowa Democrat Looks at the Tax and Spend Policies of This Administration

EXTENSION OF REMARKS OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. SCHWENGEL. Mr. Speaker, of special interest to me was a recent letter to the editor of the Des Moines (Iowa) Register from Mr. Frank Engel, 1727 Division Street, Davenport, Iowa.

Mr. Engel is a leading Democrat in our State but he certainly has no stomach for the pellmell race which the President and his spendthrift advisers are conducting with sophisticated economics to run this Nation into insolvency.

Because I feel that Mr. Engel's remarks will strike responsive chords in the Congress, and because I feel that they carry a special message to the taxpayers of this great country, I wish to insert this letter to the editor in the Appendix of the RECORD. The letter follows:

Error,
Des Moines Register,
Des Moines, Iowa.

DEAR SIR: The big tax loot the country has been shelling out is beginning to make itself felt, and if something drastic isn't done, it's going to hurt more. It's going to take more than some scrawny cut by Congress in deference to President Kennedy's plea, to preserve the incentives favorable to the success of the capitalistic system in the United States.

A lot of people say a cut in taxation should be accompanied by a cut in government spending. They should know better and be more realistic about offering such high-sounding economic platitudes, for the logical conclusion of such reasoning will never appeal to the government spenders and it will never be ardently advocated by those who live off the public trough. So long as you keep filling the trough for them, they will be your unwelcome guests. No genuine desire for efficient and economical government will ever come from the taxeaters and the tax-spending donkeys we are feeding as the free-loaders on the bin of American production.

Take into account the gigantic dollar total of all governmental taxing bodies, beginning with local, school, city, county and State taxes in addition to the huge Federal budget, and it already eats up more than half the national wealth produced in the United States annually. We are literally being eaten out of house and home. The size of that tax dish is a stupendous portion of our production.

The tax-eating hordes will strive, however, to make the tax trough bigger to hold more. They don't want employment in productive industry. They don't want to help bake a bigger pie. They just want a bigger slice, which, of course, leaves a smaller share for those who make it, or keep on trying to make it. To them, the idea of cutting taxation is bizarre and "unorthodox."

Perpetuated long enough, our taxation system will ultimately destroy the fabric of unity which binds our people together. We have now become already, a nation divided by those who produce the national gross product for the maintenance of the standard of living requirements from those who produce nothing, except persuasive arguments for more spending and taxation, and socialism.

Taxation is like a drug. It easily becomes an immoral habit. A little may be useful and necessary, but the appetite grows with what it feeds on. The orgy of tax-spending is now swallowing our economic production and destroying the legitimate incentives which has made capitalism successful. Like drug addicts, if the tax-spenders can't get enough money by taxation, they go on with deficit spending and push the country into the red with debts. We go into deficit spending very naively for the benefit of foreign nations, therefore why not go with the same deficit practice by giving something to the American taxpayers in the way of a substantial tax cut. The billions we give foreigners they now use to buy our gold supply and we even let them shell that out without protest.

While the tax-spenders wreck the economy, they yet consider themselves our overlords and the masters of the public welfare state. The U.S. State Department even runs advertisements on television suggesting people to seek careers in government. In the first 2 years of the Kennedy administration an additional 180,000 people have been added to the public payroll. They can't all be relatives. The demand for the social welfare state is hatched and built up by propaganda conceived and launched by the political tax-spenders and never was originated by the majority of the people. In short, the public doesn't know what it wants. It never has, and short of some intellectual utopia, never will. Its collective mind is a vacuum into which will rush the meanest social-demanding diversions conceived by such cynical suppliers seeking political status. In truth the public opinion is a shapeless glob, waiting to be given form by men richer in political cleverness than conscience. And that's how we got into the mess we've been shoved. We take it without protest and keep shelling out the loot to the tax-eaters and the tax-spenders. Let's start driving those donkeys and make them pull their share of the load with productive employment as the President suggests.

FRANK L. ENGEL.

Joseph William Briggs: Our First Postman

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mrs. FRANCES P. BOLTON. Mr. Speaker, millions of Americans would appreciate what Joseph W. Briggs has done for them but they may never have heard of him. Forgotten, except for a handful of relatives is the Clevelander who conceived the free postal delivery service for cities, served as the first mailman and designed the first free delivery letterbox.

Mr. Briggs, who died in 1872 and is buried in Woodland Cemetery in Cleveland, had nine children. His closest living descendants are two grandchildren: Mrs. Victor P. Minier, 12479 Cedar Road, Cleveland Heights and Mrs. Irene B. Allen, Thompson, Ohio. Their grandfather had reached his early fifties in the Civil War period. Cleveland got its regular mail route in 1803 and its first post office in 1805, located on Public Square on the site of the present Federal

Building. During the Civil War, Mr. Briggs was stationed there as a clerk and assistant to the postmaster. At that time everyone had to go to the post office for his mail, which was either placed in special boxes or delivered at the windows.

During the winter of 1862-63 Mr. Briggs noticed that the women who stood in line in the cold suffered unnecessary hardships. They were so anxious to get letters from their husbands and sweethearts who were away at the fighting fronts that some of them used to stand exposed to the cold for hours before they could reach the delivery window. So Mr. Briggs suggested the idea of sorting the mail and taking it to the various grocery stores in different parts of the city where it could be distributed to the people who lived in the immediate vicinity thus saving them a long trip downtown and waiting in line. The idea was adopted and it worked out so successfully that Briggs went a step further. He suggested that uniformed post office employees should deliver the mail at the homes of the people to whom it was addressed. At first the idea met with every kind of opposition, but it was finally put into effect and Mr. Briggs designed the first uniform worn by the post office employees who became our first letter carriers.

On March 3, 1863, Congress passed the bill authorizing city free delivery. The Postmaster General in Lincoln's Cabinet, Montgomery Blair, then made Mr. Briggs a special agent of the Post Office Department for the supervision of the free delivery system. In that capacity, he organized the system of free delivery of mail matter in 52 cities from Bangor, Maine, to San Francisco, Calif.

I do not suppose any man ever contributed as much good to as many people as Joseph W. Briggs, who died in 1872, unhonored and unsung. Today, some of our most beloved public servants are the postmen who bring our mail to our homes daily. However, if it had not been for the foresight of Joseph W. Briggs, we might still be going to the central post office and standing in line to get our mail.

Independence Day of Chad

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. POWELL. Mr. Speaker, on January 11, the Republic of Chad celebrated her second anniversary of their independence, and we take this opportunity to send warm felicitations to His Excellency, the President of the Republic, Francois Tombalbaye; and His Excellency, the Chad Ambassador to the United States, Adam Malick Sow, on this memorable occasion.

This month the people of the Republic of Chad are celebrating the second anni-

versary of their independence. Although proclaimed free and sovereign on August 11, 1960, and admitted to the United Nations the following month, formal independence celebrations were deferred until January 11, 1961.

Chad is a republic, one and indivisible, secular, democratic, and social. It has seen a period of gradual and peaceful transition from colonial rule to independent status. This Republic became a separate colony in 1917, distinctive from the other colonies in France's African empire. Chad attained the status of an oversea territory of the French Union in 1946, becoming in 1958 an autonomous republic of the French community. The final step was full independence in 1960. This peaceful and gradual transition has instilled in the people a feeling of responsibility to adhere strictly to democratic processes. In the preamble to the Constitution of Chad, the defense of the rights of man, the separation of powers, and civil liberties are laid down as the fundamental principles of the nation.

Chad is a land of many terrains and a great diversity of people. There are settled farmers in the south, raising cotton on lush riverlands. There are ranchers in the center of the nation raising cattle and sheep on the expansive savannas. And finally, there are nomads in the north, living off the desert, guiding their caravans into the interior. The country's landlocked position and relative inaccessibility are the major deterrents to development. Since the economy is dependent on cotton and cattle, it is necessary to have sufficient transportation facilities to enable these products to reach foreign markets, and in turn, to be able to receive much-needed produce from the outside. That is why immediate development plans for the future call for railroads, paved roads, and expanded air service. In the near future, development projects also outline plans for greater diversity in industry and the exploitation of minerals and other raw materials.

When the President of the United States recognized the independence of Chad, he stated that the United States looked forward to close and friendly relations with Chad's government and people. On this second anniversary, I extend the wishes of the people of the United States for continued progress and success.

Our American Heritage: Will We Keep Freedom Alive?

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. BOB WILSON. Mr. Speaker, under unanimous consent, I include in the Appendix of the Record an article entitled "Our American Heritage: Will We Keep Freedom Alive?" by a prominent American, Mr. Walter Knott.

Mr. Knott is a conservative patriot who has unselfishly dedicated much of his own time and resources to maintaining and furthering the American system. He is founder of the California Free Enterprise Association, a sound organization that publishes important economic facts of our times and encourages schools to teach free enterprise the American way.

The article follows:

OUR AMERICAN HERITAGE: WILL WE KEEP FREEDOM ALIVE?

NOTE.—Walter Knott is the founder of Knott's Berry Farm and the builder of Ghost Town, an authentic replica of early California gold mining towns, at Buena Park, Calif. This article by Knott appeared in *Tax Digest*, third quarter, 1962, a magazine for taxpayers published by the California Taxpayers Association. Richard Winter is editor. Knott was born in San Bernardino, Calif., in 1889. In 1920, he and Mrs. Knott moved to their present location in Orange County, and built their farming enterprises from 10 acres of rented land to their present extensive acres. Their four children are partners in the business and now manage it. In addition to the world famous Berry Farm and Ghost Town, their ventures include the restoration of Calico Ghost Town, halfway between Los Angeles and Las Vegas.)

(By Walter Knott)

For a few minutes let us examine our great American heritage—our individual freedom—from whence it came; what it has done for us; and what we are doing to pass this heritage on to our posterity.

Throughout all history comparatively few men have ever been free. Some historians say not more than 5 percent and most of these have lived in America. Until our American Revolution the common man everywhere had only the freedoms that his government chose to bestow on him.

Our founding fathers when gathered together to form our Constitution came up with a whole new concept of government. These men (divinely guided, I believe) said that freedom was God-given and rested in the individual. The rights were his and he could give as little or as much as he chose to his government. These pioneers chose to form a very limited government keeping their individual freedom and bearing their individual responsibilities. Here for the first time in history the chains were taken off the individual and placed on his government.

At the time of the American Revolution there were less than 5 million colonists. Yet this small number, together with freedom loving people from other parts of the world, filled the Atlantic coast and started moving west, subduing a wilderness as they went. In an incredibly short time these pioneers who had so little to work with, had subdued the West and built a nation.

How was it that they were able to build our towns, our cities, our roads, schools, churches, colleges and their homes and all without government aid? And how is it that now, even with all our accumulated wealth, we have to run to Washington when we have to build a wing on a hospital or a dormitory at a college. I think there may have been several reasons. First, hardships overcome, make strong, self-reliant people and certainly they were used to hardships. Second, they did not have to support a large and expensive government. And third, they had a degree of personal freedom that we don't have today; and fourth, they had an understanding that with freedom, there must be responsibility.

In the year 1910 the cost of running our Federal Government was \$1 billion and by chance that year the national debt was just about \$1 billion. Our population then was 90 million people.

Since 1910 our population has doubled but the cost of running our Federal Government has jumped from \$1 to \$90 billion this year and the budget for next year is \$93 billion. In these same years our national debt has climbed from \$1 to \$298 billion and we are adding to this debt at the rate of \$650,000 per hour (24 hours per day) for every hour since January 20, 1961.

Today it costs us 90 times as much to govern twice as many people as it did 50 years ago. Why? How and when did we let this take place?

It started in the year 1913 when we passed the 16th amendment to our Constitution. When that amendment was ratified without any limit beyond which the Government could tax its citizens, the Government began to grow.

With this new easy money coming in, the Government bureaus began to grow, slowly at first but it was soon found that Government could buy favor with blocs of voters so as the Government grew, it again needed more money and the rates were raised. Then the Government had more money to curry favor with more voters and rates could again be raised. We soon learned that Government bureaus never die, they only multiply.

In less than 50 years (less than my adult lifetime) I have seen that innocent appearing tax of 3 percent on a few rich people, grow until today those same rich people are paying 91-percent tax and the poor people who were to have been the beneficiaries of the tax, are paying 20 percent.

With every increase in this tax there has been a corresponding increase in the size of our Government, an increase in the controls on our lives, and a corresponding loss in our freedoms.

Perhaps you feel that the rich man who finds himself in the 91-percent bracket is not personally hurt and to a degree this is true. Today we are in an industrial age where it costs from \$7,000 to \$30,000 of invested capital to provide each new job. If the Government continues to penalize the industrious citizens by assessing a higher and higher penalty on thrift and industry, where will this large amount of capital come from to provide the new jobs for today's generation of young people? Obviously we will have to go to the Government for capital, and when the Government owns the tools of production, that is socialism.

Today America and the rest of the free world are fighting a cold war against communism. More than 100 years ago Karl Marx told his followers that the way to capture any capitalistic society was to get a high and progressive income tax levied. Ours is now up to 91 percent. Frank Choderof puts it this way, "Without the income tax, socialism is impossible, with the income tax, socialism is inevitable."

During that same 50 years our national debt has grown from \$1 billion to \$298 billion.

We have only balanced our budget six times in the last 31 years and 25 of these years we have plunged deeper into debt.

During the first 140 years of our life as a nation, we paid our national debt down after our wars, even after the great Civil War and World War I. But during the last 30 years instead of paying, we have added to our debt at a fantastic rate, and have made absolutely no effort to pay. I will bet you have not heard a politician in years even suggest that we should be paying on this ruinous debt.

No doubt some of you are thinking how can things be so bad when we are so prosperous. Yes, we are prosperous, we have gone \$25 billion deeper in debt during the last 15 years since the end of World War II while we should have been paying on our debt.

We are prosperous because we have been mortgaging 150 years of thrift and hard

work, saving and capital accumulation. A 150 years during which we saved, worked and became the most productive people in the world. We have mortgaged this until now the interest on our national debt is more than it cost to run our whole Government 22 years ago.

And, our generation is making no effort to pay. We are greedily enjoying a fool's prosperity by mortgaging everything our forefathers accumulated and leaving the responsibility to pay to our children. Do you think we are rearing children who will be more responsible, more self-denying, willing to bear their debts and ours too?

Why did this breakdown of morality, this lack of responsibility, this dishonesty happen in our generation after America had lived through five generations without building a big, extravagant Government to control the lives of its citizens? Was it the 16th amendment to the Constitution that made it possible?

Note the change in our people's thinking during the short 49 years since that fateful day in 1913. When this amendment was being discussed in Congress, one farsighted lawmaker stood up and said if we pass this iniquitous law, without setting a limit beyond which some future Congress can go, some of you will live to see the day that Government will not take 3 percent from the rich people as planned now, but will take 10 percent and they hooted him down because 49 years ago no one in America could conceive of taking 10 percent from anyone.

Well, the years passed and the Government grew and taxes were increased slowly at first, then faster and faster. From 1913 to 1933 the growth was in such little doses we hardly noticed it, even though during this time we fought World War I and we were paying on the debt this war had created during the 1920's.

Since 1933 Government debt, taxes, and Government controls have grown at a fantastic rate. We are governed today by an incredible bureaucracy.

In 1910 you could go from one year to the next and never see a Government agent, while now one person out of seven who is gainfully employed in America, is working for Government.

One-third of our national production goes to pay taxes. The average American works 4 months out of each year just to pay taxes. We are one-third socialized.

During a very brief span of years America has tried the only real experiment in freedom the world has ever seen. It has succeeded far beyond anything the world ever accomplished in all history. Under this freedom and our free-enterprise system (Capitalism) one-seventh of the world's population has been able to produce one-half of the world's goods and wealth. And we have been able to divide this production and wealth more equitably among our people than any other people during all history.

Either we will again assume the responsibilities of freedom or the light of freedom will go out in America, and if it goes out in America, hope of freedom will go out all over the world.

Today we have both a great opportunity and a great responsibility. We may be writing the last chapter in this wonderful experiment in freedom started by our Founding Fathers. This experiment that has given us so much. That has made us the envy and hope of people everywhere.

If the wealth, the luxury, the leisure that our system has brought us makes us smug and complacent, willing to load our responsibilities on our Government, we will lose and deserve to lose our freedom and with it will go all of these fruits of freedom.

We have no right to lose this freedom that was given to us to use—to enjoy and to pass on to our children. Our children deserve the same opportunity.

Let us write our chapter so that our children and their children will have the opportunity to add theirs to this, the world's greatest experiment in freedom.

Proposed Merger of New York Central Railroad and Pennsylvania Railroad

EXTENSION OF REMARKS OF

HON. WILLIAM E. MILLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. MILLER of New York. Mr. Speaker, under leave to extend my remarks, I include in the appendix of the Record a resolution adopted by the board of directors of the Niagara Falls Area Chamber of Commerce, January 14, 1963, with respect to the proposed merger of the Pennsylvania Railroad and the New York Central Railroad.

The resolution is self explanatory and I felt it would be of interest to several of my colleagues whose constituents also have an interest in this proposal.

The resolution follows:

RESOLUTION ADOPTED BY BOARD OF DIRECTORS OF NIAGARA FALLS AREA CHAMBER OF COMMERCE, JANUARY 14, 1963

With respect for the proposed merger of the Pennsylvania Railroad and the New York Central Railroad, which is before the Interstate Commerce Commission for consideration in finance docket Nos. 21989-21990, and in which the citizens and businesses of the city of Niagara Falls have a significant interest because the New York Central Railroad prominently serves enterprises of this city and community, and in consequence of a public hearing of this matter held in the city of Buffalo on December 19, 1962, at which testimony of individuals was heard, it is the desire of the Niagara Falls Area Chamber of Commerce to present a re-statement of its resolution adopted on October 30, 1962, as follows:

"Whereas there is presently proposed a merger between the Pennsylvania Railroad and the New York Central Railroad and a joint application has been filed by these railroads with the Interstate Commerce Commission (finance docket Nos. 21989-21990); and

"Whereas a statement and testimony under oath in opposition to this merger were submitted at the public hearing on December 19, 1962, purporting to represent the sentiment substantially of this city and community, which differ with the conviction held by this organization; and

"Whereas this organization reached its decision only after extensive effort to secure facts in addition to those facts readily available. It relies on expressions by organizations and declarations by individuals closely allied with the transportation industry who are, in reality, experts in this field who state: An excess transportation capacity exists in the United States; the facilities of the several transportation modes overlap; the major modes of transportation suffer from over-regulation applied as an awkward device for dividing the available traffic; that the railroad industry, in particular, in spite of extensive investment in and widespread use of the most modern operating techniques, has been unsuccessful in its efforts to derive net revenue sufficient for healthy operation; and the further fact that insolvency may be imminent; and

"Whereas improved conditions of operation, with consequent improvement in net revenue, reductions in expenses, increased efficiency, the elimination of duplicate physical facilities, and the effective pooling of managerial skills, are persuasively promised by a merger of the Pennsylvania Railroad and the New York Central Railroad, all to the end that markedly improved freight transportation service may be expected in the Niagara Falls area with a corresponding effect on its economic growth; and

"Whereas testimony which springs from hearsay, or relies on misleading information or misunderstood data, all of which is presented in summary as truly representative of this community, clearly disputes the considered judgment of the directors and officers as they represent the membership of the Niagara Falls Area Chamber of Commerce; and

"Whereas this organization desires emphatically to reiterate its earlier adopted position for the betterment of Niagara Falls industries who must rely on adequate railroad service: Now, therefore, be it

"Resolved, That the Niagara Falls Area Chamber of Commerce, in its continued emphatic support of the Pennsylvania Railroad and the New York Central Railroad proposed merger for the reasons stated, does so in the firm belief that its position truly represents the sentiment of the area, and furthermore, intends this resolution shall have the effect of correcting in the Interstate Commerce Commission record any reference to a contrary attitude which it believes to be detrimental to the interests of the people of the Niagara Falls area.

Voss Manufacturing Co. of Atlantic, Iowa, Wins at National Show

EXTENSION OF REMARKS OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. JENSEN. Mr. Speaker, we Americans are always duly proud when our friends receive recognition for outstanding accomplishments.

Mr. George Voss, president of the Voss Manufacturing Co., has again proven his company's slogan: "If it is made of wood we can make it."

Under leave to extend these remarks, I include the following editorial from the Atlantic News Telegraph, Atlantic, Iowa:

[From the Atlantic (Iowa) News Telegraph, Jan. 8, 1963]

VOSS MANUFACTURING WINS AT NATIONAL SHOW

A kitchen built by the Voss Manufacturing Co. of Atlantic and designed by Georgia Tonnell the former Georgia Voss, has been chosen the outstanding exhibit in the kitchen department of the National Home Builders show in Chicago. The kitchen, designed for Better Homes and Gardens, was pictured in a four-page spread in the November issue of the magazine, has been exhibited at a number of national home shows and has won widespread attention. The Home Furnishings Daily of December 19 featured pictures of the outstanding units of the kitchen and this national publicity has brought to the Voss Manufacturing Co., inquiries from as far away as both coasts,

Before the job of building the kitchen was given to the local concern, Better Homes and Gardens had submitted the plans to a large group of furniture builders. Without exception they had said that they could not build the kitchen. The project was all but abandoned, when Georgia mentioned to the firm that her father could build it. He was handed the job with the result that now an entirely new field for the services of the local firm appeared to be opening up.

The kitchen, French provincial in design, features a wall-hung table adapted from a maple chopping block, with wood and wrought iron supports attached to a corner post extending from floor to ceiling. It is built in pie-shaped wedges and seats six. Another unique feature is a spindle-supported plate rack, while the spindle features is carried over into cabinet bases.

The Home Furnishings Daily describes the kitchen under the headline "Fine Furniture Look in the Kitchen," and from all the exhibits at the National Home Builders used three of the Voss-built kitchen features out of a total of seven selected for detailed descriptions.

Work of the Trustees of the New Haven Railroad

EXTENSION OF REMARKS

OF

HON. ABNER W. SIBAL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. SIBAL. Mr. Speaker, the Bridgeport Post of Wednesday, January 17, carried an excellent editorial tribute to the work of the trustees of the New Haven Railroad. It should be encouraging to all Members to know that this railroad, which is being operated under the Bankruptcy Act, has such highly competent men at the controls. When the New Haven, through the joint action of Federal, State, and local governments, is at length restored to financial health, we all will owe a great deal to the imagination and dedication of the trustees, who are laboring against great odds to preserve and improve this vital asset. The editorial from the Bridgeport Post recognizes this and I am happy to offer it for the RECORD:

THE TRUSTEES ARE TRYING

The trustees of the New Haven Railroad, with initiative and energy, continue their valiant effort to revive the line against heavy odds.

A new train-to-airport transfer service is a good example of the trustees' modern thinking, the search to overlook no possibilities. Through an arrangement with a motor coach service, the railroad provides rides from Grand Central Terminal to the major airports.

There may not be an enormous amount of profit in this new program but every little bit helps. And it bespeaks an up-to-the-minute outlook which has the feature of turning competition to advantage so that it isn't, as they say, a total loss.

In the vital matter of freight revenues, the New Haven is acquiring substantial new "weapons" in its fight to increase business in southern New England. The first 3 of 50 additional modern piggyback flatcars were placed in service the other day on the Boston-New York Shore Line.

Here again, there is the factor of turning competition to advantage. The 85-foot flatcars, each capable of carrying two 40-foot highway trailers, are 3 feet high. This permits them to carry tall, 12-foot 6-inch trailers in the restricted clearance area between New York and New Haven.

Acquisition of the flatcars involves modernization. They will be paid for from the proceeds of old locomotives and other outdated rolling stock.

The trustees, explaining the reason for acquiring the new cars, cite the savings in operation and labor costs, the faster service of benefit to the shipper and railroad.

The trustees are to be commended for refusing to act as though the situation is hopeless.

Did the Appeasers Sabotage the Invasion?

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. DEROUNIAN. Mr. Speaker, with apostles of appeasement surrounding the President, the American people are not getting the truth.

David Lawrence, in an article in the January 22 issue of the Washington Evening Star, raises a very serious point when he questions whether our Military Establishment is competent and if it has been unduly interfered with by civilians.

Under leave to extend my remarks in the RECORD, I include the article, as follows:

[From the Washington (D.C.) Evening Star, Jan. 22, 1963]

UNITED STATES AND THE BAY OF PIGS FIASCO—QUESTION OF MILITARY COMPETENCE OR CIVILIAN INTERFERENCE IS RAISED

(By David Lawrence)

The American people are entitled to know whether the chiefs of their armed services are incompetent or whether, in strictly military operations, they are being interfered with by civilians in the Government.

A congressional investigation of just what happened before the Bay of Pigs invasion of Cuba took place in April 1961, is more than ever necessary now, because of what is being disclosed as the true story of the fiasco. For unless the responsibility of the U.S. Chiefs of Staff during military operations is clearly fixed, the capacity of the United States to prevent or resist armed attacks in this hemisphere may be open to question.

More than 300,000 men of our armed services were mobilized last October inside the United States for a possible invasion of Cuba in order to get rid of the Soviet missile bases there. But there is no way to judge whether the military chiefs even then had the full authority to act and just what restrictions were placed upon them which could have affected the success of that expedition.

Attorney General Robert F. Kennedy, who, because he is a brother of the President, is regarded as the administration's authoritative spokesman in many matters outside his own department, has just given two interviews on the Cuban fiasco, one to the Knight newspapers and the other to U.S. News & World Report.

The two interviews dovetail, though they do not cover all of the same points. The Attorney General told David Kraslow, Wash-

ington correspondent of the Knight newspapers, that there had been no invasion plan completed during Mr. Eisenhower's term. He said: "There was just a general concept. The logistics and the details were worked out after the President (Kennedy) took office."

Added interest has developed now in this whole subject, because many of the Cuban officers of the invasion force, who were recently ransomed have been telling Americans that the United States had assured them of air cover. Attorney General Kennedy makes quite a point of the fact that no U.S. air cover was ever promised. Technically, this is correct. But the United States was fully cognizant of the air support the Cubans were supposed to have. Yet this was inadequate. Attorney General Kennedy said in his interview in U.S. News & World Report:

"The first point is that there was not U.S. air cover and none was withdrawn. In fact, the President didn't withdraw any air cover for the landing forces—United States or otherwise.

"What happened was this: One air attack had been made on Saturday on Cuban airports. There was a flurry at the United Nations and elsewhere and, as a result, U.S. participation in the matter was coming to the surface. This surfacing was contrary to the preinvasion plan. There was supposed to be another attack on the airports on Monday morning.

The President was called about whether another attack which had been planned should take place. As there was this stir about the matter, he gave instructions that it should not take place at that time unless those having the responsibility felt that it was so important it had to take place, in which case they should call him and discuss it further. And that's what was postponed. It wasn't air cover of the beaches or landings. And, in fact, the attack on the airports took place later that day.

The air cover provided was from a base in central America. What part the U.S. Government played in organizing it is not disclosed. In the middle of a military operation, however, you can't make a long-distance call to the White House and discuss the next move. The anti-Castro forces were sure air cover was coming from somewhere.

The Attorney General was asked who did the planning. He declared that "the plan that finally went into effect was approved by our military, the Pentagon, the Joint Chiefs of Staff, as well as the Central Intelligence Agency." He added that, while the Joint Chiefs "approved" the plan, "the responsibility for the planning lay primarily with the CIA," and that, since the President had to give final approval to the plan, he had accepted the blame.

In both interviews, the Attorney General said that U.S. airpower was to have been used only if the ships transporting the Cuban invasion force had been detected by Castro before they reached the target area and were attacked on the high seas on their way back to Central America. This is the explanation given for the presence of U.S. warships, including an aircraft carrier, in the vicinity of the Bay of Pigs on the day of the invasion. Yet it is asserted that before the invasion the President had "made it clear" that U.S. Armed Forces, including airpower, would not be used.

In the interview in the Knight newspapers, the Attorney General said, "The plan that was used was fully cleared by the CIA and the Joint Chiefs of Staff."

But what does "cleared" mean? Do the Joint Chiefs take responsibility for any such plan as was employed?

Listing the major "mistakes," Mr. Kennedy added: "There was not sufficient air cover at the beach. That was a mistake. There were

not enough men and equipment. That was a mistake. Underestimating the T-33's (Castro's airplanes), that was a serious mistake. The planning was inadequate, just inadequate."

But who did all this planning, and why wasn't someone in the U.S. Air Force able to say in advance whether the T-33's had the capacity to carry rockets? These were the U.S. planes originally given to the Batista regime in Cuba.

The important "details" have never been divulged, as there has been a constant cover-up. But if Congress now fails to make a searching inquiry, with testimony available to the public, another military fiasco could occur, especially if the same "military planners" are still in command at the Pentagon.

In an AP dispatch of January 22, a member of the Cuban Revolutionary Council disputes Bobby Kennedy's version of the Cuban invasion.

The President of the United States, instead of having his hatchetmen speak for him, should be forthright with the American people and clear the air like a man.

The article follows:

CUBAN EXILE INSISTS U.S. PLEDGED AIR AID
MIAMI, FLA., January 22.—A leader in the exile organization that mounted the 1961 Cuban invasion insists that the anti-Castro brigade was promised full air cover.

Manuel Antonio de Varona, of the Cuban Revolutionary Council, said he was obliged to break silence because of Attorney General Robert F. Kennedy's statement yesterday that no U.S. air cover was planned.

The Attorney General said President Kennedy couldn't have issued last-minute orders canceling air cover, as many administration critics have maintained, because there never were any plans for the United States to provide air support.

Senator GOLDWATER, Republican, of Arizona, also disputed the Attorney General. In Washington Senator GOLDWATER said he talked with the President just after the invasion and "I certainly got the impression then that an air cover had been part of the original invasion plans."

Mr. Varona, a former Cuban Prime Minister who headed the leading Cuban democratic revolutionary front at the time of the invasion, said in a statement:

"The colonel designated by the Government of the United States as head of the camp where the Cubans trained assured me in February 1961, when I expressed concern over the reduced number of troops, that the Cuban patriots would have 'full air control' during the invasion.

"The brave expeditionaries never had the promised air coverage.

"Neither was I informed of the date nor of the plans for invasion, which in any case would not have had my approval in view of the conditions under which it took place."

The Essence of Competition

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. TOLLEFSON. Mr. Speaker, our distinguished colleague from California, the Honorable CHET HOLIFIELD, recently addressed the annual convention of the

National Appliance and Radio-TV Dealers Association in Chicago.

As usual, our colleague delved deeply, with an analytic address entitled "The Essence of Competition."

Mr. HOLIFIELD linked his subject with the quality stabilization bill, saying Congress, by enacting that bill, will affirm the true essence of competition; namely, the profit incentive, the right to earn a profit.

His meaty words have brought much comment. Typical is this column by Earl Lifshey, the well-known writer of Home Furnishings Daily.

IF YOU ASK ME

(By Earl Lifshey)

"Everywhere we find evidence that the competitive price is being singled out as the dominant element in today's free competitive enterprise system. In fact, in an increasing majority of business circles, to be competitive has come to mean only that one sells at the lowest price in the particular trading area. But unless quality is tied to price then price becomes deceptive.

"And is it any wonder when our own Federal Trade Commission in a recent case involving the Snap-On Tools Corp. said: 'Playing off one dealer against another in the hope of obtaining a better price is the essence of competition.' I don't know whether the manufacturers in your industry have left the above quotation unchallenged, but I am delighted to use the platform of the National Appliance and Radio-TV Dealers Association to challenge it."

The challenger in question is Congressman CHET HOLIFIELD, Democrat, of California, chairman of the Joint Committee on Atomic Energy and the ranking Democratic member of the Government Operations Committee, who tossed that gauntlet at the FTC the other evening in a speech at the NARDA convention dinner. Long a retailer himself—he has a men's clothing store in Norwalk, Calif.—he spoke with the authority of a merchant as well as a legislator. And, he continued:

"If we have reached the point where 'playing off' one dealer against another in the hope of obtaining a lower price is in fact the essence of competition, then we have pushed into the background all of the wonderful constructive marketing practices that have played such an important part in the growth of the most prosperous country on the face of the earth.

"In my opinion, the FTC has not selected, as the essence of competition, the necessary element that must prevail in order to preserve our free Democratic form of government. The essence of competition is unequivocally the incentive. I'm speaking of the incentive that causes us to do all the constructive things that we do to bring to market the splendid products of industry. I'm speaking of the fair reward for those constructive efforts. In this way the essence of competition is tied to the right to earn a profit, with emphasis on the word 'earn.'"

Citing the various factors that contribute toward earning a profit in merchandising, the Congressman declared that in doing those things "you have exercised your prerogatives . . . your right to earn a profit. But did you make a profit? If you did was it commensurate with the effort expended?" To help insure the continuation of the right to earn a profit and to help protect against the cannibalism of price debasement, however, he urged the exercise of another prerogative, the wholehearted support of the pending quality stabilization bill in Congress.

"That legislation will restore the competitive price to its proper perspective and will take a big step toward helping you do

all those things that you are anxious to do to earn a profit." Representative HOLIFIELD continued, reminding the dealers that "It's not the FTC, nor the courts, nor the predators in the marketplace that make our laws; it is the Congress expressing the will of the people that has the power to make the laws in this area."

Whether the housewares industry, which is currently staging its great semiannual exhibition in McCormick Place here, or the home electronics and appliance industry would take top honors in any profitless, price-cutting contest no one particularly cares about. But that the quality stabilization bill constitutes a highly desirable measure to help correct that situation is something on which I have often declared myself here most emphatically. And I join Representative HOLIFIELD in strongly urging you to promptly write or wire your Senators and Congressmen to support it when it comes up for a vote.

But there is, apparently, still a lingering misunderstanding in the minds of some people in the marketplace, if not in Washington, about this legislation. It does not guarantee a profit to anyone. All it does—and this is a point I have emphasized again and again—is help insure the right to try to earn a profit—but under the basic, traditional terms of individual, free enterprise—not under terms dictated by those who want such rights for themselves but deny them to others.

Many things have changed in this distribution revolution, but free, individual enterprise is still a two-way street.

Pilgrims and Communism

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. DERWINSKI. Mr. Speaker, there is natural discussion these days of the virtues or lack of virtues of communism. It is equally natural occasionally to compare the communism of today with its original theories and comparable practices.

I was especially intrigued by an editorial which appeared in the January 10 issue of the Lansing Journal, which discusses the economic principles of the Pilgrims in a most interesting fashion. Under leave granted, I include the editorial "Pilgrims and Communism" in the Appendix of the Record.

PILGRIMS AND COMMUNISM

We were intrigued the other day by an investment banker's speech that called our Pilgrim Fathers a bunch of Communists and then went on to prove it.

He was, of course, showing why our great free enterprise system is the only way to achieve the standards of living we have today, but he chose to do it by telling how the Pilgrim Fathers gave the communistic principles quite a whirl in 1620, even down to a 7-year plan, but pitched it out when they found it wouldn't work.

The speaker was Amyas Ames, president of the Investment Bankers Association, who addressed their convention in Hollywood, Fla.

He noted that the Pilgrims signed a 7-year agreement, agreeing to put all of their profits

and benefits gotten by trade, teaching, working, or fishing into a common stock. Also all of them drew their meat and drink from this common stock.

"Three years later," Mr. Ames said, "they were wise enough to forsake communism by allowing the incentive of profit to energize their people."

The lesson is clear. We have built a prosperous nation on the energy of profit. The postwar world has been remade on the energy of industrial profit—in Japan, in West Germany, France, England, and Italy.

We can't put it any clearer than by using Ames' words: "Profits pay our taxes, support our Government, and our schools, and most important of all they work for people and energize our communities."

Scranton's Program Warmly Received by Both Parties

EXTENSION OF REMARKS OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. FULTON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article and editorial from the Pittsburgh Press:

[From the Pittsburgh Press, Jan. 23, 1963]

SCRANTON'S PROGRAM WARMLY RECEIVED BY BOTH PARTIES (By Sherley Uhl)

HARRISBURG, January 23.—Both parties have responded warmly to Gov. William W. Scranton's "program for progress" but Democratic reaction contained a grain of tongue-in-cheek skepticism.

Democrats generally endorsed the Governor's 11-point legislative program and noted that it contained several planks frequently scorned by the GOP Old Guard.

Their attitude was that the Governor would encounter more roadblocks within the conservative wing of his own party than would be erected in the legislature by his Democratic opposition.

Many privately expressed the conviction—if not hope—that Democrats could now sit back and watch the Republicans fight among themselves.

Republican leaders, however, exhibited no qualms. They too accepted the Governor's recommendations favorably and predicted few hitches.

There were a few reservations, however. House GOP Leader Albert W. Johnson said he couldn't anticipate reaction to the Governor's desire to extend civil service protection to an additional 17,000 employees.

The same proposal was greeted cynically by Democrats who observed that it was hitched to a qualifier permitting the Governor to review records of current payrollers for 1 year to determine which are ineligible.

This qualification inspired a wave of Democratic titters and smirks in the course of the Governor's address yesterday before a joint session of the Senate and House. It provoked the only adverse restiveness noticeable during his entire speech.

Aside from this, the Democratic leadership offered to provide votes for the Governor's program if it should be stalled by the Old Guard.

Conservative Republicans, for instance, have customarily rejected proposals to rewrite the State Constitution via the convention method—as advocated by Mr. SCRANTON.

Upstate Republicans also may dissent from his proposal to establish a separate department headed by a Cabinet-rank officer to assist cities and metropolitan areas with their special problems.

Genevieve Blatt, Secretary of Internal Affairs, called the Governor's attention to the existence of the Bureau of Municipal Affairs in her own department.

She said she is prepared to spare the State the expense necessary to create an entirely new department by volunteering to deal with municipal problems. Miss Blatt is a Democrat.

After the Governor's address, Senator William J. Lane, of West Brownsville, Senate Democratic whip, commented:

"This guy sounds like a Democratic Governor."

Senate Minority Leader Charles R. Welner, of Philadelphia, said the Governor's message sounded like a variation of the Democratic platform. He said his party would support some administration bills if they ever let them out of committee—an oblique reference to possible opposition by GOP committee chairmen.

Senator M. Harvey Taylor, Harrisburg, senate president pro tem and GOP old guard leader, described the Scranton program as sensible and constructive.

But Representative K. Leroy Irvis, Pittsburgh Democratic caucus chairman, observed:

"I noted the grimness with which Senator Taylor greeted the speech."

Republican Senator George N. Wade, Camp Hill, labeled the Governor's recommendations as "appropriate but revolutionary."

Other Scranton proposals would—
Declare a 1-year moratorium on the school district reorganization act.

Place strip-mine controls under the department of forests and waters (conservation) and remove them from the department of mines, where industry's influence is sometimes paramount.

Create a separate department of mental health with no political activity.

Separate policymaking from administration in the education field by establishing a State board of education to draft principles to be followed by the department of public instruction.

Place all professional licensing under a commission of professional affairs.

Reform election laws to free election officials of political fetters, and supply the polls with adequate inspectors.

Enact Project 70—a Democratic plan to encircle metropolitan areas with forests and parks, and locate year-round recreation facilities within reach of all Pennsylvanians.

Liberalize Pennsylvania's participation in the Kerr-Mills (medical care for the aged) program by erasing the assumption that it exists for paupers only.

Return the harness racing commission to the department of agriculture, and bar politicians from investing in parimutual tracks.

The Governor also urged the general assembly to appropriate an additional \$4 million for the Pennsylvania Industrial Development Authority to keep it solvent through this fiscal year.

[From the Pittsburgh Press, Jan. 23, 1963]

EDITORIAL

GOVERNOR SCRANTON'S HOPEFUL START

If there is anything Pennsylvania needs, it's a batch of new ideas to help us cope with our community problems, our need for industrial development and the whole range of health, educational, welfare and governmental issues which remain to be tackled.

In outlining his program to the Legislature yesterday, Gov. William W. Scranton tackled these issues head on. He presented a

set of suggestions which can be the basis for both legislative and administrative reforms, for the better conduct of State government and better service to the people.

Each of these proposals probably will need further discussion before the citizens, or their legislators, can properly assess their worth and decide whether or not they favor them. But the issues raised by the new Governor are the kind we should be studying.

Mr. Scranton's proposal for a new department for community development will interest many people and many communities in western Pennsylvania. Most of us have some interest in such matters as public transportation, urban renewal, housing and community facelifting. If there is anything the State government can do in this regard, Mr. Scranton will find a broad base of public support for his proposal.

It may be pointed out that, in the absence of substantial amounts of State money for loans and grants, the State may be able to do little. But it is equally true that the State is in position to make studies and firm up plans that will be of value both to local governments and to the legislature. And, as Mr. Scranton points out, if Harrisburg does nothing to help, the Federal Government surely will.

The new Governor's proposal for a State board of education deserves study by educators and legislators. He envisions separate councils of such a board for higher education and the elementary-secondary field. Meanwhile, he asks a 1-year moratorium in the effective date of the school merger law. Many will deplore this delay as unnecessary and harmful to the ultimate objective of larger and more efficient districts, but it cannot be denied that it was a hot political issue in many districts during last year's election campaign.

A separate department for mental health is a long-time objective of many informed persons in that field. A council of human services to include heads of welfare, health, and other State services to people could help to coordinate programs. A commission to handle professional licensing could replace the present slipshod and scandalous method of handling this function.

Mr. Scranton has reiterated his views on strip mine legislation and while the precise terms remain to be defined, he has appointed an able committee to draft legislation. There is a good prospect that a strong bill will emerge from this group and, with administration support, have an excellent chance of avoiding the legislative pitfalls which undoubtedly await it.

Great value can be attached to Mr. Scranton's proposal to expand and consolidate the State civil service system, adding 17,000 employees to the group included. Pennsylvania is notorious as one of the last great strongholds of the spoils system, which benefits only the politicians at the expense of the taxpayers. There are whole departments, and Mr. Scranton named them, which should be completely out of the field of patronage politics.

The new Governor's endorsement of Project 70—the huge parks and recreation plan—is wholesome. So is his support for measures to prevent the more obvious abuses which can come out of legalized horse-race gambling, to which the State is committed by prior action.

Most of us will want to hear a great deal more about Mr. Scranton's proposal for constitutional revision before declaring ourselves on that long step, but he showed courage in kicking that ball out in the open for such action as the Legislature may take.

In all, it was a hopeful message which could result in many governmental reforms if legislators of both parties approach it in the same way the Governor has presented it. Mr. Scranton has made a good start.

Eric Waldman Discusses German Bundeswehr

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. REUSS. Mr. Speaker, Dr. Eric Waldman, director of the Institute of German Affairs at Marquette University in Milwaukee, has recently returned from a study trip to Germany. He is the author of the recent book, "The Soldier Within the State," on the German Army. His article on the status of West German armed forces appeared in the January 20 issue of the Milwaukee Journal. It is a penetrating and illuminating analysis of the Bundeswehr and its new director, and I commend this excellent article to the attention of the Members of this body.

As the West German armed forces—the Bundeswehr—celebrate their seventh birthday today, they are the strongest single national contribution to the conventional forces of the North Atlantic Treaty Organization. The 11th West German army division was integrated into NATO last month and a 12th is soon to be added, fulfilling Germany's promised quota to NATO.

Within these 7 years, the Federal Republic of Germany thus has contributed to the Western defensive alliance more than 400,000 men, designated as trained and combat ready, in the 11 army divisions and numerous air force and navy units.

At the 7-year mark, the Bundeswehr also has a new civilian chief, Defense Minister Kai-Uwe von Hassel, who this month replaced the competent though controversial Franz Josef Strauss. It was under Strauss' direction that West German forces were built into such an important component of the NATO shield which stands guard against Soviet aggression in Europe.

But Strauss was plagued—as his successor is likely to be—by critics from both extremes: Those who say the Bundeswehr is too weak, and should be greatly strengthened, and those who fear its strength as a rebirth of German militarism, with all its unhappy historical associations.

What actually is the nature of West Germany's military, as the new minister takes over, with the declared intention of continuing Strauss' major policies?

The number of men under arms alone does not provide a reliable yardstick to measure the quality of the military contribution. Ever since the highly publicized article in the German weekly magazine *Der Spiegel* the question of the overall reliability of the Bundeswehr has been of considerable concern to many people within as well as outside of Germany. This article of October 10, 1962, which brought about a government crisis in Germany and the removal of Strauss, said that the German units received a very low efficiency rating as result of their performance in the NATO maneuvers last fall.

Der Spiegel has advocated for many years a neutralist position for Germany in the East-West struggle. It therefore opposed from the very beginning German rearmament and Germany's participation in a European defense system.

The perennial hostility to Strauss, exponent of a strong German military contribution to NATO, is seen by Bonn observers as part of *Der Spiegel's* effort to discredit the German military and Germany's alignment with the West.

Strauss' successor, Hassel, the former minister president of Schleswig-Holstein, is a longtime, faithful follower of Chancellor Adenauer. It remains to be seen to what degree *Der Spiegel* and the elements in Germany which either endorse its neutralist conceptions or appeal to antimilitary tendencies among the German people will shift their attack to the new defense minister.

Hassel might prove a more difficult opponent to bring down than his predecessor because of his calmer personality and his avoidance of petty arguments.

Hassel, 49, an energetic and strong-willed man, has repeatedly demonstrated great administrative and political ability since he joined Adenauer's Christian Democratic Union (CDU) in 1946.

He was born in German East Africa, the son of a German planter in what is now Tanganyika. During World War I his family was expelled. In 1935 Hassel returned to Africa and worked himself up to director of several plantations. In the spring of 1940 he was deported again to Germany and became a lieutenant in the German Army. He was captured by the British in Italy in 1945.

After the war he became mayor of a small resort town on the Baltic Sea and a member of the state legislature of Schleswig-Holstein. In 1953 he was elected to the *bundestag*, or lower house of Parliament, in Bonn. To accept his appointment as minister president of Schleswig-Holstein in 1954, he had to give up his seat in the *bundestag*. From 1956 until 1957 he was the president of the *bundesrat*, the upper house of the German Parliament.

Hassel's strong position within the CDU makes him one of several men mentioned as possible future chancellors. In 1955 he was appointed as one of two deputy leaders to Chancellor Adenauer of the national CDU.

NO INDEPENDENT ROLE

Hassel's general political outlook is conservative. He is reluctant to accept at face value the announced change in domestic and foreign policies of the Social Democrats (SPD). It remains to be seen if his distrust of the socialists may prove to be a handicap for the new defense minister in obtaining SPD support in military matters and in making his ministry less a partisan office than it was under his politically ambitious predecessor Strauss.

If in 1963 the present coalition government of Christian Democrats and Free Democrats should break up once more, a so-called great coalition of the CDU with the SPD is most likely. This development might terminate Hassel's position as defense minister. He might be replaced by the military expert of the Social Democrats, Fritz Erler, who has been serving as vice chairman of the defense committee of the German Parliament since its inception.

The combat efficiency and reliability of the forces for which Hassel will be responsible is a question of great concern to NATO, because of its impact upon the effectiveness of the entire conventional defense structure in Europe.

There are two aspects to evaluation of the new West German military forces: One is the question of political reliability and the other military preparedness.

In regard to political reliability, great attention was paid from the first to the proper integration of the military into the young German democratic state and society. The German armed forces were to be under the executive branch of the civilian government and were not to play an independent role in the political life of the nation.

Between 1950 and 1955, representatives of the three major political parties, educators and former officers who were known for their anti-Nazi position carefully studied civilian-military relations in the Western democracies and incorporated in their planning of the Bundeswehr those features which could be applied to the German situation.

The aim was to develop a politically conscious soldier who would be aware of the values he might be asked to defend. The planners believed that only this type of soldier would be able to stand up to the psychological pressures of a future hot war and to the propaganda warfare of the present cold war.

CITIZEN SOLDIER ARMY

On the basis of a thorough investigation, this writer believes that the German armed forces have achieved the goal of the planners and created an army of citizen soldiers. It is not a democratic army since no military establishment can successfully eliminate the hierarchical principle, but it is an army made up of citizens who, during their military service, retain their basic rights. The West Germans understand well the significance of the ideological cold war and they orient their political education to the challenge which reaches across the Iron Curtain and attempts to undermine Western resistance. (This judgment is based on a careful analysis of the educational material used within the Bundeswehr and on 4,660 questionnaires completed by officers and soldiers throughout the German military forces.)

The combat efficiency of the young German military forces probably can be much improved even though high ranking NATO officers have repeatedly praised the excellent German performance in maneuvers. The relative short term of draftees is one handicap. Up to 1962 the military service for draftees was limited, because of strong political pressure, to 12 months. The present 18 months of service has brought some improvement but obviously could not overcome the entire problem.

The fact that Germany had no military forces for 11 years is the reason that there is a shortage of young field grade officers to command battalion size units and to occupy staff positions.

When judging the new German armed forces, the complete integration of the German combat units into the NATO structure must be considered. Criticizing the lack of support units, a necessity for an independent military striking force, is not valid for an integrated army.

NOT A NATIONAL FORCE

Indeed, the absence of an independent German military capability should put those people at ease who lack confidence in the changes which took place in postwar Germany. A Bundeswehr which must rely for heavy weapons and supply support primarily upon its American ally is hardly capable of repeating Hitler's attempts at subjugating Germany's neighbors.

Moscow is aware of the integrated nature of the West German military. Nevertheless Soviet propaganda to undermine NATO unity accuses the West Germans of plotting to continue Hitler's aggressive policies against Eastern Europe.

In contrast, most foreign observers are surprised at the radical change of the German political scene and at the strong impact made by concepts of western unity and European integration.

Italy Honors Chicago

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. PUCINSKI. Mr. Speaker, last week the people of Chicago had the great privilege and honor of welcoming the Prime Minister of Italy, Amintore Fan-

fani. The Chicago Sun-Times has expressed the spirit of the people of Chicago most eloquently in the following editorial welcoming the Prime Minister:

ITALY HONORS CHICAGO

Today the Prime Minister of Italy, Amintore Fanfani, visits Chicago at the personal invitation of Mayor Richard J. Daley. During his short stay he will be honored with a military reception at the city hall, he will lunch with business and civic leaders, tour the University of Chicago and the Museum of Science and Industry, hold a reception at the Italian consulate and he will receive the plaudits of Chicago at an official city dinner.

Chicago is accustomed to receiving distinguished visitors but the Prime Minister is quite an exceptional one. A strong fighter against fascism, a keen economics expert and an able statesman he typifies the new Italy—a country ready and eager to take her place in the world community of free nations.

In Chicago, Prime Minister Fanfani will find that the Italian community is a large and valued part of this great city. Americans of Italian birth and extraction have already made their mark—and are still making it—in religion, business, politics and the arts. This city has always cherished the strong ethnic groups that make for a great democracy and the Italian segment of Chicago's population is especially appreciated.

We welcome the Prime Minister and we hope that in the near future he can come again and spend more time in Chicago.

Hatch Act Eclipse

EXTENSION OF REMARKS

OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. MATHIAS. Mr. Speaker, on the 17th of January, I had occasion to call the attention of the House to reprehensible activities taking place in the executive branch which violated the basic principle of the civil service. The Washington Post has commented on this same situation in an objective editorial which I append:

[From the Washington (D.C.) Post, Jan. 18, 1963]

HATCH ACT ECLIPSE

However one looks at it, the pressure that has been applied to Government employees to buy tickets for the Democratic fundraising affair tonight is a shabby business. The Hatch Act tells Federal employees that they may not participate in partisan activities. The civil service system holds out to them assurance that they will be compensated and promoted on the basis of merit. Yet many of them are being pressured to give \$100 to the Democratic cause—in installments if they cannot afford to buy a ticket to the gala outright—by their supervising officials who should be the first to respect the spirit and letter of the law.

The law on the subject is unequivocal. It provides—

"Any executive officer or employee of the United States not appointed by the President, with the advice and consent of the Senate, who shall request, give to, or receive from, any other officer or employee of the Government any money or property or other thing of value for political purposes shall be

at once discharged from the service of the United States."

Probably most officials have avoided outright violation of the law which forbids them to solicit funds for partisan purposes from other Federal employees. But no one can fail to recognize that, when the head of any agency invites all those who are going to the gala to attend a preliminary party at his home or elsewhere, he is applying indirect pressure to buy a gala ticket. The Hatch Act and the Corrupt Practices Act are designed to protect employees from precisely this kind of subtle coercion.

It may be taken for granted that most of the steam behind this venture comes from the Democratic National Committee. Party officials are always eager to bring in new recruits and replenish the party's treasury. The chief fault lies in the failure of many high officials, the Civil Service Commission and the President to offer employees any protection against the demands of the politicians.

A very different atmosphere would have prevailed if the CSC had publicly reminded officials of the provisions of the law and assured employees that refusal to make requested partisan donations would not count against them. Better still, the President could have warned his subordinates that no coercion or pressure would be tolerated. In the absence of any such protective measure, many employees are likely to feel that the Government itself is winking at violations of the law, leaving them no alternative to making a "contribution."

Dr. D. M. Nelson

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. WILLIAMS. Mr. Speaker, last fall the Nation lost one of its foremost educators, and Mississippi one of its most beloved and distinguished Christian leaders in the death of Dr. D. M. Nelson, president emeritus of Mississippi College. It was my happy privilege to have known Dr. Nelson as a close personal friend for many years. He exerted a tremendous influence for good throughout the State of Mississippi and the South.

Under leave to extend my remarks in the Appendix of the RECORD, I am including an article written in memory of Dr. Nelson by one of his closest friends and associates, Dr. W. M. Caskey, a member of the faculty at Mississippi College. Dr. Caskey's eulogy to Dr. Nelson is a fitting and deserving tribute to the memory of a great man, and the sentiments expressed therein are shared, I am sure, by everyone who knew Dr. Nelson in his lifetime. The article follows:

IN MEMORIAM

(By Dr. W. M. Caskey)

The great essayist, Ralph Waldo Emerson, said, "There is properly no history; only biography." A great Christian institution, such as Mississippi College, just didn't happen. It is the lengthened shadows of dedicated men. Our college has become a great and honored institution, and much of the credit must be attributed to Dr. D. M. Nelson, a devout, selfless man with a vision and a sense of mission.

Dr. Nelson's tenacity and determination to succeed in life is revealed in his zeal in seeking an education. In spite of the fact that at 18 he had only completed the 8th grade, he not only graduated from high school, but also earned his bachelor of science degree from Mississippi College, his law degree from the University of Chicago, and his master's and doctor of philosophy degrees from the University of Indiana. Still obsessed with that insatiable desire and incentive to acquire learning and knowledge he was a student, and continued his fluent writing until the end of his more than fourscore years.

After graduation from Mississippi College in 1907, Dr. Nelson spent the greater portion of five decades serving in the field of education. Most of these 50 years were spent at his alma mater to which he was totally dedicated. The last 25 years he served as its distinguished president.

Few individuals in Baptist life were ever as closely identified with the development of an institution as Dr. Nelson had been at Mississippi College. During his long tenure, this financial wizard discharged the large indebtedness accumulated during the dark depression years of a half million dollars, and he operated during all these years in the black. Not once during these 25 years did he have a deficit or a financial reverse. In fact, he had a sizable surplus when he retired. This was, of course, turned over to his able successor.

As one Baptist editor has so well said of the phenomenal strides made under his dynamic leadership: "His amazing career in the service of the Great King was one of the seven wonders of the Baptist world. He, like Saul of Tarsus, moved through his busy life with divine compulsion." Undoubtedly, this great Christian educator has earned for himself a unique place in the affections of all the people of all the faiths in Mississippi. He has made Mississippi College one of the most cherished and respected institutions in the country.

Dr. Nelson had an innate love for young people. In chapel talks—and this greatest of orators always participated in these inspirational services—he often affectionately addressed the student body as "my children." This was indeed a Christian college guided by a dedicated man of God, whose personality will live within this college so long as time shall exist. The testimony of his "children" will bear fruit in the lives they lead as they put into practice the principles which were instilled in them as they studied under this great southern Christian gentleman.

The writer, who feels his inadequacy to write this editorial, came to Mississippi College shortly after World War II, and was closely associated with Dr. Nelson until the end. This great scholar grew on this writer, and as was soon discovered, he was not only a man of deep and worthy convictions, but also a man of courage, which he demonstrated by showing complete loyalty to the causes he endorsed, and by his refusal to sidestep any issue in which principle was involved.

Dr. Nelson was a versatile man, but never a man of expediency. One consuming cause of his life was of course Mississippi College. Another cause in which he was always a devout believer was our southern cause and our traditional southern way of life, which he considered an essential integral part of our American way.

The accomplishments during the presidency of Dr. Nelson would require volumes for individual listings, and must necessarily be omitted. But a brief résumé of some of the most notable achievements made during his tenure must include: the addition of some 30 buildings; a greatly enlarged library; remodeling of all old buildings; greatly increased number of departments; built concrete streets, stadium, and tennis courts; growth of endowment from about

\$100,000 to approximately \$1½ million; faculty and staff increased to more than 100; acquiring Hillman College property; and becoming coeducational in 1942.

The beautiful old reconditioned chapel, "a historical ante bellum landmark, stands for the traditions and ideals that have made Mississippi College one of the truly liberal arts colleges in the country." Nelson Hall, built in more recent times, "during the enlargement program, and named for Dr. Nelson as a tribute to him and his outstanding administration, symbolizes the progressive and determined outlook of the college, while it continues to remain true to the past that has made it great."

It must never be forgotten that Dr. Nelson was blessed by "The-Other-Self," Mary White Nelson, who enabled this Christian statesman to achieve all his remarkable accomplishments. With her natural talents, and most pleasing personality, this gracious lady could have risen to high attainments in her own right; but she chose the better part of being the queen of a Christian home, and the mother of a worthy son and daughter, and sharer of her husband's burdens, responsibilities, joys and successes. Miss Mary, as she was known to her closer friends, was always near at Mr. Nelson's (as she called him) beck and call. Always standing by his side, she was a model hostess at all college functions, and a personal friend to all the students.

In conclusion, no more appropriate sentiment can be found to express our impression of the life and work of this really great man, who served not only as president of this institution, but who also became an institution among Mississippi Baptists, than these sublime lines from Longfellow's Psalm of Life:

"Lives of great men all remind us
We can make our lives sublime,
And departing leave behind us
Footprints on the sands of time."

From New Orleans Comes a Program To Increase the Efficiency of the Public Servant

EXTENSION OF REMARKS
OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. HÉBERT. Mr. Speaker, I bring to your attention today "Unique Training Experiment—A La Nouvelle Orleans," which has won national recognition from the National Civil Service League.

The program has been outlined by Felix J. Bethancourt, senior personnel specialist for the Veterans' Administration regional office in New Orleans. This regional office, under the management of Frank W. Sheridan, a dedicated career man, has made remarkable strides during his stewardship and well deserves the plaudits of every citizen interested in veterans' affairs. The regional office in New Orleans is most fortunate in having Mr. Sheridan assigned to that post and the improvements in efficiency and morale since he arrived have been most marked and outstanding.

"As to Mr. Bethancourt, the author of the article describing the program: I have known Mr. Bethancourt since his birth and have seen him grow into manhood. He, too, is a dedicated public servant who went directly to the Veterans' Administration following his discharge from the U.S. Army in World War II. I know of no individual with higher ideals and determination to discharge his responsibility than Mr. Bethancourt. Here is a man who is wedded to the public service with a fierce determination to contribute his every ounce of energy to proving that those in the public service measure up to the high standards expected of them.

Mr. Bethancourt is one of those individuals who believes that there are those in the civil service who are interested in giving the taxpayer his money's worth and would like to substitute the words "work and service" for the stigma words "coffee break."

There is no doubt that Mr. Bethancourt and those associated with him have gotten a great deal of satisfaction by participating in this training program and I assure you that satisfaction is the only compensation received by them. They believe that they have struck on one medium of improving their image.

These dedicated men decry any attempt to politicalize the civil service and seek to eliminate any taint of political patronage by allowing the system to maintain an honest merit system instead of a spoils merit system. These men are determined to advance and live by the ideals in which they believe and will not be sidetracked by the nonbelievers and the cynics. All power to them.

This program was not only recognized nationally but the New Orleans States Item editorially recognized their efforts with an editorial which I also am directing to your attention. Perhaps it is better to direct your attention first to the editorial and then to the article by Mr. Bethancourt which is done in simple open style that should be the envy of any professional writer.

Here is the New Orleans States Item editorial followed by the article which appeared in the National Civil Service League official bulletin Good Government:

[From the New Orleans (La.) States-Item, Jan. 18, 1963]

BETTERING GOVERNMENT

Graduation of another class from the Public Employees Training Institute this week centers attention again on this important piece of pioneering in New Orleans.

Purpose of the institute is to give both Federal and State supervisors in this area an opportunity to take a short course relating to their field under a faculty drawn from universities, business, and government.

The new graduating class of 25 includes supervisors from 12 Federal and 5 State agencies. Because of the 12-week training, they are better qualified, meaning enhancement of their public service.

A creation of the Federal Personnel Council of Louisiana and the Louisiana Personnel Council, the training institute only last month was hailed by the National Civil Service League for its worth and originality.

In doing a good turn for taxpayer and public careerist in this area, the idea should catch on nationally, multiplying its benefits.

[From the Good Government bulletin]

A UNIQUE TRAINING EXPERIMENT—A LA NOUVELLE ORLEANS

(By Felix J. Bethancourt)

"Way down yonder in New Orleans, in the land of dreamy dreams * * *—well-known lyrics to an ever popular song. Those words may have a validity to a tourist who stops off in this Crescent City and weaves his way through our famous Vieux Carre. But to the residents of this old city, it isn't all dreamy. There are those who do have dreams—the kind that helped make this country great. Maybe this analogy is a bit dramatic and exaggerated for what follows. Nevertheless we will let the future contradict it.

This dream emanated from Ronald L. Brignac, an aggressive and sincerely dedicated Louisiana State employee. Ronald is executive assistant for the Housing Authority of New Orleans.

Early in 1961, Brignac addressed the members of the New Orleans Federal Personnel Council and the Louisiana State Personnel Council. His proposition was this: that these two groups sponsor a training organization aimed at presenting courses in good supervisory practices to Federal, State and municipal supervisors. Brignac pointed out "demands for government services are growing with our rapidly expanding population along with steady pressure for economy in operations. We are not likely to economize by eliminating the services; but we can economize by performing the services we are now rendering more efficiently. We can substitute the long-run economy of doing a good job for the high cost of doing a mediocre job." He added: "Increased competence in supervision is a very tangible need and it can best be achieved by united study and effort." He emphasized that in Federal and State services many agencies have developed excellent training programs in the hands of experienced trainers. "By forming a training school," he said, "we can bring all this experience and know-how to bear on our local situations for the good of all agencies, large and small, who are willing to use the pooled resources."

The membership of the two personnel councils readily agreed to explore the possibility of forming an organization as proposed. They authorized their respective chairmen to appoint a committee to study and present a plan. The State personnel council appointed Brignac; Henry R. Rauber, Port of New Orleans; and Miller Lee Martin, Louisiana State Department of Civil Service. The Federal Council appointed Walter J. Laroque, gulf district, U.S. Maritime Administration; C. B. Harrison, Army Transportation Terminal Command, gulf; and the writer.

Appointing a committee to investigate, study and report is a common practice and quite often, as we all know, that is the end of the proposal. It didn't turn out that way with our committee. The enthusiasm generated by Brignac caught on quickly and all members of the committee pitched in to make the dream a reality.

After several get-togethers, and burning of the midnight oil, a constitution and by-laws were drafted under the name of "Public Employees Training Institute." The constitution provided for a board of directors to be appointed by the chairmen of the two personnel councils, with terms of each appointee designated to extend for 1, 2, and 3 years. The appointed committees of each council presented the constitution and by-laws to its membership and received unanimous approval and sponsorship. Members of the original committee were appointed as the first board of directors of the institute. Members of the board elected Brignac as chairman; Laroque, vice chairman; Rauber, secretary; and Harrison, Martin, and Beth-

ancourt, members of the board. The board then appointed an executive director and assistant director. Edward Boettner, Jr., Department of Apprenticeship and Training, U.S. Department of Labor, and his assistant, Norwood Jatho, Jr., were appointed to the No. 1 and 2 spots. Each of these gentlemen has had considerable experience in the field of training. They lost no time in collaborating with the board in setting up administrative controls and scheduling courses.

After study and review of various State and Federal training manuals, we decided to offer our first course in middle management. A combination of the best materials available was consolidated to present 25 conference-type sessions totaling 56 hours. It was decided to assess each agency a fee of \$10 per trainee to cover cost of materials. Sessions were scheduled each Tuesday and Thursday from 9 a.m. to 11 a.m. General Services Administration provided a conference room in the new Federal Building.

The subjects presented were: "Leadership on the Job"; "Elements of Human Relationships"; "Differences in Job Relationships"; "Building Good Relations"; "Handling Behavior Problems"; "Handling Employee Dissatisfactions"; "Dealing with Breaks in Relationships"; "Memory Training"; "Performance Evaluation"; "Employment Interviewing"; "Orienting the New Employee"; "Finding Training Needs and Instructing Employees"; "Developing Understudies"; "Communications; Listening"; "The Management Concept"; "Techniques of Management"; "Planning Work"; "Making Sound Decisions"; "The Nature of Organization and Organizing for Effective Action"; "Directing Operations"; "Coordinating Operations"; "Controlling Work Activities"; "Community Resources Available for Self-Development."

Brochures were prepared outlining the curriculum and objectives of the institute. These were mailed to heads of local Federal and State agencies. Each agency was requested to nominate a middle-management supervisor. The response was excellent, however. Selections were based on comparable grades and levels of responsibilities in the nominee's respective agencies.

In the meantime, a volunteer faculty was selected by the board and executive director on the basis of teaching ability and experience in the subjects to be presented. It was our good fortune to secure the services of high caliber individuals from several of the State and Federal agencies, private industry, universities, and private schools in the area. Each member of the faculty was furnished conference outlines and requested to modify the material so as to relate it to the cross-section of supervisors in attendance. A different conference leader was assigned to each session.

Members of the board alternated in attending each session and introduced the conference leader assigned for the particular session. Also, the executive director or his assistant was in attendance.

At the beginning of each session, students were given a specially prepared critique sheet and asked to evaluate the contents as presented, as well as the manner of presentation by the conference leader. The board member in attendance also completed a special evaluation sheet.

As the course neared completion, we presented an open-type questionnaire to the students which we asked them to complete prior to the last session. We emphasized their honest and sincere evaluation would enable us to determine the feasibility of continuing future courses.

It was obvious from the evaluations and individual critique sheets that overall the course was a success. All students voiced the opinion that the training as given was worthwhile and encouraged us to continue the institute. They were also helpful in offering

constructive criticism where they felt weak spots were evident in either presentations and/or material used. We found that the most common criticism referred to: desire for more participation; elimination of duplication and repetition of material; a desire for more handout material and more use of visual aids.

On the other side of the ledger, the majority commented that they liked the wide variety of subject material; the use of a different conference leader for each session; and the opportunity to observe and associate with a variety of governmental and industrial leaders.

One pertinent comment that should give food for thought to those above the middle-management level was this: "This course would be beneficial to some individuals above me. I am thankful, however, that I was the one who benefited from it. I feel more confident and a little better qualified to carry out my specific duties, but discouraged in knowing that so much could be improved in my organization. Maybe if the opportunity comes my way, I will be able to put into practice the principles I have learned." Perhaps this feeling is not universal, but to repeat, it does give food for thought.

We do feel that our efforts have been rewarded and the dream has become a reality. We are now underway with definite and improved plans for another course. As far as we are concerned, we have passed the pilot stage, and we're in business. Better supervision with the end product of better service to the taxpayer is our goal.

We would be flattered if our movement extends beyond the "land of dreamy dreams."

Alaska Economy Expanding

EXTENSION OF REMARKS

OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. RIVERS of Alaska. Mr. Speaker, Alaska's growth continues to be a matter of widespread interest, especially in view of a recent controversial television show by David Brinkley which left erroneous impressions that Alaska's economy is lagging. The facts, as disclosed by a report of the National Bank of Alaska, of Anchorage, show vigor and growth. Excerpts from said report are published in an article in the Anchorage Daily Times of January 19, 1963, which article I commend for the information of my colleagues. The following is from that article:

The report deals generally with the State and more specifically with the coastal areas served by the bank and was given by Elmer Rasmuson, president of the bank.

The National Bank of Alaska serves Anchorage, Ketchikan, Juneau, Sitka, Kodiak, Wrangell, Soldotna, Homer, and Skagway.

Statewide, Rasmuson said the overall economy is continuing to climb.

Excerpts from the report follow:

Alaska Department of Revenue figures show that the gross volume of business increased to a new high for the State. Gross business volume for fiscal 1961-62 was \$948 million as compared with the \$842 million total for fiscal 1960-61.

More people called Alaska their home.

Provisional U.S. Census data for July 1, 1962, sets the State's population at 246,000

persons. This is a 4.2 percent increase over the figure for July 1, 1961.

Total employment was up for the first 8 months of 1962.

July and August traditionally are peak months of employment. In July 1962, the total number of persons employed was 78,200. This figure is 2,100 above that for July of 1961.

The August 1962 figure is 77,800 persons employed and is an increase of 2,800 persons over the same month in 1961.

Record catches of halibut and king crab highlighted the 1962 commercial fishing season. The commercial salmon fishing season was one of the best in years in central Alaska and in the southern section of southeastern Alaska.

The 1962 shrimp catch, estimated at 21 million pounds, exceeded the 1961 catch by 5 million pounds.

The total salmon pack was 3,420,000 cases. Total pack was down in Bristol Bay (53 percent) and in the northern section of southeastern Alaska (64 percent) from 1961.

Total pack for western Alaska was 521,300 cases; central Alaska, 1,989,100 cases; southeastern Alaska, 910,000 cases.

Halibut landed in Alaska totaled 32,452,000 pounds as compared to 1961 landings of 26,014,000 pounds.

Approximately 50 million pounds of king crab, valued at about \$4 million, was caught.

New highs were reached in petroleum and natural gas production and activity.

More than 10.2 million barrels of crude, an increase of 59 percent over last year, were produced. Its value was in excess of \$28 million.

Natural gas production jumped to 1,600 million cubic feet, a 230-percent volume increase over 1961. Value of natural gas production was \$340,000.

Twenty-seven exploratory wells and 9 development wells were drilled. There are, at present, 50 producing oil wells and 6 producing gas wells in the State.

Estimated expenditures by the petroleum industry during the year for exploration, production, and the construction of a refinery on the Kenai Peninsula is \$60.5 million.

First step in a development to extend the State's sea roads by adding a new element was accomplished in 1962.

Three State-owned ship ferries, to carry freight and passengers, were launched. All are expected to go into service this year. (The first ship ferry will leave Seattle Monday en route to Alaska.)

Each is capable of transporting 500 passengers and 105 automobiles.

They will serve southeastern Alaska from Prince Rupert, British Columbia, to Ketchikan, Wrangell, Petersburg, Sitka, Juneau, Haines and Skagway, and will provide a sea tie to inland road systems at each of their terminal points.

The Canadian National Railroad extended its freight service to Alaska early in 1962 when it initiated barge service from Prince Rupert to Whittier.

Plans are now underway to provide similar barge service between Prince Rupert and southeastern Alaska ports.

The Alaska Railroad showed a slight increase in gross revenues and revenue tons carried. Gross revenues for fiscal 1961 were \$14,308,295; in 1962, the railroad's gross revenues were \$14,455,225.

Tonnage was 1,331,359 in fiscal 1961 and 1,447,966 in fiscal 1962.

Air passengers making use of Anchorage International Airport totaled 398,629 persons last year. In 1961, the passenger total was 377,695.

Air freight and express carried last year increased to 41,103,844 pounds from the 1961 total of 40,785,032 pounds.

There was a total of 9,490 inbound flights. Approximately one-third of these were jets.

Landings of all aircraft at Anchorage International Airport and on Lake Hood during 1962 total 128,524.

Military expenditures for the calendar year of 1962 were an estimated \$37,452,000, according to the U.S. Corps of Engineers.

Civil works expenditures totaled \$2,110,000, according to the corps.

Completion of a power and market study for the Rampart Dam, authorization of Bradley Lake (on the Kenai Peninsula) and Snettisham (near Juneau) hydroelectric project for design and construction, installation of additional pumping stations on the Haines to Fairbanks petroleum pipeline, construction of small boat harbors in Dillingham, Douglas, Homer, and Seldovia highlighted the year's program.

More land was under agricultural production last year than previously with a total of 18,648 acres tilled. Statewide, production climbed for hay, grain, silage and most vegetables.

The Matanuska-Anchorage-Susitna area accounted for two-thirds of the total agricultural production in the State.

Power generation and transmission in the Cook Inlet area took great strides during the past year.

Both the City of Anchorage and Chugach Electric Association took steps to fill this vital need.

An 18,000 kilowatt capacity gas turbine generator was built and installed for the city of Anchorage.

Completion of CEA's transmission line from Cooper Lake made additional power available to the Greater Anchorage area. Cooper Lake generates 15,000 kilowatts.

CEA is in the process of constructing a \$2 million oil fired generating plant, of 10,000 kilowatt capacity, north of Kenai. The turbine generator is scheduled to go into operation before summer of 1963.

FISH, PULP, OIL, CONSTRUCTION

The city of Anchorage issued 1,110 building permits during the past year. These covered a total construction value of more than \$18 million. Twenty public works projects were completed at a cost of \$2.2 million.

Cargoes crossing the Port of Anchorage dock more than doubled in tonnage.

School district construction came to an estimated \$4,750,000.

School enrollment increased from 14,049 in 1961 to 15,188 in 1962.

Ketchikan's salmon pack was the best in several years; halibut landed there reached a new high.

The Bay West Mining Co. mined and sold 6,000 tons of uranium ore valued at \$1.5 million.

Building permits within the city totaled \$1,318,977. In the school district, permits totaled \$950,000 in valuation.

In Juneau, 250 building permits were issued for a valuation of \$1.5 million.

Voters approved two bond issues: \$3 million for improvement of streets, sidewalks, sewers and a small boat harbor, \$776,000 for a new grade school.

Bids for construction of a new Federal building, to cost about \$12 million, will be let early this year.

Improvements were made at the airfield to permit all-weather jet landings.

Kodiak's 1962 salmon catch was the largest in the city's history. Total pack reached 711,900 cases.

The king crab pack set a record. The economy of the community has been increased and stabilized as a result of more concentrated king crab fishing in the area.

More than 34 million board feet of spruce was shipped from the Wrangell Lumber Co. during the year. Eighteen ocean vessels operated out of Wrangell to move this cargo.

Shrimp and crab pack totaled \$479,000 in

value; the salmon pack totaled \$600,000 in value.

The past year marked the second consecutive year of more than \$1 million of construction in Soldotna. Population of this community's trade area is now estimated at 4,000 persons.

A good fishing season bolstered Homer's economy. Two new oil wells were started within 14 miles of this community. Work on portions of the Sterling Highway continued preliminary to paving.

Skagway saw a good tourist year with more persons visiting there than in several previous years.

Work is being done on the ferry landing in anticipation of the Alaska State ferry system beginning operations.

Pulp production at Sitka's Alaska Lumber & Pulp Co. reached a new high. Plant expansion, to allow for an increase in output from 370 to 450 tons of pulp per day, were nearing completion. Pulp is destined for Japanese markets; brings in an average of \$24 million a year.

Firm's Alaska payroll is approximately \$4.75 million. Local loggers receive approximately \$7 million annually.

Federal payrolls in Sitka are in excess of \$3 million. A \$5 million expansion of Bureau of Indian Affairs facilities at Mount Edgecumbe Hospital is planned.

Congress Should Have Authority To Fix Postage Rates for Fourth-Class Mail the Same as Congress Fixes Rates for First-, Second-, and Third-Class Mail

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. MORRISON. Mr. Speaker, I have introduced, for appropriate reference, a bill to return to the Congress the authority to fix rates of postage in fourth-class mail which includes the parcel post system.

I have discussed the grave problems confronting the parcel post with several Members of Congress, including the distinguished chairman of the Senate Post Office and Civil Service Committee and we are in agreement that immediate action by the Congress is necessary in the interest of protecting the parcel post system.

As Members know, Congress a number of years ago relinquished its authority to fix rates in parcel post and gave concurrent responsibility in this matter to the Postmaster General and to the Interstate Commerce Commission.

This arrangement, although workable at the time that this authority was granted the Postmaster General and the ICC, has proven to be unsatisfactory and, as a matter of fact, now poses grave financial threats to the very existence of an efficient and well-operated parcel post system.

Within the last 2 years a proceeding was instigated by the Postmaster General at the Interstate Commerce Commission regarding fourth-class rates. This pro-

ceeding has been drawn out for a year and a half and finally was brought to a halt with no action taken.

The present statutes require that whenever the parcel post system is more than 4 percent out of balance as between costs and revenues, the Postmaster General is required to petition the ICC for its permission to place into effect rates which the Postmaster General determines are needed to place parcel post within 4 percent of cost.

The Interstate Commerce Commission in numerous proceedings under this statute has determined that it has no independent authority to make investigations of figures presented by the Postmaster General, and has no authority to make any change at all in the petition of the Postmaster General.

In addition to this problem, several recent proceedings of this type in fourth class have demonstrated that this arrangement gives rise to many costly and time-consuming adversary proceedings which delay and hamper the arrival at decisions in the public interest involving parcel post rates.

The Congress has complete authority to set postage rates in all other classes of mail, including the fixing of zones and the assignment of priorities of delivery. The Congress met this responsibility last year in proper fashion as all of us know.

It is my sincere belief that the fixing of rates for parcel post can no longer be separated in any administrative proceeding from the fixing of rates in all other classes of mail. We have but one Post Office Department with one overall operating budget. This Department has four classes of mail and the problems of all of these classes are interrelated. If the Post Office Department is to serve the public, it must be considered as a whole, and its services must be considered collectively.

I am informed that the Senate Post Office and Civil Service Committee intends, at an early date, to begin an exhaustive study of the parcel distribution systems in the United States. I am informed further that on the basis of the information elicited in this study that the chairman of the Senate Post Office and Civil Service Committee desires to take action in this Congress in the matter of establishing rates in fourth class. I believe that this is a correct course of procedure and that we can all benefit from such a study.

In view of the grave threats to the parcel post system and its ability to serve the public, I hope that the appropriate agencies of Government who are presently concerned with parcel post rates will take note of the interest of those of us in the Congress who intend to take action to rectify the situation with which we are confronted. The problems of price, volume and service to the public in our parcel post system are extremely important to all and I feel confident that all agencies will want to cooperate with the Congress in solving these problems. I hope further that we may proceed without delay to hearings on my bill and action in the House.

Uncle Sam Has Butter Running Out of His Ears

EXTENSION OF REMARKS

OF

HON. DELBERT L. LATTA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. LATTA. Mr. Speaker, our huge dairy surpluses stand as mute testimony of the failures of the New Frontier stewardship in this area of our economy. Now they are proposing another costly, grandiose program for our dairy industry. The Congress should examine it carefully in view of the past, complete lack of performance in this area by this administration.

I commend an article on this subject by Robert Dietsch which appeared in the Washington Daily News on January 23, 1963, to my colleagues. It follows:

UNCLE SAM HAS BUTTER RUNNING OUT OF HIS EARS

(By Robert Dietsch)

People on relief in this country use a lot more butter per person than do the people who support them.

This doesn't necessarily mean relief clients prefer the higher priced spread. They're entitled to the butter under Federal- and State-operated welfare programs, and the Federal Government is only too glad to donate it.

Uncle Sam has butter running out his ears. Under the farm-price support program, the Government is committed to buy excess dairy products—dried milk, Cheddar cheese and butter. Because supplies are up and demand down, surplus stocks are at an all-time high.

INVENTORY

This was the inventory situation at year's end:

Two hundred and ninety-four and three-tenths million pounds of butter in stockpile—almost twice as much as on December 31, 1961; 2 years ago stocks totaled only 15.9 million pounds.

Sixty three and two-tenths million pounds of Cheddar cheese—compared with 5.4 million at the end of 1961 and none at the end of 1960.

Five hundred and thirteen and nine-tenths million pounds of dried milk—against 186.1 million pounds and 177.4 million pounds the 2 previous years.

The growth of dairy surpluses—and the end isn't in sight—is leading the Kennedy administration to renew its plea for legislation to cut production voluntarily. At present, law requires the Government to guarantee certain prices to dairy farmers and buy up stocks farmers say they can't sell above those prices.

The administration would lower the support price and pay a bonus to farmers who agree to reduce the amount of milk they send to market.

NO ENTHUSIASM

Up to now, Congress has shown little enthusiasm for such a program.

The dairy program now costs taxpayers \$500 million a year; Agriculture Department spokesmen say a production cutback plan would save \$150 million.

"The butter surplus situation is acute; cold storage space is already scarce," said one source.

There's just no way of handling much more butter.

Certainly efforts to step up butter give-

aways haven't solved the problem. Last year people on relief received almost 59 million pounds of butter; generally speaking, policy calls for giving a relief recipient 1 pound of butter a month.

Therefore, each person on relief may have received—and used—12 pounds of butter last year—far above the U.S. per capita consumption average of 7.4 pounds.

Kennedy Administration Backs Labor's Demands Against Rest of Nation

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. ALGER. Mr. Speaker, what is being hailed as a statesmanlike settlement of the strike of the longshoremen which seriously affected the entire economy, is in reality a disgraceful surrender to the demands of a few. It is always easy to reach a settlement by surrendering, but I wonder how long 185 million Americans will tolerate being black-jacked by powerful labor leaders abetted by the administration to giving in to unreasonable demands? The following editorial emphasizes this point.

SETTLING A STRIKE BY SURRENDER

A Presidential Board appointed to recommend a settlement of the disastrous dock strike has followed the usual practice of such boards—give the union most of what it wants.

The striking longshoremen demanded a wage increase and other benefits amounting to a total of 50 cents an hour over a 2-year period. The shipping companies offered a package totaling 22 cents an hour. The Presidential Board, headed by liberal Senator WAYNE MORSE, compromised at 39 cents.

The union leaders accepted the Board's proposal on Sunday, and Presidential pressure was applied upon the shipping companies to do the same. Mr. Kennedy asked the Mediation Board to express his concern. Senator Morse predicted the shippers would accept the settlement, even though they are not happy about it.

Yesterday the shippers gave in, announcing that they did so in the national interest and in cooperation with the President.

At the beginning of the strike the most important issue was a demand by the shipping companies that the size of dock crews be reduced to take advantage of improved methods of handling cargo. The union insisted on preserving the old crew size. This issue has been removed from the dispute and will be turned over to a board to be appointed by Labor Secretary Wirtz.

President Kennedy, in his annual economic message to Congress Monday, declared: "As long as wage rate increases stay within the bounds of productivity increases, as long as the push for higher margins through higher prices is restrained . . . the outlook for stable prices is excellent."

This sound advice has been ignored by the President's own Board in the proposed settlement of the dock strike. The shipping companies have been trying to keep wage increases within the bounds of productivity increases. How can they do so unless they can be assured that the work crew issue will be settled in their favor?

Fine Accomplishments of the U.S. Air Force Academy

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to call to the attention of my colleagues in the Congress, and the American people, the facts and figures on the amazing success of our U.S. Air Force Academy. As Congressman from the 27th District of Pennsylvania, it has been a high privilege and deep responsibility to appoint 12 young men to this fine Academy. Here is the evidence of the Air Force Academy's highly commendable accomplishments.

Six Rhodes scholarships have been awarded to members of the five graduating classes including the current class of June 1963. This places the Air Force Academy among the top four colleges and universities of the United States in the percentage of graduates so honored. In addition to Rhodes scholars, many have gone on to university and college graduate schools throughout the country and have done exceedingly well. For example, among the members of the class of 1959 who went to graduate schools, three won top honors at Massachusetts Institute of Technology, California Institute of Technology, and Princeton, majoring in astronautics, aeronautics, and political science respectively. One of these young lieutenants had the distinction of being chosen an all-America football player during his undergraduate days.

Academic success has been remarkable as attested by the scores achieved by cadets on the graduate record examination in comparison with those of graduating students at 231 representative colleges and universities throughout the country. The class of 1962 ranked No. 1 in the social science area among the 231 schools, and the classes of 1959, 1960, and 1961 were second. This certainly broadens the popular conception of the military mind.

Brig. Gen. Robert F. McDermott, dean of faculty, describes the curriculum this way:

Half our courses are in the social sciences. It may appear surprising that a service considered highly technical does not give more emphasis to science and engineering courses.

But we're not producing engineers. The cadet here receives a broad liberal education and a good knowledge of the sciences applicable to his service, which means astronautics, aeronautics, nuclear physics, and electronics.

We think our graduate's cultural attainments will command respect not only for himself, but for the Air Force and the country. Most important of all, his judgment should be tempered by an understanding of humanity—this is the sort of judgment the world demands of one entrusted with the means for its destruction.

In the area of natural sciences, the classes of 1959, 1960, and 1961 ranked

second among the above-mentioned 231 representative colleges and universities. Such achievements contributed to the Air Force Academy receiving academic accreditation as an institution of higher learning by the North Central Association of Colleges and Secondary Schools even before it graduated its first class in 1959.

The Air Force Academy cadet graduates as a second lieutenant and bachelor of science on completing a 4-year program of academics, military training, and physical training which totals 189½ semester credit hours. This compares favorably with the 140 to 145 semester hours required in the Nation's engineering schools and 120 to 130 hours at the average liberal arts college.

The Academy curriculum is equally divided between basic and applied sciences on the one hand and the social sciences and humanities on the other. Building on the experience of the other U.S. service academies, foreign academies, such as the English and French air academies, and civilian colleges and universities the Air Force has developed and continues to evolve a curriculum best suited for young men who will spend their lives serving the Nation primarily through the application of aerospace power. In doing so, the Air Force Academy was the first undergraduate school in the Nation to establish a Department of Astronautics—space vehicles and environment.

A program of elective enrichment courses was developed at the Air Force Academy soon after its founding. The cadet can take advanced and graduate level courses in addition to the required curriculum. Cadets entering with previous college work or who volunteer to take courses in addition to the set curriculum may range far beyond the required program. The Air Force Academy encourages its cadets to advance academically as far and as fast as their talents and interests permit. This program is one of the primary reasons for the outstanding scores attained in national graduate placement examinations. The Air Force Academy was the first of the service academies to institute an enrichment program beyond its prescribed curriculum.

Over 50 percent of the cadets have participated in the enrichment program. As a result, 25 percent of the graduates have earned majors in one or more of four areas: basic sciences—including physics, mathematics, and chemistry; engineering science—with options in aeronautical and electrical engineering; military management; and international affairs. Normally, service academy graduates receive only a bachelor of science degree without a major.

The Engineering Council for Professional Development recently authorized the Air Force Academy to award engineering degrees. This accreditation of the Academy is a result of the enrichment program of elective studies. About 80 cadets, or 16 percent, of the next graduating class will fulfill requirements to graduate with the degree of bachelor of science in engineering sciences. The Air Force Academy is the first of the national

service academies to receive this accreditation.

The enrichment program also permitted the Air Force Academy to pioneer among the service academies in developing graduate level courses. Cadets who take this advanced work can, after graduation, complete graduate programs in astronautics or international affairs at civilian universities and receive their masters' degrees within 7 months.

The Air Force Academy has accomplished much in a remarkably short time. There are several reasons for this. The Academy selected the best from the older service academies, foreign academies, and civilian colleges and universities and added many progressive new practices. Maj. Gen. James E. Briggs, the second Academy Superintendent, said:

Being new has its advantages. Nothing binds us to the past. That goes for customs that may have outlived their usefulness and it certainly goes for teaching methods and curriculum.

Equally important has been the support given by Air Force Headquarters and the Chief of Staff, Gen. Curtis E. LeMay, who insists that top priority be given to the assignment of instructor and administrative personnel for the Air Force Academy. This is good judgment and broad vision for the future.

Of the Academy's all-military faculty, 21.6 percent have doctorates and the remainder master's degrees, placing the Air Force Academy faculty first among the service academies in academic qualifications. Instructing at the Academy is a job which is very popular within the Air Force, and over 4,000 applications from qualified officers are on file.

The military program is equally as important as the academic program. It is woven throughout the entire 4 years of the cadet's career. The young man is molded into an officer willing and able to accept responsibility for leading and directing a military team in peace or war. Cadets are given increased privileges and responsibilities as they advance through their 4 years at the Academy. Seniors are given the responsibility for the basic summer training of the new members of the cadet wing. Under a newly instituted system of fourth class—freshmen—training, emphasis is placed upon leadership by example and training without harassment. Upper classmen must train, encourage, and exercise positive leadership rather than prejudice or degrade. All disciplinary and training must have a definite purpose. As a result, the military program is more challenging and objective and has significantly reduced fourth-class losses.

Flight training at the Air Force Academy includes indoctrination in flying and navigation. Those who choose to earn their wings must go through 13 months of flight training after graduation. Approximately 90 percent of the first four classes have gone on to pilot or navigation training. Academy graduates who have gone to flying training have done exceptionally well. Whereas the overall elimination rate for flying trainees is approximately 30 percent, Academy graduates who go through fly-

ing training have had but half that attrition rate.

Military training motivation was revealed last summer when 85 of the cadets gave up their leave to enroll in paratroop training at Fort Benning. No cadets were eliminated and 1 cadet was first in the total class of 700.

The third lieutenant program is another important element of military training. Each senior cadet gets a short tour of summer duty with an Air Force unit so as to gain first-hand familiarity with the work and environment and problems he will face following graduation.

The honor code is one of the most dynamic features of life at the Air Force Academy and is the foundation of all programs and activities. It is:

We will not lie, cheat, or steal, nor tolerate among us those who do.

To this code all cadets pledge themselves without reservation and live religiously by it.

The athletic program, along with the academic and military training programs, play an important part in the development of a well-rounded Air Force officer. On the playing field, the cadet develops self-confidence, aggressiveness, courage, leadership, and the will to win. Each must compete in 14 sports—football, field hockey, soccer, cross country, boxing, handball, squash, wrestling, water polo, lacrosse, rugby, swimming, basketball, and judo. He must participate as a member of an intercollegiate or intramural team. Many of the 2 million visitors to the Academy last year viewed the intercollegiate athletic program in which the cadets won 66 percent of their contests. The Academy fields intercollegiate teams in 15 sports. Last year its new 40,000-seat football stadium was dedicated, a gift from the Air Force Academy Foundation, a private organization of civic, business, and Government leaders who deserve a great deal of credit. Funds for the stadium were voluntarily contributed to the foundation from private sources and by individual members of the Air Force. The Academy is extremely fortunate to have such support.

Extracurricular activities at the Air Force Academy are similar to those of civilian institutions. There are cadet clubs devoted to languages, cameras, debating, mountaineering, and geography. Cultural activities of all kinds are encouraged. Religious and devotional facilities are excellent and the chapels are extremely well attended. During the Academy's first year, cadets took over Sunday school classes for children of base personnel. More than 100 men volunteered, making it, in the words of one chaplain, "the only Sunday school with more teachers than pupils."

We have in the U.S. Air Force Academy an excellent, intelligently planned, and well-run institution of which we can be justly proud. In its short life it has excelled remarkably in the academic, military, and athletic areas. Because of its accomplishments and its dedication to prepare young men for a career of service to our Nation, the Air Force Academy

is deserving of our fullest support, respect, and esteem.

Congratulations to the U.S. Air Force, and to our U.S. taxpayers on the success of the Air Force Academy, and a hearty pat on the back to the present cadet corps, the graduates, and the teaching staff for dedication and topflight results.

To ambitious young men in our high schools and secondary schools in America, if you want a really high-level education with a promising future, look up to the U.S. Air Force Academy.

Hartwell Power

EXTENSION OF REMARKS OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. DORN. Mr. Speaker, the following resolution was adopted by the board of directors, Saluda River Electric Co-op on January 8, 1963. This association represents Laurens, Blue Ridge, Broad River, Little River, and York Electric Co-ops and Greenwood Electric Power Commission which serve the northwest one-third of South Carolina. Blue Ridge, Little River, and the Greenwood Electric Power Commission are in my own congressional district. The Greenwood Electric Power Commission and all of these co-ops in northwest South Carolina are among the best in the United States and are doing an outstanding job.

Mr. Speaker, I am in complete agreement with the sentiments expressed in this resolution, and I urge the Department of the Interior to deal fairly with the preference customers of South Carolina in the distribution of Hartwell power.

The resolution follows:

RESOLUTION OF BOARD OF DIRECTORS, SALUDA RIVER ELECTRIC CO-OP AT THEIR REGULAR MEETING HELD ON JANUARY 8, 1963

Whereas the Southeastern Power Administrator of the Department of Interior has been engaged in working out a marketing and wheeling arrangement for power generated at Hartwell Dam with regard to the amount going to the South Carolina side of the Savannah, and it appears that a contract for wheeling will be entered with Duke Power Co.; and

Whereas the within named six electric cooperatives of South Carolina and two from nearby North Carolina have conferred and worked with Southeastern Power Administration for many months to plan for delivery of this power to them and other preference agencies, and during all of this time it has been planned that the area of delivery would likely be either 100 miles or 125 miles from the dam depending upon the number of preference agencies served, and this plan appeared to satisfy both the South Carolina and North Carolina cooperatives and cities; and

Whereas it now develops that the Interior Department through the Administrator for Southeastern Power Administration now proposes to allot this power to the uttermost part of the vast Duke system which will produce the result that the majority will be sold in North Carolina, even to the Virginia and Tennessee borders; Now, therefore, be it

Resolved by the Saluda River Electric Co-

operative, an association representing Laurens, Blue Ridge, Broad River, Little River and York Electric Cooperatives and Greenwood Electric Power Commission which serves the northwest one-third of South Carolina. That we strongly oppose this new plan and we contend that the marketing area should be not over 125 miles from Hartwell Dam for the following reasons:

1. Half of Hartwell power is already going into Georgia. Under the new formula of the remaining half of the total, three-fourths will go to North Carolina and only one-fourth of this half will go into South Carolina.

2. In order to attain an appreciable saving it was formerly planned that all customers may receive 30 percent of their power requirements, but under this new plan, consumers will now get only 10 to 14 percent of their requirements, so small that it will be difficult to transmit such savings to the ultimate consumers.

3. Greenwood County Electric Power Commission now purchases power from Duke in a substantial quantity, and therefore, it should be allotted its pro rata amount of Hartwell power in relation to this connected load.

4. At the time that Hartwell Dam was authorized it equally received the full support of every Senator and Congressman from South Carolina and Georgia. Congress never intended that the power from a dam on the Savannah should be allotted 50 percent to Georgia, 37½ percent to North Carolina, and 12½ percent to South Carolina, as would result from this new policy.

5. Duke Power Co. has stated that it can deliver and wheel power to any consumers designated by Southeastern Power Administration, near or far. There is ample precedent for the Interior Department to limit the area of distribution. It could be inferred that the diversion of the lion's share of this power away from South Carolina may be a punitive measure by the Department in payment for the fact that every South Carolina Representative and Senator has not always supported every request of the Interior Department. The result could be that added ammunition is given to those who allege there is ineptness and false economics on the part of those who advocate public power.

6. No public power from within North Carolina or Georgia has ever been wheeled or transmitted into South Carolina although there are interconnecting lines by which this could be done. It would appear then that this new policy would require that we go back and redetermine an exact pro rata allocation to all preference customers in all three States by a pooling of all such public power and by utilizing all available interchanges. If it is the policy that we seek to reach the greatest number of people regardless where they may be situated this is a means to get it done, and be consistent with this new policy.

7. There are undeveloped hydropower resources in North Carolina which can be developed to better serve all the areas over 125 miles from Hartwell, and it is fair that these areas should look to their own resources to serve their own areas.

8. This plan for unlimited service areas becomes arbitrary and capricious by reason of the fact that it is without precedent, it was never discussed with your relatives prior to its disclosure, and it was not sought or expected by the more remote areas of North Carolina.

Be it further

Resolved, That copies of this resolution be transmitted to the Interior Department, to Senators and Congressmen from South Carolina, and to all other officials and persons who have an interest in this matter.

Adopted unanimously at a regular meeting of the board of directors on January 8, 1963.

Secretary.

Our Debt to Britain

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. DERWINSKI. Mr. Speaker, in the complex problems facing us in the field of foreign affairs, the lack of consistency has been one of our most prominent failings.

Consistency would require the proper perspective and appreciation of the contribution to free world strength other nations have made. It has been my thought that we have not provided consistent understanding of the problems that our British allies have faced, taking them for granted as often as they have taken us for granted.

Our attitude toward Great Britain is very graphically illustrated in an article which appeared in yesterday's Washington Evening Star by syndicated columnist, William S. White, which I include in the Appendix of the RECORD.

THE MANLY DEBT WE OWE BRITAIN

(By William S. White)

A hard-used cousin of the United States has fallen ill, and wearily so, and now requires our help and understanding, for the sake of ordinary decency but most of all for the sake of ourselves.

This cousin is Great Britain. And this national illness is like that personal illness which comes as a chilling vision upon a middle-aged war veteran long, long after the guns have rusted in the silence of the yesterdays. Suddenly, as though in the middle of the night, he sees clearly that all his old exertions and perils have ended in dust and ashes for him and that his late rivals and even enemies are doing far better than he in the world they lately sought to destroy.

He wears, along with his wound stripes and the invisible medals that bring no profit in the marketplace, the gray badge of economic fear while more fortunate men are living it up on top of that world which only his valor and honor had helped to make for them.

This parallel between an ex-soldier now suffering postcombat fatigue and a nation suffering the same, through no fault whatever of its own, is not inexact. It is plain, given the smallest perception and understanding, that today's Britain has had altogether too much to bear for altogether too long. (And it is petty undertone to the tragedy that the mist brittle of England's young entertainers now wow them on this side of the Atlantic by venomous commentaries on the land of their birth.)

BARRER BY FRANCE

The nation which so long stood alone against Hitlerism—a Hitlerism backed for a time by Stalinist Russia, too—now finds itself barred from its best hope to recover its wasted strength, the European Common Market. And by whom? By the country, France, which went to its knees before Hitler's very first blows and left that island kingdom across the channel, that England which was once forever green, naked to a storm which blew not merely against England but against all freemen everywhere.

The nation whose civilians uncomplainingly underwent not days and weeks but months and years of bombing from the skies and freely spent its substance and its lives awoke at last from the nightmare of war. And to what? To an implacable pressure

(at which the United States of America stood at the very forefront) to strip from her all that she had in colonial wealth; to tear from the living body of the old Commonwealth every overseas resource she might have had to repair her ravaged strength.

But not even all this ends the tale of the hero of war who was to fare so ill in the peace which so indispensably he had helped to win.

The harsh realities forced the United States to pour out treasure, not upon tired and broken old England but upon those other lands—whether ex-enemy, as in Germany, or ineffectual ally, as in France—which it was now necessary to bolster against the sick appeal of communism.

BRITAIN GOT SYMPATHY

We could always depend upon the British, tired and broken or not. So to Britain we gave, perforce, our sympathy; to the others we gave our billions. So at length these others, notwithstanding their past guilt and failures, became, not Britain's fair equals but Britain's subsidized superiors in the economic rat race which was one of the legacies of the war.

The British are stout fellows, and very proud, too. But, to repeat, they have had altogether too much to bear for altogether too long. They would reject pity; but manly help in mutual respect they need from us. Help in the economic rat race—a determination here that no Charles de Gaulle and no dozen Charles de Gaulles shall further push Britain down, economically or otherwise—that storied first home of an American Republic which was, after all, raised up by British men.

What, then, is required of us? Why, simply, all that may be required by them to keep that honored place which by blood and valor and brains and historic decency they have a hundred times over earned. If they are no longer quite a top power in this world, they have irreplaceable values to offer still. And that world without them would be poor beyond belief—for us as well as for them.

President Again Hails as a Victory the Giving in to Soviet Demands

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. ALGER. Mr. Speaker, the record of the Kennedy administration is replete with piecemeal surrenders to Soviet demands which are then hailed as Kennedy victories. This happened in Laos where surrender was called a compromise, in Cuba where a brave show of strength developed into a farcical coverup of continued Soviet military expansion, and now in the talks for banning nuclear testing. The firm statement of the President that no ban would be effective without adequate inspection has now been watered down to accepting with enthusiasm a weak counterproposal by Khrushchev which will put us completely at the mercy of Soviet duplicity which is the rule in most of her agreements. The following editorial should be read with care for it indicates to what lengths President Kennedy is willing to go in

ignoring bad faith on the part of the Communists.

THE BIG NUCLEAR TESTING "THAW"

The United States, in negotiations now in their fifth year, originally notified the Soviet Union that America's minimum terms for a permanent ban on nuclear testing called for 180 monitoring stations around the world and 20 on-site inspections a year within the Soviet Union.

The Kennedy administration revised the quota of inspection downward to 12 to 20. Then President Kennedy said there must be "some." Last August he and the British offered the Soviet Union an unpolluted ban on tests in the atmosphere, underwater, and in outer space. They left underground explosions to later negotiation, but held out for some sort of inspection.

Now Premier Khrushchev, of Russia, proposes placing three mechanical detectors at widely spaced spots in the Soviet Union where there are frequent seismic disturbances. He would permit American inspectors to come in and look at tape recordings two or three times a year to satisfy their suspicions, provided the United States and other nuclear powers permitted the Soviet Union similar access to their territories.

Provided, further, that the American inspection team be flown by Soviet airmen in Soviet aircraft with screened windows and no cameras. Provided, also, that these inspectors take it on faith that they are being transported where they are told the automatic detectors have been placed, and provided they don't snoop around anywhere else.

Mr. Kennedy, in a well-battered note, found all this "helpful" and expressed himself as "encouraged." Why? Having started out demanding foolproof inspection and control, he has progressively retreated until the kind of ban he is now hopeful of achieving has more holes than a sieve. Some remaining element of caution has deterred him from full acceptance of the Khrushchev proposals.

The President, in his statement, omits reference to a few matters which are of an importance overriding any terms committed to paper. The first is that, in all 45 years of the existence of the Soviet Union, that Government has never honored any treaty or agreement any longer than it has been useful to Russia.

The second is that Mr. Kennedy has before him the unexampled record of Soviet bad faith in secretly preparing and resuming nuclear tests in the autumn of 1961, in flat violation of the solemn moratorium on testing which it entered with the United States in the autumn of 1958. Khrushchev himself had sworn that he would never be the first to break the agreement. He then proceeded to do just that.

Mr. Kennedy seemed to have learned that lesson when he made a last chance offer for a permanent ban in a speech March 2, 1962. On that occasion he said, "But this must be a fully effective treaty. We know now enough about broken negotiations, secret preparations, and the advantages gained from a long test series never to offer again an uninspected moratorium."

The third consideration is that Mr. Kennedy has had a more recent demonstration of Soviet bad faith. When he announced to the people last October 22 that Khrushchev had converted Cuba into a missile pin cushion, he told how the Soviet Government, the Soviet Premier, and the Soviet Foreign Minister had all brazenly lied when they had given him assurance that no Soviet strategic missiles would ever be emplaced outside the Soviet Union.

Now he seems on the verge of being willing to take these chronic liars at their word. As the old rhyme has it, "Step into my parlor," said the spider to the fly."

Easy Guide to Growth

EXTENSION OF REMARKS

OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. GUBSER. Mr. Speaker, I submit herewith a recent column, entitled "Easy Guide to Growth," which appeared in the Wall Street Journal within the past week. Prof. B. H. Beckworth of the Graduate School of Business, Columbia University, has skillfully used satire to focus the spotlight of commonsense upon the ridiculous new theories of economics which the New Frontier is attempting to formulate. I commend this article to my colleagues with the comment that not all academic people have accepted the principle that deficit financing is the best road to economic growth. Thankfully I say that there are still some sound economic thinkers. I would hopefully say that I wish more of them were in Washington.

The article follows:

EASY GUIDE TO GROWTH

(By B. H. Beckworth)

"Growth, it is wonderful," exclaimed the Government economist, sipping champagne with evident pleasure. "You see, it is not what the country can do for you, it is what you can do for your country. I did my bit by using the money freed by tax reduction to buy good American champagne. That helps growth."

"Why does that contribute to growth?" inquired a serious-looking listener. The economist gave him a withering look. "Why, as everyone knows, it increases the gross national product," he replied. "That is growth."

At the mention of GNP, there was a respectful silence in the room.

"Would it be proper," asked another individual, "for me to use my tax savings to repay a bank debt?"

"Of course not," the economist replied condescendingly. "That would be a Keynesian leakage. That destroys money. That does not help growth."

"Should the deficit resulting from tax reduction be financed by selling securities to investors?" timidly inquired another listener.

"How ridiculous," responded the economist, "you don't understand the miracle of modern money. Commercial banks need no money. They create money by a stroke of a pen. The Federal Reserve banks, too, create money by a stroke of a pen. The pen is not only mightier than the sword; it takes the place of taxes, it takes the place of savings, it causes interest rates to decline."

"But why should interest rates fall?" inquired a doubting Thomas.

The response came slowly and pedantically: "With a stroke of a pen the Reserve banks create high-powered money, with a stroke of a pen commercial banks multiply this high-powered money, into everyday money. Money is the seed of money, money begets money, no population control here."

"But," persisted the doubting Thomas, "are we never to balance the budget?"

"Simply one of our grandfathers' myths. A balanced budget is a drag on growth." Then the Government economist added: "We have budgets for every occasion: administrative, cash, income and capital. They meet every need, they win every vote."

"But will not," asked another, "a large deficit cause foreigners to lose confidence in the dollar?"

"Not at all. The balance-of-payments deficit gives the foreigner dollars. With these he buys Government obligations. One deficit finances another. I regret that I have only two deficits to give to my country."

The questioner was not wholly satisfied and put still another query.

"I was in France a few years ago and found that the budgetary deficit did not help the franc."

"Oh," declared the economist, looking at him pityingly, "the franc is not a key currency. Deficits help only key currencies. The duty of non-key currencies is to key in with the dollar. We swap dollars for francs, we swap dollars for marks, we swap dollars for guilders, we swap where we can. 'Tis Gresham's law in reverse."

All of the bystanders gazed in amazement at the erudition of the economist. Finally one of them exclaimed: "If a little deficit is a good thing, why not bigger deficits?"

"Now you understand the new economics," exclaimed the Government economist as he drained his champagne glass.

West Penn and Project Keystone

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. DENT. Mr. Speaker, recently, publicity was given to a new project of great proportions and great importance to the area of Pennsylvania I represent, as well as a vast area including parts of New York, New Jersey, and West Virginia.

This project is to be constructed entirely by investor owned utilities. The magnitude of the project makes it one of the boldest and largest privately financed endeavors of this day and age. If this can be accomplished without Federal or Public Treasury moneys it will mark a rebirth of the private enterprise system in the field of power producing installations.

Those of us in Government charged with fiscal responsibility will watch with more than passing interest the progress of this project.

The great promise of increased economic activity in western Pennsylvania coal mines, which can add at least 1,200 new mine jobs, will be a welcome lift to this hard-hit region.

Unemployment in this area is chronic and the recession is serious. Many of our people have been unemployed for many months, some stretching into years.

This condition cannot endure much longer. The depreciation of values in both human, as well as economic conditions must be halted.

If this project succeeds in this area it can well set up a pattern for an economic revival in other hard hit, depressed areas of our country.

I sincerely hope the Members can find time to read this encouraging message to all of us whose districts have felt the

blight of economic depression for too long:

WEST PENN AND PROJECT KEYSTONE

The same kind of thinking big that inspired Americans to cross the Rocky Mountains in wagon trains or slice through the Isthmus of Panama became evident once more in the electric utility industry on November 19.

That day, West Penn Power joined with 17 other investor-owned utilities¹ in announcing plans for a giant \$350-million coordinated extra-high-voltage transmission line and power plant construction program.

Allegheny Power System's part will account for \$75 million of this total program, which calls for completion of the first stages by 1967.

Simultaneously at press conferences across the State, the 18 companies revealed the mammoth project which includes construction of a 1,800,000-kilowatt power station in Armstrong County, a 500,000-kilowatt station near Point Marion on the Pennsylvania-West Virginia border, and a 600-plus-mile extra high voltage transmission system that will supply power from the 2 stations at 500,000 volts to a 7-State area with a population of 30 million persons.

This is one of the largest coordinated extra-high-voltage transmission line and powerplant construction programs in the history of the electric utility industry, and will mark one of the first full-scale uses of 500,000-volt transmission in our Nation. Transmission at 500,000-volt is so far limited to experimental lines.

Civic and business leaders throughout the country and especially in the 7-State region have hailed it as an important step in meeting future electric needs efficiently and at low cost. (The project will also boost the economy of western Pennsylvania areas near the power stations, and northern West Virginia.)

Participating companies will benefit from such economic factors as lower costs in transmitting large blocks of power at extra high voltages, more efficient operation of larger generating units, power pooling between companies and systems to meet peak loads and emergencies more efficiently, and coal mined near the new power stations to reduce hauling expenses.

General Public Utilities Corp. (GPU), Pennsylvania Power & Light Co., and Philadelphia Electric Co. will jointly own the \$175 million Keystone station set for construction near Elderton just inside the eastern boundary of Armstrong County in Kiski District.

Our neighboring utility, Pennsylvania Electric Co. (Penelec), headquartered at Johnstown, is one of four GPU subsidiaries.

The first of Keystone's two 800,000-kilowatt generating units will go into service in 1967, and the second will follow a year later, making this the largest power station in Pennsylvania. (Its 1,600,000-kilowatt capacity will approach West Penn's total 1963 capability of 1,862,000 kilowatts after Mitchell unit No. 3 goes "on line" early next summer.)

Keystone's high-pressure boilers will consume about 4.7 million tons of coal each

¹ Allegheny Power System and its subsidiaries: Monongahela Power, Potomac Edison, West Penn Power; Pennsylvania-Jersey-Maryland Power Pool Co.—Atlantic City Electric, Baltimore Gas & Electric, Delaware Power & Light, General Public Utilities Corp. and its subsidiaries: Jersey Central Power & Light, Metropolitan Edison, New Jersey Power & Light, Pennsylvania Electric; Luzerne Electric Division of United Gas Improvement, Pennsylvania Power & Light, Philadelphia Electric, Potomac Electric Power, Public Service Electric & Gas, and Consolidated Edison.

year for the first 10 years and during their estimated useful life of 40 years should burn about 160 million tons of coal.

Most of this coal will be mined within 15 miles of the plant—although some will come from a radius of 40 miles, providing 1,200 new mining jobs. The station itself will employ about 175 persons.

The nearness of coal to Keystone will keep down costs of hauling fuel, following the "mine mouth" concept that it is cheaper to generate near the coal supply and transmit the power than it is to haul coal a long distance to a power station.

Lacking a large water supply, Keystone, situated near the confluence of Crooked and Plum Creeks, will require four huge cooling towers which look like prehistoric silos. The only other similar cooling tower in the country is at Kentucky Power Co.'s Big Sandy plant.

Allegheny Power System will build and operate the power station on the Monongahela River at the State line near Point Marion, a \$57.5 million plant.

When this APS unit goes into operation in 1967 it will consume as much as 1,350,000 tons of coal annually in its early years of operation, and over a 40-year period use 40 million tons. This will become the largest generating unit and plant in the Allegheny Power System, and could possibly be doubled in size if future economic conditions should warrant it. Consolidation Coal Co. will supply fuel for this station.

More than 600 miles of extra high voltage transmission lines stretching from a point near Wheeling, W. Va., across Pennsylvania and on into northern New Jersey and metropolitan New York will tie these two new stations into existing interconnected transmission networks to the west as well as the east and deliver power from these two stations at 500,000 volts alternating current (a.c.) to terminals near Philadelphia, Newark, and New York City.

One 500-kilovolt line will run westward from the new APS station to tie in with the American Electric Power System's Kammer station near Wheeling. Another line will run northeast from the APS station to the new Keystone station. West Penn will build most of these two lines which will total 130 miles and will cost \$17.5 million.

From Keystone station, two 500-kilovolt lines will run eastward. One will terminate near Philadelphia, a 225-mile distance, and the other will connect with northern New Jersey and New York City 300 miles away.

The decision to build the giant power stations and 500-kilovolt lines came after more than 2 years of careful study of tests and research conducted by utilities and electrical equipment manufacturers during the past 15 years.

Penelec's pioneer 2-year experimental operation of a 13-mile section of 500-kilovolt lines provided valuable information in making the decision. By special arrangement with Penelec, West Penner William C. Guyker took part in this research program to help our company gain firsthand knowledge of extra high voltage operating methods and results.

West Penn and other companies involved in this program have already developed facilities to interchange power.

For years, interconnections between companies have existed as a protection against emergencies. But only beginning November 1 was frequency coordinated between the interconnected systems group of which West Penn is a part and the PJM companies to the east.

Last month, APS and GPU companies placed six interconnections in parallel operation, three of which involved West Penn and Penelec:

Near Clarion, 4.25 of a 115-kilovolt transmission line connects West Penn's Burma

NOVEMBER 21, 1962.

substation to Penelec's Piney station; a 138-kilovolt interconnection at our Loyalhanna substation, near Blairsville; and the interconnection at our Shingletown substation.

Potomac Edison System also has three interconnections.

How does the \$350 million project fit into the national and international electric industry pictures?

The Federal Government is making a survey of transmission facilities in the United States. The present administration has indicated an interest in building a coast-to-coast transmission network linking Federal and rural electric cooperative generating facilities. Such a move would cost U.S. taxpayers many hundreds of millions of dollars and entrench the Government deeper in the electric business.

In addition to providing economic advantages for its participating companies, the new project ties together the entire mid-Atlantic region into one large-scale transmission network.

American Electric Power, serving nearly 5½ million persons in seven States including Michigan, Indiana, Ohio, Kentucky, West Virginia, Virginia, and Tennessee, has a 345-kilovolt transmission network.

The direct tie-in between these two systems will provide a major investor-owned transmission grid stretching one-third of the way across our Nation.

Other investor-owned transmission networks—existing or proposed—will eventually make a coast-to-coast grid which should offset the need for Federal construction to duplicate facilities.

For example, studies indicate that it may be desirable to connect the new 500-kilovolt transmission system with that of Virginia Electric & Power Co. now under construction.

Internationally, Russia is the United States' closest competitor in electric generation and transmission.

Russia pushed ahead fast in developing extra high voltage because of its need to carry power over vast, undeveloped areas of land.

However, U.S. capability is 199.9 million kilowatts, or three times that of Russia, and the total number of miles of transmission lines in the United States far exceeds Russia's.

Furthermore, the announced extra-high-voltage project in which West Penn is participating will strengthen our Nation's position in extra-high-voltage transmission.

President Streuby L. Drumm has cited extensive engineering and economic studies of the past 2 years as supporting the technical and financial feasibility of the overall \$350 million project.

He said, "although this program is one of the biggest single projects ever advanced by the electric industry, it is only a small part of future expansion plans.

"The Nation's investor-owned utilities will invest a total of \$42 billion in plant and equipment during the current decade and another \$80 billion in the 1970's. This continuing investment is one reason Americans are so far ahead of the rest of the world in availability and use of electric energy."

The following correspondence is worthy of reprint:

SECRETARY OF INTERIOR PRAISES CONSTRUCTION PROGRAM

Secretary of Interior Stewart L. Udall lauded West Penn and the 17 other investor-owned electric utilities for their bold and imaginative plan to link 3 mid-Atlantic power systems at a cost of \$350 million, and called it American private enterprise at its best. Here is his complete letter, and President Streuby L. Drumm's answer to it:

Mr. S. L. DRUMM,
President, West Penn Power Co.,
Cabin Hill, Greensburg, Pa.

DEAR MR. DRUMM: I read the press accounts yesterday of the bold and imaginative plan of your company, and 17 other private utility companies, to further integrate and coordinate your systems. Having recently seen some of the pioneering work which the Soviets are doing in extra high voltage transmission power, it was heartening to me to note your plan to activate a long-distance line as part of your overall program to keep the cost of electric power at the lowest possible level.

It is my strong feeling that a plan such as the one you have just announced will do much to keep American energy competitive and to help our Nation meet the challenge of efficiency which President Kennedy has stressed so many times as a major national goal.

I should, therefore, like to commend you and your associates in the highest terms for the scope of your plans. To me this is American private enterprise at its best.

Sincerely,

STEWART L. UDALL,
Secretary of the Interior.

NOVEMBER 28, 1962.

HON. STEWART L. UDALL,
Secretary of the Interior, U.S. Department of
the Interior, Washington, D.C.

DEAR MR. UDALL: It was considerate of you to share with us your reaction to the recently announced \$350 million, 18-company generation and transmission project.

We too, of course, are enthusiastic over the contribution this project will make in holding the line on the cost of electrical energy and meeting the ever-growing energy needs of America.

We are particularly pleased at your reference to this as a contribution of private enterprise.

Sincerely,

S. L. DRUMM.

The Shame of the U.N.

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mrs. ST. GEORGE. Mr. Speaker, the following editorial, written by a friend and constituent of mine, Mr. Raymond J. Dulye, points up once more the sentiment among so many of our people.

The average citizen is ashamed and appalled at what has taken place in Katanga. He is ashamed and appalled when he realizes that all this has been paid for largely with his hard-earned tax dollars.

Yes, Mr. Speaker, many of us agree with Mr. Dulye that the United Nations has become our Svengali, and a dangerous and savage one at that.

Under unanimous consent I insert the editorial in the Appendix of the RECORD.

[From the Wolden (N.Y.) Citizen Herald,
Jan. 17, 1963]

THE SHAME OF THE U.N.

Through the 18 years of our starry-eyed involvement with the global fantasy called

the United Nations, both the actual injury and the potential peril of our misguided altruism have become increasingly apparent and painful.

We emerged from World War II, the savior of the free world and we entered the sanctified company of the United Nations as the strongest of all. But what has happened to us since that day passeth all understanding.

Undertaking a "peace action" in Korea we became involved in a war in which our armies, joined by token forces from a few other U.N. members, were under U.N. command; a war we were not allowed to win, a war in which 125,000 Americans died in vain.

In 1956, after years of encouragement by our radio propagandists, Hungarian patriots rose and beat their Red slavemasters with fists and stones and clubs and a few small arms—but we lacked the courage to help and allowed them to be massacred by hordes of Soviet and Red Chinese troops. We averted our eyes while Mao's forces pillaged and enslaved Tibet, while Nehru took the peaceful, industrious Portuguese enclave of Goa, and a Communist stooge seized Portuguese Angola.

But now we have been stirred to action in airlifting U.S. arms to the U.N. "peace force" in its ruthless destruction of the hopes and resistance of pro-Western Katanga and its president, or once-president, Moise Tshombe. Our presence in Katanga is illegal by the law of this land and by the law of the United Nations, yet we're there. As what, international brigades? Strange we could not lift a finger, not point a gun or a plane against the Cuban bandit, Castro, a grave menace on our very doorstep. But against the friendly Katangese, yes!

The U.N., it seems, is our Svengali. We have been hypnotized, rendered incapable of acting in our own interest and traditions. We have even given the U.N. a blueprint for the three-stage takeover of the U.S. Army, Navy and Air Force.

This same U.N. is considering a grant of \$2.1 million to Castro, of which we would supply nearly half a million. Our U.N. Ambassador, Adlai Stevenson is opposing it, yet he admits that if the U.N. bosses approve the plan there isn't much that can be done about it.

Isn't there? If we have any spirit or pride left, we can do what we should have done before Korea. We can get out before it's utterly too late.

Congress Must Guard Authority

EXTENSION OF REMARKS

OF

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. ANDERSON. Mr. Speaker, once again we are witnessing the recurrent phenomenon of Congress being roundly condemned by a plethora of liberal columnists and authors. Their vision is quite myopic when they glance in the direction of the executive branch and its legions of disciplined \$100-a-plate bon vivants. But when they take a look at Congress they see visions of oligarchy, autocracy, and a host of other dangerous symptoms of chronic constitutional malaise. Recently the Nation was advised by Mr. Kennedy's friendly biographer, Prof. James MacGregor Burns, that:

The basic thing wrong with our political system is that our Government was set up to be a divided government with internal checks at a time when we did not need a strong National Government. Today it is imperative that we have a strong National Government, but we still have our old constitutional checks. This is the basic problem.

Implicit in these intemperate remarks is the vengeful frustration of the liberals who view the Congress as merely another stumbling block to the onward march of executive power. They knowingly avow that we have simply outgrown the Constitution of an 18th century agrarian society with its checks and balances and silly notions of three independent and coordinate branches of National Government. All important legislation must now come from the Chief Executive in a series of "must" bills. Should the men in the Congress tarry too long in determining the "rolling national consensus" one of those terms of which New Frontiersmen are so everlastingly fond, the remedy becomes clear. They must be labeled as "obstructionists" and drummed out of public life.

How the liberals used to fume about the father image of former President Eisenhower. Today these same liberals are carefully creating the image of the man in the White House as the sole repository of national purpose and the wisdom to achieve our national goals. What a tragedy that they display so little faith in the inherent genius of the Founding Fathers when they provided for a separation of powers.

The last thing they want is a strong Congress; rather they demand a subservient Congress. If they and others of so-called liberal persuasion have their way, "of the people, by the people, and for the people" will all too soon become "of the President, by the President, for the President." Then the management of the news which is now the policy of the present administration will certainly preclude the kind of comment about the Chief Executive which they are now so free to make about the Congress. We do not need a man on horseback; we have got a man in the White House. This, sadly enough, is the bankrupt philosophy of the liberals whose impatience with the legislative process is now plain to behold.

It is against this background and within this context of current opinion that I was pleased to read a recent editorial by Rex Karney, editor of the Rockford Register-Republic entitled, "Congress Must Guard Authority." It points out that we, as Members of Congress, have a responsibility to lay aside petty intramural bickering and join in a common defense against the assault that is being made against the integrity of our National Legislature as a coequal and coordinate branch of the Federal Government. His warning against the inevitable results of further encroachment by the executive and judicial branches of Government should command our attention as we proceed into this first session of the 88th Congress.

Mr. Speaker, Mr. Karney's excellent editorial follows:

POWER DELEGATED OR NOT USED IS POWER LOST—CONGRESS MUST GUARD AUTHORITY

(By Rex Karney)

Unless U.S. Senators and Representatives stop their squabbling—Republicans against Democrats and liberals versus conservatives—they will find that they have lost another more important battle. Unless our national lawmakers quit fighting among themselves, they will soon discover that while their attention was diverted to relatively minor issues, they have been relegated to a position of subservience to the judicial and executive branches of our National Government.

Under the U.S. Constitution, the Nation is given three separate but distinct branches of Government.

All lawmaking power is given to the Congress, which consists of the Senate and House of Representatives. The Executive power is given to the President. And the power to interpret the Nation's laws as written by Congress rests with the Supreme Court.

But in the past three decades the lines of demarcation between the three branches of Government have become blurred. Presidents have successively reached out to steal authority from the Congress, or to nullify its will as expressed by laws. And the Supreme Court has likewise edged over into the area of legislation, torturing the English language to wring from Federal statutes meanings that never were intended.

This week the White House succeeded in convincing a sufficient number of Representatives that the House Rules Committee should number 15 members, rather than 12. As President Kennedy said in one of his recent television shows, he felt that the committee should number 15 rather than a dozen so that appointment of additional liberals would make it easier for him to get his program through Congress.

That may or may not be the case. Time will tell. But the fact of the matter is that the President succeeded in dictating to Congress the proper size of one of its committees.

Congress in the majority of the years since 1932 has been controlled by members of the Democratic Party. Senators and Representatives alike have drifted into a position where it is accepted procedure for lawmakers to wait for the President to come forth with his legislative program. The success or failure of most congressional sessions now seems to be calculated on the basis of what percentage of the President's program has been written into law.

This is not to say that the President should have no right to ask for or recommend certain legislation. He has that right, indeed. But the congressional tendency has been to await orders, to surrender the initiative to the Chief Executive, to bow to his will. Only occasionally, when White House pressure becomes too extreme, does Congress balk. Mr. Roosevelt ran into trouble when he tried to pack the Supreme Court. Mr. Kennedy ran into resistance last year when his lieutenants got too heavyhanded.

The extent to which the executive department and Government bureaus nullify the clear intent of Congress is too seldom realized, even by Congressmen themselves.

Administrative agencies such as the Labor Board, the Federal Trade Commission, Interstate Commerce Commission, and the Federal Communications Commission all make decisions and issue orders that have the full force and effect of law. Many of these orders and decisions would never have a chance of passage if they had to run the gauntlet of legislative debate. The Justice Department and Internal Revenue Service, for example, apparently cooperated in the decision to make individual and corporate contributions toward ransom payments to Fidel Castro tax deductible. Does anyone think such a proposal would pass if it were put

to the test of a rollcall vote in Congress? Right now the Kennedy administration is using Government contracts as a bludgeon to force aerospace companies to deliver all their employees into labor unions. If such a program required congressional sanction, it couldn't be done.

The other day Mr. Kennedy again crossed swords with Congress when he refused to allow unspent foreign aid funds to revert to the Treasury, or to be spent only with the consent of congressional committees. It will be interesting to see whether Congress will take this lying down, or whether it will reassert its control over the public purse.

Congress has authority, but authority not used, or delegated elsewhere, is authority that is lost. Unless Congressmen, regardless of party, soon reassert their authority, they will find they have lost it. Congressmen always will quarrel among themselves, but they should be united in a stand against encroachments by the executive and judicial branches of our Government.

"And Some Men Yield to Temptation"

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. WIDNALL. Mr. Speaker, the happy sight of the returned Cuban prisoners in recent weeks should not obscure the reasons for their being in Cuban jails—or the methods by which ransom was raised for their release. While the Bay of Pigs fiasco can be referred to as past history from which a lesson must be learned, the half-hidden moves of the Kennedy administration in negotiating the return and raising the ransom, by their very obscurity, are neither history nor encouraging for the future.

It, of course, has been no secret that the President felt a need to do something for these men. We also know that the Justice Department, and the President's brother as Attorney General, participated in the operation to redeem the Cuban invaders. Ostensibly, the manufacturers and other businessmen who contributed supplies or money to the ransom shipments did so voluntarily. No doubt, some did, or would have, had they been approached by private individuals.

A very public individual, however, did the approaching, and the persuading; namely, the President's brother. Whatever the value of the end to be sought, the fact remains that the methods used, and the public office involved, are highly questionable. It is not surprising to me, therefore, that the following editorial appeared in the January 11, 1963, edition of the American Metal Market, and this editorial leaves no doubt that business as well as the American public lose confidence in any administration where even the suspicion occurs of the use of a public office in one sphere to aid the administration in another.

Over 2 years ago, the then Senator Kennedy, in a speech at Wittenberg College, Springfield, Ohio, on October 17, 1960, outlined an eight-point policy

statement he hoped would govern officials of his administration should he be elected. The second point stated:

Secondly, no officer or employee shall engage in any business transaction with . . . any enterprise or person . . . who is subject to regulation, investigation or litigation under the jurisdiction of that (the employee or officer's) unit. To be above criminality is not enough; I want my appointees, like Caesar's wife, to be above suspicion.

As the editorial states, there is sufficient uncertainty about the application of antitrust laws and other regulatory measures now without more being added. Perhaps we can only return to Mr. Kennedy's campaign speech for an answer:

But experience has shown that such promises are not enough. For ours is a government of men, not promises—and some men yield to temptation . . ."

The editorial follows:

MISCARRIAGE AT JUSTICE

However one may extol Americans for their humanitarianism in gaining the release of the Bay of Pigs invaders from Castro prisons, the details of the exchange now coming to light are posing questions more provocative than the ransom itself. They center not so much on Castro's extracting of a tribute of medicine, food and other supplies as they do on the manner in which the money was raised for freeing the prisoners.

The salient fact emerging from the Cuban prisoner affair is that the Attorney General, Robert Kennedy, played a leading role in securing the more than \$50 million worth of medicine and food and nearly \$3 million in cash demanded by Castro. Most of these contributions were made by American industry, chiefly pharmaceutical and food concerns, although the last-minute cash contributions may have been raised outside of these industries. In all of the fundraising, the Kennedy administration exerted strong pressure on industrialists to contribute. Spearheading the effort was the Attorney General.

Considering the often bewildering and multifarious array of antitrust cases and other litigation pending by the Justice Department against American business, it is laudatory, but puzzling, that the Attorney General also was able to find so much time to promote the Cuban rescue.

Be that as it may. The real damage is that the head of the Justice Department has gravely prejudiced the agency's interests. By his action, he has established an intimate connection between law enforcement—and particularly any possible lack of it—and those companies who contributed to pulling the Kennedy Irons out of the Cuban-prisoner fire.

If anyone does not sense the conflict of interest involved here, let him consider a possible parallel in which a police chief seeks financial backing for a business venture from a leading citizen whom he someday may have occasion to arrest.

Indeed, a number of the pharmaceutical companies who donated money at the Attorney General's behest have been under fire from Washington. More disturbing was the report last week by a Minneapolis newspaper that help for the Cuban prisoners came from a large corporation that is currently facing a Government lawsuit. The company reportedly received a call from the Justice Department asking it to supply specific items plus an amount of cash. A spokesman for the company is reported to have said: "We knew we were being blackjacked, but there was nothing we could do about it."

Uncertainty about the application of U.S. antitrust laws and other business regulations is already a serious matter. It is well known that the Justice Department exercises considerable discretion in the selection of cases it will pursue in the courts. It is intolerable, therefore, to permit the creation of suspicion that the Justice Department's pursuit of certain litigation can be influenced by business cooperation with the administration in other matters. Yet the Attorney General of the United States has succeeded in arousing such suspicion.

Thomas Kennedy

EXTENSION OF REMARKS

OF

HON. THOMAS E. MORGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. MORGAN. Mr. Speaker, it was with regret that I learned of the death last Saturday of Thomas Kennedy, president of the United Mine Workers of America. He was born and raised in the State of Pennsylvania. He died at his home in Hazleton at the age of 75. He had the respect and love of everybody in his native State.

Tom Kennedy was a statesmanlike leader for organized labor. He worked and fought to better the working conditions for the miners.

He had many fine and great qualities including personal modesty. The labor movement has indeed lost a great friend and champion in his passing.

Under leave to extend my remarks, I wish to include the following editorial from the Evening Standard, Uniontown, Pa:

THOMAS KENNEDY

Throughout most of his life, Thomas Kennedy, president of the United Mine Workers of America, who died on Saturday at the age of 75 years, lived in the shadow of John L. Lewis, the volatile retired leader of the miners.

Mr. Kennedy rose from a 4-cent-an-hour slate picker in the anthracite region of eastern Pennsylvania to the international president of the UMWA.

During the 4-year term of Pennsylvania Gov. George Earle in 1935-39, Mr. Kennedy was Lieutenant Governor of the State. He was defeated in a bid for the Democratic gubernatorial nomination in 1938.

When Mr. Kennedy became the UMWA secretary-treasurer he was the principal negotiator for the anthracite districts in wage negotiations.

He was a balancing influence on the fiery John L. Lewis during the many contract battles with the coal operators. Lewis roared, Kennedy was reserved. But they worked together splendidly as a team through the many years of their close association. When Lewis retired in 1960, Kennedy succeeded him.

Mr. Kennedy was deeply concerned with the workingman. He labored to have better working conditions, a fair day's pay for a day's work.

The labor movement lost a great champion in the death of Thomas Kennedy.

Chicago's Northwest Side Keeps Pace With Modern Living, Builds and Remodels

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. PUCINSKI. Mr. Speaker, the Jefferson Park (Ill.) Press, which is published in my district by Mrs. Morton Steinman, ran an excellent review of activities in my district during 1962.

Since my congressional district is certainly representative of the entire Nation, I should like to include this excellent review, prepared by Miss Sally Swanson, in the Record today.

Miss Swanson has done an outstanding job of writing an interesting chapter about one little corner of our great Nation—its people, its problems, and its progress.

The Jefferson Park Press and Miss Swanson deserve the highest commendation for this fine journalistic accomplishment.

The article follows:

REVIEW HEADLINES OF ENDED YEAR—1962 WAS TIME OF CHANGE HERE—NORTHWEST SIDE KEEPS PACE WITH MODERN LIVING, BUILDS AND REMODELS—AREA PROTESTS NOISE OF JET ENGINES; TALKS ABOUT RELIEVING TRAFFIC JAMS

(By Sally Swanson)

What was the Northwest Side like in 1962? It was, above all, changing—building new and remodeling old to keep pace with a mode of life influx.

It was complaining about the roar of jet engines.

It was arguing how to relieve congested patterns of transportation.

It was protesting high taxes.

And it was intensely interested in politics.

A review of press papers' headlines for the year just ended tells of merchants giving Jefferson Park a clean, young face—their confident reply to modern shopping centers proliferating near new expressways.

It tells how individuals' grumbings about noise from jetliners were translated into concerted areawide protests through community clubs and elected officials.

Recalled too, are objections to recommendations that Chicago Transit Authority rail service be installed in the median strip of the northwest expressway—objections voiced mainly by the Chicago & North Western Railway, which said the Chicago Transit Authority service, necessitating a public subsidy, would compete unfairly with railroad commuter service.

And 1962 headlines reported a flood of protest votes from Northwest Side wards in April, playing an important part in the defeat of \$66 million public improvement bonds, and they recall bitterly fought political campaigns that brought out voters in record numbers to the November election.

FALLOUT SHELTER APATHY ENDS

Through three-fourths of 1962, efforts of civil defense officials to stir up interest in fallout shelters met with uniform indifference.

Northwest Siders received with a shrug news that the area was being surveyed as

part of a public fallout shelter study to determine where 50 or more persons could be accommodated in the event of enemy attack.

And only passing interest was given a cut-away model of a shelter when it was displayed here last spring by Edwin P. Fifielski, 4758 Milwaukee, who as national commander of AMVETS toured the country with the shelter display.

Public apathy ended abruptly in October when the world tipped on the brink of nuclear war after a United States-Russia flare-up over Cuba.

Civil defense officials, who overnight became popular, reported thousands of calls asking locations of public shelters.

The bald truth was that no public shelters existed and private shelters were rare.

Officials, however, promised that the locations would be announced soon, and in November designated 11 Northwest Side schools as community shelters.

TRANSPORTATION CREATES BIGGEST PROBLEMS

People going places fast and ever faster—by plane, train, and automobile—gave the community its biggest headaches.

When in January, streamlined twin terminal buildings replaced O'Hare Field's 5-year-old temporary terminal, public relations men proclaimed the jet age had in truth come to Chicago. But this was no news to Northwest Siders who knew too well, and already were protesting the roar of jet engines disrupting the quiet of formerly peaceful neighborhoods.

Brunt of the complaints was borne largely by the area's representative in Congress, Representative ROMAN PUCINSKI, Democrat, 11th District.

Aroused individuals joined local civic groups in assembling data to present at a congressional hearing scheduled in Chicago to investigate the O'Hare noise problem.

When in March the hearing was postponed, about 20 persons, representing scores of community clubs, attended a Sunday meeting called by Congressman PUCINSKI to thrash out O'Hare problems with him and FAA officials.

Perhaps one of the most vocal of the protesting clubs was the Bryn Mawr-Higgins Community Association, which circulated petitions last summer asking that the east-west runway at O'Hare be extended west instead of east, and that a south-west runway be installed.

A congressional hearing on O'Hare noise finally was held in July in Washington, D.C.

"What started out a few years ago as a minor annoyance has now become a problem of such proportion as to override other municipal problems in our area," 41st Ward Alderman Bell, one of those testifying, told the committee.

In evaluating the hearing, Congressman PUCINSKI listed as two immediate results:

Disclosure that at least one major airline planned to institute underwing markings.

Announcement by the FAA that it would start maintaining running records on frequency of use of the various runways.

In the autumn Northwest Siders had a chance to voice their grievances to the aviation committee of the city council, which subsequently adopted a resolution by Alderman Bell recommending congressional legislation that would impose on the FAA a responsibility to effectuate and regulate a noise abatement program.

By yearend, complaints of jet noise had decreased considerably although there were those who claimed the disturbance was unchanged.

Relief in 1963 has been predicted by Congressman PUCINSKI who said that \$3,972,693 allocated by the FAA for improvements at O'Hare next year would help reduce the noise.

Largest expenditure, according to PUCINSKI, is for extending the shorter of two northwest-southeast runways, 1,900 feet to the northwest.

PLAN NEW EXPRESSWAY IN CICERO AVENUE AREA

Plans for a new expressway that would connect Northwest-Edens Expressways with Congress and Southwest Expressways were announced in March by the Illinois Highway Department.

To cost about \$150 million the new expressway would be in the vicinity of Cicero Avenue, ending near Midway Airport.

The Chicago Motor Club endorsed the expressway in general, but insisted it should have connections also with the Skyway and South Expressways.

Immediately the club began pushing plans for the crosstown links with all Chicago expressways in a series of meetings of neighborhood clubs throughout the city.

Northwest Federation of Improvement Clubs approved the crosstown expressway with connections to all Chicago expressways, but added that it believed crosstown should be the final Chicago expressway and that hereafter concentration should be on rapid transit service.

TWO SURVEYS RECOMMEND CHICAGO TRANSIT AUTHORITY RAILS IN EXPRESSWAY

More ammunition was collected by the Chicago Transit Authority for its controversy of 2 years' standing with the Chicago & North Western Railway, which objected to proposed Chicago Transit Authority rapid transit in the Northwest Expressway median strip.

Chicago Transit Authority rails in the expressway were recommended in the third part of the Chicago area transportation study, a research project begun in 1955 to determine transportation needs of the Chicago area through 1980.

And in December an 18-month survey financed by the Chicago Transit Authority and Chicago & North Western Railway reported that Chicago Transit Authority expressway rail service was the most feasible way of easing the Northwest Side's traffic congestion problems.

The Chicago Transit Authority's real problem is \$39 million needed to complete the road beds and rails for expressway extension of the Logan Square elevated service.

Prospects for the \$39 million brightened when President Kennedy urged Congress to enact Federal aid to urban transportation, but dimmed again when Senate failed to pass the legislation, which would have provided matching grants to metropolitan areas to build up their mass transit systems.

However, Congressman ROMAN PUCINSKI, Democrat, 11th District, a cosponsor of the bill in the House of Representatives, said he was hopeful that the legislation would pass during the upcoming congressional session.

YEAR 1962 MARKED BY AROUSED INTEREST IN POLITICS

There was a lively interest in politics, unusual for an off-year election traditionally marked by voter apathy.

The Northwest Side led opposition to \$66 million city bonds for public improvements—expected to win easily—which were rejected soundly in April by voters who flocked to the polls in largest numbers recorded at a primary for 20 years.

Locally, party primary interest centered around the Republican nominations for 14th district State representative candidates, where a determined Norwood Park businessman, Hellmut Stolle, 56, of 6111 Northwest Highway, had pitted himself against the party-endorsed candidates for a berth on the GOP ticket.

When primary smoke had cleared, Stolle held an uneasy 52½-vote margin; a recount was demanded; Stolle won again and was slated for the Republican ballot along with incumbent State Representative Oscar Hansen, 66, of 4507 North Long, who won handily in the primary.

In another contest, State Representative Walter P. Hoffelder, 62, of 5641 North Mango, who carried the party label, had little difficulty putting down opposition for the GOP 29th District State senator nomination.

NORTHWEST SIDE A REPUBLICAN STRONGHOLD IN NOVEMBER

The far Northwest Side was a Republican bulwark in the November general election, handing GOP State and county candidates their strongest Chicago support.

The surge of Republican votes was not strong enough, however, to carry into office the GOP candidate for the 11th District congressional seat, Henry Hyde, 38, of 6841 North Tonty.

The contest between Hyde, a Loop attorney going after his first political office, and the incumbent Congressman, ROMAN PUCINSKI, 43, of 2315 North Kostner, was one of the most fiercely fought in recent Northwest Side political history.

During the early hours of November 6, election night, PUCINSKI led by slim pluralities and his job seemed threatened until about 11 p.m., when he moved virtually out of danger with a 9,000 plurality. The Congressman was reelected to a third term by a respectable 12,300 plurality.

The Democratic 29th District State Senator James Strunk, 42, 3459 North Pontiac, lost his post to Republican Hoffelder, who polled an early and overwhelming vote majority.

Republican Hansen and Stolle and a Democrat, Chester P. Majewski, 34, of 3306 Oketo, an attorney and political newcomer, were elected State representatives from the Northwest Side's 14th District.

In the 13th District, which includes Mayfair, the three incumbent assemblymen were reelected: Elroy Sandquist, Republican, 62; James Loukas, 45, and Nathan Kaplan, Democrat, 53.

As 1962 drew to a close, candidates were lining up for another contest, the February aldermanic elections, the first since ward lines were redrawn reducing the 41st ward and creating a new 45th ward on the Northwest Side.

A Citizen's Protest Against the Invasion and Occupation of Mississippi by Federal Troops

EXTENSION OF REMARKS OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. WILLIAMS. Mr. Speaker, the people of Mississippi who know the true story of the sequence of events which have occurred at "Ole Miss" are justifiably aroused and incensed. As a result, hundreds of letters protesting the Federal Government's actions there have poured into my office. Typical of these is one which I received recently from Mr. N. S. Brown, of Jackson. Under leave to extend my remarks in the Appendix of the RECORD, I include the following copy of Mr. Brown's letter to

me and commend it to the attention of the House:

JACKSON, MISS., January 17, 1963.

Congressman JOHN BELL WILLIAMS,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN WILLIAMS: Now that the 88th Congress is underway, the administration and its New Frontier spenders will be manipulating every conceivable device to wrangle the approval of an exorbitant budget for more spending toward the destruction of our State and National sovereignty. But before Congress gives them the green light, as it has done in the past, it would be well for them to invite their constituents, the taxpayers, to inspect some of the worthy (?) Federal projects their hard-earned money is financing.

It would not be necessary for the State Department to cable foreign countries for reservations and entertainment in luxurious resorts, nor to supply funds, Government planes, and expensive side trips to Switzerland for this inspection.

The most unique Federal project in all the annals of history can be seen right here in "occupied Mississippi," conducted under the direct orders of John Kennedy, President of the United States, and his brother, Robert Kennedy, the Attorney General. An average of more than \$1 million per month has been spent on this project for 4 consecutive months.

The supposed purpose of this fantastic Government-financed deal—which has practically wrecked the University of Mississippi and embittered and destroyed the morale of 5,000 white students—was to force the undesired person of an unqualified Negro male, who was selected in New York City by the NAACP, into this all-white university.

Air Force psychiatrists who examined this Negro, James Meredith, stated that he had "a condition described as compulsive obsessive neurosis," and that "at times, he starts a crusade to get existing rules and regulations changed." The accuracy of this diagnosis has twice been proven. Once when he demanded that the Army change their guards, and again a few days ago when he called a press conference and announced that unless the policy of the university was changed he would leave.

Immediately following this statement, Robert Kennedy requested that the 5,000 "Ole Miss" students and faculty adjust to this Negro's demands.

While posing as a student, Meredith attends NAACP meetings in Memphis, Chicago, New York, and elsewhere, and may be seen driving along the highways in his big black Cadillac (one of two cars he owns), preceded and followed by a caravan of U.S. marshals. These marshals act as companions and serve him in his domicile and on campus. Even though he owns two cars, Government planes and cars have been furnished for his transportation.

When the Government spends more than \$4 million on 1 Negro student without spending a like amount on each of the 5,000 white students, it is guilty of practicing racial discrimination in the rankest form.

Bloodshed, death, and destruction reigned on the "Ole Miss" campus for 18 terrible hours in the wake of the Kennedy invasion and occupation by more than 30,000 U.S. marshals, Federal prison guards, members of the Army, Air Force, and Marine Corps. (Enough force to have wiped Communist Cuba off the map.) But, this action was not against communism. It was against Mississippi in fulfillment of Communists and Communist-front demands wired to the President.

"Oh, no," you say, "this couldn't happen here. This is America. You have had a nightmare. You are not in Russia. Wake up."

No, I'm not asleep, although it is a nightmare. A horrible one. But, I'm wide awake,

and I know I'm not in Russia. I saw it happen here. Just as it did in Russia, Siberia, Poland, and Hungary. I saw caissons rolling in, miles of them, and multiplied thousands of soldiers, bayonets, guns, tanks, gas, and ammunition. Mississippi citizens were shot in the back. Students who loved their university and their freedom were shot, beaten with rifle butts, cursed, and abused on their own erstwhile peaceful campus by brutal Federal forces. Why? Because Communists and Communist-front groups demanded it and the Kennedy administration produced it.

The conscienceless atrocities the Kennedys have inflicted upon the bodies, minds, hearts, and souls of Mississippians will never be healed, nor can they ever be erased by the steady grind of the sands of time. They are too deep, too bitter, and too damnable to forget.

However, I believe the tragedy we have suffered, gory as it has been, will in the end prove a blessing in disguise since it is serving to awaken the Nation to the fact that our Government is in the hands of tyrants and must be wrested from their despotic grasp.

It is my firm belief that this occupation of Mississippi was planned as the first step toward the armed takeover of the South for a Communist Soviet as outlined in Stalin's plan to use the Negro to incite revolution and bring about the Communist enslavement of this Nation. The presence of hundreds of troops unlawfully stationed on Mississippi soil and the building of barracks adds strength to this belief which is shared by hundreds of our citizens.

We urge you and our Congress to initiate legislation to protect U.S. citizens from Federal Government atrocities.

Sincerely,

N. S. BROWN.

The Challenge We Face

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. PUCINSKI. Mr. Speaker, the Chicago Sun-Times recently carried an excellent editorial on the tremendous problem confronting our Nation with the steadily increasing rate of American children who fail to complete at least a high school education.

It is my earnest hope that my colleagues will ponder the wisdom of this editorial which, while it deals with the problem in Chicago, enunciates principles which can be applied to any community throughout the United States. The editorial follows:

THE CHALLENGE WE FACE

This past September 26,024 students entered high school in Chicago. Of this number fully 35 percent will have left school before their classmates graduate.

These are the dropouts. They total 1,000 every month of the school year in Chicago. They pose a serious problem to the Nation as well as Chicago; in this country 1 million students drop out of school each year.

Why do they drop out?

It is a difficult problem for the educator and the sociologist to determine, but this much is known: the climate for the dropout is established in the home before and during the early school years. Too many families fail to appreciate the technical age we live

in. Too many fathers who went to work at an early age and managed to survive economically because of the war years, seniority, strong unions, or whatever, take the attitude toward a son who is experiencing difficulty in school—"I had to work and it did not hurt me. I get by. What is wrong with my kid quitting school and getting a job?"

Educators who study this problem know that the seed of disassociation with school is planted early in life. Herbert Lehmann, director of the cooperative work study program of the Chicago public schools, says that a dropout is conditioned to leave school before he reaches the sixth or seventh grade. If the student has any trouble in learning in the very early grades he encounters real difficulty in the middle grades where comprehension is required and the decision to drop out of school begins to form. By the time the student reaches high school, sometimes before, he drops out.

The employment prospects facing the dropout are not pleasant nor are they rewarding. More and more business concerns are demanding a high school diploma as a requisite for employment. As a general rule management simply does not want a dropout. Most craft unions require a high school diploma before they will accept a candidate for their apprentice programs.

The job market for the unskilled worker is poor. In 1950, 5.6 percent of the employed people in Illinois were classified as unskilled. Ten years later, in 1960, with far more jobs available and filled, the percentage of unskilled workers who were employed had shrunk by almost one-fourth—to 4.3 percent.

In April of 1960, 12.2 percent of the unemployed in Illinois were classified as unskilled, and this percentage shows every sign of increasing as time goes on.

When the industrial revolution mechanized the farms, the great pool of farm labor, relatively unskilled, disappeared. Today the Nation has no measurable unskilled farm labor force.

As the electronic age progresses it is very likely that within a decade the demand for any laborer without technical skills will disappear. Even now most employers demand at least the basic skills of comprehensive reading and demonstrated ability to be trained. The dropout too often quits school because he has trouble reading, and his reading troubles gravely affect his ability to comprehend and be trained.

Walter E. Parker, superintendent of the Illinois State Employment Service, says:

"From my experience of 30 years in this field I will say that the high school dropout is going to be much worse off than his father was in the unskilled groups. The market for the unskilled shrinks daily. Our hard-core unemployment problem is the uneducated. It is really difficult to get jobs for these people."

Herbert Lehmann underlines this by saying: "Once you could put a dropout kid to work in a laundry. Now the laundries are automated and they want someone with some demonstrated intelligence to work in them."

Chicago has started a new program for seventh and eighth grade students called upper grade centers. These are, in effect, junior high schools where the elementary student is given a running start toward high school by being introduced to laboratory classes, shop courses, and increased group activity. These new centers attempt to lessen the sharp cleavage between the elementary and the high school.

The real and necessary area for work toward the elimination or lessening of the dropout is in the first four grades of elementary schooling. Here is the proving ground of education. Prof. Benjamin S. Bloom, professor of education at the University of Chicago says, commenting on the efforts made to save the dropout while he is still in high school or after he is out of school:

"It is apparent to us that these programs begin too late. The help given a youngster comes at a time when his capacity to learn has stabilized. How much more effective an effort it would be if put into the first three grades rather than at the end of his public schooling."

The very fact that 1,000 youngsters drop out of Chicago schools every month is a sobering and shocking statistic. In an age where even a basic high school education is going to be a minimum requirement for a productive earning capacity the Nation is losing 1 million youngsters a year from its schools.

Some of these will find employment. Some will be fortunate enough to be fairly steadily employed during their working lives.

Some—too many—will become welfare recipients.

The evidence is clear. The demand for college graduates for 1963 employment is greater than it was in 1962. Coincident with the demand for college graduates is a demand for people who can be trained as technicians. Soon there will be no place in our society for the uneducated, no place for those who cannot intelligently read, comprehend, and be trained.

The place to begin corrections is in the lower grades. Perhaps it is time to recognize that the teacher who assumes the awesome responsibility of first opening the minds of little children to the wonders of education—and its necessity—should be most carefully chosen and amply rewarded.

If parents would realize that the future of their children truly begins in the home and educators would realize that the child's course is set in the first four grades of elementary schooling a great step forward will have been taken.

Military Threat From Cuba Undiminished

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. ROGERS of Florida. Mr. Speaker, events in Cuba continue to threaten the peace and security of the Western Hemisphere. From almost every source we hear of continuing Russian support to the Castro government, resulting in an ever-increasing arms buildup. While events of this past fall certainly strengthened the U.S. position in all of Latin America, we still have not secured onsite inspections in Cuba.

Mrs. Jeanne S. Perry, writing in the Palm Beach Post-Times, clearly outlines the continuing threat facing this Nation. Since last summer she has traveled extensively in Latin America, and from her contacts there and with Cuban exile sources she is able to report documented facts clearly and concisely. I include Mrs. Perry's article of January 6, 1962, in the RECORD, as follows:

MILITARY THREAT FROM CUBA UNDIMINISHED

(By Jeanne S. Perry)

Cuban Minister of Industries, Che Guevara, clearly outlined future Communist plans in a recent interview with the Daily Worker.

Said Guevara, "Armed struggle against American imperialism is the only way to solve the problems confronting Latin America. To this end, the Communist regime in Cuba would continue to foster communism and support armed intervention in all of Latin America."

Guevara is a man well known to do exactly

what he says he will do. His past statements, followed by his subsequent actions bear this out. The Soviets are giving impetus to Che's plans for Latin America by continuing to bring arms into Cuba for the purpose of equipping guerrilla movements. Since the naval blockade was lifted on November 20, more than 30 Communist bloc ships have arrived in Cuba and disgorged their cargoes of arms. Twenty ships from countries outside the Soviet bloc have also contributed their share of weapons during the same period.

Four crack battalions of armored shock troops are still on the island. They are supported by more than 12,000 troops in charge of radar, the air force, heavy artillery, and missiles.

Four Sundays ago, we said we would rather believe Cuban underground information when released than all the administration's denials of this information. Now, we have one more example that shows our faith has not been misplaced. Reports from Washington now confirm underground declarations that 20,000 Russian troops are in Cuba. This information was reported by the underground and published here last September.

In spite of all this, Secretary of State Dean Rusk saw fit to dismiss Guevara's statement as "just talk." One has only to review events just prior to Rusk's comment to conclude that Guevara cannot be dismissed as "just talking." Cuban Communists actively aided and abetted—

1. A determined effort to overthrow the legally constituted government of President Ydigoras Fuentes in Guatemala.

2. Five Cuban Reds were picked up in New York City before they were able to carry out their plans to sabotage department stores there and oil refineries in New Jersey.

3. Communists in Venezuela paralyzed one-sixth of that country's oil production.

Was this "just talk," Mr. Secretary? On December 10 Dean Rusk told the Washington press that the United States could not accept the continued presence of Soviet troops in Cuba as a "normal condition." This is all very well and good. But, are we then to accept communism in Cuba "as a normal condition"?

We might also add that everyone of our varied underground sources continues to report the presence of missiles and troops in Cuba. Furthermore, this information is also confirmed in letters written to Cuban friends in Florida by relatives still remaining on the island.

We have just learned that the Soviets don't plan to get caught out on a limb with any shortage of fuel for their hidden missiles. The U.S.S.R. is sending special equipment to Cuba so that they can produce their own liquid oxygen. The first shipment is expected shortly at the Cuban port of Matanzas.

Anyone reading Premier Khrushchev's New Year's message knows that Russia fully intends to continue their military buildup in Cuba. Khrushchev stressed "unbreakable, brotherly Soviet-Cuban friendship" and said the U.S.S.R. "will never leave Cuba in the lurch, that revolutionary Cuba will not remain defenseless."

We quote from our column of May 14, 1962: "There are many ways in which the United States is helping Castro financially. Paul G. Hoffman, as head of the United Nations Special Fund, has signed an agreement whereby the special fund is to help Cuba get away from heavy dependence on sugar by diversifying its farm production. The United States pays about 40 percent of the Special Fund's annual budget, which stands this year at about \$47 million."

On May 28, we published part of a letter from Brooks Hays, then Assistant Secretary of State. He was replying to inquiries made to the Department of State regarding disbursement to Castro of Special Fund dollars.

Mr. Hays stated that Cuba would receive assistance in agricultural research and re-

search training in such areas as plant diseases, soil conservation, and food technology. The total amount requested from the Special Fund is \$1,157,600, of which \$763,500 would be for experts and consultants, \$200,000 for equipment, \$50,000 for fellowships, and the balance for miscellaneous and overhead costs. The Government of Cuba would provide at least \$1,878,000 of its own funds to cover additional costs of the project for local experts and technicians, labor, land, and buildings.

"The statute of the Special Fund forbids the Fund from intervening in the internal affairs of any country or from placing any political conditions upon its assistance. On the other hand, projects undertaken by the special fund are supposed to bring early results and have the greatest possible impact in advancing the economic, social, or technical development of the country concerned."

Due to publication of the United Nations offer of financial and technical assistance to Castro (plus the many objections voiced by irate citizens) the project was dropped. This was not the end of the matter, however. Now, it looks like Mr. Hoffman has gotten the ball rolling once more. Castro has again been offered this same bonanza by Paul Hoffman. The total amount of dollars to be given Castro by the Special Fund remains the same. So does the nonpolitical attitude of U.S. officials involved in giving Castro this helping hand. The only difference is that this time the Food and Agriculture Organization is acting as agent for the Special Fund. The FAO and the Cuban Ambassador have recently been winding up negotiations in Rome.

Ukrainian Independence Day

EXTENSION OF REMARKS

OF

HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. WYDLER. Mr. Speaker, the celebration of Ukrainian Independence Day is a tribute not only to that occasion in history which marked a triumph of the centuries for the Ukrainian people, great as that occasion was. It is also a tribute to the force and steadfastness of ideas that persist despite all the adversities of the flesh that have beset mankind. For the Ukrainian people have, in the course of their long history, known more suffering, more physical violence, more of the tribulations attendant upon wars and invasion than most of the people on earth. Yet they have, throughout centuries of ills inflicted by those who sought to conquer them, maintained their identity, their independence of spirit, and the pride and determination necessary to preserve the dream of an independent Ukraine.

This dream which became a reality on January 22, 1918, was age-old. Despite the long history of subjection the Ukrainian people had never willingly submitted to the indignities of political domination. Superior in their heritage, their civilization, their resources, to the Russians whose force had overcome them, they retained their separate culture and that spirit of independence which has marked them wherever they are. The celebration of Ukrainian Independence Day is a reminder that the freedom of the mind cannot be conquered.

Appendix

Definition of a Farmer

EXTENSION OF REMARKS OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, January 25, 1963

Mr. YOUNG of North Dakota. Mr. President, defining a true farmer has never been a simple matter. A great many people are proud, and I think justly so, of having some farm background. Others, though their major endeavors may be in some field other than farming, still like to claim they are farmers if they happen to own a farm. Sometimes there is a vast difference between an honest-to-goodness farmer and a sidewalk farmer like myself.

I am indebted to the Farmers Union Grain Terminal Association for coming up with one of the best definitions I have heard yet of a farmer. The idea originated with radio station KMA in Shenandoah, Iowa. Mr. President, I ask unanimous consent to have the recent broadcast by the Grain Terminal Association included as a part of my remarks in the Appendix of the RECORD.

There being no objection, the text of the broadcast was ordered to be printed in the RECORD, as follows:

The problems and burdens of the world are heavy on the shoulders of some people, while others carry their loads lightly. Farmers, being people, are like that too. Some are worried and burdened, others happy and carefree.

Trying to define a farmer is no easier than defining a family farm. But there's always somebody ready to make the try. Latest of these offerings on "What is a Farmer," was boomed out over radio station KMA in Shenandoah, Iowa, recently. We are indebted to our alert watchdog on news, J. K. Stern, president of the American Institute of Cooperation, for calling it to our attention.

Let's see how it jibes with your picture of the farmer.

"A farmer is a paradox. He is an overall executive with his home his office; a scientist using fertilizer attachments; a purchasing agent in an old straw hat; a personnel director with grease under his fingernails; a dietitian with a passion for alfalfa, amines, and antibiotics; a production expert with a surplus, and a manager battling a price-cost squeeze.

"He manages more capital than most of the businessmen in town.

"He likes sunshine, good food, State fairs, dinner at noon, auctions, his neighbors, his shirt collar unbuttoned and, above all, a good soaking rain in August.

"He is not much for droughts, ditches, throughways, experts, weeds, the 8-hour day, grasshoppers or helping with housework.

"Farmers are found in fields—plowing up, seeding down, rotating from, planting to, fertilizing with, spraying for, and harvesting. Wives help them, little boys follow them, the Agriculture Department confuses them, city relatives visit them, salesmen detain them

and wait for them, weather can delay them, but it takes Heaven to stop them.

"A farmer is both faith and fatalist—he must have faith to continually meet the challenges of his capacities amid an ever-present possibility that an act of God (a late spring, an early frost, tornado, flood, drought) can bring his business to a standstill. You can reduce his acreage but you can't restrain his ambition.

"Might as well put up with him. He is your friend, your competitor, your customer, your source of food, fiber, and self-reliant young citizens to help replenish your cities. He is your countryman—a denim-dressed, businesswise, fast-growing statesman of stature. And when he comes in at noon, having spent the energy of his hopes and dreams, he can be recharged anew with the magic words: 'The market's up.'"

Who Owns the Moon?

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. MILLER of California. Mr. Speaker, we have been projected into the space age with the rapidity with which the missile is projected into space. The physical problems and the biological problems that confront us have been tremendous but one that cannot be neglected and must be reconciled is the legal problem of space.

Mr. Andrew G. Haley, past president of the American Rocket Society, and an expert in this field poses the question in This Week magazine with a provocative article entitled "Who Owns the Moon?"

It has been my privilege to attend more than one symposium at which Mr. Haley has been on the panel and it has always been an enlightening experience.

I commend this article to my colleagues and urge them to read it:

WHO OWNS THE MOON?

(By Andrew G. Haley)

For centuries, there has been no question about ownership of the Moon. It has belonged to astronomers, poets, and young lovers. But now that the space race has changed the Moon's role from romantic to strategic, the question of who owns it has taken on life-or-death importance.

I am firmly convinced that unless an effective international treaty governing celestial bodies is signed before the first cosmic Columbus sets foot on its craterpocked surface, the Moon could become not an exciting new frontier but a tragic new battleground.

The urgent need for such a treaty became painfully clear the night of September 13, 1959, when Lunik II planted the Soviet flag on the Moon, ironically near the Sea of Tranquility. I was at the Moscow observatory that night, a guest of Soviet scientists, fellow members of the International Astro-

nomical Federation. I know I should have been thrilled at this triumph of the skill and ingenuity of mankind, but as I congratulated my Russian hosts, I could not help but wish I were somewhere else, preferably on the Moon.

The Russians did not claim the Moon that night. Nor did they claim it 3 weeks later when Lunik III photographed the Moon's dark side. But their flag planting, plus their aerial mapping, laid strong legal groundwork for a future Soviet claim to the Moon, particularly if they achieve the first manned lunar landing.

FIGHT FOR THE MOON

When ships were propelled by winds rather than rockets, new lands were claimed by the planting of flags. But events proved that effective control of a territory could only be achieved by colonization and the exercise of political jurisdiction.

The first nation to reach the Moon can claim it all. But because the Moon is foodless, airless, and waterless, effective colonization of its vast surface before another nation's arrival will be well nigh impossible. The inevitable dispute over Moon land ownership might then be resolved, as were so many New World land clashes of the past, only today gunpowder wouldn't be the weapon.

Peaceful agreement is possible. This was proved recently when a dozen nations having claims on Antarctica signed a U.N.-endorsed treaty setting up that region as a kind of scientific preserve. A start was made toward peaceful use of outer space with the universal acceptance of the astronomical program of the International Geophysical Year. Satellites have since circled the earth many thousands of times without a single complaint of airspace violation, creating, in effect, a freedom of outer space skin to the long-recognized freedom of the seas.

The U.N. took an important step when its General Assembly resolution of December 20, 1961, declared that "celestial bodies are free for exploration and use by all states in conformity with international law and are not subject to national appropriation." But we have never been able to agree on what constitutes national appropriation here on Earth. And it would hardly be necessary to appropriate the Moon in order to set up a missile base on a piece of it.

BASE FOR WAR?

Only a worldwide treaty, setting up the Moon as a kind of outer space Antarctica, with common control among all nations, can eliminate use of the Moon as a base for aggressive war. Such a treaty would be only the first step in cosmic law. Astronomers estimate that there are 100 million habitable planets in the universe, and that life may exist on many of them. We will one day soon need an international commission to negotiate with these beings and their governments. It could also administer projects like the propelling of Saturn into an orbit closer to the Sun, giving it a capability for sustaining life as we know it that might solve our population explosion.

But the closer the United States and the U.S.S.R. get to the Moon, the farther apart from agreement on its ownership we are likely to drift. Let us agree now, while we still can, that—

An international commission shall administer new worlds for the common good.

Any nation which first develops mineral or other resources on the Moon may obtain exclusive rights over those resources but may not own the area from which they are taken.

No nation may fortify the Moon.

Power politics must not be permitted to obscure simple truths like one voiced recently by a young friend of mine. Said he, with the uncomplicated wisdom of the 6-year-old: "The Russians shouldn't own the Moon, but neither should we. God made the Moon for everyone."

Grants To Aid Construction of Various Health Professions Training Schools

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. MOSS. Mr. Speaker, I have introduced a bill, to provide Federal grants to aid construction of various health professions training schools, and also schools for training public health personnel.

My bill is similar to one introduced in the 87th Congress and which was reported favorably by the House Committee on Interstate and Foreign Commerce. It had widespread support.

This bill is in keeping with President Kennedy's request in the fiscal year 1964 budget. The President asks \$34,352,000. My bill would provide \$60 million a year for 10 years for constructing facilities to train dentists, physicians, optometrists, pharmacists, osteopaths, podiatrists, nurses, and professional public health personnel.

This legislation will have a great effect on the future of every American. Presently, there are 141 physicians for each 100,000 population. Ten years ago, there were 143. By 1970, the figure can drop to 133 and by 1975, to 135.

By taking action in this session, the Congress can contribute to the means of educating the people who will serve the Nation's health needs.

The health professions schools have been turning out more graduates, but not in proportion to the Nation's growing population. We face a critical shortage in 10 years.

Coupled with the expanding population is a change in the demand for medical services. The greatest users of medical services are those under 15 and over 65. Both age groups are expected to grow in disproportionate ratio to the balance of the population.

Three factors contribute to the shortage of medical personnel: limited enrollment capacity of schools, mounting costs of professional education, and the diminishing supply of qualified applicants.

Just to maintain the present proportion of doctors and dentists, we will need 20 new medical and 20 new dental schools by 1970.

Present sources of school financing must increase their contributions. But these sources—State legislatures, alum-

ni, business, and industry, foundations and private donors and voluntary societies—cannot meet all additional needs. Federal funds are the only source able to meet the need in time to avoid a real crippling of medical manpower.

In the last session, the committee heard considerable support of the legislation, from those in Government, education, and medicine and including the American Medical Association.

I intend to support this measure vigorously because I believe it is vitally important to the Nation's health and therefore a most appropriate area for Federal Government participation.

The Economic Situation of East Kentucky

EXTENSION OF REMARKS

OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, January 25, 1963

Mr. MORTON. Mr. President, I was delighted to read in the January 20 edition of the Louisville Courier-Journal an article, written by Mr. Joe Creason, a staff writer for that newspaper, which I feel places in better perspective what the mountain region of eastern and southeastern Kentucky is doing to pull itself up by its bootstraps.

I do not minimize the economic situation in this area, because it is severely depressed, and much remains to be done before anything approaching a stabilized economy will be reached. Publicity in magazines and newspapers and on television telling of the mountain area's plight has, in my opinion, neglected to give proper credit to the positive side of the picture.

In his article, Mr. Creason writes about the determination, initiative, and optimism of many communities, and in item-by-item fashion details what they are doing to make themselves more prosperous economically.

I ask unanimous consent that Mr. Creason's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LIVELY SICK MAN

(By Joe Creason)

The impression left by recent magazine articles and television documentaries to the contrary, depression-plagued east Kentucky has not settled back placidly to await the obituary the crepe hangers intimate will be read over the remains of the region any day now.

A check on the region shows that, far from wringing its hands in despair and refusing to help itself, east Kentucky, which covers a quarter of the State, is showing a dogged determination not to give up in this hour of great need.

Problems which seem as high as the dark mountains that stud the region are present in east Kentucky and have produced a depressed economic condition perhaps never before known in any part of the State.

SORRY LEGACY

Coal, traditionally the one industry, has petered out in some areas and is being mined in others by machines, leaving a legacy of mass unemployment, privation, and actual hunger. In some counties, 30 percent of the labor force is without work; many families exist solely on surplus food commodities doled out once a week at the courthouse door.

Nevertheless, eastern Kentucky is fighting back, spurred on by leaders who preach the optimistic gospel that a new day can come to the mountains.

Largely because of this leadership, mountain towns have initiated more projects aimed at helping themselves than have communities in more economically prosperous sections of the State.

FAITH AFFIRMED

Eastern Kentuckians have affirmed their faith in their region in recent months by raising tremendous sums of money via increased taxes, civic-obligation bonds and personal cash to start the changes they feel are necessary to put their part of the State back on its feet.

For instance, on a per capita basis, Prestonsburg and Hazard have put up more money in the last 18 months to finance badly needed projects than has Louisville or Lexington.

Prestonsburg (population 4,000) raised \$100,000 over 2 weekends to buy land for a community junior college; collected \$40,000 for a high school football stadium, and led the drive which resulted in health and library taxes being approved by voters of the county (Floyd) by a 4 to 1 margin.

MILLION FOR HAZARD

Last year alone, Hazard (population 5,000) obligated itself to the tune of more than \$1 million as its share in the cost of projects—sewage-disposal plant, waterline extension, a new municipal building, and swimming pool. Without any outside help, the city is paving 13 miles of streets and has built \$50,000 worth of sidewalks and an \$850,000 elementary school.

Every source of help—Federal, State, and local—has been explored by eastern Kentucky towns in rounding up funds to plan and start self-improvement projects. These projects range from urban renewal and slum clearance developments to schools and churches, and from vast tourist resort centers to sewerline extension.

In every instance, it has been mountain area leaders who have initiated the projects, since the line of development of even the Federal assistance programs is from the local level outward to Washington and then back, not the reverse.

COMMUNITIES "SOLD"

It has been these leaders who have "sold" their communities on the fact that there will be no return to yesterday, that the coal industry will not be reborn, and that the situation, while dark now, is not hopeless if all avenues of economic development are explored.

This is the philosophy which has resulted in the establishment in many towns of industrial-development groups ready to finance the purchase of land or construction of buildings for manufacturing concerns through bond issues.

It is the philosophy which also has brought about an awareness of the great tourist potential of the region as a source of employment.

There are many who feel that tourism can be the salvation of eastern Kentucky. To that end, the State has expanded its Pine Mountain and Jennie Wiley Parks, and similar programs are planned at Buckhorn Lake and Natural Bridge in the mountain country.

New privately financed resort motels have been opened near Harlan and Paintsville,

while imaginative, multimillion-dollar developments are planned at Hazard and near Whitesburg.

The Hazard resort project is called Magic Mountain, and would cost an estimated \$4,500,000. It would be financed privately with the Area Redevelopment Administration lending 65 percent of the money at an interest rate less than 4 percent over 40 years.

LAND OPTIONAL

More than 500 acres of mountaintop and valley land has been optioned. Plans call for a 100-acre lake, a 200-unit motel, convention hall, and nightclub atop one 1,600-foot peak; a ski lift and slope; a cable-car ride from one peak to another; horse-riding trails, and a model coal mine through which visitors would be escorted.

The project would create some 400 new jobs directly. And if all the details fall into place, work might start this year.

The Whitesburg resort development is Cloud City, and it would spread over some 6,000 acres of Pine Mountain at the eventual southern end of the East Kentucky Turnpike and adjacent to the proposed Allegheny Parkway from Cumberland Gap to Breaks of Sandy.

A basic new city would be built, and selected sites would be made available to large resort and motel operators. The initial cost would be about \$2,500,000, of which \$750,000 would come from private stock sale and the remainder from a combination of Federal and State loans and grants.

Also in the line of tourism, two east Kentucky towns will stage summer dramas this summer. Pineville citizens have pledged \$30,000 to underwrite "The Book of Job" for a fifth season, while in Prestonsburg, \$10,000 has been pledged to produce a new play by Paul Green.

SUCCESS STORIES

In their determination to improve their lot, east Kentucky towns have the amazing success stories of three communities—Corbin, London, and Somerset—to spur them on. During the last year, development programs paid off handsomely in all three towns.

Corbin, where 4 years ago community leaders took a close look at their town and then set out to bring it up to par in schools, hospitals, recreation, and housing, landed four industries which will employ 800 eventually. London, which years ago was the test city in a Kentucky chamber of commerce community-improvement study, attracted one new plant with 200 jobs, while Somerset landed three plants with 700 employees. Somerset's biggest prize was a plumbing-fixture plant which will be built with a \$3 million municipal bond issue and then leased to the company.

With these examples of what can happen before them, other towns all over the region are rife with self-improvement programs.

It would be impossible even to mention all the work that is under way in the region one TV commentator called "impoverished to the point that the will to do anything for itself is about gone."

However, these are highlights of projects in some towns:

Barbourville: One of the first towns in Kentucky to start a municipal housing project, this Knox County seat now is completing plans for 30 more units of federally financed low-cost housing. An urban-renewal project also is being planned, while the county is about ready to start a new \$479,000 courthouse.

The county also has built three new elementary schools and a vocational school at a cost of more than \$700,000. The city has raised \$16,000 in cash to reactivate its chamber of commerce, and a new country club has been organized.

Middlesboro: Leaders there say things never looked better for solid, long-term growth. An ambitious industrial development pro-

gram has been launched, an industry locator has been hired, and a \$500,000 bond issue is available to finance buildings for industries.

Middlesboro is the smallest city in the State with a full-time city planner. It also has a zoning ordinance, subdivision regulations, and a building code adopted and enforced.

SCHOOLS SCHEDULED

Two elementary schools, costing \$875,000, will be started this spring. About \$350,000 worth of sewer extensions, half the cost being paid locally, will be started this year if Federal assistance through the accelerated public works program is approved. Plans also are being studied for expansion of the sewage-treatment plant.

Martin: This Floyd County town (population 900) is the smallest municipality in the Nation with an urban-renewal project actually underway. The work is centered on a 7-acre plot that formerly was covered with submarginal buildings. The land and buildings were bought with a \$75,000 city bond issue, and the Federal Government is providing \$238,000 to level the area, build 85 parking spaces, and open 7 lots that will be auctioned off. The State is constructing a Kentucky 80 bypass route through one edge of the site, and a new post office building probably will be built.

The town also has been approved for a 40-unit, \$628,000 housing project.

Whitesburg: Including the Cloud City resort, some \$15 million worth of projects well might be started this year in Letcher County, of which Whitesburg is the seat.

PROJECTS ON HAND

Projects involving the city directly include a start on the southern end of the East Kentucky Turnpike, a 40-unit municipal housing development, an urban-renewal project, extension of the water system, construction of a new courthouse and completion of a mountaintop airport.

The water-system improvement calls for a \$350,000 filtration plant. Under the accelerated works program, 66 percent would come from Washington, with the remainder financed by a city bond issue.

Paintsville: These, among other things, have been done without outside help: a \$250,000 city park opened; water filtration plant put in use; new high school built; \$300,000 in street paving and widening started; 50 acres of choice land optioned and reserved for industry by the Paintsville Development Corp.; a \$350,000 courthouse and an \$80,000 health building erected, and the municipal golf course expanded to 18 holes.

With about \$250,000 in Federal help, a \$1,121,000 sewage-disposal plant has been started. State-Federal money has built a U.S. 23 bypass route around the town, and a 52-unit, \$800,000 low-cost housing project has been started adjacent to the bypass.

CRAFTS CENTER HELPS

Also fronting the bypass are the new home of Kentucky Hills Handicraft, and a 32-room motel. Both were built with loans made available through ARA. The crafts center serves as a wholesale shipping point and retail outlet for items made in homes and small workshops in 10 counties.

Pikeville: Recognizing that participation of all the people is necessary to finance the self-help program they visualize, the city fathers passed a 1-percent payroll and a 1-percent net-profits tax. This has produced revenue equal to that from property tax.

Application has been made for a \$3 million Government loan to finance construction of waterlines, sewer-collection lines and a sewage-treatment plant. The city's \$1 million share of the cost would be paid from bonds issued against the municipally owned water system.

However, the most ambitious project being talked is a \$6 million urban renewal undertaking that would all but rebuild the

town. The Chesapeake & Ohio Railroad, which now follows a wide bend in the Big Sandy River through the center of town, would be relocated and the right-of-way used for a four-lane boulevard. Pikeville's approximately \$1,500,000 share of the cost would be from parking-meter income for the next 30 to 40 years. A \$48,000 grant has been requested to determine the feasibility of the idea.

Pikeville College is nearing completion of an expansion program costing more than \$1 million, much of which has been raised in the hills.

Prestonsburg: Construction of a junior college is expected to start soon on land provided by the community. Adjacent to the college site, work is being pushed on a 40-unit, \$560,000 housing project.

Two urban-renewal jobs are on the fire. Work should start soon on a \$1,038,000 sewer line and disposal plant project, with the 42-percent local share in the cost coming from a 70-percent increase in water rates.

A new fire truck and garbage truck have been put in use; two new county schools have been built, and application has been made for a loan to cover 52 percent of the cost of a new courthouse.

Hazard: In addition to the self-help work already mentioned, 98 units of public housing soon will be opened, and application has been made for 30 more units.

The city was the first in Kentucky to complete a federally financed urban renewal project. Back in 1960, a blighted area on Main Street was razed to widen the street and make room for a city-owned parking lot.

On the drawing boards is another big urban renewal job that would clear three blocks of substandard homes and stores on North Main to provide space for a recreation center and diversified new businesses. The feasibility survey has been completed, and the total cost would come to about \$12 million. The city's 25-percent share would come from pooling of noncash grant-in-aid credits.

Perry County has some \$450,000 on hand to use in building a new courthouse, a step that would do much to improve the appearance of Hazard.

Besides projects listed, Pineville, Hyden, Manchester, Jenkins, Neon, Cumberland, Fleming, Jackson, Harlan, and other eastern Kentucky towns, large and small, have enough projects underway to indicate that the region may be down but not out.

Tomorrow Must Be Earned—Not Appropriated

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, January 25, 1963

Mr. MUNDT. Mr. President, the December 31, 1962, issue of U.S. News & World Report carried an advertisement, "Tomorrow Must Be Earned—Not Appropriated," sponsored by the Warner & Swasey Co., of Cleveland, Ohio.

Mr. President, this message I feel cannot be repeated too often, and I ask unanimous consent to have it included as an extension of remarks in the Appendix of the RECORD.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

**TOMORROW MUST BE EARNED—NOT
APPROPRIATED**

Voting more money for schools doesn't make this an educated nation. It isn't billions for more veterans' hospitals that will make America healthy. It is honest production, not shorter hours, that protects jobs. It takes more than costly playgrounds to cure juvenile delinquency. Pouring our billions all over the world doesn't buy security nor peace.

Nothing worth having or worth being is ever reached except by honest hard work, but it is becoming the tragic fashion to think we can shortcut the work, and have everything we want if we only spend enough Federal dollars. And then we mistakenly feel "the Government has taken care of it," so we can sit back and relax.

Another once great nation withered and died when its people were drugged with the same fatal poison. (Perhaps "The Decline and Fall of the Roman Empire" should be required reading in many places today.)

Everything Government offers free is obviously and always paid for by all of us in higher taxes or a worsening deficit—both of them deficits of dollars but, even more tragically, deficits in national character and self-respect. What would ever be worth that?

**State Planners Take Heed—The
Kremlin Admits Failure**

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. WIDNALL. Mr. Speaker, the trend in the United States these days, is to consider the presumed advantages of planning and attempt to apply them throughout the economy and Government at all levels. I have no objections and agree to giving thought to the future—but I am hesitant to confer power in the present that may portend chaos in the years to come.

The citadel of the planned economy, the organization state, and the automated human being—the Soviet Union—has finally discovered through a painful experience I want this Nation to avoid that planning is no substitute for individual initiative within an orderly society of freemen. Nikita Khrushchev himself has berated the crop failures, under production and shortages that have resulted, and has called for a new look at the capitalistic incentive system.

I call the attention of all those here in America fondly dreaming of the perfect ordered society through planning to the following editorial in the December 24, 1962, edition of Barron's National Business & Financial Weekly that follows:

**BANKRUPT SOCIALISM—STATE PLANNING, THE
KREMLIN HAS CONFESSED, IS A FAILURE**

Throughout the free world, so chastened investors are painfully aware, the past 12 months have been a time of agonizing reappraisal. In this country, despite the brisk recovery in stock prices since October, the average portfolio probably has dwindled in value by 20 percent or more; other financial centers, notably West Germany and Switzerland, have suffered heavier losses. Business

empire, built on exuberance and easy credit, have tottered; here and there, a few have crashed. Curiously, however, the greatest economic shakeout of 1962 has engulfed not some citadel of capitalism, as might be supposed, but the homeland of communism. In a speech that must have rocked the Kremlin to its foundations, Premier Nikita Khrushchev last month publicly confessed that the Soviet system doesn't work very well. What the U.S.S.R. needs, he added, is less planning and more enterprise. "We should remember Lenin's injunction to be able, if necessary, to learn from the capitalists—to imitate whatever they have that is good and profitable."

In a proletarian dictatorship that condemns people to death for the crime of speculation, these remarks have an ironic ring. Whether they portend a lasting change in either Communist theory or practice, no man—probably not even the Premier himself—can safely say. Nonetheless, Khrushchev's confession (which may be likened to a plea of philosophic bankruptcy) is an historic event. For one thing, while few U.S. demonologists have noted the fact, it marks the end, for all practical purposes, of the vaunted 7-year plan. In the Politburo, long-range blueprints of production and distribution suddenly are out of style. The shift in the party line, moreover, is bound to encourage the few bold spirits at home who lately have dared to urge upon the Kremlin such precepts as proper cost accounting and profit incentives. Finally, it constitutes a wonderful rebuff to all those in the West who, one way or another, are seeking to foist collectivism upon the world. Everyone else may have known all along that the emperor was naked, now the emperor himself has owned up to feeling a chill.

The presence of trouble in the workers' paradise long has been an open secret. While Walter Reuther, Barbara Ward, and other like-minded innocents were marveling at the rapid rate of Russian economic growth, knowledgeable observers were noting the drastic devaluation of the ruble, the wholesale confiscation of savings, the persistent reports of civilian unrest. Last summer a party of U.S. newsmen, including Vermont Royster, editor of the Wall Street Journal, made an 8,000-mile guided tour of the Soviet Union. In testimony before the Joint Economic Committee of Congress recently, Mr. Royster told of visiting collective farms where 17 men do the work of 2; of seeing scores of buildings unfinished "for want of the proverbial nail"; of traveling in a land virtually without roads. A few outspoken Russians have been equally caustic. In Izvestia not long ago, one writer denounced tires and ball bearings that quickly wear out, textile mills that produce shoddy cloth, and production lines that creep and crawl.

One of the loudest critics has been Nikita Khrushchev, who last winter complained bitterly about the perennial shortages of meat. Now, in an astonishing break with tradition, which has worshiped at the shrine of Soviet industry, he has shattered ikons right and left. While the current 7-year plan has yielded impressive statistics, said Mr. K., it has fallen short in production, notably that of power and natural gas, synthetic fibers and plastics, turbogenerators, diesel engines, and oil refinery equipment. Furthermore, he went on, too many items are being produced for which no real demand exists. Finally, the Soviet product mix is growing obsolete. "If we had merely met the target for steel but overfulfilled the plan for polyethylene, we should be substantially better off."

Besides citing specific failures of planning, the angry Premier sweepingly assailed the inner workings of the system. The Soviet economy, he charged, is plagued by phony bookkeeping, excessive integration (from

bitter experience with unreliable allocations, most plants turn out their own components), theft of state property (with which some rugged entrepreneurs do a thriving business on the side), bribery (a common means of gaining access to government credit or scarce raw materials), waste and fraud. It is technologically backward and hostile to innovation. Above all, it is inefficient. Hence Mr. Khrushchev proposes to throw the whole creaking apparatus, 7-year plan and all, into the Communist equivalent of chapter X.

What will emerge from reorganization remains to be seen; the Kremlin, which cares nothing for full disclosure, has been vaguer than usual. Some outmoded government machinery has been scrapped, and certain planning functions have been decentralized. More posts apparently have been created for the party faithful. Inevitably, however, none of the reforms cuts to the heart of the matter, and none is likely to succeed. For contrary to good Marxist doctrine, it is communism, not capitalism, that suffers from fatal contradictions. Thus state control of the means of production has not eliminated workers and bosses; it has merely thrust into positions of authority a new class, which, through close affiliation with state and party, enjoys all the fruits of ownership without incurring any of the risks, notably that of going broke.

Similarly, long-range planning has tended to perpetuate the expansion of obsolescent or useless products and processes; no planner in any country has been either able to foresee, or willing to preside over, the often unpleasant effects of technological change. In the absence of a marketplace, Soviet prices frequently bear little or no relation to costs or, for that matter, to each other. Lacking unhampered choice, finally, the Russians willy-nilly also must do without what one of their technical experts has aptly called feedback, i.e., the effective consumer response which sooner or later serves to punish the inefficient or shoddy producer and to reward his businesslike competitor. Like some superstitious savage, who believed that it was literally possible to steal his enemy's thunder, the Soviet Premier has urged his followers to imitate what is "good and profitable" in capitalism. In so doing he has chosen to forget that plenty and freedom—like poverty and socialism—go hand in hand.

As a doctrinaire Communist, Mr. Khrushchev may be pardoned for his lapse. The same excuse, however, hardly suffices for American officials who, through the Alliance for Progress, the 5-year plan for India and similar extravagant designs, are helping to further the cause of statism. By supporting such schemes, the U.S. Government, despite its vaunted pragmatism, is underwriting economic systems that simply do not and cannot meet people's needs. "I have seen the future and it works," the misguided Lincoln Steffens once was moved to exclaim. After decades of deception at home and propaganda abroad, the Kremlin has finally exploded the myth.

**Great Work of Senate Special Committee
on Aging**

EXTENSION OF REMARKS

OF

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, January 25, 1963

Mr. YARBOROUGH. Mr. President, of the 17 million people in the United States over the age of 65, some 700,000 are in my home State of Texas, and the people of Texas are deeply appreciative

of the public service of the Special Senate Committee on Aging, which is headed by the senior Senator from Michigan [Mr. McNAMARA]. Many thousands of the people of this Nation over 65 live on small incomes, or small savings, with help from their families, or from tax-financed agencies.

No nobler service can be done for these people than to protect them from medical quackery, crooked promoters, and other fast-buck operators.

Abraham Lincoln once wrote that the legitimate operation of government was to do for the people what they need to have done but cannot do as individuals. The investigative work of the Special Senate Committee on Aging is in the highest tradition of government service to the people.

In a fine editorial captioned "Bilking the Elderly," the Houston Post of January 20, 1963, praised the work of the Special Subcommittee on Aging.

I ask unanimous consent that this excellent editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BILKING THE ELDERLY

There are now approximately 17 million Americans over 65, about 9 percent of the total population of the country, and both the number and the percentage are increasing rapidly because of greater longevity. It is estimated that by 1980 there will be more than 24.4 million in this age group, almost three times the number in 1940.

Although the average annual income and the resources of this group of citizens may leave much to be desired, they are today not exactly impoverished as a group, because of social security, private pension plans, savings, and public assistance. As their total number increases, the total amount of money they have to spend, save or invest increases.

It is not surprising that Americans in this age group should receive increasingly the special attentions of confidence men, frauds, quacks and slick promoters out for a fast buck. And there are no more limits on the ingenuity and imagination of these predators than there is on their unscrupulousness.

The pluckings are particularly profitable because such a large percentage of the older people are in need of more income than they have, have chronic physical ailments for which they are always hopeful of some miraculous cure, and because of infirmities of one kind or another, are not able to keep fully informed about new developments in the confidence game.

Repulsive as the idea of swindling the elderly may be to most people, the fact remains that they are being bilked of hundreds of millions of dollars annually through false nostrums, worthless health foods, phony retirement schemes, crooked land sale deals or spurious work-at-home schemes.

The Special Senate Committee on Aging, which is headed by Senator PAT McNAMARA, of Michigan, is performing a distinguished service by putting the public spotlight on these operations through its current hearings. It is doubtful if the hearings will produce any information that is startling to the lawmakers or other public officials. They may or may not show a need for additional Federal legislation to protect the Nation's older citizens.

But at least they serve to make the public more aware of the problem, and perhaps more of the older people or members of their families will be quicker to recognize some

of these fraudulent schemes than they would be otherwise.

With new gimmicks turning up constantly, it also is necessary that all laws aimed at preventing or controlling these activities be reviewed more or less continuously, to make certain that all is being done that can be done to protect the elderly.

In a society that views tolerantly exaggeration in advertising, it sometimes is difficult to draw the line between what is legitimate and what is an outright fraud. It also is difficult to get adequate laws at the Federal, State, and local levels of government. Most professionals know where the legal loopholes are and how to keep from crossing over the line where they might be in danger of criminal prosecution.

Even if it is accepted that most citizens should be able to protect themselves, the same thing cannot be said with respect to older people who, although no more gullible, are less able to recognize the new gimmicks which are being dreamed up constantly to separate them from their money. The committee hearings therefore are a public service for which there is a real need.

Walter Splawn: A Great American Has Passed

EXTENSION OF REMARKS

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. FISHER. Mr. Speaker, one of the great minds of America passed to his reward on last Thursday. Dr. Walter M. W. Splawn, twice Chairman of the Interstate Commerce Commission, and former president of the University of Texas, will be remembered for generations yet to come because of his profound contribution to the good of mankind and to the cause of good government. To me he was a friend and an inspiration. To the entire Nation he was a benefactor. Few men in our time have done so much.

As a part of my remarks, I include a news article about Dr. Splawn which appeared in the January 18, 1963, issue of the Washington Post, which follows:

WALTER SPLAWN, Ex-ICC CHIEF

(By William J. Raspberry)

Walter M. W. Splawn, twice Chairman of the Interstate Commerce Commission and former president of the University of Texas, died of a heart ailment yesterday at his home, 3133 Connecticut Avenue NW.

The 79-year-old economist, author, attorney, and educator was an authority on railroad law. The Texas railroad laws which he formulated as a member of the State railroad commission served as a basis for the Federal railroad reorganization laws of 1922.

A consultant to the House Interstate Commerce Committee during the early 1930's, Mr. Splawn was largely responsible for the formulation of the Railroad Holding Company Act, the Trust in Securities Act, the Securities and Exchange Act, the Utility Holding Company Act, and the Federal Communications Act, all initiated during the administration of President Roosevelt.

He was a close friend of the late Speaker Sam Rayburn who, as chairman of the House Interstate Commerce Committee, sponsored the regulatory legislation on which Mr. Splawn worked.

Born in Arlington, Tex., he was graduated from Decatur Baptist College in 1904, earned his law degree at Baylor University in 1906, took his master's degree at Yale University in 1908, and received his doctorate at the University of Chicago in 1921.

After practicing law in Fort Worth for a time, he taught social science at Baylor and economics at the University of Texas, where he was president from 1924 to 1928.

During the late 1920's he served as chairman of the Western Railroad, board of arbitration and referee of the War Claims Settlement Act.

Mr. Splawn retired as Chairman of the Interstate Commerce Commission in 1957 and, despite his having become blind, returned to Decatur College as a teacher.

He was a member of the American Bar Association, the American Economic Association, the Southwestern Political Science Association, the Masons, and the Baptist church.

Surviving are his wife, Zola, and two daughters, Mrs. Thomas E. Taylor, of Lincoln, Va., and Mrs. Joe H. Munster, of Cleveland.

The 45th Anniversary of Ukrainian Independence

SPEECH

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. ZABLOCKI. Mr. Speaker, I wish to commend my distinguished colleague and friend from Pennsylvania [Mr. Flood] for reserving time to address the House on the occasion of the 45th anniversary of Ukrainian independence.

I know that the gentleman from Pennsylvania, Congressman Flood, has been keenly interested in the plight of the Ukrainian people. Their tragic state, their aspirations for freedom and self-determination, deserve our utmost consideration.

Mr. Speaker, several weeks ago the news was received that a group of Ukrainian peasants and farmers forced their way into the U.S. Embassy in Moscow. They told a tale of denial of religious freedom and other civil liberties at the hands of the Communist government.

Their plight has evoked well-deserved sympathy from freedom-loving peoples of the world. More than that, we can applaud the courage of that little group of Ukrainians who dared defy the terror of their totalitarian police state.

Their example should be a reminder to us that the fire of freedom still burns bright in the hearts of the millions of men and women behind the Iron Curtain. History has demonstrated that the undaunted human spirit cannot be suppressed.

Let us remember this as we pay tribute to the brave people of the Ukraine who have amply demonstrated their determination to regain independent national status. Let us pledge ourselves anew to the task of working toward a better world where all peoples can find peace, freedom, and justice.

The Chances for Education Bills in 88th Congress

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. FRELINGHUYSEN. Mr. Speaker, because of its general interest, I should like to submit an article which appeared in the Sunday Star of January 20, 1963.

Under unanimous consent I insert the article in the Appendix of the RECORD.

THE CHANCES FOR EDUCATION BILLS IN 88TH CONGRESS

(By George W. Oakes)

Prospects for major new education legislation in the new congressional session depend on whether the administration and the Democratic leadership can "put the pieces back together" after the bitter controversies and failures of the last 2 years.

Federal financing for college academic buildings seems to have a real chance of enactment if the church-state issue can be resolved.

President Kennedy in his state-of-the-Union address last week mentioned aid to education first in presenting his recommendations for domestic legislation but did not go into any details.

The Senate 2 years ago passed a large-scale program for construction or teachers' salaries for elementary and secondary schools. The House, traditionally education's stumbling block in Congress because of the Southern Democrat-Republican coalition, defeated the bill due to Catholic demands that private schools be included. Therefore this particular approach to Federal aid at the elementary and secondary level seems doomed and no major school legislation appears possible this year.

LOANS PASSED

The college building program, the most important new education legislation up for decision last year, was beaten in the House after a Senate-House fight over the issue of Federal grants to church-related colleges and a large federally-financed scholarship program. Senate education leaders opposed grants to private colleges, especially those affiliated with the Catholic Church but passed last February a \$300 million a year loan program for public and private colleges over a period of 5 years, \$250 million in grants for public community colleges for 5 years, and 212,500 college scholarships costing \$149 million averaging about \$700 per year per student.

THE BILL THAT FAILED

The House last year passed a bill for private and public colleges with \$180 million a year in grants for 5 years and \$120 million in loans over the same period.

In conference the Senate and House leaders agreed in September on a \$2.345 billion academic building and student aid bill for higher education that would have provided:

One billion five hundred million dollars over 5 years—60 percent in matching grants and 40 percent in loans, to construct engineering, physical and natural science buildings and libraries excluding buildings for religious purposes.

Five hundred ninety-five million dollars in student loans of \$1,000 per student, of which 20 percent would be for "nonreimbursable loans" (a political device) for needy but outstanding students.

The House defeated the conference report 214 to 186 on September 20, 1962, by a combination of Republican, Southern and some

Western Democrats. Most Southern Democrats objected to any Federal grants to church-related colleges, largely because of the Catholic issue. They were joined by such normal administration supporters as Representative UDALL, Democrat, of Utah. The National Education Association, which lobbied against the bill, felt that elementary and secondary education should have had priority in congressional action.

DEMOCRATIC DEFECTION

Although the administration has claimed that three or four more Republican votes in the House could have been decisive, influential liberal House Democrats are convinced that the legislation's defeat reflected the defection in Democratic ranks caused by poor strategy of the administration and the House Democratic leadership.

The religious issue on higher education had not raised its head in a vital way until certain prominent Southern legislators in September stirred up the church-state issue to defeat the conference report.

President Kennedy's education proposals for this year, likely to be sent to Congress the latter part of this month, probably will be included in one omnibus measure as a result of House Democratic strategists' insistence that the administration concentrate its objectives in one bill rather than recommend a deluge of education legislation as in the last 2 years.

The omnibus bill seems certain to include the following major proposals for new programs:

1. A revised college building program that would include loans and possible grants to nonchurch related institutions. The total cost might be larger than the 1962 Senate bill of \$1.5 billion but, for budgetary reasons, would be stretched out over a longer period of time and therefore cost less on an annual basis. By limiting the grants to nonchurch related institutions the administration hopes to avoid the church-state issue.

2. A proposal for technical education to overcome the national shortage of engineering technicians. Congressman BRADEMAS, Democrat of Indiana, proposed this a year ago and it has been vigorously supported by Dr. Jerome B. Wiesner, the President's science adviser.

3. A proposal for expanding the number of teacher training institutes in the humanities and the social sciences modeled on the successful experience of those in the physical and natural sciences operated by the National Science Foundation. Certain national standards might be set to encourage new teachers of ability and to retain present ones.

4. A modest proposal for elementary and secondary school construction in certain urban depressed areas extended over a number of years.

5. A proposal for a work-study plan providing Federal funds for needy students who would be employed, for example, as laboratory research assistants.

CONTINUED PROGRAMS

The following major existing programs in Federal aid to education would be continued:

1. The National Defense Education Act which expires this year. The student loan section of this successful program would be expanded and more graduate fellowships would be added.

2. A 1-year extension of Federal aid to impacted areas which may be the House's first education order of business. The House might provide that a commission renew the entire program, which many in Congress feel has outlined its usefulness.

3. Modernization of the old vocational training program.

These recommendations can only be regarded as a considerably watered-down version of the administration's original programs for both elementary and secondary

schools as well as higher education as promised during the 1960 campaign and as submitted on paper to the Congress during President Kennedy's first year.

The major reason for such a drastic cutback is the resounding defeat the President has suffered in education legislation. Many observers, including leading Democratic congressional advocates of Federal aid to education, attribute the disaster to administration mishandling of its program. In recent months the White House seems to have lost whatever real enthusiasm it had for large-scale education legislation. The President is said to have privately expressed his sense of frustration and discouragement. His dispirited attitude has spread throughout the Government and on Capitol Hill and in itself has discouraged Congressmen holding marginal seats from taking a political chance on a program they feel the White House doesn't really intend to support to the fullest extent possible.

However, Francis Keppel, the new Commissioner of Education and the first to be sworn in at the White House, has the enthusiastic backing of the educational community. He is expected to instill a new spirit of optimism and to take an active role in presenting the administration's program to Congress.

The major struggle with Congress this year will be over the college building program. In 1970 the college population is expected to be twice what it was in 1960. Administration officials believe that the election has not improved appreciably the political problem in the House, the main hurdle to be faced. However, the elevation of Representative PETER FRELINGHUYSEN, Republican, of New Jersey, a long-term supporter of higher education, to ranking minority status on the House committee is encouraging.

QUESTIONS REMAIN

Enactment of the higher education legislation mainly depends on how these questions are resolved:

1. Can the administration and House Democratic leaders get the various powerful Democratic personalities in the House to reconcile their views and support a unified program?

2. Will the administration and House Democratic leaders utilize fully the available Republican support in the House?

3. Will Senate Democratic leaders go along with a bill if it passes the House where it may be taken up first?

4. Will the education community, in particular the influential college presidents, agree on what they want and exert every effort to press their views on Congress?

5. Will the Congress face squarely up to the church-state issue and bring it to a vote?

Otherwise, the best possible political alternative might be to use the probable renewal of the National Defense Education Act as a vehicle to incorporate a major college academic building program.

Polish Insurrection Against the Russians

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. BOLAND. Mr. Speaker, this week marks the centenary of a glorious event in the modern history of the Polish people. One hundred years ago the Poles openly defied the oppressive and auto-

cratic Russian regime in their homeland in the fond hope of regaining their independence. Under the firm leadership of their national committee in Warsaw the movement spread to all parts of the country like a forest fire. In every hamlet and town, in all Polish communities under Russian rule, there were instantaneous uprisings. Irrespective of the sacrifices involved and the sufferings to be endured, the people seemed to have vowed to fight or die for their freedom. At first czarist officials in the country were bewildered by this sudden explosion and for a while they seemed unable to cope with the situation. Most unfortunately for the Poles, however, time was on the Russian side. In due time, in a matter of months, they were able to bring Russia's ferocious might against these ill-armed, ill-organized but gallant Poles and crush this national uprising.

But even in their failure to attain their goals Polish leaders and their united followers showed greatness and gallantry, they also showed nobility in spirit and purity in purpose. In their proclamation they urged the Poles to fight for the emancipation and the complete enfranchisement of every person in the Polish realm without regard to race, religion, or previous condition of bondage. By the display of such broad-mindedness Polish leaders were hoping to unite non-Polish elements in the country behind their cause. But they had also counted on outside intervention by certain governments; they were almost sure of French and British aid in their fight against their oppressors. Unfortunately they were sadly mistaken and misled in this calculation, for even if the governments of these countries wanted to intervene effectively they were ill prepared to come to Poland's rescue. So in the end carrying their fight against huge Russian armies for more than a year, their glorious uprising was cruelly crushed by the defeat, capture, and public hanging of their youthful leader, General Traugott, on August 5, 1864. On the centenary of this most heroic armed uprising in Poland's modern history we pay tribute to the gallantry of Poland's patriotic leaders.

World Airways Orders \$8 Million Boeing Jet

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks, I include an article that appeared in the Daily Commercial News of San Francisco under date of January 15 pertaining to the expansion of World Airways, a company with headquarters in Oakland, Calif.

World Airways is headed by Mr. Ed-

ward J. Daly, a dynamic leader and astute businessman, who has developed this organization into one of the leading nonschedule air transportation companies in the United States.

I am sure that you will see planes of this company in all of the ports of the Pacific in which our military establishments are located.

Ed Daly has done a great job in building an organization that is a standout in the United States.

The article follows:

WORLD AIRWAYS ORDERS \$8 MILLION BOEING JET

The final phase of a \$25 million buildup of jet aircraft by World Airways, Inc., of Oakland, was announced today, with disclosure the company is purchasing a third Boeing 707-320-C cargo-passenger transport for a price of \$8 million. The price includes spare parts and engines.

Last May, World Airways ordered two similar jets for a price of \$17 million including spare engines and parts, at the same time obtaining an option to purchase the third.

Exercise of the option, according to World Airways President Edward J. Daly, was accomplished through a \$5,600,000 loan from the Bank of America's headquarters office in San Francisco, with the balance of the money coming out of World Airways reserves.

The new jet is due for delivery in September, Daly said, with the first two scheduled to arrive in June and July.

SERVICE

The huge planes will be used in the company's transpacific operations for the Military Air Transport Service (MATS), and in supplemental transportation services, according to Daly.

When they go into service World Airways will be the first carrier to operate jets from the Oakland International Airport, where a 10,000-foot runway was completed last fall.

The new jet equipment will augment the company's present fleet of 8 Douglas DC-6A/B's and 11 Super Constellations, which operate in flights for MATS, Logair, and various contract services, including a twice-weekly round trip to the Nike-Zeus project at Kwajalein for the Western Electric Co.

Like the 19 piston-driven aircraft, the new jet equipment will be committed to the civil reserve air fleet, thus being available to the military in times of national emergency.

The first two jets, ordered last May, have been financed by Boothe Leasing Corp., in connection with the Central Valley National Bank of Oakland and the Republic National Bank of Texas.

TERMS

Under terms of the leasing agreement for the first two jets, World Airways has the option to purchase the aircraft from Boothe at any time during the 10-year term, or at its termination.

All three of the new jets will have a cruising speed of 595 miles an hour and a nonstop range of 3,400 miles with full cargo load.

In MATS configuration, the 707-320-C can carry 168 passengers or 95,000 pounds of cargo, or any required combination of passengers and cargo. In economy configuration, 188 passengers can be carried. In either passenger configuration the craft can fly in excess of 6,000 miles nonstop.

They can be converted from passenger to cargo service in less than 4 hours.

Among the points which the new aircraft will serve in World Airways' flights for MATS will be Honolulu, Wake, Guam, Manila, Saigon, Bangkok, Tokyo, and Okinawa. Flights will originate at Oakland International Airport.

West Allis, City of Homes and Industry

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which appeared in the January 21, 1963, issue of the Milwaukee Sentinel concerning West Allis, Wis., a city in my congressional district. Written by Sentinel reporter, William Janz, the article is one of a series on the history and progress of communities in the Milwaukee metropolitan area.

Now the fourth largest city in the State of Wisconsin, West Allis has made significant strides since it was incorporated in 1902. Industry found the community a good one in which to settle and expand. It became the home of the Wisconsin State Fair and as such, the center of the State's industrial and agricultural progress.

But West Allis is also a city of homes. The people who live there have a deep sense of identity with their community and a justified civic pride. Its leaders have been farsighted and progressive. Past achievements and present prosperity point to a bright future for this city of homes and industry.

It has been my great privilege to represent the people of West Allis in the Congress since 1949. To demonstrate further the cause of my pride, I commend to the attention of my colleagues the interesting and informative article which follows:

WEST ALLIS TIES INDUSTRIES, HOMES

(By William Janz)

West Allis is an industrial city whose growth has been marked by the rhythmic pounding of heavy hammers.

Though a suburb, West Allis has become one of the State's major cities. It got there carrying a tool box and a lunch bucket.

The city's astonishing success was predicted in 1920 when Mayor Delbert Miller said, "We are so close to Milwaukee that people do not realize what we have, but if they'll wait, we will show them."

This industrial boomtown that "showed them" was dug out of nearly empty fields 60 years ago like a piece of raw material, heated, hammered and polished.

The sound West Allis makes is loud enough that it cannot be drowned out by the giant, Milwaukee, as Mayor Miller foresaw more than 40 years ago.

The quest for industry that had so much to do with forging this community of factories and homes is still going on.

In the city hall office of Mayor Arnold Klentz, who has been chief executive for 19 years, 13 colored bricks are lined up on a ledge below the windows. Each brick has a small pennant flying atop it with the name of a new industry or commercial venture. The bricks are from the foundations of new businesses.

The successful merger of industry and home wasn't always as peaceful a coexistence as it is today.

In 1920, when Miller was mayor, there was a mass meeting of citizens of the first ward

to discuss whether legal action should be taken so residents could get some sleep and not have to duck falling plaster.

It seemed some new giant steel hammers at a drop forge company were disturbing the usually peaceful slumbers of the occupants of 500 homes near 54th Avenue and Burnham Street.

But this was an early crisis in this marriage of home and factory. Since the end of the honeymoon, there haven't been many noticeable spats, and meanwhile, production has gone on—giant turbines, generating equipment, tractors, machinery and engines used all over the world.

"Our residential growth was naturally influenced by the plants that located here," Mayor Klentz said. "When the early industrial expansion went into high gear, people wanted to live closer to their employment and the result was a residential building boom."

West Allis today has a population of almost 69,000. When the Edward P. Allis Co. (Allis-Chalmers Manufacturing Co.) moved west from Milwaukee shortly after the turn of the century and triggered the industrial explosion, there were about 1,000 persons in the area.

On Milwaukee's south side, the Edward P. Allis Co. had only room to employ about 3,000 persons. It needed 10,000 workers. So it purchased 100 acres of farmland at \$250 an acre in what was known as North Greenfield and in the 1850's had been called Honey Creek.

With the purchase, a run on land began as other industrial concerns moved west with their workers.

Shortly after, in 1902, the village of West Allis was incorporated by a vote of 189 to 33. In 1906, Gov. J. O. Davidson proclaimed the village a fourth-class city.

"There's a funny story the old timers tell about the city being called West Allis," Mayor Klentz said.

He quoted from a book by Father J. H. Burbach, an early West Allis historian and an uncle of the present city engineer, Peter Burbach.

Mayor Klentz said there were those who wanted to retain the name of North Greenfield and those who wanted to call the new village West Allis. A meeting was called at Cappel's hall at 55th and Greenfield and those favoring the new name arrived first.

The meeting was called to order, a chairman and secretary elected, a motion made and carried to organize a village, to call it West Allis, to have a census taken and to have the village surveyed and mapped.

All this took only 5 minutes and when the supporters of North Greenfield arrived for the meeting, West Allis supporters were kind enough to read them the minutes.

Since then, West Allis has prospered and expanded. It boomed through the war years with its factories working 7 days a week, 24 hours a day. It annexed 6 miles of land in the early 1950's and is now fairly well developed.

"There is no substantial residential area left not committed for subdivisions," Mayor Klentz said. "There are about 300 acres of unoccupied land for industry and commercial use and you can bet we're certainly still looking for industry."

If the State fairgrounds are ever abandoned, as proposed, this will leave a large section of land for use.

The fair site was purchased by the Wisconsin Agriculture Society December 9, 1891. It helped play its part in the city's development because manufacturers were attracted by the ease of travel along streetcar lines put in for park users.

This was the beginning for the city that became known the employing suburb of Milwaukee County. More people used to work in West Allis than live there, although that isn't true today.

The four largest companies in the city

presently employ about 17,000 persons, city officials estimated. They are Allis-Chalmers, Kearney & Trecker Corp., Pressed Steel Tank Co., and the Wisconsin Motor Corp.

Completely Free by 1963

EXTENSION OF REMARKS OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I commend to the attention of our colleagues the following article which appeared in the January 5, 1963, edition of the Michigan Chronicle under the authorship of my highly esteemed and dear friend, Dr. Broadus N. Butler.

Richly endowed with an irrepressible spirit, depth of perception and intellectual strength, this articulate and inspiring American has continued to offer vigorous leadership in the field of human rights and human development.

The editorial follows:

COMPLETELY FREE BY 1963

(By Dr. Broadus N. Butler)

The tide of events since this declaration was adopted by the NAACP in 1953 has successively borne a Supreme Court school desegregation decision and an equal public accommodations resolution in 1954; a non-violent spiritual movement in Montgomery, Ala., in 1955; a high-gear series of moral and irrevocable national movements by the Federal Government to achieve equal employment opportunity and open occupancy housing opportunity from 1960 to 1962; and 1962 saw James Meredith and the Federal Government combine to finally seal the moral commitment of the entire country in their University of Mississippi demonstration that there will be no turning back.

There is now freedom in the air we breathe, but the air is not yet completely free. Segregation and discrimination are like dying serpents—weakly wriggling but still as deadly poisonous as when they were full alive. The bombed church in Birmingham, Ala., the shots that pierced the sanctity of the Meredith home in Mississippi, and the announcement by the Governor of Alabama that there will be more violence when Miss Malone registers at the university are sobering reminders that the freedom year of 1963 is not to be approached with unreserved and irresponsible glee. Nevertheless, the very fact that our Nation has officially and morally recognized that the serpent has been mortally wounded calls for unremitting determination to complete the task of stamping out forever this evil.

Equally important is the imperative that we not leave a vacuum where segregation was; for nothing is more quick to rejuvenate than something that is evil and negative. Unlike segregation and discrimination which are characterized by negations and denials, freedom is a very positive condition which must be produced by the constructive wills of men who set themselves to be free.

Freedom starts, in the words of James Weldon Johnson, with inner assurance. In his memorable book, "Negro Americans, What Now? (1938)," there are these salient closing words: "In the situation into which we are thrown, let each one of us, let the whole race, be ceaselessly on guard against the loss of spiritual integrity. So long as we maintain that integrity we cannot be beaten down, not in a thousand years * * * I will not allow one prejudiced person or 1 million

or 100 million to blight my life. I will not let prejudice or any of its attendant humiliations and injustices bear me down to spiritual defeat. My inner life is mine, and I shall defend and maintain its integrity against all the powers of hell."

From this foundation alone is built the personal and social disposition of the truly free man. No matter how decorated a man may be with the mythological garb of superiority, that man is not free who cannot look himself squarely in the private mirror of his own life and see his own integrity intact.

Contrariwise, no forces of men or institutions, nor all of the evil contrivances of slavery systems, segregation systems, or even genocide systems, can bend to submission the will of the privately freeman.

The whole massive slavery system at the height of its power could not weaken the will of Denmark Vesey, Nat Turner, Harriet Tubman, or Frederick Douglass. The entire national educational system aimed to keep the Negro submissive and ignorant could not stay the minds of W. E. B. DuBois, Carter G. Woodson, James Weldoh Johnson, and a host of Negro intellectuals. The savage and unspeakable sadistic lynch mobs and murderous bigots could not dent the courage of Mary White Ovington, Arthur Spingarn, William Pickens, Walter White, and Roy Wilkins. The economic sanctions and year-long absence of transportation could not deter the spiritual purpose of Rosa Parks, Martin Luther King, and the Negroes of Montgomery.

The jails, the burning of busses, the crashing of lead pipes and chains against the heads and bodies could not stop James Farmer and the freedom riders. Nay, not even hot coffee down the backs and pepper in the eyes of the sit-in demonstrators could lessen their demand for dignity. Why? Simply because they were already free. The steel of freedom does not bend to the exigencies of ignorance, vice, malice, or hate.

Freedom is a many-splendored and positive thing that is either there in the soul of the man or it isn't. The two most enslaved types of men in America—the most persistently wracked with fear and the most dangerous to themselves and others—are those who have to admit to themselves and their God that they are bigots and those who are so demeaned by the consequences of bigotry as to look at themselves and believe that they are inferior. Both are enslaved by the systematic loss of their own souls, and both seek irresponsible control over truly freemen.

This year, 1963, marks 100 years since the Emancipation Proclamation. Now that the denigrations, deprivations, and desecrations of the segregation system are reduced to but the wriggle of a dying asp, we must never again permit racial injustice, religious injustice, or any other form of systematic destruction of the dignity of our persons, either by myths of inferiority or by physical brutalities, to hold sway in this Nation. And every man must start within himself, where he is—now. The time of promise is nigh. Be it solemnly resolved: "But as for me, I shall be free."

Soviet Three Onsite Inspection Offer Rejected by United States in 1960

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. HOSMER. Mr. Speaker, on December 19, 1962, Premier Khrushchev

wrote President Kennedy that he would permit two or three onsite inspections annually of the Soviet Union in connection with a nuclear test ban treaty. The President replied on December 28, 1962, that he was encouraged and suggested further negotiations. Later, of the Khrushchev two or three statements, Secretary of State Dean Rusk said the United States is "encouraged to believe that the way is now open for some serious talks." On a Voice of America broadcast the President's science adviser, Jerome B. Wiesner said it "does bring us within shooting distance of some agreements." Somehow the impression has got around that the Khrushchev letter amounts to some magnificent concession extracted from the Kremlin by some wizardry or other of the Kennedy administration.

The truth and fact is that the three onsite inspection proposition was put up by the Soviets in 1960 and rejected by the United States. Here is what was said of it in the Atomic Energy Commission's annual report to Congress dated January 1961 at page 128:

The Russian negotiators at Geneva have offered to permit only three onsite inspections per year in their country for all unidentified seismic events. The U.S. position is that, in view of the fact that more than 100 locatable seismic events of greater than 4.75 magnitude occur each year in the Soviet Union, 20 percent of these should be eligible for inspection (20 inspections per year.)

This quotation is recalled simply as a reminder to those who might wittingly or unwittingly attempt to rewrite history regarding this particular matter.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer shall arrange the contents of the daily RECORD as follows: The Senate proceedings shall alternate with the House proceedings in order of placement in consecutive issues insofar as such an arrangement is feasible, and the Appendix and Daily Digest shall follow: *Provided*, That the makeup of the RECORD shall proceed without regard to alternation whenever the Public Printer deems it necessary in order to meet production and delivery schedules.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. _____ addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10(a). *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix. This rule shall not apply to quota-

tions which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the sine die adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

10(b). *Makeup of the Appendix.*—The Appendix to the CONGRESSIONAL RECORD shall be made up by successively taking first an extension from the copy submitted by the official reporters of one House and then an extension from the copy of the other House, so that Senate and House extensions appear alternately as far as possible throughout the Appendix. The sequence for each House shall follow as closely as possible the order or arrangement in which the copy comes from the official reporters of the respective Houses.

The official reporters of each House shall designate and distinctly mark the lead item among their extensions. When both Houses are in session and submit extensions, the lead item shall be changed from one House to the other in alternate issues, with the indicated lead item of the other House appearing in second place. When only one House is in session, the lead item shall be an extension submitted by a Member of the House in session.

This rule shall not apply to extensions withheld because of volume or equipment limitations, which shall be printed immediately following the lead items as indicated by the official reporters in the next issue of the CONGRESSIONAL RECORD, nor to RECORDS printed after the sine die adjournment of the Congress.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

Address by Herman Robinson Before
United Cerebral Palsy Association,
Inc.

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES
Monday, January 28, 1963

Mr. KEFAUVER. Mr. President, one of the most moving talks that I have ever read was delivered last October at the national legislative workshop of the United Cerebral Palsy Association, Inc., in Washington.

The speaker was the Honorable Herman Robinson of Elizabethton, Tenn., who in his own words "was not born to speak, and until 7 years old neither spoke nor walked" because he was afflicted with a form of cerebral palsy. But Mr. Robinson has refused to surrender to his handicap; indeed, today he is a successful newspaperman and a member of the Tennessee State Senate. He serves on the Tennessee Legislative Council and on a subcommittee studying the problems of the handicapped. He represents Tennessee on the Southern Economic Development Commission and also serves on the National Advisory Commission on Intergovernmental Relations.

I ask unanimous consent that the text of Mr. Robinson's speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the Record, as follows:

Thank you Mr. Lyons, Mr. Bogatin, for inviting me to this great meeting. My being here—to speak to you, briefly is the greatest honor that has ever come to me. An honor, yes, and a challenge—for I have never before undertaken to address so many distinguished people at one time. And just as I consider it my greatest honor, I consider it also my greatest victory. For when I came into this world, the doctors shook their heads sadly and said I would never walk or talk, or even live—and here I am speaking before a great assemblage in a great city. You will pardon me if I seem somewhat overawed.

When I am through, you will not say I made a great speech. You may not say that I even made a good one. You may say that I made a bad one; that I did not enunciate well; that I spoke haltingly; that there were times when I seemed confused. But all this will not matter to me. I will rejoice in the bare fact that I spoke at all—that I mustered the courage to make this attempt. For I was not born to speak, and until I was 7 years old I neither spoke nor walked—because I was afflicted with spastic paralysis, a form of cerebral palsy. So each time I speak in public, each time I communicate successfully with an audience, I consider that I have won a victory—and tonight, as I said, I have won the greatest victory of all.

What does all this prove? It proves, I think, that man can be greater than his handicaps. His mind can be disciplined to overcome the weakness of his body. With determination and perseverance, he can do what he wants to do and be what he wants to be, regardless of any physical deficiencies. In short, if he refuses to accept defeat, he cannot be defeated.

I am reminded of the farmer who had an old blind horse which had outlived its usefulness. One day the horse fell into an unused well, and the farmer found him there, standing knee deep in water. There was no way to get him out, and as both he and the well were useless, the farmer decided to fill the well up, and leave the horse buried in it. He shoveled the dirt into the well as rapidly as he could. But the horse was not ready to be buried. When the dirt began to pour in upon him, he shook the dirt off and kept treading on the dirt under his feet. Gradually the well filled up, and the horse, at the same time, rose higher and higher, until he was able to step out and walk away to the pasture. The moral, of course, is that none of us need be buried under hard times, discouragements and calamities, unless we are willing to be buried.

You did not invite me here, I am sure, to hear the story of my life, but I feel I must tell it to you briefly because I consider myself to be much like that old horse in the well. I just refused to be buried.

Let us go back to 1912 and let us picture a tiny mountain village in southwest Virginia called Castlewood. Now add to that picture a rural mail carrier and merchant and his wife excitedly looking forward to the birth of a baby—me. And now think of that picture becoming dismal and black as the baby is born with birth injuries to the head and nervous system—injuries which led physicians to say the child would not live "and it is better that way."

But the baby did live, though medical specialists continued to shake their heads and say walking or talking, or any vestige of normal life, was out of the question. It appeared they were right, because by the time I had reached 6 years of age I could do no more than sit in a wheelchair—and had to be propped up with pillows even to do that.

Even so, my mother was determined I should go to school with normal children. And, though doctors and school officials alike said no, she persisted. She told them, "He may not be able to talk, but he sure can listen good." They finally gave in. In those days, I think I made a great deal of progress by imitating the other children, their movements especially. In watching the other children, I tended to forget myself momentarily—and that helped.

In about a year, I was able to stumble out of the wheelchair and stand briefly. Then I began trying to walk. I suppose I fell down several hundred times—but finally the day came that I walked out of that chair and never returned to it. It seemed almost like a miracle. Learning to talk was a separate problem—and just as hard as learning to walk. I wanted to communicate what was inside me, but the sounds would not form. I made noises but didn't say anything. My parents kept saying words to me, and I tried to repeat them. Eventually, I succeeded—enough to make myself understood not only at home but at school. I do not mean to say I spoke as well as the other children did, or

even as well as I do tonight, but I did speak. And that, to me, was really something.

I kept up well in school. Perhaps this was due in part to sympathetic and understanding teachers. They kept promoting me from grade to grade. By the time I was ready for high school, the family had moved across the State line to Elizabethton in east Tennessee. That is where I live now.

My hero was a football coach whose name was E. N. Brown, but everybody called him "Mule." I decided I was going to play football for Mule. He had other ideas, but in an effort to make me feel a part of the team he made me manager. I guess I was just a glorified waterboy. I spilled so much water opposing teams accused Mule of wetting down the field.

They were justified. How well do I remember that first ball game in early September when the players called time out because of heat and called for water. Those days the team had a big water pail and a family dipper. I grabbed the bucket with the dipper in the other hand. I went to the team with the water splashing and the crowd in the stands laughing. You know, when I got to the team, I was wet; but I was there. I had made it. The captain took the water pail from my hand and turned it upside, not a drop left. He called for more water. And I'll never forget halftime when the boys asked the coach never to send me out there again. I handled that problem by getting bottles for each individual. And too, we were practicing more sanitation.

Those were good old days. You know, when I would bring the footballs out to the practice fields, very often one of the players would say, "Give me that football before you shake the air out of it."

The manager business was good—but not good enough. I still wanted to play. I got a signed statement from my parents saying it would be all right, and that did it. In modern parlance, I was in orbit when Mule said I could get out there and practice with the team. I don't think I was exactly a star—it seemed at times they were using me as a blocking dummy, but I did make the team and earn a letter. At that time, I could not have asked for more. It seemed to me I had no more worlds to conquer. I had proved I could mix it up with the roughest of them and hold my own.

After high school, I attended East Tennessee State College in nearby Johnson City, but by that time I had been bitten by a bug which left a virus from which I have never recovered—newspaper reporting.

I was interested in writing for the papers—sports, social events, anything. That was in the time of the depression, and publishers were cutting off instead of putting on. They wouldn't give me a regular job, but let me sweep out at \$2 a week. Between sweepings, I managed to contribute a few articles that found print. I could not ask for anything more, even money.

Eventually, I worked my way into regular employment, first in my hometown and then in neighboring Johnson City. I have worked for these newspapers ever since, and they have contributed more to my education, I feel, than all the classroom instruction I received. It was through newspaper work that I became interested in politics, which I found fascinating to report. Perhaps it was only natural that this fascination should lead me to enter the "great game" on an active basis and be elected to

the Tennessee State Senate, in which I am now serving my fourth consecutive term. The last three without opposition.

Up until now, I am afraid I have been giving myself credit for what I have accomplished. Perhaps I may seem to have been boasting. I have not meant to do this. Truth compels me to say that I could never have done anything if I had not had patient and loving parents, many faithful and understanding friends—and most of all, a loving wife who came to me (for what reason I do not know) and has stood by me through the years when the going was rough as well as when it was smooth. It was she who gave me social confidence—something I surely lacked even after winning the physical battles. It did not occur to me that I could ever be a part of "boy-meets-girl" life, because I felt no young lady could ever be attracted to me. (And I am still mystified as to how it could happen.) But she brought romance to me, and it has never left me—and I know it never will so long as I have Margie.

This young woman has been my bride for 23 years in December—and she has been my partner in my work. We are a team. I never undertaken anything of importance without getting her advice and consent. We planned our family, waiting 8 years for our first child, a son. We wondered if he would be handicapped. Would my affliction carry over to him? We were anxious, and we consulted the best physicians. I can answer the question of "carry-over" best by telling you this boy is kicking extra points and field goals for the University of Tennessee Volunteers, a football team of which you may have vaguely heard. He is a sophomore studying law. We also have a daughter, 13, who is doing well in the accelerated program of the Elizabethton school system—and equally well in tap dancing, piano, and band. She and our son could hardly be more normal teenagers. And so, you can readily see why I feel life has treated me well. It has responded generously when I have called upon it. It has given me more than I deserve. For all of this, I humbly thank a kind Providence.

I have found that it isn't the handicap that gets a person down. It is the surrender to a handicap. If one is determined, he can conquer the handicap, but if he is sorry for himself, it will conquer him. Look at it this way: Everybody is handicapped. Some are handicapped in body, some in mind. Some have handicaps which show, others have handicaps which are not seen with the eye. Some of the people most envied by their fellows are nursing burdens which sorely test them. From the highest to the lowest—even including the President of the United States—all are burdened. All are put to the test, all are challenged to conquer or be conquered, to hope or to despair, to win or to lose. Nobody is free of handicaps. Yours may be different from mine, but it is there. God did not intend that any human be perfect—in mind, or in body, or in soul. He made us a little lower than the angels, each one of us with frailties which, after all, means that we are human and not divine. But God did not intend that we surrender to our handicaps. He gave them to us as challengers. He intends that we shall fight to overcome them. In a sense, then, they are blessings as much as burdens. They are crosses which, when we bear them bravely, can give life meaning if otherwise would not have.

The greatest victories in life are those we win against great odds. The victory which comes easily brings with it no sweet taste. So whatever may be our lot, let us accept it without bitterness—and determine to improve it.

We can do it, if we will. I know we can.

We can grow and we can build, if we but have faith.

A builder builded a temple
He wrought it with grace and skill
Pillows and goins and arches
All fashioned to work his will.

Men said when they saw its beauty
It is never to decay
Great is Thy skill, O builder
Thy fame shall endure for aye.

Fathers and mothers builded a temple
With infinite hands and care
Planting each arch with patience
Laying each stone with care.

Gone is the builders temple
Crumpled into dust
Low lies each stately pillow
Food for consuming rust.

But the temple the parents builded
Will last while the ages roll
For this beautiful unseen temple
Is a person's immortal soul.

Obvious Critics

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. FLOOD. Mr. Speaker, I rise to ask permission to have inserted in the CONGRESSIONAL RECORD an excellent editorial, written by Mr. Gordon Fister, in the Allentown (Pa.) Morning Call, praising the work of our distinguished colleague, Representative FRANCIS E. WALTER, and the Committee on Un-American Activities.

I wholeheartedly agree with the editor's observations on the outbursts made at a recent committee hearing. Mr. Fister wrote:

Demonstrations * * * serve neither the cause of peace, the interests of this country, or the individuals who seek a place in the sun by making spectacles of themselves.

Under unanimous consent I include the following article for the Appendix of the RECORD:

OBVIOUS CRITICS

There isn't much reason to become excited about abuses sometimes charged to the House Un-American Activities Committee so long as the objections to its procedures come principally from those who plead the fifth amendment when asked about present or former Communist affiliations.

Little more significance need be attached to outbursts by any who like Jack Levine, survived the rigorous training and life of an FBI agent only long enough to launch an attack on this law enforcement agency and its respected chief, J. Edgar Hoover. It takes more than one agent with less than a year of service on his record to discredit such a force.

Demonstrations like those once again being mounted by adversaries of the Un-American Activities Committee at hearings in Washington serve neither the cause of peace, the interests of this country, or the individuals who seek a place in the sun by making spectacles of themselves.

Few Americans who are not Communists now and never have been would hesitate to vigorously deny such affiliations publicly

or privately. Few who could not give a negative answer to the simple question would want either their present or former associations with the party on the record. Their reasons for objecting to hearings like these are obvious. Communists, after all, aren't in the best repute among most Americans.

There probably are many well-intentioned and conscientious folks in pacifist groups like the one identified as Women Strike for Peace. There could, however, be some who use this and other organizations with high-sounding names to feed innocent victims poisoned Moscow pap.

The House Un-American Activities Committee, for so many years headed by Representative FRANCIS E. WALTER, and the FBI, both are charged by Congress with determining what insidious forces are at work behind convenient cloaks in this country. Most folks want them identified so they can more accurately determine which groups are dedicated to serving this country and which are under the influence of others.

Ukrainian Independence Day

EXTENSION OF REMARKS OF

HON. QUENTIN N. BURDICK

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 28, 1963

Mr. BURDICK. Mr. President, on Tuesday last, in Wilton and Belfield, N. Dak., the Ukrainians of North Dakota joined Ukrainians throughout the free world in observing the 45th anniversary of the proclamation of a free Ukrainian state on January 22, 1918.

As a part of the observance, Hon. William L. Guy, Governor of North Dakota, issued an executive proclamation setting aside January 22 as Ukrainian Independence Day in North Dakota.

The proclamation is a symbol of freedom for the Ukrainians of North Dakota and throughout the world.

Mr. President, I ask unanimous consent that the Governor's proclamation and a press release by the Ukrainian Congress Committee of America, Inc., Bismarck, N. Dak., be printed in the Appendix of the RECORD.

There being no objection, the proclamation and press release were ordered to be printed in the RECORD, as follows:

PROCLAMATION OF UKRAINIAN INDEPENDENCE DAY IN NORTH DAKOTA

"Whereas on January 22, 1963, Ukrainians in North Dakota and throughout the free world will solemnly observe the 45th anniversary of the proclamation of a free Ukrainian state; and

"Whereas after a defensive war lasting 4 years, the free Ukrainian state was destroyed in 1920 and a puppet regime of the Ukrainian Soviet Socialist Republic was installed, later becoming a member state of the Soviet Union, and

"Whereas the once-free Ukraine is now no more than a colony of Communist Russia and its vast human and economic resources are being exploited for the purpose of spreading communism; and

"Whereas some 25,000 Americans of Ukrainian descent now living in North Dakota have made significant contributions to both State and Nation. Now, therefore, I, William L. Guy, Governor of the State of North Dakota, do hereby proclaim the week

of January 22, 1963, as Ukrainian Independence Day in North Dakota and urge all citizens to demonstrate their sympathy with and understanding of the aspirations of the Ukrainian nation to again achieve its rightful inheritance of freedom and independence."

Given under my hand and the great seal of the State of North Dakota here in my office in the State capital at Bismarck, N.Dak., this 17th day of January 1963.

WILLIAM L. GUY,
Governor.

Attest:

BEN MEIER,
Secretary of State.

JANUARY 22 PROCLAIMED UKRAINIAN DAY

For many years the 22d of January has been proclaimed and celebrated in our American cities and States from coast to coast as Ukrainian Independence Day.

On January 22, 1963, Americans of Ukrainian descent are observing the 45th anniversary of the Proclamation of Independence of Ukraine which took place on January 22, 1918, in the capital of Ukraine, Kiev.

On that day, a free and democratically elected Parliament and Government of Ukraine issued a solemn act and proclamation of the reestablishment of the Ukraine as a sovereign and independent nation called the Ukrainian National Republic.

The young Ukrainian state was recognized by a number of governments including that of Soviet Russia. But despite the fact that it officially recognized the independence of Ukraine and pledged itself to respect the sovereignty of the Ukrainian nation, Communist Russia attacked Ukraine both by military aggression and subversion and infiltration from within. After almost 4 years of bloody war, Ukraine, deprived of all military, economic, and diplomatic help from Western nations, succumbed to the forces of Communist Russia.

Since 1920 Ukraine has remained under the domination of Communist Russia, but it has never surrendered the spirit of resistance nor given up the hope of liberation and complete independence. During the whole period of enslavement, Ukrainian resistance to the Communist regime and Soviet Russian oppression continued. As a result the Ukrainian people were subjected to harsh and inhuman treatment and persecution. Both Ukrainian churches; namely, the Ukrainian Orthodox and Ukrainian Catholic Church, were physically annihilated by Moscow; the Ukrainian intelligentsia was decimated by purges, deportations, and executions; while over 5 million Ukrainian peasants died from hunger and starvation during a manmade famine. It was Khrushchev himself who declared at the 20th Congress of the Communist Party that Stalin planned the total extermination of the Ukrainian people, which plan failed only because there were too many Ukrainians. How significant was the Ukrainian problem to the Russians was evident in 1959-60 when the Soviet Government sent special agents to kill Ukrainian leaders in the free world, as was the case of Stepan Bandera and Dr. Lev R. Rebet, whose killer was recently sentenced by the German Supreme Court in the fall of 1962, to 8 years of hard labor.

Both the U.S. Government and the President have recognized the plight of the Ukrainian people, enacting and signing the Captive Nations Week resolution, which listed the Ukraine as one of the captive nations enslaved by Communist Russia. During the debate of the United Nations General Assembly, a number of Western statesmen, including Hon. John G. Diefenbaker, Prime Minister of Canada; Hon. Adlai Stevenson, U.S. Ambassador to the U.N.; the Ambassador of the Republic of China; and others raised their voices in protest against the colonial

enslavement of the Ukraine by Communist Russia.

In the summer of 1962, special Senate and House resolutions calling for congressional inquiry into the persecution of religious groups, its genocide of the Ukrainian churches and 18 years of imprisonment of Archbishop Joseph Slipy, were introduced by Senator Milton R. Young and Congressman Don L. Short.

Today the Ukrainian people everywhere are celebrating the memorable date of January 22, 1918, as their greatest national holiday. Today, after 45 years of unrelenting struggle against Moscow, the Ukrainians have made much progress, and their cause is known as never before.

The cause of Ukrainian freedom and independence is no longer a patriotic desire of the Ukrainians. Since the Communist menace has spread to our shores in Cuba and Latin America, it has become a political necessity for the free world, since the independent Ukraine means a substantial weakening of the Soviet Communist empire and therefore the permanent Soviet threat which hangs over an intimidated humanity.

Americans of Ukrainian descent in our great State of North Dakota are planning to celebrate the forthcoming 45th anniversary of the Ukrainian independence on January 27, 1963, in Wilton and Belfield, in a fitting and solemn manner.

Therefore the 45th anniversary of Ukrainian independence provides an appropriate occasion for the American people to demonstrate their sympathy with and understanding of the aspirations of the Ukrainian nation to freedom and independence.

Monkey Wrench in the Economy

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. YOUNGER. Mr. Speaker, the following article by David Lawrence which appeared in the Washington Star on January 26, 1963, clearly illustrates some of the grave difficulties arising out of the proposed tax cuts accompanied by the largest annual budget in the history of this country.

If the state of the Union is as good as we were assured it is in the President's state of the Union message, then why all of this tampering with the economic system.

Under unanimous consent, I include the following article in the Appendix of the RECORD, as follows:

MONKEY WRENCH IN THE ECONOMY—PRESIDENT'S TAX PLAN VIEWED AS LEADING TO UNCERTAINTY AND POSSIBLY STAGNATION

(By David Lawrence)

President Kennedy has thrown a monkey wrench into the national economy. His message to Congress on taxes was well intentioned, but the confusion, disruption, and uncertainty it will bring in the next few months to business operations in this country could stagnate the economy and result in the very opposite of the hoped-for stimulus; namely, a recession.

For, again Mr. Kennedy has depended on academic advisers who boldly disregard the most important single factor in the national economy, the confidence necessary to future planning.

Instead of getting the widely heralded tax cut, corporations will pay more tax money to the Government during the next 3 years than they did before. They will not actually get on the promised percentage basis of reduction till 1969. It's a stimulus in 1963 that's needed, not in 1969.

This outlook is partly due to the President's scheme for moving up tax collections from many corporations to larger payments during the same year the income is earned. This involves a surgical operation on the cash flow of a company that could block expansion or even the financing of current capital outlays to which many corporations have already committed themselves for the next several years.

On the face of it, moreover, individuals in the higher brackets are being told they will have the rates reduced from 91 to 65 percent over a 3-year period, but the President's recommendations call for such vital changes in the handling of capital gains as well as contributions and other deductions that the net result may be little, if any, decrease in the payments by the taxpayer.

A man with an income of \$20,000 a year, for instance, may hitherto have had legitimate deductions of \$2,000. Under the proposed plan, the Government would disallow deductions, including interest on the mortgage on his home, contributions, and city and States taxes, equal to 5 percent of his income, or the first \$1,000. The deductions allowed would then amount to \$1,000. But should he happen to have casualty losses, these would be deductible only in the amount they exceed 4 percent of his gross income, and even this would be subject to the basic 5 percent limitation. Also, he would be required to pay taxes on the premiums paid by his employers on any group life insurance policy above \$5,000. There are other new increases in taxes and removal of exemptions, so that the taxpayer could wind up with less net revenue than before.

But what the President's plan does to individual planning for estates is even worse. A capital gains tax on the appreciated value of real estate, for example, will have to be paid at the death of the owner, even if the property isn't sold. This would be in addition to inheritance taxes. There will have to be a revision now of many a will. A person who thought he was leaving a certain sum to his family will find the amount materially diminished.

The repeal of the provision that sick pay is not subject to taxation up to \$100 a week will cause dismay to the head of many a family who becomes ill and tries to make ends meet on a diminished income, especially if his work is largely on a commission basis. Also, while heretofore he could deduct medical expenses in excess of 3 percent of income, now he will be given a deduction for such expenses above 4 percent and will be able to take even this only to the extent that his total deductions exceed 5 percent of his gross income. So more of his income will be taxable than before.

When one surveys the confusion to individuals and the diminution of the capital or reserves in the treasuries of corporations, one wonders if the President's advisers gave any thought to the high cost of the transition period in terms of a demoralized national economy.

There are dozens of categories on which increases in taxation will result, yet the President's plan is hailed as a tax cut. It will take many months for such a measure to go through Congress. Meanwhile, what will individuals and businesses do? How can they plan? Will spending be discouraged? People don't spend money expected from tax cuts till they are actually in effect. Since the changes in rates are to be spread over 3 years, while the changes in regulations about deductions and expenses of all kinds,

including certain classes of gifts, are to go into effect next January, it will certainly make people in 1963 cautious about what they spend. This caution and hesitation may last 2 or 3 years, because there will be no certainty that Congress will not be compelled, due to public-opinion pressures, to make more changes next year.

All in all, when the country fully understands the President's tax plan, the Democratic Party will certainly be on the spot. The division in the electorate between the two major parties is a narrow one, anyhow, and it takes only a small percentage shift of voters to produce a landslide for the other party. That could mean a Republican Congress and a Republican President in 1964. Until Mr. Kennedy made public his tax plan, it looked as if he might win again in 1964. But now it looks as if a nationwide protest will develop. This will be felt in Congress, which will hesitate to adopt the President's plan, alluring though a tax cut seemed to the politicians at first glance.

In the final analysis, what good is a cut in tax rates if business conditions turn for the worse and individual incomes begin to shrink? That's the unanswered question in the President's message.

What Is a Farmer?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 28, 1963

Mr. MUNDT. Mr. President, farming remains the basic industry in all America. When farmers are successful the Nation is prosperous; when farmers are in economic distress, the Nation falters; should farmers fail completely in their production of food and fibers, all of us would be reduced to inadequate diets, deteriorating health, and unsuitable clothing. A sound and productive agriculture is essential to a stable and successful American economy.

But how about the men and women who operate these all-essential farms? Who are they? How do they think? What are their attitudes, their goals, and their ambitions? What manner of human being and fellow citizens are they actually? Station KMA of Shenandoah, Iowa, recently broadcast a description of a typical farmer which was reprinted in the GTA Daily Radio Roundup of St. Paul, Minn. It summarizes well the sturdy, self-reliant characteristics exemplified by our Nation's farmers and I ask that it be printed in the Appendix of the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

A farmer is a paradox. He is an overall executive with his home his office; a scientist using fertilizer attachments; a purchasing agent in an old straw hat; a personnel director with grease under his fingernails; a dietitian with a passion for alfalfa, amino acids, and antibiotics; a production expert with a surplus, and a manager battling a price-cost squeeze.

He manages more capital than most of the businessmen in town.

He likes sunshine, good food, State fairs, dinner at noon, auctions, his neighbors, his shirt collar unbuttoned and, above all, a good soaking rain in August.

He is not much for droughts, ditches, throughways, experts, weeds, the 8-hour day, grasshoppers, or helping with housework.

Farmers are found in fields—plowing up, seeding down, rotating from, planting to, fertilizing with, spraying for, and harvesting. Wives help them, little boys follow them, the Agriculture Department confuses them, city relatives visit them, salesmen detain them and wait for them, weather can delay them, but it takes Heaven to stop them.

A farmer is both faith and fatalist—he must have faith to continually meet the challenges of his capacities amid an ever-present possibility that an act of God (a late spring, an early frost, tornado, flood, drought) can bring his business to a standstill. You can reduce his acreage but you can't restrain his ambition.

Might as well put up with him. He is your friend, your competitor, your customer, your source of food, fiber, and self-reliant young citizens to help replenish your cities. He is your countryman—a denim-dressed, businesswise, fast-growing statesman of stature. And when he comes in at noon, having spent the energy of his hopes and dreams, he can be recharged anew with the magic words: "The market's up."

The Crisis for American Poultry Exports

EXTENSION OF REMARKS

OF

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. MARSH. Mr. Speaker, the strong protectionist policy adopted by the European Economic Community toward importation of agricultural products from nations outside its group has had a devastating impact on the American poultry industry, which, in recent years, had developed a substantial export market in Europe, particularly in West Germany.

The Virginia poultry industry alone had built to an annual volume of \$7,500,000 in shipments to West Germany. In recent months, this business virtually has been extinguished. Other poultry producing States have suffered comparable economic damage.

Conscious of the overall dollar loss to the State, not only in direct payments to poultrymen but also in business generated among those selling goods or services to poultrymen, all segments of Virginia's economy have banded together in a cooperative move to press for more intensive efforts by the U.S. Government toward modification of the oppressive tariff, variable levy and "gate price" policies adopted by the European Economic Community.

As of possible interest to colleagues from other poultry States, Mr. Speaker, I include, under leave to extend my remarks in the Appendix, some background material on the problem:

BACKGROUND INFORMATION

Set out below are several items of information in reference to the European com-

mon agricultural policy that may be helpful in presenting the case for the poultry industry.

1. The present treatment of American poultry entering Common Market countries is a result of regulation No. 22 of the European Economic Community adopted at Brussels on the 4th day of April 1962. To request the official translation of regulation No. 22, address inquiries to the U.S. Department of Agriculture, Foreign Agriculture Service, Washington, D.C., and request Foreign Agricultural Circular FPE 4-62, November 1962.

2. Under the Common Agricultural Policy (CAP) nonmember countries' exports are subjected to (a) gate price, (b) equalization fee (variable levy), (c) ad valorem duty (internal), (d) ad valorem duty (external). See attached sheet for explanation of these levies.

3. It is important to stress that poultry is a nonsupported, non-Government-controlled agricultural commodity, the price of which is established by the forces of the free market. Poultry has the best case of any agricultural product to point out the unfairness of the Common Market action. Poultry is a substantial export item that is sold for dollars and consequently not only helps achieve a favorable balance of trade but also would help to achieve a favorable balance of payments. In short, the export of poultry helps to stop the outflow of gold that is posing for this Nation a serious economic dilemma.

4. The Common Market has stated that it expects to follow a liberal trade policy, and their action on poultry in using a series of levies is a flagrant example of an extremely protectionistic policy in order to establish a domestic production capability.

5. Unless the case for poultry is made now, it will be much more difficult to achieve a solution once they have invested heavily in their own production capacity.

6. Under the forces of a free market system, Common Market poultry cannot compete with American poultry. To emphasize this point, it is estimated that the American industry could place broilers into the Common Market at a cost of 29 to 31 cents per pound. American imports have reduced the price of poultry from a luxury foodstuff to a reasonably priced commodity more nearly within the reach of the average European housewife. The price of chicken per pound in Germany as of December 31, 1962, was approximately 44 cents per pound. Prior to August 1, 1962, and the common agricultural policy, the maximum price per pound of chicken was approximately 38 cents per pound.

7. There is no certainty as to the firmness of levies of the Common Market. The deliberations of the Council of Ministers are closed, and to point this out, a supplemental levy of 2.84 cents was made in the November meeting and announced overnight—suddenly disrupting the American market and confusing exporters and importers. Importers were caught with thousands of pounds of poultry on the high seas purchased at one price but subject to higher levies on entry to Europe.

8. Although Virginia provides only about 3 percent of U.S. poultry production, it has 13 percent of the national exports.

9. It has been argued by Common Market officials that poultry has only recently become a major export item to the Common Market, especially Germany, and, therefore, the American poultry industry has not been hurt. It should be emphasized that only within the last few years could we get into Germany because of extremely high tariff walls. Secondly, the market was built by aggressive sales promotion, through advertising, trade fairs, and other media to develop a consumer demand.

10. It should also be emphasized that the American poultry industry has the experience in growing, processing, and packaging that enables us to develop our markets in Europe. Another major factor is the American capacity and experience in freezing poultry products.

11. The argument is made that we can avail ourselves of the negotiation procedures under the recent Trade Expansion Act. Persons who raise this point are probably referring to the Christian Herter team which will implement the negotiation procedures of the act. However, it should be stressed that the negotiation procedures provided in the act will not be available until some time in 1964.

This entire organization must be planned and put together and until that is done, State Department officials advise that normal diplomatic procedures will have to be followed in communicating with Common Market nations. Many observers feel (foreign and domestic) that strong action on poultry could minimize future unfair trade policies by the Common Market.

The new Trade Expansion Act, section 252(a)(3), gives authority to the President and our negotiators to retaliate against countries which impose unreasonable tariffs on poultry and other agricultural products.

12. There are indications of support of the American industry in several of the Common Market countries, particularly Germany and Italy.

13. Many persons do not look on poultry as being an industry. This is especially true in the Common Market. There are also indications that many persons in this country cling to the idea that chickens are raised by walking out the back door and throwing a handful of grain in the yard. The point must be brought home that the poultry industry is a highly-technical operation that affects and involves many other areas in our economy and a host of related industries from a farm operation to a complex modern marketing operation.

14. In a paper prepared by the Georgia Poultry Federation, it is stated:

"Economists estimate that if there had been no exports in 1960, broilers would have brought a cent a pound less, eggs over a cent a dozen less and turkeys over a half-cent a pound less."

15. Special mention should be made concerning West Berlin and the importation of poultry to that city. The present levies of the CAP are applied in that city to our poultry imports, and a strong position should be taken without admitting, or agreeing, to any of the levies established under the CAP on poultry—that, in any event, the citizens of West Berlin should have made available to them foodstuffs at the lowest cost at which they can be provided to the people of that city, especially in light of the heavy commitment this Nation has made to the defense of West Berlin and to the costs of garrisoning and possibly subsidizing the supply of foodstuffs to that city.

16. There is little or no turkey production in Europe, and the large fowl market is in geese. Similar levies, but at different rates, are applied to turkeys and other large fowl. The market price of geese and turkeys are quite close, and up until the recent holiday season the "variable levy" (equalization fee) on geese and turkeys was about 9½ cents per pound; however, in November the variable levy was dropped by about 6½ cents for geese but held at 9½ cents for American turkeys. Among the principal suppliers of geese on the Common Market are Poland and Yugoslavia, and the result of this action was to exclude turkeys, our major fowl export, from the market which was captured by the cheaper-priced geese. It is understood that the variable levy on

geese, as of January 1, 1963, was raised to the 9½-cent level; however, the holiday demand had ceased.

COMMON MARKET LEVIES ON AMERICAN POULTRY

"An equalization fee (sometimes referred to as a variable levy) is to be charged on poultry to correct for the amount by which feed grain prices in the importing country exceed the price of the same grains in the world market. This fee will be levied per kilo of meat (2.2 pounds).

"A gate price—the minimum price at which poultry may enter the Common Market—is also provided. This is designed to prevent dumping by nonmember countries.

"The gate price is based upon the world market price for feed grains and a feed conversion factor which is considered to be typical of the exporting countries. When prices offered by the exporting country are below the gate price, the importing country must charge a fee equal to the difference.

"An ad valorem duty (internal) in the amount paid by member countries to each other will be charged all outsiders. For instance, Germany charges a duty of 10.5 percent on poultry from other Common Market countries. Any outside countries shipping poultry into Common Market countries will have to pay such a fee as of July 1.

"The German duty is now 15 percent on poultry from outside countries. Hence, the United States will benefit from the reduction. The duties vary according to the problem of member countries in adjusting their farm policies to free trade conditions. These duties are all scheduled to be reduced gradually to zero by December 31, 1969.

"Another ad valorem duty (external) of 2 percent is being added this year. It is to be built up gradually to 7 percent by 1970. This so-called preferential duty will be charged on all poultry from outside the Common Market."—Taken from an article by Dr. Harry M. Love, published in the Virginia Poultryman, May 1962.

One thousand pounds eviscerated poultry generates the following gross income:

Income to producer of feeds (to grower of grain, etc.)	-----	\$150.00
Income to flock owner (to hatching eggs produced)	-----	18.00
Salaries, wages, and other:		
To broiler grower	-----	33.00
To delivering feed and servicing broilers	-----	14.00
To truck to haul live poultry from farm to plants	-----	7.50
To wages to process and pack	-----	30.00
To boxes, paper packaging material	-----	18.00
To ice	-----	3.00
To trucking dressed poultry to seaport	-----	10.00
To repairs, replacements to plant processing equipment	-----	15.00
Total	-----	298.50

(Taken from statistics supplied by the Georgia Poultry Federation.)

WHAT MIGHT BE DONE

1. Adoption of a resolution by trade associations and other organizations in the Commonwealth which would be forwarded to a coordinating committee that would make proper distribution.

2. Make it a point to discuss this Common Market action with your local newspaper editor, radio station, radio-television station and other news media.

3. Arrange for insertion in trade organs of a story covering the Common Market action.

4. Organize a letter and telephone campaign by different organizations and individual citizens directed to the appropriate agencies of the executive branch of our

Government. Correspondence should be addressed to the White House and the Department of State.

5. Organize a speakers team of individuals to address civic clubs, trade associations and other clubs throughout the Commonwealth explaining this matter and requesting their assistance by demanding support of the poultry industry by our Government.

6. Inform your elected representatives of the situation.

7. Arrange for a conference with appropriate officials at the highest possible level in the executive branch of the Government.

The Power of Belief

EXTENSION OF REMARKS OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, January 28, 1963

Mr. KEFAUVER. Mr. President, several of us in the Senate were privileged to hear a most inspirational address by our colleague, Senator CLAIBORNE PELL, delivered at the Old St. John's Church, Georgetown, on January 13, 1963.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TALK DELIVERED AT OLD ST. JOHN'S CHURCH, GEORGETOWN, ON SUNDAY, JANUARY 13, 1963, BY SENATOR CLAIBORNE PELL, OF RHODE ISLAND

From the time I was confirmed until I graduated from college, I occasionally contemplated entering the clergy. I used to think, and still think, that the pulpit can be a most wonderful podium from which to change the course of events for the better. But I am afraid I had neither sufficient determination, nor virtue, to follow through with this interest.

So, following a rather indirect route, I became a politician. However, I believe that a politician can also be a force for good, because a good politician—and remember a politician is never a statesman until he is dead—a good politician is also driven by the desire to help and to lead. If we weren't, we'd be doing something else, and usually something a lot more profitable. And, so I am very, very glad indeed to be standing here talking with you now.

Today, when we hear so much about the balance of power, yes, the balance of terror, I would like to discuss the tremendous weapon that we of the West have and the Communists do not have.

To my mind, it is a weapon that can more than hold its own with nuclear missiles over the long haul. Although it must be confessed, the decisiveness of the nuclear missile over the short haul would be pretty decisive.

This weapon is religion. It is a universal weapon, too, because when I say religion, I am not just thinking of a particular faith, nor am I thinking of Christianity with all its rich intermixture of faiths, but I am thinking of religion in general and the common belief of certain origins and certain values.

I wonder how many of us have stopped to think that it can be said that Jesus Christ, Mohammed, and Moses are all descendants of Abraham. I believe one could actually trace out a genealogical cousinship, a consan-

guality, between these three. It is quite interesting, incidentally, to see with what pride the Moslems consider themselves of the same general religious family as do the Jews and the Christians. I guess this all goes to show that Senator Austin's plea at the Security Council to the Israelis and the Arabs to settle their problems in a truly Christian spirit, may not have been such an unattainable idea after all.

Then, on a more universal scale still, many comparative religions not only show the same misty origins of the world starting with the Great Flood, but will also show a surprising similarity in values, values that oppose the Communist ones: the importance of loving, the importance of generosity, and, perhaps, the greatest difference with the Communist bloc, belief in the afterlife.

Let us see now, the role of religion in the uncommitted, undeveloped areas of the world such as Africa—particularly sub-Saharan Africa and southeast Asia. Here we have a very specific debt to the missionaries.

Until I made a trip to Tanganyika some time ago, I had always given a very long look at the activities of missionaries since I was under the impression that they were often disliked by the people of the emerging nations and regarded by them with great suspicion.

However, my trip to Africa deeply impressed me with the great educational and medical contribution made by missionaries there. In Tanganyika alone, I found that there were 400 American Christian missionaries, or 20 times the number of American Government personnel in that country. In fact, in tropical Africa, as a whole, there are close to 10,000 American missionaries. This is a number more than a thousand percent higher than the 778 American Government personnel there.

Another way of looking at it, and an even more impressive figure, is the realization that there are 23,000 missionaries of all nationalities, including Americans, in tropical Africa, approximately 6,440 Catholic and 15,970 Protestant.

These dedicated men and women may handle very high caliber education, as is the case with the Anglican St. Andrew's School outside Dar-es-Salaam, Tanganyika, where the graduates are able to compete on an equal basis with youngsters finishing the best English school at home. Or, as is the case with the majority of missionary schools, the education may be more simple and elementary, giving the students a basic knowledge of reading and writing. But, no matter what may be the particular level of missionary education in Africa, without it, that continent would be undergoing far greater turmoil and internal strife than is now the case.

In this connection, it is interesting to notice that 16 heads of state and prime ministers of the newly emergent nations of tropical Africa received their education in full or in part in missionary schools. In fact, with only a single exception, every African head of state or prime minister in tropical Africa who is not a Moslem was educated to some degree in a Christian missionary school.

Moreover, in those countries not yet independent, we find the leaders equally owe their education to missionaries.

Altogether, a total of 35 men are included. Of these 35, Christian missionaries educated 25. Catholic missionaries educated 17, and Protestant missionaries educated 8.

In the remote vastness of the mountain lands in the periphery of Communist China, there are many American missionaries, including incidentally, a goodly number from my own State.

In general, in the area of missionaries, our Protestant Episcopal Church is not seen as much in the Far East as others.

Now, let's examine the situation of religion behind the Iron Curtain. Here, I would like to cite two differing views on religion.

The first you are familiar with—Karl Marx's dictum that "religion is the opiate of the masses." But, I believe more in the words of Bela Udvarnoki, who, in an article in *Christianity Today* last July said, "Man is incurably religious."

The fact, I think, that man is incurably religious is our great secret weapon against the Communists. It is secret only because we are not sufficiently aware of it and do not recognize its importance and strength.

There is another interesting set of circumstances behind the Iron Curtain and that is that in Albania, Bulgaria, Czechoslovakia, Hungary, Poland, Romania, Yugoslavia, appropriations of one sort or another are actually granted by the atheistic governments for church or parochial schools.

Religion, too, is a means of expressing their feelings toward communism by the unhappy people behind the Iron Curtain.

Having lived and traveled in Czechoslovakia, Poland, and Hungary since these countries have fallen behind the Iron Curtain, I am always struck by the intensity and fervor with which religion is practiced there today. I can remember, in the churches before World War II, the people attended but they did not attend and pray in the same numbers and with the same intensity.

Yet, I recall that shortly after the Communist coup in Czechoslovakia, the church parades on Saints' Days and Sundays suddenly became two or three times as long as they had been before. Why? Because this was a way for the people to show how much they opposed communism.

In Poland, President Gomulka and the Communist regime have had to accept the church and the practice of religion by the vast majority of Poles.

Cardinal Mindszenty still in our Budapest Legation, remains a symbol to many of the Hungarians, and the churches there too are crowded on a Sunday.

Even in the Soviet Union, religion is re-emerging a bit more than we realize. The atheism that for two score years has been forced upon the young scientists and the intelligentsia of the Soviet Union does not give the logical answers as to what caused human life: in essence, why are we, and to the question of the afterlife.

The best description of the beliefs of the younger Soviet scientists was offered by V. Tenoryakov when he said, "I do not imagine God as he is depicted on icons. To me, God is a sort of spiritual principle, the stimulus to the evergreen of the galaxies, the stars, the planets, and of everything which lives and reproduces on these planets, from the most elementary cells up to man."

Now, how exactly is religion doing in the Soviet Union? I was there a few years ago and took the opportunity to go through two of the five religious seminaries and two academies that are there. I found that almost 80 percent of the new babies in Leningrad were being baptized. Though, I must confess that in general, I don't believe the babies were being baptized because of their parents being true believers as much as an insurance policy being taken out by the parents in case there was an afterlife.

Just as Khrushchev has followed policies that differ from Stalin's, so the Russian Orthodox Church has tended to become more ecumenical under the direction of Archbishop Nicodemus who succeeded Metropolitan Nicolai.

A rough estimate in the Soviet Union today is that there are some 50 million believers out of a population of 215 million and some 20,000 churches.

The atheistic pressure of the Soviet Government is directed more against the Baptists, and other fundamentalists, than the Russian Orthodox Church, and this was underscored by the sad plight of 32 Evangelical Christians who sought sanctuary in the American Embassy the other day. There is even more pressure being brought against such faiths as Jehovah's Witnesses and the Seventh Day Adventists.

Religion then is one of the principal reasons why it is that communism has the seeds of its own disintegration and destruction within itself. Man is innately religious, and communism goes against his innate human nature in this, as in every way. Under communism, he can't talk freely, work freely, travel freely, collect property freely and, most important, his religious freedom is violated.

So, I believe that it is religion, particularly Christianity, that will play a principal role in the eventual erosion of communism.

Now, for a final moment, let us look inwardly at ourselves. Religion in the United States is presently at a record high. Statistics published in October 1961 showed U.S. church membership at a record high of 114,449,217, or 63.6 percent of the total population of about 180 million.

The breakdown was 63,668,835, Protestants; 42,104,900, Catholics; 2,698,663, Eastern Orthodox, 5,367,000, Jews; 589,819, Old Catholic, Polish National Catholic, and Armenian Apostolic; 20,000 Buddhists.

Yet, in their annual statement in November the U.S. Catholic bishops warned of a "widespread moral apathy" in America touching virtually every group. They said this makes it vitally necessary for Americans to "make open profession of religious beliefs and moral convictions."

In conclusion, then, as well as weapons in our nuclear arsenal, we can each help forge the principal and most permanent weapon we have—religion—and especially, Christianity.

Let us remember, too, the thought expressed on a plaque in a church in my neighboring town of New Bedford, "Church is a hospital for sinners; not a haven for saints."

We sometimes tend to become a bit too smug. We preach a good life, but practice it too little. We listen to fine words on the Sabbath, but do not always practice them in the remaining 6 days of the week. For instance, there are far too few applicants for the Peace Corps. We, as parents and leaders in our community, could do a lot to see that more applied.

So, I guess the only thought I would like to leave is the hope that throughout the week we may try to believe in our hearts and practice in our lives the words which we have heard with our ears and said with our lips on the Sabbath.

The Lord Giveth and the Government Taketh Away

EXTENSION OF REMARKS
OF

HON. GEORGE A. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. GOODLING. Mr. Speaker, the President's tax proposals tend to once more confirm the truth of the old adage, "All that glitters is not gold."

There is complete agreement when he says present taxes are so high they are

selfdefeating. There is less than unanimous agreement, however, when he proposes spending at an alltime high, piling deficit upon deficit, and sending our national debt beyond all bounds of fiscal responsibility.

All agree further that all loopholes should be closed, but as one commentator suggested, why not close the granddaddy of all loopholes, the oil depletion allowance? Oil may produce a fire too hot to handle.

The following editorial in the January 25 edition of the Wall Street Journal points up some facts not commonly recognized.

Under unanimous consent I insert the following editorial in the Appendix of the RECORD:

THE GIVING AND THE TAKING

The Lord giveth and the Lord taketh away, that is the not particularly surprising theme of President Kennedy's detailed tax proposals sent to Congress yesterday.

Politically such a hodgepodge of giving and taking faces a dubious fate at the hands of the lawmakers; if they approve any tax cuts at this session, the package seems unlikely to bear much resemblance to the Kennedy message.

Economically the claim that it would be a tremendous boost to business sounds more and more specious, especially since Mr. Kennedy adamantly sticks to his philosophy of planned deficits and calls them a piddling price to pay for prosperity; that way confidence does not lie.

Unlike the U.S. Government, we don't presume to know how consumers will react when they digest the import of these tax recommendations. But what they will digest is far from wholly palatable.

Out of the \$11 billion cut individuals are supposed to get over 3 years, the message plans to recoup about one-fifth, among other things through drastic limits on deductions for home mortgage interest, contributions, medical expenses and local taxes. Only that portion of the total amount which exceeds 5 percent of the taxpayer's income could be deducted. And the present provisions modestly curtailing the double taxation of dividends would go out the window.

In other words, the individual's taxes are going up as well as down, and the net result depends on many factors, including steeply rising social security taxes, State and local taxes. Perhaps all this will send the consumer on a grand and glorious spending spree, but it is permissible to be slightly skeptical.

Much the same is true of corporate taxes. Reducing the top rate from 52 percent to 47 percent seems like a useful step, though grudging and incredibly belated. It doesn't look so great, however, when you consider that it is spread over years, and the only cut in 1963, affecting small business—is of minor economic significance.

Indeed, it is mildly ironic that the first tax event to occur is to boost the corporate rate beyond what it would otherwise be for the rest of this year. By existing law it would automatically drop to 47 percent in a few months, but the President insists it must be kept at 52 percent until next January.

Moreover, the net effect of the proposed speeding up of the timetable of corporate payments could be to increase taxes. In theory what is taken faster is given back; in practice a company may not get it back unless it liquidates or ceases to be profitable.

Then, when all the business reforms are thrown in, the claimed economic adrenalin doesn't feel particularly potent. Stricter treatment is to be accorded the oil-gas in-

dustry, stock options and stock dividends. Whatever else may be said of these recommendations on other grounds, they cannot be ranked as investment incentives, which is one of the chief ostensible purposes of the whole elaborate exercise.

As in anything so ramified, there are some improvements, though not of momentous economic potential. A somewhat more sensible approach is taken, for example, to the tax treatment of authors, professional athletes and others whose income is sporadic. Yet even these efforts at equity are offset by monumental new inequities, like taking about 1 million people off the tax rolls entirely.

And that is one of the basic troubles with this kind of reform. For many months the Nation has been alerted to expect a bold, dynamic new concept of taxes that would inject tremendous new zest in the economy, and in a famous phrase get America moving.

We have always believed the President is right in denouncing the present tax structure as an obsolete checkrein on the economy; moreover, that now is the time for radical correction.

But to be effective a tax program requires two things: Control and reduction of Federal expenditures, which weigh so heavily on the economy and are the inescapable other face of taxes; and a true simplification of the dangerously complex tax structure. All the experts know that the vast bulk of tax provisions could be swept away and rates drastically lowered to a flat percentage of all income, with no loss of revenue.

Instead of anything of that sort, we are being given much heavier spending, huge and chronic deficits, new tax inequities and confusions piled on red tape. The totality may please some people, but it certainly takes away a lot of the Nation's high tax hopes.

Kennedy Asks 36,500 More Jobs, Contradicts Pledge of Economy

EXTENSION OF REMARKS

OF

HON. CLARK MacGREGOR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. MacGREGOR. Mr. Speaker, the following article from the Washington Evening Star of January 21 gives an added insight into the President's budget message. In addition to economy, it seems as though we badly need a little more candor in Government.

Under unanimous consent I include the following article:

KENNEDY ASKS 36,500 MORE JOBS, CONTRADICTS PLEDGE OF ECONOMY

(By Joseph Young)

Members of Congress are still befuddled by the logic of President Kennedy's budget message which proclaims a vigorous Federal job economy program and winds up asking for 36,500 more Government jobs.

Mr. Kennedy was so proud of the administration's new manpower utilization program, which seeks to eliminate minimal Federal jobs as well as trim other jobs by demanding greater employee work productivity, that he devoted an entire section of his budget message to it.

Economy-minded Members of Congress sat beaming as they heard the President proclaim the administration's Government job economy program in his budget message.

This reporter, after the speech, ran into one

of the economy-minded members of the House Appropriations Committee. With a happy smile, the Congressman asked us, "How many thousands of Government jobs will be eliminated by Mr. Kennedy's 1964 budget request?"

"Congressman," we said gently, "he is asking for 36,500 more Government jobs."

"But why all his talk of cutting job costs through greater efficiency and productivity?" the bewildered legislator asked.

"Well," we answered, "President Kennedy said there would have been an even greater increase in Government employment had not he initiated his economy program and kept the job requests down. The population keeps growing all the time, you know."

The legislator groaned, "But hasn't there already been an increase of 200,000 Federal workers since Mr. Kennedy took office?" he asked.

"Yes, but the President says it could have been worse," we reminded him.

"Well," he asked pleadingly, "hasn't the President proposed any job cuts anywhere in Government?"

"Of course," we replied. "He is asking an overall reduction of 30 jobs out of the Army's present 345,284 civilian employees. Army would then, only have 345,254 civilian employees."

"Well, that's something, I guess," the Congressman remarked bravely.

Knowing the Congressman's special antipathy regarding our foreign aid program, we sought to cheer him up even more. "The Agency for International Development is going to eliminate 48 whole jobs from 16,588 down to 16,540," we told our friend.

"Oh. This is an encouraging start," he exclaimed, his eyes misty with emotion. "And to think that only last year AID told us that not a single employee could be spared, and now we find that 48 of the 16,588 employees are expendable after all. We are making progress indeed."

As we prepared to take our leave, the Congressman wrung our hand and said in an emotion-filled voice, "And to think that only a few minutes ago I was so discouraged that I was thinking of giving up my appropriations post for a place on the District of Columbia Committee."

The Need To Encourage Our System of Government-Free Education

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. BYRNES of Wisconsin. Mr. Speaker, on January 9, 1963, I introduced a bill, H.R. 49, to provide a tax credit for amounts paid on account of tuition, fees and similar educational expenses at a level above the 12th grade. I first introduced this bill in the 87th Congress—H.R. 12771, 87th Congress, 2d session. I am reintroducing it in the belief that its enactment is vital to the continuance and further expansion of our present educational system.

Under the bill a taxpayer would be permitted to reduce his taxes equal to 20 percent of the cost of such educational expenses for the taxpayer or his dependents.

A tax credit of 20 percent has the same effect as the deduction in full of educational expenses for a taxpayer being taxed at the rate of 20 percent. This is equivalent to allowing the full deduction of educational expenses for a taxpayer in the first tax bracket.

An outright deduction for educational expenses would be of no benefit to more than 37 million taxpayers, who elect either to use the tax tables or to take the statutory standard deduction instead of itemizing their deductions. By the use of a credit, however, such taxpayers will be in a position to avail themselves of the benefit of the educational tax credit in their returns and also use the tax tables or standard deduction in the computation of their tax liability.

Many of my colleagues in this body have likewise recognized the need to encourage further growth of our educational system through tax incentives to the individual. In the last Congress alone, there were approximately 100 bills introduced which would have provided some form of tax relief for educational expenses.

Our educational system, free from Government control, is one of our greatest national assets. It is essential to encourage the expansion of that system, and to make its benefits available to the greatest number of people. This bill will aid in the attainment of that objective.

The President's Budget and Our Global Responsibilities

EXTENSION OF REMARKS

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. EVINS. Mr. Speaker, Mr. William Randolph Hearst, Jr., who has recently returned from a global tour of Europe and Asia, has made some interesting comments in his recent newsletter regarding the President's budget recently submitted to the Congress, as it relates to defense and world expenditures. I believe many of our colleagues and others will be interested in reading Mr. Hearst's comments in this connection and I ask unanimous consent that an excerpt from his published newsletter be reprinted in the Appendix of the RECORD, which follows:

When we were in Moscow this time, there wasn't the same anxiety to sound off in interviews that Khrushchev and his crew had shown on our previous trips. Frank Conniff, Bob Conside and I got the distinct impression that the Kremlin biggies hadn't yet figured out their new course and didn't want to give that fact away in talking.

But trust Nikita S. Khrushchev to put on a good act to cover any uncertainties. When he shook hands with U.S. officers over the Berlin wall on last Thursday, grinning and mugging for the crowd, he could almost make you believe he considered the wall the Red victory he pretends it is.

The fact is, and he knows it very well, the wall in Berlin represents to the world com-

munism's inability to keep people happy. Nobody risks being shot to death trying to escape from a paradise.

As I have noted before, there is another important difference between family quarrels of free nations and those of the Communists. On our side there can be playing for selfish angles, but the overall idea is to come through eventually with agreement for the common good. On their side, it's a battle for supremacy that can reach a life-or-death climax.

In his special piece yesterday, however, Frank Conniff points out that our allies are led by men of such ability and determination that we cannot rule out the possibility of our being left behind within the Western family. That is, unless we are sure we, too, are on the move to destiny.

The point is valid and I think it especially deserves consideration when we debate the merits of President Kennedy's budget submitted Thursday. Getting on the move is its avowed purpose. The figures taken in themselves are awesome, to say the least. Look:

Ninety-eight billion eight hundred million dollars Federal spending (\$55.4 billion for defense, \$4.2 billion for space projects, \$39.2 for the rest), biggest ever in peace or wartime.

Eleven billion nine hundred million dollars deficit calculated on expectation of \$86.9 billion Federal revenue.

Thirteen billion five hundred million dollars tax cuts for individuals and business spread over 3 years, expected to be partly offset later by \$3.5 billion in tax reforms.

By orthodox, traditional economics, that is a picture to turn hair white. But I, who am not a trained economist, see the question rather from the viewpoint of a newspaperman who came out of college in 1930 in the dark days of depression and watched the United States climb back to being the world's richest Nation.

In the 33 years since then, and I don't see how you can avoid describing that as our times, there have been only 5 years in which our Federal Government did not operate on a deficit. Three were under Democrat Harry Truman, two under Republican Dwight Eisenhower.

In other words, we've been living under deficit financing as a national economic system most of our lives just as surely as most of us have been living that way personally, where we call it installment buying. How many of us, for instance, buy our automobiles with spot cash?

The United States started with deficit financing. From 1789 to 1800, the record says, the Federal Government had an average annual intake of \$5,717,000 and an average annual outgo of \$5,776,000. We balanced better most of the time after that, but from the war entry years of 1917 on, the first time the budget went into 10 figures, and 1941, the first time it hit 11 digits, the budgets have borne closer resemblance to astronomical distances.

Let's not kid ourselves, in that period our country has surmounted two wars, one whopper of a depression and several smaller recessions, and all kinds of cold war milking of our substance. And we have seen it give proof through the night that our flag was still there, right on top of the world.

I can remember when my father, who took positions on the issues as he saw them and couldn't be properly taped as conservative or radical more than a few weeks running at a time, advocated printing \$5 billion more money to help yank ourselves out of the depression of the 1930's.

If that isn't deficit financing, what is? Anybody who'd call President Eisenhower a radical economist would be ridiculous, but Ike pulled us out of two recessions with

heavy deficit spending, including the Nation's great roadbuilding program for which the Hearst papers can take a big bow.

The old saw that economics is not an exact science is as true as ever. Our world has expanded beyond the imagination of the men who projected orthodox economics long, long ago. Now more than ever we have to think in a global framework, because economic blocs make that imperative if we don't want to get hurt.

President Kennedy believes his pump-priming plans can spur the U.S. economy to growth that would bring the Government more tax dollars at cut rates within a few years—because there would be more business activity to tax.

You cannot prove that either way without trying it.

I'm for a bigger, more prosperous and more powerful United States, first, last and always, and I think that America's growth is the world's best bet. If, because of traditional shibboleths, we drag our feet in a fast-moving world, it could be the biggest mistake in our history.

Report on National Defense to the Board of World War I Veterans

EXTENSION OF REMARKS

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. CUNNINGHAM. Mr. Speaker, I wish to insert in the RECORD a copy of a report to the National Board of Administration of Veterans of World War I of the United States of America, Inc., prepared by Mr. Kai A. Koch, director of defense and secretary for the World War I veterans.

Mr. Koch is a long-time resident of Omaha, Nebr., and for many years has been active in positions of responsibility and leadership in veterans' organizations in our State.

I was pleased to see the strong stand taken by World War I veterans in regard to our national defense and foreign policy matters. I am very pleased to submit a copy of Mr. Koch's report to the national board:

REPORT ON NATIONAL DEFENSE TO THE BOARD OF WORLD WAR I VETERANS

As your national director of defense there are a number of things pertaining to our national security that I would like to bring to your attention and for your consideration and possible action and I am sure many of these items are of interest to all American citizens and particular veterans.

At the national convention held in Buffalo, N.Y., there were two resolutions passed, one commending President John F. Kennedy for the the firm stand he took pertaining to the Cuban situation, and the second one that the Universal Military Training and Service Act be extended in its present form until June 30, 1967.

While we have been informed that the missiles have been removed from Cuba we are of the opinion that we should insist that an on-site inspection by a neutral party be made to determine that all missiles have been removed, also that the 15,000 to 17,000 Russians soldiers now stationed in Cuba be sent back to Russia as they pose a threat to our security. Furthermore, while there has

been a lot of agitation about the Cuban prisoners being released and sent to the United States, we fall to see much about the 21 or 23 American prisoners being held there and we are of the opinion that they should have been released before any of the Cubans and we should ask our Government to take action with regards to these prisoners.

We advocate that there will be no appeasement in either Cuba or Berlin including the associated issues of ground and air access by the United States and our allies to Berlin.

We must realize the strategic value of the naval base in Cuba and the need of it in our defense of the Caribbean Sea, the Panama Canal, the Gulf of Mexico, and the Atlantic coast of the United States against the Russian submarines operating in these waters.

We should insist on adherence to the Monroe Doctrine as it would tend to keep the Communists out of the Western Hemisphere and keep the independence and freedom of the Americas protected, which also means that the Red aggression in Cuba must be eliminated and Cuba returned to the community of free nations.

That Red China will not be allowed to become a member of the United Nations as this would be a repudiation of a major feature in the U.S. policy, and if such an act should come about the United States should withdraw from the United Nations.

We should balance, modernize, and stabilize our Armed Forces which calls for increased strength, properly balanced in every category—land, sea, and air.

We should increase our Navy's antisubmarine program, keeping in mind that Russia has nearly 500 submarines, also remembering the Germans had only 57 submarines in the Atlantic during World War II and nearly won the battle of the North Atlantic Ocean.

A positive civil defense program should be established.

We should support the Joint Chiefs of Staff system as this is the most efficient method for overall military planning.

After spending millions of dollars perfecting the Skybolt missile and succeeding with the sixth trial, our Government wants to scrap this missile due to the fact that it takes super aircrafts to carry them to the target, a procedure that General LeMay, Air Force Chief of Staff, has advocated for some time; and as per the newspapers there is a move afoot to remove him as Chief of Staff due to his activities in this matter. We are of the opinion that we should continue to manufacture the Skybolt, also retain General LeMay as Air Force Chief of Staff.

We are of the opinion that everyone of the World War I veterans is conscious of the fact that our country is in peril if we do not stop this communistic menace and all red-blooded and patriotic Americans should rally to the aid of our country even to the extent of war.

Again may we offer the above mentioned items for your consideration.

KAI A. KOCH,
Director, National Defense and Security,
Veterans of World War I of the U.S.A.
OMAHA, NEBR.

Warning on Deficit

EXTENSION OF REMARKS

OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. LAIRD. Mr. Speaker, the Stevens Point Daily Journal of Stevens Point,

Wis., on January 21, 1963, carried a very interesting editorial based on the warning of the Honorable William McChesney Martin, Jr., Chairman of the Federal Reserve Board. The editorial is as follows:

WARNING ON DEFICIT

As Chairman of the Federal Reserve Board, William McChesney Martin, Jr., is closely attuned to matters affecting world currency transactions. He knows the relative strength of the dollar in comparison with other currencies.

Mr. Martin, in a speech to the American Finance Association and the American Economic Association, cited that the U.S. balance-of-payments deficit was disappointing in 1962. Instead of the anticipated deficit of \$1.5 billion, he said, the final tally will probably show the United States well over \$2 billion in the red for last year.

Adding such a large deficit in a year which began with the United States owing more gold to foreign creditors than it possessed, weakens the dollar's standing at home and abroad. Should gold demands by creditors reduce U.S. gold stocks below the Federal Reserve certificate requirement, the dollar almost certainly would encounter devaluation pressures. Only a few billions in gold separate the United States from this prospect.

"Whatever other consequences would follow from a devaluation of the dollar," Mr. Martin warned, "I am convinced that it would immediately spell the end of the dollar as an international currency and the beginning of a retreat from the present world role of the United States that would produce far-reaching political as well as economic effects."

It is not a cheering prospect, but Mr. Martin's warning is likely to be heard again and again throughout this session of Congress. And it should be heeded, especially when money bills affecting U.S. balance of payments come before it.

Anti-Semitism in Russia

EXTENSION OF REMARKS

OF

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. MACDONALD. Mr. Speaker, the Soviet Union proclaims itself as the champion of minority rights. Premier Khrushchev boasts that the Soviet Constitution guarantees individual and group liberties. These self-serving declarations are indeed hollow when viewed against the background of anti-Semitism in Russia today. The Soviets have gone beyond the limits of an anti-religious campaign in their treatment of Jews within their own borders. Their tactics have entered into the realm of racism. The anti-Semitic campaign in the U.S.S.R. today is reminiscent of the dark, despotic days of Stalin and Hitler.

The story of discrimination against the Jewish minority in the Soviet Union provides a somber lesson for all peoples of the free world. The emerging nations of Asia and Africa should note the facility with which the Communists resort to racism in pursuit of their goals.

A group of religious leaders of all faiths have made a direct protest to Chairman Khrushchev. Their cablegram was pub-

lished as a full-page advertisement in the New York Times, the Providence Journal, the Washington Post, and the Jersey Journal. This message was echoed editorially in newspapers throughout the Nation. The injustices it chronicles merit reading by all. I include this message as part of my remarks:

PREMIER NIKITA S. KHRUSHCHEV,
The Kremlin, U.S.S.R.:

The Soviet Union declares it is a champion of human dignity and equality. No nation has been more persevering in pronouncing itself a defender of minority rights.

Soviet spokesmen cite your country's constitution, wherein equality of citizens is guaranteed, as proof that religious discrimination is not countenanced in the U.S.S.R. You yourself have said: "The question of a man's religion is not asked in our country. It is a matter for the conscience of the person concerned. We look upon a person as a person."

But what are the facts?

The Soviet Government's persistent enmity to religion is a matter of historical record. While most faiths are permitted bare necessities, such as requisites for worship, sacred literature, theological seminaries and central bodies, their activities are sternly circumscribed. Devout citizens suffer harassment. Nowhere, not even within the walls of church or mosque, is religion secure from surveillance. This is a fact of Soviet life.

It is also a fact that within the narrow framework of permissible religious practice, discrimination is enforced. Jewish citizens of the Soviet Union, numbering close to 3 million, are denied minimal rights conceded to adherents of other creeds.

Hard pressed as they are by blanket restraints, none of the other major religions of the Soviet people, neither the Orthodox, Armenian or Protestant Churches, neither Buddhism nor Islam, have been subjected to the extraordinary disabilities inflicted on Judaism and its followers.

Legally constituted Jewish congregations are isolated from one another. They are forbidden to organize a central body. They are allowed no contact with Jewish religious groups in other countries. Their leaders are singled out for abuse.

Since June 1961, synagogue presidents in six cities have been arbitrarily removed from office; Jewish communal leaders in Leningrad and Moscow have been sentenced to prison for the alleged crime of meeting with foreign visitors to their synagogues.

Scores of synagogues have been closed by the state. The few that remain are served by rabbis who were ordained more than 40 years ago. For more than a generation, Jewish theological seminaries have been banned, except for a lone yeshiva in Moscow, opened in 1956. Its enrollment, never permitted to exceed 20, was reduced to 4 in April 1962.

No Jewish Bible has been printed in 40 years. No articles for Jewish ritual can be produced. This year, for the first time in Soviet history, even the sale of unleavened bread, essential to observance of the Passover, was banned. The prayers of Judaism are said in Hebrew, yet the teaching of that language is prohibited.

Although half a million Jews declared Yiddish as their mother tongue in the Soviet census of 1959, their hundreds of schools, their once-flourishing theaters, have been stamped out. Much smaller ethnic or linguistic groups have schools, theaters, books, and newspapers in their own languages.

These conditions conjure up memories of the anti-Semitic Stalin regime, which you yourself have denounced.

According to the United Nations Universal Declaration of Human Rights and the con-

stitutions of enlightened countries, freedom of conscience and expression is vested unconditionally in every human being.

Unless the Soviet Government conforms its behavior to this universal standard and to its own professed principles, it forfeits the confidence of all peoples.

When will synagogues and Jewish seminaries be reestablished, imprisoned synagogue leaders set free, the ban on unleavened bread rescinded, ritual articles and Jewish prayerbooks made available?

When will the Yiddish-language institutions that sustained Soviet Jewish culture and education be restored?

When will Jewish congregations, like those of other religions, be enabled to form a central body, to join in fellowship for the continuity of their faith?

The world awaits your response.

By deeds alone, can your Government confirm that the Soviet Union in truth upholds the rights of minorities and the equal dignity of man.

Minneapolis-St. Paul Area Helps Earthquake Victims

EXTENSION OF REMARKS

OF

HON. CLARK MacGREGOR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. MacGREGOR. Mr. Speaker, last fall the people of the Minneapolis-St. Paul area performed a remarkable act in providing assistance to victims of the major earthquake in Iran. The project is described in the following article from the People to People News of October 1962:

SEND 18,500 BLANKETS TO IRANIAN VICTIMS

A thing called compassion stirred residents of Minneapolis-St. Paul to community action resulting in the collection and shipment of 18,500 blankets to Iranian earthquake victims who are facing winter with no shelter.

It began when a group of Minneapolis citizens—members of people to people—resolved to help Iranian students at the University of Minnesota and at Macalester College, St. Paul, to send aid to their anguished countrymen.

"What shall we do to help?" they asked.

Mrs. Gertrude Swanson, chairman of the Minneapolis People-to-People Committee, called Elmer "Tweet" Tvetene, manager of Pan American Airways in the Twin Cities for advice.

PAN AMERICAN AIRWAYS HELPS

"I'll call you back in 15 minutes," he told Mrs. Swanson. He did and informed her an entire cargo plane would be available in 1 week at Minneapolis-St. Paul International Airport bound for Teheran. "Make up your minds what you want to put on the plane," he said.

The people-to-people committee continued to meet for most of that night. They called the Iranian Embassy in Washington and learned that blankets would be the most helpful single item that could be sent on the plane. Thousands were needed.

The committee decided to invite St. Paul and suburban residents to participate in the blankets-for-Iran project.

TWO MAYORS' SUPPORT

Mayor Arthur Naftalin of Minneapolis and Mayor George Vavaoullis of St. Paul issued proclamations on the state of emergency in Iranian earthquake disaster areas and urged

Twin Cities residents to show friendship by donating blankets.

Fire stations were designated as collection depots throughout the area. Firemen enthusiastically participated in the people-to-people effort by folding, sorting, counting, and bundling the blankets as they were brought in by residents of all races, religions, and social groups.

A goal of 10,000 blankets was set. The first 2 days brought in a disappointingly small number of blankets.

Then area radio, television, and the press took up the cause and the blankets poured in. A week later, when the plane was ready to leave, nearly twice as many blankets as the cargo plane could hold had been baled at the old air terminal building. James Grant of WTCN-TV spent many hours writing press releases for the project, using air time to tell residents of the Twin Cities how they could help.

American agencies, such as CARE, are administering distribution of the blankets to the needy in Iranian disaster areas.

A telegram expressing the deep appreciation of the Iranian people to its mayors of St. Paul and Minneapolis by Hossein Ghods Nakhai, Ambassador of Iran to the United States.

Nuclear-Age School—New Mexico Students Pursue Knowledge Underground

EXTENSION OF REMARKS

OF

HON. JOSEPH M. MONTOYA

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. MONTOYA. Mr. Speaker, I include an article by David Nevin which appeared in the January 26, 1963, issue of the Saturday Evening Post referring to the underground elementary school in Artesia, N. Mex. Mr. Vernon Mills, superintendent of the Artesia school district, is to be commended for his foresightedness in initiating the construction of this nuclear-age school. Rosewell architect, Standhardt, demonstrated imagination and ingenuity in his design of this unique structure which has brought high praise from architects and school officials the world over. The construction of this underground school was made possible through the efforts of the city of Artesia together with the Office of Civil Defense. This school was dedicated in June 1962 by the Honorable Stuart L. Pittman, Assistant Secretary of Defense.

Under unanimous consent I insert the following article in the Appendix of the RECORD:

NUCLEAR-AGE SCHOOL—NEW MEXICO STUDENTS PURSUE KNOWLEDGE UNDERGROUND

Betsy Anne Hart, a fourth-grader in Artesia, N. Mex., learned something new at school the other day. "Mother," she burst out when she got home, "did you know there is a room for dead people at our school?"

Having a morgue on the premises is just one of the things that makes Betsy Anne's school unusual. For Abo Public Elementary School, named for a nearby oil formation, is the only school in the Nation which lies entirely underground, and which doubles as a fully equipped fallout shelter.

Abo opened for the first time last fall,

with some 460 pupils. The experiment has attracted considerable interest among both schoolmen and civil defense officials around the country. Some educators have condemned the whole idea out of hand. Others have adopted a wait-and-see attitude. They feel that, taken simply as a teaching plant, Abo deserves high marks for efficiency and interior beauty. But, they wonder, can the school be taken that simply?

From aboveground all that shows of the school is a huge concrete slab, which serves as a playground for the children who go to school beneath it, and the covered walkways which connect three block structures housing the stairwells. These entrances are narrow, dimly lit and painted a dark red. Somehow they seem vaguely threatening.

Inside, however, the building looks like a school, and an attractive school, at that. The central corridor is 14 feet wide, wider than usual, to prevent claustrophobia, and the tiled floors and walls are green balanced with a warmer rose. The fluorescent lighting has a daylight quality. One has no sense of being in a basement or even, save for the lack of windows, of being underground. Automatic air conditioning keeps the temperature at 72° and the humidity at 50 percent. The 18 classrooms, each approximately 28 feet square, are superbly equipped. An air of quiet industry pervades the building, due partly to the insulation of acoustical plaster on the inside and solid earth on the outside, and partly to the somewhat sobering effect the school appears to have on its pupils. On the whole, Abo seems a remarkably pleasant place in which to tackle the three R's.

NUCLEAR SCHOOL

But this is not only a school, it is also a carefully planned fallout shelter, and the children are well aware of the fact. Bedding and survival food for 2 weeks are stored in spare rooms. Two deep wells can supply safe water. There are air filters, an emergency power system, and decontamination showers. If an attack should come during school hours, the school would shelter its own students and those from nearby schools. At any other time, it would accommodate the first 2,160 people to reach it. Then, 1,800-pound steel doors at each entrance would be bolted shut, barring those who came late, the parents, perhaps, of the children inside. Some time this year 2,000 Artesians will spend a night at Abo to test its shelter facilities.

This dual-purpose concept of school construction sprang directly from Artesia's experience with two windowless, but aboveground, schools built in 1959. With its near-desert climate, Artesia switched to schools with solid walls when it found that the rapid heat transference in its old glass-walled buildings made economical air conditioning impossible.

These buildings, designed by architect Frank Standhardt of Roswell, N. Mex., were among the first windowless schools in the Nation. Since then the idea has spread as far as California and Florida. But meanwhile, back in Artesia, the board's thinking had gone a step further.

AN AF BASE IS NEARBY

It had discovered that, with the cold war periodically threatening to turn hot, and with both an important Air Force base and the White Sands Proving Ground uncomfortably nearby, there was not a single building in town which could serve as a public fallout shelter. Since it felt responsible for the safety of its students—and, less directly, for the public in general—the board reasoned: Why not build another windowless school, and this time put it underground?

Architect Standhardt accordingly designed a subterranean structure with 12-inch concrete walls and an overhead slab of 21-inch

reinforced concrete which could resist a 20-megaton blast at 10 miles. His plans called for a building with classrooms along the four outside walls, then the hall, then an inner block of classrooms. The voters of Artesia approved the project by passing a bond issue, and the school was built—at a cost of \$469,847, of which \$134,067 went for putting it underground. The Federal Government readily paid the latter sum, since it planned to use Abo as a pilot project for a study of the shelter-school concept.

At this early date only a preliminary report is possible. The indications, however, are hopeful. The teachers like the building because they find it more comfortable than most other schools and also because they believe that the students' performance is better. Mrs. Gertrude McCaw, the most experienced teacher there, said, "They simply are less rambunctious. You spend more time teaching and less time disciplining." She believes the quiet and the lack of windows, with their distractions, are responsible, and the other teachers agree.

The children say they like the school too. Artesia can be brutally hot, and they enjoy the air conditioning. Russ Baldwin, a fourth grader with a long face that breaks into a sudden, winning smile, explained, "You get your brain cooled off down here. It runs better when it's cool."

They think their school is pretty and say they learn a lot there. Surprisingly, several volunteered the information that its lack of windows helps keep them from getting into trouble with their teachers. But Andy Ashton, fifth grader, probably summed it up best when he said, "I like it because we go to the only underground school in the world." He meant, of course, that he liked the attention, the publicity, the sense of being different and therefore, somehow, superior.

Sociologists recognize that people who take part in novel experiments often enjoy the experience and are stimulated to do better work than usual. This stimulation, however, is only temporary, and one suspects that in the long run the students at Abo will like their school no more and will learn no more than students at schools aboveground.

Most outsiders' reaction to Abo is twofold. First, they wonder if it isn't cruel to deprive a child of the sight of the outdoors. Second, and even more important, they wonder if sending him underground, where he can't help being reminded daily of possible nuclear horrors, won't necessarily implant in him a fear psychology, an unhealthy preoccupation with safety and protection.

The success of aboveground windowless schools and the easy adjustment of the children to life without windows tend to answer the first objection, but the second cannot be set aside so easily. The president of the Artesia board, however, tries hard. She is Mrs. C. P. Bunch, a peppery little woman with graying hair. "I'm tired of hearing about the horrors of going underground," she snaps. "This is much overplayed. I've lived in large cities, no one says anything there about becoming moles when they ride the subways. No one says, 'I'm going underground to shop,' but I never met a woman who wouldn't go into a basement for a bargain."

Supt. Vernon Mills, a short, portly, soft-spoken man, explains more mildly, "What matters is the approach. This is a school which could serve as a shelter, not a shelter that doubles as a school."

Nevertheless, some of the youngsters do seem deeply affected by their school's second purpose. All are aware of it and of the implications of nuclear weapons and fallout. When asked, they say this does not disturb them but in several roundtable discussions, interesting remarks cropped up.

Martha Terpening, a six-grader with a classically beautiful face, said softly, "What I'm afraid of is that my mother is a teacher

and she would be safe, but my daddy works at the post office and he wouldn't have any place to go." Russ Baldwin said, "You think a lot about the danger while you're here. Sometimes I have the feeling that fallout is coming now, that it is out there now, and then I go out and it isn't." Rusty Heckel, aged 9, who worries about his parents, said, "Being underground gives you a funny feeling, but you know you're safe."

Yet even while blithely making remarks that sounded dire indeed to the adult mind, the children seemed happy. It was Martha Terpening who, when asked if the stairs leading down into the ground upset her, replied, "It makes my legs tired, but my mother says it develops them, so I don't mind."

Dr. George Collins, chief of elementary and secondary education for the Office of Education in Washington, believes that chronic worry is symptomatic of our times. He finds that children in other schools in other cities also worry about the bomb and the future.

PARENTS ARE NOT ALARMED

The parents of Abo pupils do not seem to think their children are being damaged. Mrs. Preston Greve, blond mother of a fifth grader, spoke for the majority. "Well, I don't think that war will come, but if it does, I guess a fallout shelter is a good place to be."

Criticism of the school-shelter concept comes mainly from observers outside Artesia. At its most recent annual meeting, the National Council on Schoolhouse Construction said flatly that "shelter provisions are not compatible with educational requirements." The State of California has taken a vigorous stand against such dual-purpose buildings. For California, at least, Charles Gibson, chief of school planning, finds the expenditure of any educational funds for fallout protection ridiculous. The two ends, he insists, simply don't fit.

The Artesia School Board has encountered some local opposition, too. Dr. Gerald Slusser, an Artesia surgeon whose child does not go to Abo, asks rhetorically, "Is driving our children underground to become a way of life? Is this the future we give them?" And Bill Hart, Betsy Anne's father and the vice president of a bank, is disturbed to realize that his young son probably faces 9 school years underground, for a new junior high school with many of its classrooms belowground, facilities like the gymnasium will go aboveground, will be built soon.

But the board is inclined to discount this sort of criticism. The bond issue for the new junior high passed by a margin of 2 to 1, and the board not unreasonably regards this as an indication of local approval for its actions. Now that support from those who know Abo best has brought the underground school concept past the pilot stage, other school districts will surely study the idea with heightened interest. And in view of the prospect for continuing international tension, the chances are good that parents in communities far from Artesia will be asked, one of these days, to decide whether they, too, want their children to go to school underground.

What Price Slavery?

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. BERRY. Mr. Speaker, in an earlier day this question was put to a few

Americans and they pledged their lives, their fortunes and their sacred honor for individual freedom, individual privilege, and liberty.

Today the question is in reverse. Americans are not being asked what price they are willing to pay for liberty but what price they are willing to accept for the liberty that has been theirs.

The old adage has it that "every man has his price"—the planners are simply determining what that price is. They are willing to pay it, particularly so long as it is your money they use to pay your price.

The American farmer was the first to be bought off. Agricultural tariffs were reduced or wiped out. As agricultural imports poured across our border and onto our tables and upon our backs the farmer was required to take his land out of production to make room for these imports. Of course, he was paid by the Government to remove his acres from production.

In January 1963, over 30 million pounds of dressed beef, lamb, and mutton were imported from New Zealand and Australia alone. It is difficult to determine the American acreages these shipments supplanted, but with the imports of beef alone in 1962, over 2½ million head of 1,000-pound beef supplanted the production of more than 45 million American acres.

The planners, of course, paid the farmer a certain stipend for each acre they forced him to take out of production to make room for these imports. The Department of Agriculture "leaked" their plan in December 1961 to subsidize and remove 2 million farmers from the land—that subsidy is the price these farmers must accept for the sale of their freedom.

Those planners who would force every American to sell his freedom were able to ram through Congress last session a bill known as the Trade Expansion Act which was intended to do to industry and labor what they have already done to the farmer and forced him to accept, even if against his will, a price for his freedom.

Already the mines of America are coming in for payment under this act for the business that is taken from them by low tariffs and foreign mineral imports, forcing the mines of America to sell their freedom for a price.

Factories are reducing output, or closing, and accepting a subsidy price in exchange for their freedom to compete. Labor, idled by imports, is seeking its subsidy—the price it is receiving for its freedom.

Independent businessmen in almost every community across the Nation are making plans to come to Washington for free money for community development. They, of course, must agree to comply in order to get it.

WHAT PRICE SLAVERY?

Three interesting letters came to my desk in the morning mail. One enclosed an editorial from the Bennett County Booster, Martin, S. Dak.; the second was the reprint of a broadcast from the public relations division of the Farmers Union Grain Terminal Association of St. Paul, Minn., and the third was a letter

enclosing an editorial from the Custer (S. Dak.) Weekly.

I have asked permission to reprint each because of the story the three tell. The first outlines the Socialist Manifesto, as set forth by former Congressman Samuel Pettengill, the second urges the wonders of farming under "regulated abundance through intelligent Government programs," and the third depicts "intelligent Government programs" in operation; its title is "The King Can Do No Wrong."

With a view of presenting not where we are going, but where we are, I present one morning's mail:

[From the Bennett County Booster, Martin, S. Dak.]

DOWN THE ROAD

The Constitution of the United States does not guarantee that America will remain a republic forever. It does guarantee the American people the right to change the form of government to whatever a two-thirds majority of any generation may desire it to be.

Back in 1944, Congressman Samuel Pettengill described the unconstitutional methods used by socialists to destroy free government. He called it the 12 points of the Socialist Manifesto. We believe it will be good for all Americans to review his words:

"The people must be made to feel their utter helplessness and their inability to solve their own problems. While in this state of mind, there is held up before them a benign and all-wise leader to whom they must look for the cure of all their ills. This state of mind is most readily developed in a time of economic stress or national disaster. "The principle of local self-government must be wiped out, so that this leader or group in control can have all political power readily at hand.

"The centralized government, while appearing in form to represent the people, must dutifully register the will of the leader or group in control.

"Constitutional guarantees must be swept aside. This is accomplished in part by ridiculing them as outmoded and as obstructions to progress.

"Public faith in the legal profession and respect for the courts must be undermined.

"The law-making body must be intimidated and from time to time rebuked, so as to prevent the development of public confidence therein.

"Economically, the people must be kept ground down by high taxes which, under one pretext or another, they are called upon to pay. Thus they are brought to a common level, and all income above a meager living is taken from them. In this manner economic independence is kept to a minimum, and the citizen is forced to rely more and more upon the government that controls him. Capital and credit is thus completely within the control of government.

"A great public debt must be built up so that citizens can never escape its burdens. This makes government the virtual receiver for the entire nation.

"A general distrust of private business and industry must be kept alive, so that the public may not begin to rely upon its own resources.

"Government bureaus are set up to control practically every phase of the citizen's life. These bureaus issue directives without number, but all under the authority of the leader to whom they are immediately responsible. It is a government of men, and not of laws.

"The education of the youth of the nation is taken under control to the end that all may, at an early age, be inoculated with a spirit of submission to the system and of reverence for the benevolent leader.

"To supplement and fortify all of the foregoing, there is kept flowing a steady stream of governmental propaganda designed to extol all that bow the knee, and to vilify those who dare to raise a voice in dissent."

How far down the road of this Socialist Manifesto has America gone?

BROADCAST BY FARMERS UNION GRAIN TERMINAL ASSOCIATION

Did you ever think very seriously about what is going to happen in the future on your farm? Farmers are the people most concerned so they hadn't ought to lag behind in looking ahead.

The other day we told you about a research group set up by businessmen and education leaders to dig into the whole problem of the economy of the region. It's called the Upper Midwest Research and Development Council and one of its latest studies does some farm prognosticating way ahead in 1975.

Are you going to be rich or poor, worse off or better off? Who's going to be farming and who isn't in 1975? The report of this research group points out what most everyone already knows—farms are getting bigger and farmers fewer. Also it says that farm income depends on national policies which is another way of saying what we've always said, that farm prices are made in Washington.

But let's get down to some specifics about 1975 and, as the report says, that's of special concern to young fellows 20 years and under who are on their dad's farms today. Less than 15 percent of them are likely to find positions as farm operators of adequate-sized units in the words of the report. So now is the time to educate many of them for other jobs, maybe in towns and cities or in the rural areas connected with agriculture. Does that make good sense to you?

What's going to happen to the land itself? The businessmen and educators seem to agree here with progressive farmers. It believes that Government programs ought to aim at regressing big acreages. That ties in with more livestock production. Also a little more growing of specialty crops, like safflower, might fit in. Uncle Sam, says the report, should help get some of the less desirable land into trees for industry and recreation. And by 1975 it recommends a lot of land should just be idled under Government programs. Again, do you agree?

Farmers will continue to feed the Nation and probably a good piece of the world, of course. They'll produce more per acre, so the Upper Midwest Research and Development group sees a need to reduce crop acres even more by 1975. It believes that acreages of wheat, corn, soybeans, oats, barley, and flaxseed should be reduced by almost 16 percent and we'll still have abundance. But (and this is a point that the businessmen and educators emphasize) it has to be regulated abundance. The report speaks of "co-ordinated effort at local, State, and National levels." In other words, farm programs to avoid unmanageable surpluses and severely depressed farm prices and incomes.

You might wonder why businessmen and college people have a deep concern about the welfare of farm people as long as they have plenty to eat. They answer that question when they point out that "agriculture is the key factor in this region's economic future."

So again, even looking to 1975, we see that regulated abundance through intelligent Government programs is the course most people are thinking about. That makes it easier to understand the importance of the wheat vote coming up this spring.

[From the Custer (S. Dak.) weekly]

THE KING CAN DO NO WRONG

On various occasions, particularly when editorials have pointed up the present prob-

lems in the lumbering industry, the Custer Weekly has been accused of being "anti-Forest Service." This is not the case—we are in conflict with various Forest Service policies, but not with the service as a whole.

Howard Lee, supervisor of the Black Hills National Forest, recently pointed out that a community benefits from the spending of Forest Service personnel who live there. This is a factor of which Custerites have long been aware, though when controversies and tempers flare, it is one we sometimes are inclined to forget, and Mr. Lee's point is well taken.

We would even go a step farther than the forest supervisor and add that economic benefits are not the only ones reaped when Forest Service people live in a community. Many of these families have wide interests and excellent educations and share them to enrich the community socially and culturally. We have noticed, too, that many Forest Service people seem to go out of their way to participate in civic betterment. Although we're not completely sure, we suspect this is a part of Forest Service policy—if so it is one with which we are completely in accord.

The Forest Service has been with the Custer community for a long, long time. During this period, many lasting friendships have been formed, local people have found employment within the Forest Service and Forest Service wives have not infrequently worked in local businesses. Most of us realize the community is dependent upon this Government agency to a degree that it would be very difficult to prosper without it.

The problem here is that the community is also dependent upon the lumbering and ranching industries which are frequently at odds with Forest Service rulings, many of which seem reasonable when made at a higher level, but seem neither reasonable nor fair when applied to local situations.

We take issue with the apparent policy of the Forest Service to grow ever bigger and more powerful—insofar as land, people, and money are concerned. The Custer Weekly firmly believes in free, private enterprise, feeling that the arm of Federal Government should reach into a problem only when private enterprise has failed or refused to cope with an urgent situation—We grant here that men—and agencies—do not always agree on what is urgent and what is not.

The Forest Service, well aware of the important part tourism plays in many forest regions, points with pride to the recreational facilities which it has developed. Who can say this would not have been done by private enterprise—after all, one doesn't just go into a national forest and start developing.

There was a time when lumbermen went into a virgin forest and laid it waste with never a thought for the morrow; there was a time when few ranchers knew or cared they were overgrazing. Though both elements are better informed today, it was probably vital to conservation that the early day Forest Service intervened. But today, it many times seems just too much of a good thing.

It particularly becomes "too much" when an individual, meeting up with a regulation which works a hardship asks for a reprieve and is confronted with what seems to be an attitude of unyielding superiority. The Magna Carta, limiting the powers of the king, and laying down as a principle that justice may not be denied or delayed, was signed in England 747 years ago. American government was based in part upon this important document which freed the common people from complete royal dictate. It is a sorry situation when an agency of that same American Government appears to operate under the premise, "The king can do no wrong."

**Monroe Sweetland—A Memorable Name
in Oregon Politics, Journalism, and
Public Service**

EXTENSION OF REMARKS
OF

HON. MAURINE B. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES
Monday, January 28, 1963

Mrs. NEUBERGER. Mr. President, the current newspaper strike in New York has focused attention on the importance of the daily newspaper. In my home State of Oregon there is a small weekly newspaper which has had a salutary influence in the community under the able editor-ownership of Mr. Monroe Sweetland. Last fall Monroe Sweetland, long active in Oregon politics and journalism, sold the Milwaukie Review as Mr. Sweetland had accepted a position as executive vice president of the Indonesian-American Society of the United States.

Mr. Sweetland is a Democrat and has served his party as a member of the legislature and as national committeeman. A tribute is paid to him by another well-known Oregon publication, the Oregon Voter, which is more inclined to present the Republican view.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD that tribute from the Oregon Voter of September 29, 1962:

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEWSPAPER SALE—RECALLS SWEETLAND INFLUENCE IN MILWAUKEE'S POLITICAL HISTORY

Sale of the Milwaukie Review and the North Clackamas Shopper by State Senator and Mrs. Monroe Sweetland to a corporation owned by Dale Johnson and Robert G. Swan, both Oregon newsmen, recalls the Sweetland influence as a Democratic newspaper editor during the two decades in which he was at the helm of several Oregon weekly newspapers. Early in the forties he purchased the Molalla Pioneer which he sold in 1947, then buying two struggling publications at Newport from which he created the Newport News, which he sold in the early fifties, buying the Milwaukie Review in 1954. In the meantime, Senator Sweetland had acquired the Oregon Democrat, which he operated for 9 years, and which succumbed shortly after he disposed of it several years ago.

Wherever Senator Sweetland has taken over a newspaper his enterprise as an editor and publisher has been a factor in increasing the Democratic registration in the area; the newspapers showed improvement in appearance, advertising, and news content, and especially in sharp political news and comment. During this period Mr. Sweetland's influence in the Democratic Party steadily increased and he rose, not only in party leadership in Oregon, but maintained active touch with the party's national leaders. To what extent the Democratic Party was a factor in his acquiring the several newspapers is not known to us, but in each case he took over weekly papers more or less Republican in their political philosophy, converted them into aggressive and sometimes militant Democratic newspapers with results that were soon evident.

Now, for the first time in 20 years, the Sweetlands have no newspaper property in

Oregon. Senator Sweetland a year ago became executive vice president of the Indonesian-American Society of the United States and has spent little time in Oregon. The Sweetlands however retain their home on McLoughlin Boulevard in Milwaukie, and there has been no announcement that the corporation he headed, Milwaukie Publishers & Printers, Inc., will be dissolved or continued.

The sale to the new corporation brings Dale Johnson, a former Oregon (Portland), and Idaho (Boise), newspaperman, and more recently an executive in the investment firm of Atkinson & Co., in as editor of the Milwaukie Review, but Stan Federman who has been editor during the Sweetlands' absence remains with the newspaper. The sale will have some impact on the local community as the new owners have announced the paper will be printed offset at a plant, probably in Hillsboro, removing some of the mechanical operations from Milwaukie. Four printers and a pressman have been notified they will no longer be needed. The Sweetlands had a contract with the Typographical Union due to expire in July 1963.

Since 1952 Mr. Sweetland has been in the Oregon Legislature, the first Democrat elected to the house from Clackamas County in 14 years, and when he went to the senate in 1954 the first Democrat from his district in 20 years. He was reelected to the senate in 1958 and did not seek reelection this year, indicating he will continue in his far East educational work. The Indonesian Society office is at 218 North Canon Drive, Beverly Hills, Calif.

The Milwaukie Review was established April 14, 1921, and its first editor and publisher was George A. McArthur, at the time a 50-year veteran among Oregon printers, who was also one of the printers who assisted Tom Dillon and M. H. Vorhees when they started the East Side News in Portland. The latest sale of the Milwaukie Review recalls, also, that on November 21, 1850, Lot Whitcomb, founder of Milwaukie, then a bitter rival of Portland, started the Western Star, dedicated to making Milwaukie the metropolis of Oregon, giving it 2 weeks seniority over the Weekly Oregonian in Portland. The Star carried under its first masthead this patriotic boast:

"As far as breeze can bear or billows foam, survey our empire and behold our home."

Milwaukie was a town of 500, a year old, about the size of Portland, but his paper's financial losses caused Lot Whitcomb to lose the paper to his unpaid printers, who on June 5, 1851, overnight, moved the plant to Portland as the Weekly Times, from which were graduated some men destined to become notable in the history of Oregon politics, before the Times died in 1864. The colorful newspaper history of Clackamas County, and the Milwaukie community in particular, makes fine reading in George Turnbull's "History of Oregon Newspapers" and Senator Sweetland's sale led us to his pages. Politics has almost always had a place in Milwaukie's newspaper history.

**Her Concern Is Progress in the "People"
Area of AID**

EXTENSION OF REMARKS

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. GALLAGHER. Mr. Speaker, President Kennedy in his state of the

Union message did an admirable job of detailing the compelling reasons for the continuance of our mutual security program. Our aid program has been a major bulwark against the threat of Sino-Soviet imperialism. As the President stated so well:

If these programs were ever to be ended, our failures in a dozen countries would be sudden and certain.

I am pleased that President Kennedy's eloquent words have gone out to the Nation. When Americans have realized that the sacrifices they are making contribute to our peace and security, they have been unflinchingly willing to bear the burdens required.

Another fine contribution to public understanding of the importance of the mutual security program to the United States is contained in a recent Washington Post article by Sue Cronk. In her article Sue Cronk reports on an excellent speech given by Assistant Secretary of State Leona Baumgartner before the Woman's National Democratic Club.

Mr. Speaker, under unanimous consent, I insert the Washington Post article, headed "Her Concern Is Progress in the 'People' Area of AID," published January 11, 1963, in the Appendix of the RECORD.

DR. BAUMGARTNER OUTLINES FOREIGN AID PROGRAM: HER CONCERN IS PROGRESS IN THE "PEOPLE" AREA OF AID

(By Sue Cronk)

Lack of public understanding and support of America's foreign aid program is one of the chief problems faced by the Agency for International Development, one of its assistant administrators said yesterday.

"I've never known a program so misunderstood by so many and so unknown by so many more," Assistant Secretary of State Leona Baumgartner told the Woman's National Democratic Club.

She noted that AID, which has changed its name and its administrator with dizzying rapidity in recent years, seems "like a whole lot of different pieces (of various foreign aid programs) all glued together."

Nevertheless, its purpose has always been the same: "to help produce the kind of political and economic development in the world in which the United States can best pursue its own way of life."

Foreign aid isn't something invented since World War II to plague American taxpayers, Dr. Baumgartner said. "We've been in this business a long time, ever since Congress voted \$50,000 for aid to Venezuela during the War of 1812."

Nor is Uncle Sam the world's only sugar daddy in the field of foreign aid. "Nine other countries also are in the foreign-aid business, some of them countries we helped to get back on their feet with the Marshall plan," she said. "And although we contribute 57 percent of the total foreign aid, we spend smaller percentage of our gross national income on it than they do."

Dr. Baumgartner is no starry-eyed dogooder in the AID job she accepted last November 1. "In all honesty," she admitted, "we respond to a lot of political pressures, both from foreign countries and in our own country. We do a tremendous lot of hand holding with green ministers of health and education in developing countries. At times our short-range foreign policy goal may be to shore up the internal stability of another government which may not be a very good one, but the only one available."

However, she said, the important facet of American foreign aid is "its long-range goal, which boils down to transferring what we know in a modern industrial country to developing countries.

"We've built a tremendous number of things—roads, dams, airfields, factories, hospitals, schools. We've increased crop yields. We've promoted land reform, tax reform, and self-help community development. We've trained teachers, doctors, technicians, and government workers. We've steadily eliminated malaria."

As head of the newly created AID Office of Human Resources and Social Development, Dr. Baumgartner is particularly concerned with the human element of the foreign aid program.

"People who are hungry and sick, who are without shelter and have few skills, are not the people who are going to build a stable government," she said. "The human side cannot be ignored."

Unfortunately, she noted, progress in the people area of the foreign aid program is not as readily noticeable or impressive as "a new dam or silo which anybody can see. The process of educating people, of wiping out disease," is not so tangible.

Yet she pointed with pride to several such AID achievements:

In 1954, 100 percent of the residents of an Asian village had malaria. They were taught to spray their homes for the disease and five years later the number of malaria victims had dropped to one-tenth of 1 percent.

In the Turkish Army, 175,000 of the conscripts were illiterate. The soldiers were taught to read and write and 3,000 of them have been trained as teachers.

In Guatemala, village residents too poor to pay for the meals provided by Food for Peace agreed to work for them instead and have built schools and roads.

Not all of our foreign-aid projects have turned out so well, Dr. Baumgartner admitted. "We assume our scientific and technological methods will work anywhere, and they don't always. Some need a great deal of adaptation." Furthermore, AID is hampered by "so little continuity in either leadership or in the funds voted for it by Congress."

But all in all, she said, "our programs have achieved a remarkable degree of success. And the success of our efforts is intimately related to our own future."

Department of Agriculture Follows Recommendation of House Small Business Committee in Ordering an Investigation of the Domestic Poultry Industry

EXTENSION OF REMARKS
OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. EVINS. Mr. Speaker, I was gratified to note in the press, the Washington Post, under the byline of the Associated Press, dated January 25, 1963, that the Agriculture Department is to launch a broad-scale investigation of pricing and other trade practices in poultry marketing.

A special subcommittee of the House Small Business Committee held extensive hearings during the 87th Congress concerning trade practices relating to

processors and the broiler aspect of the poultry industry. This subcommittee, under the chairmanship of our distinguished colleague, the Honorable Tom STREED, of Oklahoma, held hearings on this subject in Washington, D.C., and at the express request of Members of Congress held hearings in Missouri and Indiana.

The special subcommittee submitted a report on these hearings—House Report No. 2566—which points up the difficulties being faced by small processors in the poultry industry and suggests a number of recommendations which could help alleviate the situation. Also, the final report of the full committee—House Report No. 2569—contains recommendations pertinent to this field. Included in these recommendations is the opinion that, "Farm organizations and the U.S. Department of Agriculture should actively assist such voluntary measures," that could go far toward correcting the existing inequities and that "cooperation with the U.S. Department of Agriculture should be expanded."

The recent announcement that the Department of Agriculture will look further into this problem is evidence that our executive agencies are following the work of the Small Business Committee in working to solve critical domestic problems.

The article referred to concerning the impending investigation by the Department of Agriculture follows:

PRICE PROBE OF POULTRY UNDERWAY

The Agriculture Department yesterday reported that it is launching a broad-scale investigation of pricing and other trade practices in poultry marketing.

Roy W. Lennartson, associate administrator of the Department's Marketing Service, said numerous complaints had been received in recent months that many producers, particularly smaller ones, are being treated unfairly by some buyer-processors.

A series of hearings on similar complaints was conducted by a subcommittee of the House Small Business Committee late last year.

The broiler industry, which has grown tremendously in recent years, has been marked by periods of overproduction and low prices, both at the producer and retail levels.

CHAIN OPERATIONS EYED

Figuring in the inquiry will be sales operations of chain stores which periodically offer poultry at cut-rate prices.

Lennartson said the investigation will not be a "witch hunt," but an attempt to get facts about operations with the idea of correcting wrong ones through new regulations, enactment of new legislation or prosecution of law violators.

He said the inquiry, which may take a year, will seek to determine to what extent, if any, processors and others in the industry are violating the Packers and Stockyards Act. This act directs the Department to police the livestock and poultry industries against unfair, unjustly discriminatory or deceptive trade practices.

MARYLAND INCLUDED

Lennartson said preliminary investigations made in Arkansas, one of the major producing States, indicated there is need for a full-scale inquiry.

Lennartson said that some of the complaints claim that some producers are being discriminated against because they joined producer associations or cooperatives; that

others were discriminated against because they testified at the House committee hearings, and that some processor-producer contracts contained provisions that are in restraint of trade because they limit producer dealings with a single processor.

No Time To Abolish House Un-American Activities Committee

EXTENSION OF REMARKS
OF
HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. ASHBROOK. Mr. Speaker, I deem it a great privilege to have received appointment to one of the outstanding committees of this Congress, the House Committee on Un-American Activities. I am mindful of the abuse that will automatically be directed at anyone who enlists his support to the vital work of this committee.

I am also mindful, Mr. Speaker, that I am filling the vacancy created on the retirement of an illustrious Ohioan, Hon. Gordon H. Scherer. You note I did not say I will be filling the shoes of Representative Scherer because I do not believe that I can do this. The void created by his absence in the 88th Congress will not be replaced by this speaker or anyone else. Mr. Scherer's fine work, patriotic zeal, and statesmanship will serve as an inspiration to me.

Mr. Speaker, an excellent editorial appeared in yesterday's Cincinnati Enquirer and under unanimous consent, I include it in the Appendix of the RECORD:

[From the Cincinnati (Ohio) Enquirer,
Jan. 27, 1963]

NO TIME TO ABOLISH HUAC

In much the same way they look forward to flu, taxes, and death, the American people have become accustomed, during the past quarter of a century, to expecting a biennial campaign to abolish the House Un-American Activities Committee.

This year, oddly enough, the campaign has assumed particularly energetic proportions. And we use the term "oddly enough" because it should be clear in 1963, if it was never clear before, that the HUAC is a vitally important feature of the Nation's total defense against international communism. To abolish it now would be roughly tantamount to dismantling the Defense Department or abrogating the North Atlantic Alliance.

The phase of the Communist conspiracy to which the HUAC devotes its attention is not, of course, the only phase. But to expend scores of billions for defense and to ignore the internal threat to our freedoms scarcely makes sense.

Yet that is what the committee's enemies would have us do.

THE IMPETUS COMES FROM SOVIET SOURCES

The 1963 campaign against the House Un-American Activities Committee has enlisted the support of thousands of well-intentioned, non-Communist Americans. But the campaign's impetus comes from the Communist apparatus itself. Communist Party headquarters not long ago sent word to its members that "we must join forces with the anti-HUAC forces wherever they

are." The party's chairman, Elizabeth Gurley Flynn, has sounded a clarion call to destroy "this disgraceful witch-hunting committee."

Accordingly, an organization known as the National Committee to Abolish the HUAC has gone to work. Its coordinator is Frank Wilkinson, of Los Angeles, identified on several occasions as a Communist. Wilkinson was released a year ago after serving a 1-year sentence for contempt of Congress. His strategy is to convert the HUAC battle into a sacred war for civil rights, fairplay, and all of the other high-sounding notions that international communism traditionally perverts and distorts for its own insidious ends.

The 1963 campaign is aimed primarily at abolishing the committee and its functions outright.

If that goal proves to be unattainable, the HUAC foes will settle for the establishment of a subcommittee with sharply curtailed activities. Another alternative is transferring the committee's present functions to the House Judiciary Committee. And if all of these tactics fail, the committee's enemies will seek to cripple the committee by sharply reducing its funds.

Two years ago, when the last major attempt to destroy the HUAC was undertaken, the House of Representatives rejected the attempt by a lopsided vote of 412 to 6. In ordinary circumstances, a mandate as impressive as that would discourage the HUAC's enemies. But such is far from the case.

THE HUAC IS NOT A NECESSARY EVIL

For, even if the 1963 effort fails, it will have the subsidiary effect of discrediting the committee's work in the eyes of millions of Americans. The facts altogether too frequently don't catch up with reckless accusations. There are, as a result, many Americans who look upon the HUAC as a necessary evil, when, in reality, it is an altogether legitimate and normal feature of the legislative process.

Campaigns like the one presently afoot have the additional effect of intimidating Members of Congress who have the temerity to serve as HUAC members.

In this connection, we have this impressive testimony from Cincinnati's former Representative Gordon H. Scherer:

"When, soon after my election to Congress in 1952, I accepted a place on the House Committee on Un-American Activities, I had neither misgivings nor forebodings. Our boys were dying in Korea. The mischief wrought by Soviet agents was no longer a matter of surmise; enough of it had been exposed in detail to alarm the American people. To help dislodge these internal enemies seemed to me a task any patriotic American could undertake proudly.

"What I failed to foresee was that mere act of joining the committee would make me a target for organized slander, regardless of how I might conduct myself. I was not unfamiliar with the rugged give-and-take of political life, but not until I joined the struggle against Red sedition had anyone impugned my patriotism, honesty and decency. Thereafter, I had to accustom myself to being called, to my face, in print and on the air, a witch-hunter, a character assassin, an inquisitor, and Fascist. I had become an enemy of the Bill of Rights.

"But my real dismay is not with the Communists and their friends who are engaged in protecting themselves and their cause. What distresses me is that a large portion of the public swallows the Communist distortions and blandly echoes the Red billingsgate."

From the day the committee was created a quarter of a century ago up to this crucial moment in the cold war, the story has been the same.

Fortunately, Mr. Scherer and his associates in the work of the House Un-American Activities Committee have won, in addition to the abuse of the Communists and their apologists, the applause of conscientious Americans.

"For years," J. Edgar Hoover notes, "the Communist Party has campaigned against the House Committee on Un-American Activities. The Department of Justice and the FBI have not been spared, and we have come to judge our effectiveness by the intensity of the Communist attacks."

The furiousness of the 1963 anti-HUAC drive only underscores the importance of retaining the committee, its powers and its appropriation.

Federal Highway Administrator, Hon. Rex M. Whitton, Reviews Progress in Construction of Interstate Highway System in Address Before National Limestone Institute Convention

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 28, 1963

Mr. RANDOLPH. Mr. President, the 18th Annual Convention of the National Limestone Institute was held at the Statler Hilton Hotel in Washington, D.C., the week of January 21. One of the high points of the agenda was a luncheon address by Federal Highway Administrator, Hon. Rex M. Whitton, who emphasized the need for effective Federal-State cooperation in the construction of our Interstate Highway System.

As a member of the Senate Committee on Public Works, and its Subcommittee on Public Roads, it will be my privilege to work closely with Mr. Whitton and his associates during the 88th Congress, as he administers the vital Federal-aid highway program.

Speaking before representatives of the various segments of the limestone industry, Administrator Whitton stressed that a sense of partnership must prevail between the State and the Federal Government if we are to complete on schedule the huge network of freeways envisioned in the Federal-aid highway program. He indicated that some form of work is completed or underway on 70 percent of the Interstate System, but that some States are lagging due to problems in design, acquisition of rights-of-way, and in providing State matching funds. Mr. Whitton likewise emphasized the role of the Bureau of Public Roads as the agency responsible for overseeing this vast national project, and charged with assuring both sustained progress and efficient administration in Federal-aid highway construction.

Mr. President, I request that the remarks of Mr. Whitton before the National Limestone Institute Convention January 23, 1963, be reprinted in the Appendix of the RECORD:

There being no objection, the remarks

were ordered to be printed in the RECORD, as follows:

PROGRESS OF THE FEDERAL-AID HIGHWAY PROGRAM

(Remarks by Rex M. Whitton, Federal Highway Administrator, Bureau of Public Roads, U.S. Department of Commerce, at the 18th Annual Convention of the National Limestone Institute, Congressional Room, Statler Hilton Hotel, Washington, D.C., Wednesday, January 23, 1963, 12:30 p.m.)

I want to thank you for this chance to talk with you today. I know I'm among friends. Here's Bob Koch, your president; and some of the people from my home State, Missouri; and others from both Washington and all over the country that I know well.

I can tell from your printed program that this annual meeting is well planned. The subjects for your discussion range from broad problem areas, to those of current and practical concern. I am sure you will find that the sessions will be of real value, both to you who are producers, and to some of us who are in effect your customers.

Again, I want to tell you how proud I was to receive your Distinguished Service Award. I am very grateful. I must say that work deserving such an award is accomplished with the help of many people who work with me in the Bureau of Public Roads, in the State highway departments, in associations such as yours, and at the top of the list is Mrs. Whitton.

Let me start, today, by sketching just what the Federal-aid highway program is. It has grown a lot since its modest start in 1916. Almost 880,000 miles of roads and streets are included in the Interstate and ABC Systems, and are eligible for improvement with Federal aid. That's about one-fourth of our total road and street mileage, and generally the most important part. Today, Federal aid accounts for over 40 percent of all funds spent for road and street construction by all levels of government.

Yet the basic concepts created by Congress 46 years ago still prevail. The Federal-aid program is a Federal-State cooperative effort in which the States might be called the "initiating" partners. They choose the system routes and the projects to be built. They select the detailed locations and draw the plans. They let the contracts and supervise the construction. The States maintain the highways without Federal assistance.

The Congress has decided, by methods prescribed in the law, how much Federal highway aid each State is to get, each year. And Federal-aid payments are made to the States, project by project, only for work completed and accounted for.

In this whole process, from choice of routes to payment for projects, the Bureau of Public Roads' function is that of review and approval—or disapproval. Disapproval does not come frequently, and it is more apt to be a reservation than a flat denial.

Of course such cases seem to make news. I assure you that disapprovals come only after careful thought. And they occur through differences of judgment based on engineering and economic analysis. Further study often resolves such differences, and the Bureau and the State thus reach agreement.

Now, I have said that the States are the "initiating" partners in this program. Nevertheless, Public Roads believes that it is dutybound to provide both guidance and controls. This, to me, is both right and proper. We are not hamstringing the States with an overabundance of regulations. But we certainly are expected, by the Congress and the public, to assure them they are getting full value for the money they invest in Federal highway aid.

We have recognized that both our own procedures, and those of the States, must change from time to time. The growing size and complexity of the highway programs surely merit that attention.

During the past few years we in Public Roads have taken a number of major steps to strengthen our controls in the Federal-aid program. None of these have been taken without careful study. We think they are reasonable and necessary, and that they do not infringe unduly on the States' functions or rights.

One major step taken last year was the creation of two new primary units in our headquarters organization.

One of these is the Office of Right-of-Way and Location. These are areas of great importance. Route location is often the subject of strong and heated argument. Right-of-way purchase is a field new to many highway officials. It is difficult in that right-of-way costs cannot be measured and compared with standards as easily as construction items.

Our second new major unit is the Office of Audits and Investigations. It handles a dual job. One is that of auditing State claims for Federal-aid payments. The other is to maintain vigilance over all phases of our programs.

This office investigates all charges of incompetence and fraud. But it does much more. It surveys the procedures of both Public Roads and the States, to see that they are properly applied and that they work well.

We are not interested in witch hunts. But we are interested in providing good checks and balances. And we know that these must tread a middle path that assures good workmanship without slowing the work to a standstill.

One of our techniques now in use is called inspection in depth. Individual projects, chosen at random, are examined in detail from start to finish by Public Roads staff. If there are faulty procedures, or if good paper procedures are not being carried out, they will show up in this inspection in depth. The process is most helpful both to the States and to Public Roads.

We have also applied this process to the right-of-way procedures of every State. The 35-point review has shown possible weaknesses in some cases. We have worked with those States in overhauling and tightening their right-of-way policies and operations.

We have developed a current billing method for Federal-aid payments, called concurrent auditing. The process calls for a good deal of preparation, and we are helping the States to organize for it, one by one. The system, among other things, first requires a thorough review of procedures.

In use, it permits the States to get Federal reimbursement much sooner than before, when projects were not audited until they were finished. And it also turns up more quickly any procedure flaws or non-allowable items. Thus corrective action can be taken promptly.

You will note that our so-called controls are mostly concerned with procedures and their actual use. We are primarily interested in improving our and the States' operations.

Still, we know fraud and carelessness can and do occur. We intend to keep on hunting out such instances, and taking drastic action when necessary. But we are convinced that fraud, incompetence, and poor work in the Federal-aid program are of very small proportion. We and the States want to keep it that way.

Now, let me turn to more positive reporting. All of you are interested in the Interstate Highway System. Some of you produce materials for its construction. All of you are potential users, both with your own cars and with your company trucks.

We are about 1,700 miles further ahead with the system than we were a year ago. Well over 13,000 miles of these freeways are open to traffic and are in daily use.

Of this total, about 8,000 miles have been completed to fill the needs of traffic expected in 1975. Another 3,000 miles have been improved enough to handle today's traffic well, but they require further work to bring them up to the 1975 standards. And 2,300 miles are toll facilities, included in the system as permitted by the law.

We also have nearly 5,000 miles under construction, and close to 11,000 miles with preliminary engineering or right-of-way work going on.

So some form of work is finished or underway on 70 percent of the Interstate System. It's a good record. But this national figure is an average for all of the States. Compared with that 70 percent, some States have already passed the 90-percent mark. Some others haven't reached 50 percent as yet.

We in Public Roads think it is important to move ahead on a mileage objective. In a sense, the public is already sold on the Interstate System. Through Congress, they have provided the money. To be convinced that it is worth the cost, they have only to ride on it, and see the better, cheaper, faster, and safer travel they are buying.

It is for this reason that we are urging the States to plan their interstate schedules with certain goals. One is to develop long, usable sections of completed freeways, particularly those connecting major cities. Another is to concentrate on replacing badly deficient or dangerous existing road sections.

We also are urging a target of half the system mileage open to travel by the end of 1964, the halfway mark in the 1957 to 1972 time schedule.

Our present estimates and the States' show that we have a good chance of reaching that goal. But it, in turn, is only a halfway mark. The Congress expects us to complete the entire system by 1972.

Some States, using bond or other financing and knowing they will receive their Federal aid later, are going ahead rapidly. A few will finish well before 1972. Others are lagging on a mileage basis. Some will have to complete five times as much mileage annually in the next 10 years as they did in the past 6.

Mileage isn't the only measure of program progress, of course. But the fact remains that Congress has given us a time limit.

A number of States are facing very real problems. There are 2,500 miles of the Interstate System where locations aren't settled. Twenty percent of the States have some lag in design work. Thirty percent are having difficulty in acquiring right-of-way. Twenty percent face trouble in providing State matching funds.

The need for careful, long-range planning becomes clear if we view the successive steps of the program from the far end. To complete the system in 1972, the final construction projects should be awarded to contract in 1970.

Then the last right-of-way purchase and clearing should be started in 1967 or 1968. And, in turn, all Interstate project design work ought to be underway in 1966.

Final route location has to be settled before then. Location requires preliminary studies of alternates, public hearings, and reaching agreement with various Government and planning agencies. So it is evident that final route location work should be in progress right now.

It is obvious that we cannot hold up all or many remaining Interstate projects to these several terminal dates. If we do, there will be a construction "pile-up" in the last few years before 1972, with above-normal building costs and an impossible strain on inspection staffs.

It is for this reason that long-range planning of all operation phases is essential.

I have been dwelling at some length on the Interstate System program because of its importance. But this does not mean I attach less importance to our ABC program for the improvement of the Federal-aid primary and secondary systems in urban and rural areas.

Perhaps less needs to be said about the ABC program because it has been going on for 46 years now, and getting bigger every year. This past year the Congress authorized \$950 million for the program for fiscal year 1964, and \$975 million for 1965. Your own organization with Bob Koch speaking ably for you, strongly supported that legislation.

For the record, during fiscal year 1962, Federal-aid ABC projects were completed on more than 18,000 miles of roads and streets. This work cost over \$1.5 billion, of which nearly \$800 million was Federal aid.

Some of this work was new construction, extending our total road and street mileage. But much of it was for improvement of existing roads, better curves and grades, and stronger and wider surfaces. About one-fifth of the 5,000 miles of primary projects completed in fiscal 1962 were four-lane highways. A good many of them had partial or full freeway design. We certainly expect this trend to continue.

In fact, we expect the great speedup in road building, begun in the last decade, to continue throughout this one. And the 1970's will probably see an unslacked continuation.

I won't forecast dollars far ahead, but in this year of 1963 we expect to see highway construction outlays of \$6.1 billion; up \$600 million over last year. That's just construction, excluding right-of-way, engineering, maintenance, and all the rest of the annual highway costs.

The use of materials in the highway program is staggering. In 1962, in all road work, 582 million tons of aggregates were used for construction and 172 million for maintenance. In the 1962 to 1972 decade we expect 9 billion tons of aggregates to be used for roads.

Aggregates, of course, include sand, gravel, and slag, as well as crushed stone. Limestone will certainly account for a healthy share of the latter.

One of the problems in which you and I share concern is that of specifications. Last year the Bureau of Public Roads published a report of real interest to you.¹ It was called "Aggregate Gradation for Highways." It pointed out the benefits that would result if aggregate gradation specifications could be simplified, standardized, and made more uniform.

You, as producers, would benefit because you would not have to prepare and stock such a wide variety of aggregate sizes and mixes. We, as customers, would benefit from possibly lower costs and less confusion.

We believe there is considerable room for improvement in most other specifications areas, too. Material usages could be more standardized, and construction methods made more uniform. Roadbuilding production rates could be increased and the end product would be better, if such steps were taken by the States.

And the States are taking just such steps. The American Association of State Highway Officials is now preparing a complete book of construction specifications. The book has already been through several drafts and is now under committee review.

Some time this spring the final draft will go out for review and comment to State highway people, to equipment manufac-

¹Your organization had a committee that worked with us over a period of 2 years in developing this report.

turers, and to materials producers. I know your organization can be counted on to offer helpful and constructive comment. And you can be sure your comments will be given careful attention.

Thereafter, the book will have final review by AASHO and will be voted on by the States. I am hopeful of seeing the final product before the summer of 1964. Then we will have a complete and modern guide specification book for the construction of highways. I am confident it will lead to what we aspire among the State specifications—standardization, simplicity, and uniformity. It is an objective that will help all of us.

While I'm on this subject I want to tell you that the Bureau of Public Roads is fostering a greatly expanded research program, on its own and with the States. One important research area is better quality control in highway construction.

I don't mean restraints, either. But we have a great need for a scientific approach to sampling and testing. In the end, it will mean less interference with the contractor; and assurance that materials and methods are checked out before it is too late.

One final word, for the future. When one tries to look 100 years ahead, one wonders what kind of transportation systems we may have, perhaps radically different.

But, for a somewhat lesser range, we must remember that planning for, say, 1980, is already on the drawing board or in the thinking stage. The United States will be even more urbanized then. But I cannot foresee drastic change in the shape of our cities or in the forms of our transportation.

By 1980 we may have some forms of automated highway in the development or try-out stage. We will probably have more rail transit in our very largest cities. I certainly expect much more urban bus service, perhaps some of it in little local buses, such as are to be tried out here in Washington, as well as express buses running on special or reserved lanes of freeways.

But the public is unlikely to forego, by 1980, its great desire for personal mobility. We will probably have additional mileage of freeways in the Interstate System, financed by Federal aid or otherwise, and thousands of miles of primary highways will be rebuilt to higher standards; thousands of dirt roads will be surfaced.

In our lifetime, you need have no fear of running out of a market for limestone.

In closing, once again I express my gratitude for the award you conferred on me last night, and I appreciate this opportunity to talk with you.

Your organization has cooperated fully with us and with the States, in the past, and your help has been very real. I know we will continue that friendly and useful relationship.

Is Oxford the Rehearsal of the Takeover?

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I am including a thought-provoking article written by Mrs. Katharine Phelps Close, a native of

the State of Maryland, which I feel deserves the attention of this body:

IS OXFORD THE REHEARSAL OF THE TAKEOVER?

(By Katharine Phelps Close)

Well, the sound and the fury seem to have quieted down for the time being in Oxford, Miss., and I have been watching for some reply to David Lawrence's cogent article (Oct. 3d) on the "tragic silence" concerning the validity of the controversial 14th amendment to our Constitution, but I have seen none so far. Therefore, I am impelled to add my few words that may help clarify the Southern point of view to some readers who may not be familiar with the Reconstruction era in American history. As a Southerner from the State of Maryland I had ancestors who fought on both sides of this terrible conflict—brother against brother—and one of my grandmothers was from Mississippi, so I was raised on stories of the Old South and the terrors of Reconstruction. They lived through a crisis not unlike that which happened recently in the Congo.

The Southern people can never forget. But through the ensuing years following the horrors of the Civil War they have tried to work out a decent solution to the Negro problem, giving the Negroes equal but separate facilities which were improving with every year, and they lived side by side in peace and mutual respect, until lately. (Had Abraham Lincoln not been killed, his plan was to send all the freed slaves back to Africa to settle Liberia, a name derived from Liberty, and whose capital is Monrovia, so called for our patriot James Monroe of the famous and now forgotten Monroe Doctrine.) As a Southerner, but a non-professional one, I am proud of it, and I feel it is unfair that the brutal subjugation of the Southern people following this war has been glossed over by historians (Northerners most of them. Surely the basic sin was slavery at all, from which the Northern slave-traders profited handsomely.) There is an old proverb which so aptly says: "The past foretells the future."

The War Between the States ended April 10, 1865, after 4 bloody and terrible years. The 14th amendment giving citizenship to the freed Negro slaves was first proposed June 12, 1866. By July 28, 1868, the prostrate former Confederate States were forced by Federal arms to ratify this amendment, and it was a shocking and brutal scandal at the time. The 15th amendment, giving the freed slaves the right to vote was put into force in March 1870. (The American Indians were only franchised in 1924.)

In those days following the Civil War many of the Governors of Southern States were Negro puppets put in power by the Federal conquerors, and their legislatures were a rabble of white renegades and newly free black men, many of them illiterate. The intolerable situation created by the Federal victors in the South during the Reconstruction, as it is called, gave rise to the Ku Klux Klan (since shamefully degenerated) but which was, in those days, a respectable organization made up of white gentlemen in an effort to protect their homes and their women against barbarism. These Southern white men had been stripped of all they possessed, their homes and plantations had been burned and property destroyed or confiscated (stolen) by the swarms of carpetbaggers from the North—and by roaming bands of bewildered free Negroes used to a paternalistic way of life and who, faced with the responsibilities of freedom and of earning their own keep, resorted to pillage and rape and brought terror to their homeland. All this was graphically shown in an old and historic movie by D. W. Griffith of the silent picture days, called "The Birth of a Nation," which has now been muzzled as

it is no longer politically popular to remember the painful, historic truth as regards the South.

It would be interesting to know just why this 29-year-old Negro, James Meredith, was chosen by the National Association for the Advancement of Colored People, over many applicants, to be the martyr-hero he now is to his race in breaking, with the aid of thousands of heavily armed Federal troops, the solid white barrier at the University of Mississippi. It would be even more interesting to know how much James is being paid to endure this education. It would be further absolutely fascinating to know how deeply the Communists have penetrated in this powerful and rich political lobby of the NAACP, which, in appealing to the huge Negro vote in the United States, is now a power to be reckoned with in our national politics. It is not as if Meredith were unable to obtain a satisfactory education in his own State of Mississippi, for he had been attending a well accredited Negro college there for several semesters (and which his colored wife is still attending), when he demanded and got a transfer to the previously all-white State university. Some may say, "There is a principle involved and by the recent Supreme Court decision this man was given the right to go to the university of his choice." But what about the majority? Don't the majority have any rights any more? (The Negro minority, certainly in the South, pay no taxes, or, if they do pay taxes at all to the State or Federal Government they are negligible in proportion to the rest of the population.)

And what about the serious consequences of using force to push through this issue at this time, knowing full well what the reactions of the white citizenry would be? Of the wisdom of sending 14,000—or was it more?—armed military including Negro troops (an added insult) to this small town of little more than 5,000, so that one stubborn Negro could make himself a public figure, a hero, to his people, and crack the hitherto barrier there, backed up with all the strength of Federal might. (The old wounds of the Reconstruction days have been opened up afresh all over our South. A wedge, driven at the national Achilles heel, has been driven in to divide our people once again.) And what about the other students? Certainly the tense atmosphere of an armed camp is not conducive to quiet study for anyone, white or black. Will having this Negro there make others more acceptable? I don't think so. This one needs guards day and night, shameful as it is, and he will continue to need them as long as he remains there. If education is really what this Negro wants, wouldn't the more tranquil campus of his former Negro college with the companionship of his wife, be preferable? On being admitted to the University of Mississippi in the midst of the wildest melee seen there since the Civil War, James is reported to have said, "This is not a happy occasion." This remark wins my personal prize as the understatement of the year. Then to further enhance his importance publicly and in the eyes of the Negro voters, this colored student—a true troublemaker if there ever was one—gives interviews to the press, criticizing the Federal Government that had just saved his life with the aid of an army invasion into the State, by saying that not enough Negro troops had been used in Mississippi, claiming this as segregation of the Negro service personnel, and useful to the boys in the Kremlin for propaganda purposes. (The very fact of having any Negro troops there, armed against the white citizenry of the South, was enough to madden the population, remembering as they all do the days when a Negro was in control with his henchmen.)

If a principle is involved in this Mississippi situation, then, as David Lawrence so rightly and sufficiently pointed out, the whole subject of the legality of the 14th amendment, as well as the Supreme Court decision based on it, "should be opened up for trial after 94 years of tragic silence by the Supreme Court of the United States." This matter of school integration was never put up to the States for a decision, knowing that the Southern States would probably never ratify it. It is one of the slickest deals ever pulled off by a powerful lobby group in the politics of our country. The naked military force shown in the little town of Oxford, Miss., poses the question "What has become of State rights—of State sovereignty—of the very cornerstone of our country, and the basis of the name, United States?"

The real neglected minority is the American Indian, the first and true American, because his voting power is weak and unimportant. This whole integration problem is for political purposes, for votes at home and to try to win over the Afro-Asian block in the U.N. In spite of all the high-flown moral reasons given, votes are the real basis for the deplorable situation * * * but at what cost in prestige abroad and at the risk of open rebellion among our own people. It will take a long, long time for the wounds of this new-Reconstruction to heal.

The Chief Joseph War

EXTENSION OF REMARKS OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. HORAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include a very interesting article reprinted from the winter, 1963, issue of *Montana*, the magazine of Western history, written by Rowena L. and Gordon D. Alcorn, of Tacoma, Wash. Both Dr. and Mrs. Alcorn have been deeply interested in the Nez Perce Indians for more than a quarter century and Mrs. Alcorn is internationally famous for her paintings of outstanding Indians of the past and present.

This story concerns Sam Tilden, a nephew of Chief Joseph, one of the oldest survivors of the famous retreat in 1876 of the Nez Perce from central Idaho through the Lolo Pass, down the Bitterroot Valley of Montana, thence southeasterly into the general area of Yellowstone Park and then north, heading for the Canadian border. This retreat is sometimes referred to as "the Chief Joseph war." Many colorful sidelights are set out in this account of this famous retreat in which the Indians, although greatly outnumbered, were successful in many pitched battles and, in fact, were never defeated until the last battle which occurred in northwestern Montana east of the Rocky Mountains. The Indians thought they had reached Canada when the troops, under Gen. O. O. Howard, caught up with them and Chief Joseph,

because of the exhaustion of his entire band, was forced to surrender.

The article follows:

OLD NEZ PERCE RECALLS TRAGIC RETREAT OF 1877

(By Rowena L. and Gordon D. Alcorn)

"Under a buffalo skin robe, I was sleeping soundly in our tepee beside Chee-Nah my grandmother. Suddenly a rifle shot, then neighing of startled horses roused us. Chee-Nah rose to peer out and a bullet pierced her left shoulder * * * blood streamed from the wound as she pushed me from the tepee crying, (Suhm-Keen run to the trees and hide.) I raced up the slope as fast as I could * * * bullets kept whizzing past clipping off leaves and branches all around me. I was very afraid * * * soon some other boys joined me there and we watched trembling at the awful sight below. Our tepees were set afire and our people shot as they tried to run for cover in the timber."

Thus recalled our aged friend Sam Tilden, whose Nez Percé tribal name, Suhm-Keen, means "shirt on." We visited him again last summer (June 1962), and he was telling us boyhood memories of the historic Battle of the Big Hole on August 9, 1877. Tilden was 10 years old when he went along on that tragic retreat. Five nontreaty bands of the Nez Percé Nation were forced to flee their homeland in what was a part of Washington, Idaho, and Oregon, to seek sanctuary in Canada, "Land of Redcoats."

After they had crossed over the Lolo Trail of the Rockies, the tribesmen hoped they were safe from pursuit by Gen. O. O. Howard's U.S. Army forces. So, exhausted from their arduous trip (encumbered as they were with old men, women, and little children) they at last stopped to rest at Big Hole, which they called "Is-Kum-Tse-Talik" (Place of Ground Squirrels).¹

Scouts should have been sent up the pass to be sure they were not being followed, but in the council of chiefs, Looking Glass vehemently insisted that it was not necessary: "Montana people our friends." This decision that speed was most imperative was to cost the Nez Percé many lives.

Lulled into a false sense of security, they made camp. Tepee poles were cut, squaws dug camas bulbs, and soon roasting pits to cure them were smoldering. They would need as much of this nourishing food as they could prepare for the long trek to Canada. Two camas bulbs and two kous roots could sustain one for a day.

Tilden continued his account of the battle: "About 4 a.m. before dawn, one of our old men, Nata-Le-Kin who had poor eyesight, heard the ponies stirring restlessly up on the hillside where most of them were hobbled. It was a chilly night, so he drew his blanket around his shoulders and rode up to investigate the cause of that disturbance. Colonel Gibbon's troops were hiding up there ready to attack the sleeping camp, when Nata-Le-Kin appeared. They shot him and the report of the rifle roused our encampment and our warriors rushed from their tepees to do battle. Many of the tepees were set afire by the soldiers, who shot our people as they tried to run for cover in the timber. The first warrior to be killed was Rainbow (Wah-Chum-Yus) who had always told us

that if he had to fight before dawn, he would surely be killed."

It was not yet light when the battle started. Five Wounds (Pah-Kah-Tos), lifelong friend of Rainbow, had made a pact with him that they would die on the same day as their fathers had died many years before. When Five Wounds saw that Rainbow was slain, he deliberately walked out into the enemy fire and died. Tilden also saw other great warriors killed: Red Moccasin Tops (Sarpis-Ip-Pilp), Shore Crossing (Wah-Lit-Its), Woodpecker (Woo-Kaw-Kaw) and Circling Sun (Wet-Yet-Mas-Lik-Lelen).

In spite of the surprise attack, the Nez Percés were able to drive off the enemy, and even managed to capture the one howitzer hidden in the timber. Then, while a number of warriors held the troops pinned in rifle pits, the other tribesmen buried their dead. Then they hastily fashioned travois from poles of the unburned tepees. On these they placed the wounded and left the sad "Place of Ground Squirrels," and again headed toward Canada. Riding on fast ponies, the fighting men joined the others when they made a camp after traveling "one sun" from Big Hole.

The name of this place they called Tak-Seen (The Willows). Here Olokot's wife, Ai-Hits-Palo-Jam (Fair Land) died of the wounds she had received the day before. She left an infant baby. Husis-Ow-Yeen (Wounded Head), whose Indian name was given to him from the severe head wound received at the battle, had tallied the dead at Big Hole on his buffalo drinking horn: 63 had been killed, 32 of them men. All the others were women and children. There was much grieving and wailing in camp that night.

Sam Tilden was born in 1867 when his parents were camped on the Musselshell River during a buffalo-hunting trip. His father was We-Ahch-Chech-Kan (Packing Blankets), his mother Ka-Too-Cham-Miyah (Horse Chewing Grass Noisily). The name of Samuel Tilden was given to young Suhm-Keen by a teacher, Frank Kettenbach of Lewiston, Idaho. The names were frequently given to Indian children by teachers or ministers.

Chee-Nah, Suhm-Keen's grandmother, was the sister of Chief Old Joseph, and she was known as Martha Joseph. The wound she received as the attack at Big Hole started, gradually healed during the retreat. She was captured at Bear Paw and taken prisoner with Chief Joseph. She returned to Lapwai where she died after the war, many years later.

"During the early summer of 1877," Tilden remembers clearly, "we were camped on the bank of the South Fork of the Clearwater River, not far from the present village of Stites, Idaho." After the Battle of White Bird Canyon on June 17, 1877 the Nez Percé moved up onto the Camas Prairie and then down to the South Fork of the Clearwater River (Kooos-Koos-Kie). There they made a camp in the sloping meadow directly across from what is now known as Battle Ridge. There, Tilden's family joined the other tribesmen.

On July 11 and 12, a band of 24 Nez Percé warriors, led by Yellow Wolf, Olokot, Wottolen, Peo-Peo-Tholekt, Rainbow, Five Wounds, and others, held off the Army forces along this high promontory. Meanwhile salvos from the two howitzers landed in the Indian encampment. Finally it was decided that their camp should be moved for safety, and so the Nez Percé headed for Kamiah while the warriors held the soldiers on the ridge. The last to leave was Yellow Wolf, who helped Springtime, Joseph's young wife, to mount

¹ Located on State Highway 43 in western Montana, the spot is now marked by a monument maintained by the National Park Service. It is 12 miles west of Wisdom and 21 miles from its junction with U.S. Highway 93. Shallow, grassy trenches and many battle-scarred trees remain as evidence of the historic encounter here.

her rearing pony frightened by the roar of the howitzers. With the cradleboard containing her baby, she could not handle the terrified animal. Together, Yellow Wolf and Springtime rode to join the retreating Nez Percé.

Tilden recalls the stormy council of chiefs—Joseph, Looking Glass, Ollokot, White Bird and Too-Hool-Hool-Zote—after the next attack which came the following day on July 13 at Kamiah Crossing. Chief Joseph suggested that they go back down into the rugged terrain where they could easily elude the soldiers. This was the Salmon River area which is gashed by awesome canyons. Joseph was overruled by the others who wanted to leave Idaho and go to the "Land of Redcoats," and so preparations were made to leave at once.

Several of the warriors who had fought bravely at White Bird Canyon, the Clearwater Battle and at Kamiah Crossing, decided to remain behind at Kamiah with Chief Red Heart and his band which had just returned from Montana where they were hunting buffalo. These tribesmen were all taken prisoner and were later held for a year at Fort Vancouver. Among them was Halfmoon, and an old man, Chief Jacob, who had signed the Treaty of 1855. What a change had taken place in 22 short years.

"On the way up over Lolo Trail," Tilden told us, "we had plenty of wild game. I was usually put on night duty to guard the horses. Chief Joseph was my uncle and he asked me to do this."

After the Battle of Big Hole, the Nez Percés were attacked again at Camas Meadows (Kamus-Nim-Takin). This was on August 20. It was while they were still in this area that some of the Nez Percés warriors led by Yellow Wolf and Peo-Peo-Tholekt ran off some of the army animals in a night raid. This was a daring maneuver, especially since the redmen had stamped them into joining the herd of Indian ponies. However, when it grew daylight, the raiders were chagrined to discover that there were only three horses; the rest were mules. Suhm-Keen (Tilden) laughed when he remembered this incident. "I helped to guard those animals—those mules which they thought were horses in the dark."

On and on the fleeing Nez Percés traveled northward toward Canada. Then at Canyon Creek, Col. Samuel Sturgis' troops tried to corner them on September 13. Only one warrior was killed in this encounter. Tee-Wee-Wow-Nah's pony became terrified by the shooting and bolted, running out into the open where the soldiers found the redman an easy target. Canyon Creek, although not a narrow place, was skillfully defended by the expert marksmanship of the Nez Percé.

"It was growing colder every day as we headed northward," Tilden continued. "On September 29 when we finally arrived in the Bear Paws at the place we called 'Ali-Kos-Pah' (Place of Manure Fires), it was already starting to snow. I helped to gather buffalo chips and before long many fires were burning."

"We are at least two suns ahead of the soldiers and only two suns from the 'Land of Redcoats,' so we can rest here awhile." This was again Chief Looking Glass who had spoken. However, the other chiefs seemed

to agree that they might be safe now to remain there at least "one sun."²

Several scouts had arrived at the camping spot ahead of the main body of the Nez Percé, and had shot some buffalo. Soon meat was roasting over many fires. The Indians, their hunger appeased and warmed by the buffalo-chip fires, felt at ease now that they were such a short distance from Canada. All night long the fires were kept aglow by the squaws. To keep warm enough this was necessary, for many of their thick buffalo robes had been destroyed when their tepees had been burned at the Big Hole.

A light snow had fallen during the night and it was bitterly cold as dawn broke. The camp was just stirring when scouts were sent out in different directions as a precautionary measure. "But we were not worried," says Tilden.

"The scouts had been gone just a short while when suddenly we heard a distant rumbling . . . We all knew that this was not Hein-Mot (real thunder). It was the ominous sound of stampeding buffalo . . . this could mean only one thing. At that very moment one of our scouts appeared on top of the highest ridge. He yelled, then he fired his rifle in the air, at the same time he waved a blanket giving us the signal, 'Soldiers coming—soldiers coming.'

"While this scout was still waving the blanket to warn his tribesmen, there suddenly appeared two long lines of cavalry from the ridges; as they raced toward us, they formed two wide arcs to encircle our encampment.

"My mother screamed at me, 'Suhm-Keen, grab your packsack and get away to the Redcoats.' I ran to my pony and galloped him as fast as he could. The noise of shooting had stampeded the Indian ponies and they were running away from the encampment. As I left the others, ahead I saw another Indian on a Pinto pony. He had a long war-bonnet on. This Indian rode toward me and tried to shoot me but missed." (He was no doubt one of the Cheyennes who were helping the soldiers. Some Crow Indians were also at Bears Paw, and it was a great shock to the Nez Percé to see that these Crows who were supposed to be their friends, had turned against them. The help of these Indians to the troops made the plight of the Nez Percés even more desperate.)

"It was again snowing as I rode on to the north. Toward evening I crossed the Milk River which was almost dry. Here I stopped for the night; my horse was too tired to go on. I had no food, no blankets except the one I used for the horse's saddle-blanket. Along came an Indian, and when we 'threw the signs,' I discovered he was a friendly Cree. He was kind and generous, for he gave me a pair of moccasins and some food. He was a good-looking Indian."

Sometime later, about 30 or 40 Nez Percés arrived at the Milk River, and among them, to young Suhm-Keen's joy, were his parents. They had waited until dark, and then slipped away from the camp, and fortunately had located some of their ponies which had run away when the shooting started. Later, more Crows came along and provided these shivering refugees with a few blankets, food and moccasins. Many had arrived barefoot, and it was very cold.

² According to some historians, Joseph and his chiefs believed they had actually reached safety in Canada when they arrived in the Bear Paw country of northeastern Montana. "The mistake was discovered when General Miles attacked on September 30," states the Montana Guidebook. "A 4-day battle forced Joseph to make a decision—he must either surrender or abandon the wounded, the old women, and children."

Several days later this bedraggled party slipped over across the border of Canada and at last arrived at the camp of the Sioux Indians. There, Chief Sitting Bull welcomed them and they were treated well. (Sitting Bull rode out to assist the Nez Percé when the word came that the tribesmen needed his help. While he was en route to the Bears Paw, he met some of the tribesmen who were on foot led by Chief White Bird. When Sitting Bull saw their said plight, he dismounted and stood there and wailed in sympathy for their lost cause.)

When Chief White Bird arrived with the news that Ollokot was dead, Too-Hool-Hool-Zote was dead, and Looking Glass was dead, they were shocked but almost worse was the dreadful news that three of their bravest warriors had been killed by mistake, by one of their own tribesmen. White Bird told them too that Joseph had surrendered on October 5, and there was much grieving and wailing among the Nez Percé in far-off "Land of Redcoats." They all knew now that this was the end of all the things they loved.⁴

Tilden's parents remained at the Sioux encampment until 1878, then they crossed into Northern Montana where they lived about 2 years on a small ranch near the border of Alberta, Canada. The father worked for some white settlers there, milking cows and doing other farm chores. In 1880 they moved onto the Flathead Indian Reservation where they stayed until 1910; then they returned to Lapwal, Idaho.

Gradually more and more Nez Percé tribesmen drifted back into the United States. Some were caught and sent to the Indian Territory where Chief Joseph was being held with all who had surrendered with him at Bears Paw. Chief Joseph was permitted a last visit to the Wallowa Valley, the "Land of Winding Waters," in August 1899.⁵

Sam Tilden says "I was one of the two first Nez Percé Indians to attend Carlisle Indian College. When I returned from there, I was through school, so I married Amy who was half Nez Percé and half Yakima. We moved back to the Flathead Reservation where I worked as a teamster. We had three boys, Harry, Lawrence, and Ralph. In 1914, I became a member of the Flathead Indian Reservation police force, and served on that force for 20 years. During World War I, I was on duty guarding the border between Montana and Canada."

Sam Tilden, a gentle soft-spoken man, lived 30 years of his life in Montana, but when he retired from the police force, he returned to live near Lapwal, Idaho (Valley of Butterflies). His home was between Lapwal and Spalding in a grove of tall locust trees. In the early 1940's Ralph, his eldest son who was deaf, was run down by a train just a few hundred feet from their house. His son Lawrence and family now live in this house, for Sam Tilden has for the past 2 years made his home in the Orchards Nursing Home at Lewiston, Idaho.

For many years he took part in special Indian celebrations throughout the North-

⁴ Chief White Bird (Peo-peo-hih-kis-kick), known as a great medicine man as well as warrior, never returned to the United States. He died about 5 years after the surrender and is buried near Fort McLeod.

⁵ Max Wilson, an attorney who has lived almost all his life in Joseph, Oreg., recalls this sad visit by Joseph to Wallowa. Although he was only 14 years old at the time, Wilson followed the famed chief around during the 3-day visit. So much had changed during the 22 years which had passed that Joseph realized there was no hope of his people going back to their beloved homeland in Idaho, although he continued to press for permission until his death.

³ This site of the last major Indian battle in the United States is located 16 miles south of Chinook in eastern Montana. It is a little more than 40 miles from the Canadian line, across which Joseph believed he would find refuge for his people. It is now a Montana State Park.

west. He was active in the Stevens Treaty Centennial at Walla Walla in June 1955, and was always there for the Chief Joseph Days held each summer at Joseph, Oreg. Although he no longer takes an active part in most of these things, he rode in the Lewiston centennial parade in the summer of 1961. He was dressed in his unusually handsome white beaded buckskins.

"I am very proud that my uncle, Chief Joseph, asked me to go back to Washington in 1903 (the last time he made a trip there to plead for the return of the Wallowa country to his people). He told me that I was one of the few people left that he could really trust." (On that trip, James Stewart, Joseph's relative, went along as an interpreter. Tilden speaks perfect English, but there had to be an official interpreter along).

"Chief Joseph wore civilian clothes back there, but always wore moccasins. He never put on shoes of the white man. We went to the White House to meet President Roosevelt . . . you know, the roughrider. We had dinner, too, with General Miles; we ate buffalo meat. Then, Congressman Charles Curtis from Oklahoma took us to the Congress where we shook hands with many people."

The next year, Chief Joseph was dead, many said from grief.

Sam Tilden is not the lone survivor of the retreat over the Lolo Trail in 1877. There are two other Nez Percé still living who were with their fleeing tribesmen.

One of them is Josiah Red Wolf, grandson of the famous Chief Red Wolf who ruled with Chief Timothy over the Alpowa Band. (Both were signers of the 1855 treaty at Walla Walla.) Josiah Red Wolf's mother and baby sister were killed at Big Hole. When Chief Joseph surrendered at Bears Paw, Josiah Red Wolf went into captivity to "Eekish-Pah" (Hot Place). He was 5 years old in 1877, so he remembers everything.

Then there is Lillie Lindsley, of Lapwai. She was only 2 years old in 1877, so she can recall nothing of the war. Last summer, death came to Shining Light (Johnson Hoyt) who had reached the century mark. He, too, had been on the retreat, and had escaped at Bears Paw when he raced to the Canadian border on his pony as the shooting started.

The oldest living Nez Percé tribesman was 101 on November 19, 1962. He is Albert Moore, whose Indian name is Peace Pipe (Tuk-Tar-Mal-Way-Une). He watched the Battle of the Clearwater from the Nez Percé camp on July 11 and 12, 1877. When the five bands started over the Lolo Pass after the Battle of Kamiah Crossing, Peace Pipe wanted to go, but his mother, In-Mah-Mah, persuaded him not to go. "There are too many soldier-coats along the way. Our people will never reach the Land of Redcoats."

So Peace Pipe stayed behind. But he, along with the remaining few old Nez Percé, witnessed some awesome history. It is more than likely that 1962 was one of the last years in which any of us will be permitted person-to-person contact with them.

Salute to Thailand

EXTENSION OF REMARKS

OF

HON. DONALD C. BRUCE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. BRUCE. Mr. Speaker, earlier this month the people of Indiana saluted the people of Thailand. The city and

State of Indianapolis, Ind., joined with the Indianapolis Council on World Affairs and the Indianapolis Symphony Orchestra January 12 and 13, 1963, in the Salute to Thailand. The 2-day civic and cultural activities were cosponsored by the U.S. Information Agency and the Voice of America.

The tribute to Thailand marked the beginning of a second decade of Hoosier salutes to other lands and people of the free world.

Welcoming His Excellency Visutr Arthayukti, Thai Ambassador to the United States, were Indiana Gov. Matthew E. Welsh, Lt. Gov. Richard O. Ristine, and Indianapolis Mayor Albert H. Losche. Indiana news media, businessmen, and civic and social leaders also joined with the sponsoring organizations to make the salute a success.

An exotic Thai menu and ball was held the evening of January 12, attended by the Ambassador from Thailand and ranking city and State officials and members of the Indianapolis Council on World Affairs and the Indianapolis Symphony Orchestra.

The musical salute to Thailand January 13 was the 11th annual salute by the city of Indianapolis and the orchestra to a foreign land. Included in the program was the Thai national anthem and a delightful Thai composition, "Kridaphinihan Dance." As in the past, official exchange of greetings took place at intermission time, with His Excellency Visutr Arthayukti representing Thailand.

The President of the United States sent a special telegram commending the orchestra and the council for their participation in the annual program of musical and civic greetings. The programs, which are recorded by the Voice of America for rebroadcast overseas, have been heard by an estimated 50 million people throughout the world. Obviously, they constitute an important diplomatic activity for the United States.

And the programs are an excellent implement for spreading the name of Indiana worldwide. Further, the programs are an invaluable economic tool for firms of Indiana doing business in the respective countries. Lieutenant Governor Ristine informs me that some 50 Indiana firms have offices or business representation in Thailand—including such distinguished firms as Eli Lilly & Co. and P. R. Mallory. In addition to Hoosier agricultural products, made-in-Indiana drugs and chemicals, machinery, and automotive and transportation equipment are sold in Thailand and other southeast Asian markets.

The success of the Salute to Thailand, the enthusiastic support of the people of Indiana, and the appreciative response of the Thai Ambassador are indicative of the fine work done by the salute committee: Izler Solomon, conductor of the Indianapolis Symphony Orchestra; Virgil Hunt, president of the Indianapolis Council on World Affairs; Harold Boxer of the Voice of America; and Mr. and Mrs. E. F. Taggart, Albert Losche, Jr., Richard Spikerman, and Harold Sundstrom.

Editorial comment and stories from the Indianapolis Star and the Indianapolis Times about the Salute to Thailand are typical of Hoosier reaction to this important people-to-people program, and I insert at this point in the Record the following:

Editorial, "Salute to Thailand," Indianapolis Star, January 12, 1963.

Editorial, "Salute to Thailand," Indianapolis Times, January 13, 1963.

News feature, "Salute to Thailand Is Set January 12-13 in City, State," Indianapolis Times, January 6, 1963.

Mr. Speaker, the people of Indiana are proud to recognize the people of Thailand and to have hosted that nation's Ambassador and his party in their visit to our State. Let the splendid example of the citizens of Indiana serve as a constant reminder to all of our people that in the area of self-government and relations among mankind there are no political partisans. All of us, Republicans and Democrats, are Americans first, interested in the world about us and in the preservation and advancement of the cause of freemen everywhere.

The material follows:

[From the Indianapolis Star, Jan. 12, 1963]

SALUTE TO THAILAND

It casts no aspersions, in any direction, to confess that the land which will be saluted in Indianapolis this weekend is chiefly known to most of us as the locale of "Anna and the King of Siam," and its musical version, "The King and I."

Thailand is remote and mysterious. Its name conjures up all those mental pictures associated with "the mysterious East"—exotic temples in sultry jungles, dancing girls laden with jingling bracelets, incessant, restless rhythms in cymbals and minor-key music. And so on.

This is all the more reason to rejoice that the occasion of a "Salute to Thailand" brings both incentive and opportunity to get a little better acquainted with this storied land.

Few cherished illusions need be shattered. Thailand is indeed a land of oriental charm and beauty and mystery. It has clung to the deep-running, quiet culture of the East, yielding but little and but slowly to the impatient bustle of Western fascination with growth rates and the industrial revolution. It promises unforgettable experiences to the perceptive visitor. The chance to learn a little about Thailand, and hear some of its music, promises delight to weekend audiences in Indianapolis.

Let it not be thought, either, that Thailand has stood in the shadows while the world passed by. It plays a significant role in the complex and constantly moving affairs of modern Asia. Its government is strong and dependable though turbulence and fear and uncertainty lap at its borders. In any roster of the friends of freedom and the West, the Thais stand up to be counted.

We are happy and proud to join the Indianapolis Symphony Orchestra and the Indianapolis Council on World Affairs in this weekend's salute to Thailand. We welcome the visit of the Ambassador from Thailand, and hope he will find this a warm and hospitable city. We wish the two sponsoring organizations gratifying success in this enterprise, and many happy returns of the occasion.

[From the Indianapolis Times, Jan. 13, 1963]

SALUTE TO THAILAND

King Phumiphon Aduldet, of Thailand, is so skilled a musician, and so modern in his

tastes, that he once played his clarinet in a jam session with Benny Goodman. But he doesn't approve of how the classic musical, "The King and I," treated one of his ancestors.

The present king is proud of his lineage and proud of the glorious history of Siam. But things are different now, even to a new name.

Still blessed with the beauty, culture, and traditions of the ancient East, Thailand is building to a meaningful place in the modern world. Politically and economically, it believes in the things we believe in, and it is a firm ally.

Its industry is booming. Its lovely capital, Bangkok, is the transportation center of southeast Asia.

Today, the Indianapolis Symphony Orchestra salutes Thailand in a concert sponsored by the Indianapolis Council on World Affairs. We salute this project.

The Thai Ambassador and other dignitaries are visiting us. We are proud to welcome them.

[From the Indianapolis Times, Jan. 6, 1963]

Agricultural abundance is a common bond linking Indiana farmers with Thailand, the nation being saluted January 12 and 13 by the State of Indiana, the city of Indianapolis, the Indianapolis Council on World Affairs, and the Indianapolis Symphony Orchestra.

A billion-dollar farm State, ranking in the top 20 percent of the Nation's livestock and crop producers, Indiana can be proud to salute Thailand. Fertile soil and willing farmers have made Thailand a rarity among her neighbors in southeast Asia. In an area where poverty and starvation are the rule, Thailand's agriculture-based economy is on a steady upswing, and she is one of the world's largest exporters of rice.

Located in the tropics beneath Red China, 7,700 miles across the North Pole to the other side of the globe, Thailand has almost a year-round growing season. More than 75 percent of the 25 million acres of cultivated land is in rice production. Tobacco is grown in the north, but the Thai import U.S. tobacco to blend with the locally produced variety in order to make an American-blend cigarette. Corn crops are grown twice a year but are almost entirely exported, with little used for food or animal feeding. Casava, cotton, peanuts, soybeans, sugarcane, and coconuts are other agricultural crops.

Agricultural comparisons point up the efficiency of the Hoosier farmer. Thailand is 5.5 times larger in size and population (200,000 square miles and 26.2 million people) than Indiana (36,200 square miles and 4.6 million people). The 18 million acres of farmland in Indiana have a farm population of approximately 670,000 people against Thailand's 25 million acres and 9 million farmworkers.

In the livestock area, Indiana produces over 5 million hogs each year compared with Thailand's 4.7 million in 1959. Indiana's 2 million cattle and calves and 500,000 sheep and lambs match up favorably against Thailand's 5.7 million buffalo. In 1959 Thailand produced 57.5 million chickens, 20 million ducks, and 500,000 geese. Last year Indiana had 13.8 million chickens on the farm and produced 38 million broilers. Thailand does have one variety of livestock that Indiana farmers will never come close to matching—12,500 elephants.

Add to these production figures Indiana's 300-million-bushel corn crop, her \$100 million worth of soybeans, \$60 million worth of wheat, and you begin to realize how productive the Indiana farmer is. In a land much larger than Indiana and which has as good a climate for agriculture, 13 times as many Thai farmers work the land but produce less.

Indiana farmers, relying heavily on mod-

ern U.S.-developed technology, are continuing to increase yields. Pesticides, weed-killers, vaccines, better breeding practices, resistant varieties of crops are all familiar ideas to Hoosier agribusinessmen. They are almost unheard of in Thailand, where hard labor is the norm. Yet Thailand manages to produce more than she needs, mostly by relying on a favorable climate and hard work.

Another agricultural link between Thailand and Indiana dates back to 1955, when a missionary collected a soil sample in a Thailand rice paddy and sent it to the Indianapolis laboratories of Eli Lilly & Co. From the soil sample Lilly scientists developed the agricultural antibiotic Tylan,¹ now used to combat chronic respiratory disease in poultry and to boost weight gains and feed efficiency in swine.

Typically, the United States is not jealously safeguarding its agricultural secrets. Improved breeds of poultry, hogs, and cattle have been imported from the United States in a cooperative program to develop the livestock industry. Once-prevalent animal diseases are being combated, and Thailand is now starting to export meat to the markets of Hong Kong and Singapore. American and Thai technicians have joined forces in helping farmers develop cooperatives for farm machinery, marketing, and credit.

At present Thailand imports about \$8.3 million worth of agricultural goods from the United States, with cotton and tobacco the major items. It has been predicted that the rising economy of the Thai nation will likely result in a growing demand for U.S. agricultural and manufactured products. This is already evident, as the people are beginning to eat bread and drink milk.

A graphic example of the contrasting technology of the two agricultural areas is in the field of farm power units. Indiana farmers own 165,000 cars, 188,300 field tractors, 90,000 trucks—for a total of 443,300 units. Thailand has a total of 134,000 registered motor vehicles, and 78,000 of these are located in Bangkok, the capital city.

In other areas that Indiana farmers and citizens take for granted are these comparisons: Thailand has 3 million radios and 80,000 TV sets, and used 440 million kilowatt hours of electricity in 1960. In Bangkok there are 17 telephones per 1,000 residents. Indiana citizens own 1.2 million radios, 1.2 million TV sets, have 40 telephones per 1,000 residents, and used 19,753 million kilowatt-hours of electric power in 1962.

Although technologically Thailand does not yet compare with Indiana, she is not a backward nation. A free world bulwark against communism in southeast Asia, Thailand is moving forward in industry as well as agriculture. The people are progressive and are proud of their freedom (Thailand means "land of the free"). Just as the United States did in the past, the Thais are using agriculture as the springboard to a higher standard of living. Their past successes and present efforts are being watched carefully by their neighbors.

¹ Tylan (tylosin tartrate, Elanco).

Reds Active in Central America

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. FLOOD. Mr. Speaker, many Members of this body have mentioned

the force of communistic revolutionary subversion in the Caribbean with the result that letters are sometimes received requesting information as to the numerical strength of Communist parties in the countries of that area.

An informative article by Al Burt of the Miami Herald giving the number of members in the Communist parties in the countries of Central America was published in the December 9, 1962, issue of the Washington Post.

In order that its data about the conspiratorial fifth column now at work in the Caribbean may be readily available to all concerned with the security matters, I include it as part of these remarks:

REDS ACTIVE IN CENTRAL AMERICA

(By Al Burt)

GUATEMALA CITY.—Communism speaks directly to some 10,000 hard-core followers in Panama and Central America. And this organized strength feeds on the sympathy of between 60,000 and 75,000 fringe believers.

Panama, Costa Rica, Nicaragua, Honduras, El Salvador and Guatemala have the Communist danger inside their houses, and they know it. The Communist strength runs to students and laborers, and thrives on domestic situations that create widespread dissatisfaction. Unemployment, lack of freedom, government corruption, and the miseries of the poor and illiterate are their favorite poison.

In general, Fidel Castro has lost his messiah's license, but sympathy still exists for the Cuban revolution. There is a feeling that Russia and Cuba may have lost more prestige in the current crisis than the United States did in the Cuban Bay of Pigs invasion fiasco in 1961. But optimism is tempered by the knowledge that each country has its own crop of Communists eager to make a new Cuba.

In capsule, the countries line up like this:

Panama: Estimated hard-core Communist strength, 1,000; sympathizers, 10,000 to 20,000. Strong influence at the university, among labor. Aided by unemployment, concentration of wealth and power, United States-Panama friction over the Panama Canal. Justice Minister Marco Robles: "Panama is the most important objective of the Communists because of the canal." A Robles crackdown during the Cuban crisis kept unrest at a minimum.

Costa Rica: Estimated hard-core strength, 300; sympathizers, 10,000. Making strong pitch to bananaworkers and trying to organize peasant leagues among the campesinos. Problem regarded as less serious here, proportionately, but an "elite" Communist group is making strong effort. Government has support of people.

Nicaragua: Estimated hard-core strength, 1,000; sympathizers, 10,000 to 20,000 and growing. Strong among students and laborers. May 1 parade drew 5,000 protesting against the United States for Cuba. Take advantage of widespread unrest resulting from 26 years of rule by one family, the Somozas. Working to recruit large group in 18-25 age bracket who have never voted and have no political affiliation.

Honduras: Estimated hard-core strength, 2,000 to 5,000; sympathizers about 10 times that number. Effectiveness rises and falls directly with Cuba's fortunes. Down now. Honduras has reputation of being most heavily infiltrated of the six countries. The Government says this is exaggerated. Take advantage of economic problems, particularly unemployment, of underdeveloped country. Government pushing social reforms.

El Salvador: Estimated hard-core strength, 1,000; sympathizers, at least 5,000. Prin-

cial threat in urban areas with Communist-front organizations among labor, teachers, student groups. Strong Government cracks down hard. Antisubversion law passed this fall gives broad police powers, provides up to 7 years in jail. In September, Government headed off trouble by grabbing agitating leaders, hustling them to airport and sending them out of country. Take advantage of overpopulation problem in small country. Government critics complain police work goes beyond efficiency.

Guatemala: Estimated hard-core strength, 1,500 to 2,000; sympathizers, 5,000. Take advantage of discontent with present Government. Strength in rural areas. Popular support in rural areas for return of former President Juan Arevalo, generally blamed with leading country into communism before. Previous Communist experience makes literate wary, but illiteracy high.

Panama Canal: President Theodore Roosevelt's Decision on Type

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. FLOOD. Mr. Speaker, in the long history of the Panama Canal there have been many state papers but none of greater importance than President Theodore Roosevelt's message to the Congress of February 19, 1906, submitting the reports of the International Board of Consulting Engineers and of the Isthmian Canal Commission concerning the vital question of the type of canal to be constructed.

Strongly supporting the recommendations of Chief Engineer John F. Stevens for a canal of the lake-lock type, President Roosevelt's stand led to a scorching congressional debate known as the "battle of the levels" in which Stevens played an important role in preparing addresses for Members of Congress. The outcome was decision for the high-level lake-lock plan of the general type as proposed by the minority of the Board of Consulting Engineers as authorized by act, approved June 29, 1906. The successful completion of the Panama Canal, with its opening to traffic in 1914 within cost limits, and the subsequent transit, in both peace and war, of hundreds of thousands of vessels of various types has completely established the wisdom of the 1906 decision of the Congress and the President for the high-level lake-lock type—the great decision.

Since the enactment of Public Law 280, 79th Congress, approved December 28, 1945, as the result of the hysteria over hypothetical questions of security, the Panama Canal has been in another battle of the levels. Featured by arguments based on the newer term "security," rather than the earlier one, "vulnerability," the ensuing debate was, in effect, a reenactment of the 1906 struggle.

With only minor revision, President Roosevelt's 1906 message is just as applicable today as it was then. In order

that this important state paper may be read by every Member of the Congress and all the cognizant officials in the executive department, and be known to the Nation at large, I quote it as part of these remarks:

To: The Senate and House of Representatives.

From: Report of the Board of Consulting Engineers for the Panama Canal.

I submit herewith the letter of the Secretary of War transmitting the report of the Board of Consulting Engineers on the Panama Canal and the report of the Isthmian Canal Commission thereon, together with a letter written to the chairman of the Isthmian Canal Commission by Chief Engineer Stevens. Both the Board of Consulting Engineers and the Canal Commission divide in their report. The majority of the Board of Consulting Engineers, eight in number, including the five foreign engineers, favor a sea-level canal, and one member of the Canal Commission, Admiral Endicott, takes the same view. Five of the eight American members of the Board of Consulting Engineers and five members of the Isthmian Canal Commission favor the lock canal, and so does Chief Engineer Stevens. The Secretary of War recommends a lock canal pursuant to the recommendation of the minority of the Board of Consulting Engineers and of the majority of the Canal Commission. After careful study of the papers submitted and full and exhaustive consideration of the whole subject I concur in this recommendation.

It will be noticed that the American engineers on the Consulting Board and on the Commission by a more than 2-to-1 majority favor the lock canal, whereas the foreign engineers are a unit against it. I think this is partly to be explained by the fact that the great traffic canal of the Old World is the Suez Canal, a sea-level canal, whereas the great traffic canal of the New World is the Sault Ste. Marie Canal, a lock canal. Although the latter, the Soo, is closed to navigation during the winter months, it carries annually three times the traffic of the Suez Canal. In my judgment the very able argument of the majority of the Board of Consulting Engineers is vitiated by their failure to pay proper heed to the lessons taught by the construction and operation of the Soo Canal. It must be borne in mind, as the Commission points out, that there is no question of building what has been picturesquely termed "the Straits of Panama"; that is, a waterway through which the largest vessels could go with safety at uninterrupted high speed. Both the sea-level canal and the proposed lock canal would be too narrow and shallow to be called with any truthfulness a strait, or to have any of the properties of a wide deepwater strip. Both of them would be canals, pure and simple. Each type has certain disadvantages and certain advantages. But, in my judgment, the disadvantages are fewer and the advantages very much greater in the case of a lock canal substantially as proposed in the papers forwarded herewith; and I call especial attention to the fact that the chief engineer, who will be mainly responsible for the success of this mighty engineering feat, and who has therefore a peculiar personal interest in judging aright, is emphatically and earnestly in favor of the lock-canal project and against the sea-level project.

A careful study of the reports seems to establish a strong probability that the following are the facts: The sea-level canal would be slightly less exposed to damage in the event of war, the running expenses, apart from the heavy cost of interest on the amount employed to build it, would be less, and for small ships the time of transit would probably be less. On the other hand, the

lock canal at a level of 80 feet or thereabouts would not cost much more than half as much to build and could be built in about half the time, while there would be very much less risk connected with building it, and for large ships the transit would be quicker; while, taking into account the interest on the amount saved in building, the actual cost of maintenance would be less. After being built it would be easier to enlarge the lock canal than the sea-level canal. Moreover, what has been actually demonstrated in making and operating the great lock canal, the Soo, a more important artery of traffic than the great sea-level canal, the Suez, goes to support the opinion of the minority of the Consulting Board of Engineers and of the majority of the Isthmian Canal Commission as to the superior safety, feasibility, and desirability of building a lock canal at Panama.

The law now on our statute books seems to contemplate a lock canal. In my judgment a lock canal, as herein recommended, is advisable. If the Congress directs that a sea-level canal be constructed its direction will, of course, be carried out. Otherwise the canal will be built on substantially the plan for a lock canal outlined by the accompanying papers, such changes being made, of course, as may be found actually necessary, including possibly the change recommended by the Secretary of War as to the site of the dam on the Pacific side.

THEODORE ROOSEVELT.

THE WHITE HOUSE, February 19, 1906.

Private Power Comparison Backfires—TVA Is National Asset, Skybolt a Dud

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. EVINS. Mr. Speaker, private power interests have once again attempted to launch a bitter attack on the Tennessee Valley Authority by making an ironic comparison of the TVA and the Skybolt development project.

Private power interests in national magazines have gone so far as to say that investment of tax dollars into the Skybolt project buy defense while tax money used to construct public powerplants and transmission lines is spent needlessly. How wrong indeed are the propagandists. Skybolt has been canceled as a dud, while TVA continues as a national asset.

The Nashville Tennessean has pointed out the complete folly of the statement contained in this advertising and has shown that the TVA has returned to the Treasury more than enough money to pay for the costly Skybolt program which was a miserable failure and which has been canceled by the present administration.

Mr. Speaker, under unanimous consent, I include this editorial in the Appendix of the RECORD, as follows:

PRIVATE POWER COMPARISON BACKFIRES—TVA IS NATIONAL ASSET, SKYBOLT A DUD

The private power interests have renewed their age-old attacks on public power, using their unlimited cash resources to manu-

facture phony charges and circulate uninformed criticism. As usual, the propaganda peddlers have singled out the Tennessee Valley Authority.

Year after year TVA continues to serve its customers, neither feeling the need nor having the funds to engage in propaganda warfare with rich private power. But this time the anti-public-power crusade has backfired, demonstrating the low level to which its promoters are willing to stoop.

In current issues of national magazines a full page color advertisement appears showing missiles on the wing of a bomber. The accompanying text reads:

"When Skybolt rides a bomber your tax dollars buy defense, but when your tax money is used to build more Federal Government-owned electrical plants and transmission lines it is spent needlessly."

This obviously was to have been the mighty opening gun in a winter offensive against public power. It also represents a little flag waving and a degree of false patriotism on the part of private power interests.

It is a wrench of logic to compare a resource development program with a missile project, but the tricksters employed by the wealthy power corporations didn't hesitate to invent a comparison, pitting the value of Skybolt against the value of TVA.

Therefore, let the real values speak for themselves.

Skybolt was a flop. Obviously it did not represent a good investment of tax dollars. The administration wisely canceled Skybolt after many unsuccessful tests, concluding that any future outlays of funds would be "spent needlessly."

The Government during two administrations already had poured \$353 million into Skybolt.

It is ironic that since its beginning in 1933 TVA has returned to the Treasury of the Federal Government \$348 million from power revenues and \$42 million from nonpower revenues. This total of \$390 million is enough to have paid for the now impractical Skybolt with \$37 million left over for some worthwhile defense project.

This \$390 million, incidentally, does not include payments of \$190,500,000 TVA has paid in lieu of city, county, and State taxes during its lifetime.

Interesting too is the fact that the Skybolt development project calls for a thousand missiles for the Air Force and another 100 for Great Britain—at an estimated total cost of \$2.5 billion.

Again ironic, since the effort to compare missiles and resource development has been made, is the fact that during the 30-year history of TVA appropriated funds for all valley projects—dams for navigation, dams for flood control, power itself, experimentation, fertilizer production and the rest—amounted to \$2.5 billion, or precisely the amount estimated necessary to make Skybolt operational.

Even these figures ignore many other facts about TVA: Resource development creates a climate favorable to industry. This means more jobs and more productivity for the area affected. It brings about general growth and added revenue to State and local governments as well as to the Federal Government. In addition, atomic energy plants and other Federal defense agencies use electricity from TVA at a special reduced rate, saving taxpayers millions of dollars each year—\$50 million last year alone.

If the power interests want to make comparisons they should take note that the savings the Federal Government has realized from this reduced rate during the last 9 years have amounted to enough money to have built the U.S. portion of the St. Lawrence Seaway, or more than all the funds spent thus far on Skybolt.

The reason private power interests launched these bitter and frequently uninformed blasts at TVA is because TVA rates force them to hold their own electric power prices down. Millions of electricity users elsewhere in the country are paying lower electric rates because of TVA's "yardstick" policy.

Surveys show that residential electric rates grow progressively higher as the distance from TVA increases.

Yet private power blithely asserts "when Skybolt rides a bomber, your tax dollars buy defense, but—"

The truth is that Skybolt was a skyburst and the private power interests, not realizing it, fell into their own pit of quicksand.

From the beginning, the people of the Tennessee Valley have seen through the gross huckstering and stupid misstatements of fact of the rich utility corporations. Now perhaps others will recognize the brainwashing tactics for what they are—hogwash.

Oil Spokesman Shocked

EXTENSION OF REMARKS

OF

HON. GRAHAM PURCELL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. PURCELL. Mr. Speaker, the tax proposals made last Thursday by the President in his message to the Congress were very broad and will require much serious study before action is taken. At first glance many of the programs seem sound and equitable.

However, the proposals effecting the petroleum industry seem to me to reflect a lack of understanding of the problems of this vital sector of our economy. The oil industry, so vital to our national security and our continued progress in living standards, has been declining for the past several years. The new tax proposals of the President would hasten this decline and severely hamper an industry which needs help and not another setback.

A statement issued last Thursday afternoon by Mr. Harold Decker, president of the Independent Petroleum Association of America, states the case of the oil industry and points out very well the disastrous effects the new tax proposals would have on the oil industry if they were adopted. Here is Mr. Decker's statement:

President Kennedy in his tax message to the Congress today has recommended changes in petroleum tax policy which would be a drastic setback to the economy and national security. His proposals would directly and severely depress the development of oil and gas resources.

The President's recommendations are shocking because the effect of the proposed changes on the Nation's largest resource industry would run contrary to his objective of stimulating capital investment and economic growth.

The recommendations are designed to impose an additional tax burden of \$280 million on oil and gas development. Dollarwise, this is equivalent to reducing percentage depletion from 27½ to 17½ percent. Even worse from the standpoint of the national economy, this additional tax would

come directly at the expense of the development of our petroleum resources.

It would reduce drilling activity by more than 5,000 wells per year, which would cost the Nation more than 500 million barrels of new oil reserves each year.

The President's proposal, if enacted into law, would threaten the self-sufficiency of our Nation in petroleum. The industry already is in a depressed condition. Exploration and development activity has declined steadily for 6 years. In 1962 exploratory drilling, the necessary forerunner to the discovery of new reserves, was more than 30 percent below the rate in 1956. So far this year, it has suffered a further decline. Only yesterday it was reported that domestic rotary rig activity is at a 19-year low.

In discussing the broad objectives of the tax philosophy of his administration before the New York Economic Club last December 14, President Kennedy made clear that the basic goal would be to stimulate the economy, and stated that "we can and must step up development of our national resources."

In light of the stated objectives of the President, it comes as a shock to us that he would propose and advocate adverse changes in the long-standing resource tax policy which the Congress wisely has maintained in recognition of the peculiarities of the petroleum industry, the hazardous risk in oil exploration, and the unusually large capital requirements of the petroleum producing industry, which exceed those of any other industry.

The recommended changes which the President has made would seriously aggravate the unhealthy conditions which the domestic oil producing industry is now experiencing. Both the political and business communities are advocating tax and fiscal policies designed to stimulate capital expenditures and economic expansion. These goals cannot be served by actions which would discourage the Nation's largest natural resource industry, expending about \$5 billion annually for exploration and development, with roots in thousands of local communities in more than 30 oil and gas producing States.

The Independent Petroleum Association of America is confident that congressional studies will reconfirm, as previous ones have for more than three decades, both the necessity and propriety of existing petroleum tax provisions.

Remarks of Vice President Lyndon B. Johnson at the Democratic National Committee Luncheon, January 19, 1963, Sheraton-Park Hotel, Washington, D.C.

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KIRWAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. KIRWAN. Mr. Speaker, it was my pleasure to attend a recent luncheon of the Democratic National Committee and hear our distinguished Vice President make a stirring speech on the philosophy and role of the Democratic Party over the years. I urge my colleagues to read this wonderful expression of the belief and guidelines of politics as enunciated

by a man who adopted them as his way of life. It follows:

I have never ceased to be amazed by the dedication of the loyal Democratic Party workers who give so freely of their time and their energies to a cause. To me, this is one of the true strengths of a free people.

You have put aside your affairs and traveled hundreds, and even thousands, of miles to strengthen the party. And you have done so only because you believe in goals which are over and beyond your own, individual interests.

A democratic form of government can exist in the modern world only if people organize themselves to make a point of view effective. Without that organization, government becomes the exclusive province of a small group of officials who have succeeded by one means or another in capturing power. And government that is exclusive is exclusive of the people.

There is a cynical view which holds that politics is the art of organizing to seize power. In our country, I believe, it is the art of organizing to achieve goals that will serve the people.

You and I have chosen the Democratic Party, because we have faith in its dreams and aspirations. And, as we close out the books on the first 2 years of a Democratic administration, I feel we can conclude that our faith has been justified under the leadership of John F. Kennedy.

President Kennedy likes to trace our party's beginning back to 1791, when Thomas Jefferson and James Monroe went from Virginia to New England on what they called a botanizing excursion. The seeds they planted on that trip blossomed almost immediately, and the plant still bears fresh fruit every year in the form of new leaders, new ideas, new accomplishments, and new victories.

We are here as members of the world's third oldest party, and we were a going concern when the English Whigs and Tories were merely the political arm of a few established families.

I never tire of telling people why I think we have remained in good shape for so many years. There is a lesson in this great political success story, and the better we remember it the more effective we will be when we leave Washington and return to our homes and the voters, the real source of our party's strength.

Franklin Roosevelt once said that the Democratic Party would be the majority party as long as it belonged to the people. He went on to describe our party as one that believes "in the wisdom and efficacy of the great majority of the people, as distinguished from the judgment of a small minority."

Our party, Roosevelt said, also "believes that, as new conditions arise beyond the power of men and women to meet as individuals, it becomes the duty of the Government itself to find new remedies with which to meet them."

These are principles of constant change—as man's needs are constantly changing. But they are firmly rooted in stable and fruitful soil.

To begin with, we Democrats are not an exclusive party. If this country was founded as a haven where all who believe in liberty could come, live together in harmony, and try to make their lives better, then it follows that a party which hopes to lead the country must believe in these things, too.

So we Democrats have always been the one great national political party, made up of people from all sections, all classes, all races, all religions. From the outset, we have been the party that has met the immigrant at the dock and helped him to become a citizen—just as it reached out a helping hand

to the sharecropper, the working man, the student, and the businessman.

But we knew that this was not enough. Jefferson said that the only healthy republic was one of educated citizens, each with a stake in his country's welfare. So we believe in educating each American to the utmost of his capacity. So we believe in the right of every American to have an equal chance to contribute his talent to our country.

Our foreign policy has been equally uncomplicated down through the years. We Democrats, of course, believe that in a world of aggressors our country can only remain free by remaining brave, by remaining strong. But we do not arm for conquest. We arm to maintain freedom and preserve peace.

But we also believe that "the best way to have a good neighbor is to be one." This is the basis of our historic reciprocal trade policy, which encourages commerce among all the nations of the globe. It is the basis of our support of the United Nations in its painful quest for world order, and of our support of programs which help others to help themselves.

These principles, as you can see, are neither numerous nor hard to understand. But they have lasted, and our party has lasted with them.

When I entered politics, some 30-odd years ago, I found my natural home in the Democratic Party. It wasn't hard for me to join—I was born one.

I found it easy to remain in the Democratic Party because my deepest personal political principles were at home there.

I believe that it is the politician's first duty to hold his country together, to appeal to the forces that unite us, and to channel the forces that divide us into paths where a democratic solution is possible. It is our obligation to resolve issues—not to create them.

None of us will ever live to see our country perfect, just as we will never live to see ourselves perfect. But we can try—and if we leave the world a little better than we found it and if we die with a little more understanding than we had when we were born, we are doing all right. I have found that being a Democrat has helped me to try to do both.

Our work is made easier because during the past 2 years, we have had a man in the White House who has dedicated his life to advancing the cause of freedom and social justice in every corner of our land and in every corner of the globe.

John F. Kennedy has taken the principles of the Democratic Party and has applied them to solving the world's problems.

Because our administration believes in strength, freedom is stronger everywhere in the world. We have pulled the fangs of the Cuban rattlesnake—and made it clear there were no limits to our determination to defend our security.

By calling the bluff in Cuba, we made freedom in Berlin and southeast Asia that much surer. And, where a few short years ago the Communist world was solid and united, its major preoccupation today is a bitter internal quarrel between its two most powerful leaders.

Because we believe in collective security and in being a good neighbor, we have supported intelligent trade, the Alliance for Progress, the Peace Corps, and the United Nations.

Because we believe in solving problems, we are seeking to bring our economy to full capacity, so that every American capable of holding a job or a place in college attains those goals; so that the senior citizens among us need no longer feel the crippling financial effects of lingering illness, and so that our great metropolitan areas are made

livable for the overwhelming majority of Americans who reside in them.

The Democratic Party has grown in recent years because the people know it is the best vehicle for carrying out their hopes for a better world. We have gained this confidence for three reasons.

First is our history, our principles, and our present program.

Second is our willingness to work long and hard for what we believe in. We know that human needs change, and we must plan for the future. But also we know that current needs must be solved. We are trusted because we have the eyes to see what must be done and the courage to do it.

Third is the kind of people our party attracts. I mean more than the tens of millions of voters—a vast majority, by the way—who consider themselves Democrats. I mean the kind of people—the hundreds in this room and the millions of people to whom we will carry the message when we leave here—who hold our party together.

So I would like to thank you again, in behalf of the President and myself, for what you did for us in 1960; for what you did last year; and for what you will do next year to help elect the Democratic candidates for President and Vice President—whoever they might be.

We will meet again next year to choose those candidates. If the Democratic Party holds true to the country, and if we hold true to our party, we will have doubly earned the victory that will be ours.

Influence for Sale

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. ALGER. Mr. Speaker, many people have been rightly concerned with the recent emasculation of the civil service system by the Democratic National Committee in the brazen pressure it put upon career Federal employees to buy \$100 tickets to the committee sponsored vaudeville show. The following article by Robert Baskin in the Dallas Morning News has even more frightening implications wherein White House influence was peddled at \$1,000 a clip. Is there no lengths to which the Kennedy administration refuses to go in playing politics and in building a political machine in the basest image of ward-healing politics?

CLUB MAY HAVE TROUBLE MAKING GOOD ON PROMISES

(By Robert E. Baskin)

WASHINGTON.—The Presidential box at the National Theater in Washington contains seats for six persons.

What, then, might happen if some 32 Dallas residents—or, worse still, 500 people from across the country—demanded their right to exercise the privileges of the newly formed President's Club?

Membership in the President's Club cost \$1,000 a member and members have been assured, by telephone but not in writing, of a number of special privileges not conferred on ordinary taxpaying citizens.

The right to sit in the President's box at various public functions is one of these.

But there are other prerogatives attached to membership in this exclusive club, which sets a record in Presidential effort to assist the financial condition of the Democratic Party.

Each member, for instance, receives a gold-plated membership card in the President's Club, good for 1 year—which means it is good until next year's party fundraising effort starts.

Members of the club, who held their first gathering last Friday at Washington's International Inn, with personal greetings from the President and Vice President and their wives, are also entitled to an invitation to at least one major White House social function during the year.

This, in itself, is going to be difficult to arrange. If carried out, some White House social events will be dominated by the \$1,000 card holders, including a very sizable contingent of socially aspiring and well-heeled Texans.

This is not all of it.

Some of the elite crew have been advised that a so-called liaison office is being established at the White House just to handle problems that members of the President's Club have with the Federal Government.

One can readily see that the \$1,000 membership in the club could be the biggest bargain ever conceived, particularly if a member has a problem in the field of Government controls.

Invitations to the \$1,000 event carried none of these promises of special favor.

However, various officials in the Democratic National Committee followed up the printed invitations with phone calls which assured the recipients of special considerations involved, although these assurances varied somewhat from person to person.

Most Washington lobbyists, for example, were told nothing about the White House liaison office, since they would know this was a pretty ridiculous prospect. Some of the folks in the hinterlands got no word on the presidential box project.

But practically everyone was assured that he would be invited to a major White House social event during the year.

There is a lot of cynicism among the veteran Washington lobbyists who had to shell out the \$1,000 for the elite dinner last Friday, at which the President and his wife table-hopped while the paying guests ate. They later sat down for dinner privately with Vice President and Mrs. Johnson.

"It represents a new low for the office of the Presidency," said one lobbyist who attended the \$1,000 dinner.

Youth and Unemployment in New York City

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which was broadcast over WCBS-TV in New York City on January 11 and January 12.

The problems of a city the size of New York are many and varied. One of the most serious is that of unemployed and—at present—unemployable young people. A strong campaign and concerted effort must begin now to solve this prob-

lem if these young people are to be turned into useful citizens.

The editorial follows:

YOUTH AND UNEMPLOYMENT IN NEW YORK CITY

ANNOUNCER. The following program is an expression of opinion of WCBS-TV. Speaking for the station: Mr. Norman E. Walt Jr., vice president and general manager of WCBS-TV.

Mr. WALT. Good evening.

New York City is developing a new kind of unemployment problem that may seriously affect its economic life as well as the welfare and safety of its citizens.

Recently, the mayor's task force on youth reported that there are almost 77,000 young people in our city who are out of school and out of work, and that the number of unemployed youth is increasing steadily. Some eagerly seek work and a few manage to find occasional, part-time employment. But a large number of them have stopped looking for work altogether because they are convinced their search will be fruitless, and they are drifting on a tide of frustration and despair.

Who are these young people? A large percentage of them are Puerto Rican and Negro. But nearly all the young unemployed, regardless of their economic or racial backgrounds, are school dropouts.

Each of these young people represents a tragic human waste. But what happens to them as individuals also has consequences for the entire community.

The existence of large numbers of untrained, poorly educated young people is a major problem for our business and industry. Office and industry jobs increasingly demand a minimum of high school education or special training. Many offices and plants will be forced to relocate outside the city, if a sizable portion of the city's work force can't meet their job requirements.

These young unemployed also present a serious threat to those who are employed. Cheap labor in large supply inevitably depresses the labor market and affects everyone else's living standards. It encourages "sweat shops" and economic exploitation.

In fact, the existence of a mass of unemployed youth affects every resident of the city. Idleness and juvenile delinquency go hand in hand. Crime in our city streets has already caused many families to flee the city. If these young people are permitted to attain maturity without any improvement in their lives, even more people will leave the city to avoid the burden of coping with large-scale poverty, unemployment and crime. Every taxpayer should realize that an unemployed youth who is not helped today becomes a community burden tomorrow.

It is, therefore, in our interests—as taxpayers, as employers, as workers—to see that something is done for these young people. It is not simply a matter of finding jobs for them. These youngsters are caught in a vicious circle. There are few jobs for which they are qualified. They are not qualified because they dropped out of school. They dropped out of school because there is no motivation to continue. And they don't have the motivation to remain in school because they have seen from the experience of their parents, older brothers, sisters and friends that racial discrimination bars them from most job opportunities.

This truly is a vicious circle and it has to be broken at many points. As Mayor Wagner pointed out recently, we have to deal with the total environment of these youngsters—housing, family relations, education, and discrimination in hiring. There are a number of well-intentioned public and private agencies who are trying to do just this—the schools themselves, welfare agencies, youth services, employer and trade union groups. But none of them are as effective as

they might be because each operates on its own, with little or no heed to the work of other agencies and frequently with duplication of effort. For example, there are school vocational courses which train youngsters for jobs which rarely exist, such as cabinet-making, while there are no training opportunities at all in a number of fields where there are job opportunities. Again, for lack of coordination, various vocational schools are actually in competition with one another for available jobs.

What is needed is a team effort with a good quarterback.

During the past year, the city youth board made a good start toward creating this kind of effort when it sponsored the mayor's task force on youth and work. But this is only a start. There still is no citywide agency which coordinates all the various youth programs and services now in existence. There still is no single agency in the city responsible for gathering the kind of information which would provide schools with a clear picture of the changing job market, that would identify expanding industries and new skill requirements and thereby define the kinds of vocational programs the schools should emphasize. What the city needs is a single agency that would provide this information service and, at the same time, have the responsibility for planning overall city youth policy and seeing to it that all the youth services work together as a team. Without such an agency, much of the efforts to help young people in our city will miss their mark.

Channel 2 urges the mayor to give the youth board the authority and the financing to enable it to develop an overall plan of attack on youth unemployment and to see that the best use is made of present efforts. Channel 2 urges the mayor to take such steps now. The presence of large numbers of unemployed youth in the city is social dynamite. No problem has a more compelling claim on our attention and on our resources.

Thank you and goodnight.

Mrs. Harper Sibley: A Matter of Energy

EXTENSION OF REMARKS

OF

HON. FRANK J. HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. HORTON. Mr. Speaker, my home community of Rochester, N.Y., has as one of its residents one of the distinguished women of the world. She is Mrs. Harper Sibley.

Mrs. Sibley has gained distinction far and wide for her selfless activities. She has applied her talents and energies to a host of humanitarian projects. Not alone has been the benefit to mankind of Mrs. Sibley's contributions, for her service also has proved an inspiring example to other women.

On a recent visit to her home from one of her many globe encircling missions, Mrs. Sibley gave an interview to the Rochester Democrat and Chronicle. I take pleasure in submitting it at this time for insertion in the RECORD:

MRS. SIBLEY RETURNS—HOME FRONT WHIRL BEGINS

(By Lynne Watson)

Rochester's famous lady has been home for just 5 days after a 4-month trip to

Europe and the Near East, barely enough time for her to open the piles of mail in her office at her 400 East Avenue home.

In fact Mrs. Harper Sibley probably won't get all that mail read, for the churchwoman and lecturer is off again tonight—this time to New York for meetings on one of her favorite projects, the Japan International Christian University.

After New York, Mrs. Sibley goes to Oxford, Ohio, to speak to Western College for Women. In February she plans a trip to California to see "my two daughters, six grandchildren and five great-great-grandchildren there" as well as address a Rotary meeting in Los Angeles and a women's group in San Francisco.

Today's agenda is typical of the fast-moving former president of the United Council of Church Women. She'll introduce Andrew W. Cordier, dean of the Graduate School of International Affairs at Columbia University, to the City Club of the Chamber of Commerce, and speak that evening herself at the Century Club.

Mrs. Sibley thrives on this schedule which would exhaust many a man or woman younger than her 75 years.

"I believe there are infinite sources of energy in the universe," she said last night at her home. "It's a question of living in harmony with these spiritual resources."

As usual on her trips abroad, Mrs. Sibley combined her love of travel with a desire to check the progress of religion in other nations.

As an unofficial observer at the Second Vatican Ecumenical Council in Rome, she found this historic meeting "has moved so fast that of the eight volumes of schemata (agenda) for its reopening September 8, the second already has needed revising."

She had these comments on other subjects: The Supreme Court decision outlawing the board of regents school prayer in this State: "It's too bad the regents wrote that prayer," she said. "But it really was a Government group entering into the picture. This doesn't mean religion is finished in our schools—there's just a little hysteria at the moment over the decision."

Israel: "Israel has had a great deal of help" from other countries in its drive for progress. "But I hate to see girls in military uniforms, it's bad enough the boys must do it."

Evangelists: "Certain people have been stirred to something very permanent" after hearing one of them. She welcomes the re-birth of religion that some observers feel is happening in America, but cautions that nuclear war alone shouldn't send people to God—"religion just from fear has no validity."

A nonbeliever in God can also live life to its utmost, "but he misses something," said the widow of the former president of the U.S. Chamber of Commerce.

"Why live in the cellar and not see the sun?"

The Administration's Tax Proposals

EXTENSION OF REMARKS

OF

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. ANDERSON. Mr. Speaker, under leave to revise and extend my remarks and to include extraneous material, I wish to call the attention of the Members of the House of Representatives to some

remarks in the January 24 issue of the Durand Gazette, Durand, Ill., under the column entitled "In This Column," written by the Editor and Publisher Mr. John van Sickle.

I think that these few lines very succinctly captured the thoughts of many thinking citizens with respect to the administration's tax proposals. The article follows:

IN THIS COLUMN

No matter what your politics happen to be, does it make sense to increase the Federal budget and propose tax cuts in almost the same breath?

Admittedly, I am no economist, but I know that if I don't put more money in the bank than I check out, that I am headed for trouble. Perhaps, a government can run its finances differently.

President Kennedy's theory is that a cut in income taxes will give people more money to spend, will create more consumer demand, and eventually enable the United States to balance its budget as improved business conditions will be reflected in higher tax collections even at lower rates.

But, to be realistic, if our Government continues to spend more than it takes in, will this not lead to inflation and depreciation of the value of the dollar still further?

Senator DIXSEN says the budget proposals are incredible. Indeed they are. Even many of the Democrats are alarmed at the size of the budget.

Nor is the end in sight. With medicare given a chance of being adopted during this session of Congress, another increase in social security taxes lie just ahead.

Probably the thing that irks me the most is that I know there is so much waste in Federal spending. When a government is as large as ours, there is bound to be an immense amount of waste, but it breaks my heart to pay my income taxes and know that so much of what you and I have paid will literally be going down the drain.

George H. Mead—The Mead Corp.

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. DORN. Mr. Speaker, George H. Mead was not only a great industrialist, but he was a great American. Mr. Mead became the first president of the Mead Corp. when it was formed from the Mead Paper Co. in 1930. In 1942 he was elected chairman of the board. At the time of his recent passing at age 85, he was honorary chairman of the board.

Although the headquarters of this great corporation is in Dayton, Ohio, and Chillicothe, Ohio, is the "White Paper capital of the world," Mead was a leading pioneer in the development of the paper industry in the South.

Few people know the story of the paper industry in the South, and the important part it has played in developing the South's great new vigor and economic progress. Mead played a major role in this southern development. Today every school boy in the South knows the importance of tree farming.

Mr. Mead devoted much of his energy to the national welfare. He was one of the founders of the Business Advisory Council for the United States in 1933, and a member of the National Defense Mediation Board in 1941. He served on the Hoover Commission on Reorganization of the Executive Branch of the U.S. Government in 1947.

As a member of the National War Labor Board in 1942, he was closely associated with the "Assistant President of the United States," our own beloved James F. Byrnes. He greatly aided Mr. Byrnes in mobilizing the industry and manpower of this Nation for complete victory over the Axis Powers.

Mr. Mead maintained a residence at Aiken, S.C., and donated his property at Aiken to St. Thaddeus Episcopal Church in 1955 for the establishment of a school, Mead Hall, in memory of George H. Mead, Jr., who was the first marine officer killed at Guadalcanal, during World War II.

The following editorial from the Kingsport Times, Kingsport, Tenn., where one of the Mead plants is located, pays a very eloquent and deserved tribute to George H. Mead, industrialist, philanthropist, and American patriot:

A BUILDER OF AMERICA

In a day and age when the old-fashioned American businessman has become almost an object of suspicion to some people, or at least regarded as something out of date, it is good to remind ourselves that there is no class of people to whom this country owes more than this same businessman. There is no class of people who have contributed more to building the country and who have done more to bring into being the American way of life. While the socialists and demagogues and political opportunists slander the American businessman with dirty words, he has been the real builder of America.

We are reminded of this fact by the death of George Mead, honorary board chairman of the Mead Corp. George Mead was one of those industrial tycoons we hear so much about. In the course of a long and vigorous life he had the leading role in the building of a great industry that gave many thousands of Americans jobs and in so doing helped to create many happy and prosperous communities in this country.

George Mead was not the classical example of the poor American boy struggling up from the bottom. He was the classical example of the young man brought up in a good home, given a good education which included understanding of the responsibility of citizenship. He went to work to prove that he had learned that lesson and he proved his right to come to the top by the use of a good brain, a fine character and the use of the old-fashioned virtue of hard work and diligence.

Like other men of his stamp and caliber George Mead took time out for what is called public service. He took on government work and served on many advisory committees and agencies of the Federal Government under different Presidents. But the point we would like to make and a point we think really needs stressing in our time is that his greatest public service was the role he played in the development of American industry. This was every bit as much public service as his work with government agencies, and we submit that it had a greater impact, a greater effect on the country and came closer to the American people. America would not be America without this sort of public service.

We here in Kingsport know something of this fact. We know that much of the prosperity and happiness of our people comes from the growth of the Mead operation in this city. We know what a shattering effect it would have if the plant shut down for good. We know that the men who operate the plant here understand that the manufacture of paper is not the be-all and end-all of their work. It is a contribution to the growth of the community and the growth of the Nation. This is not a materialistic idea but a human idea.

We get a little tired of hearing demagogues speak of corporations as if they were some devilish invention of wicked men. We get a little irritated at hearing it implied that all businessmen are interested in profit and have no concern for human values. That does not square with the facts. The history of this country gives it the lie.

Men like George Mead in their lives give the lie to such charges and insinuations. The growth of America has been the growth of American business. It is American business that creates the jobs for our millions of people and gives them the highest standard of living of any people on earth.

George Mead was a representative of the highest type of American businessman. We repeat, it is such men who are the true builders of America.

Fifth Anniversary of International Tracking of Space Vehicles

EXTENSION OF REMARKS OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. FULTON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news release from National Aeronautics and Space Administration:

FIFTH ANNIVERSARY OF INTERNATIONAL TRACKING OF SPACE VEHICLES

The Government and people of the United States will express their thanks and appreciation to the peoples and governments of 16 countries at a ceremony marking the 5th anniversary of international tracking of space vehicles on January 31 at the Goddard Space Flight Center, Greenbelt, Md.

Vice President LYNDON B. JOHNSON, Secretary of State Dean Rusk, and James E. Webb, Administrator of the National Aeronautics and Space Administration, will participate in the program.

The Vice President, as Chairman of the National Aeronautics and Space Council, will award scrolls of appreciation to the ambassadors of the countries which have cooperated with the United States in the establishment of the worldwide networks used in tracking manned and unmanned satellites.

Dr. Harry Goett, Director of the Goddard facility, will preside at the ceremonies and Astronaut Walter M. Schirra, Jr., of the Manned Spacecraft Center will be among the speakers.

The tracking station network was activated to track *Explorer I*, launched on January 31, 1958. This network included minitrack stations located primarily in the Western Hemisphere. Since that time, other networks—Deep Space, Manned Space Flight, and Baker-Nunn—have been added to form a worldwide tracking network and data acquisition system

for satellites and space probes launched by the United States.

Explorer I carried the International Geophysical Year scientific experiment of Dr. James A. Van Allen and discovered the radiation belt around the earth. The satellite is still in orbit, although no longer transmitting information from space. A model of this first U.S. earth satellite will be displayed for the occasion, as well as other historic NASA satellites and launch vehicles.

A signal from this country's oldest transmitting satellite is expected to be received in the Goddard auditorium during the ceremonies. This is the 6-inch grapefruit-sized Vanguard I, launched March 17, 1958, whose transmissions led to calculations showing that the earth is pear shaped. Information received from Vanguard I via the tracking networks has also helped in locating points on earth to an accuracy not previously known and has provided data on the effects of solar pressure.

While the other speakers will talk of the scientific and political implications of such a worldwide cooperative effort, Astronaut Schirra, whose Sigma 7 spacecraft orbited the earth six times last October 3, will express his personal appreciation and that of his fellow astronauts for the manned space flight network which kept Astronauts John Glenn, Scott Carpenter, and himself in constant communication by voice and signal with men on the ground during their orbits around the earth.

Following the formal anniversary ceremonies, the Ambassadors and other guests will tour Goddard facilities and view the progress made in earth's contact with outer space. The Goddard tour will show how the limited communications which tracked *Explorer I* 5 years ago have expanded through the demands of the space age to an integrated network of teletype, telephone, and high-speed data circuits comprising 177,000 miles of communications with 27 overseas facilities in 19 different political jurisdictions.

The minitrack network has grown to a worldwide tracking and data acquisition system for unmanned satellites and space probes launched by the United States. Established primarily in the Western Hemisphere in 1958, minitrack today comprises five stations in the United States and eight abroad. These stations provide precision tracking, command and telemetry data to the Space Operations Control Center on such satellites as Vanguard, Explorer, as well as the Ariel and Alouette scientific satellites of the United Kingdom and Canada.

Spacecraft traveling to the moon and beyond are tracked by the Deep Space Instrumentation Facility (DSIF) network. Three permanent installations of powerful transmitters and sensitive receivers are located approximately 120 degrees apart around the earth at Goldstone, Calif.; Johannesburg, Republic of South Africa; and Woomera, Australia.

The manned space flight network was built for the specific requirements of Project Mercury, which demands constant and dependable communications by voice with the astronaut from launch to landing. This network is capable of faster data handling than minitrack and maintains immediacy of conversational contact with the capsule through eight ground stations abroad, eight ground stations in the United States plus U.S. ships at sea.

The fourth tracking network is optical rather than electronic and comprises a worldwide system of Baker-Nunn telescopic cameras. While used as backup for the radio tracking system, its primary function is to obtain information on atmospheric densities and exact earth dimensions. The network is operated by the Smithsonian

Astrophysical Observatory under a NASA grant and functions in nine countries abroad.

Countries to receive scrolls of appreciation for their international efforts from Vice President JOHNSON are: the Argentine Republic, Australia, the United States of Brazil, Canada, the Republic of Chile, the Republic of Ecuador, the United Kingdom of Great Britain and northern Ireland, India, Iran, Japan, the United Mexican States, the Netherlands, the Federation of Nigeria, the Republic of Peru, the Republic of South Africa, and Spain.

New Farm Policy Omits Mandates

EXTENSION OF REMARKS

OF

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. QUIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the January 25, 1963, edition of the Albert Lea Tribune. I call attention to the views stated in this editorial because they are such an outstanding presentation of the opinions of many of the people in our agricultural areas and worthy of consideration by my colleagues.

NEW FARM POLICY OMITTS MANDATES

With no little satisfaction, the Tribune notes that the Kennedy administration will abandon its get tough policy for farmers. We have long protested the "or else" approach to the problems of surplus farm produce. Newsmen now write from Washington that a special farm message may be submitted to the Congress in a few days that will emphasize voluntary compliance.

Mandatory controls were the basis of Democratic election campaign in 1960 and were basic to legislative proposals made to the Congress in 1961 and again last year. This rigid control approach has long been advocated by Dr. Willard Cochrane, formerly a teacher at the University of Minnesota. When former Governor Freeman became Secretary of Agriculture, he took Cochrane and Cochrane's ideas with him to Washington.

It seems worth noting that the news of the administration's about face on its farm approaches was given to news reporters by "an authoritative source." Secretary Freeman wasn't that source and only in the most lengthy dispatches does the Secretary's name appear at all and then only in connection with the dairy industry program—which even he admits is failing.

The best news is that no longer will a farmer be forced to do what his Government believes to be good for him or face economic ruin. As noted above, the administration—which is to say Secretary Freeman—had urged rigid controls on farmers in the Congress twice and twice the Congress voted not to extend the managed production concept.

The Congress, instead, adopted voluntary statutes. Results in the voluntary feed grain program are generally so satisfactory, the administration has apparently decided on its shift from mandatory to voluntary controls for feed grains, dairy and cotton programs.

Taxpayers will benefit from this shift of policy. The feed grains program will cost less, because the present voluntary program has markedly reduced surpluses. A dairy

program is expected to cost nearly \$150 million less than today's figure. Cotton costs will offset some of these savings.

But the most important fact of all is that the gun has been removed from the farmer's head.

Dr. Kelsey Describes New Drug Protections for the Public

EXTENSION OF REMARKS OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mrs. SULLIVAN. Mr. Speaker, there is no such thing as an absolutely safe drug—one which would not be harmful to some one, or to many people, under certain circumstances. That is why the Food, Drug, and Cosmetic Act for nearly 25 years has required extensive pretesting of all new drugs before they can be placed on sale.

But the 1938 act nevertheless had many deficiencies. These loopholes were recognized by some of us long before the thalidomide incident last year stirred public concern to such a fever pitch that we were finally able to close the worst loopholes in the 1938 act applying to prescription drugs. My bill introduced originally in January 1961, H.R. 1235, to rewrite the Food, Drug, and Cosmetic Act of 1938, contained many of the provisions of the prescription drug provisions of the law we enacted last year along with provisions to close other loopholes in the act. Eliminating the provisions of H.R. 1235 on new drugs which are now law, I have now reintroduced substantially the same bill in this Congress, under the same number, H.R. 1235, to achieve the additional reforms needed in our 25-year-old consumer protection laws. These include stronger controls over over-the-counter drugs, over barbiturates, and over amphetamines, the pretesting for safety of all cosmetics, more stringent factory inspection requirements for all foods, drugs, and cosmetics, the required pretesting for safety and efficacy of therapeutic devices, and so on.

TIGHTER SUPERVISION OVER EXPERIMENTAL DRUGS

Under the Drug Control Act we passed last year, the public is now being given far greater protection in connection with the experimental use of new drugs before they go on sale. It is most fitting that Dr. Frances O. Kelsey, the one individual most directly responsible for preventing the sale in this country of the drug thalidomide, is now in charge of this work as the newly designated chief of the Investigational Drug Branch of the Food and Drug Administration.

Her assignment is an extremely difficult one because, as I noted earlier, there is no such thing as a completely safe drug under all circumstances. She must weigh the methods being used to test drugs before they can be used experimentally on humans. She is also in charge of the re-investigations of drugs previously approved for sale. One of the

main achievements of the new law we passed last year, based on one of the cardinal points in H.R. 1235 as introduced originally in 1961, is in the form of new powers the Government now has to remove from public sale previously approved drugs which are later suspected of constituting an imminent hazard to public health. Previously, the Government had to prove such a drug was actually dangerous in use in order to revoke its earlier clearance and take it off the market.

"ON THE RECORD" INTERVIEW WITH DR. KESLEY

Public confidence in the protections accorded consumers under our drug laws will certainly rise as a result of the assignment of Dr. Kelsey to this important assignment, and also by the intelligent and forthright manner in which she has undertaken this challenging and awesome responsibility.

In that connection, Mr. Speaker, I am delighted to submit for inclusion in the CONGRESSIONAL RECORD as part of my remarks an excellent article by an outstanding Washington correspondent, James Deakin, of the St. Louis Post-Dispatch, about Dr. Kelsey's approach to her new assignment. This article is based on a joint interview conducted with Dr. Kelsey by representatives of the Detroit News, Newark News, and Washington Star, as well as the St. Louis Post-Dispatch. Many of the Members may have seen the copyrighted question-and-answer interview yesterday in the Sunday Washington Star. While both papers in which I have seen the interview used the question-and-answer text in full, each had its own analysis and summary of the information, and I am pleased to have the opportunity to bring Mr. Deakin's story to the attention of the Members.

Jim Deakin has followed the drug-control issue over a long period of time. He did an outstanding job of informing the people of St. Louis about the need for tighter food, drug and cosmetic legislation long before we had ever heard the word "thalidomide." I am grateful to him for the many stories he has written over the years about my concern in this field, and I herewith present his account of the joint interview with Dr. Kelsey along with the text of the reporters' questions and Dr. Kelsey's answers, as carried in Sunday's St. Louis Post-Dispatch:

TWELVE MORE DRUGS SUSPECTED OF CAUSING DEFORMITIES

(By James Deakin)

WASHINGTON, January 26.—The Government has asked for reports from the manufacturers of 12 drugs suspected of being possible causes of birth deformities, Dr. Frances O. Kelsey of the Food and Drug Administration said today.

Dr. Kelsey emphasized, however, that there is no proof at present that any of these drugs actually are harmful. If any proof had been found, she said, "something would have been done."

As an FDA medical officer, Dr. Kelsey last year prevented the sale of the drug thalidomide in the United States, by refusing to license it for commercial distribution. Thalidomide is believed to have caused birth deformities in thousands of European babies.

Dr. Kelsey talked with Post-Dispatch, Detroit News, Washington Star, and Newark News reporters in one of a series of copyrighted, on-the-record interviews with Government officials. She was appointed last month as Director of the FDA's new Investigational Drug Branch.

In reply to a question, she confirmed that the 12 drugs under investigation are in the popular and much-sold fields of tranquilizers, antihistamines and various cold remedies. Some of the antihistamines are taken by pregnant women as treatment for morning sickness.

Dr. Kelsey pointed out, however, that the drugs in question can be obtained only with a physician's prescription if they are recommended for use during pregnancy.

Two of the drugs on which reports are being sought, Dr. Kelsey said, are preludein and postafen, both of which are suspected of being possible causes of deformities in newborn babies.

Preludein, also known as phenmetrazine, is an appetite-curbing preparation. Postafen, an antihistamine preparation sometimes mixed with the vitamin pyridoxine, is a remedy for morning sickness.

The other drugs under investigation were not identified, but in a recent speech at a symposium on birth defects, Dr. Kelsey listed several others believed in medical circles to be possible causes of birth deformities. Among them were:

Glutethamide (doriden), a hypnotic; chlor-thalidone (hygroten), a diuretic; tolbutamide, an oral antidiabetic drug; thiazide-type diuretics; podophyllin, a cathartic; podophyllotoxin, a constituent of podophyllin; ancoloxin, an antihistamine used as a morning sickness remedy; the phenothiazine tranquilizer drugs; the nasal decongestants commonly present with antihistamines in various cold remedies, and tetracycline, an antibiotic.

In reply to a question, Dr. Kelsey said that some of these drugs have been on the market for 10 or 15 years.

The FDA, she said, has asked the manufacturers of these drugs to report any information they may have on adverse effects experienced by persons taking the drugs.

Asked whether new FDA regulations that will go into effect February 7 will prevent a repetition of the thalidomide incident, Dr. Kelsey said no one could give absolute assurance of the safety of a drug. She added, however, that many harmful drugs can be brought to light through careful clinical testing.

The new FDA branch headed by Dr. Kelsey will check on whether drugs have been tested adequately before the manufacturer applies for permission to put them on the market. This is the so-called investigational stage, in which drugs are tested on animals and human beings but not sold for general use.

Following is the transcript of the interview with Dr. Kelsey, copyright 1963 by the St. Louis Post-Dispatch, the Detroit News, Newark News, and Washington Star:

"Question. Dr. Kelsey, you have been named to head the investigational drug branch of the Food and Drug Administration, and new regulations for your branch go into effect February 7. What protections will the public have now that it didn't have before?"

"Dr. KESLEY. The FDA will be aware of every drug that is under investigation, being tested in humans. Previously, we were only required to be told that these tests were going on at the time the drug was submitted for clearance as a new drug. Consequently, many drugs might be tried on humans which we would not be aware of. We might not know a drug was being tested that had shown toxic effects.

"Now we will have some control over the types of investigations, the investigators that

will be used, the subjects that will be used, the types of tests, how much animal work should precede particular types of human testing, and so on.

"Question. Do these new regulations prevent a repetition of the thalidomide incident?"

"Dr. KELSEY. I don't think one can give an absolute assurance of the safety of a drug. There are so many factors involved so many different adverse reactions that may only come to light in a few persons or a select group of the population, that may not show up until years of use.

"There are many, however, that with careful clinical testing can be brought to light, and physicians can be made aware of these, and weigh whether the drug should be used or not.

"Question. Are other new rules or regulations still needed to prevent the toxic effect of drugs?"

"Dr. KELSEY. I think it is simply new knowledge that is needed, a further knowledge of how drugs act and how human subjects respond to them.

"Question. The last time I looked, Dr. Kelsey, this investigational drug branch consisted of yourself and two chemists. Under these new regulations, do you have sufficient authority and employees to do this big job?"

"Dr. KELSEY. We are short-handed now, and we are going to have a great many more drugs to handle under the new regulations, so I hope to get considerably more people.

"We already have perhaps 300 new drug applications a year. You realize that perhaps there will be maybe 10 investigational drugs to every new drug.

"Question. You mean that, on February 7, you will have only yourself and two other people to handle hundreds of drugs in the coming year?"

"Dr. KELSEY. What we anticipate doing at first is to get assistance, so we will borrow, as it were, from the personnel in the existing new drug division. Meanwhile, we are having a very active recruitment program, and we are getting new medical officers in all the time.

"Question. Do you feel you have enough authority to do the job on other drugs that you apparently did on thalidomide?"

"Dr. KELSEY. I think so, yes; I believe so.

"Question. Doctor, the American people look to you as a symbol of better protection in the drug field. Do you think they may be expecting you to do miracles that you can't perform?"

"Dr. KELSEY. It depends on how realistic their hopes are. If they think that toxicity of drugs is going to be absolutely eliminated, they will be bound to be disappointed. The decision whether to allow a drug to be used, or to take one off the market, simply because a few side effects appear—these are going to be very difficult decisions, and some of them are bound to be wrong. We hope there won't be many, though.

"Question. You said recently that FDA had 12 drugs under investigation as possible causes of birth deformities. Are these drugs in the popular and much-sold field of tranquilizers, antihistamines, and various cold remedies?"

"Dr. KELSEY. That is right. Now, some of these, we know, are based on rather sketchy reports, and there may be no valid reason to have concern about these drugs. On the other hand, we do have these reports and we have to examine them and then weigh the evidence. There have been two or three reports from Europe on antihistamines. There are, of course, dozens of antihistamines. Many are used in the treatment of morning sickness, and according to British reports, at least 30 percent of women take such a drug during early pregnancy.

"If you have a deformity among these

mothers, is it a coincidence? Is it somehow related to the fact that she was nauseated during pregnancy? Did the drug somehow play a role? We just don't know.

"Question. Are a substantial number of these drugs on sale in the United States now?"

"Dr. KELSEY. That is correct.

"Question. What is the FDA doing to find out whether any of these drugs are harmful?"

"Dr. KELSEY. At the moment there is no proof that these particular drugs cause any harm.

"Question. Are you calling for reports from the manufacturers of these drugs now?"

"Dr. KELSEY. That is right, yes. We are asking them.

"Question. What information are you asking now?"

"Dr. KELSEY. In general, if the manufacturers have had any reports of adverse reactions.

"Question. Are they bound to give you that information?"

"Dr. KELSEY. They will be legally bound to comply, beginning May 1 under the new law. At the present time they usually do this on a voluntary basis. We have been receiving reports.

"Question. Have you had good cooperation from them?"

"Dr. KELSEY. Yes.

"Question. Are you reviewing the applications that they originally filed for these drugs?"

"Dr. KELSEY. Well, we certainly are looking over them, yes. It may be a question of revising the labeling to indicate that the safety of these particular drugs has not been established in pregnancy. Remember, these are prescription items if recommended for use during pregnancy.

"Question. Antihistamines are also widely available without prescription?"

"Dr. KELSEY. That is correct; yes.

"Question. Thus far, you have found no pattern of thalidomide scope with any of these drugs?"

"Dr. KELSEY. That is right. If we had, something would have been done.

"Question. Italy has banned the sale of preludein, which is a drug suspected of causing birth deformities.

"Dr. KELSEY. Italy has put it back on the market again. We are going to follow this drug as well as any others where there are any reports that suggest that there might be an association between the drug and malformations of the fetus, but we have no basis at this time for taking the drug off the market.

"Question. Does the same situation apply to the drug postafen, which Sweden apparently is in the process of withdrawing because it is suspected of causing birth deformities?"

"Dr. KELSEY. That is right. This is one of these mixtures of antihistamine and the vitamin pyridoxine, and we have similar ones in this country. We are requesting the manufacturer for details. This has not been removed from the market anywhere. It has been made a prescription item only in some countries.

"Question. But, as yet, you have no evidence of any excessive birth deformities?"

"Dr. KELSEY. No, that is perfectly right, and these drugs have been used, oh, for 10, 15 years I would say.

"Question. Senator HUBERT HUMPHREY has placed great emphasis on the difficulty in getting international coordination, when suspicions are raised about a drug in one country. It takes a long time for the information to filter across the Atlantic. Has there been any improvement in this coordination?"

"Dr. KELSEY. We have a liaison officer with the State Department, but I don't think any

system is adequate that we have now. We have certainly got to get improved communications. We are working on it, and I think already there is some evidence that it has improved. Being faced in a matter of 2 or 3 months with acquiring a great deal of information here, we have got to be able to handle that ourselves, and this is a problem. This is our No. 1 problem, I would say.

"Question. But as of now, you are relying essentially on newspapers to find out whether a drug is being or has been removed from the market, let's say, in Italy?"

"Dr. KELSEY. I would think that, at the moment, is correct. My branch frequently gets a call from a newspaperman first, to be perfectly frank. It is usually followed very closely by some other information from, say, the State Department.

"After May 1 any American manufacturer who acquires information about an adverse effect of a drug is required to report that information to us. Some of these firms have direct contacts and associations with foreign manufacturers.

"Question. Since enovid is still under investigation by the FDA for suspected blood-clotting difficulties, are women using this drug for birth control taking a risk of injury or death?"

"Dr. KELSEY. Well, I think this is a loaded question, because if I say 'No,' you will say, 'Why are you investigating it, then?' As you know, a group is coming to discuss it. A great many women have taken this drug, and some have developed thrombophlebitis. But many women developed it before the drug was introduced. It is a question of deciding. You have to weigh the theoretical—at this time—harm of this drug with the known value to your patient.

"Question. Do you think the new regulations will delay new drugs reaching the market?"

"Dr. KELSEY. I think it will have the reverse effect. We will be able to point out deficiencies in the plan of testing, or in the toxicology, and so on. The manufacturers will be able to adjust their studies as they go along.

"Question. The very controversial cancer drug, krebiozen, has long been in use as an experimental drug, and never as a regular prescription drug. Is there any way its manufacturers can continue to use it without coming to you with their data?"

"Dr. KELSEY. The situation here is quite complicated, since this drug comes under the Public Health Service as well as FDA. But to answer your question about submission of data, they would have to—in order to continue to investigate the drug.

"Question. If they do not comply, can you stop the investigational use?"

"Dr. KELSEY. If we feel that the investigation is not being carried out in a manner which is safe, we can stop it, yes.

"Question. Dr. Kelsey, remembering the thalidomide incident, how are you and the pharmaceutical houses getting along now?"

"Dr. KELSEY. Oh, fine, I would say. I hope."

Commonsense in Advertising Copy

EXTENSION OF REMARKS OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. ALGER. Mr. Speaker, I would like to commend to the attention of my colleagues the commonsense contained in the following copy which appeared in an

advertisement by Warner & Swasey Co. in the U.S. News & World Report:

AS EVERY BANKRUPT KNOWS YOU CANNOT SPEND YOURSELF RICH

Did you enjoy your trip to Europe? You paid for one, in subsidies to steamship lines.

Are you glad to pay someone else's electricity bill? You do. You have to pay the billions for Federal power dams, but people near them enjoy cheaper electricity than you do.

If you are not in a depressed area you soon may be, with your savings being poured out to so-called depressed people.

Do you get enough benefit from the Federal roadbuilding program to pay your share of the billions it costs in taxes?

Billions to farmers is pleasant for the farmers, but has to be paid by all taxpayers, including you.

Veterans with nonservice disability may like the billions they cost, but that doesn't help the vast majority of taxpayers.

The billions pour out, the deficit grows, of course. Any child knows that when you waste money, when you spend more than you earn, you go broke. If you could spend yourself rich, every park-bench panhandler would be a millionaire.

WAVZ Radio Editorial on Taxes

EXTENSION OF REMARKS

OF

HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. ST. ONGE. Mr. Speaker, a few days ago we received in this Chamber the President's tax message. It was a message which not only prescribed a tax reduction, but also a series of badly needed reforms in our tax structure. I am in full agreement with the President's proposals. I believe that the tax reforms are no less important for the Nation's economic growth and the expansion of business as are the proposals to reduce taxes. The two go together and Congress should act on them both.

Recently there came to my attention the text of a brief editorial broadcast over radio station WAVZ of New Haven, Conn., dealing with the subject of taxes. The editorial was broadcast by Mr. Daniel W. Kops, president of WAVZ, on Tuesday, January 15, and Wednesday, January 16, 1963, and was heard in many parts of the State of Connecticut. This editorial expresses my sentiments on the subject and I am pleased to commend it to the attention of my colleagues. It reads as follows:

EDITORIAL BROADCAST BY DANIEL W. KOPS

We take a great deal of pride in the leadership that the United States has given the rest of the world in the development of democracy and technological advances.

But there are times when it behooves us to abandon our complacency and take advantage of what we can learn from abroad. We have in mind at the moment the booming prosperity which has developed in Western Europe while our economy has rested near dead center.

We don't want to oversimplify the differences, but the one that stands out is taxes. The countries of Western Europe have found that a simple tax structure encourages busi-

ness growth, which in turn raises the standard of living of the country generally.

On the other hand, we have perpetuated taxes so heavy that they have discouraged expansion of business and growth. We think that sentiment around the country has crystallized in favor of tax reduction. We agree with President Kennedy's proposal that reductions be coupled with tax reform. If instead, Congress enacts perfunctory changes in rate without real reform, it will be years before we have another chance.

We in Connecticut faced with the possibility of increased State taxes would have special reason to welcome a cut in individual tax rates. It is equally desirable to see changes in the corporate tax structure which would spark the economy. We look to our Congressmen for effective action in this field.

Thank you for your attention.

Where Labor Unions Get Their Power

EXTENSION OF REMARKS

OF

HON. ROBERT TAFT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. TAFT. Mr. Speaker, in view of recent events, J. Mack Swigert's article, which appeared in the January 21st issue of U.S. News & World Report, is particularly timely. Because this article, entitled, "Where Labor Unions Get Their Power," is authored by an authority on labor law, I believe its contents will be of interest to all Members and citizens and ask unanimous consent to have it inserted in the Appendix of the RECORD.

WHERE LABOR UNIONS GET THEIR POWER

(By J. Mack Swigert, authority on labor law)

Today there is a widespread feeling that unions need further regulation. How is this to be achieved? The public must understand that this is not a simple problem. Union power has many roots. Here are the major ones.

1. PUBLIC SYMPATHY FOR UNIONS

One of the ultimate sources of union power is the public sympathy which arose in the early sweatshop days and which has persisted in a large group of the population even though the conditions which originally created sympathy no longer exist.

Public identification with the weakness of the individual worker in his relations with the large corporate employer seems to have created a David-against-Goliath sympathy. Many seem to forget that, if the union was originally David, for many workers it is now itself Goliath. Also, there is a certain class feeling in this country, a tacit admiration for Robin Hood, who robbed the rich to help the poor.

In addition, one must bear in mind that we are a nation of employees. Most adults are in business for themselves, but are employed by somebody else. Many employees, even when not union members, tend to feel that "unions are on our side" even though many union objectives are basically selfish and against the interest of the nonunion majority.

Basically, it has been this underlying public sympathy which has enabled the unions to obtain the legislation and special treatment from public officials and communication media which today is a direct source of their power.

This prouction sympathy has been particularly evident among intellectuals and mem-

bers of the educational community. Because of this factor, many economics and industrial-relations textbooks and reference works tend to present facts and weigh arguments in favor of the union position. These intellectuals, also, when called upon to give advice to Government representatives or to serve as arbitrators or members of fact-finding panels, tend to lean in favor of the union position because of their sympathy for the union movement.

2. LABOR'S POLITICAL STRENGTH

Votes are the currency of politics. Because of the public sympathy referred to above, the formidable union machinery for getting out the vote and for collecting political-action funds, and also because the unions have many members who presumably share a common point of view, many politicians believe that the unions control a substantial number of votes. They believe that the unions, when aroused, can cause office-holders to be elected or defeated.

As politicians make laws and enforce them, this idea that unions can influence the direction of thousands or even millions of votes leads politicians who want to keep their jobs or advance in their profession to bend in the union direction when a union issue is before them.

Through COPE (AFL-CIO Committee on Political Education), the unions are now able to collect and expend enormous sums of money in the political arena. They have also had the support of the ADA (Americans for Democratic Action), and certain other groups of similar political bent.

The growing effectiveness of union political action on local, State, and National levels is an important source of union power.

3. FAVORABLE LAWS

(a) National Labor Relations Act: This Federal labor law protects employees in their right to form and support unions. The act creates a special status for unions and gives them special rights and privileges of great importance and enjoyed by no other economic group. Among these special rights are the following:

(1) A union designated by a bare majority of employees in an appropriate bargaining unit becomes the representative of all employees in the unit including those who are opposed to the union.

(2) Moreover, such union becomes the exclusive representative of such employees.

(3) The employer must bargain with the union so designated on all aspects of wages, hours, and working conditions.

(4) The subjects of collective bargaining are broadly defined in section 8(d) of the act as encompassing wages, hours, and other terms and conditions of employment. Because of the generality of this phraseology, almost any conceivable subject is placed in the area of collective bargaining and consequent union interference with management decisions.

(5) The employer may not interfere in the internal affairs of the union in any way and may not terminate an employee or otherwise discriminate against him because of union activity.

(6) Excepting in States which legislate otherwise, the employer is permitted to sign a compulsory union-membership contract. Such a contract ordinarily requires all employees to join the union within 30 days and remain members thereof as a condition of further employment.

(7) Exclusive jurisdiction over the subjects covered by the act is vested in an administrative board—NLRB—which has ordinarily been dominated by members sympathetic with unions.

(b) Exemption from Sherman Act: Although unions may originally have been subject to the Sherman Act, the Supreme Court in later years has ruled that, because of the Clayton Act and the Norris-La Guardia Act,

unions cannot be regarded as legal monopolies or combinations in restraint of trade—even though they intentionally and maliciously put employers out of business—unless they are acting in conspiracy with an employer. This exemption from the antitrust restraint applicable to employers is an important source of union power.

(c) Practical exemption from Corrupt Practices Act: Through the Taft-Hartley Act, enacted in 1947, Congress attempted to put unions under restrictions of the Federal Corrupt Practices Act and thus limit the use of union funds in political campaigns.

In a subsequent test case, the UAW-CIO was found not guilty of violating the amended Corrupt Practices Act even though its telecaster, Guy Nunn, gave widespread publicity to union-backed candidates in the 1954 primary and general-election campaign, and even though his propaganda was paid for out of the union's general funds accumulated out of the dues of the members.

For all practical purposes, the failure of this test case seems to have freed unions from the restrictions of the act and has enabled them to amass large political war chests and to spend the money in such a way as to further the special interests of the union leadership. This has enhanced union power.

(d) Norris-La Guardia Act: Because of the Norris-La Guardia Act and similar legislation in many States, it has become very difficult to enjoin violations of contract or law by labor unions even when the injury resulting from the violations is irreparable. This protection is extended by legislation only to unions.

The Norris-La Guardia Act itself is particularly important because, for practical purposes, it closes the doors of Federal courts to employers seeking injunctive protection against illegal union conduct. In these situations, the Federal judge would ordinarily be the most effective remedy, because he not only has a special status of respect in the community, but is also appointed by the President for life and, therefore, is not subject to the usual political pressures.

Money damages are ordinarily not a very effective remedy for the employer, because they do not, as in the case of an injunction, stop the illegal conduct at the time it is going on. A damage suit is usually not tried until at least 6 months or a year after the event.

Secondly, unions follow the tactic of refusing to settle a strike until the damage suit is dismissed. Thus, it is dismissed before it ever comes on for trial, and, therefore, operates only in a remote way as a deterrent to illegal union conduct. Of course, there are special situations in which the damage remedy results in the collection of money from a law-violating union, but these situations are quite exceptional.

With respect to injunctions, the Norris-La Guardia Act applies a double standard not applicable to other individuals or economic groups, a double standard which substantially enhances union power with respect to employers, members, and the public at large.

4. SPECIAL TREATMENT FROM COURTS

Largely because of public sympathy and effective political action, as indicated above, unions not only benefit from favorable legislation, but also are singled out for special and favorable treatment from courts, arbitrators, law officers, and other public officials.

Labor-violence cases, when presented in police court, are customarily continued until the strike is over and then dismissed. The reluctance of many courts to issue and to enforce injunctions against unions is well known to lawyers.

Police assigned to strike duty often look the other way when union violence occurs. Even the FBI is reluctant to intervene in labor disputes. Many States have statutes

forbidding or limiting the use of State highway police in such disputes. A tendency to lean in the direction of the union when the question is a close one is observed throughout almost the entire hierarchy of public officials.

Favorable treatment of unions is particularly marked in the case of State and Federal administrative officials and employees who deal directly with labor problems.

State departments of labor, workmen's compensation commissions, unemployment commissions, industrial commissions, mediation boards and labor boards are almost uniformly staffed with union members or former union officials or persons otherwise closely associated with and sympathetic to the union movement. This is true even though these agencies are charged with the protection of all workers, including the great majority who are nonunion.

Similarly, the U.S. Department of Labor, the National Labor Relations Board, and, to a considerable extent, the Federal Mediation and Conciliation Service, as well as other agencies dealing with labor problems, are staffed largely with union members or sympathizers.

Since the advent of the Kennedy administration, the National Labor Relations Board has openly moved in a direction very helpful to organized labor.

The unions now have a clear majority of union sympathizers on the Board.

During the past 2 years, under the leadership of the new chairman of the Board, numerous precedents have been overruled and discarded, and the labor law has been substantially changed without legislation.

In almost every instance, the change has favored organized labor against the employer or nonunion employees and has been retroactive. As a result of the Board's continuing rejection of precedents and retroactive overruling of interpretations of law previously established by Board decisions and relied on by employers and others in the industrial relations field, no employer can be sure today that any action taken by him which might prove harmful to a union will be sustained by the NLRB.

The tendency of this policy is toward a government of pronoun men instead of a government of law. This uncertainty tends to discourage employers from attempting to resist union demand and activities and is, therefore, an important contemporary source of union power.

This tendency towards a government of men instead of law, favorable to unions, appears to extend all the way to the White House.

Recent presidential intervention in the steel strike and the west coast airframe-industry dispute benefited the union and weakened the employer. There has been no comparable executive action against unions and none seems likely or even possible.

This factor of favorable treatment from the courts, law officers and other public officials is a further important source of union power.

5. FAVORABLE TREATMENT FROM PRESS

Generally, unions get favorable treatment from the national wire services, radio and TV. These are important sources of public opinion.

Most news writers belong to unions or are union oriented. It is natural for them to slant stories which might otherwise place the union in a bad light. Besides being protected by their friends in the large news-gathering and dissipating agencies, unions also obtain considerable publicity for their affirmative programs. This favorable treatment is an additional source of power.

6. RIGHT TO STRIKE AND BOYCOTT

The right to strike is recognized and protected by the Taft-Hartley law and mis-

cellaneous other legislation, including the Norris-LaGuardia Act. In the Taft-Hartley law, "strike" is defined as a "concerted stoppage of work" or a "concerted slowdown or other concerted interruption of operations by employees."

This legal right of employees to band together and withhold their services in concert from a particular employer is an obvious source of union power. The Sherman and Clayton acts, and general public policy against monopoly, deny other business entrepreneurs a right to band together for the purpose of influencing price or willfully inflicting economic harm in this way.

Unions are also permitted to advocate and advertise consumer boycotts against employers with whom they have a controversy, even though the Taft-Hartley law and the Landrum-Griffin Act have substantially limited their previous right to engage in secondary boycotts.

Businessmen are generally not permitted to advocate in this way a public boycott of their competitors, suppliers or others with whom they have business relations.

As there is almost no limitation of the right to strike, the use of the strike weapon is often abused. The strike power is frequently used to force retention of surplus or excess personnel and in support of various forms of featherbedding. Strike power is also used to force union recognition without recourse to the election procedures provided by the NLRB.

Sometimes a small group, through use of the strike power, is able to shut down virtually an entire operation or industry. In Pittsburgh, for example, a strike by a union representing a small number of steel-mill railroad employees was able to shut down an entire steel mill.

7. UNIONS' PICKET SYSTEM

The great and traditional source of union power is the picket line. This probably ranks along with compulsory bargaining, required by the National Labor Relations Act, as one of the two most immediate and potent sources of union power in this country today.

The picket system includes two types of picketing—peaceful and violent. Both can be highly effective. Peaceful picketing—even when only one man with a banner is present, is effective because the working population as a whole has come to recognize this symbol placed in front of a place of business as a quarantine signal. Millions of workmen have been disciplined and educated by unions to believe that they are doing wrong when they walk past a fellow workman who is carrying an "on strike" banner or an "unfair" banner. Therefore, in many situations, the mere presence of a man with a banner in front of any employer's place of business brings great economic harm to the employer.

In situations where the peaceful picket line is ineffective, the violent picket line usually does the job. It creates physical injury, property damage and fear. Most people do not want trouble. They will not risk physical injury or property damage to continue business relationships with a besieged employer. Through keeping third persons from taking the jobs of strikers, the picket line enables the union to monopolize the jobs in the struck plant. It is a coercive power weapon employed by the union to bludgeon the employer into submission. In their economic relationships, employers possess no comparable weapon.

8. TRADITION OF THREATS AND VIOLENCE

Closely associated with the picket system, but having an effect beyond the picket line, is the union tradition of threats and violence. The labor movement in this country has been characterized by many violent strikes. The more spectacular of these in recent years, such as Kohler, Perfect Circle,

Republic Aviation, Southern Railway, and Southern Bell Telephone, have received widespread publicity. Hundreds of lesser strikes, however, have been accompanied by widespread acts of violence and terrorism. Even in so-called "peaceful" strikes, petty coercions, such as nails in the driveway and verbal threats, are almost always present. Most people do not want trouble. Therefore, this well-known tradition of threats and violence helps the union leaders keep workers in line and is a source of union power.

Fear of some form of reprisal is a factor which helps union organizers sign up workers for union membership. It helps union leaders control union meetings and direct the votes of the members. The standing vote is very common in union meetings. In certain situations, a member may feel that he is risking personal injury by standing up and being counted against a proposition strongly urged by union leadership.

Fear of ostracism may exist even when there is no fear of actual physical injury. Most unions encourage class feeling. Members are encouraged to feel that they do wrong if they stand with the employer against fellow workers. The threat of ostracism is itself a potent weapon when directed against the ordinary man who just doesn't want any trouble.

In many instances, the union threat extends far beyond mere ostracism. Each year there are many strikes characterized by shooting, dynamiting, physical beatings, mass picketing, car rocking, window smashing, paint throwing, and other forms of injury to person and property.

9. LOYALTY OF UNION MEMBERS

Another important source of union power is the dedicated loyalty of many hard-core members. Almost every local has a hard-core of members who attend meetings regularly and who sincerely believe in the union movement. With many of these individuals unionism is almost a form of religion. They deeply believe that unions have advanced the workingman and that employers would exploit workers ruthlessly if it were not for the existence and continued vigilance of labor unions. These dedicated members are a very important source of strength in all unions.

10. COMPULSORY MEMBERSHIP

During recent years, unions have used strikes and the threat of strikes with great success in forcing compulsory-membership provisions and checkoff clauses into a high percentage of the contracts in the two-thirds of the States of the Union where such contracts are lawful.

Under these provisions, there is no longer even the pretense that a union is a voluntary association. With these clauses in the contract, workers must belong and pay their dues in order to hold a job in the plant. In effect, the union is given the power to tax usually reserved solely to the sovereign. Although the Taft-Hartley Act gives employees some protection against discharge at the request of the union for reasons other than nonpayment of dues, the existence of compulsory-membership contracts is a very important source of union power and control over both employees and employers. Also, unions benefit greatly and are strengthened by the fact that employers can be made to collect the dues for the union before the employee ever receives his pay.

11. UNLIMITED SIZE OF UNIONS

The fact that the law permits unions to function as "internationals" is a root of union power. The union which is certified as the exclusive bargaining representative in a particular plant is usually not the local but the international union, which may have its headquarters and center of control hundreds of miles from the particular plant.

Through the provisions of its international constitution, and its usual power to appoint receivers, displace officers and take over the assets of the local if considered necessary, international officials have great practical power over the local and its members.

Craft unions also have apprenticeship systems, and membership cards which attract and hold members. As a practical matter, many skilled men can't even get a job without one of these cards. The international receives its tax-free financial support from locals throughout the country and is able to build up huge strike funds and also large welfare funds, pension funds and the like. Through the granting or withholding of strike benefits, the international is able to control the course of the negotiations at the local level. Through using strike funds to pay employees to strike, the international often can cause small employers to give in to union demands.

As there is no limitation on size, international unions can also organize an industry vertically as well as horizontally—as in the case of the Steelworkers, who represent ore mines, boat crews, and other groups in all phases of the industry.

The true picture of modern collective bargaining, therefore, is not that of a group of employees banded together to bargain with their own boss. Instead, an organization representing hundreds of thousands of employees throughout the country bargains with an employer who may possibly have only a hundred people working for him.

The fact that the law permits union bargaining power to be centralized in huge international organizations, which exercise discipline and tight control of the union funds, the union locals, and the individual members, and which are run by an expensive account aristocracy of professional union managers, is, of course, an important source of union power.

12. WEAKNESS OF EMPLOYERS

In any catalog of the sources of union power, this item cannot be overlooked. Some industries are so sensitive that the employers cannot take a strike of any duration and remain in business. In other industries, direct labor costs are such a small percentage of the total cost that it is not considered practical to stand up to the union. These factors enable unions to be very strong in such industries.

Sometimes employers do not have the financial strength to withstand union pressures. These employers cannot go to the brink, where most important labor issues are ultimately settled. They cannot risk a strike, so ultimately must submit to the union demands.

In other situations, however, the source of union power may lie to a considerable extent in the weakness of the employer himself. Many employers regard labor relations as a nuisance.

They want to get the negotiations over with as soon as possible. They have no stomach for a fight. They do not understand the ponderous and time-wasting machinery of collective bargaining. In some instances, employers are even physically afraid of the union.

Many employers are opportunists. To save a few cents on wages, they are willing to make concessions to the union which over the years may cost them a great deal more than an extra 2 cents or 3 cents in wages. Their philosophy is to settle today and take their chances on tomorrow. If they cannot pass the cost on in price, they may be able to save the difference by changes in operations.

In dealing with employers of this type, professional union leaders, rich with experience, know that if they stand their ground, the employer will give in. Union leaders

regard such employers as weak. Just before Christmas, the President asked the Longshoremen's Union to postpone a shipping strike for another 90 days "in the national interest." The international vice president of the union refused, explaining: "They're very weak, we'll lick 'em fast."

The weakness of employers, no matter how justifiable its cause, is an added source of union power.

CONCLUSIONS

Like banyan trees, unions today draw strength from many roots.

Favorable legislation and favorable treatment from courts, law officers and other public officials, and from news media, are important sources of union power. So are the right to strike and boycott, the picket system and the tradition of threats and violence.

Compulsory membership and checkoff and the unlimited size permitted by law also buttress union power. The hard core of members, and the vulnerability, disunity and weakness of employers, contribute to the strength of these organizations. In addition, there are the strong roots of public sympathy and effective political action.

Today, unions are big business—rich—tax-free—and run by a new class of well-paid professional union managers.

On the political front, unions, acting through their grand lodge, the AFL-CIO, constitute a national Tammany Hall, with political machinery which functions in their self-interest from coast to coast. The influence of these unpoliced organizations, which are capable of shutting down basic industries and destroying small business, is felt in all walks of life. At few points are unions responsible for anything, even to their own membership.

There is a growing feeling that the national interest now calls for additional restraint on union power. The Supreme Court recently suggested that Congress correct the Norris-LaGuardia Act to permit Federal courts to stop union strikes in breach of contract. Many believe that the antitrust laws should be amended to cover unions. Others believe that a more fruitful course would be to withdraw some of the special privileges conferred by existing laws, which were enacted to encourage the growth of unions when they were small and weak, and which seem out of place today. A basic review and revision of union privileges and immunities seems in order if the public interest is to be protected.

Make Them Use the Front Door

EXTENSION OF REMARKS

OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial by Mr. Verne McKinney in the Hillsboro (Oreg.) Argus on the subject of back-door spending:

MAKE THEM USE THE FRONT DOOR

One of the most rewarding New Year resolutions that the administration and Congress could jointly make would be the elimination of back-door spending.

Back-door spending is the expenditure of funds outside the regular appropriation process. It is a violation—at least in spirit—of the Constitution which holds that Federal money can only be spent when the Congress duly appropriates it.

This practice cannot be dismissed as inconsequential. In 1961 it amounted to just under \$20 billion—divided among Federal programs for agriculture, airport, area redevelopment, foreign aids, highways, housing, school milk, and loans for veterans. As large as that sum was the money originally requested was even greater—\$29 billion.

In 1962, happily, encouraging progress was made in curbing back-door spending. Through the combined and commendable efforts of the administration and the Congress the rearflow was reduced to \$437 million. First the budget requests were slashed from the \$29 billion sought in 1961 to \$2½ billion for 1962. Then the Congress performed more surgery on that amount, reducing it to \$437 million.

It is not enough merely to cut down on the total spent in this evasive manner. The back door should be securely locked and permanently sealed.

Stephen B. Luce, 1827-1917: Founder of the Naval War College

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. FLOOD. Mr. Speaker, over a period of many years, especially since becoming a member of the Board of Visitors of the U.S. Naval Academy, it has been my privilege to study the records of many of our naval leaders who have made notable contributions to U.S. history.

Preminent among them was Rear Adm. Stephen B. Luce, who entered the Naval Academy in 1841 and was the 173d graduate of that famed institution. It was, therefore, with the keenest interest that I read in the January 1962 issue of *Shipmate*, the monthly magazine of the Naval Academy Alumni Association, a most informative biographical account of this distinguished naval leader by Rear Adm. John D. Hayes, U.S. Navy, retired, of the class of 1924.

Admiral Luce's greatest contributions were in the field of education. He was the architect and first president of the Naval War College, and prepared the first book on "Seamanship" for use at the Naval Academy, where Luce Hall was named in his honor.

In order that the career and contributions of Admiral Luce may be better known, I quote the indicated character sketch as part of these remarks:

STEPHEN BLEECKER LUCE, 1827-1917

(By John D. Hayes)

Stephen B. Luce has been made the subject of this first of a series of character sketches because I believe him to be one of the greatest figures that our Navy has produced. Another and perhaps more controlling reason is that he forms the link between the two great periods of our naval history—that of the sail Navy in the days of wooden ships and iron men with its revolution during the Civil War and the steam and steel Navy which did not have its beginnings until 20 years after that war. He, almost alone, preserved and carried forward the spirit and

tone of the old Navy through those barren 20 years and infused it into the modern Navy of today. He did so by insisting that men were as important as weapons and machines and by constantly pointing out that no matter how remote the possibility, the purpose of a navy is war and the duty of officers is to study it and to train their men for it.

Fate did not grant to Luce the fortune of a major command in war, the opportunity by which a place in history is usually gained in the military profession. Instead it destined him to serve, as a young but seasoned officer, through the greatest of American wars and to see firsthand, as an impressionable man, the purposes of a navy in war and the needs of the men who make it. He never afterward allowed himself or those who followed him to forget these two foundation stones of their profession. His enthusiasm and acumen through the next 50 years were to bring about a revolution in naval thought, education, and administration that has had its impact to this day, not only in our own Navy but through it to the navies of the world.

The contributions of Stephen B. Luce to his profession cannot well be measured in tangible terms. He taught the Navy to think of itself as a whole. He saw strategy as clearly as others see a weapon or a ship. He defined better than anyone has since the relations that should exist between a government and the officers of its armed services. Nevertheless his concrete accomplishments were many. They include the following:

1. He prepared the first textbook on "Seamanship." It was first published in 1863 and went through several editions before it was replaced by the present Knight's "Modern Seamanship" in 1900.
2. He was commandant of midshipmen in the Naval Academy's most dynamic years just after the Civil War while David D. Porter was superintendent.
3. He pioneered the concept of training for merchant marine officers and established the first Maritime Academy for the State of New York in 1875.
4. He started the naval training system which today prepares our recruits for life aboard ship.
5. He saved most of the sea chanties of the days of sail by his book of "Naval Songs," first published in 1883.
6. He wrote the first article published by the U.S. Naval Institute and was president of that institution for 11 years from 1887 to 1898.
7. He is best known for establishing the Naval War College in 1886. What is not so well known is that he spent the next 25 years saving it.
8. He gave Alfred T. Mahan his great opportunity by asking him to lecture at the new college and this evolved into Mahan's famous books on Sea Power. It is interesting to note that the title of the series of lectures given was not "The Influence of Sea Power on History" but "The Influence of Naval Power on the Growth of Nations."
9. Finally, Luce was the leader of a group of forward-looking officers who, after a 30-year fight, finally succeeded in properly organizing the Navy Department by the establishment of the Office of the Chief of Naval Operations.

LUCE'S CAREER

Luce was born in Albany, N.Y., in 1827 and entered the Navy in 1841. He spent only his last year as a midshipman at the Naval Academy. One of his early cruises was under the War of 1812 hero, Commodore James Biddle, in the 74-gun line-of-battleship *Columbus*, which made a voyage around the world and visited Japan several years before Perry. During the Civil War Luce served in the South Atlantic Blockading Squadron, first as a watch officer in the flagship *Wa-*

bash, later in command of a monitor and finally in command of a blockading gunboat. In the latter he had a contact with General William T. Sherman, which he himself claimed started him in the study of the art of war.

Sherman in January 1865 was at Savannah, Ga., after his March to the Sea. It was Luce's job to cover the Army's initial movements by water on the march north. Almost 40 years later Luce, in a lecture at the War College, told the story of his meeting with Sherman. "On reporting to headquarters, General Sherman indicated in a few short pithy sentences and by the aid of a map his plan for the campaign from Savannah north. * * * And he added in the pleasant style of banter with which he was accustomed to talk to naval officers: 'You Navy fellows have been hammering away at Charleston for the past 3 years. * * * I will cut her communications and Charleston will fall into your hands like a ripe pear.' And that is just what actually came to pass."

Luce continued: "After hearing General Sherman's clear exposition of the military situation, the scales seemed to fall from my eyes. 'Here,' I said to myself, 'is a soldier who knows his business.' It dawned on me that there were certain fundamental principles underlying military operations, principles of general application whether the operations were on land or at sea."

The prime of Luce's life, from the ages of 40 to 60, was spent in the period when the U.S. Navy was at the nadir of its history. The eyes of the American people after the Civil War were turned inward to the development of their heartland and away from the seas and overseas which had been the prewar outlook. The Navy and the merchant marine were neglected, forgotten. Senior naval officers seemed content to reflect in the glories of Civil War days and even Luce's contemporaries chose to look backward rather than ahead. Luce's thoughts, however, were kept focused on the future, on war and on the potentialities of war's handmaiden, strategy. His happy enthusiasm was able to transmit this ardent and unselfish professionalism to the young men who were to create the Navy of the future—Sampson, Evans, Chadwick, Taylor, Sims, and Gleaves.

Although best known for his establishment of the Naval War College, Luce's greatest monument should be the Office of the Chief of Naval Operations. The organization he thereby brought to the Navy Department has survived two wars and is essentially the same today. Luce was assisted in this work by Mahan; Henry C. Taylor, third president of the War College; Bradley Fiske; William S. Sims; and Dudley W. Knox. On the civilian side were President Theodore Roosevelt, through Sims then his naval aide; Secretary of the Navy Meyer in President Taft's administration; and Congressman Richmond P. Hobson, 1889, who introduced the legislation. These civilians however were only agents. It was the line officers, sparked by Luce, who were the positive, dynamic driving force to reform. This was in contrast to the Army reorganizational improvement which was largely the work of Elihu Root, Secretary of War in Theodore Roosevelt's administration. It is in contrast to the situation today.

Luce's impact was not alone on the line officers. He made efforts to start a school of naval architecture at Massachusetts Institute of Technology a generation before it was finally established. He encouraged the study of naval engineering but was opposed to the amalgamation of the Engineer Corps with the line. The man who brought it about, George W. Melville, finally came to agree with Luce that it was a mistake. Luce introduced the word "logistics," created by Jomini, into naval terminology and from there

it has gone into the military language of the free world.

LUCE'S METHODS

Luce to a large extent accomplished what he did through persistent letter writing, mostly to people in influential positions both in government and outside, as his papers, now preserved by the Naval Historical Foundation in the Library of Congress, indicate. He was always prolific with his suggestions and persistent in his demands. He was not hesitant about giving advice to those in high places, a service not always appreciated.

It was with his writings, however, that he made his great imprint on naval thought. They were mainly in the form of periodical articles, many of them in the Proceedings of the U.S. Naval Institute. They covered many subjects in the fields of warfare, naval history and administration, military ethics, officer education and enlisted training. Thirty-six of them, written between 1874 and 1911, have been summarized in an article in Military Affairs, winter 1955, under the title of "The Writings of Stephen B. Luce." Many of the concepts expressed therein are as pertinent today as when Luce stated them. They have become so ingrained into our naval administrative system that we take them for granted. If they were known better in the abstract by naval officers, they might have been applied with some benefit to the present day Department of Defense whose organizational problems are strikingly similar to those of the Navy in Luce's day.

Luce also wrote for many of the general periodicals of his day such as the *Galaxy*, *North American Review*, *Harpers*, and *Youth's Companion* and for several encyclopedias. However, he never took the time to compose his thoughts into books, as Mahan did, and for this reason his writings remain unknown while Mahan's are gaining in popularity each year.

Luce's learning was outstanding even in a day when anti-intellectualism was less prevalent in the service than it is today and when officers were not ashamed to quote Shakespeare to each other. Researching the references in his articles is a liberal education in itself.

His familiarity with foreign languages enabled him to know firsthand the French military writing in the 19th century when it was at its best. Luce had a much better knowledge of the French Navy and French naval strategy than did Mahan.

His devotion to his profession kept Luce a poor man all his life, unable even to give a college education to his son. On active duty he always preferred posts of usefulness to posts of honor. He was blessed with good health and he lived to be 90. An active mind, never devoted to self, no doubt contributed to this long life.

The last act of his career was a hallmark of the man. Asked to address the War College in 1911 at the age of 84, he might have reminisced. Instead he chose to make a fighting speech. He was frankly worried because there was so much interest in the then new postgraduate school of engineering and still so little in the Naval War College.

"Your profession is the art of war and nature will be avenged if you violate one of its laws in undertaking to make a part greater than the whole."

LUCE'S CHARACTER

Luce's character is best described by his contemporaries.

Admiral Porter wrote of him in 1866 to Assistant Secretary of the Navy Fox: "He is a straightforward fellow and nature has not given him the soft manners possessed by some people who are all smiles to your face and abuse you behind your back."

John S. Barnes who served with Luce in the Wabash and at the Naval Academy but who resigned to pursue a successful legal

and business career: "Stephen B. Luce, all through his distinguished career, was one of the most capable officers in our or any other Navy. Besides his professional accomplishments which were great, his scientific and literary knowledge, increased by constant study and reading, made him an ideal naval officer, fitted to fill any office with dignity and power within the scope of Government action. My intercourse with him, then and later, I regard as one of the most fortunate intimacies of my life."

Robley D. Evans: "That master of his trade."

Albert Gleaves: "To such as he, there is no successor."

Remarks by Mayor Robert F. Wagner at the 31st Annual Dinner of the Citizens Budget Commission

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. ROONEY. Mr. Speaker, on the evening of Friday, January 11, 1963, the Citizens Budget Commission held its 31st annual dinner at the Waldorf-Astoria Hotel in New York City. The principal speaker on this occasion was His Honor Robert F. Wagner, mayor of the city of New York. Under the permission heretofore granted me by unanimous consent of the House I include Mayor Wagner's address on this occasion:

ADDRESS BY MAYOR WAGNER

I am pleased to join tonight in greeting and saluting the Citizens Budget Commission on the occasion of its 31st anniversary. I wish a happy and fruitful year and many more in the times ahead to this organization which I have long known, always respected—and have sometimes differed with. But CBC, I love you anyway.

Again, as in the past, I congratulate CBC on its president, a true friend of mine and a public-spirited citizen if ever I knew one, Bob Dowling. And CBC is full of the spirit of Bob Dowling.

I intend tonight to make what might be considered a major pronouncement on the fiscal affairs of New York City. I am glad to do this under the auspices of the Citizens Budget Commission.

I shall deal with our budgetary prospects for next year—in fiscal terms and in terms of some of the practical problems we face and the decisions we must make during the weeks and months immediately ahead. They are very difficult ones.

The question is sometimes asked: Why must the city approach each year's budget problem as though it were being faced for the first time and, why can't we engage in more long-range budgeting and budgetary planning. The answer is very simple. Unlike the Federal and State Governments, we in the city government do not have ultimate control over our fiscal affairs. We can and do schedule our expenditures but the State government, above all, has the ultimate power of decision over our revenues and sources of revenue. New York City proposes, but Albany disposes.

In the current year, our revenues are expected to reach record levels. Our tax receipts from real estate are expected to attain

their highest peak in our city's history due, among other factors, to the city's steady and sometimes spectacular development—as on Sixth and Third Avenues in Manhattan, Riverdale in the Bronx, in the Borough Park area of Brooklyn, in half a dozen sprouting areas in Queens, and in almost every section of Staten Island.

But as I said, we have no real power of decision or control over these revenues. When I first took office in 1954, real estate taxes accounted for 47.7 percent of our total city revenues. Today they only account for 41.04 percent of our revenues. To increase this tax would require an amendment to the State constitution, which takes a minimum of 3 years to enact. All other tax levies are subject to State authorization and some of this authorization is given us on a short-term basis like the authorization given us last year to establish for 1 year a tax on vault space under the city's streets and sidewalks. Likewise, State aid for education and other purposes is given us on a year-to-year basis. We know what we ought to be able to get from the State, but we never know what we are actually going to get.

Under such circumstances, long-range fiscal planning is extremely difficult if not impossible. Nobody would be more pleased to see this condition remedied than myself.

This brings me to the situation we face for next year. The fact is that for next year we face a very sizable budgetary imbalance—so substantial in magnitude as to require major decisions and measures by both the State and the city governments to meet the situation.

I am really not telling you any deep secrets. Anybody with a sharp mind and a dull pencil can figure it out and he doesn't need a very long piece of paper either. The Citizens Budget Commission issued a statement not many days ago giving a range of anticipated budgetary imbalance. For reasons I shall cite, I do not yet have the exact official figure, but I can say that the imbalance for next year will certainly be above the lowest figure in the CBC projection—which was, as I recall, \$117 million. How much higher it will be, I am not yet prepared to say, but it will be substantially more.

We are hard at work right now reviewing the budgets and the proposed programs of the various city departments and agencies. I am examining and reexamining, in budgetary terms, the programs we had planned to inaugurate or expand next year and to achieve further savings and economies which may be possible. Until all this process is completed, I can't say finally what our minimum budgetary needs are. I know only that they will be substantially greater than in the present fiscal year, if only by virtue of automatic and mandatory increase.

Nor, of course, can I make a prediction as to our revenues for next year. Thus, I can only guess at the amount of aid we are going to get from the State government. I have no idea what increase, if any, we might hope to get in school aid; and I must say that for the long overdue increase in per capita payments, the prospects do not appear very bright. I wrote to Governor Rockefeller on December 2d, asking for the rectification of the inequities in State-city fiscal relations. I have no idea at this point what additional revenues we may count on from Albany.

For some years now we have been fighting for the authorization of legalized off-track betting, which could, within a few years of enactment, provide \$100 million a year for New York City and a like amount for the State treasury—from off-track betting in New York City alone. This year there appears to be a somewhat more favorable climate in Albany for this proposal, or at least for an authorization of a referendum on it. But that doesn't promise us much money to meet next year's expenses.

For many weeks now, ever since August, in fact, I have been giving intense consideration to this problem and have been making such studies and holding such consultations as could be helpful.

Last April I said I would commission a group of experts to review the tax and revenue sources of the city and to reassess them in the light of our impending needs. I, and members of my staff, held preliminary discussions with a number of tax and fiscal experts in the effort to organize such a study. In the end we abandoned it as a formal enterprise—simply because of the factors to which I have already referred. There were just too many variables for a useful study by experts. Instead, in addition to a number of informal meetings with experts, I held and am holding frequent meetings on this subject with the comptroller, the president, and the majority leader of the city council, and other elected public officials, and, of course, with the appropriate officials and experts in the city government. I have also been seeking and considering the views on this subject of outstanding community leaders. These meetings are continuing.

Against this background, let me tell you that upon the conclusion of these studies and discussions, and after some of the variables I referred to become a little more definite, sometime within the next month, I will make my recommendations on the measures which I feel to be needed, including new tax proposals, to meet the urgent needs of the people of this city.

What do we mean when we speak of the urgent needs of the people? I think that the vast array of the services which the city government provides and the vital importance of them are sometimes forgotten when people talk about budget and taxes.

When we talk about city government, we are talking about the police, for whose services \$204 million are included in this year's budget which provides 25,000 police. This amount pays for the greatest per capita police protection of any large city in the country. As a result of this protection, New York—contrary to impressions given by some headlines—ranked, for the first 9 months of last year, well down among the second 10 of the major cities of the country for per capita cases of crimes of violence.

We are also talking about \$104 million for the fire department, which is widely acknowledged to be providing one of the most efficient and effective firefighting services in the country.

We are talking about the \$191 million budgeted for the hospitals department for the maintenance of 27 city hospitals—for the recent spectacular improvement in the level of medical care and treatment in those hospitals—improvements which were overdue and must continue.

We are also talking about the more than \$800 million budgeted for our city's primary and secondary schools and for our free-tuition city university providing essential education, including vocational training, for over a million of our young people.

We are talking about the \$31 million for our health department for a wide range of activities including funds for the care of infants and children, for the largest medical research program to be financed by any city in the world, the inspection and supervision of the availability of heat to millions of tenants, and for the unending and essential war against rats and vermin.

We are talking about the \$9 million budgeted for the department of buildings to administer and enforce the building code—so essential for public safety.

We are talking about only \$1,500,000, which the city government's money contribution to our great housing program, which makes possible—together with the funds and credit of the Federal and State Governments—the vast amount of low-income and middle-income housing now under

construction and on the drafting boards. We have, by far, the greatest government housing program in the Nation. More governmentally aided low-income and middle-income housing has been built in New York City than in any other city or group of cities in the country.

Included in the \$1,500,000 the city has budgeted for housing, is money for our area services program which is designed and has achieved spectacular success in halting deterioration in neighborhood conditions, both housing and social. There is a crying need for the extension of this program to many areas of this city which do not need urban renewal but do need the kind of interim program we have developed under the name of the area services program.

We are talking also of our youth services program centered not only in the youth board and the parks department and also in other agencies, amounting to \$329 million. A part of this money has been used to bring juvenile gang wars under some sort of control. I had occasion today to pay my last sad tribute to a frontline fighter against youth gangs who gave his life to this undertaking. He was brutally beaten when he stopped an incipient rumble—I think they call them. He had stopped many in East Harlem where he worked. There hadn't been one in his area for a long time. I had met him. He was typical of the dedicated youth board workers who at modest pay are doing heroic and successful work in this field.

We are also, of course, speaking of welfare, for which \$298 million is budgeted this year. What is not generally known is that only a small percentage of this goes for general welfare. The largest percentage and the overwhelming number of so-called welfare clients are needy children and the needy and disabled aged. These amount to 338,000, out of the total of 352,000 served by the welfare department.

Then there is also the \$36 million for parks and playgrounds, and the \$28 million for libraries and museums, and the \$47 million for the department of water supply, gas, and electricity, and the \$12 million for our piers and docks.

I have covered practically the entire budget, aside from such irreducibles as debt service, pensions, and the like. I have asked myself—I ask each of you tonight—Which of the services covered in the budget totals I have listed would you eliminate or stringently curtail?

Of course, the drive for savings through administrative efficiencies has been going on for some time and must continue to go on.

As a result of the recommendations of experts in the office of the city administrator and budget director, we have eliminated, over the past several years, thousands of jobs, and made other savings amounting to more than a hundred million dollars. I and the deputy mayor for administration and my budget director are now searching for additional ways to economize and to pull the belt tighter. This will not be the last you will hear of economy this year and next, I promise you.

It is a fact that our expense budget has increased by 68 percent since I have been mayor. But over the same period, the State budget just for State purposes has increased by 74 percent and the Federal budget, even exclusive of defense, has increased by 75 percent. We have been providing an increasing number of new but essential services, through the Police Department, the housing program, the area services program, the improvements in our city hospitals and nursing homes, the services for youth, the activities of the health research council, and the special aids for the aged, among many others.

Just as an example, there is such an item as payments to voluntary hospitals for the care of needy patients assigned to the hos-

pitals by the city. In 1946, the city paid \$3.25 per patient per day. Today, it is \$30 per day.

Of course, there have been major increases in the cost of almost everything the city buys, and also in the salary and wage rates and scales.

We now have on our statute books a career and salary plan which provides for automatic increases. All this is necessary not only to help our employees meet the rising costs of living but also for the city to compete with outside business and the State and Federal Governments, and to attract to the city service capable professional workers.

There are at least two ways of looking at city government—from the viewpoint of the balance sheet or from the viewpoint of the essential services it provides for the people.

The projected balance sheet for next year shows that we face a heavy problem. The program sheet for next year shows that we must not only maintain present government services, but in some categories, we must expand them.

Thus we must continue to improve and expand our new program for traffic control. We must continue to improve and expand our police department. We must continue to improve our hospitals. We must step up our efforts to promote the cultural and artistic life of our city, to provide more vocational training facilities for the unskilled—especially the unskilled youth—and thus to diminish our waste of human resources. We must take new steps to promote and encourage business activities, to keep the businesses that we have and to attract new trade and enterprise to our city. Such programs and many others, I will not take the time to mention, are essential if we are to keep our city dynamic, to make the most of our human resources.

To do all this and more, budgetary provision will have to be made. If our revenues are to be increased to meet the need, that increase must come either from substantially increased payments from the State government or by added taxes, or by a combination of both. For reasons I have already stated, we can get no substantial increase in the amount of money received from our real estate taxes. We must look elsewhere.

As I said, I will make my recommendations as soon as I get all the facts and complete the discussions I am now in the process of holding. One thing is certain: we will solve this problem as we have solved others.

New York is a wonderful place, and New Yorkers are wonderful people. If New York weren't such a thriving, throbbing, dynamic city, it wouldn't be as attractive to all the people of the world. If it weren't so attractive, it wouldn't be so crowded. And if it weren't so crowded, it wouldn't be so interesting.

The decisions we must make on budget and taxes will require a consensus of all our citizens. There will need to be a great deal of public discussion. I know that the citizens budget commission will play its part in helping to lead an informed, responsible, and constructive public discussion of this matter. I promise you that I will do my part to help this along.

Now it is my special pleasure to make a surprise announcement and award. It is my privilege to pay a special tribute to the executive director of the citizens budget commission, Col. John M. Leavens. Mr. Leavens has been executive director of the CBC for the past 10 years. He has, at the staff level, provided a driving, tireless leadership, and has helped in a major way to make possible the fine contributions of the CBC to the cause of good government in this city and State. I am pleased to be able to present to you, John M. Leavens, the scroll of the city of New York as an expression of the appreciation of all the citizens of New York, for your fine work with the citizens budget commission.

Calendar of Events at the National Gallery of Art

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. FULTON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following calendar of events at the National Gallery of Art:

NATIONAL GALLERY OF ART—CALENDAR OF EVENTS, JANUARY 1963

Gallery hours: Weekdays 10 a.m. to 5 p.m. Sunday 2 p.m. to 10 p.m. Admission is free to the gallery and to all programs scheduled.

Permanent collection: Paintings and sculpture comprising the Mellon, Samuel H. Kress, Widener, and Chester Dale collections, with gifts from other donors, are located on the main floor. The Widener collection of decorative arts is on the ground floor.

Special exhibition: *Mona Lisa* by Leonardo da Vinci, lent by the French Government. From January 9.

Continuing exhibition: John Gadsby Chapman, a retrospective exhibition. Through January 13. Central gallery.

New publication: "The *Mona Lisa*," illustrated booklet, 16 pages, 7 by 10 inches, 50 cents postpaid.

Recent publications: "John Gadsby Chapman." Exhibition catalog 7½ by 10 inches, 32 pages with 20 illustrations. Introduction by William P. Campbell. Price \$1 postpaid. "Treasures from the National Gallery of Art," edited by Huntington Cairns and John Walker, 11¼ by 15 inches, 85 color plates. Price \$25 postpaid.

New reproductions: Color postcards. Seven new postcards of paintings: Annibale Carracci, "Landscape"; Innes, "The Lackawanna Valley"; Morisot, "In the Dining Room"; Renoir, "A Girl With a Watering Can"; Reynolds, "Lady Caroline Howard"; Steen, "The Dancing Couple"; Titian, "Saint John the Evangelist on Patmos." Five cents each postpaid.

Sunday lectures: A series of lectures on "Stylistic Origins" will begin on January 6 and will continue through February 10.

Holiday Lecture: On New Year's Day the gallery will be closed. A radio lecture device is installed in 30 exhibition galleries. Talks, running continuously, cover most of the periods of art represented by the collections. A visitor may rent a small receiving set for 25 cents to use in hearing these Lecture broadcasts.

Cafeteria: Open to the public Monday through Saturday 11 a.m. to 4 p.m. Sunday 4 p.m. to 7 p.m. Closed January 1.

MONDAY, DECEMBER 31 THROUGH SUNDAY, JANUARY 6

Painting of the week: Hals. "Balthasar Coymans" (Mellon collection), gallery 47, Wednesday through Saturday, 12 and 2; Sunday, 3:30 and 6:30.

Tour of the week: Italian Schools of Painting: Early Florentine, rotunda, Wednesday through Saturday 1; Sunday, 2:30.

Tour: Introduction to the collection, rotunda, Monday, Wednesday, Thursday, Friday, and Saturday, 11 and 3; Sunday, 5.

Sunday lecture: "Origins of the Classical Style." Guest speaker, Charles Morgan, professor of art history, Amherst College, Amherst; lecture hall, 4.

Sunday concert: National Gallery orchestra, Richard Bales, conductor; Marjorie Mitchell, pianist; East Garden Court, 8.

MONDAY, JANUARY 7 THROUGH SUNDAY, JANUARY 13

Painting of the week: Monet. "Banks of the Seine, Vétheuil" (Chester Dale collection), gallery 83, Tuesday through Saturday, 12 and 2; Sunday, 3:30 and 6:30.

Tour of the week: Italian Schools of Painting: Late Florentine, rotunda, Tuesday through Saturday, 1; Sunday, 2:30.

Tour introduction to the collection: Rotunda, Monday through Saturday, 11 and 3; Sunday, 5.

Sunday lecture: "Origins of the Gothic Style." Guest speaker: Robert Branner, professor of art history, Columbia University, New York, lecture hall, 4.

Sunday concert: Claude Frank, pianist, east garden court, 8.

All concerts, with intermission talks by members of the National Gallery staff, are broadcast by station WGMS-AM (570) and FM (103.5).

MONDAY, JANUARY 14 THROUGH SUNDAY, JANUARY 20

Painting of the week: De Hooch. "A Dutch Courtyard" (Mellon collection), gallery 47, Tuesday through Saturday, 12 and 2; 47, Tuesday through Saturday, 12 and 2; Sunday, 3:30 and 6:30."

Tour of the week: Italian Schools of Painting: Venetian, rotunda, Tuesday through Saturday, 1; Sunday, 2:30.

Sunday lecture Z u
Tour: Introduction to the collection, rotunda, Monday through Saturday, 11 and 3; Sunday, 5.

Sunday lecture: "Oriental Influences in Early and Late Medieval Art." Guest speaker Benjamin Rowland, professor of art history, Harvard University, Cambridge, lecture hall, 4.

Sunday concert: Luis Garcia-Renart, cellist; Marta Garcia-Renart, pianist; east garden court, 8.

MONDAY, JANUARY 21 THROUGH SUNDAY, JANUARY 27

Painting of the week: Orazio Gentileschi. "St. Cecilia and an Angel" (Samuel H. Kress collection), gallery 49, Tuesday through Saturday, 12 and 2; Sunday, 3:30 and 6:30.

Tour of the week: Italian Schools of Painting: Umbrian, rotunda, Tuesday through Saturday, 1; Sunday 2:30.

Tour: Introduction to the collection, rotunda, Monday through Saturday 11 and 3; Sunday, 5.

Sunday lecture: "Renaissance Experimenters." Speaker, Margaret Bouton, associate curator of education; National Gallery of Art, lecture hall, 4.

Sunday concert: George Walker, pianist, east garden court, 8.

Inquiries concerning the Gallery's educational services should be addressed to the Educational Office, REpublic 7-4215, extension 272.

Salute to the Ukrainian People on Ukrainian Independence Day, January 22, 1963

SPEECH

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. GALLAGHER. Mr. Speaker, during the last several centuries the long

history of the Ukrainian people entered a period full of calamities and tragedies. Since the middle of the 17th century the Ukrainians have been subjected, except for a brief period from 1918 to 1920, to alien rulers in their homeland. After suffering under the autocratic czarist regime of Russia for some 250 years, they were freed from the chains of that regime by the Russian Revolution of 1917, and early in 1918 they proclaimed their national independence. Ukrainian leaders instituted a democratic form of government and proclaimed the Ukrainian Republic. During the next 2 years Ukrainians worked heroically to rebuild their war-torn country and to make it a safe haven for its people. Unfortunately they had neither the time nor the means to accomplish these difficult tasks because their foes were preparing to put an end to the new state. In 1920 the country was attacked, invaded and overrun by the Red army, which viciously put an end to the Ukrainian Republic. Soon the country was completely overrun and was made part of the Soviet Union, and so it remains to this day.

For nearly 43 years, the Ukrainians have suffered under Soviet totalitarianism. Some 42 million stout-hearted and patriotic Ukrainians have been unsuccessful in their continuing attempt to free themselves from Soviet tyranny because with their bare hands they have been facing the ferocious might of the entire Soviet Union. The freedom-loving people of Ukraine have not, however, abandoned their struggle for independence. They have been carrying the fight for freedom on, and still carry on with all the means at their disposal, hoping and praying that their righteous cause will eventually win. On the 45th anniversary of their Independence Day I join millions of Americans in wishing the Ukrainian victims of Soviet treachery fortitude and power in their struggle against the forces of totalitarian tyranny.

Tribute to Herbert H. Lehman

EXTENSION OF REMARKS

OF

HON. WILLIAM FITTS RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. RYAN of New York. Mr. Speaker, on January 15, Herbert H. Lehman, one of the great statesmen of our times, was honored by the women's division of the Federation of Jewish Philanthropies. Senator Lehman, who has been elected to the highest offices New York State can bestow, is loved and respected as no politician has been since Franklin Delano Roosevelt. One of New York's great Governors and the voice of liberalism in the Senate during the 1950's, Senator Lehman's constant demonstration of courage and dedication is an everlasting inspiration. It is with great pleasure that I direct the attention of

my colleagues to the following remarks made by Mayor Robert F. Wagner, of New York, at the luncheon. The address follows:

REMARKS BY MAYOR ROBERT F. WAGNER, AT LUNCHEON OF WOMEN'S DIVISION, FEDERATION OF JEWISH PHILANTHROPIES

I would not, for anything, have missed this opportunity to join in paying today's heartfelt tribute to Herbert Lehman. Herbert Lehman needs no testimonials, but in honoring him, we honor not only a man but an era—not only an individual but a tradition—a tradition of greatness of which he has been of the main builders, and of which he remains today one of the last great exponents.

Herbert Lehman is, among many other things, a living proof that virtue, integrity, and nobility can pass through the weathered streets of public life, and through temptations and stresses of elective office, and of standing for public office, and can come through undimmed, untarnished, and unfulfilled. I believe that the answer lies in the strength with which these virtues are attached to the character and personality of the man. In Herbert Lehman they are cast in one piece. In him these characteristics, these virtues, are found almost unalloyed. Yet, contrary to the theory of cynics, this man is recognized in all the places of the earth and among his own friends and family as well—which is an even harder test—as a truly great man.

I knew of Governor Lehman before I knew him. Even before I knew him as a friend, he was pictured in our household as a symbol of rectitude and uncompromising integrity, and of unswerving devotion to the public good. We knew of his greatness of character even before we came to realize his greatness as a public officeholder.

I knew of him as a generous and passionate admirer of Al Smith and as a man who shared my father's ideals and principles, even though Herbert Lehman had arrived at his first places of public eminence by a road quite different than that traveled by my father.

It is worth noting that both my father and Governor Lehman's father came here from Germany, although his father preceded mine to this country by more than a full generation. Beginning in the late twenties, Governor Lehman's career in public office came to dovetail closely with that of my father. In the thirties, they worked together under the supreme leadership of Franklin D. Roosevelt for the achievement of what is often called the Roosevelt revolution.

Then in the Indian summer of Herbert Lehman's career, after he had retired from the last of his great public offices, he returned to the grassroots of his political life—to the sidewalks of New York—to the great task, as he conceived it, of reforming the Democratic Party organization of New York, as a means of generating improvement in the political and governmental atmosphere of his native city.

It had been my privilege ever since the days I was a freshman assemblyman in Albany, my first public office, to look up to Governor Lehman as a symbol of all the political values I had learned to cherish. I followed his leadership while he was Governor. I was proud to have him speak for me and for the people of New York City in Washington while he was Senator, and finally in the end, I was immensely fortunate to have him not only as my friend but as my counselor and supporter.

He had long been called the conscience of the American liberalism and so he became the embodiment of what was called here in New York City the reform movement. The impact of that movement on New York City may be debatable. I will not undertake to

day to give a full evaluation of Herbert Lehman's influence in the political or governmental life of this city. That would take a book. I hope sometime, when I have the time, to be able to contribute to the writing of such a book. But today I will only say that in my judgment this impact has been historic, and altogether constructive and salutary.

To see this great man, already full of all the honors that the people of New York City and State could give him—the most venerated man of his faith in all the country and in all the world—to see him go barnstorming along the sidewalks of the city, into every neighborhood and section, shaking hands, speaking from the backs of trucks and jerry-built platforms, speaking so earnestly and sincerely as only he can speak, to see him in this way, to see him at my right side over a period of so many arduous months, was a spectacle to be remembered beyond even the narrow frame of the political circumstances which brought about his involvement.

As I said, I will leave it to the historians to measure the full proportion of the impact of the New York City reform movement. But I would be ungrateful, if I did not observe that had Herbert Lehman chosen to retire and enjoy his honors and the leisure and rest that his years deserved, it is rather unlikely that I should be standing here today as mayor of this city.

Certainly not because of this, but for a wide range of reasons which are so obvious that I need not enumerate them here today, I have asked and secured Governor Lehman's tentative agreement to be here in New York City on March 28—which day and week I shall proclaim as Lehman Day and Lehman Week. And there shall occur on that day and during that week, I am sure, appropriate observances of the 85th birthday of this beloved and heroic man, this compassionate and generous man, this gentle, gracious, peace-loving and yet fighting man. All of us will join on that occasion in tribute not only to Herbert Lehman but to that beautiful, devoted, gracious and ever-zealous and protective wife and helpmate, who with Herbert Lehman have made up one of the finest man-and-wife teams I have ever known—Herbert and Edith Lehman.

And now let me conclude my tribute to Herbert Lehman with words which are deeply appropriate to him—words that come from that great book, the Talmud. That wise and inspired book says: "The best preacher is the heart; the best teacher is time; the best book is the world; the best friend is God."

Herbert Lehman has lived these sentiments.

Cardiologists' Oversea Program Successful

EXTENSION OF REMARKS OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. ROOSEVELT. Mr. Speaker, almost a year ago, my good friend Mr. Eddie Cantor, a great American and well-known entertainer, wrote me with respect to an oversea program involving the American College of Cardiology. This nonfund raising educational organization has set up a committee to provide postgraduate courses in cardiology for less privileged countries, and particularly to present the great recent ad-

vances in cardiology in America. This program was particularly conceived to bring good will for our country and to improve the scientific image of America overseas.

The first circuit course was conducted in the Philippines and then Formosa, and was received with great enthusiasm by the over 2,200 physicians who attended. The reports received by our State Department were most satisfactory. The traveling expenses of this first circuit course were met by a \$10,000 education grant from the Eli Lilly & Co., International. The program was intense, but the interest of the local physicians made the effort worthwhile.

The American Specialists Division of the Department of State recommended that the college obtain invitations from other countries, and advised that the Department of Cultural Exchange hoped to provide funds to pay the travel expenses for future faculties. A second course was arranged, but despite the immeasurable success of the first journey, the State Department officially advised that while it considered the program a commendable one, it could not offer the financial assistance requested—the nominal sum of \$9,000.

At this point Mr. Cantor asked that I contact the Department of State to request that additional consideration be given to this project. I was happy to do so, and as a result the proposal was approved. Its success is attested to by a letter to Mr. Cantor from Dr. Elliot Corday, chairman of the committee which arranged the courses. Mr. Cantor has graciously shared this highly interesting report with me, and I believe you will also find satisfying the immense good accomplished by a small sum by these dedicated representatives of their profession and country:

INSTITUTE FOR MEDICAL RESEARCH,
CEDARS OF LEBANON HOSPITAL,
Los Angeles, Calif., December 31, 1962.
Mr. EDDIE CANTOR,
Beverly Hills, Calif.

DEAR MR. CANTOR: I would appreciate it greatly if you would transmit the attached information to our Congressman, JAMES ROOSEVELT, and thank him for his help in this program.

In summary, we have now conducted 3 circuit courses in 6 countries, the first 1 to the Philippines and Formosa (a copy of this report is attached), the second to Lisbon and Madrid, and the third to Jerusalem and Istanbul (programs attached). All these programs were overwhelmingly successful. You will notice that the doctors served without remuneration, only their traveling expenses were paid. In many areas the per diem did not cover their living costs. They refused an honorarium because they wished this to be their contribution to our country, and for the benefit of mankind. They often suffered a great loss of income. President Kennedy's motto of "Ask not what my country can do for me, but what I can do for my country," would be most appropriate.

Each visiting faculty came back exhausted, but so enthused by the reception they received. Usually, the auditorium was too small. In Turkey a public address system had to be installed in an adjoining hall. The local committees were overwhelmed by the turnout. The U.S. Information Agency used each ceremonial event for press, television, and radio so that the people throughout the land could appreciate that American medi-

cine was supreme. It helped improve the scientific image of the United States. Senator FULBRIGHT and Congressman MORGAN were present at the Ambassador's reception in Madrid. I understand they commented on the effectiveness and low cost of this program, and considered it should be expanded.

The State Department has asked us to prepare to send similar groups to South America in the spring of 1963. Chancellor Murphy of UCLA who is an authority in medical affairs in South America has helped us with our plans. In addition, we have invitations from countries behind the Iron Curtain. Yugoslavia and Poland asked us to present courses there. Other requests have been received from Pakistan, Thailand, France, Greece, and the Australian Asian Heart Association. The State Department is checking on the authenticity of these invitations.

I am enclosing reports from the program chairmen of Lisbon, Jerusalem, and Madrid, and from the cultural attaché in Lisbon. I wish that you would transmit these along with the copies of the programs to Congressman ROOSEVELT. Programs were sent to all the doctors in Spain—35,000 copies. You can realize the immense good-will value that such distribution would have.

Again, Mr. Cantor, I hope that you will extend our best wishes to Congressman ROOSEVELT and thank him again for his assistance in making this program possible.

Wishing you the best of everything in the new year, and with kindest personal regards,

Sincerely,

ELOTT CORDAY, M.D.

MADRID, December 4, 1962.

ELOTT CORDAY, M.D.,
Institute for Medical Research, Cedars of
Lebanon Hospital, Los Angeles, Calif.

DEAR ELOTT: The course was a great success. From 500 to 600 doctors attended it and many took part in the discussions. Everybody was really pleased not only because of the prestige of the American colleagues but because of their efficiency, sincerity, modesty, and good will.

We tried to make pleasant their stay here and I have the impression that they did appreciate it. We do keep a wonderful memory of these past days.

Please receive my congratulations for it and forward my gratefulness to the American College of Cardiology for its initiative in organizing such courses. I thought of you very often during those days.

With very kind regards to you and Mrs. Corday, I am,

Yours very truly,

C. JIMÉNEZ DÍAZ.

LISBON, PORTUGAL,
December 3, 1962.

Dr. ELOTT CORDAY, M.D.,
Chairman, Postgraduate Program Overseas,
American College of Cardiology, University of California School of Medicine,
Los Angeles, Calif.

DEAR ELOTT: The course in cardiovascular diseases you worked so hard to bring about was a huge success.

The members of the faculty were top grade, their subjects of the greatest interest, and they had a full house every time they spoke.

All of us that had the privilege of knowing these great men enjoyed meeting them and were stimulated by them.

To you as the prime instigator and principal organizer of this wonderful meeting go our most heartfelt thanks.

Kindest regards from

Yours ever,

Arsénio,
ARSÉNIO CORDEIRO.

THE FOREIGN SERVICE OF THE
UNITED STATES OF AMERICA,
AMERICAN EMBASSY,
Lisbon Portugal, December 10, 1962.

ELOTT CORDAY, M.D.,
Institute for Medical Research,
Cedars of Lebanon Hospital,
Los Angeles, Calif.

DEAR DR. CORDAY: First, I should like to apologize for taking so long to send you a report of the distinguished cardiology team we were privileged to have with us for a few days at the end of November.

The seminar was held at the School of Medicine of the University of Lisbon and was very well organized by the Portuguese Cardiology Society headed by Dr. Arsenio Cordeiro. The seminar was well publicized through the local press, radio, and television and by the previous distribution of 1,500 programs (see attached copy) to leading physicians throughout the country. Attendance at the sessions was unusually high; 280 doctors and students received certificates for attendance at seven of the eight sessions. At one of the sessions on the last day Dr. John LaDue presented technical books by various team members to the University of Lisbon. This presentation was covered by the local press, including photographers. Parts of the opening session were also filmed for television transmission. On November 20, the American Ambassador offered the visiting team a reception at the Embassy residence for approximately 75 professional people.

Portuguese response to the seminar was extremely favorable; not only were local participants greatly impressed by the high category of the American team, but they also reacted positively to the consistently high level of the individual presentation. I attended the opening session and can honestly say that Dr. Dwight E. Harken's lecture on "The Past, Present, and Future of Cardiological Surgery" was the best organized and most absorbing talk I have ever witnessed. The fact that all sessions were conducted in English seems to have presented no impediment to general understanding of the material.

Members of the team expressed themselves as satisfied with both the results and with their reception by their Portuguese colleagues. They all agreed, however, that the program was an exhausting one which left very little time for rest and recuperation. I gather, however, that it was the intention of the American College of Cardiology that this visit be strictly a work session, as I can assure you it was.

Altogether this project was one of the most successful I have known and left an excellent impression upon both sponsors and participants. The Embassy feels particularly grateful that the team could have come to Portugal at a time when Portuguese-American relations need strengthening in every possible way. I am sure the Ambassador would wish to add his gratitude to mine and to wish these distinguished cardiologists all success in their future missions.

Sincerely,

ROD W. HORTON,
Cultural Affairs Officer.

Ukrainian Independence Day

SPEECH

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mrs. DWYER. Mr. Speaker, the 45th anniversary of the independence of

Ukraine is an event that demands commemoration here in the House of Representatives, the oldest continuous free representative assembly on earth. So I consider it a privilege to join with our colleagues in paying tribute to the people of Ukraine, both here in the United States and in their captive homeland, and to their love of personal freedom and national independence which has survived centuries of persecution and oppression.

The people of Ukraine have a special claim to our understanding and support. Not only do they seek for themselves what we have found and firmly established here and what we proclaim to be an inalienable right of all peoples—that is, government by the consent of the governed—but we have also been the beneficiaries of the approximately 2 million people of Ukrainian ancestry who have brought to this country the spiritual qualities and the human values of an old and distinctive culture.

In the congressional district which I am privileged to represent, I have seen at first hand the importance of the contributions being made daily by our fellow citizens and neighbors of Ukrainian descent. Because of their friendship, I have obtained a closer, more personal appreciation of the dedication of Ukrainians everywhere to the goals of individual liberty and national self-determination.

At this point, Mr. Speaker, I should like to call the attention of those of our colleagues who were not present at the opening of our session this noon to the fact that the prayer today was offered by the Very Reverend Walter Bukata, pastor of the Ukrainian Orthodox Church of the Holy Ascension of my neighboring city of Newark. On my own behalf and that of my many constituents who know and admire Father Bukata, I am delighted to welcome him to the House of Representatives on this memorable occasion.

Mr. Speaker, Ukraine is the largest and one of the oldest of the captive nations of Eastern Europe. Yet, the period of her independence as a nation during the 20th century is the shortest, the 2 years between 1918 and 1920 during which Ukrainians fought for and won their freedom from Russian monarchists only to have it torn away by the Russian Communists. Thus it is that Ukrainians know, perhaps better than most, the evils of imperialist tyranny and despotism, whether of the tsarist variety or the Godless brutality of communism. To have refused to succumb, to have kept alive the dream of freedom and the light of independence in the face of almost permanent persecution, is worthy of our deepest admiration and gratitude.

Unfortunately, Ukraine is sometimes omitted from the lists of the so-called captive nations of Eastern Europe, possibly because this brave nation was forcibly incorporated into the Union of Soviet Socialist Republics. Whatever the explanation, however, this must be considered one of the real ironies of modern history. For Ukrainians have not freely subordinated their consciousness of nationhood to the iron demands of the Soviet state. On the contrary, it was

only because of their undeniable claim to nationality and their determination to fight for it that Soviet Russia was led to concede the Ukrainian people the status of a republic with the false hope of independence it implied. The hypocrisy, of course, was compounded when Soviet Russia obtained a seat in the United Nations for its puppet government of Ukraine.

But make no mistake about it, the 40 million Ukrainians now living in captivity and their countrymen everywhere know all too well that Ukraine is not free or independent. Nor have they given up the struggle for what is theirs in justice, despite the difficulties, the dangers, and the discouragements. We salute them for their courage.

On this occasion, however, we should do more than salute a people's courage, more than indicate our understanding of their problems, more than pledge our support in general terms. We owe them action, effective action, even though we recognize the limits of our own national power. We cannot arbitrarily or single-handedly change the face of the map or even raise the iron curtain, but there are concrete and positive steps we can take to advance the cause of freedom.

Among them, Mr. Speaker, we can establish the proposed Select Committee on the Captive Nations here in the House and thereby help equip the Congress to deal with developments in Eastern Europe more expeditiously and effectively. The hearings held last year on the captive nations by the Subcommittee on Europe of the Committee on Foreign Affairs indicates the real usefulness of such a group whose full-time attention could be devoted to this critically important subject. Consequently, I have today introduced again legislation to create a Captive Nations Committee.

We can also act to strengthen the U.S. Information Agency and its Voice of America with regard to the quality, frequency, and scope of its programming behind the iron curtain.

We can broaden and increase exchange programs and other means of contact between the people of the captive nations and our own people.

We can do a better job of reminding the rest of the world as frequently as practicable that the United States, as a matter of fundamental principle, refuses to accept the status quo in Eastern Europe and continues to insist upon the right of every people to political liberty and national self-determination.

We can expose at every opportunity—especially in the forum of the United Nations—the ugly record of Soviet colonialism in Eastern Europe, a record of subjugation, discrimination, economic exploitation, and military domination, a record that deserves the official condemnation of that world body.

These and many other actions can be taken which would give to the Eastern European policy of our Government the emphasis this important area requires. In keeping with our own ideals and in justice to those who have suffered for freedom's sake, we can do no less.

An Expensive Dock Settlement

EXTENSION OF REMARKS OF HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. RUMSFELD. Mr. Speaker, as many of my colleagues, I have been deeply concerned in recent weeks about the losses which this Nation has and is still suffering as a result of strikes. In the few weeks since this Congress convened, we have seen several dramatic examples of abuses of the substantial economic power of the labor monopoly.

Under leave to extend my remarks in the Appendix of the RECORD, I submit an editorial from the Christian Science Monitor of January 25, 1963, which raises some serious questions worthy of consideration by all Americans and which demand the attention of the Congress.

The editorial follows:

AN EXPENSIVE DOCK SETTLEMENT

The 31-day longshoremen's strike which tied up 600 ships and idled 100,000 men at ports up and down the U.S. Atlantic and gulf coasts is estimated to have cost more than \$700 million in lost wages and business.

How much indirect loss was caused in shutdowns and layoffs in industries producing goods for overseas shipment will never be known.

But now that a settlement has been forced by a kind of compulsory mediation on the part of the Government, the cost of the imposed terms to the shipping industry and to users of shipping will be far from insignificant even compared with the costs of the strike.

The spokesman for the New York Shipping Association calls it a "very, very expensive" settlement. And a look at the terms bears him out.

In the first place, the most emotional issue in the dispute, reduction of work gangs in northern ports from 20 men to 17, had earlier been referred to the Department of Labor for a 2-year study. This is probably the best way to handle the matter. But it means that savings by mechanization with which the shipping companies could meet the cost of wage increases are denied them for at least 2 years.

Meanwhile, President Kennedy has referred wage issues in the dispute to a special board headed by Senator WAYNE MORSE, an experienced labor arbitrator but also a pronounced political liberal. The terms recommended by this board, backed by the prospect of a report to Congress if the shutdown continued, involve increased labor costs of 37-cents-an-hour by the end of a 2-year period.

This is, if anything, a shade nearer the 51-cent serious demand of the International Longshoremen's Association than to the 22-cent offer of the employers. It is enough to raise serious question whether the increase is "in the national interest" to which President Kennedy appealed when he appointed the special board.

One of the national interests, as the President and others repeatedly emphasize, is to compete effectively in international trade, so that earnings from exports may reduce the deficit in balance of payments which results from defense and aid costs. This is not served by permitting unchecked continuance of a wage spiral enforced by labor monopoly.

Further, will the example of what the dockworkers have gained by subjecting the Nation to their economic power encourage the New York Typographical Union to continue its strike against New York newspapers until one or more of those publications goes out of business? Or encourage the United Steelworkers to reopen their contract with demands that would have far-reaching and depressive effects?

ROA's Minuteman, Dennis Chavez

EXTENSION OF REMARKS OF HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. SIKES. Mr. Speaker, I am privileged to present for reprinting in the CONGRESSIONAL RECORD an interesting and significant article from the Officer, the publication of the Reserve Officers Association of the United States. It deals with the life and accomplishments of the late Senator Dennis Chavez of New Mexico. Senator Chavez was selected last fall to receive the honor of "Minuteman of 1963" by ROA. On November 17, 1962, Senator Chavez died, and the award will be accepted posthumously at the midwinter national conference banquet on March 1 by his widow. Senator Chavez led an interesting and colorful life and was a great and good friend of the military. The article herein reprinted was written expressly for the Officer by John J. Ford, legislative editor of the Army Times, and is an authority on Capitol Hill matters.

The article follows:

PROFILE OF AN AMERICAN—BORN IN ADOBE HUT, ROA'S MINUTEMAN ROSE TO BECOME POWERFUL LEADER

(By John J. Ford)

Born in an adobe home with a dirt floor, too poor even to go to high school and past 30 before he could afford to study law, Dennis Chavez rose to become chairman of the most powerful subcommittee in the U.S. Senate, the group that sets the annual appropriations for national defense. At the time of his death last November he was fourth senior Member of the U.S. Senate and had served as a Senator longer than any other man from New Mexico.

As a boy he was forced to leave school in the seventh grade to go to work and help support his family, driving a grocery wagon 12 hours a day for the princely salary of \$2.75 a week. As a Senator he headed the unit that wrote awesomely expensive Defense bills, directing the spending of \$40 billion or more annually. His first job had taught him the value of the dollar but in his last he never made the mistake of trying to put a price tag on defense. Chairman of the Defense Appropriations unit during 8 years when Congress was showing renewed interest in strategic planning and exerting a big influence on such planning through the money bills, he consistently fought for a stronger Defense Establishment. He was in the forefront of the fight for a larger Army and Marine Corps, minimum strengths for the Reserves, speedier development of Polaris, a nuclear carrier, more conventional airpower and development of the B-70.

The grocery wagon job was in Albuquerque 25 miles north of Los Chavez, in Valencia County, where Dennis was born on April 8, 1888, the son of David and Paz Sanchez Chavez. The name of his birthplace was not coincidental; his roots went deep in the soil of Valencia County. He was on land deeded to his direct ancestors by Phillip II of Spain in 1597. One of his progenitors was the first jefe politico (Governor) of the New Mexican territory when Mexico won its independence from Spain in 1821.

The roots were deep but the soil was dry. David Chavez struggled in vain to provide a living for his family on the parched earth of his forebears. When Dennis was 7 the family moved to Albuquerque where there were jobs and also schools. In Los Chavez there were no schools, no books, and only Spanish was spoken. Dennis later said he had become a Democrat because, "I saw that under the Republicans English-speaking communities had schools, Spanish-speaking communities had none."

TO WORK AT 13

But the family was still poor and at 13 Dennis, oldest of 8 children, had to go to work. He not only drove the delivery wagon, he cared for the horse and stable. He once said he spent his youth "playing valet to a horse at 6 o'clock in the morning." The hours were from 6 a.m. to 7 p.m. except on Saturday. On Saturday he worked till 11 p.m. On weekday evenings he studied in the local library, reading his great hero, Jefferson.

After 4 years the pay was up to \$11 a week but 1 day the store owner told him to deliver food to men hired to break a strike. He refused and was fired. At 17, he had taken his stand on the side of the underdog. It was the only side he was comfortable on for the rest of his life.

Examples of this come up again and again in his career. He worked tirelessly for the Mexican people of his State, who had discrimination problems, and for the often neglected Indians of the West.

A little-known incident happened in connection with the Defense money bill, which regularly contains restrictions against buying food and clothing from foreign suppliers. In 1955, Chavez added to the restriction the buying of "spun silk yarn for cartridge cloth." A man who owned a small silk plant who had supplied the cartridge covers to the Navy testified he was being forced out of business because the Navy was buying the covers from Japan. He had some evidence the Japanese product did not wear as well as his own. He had a small business and no lobbyist or Senator to fight his cause; he was a little man being disregarded by the Federal Government. Chavez put in the rider to protect him and the jobs of the people who worked for him. Senator Chavez had never seen the man before the committee hearing and never saw him after that but the rider stayed in the bill despite pressure from the State Department and other sources. It is still in the Defense bill today.

TAKES SENATE JOB

The ex-wagon driver studied at night to become a qualified surveyor, worked as assistant engineer for the city of Albuquerque. A job as interpreter for Senator A. A. Jones in 1916 brought an offer of a clerkship in the U.S. Senate. Encouraged by his wife, whom he had married in 1911, he gave up a promising start in the contracting business to come to Washington and fulfill his long dream of studying law. At the tender age of 30, a married man with two children who had never seen the inside of a high school or a college, he entered Georgetown Law School.

Years later, any young man who served on Senator Chavez' staff was required to use his spare time bettering his education. Among ex-Chavez staffers who got their

higher education this way are a former lieutenant governor, a former district attorney, and a number of prominent lawyers and doctors.

With his law degree in 1920, Chavez started a notably successful law practice, though often defending clients who could not afford attorney fees. In 1923 he was elected to the State legislature where he introduced the first bill to provide free textbooks to the schoolchildren of New Mexico. In 1930 he was elected to the House of Representatives, unseating incumbent Republican Albert Simms.

Reelected in 1932, he tried unsuccessfully to defeat Republican Senator Bronson Cutting in 1934 in one of the more acromatic campaigns in New Mexico history. It was the only 1 of 13 major primary and general election campaigns he lost. When Cutting died in a plane crash in 1935, Chavez was appointed to the seat. He was elected to it in 1936 and reelected in 1940, 1946, and 1952. Early building a reputation as a fighter for the things he believed in, he fought some tough battles in the political arena, once complaining it was his fate "always to run against a million dollars."

PROUD OF HERITAGE

The only Senator of Spanish descent, he was intensely proud of his heritage. Once, when asked his nationality, he replied, "American since before Plymouth Rock." An aid once said Chavez was recognized by his colleagues as "one of the last great individualists in the Senate." Like the great individualists throughout the history of the Senate, he had courage. His fellow Senators much admired that courage in 1950, at the height of the McCarthyism era, when many in the Congress were afraid to speak out. Chavez rose on the Senate floor to denounce McCarthy's favorite witness, Louis Budenz, as a man who gave un-American, un-Christian dubious testimony under the shield and cloak of the Catholic church. Chavez, himself a Catholic, said the period might be remembered as a time "when we have quietly shackled the growth of men's minds."

Early in the years of the war he showed that foresight on defense matters that marked his later service. The Senate was debating the Army appropriation bill in 1940 at a time when air power was still little understood and attempts were being made to cut the funds for pilot training. Chavez argued, "I maintain that our national defense in the future will be . . . the airplanes of the future. I am for anything that may be done for the making of better pilots and for bringing about of technical improvements in this field."

EQUAL PAY FOR NURSES

Senator Chavez often helped on defense matters in less conspicuous ways. Early in the war there was a terrible shortage of nurses in the Army. Looking into the problem Chavez learned the pay for nurse second lieutenants was below that of male officers of equal grade. He prodded the War Department into paying nurses the same as other officers and recruitment soon picked up.

He wanted a strong defense and he wanted Congress to take the lead in bringing it about. In 1959 his committee reported a bill providing a 200,000-man floor on the Marine Corps and minimum strengths of 300,000 and 400,000, respectively, for the Army Reserve and Army National Guard. He had also voted for an active Army of 900,000 but it had lost in committee. When some in Congress questioned whether Congress should be setting strength minimums or other details of military policy, Chavez said:

"The fundamental issue involved far exceeds in importance the question of what constitutes an adequate strength for the Marine Corps. What is in fact involved here is the constitutional role of the Congress in

the formulation of national military policy. The Constitution places the ultimate responsibility for defense squarely on the shoulders of the Congress."

He then lectured his colleagues with precedents, dating back to the time when veterans of the Continental Congress served in Congress, of the legislature setting the size of the Armed Forces and such details as how many marines would be carried on specific naval vessels. He even brought up a case where Congress had specified the tensile strength of the steel to be used in construction of warships.

"In those occasional incidents where our most carefully considered judgments differ from that of the Executive," he concluded, "the Congress cannot in honor and good conscience absolve itself of the burden by supinely bowing to the Executive."

Senator Chavez had a clear understanding of the value of the Reserves. On July 13, 1959, he told the Senate:

"Over a period of years there have been progressive reductions in the strength of the Active Army. One of the factors compensating for this reduction has been the increasing effectiveness and readiness of the Army National Guard and Reserve.

"The Guard and the Reserve are the lowest cost military forces that we have. As an economical and effective alternative to large standing forces they should, at all times, be kept at the optimum levels comparable with the importance of their mission.

"Because no nation, however prosperous, can afford to maintain on active duty all of the personnel who might be needed in time of national emergency, it is imperative that there be a pool of trained manpower available at a moment's notice. The Guard and Reserve, if properly maintained at adequate strength levels, will be able to fulfill this requirement."

LONG, USEFUL LIFE

The respect that fellow Senators had for Senator Chavez' service on national defense matters was well expressed by Vice President LYNDON JOHNSON who said, "I believe the Members of the Senate and every liberty-loving American looks with a great deal of approval upon his efforts. The Senator from New Mexico has had a long and useful life of public service, and I think the Senate is honored to have him head this important subcommittee."

Senator Chavez was thought to have won a year and a half battle with cancer of the throat and was learning to talk again with a metal tube in his throat. He left the hospital last fall to campaign for his party's ticket in New Mexico. He contracted a virus which, coming after the long illness, led to a heart attack that took his life November 17, 1962.

Those who attended the funeral in Albuquerque noted that when the funeral procession moved through the poorer sections of the city the people lined the streets for miles to pay their last respects. They had lost a great friend and they knew it. They always do.

Washington State Senate Opposes Japanese Halibut Fishing in Bering Sea

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. PELLY. Mr. Speaker, the Washington State Senate unanimously passed

a memorial urging Federal action to cancel recent concessions of the International North Pacific Fisheries Treaty Commission to allow Japan to fish for halibut east of an existing treaty line.

This memorial was adopted 44 to 0 and charged that a halibut fishery conservation program was threatened by the concessions.

On February 5 a meeting of the International Commission is scheduled to be held in Tokyo to consider Japanese proposals for conservation. It seems to me the agreement to allow Japan to cross the line heretofore established by treaty is premature. Conservation arrangements should have been agreed to first.

Once this halibut resource was almost destroyed but through regulation and self-denial of our fishermen the catches have been increasing in the Bering Sea area. Now the question is, Will the Japanese make 30 years of such restraint and sacrifice in vain?

In this connection, Mr. Speaker, let me add that a joint House-Senate congressional committee has scheduled a hearing on February 14 and 15 in Seattle, Wash., to investigate as to whether the halibut Commission's action was justified.

Plain Commonsense on So-Called Deficit Spending

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by James Tobin which appeared in the January 19, 1963, issue of the *New Republic*. Mr. Tobin takes the commonsense approach and gives an accurate assessment of so-called deficit spending.

The article follows:

DEFICIT, DEFICIT, WHO'S GOT THE DEFICIT?

(By James Tobin¹)

Question: "Sir, on that point, what do you think of the President's tax cut proposal and his idea that it would spur revenues even though we would have what he calls a temporary deficit? Does this make sense to you?"

Answer: "My own background is that of a small businessman who has had to scratch right hard to keep his head above water at times. The arithmetic of this thing just doesn't work out. I couldn't in my business increase my expenses and reduce my revenues and stay alive. I don't think a government can do it without an eventual change in our form of government."—Interview with Representative HOWARD W. SMITH, Democrat of Virginia, Chairman of the House Committee on Rules.

For every buyer there must be a seller, and for every lender a borrower. One man's ex-

penditure is another's receipt. My debts are your assets, my deficits your surplus. If all of us were consistently "neither borrower nor lender," as Polonius advised, no one would ever need to violate the revered wisdom of Mr. Micawber. But if the prudent among us insist on running and lending surpluses, some of the rest of us are willy-nilly going to borrow to finance budget deficits.

In the United States today one budget which is usually left holding a deficit is that of the Federal Government. When no one else borrows the surpluses of the thrifty, the Treasury ends up doing so. Since the role of debtor and borrower is thought to be particularly unbecoming to the Federal Government, the Nation feels frustrated and guilty.

Unhappily, crucial decisions of economic policy are too largely blind reactions to these feelings. The truisms that borrowing is the counterpart of lending, and deficits the counterpart of surpluses, are overlooked in popular and congressional discussions of Government budgets and taxes. Both guilt feelings and policy are based on serious misunderstanding of the origins of Federal budget deficits and surpluses.

American households and financial institutions consistently run financial surpluses. They have money to lend, beyond their own needs to borrow. Chart 1 shows the growth in their combined surpluses since the war; it also shows some tendency for these surpluses to rise in periods of recession and slack business activity. Of course, many private households have financial deficits. They pay out more than their incomes for food, clothing, cars, appliances, houses, taxes, etc. They draw on savings accounts, redeem savings bonds, sell securities, mortgage houses or incur installment debt. But deficit households are far outweighed by surplus households. As a group American households and nonprofit institutions have in recent years shown a net financial surplus averaging about \$15 billion a year, that is, households are ready to lend, or put into equity investments, about \$15 billion a year more than they are prepared to borrow. In addition, financial institutions regularly generate a lendable surplus, now of the order of \$5 billion a year. For the most part these institutions, banks, savings and loan associations, insurance companies, pension funds, and the like, are simply intermediaries which borrow and relend the public's money. Their surpluses result from the fact that they earn more from their lending operations than they distribute or credit to their depositors, shareowners and policyholders.

Who is to use the \$20 billion of surplus funds available from households and financial institutions? State and local governments as a group have been averaging \$3 to \$4 billion a year of net borrowing. Pressures of the expanding populations of children, adults, houses and automobiles, plus the difficulties of increasing tax revenues, force these governments to borrow in spite of strictures against government debt. Unincorporated businesses, including farms, absorb another \$3 to \$4 billion. To the rest of the world we can lend perhaps \$2 billion a year. We cannot lend abroad, net, more than the surplus of our exports over our imports of goods and services, and some of that surplus we give away in foreign aid. We have to earn the lendable surplus in tough international competition. Recent experience shows clearly that when we try to lend and invest too much money abroad, we either have to borrow it back or else pay in gold.

These borrowers account for \$8 to \$10 billion. The remainder—some \$10 to \$12 billion—must be used either by nonfinancial corporate business or by the Federal Government. Only if corporations as a group take \$10 to \$12 billion of external funds,

by borrowing or issuing new equities, can the Federal Government expect to break even. This is, moreover, an understatement of what is required to keep the Federal debt from rising. For the Federal Government itself provides annually \$3 to \$4 billion of new lending; and the Treasury would have to borrow to finance these Federal lending programs even if the Government absorbed no net funds from the economy. It is gross Federal borrowing which offends the fiscal conservative, whether or not the proceeds are used to acquire other financial assets.

The moral is inescapable, if startling. If you would like the Federal deficit to be smaller, the deficits of business must be bigger. And would you like the Federal Government to run a surplus and reduce its debt? Then business deficits must be big enough to absorb that surplus as well as the funds available from households and financial institutions.

That does not mean that business must be run at a loss, quite the contrary. Sometimes, it is true, unprofitable businesses are forced to borrow or to spend financial reserves just to stay afloat; this was a major reason for business deficits in the depths of the great depression. But normally it is businesses with good profits and good prospects which borrow or sell new shares of stock, in order to finance expansion and modernization. As the president of A.T. & T. can testify, heavy reliance on outside funds, far from being a distress symptom, is an index and instrument of growth in the profitability and worth of the corporation. Financial deficits incurred by business firms, or by households and governments, do not usually mean that they are living beyond their means and consuming their capital. Financial deficits are typically the means of accumulating nonfinancial assets, real property in the form of inventories, buildings and equipment.

When does business run big deficits? When do corporations draw heavily on the capital markets? The record is clear: When business is very good, when sales are pressing hard on capacity, when businessmen see further expansion ahead. Though corporations' internal funds, depreciation allowances, and plowed-back profits, are large during boom times, their investment programs are even larger.

Chart 2 shows the financial deficits or surpluses of corporate business and of the Federal Government since the war. Three facts stand out. First, the Federal Government has big deficits when corporations run surpluses or small deficits, and vice versa. Second, Government surpluses and business deficits reach their peaks in periods of economic expansion, when industrial capacity is heavily utilized: 1947-48, 1951-52, 1956-57. Third, the combined deficit of corporate business and the Federal Government is greater now than in the early postwar years; this is the counterpart of the upward trend in available surpluses as shown in chart 1.

Recession, idle capacity, unemployment, economic slack, these are the enemies of the balanced Government budget. When the economy is faltering, households have more surpluses available to lend, and business firms are less inclined to borrow them.

The Federal Government will not succeed in cutting its deficit by steps which depress the economy, perpetuate excess capacity, and deter business firms from using outside funds. Raising taxes and cutting expenses seem like obvious ways to balance the budget. But because of their effects on private spending, lending, and borrowing, they may have exactly the contrary result. Likewise, lowering taxes and raising Government expenditures may so stimulate private business activity and private borrowing that the Federal deficit is in the end actually reduced.

This may seem paradoxical, and perhaps it is. Why is it that the homely analogy be-

¹ James Tobin was a member of the President's Council of Economic Advisers from January, 1961, until last July, when he returned to Yale University. His article on "Growth Through Taxation" appeared in the *New Republic* of July 25, 1960.

tween family finance of Government finance, on which our decisive national attitudes toward Federal fiscal policy are so largely based, misleads us? If John Jones on Maple Street is spending \$8,700 a year but taking in only \$8,000, the remedy is clear. All Mr. Jones need do to balance the family budget is resolutely to live within his income, either spending some \$700 less or working harder to increase his earnings. Jones can safely ignore the impact of either action on the incomes and expenditures of others and the possible ultimate feedback on his own job and income. The situation of John F. Kennedy on Pennsylvania Avenue, spending \$87 billion a year against tax revenues of \$80 billion is quite different. Suppose he spends \$7 billion less, or tries through higher tax rates to boost Federal revenues by \$7 billion. He cannot ignore the inevitable boomerang effect on Federal finances. These measures will lower the sales, payrolls and profits of business firms, whether they were selling aircraft to the Government or pleasure boats to taxpayers. These business firms will in turn spend less for new machinery; their employees and stockholders will spend less on vacation trips. This chain is not endless. But before it ends, it will shrink total spending and income in the economy by a multiple of the original \$7 billion. The Federal tax base shrinks correspondingly. In the end the Federal deficit will be reduced by much less than \$7 billion; perhaps it will even be increased.

Incidentally, many of the very critics who are most vocal in chiding the Government for fiscal sin advocate policies which would make fiscal virtue even more elusive. They want to keep private borrowing in check by tight credit policies and high interest rates. They want to increase corporations' internal flow of funds by bigger depreciation allowances and higher profit margins, making business still less dependent on external funds to finance investment, even in boom times. When these apostles of sound finance also tell the Government to shun external finance, have they done their arithmetic? If everyone is self-financing, who then will borrow the surpluses?

The Nation is paying a high price for the misapplied homely wisdom which guides Federal fiscal policy. The real toll is measured by unemployment, idle capacity, lost production, and sluggish economic growth. But fiscal conservatism is also self-defeating. It does not even achieve its own aim, the avoidance of Government deficits. Federal fiscal and monetary policies consciously and unashamedly designed to stimulate the economy would have sufficient justification in economic expansion itself. But they might well improve the Federal budget too, by inducing business to use the private surpluses that now have no destination other than a rising Federal debt.

New York City: Educational Stepchild of New York State

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. MULTER. Mr. Speaker, another example of the way an urban area is discriminated against by a rural Republican-dominated State government is the area of education. The amount of money that New York City pays into the coffers of the State treasury is astrono-

mical, and yet we have the spectacle of the State returning \$107 less per pupil in State aid to the city's schools than the average received by other school districts throughout the State.

The people of New York City are not blind to this fiscal discrimination and will exert their influence at the polls at the proper time. An example of the awareness of this problem is the following editorial which was broadcast by station WCBS-TV on January 10 and 11:

ANNOUNCER. The following program is an expression of opinion of WCBS-TV. Speaking for the station: Mr. Norman E. Walt, Jr., vice president and general manager of WCBS-TV.

Mr. WALT. Good evening.

New York City schools have been a chronic source of dissatisfaction for a long time. Twenty years ago, our schools were widely regarded as being among the best in the country. Since then they have steadily declined.

Just last month, the State education department issued a report on the city's school system which pointed out that we don't have enough teachers, our classrooms are overcrowded, there aren't enough textbooks, a lot of equipment is antiquated, and many of our school buildings are dingy and dilapidated. While this report was no great revelation to teachers, to parents or, for that matter, to the school children themselves, it was useful to the extent that it spelled out what can be done to remedy these deficiencies. But as responsible citizens who live in New York City, we must face up to the fact that whatever has to be done will cost money, a lot of money. According to an estimate made in a joint report by the Public Education Association and the United Federation of Teachers, the amount required will be close to \$200 million more each year than we are paying now. We must also face up to the fact that there are only two ways to raise it—by increased city taxes and by increased State aid.

Where can New York City taxes be increased? There have been proposals to increase the tax on cab rides, on amusements, on overnight parking, and a proposal to extend the city's sales tax to beer. Channel 2 opposes these taxes because they hit hardest at those who are least able to pay.

However, there are other tax possibilities which channel 2 believes should be carefully studied. One possibility might be to add one-quarter of 1 percent to whatever rate the taxpayer is paying in State income tax. This is called a surtax and would yield approximately \$60 million. Its advantage is that it is based fairly on income. Another tax possibility which could yield as much as \$269 million would be to raise the legal tax limit on real estate 1½ percent—to bring it in line with tax ceilings elsewhere in the State. Or the city might consider taxing the profits from the port authority's non-aviation enterprises at Idlewild Airport as well as any port authority project which has already paid for itself. And finally, there is offtrack betting as a possible steady source of city income.

Now, what about increased State aid? At present, State aid to our city's schools is \$107 less per pupil than the average received by other school districts throughout the State. Why do we receive less? Because the current State aid formula bases the amount any school district shall receive on the tax value of its real estate. This formula is based on the premise that the greater the value of a city's real estate, the greater the taxes it may impose, and, therefore, the greater its financial ability to support its schools. The State figures that New York City, with its high real estate values, doesn't need as much State aid for schools as other districts. The difficulty with this

premise is that it fails to take into account the city's expenses in relation to its income. The fact is that our city spends a far greater proportion of its tax revenues for a far greater number of public services than do the less populous areas. For example, in order to provide adequate police protection, New York City must spend a greater proportion of its total income than that spent by upstate Yates County for the same public service, in fact, 4 times as much. And it must spend proportionately 8 times as much of its total income for its fire department, 10 times as much for sanitation and more than twice as much for welfare. New York City also has to provide services which may not figure at all in the rural county budget, such as air pollution, water pollution, museums and markets. As a result, New York City actually has less of its total income to spend on education than far smaller communities where the cost of other public services is not so great.

If New York City is ever to halt the steady decline of its schools, and to restore them to the high scholastic level they maintained 20 years ago, we must face up to the fact that sacrifices will have to be made. It is going to take money—a lot of money—\$200 million more for our schools than we are paying now. The additional money can only be obtained in two ways: by increased city taxes and by increased State aid. But we can't increase city taxes without the approval of the State legislature and we can't get increased State aid until the legislature comes through with a school formula that no longer discriminates against New York City.

For years our rural-dominated State legislature assured us that it is giving New York City its fair share of aid for education. On this station last November 20, Republican majority leader of the senate, Walter J. Mahoney, assured our viewers that in the field of education, and I quote: "the legislature is appropriating millions of dollars each year in special aids, over and above the amount the city is entitled to under the statewide formula." But significantly, he failed to discuss the formula itself—a formula which doesn't provide the city with anywhere near its fair share of State funds.

Parents of children enrolled in New York City schools can no longer afford to be passive about this form of discrimination. Channel 2 is convinced that Governor Rockefeller and Mayor Wagner can—and ought—to take the problem of our schools once and for all out of the realm of politics. If these two men will work out a statesmanlike formula for new city taxation and increased State aid—before the issues get distorted in legislative infighting—they will have given the legislature much-needed leadership and they will have earned the gratitude of every citizen in New York City.

Thank you and good night.

ANNOUNCER. The preceding program was an editorial opinion of WCBS-TV by Norman E. Walt, Jr., vice president and general manager of WCBS-TV.

Loans for Students

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. TOLL. Mr. Speaker, I have introduced a new bill in the 88th Congress—H.R. 1978—to increase the funds which the colleges and universities can get for

loans to students. The bill will double the amount which the institutions of higher learning will have available for loans to needy students. In the 87th Congress, Representative Bailey, of West Virginia, had a similar bill which did not reach the floor.

I hope that the Committee on Education and Labor will give immediate consideration to my bill or to any similar bill which may have been introduced. The universities and colleges are unable to meet the requests for loans which are made by needy students. The National Defense Education Act program, involving loans to needy students, is acceptable to and supported by all groups interested in higher education. It provides for the return of the public funds loaned, with interest. It contains special benefits for loans to students who are preparing to be teachers so that the teacher shortage can be overcome. The programs for education are vital to the welfare of our country. Many States and cities are cooperating in a splendid manner with education grants, but these sources cannot begin to adequately solve the problem. This Congress can be a tremendous help if the loan program can be doubled at once so that needy students can be helped immediately.

National Revolutions and Russian Imperialism

EXTENSION OF REMARKS OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. FEIGHAN. Mr. Speaker, there is considerable confusion with respect to communism, Russian imperialism, and national revolution which we read and hear so much about in these changing times. National revolutions have been in conflict with the aims of Russian imperialism for more than a century. Today the Russian Communists call out for peaceful coexistence while at the same time they are plotting and working to destroy the national independence of all free nations.

A very significant analysis of the relationship of Russian imperialism, peaceful coexistence, and the aspirations of nations to be independent was made by Dr. Michael S. Pap, director of the Institute for Soviet and East European Studies, John Carroll University, Cleveland, on the occasion of the 45th anniversary of the independence of the Ukrainian Democratic Republic. His analysis relates to the atmosphere which permeated the Treaty of Brest-Litovsk in 1918 and the attitude taken by the Russian Bolsheviks with regard to the newly independent nations which arose with the collapse of the Russian czarist empire. This analysis is a positive contribution toward clearing up the confusion which exists on the nature of imperial Russian communism. By leave

obtained, I insert in the RECORD Dr. Pap's analysis on national revolutions and Russian imperialism:

The anniversary celebrated by the Ukrainians in the free world each January has a meaningful significance not only for the Ukrainians but for the people of the United States and the whole free world as well. It is obvious that when freedom is obliterated in one country, it indirectly affects all the other free peoples. At a time when Moscow tries to impress the world as the champion of anticolonialism, there is an urgent need to remind our people of the fate of nations forced to live under the brutal oppression of Communist Russian dictatorship.

Ukraine with a population of 45 million was the first victim of Soviet Russian aggression. It is the largest non-Russian nation within the Soviet Russian Empire. This entitles it to rank in Europe next to Russia, Germany, and France not only in terms of population, but also in terms of strategic geographic position and rich resources. Because of its resources, it had always been regarded as a coveted prize of aggressors—first the Mongols, then Moscovite czars, and finally the Russian Communists.

When, in 1917, the Russian autocratic government disintegrated, the Ukrainian people availed themselves of the opportunity to regain their own independence. A national government was formed which then issued decrees and promulgated laws, securing liberty and equality for all citizens of Ukraine. At the same time, the Russian Communist Party issued its declaration in favor of the right to self-determination.

It soon became apparent, however, that this Soviet declaration was only a clever Bolshevik maneuver to preserve the unity of the former Russian Empire. Simultaneously with the ostentatious proclamation of the right to self-rule, the Soviet Russian Government dispatched to the Ukrainian National Government a 48-hour ultimatum dated December 17, 1917, signed by Lenin and Stalin, demanding unconditional surrender and the acceptance of Soviet Russian domination over Ukraine. The reply by the Ukrainian Government of December 19, 1917, is regarded today as a historical and a classic document which clearly exhibits a unique comprehension of the potential Communist threat not only to the young Ukrainian Republic, but to the free peoples throughout the world. Ukrainians realized already in 1917 that between the czarist and the Bolshevik imperialism, there was little or no difference. Rejecting the Soviet ultimatum, Ukraine proclaimed her independence on January 22, 1918. A proclamation of the reunification of all Ukrainian territories in one single democratic state followed a year later on January 22, 1919. With these two significant acts, the Ukrainians demonstrated to the world that Moscow and Kiev represented two different cultures, two different nations, and two different mentalities. Kiev personified the democratic concept of government based on respect for human rights and the dignity of man, while Moscow represented not only totalitarianism but also a godless force of destruction.

The ensuing Russian-Ukrainian war of almost 4 years' duration (1917-21) is rather obscured, because at that time communism was not recognized as a danger to the free world. The Russian Communists were aided in their war against Ukrainians by a majority of the Russians who sacrificed democracy in order to preserve the unity of the Russian Empire. How well the Ukrainians understood the danger of Russian Bolshevism can best be described by quoting the Ukrainian Representative Llubinsky at the Brest-Litovsk Peace Conference in February 1918 when following Trotsky's declarations of Communist peaceful aims, he stated:

"The noisy declarations of the Bolsheviks

regarding the complete freedom of the people of Russia is but the vulgar stuff of demagoguery. The Government of the Bolsheviks, which has broken up the constituent assembly and which rests on the bayonets of hired red guards, will never elect to apply in Russia the very just principle of self-determination, for they know only too well that not only the Republic of the Ukraine but also the Don, the Caucasus, Siberia, and other regions do not regard them as their government, and that even the Russian people, themselves, will ultimately deny their right; only because they are afraid of the development of a national revolution do they declare here at the peace conference and within Russia, with a spirit of demagoguery peculiar to themselves, the right of self-determination of the peoples. They themselves are struggling against the realization of this principle and are resorting not only to hired bands of red guards but also to meaner and even less legal methods."

Since the Bolshevik Russian occupation of the Ukraine, 10 million Ukrainians or more died in the defense of their independence. The Ukraine would have remained free had the Western nations paid heed to her warnings of the potential Communist menace and answered her desperate call for moral and military assistance. Without the Ukraine's strategic position and her immeasurable mineral resources, the Soviet Russian Government would have difficulties in initiating aggressive pressures toward the West. We, Americans, should find comfort in knowing that the Union of Soviet Socialist Republics is not all Russia, but a chain of captive nations yearning for an opportunity to break this chain of bondage and become masters of their destinies within their respective Republics. During and after World War II, the Ukrainian Insurgent Army, was actively engaged in fighting nazism and communism alike. Paradoxically, the Western Powers again were not interested in the emergence of this freedom force in Eastern Europe, and unwittingly helped the Kremlin pave its way to the heart of Europe and Asia. On the basis of our experience with the Communists, we should know by now that the only policy capable of shaking the foundation of the Soviet Russian slave empire is a policy motivated by the idea of individual and national liberty for all. It is this ideological weapon the Communists fear most. For this reason, the Ukrainians would wholeheartedly support the U.S. ideological reorientation which would include an open support for the Ukraine's as well as for other nations' right to liberty and independence. Such a policy would force the Kremlin into a defensive position and may prove to be the best deterrent to a nuclear war.

Washington Report

EXTENSION OF REMARKS OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following newsletter of January 26, 1963:

WASHINGTON REPORT (By Congressman BRUCE ALGER) THE PRESIDENTIAL MESSAGES

The economic report and tax messages of this week, as well as the earlier state of the Union and budget messages are sick documents, as I see it. Realizing this, I have of-

ferred my own general analyses in the CONGRESSIONAL RECORD following each message, respectively.

Economic report

"Governmentitis" is the sickness. Keynesianism, that is, modern socialism, is described in detail. The deficit specified as \$11.9 billion likely will run up to \$20 billion or more. The President's four reports to Congress under the Employment Act of 1946 were: (1) Economic conditions; (2) foreseeable; (3) economic expansion; and (4) program for carrying out policy. Both the original act and the President's report carry all the language necessary for total control of the U.S. economy by the Federal Government.

Items from the report:

(1) Unemployment is still too high. Unmentioned are these factors: (a) Everyone over 14 years of age having requested work but unemployed are carried on the roles; (b) in a free society of 185 million there will always be several million unemployed.

(2) Gross national product and growth should be greater. Implicit in such statements is the assumption of our President that there are certain mandatory growth amounts in a free society, that he knows them, and that the Government can and will change them by Federal mandate. Unmentioned and/or unrecognized is the stultifying effect of Government redtape, control, and burden now on our private economy. The President confuses Government's role with the voluntary actions of millions of citizens and the Chief Executive's role with that of the Almighty.

3. The 1961-62 historical analysis is inaccurate. He characterizes the social security program as antirecession legislation which it is not; public works pumppriming as healthy economic growth, public housing and urban renewal as aids to recovery which, with Federal aid and deficits, they are not. The budgetary policy shift is explained, into deficits, and we are told to disregard as fallacious current fears over inflation on the one hand and gold outflow on the other, both endangering the value of our currency. Deficits are defended as prelude to wealth.

The President defended again: (1) the need for Executive quickie tax cuts at his pleasure and, (2) quick and massive public works expenditures (the second Congress passed last year—but not the first) and outlined for all to see a blueprint for dictatorial power.

So I presented then and now, a constructive program, quite revolutionary to some, of: (1) Balanced budget; (2) surplus accumulation; (3) debt reduction; (4) tax reform as part of my legislative cures for our economic sickness.

Tax message

The tax message carried further earlier references in other statements concerning tax reform and reductions, but still dealt in generalities instead of being in legislative form: \$13.6 billion total tax cut, \$11 billion individual and \$2.6 billion corporate, with \$3.4 billion recovered by increased taxes in various areas.

These are some of the suggested areas: (1) Reduce current 20 to 91 percent bracket percentages to 18½ and 84½ this year—next year down to 14 to 65 percent, respectively; (2) reduce 52 percent corporate to 50 percent first year and further to 47 percent; (3) change capital gains both in time property held and percent rate resulting in slightly lower rates; (4) repeal \$50 exclusion and 4 percent tax credit on stock dividends over \$50; (5) tighter tax rules surrounding oil and mineral depletion; (6) speed up quarterly payments of corporations; (7) eliminate individual deductions under 5 percent of income not permitted (instead of present 10 percent or \$1,000).

The tax message has been referred to the Ways and Means Committee. Hearings open to the public for several weeks will be held starting February 6 followed by executive sessions by the committee.

FUNDAMENTAL FACTORS

Basic factors to be remembered: (1) Tax cuts should be matched at least by Government spending cuts and not divorced; (2) deficits lead to debt, not the wealth as the President foresees; (3) contrary to the President's avowed belief, inflation and gold outflow are twin dangers we must not disregard. Currency devaluation is inherent and would sabotage our economy.

Specific tax factors to remember: (1) Corporate taxes are passed on in higher prices to consumers; (2) corporate taxes drop automatically this year to 47 percent—Congress is being asked to keep them up in order to cut them starting next January; (3) speedup in tax payment—stricter law, more regulations—are not incentives to investment as heralded; (4) 1 million are being taken off the tax roll; (5) individual deductions elimination will increase taxes for everyone by that amount; (6) medical expense and drugs less deductible is Federal coercion of people to support the President's Medicare program; (7) less charitable deduction is more Federal coercion for Federal aid to replace charitable help, while foundations tax-free operations are overlooked; (8) double taxation is increased by removal of stock dividend and credit.

FLAT PERCENTAGE TAX

Tax reform as I see it, to be fair must move to the flat percentage tax, paid equally by all people. That is my proposal. Meanwhile, our hodge-podge is further scrambled, not fair, not equitable, not an incentive, while the monstrous sabotage of private enterprise—Federal deficit planning and control of our people—is perpetrated. In the President's language "Tax reform . . . will stimulate growth and steer income or investment into areas which better serve the national purpose." By whose judgment I now ask? I believe individuals are entitled to what they earn, not to have Federal planners take it in taxes and replan individual lives in a society conforming to the planners' ideas and concepts of what's best for people.

CURRENT EVENTS

Current events, via Presidential action and statement: (1) Bay of Pigs fiasco. What really happened? Lesson learned: Tragedy of managed and manipulated and censored news by White House mandate; (2) surveillance of Cuba by U-2 proudly acknowledged by our President is same Communist surveillance for which Democrat leaders denounced President Eisenhower; (3) President wants to extend trade with Poland and Yugoslavia, saying "Trade really is better in this case than aid," never thinking apparently that both are wrong, and that both must be terminated.

Elsewhere this week the United States is displaying brinkmanship on the edge of danger in encouraging: (1) Nuclear test ban without adequate inspection; (2) capitulation to labor demands in the dock strike via Federal mediation; (3) seeking of more Socialist advice (beyond Walter Heller, the President's Chief Economic Advisor), by soliciting Socialist Gunnar Myrdal's counsel, who admits big Government's spending leads to inflation and therefore we need price and investment control.

PREDICTIONS

Predictions department: Present United States course will lead to: (1) Devaluation of currency through inflation and reduction of gold backing; (2) price control; (3) increased wage control, more than at present; (4) full managed economy.

How does all this tie in and is it affected

by the statement of Arthur Sylvester, Assistant Secretary of Defense: "That it's inherent in that Government's right, if necessary, to lie to save itself when it's going up into a nuclear war. This seems to me basic—basic."

Let's hope our country wakes up in time. Once again the Dallas Federal Building is in the news with the usual misunderstanding or misinterpretation, of what happened. The Democratic leadership has admitted that the building has been held up for political reasons. The record proves I have done everything that is ethical and possible to have this project included in the budget.

House committee appointments: The appointment of Ed FOREMAN to the powerful Armed Services Committee in his first term shows recognition by the Republicans of the importance of the South and is a real tribute to Ed's qualifications as a Member of Congress.

Our National Anthem

EXTENSION OF REMARKS OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. FRIEDEL. Mr. Speaker, all Marylanders take great pride in the fact that Francis Scott Key wrote the immortal words to our national anthem at Fort McHenry in Baltimore. In recognition of this event, the Stars and Stripes fly over Fort McHenry 24 hours a day and there are only 2 other places in the world where this is permitted.

Next year, we will mark the 150th anniversary of the penning of the "Star Spangled Banner," and we in Maryland would like to have the rest of the Nation join with us in celebrating this historic event.

The Metropolitan Civic Association of Baltimore is taking the lead in arranging for appropriate activities in our own State. This organization has adopted a resolution calling upon the President to appoint a Special National Commission to arrange for a nationwide celebration marking this 150th anniversary.

Under leave to extend my remarks, I would like to have this resolution and a brief statement by the executive secretary of the Metropolitan Civic Association, Mr. Maurice Shochatt, printed at this point in the RECORD:

METROPOLITAN CIVIC ASSOCIATION,
Baltimore, Md.

The Metropolitan Civic Association, a group dedicated to Metropolitan Baltimore activities, has won recognition for its activities in the spheres of transportation, rehabilitation, beautification, and taxation.

As part of its activities, the organization presents annual achievement awards to outstanding citizens of Maryland. Recipients of such awards include Baltimore Police Commissioner Bernard J. Schmidt; Charles P. McCormick, chairman of the Baltimore Civic Center Commission; Francis X. Gallagher, people's counsel to the Public Service Commission of Maryland; Dr. George B. Brain, superintendent of the Baltimore public schools; Inspector Thomas J. Keyes, of the Baltimore Police Department; Joseph F. Caskey, director of the youth traffic section of the municipal court of Baltimore City; and Hyman A. Pressman, champion of citizens'

causes. The organization is headed by Warren J. Weinberger, president; Reuben Federman, senior vice president; and Maurice R. Shochatt, executive secretary.

Within recent date, the executive board of the Metropolitan Civic Association passed a special resolution, in conjunction with the 150th anniversary of the "Star-Spangled Banner" that is to be observed in 1964. The text is as follows:

"Whereas 1964 will mark the passage of 150 years since Francis Scott Key saw our flag flying over Fort McHenry 'in the dawn's early light' on September 14, 1814, and then penned the immortal "Star-Spangled Banner": Therefore be it

Resolved, That the President be requested to appoint a Special National Commission to begin formulating and arranging for a nationwide "Star-Spangled Banner" celebration in 1964 so that all citizens may point with pride to Francis Scott Key's unique contribution to the Nation, as exemplified by our national anthem and its 150th anniversary."

America the Beautiful: Heritage or Honky-Tonk?

EXTENSION OF REMARKS OF HON. FRED SCHWENDEL

OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. SCHWENDEL. Mr. Speaker, the Kiplinger magazine for November 1962, carried a provocative article on "America the Beautiful: Heritage or Honky-Tonk?"

This article has been reprinted for wider distribution by the National Trust for Historic Preservation, a nonprofit educational organization, chartered by an act of Congress, and privately supported by membership dues and contributions.

Overcommercialization does pose a serious threat to the beauty and dignity of many of our historic shrines. This is a natural development in keeping with the greater mobility of our citizens. More and more of them are attracted to the battlefields and other historic spots each year and entrepreneurs are quick to capitalize on the availability of these customers.

Preserving our national heritage is of overriding importance, however, and it behooves thoughtful citizens to work toward keeping a dignified balance in the development of all of these historic sites.

In bringing this article to the attention of my colleagues, it is my hope that the Congress will provide the necessary leadership in preserving our national monuments for the enjoyment of the many rather than for the private gain of the few.

I ask unanimous consent to have the following article printed in the Appendix of the RECORD:

AMERICA THE BEAUTIFUL: HERITAGE OR HONKY-TONK?

What are they really like today, the places your kids read about in school and which you hope to show them sometime as the finest representations of the American spirit? In case you haven't looked lately, a shock is in store. Marvels like Yellowstone Park and Gettysburg battlefield are infested, often

within their borders and almost always around the edges by a spreading disease of our time—tourist blight.

It's more than a sickness of an era marked by mobility and leisure; the manufacture of tourist blight is also a lucrative business. Competition is keen among those who cater to and exploit the simplest expressions of public taste.

Now Coney Island is one thing. It serves a delightful purpose, a fluter with pennants and sideshows and mistaken for nothing else but itself. So does Atlantic City, for those who like to walk the Boardwalk and Steel Pier, feeling content in company of loud signs, loud noises and throngs of people. But this is hardly the atmosphere to spread from one coast to another, hardly an appropriate symbol to find at the gateway to, or within, a national shrine.

Of course, everyone is entitled to his own taste and should pursue it freely. But the public landscape, which all of us must live with, deserves farsighted care. And our national monuments should be more than an opportunity for promoters to make a fast buck.

Perhaps the surge of the last decade to lay waste to large sections of the countryside owes its inspiration to the success of Disneyland. Walt Disney built a synthetic thing, ballyhooed it on television and proved that millions of families would come running. Enterprising hopefuls copied some of the Disney image, playing up to public interest in history, the American West, nature, patriotism and religion. In almost every part of the country—often adjacent to a national park or monument drawing millions of visitors—are places bearing such names as Fantasyland, Six Gun City and even Bibleland.

But they lack Disney's greatest promotional advantage, the handy access to network television, and have to compensate in other ways. They resort to mammoth roadside billboards unashamed representing their attractions as the "most outstanding," "foremost," "most historic," "most scenic" single spot in the State or Nation. They harass with their signs, they demand attention, they cajole through appeals to children and parents until the poor family can hardly pass the place by without a guilty conscience.

Some resort to the lowest form of attention-getters, the display of caged animals at souvenir stands, gas stations and other tourist places.

Is this really what the public deserves? Some of those who profit from blight say, "Yes, most people have poor taste and we give them what they want." Yet there is the pitiful example of the Civil War Centennial to show how little opportunity the public is accorded to express its taste freely.

Long before the centennial began, it was marked as a target of exploitation by all manner of commercial interests hoping to capitalize on the instincts of patriotism. Manufacturers of toys and gimcrack souvenirs advanced from one direction. Tourist operators attacked from another, establishing paid attractions close to the gateways of sacred battlefields.

When Allan Nevins, the distinguished historian, became chairman of the Commission in late 1961, he pledged that the sufferings and sacrifices of a century ago would not be memorialized with a carnival and that commercialism would be muted and disciplined. The hopeful objectives became to save a neglected battlefield, commission a symphony, raise a monument, get important books written. The scholar, very clearly, expresses a different concept than does the self-serving tourist promoter.

Dr. Nevins and others like him, the garden clubs, historical societies, the advocates of planning and zoning, endeavor to preserve and protect the characteristics that made them natural wonders and historic shrines in the first place.

What can you do to help, besides let your blood boil? We'll get to that later, but for now come abroad the callopie and tour the country for a look at blight on the landscape. The following are choice examples:

Gettysburg, Pa.: No matter how you approach this hallowed ground, the route is lined with signs leading to extraneous commercial attractions. On the west, the Chambersburg Road, which Lee followed en route to the fateful battle, there is an Indian village, complete with totem poles and tepees; it's labeled "authentic," although Indians have not been in this area since 1750, and never did use totem poles or tepees when they were here. On the north, the road from Harrisburg, near the place where Gen. Jubal Early's force smashed Union defenses the first day of battle, there is a Horse 'N' Buggy Museum, variously and modestly advertised as "America's largest" and the "world's largest" collection.

But to be near is not enough. The new Howard Johnson motel advertises happily that it is practically in the center of the battlefield inviting guests to experience the art of pleasant living only a few hundred yards from the field of Pickett's Charge and the scene of Lincoln's Gettysburg Address. Then there is America's most beautiful land of make-believe, a place called Fantasyland, with monkeys and Mother Goose, right in the center of things facing General Meade's headquarters just below the National Cemetery. And Stuckey's garish red and yellow roadside emporium, accompanied by Texas Fire Chief, astride the line of Longstreet's daring and bloody attack of the second day, where you can purchase mementoes of the battlefield, including ceramic birds, dogs, horses, alligator bags, and ash trays with such inscriptions as "Gasoline and alcohol don't mix—but gasoline straight ain't bad."

Then there is another group of attractions at Gettysburg, the "inspirational and educational." One is the Hall of Presidents, an array of wax figures that constitute an "exciting and patriotic exhibit" and a must for every American. Next, the National Civil War Wax Museum, with more than 150 figures in stirring tableaux. If you find them not sufficiently stirring, proceed to the "newest and finest attraction," the Gettysburg Battlefield Diorama and Museum, which features sound effects of smoking rifles, burning wagons, and blazing cannon fire. There is also the granddaddy of them all, the Gettysburg National Museum, now pressed into proclaiming itself as "Home of the New Electric Map."

These places are determined to leave absolutely nothing to the visitor's imagination. The battlefield tour, provides moments of emotion-drenched history in stereophonic sound. You travel by bus and listen to the voices of Lincoln and Pickett, with cannons thrown in as chills run up and down your spine.

Lincoln, in his utterance that brave men consecrated these fields far above our poor power to add or detract, proved a poor prophet.

Natural Bridge, Va.: Thomas Jefferson would hardly recognize the towering limestone arch that he once owned. He treasured the great bridge, carved by rushing mountain streams over the centuries, and described it as "the most sublime of nature's works." He resisted suggestions for manmade changes and said the bridge should remain as nature left it.

Today the wide bridge, 215 feet above Cedar Creek, supports Route 11, the main road down the Shenandoah Valley. But the view is blocked by a wooden fence, as though protecting the inside of a baseball park. Jefferson would be required, before gaining admission, to pay his fee of \$1.50. But there would be no extra charge if he elected to visit during the evening to see the soul stir-

ring performance of the "Drama of Creation," when the bridge is illuminated with colored lights and voice recordings evoke various religious images. And after coming through the entrance, he could also stop at the swimming pool, skating rink and an enormous souvenir counter vending a multitude of trinkets and doodads.

A recent addition at Natural Bridge is the antique car collection known as the "Museum of Motoring Memories"; this kind of companion piece is now widely found together with moneymaking commercial tourist attractions. Natural Bridge is perhaps the pacesetter for Route 11, a once-beautiful route, now adorned from Winchester to Roanoke with unrestrained advertisements for motels, commercial caverns, a place called Zoorama—it failed after a short, unhappy life, but the signs remain—and some ill-maintained State roadside rests.

The Great Smokies, N.C.: "The lowest form of tourist blight involves the exploitation of wild animals, and some of the most distressing examples are found in the highlands of western North Carolina. Michael Frome, in his book on the national forests, "Whose Woods These Are," passes lightly over moonshining as a menace of the mountains to describe the caged-bear routine, as follows:

Gracing the foreground of the historic gateway to Pisgah National Forest is a roadside souvenir and refreshment stand. Here you can buy a coke, hand it to a bear through the bars of his cage and watch him drink it. The purpose of his presence is to attract your interest and trade. Western North Carolina has a variety of such crude attractions. One is the reptile garden, which everyone who loves wild creatures should see, not because it is good, but to observe how the animals, assorted scraggly deer, a bear and snakes, are cared for. There are the Twin Yona—yona is Cherokee for bear—caged on the roadside in the Indian reservation between the National Forest and Great Smoky Mountains National Park. And like displays of wildlife before gift shops and gasoline stations in Maggie Valley.

How are these creatures captured? And how are they cared for? The author asked these questions of the North Carolina Wildlife Resources Commission, which endeavored, in reply, to place the full blame on the Cherokee Indians although bear-displaying souvenir stands invariably are operated by white Carolinians. After the book stirred a commotion, with the Governor receiving letters of protest from all sections of the country, officials of the wildlife commission conceded the bears are kept in deplorable, unsanitary and inhumane conditions but have so far failed to protect the animals from their roadside exploiters.

The Tennessee side of the Great Smokies provides hardly a better foreground setting for the most popular of America's national parks. The town of Gatlinburg, an obscure mountain crossroads until chosen as the site of park headquarters, offers all manners of neon-lit commercial diversions, plus a chairlift ride over the town and a Biblical garden with dioramas of the life of Christ. There are some fine craft shops, in the best Smokies tradition, but far more prominent are those inevitable trinket stands—where the price is cheap but the markup is high. "Sure, I'm in the craft business," said one souvenir dealer with a laugh. "Get some of my best merchandise over the mountain—in Jay-pan."

Lookout Mountain, Tenn.: From top to bottom, four commercial tourist attractions decorate the landscape of Lookout Mountain. But their influence does not end there. The city of Chattanooga, with signs of all sizes and shapes advertising attractions, motels, and restaurants, is a difficult maze to pass through unscathed. And for hundreds of

miles around, barn tops, billboards and birdhouses exhort the motorist and his family to "See Rock City."

Many visitors actually find Rock City, atop Lookout Mountain, an attractive place, with sandstone formations and trails over suspension bridges, through tunnels and "fairlyland caverns." Admission may be high priced at \$2, 75 cents for children (plus extras for special displays), but 30 percent of the revenue is poured back into highway advertising. Then there is Ruby Falls, reached by elevator, located in a cave below the surface. This attraction considers itself "the most spectacular of the world's wonders," and if this slogan is not sufficient enticement, there is another: "Worthy of the Master's hand alone."

To go up and down the mountain, there is the incline railway, which spans "America's Most Amazing Mile." To visitors the cost of being "breathlessly suspended above the city" is \$1 round trip, while to commuters it is 36 cents. At the base of Lookout the new Confederama, "the world's largest battlefield display of its kind," is guaranteed to tug at the heartstrings of every red-blooded son of Dixie.

If you persevere in ascending the mountain, and successfully penetrate this glowing ring of commercial superlatives, you will ultimately reach Point Park. Maintained by the Federal Government to commemorate the Civil War "Battle Above the Clouds," it overlooks the city of Chattanooga and the sweeping Moccasin Bend of the Tennessee River. And, without binoculars, there's not a billboard in sight.

Silver Springs, Fla. The jungle waters and swamp growth of the springs have been a tourist attraction ever since a paddle-wheel steamer carried passengers up the Oklawaha River a century ago. Today this is big business, even by booming Florida standards. The traditional 1-hour electrically operated boat trip is only the beginning. From there you are invited to the adjacent reptile farm, or "institute"; the Prince of Peace Memorial (depicting the life of Christ in diorama); the deer ranch, and, of course, the inevitable collection of antique automobiles. Each of these components charges a separate admission, and the average family is likely to spend \$10 or more.

Big business requires big promotion, and Silver Springs is a master of the art. Billboards are located all over the State, tracking the visitor from the instant he crosses the line; what is more, boards change frequently to keep timely and topical. Door-mats at motels are not inscribed with the usual word of "welcome," but with "See Silver Springs." Bathmats are apt to say the same. So are placemats at restaurant tables. Any child traveling with his family to a vacation in Florida who doesn't say, "I want to see Silver Springs, daddy," has clearly had his head buried in a comic book the entire way.

Customers leaving the springs are also enlisted in the campaign, voluntarily or otherwise. One autumn a Florida newspaper editor thought he would take a presidential poll by assigning a reporter to tally Republican and Democratic bumper strips. "Sorry, chief, neither party can win," his man advised after spending a day on the street. "It's 'See Silver Springs' way out front."

Ocala, Silver Springs' neighbor in central Florida, bears the heaviest saturation. Advertising assumes urgent, imperative qualities, with such expressions as "Don't Miss" and "You Must." This basically attractive town appears despoiled and mesmerized, with its beautiful live oaks and subtropical foliage on the verge of obliteration by the unending message of "See Silver Springs."

Curiously, almost adjacent to the Springs lies Ocala National Forest, where on pennants flutter a welcome reminder of Florida's natural glories; yet its recreation areas receive

scant attention from tourist promoters in Ocala or the State government. Little wonder, perhaps, considering the overwhelming emphasis on real estate, industrial development, hotels, motels and manmade tourist attractions. Places like the Ocala National Forest and Everglades National Park are hard put by many pressures. Yet they are the pattern for the synthetic, like the tourist place in southern Florida that offers the convenience of a little bit of the Everglades in the heart of Miami.

Black Hills, S. Dak.: "Yes, it is amazing to see the long line of commercial attractions on the road out here," a prominent and responsible citizen of the Black Hills area told a visitor from the East last summer. "The number is growing each year, too. Of course, we receive many complaints from visitors that this sort of thing destroys the feeling for Rushmore. But it seems somebody is bent on trying a new gimmick on every piece of private land from Rapid City to Mount Rushmore."

The gimmicks are multifarious indeed. The 25-mile road to Rushmore is an obstacle course of commercial attractions, all seeking to divert a million visitors, heading for a famous shrine, into their little crannies. The Reptile Gardens leads the way with the largest number of signs. There are four separate self-professed natural phenomena: Gravity Hill, Gravity Spot, Dizzyland, U.S.A. (Mysteries of Gravity) and the Cosmos—the real nature's mystery area—then assorted caves and gold mines, and the usual Horseless Carriage Museum and Fairyland's Bewitched Village.

At one point the tragic contrast between the shrine and the commercial surroundings becomes most evident. A neat, small, green and white sign reads, "Mount Rushmore Memorial, 3 miles," but this can hardly be seen for the much larger, garish signs above and around it advertising mines, motels, caves, and bars.

There is a novel little stunt in the Black Hills not seen elsewhere, a seal of approval at the entrance to many of these places. This sign reads "Family Approved Attraction." Approved by Parents' magazine? The Automobile Club? No, nothing as objective as that. These tourist operators have their own organization, the Black Hills, Badlands, & Lakes Association, and simply approve each other.

The picture within the memorial grounds has its dim side, too. One would think the National Park Service would maintain the vantage points facing the four Presidential heads carved high on the granite mountain. But one of the best spots is operated by a commercial concessionaire as a kind of carnival.

The mammoth souvenir shop carries the feeblest assortment of native handicrafts made by the Sioux Indians. The emphasis is on merchandising such items as nylon flags of all nations, Japanese-made plates bearing pictures of President and Mrs. Kennedy and figurines of Jesus Christ.

Yellowstone National Park: The sorry truth is that Federal officials sometimes contribute to tourist blight, too. Despite the proud tradition and generally high standards of the National Park Service, the core of Yellowstone, the Nation's oldest and largest national park, has deteriorated into a scandalous slum, the consequence of poor commercial management over a period of years and of soft and sloppy administration by park officials.

Park people concede this privately, often with grim humor. "I heard my neighbor brushing his teeth this morning," says one visiting park man to another after spending a night at Canyon Village Motor Lodge, the first new overnight accommodation in the park in 30 years. "That's nothing," his friend replies. "I heard my neighbor think-

ing about brushing his teeth. When do we leave?"

In short, 512-room Canyon Village, intended as a model in commercially developed lodgings for the entire park system, has turned out to be a failure, faulty in design, faulty in construction, with poor heating, flimsy soundproofing and a multitude of other shortcomings. Rooms are horribly overpriced (\$13.50 for two, \$18.50 for four), and the entire setting is incongruous with the great park, landscaped largely with black asphalt and blinking lights over the cocktail lounge. The gift shop offers one of the worst assortments of trinkets in America, 8,000 separate items, principally cheap, but profitable, importations from the Far East, including imitation English Wedgewood, Spanish toreador figurines in several colors, bells of Sarna and bongo drums.

The tragic debacle of Yellowstone illustrates the power exercised by private concessionaires. The three firms at Yellowstone appear to have more authority than the park superintendent. The Yellowstone Park Co., which operates lodgings and restaurants, made profits over the years while its plant became outmoded, overused and ill maintained. Finally goaded into construction of Canyon Village, the company paid \$5,500,000 for a project originally estimated at \$3,500,000. In an effort to recoup its losses, the firm last summer cut the number of college boys and girls on its payroll, then cut the wages of those it hired, to the barest minimum of compliance with wage-hour laws.

Yet for all the failings of the concessionaires, it remains for the park staff to answer the many complaints. The principal ones last summer were poor housekeeping, antiquated facilities, poor service, poor food.

Avoid the blight of Yellowstone? It is possible to a certain extent. You can find decent, clean and modern cabin and motel-type accommodations at the Grand Tetons, or well-kept campgrounds in surrounding areas. Look only at the thermal wonders, the wildlife and the marvels of a vast wilderness, shutting your eyes to all else.

But this is exactly the trouble: thinking Americans have shut their eyes for so long while blight and mass vulgarization have swept over the landscape. The amusement parks, the souvenir stands, the roadside animals won't go away by themselves. But neither must they be accepted as being here forever.

The point isn't that such places are not interesting or entertaining or even, in some cases, in good taste. But, rather, do they belong where they are? What does Mother Goose have to do with the commemoration of a Civil War battlefield? What are commercial biblical dioramas doing in the Great Smokies?

IT'S NEVER TOO LATE

"Honky-tonk, cheap-facade joints in the mountain areas are a disgrace to the State," declared a recent editorial in the Greensboro, (N.C.) Daily News, which pointed out what should be done. "Agitation in the public prints will do something to tidy up these roadside monstrosities. A little local or community pride might jolt the owners into at least partial recognition that an attractive, neatly kept roadside establishment is the best advertisement in the world for business."

Look over your own community. Demonstrate pride in its appearance and your desire to protect its inherent values. Sure, there's money in the tourist industry, but beauty is a far better advertisement for any town than a billboard. Certainly accommodations and commercial attractions are entitled to directional signs, but unrestrained coercive advertising of a captive audience is quite another thing.

Support the type of beautification work undertaken by the garden clubs, the true historic restoration urged by preservation groups, the strict zoning proposals. They will do far more to create a favorable image that visitors will remember, and that you can live with, than gimcrack attractions, high prices, and unrestrained signboards.

In going places with your family, be selective. Visit places of reputation and stature because they really interest you, not because of their repetitive advertising along the roadside. If you want to see animals, there are zoological gardens in major cities. For souvenirs, purchase craft items indigenous to the area, not some cheap trinket that will scarcely survive the trip home. Cultivate an appreciation of the best of America in your children.

When you're good and mad, write letters. To the President, about the tragedy of Gettysburg. To the Governor of the State where you feel any shrine is marred. To the Director of the National Park Service, about the shabbiness of Yellowstone or of national park souvenir counters. Letters to the editor of your daily newspaper are useful because other people see them, too. Tell about places you are not going back to visit a second time.

Such words will find their way around, and nothing will shake a tourist community more than realizing it may lose business. Perhaps nothing will do more to encourage it to enhance, instead of exploit, its endowment of history or natural wonders.

Resolution To Create a Select Committee on Arms Control and Disarmament

EXTENSION OF REMARKS

OF

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. ROSENTHAL. Mr. Speaker, I am today reintroducing a resolution to create a Select Committee on Arms Control and Disarmament in the House of Representatives. I had originally proposed the creation of such a committee during the last session of Congress, and hope that it will not be possible to obtain prompt consideration of the legislation during the current Congress.

This resolution provides that the committee would be composed of 13 Members of the House of Representatives chosen for their special knowledge of foreign affairs, armed services, atomic energy, science, and astronautics. The committee would be authorized to conduct a full and complete investigation and study of proposals for arms control and disarmament including, but not limited to, first, efforts made by the United Nations in seeking the control and reduction of military forces and armament of all types; second, disarmament proposals developed by the United States and other governments as well as by private groups and individuals; third, methods by which the attitudes of the American people and their Government on the subject of disarmament and world peace may be communicated abroad; fourth, the relationship of armaments to the state of the world

economy; fifth, the relationship of underlying international tension to the problems of disarmament; sixth, the dangers implicit in unilateral reduction of armaments; and seventh, methods of assuring that plans for reduction of armaments shall not endanger the security of the United States.

I realize that any proposal to create another standing committee would probably meet with some difficulty and with much reluctance on the part of many Members of the House. Therefore I ask that a select committee be set up to stimulate discussion and consideration of one of the most pressing issues of the day—that of arms control and disarmament.

Creation of such a committee would be desirable and necessary first step to reduce the grave possibility of nuclear war, because it would emphasize the efforts being made by the United States in its current negotiations with the Soviet Union to end nuclear weapons tests. I think we have all been heartened by the recent exchanges between President Kennedy and Soviet Premier Khrushchev, and by the temporary halt in U.S. underground atomic tests, announced by the President the other day, which is another step in the direction of world peace. I fervently hope that the further discussions which are due to take place in New York this week will bring us even closer to an agreement on a nuclear test-ban treaty at the Geneva meetings next month. Establishment of such a committee would have a tremendous impact on world opinion, and would demonstrate for all to see that the Congress of the United States is completely in accord with the efforts of the President to reduce the possibility of thermonuclear war, which could destroy us all.

I certainly hope that this resolution will warrant the consideration and support of each and every Member of the House.

Let's Keep the Record Straight—A Selected Chronology on Cuba and Castro

EXTENSION OF REMARKS

OF

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. SHORT. Mr. Speaker, year before last, on May 23, 1961, I placed in the Appendix of the CONGRESSIONAL RECORD an article entitled, "A Selected Chronology on Cuba and Castro." The Library of Congress had prepared this for me, at my request, in order for me to keep the events taking place in Cuba in their proper sequence.

Since that time the Library of Congress has continued to keep this chronology up to date and I now wish to follow up my original action by placing the later continued story in the CONGRESSIONAL RECORD Appendix on 5 consecutive days, beginning today.

I am doing this because of the renewed controversy over who did what and who did not do what they should have with regard to our U.S. policy toward Cuba. Our Attorney General, Robert Kennedy, has made it a point to come up with some fairly myopic remarks during the course of an interview by the U.S. News & World Report on January 28, 1963, published under the title of "Robert Kennedy Speaks His Mind."

I used the word "myopic" because I feel his viewpoint is rather nearsighted, to say the least, as far as the Cuban issue is concerned. Let me quote a portion of his remarks to indicate why I feel this way:

Question. Do you feel that the latest Cuban crisis was a lesson to the Russians?

Answer. I think it makes a great difference because that's the first time that the power position and determination and energy of the American people and their Government—all of this had been brought to bear.

Now I suppose we cannot really blame Robert Kennedy for wanting his brother's administration to stand out as the one which singlehandedly solved the Cuban issue. However, a review of the chronology I previously inserted will prove that former President Eisenhower took, and attempted to take some steps which would have shown the power position and determination and energy of the American people and their Government. Attempts have repeatedly been made by many of those around the President to blame the Cuban problems on the Eisenhower administration. I feel the American people are entitled to something more than that sort of demagoguery. Space will not permit my quoting some of the actions taken by President Eisenhower, but again I commend the former chronology on Cuba to the Members and the public's attention.

While a candidate for the Presidency, then Senator Kennedy called the October 19, 1960, embargo on all exports to Cuba, with exception of medical supplies and various food products—placed by President Eisenhower—"a dramatic but almost empty gesture—a gesture which will have so little impact on Castro as to be almost meaningless." Yet President Kennedy on February 3, 1962, proclaimed an embargo on almost all U.S. trade with Cuba, with the exception "on humanitarian grounds" of the export to Cuba of certain foods and medicines. His feelings as President seem to be greatly different than his feelings as Candidate Kennedy.

Again, Candidate Kennedy on October 6, 1960, made a speech at a Democratic dinner in Cincinnati, Ohio. Exhibiting a detailed knowledge of Castro's attempts to carry his revolution through South America, Mr. Kennedy stated:

The American people want to know how this was permitted to happen—how the Iron Curtain could have advanced almost to our front yard. They want to know the truth—and I believe that they are entitled to the truth.

The American public for some time now has longed to know the truth about the failure of the Cuban invasion and our part in it. Statements made by Bobby

Kennedy, and backed by the President cover only the small issue of whether we promised air cover or not. But a statement by Manuel Penabaz, a veteran of the Cuban invasion, does not back up this supposed "official report."

Former President Eisenhower, by no means a man who could ever be called a demagog, stated on December 22, 1962 that he believed the truth is a far better weapon in the cold war against communism than managed news. He stated further that he has no reason to think the American people have not been told the truth on the Cuban situation, but he noted that he doesn't know all the facts. He stated further that he sees no reason why the administration should not now release a full and official version of what happened in the disastrous attempt to invade Cuba in April 1961. The Bay of Pigs invasion is now history, he said, and the official story should have been told long ago.

On April 24, 1961, Presidential Press Secretary Pierre Salinger declared in a statement to the press that President Kennedy "assumes sole responsibility for the U.S. role in the action against Cuba."

Yet on May 24, 1961, President Kennedy, in discussing the tractors-for-prisoners ransom demand of Castro, in which he declared the U.S. Government would not negotiate with Cuba to ransom the prisoners, stated:

these men were trained and armed for this invasion by the Eisenhower administration. The signal to let them go and the means to get them there were given by the Kennedy administration. The United States still has a responsibility for those lives.

Now, former President Eisenhower, on January 24, 1963 says no plan was drawn up during his administration for a U.S. air cover for a refugee invasion of Cuba. He added however that he had "no kick with the plan" for air cover for the invaders. "If that had been done," he added, "that might have made the difference, because once these forces were ashore, ready to take care of themselves, it might have been easy to get more reinforcements through from the island itself and, finally, to recognize a government there."

Is it any wonder that Members of Congress, the public, and the press would like a truly official report of what happened? The Congress, you will remember, took some pretty strong actions itself in passing resolutions and legislation aimed at solving the Cuban crisis. They took these actions because they were close to the American grassroots opinion. They knew the American public wanted something done, that it was tired of speeches and soothing words, promising action but taking none. Those who trouble to read the original chronology on Cuba and Castro and follow through my continued chronology, will refresh their memory on some of the events, as reported, on the Cuban situation. And perhaps the congressional investigations suggested and promised will make the official actions clear to the American public.

I believe we can depend upon the commonsense and good judgment of the

American people to know and recognize partisan politics when they see it played. And if the administration truly desires a bipartisan foreign policy and the continued support and encouragement of the American public and the Republican Party, it should remember that we do not intend that former President Eisenhower should be labeled directly or indirectly as a weakling by any member of the Cabinet, regardless of relationship to the President. This man, whose name has always been synonymous with honor, bravery, and love of his country, does not hesitate to call for support of the President's foreign policy. And he is not afraid of the truth or an "official version" of what took place on the Cuban issue.

Let me say that neither the Kennedy administration nor the minority party nor the majority party are doing themselves, or the public, justice if this matter is allowed to fall and rest in the area of purely partisan politics. The public, who gave the President complete, enthusiastic, and unequivocal support at the time he announced the "quarantine" of Cuba could well lose its enthusiasm for further support of this administration if they are denied the truth, or given half-truths or distortions.

And that is why I am including, Mr. Speaker, with my remarks today, a second portion, covering the period between May 20, 1961, through September 13, 1961, of the "Selected Chronology on Cuba and Castro," and every day hereafter a continuation of the chronology for a total of 5 consecutive days.

We want to keep the record straight.

A SELECTED CHRONOLOGY ON CUBA AND CASTRO¹

May 20, 1961: A committee of U.S. citizens, headed by Mrs. Franklin D. Roosevelt, Walter Reuther (president of the United Auto Workers), and Dr. Milton Eisenhower, is formed to raise the funds to provide the 500 tractors. "President Kennedy was reliably . . . reported to have personally asked three prominent private citizens . . . to organize the 'tractors-for-prisoners' exchange with Premier Fidel Castro of Cuba" (New York Times, May 24, 1961).

May 24, 1961: President Kennedy urges all Americans to contribute to the purchase of the 500 tractors.

June 2, 1961: Tractors for Freedom Committee informs Premier Castro that it is ready to send the 500 tractors in exchange for the 1,214 prisoners. The committee gives him until noon June 7 to accept the offer.

June 6, 1961: Premier Castro suggests that his prisoners be exchanged for "political prisoners" allegedly held in jail in the United States, Puerto Rico, Guatemala, Nicaragua, and Spain. He also demands that Mrs. Roosevelt or Dr. Eisenhower, two of the leaders of the Tractors for Freedom Committee, come to Havana for further negotiations.

June 7, 1961: Cuban Government nationalized education.

June 8, 1961: Tractors for Freedom Committee offers to send six agricultural experts to Havana to discuss details of the types of tractors to be sent in exchange for the prisoners. The committee also announces that it is prepared to send the first consignment of 100 tractors to Cuba by June 22.

¹ Based chiefly on excerpts from *Deadline Data*; reproduced with the permission of *Deadline Data on World Affairs*.

Premier Castro accepts the offer the next day.

June 14, 1961: Experts confer with Premier Castro. He now demands tractors valued at \$28 million, the equivalent of 1,000 farm-type tractors or 500 heavy-duty construction tractors, and will exchange them for 1,167 prisoners instead of the 1,214 he had originally offered to trade. He explains that the difference is due to some fatalities, special trials he plans, and other reasons.

June 19, 1961: Tractors for Freedom Committee in Detroit cables reply to Premier Castro. They give him until noon June 23 to decide whether he will accept 500 farm-type light tractors in exchange for the 1,214 prisoners he originally offered to trade. If he refuses, the committee will return the funds it has collected to the contributors.

June 26, 1961: Adlai E. Stevenson, President Kennedy's special envoy to Latin America and U.S. Ambassador to the U.N., declares at the National Press Club in Washington that during his recent trip to Latin America, Cuban agents preceded or followed him for propaganda purposes.

June 28, 1961: Florida court orders seizure of 29 carloads of lard going to Cuba. "The seizure order was obtained by a Miami advertising firm to help satisfy a judgment of \$429,000 against the Cuban Government tourist agency" (New York Herald Tribune, July 6, 1961).

July 4, 1961: U.S. authorities in Florida seize three Cuban planes which have landed in the United States after being stolen from Cuba by refugees. The planes are seized on court orders to satisfy claims against the Cuban Government.

July 21, 1961: U.S. Government announces that it will finance the passage of 20,000 refugees from Cuba to the United States, because the refugees cannot obtain dollars.

July 23, 1961: Cuban Government orders Pan American World Airways—the company chartered by the U.S. Government for the airlift—to limit its flights from Miami to Havana to two round trips a day.

July 24, 1961: U.S. commercial airliner—worth \$3.5 million—en route from Miami to Tampa, Fla., is forced by an armed passenger to fly to Havana. The other passengers and the crew are returned to the United States the following day, but the plane is kept by the Cuban authorities.

July 26, 1961: Premier Castro, in a speech made at the 26th of July celebrations, declares that he will return the airliner if the United States returns "the 10 Cuban planes which it has stolen."

During a speech made at the celebration of the 8th anniversary of the 26th of July movement, Premier Castro announces that all Cuban political parties are eventually to be merged into the United Party of the Socialist Revolution. The celebrations are attended by Soviet Astronaut Maj. Yuri Gagarin.

July 27, 1961: U.S. Secretary of State Dean Rusk declares in Washington that the United States will not agree to the exchange. He declares that final authority for the return of Cuban planes to Cuba rests with the courts, and not with the U.S. Government, and that if it is entitled to do so, the Cuban Government may apply for "sovereign immunity" for the planes. Rusk points out that since mid-1959, 25 Cuban planes have been held in the United States. Some of these have been sold in pursuance of court orders.

July 29, 1961: Cuban note to the U.N. accuses the United States of preparing an "imminent military aggression" against Cuba, and of using the plane incident as an excuse for its plans. Foreign Minister Raul Roa announces that the Cuban Government has placed the U.S. plane under the jurisdiction of the U.N. Security Council. The U.S. State

Department declares that the Cuban move in the U.N. is a "transparent tactic to divert attention from the actions of the Castro government in detaining" the plane.

August 2, 1961: Government announces the reorganizing of the country's labor unions under direct government control. Henceforth, there will be only one union for each industry, and all unions will be grouped under a Workers' Confederation.

August 3, 1961: Two U.S. citizens—a former convict and his son—fall in a plot to take a Boeing 707 jet airliner to Cuba from El Paso, Tex.

August 4, 1961: Cuban government again protests to the U.N. Security Council that the U.S. Government is preparing military aggression against Cuba, and is using plane incidents as an excuse.

August 5, 1961: Cuban Government declares that it will release the airliner if the United States releases a Cuban patrol boat brought to Florida by defectors a week ago.

Cuban Government orders the immediate replacement of all Cuban currency. All bills now in circulation must be traded in for new ones. No more than 200 new pesos will be given any one household. Any amount over this will be deposited in a "special account" and may be drawn upon in a week's time. Bank holdings are not affected. There is no revaluation involved in the move. Cuban borders are closed to all ships and planes through August 7, to prevent any Cuban money being brought in from abroad.

August 8, 1961: Premier Castro declares that Cubans will be allowed to draw up to 1,000 pesos in cash from their special accounts. Thereafter, they will be allowed to withdraw at the rate of 100 pesos a month. Total deposits of 10,000 pesos will be allowed, but any amount over 5,000 will be placed into savings accounts. Castro also declares that any amount over 10,000 pesos will be confiscated.

Minister of Industry Ernesto Guevara (during a 2-hour speech, at the Inter-American Economic Conference in Punta del Este, Uruguay), accuses the United States of attempting the assassination of Armed Forces Minister Raul Castro on July 26, and of attempting the invasion of Cuba on the same day. He also implies that the United States was implicated in the assassination of President Trujillo of the Dominican Republic, on May 30. Guevara ridicules President Kennedy's Alliance for Progress, and declares: "While Cuba is there, the United States is ready to give." He suggests that with a little push, Latin America will get the \$30 billion in U.S. aid which Castro called for 2 years ago. Guevara declares that Cuba expects \$450,000 in loans from Communist countries over the next 4 years. Cuba, he says, "pledges a guarantee that it will not export revolution" to other Latin American countries. Guevara also produces two U.S. "secret" documents, allegedly State Department reports. The first characterizes Venezuelan officials as "inept and indifferent"; the second indicates the South American countries which can be counted upon for anti-Cuban measures.

August 9, 1961: U.S. Pan American jet airliner, en route from Mexico City to Guatemala, is forced by an armed passenger—a French Algerian, reportedly, a psychopath—to fly to Havana. The other passengers, the crew, and the plane are allowed to leave for Miami the same day. The Cuban Government declares that it is releasing the plane out of deference to the Colombian Foreign Minister, Julio Cesar Turbay Ayala, one of the passengers, and because Cuba is opposed to air piracy. In Washington, before it is known that the plane is returning to the United States on the same day, the news of the incident causes various U.S. Congressmen to advocate the use of force to retrieve the plane.

On the same day, Cuba requests the U.N. to place on the agenda of its 1961 General Assembly—due to open in September—an item on "threats to peace and security" by U.S. "aggression" against Cuba.

August 10, 1961: President Kennedy declares in a news conference that the anger aroused by the hijacking of planes must not be allowed to overshadow the importance of the Inter-American Economic Conference, meeting in Uruguay which he calls "perhaps one of the most significant meetings in the history of the Western Hemisphere."

August 14, 1961: The 5,805-ton *Bahia de Nipe*, a Cuban merchant ship carrying sugar and tobacco to a Soviet Baltic port, was seized by the captain and 10 crew members and diverted to Norfolk, Va.

August 15, 1961: A patrol boat, valued at \$50,000, which was brought to the United States on July 29, by Cuban defectors was returned to the Castro regime.

At the same time the Eastern Air Lines Electra hijacked on July 24 was returned to the United States by the Cuban Government.

August 21, 1961: President Kennedy declined to use the Cuban ship, *Bahia de Nipe*, as ransom for the families of the Cuban seamen who brought the ship here and have sought political asylum.

Earlier the Cuban Government formally asked for the return of the vessel and U.S. Secretary of State Dean Rusk asked a Federal court to release the ship.

August 24, 1961: In a special session of the U.N. General Assembly called to discuss the Bizerte dispute between France and Tunisia, the Cuban delegate challenged the validity of the treaty under which the United States maintains the Guantanamo Bay Naval Base.

U.S. Ambassador Stevenson called Cuba's charge "international lawlessness."

August 29, 1961: Premier Castro called on the Brazilian people to "take arms * * * and take to the mountains and jungles" to fight the military leaders who are trying to keep Joao Goulart from becoming president of Brazil after the resignation of President Janio Quadros.

August 31, 1961: The Senate Foreign Relations Subcommittee on Latin America said it was satisfied that an encounter in Montevideo, Uruguay, between Maj. Ernesto "Che" Guevara and Richard Goodwin, President Kennedy's Special Assistant on Latin American Affairs, was a casual and unimportant meeting at a cocktail party.

The subcommittee met with Mr. Goodwin after Argentina's Foreign Minister Adolfo Mugica declared on August 22 that the conversation had been politically vital and had touched on a possible resumption of United States-Cuban relations.

September 7, 1961: A spokesman for the Democratic Revolutionary Front, a Cuban exile group, announced that the front will shortly merge with the Revolutionary Council. The new group will be called the Cuban Revolutionary Council and will be headed by Miro Cardona with Antonio de Varona as second in command.

The U.S. Fourth Circuit Court of Appeals freed the hijacked freighter *Bahia de Nipe* for return to Cuba but stayed its order for 5 days to permit an appeal to the U.S. Supreme Court.

September 9, 1961: Five of the prisoners captured after the unsuccessful invasion attempt last April were executed on charges of murder and torture committed before they left Cuba. Nine others were given 30-year jail sentences on similar charges.

September 10, 1961: Four thousand Cubans shouted antigovernment slogans in downtown Havana until they were dispersed by machinegun bullets. Seven were injured. The demonstration was touched off by cancellation of a Roman Catholic procession in honor of the Virgin of Charity, the patroness of Cuba.

September 13, 1961: A third request for an order blocking the immediate return of the freight *Bahia de Nipe* to Cuba was submitted to U.S. Supreme Court Chief Justice Earl Warren by the United Fruit Co. which has claims against the freighter's cargo of sugar.

G. Gernon Brown—A Tribute to One of the Nation's Outstanding Molders of Men and Developers of Character in the Youth of the Nation

EXTENSION OF REMARKS OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. HÉBERT. Mr. Speaker, the Nation has lost one of its outstanding developers of character and molders of men in the unexpected death last week in New Orleans, of G. Gernon Brown, executive assistant director of the New Orleans Recreational Department and for more than two decades the football coach of the Jesuit High School in that city.

Gernon Brown was nationally known in the sports world and in the field of youth development.

Such All-American football players as Ki Mills, of Virginia Military Institute, and John Pettiborn, of Notre Dame, were developed by him.

To the big leagues in baseball he had sent "Tookie" Gilbert, Connie Ryan, Charlie Gilbert, "Fat" Dantoni, among others.

The affection held for him by the people of New Orleans is reflected in many tributes paid to him by press, radio, and television following his death.

Gernon Brown was my lifelong friend. We were boyhood companions and classmates from parochial school through our formative years at Jesuits in New Orleans during which time we were inseparable associates. It is not, however, because of this personal devotion to him that I pause to pay tribute to him today. It is because of the niche which he occupied in the community and the respect which he had earned as one of the most successful scholastic football coaches in the Nation.

I pay this tribute because I think it fitting and proper that something should be said at this time when an enduring recognition can be made of a man who has contributed so much to so many during his lifetime. Other communities undoubtedly have Gernon Browns in their midst. Other cities and other States have given birth to men of like stature who have never come into the national focus. I doubt, however, if there ever lived an individual who brought such eulogies from those among whom he lived and from those who knew him and profited by their association with him as did Gernon Brown.

His classmates borrowed from Shakespeare to say of him in the Blue Jay, the graduating classbook of 1920:

He was a man, take him all in all,
I shall not look upon his like again.

That was Gernon Brown.

How he kept that image in the years that followed is mirrored in what was written about him the day after he died.

Here is Charles L. "Pie" Dufour, columnist for the New Orleans States-Item and now an author of prominence with such books as "The Gentle Tiger," "The Night the War Was Lost," and "Nine Men in Grey," to his credit. It is an inspired tribute to the boy and to the man, written by one well qualified to write about his schoolmate and his friend. Dufour's column speaks eloquently for that segment who knew Gernon Brown as he lived and as he left his imprint on those who were privileged to have known him over a span of 30 years and more.

Here is "Pie" Dufour's tribute:

DEATH OF GERNOBROWN CREATES ANOTHER
VOID IN NEW ORLEANS
(By Pie Dufour)

When a good man dies, there is a void in the world. Such a void has been created in New Orleans by the death yesterday of Gernon Brown.

Gernon—I use his first name, because we were friends for more than 45 years—was good in everything he did, everything he undertook.

As an individual, he was moral, ethical, honorable, a genuinely good man, cherished by friends and family.

Gernon Brown could have been a great actor. He was a great high school football and baseball coach. He could have been a great mathematician. He was a great math teacher.

But whatever he was, or could have been, he never failed to be a great human being. For here was a man with literally thousands of friends.

You'll read on the sports pages of his remarkable coaching career at Jesuit High, and in American Legion play and the records his teams compiled and the players he produced. But far beyond the records and the stars is Gernon Brown's influence for good on the boys he coached. Long after they, too, have forgotten what they did on the athletic field under Brown's tutelage, will remain the lessons in character that he instilled into them.

I was in the eighth grade at the old Jesuits on Baronne and Common when Gernon Brown was in first high. He was in the same class with EDDIE HÉBERT, U.S. Representative from the First Congressional District. Just 6 months ago, Gernon was voted the Jesuit alumni Man of the Year Award, presented annually by Congressman HÉBERT.

Recently Charlie Wicker wrote about the old Jesuit team on which Gernon Brown played, and he quoted EDDIE HÉBERT as saying that one year when the Blue Jays didn't have a coach, Gernon was player-coach. I challenged that in a conversation with Charlie, and he said that he had even checked it with Gernon, and that that was correct.

Well, that fact had escaped my memory entirely and just the other day, I wrote Congressman HÉBERT, chiding him on his memory playing tricks upon him. He came back in the same vein, insisting that he was right. I had intended calling Gernon Brown up to get the word from him. Just a few weeks earlier, HÉBERT had pointed out that Dan Levy, fullback on the old Blue Jay team in question had died within a few days of Dr. Joe Palermo, who once was a part-time Jesuit coach.

And now, a third member of those great Blue Jay days—the first of the great Jesuit teams—of 1919 and 1920, Gernon Brown, is gone.

As a fellow student of Gernon, I remember him as much for his histrionic ability as for his athletic prowess. He was really magnifi-

cent on the stage—a high school boy who could have stepped right onto the professional stage. I remember him as the jester in "In a Fool's Bauble," a play by whom, I know not, and he was great. But in his final year, 1920, Brown played the title role in Bulwer-Lytton's "Richelleu."

I've never forgotten Gernon's "Richelleu." I still hear him declaim: "Armand Duplessis, Duc de Richelleu dies not by the hand of man." Over the 43 years that have elapsed since Gernon played the famed cardinal of France—it was at the Lafayette Theater, now the Civic, I believe, but it could have been the old Tulane Theater—I would frequently greet him with that quote. I had good cause to remember, because I was a spear carrier in that production of "Richelleu," a companion warrior to Ellis Henican. We heard the play over and over in rehearsals, and grew quite familiar with other parts than our own. For, as I recall it, on the night of the play, we were so absorbed in Gernon's impressive performance that when the time came to do our military duty, we arrested the wrong character.

Had Gernon Brown gone on the stage, there is no doubt in my mind that he would have become one of the leading figures on the American stage. Instead, he went to Annapolis, but a broken leg as a plebe football player ended his naval career. He finished his education at Loyola.

A teaching post at Jesuit High, after graduation, led to his becoming an assistant coach under "Doc" Erskine. Judge Ike Carriere, then a young lawyer, taught and coached with Erskine part time. When he began to be too busy as a lawyer, he retired from this part-time coaching and teaching, and Brown took his place as a coach. When "Doc" Erskine went to Loyola as head coach, Gernon took over the Blue Jays. His more than two-decade performance was tremendous. For the last 10 years or so, Brown was the executive assistant director of NORD under \$1-a-year-man Lester Lautenschlaeger.

Death came for him at his desk, yesterday. But wherever and whenever it had come, it would have found Gernon Brown ready. He was, in every finest sense of the word, a good man.

Here is Cro Duplantier, executive sports editor of the New Orleans States-Item whose facile pen describes the man and the memory he has left behind:

AS COACH SAID, HE'LL BE AROUND

(By Cro Duplantier)

Lester Lautenschlaeger, executive director of New Orleans Recreation Department, said G. Gernon Brown, New Orleans Recreation Department's assistant director, was completing a call made to set a luncheon date. "I'll be over in 10 minutes," Gernon said and hung up.

That was the last that Lester heard from Gernon and about the last thing anyone heard. For about 10 minutes later Gernon Brown was dead.

But the ending perhaps is a bit prophetic for Gernon will be over, he'll be around again, perhaps not in 10 minutes but time and time again in the minds and hearts of the thousands of boys grown into men whose lives he touched.

For when he touched the touch left an imprint—the G. Gernon imprint—and the mark has stayed with most of his boys forever after.

Gernon's own family life is indication enough of his attitude toward young people. He fathered 10 children and raised 9 of them. A man who raises nine children has to love children, has to love young adulthood, has to love people. And Gernon, for all his occasional gruffness, loved people.

We met Gernon the year he became a head coach. We were a boy of 11, he a vigorous, husky, impressive, assured man of 31.

If taking the jump from assistant to head man frightened him, there is no record of it. And that there need not have been any worry on his part was obvious immediately. He was a smash success from the start and to the finish.

His years were not only the years of the Jays' greatest successes, but also the years when the prep league was at a height never since attained.

There were fewer schools. The schools that did exist largely had been there for a long time and their rivalries were traditional ones. Gernon loved it. And the Jay fans loved him.

But for the rest of the league it was a period of aggravation. Beating Jesuit was the goal. And making Gernon eat humble pie was something that all strived for.

Falling that, the fans from rival institutions were forever finding excuses. They blamed their defeats on Jesuit luck. On the pregame prayers the Jays said before each contest, led quite frequently by boys of Protestant faiths. But they missed their mark. Gernon was the guy to blame.

He liked being a winner. He wanted his boys to like being winners. And he inculcated that idea into them. If you've got the equipment, the talent, you ought to use it, he figured. And Gernon and his kids did.

We've had a few differences with him over the years. But they were minor ones and they lasted only briefly.

For he was that kind of guy.

You admired him because he was smart. You admired him because he knew his business. You admired him because he could handle himself well in a contest, before a crowd.

And you liked him because, for all his assurance, for all his gruffness, for all his talent, he was still warm, still anxious to please and, above all, because you felt that he liked you and you were important to him.

Gernon Brown was the kind of man who could have been a big success in any undertaking, for, with everything else there was a dynamism, a restlessness to go, go, go * * * and to get others on the move too.

He spent his life in work which certainly offers small financial rewards for the talents and energy that he put into it. But we suspect that he rarely gave thought to this, though there must have been occasions when that army of kids was growing when he could have used a bigger income.

He spent his life as he did, because his work was the kind of work he loved.

This perhaps could be the key to sum him up as completely as is possible in a couple of words. He chose his work because he loved it. Because he loved it he was a happy man. And a happy man is bound to have many friends, and bound, also to make a lasting impression on them.

"Coach," as most of us called him, and as he called most people in return—told Lester he'd be "over in about 10 minutes."

He's already here, he's here right now, all around this area of ours, the death notice notwithstanding.

He's here and will be as long as any of the boys he coached and guided are.

He was that kind of guy.

Harry Martinez, my old associate and dear friend and sports editor of the New Orleans States, was a sportswriter when Gernon Brown played his first football game for Jesuits. He points out the difficulty it will be to replace Gernon Brown in the New Orleans recreation department program:

DIFFICULT TO REPLACE BROWN

(By Harry Martinez)

Replacing Gernon Brown as assistant director of the vast New Orleans recreation de-

partment program is not going to be an easy task. In his position he carried out the work outlined by Director Lester Lautenschlaeger and the two worked hand in hand to build up New Orleans recreation department's activities so well that other cities used the local programs as a model for their own.

Brown's death is mourned by thousands, particularly among boys who came in contact with him in sports. As a coach and as a teacher he had a great influence over his athletes, in mapping out their lives and causing them to become worthy citizens.

His life was dedicated to teaching youth. As a coach for 20 years at Jesuit High School he not only turned out championship teams, but built character. He taught fair play and, win or lose, his boys always played like champions.

The long years he spent coaching high school boys made him an invaluable man to take the position with the New Orleans recreation department which he held until his death. He knew the recreation work from all phases and helped to build it to the point where New Orleans was regarded as having one of the finest recreation programs in the Nation.

In recognition of his long association with athletics and recreation work, Gernon Brown served on many boards both local and national for the improvement of high school sports. Only last Tuesday he returned to New Orleans from New York where he was elected vice president of the All-American Baseball Association.

As one who has followed Brown's activities from his high school playing days at Jesuit back in 1919, we can add nothing but praise for his devotion to the work of moulding the character of many who have made their mark in the business world.

Then there is Buddy Diliberto, most articulate sports columnist of the New Orleans Times-Picayune, who wrote:

FROM THE BENCH: THE PASSING OF GERNON BROWN

(By Buddy Diliberto)

The unexpected death of Gernon Brown Tuesday hangs heavy with all who knew the man, especially hundreds of former Jesuit High athletes.

In his latter years Brown distinguished himself as executive assistant director of the New Orleans Recreation Department but it was as a Jesuit coach that he was known best.

Brown was a coach in the tradition of Knute Rockne or Frank Leahy. His greatest attribute was the ability to make boys perform beyond their normal capabilities.

The manner in which he accomplished this varied but the result was usually the same—success.

Hal Breeding, one of Brown's former athletes, recalls a game against Warren Easton in the early 1940's in which Easton outweighed Jesuit about 20 pounds per man.

"Gernon told us a story and when he was finished there wasn't one of us who thought Easton was too big to beat," Breeding recalls.

The story was about a second-string basketball player who played for Jesuit years before.

"The kid weighed only 135 pounds and unbeknown to the coaches suffered from epilepsy," Brown told the team.

"One afternoon during practice the kid had an attack and five of the biggest athletes on the team couldn't hold him down.

"Remember, boys, it's the size of fight in the dog not the size of the dog."

Easton's weight advantage made no difference that afternoon.

THE YEAR BROWN GAVE UP SMOKING

Brown hated to lose. He once said, "When you lose once it's always easier to lose the next time."

Jesuit teams seldom lost during the Brown years but when they did he wanted every player to take the loss as seriously as he did.

In 1941, Doc Blanchard led St. Stanislaus to a victory over Jesuit at City Park Stadium. Gernon herded the team into the bus after the game and there was hardly a dry pair of eyes.

Brown walked up and down the aisle studying each of his players until he came upon a boy who wasn't crying.

"What's the matter son, are you happy we lost?" Brown barked.

"No sir," the boy replied.

"Well, start crying real tears or turn in your uniform when we get back to school," Gernon bellowed.

In the fall of 1946 Jesuit needed to win the State football title to complete a sweep of championships unmatched in the history of Louisiana high school athletics. The Jays had already won State basketball and baseball crowns under Brown that year and the track championship under the late Eddie Toribio.

Brown was a chain smoker yet no sacrifice was too big if Gernon thought it would help achieve victory.

He gave up smoking for a year that season as a sacrifice and the Jays went on to complete the slam by winning State in football.

It was a nerve-racking ordeal for the man but he lived up to his promise. The picture of Toribio following Brown around him with mints and chewing gum as a substitute for cigarettes is still vivid in the minds of the players on the 1946 team.

MOLDER OF TRADITION, SPIRIT

Brown, shirttail hanging out and arms waving, delivered many pregame and half-time speeches that would have made a Rockne proud. And at other times just a sentence would do the job.

John Petibon recalls a game in 1946 in which Jesuit was a topheavy favorite and Brown was convinced his team wasn't ready to play a good football game.

"Our practices were sloppy the entire week and we were all waiting for Gernon to tear into us," Petibon recalls.

"But he didn't utter a harsh word. Then moments before we went onto the field he said, 'Okay, girls. Let's go take our whipping.'

"That one sentence burned us so much we went out and won 40 to 0."

One of Brown's favorite tricks to fire a team was to address a letter to the squad and sign the name of the opposing team.

The letters were usually the same. They had references to the Jesuit players being "girls, mollies, mama's boys, etc." And they never failed to bring the desired result.

With all due respect to the many wonderful priests and lay teachers through the years, I feel Gernon Brown did more than anyone to build the tradition and spirit of Jesuit High.

The New Orleans States-Item said this of Gernon Brown editorially:

G. GERNON BROWN

Because he devoted his life to the moral, mental and physical development of New Orleans' youth, the death of G. Gernon Brown Tuesday imposed a particular deprivation on this community.

Mr. Brown leaves the stamp of his character not only on the athletes and students of Jesuit High School, where he served as head coach for 21 years dating back to 1933 and as faculty member, but also on New Orleans' younger generation in general.

For he was, of further reaching consequence, executive assistant director of the New Orleans Recreation Department and had, since its inception, played a major role in growth of that agency.

He was a charter member of the New Orleans Junior Sports Association, predecessor of New Orleans Recreation Department, and an organizer of many activities that comprise the recreational department program.

Milestones of the career which he dedicated to development of youngsters lie on the local, State and national levels.

For unstinted devotion to the ideal of inspiring tomorrow's citizens, Mr. Brown, during his notable career, earned the gratitude of the community many times over.

Now comes Peter Finney, one of the better young writers on the staff of the New Orleans States-Item who knew Gernon Brown as a student and later covered him from the sports desk:

BLUE JAY SPIRIT MADE BY GERNON BROWN:
A SUPER SALESMAN
(By Peter Finney)

In later years, Gernon Brown would throw back his head and roar when reminded of the standing joke on the 1944 Jesuit basketball team.

"Let's steal his book," Tookie Gilbert used to say, "and he'll have to call off practice."

So far as I know, Gernon Brown was the only man who actually coached from a book.

Thumbing through the pages in practice, he readily admitted his knowledge of the sport was limited to what Stanford's Everett Dean had set down between two red covers.

As time when on, however, and you were in a position to assess Gernon Brown—the coach—you realized the extraordinary talents which made him the brightest figure in the golden era of prep sports.

It is not difficult to conjure up an image of the master at work—on the sidelines at City Park Stadium, in the dugout at Muny Park, on the bench at Jesuit's old quonset-like gymnasium.

Hair in disarray, suit rumpled, and eyes blazing, he was an eloquent picture of a forceful personality leaving his stamp on all who played under him as well as on the league in which he competed.

All of the high school heroes he mass produced—from Jesse Danna to Putsy Caballero, from Clay Calhoun to John Pettibon, from Connie Ryan to Hugh Oser—will tell you the intangible thing known as Blue Jay spirit was "made by Gernon Brown."

To what did he owe his success?

"Give Gernon a piece of chalk and a blackboard," Eddie Toribio once told me, "and he'll sell anyone on anything."

Yesterday, with tragic suddenness, 61-year-old Gernon Brown joined one of his greatest pupils. And, as news of his fatal heart attack sank in, bits of conversations with the wizard of the preps came back to you in staccato fashion.

"I learned most of my football from Lester Lautenschlager and most of my baseball from Larry Gilbert and Mel Ott," he'd tell you.

But this did not explain (as Eddie Toribio had) his amazing success on Carrollton Avenue during a 20-year period which began in 1932—an era in which his Jesuit football teams won 6 city and 5 State championships, his baseball teams captured 11 city and State titles, and his basketball teams 3 city and 3 State crowns.

"Mr. Brown was a supersalesman all right," declared Ray Coates, tailback on the 1943 city and State kingpins and his coach's choice as the finest triple-threat back that ever passed his way.

"He had a way of getting the best out of everyone. He simply had the God-given talent of knowing how to handle different types of boys. Some had to be petted, some had to be pushed and he knew which ones.

"Another thing he mastered was the knack of never allowing a game to be lost at practice. He knew just when to ease up. This plus his stirring pep talks and his passion for perfection made him the great coach he was.

Following his retirement from the coaching ranks in 1953, Gernon was constantly

badgered with questions on his Jesuit football teams. The persistent poser: Which was the best?

"The 1940 bunch with O. J. Key, Tony DiBartolo, Lenny Finley, Paul Limont, Cy Kirsch, and many more," Gernon would tell them. "I never saw such talent on one squad."

Then he'd quickly add: "But that 1946 crew with John Pettibon, Hugh Oser and Mire Thomas was another great one * * * No one came within two touchdowns of us."

The only question Gernon liked to answer unequivocally was: "Which team gave you the most satisfaction?"

"That crowd in 1943," was his quick reply. Sweeping to the city and State championships, the lightweight Blue Jays upset Holy Cross, 18-14, and Byrd High, 25-7.

"Mister Brown never let us believe we had less than an even chance of winning," said Coates. "We came from behind in four of our games that year; in fact, we had to come from behind three times against Holy Cross."

For the Baton Rouge game, Coates took two left shoes to the State capital and had to borrow a pair from the Bulldog coach. He used them to run 100 yards with an intercepted pass.

Gernon called the halftime demonstration against Byrd "the greatest I ever saw."

"When I came into the dressing room, we were behind 7-6," he told me once. "I was all set for a real rah-rah sermon, but I never got to say a word.

"The squad was standing when I walked in and Coates said: 'Don't worry, coach, we'll beat hell out of these guys.' Then all of the other players began shouting. They sold me."

There was another time when Gernon worked magic without uttering a word.

"We won our first State football championship in 1933," he once recalled. "That year we played Morgan City for the South Louisiana title and the score was 0-0 in the fourth quarter.

"Eddie Toribio's knee gave way on him and I went out and carried him from the field * * * he was crying like a baby * * * It fired the team up so much we had the game's only touchdown 2 minutes later."

Gernon Brown was fired up too—by a speech to the graduating class in June, 1940.

"You are the first class in the history of the school to graduate without seeing the football team defeat Warren Easton," said the principal.

Beginning that fall, Brown's football teams went on a rampage that brought his school four city and four State titles in the next 7 years—and four victories over the Eagles.

It also brought to mind the advice he received when he took over as football boss in 1932. Doc Erskine, his predecessor, told Gernon: "Don't get too het up about winning because you open yourself to too much disappointment."

Commented George Gernon Brown with a wry grin: "That's one rule I was never able to follow."

Finally there is N. Charles Wicker, who came to know Gernon Brown as a young prep school reporter covering the high school athletic beat. Charlie Wicker's deep personal tribute reflects the personal emotions and feelings of those who were exposed to Gernon Brown in his days as football coach and executive assistant director of the New Orleans Recreation Department program in New Orleans:

WHAT'S WHAT

(By N. Charles Wicker)

New Orleans mourns the death of a great man, a wonderful father, a leader of youth and men, and a coach, whose record will never be matched, with the passing of G.

Gernon Brown, executive assistant director of the New Orleans Recreation Department, and former Jesuit High School coach.

Gernon Brown excelled in everything he did. He was an outstanding teacher in the classroom, an unexcelled coach on the field, and truly our best friend.

Gernon is the second of our great coaches to pass away while serving as executive director of New Orleans Recreation Department.

A little more than 10 years ago Gernon Brown was forced to retire as head football coach because the priests at Jesuit didn't want him to die on the field.

Proving that he was not finished, he took over as head of the recreation department when Johnny Brechtel passed away, and served in that position since.

We began our newspaper career just a few years before Gernon Brown became head football coach at Jesuit in 1931. Many happy and joyful hours were spent with him in the Jesuit athletic office, at various meetings, in fact, everywhere we were together. He was a man that the Jesuits let run the show. Why? Because they knew Gernon Brown to be a great leader and a man who stood for what was right.

Gernon Brown served as captain and coach of the 1918 Jesuit football team. He coached dramatics, he was a great math teacher, and at the time of his death he was part-time teacher at Jesuit. Every morning before he went to his office in the city hall he taught classes.

He became head coach of the football team in 1931. Without any basketball knowledge he coached the basketball team and won championship honors.

Several of his proteges, all great coaches, the late Eddie Toribio, Lou Brownson, and the present Jesuit coach, Ken Tarzetti, got their start as assistants under Gernon.

Ray Coates, present assistant at Jesuit, is another of Gernon's boys.

Without a question of a doubt, Gernon Brown developed more high school athletes than any other man in the city of New Orleans.

In a matter of a few years he would have been connected with Jesuit 50 years. He devoted his life to Jesuit.

Just a few months ago he was given the Blue Jay of the Year Award presented to the alumni voted as top man by the old grads for work done for Jesuit. "It was long overdue," said Congressman F. EDWARD HEBERT who presented the award, and who started the idea some years ago.

Gernon Brown and the late Johnny Brechtel, along with the Brown brothers, "Little" and "Big Fuz" of Istrouma were the backbone of the Louisiana High School Coaches Association when it was formed.

W. L. Colvin, former president of the Louisiana High School Athletic Association, and Grover C. Koffmann, former secretary-treasurer of the LHSAA, were both great admirers of Gernon Brown. But who wasn't?

Brown worked long and hard to raise a wonderful family, the eldest of whom is Dr. Gernon Brown, a very successful physician in our town.

He never shirked his responsibility. He gave endlessly of his time. After a full day at Jesuit High School and football practice, Gernon found time to serve as math instructor for the nurses at Charity Hospital.

Each year at this time on the morning of the New Orleans Athletic Club banquet honoring the outstanding athlete of the greater New Orleans area, we devote much of our space to the winner of the award. But we just couldn't let the opportunity pass without paying tribute to a true friend.

To his wife Kathryn, and to everyone of his children, his sisters, and his brother, in behalf of my family and my children who have all been very fond of Gernon, may we

extend our deepest and most heartfelt sympathy.

Gernon is the third Blue Jay of the same era to pass away with a heart attack in a period of 10 days of each other.

Yes, we must agree with Gernon Brown's classmates at Jesuits in 1920 in New Orleans that this was a man whose like we shall not see again.

Mobile, Ala. Editor Cites Dangers in Political Reprisal

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1963

Mr. ALGER. Mr. Speaker, under leave to extend my remarks I would like to include an editorial from the Mobile, Ala., Register in which the editorial writer points out the danger to our Republic in the action of the Kennedy administration in holding up a needed and meritorious project, the Federal Building in Dallas, until the people of that great city elect a Representative to Congress acceptable to the President. The editorial speaks for itself, but it should remind the President, as I said on the floor a few days ago, such tactics are not good politics and the President should remember the American people will exercise their freedom to vote as they please and they will not be bought nor pressured by any political machine:

WHERE NOT TO USE POLITICAL SPOILS TACTICS

This being a free country, the people are free under the American system to vote for candidates of their choice.

In some instances, however, it has seemed that the people have been free to vote for candidates of their choice only at the peril of being politically penalized.

Right now, to cite a case in point, Dallas, Tex., is less than supremely happy because of a feeling that spoils politics tactics are being used to give it the cold shoulder on a Federal building project.

More specifically, they suspect in Dallas, that the cold shoulder is coming from Washington, D.C., because the Kennedy New Frontier is burnt up over the presence in Congress of a Republican House Member from Dallas, Representative BRUCE ALGER.

Mr. ALGER has been in Congress 6 years longer than the New Frontier has been in the White House, but the New Frontier is suspected of resorting to political reprisal because of his presence there.

The Republican Congressman himself has sharply criticized what he calls a "deliberate attempt of the Kennedy administration to penalize and punish one of the great metropolitan areas of the Nation because its people did not support the candidate of the President's choice for election to the House."

Mr. ALGER says (and these quotations are from his remarks in the House) that "such

a bold and tyrannical attempt to force the election of favored candidates to the legislative branch cannot, must not, go unchallenged in this free society."

He has also called attention in Congress to newspaper comment in Dallas.

He called attention to this from the Dallas Morning News:

"On Dallas' failure again to get its Federal center, one can strongly suspect but not prove that—

"We are being punished because Dallas County voted against Mr. Kennedy by nearly 70,000 votes. Other Republican districts are getting their share of projects.

"Continued reelection of BRUCE ALGER, a Republican to Congress, mitigates against us.

"Dallas doesn't want the (Federal building) center if it doesn't deserve it and if it doesn't need it.

"Truth is, we do need it, it is worthy, it will save the Government money; and regardless of how the people of a free district vote freely for whom they please, the center should be authorized on merit—and merit alone—regardless of ALGER, Kennedy, or anybody else."

Even more pointed has been the comment of the Dallas Times Herald, in saying:

"The Federal Government is using political reprisal for an inexcusable hatchet job on one of its greatest American cities; namely, Dallas. Dallas County (which forms the congressional district represented by Mr. ALGER) is getting its punishment from the Democrat administration because it voted a Republican Congressman into office.

"There are no party labels pasted on taxes we send to Washington and we want none in return."

If the Kennedys are going to operate a political spoils system of blacklisting people who have not seen fit to vote New Frontier, more than one-half of all who cast votes in the 1960 presidential election are eligible to the blacklist, for President Kennedy received less than 50 percent of the nationwide popular vote.

But the Kennedys surely know that apart from the political smallness of such tactics, the idea of running the U.S. Government on that basis is utterly incredible.

Democrats and Republicans have an identical right under the American system to vote for candidates of their choice without reprisal or fear of reprisal from the White House.

The American system would become empty and meaningless if the American people were browbeaten into goosestepping to the polls to do only the bidding of the White House, whether Democrats or Republicans were in power.

Ballots cast in that manner and under those conditions would be cast by robots, not by voters.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Bonneville Power Administration Must Increase Its Rates

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. SAYLOR. Mr. Speaker, on Thursday, January 17, the Congress received the President's proposed budget for fiscal 1964. Even though many of us anticipated that it would be larger than his requests for 1963, I don't think we were quite prepared for the fantastic figure of over \$107 billion requested in new appropriations in this document. It is almost inconceivable that Congress could be asked to consider a budget of this magnitude, while at the same time being asked to consider rather sizable decreases in Federal taxes.

I, for one, firmly believe the level of personal and corporate income taxes is seriously hampering this Nation's rate of economical growth. The excessively steep progression of tax rates to a point approaching an almost confiscatory level very often has the effect of stifling initiative and inventiveness of our citizens.

However, I do feel that if a tax cut is forthcoming it must be accompanied with a concomitant serious reduction in the level of governmental expenditures or a conscientious effort on the part of Members of Congress to find additional ways to increase Federal revenues.

In my humble judgment, one outstanding and immediately obvious way to reduce Federal expenditures, while at the same time increasing Federal revenues, would be to establish a realistically increased electric power rate for the Bonneville Power Administration.

Mr. Speaker, the audit report by the Comptroller General of the United States on the financial statements of the Columbia River Power System and related activities for fiscal 1962, which was transmitted to Congress on December 11, 1962, clearly points out that that power system sustained a net loss—and I repeat, a net loss—of about \$13.1 million in fiscal 1962. This is the fifth straight year Bonneville has sustained losses from the sale of power because of its unrealistically low rates. In 1961, the loss was \$14.2 million; in 1960, it was \$10.9 million; \$6.6 million in 1959; and \$2.9 million in 1958—for a total of about \$47.5 million in 5 short years.

The Comptroller General also reported to Congress that the Bonneville Power Administration failed to meet its scheduled repayment of the capital investment in commercial power facilities by about \$17.6 million in 1962. This compares

with a failure to meet its scheduled repayment of \$15.3 million in 1961, \$11.6 million in 1960, \$9.7 million in 1959—for a total of \$54.2 million in 4 short years.

Mr. Speaker, in these trying times when the demands of our Federal commitments at home and abroad create ever-increasing pressures for greater spending, and the poor taxpayer is almost stumbling from his burden of excessive taxation, to allow Bonneville to continue this folly is intolerable. It is made even more intolerable because it does not have to be.

Mr. Charles Luce stated in the 1961 annual report of the Bonneville Power Administration that "future deficits are predicted for the next 4 or 5 years." It will be remembered by many of us who were in this House during the 2d session of the 87th Congress that this same Mr. Luce promised us that if the Hanford project resulted in additional losses that Bonneville's rates would also have to be increased.

In my opinion, fiscal responsibility and sound public financing will not permit further procrastination in our need to face up to the realities of the Bonneville rate structure.

Mr. Speaker, many of us have also heard spokesmen for the Bonneville Power Administration say that its rates cannot be reviewed and adjusted except at 5-year intervals, and the next review would not be until December 1964. However, the organic Bonneville Project Act states only that contracts shall contain provisions for equitable adjustments of rates at "appropriate intervals not less frequently than once in every 5 years." Let me remind my colleagues, that Mr. William A. Pearl, then Bonneville Power Administrator, told the House Committee on Appropriations in May 1957—and let me quote him:

Periodically, in accordance with the Bonneville Act, we are to review our rate structure—that is, no less often than once every 5 years. Actually, we review it every year.

He said also:

About 2 weeks ago we announced there would not be an increase in rates for the year beginning December 1957.

When Mr. Pearl was telling the House Appropriations Committee this, the next so-called 5-year review would not have been until December 1959.

In other words, even though the review required under existing contracts was still almost 2½ years in the future, the Administrator announced there would be no increase in the year beginning December 1957. This announcement would seem to indicate—at least by inference—that if he had felt it necessary to increase rates before 1959, he could have done so.

The Bonneville Act further states very clearly that rates may be modified "from time to time by the Administrator" subject to the confirmation and approval

of the Federal Power Commission and subject to the terms of existing contracts. Furthermore, the act specifically requires that rates charged by Bonneville must be sufficient to cover the cost of producing and transmitting the electric energy, including the amortization of the capital investment in power facilities, over a reasonable period of years.

However, even assuming, for the sake of discussion, that the Bonneville Power Administration cannot increase rates under existing contracts until December 1964, I can find nothing in the Bonneville Act which would prohibit the Administrator from increasing rates under new contracts or under mutually agreed revisions of existing contracts which would be adequate to recover at least a portion of the losses and to repay a part of the investment until such time as a general rate increase might be applicable to all contracts. The act merely states that rate schedules may—and I emphasize may—provide for uniform rates but does not state that the rates must necessarily be uniform.

Mr. Speaker, because of the seriousness of allowing Bonneville to continue operating at such large deficits, I have sent a letter to Bonneville Administrator Charles Luce sincerely suggesting that he and his staff begin immediately to prepare for a realistic increase in Bonneville's power rates. Even though the overall increase may not be applicable to most of its customers until late next year, I think it is only fair to forewarn them at the earliest possible moment of the necessity for a forthcoming rate increase.

Under unanimous consent I insert a copy of my letter to Mr. Luce in the RECORD at this point in my remarks:

CONGRESS OF THE UNITED STATES,

HOUSE OF REPRESENTATIVES,

Washington, D.C., January 28, 1963.

HON. CHARLES F. LUCE,
Administrator, Bonneville Power Administration, Portland, Oreg.

DEAR MR. LUCE: I have recently read the audit report of the Comptroller General of the Columbia River Power System submitted to Congress in December. The report, as expected, shows the Bonneville Power Administration lost another \$13.1 million in 1962 and failed to meet its scheduled repayment of the capital investment in commercial power by \$17.6 million. As a member of the House Committee on Interior and Insular Affairs and a taxpayer, I am deeply concerned about these losses.

This is the fifth straight year BPA has sustained losses from its sale of power: \$14.2 million in 1961, \$10.7 million in 1960, \$6.6 million in 1959, and \$2.9 million in 1958, for a total over the 5 years of \$47.5 million.

Also, for the past 4 years, including 1962, BPA has failed to meet its scheduled repayment of the capital investment in commercial power to the extent of \$54.2 million. To the 1962 deficiency, there must be added deficiencies of \$15.3 million in 1961, \$11.6 million in 1960, and \$9.7 million in 1959.

Furthermore, it was brought out in the House Public Works Appropriations hear-

ings for 1962, that these stated losses are not a true reflection of the real losses to the U.S. Government.

The information you supplied for the record clearly showed that if Bonneville were paying interest at the more realistic rate of 4 percent instead of 2.5 percent, the losses for 1960, 1961, and 1962 would have been more than double the amount shown as losses in your reports.

In BPA's 1961 annual report you state, "future deficits are predicted for the next 4 or 5 years." You also observe that it will be most difficult to avoid a rate increase, if this trend is not reversed.

You have consistently stated or implied that BPA rates cannot be reviewed less than each 5 years, and the next review date would be toward the end of 1964. However, the Bonneville Project Act provides that contracts shall contain provisions for equitable adjustment of rates at "appropriate intervals not less frequently than once in every 5 years." The act further provides that rates may be modified "from time to time by the Administrator" subject to confirmation and approval by the Federal Power Commission. Finally, may I remind you, the act also specifically requires that the rates be sufficient to cover the cost of producing and transmitting the electric energy, including the amortization of the capital investment, over a reasonable period of time.

As I read this act, you cannot by contract preclude the Bonneville Power Administration from reviewing the rates charged thereunder at least every 5 years. This does not prohibit the Bonneville Power Administration from making more frequent rate reviews and, if necessary, rate adjustments as would be in accord with existing contracts.

In order to at least minimize the impact of losses temporarily, it seems to me that BPA should immediately review its rate schedule with a view to assuring that any future new contracts contain rates adequate to enable BPA to comply with the law. In the interest of fiscal responsibility by the Government—in the face of increasing Federal budget requests and the expressed desire by the administration to reduce taxes—I think it is urgently necessary to insure that any new customer taken on by BPA apparently is committed in existing contracts.

I can find nothing in the act to prohibit you from treating any new contracts under new rate schedules which would be adequate to recover losses and repay investments. The act states that rate schedules "may provide for uniform rates." It does not state that the rates must be uniform.

Mr. Luce, for these reasons, I sincerely suggest that you and your staff immediately begin to prepare evaluations of the BPA rate structure which will lead to appropriate increases necessary to comply with the law and today's economic facts of life. Remembering that your customers must also have sufficient leadtime to plan future needs, I would further suggest that they should be forewarned as soon as possible that a rate increase will have to be forthcoming in the not too distant future.

Sincerely,

JOHN P. SAYLOR,
Member of Congress.

Mr. Speaker, as a longtime member of the House Interior and Insular Affairs Committee, I realize full well the consequences and implications of a rate increase for the Bonneville Power Administration. However, as I said in my opening remarks, it is intolerable that Bonneville should be allowed to continue to operate at a serious deficit. The Government can and must strive to find every possible means of meeting its financial requirements while at the same

time reducing the burdensome load on the average taxpayer.

In closing, I would like to compliment the Comptroller General and the Government Accounting Office for the quality of their audit report on the financial statements of the Bonneville Power Administration for fiscal 1962. I have been reading these GAO audit reports for several years now and I think that in general they are outstanding. I have been somewhat concerned, however, that they seem to have received so little attention here in Congress. We should all remember that the Government Accounting Office is an arm of the Congress—not the executive—and, therefore, is deserving of more consideration.

The suggestions from the Comptroller General and his staff for improving Government and very often for saving money are usually well founded and excellent. I sincerely hope that in the future every Member of Congress will pay more attention to these reports and suggestions.

Walter Hall, of Galveston County: A Banker for the People

EXTENSION OF REMARKS OF

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 29, 1963

Mr. YARBOROUGH. Mr. President, Walter Hall, a leading Texas businessman who has risen to prominence both as a successful banker and civic battler for good government, was recently the subject of an excellent article in the Houston Post.

Walter Hall is known statewide in Texas for his courage in stepping forth against great odds to defend the people who helped him build his business—the people who start at the bottom of the ladder and work hard for a living. He has fought great odds, economically and politically, and always with growing strength and support from the people. He is a staunch Democrat.

The Houston Post quotes Walter Hall:

I didn't consider it going out on a limb to help these people get started. Some of the first loans in that area were no more than \$100. And the same people who borrowed these small amounts are pretty well off today.

This is a statement from a banker who knows where the basic strength of a country, or a business, is to be found. He has never forgotten this fact in his life as a banker.

On the subject of government, the Post quotes Walter Hall:

It is my feeling that all citizens should take an informed interest and have some participation in politics. I believe good government is almost in direct ratio to the percentage of people engaging in it as voters and in political activities.

Walter Hall and I have worked shoulder to shoulder for more than a decade

for better government for Texas and the Nation.

Mr. President, because Walter Hall is an outstanding example of an American businessman who has achieved success in a relatively small town, and because of his continuing courage in working for good government locally, statewide and nationally, I ask unanimous consent that the article captioned "Friend of the Little Man: Walter Hall, Banker, Doesn't Act the Part," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FRIEND OF THE LITTLE MAN—WALTER HALL,
BANKER, DOESN'T ACT THE PART

(By John Rainey)

DICKINSON.—Walter Hall has been a banker for 31 years.

For 31 years he has broken the so-called cardinal rules of banking, has become the image of a man most bankers refuse to be, and he's still solvent.

This has confused his financial and political opponents no end. They can't figure out how he manages to remain solvent.

"Some bankers laugh at me for making small loans of \$50 and \$60. Yet, I know when people need money in a country town they have no other place except a bank to go. Loan sharks have tried to move into the towns where my banks are, but they don't stay long," Hall says.

Hall is a liberal Democrat, in the national sense.

He is president of banks at League City, Dickinson, and Alvin. And plans are being readied for the fourth, at Webster.

Dickinson, League City, and Webster are in the heart of the NASA development. But before the space age came along the area was expanding rapidly.

Most of the loans in the Bayshore area—which helped it to grow, originated at the Citizens State Bank at Dickinson, Hall's first bank.

He bought controlling interest in the Alvin State Bank in 1953. Then along came the Chocolate Bayou plant of the Monsanto Chemical Co., swelling payrolls in wealth in the town this year.

He acquired control in the Dickinson bank during the midst of the depression, not an era of health for banks. Yet the Texas City petrochemical boom was mushrooming. He was in on the ground floor.

Doesn't sound much like luck, does it?

But most of the major windfalls in the area from which he has benefited were entirely unforeseen, he says.

Hall quit the Humble Oil & Refining Co. in 1931 to take a job as cashier in the League City bank, then owned by the Hutchings family of Galveston.

It was then called the Citizens State Bank. Hall got into the insurance business on the side and saved his profits to buy an interest in the bank. In 1932 the competing First National Bank at Dickinson closed.

The League City bank was then moved in 1935 to Dickinson. Hall gained controlling interest in 1943.

From 1933 to 1934 the expansion at the chemical plants was astronomical. In 1934 an oil field was discovered in Dickinson. In 1938 the League City field was uncovered.

In 1939 Camp Wallace was established in the La Marque-Hitchcock-Dickinson area. A blimp base was built at Hitchcock.

As he tells it: "The Camp Wallace and blimp projects filled every living unit in the area. And I had been making loans for additions to homes and for apartments.

"Our bank was the first in a 16-county area to make FHA title I loans. The other

banks were slow in getting into this new program.

"But then I didn't have the handicap of experience and outmoded ideas to tell me I shouldn't do it.

"In the same period, the people trying to develop the Bayshore area were considered wharf rats by many. I felt that the rapidly expanding population in Houston and along the coast would create a boom someday in the recreation business.

"I didn't consider it going out on a limb to help these people get started. Some of the first loans in that area were no more than \$100. And the same people who borrowed these small amounts are pretty well off today.

"When I acquired control of the Alvin bank in 1953 the decision was based on the premise that oil in the area would cause other industry to grow. It did. But they were primarily of a diversified nature—rice farming, dairy, and beef cattle ranching. I had no idea that Monsanto would build at Chocolate Bayou.

"And that has been the story. I was in the right place at the right time."

The three banks now have combined assets of about \$25 million.

Hall may have been in the right place at the right time; that is part accident. But the loan policies he has instituted are not accident.

At the Alvin bank for example, he raised the ratio of loans to deposits from the previous 10 to 25 percent to 50 percent. The rate of growth of assets was 7.2 percent annually, up until 1961. That year the rate was 19 percent.

He organized the League City State Bank in 1956. It has had an annual rate of growth of 12 percent. It now has over \$6 million in assets.

He has been active in his banks but he considers himself a citizen first, a banker second. He has hired competent people to run the banks, given them authority and then turned 'em loose.

For Hall has been active in politics as he has in business. His views on economics put him in the class of radical among most businessmen and definitely so among bankers.

He gave more than voice support for Don Yarborough for governor this year. He campaigned and supported Yarborough financially. But this is not new with Hall. He is a prime supporter of U.S. Senator RALPH YARBOROUGH. Hall is also close to Vice President LYNDON JOHNSON.

He gets around, though his ideas on State finances have not been given much attention.

Here they are: "I don't gripe about taxes. I realize that the economic world we live in makes them necessary. I do think that the State tax structure is unfair, though.

"Taxes should be levied relative to the capacity to pay. They should be levied fairly with the least disturbance to the economy and living conditions of the people.

"Also, economy in the mechanics of collection is important. One of the main defects of the sales tax is the heavy cost of collection and the difficulty of enforcing it fairly.

"In many States where it is levied too much of the tax collected never reaches the State treasury because of collection costs.

"The State corporation tax, which is in effect in 37 States, has the advantage of being easy to compute and collect. And, of course, it is based upon profits. It is, therefore, a tax that meets the requirements of the capacity to pay.

"A glaring example of a vicious tax that is not related to the capacity to pay is the State franchise tax. This is a tax on capital and long-term debt and will literally bankrupt a company that is just barely getting by before the tax.

"One thing in favor of the corporate tax on a State level is that much of the money so collected by the State amounts to a diversion of Federal taxes.

"Texas is at a distinct disadvantage in not using the State corporate tax to help finance expenses.

"Taxes are heavy and will continue to be so. For the people want more things from all the various governmental units. These cost money and there is only one place to get it, from the people. But taxes have to be in relation to the income of those paying them, otherwise they become confiscation.

"People, especially businessmen, can't understand why I should be so interested and also mixed up in this business of politics.

"I do not consider myself a politician at all. We approach all problems through some political unit, generally, I like to see the efforts of meeting changing problems made by applying reason and using the best information possible.

"All of us, the busy businessman included, should see that tax money is spent efficiently and for the things the taxpayers want it spent. That there may be some penalty risk by businessmen participating in politics as I do, I do not question. Some say there is, some say there is not. Personally, I do not know. But I do know a man is, or at least should be, a citizen first, and a banker, engineer, farmer, or whatever, second.

"I respect politicians because I realize we cannot have a democracy without them. While democracy may have its defects, it is so far superior to anything yet devised that to me there is no alternative.

"I have been called a liberal and I suppose by some measures I am. This is because I know that change is inevitable and that orderly change is the most desirable kind. I do not fear change and it wouldn't matter if I did because it would still be with us, and I would have to meet it.

"It is my feeling that all citizens should take an informed interest and have some participation in politics. I believe good government is almost in direct ratio to the percentage of people engaging in it as voters and in political activities.

"People scream about the Federal Government invading the States, taking away States rights. While I do not regard the Federal Government as some sort of enemy as do some folks, I do not think it is good, in a State with the basic wealth of Texas, to have development of these resources depend upon Federal financing.

"I think it is a poor trade to exchange some degree of State control for Federal dollars.

"Yet, we have seen, countless times, people who constantly criticize Federal taxes and expenditures go all out for the Federal aid to finance State projects. In some States this is necessary, it is not in Texas. And yet, there is nothing now to cause anyone to believe there is any basic change in sight."

Hall has one other favorite topic—soil and water conservation. He served as president of the San Jacinto River authority for 11 years, from 1943-54.

He became interested in water supplies because of the need in the area for fresh water, especially for industry.

"Water supply has been the ceiling on every civilization," he says. "The need is now, and it will increase in the future."

"It can be said, perhaps, with logic, that the people will see the need when they become sufficiently educated. This may be true, but I point out we have many well educated people now and only a few of them seem to be much concerned about all of the aspects of taxes and water development.

"While the educational process is going on, and I hope being improved, considerable damage is being done in the State through neglect of soil and water development.

"For instance, there goes down the rivers of Texas into the Gulf of Mexico enough of our soil each year to create 8,000 farms, 100 acres each, with soil 6 inches deep.

"The leaders must lead. But the fact that the masses are not greatly concerned over these problems is a reflection on the leaders."

Hall does not demand that others listen to his opinions, only that others be tolerant of them. His politics is not a company policy. For example, his own secretary is a Republican.

Those who differ with him rarely become bitter over the differences.

He likes to have ideas on problems come out in full play, regardless of their nature. He likes to philosophize and mix economics with his philosophy. He received his bachelor of arts degree from Rice University in 1928. His favorite subjects were economics, philosophy, and history.

He was born in 1907, the youngest of seven children.

His parents moved from Illinois to a farm northwest of Webster in 1898. The 1900 hurricane ruined their crops and home. The family moved to Houston where Hall attended Central High School.

He is still essentially a country boy at heart. He knows the people in his area, personally.

One of his friends sums him up this way: "He has listened to the small because he considers them important. But the listening has not made him small. If he has a banner, it is one of individualism. He carries it high. It is, though, the kind of higher individualism that grows out of looking for meanings in the human drama."

The Romance of the Mona Lisa

EXTENSION OF REMARKS OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. ADAIR. Mr. Speaker, in these days when we are all so much pleased and interested in the display of the Mona Lisa at the National Gallery of Art, it is particularly interesting to note what the newspapers of our country are saying with respect to this matter. I think the editorial headed "The Romance of the Mona Lisa," which recently appeared in the Fort Wayne News-Sentinel sums the matter up very well and I am pleased to include it herewith.

Under unanimous consent I insert the article in the Appendix of the RECORD:

THE ROMANCE OF THE MONA LISA

It is indeed a heartwarming contrast that against a background of so much that is negative and ominous in international relations there should fortuitously be such a positive and ennobling expression of international relationship which is currently being graphically enacted in our own country—indeed in our National Capital.

The fruition of this salutary romantic and artistic international gesture became a reality when Leonardo da Vinci's incomparable masterpiece, the Mona Lisa, went on public view at the National Gallery of Art in Washington today. On loan from the French Government, it will also be shown in the Metropolitan Museum in New York City before being returned to the grand gallery in the Louvre.

The Mona Lisa, of course, is not the oldest portrait in the world, and there could be some division of expert artistic opinion as to whether it is the greatest. But it is a veritable miracle in international esteem. Mona stands for madam, and Lisa, her given name. Relatively speaking, it is a small portrait, just 30 inches high and 21 inches wide.

Lisa was the third wife a Florentine patrician, Francesco di Zanobi del Giocondo. She was about 25 years old when she sat for da Vinci, then in his early fifties. Incidentally, Giocondo was an ordinary rich man such as one encounters often and everywhere. He was neither overly handsome nor ill featured, and while he was preoccupied with his affairs, he nevertheless was still devoted to culture. He was 20 years older than Lisa, who to him was the ornament of his home. But legend has it that he really understood less of the consummate beauty and charm of his madonna than he did the quality of a new breed of beef cattle.

Lisa was a Neapolitan and a scion of an ancient family. Disaster struck her family, for her once rich father had been ruined by the French invasion in 1495. She was said to have married, not for love, but out of filial obedience. Her marriage disappointed many passionate, obstinate and desperate suitors. But none could speak ill of her. A biographer of Leonardo describes her as: "calm, modest, plous, charitable to children, a good manager, a faithful wife, and very tender with her stepdaughter, Dianora."

This then was the Lisa who remarkably sat to Leonardo for the better part of 3 or 4 years. That they both enjoyed the platonic seances is evident. Leonardo always had mimes, musicians and poets at his studio to keep the Madonna amused. A bitter note of tragedy intervened when one of her children died during her sittings.

It was most distinctive of the artist that he is historically reputed to have been, that Leonardo was never satisfied that the portrait was complete. He took it with him when he went to France in 1516 and sold it to the King, Francis I (Giocondo never got his hands on his wife's historic likeness), for 4,000 golden ducats. Nevertheless Leonardo kept the Mona Lisa on a whitewashed wall in his mansion at Chateau de Clous until the day he died.

The loan of the enigmatic Mona Lisa to the Washington National Gallery by the French Government represents alike a master stroke of diplomacy and international friendship. Significantly, *Le Monde*, the highly influential Paris newspaper, already has suggested that the French might "hope in return for the loan of artistic works which will arouse a lively interest." Noted international art connoisseurs have for centuries paid profound tribute to da Vinci's artistry in the Mona Lisa. The following by Walter Pater is typical: "Hers is the head upon which all the ends of the world are come. It is beauty wrought from within the flesh, the deposit, little cell by little cell, of strange thoughts and fantastic reveries, and exquisite passions."

Let Us Be Better Americans

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, January 29, 1963

Mr. KEATING. Mr. President, I have just received a copy of a speech recently

delivered by Mr. Harry Ostrov, grand master of Free and Accepted Masons of the State of New York, which was recently delivered at the Garden City Hotel, Garden City, Long Island.

Mr. President, in my judgment this address is worthy of the consideration of all thinking Americans. It is a call and a challenge to all of us to fill our responsibilities as citizens under a free government. As Mr. Ostrov points out, the citizens of America have never before been faced by the challenges that confront us throughout the world today. He concludes:

If we pride ourselves on being Americans, let us be better Americans. Let us work for the day when there will be peace on this troubled earth, when every man shall be free, when all of us can follow the dictates of our conscience, when all of us can work together for a better world.

Mr. President, I ask unanimous consent to have the text of this stirring address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS GIVEN BEFORE THE MASONS OF LONG ISLAND AT THE GARDEN CITY HOTEL, GARDEN CITY

We have started this day in a very auspicious manner. We have arisen and directed our footsteps to our houses of prayer and there, as the first act of the day, have paid our obeisance to our Almighty Father who is in Heaven; and then we gathered here to break bread together, and to share each other's fellowship, with the thought in mind that we will leave this place a little bit stronger than when we arrived, for we will be leaving with the good wishes of our brethren in our hearts. Would that we could start every day in this fashion, for then we would be ever mindful of the responsibilities which are ours, both as Masons and as Americans. We would then be able to gather the courage that we need to face the problems of our day; and problems, my brethren, we have.

From the very beginning of our Nation's history we have had problems. We have been confronted with one crisis after another, and we have survived as a nation primarily because of these crises; for each of them presented a challenge to us, and as we met the challenge day by day we became stronger in our convictions, strengthened in our purpose, and we developed a character which is known as the American; and we today inherit the steadfastness, the zeal, the courage, and the dedication of those who founded this Nation. In the forefront of those who established this country were members of our craft. Many of the signers of the Declaration of Independence were Masons; and also many of Washington's generals. Down through history, wherever our country needed men of courage and conviction and trustworthiness, it often developed that they were members of our craft. They had a job to do for their young Nation; we have a job to do for the Nation that has grown out of their efforts.

The one fault I would find with Americans, if it can be called a fault, is that they take too much for granted. We know that ours is a great fraternity and a great country, but we sometimes forget that this Nation was not born out of wishful thinking, nor was our fraternity. This Nation resulted from the sacrifice of many dedicated men who were willing to offer their wealth, their position, their sacred honor, in order to establish here on this continent a new nation conceived

as it is in liberty, and firmly based on the principle that we are all God's children; and that there should be equality of opportunity for every man, for every citizen, to develop his highest best, not for any selfish reason of his own, but that he may thereby be better enabled to contribute greatly to the success and prosperity of his Nation, this beloved land of ours, and of all mankind. Freemasonry, my brethren, has ever been in the forefront of every movement for democracy and for freedom, and come what may we will always be in the vanguard of the battle for the dignity of the human soul.

We face a particular crisis today. We have met a challenge straightforwardly, unequivocally; we have accepted the challenge that was laid at our doorstep and we are now willing to negotiate and, if need be, to fight for the preservation of our way of life. It may not be easy, but nothing that is worthwhile, my brethren, comes easily. This is a time when Americans must stand united behind the leaders of our Nation, and support them with calm dignity. The worst thing that we can do is to panic. The best is to preserve our calm, maintain our faith in these institutions which we cherish so dearly, and, with the help of Almighty God and the dedicated efforts of all Americans, we shall be vindicated in establishing the principles for which this country has ever stood. I am proud this morning to be an American.

With this realization, I think that we should do this a little bit more often. Confession is good for the soul, and it would be well for us to stand up every once in awhile and speak about the things we believe in, and the things for which we stand, rather than devote our time, and such talents as we may have, to decry those things which we do not like.

Let us be positive. Do you believe in Masonry? Work for it. Do you believe in America? Fight for it. Do you believe that there is one Almighty Parent in heaven, which makes us all members of the human family? Brethren, if you believe in that ideal, fight for it. In no other way can these precious liberties, and these wonderful privileges, be maintained and preserved for the generations that come after us.

I attended a cornerstone laying in Philmont recently, a quiet little village upstate. There we heard much about the history of the times that preceded the laying of that cornerstone. But histories, my brethren, are unimportant excepting what we may learn from the lessons of the past. The history that is important is the history that we make today. We make it by the things we do today, by the things we think today, and by the manner in which we live our lives. Every moment of today is the history of tomorrow, and you who sit before me now, are writing history. What kind of history will it be? Will it be the kind of history that you will be proud to have your children read? Will it be the kind of history on which future generations will look back and say, "There were men of courage." It must be that kind of history, and to the making of that history I enlist every member of our fraternity, and I would enlist every American, for we have the opportunity now of showing the world that Americans are not just a country of preachers. Americans are not just a group of people who mouth their sayings without meaning them. We can prove to the world that Americans, and especially Master Masons, believe in their preachings, practice their preachments, and are ready to fight to see that this preaching is put into practice and that these faiths that we espouse will prosper and go on to greater glory. Never, in the history of America, have the citizens been given such a challenge. Never has the proper response to that challenge been so important. This morning, my brethren, let us dedicate our-

selves to the thought that if we are going to be Masons, let us be better Masons. If we pride ourselves on being Americans, let us be better Americans. Let us work for the day when there will be peace on this troubled earth, when every man shall be free, when all of us can follow the dictates of our conscience, when all of us can work together for a better world.

May I read to you, in conclusion, the prayer that was uttered at one of our services this morning, and in which I ask you all to join. "Bless our country, that it may even be a stronghold of peace, and its advocate in the council of nations. May contentment reign within its borders, health and happiness within its homes. Strengthen the bonds of friendship and fellowship among all the inhabitants of our land; plant virtue in every soul; and may the love of Thy Name hallow every home, and every heart. Praised be Thou, O Lord, giver of peace."

Ohio's Favorite Son

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. VANIK. Mr. Speaker, in the 6 months since his appointment as Secretary of Health, Education, and Welfare, Secretary Anthony J. Celebrezze has proven himself a tireless worker dedicated to the successful administration of his far-reaching Department. More recently, Secretary Celebrezze rendered extra service in his cordial meetings with Premier Amintore Fanfani, of Italy, serving to strengthen the ties between our nations.

The State of Ohio is proud of its favorite son, who has distinguished himself and continues to bring great honors to Ohio.

On Saturday, January 26, at the dinner meeting of the Ohio Society of Washington at the Lawyers Club, Secretary Celebrezze delivered the following inspiring address:

REMARKS BY ANTHONY J. CELEBREZZE, SECRETARY OF HEALTH, EDUCATION, AND WELFARE

Since I am a lawyer by trade and since all of us here are from Ohio, it occurred to me that you would indulge me in a stipulation or two about our State.

Without making too fine a legal point of it, I think that in these circumstances we can stipulate that Ohio is a great State—and that all Ohioans are great people.

As a matter of fact, I suppose on this occasion I could probably stipulate that Ohio is the greatest of all States. But that would be bragging, and since—among our many other virtues—we are naturally modest, we'll simply stipulate that we're a great group of people from a great State, leaving the superlatives to someone else. There are, after all, only so many superlatives, and those that New York and Texas haven't cornered, Alaska and California have—or will.

So acknowledging our natural modesty, we will simply confine ourselves to the facts. We will merely note that Ohio was the pioneer State in one of the most brilliant chapters in American history—the development of the Northwest Territory—and that it has been a leader ever since.

We'll merely note that Ohio is blessed with rich soil, abundant water, healthful climate,

and all other characteristics of a fine piece of real estate and that its people are industrious, imaginative, honest, forthright, progressive, conservative, and otherwise—by any standard—quite without fault.

I could, of course, go on. But having stipulated these self-evident facts, I am sure none of us wants to dwell overlong on the past or even on the present. The past is static—at least to the extent that it doesn't get rewritten. And there's not much any of us can do about the present—it, too, is in the process of freezing into the past.

But the future. That's where the great game is—always ahead of us. The seed not yet planted, the machine not yet invented, the song not yet sung—these are the things that lead us on.

Now, don't misunderstand me. I don't underrate the past. It is not only important, it is imperative that we understand and interpret the past. It is imperative that we grasp the significance of the present. We must know the past and appreciate the present if we are to command—and not be commanded by—the future.

But granted the most penetrating analysis of the past, the most sensitive appreciation of the present—granted all that, and the future is still an uncertain business.

What will the world be like—10, 20, 30 years from now? What will America be like? What will Ohio be like?

No one, of course, can know with certainty. But we do know that what each of us does or does not do tomorrow may—and in all probability will—have some bearing on the shape of things to come.

The other evening I was in Cleveland helping to celebrate the 70th birthday anniversary of a great and wonderful friend—Rabbi Abba Hillel Silver. And I quoted some of Rabbi Silver's own words from an address he had given several years ago.

"We have long been admonished by our sages not to observe the wind too closely lest we fail to sow, nor to regard the clouds with too much concern lest we fail to reap."

I like those words—let us not observe the wind too closely lest we fail to sow or regard the clouds with too much concern lest we fail to reap.

Somehow these words remind me of the traveler who stopped to ask the way of a local citizen. You all know the story of how the local citizen, after deep thought and a number of false starts, finally gave up and said to the traveler: "You can't get there from here."

We are seeking our way to the 21st century. It is just over the horizon, but how do we get there from here? Or more precisely, how do we go about making the world of the 21st century the kind of world we want it to be?

From some of the things you read, you sometimes get the notion that there's no way to get to the 21st century from here and that anyone who tries to figure it out ought to have his head—and even his motives—examined.

I expect that somehow we'll make it, but I think we can stipulate that it's going to take some doing. We're going to have to do a lot of sowing, wind or no wind, and a lot of reaping, clouds or no clouds.

It takes a lot of work to keep a nation like this humming. But work is no problem. We seem to like work, and I am sure we will continue to like it.

The point is that it isn't enough in this day and age—if indeed it ever was—merely to get "A" for effort. The really difficult part is making our efforts, as individuals and as a nation, count. And that means developing and using all our resources.

Up to now, I haven't mentioned my dominant concerns, and I don't intend to burden you with them this evening. But since we are making some stipulations, I think we must stipulate that progress in the fields of

health, education, and welfare are essential to our progress as a nation.

And we have made progress in all these fields. We are spending more money for medical research than any nation on earth, we have provided more education for more people than any nation in history, and we are spending billions of dollars a year to see that no one is destitute.

In short, we have gone to considerable trouble to deal with those problems which are of manifest public concern. The question is, Are we really taking advantage of our opportunities in these fields?

I suggest that merely alleviating human problems is a costly investment. I suggest that this approach belongs to a less enlightened, less resourceful age.

The youth loitering on the street corner, out of school, out of work—is he merely a problem, or does he represent an opportunity?

The once-clean river, laden by waste and debris—is this merely a problem, or does cleaning it up represent an opportunity for progress?

The mentally ill, living out their lives in custodial institutions because known methods of treatment are not available to them—are they merely problems, or do they represent opportunities for constructive action?

In a less enlightened, less resourceful age, the most we could hope to do in dealing with problems of health, education, and welfare was to try to relieve the symptoms.

But times have changed. We now know that it is possible, through timely and constructive action, to prevent many of the problems that have beset humanity throughout the ages.

It seems to me the better part of prudence that we steadily move in that direction—in the direction not only of dealing with problems after they have arisen but in the direction of preventing them from occurring in the first place.

There is nothing, it seems to me, quite so important to our progress and well-being as a nation as increasing the vitality of our educational system. I think you will agree that this becomes more and more evident as we advance further and further into the age of technology.

Consider merely one product of technology—automation. Consider the problems it poses for our educational system—and the opportunities it offers for increased productivity and the manifold benefits that go with it. But we must look upon automation as an opportunity for all—rather than a problem for many—if its true value is to be realized.

Well, I said I wouldn't burden you this evening with these concerns. If I haven't kept my promise, I apologize. But in all candor, I think we must stipulate that the work of the great State of Ohio is not yet done.

I think we must stipulate that Ohio, in common with all the other States, must not rest on past achievements but must keep moving forward—toward the 21st century.

There is bound to be a way to get there from here—if we will but find it.

Adlai Stevenson and the Cuban Crisis

EXTENSION OF REMARKS

OF

HON. GALE W. MCGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, January 29, 1963

Mr. MCGEE. Mr. President, this morning's edition of the Washington

Post carried a very interesting and informative editorial concerning a situation illustrative of the less effective side of American journalism. The editorial refers to the role played by U.N. Ambassador Adlai Stevenson during the Cuban crisis and subsequent revelations of his actions by a national magazine.

History has wasted no time vindicating Ambassador Stevenson, and I hope that this incident, painful as it has been to Mr. Stevenson, has taught us that eavesdropping and supposition are not suitable substitutes for factual reporting and analysis based on the facts of diplomatic life.

Mr. President, I ask unanimous consent that this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MUTABLE MUNICH

"We're eyeball to eyeball, and I think the other fellow just blinked." So began the celebrated Saturday Evening Post account of the Cuban crisis as written by Stewart Alsop and Charles Bartlett. Near the end, this passage occurs: "Only Adlai Stevenson, who flew down from New York on Saturday, dissented from the Excomm consensus. There is disagreement in retrospect about what Stevenson really wanted. 'Adlai wanted a Munich,' says a nonadmiring official who learned of his proposal. 'He wanted to trade the Turkish, Italian and British missile bases for the Cuban bases.'"

Last week a curious footnote was written to the melancholy controversy over Mr. Stevenson. President Kennedy confirmed at his news conference that the missile bases in Turkey, Italy and Great Britain are being phased out in favor of Polaris, "a much more modern weapon." Mr. Kennedy concluded by remarking, "I think we are going to be in a stronger position."

In other words, what would have been a Munich in September became a matter of modernization in January. Surely this ought to serve as a sobering lesson to those who persist in evincing a retrospective rectitude about what may or may not have gone on in the secret councils of state during a moment of supreme crisis. Mr. Kennedy would have been derelict if he had not considered the missile bases as part of the diplomatic equation, especially since their removal does not, on the President's testimony, lessen western security. Events have brought Mr. Stevenson and his critics eyeball to eyeball, and it looks suspiciously as if history has just winked.

Quincy Soldier Cited in Vietnam

EXTENSION OF REMARKS

OF

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. BURKE. Mr. Speaker, may I take this opportunity to bring to the attention of the Members of the U.S. Congress an award given to a brave young man who lives in my district. Pfc. Kenneth B. Eaves of 282 Wilson Avenue, Quincy, Mass., graduated from high school in 1961. He is a former newspaper boy and is a typical young American who is courageously doing his duty in order that peace may be established in the world.

In this far-off place Kenneth Eaves is engaged in combat just as deadly and as dangerous as any battlefield in World War I, World War II, or the Korean conflict. It is fitting that we should recognize the great sacrifices being made by these brave young Americans. Their devotion to duty, to God, and country has never been excelled.

I enclose a news story that appeared Thursday, January 24, 1963, in the Quincy Patriot Ledger that reads as follows:

**QUINCY SOLDIER CITED FOR VIETNAM
HEROISM**

SAIGON, SOUTH VIETNAM.—A 20-year-old helicopter gunner from Quincy, Mass., was awarded the Distinguished Flying Cross today by U.S. Army Chief of Staff Gen. Earle G. Wheeler for heroism in a battle January 2.

WAS WOUNDED

Pfc. Kenneth B. Eaves of 282 Wilson Avenue, Wollaston, was shot down twice and slightly wounded in the leg in five missions during the 12-hour battle of Ap Bac.

He was 1 of 12 American soldiers awarded medals today.

Three Americans died and Vietnamese Government Forces suffered heavy losses in the battle with Viet Cong rebels about 40 miles south of Saigon.

Eaves, a machinegunner on a U.S. Army troop-carrying helicopter, has been stationed in this embattled country for 9 months.

On one mission, though covered with oil from a burst pipeline, he continued to fire his machinegun until his helicopter crashed. He survived the crash and waded across 100 yards of knee-deep mud to reach a rescue helicopter.

The gunner, his Distinguished Flying Cross dangling from his shirt, said after the ceremony: "I will stay in the Army and I hope to join the Special Forces."

FORMER NEWSBOY

Eaves, a 1961 graduate of North Quincy High School, has been in South Vietnam since last April. From junior high school until his sophomore year at North Quincy he was a Patriot Ledger carrier boy.

Five Distinguished Flying Crosses, six Bronze Medals and one Air Medal were awarded. Seven went to helicopter pilots and crewmembers and the other five were to military advisers.

"This is a dirty, nasty, little war," General Wheeler said in the ceremony at Soc Trang, a major American helicopter base 100 miles southwest of Saigon. Referring to the Normandy invasion of France, he said:

"You know you can get killed here just as easy as you would landing on Omaha Beach."

It was a "lonesome war," he added.

But he said although some might consider the Vietnam war a strange war in a strange country, no American should feel alien in any country fighting for freedom.

**Address by Hon. Anthony J. Celebrezze
Before the National Federation of Business and Professional Women's Clubs,
Inc.**

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, January 29, 1963

Mr. YOUNG of Ohio. Mr. President, on January 19 the National Federation of

Business and Professional Women's Clubs, was honored to have as their main speaker our great Secretary of Health, Education, and Welfare, Anthony J. Celebrezze. The speech given by my personal friend Secretary Celebrezze set forth as well as anything I have read regarding our national objectives in the fields of health, education, and welfare.

I ask unanimous consent that this speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS¹ BY ANTHONY J. CELEBREZZE, SECRETARY OF HEALTH, EDUCATION, AND WELFARE

Madam President, distinguished colleagues. Seldom do I have the opportunity to speak before an audience whose major concerns, both personal and professional, are so deeply meshed with my own and so broadly extended over the field of government.

We are, each of us, in one way or another, trustees of the public welfare. Together we share the task of administering to the needs of the American people, and together we share the tremendous responsibility of safeguarding the future of democratic institutions both here and around the world.

It is fitting, at the beginning of this new year—at the beginning of this new legislative session—that we should pause to re-define our common goals and to examine some of the issues surrounding them.

Abraham Lincoln once observed that, "If we could first see where we are and whither we are tending, we could better judge what to do and how to do it."

President Kennedy, on Monday, provided such an overview on the state of the Union.

Today, I would like to make some further observations concerning our national objectives in the fields of health, education, and welfare.

These objectives and the means of meeting them have often been the subject of vigorous public debate.

I am not dismayed by this attention. It reflects the fact that the programs of our Department touch directly, most intimately, the interests and concerns of the individual citizens of our Nation. Their spirited reaction to our programs and proposals is not something to be deplored. It is a very healthy sign of American democracy in action.

It is through such debate that we are able to reconcile differing points of view and produce a consensus that serves as a basis for action.

It is this that propels our Nation forward. When we fail to reach a consensus on matters of urgent public need, as in education, for example, then we are in trouble. For unless our Nation can move forward, not only we Americans but free peoples everywhere are imperiled.

How to resolve the differences that divide and tend to immobilize us, how to keep this Nation moving along on all fronts, is the function of government, the function of politics, the function of responsible citizenship. It is your job and mine.

It requires the free flow of ideas. It requires honest effort at accommodation among the special interests that are bound to exist in a pluralistic society such as ours. It requires broad perspective and broad understanding of all these interests.

I am most concerned that we should understand each other, you and I and the pub-

¹ Before the National Federation of Business and Professional Women's Clubs, Inc., Grand Ballroom, Mayflower Hotel, Washington, D.C., Saturday, Jan. 19, 1963, 12:30 p.m., e.s.t.

lic at large, on the fundamental issues concerning our objectives in health, education, and welfare.

Let us see ourselves first in the broadest possible perspective before we attempt to resolve the finite issues that appear to divide us. There is much that we are agreed upon, and from this vantage point I am certain that we can move to even closer understandings and to more productive leadership for the Nation as a whole.

In a global and historic perspective we know these things:

That we are a nation of 185 million people in a world of 3 billion, one-third of whom live under the yoke of communism;

That we share grave responsibility for leadership of the free world;

That we are a people of diverse national origins and races, with differing religious and political beliefs, who have made a common commitment to defend the freedom of man and to support the rule of law.

We are also a compassionate people, a people of good conscience, whose concern for the well-being of others is a fundamental and active component of our democratic way of life.

In the history of the world, ours is a unique experiment in democracy. It is true that we have fulfilled many of the great expectations of our Founding Fathers. We have survived the bitter tests of civil strife and economic hardship—of world conflict and militantly challenging ideologies. Our people have prospered. Our national stature has grown.

But the time of testing is not yet over. We are not preordained either to succeed or to fail. Our destiny will be determined by our actions, by our response to the needs and the aspirations of mankind today and tomorrow, here and around the globe.

During the last 20 years, since the end of World War II, the world has been undergoing a remarkable change in human attitudes.

This social and political change which we are experiencing is still too close for objective evaluation. That will be a task for future historians. But we can perceive its general outlines in the changing social, political, and economic structure of Western democratic states.

The change was heralded by Franklin D. Roosevelt when he added "freedom from want" to the essential rights of man. It was echoed by Winston Churchill when he proclaimed our era "the century of the common man." One of its first major international expressions was the Marshall plan, a truly historic gesture of man's concern for his fellow man which infused the nations of Western Europe with new life and new hope.

The concept of the Atlantic Community, the growth of the European Common Market, the Truman doctrine, the decolonization of Asia and Africa, the Alliance for Progress in our own hemisphere, all these are manifestations of the interdependence of free nations and of the rising hopes and expectations of free peoples for a new kind of society, for creation of what President Kennedy has called "a new world of law, where the strong are just and the weak secure and the peace preserved."

This is the promise of democracy. Whether this new world of law ultimately comes into being will depend to a considerable extent on us, on our own continued strength, on our ability to achieve social and economic progress in our own land. We must continue to demonstrate that a free society is a viable society in which the rights of man are guaranteed, in which the common good is sought by common consent, in which civilization can grow and prosper.

This is the larger picture. But it is in this context that I would like you to consider this administration's objectives in health, education, and welfare. For we can

no longer view the needs of our society or the obligations of our Government without an awareness of our place in the family of man.

Deterrants to progress in our land are no different from those in any other. Disease and poverty, ignorance and idleness all bear the same form and wear the same face. We are pledged to overcome them. Not all of them today, or tomorrow, or even perhaps in this generation. But we are pledged to make a fresh start. And we have made a fresh start.

We have begun by reaffirming our faith in the individual, in the 185 million men, women, and children who make up our national family. Our goal is to increase their personal freedom, to enlarge their capacity to build a good life for themselves and their families.

We believe that this can best be done by preventing the conditions that lead to dependency, to loss of personal freedom. Or, if we are too late, we would seek to restore their independence, to help them to help themselves.

In every field of social action, in health, in education, in welfare, these approaches are applicable. And they make sense.

Our social security system provides basic economic independence for retired or disabled workers, their widows, and surviving children. This does not intrude upon individual freedom and dignity. It makes them possible.

Our proposal to extend this insurance system to meet the basic health needs of the aged is another preventive measure, bearing no relation to socialized medicine. It would help protect the economic independence of older people by allowing them to insure themselves against some of the crippling costs of illness by prepaying part of these costs during their working years.

In the field of education we are facing a national crisis of alarming proportions. The growth of our economy is stunted on the one hand by the large and still growing number of educationally handicapped people, more than 8 million functional illiterates, 1 million school dropouts each year, and hundreds of thousands of men and women whose skills are becoming obsolete in today's highly developed industrial society. On the other hand we are experiencing a severe shortage of highly skilled manpower, particularly in the scientific and technical fields.

Thus, important national objectives are threatened by inadequacies in our educational system. Federal aid is clearly indicated, but of necessity can be only a small part of the total \$30 billion invested annually in this country for education from all sources. Accordingly, the Federal contribution to education must be used to the maximum possible advantage of our schools.

Primarily, as President Kennedy pointed out in his budget message, Federal aid must "provide a major impetus to the solution of a selected number of critical educational problems."

The President has proposed that the Office of Education be strengthened and that the National Science Foundation play an increasing role in supporting the education of scientists and engineers. Other phases of the program, to quote the President, are designed "to obtain improved quality in all levels and types of education . . . to help break crucial bottlenecks in the capacity of our educational system by providing funds for building expansion . . . to increase opportunities for individuals to obtain education and training by broadening and facilitating access to colleges and universities and by providing an expanded range of technical, vocational, and professional training opportunities for teachers and students."

This is not too ambitious a program for America. Every phase of it is geared to

stimulate State and local activity in overcoming an immediate and urgent national need.

And every phase of the program, in one way or another, has this objective: To prevent the tragic waste of stunted intellectual development in individual human lives and to assure that the Nation has the skills and brainpower it will need for the long haul in the years to come.

This program stands on its merits. In the field of health, the principle of preventive and protective Federal action in concert with the States and local communities has long been practiced with success. The record of the Public Health Service is one of progressive triumphs over the agents of death, human suffering, and disease.

These efforts will be continued and strengthened and hopefully expanded to include national programs to prevent the appalling waste of human lives resulting from mental retardation, from drug addiction, from accidents, and other causes.

Our public health needs today are further complicated by manmade hazards in the environment, by the pollution of our waterways and the contamination of our atmosphere from industrial wastes, automobile exhaust, and the very same chemicals that serve to protect us.

During the last Congress we sought and received authority to strengthen our nationwide program of water pollution control, a major legislative achievement. We believe that effective air pollution control will require a major joint effort of nationwide scope.

We are also concerned about our manpower needs in the health fields. Today's shortages of doctors and dentists, nurses and public health specialists will not be overcome because we are already too late to do much about them. Tomorrow's shortages we can prevent by preparing for tomorrow's needs. This will require a huge national effort to expand our medical teaching facilities, to increase enrollments in medical schools by at least 50 percent and in dental schools by 100 percent.

These are our major objectives in health, education, and welfare. I believe they are sound objectives. They are all aimed at guarding and conserving our human resources, protecting the health and well-being of the individual citizens of this Nation and promoting its general welfare.

They are forthright, practical, and responsible approaches to difficult social and economic problems that must be solved.

The tasks we face today are not the same as those of yesterday. They require new approaches, new tools, and the testing of new ideas. Only by remaining flexible in our thinking and in our attitudes can we meet the challenges of change.

And change we must, for the status quo is neither safe nor desirable. We are by nature an open society, a dynamic society, that is responsive to the needs of its people and protective of their human rights. Other nations are looking to us, and we shall not disappoint them.

Among our goals, as you are well aware, is the provision of equal rights and opportunities for women.

We have not yet provided a fully satisfactory answer to Susan Anthony's question: "Are women persons?" In spite of the progress we have made in securing for women their basic rights, there remain shameful inequalities and prejudices that prevent the full partnership of women in our democracy.

The establishment by the President of his Commission on the Status of Women is a frank acknowledgment that much more can and needs to be done to assure that women in our society are part of "the whole body of the people." The Federal Government has assumed its leadership responsibility in this

area by translating intent into action. Our department has consistently supported a nondiscrimination policy in employment and promotions and will continue to do so.

But we do not need to be convinced of the huge contributions that women can make to the advancement of the Nation's welfare. We know how great it has been and can be.

We rely, perhaps more than any other Federal agency, on the efforts of women to further our programs of social improvement through voluntary and professional activity at national, State, and local levels.

We also rely on your leadership.

In the important unfinished business of achieving social progress in our land, this year and in the years to come, may we continue to benefit from your leadership, your talents, and from the high sense of purpose and dedication that you bring to the conduct of public affairs.

Quiet, but Effective

EXTENSION OF REMARKS OF

HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. ROUDEBUSH. Mr. Speaker, for the past 12 years the people of Indiana have been extremely fortunate to have the services of Mr. Robert Kellum as executive secretary of the Indiana Flood Control and Water Resources Commission.

During this period many important and progressive strides have been made in Indiana to conquer the annual threats of flood and develop the State's water resources for the betterment of the entire State.

No individual has played a more important role in the solving of these difficult and time-consuming problems than Mr. Kellum who has served with a quiet efficiency becoming of any public official.

The recent resignation of Mr. Kellum from his post leaves a vacancy that will be extremely difficult to fill.

In honor of the 12 years' work by Mr. Kellum the Indianapolis Star recently published an editorial which depicts with clarity and accuracy the service rendered to the State of Indiana by Mr. Kellum.

The editorial from the Indianapolis Star follows:

QUIET, BUT EFFECTIVE

Those who are associated with him for any period of time soon learn that Bob Kellum is a quiet-spoken man of great sincerity not given to exaggeration or overstatement.

His comment on resigning as executive secretary of the Indiana Flood Control and Water Resources Commission is typical. Kellum wrote after 12 years' service, "It does seem to me that the commission can take credit for a number of extremely important developments that will be of lasting benefit to the people of Indiana." That statement hardly tells the progress in this field during a tenure that spanned four governors and both political parties.

Flood control and the conservation of water resources have been solidly established as matters of prime importance in Indiana under Bob Kellum's able and patient leadership. The scope of this work ranges from

relatively small projects to the huge Monroe Reservoir, and the ambitious program to check flooding on the upper Wabash. Local flood control programs have benefited from his quiet cooperation.

The Star is proud that such an outstanding citizen is part of its family. Hoosiers should applaud a public servant who can leave a responsible office knowing his accomplishments will, in fact, "touch every segment of the population in some way."

In Retrospect

EXTENSION OF REMARKS

OF

HON. GEORGE A. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. GOODLING. Mr. Speaker, three Congressmen have the distinction of representing former Presidents of the United States.

Residents of the 19th District of Pennsylvania are delighted to have the most recently retired President as its No. 1 citizen.

The following editorial appearing in the Friday January 25, issue of the Patriot, Harrisburg, Pa., is eloquent testimony to the high regard in which he is held by one man. A great majority of people everywhere would subscribe to the statements which follow:

J.F.K.'S YEARS—HOW HAS IKE FARED?

(By David Lawrence)

This is the second-anniversary week for the Kennedy administration, and a lot has been written lately evaluating what has happened since the inauguration in 1961.

So maybe it is timely to examine retrospectively how Mr. Kennedy's predecessor has fared in the last 2 years, how Dwight Eisenhower has weathered the storm of contrasts to which he has been so often subjected since he left the White House.

For it seems that President Kennedy's speechwriters are politically expert enough to make sure that, when anything bad develops on the current scene—for instance, the early phases of the Cuban controversy—the public must be told that the whole thing originated under the Eisenhower administration anyhow.

Indeed, the other day, in defending America's prominent role in supporting the U.N. intervention in the Congo—which is growing in unpopularity—the official White House statement was careful to put the umbrella of virtue over the existing policy by intimating that it was the preceding administration which had initiated U.N. efforts to harmonize things in the Congo.

Except, however, for these occasional efforts to gloss over delicate situations that may not be popular with the people, the tendency of the Presidential speech writers now is to imply that the U.S. Government really began to function only after January 20, 1961.

Perhaps General Eisenhower, quietly sojourning at Gettysburg or Palm Springs, is given to reflective soliloquy. He must be happy to read that, after all, it apparently was all right for him to go to Augusta, Ga., to play golf or to be away from the White House on vacation and weekend trips. For the latest statistics from the White House confirm that, whether on official or unofficial travel, Mr. Kennedy, during his first 2 years

in office, has been out of Washington more days than was his predecessor during the same period in office. It is quite clear that such statistics will be considered meaningless now, for it is being said that the President has to keep moving if the country is to keep moving.

As for big crises when the people's hair stood on end, the impression has been conveyed that this happened for the first time when the "quarantine" was imposed around Cuba last October. Yet the tensest moment in recent history occurred when President Eisenhower and the Congress took a firm stand to ward off any attacks on Quemoy and Matsu that might lead to an invasion of Formosa. Red China has been and is far more irresponsible than the Soviet Union.

There was tension, too, when American Marines landed in Lebanon in 1958 in a turbulent Middle East situation. But these events today seem as far away as the Korean war, which wound up under President Eisenhower's administration in 1953.

When it comes to domestic problems, Mr. Eisenhower can look back on his relations with Congress as satisfactory in the main, even though the Democrats were in control of both Houses for 6 out of his 8 years. He didn't pick fights with the Democratic leaders but tried instead to preserve harmony and thus get his programs adopted. He must today view the passing scene with extraordinary interest because, theoretically at least, Mr. Kennedy has a majority in both Houses but is troubled by the same Republican-Democratic coalition of nonradicals that helped Mr. Eisenhower.

Eight years is a long time for a man to occupy the White House and the business of the National Government is so heavy from day to day that it must have caused Mr. Eisenhower to arch his eyebrows when his political opponents spoke of him as a do-nothing President. Maybe he does have some qualms of regret that he didn't engage in such publicity operations as Mr. Kennedy's energetic staff have conducted so intensively. For lots of things that Mr. Eisenhower did quietly and without fanfare would have made good news stories or fascinating shows on TV.

Mr. Eisenhower is basically a military man. He has an orderly mind and, as President, he followed a system of organized staff work. He constantly delegated tasks to his subordinates. He didn't try to be his own Secretary of State. He listened to his Joint Chiefs of Staff on military matters, even though he had been commanding general of the largest Armed Force in the world in a major war. Anyone who says he didn't keep in touch with what was going on every hour of the day, whether he was at the White House or away, doesn't know the fidelity with which such a man dedicates himself to his job.

After 2 years out of office, Ike continues in his own way to be useful to his country. While he makes speeches and indulges in criticism on domestic policies, he never impugns the patriotic motives or conscientious purposes of his successor—and that's one measure of the meritorious behavior of any former President of the United States.

More From Mohawk

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. KILBURN. Mr. Speaker, I think most Members of Congress would be in-

terested in the following editorial from the Watertown Daily Times. At a time when airlines are demanding continued subsidy assistance from the Federal Government, it seems in poor taste to offer better inducements to air travel to potential customers abroad than to those of us who use the facilities at home, and are frequently subjected to erratic performance.

I think it might be well for the CAB to take a good look at the proposal mentioned in the editorial of January 24:

MORE FROM MOHAWK

The accusation has been made, not infrequently, and perhaps justifiably that we pick on Mohawk airlines. We cannot let the latest missive from Mohawk move past us without at least a plaintive comment.

Mohawk has announced that, effective March 1, a foreign visitor to the United States may purchase for \$99 an airline ticket good for unlimited travel on Mohawk routes for 30 days. How about that? And how about the loyal regular patrons of Mohawk—loyal, that is, through thick and thin—getting in on this? Does it seem too much to ask that for every foreign visitor's ticket sold one should be offered at the same price to a regular customer?

The 1963 Feed Grain Program

EXTENSION OF REMARKS

OF

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. SHORT. Mr. Speaker, farmers will soon be making a decision as to whether or not to participate in the 1963 feed grain program. Since the feed grain program, in itself, is somewhat complicated and since there are important differences in the 1963 program, as compared to 1962, I was pleased to find in the February 1963 issue of *Successful Farming* magazine, an objective explanation. I believe the Members of the House of Representatives will find this analysis helpful in explaining to their constituents provisions of the 1963 feed grain program and I accordingly, under unanimous consent, include portions of the article with my remarks in the Appendix of the RECORD, as follows:

THE 1963 FEED GRAIN PROGRAM

(By Fred Bailey, Jr., and Bill Brantley)

"Figuring with a sharp pencil or a dull one," Secretary Freeman recently said, "farmers will be money ahead to sign up for this year's feed grain program." Before you rush into a contract, however, take time to figure it with your own pencil.

Some farmers will get bigger Government payments than last year. But others will collect less. And few if any will find it as profitable to divert "extra" acres. As finally settled on, here's the program—with sign-up beginning February 1 and ending March 22.

All or nothing. Be sure to realize from the outset that this year you must divert all the acres you agree to divert in order to be eligible for any payments or price support. It's a new rule for 1963. And if you receive partial payment, then fail to comply in full, you forfeit the money and must return it

(possibly with interest; this hadn't been decided at press time).

A three-crop program. Corn, grain sorghum, and barley are combined into a single program in 1963. Barley was separate last year. Thus, under the new program, your farm's feed grain "base" will be the average 1959-60 acreage of the three grains. (If your 1963 barley crop is in the ground, you can still participate in the program by reducing your total feed grain acreage.)

To participate, you must divert at least 20 percent of your 1963 base acreage. But you can, as in past years, divert more. The maximum per farm is 40 percent of your base or 25 acres, whichever is larger. In no case, of course, can the total diversion exceed your base.

Participation in the program entitles you to—

1. Diversion payments: These are paid on the acres you divert and they vary according to the crop idled. Payments average 20 percent of county support rate (national averages: Corn—\$1.25, grain sorghum—\$2, barley—96 cents) times normal—1959-60—yield of acres diverted. On acres diverted over the minimum 20 percent, payment is 50 percent of the local support rate times normal production.

2. Direct payments: These are 18 cents a bushel for corn, 14 cents a bushel for barley, or 29 cents a hundred for grain sorghum. You'll get the appropriate rate times the normal yield on the acres you plant for harvest.

3. Price support loan or purchase agreement: The CCC loan for this year's crop is \$1.07 a bushel for corn, \$1.71 a hundred for grain sorghum, and 82 cents a bushel for barley. It's available on your total 1963 production. Last year it was limited to normal production.

Other program details: Oats and rye are not included in the 1963 program, so you can plant all of them you want and still get price support on them—whether or not you participate in the program for other crops. National average support price on oats is 65 cents a bushel, and on rye \$1.07 a bushel.

There's special payment this year to encourage small growers (those with a base of 25 acres or less) to divert their entire base acreage under the program. They will be paid at 50 percent of the support price for their full diversion.

Malting barley is not exempt in this year's program. So if you grow it, you must participate in the 1963 feed grain program to be eligible for price support.

About soybeans: There's no cross compliance. That is, you don't have to participate in the feed grain program to get soybean support. But you may be required to maintain your farm's total soil conserving and idle acreage to qualify for soybean loan. This rule wasn't firm at press time, so check your ASCS office.

What to do with diverted acres? USDA says the land diverted must be put to a conserving use, and that it must be in addition to the average acreage of conserving and idle land on the farm for 1959-60.

Payments you receive for diverting acres under the 1963 wheat or feed grain programs are only one part of the bargain you enter into when you sign up. There also are some obligations, and some opportunities you shouldn't miss on the handling of diverted acres.

Remember—your contract with the Government is just that—a contract. And the payments it offers are conditioned on a big "if". If you live up to your side of the agreement. So be sure you know just what is required. Here are some reminders on the requirements.

1. You must maintain your farm's normal soil-conserving acreage. This means the

average number of acres in noncrop use during 1959 and 1960 must be maintained. Generally speaking, whatever conserving use this land was put to during this 2-year base period is considered an acceptable use for 1963.

And the acres you get paid for diverting under either the wheat or feed grain programs must be in addition to the above soil-conserving base.

2. The diverted acres must be from land currently used for crop production or from land previously under a Government conservation contract.

3. The law further requires that producers must keep such diverted acreage free from erosion, insects, weeds, and rodents. Chances are you can comply with this requirement simply by having the land in a suitable grass or legume soil-conserving cover.

Close mowing of diverted acres keeps weeds from seeding and controls foxtail, ragweed, smartweed, and similar weeds. If bindweed is a problem, or noxious weeds such as Canada thistle, perennial sow thistle, and horse nettle, spot spraying with 2,4-D will kill them.

Nationally, the USDA lists dozens of acceptable conservation uses for diverted acres. But a word of warning: By no means are all of these considered acceptable in all counties. Best bet is to check with your county ASCS office.

4. An other rule you should know about prohibits bringing new cropland into production, unless you make an equal reduction in present cropland. Otherwise, you will be subject to an acre-for-acre reduction in your diversion payments.

5. Except for specially permitted crops, diverted acres cannot be harvested or grazed during the contract period. The ban on grazing begins at the end of the sign-up period and is usually lifted after normal harvesttime.

Specific crops you can grow on all or part of the acres diverted from wheat or feed grains this year are: Guar, sesame, safflower, sunflower, and castor beans.

You can grow and harvest these crops without affecting your eligibility for wheat or feed grain program benefits, but your diversion payments will be reduced, and with safflower, you forfeit all the payment. With sesame, you get 40 percent of the farm's regular diversion rate; guar and castor beans 30 percent; sunflower, 20 percent.

Note that production of flaxseed, rapeseed, and mustard seed will not be permitted this year on diverted acres.

What about starting crops next fall on diverted acres? Yes, you can, if it's a crop that's normally fall-seeded, and one you will not harvest before the end of the year when your contract ends.

This means you can start crops such as alfalfa, wheat, barley, or winter oats next fall on diverted acres. You can start new orchards of fruit or nut trees on diverted acres, too, provided required conservation measures are followed.

Seeding legumes or grasses is probably one of the best ways to use your idle acres. Although you can't harvest the crop while the land is in the program, this is a good way to establish a hay crop for the following year. Or you can plow it under and build up soil fertility.

Since legumes on diverted land don't have to be managed to produce good feed, there's no point in clipping early, unless you want to avoid too heavy a blanket of material on the ground. By waiting until late-bloom stage to clip alfalfa, reserves build up in the roots and crowns, strengthening the plants.

A topdressing of phosphate and potash is recommended on established legume stands. The reason is that legume clippings left on the soil result in a buildup of nitrogen. This favors grasses at the expense of the legume.

Check into getting conservation cost-sharing help through the ASCS. While the law doesn't specifically provide for ACP cost-sharing on diverted acres, neither does it prohibit it. The decision is left up to individual county committees. So visit your local ASCS office to find out about this and for answers to other questions about diverted acres.

The Political Perils of Foreign Aid

EXTENSION OF REMARKS
OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. YOUNGER. Mr. Speaker, the following article points up the extreme partisanship of this administration. The Kennedy family in building their ruthless, political juggernaut is perfectly willing to sacrifice national policies to gain one seat in the House as evidenced by the Dr. Walter Judd case.

More than any other Member of the House, Dr. Judd was responsible for the passage of the foreign-aid legislation last session. This case should be a warning to other Members of the House that you cannot buy political immunity by going along, but you possibly can purchase internal revenue immunity or antitrust immunity by giving \$1,000 for a Presidential interview or \$1 million to free the Cubans.

Under unanimous consent, I insert the article by William S. White which was published in the Washington Star, January 28, 1963:

THE POLITICAL PERILS OF FOREIGN AID
(By William S. White)

Both past and present instances of small bore Democratic partisanship have already brought danger to the only proper conduct of our foreign policy—which is to say its bipartisan conduct. They may bring yet more.

The Republican leaders of the House of Representatives have just repaid President Kennedy's participation in the defeat last fall of the veteran internationalist Representative Walter Judd, of Minnesota. They have calmly stacked the Republican side of the House Foreign Affairs Committee with five new anti-foreign-aid members.

This comes at a time when the continuation of the foreign aid program, one of the keys to the administration's world approach, is admittedly in hard straits in Congress.

No one on the administration's side can fairly cry "foul" at this action of the GOP. For if ever there was a case of built-in and inevitable tit for tat it was this unhappy instance of Presidential intervention against a first-rate Member of Congress simply because he happened to be in the other party.

Judd in fact risked his political life last fall by staying on in Washington to assist Mr. Kennedy's then current foreign aid bill—while the President was out in Minnesota demanding Judd's head in behalf of the Democratic Party.

It was a singularly clear illustration of the odd unwisdom of President Kennedy's uncharacteristic decision to go all out in a domestic campaign to return a Democratic Congress which just might be more amena-

ble to him on such relatively picyune issues as medicare.

The President has always regarded the cold war as neither a Democratic nor a Republican but simply an all-American undertaking. But for this momentary switch from his usual course he has tried to keep partisan home politics out of his foreign policy.

Whatever moved him, it was a melancholy "victory" for him. For Judd's absence from the House will cause the President infinitely more trouble on the things that really matter than any possible gain it can bring him on the things that matter a great deal less.

Nor is this the end. While the House Republicans have been moving to retaliate, the ultraliberal Senate Democrats have been maneuvering in a characteristically myopic way to spread the damage, by way of both petty ideological and purely party partisanship.

They have been attempting to bar the Senate Republican leader, Senator EVERETT DIRKSEN, of Illinois, from a seat on the tax-writing Senate Finance Committee. They proceed here on the curious theory that DIRKSEN is likely to be critical of the President's tax bill; ergo, DIRKSEN has no right to be on the committee.

But this touches foreign policy, too, because DIRKSEN until now has been a tower of bipartisan strength to the President on all the top foreign crises in which he has thus far had to be engaged.

The same Democratic ultraliberals are running a muttering campaign against the ascent to the Senate Foreign Relations Committee of the few public men in the country who have been right about Castro Cuba from the start, Senator GEORGE SMATHERS, of Florida. SMATHERS' crime? Why, he does not support the President on every little domestic issue that may come up.

The ultraliberals are highly unlikely to be able to bar either DIRKSEN or SMATHERS from earned committee advancement. The mere fact that they have set off upon these absurd and juvenile vendettas, however, will surely do nothing to promote bipartisan foreign policy unity in a world in upheaval everywhere. The President himself could do worse than to call off these frantic advocates of a total conformism at the cost of what really matters—the proper, or bipartisan, conduct of foreign policy.

Congress Must Assume Control

EXTENSION OF REMARKS
OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. BOB WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the San Diego Union of Saturday, January 26, 1963.

CONGRESS MUST ASSUME CONTROL

A feeling of dismay is sweeping over the country.

A cascade of words is tumbling out of Washington—but they seem to make little sense to the people. We speak for the Western Alliance—and our allies reel in doubt and confusion.

The President's fiscal program has lost all meaning. Even leading members of his own party, and many of them normally political liberals, also seem bewildered.

On the one hand, the President says taxes are a drag on the economy, proposes to cut

them and practice fiscal frugality; on the other hand, he dumps on Congress a vast new spending package and waves aside a fantastic deficit.

As one Democratic Congressman is supposed to have expressed it, "if that is being frugal, I'm Peter Rabbit."

Walter Heller, the professorial Chairman of the President's Council of Economic Advisers, says he has the answer to all of this. He says that the deficit merely "means, after all, that the Government is putting more money into the economy than it is taking out."

The old chain-letter fad seems to have been adapted to economics. Even the President refers to a "chain reaction" of spending, as if every dollar not collected in taxes and every dollar that is spent by the Government automatically carries its own seed of prosperity.

What has emerged in Washington, and is being passed off as a fiscal program, is a hodgepodge reflecting the diverse suggestions coming to the President from left-liberal politicians, radical professors, immature advisers, and assorted speech writers. Dropped in here and there, with an eye to public support, are concessions to conservative, or orthodox thinking.

Tax reduction is necessary for economic growth, but it was too much to expect that those who sought more Federal power would suddenly favor a freer economy. The administration is merely restoring inflation. The President's messages have been speeches more than programs.

In these messages the President has almost abdicated his responsibility. He has swept up a conflicting mass of ideas and thrown them at Congress—or you might say, at the people.

If it all doesn't work, he says, he'll try something else.

To whom are the people to turn for guidance? For understanding of what is right or wrong?

The Congress must step in and take hold of the Government of the United States, as far as constitutionally possible.

The Congress must immediately assert its full authority over the spending and taxing powers of Government and over its fiscal policies. It should throw out the President's program in its entirety, and begin the task of charting a clear and acceptable course of action.

The United States cannot be governed by chance and by theory. Congress must act, for the good of the country.

The appropriate committees of the Senate and House also must begin thorough hearings into our foreign policy, our relations with our allies, into the truth about the situation in Cuba, and into the manipulation of public information.

Let's find out what is going on, who is doing what and why, and what can be done about it.

George Washington Alumni Rank High in Number of Federal Executives

EXTENSION OF REMARKS
OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. ADAIR. Mr. Speaker, I recently came across an article relating to the alumni of the George Washington University and thought that since there are so many of them in the public service it

would be of interest and include it herewith:

GEORGE WASHINGTON ALUMNI RANK HIGH IN NUMBER OF FEDERAL EXECUTIVES

The George Washington University ranks first (men) and second (women) among educational institutions from which Federal executives (those in the Federal civil service at GS grade 14 and higher have received undergraduate degrees.

In an article entitled "Women Executives in the Federal Government," by W. Lloyd Warner, professor of social research at Michigan State University; Paul P. Van Riper, professor of administration at Cornell University; Norman H. Martin, professor of management at New York University; and Orvis F. Collins, professor of business administration at Michigan State University, which appears in the October 1962 issue of *Public Personnel Review*, the authors include in their statistical study a ranking of those educational institutions from which women Federal executives have been graduated, with a comparative listing for men Federal executives.

The top institutions from which women Federal executives have received undergraduate degrees in order are California, George Washington, Vassar, and Wisconsin. Those from which men Federal executives received undergraduate degrees are George Washington, City College of New York, California, and Harvard, in that order.

At the master's level, George Washington is not among the top four alma maters of women Federal executives (Columbia, Chicago, Harvard, and California), but again ranks high among alma maters of men: Harvard, George Washington, Columbia, and Chicago in that order.

State Opposes FCC Investigation

EXTENSION OF REMARKS

OF

HON. RALPH F. BEERMANN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. BEERMANN. Mr. Speaker, the Federal Communications Commission has announced its intention of holding a public hearing in the city of Omaha, Nebr., for the purpose of inquiring into the local service given by Omaha TV stations. This highhanded action has aroused the Nebraska State Legislature into adopting a resolution that I think should be read by every person who is alarmed at the prospect of Federal interference.

The resolution follows:

LEGISLATIVE RESOLUTION 8

(Introduced by William Moulton, 10th District, George Syas, 4th District, Fred O. Gottschalk, 26th District, Matt Wylie, 27th District, Cecil Craft, 38th District)

Whereas the Federal Communications Commission in Washington, D.C., has announced its intention to hold a public hearing in the city of Omaha, Nebr., for the purpose of inquiring into the local service rendered by the television stations of Omaha to the citizens in and around this great community of our State; and

Whereas this forthcoming hearing which is scheduled to commence to January 28 is not related to any complaints received from the citizens of this State, as to the kind and

quality of service which is provided by the Omaha television stations, nor has any issue been raised in any renewal or revocation proceeding as to the qualifications of these licensees to operate in the public interest; and

Whereas television in this country constitutes a major and vital arm of our free press which should not be subject to direct or indirect pressure or control by government at any level if it is to exercise its full responsibility of serving and informing the people in our democratic society; Now, therefore, be it

Resolved by the members of the Nebraska Legislature in 73d session assembled:

1. That the Legislature of the State of Nebraska convened on this 24th day of January in the year of our Lord 1963, does register its strong opposition to the scheduling of this public hearing by the Federal Communications Commission without just cause or reason, believing that this action constitutes an unwarranted intrusion by the Federal Government into the freedom of broadcasting, and the affairs of the citizens of this sovereign State.

2. That the Legislature of the State of Nebraska expresses both pride and commendation for the outstanding service which is provided by television stations, KETV, KMTV, and WOW-TV, Omaha, and the broadcast media generally of this State, in advancing the best interests of our citizens.

DWIGHT W. BURNETT,

President of the Legislature.

I, Hugo F. Srb, hereby certify that the foregoing is a true and correct copy of Legislative Resolution 8, which was passed by the Legislature of Nebraska in 73d regular session on the 24th day of January, 1963.

HUGO F. SRB,

Clerk of the Legislature.

United States of Europe—Dream of Christian Democratic Leaders in Europe a Century Ago

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 29, 1963

Mr. SCOTT. Mr. President, during these chaotic days, when every effort is made to establish peace, we should recall that a century ago Christian democratic leaders in Europe were planning and visualizing a United States of Europe, based on the pattern of our American democracy. Had such a plan been adopted, communism probably would not have succeeded in taking over these Christian democratic countries.

Mr. President, in order that we may better understand the plan these people had in mind, I ask unanimous consent that an article on this subject be printed in the Appendix of the RECORD. The author of the article is Mr. John C. Sciranka, of Passaic, N.J. Mr. Sciranka is a well-known American Slovak journalist. The article was published in the *Dobry Pastier* (Good Shepherd), official organ of the Slovak Catholic Federation of America.

There being no objection, the article

was ordered to be printed in the RECORD, as follows:

THE BROTHERHOOD OF CYRIL AND METHODIUS CENTURY AGO COULD HAVE SAVED RUSSIA FROM COMMUNISM

(By John C. Sciranka)

When two high officials of the Russian Orthodox Church, the bearded Archpriest Vitali Borovoy, professor at Leningrad Theological Faculty and representative of the Russian Church at the World Council of Churches headquarters in Geneva, and Archimandrite Vladimir Kotliarov, vice chief of mission of the Russian Church in Jerusalem, were received by Pope John XXIII in Vatican after the opening of the 21st Ecumenical Council, we were reminded of the efforts for the SS. Cyril and Methodius Brotherhood (Bratstvo) in Russia a century ago.

We often mention the historical meeting of Slavs, held in Prague in 1848 inspired by our famous Jan Kollar, where the Slavonic leaders pledged unity for the liberation of their nations. But 2 years before this historical meeting, an informal group of pan-Slavists met in Kiev and formed the Cyril and Methodius Brotherhood in honor of the apostles of the Slavs.

This brotherhood, although representing the organization of saints, was a democratic and semipolitical society with far reaching ideals. It advocated the Federated Slavdom, ruled by the principles of representative government and constitutionalism. These democratic concepts, the historians inform us, remained the backbone of the society, which had been part of the intellectual atmosphere of eastern Europe from the time of the French Revolution.

Other historians inform us, that the prototype of the society had existed in Russia under Czar Alexander I. This Brotherhood of Cyril and Methodius composed of some 100 Ukrainian intellectuals. The leaders were: M. I. Kostomarov, teacher and future historian; P. A. Kulish, writer; Hulak and Bilozersky, students and Taras Shevchenko, the liberated serf and artist, who became the national poet of Ukraine.

The members believed and advocated that the Ukrainians were equal to any other Slav nation. Although they advocated independence, nonetheless they felt that Ukraine was surrounded by enemies and would become as an independent state a pawn of more powerful neighbors. They have, therefore, advocated a federation and led a movement for unification. The society conceived a federation like the early Greek republics or the United States of North America, which would maintain basic laws, internal free trade, etc., prohibiting serfdom.

They were then so precisely informed about America and its democracy that way back in 1846 they formulated and proposed two plans for this federation. One was for a "Slavonic United States," with a president serving 4-year terms, and the other plan was to form a "Slavonic District of Columbia", an independent capital city. Of course, Kiev was to be given preference. They had then formulated a plan of embracing the empire of Russia and forming 14 states, including Poland, Bohemia, Ukraine, Moravia, Slovakia, Servia, Croatia, Slovenia, Bulgaria, etc.

The Cyril and Methodius Brotherhood (Bratstvo), although bearing the names of two saintly Slav apostles, was breathing such liberal principles that the drafts of its rules and aims, omitted references to religious sects and emphasized guidance by "Christian teaching."

Unfortunately the group dissolved in March 1847, when the czar's police acted on reports of an informer and arrested those it considered most dangerous. However, no conspiracy against the state could be proven.

But Kostomarov and Hulak were anyway sentenced to prison and later exiled. Shevchenko was forced into army and forbidden to write. Others were exiled. Yet the cause of liberation and ideal of SS. Cyril and Methodius never died and it has more adherents now than ever before. It was through the efforts of such movement, that a century ago, the millennium of SS. Cyril and Methodius was observed by some 80 million Slavs.

It is providential that the Holy Father, John XXIII, called the 21st ecumenical council to the Eternal City during the observance of the 11th centennial of the arrival of SS. Cyril and Methodius to Slovakia. All Slavs honor these two brothers as their apostles, even the Slav Protestants. With the representatives of Slav nations in Vatican, during this ecumenical council, even from the satellite countries, we hope and pray that the ideals of those apostles will mark a new era of stopping the persecution of Christian church in Soviet Russia and the satellite countries.

Although the Brotherhood of Cyril and Methodius was dissolved in Russia in 1847 the faith in the people continued to live and lives even under the Communist persecution. In the past century the heritage of SS. Cyril and Methodius has grown in adherents. There were more churches and various institutions built in the past century in honor of SS. Cyril and Methodius than in all 10 centuries put together. This is a vindication of their sacred cause. We Slovaks are most fortunate that during this 21st ecumenical council the building of SS. Cyril and Methodius Institute in Rome will commence and will be dedicated in 1963. Since even the Russian Orthodox Church sent its representatives to Rome for ecumenical council, let us be more encouraged to make even greater sacrifices for this Cyril and Methodian heritage.

The Political Perils of Foreign Aid

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. BOB WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Evening Star of Monday, January 28, 1963:

THE POLITICAL PERILS OF FOREIGN AID—KENNEDY'S FALL DRIVE TO DEFEAT JUDD BLAMED FOR GOP COMMITTEE CHOICES

(By William S. White)

Both past and present instances of small bore Democratic partisanship have already brought danger to the only proper conduct of our foreign policy, which is to say its bipartisan conduct. They may bring yet more.

The Republican leaders of the House of Representatives have just repaid President Kennedy's participation in the defeat last fall of the veteran internationalist, Representative Walter Judd, of Minnesota. They have calmly stacked the Republican side of the House Foreign Affairs Committee with five new anti-foreign-aid members.

This comes at a time when the continuation of the foreign aid program, one of the keys to the administration's world approach, is admittedly in hard straits in Congress.

No one on the administration's side can

fairly cry "foul" at this action of the GOP. For if ever there was a case of built-in and inevitable tit for tat it was this unhappy instance of Presidential intervention against a first-rate Member of Congress simply because he happened to be in the other party.

Judd in fact risked his political life last fall by staying on in Washington to assist Mr. Kennedy's then current foreign aid bill, while the President was out in Minnesota demanding Judd's head in behalf of the Democratic Party.

It was a singularly clear illustration of the odd unwise wisdom of President Kennedy's uncharacteristic decision to go all out in a domestic campaign to return a Democratic Congress which just might be more amenable to him on such relatively picayune issues as medicare.

The President has always regarded the cold war as neither a Democratic nor a Republican but simply an all-American undertaking. But for this momentary switch from his usual course he has tried to keep partisan home politics out of his foreign policy.

Whatever moved him, it was a melancholy victory for him. For Judd's absence from the House will cause the President infinitely more trouble on the things that really matter than any possible gain it can bring him on the things that matter a great deal less.

Nor is this the end. While the House Republicans have been moving to retaliate, the ultraliberal Senate Democrats have been maneuvering in a characteristically myopic way to spread the damage, by way of both petty ideological and purely party partisanship.

They have been attempting to bar the Senator Republican leader, Senator EVERETT DIRKSEN, of Illinois, from a seat on the tax-writing Senate Finance Committee. They proceed here on the curious theory that DIRKSEN is likely to be critical of the President's tax bill; ergo, DIRKSEN has no right to be on the committee.

But this touches foreign policy, too, because DIRKSEN until now has been a tower of bipartisan strength to the President on all the top foreign crises in which he has thus far had to be engaged.

The same Democratic ultraliberals are running a muttering campaign against the ascent to the Senate Foreign Relations Committee of the few public men in the country who have been right about Castro Cuba from the start, Senator GEORGE SMATHERS of Florida. Smathers' crime? Why, he does not support the President on every little domestic issue that may come up.

The ultraliberals are highly unlikely to be able to bar either DIRKSEN or SMATHERS from earned committee advancement. The mere fact that they have set off upon these absurd and juvenile vendettas, however, will surely do nothing to promote bipartisan foreign policy unity in a world in upheaval everywhere. The President himself could do worse than to call off these frantic advocates of a total conformism at the cost of what really matters, the proper, or bipartisan, conduct of foreign policy.

The Honorable John J. Bell

SPEECH

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. THOMPSON of Texas. Mr. Speaker, news of the untimely and sud-

den passing of our former colleague, the Honorable John J. Bell, of Cuero, Tex., was particularly distressing to me. The day before, I had written to him in response to a request of his, a request not for anything in his own behalf but something to help a constituent of mine who was particularly well known to him.

John, even after he left Congress, continued to be a natural-born public servant and one who was always ready to be of assistance to anyone who needed it.

I was especially close to him because when he was a State senator, a portion of the Ninth Congressional District was also a part of his senatorial responsibility. He worked together on many projects in complete harmony and mutual regard. Our friendly relationship continued after he returned to private practice of law, and I relied on him frequently for advice.

I shall miss him, and I know how much more his loss will be felt by his devoted wife, Mabel Claire. She and all the members of the Bell family have my deepest sympathy.

High Cost of Keeping Our Powder Dry

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. HATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "High Cost of Keeping Our Powder Dry," which appeared in the January 22, 1963 issue of the Messenger of Madisonville.

The editorial is as follows:

HIGH COST OF KEEPING OUR POWDER DRY

A fellow has merely to glance at items in the \$98.8 billion budget submitted to Congress by the President to see that a lot of the money asked goes for war and preparation for war.

More than half the budget, in fact, as is shown when you tally up the items to find that outlay for the cold war in which our Nation is engaged with the Bolsheviks runs to something like \$53 billion a year. This is the U.S. outlay, not that of the other countries of the West, and the \$53 billion is the amount spent directly on defense preparations alone, and does not include the carrying charges on other wars in which our country has engaged.

Yet, burdensome though this heavy obligation may be, and however expensive to the American taxpayer, the following thoughts will not down:

The thing which caused Nikita Khrushchev to back down some weeks ago on the Cuba issue, and which caused him to pick up his deadly nuclear hardware and cart it back home was the simple fact that we were better armed for war than Russia, that we had the drop on the Soviet Union, nuclear bomb wise, and that we showed a determination to wage devastating war on the Russians if we were obliged to.

We had kept our powder dry, to use a phrase from the pioneer days, we had mended our stockade, and we were ready

for the worst that the enemy in pioneer days the Indian and in modern days the Bolshevik could send against us.

Our defense preparations paid off, in other words, and won a considerable victory for us without the firing of a single shot. Nikita Khrushchev has changed his tune, and in recognizing that the paper tiger has nuclear teeth, has widened Russia's split with Mao and Red China, willing to see world war on the simple mathematical possibility that enough Chinese would be left to take over whatever of the earth happened to survive.

As for the cost of defense, everybody is aware that it far exceeds all other costs of government. Yet it has been pointed out recently that, burdensome though this heavy obligation may be, the effect probably would be far more serious if by some chance, remote though it be, the necessity for defense spending were removed. By disarmament, for instance.

Prof. Seymour Melman of Columbia University said the other day that it might be time for industry in this country to begin thinking about the possibility and planning how to convert its vast production facilities to nondefense purposes.

Melman and other professors cited our country's heavy reliance on defense spending at a symposium of the American Association for the Advancement of Science. They came up with an estimate that 6 million Americans and 50 million persons in the world are actively engaged in defense activities. Also that more than half of all research and development activities are paid for by the Government, being connected in one way or another with military projects and needs.

Assuming that Russia spends as much as the United States, and adding the expenditures of smaller nations, it is considered likely that \$120 billion a year or even more is devoted to warmaking preparations and related activities.

A fellow doesn't have to look any further than Fort Campbell to our south or Fort Knox to our east to see two examples of defense expenditures in the United States, and to guess at the vast cost when you toss in all the larger and smaller forts and plants and ships and aircraft and whatnot.

Professor Melman's remarks were prompted in part by the fact that the United States has submitted to the United Nations a proposal for general disarmament, and that Washington insists that the proposal is meant in earnest and is not a mere gesture.

"What if it were accepted?" the professor asks, adding that the economic dislocation would be severe. Economic dislocation is always severe, come an end to war, and it has happened to us before, but on no such vast scale as would be the case now.

So far as we can see now, the United States might as well be watching migratory wildfowl as offering disarmament to Russia in any hope that the Bolshevik might agree. Old Khrush hopes capitalism may die without the necessity of killing it by gunfire, but he doesn't hope it strong enough to quit the arms buildup. And this buildup, which we are obliged to top if we are to survive, is what makes it necessary for us to devote a major portion of our resources and energies to defense against the Communist threat.

A threat which was deadly real, a few weeks ago, in little Red Cuba just 90 miles off our shores.

Proposed Tax Reduction

EXTENSION OF REMARKS

OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. FALLON. Mr. Speaker, there seems to be general agreement that our high income tax rates should be reduced. In this connection, I should like to submit a letter received by me from Mr. Joseph L. Manning, managing director, the Independent Retail Food Distributors of Maryland, also, a copy of one written by him to President Kennedy. The suggestions made by Mr. Manning are, in my opinion, sound and I commend them to the attention of the Members of the House.

THE INDEPENDENT RETAIL FOOD

DISTRIBUTORS OF MARYLAND,

Baltimore, Md., January 17, 1963.

HON. GEORGE H. FALLON,
U.S. Congressman, House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FALLON: Since we so strongly believe that any tax out passed by the Congress should contain provisions to generate full employment and increase sales volume, we have written to the President urging certain studies be made in an effort to accomplish that purpose.

We are aware that time is of the essence, since the tax bill has been submitted to Congress. However, in the committee hearings and discussions we hope the suggestions we have made will be given consideration. If opportunity is afforded, we plan to attend any sessions in Washington we believe will be helpful to the committee studying this matter.

In writing directly to the President, we have no intention of bypassing our duly elected Senators and Members of the House of Representatives. We felt, however, that it was urgent to have our views placed before the President as early as possible. All of our elected Representatives will receive a copy of this letter which is enclosed.

I would appreciate deeply your reaction to this suggestion and ask your advice and help in stimulating and generating this suggested proposal. Won't you please let me hear from you as soon as you possibly can, since I intend to publish this letter in the February edition of the Maryland Grocers' Food Trade magazine, the Skirmisher.

Best wishes for a happy and healthful new year.

Sincerely yours,

JOSEPH L. MANNING,
Managing Director.

THE INDEPENDENT RETAIL FOOD
DISTRIBUTORS OF MARYLAND,
Baltimore, Md., January 17, 1963.

President JOHN F. KENNEDY,
The White House,
Washington, D.C.

MY DEAR MR. PRESIDENT: We are sure any income tax cut proposed by the administration will have for one of its purposes the stimulation of our economy in the form of increased employment with resultant increments to general income to Federal, State, and local governments.

If there is any reasonable device which would encourage improvements to dwelling properties where part of the costs of such improvements could be deducted from the individual homeowners income tax, it would put many hundreds of people to work and encourage property improvements, thus reducing the cost of urban renewal programs. Prevention is cheaper than demolition but our present laws offer little or no incentive for improvements.

I am sure you are aware that in most jurisdictions properties which have been well maintained are assessed for more than similar properties in the same block but which have been allowed to fall into disrepair.

A considerable number of plumbers, electricians, carpenters, bricklayers, etc., were employed for a fairly simple neighborhood rehabilitation project such as we conducted here in Baltimore several years ago. In addition, building materials, fixtures, etc., are required for each individual improvement. We cannot help but believe that if some tax incentive were offered, thousands of properties would be improved and in the long run, less money would be required for urban renewal.

We also learned that providing new and modern kitchens, bathrooms, family rooms, etc., creates an incentive to purchase new furniture, rugs, and other items, and to generally refurbish the entire property.

In another field, domestic help could be employed if some relaxation on withholding taxes and a simplified form of reporting were adopted. Part-time help around the home could result in considerable employment if the property owner had less bookkeeping to do. Also, as soon as you tell a part-time gardener, maid, or handyman you will have to withhold certain taxes and pay social security, he or she is not interested in the job.

Perhaps these are oversimplifications. However, we sincerely believe they merit study in any new tax revision.

In our judgment, what is needed is tax revision designed to stimulate business and promote employment, and we believe the items we suggest will generate considerable business activity.

Sincerely yours,

JOSEPH L. MANNING,
Managing Director.

Exemption of Pension Payments by Retired U.S. Government Employees— H.R. 533

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. MULTER. Mr. Speaker, on January 9, 1963, I introduced H.R. 533 to exempt from income tax, annuities, and pensions paid by the United States to its employees.

It has long been believed that most people should retire at 65 years of age. However, every day more and more people eligible for retirement refuse to quit

because they find that their pension will be inadequate to live on. Especially is this true for the Government employee who finds that his small annuity is further reduced by income taxes.

Anyone who retires on a pension or annuity of \$3,000, \$4,000, or \$5,000 will usually be forced to live on an income considerably less than his former income. Steadily rising living costs and the depreciation of the dollar will make life in the late years of life an even more unpleasant prospect. Therefore, the Government should not place further obstacles in the way by taxing the small income of these people during the declining years of their lives when their expenses are especially high. Rather, the Government should encourage its people to retire and take steps to insure financial independence in their old age. Exemption of Government employees' pension payments from the income tax will provide a long step in the right direction.

I do not urge that the Congress should restore to all annuitants the same purchasing power they once had, but it can and should allow them the same tax benefits that it allows others who draw pensions from the Federal Treasury. For example, pensions paid under the Railroad Retirement and Social Security programs are exempt from all Federal income taxes. As an illustration of how this discriminates against the retired Federal Government employee, I call attention to the fact that while a retired railway worker enjoys this tax relief for his pension, the retired railway postal employee who may have worked right beside him enjoys no such relief. This discrimination cannot be justified. Therefore, my proposal is introduced to promote equity where there is need for it.

George Maurer

EXTENSION OF REMARKS

OF

HON. THOMAS E. MORGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. MORGAN. Mr. Speaker, it was with a deep sense of personal loss that I learned of the passing on November 16 of my dear friend, George J. Maurer, from a heart attack.

George was a native of Easton, Pa., who received his education in the parochial school of his hometown and at the George Washington University School of Law here in Washington.

At the time of his passing, he was only 56 years of age, but he had already distinguished himself by his long and outstanding career of service in the legislative branch. His first job was with the Library of Congress from where he was requisitioned as a clerk in the Speaker's Office in 1939. In September 1943 he began his work as a reading clerk of the House and during the long years that have since gone by George

won the friendship and admiration of the Members of the House by his unstinting devotion to his work as well as by the efficient way in which he discharged his responsibilities.

We are all going to miss George and the smooth efficiency he displayed in discharging his duties has set a high target for his successor to achieve and emulate.

May I take this occasion to extend to George Maurer's widow and the other members of his family my heartfelt condolences and to assure them that their grief and sorrow is shared by the host of George's good friends here at the Capitol.

Tariff Loophole

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. DENT. Mr. Speaker, I think, as we opened the new session, the fears that some of us had on our trade policies and where they would lead us are beginning to become realities. The case of stainless steel is one in point. I believe the following news release issued from my office on January 28 tells a story that should have the attention of every Member of Congress. Those of us who believe job protection is essential to the well-being of our Nation will find ourselves oftentimes condemned by those whose interest is subject to question on more than one ground. Those among us who believe that we can have free trade without having foolish trade and the defense of our Nation goes beyond that of military and physical defense, but must, of necessity, in order to guarantee the security of the Nation reach into economic defense. The economy of this Nation is dependent entirely upon the work security of the people. This Nation, which could not live half free and half enslaved, cannot live half working and half loafing. This economy cannot change into a prosperous and growing era unless we reevaluate our job security.

The release follows:

Congressman JOHN H. DENT today introduced legislation calling for an amendment to the Tariff Act to close a loophole which is causing a serious disruption in the domestic production of stainless steel. The attached memorandum covers the contents of the legislation and its purposes.

"This is a very serious matter because of a veto by GATT of the tariff schedules, included in last year's Tariff Classification Act of 1962, which would have closed this loophole, but since the GATT veto in October, this act of Congress has not been put into effect, thereby creating a situation which has become acute," said Dent.

"Because of the discovery of a loophole by the Japanese in the spring of 1960, imports on stainless steel in 1959 totaled \$14,000. In 1960, when the loophole was discovered, it jumped to \$257,000, and in the first 11 months of 1962, \$5,518,000.

"Specifically, stainless steel carries a duty of 14½ cents per pound but, by manipula-

tion of the loophole interpretation, the Japanese—with their cheap labor—polish one side of a sheet of stainless steel and come in under paragraph 309-1001 of the Tariff Act of 1930, and thereby pay a duty of only 1¼ cents a pound on an ad valorem equivalent of less than 3 percent. This subterfuge was not employed by any exporters to the United States, but since the Japanese steel complex has grown to a surplus production unit, they are seeking any and all means to dump their surplus into the United States.

"This is not an attack against free trade as such. This is a move intended to preserve the jobs fast disappearing in the steel industry of the United States," concluded DENT.

The following memorandum is designed to bring to your attention a serious import problem facing U.S. producers of stainless steel and their employees and to urge remedial legislation which would eliminate threat of substantial economic injury to domestic firms.

The legislation we recommend is in the nature of a technical amendment to the Tariff Act of 1930, it would neither conflict with present foreign trade agreements nor interfere with trade expansion goals. It would merely close a disturbing loophole.

TARIFF LOOPHOLES

The appropriate duty rate on stainless steel sheets is at least 14 percent ad valorem. Stainless steel sheets which are polished, however, enter under paragraph 309, 1001, Tariff Act of 1930, at a duty rate of 1¼ cents per pound, a figure which, based on recent import values, may be expressed at 2.9 percent in ad valorem equivalent.¹

These contrasting duty rates can be outlined as follows:

	Specific duty per pound (cents)	Ad valorem rate
A. 1. Plates and sheets, n.s.p.f. (par. 304).	-----	9½ percent.
2. Additional duty based on alloy content of stainless steel (par. 305).	-----	4 percent plus 1 percent additional.
3. Total.....	5.94	14½ percent.
B. Plates and sheets, polished, planished, or glanced (total).	1.25	2.9 percent.

There is no justification for such a discrepancy in effective duty rate: Stainless steel sheets properly dutiable at 14 percent, are subject to a duty of less than 3 percent simply as a result of the polishing process. Ironically, since polishing necessitates greater labor content and commensurately increases the competitive labor cost advantage of foreign over U.S. stainless steel sheet, the process should militate in favor of a higher rather than a lower import duty.

The history of paragraph 309 of the Tariff Act of 1930 explains its illogical impact. Tariff provision for "sheets and plates of iron or steel, polished, planished, or glanced, by whatever name designated" as found in 309 has existed with only minor changes since 1883. Stainless steel, however, is of comparatively recent commercial importance, not being in production in significant quantities until well after World War I. It is apparent that the provision was intended to apply only to high-tonnage carbon steel. This duty, when applied to substantially higher value stainless steel sheets, however, presents the opportunity for tariff evasion.

¹ The average value of imports of this item is 42 cents per pound.

The apparent discovery of this loophole in 1960 creates the present serious problem.

INCREASE IN IMPORTS

As a result of the discovery of the discrepancy, the importation of stainless steel sheets and plates has increased by more than 1,000 percent since 1960, a rate of increase which far exceeds any precedent. The level of importation itself, even assuming stabilization of the increase rate, threatens serious injury to domestic producers of stainless steel.

The import situation is clearly revealed by the following chart:

	Imports, schedule A No. 6039700 ¹	
	Pounds	Value
1955.....	2,755	\$19,102
1956.....	30,478	18,881
1957.....	32,574	31,168
1958.....	42,952	11,020
1959.....	15,650	14,251
1960.....	736,746	257,160

1962 (11 months).....	14,056,178	5,518,943

¹ "Sheets or plates of iron or steel, polished, planished or glanced." Over 90 percent of this total is comprised of stainless steel.

Source: Bureau of Census, U.S. Department of Commerce.

Japan is by far the greatest source of these polished steel sheets, accounting for well over 90 percent of the imports during the first 10 months of 1962. Japan's share of imports under paragraph 309 during the month of October 1962 alone was 1,493,018 pounds, a figure which exceeds the all-nation total for the entire period from 1955 through 1960. Foreign competition of this nature threatens immediate injury to the U.S. industry. It is inexcusable that the threat is greatly enlarged by an obvious tariff loophole.

THE ANOMALY HAS BEEN RECOGNIZED BY THE TARIFF COMMISSION

Acting under legislative mandate, the Tariff Commission has recently completed a series of tariff schedules which collate and simplify the U.S. tariff structure. In cognizance of the anomaly, the Commission would correct it by classifying plates and sheets in a single category, thereby eliminating the illogical result in accordance with the standards of the Customs Simplification Act of 1954. Congress authorized the proclamation of the tariff schedules early last year in the Tariff Classification Act of 1962 when the President implements this act, the schedules will have the force of law.

Unfortunately, by reason of the difficulty of conforming the schedules to trade agreements, the proclamation has been delayed.

As the matter is dependent upon successful negotiation with principal foreign nations, there is no way in which domestic stainless steel producers can know when this loophole will be closed.

LEGISLATION NECESSARY

Corrective legislation is the only solution which will effectively prevent the continuation of injury. Such legislation would provide for the deletion of the reference to polished, planished or glanced plates or sheets from paragraph 309. No tariff adjustment, or other adjustment assistance relief, may be sought, since polished, planished or glanced sheets have never been the subject of a trade agreement.

There is ample precedent for legislation to correct an inequity of this sort. See Public Law 749, 83d Congress; Public Law 454, 85th Congress. Furthermore, the proposed amendment would not constitute a discriminatory duty against foreign suppliers—the current import duty on polished stainless

steel sheets is 15 percent ad valorem in Japan itself.

In conclusion the industry is certain that it was not and is not the intent of Congress to permit an obvious loophole in tariff structure to imperil the continued existence of a viable segment of domestic industry.

Joseph P. Riley: Dynamic Leader

EXTENSION OF REMARKS OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. RIVERS of South Carolina. Mr. Speaker, I would like at this moment to call attention to the selection of an outstanding South Carolinian to head our State chamber of commerce in South Carolina.

He is Joseph P. Riley, of Charleston, a dynamic civic leader and businessman.

Joe, as he is called by his many friends in the low country and the State, is a member of countless civic and community organizations.

Well versed in the ways of business promotion, he is a successful real estate executive and will do well for the Palmetto State in cultivating a warm industrial climate for new industry seeking a favorable site to locate.

In his new post, he will play a vital role in directing an organization which influences the economic welfare of our citizens to an important degree through attracting new payrolls by extolling our assets—industrial and otherwise.

The chief position of our South Carolina Chamber of Commerce is in capable hands. I personally extend to Joe Riley my best wishes for a fruitful tenure of office.

In Charleston's two large newspapers, editorials were carried on January 24 and 25 concerning the high regard people hold for Joe Riley. Under leave to extend my remarks to the Appendix of the RECORD, I hereby insert these editorials for the information of my people and the Members of the Congress:

[From the Charleston (S.C.) News & Courier, Jan. 24, 1963]

BUSINESS TEAM

Selection of Joseph P. Riley of Charleston as the new president of the South Carolina Chamber of Commerce brings to State leadership a low countryman already well versed in the ways of business promotion. For years Mr. Riley has been among the leaders in community and civic projects in Charleston. We commend him to the people of South Carolina as a likable and aggressive personality.

Mr. Riley has served as president of the Charleston Chamber of Commerce, as a director of the Chamber of Commerce of the United States and in countless other capacities. He is well acquainted with business and political leaders of this region.

With his associates—G. G. Dowling of Beaufort as vice president for the eastern district and James Chapman of Spartanburg for the western district, and W. G. Edwards of Columbia as chairman of the board—Mr. Riley leads a strong team to represent the

business interests of the entire State. We know something about all these men and the work they have been doing for the public service. The public would be fortunate to obtain their services at high salaries—and they are donating their time. When we wish them well, we are wishing for everybody.

[From the Charleston (S.C.) Post, Jan. 25, 1963]

RILEY ELECTED BY STATE CHAMBER

To the long list of high civic and business offices to which Joseph P. Riley has been elected is added still another—the presidency of the South Carolina Chamber of Commerce. The Charleston real estate and insurance executive assumed that office this week.

Few people can claim to have given as much time to worthy causes as Joe Riley has given in the last 25 years. To list the organizations he has served would require a column or more of space.

Among the groups he has headed as president are the Charleston Chamber of Commerce, the Charleston Board of Insurance Underwriters, the Charleston Board of Realtors, the Charleston Lions Club, the Hibernian Society, the Charleston United Fund, the St. Francis Hospital Advisory Board and numerous others. He has served on the board of directors of the United States Chamber of Commerce, the Charleston Development Board, the State development board, the Charleston Red Cross, the Coastal Council of the Boy Scouts, etc.

In his new post, Mr. Riley will direct an organization which plays an important role in the orderly development of a favorable climate for the growth of business and industry in South Carolina. The State chamber remains in capable hands and we wish for Mr. Riley a fruitful tenure of office.

Part 3: Let's Keep the Record Straight — A Selected Chronology of Cuba and Castro, September 21, 1961-February 20, 1962

EXTENSION OF REMARKS OF

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. SHORT. Mr. Speaker, in the third part of my chronology of events on Cuba and Castro—we find outlined the growing realization of Latin American countries that Cuba is indeed Communist-controlled, and Castro's admission publicly that he is a Marxist-Leninist "and will be one until the day I die."

Fifteen Latin American countries and the United States have severed diplomatic relations with Cuba. The Organization of American States held a Foreign Ministers' conference on January 31, 1962, and voted—14 to 1, with 6 abstentions—to exclude Cuba from participation in the inter-American system. Later this conference action was to culminate, on February 14, 1962, in Cuba being formally excluded from the Organization of American States.

We find that \$12 million a year in U.S. exports are being sent to Cuba, via Mexico, and that 18 American firms and individuals later are penalized by the U.S.

Commerce Department for their part in ignoring the U.S. embargo.

We find on February 3, 1962, that President Kennedy has decided it is necessary to proclaim an embargo on almost all U.S. trade with Cuba, with the exception "on humanitarian grounds" of exporting certain foods and medicines—thus continuing the embargo which President Eisenhower had originally proclaimed and which then-Candidate Kennedy had criticized as being a gesture which was almost meaningless.

It is good to review history—and with the continuing threat of a Communist Cuba only 90 miles from our shores—it is good to learn from history. Our 20th President, James A. Garfield said:

History is philosophy teaching by example, and also by warning; its two eyes are geography and chronology. History is but the unrolled scroll of prophecy.

The article follows:

A SELECTED CHRONOLOGY ON CUBA, SEPTEMBER 21, 1961-FEBRUARY 20, 1962,¹ BY THE LEGISLATIVE REFERENCE SERVICE, THE LIBRARY OF CONGRESS

September 21, 1961: President Osvaldo Dorticos leaves Moscow for Peking, after a 10-day visit to the Soviet Union. In a speech at the Kremlin on September 20, Dorticos expresses the solidarity of Cuba with the Soviet Union on all foreign policy issues, and says that Cuban industrial development is based on Soviet credits. "In Havana, Premier Fidel Castro announced that Socialist countries have guaranteed to buy 4,500,000 tons of Cuba's sugar for each of the next 5 years. The message was conveyed to Cuba's Premier by President Dorticos now visiting in Moscow. It means Cuba will be able to sell her total crop of some 6,500,000 tons of sugar for the next 5 years, a gratifying assurance to the Castro government which is having its economic difficulties."

September 22, 1961: President Dorticos is greeted on his arrival in Peking by Communist Chinese head of state, Liu Shao-chi, who praises Cuba as "standing in the forefront of the struggle against U.S. imperialism, which is the common enemy of the peoples of both our countries."

September 25, 1961: Dorticos (addressing a mass rally in Peking) declares that the Nationalist occupation of Taiwan "reminds us of the shameful occupation of a part of our territory in the Guantanamo Base. Cuba and China will recover these territories through a resolute and tenacious prolonged struggle; the imperialists will have to give up these territories." Five men are executed and 64 are imprisoned for terms ranging up to 30 years for alleged anti-Castro activities. "Firing squads already have executed 20 persons this month, 111 this year, and 944 since Castro came into power in January 1959."

October 9, 1961: Cuban Government (in a "white book" presented to heads of 31 foreign missions in Havana) accuses the United States of training anti-Castro invasion forces at 20 U.S. bases and 9 camps in the Caribbean (in Puerto Rico, Guatemala, Nicaragua, the Panama Canal Zone, and at Guantanamo).

October 10, 1961: U.S. State Department declares that Cuban accusations that the United States is training new invasion forces "are not only totally unfounded but are ridiculous." On the same day, Foreign

¹ Sept. 21, 1961-Sept. 20, 1962, excerpted from *Deadline Data*; reproduced with the permission of *Deadline Data on World Affairs*. September 1962-October 1962 from *New York Times*.

Minister Raul Roa (in the U.N. General Assembly) accuses the United States of planning a new attack against Cuba which he described as the scene of "the building of a Socialist society 90 miles from a stubborn empire determined to repress the inexorable flow of history." He says that Cuba would welcome "the amicable mediation of a number of American governments to explore the possibilities of worthy and honest negotiations with the Government of the United States."—"Although he implied that these efforts had failed, Latin American sources said that this was Cuba's first public acceptance of the idea of mediation."

October 17, 1961: Council of the Organization of American States (meeting in Washington) votes 20 to 1 (Cuba) to study a Peruvian request for a meeting of American Foreign Ministers to consider taking collective action against Cuba. Peru claims that such action is both justified and necessary to protect the Western Hemisphere from Communist subversion. The Cuban Ambassador to the OAS accuses Peru of acting on orders from the United States.

October 18, 1961: U.S. Secretary of State Dean Rusk (in a press conference) praises the Peruvian Ambassador to the OAS for having "eloquently described the causes for hemisphere-wide concern with development in Cuba since the Castro government transformed that country into an accomplice of the Sino-Soviet bloc." Rusk adds: "The world will be watching the OAS approach to the Cuban problem. The central question here, as it is in other parts of the world, is: Can people who are devoted to a world of free choice, opposed to a world of coercion, keep Communist intervention from undermining and destroying independent nations?"

October 25, 1961: OAS Council votes to delay action on the Peruvian proposal by referring it to a committee for further study: "It is known that the United States was not in favor of bringing the issue before the OAS just yet, because it has not been able to persuade a majority of the Latin American nations to support any moves against Cuba. * * * Some of the larger and more influential South American countries, notably Argentina and Brazil, are firmly against such OAS action." (Times, London, October 26, 1961): "Brazil and Ecuador led a movement to kill the proposal outright. The smaller Central American nations and the United States sought a compromise formula that would keep it alive. Opposition from the big nations, especially Argentina, Chile, and Mexico, made it impossible to expect outright approval by the council."

November 8, 1961: President Kennedy (at a press conference in Washington) declares that U.S. exports to Cuba now amount to about \$12 million a year.

November 9, 1961: Colombia asks the Organization of American States to convene an Inter-American Foreign Ministers' conference on January 10, 1962, to consider measures for the defense of the Western Hemisphere against any threat posed by the intervention of extracontinental powers. Although the request did not mention Cuba, the Colombian proposal is specifically designed to counter what is regarded, in effect, as the Habana alliance between Premier Fidel Castro's regime and the Communist bloc as well as the subversive activities of Cuban agents in most Latin American countries.

November 11, 1961: Venezuela severs diplomatic relations with Cuba.

November 21, 1961: Cuba requests urgent meetings of the U.N. Security Council and the OAS Council to consider her charge of U.S. military intervention in the Dominican Republic.

November 22, 1961: OAS Council meets (in Washington) to hear Cuban charges refuted by the U.S. delegate as a new low of irrele-

vance, hypocrisy, and slander, and adjourns without taking action.

November 28, 1961: U.N. Security Council ends its debate on Cuban charges of U.S. aggression against the Dominican Republic without taking any action. In the three-day debate, Cuba had asked the Council to brand the United States as an aggressor and to demand the recall of American ships from the Dominican coast. She was supported only by the Soviet Union, but Soviet support did not extend to submitting a resolution in the matters.

November 29, 1961: President Kennedy (at a press conference) declares that the United States would be most concerned if the Castro regime in Cuba attempted to overthrow the existing government in the Dominican Republic or in any other Latin American State.

December 2, 1961: Premier Castro (in a 5-hour television speech) declares: "I am a Marxist-Leninist, and will be one until the day I die." He says "the world is on the road to communism," and he is taking Cuba along that path. He also says: "We must study all the experience in the building up of the world's first Communist society [the Soviet Union]." He rejects neutralism, saying: "There is no half way between socialism and imperialism. Anyone maintaining a third [neutralist] position is, in fact, helping imperialism." Like Soviet Premier Khrushchev, he denounces the cult of personality, and says: "It would be absurd for a single man to make government decisions. * * * I firmly believe in collective leadership. * * * I never have wanted to be a Caesar." He announces that he is forming a "United Party of the Cuban Socialist Revolution," as a single, monolithic party which will lead Cuba to "a people's democracy or the dictatorship of the proletariat."

December 4, 1961: OAS Council adopts the Colombian proposal by a vote of 14 to 2 (Cuba and Mexico), with 5 abstentions (Argentina, Bolivia, Brazil, Chile, and Ecuador).

December 9, 1961: Colombia severs diplomatic relations with Cuba, a few hours after Premier Castro denounced Colombia and Panama as "accomplices of imperialism." Colombia is the 12th nation of the Americas to sever relations with Cuba. The others are the United States, Costa Rica, the Dominican Republic, El Salvador, Guatemala, Haiti, Honduras, Nicaragua, Paraguay, Peru, and Venezuela.

December 14, 1961: Panama announces that it has severed diplomatic relations with Cuba, and that the break is to be considered effective as of December 8 when Premier Castro made insulting remarks about Panama.

December 18, 1961: Cuba (in a letter to the Organization of American States) rejects a request of the Inter-American Peace Commission that it be allowed to visit Cuba to investigate Peruvian charges of Communist subversion against other American republics and claims that the Castro government is violating human rights. The Cuban note refers to "the servile, corrupt, despotic" Government of Peru, and the "abject submission and repugnant immorality of the Inter-American Peace Commission." (The Commission is an autonomous body of the OAS, whose members are from the United States, Colombia, El Salvador, Uruguay, and Venezuela.)

December 20, 1961: U.S. Commerce Department announces it has taken action penalizing 18 firms and individuals for illegal shipments of aircraft, automotive and other equipment to Cuba via Mexico. A Department statement says: "There has been great effort on the part of the Castro regime to attempt to obtain U.S. parts and equipment in the face of the U.S. embargo."

December 22, 1961: OAS Council (meeting in Washington) agrees to hold the Foreign Ministers' Conference, convoked at Colom-

bia's request, at Punta del Este, Uruguay, on January 22 (originally scheduled for January 10). "The 19-to-0 vote [Cuba abstained; Mexico, which opposed the conference, was absent] did not reflect the sharp division that has persisted among the 21 member nations of the Organization of American States on the desirability of considering collective action on the Cuban problem. The question today was limited to the date and place of the ministerial conference."

January 2, 1962: Premier Castro (at a mass rally in Havana to celebrate the 3d anniversary of the overthrow of the Batista regime) declares: "We reiterate that we are Marxist-Leninists and we do not repent it." He attacks the OAS Foreign Ministers' meeting (to be held in Punta del Este on Jan. 22), and warns "governments of America sold to [United States] imperialism who are willing to attack a brother people" against any military adventure. He says that if any new invasion force attacks Cuba, "we will exterminate [them] to the last man." "The Premier backed his statement with a display of military might supplied by his Communist allies. Soviet-built MIG fighter jets, multirocket launching units and twin aircraft guns were shown during a 90-minute military parade."

January 3, 1962: Expert on cannon law, Msgr. Dino Staffa of the Vatican Secretariat of State, declares to the press that Premier Fidel Castro and certain officials of his regime have fallen under automatic excommunication because they are responsible for "impeding and imprisoning" Roman Catholic bishops. He says the excommunication has been incurred without formal announcement.

On the same day, the U.S. State Department makes public a document entitled "The Castro Regime in Cuba," which was submitted by the United States on December 6 to the Inter-American Peace Committee (an organ of the OAS). The document says that "as a bridgehead of Sino-Soviet imperialism within the inner defenses of the Western Hemisphere, Cuba under the Castro regime represents a serious threat to the collective security of the American republics."

January 4, 1962: Government announces the execution of an anti-Castro guerrilla leader, Margarito Lanza, convicted of killing three militiamen. "It was the first execution to be announced in 1962. Firing squads killed at least 136 Cubans in 1961 and an estimated 968 since Fidel Castro assumed power 3 years ago."

January 10, 1962: Soviet news agency Tass announces that the Soviet Union and Cuba have signed a trade protocol for 1962, which provides for "a considerable increase" of trade between the two countries. Under the agreement Cuba will export sugar, alcohol, rum, tobacco, canned fruit, nickel ore, and other products to the Soviet Union. The latter will export to Cuba oil and petroleum products, ferrous and nonferrous metals, chemicals, fertilizers, sawn timber, cellulose, paper, cotton, wheat, flour, animal fats and vegetable oils, various plants and equipment, instruments, and other commodities. The Associated Press quotes Cuban Foreign Ministry sources as having said that the Cuban-Soviet protocol provides for trade worth \$700 million between the two countries, a rise of \$150 million over 1961.

January 18, 1962: Inter-American Peace Committee publishes a report (approved unanimously by the five members of the committee—Colombia, El Salvador, Uruguay, Venezuela, and the United States), which denounces Cuba's ties with communism, subversion, and violations of human rights. The report declares: "Such acts represent attacks upon inter-American peace and security as well as on the sovereignty

and political independence of the American States, and therefore [constitute] a serious violation of fundamental principles of the inter-American system."

January 22, 1962: Conference of Foreign Ministers of the 21 American Republics meets in Punta del Este, Uruguay, to consider collective action against Cuba.

January 31, 1962: OAS Foreign Ministers Conference votes by a two-thirds majority—14 to 1 (Cuba), with 6 abstentions (Argentina, Bolivia, Brazil, Chile, Ecuador, and Mexico), to exclude Cuba from participation in the inter-American system. President Osvaldo Dorticos of Cuba declares that the exclusion of Cuba from the OAS will convert the organization into a "political-military bloc at the service of the United States." He says: "You may expel us but you cannot extract us from America. You may put us out of the OAS, but the United States will continue to have a revolutionary Cuba 90 miles from its shores." On the same day (Jan. 31), President Kennedy declares (at a press conference in Washington) that he is satisfied with the outcome of the Punta del Este Conference. He says: "It is the first time the independent American States have declared with one voice that the concept of Marxism-Leninism is incompatible with the inter-American system."

February 3, 1962: President Kennedy proclaims an embargo on almost all United States trade with Cuba, with the exception—"on humanitarian grounds"—of the export to Cuba of certain foods and medicines. The embargo (which goes into effect Feb. 7) will stop U.S. imports from Cuba of tobacco, industrial molasses, and vegetables—thereby depriving Cuba of an annual income of about \$35 million—"Through sales of sugar, tobacco and some other food products, the Cubans are thought to have earned about \$100 million in the free world last year. The U.S. action thus is expected to reduce Cuban dollar income by about one-third." (New York Times, Feb. 4, 1962): "The embargo . . . is frankly described . . . in the serious Eastern press [of the United States] as a unilateral act meant to compensate in part for the failure of the OAS to act as a punitive body."

February 4, 1962: Premier Castro denounces (at a mass rally in Havana) the U.S. trade embargo as "another economic aggression." In answer to the exclusion of Cuba from the OAS, voted by the American Foreign Ministers at Punta del Este, Castro issues a "Second Declaration of Havana" which states that the Punta del Este conference has shown the OAS "in its true light [as] nothing more nor less than the U.S. Ministry of Colonies."

February 7, 1962: Brazilian Foreign Minister Francisco San Tiago Dantas (in a report to the Brazilian Chamber of Deputies on the Punta del Este Conference) defends Brazil's abstention in the vote excluding Cuba from the OAS. He says that the American Republics should negotiate with Cuba rather than isolating her. He declares: "It is not true that Cuba is lost as a nation for co-existence with the other countries of the hemisphere." He denies that the U.S. delegation tried to use economic pressure on the six countries (Argentina, Bolivia, Brazil, Chile, Ecuador, Mexico) which abstained in the vote on Cuba.

February 8, 1962: Argentina severs diplomatic relations with Cuba.

February 11, 1962: Cuban Revolutionary Council, headed by Jose Miro Cardona, announces (in Miami, Fla.) the formation of a hemispherewide anti-Communist, anti-Castro alliance. The announcement lists among the adherents Pres. Romulo Betancourt of Venezuela, former Pres. Jose Figueres of Costa Rica, Gov. Luis Muñoz-Marín of Puerto Rico, former Pres. Luis

Batlle Berres of Uruguay, Gov. Carlos Lacerda of the state of Rio de Janeiro in Brazil, Victor Raul Haya de la Torre and Eudocio Ravines, leftist leaders in Peru, and many others. The primary object of the body is described by Cardona as inter-American action against the Castro regime and internationalization of the struggle of Cuban exiles to free their country from communism.

February 14, 1962: Cuba is formally excluded from the Organization of American States by the OAS Council—thereby carrying out the resolution voted by the Conference of Foreign Ministers at Punta del Este.

February 15, 1962: U.N. General Assembly's Political Committee rejects a Czechoslovak-Rumanian resolution calling on the United States to cease "interference in the internal affairs of Cuba." (All Latin American countries—except Cuba—vote against this resolution.)

February 20, 1962: United States asks its NATO allies to prohibit voluntarily trade in strategic materials with Cuba and to reduce in general their trade with that country. The request is submitted to the Permanent Council of NATO in Paris.

Swede Nelson and the Carens Award

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include therein an excellent article by the able, distinguished writer of the Boston Traveler, Tim Horgan, concerning my dear friend, the incomparable N. V. (Swede) Nelson, recent recipient of the Carens Award at Boston.

This award, given annually to the person who, in the opinion of the committee, has done most for football in New England for the year, is a very great honor, and its presentation to Swede Nelson this year has met with overwhelming public acclaim and approval.

Swede Nelson has distinguished himself in many ways—great football star in his college days at Harvard, well-known coach and football expert, successful businessman, resolute advocate of highest standards of sportsmanship, many-sided humanitarian and an inspiring human being.

Devoted in his many activities for worthwhile, charitable causes, diligent, effective worker for the underprivileged, the handicapped, and the helpless, Swede Nelson throughout the years has furnished a striking example of noble achievement and unselfish service.

A widely known wit and accomplished after-dinner speaker, he has given most generously of his time, efforts, and amazing talents to innumerable fine causes in Boston, New England, and throughout the Nation. He is loved, admired, and respected by all who know him and by a host of people of every rank and station throughout the country.

Certainly no one has ever received this valued award, given in the honor

of the late, very distinguished George Carens, famous Boston newspaperman and sports authority, who more truly and wholeheartedly exemplifies the highest aims and traditions of American football and dedicated citizenship than Swede Nelson.

I congratulate my beloved friend, Swede, and his lovely family upon this great honor, and wish for him and for them continued success and true happiness for many years to come.

The article follows:

SWEDE GIVES ENTIRE LIFE TO FOOTBALL

(By Tim Horgan)

Nils V. Nelson visited his barber the other day, and in the course of his once-over-lightly, the barber wondered about Swede's age.

"I'm 43," Swede reported.

"On one side," the barber scoffed.

"You cut the hair," Swede told him, "and I'll tell the jokes."

That's the way it should be, of course, because nobody tells a joke quite as well as this loyal son of Harvard, 1918. Very few have told so many, also. This is partly because it all began back in 1914, when no less than the late A. Lawrence Lowell advised the toastmaster at the Harvard freshman football banquet: "You were terrible, but you can be very good if you stick at it."

Since this came from the president of his beloved Harvard, Swede went out and set a world record for tenacity.

He had made approximately 150 talks per year after year since, although his arthritis and those 43 years of age have cut him to 40 or 50 recently. If there are people in New England who haven't heard Swede speak, they haven't been in New England more than an hour.

"Out in the open spaces," he begins launching his favorite gag of all time in that rollicking voice, "out West, they do a lot of proselyting. That's a Harvard word, I can't spell it. I can't even pronounce it, but it sounds good."

It sounds better every time he tells it, and nobody enjoys it more than Swede himself. "I speak," he says, "because I love it." That's part of the reason.

Swede is one of those men everybody knows but very few know much about. One of the least known aspects of this incomparable buffoon is that behind the raucous guffaw and the wagging cigar is a superb and dedicated man.

This was discovered when the football writers, in a startling turn of events, gave Swede an award yesterday. The man who has given so many awards, they finally named one after him, got the George C. Carens Memorial Trophy. Its for the person who has done the most for New England college football over the years, and the choice was perfect, if not inevitable.

Nobody has done more for New England college football, in his own inimitable way, than Swede. This is even apart from his work on the Bulger Lowe Committee, for the Gridiron Club, or as a former Harvard coach. It's also not only because he has entertained more football groups than the shotgun formation.

What Swede does is live, breathe and, mostly, talk football with a purpose. He's a man with a message, a message to the effect that people are good, life is wonderful, and football is the best part of both.

He carries the message wherever he goes, because it's as much a part of him as his wit. In fact, it's why he goes to so many places, particularly where there are teenagers.

In the past 2 weeks, he has spoken at Somerville and Beverly High Schools, the Shirley

Industrial School and the Dedham County Jail or maybe he's kidding. He goes to the teenagers and he says: "I understand you kids because I spent the best 9 years of my life in high school."

The kids love him for it and are thus available for the message, which Swede slips in between jokes, in epigrammatic form. Some of his favorites:

"The greatest thing in life is enthusiasm. The finest things of life are born out of it. Everything in life is dull and drab without it."

"Never hate in the plural. Dislike individuals if you want, but don't indict a whole race or a nation because of an individual."

"Truth is the best defense of all. It's better than a nine-man line."

His goodness, as much as his humor, makes Swede an extraordinarily popular man, which is why he shouldn't have been so genuinely surprised to get the Carens Award. After all, Swede admits: "Everywhere I go somebody is opening a door for me or holding my coat or giving me two scoops of ice cream."

Columnist Appraises the First 2 Years of the Kennedy Administration

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. ALGER. Mr. Speaker, I would like to call the attention of the Members to an editorial by David Lawrence in U.S. News & World Report, January 28, 1963. Mr. Lawrence makes a keen appraisal of the President's first 2 years in office and his analysis is a serious indictment of the failures of this administration. My purpose in including it as a part of these remarks is not to make of it a partisan issue, but in the hope that President Kennedy made be made to realize before it is too late that his policies of playing politics at all costs may prove disastrous for this Nation.

Under unanimous consent I insert the editorial in the Appendix of the Record.

AFTER 2 YEARS

(By David Lawrence)

There are two ways to appraise an administration at a given time, either in terms of political popularity or by a realistic evaluation of the actual progress that has been made in the Nation's economy.

If an election were held today, President Kennedy would win a second term. This would be due not to his own efforts on television, radio, and in the press to present an image of successful leadership, but largely to the failure of the Republican Party, both inside and outside of Congress, to tell the American people the other side of the story.

The record of the Republicans as an opposition party in the last 2 years is the poorest in a half century of American politics. The Republicans have ignored the lessons of the past and feel they must fashion their strategy to fit Democratic Party concepts. They argue among themselves about "liberalism" and "conservatism," or about "old Republicanism" and "new Republicanism," while they should be uniting to tell the country of the scandals that are emerging under the Kennedy administration. For rarely in history have governmental powers been so

brazenly used to build a national political machine.

The administration has kept the peace. After waiting until Soviet missiles were actually assembled and emplaced in Cuba, President Kennedy finally acted with a show of firmness. Even though his action was belated, and there is still considerable doubt as to whether the danger has been removed, the fact remains that on balance today the electorate would on this specific issue vote to sustain the President.

But does the country know the facts? Why hasn't the truth about the ill-fated invasion of Cuba in April 1961 been disclosed? Is it conceivable that our military chiefs did not protest an invasion plan that failed to provide adequate air cover of some kind? If they did recommend it, did the President disregard their advice? Didn't this debacle give the Soviets their opportunity to threaten us and bring on our worst war scare in recent history?

Premier Khrushchev concedes that the United States now has at least 40,000 nuclear bombs and warheads and that war is unthinkable. So the average man feels more secure for the time being.

If, to be sure, the Republicans hadn't been asleep at the switch, they would have been pointing out that the military strength of this country could not have been built up to its present superiority in just 2 years.

The charge that the Eisenhower administration permitted a "missile gap," for instance, is no longer heard in debate. It remains nevertheless as one of the biggest falsehoods ever perpetrated in American politics.

The Republicans can hardly rely on the present administration to give credit for what was really achieved militarily and on the diplomatic front in the preceding 8 years.

Measured in the perspective of history, the administration has failed to come to grips with the fundamental problems of our economic life. Most important is the inability either to balance the budget or to cure the unemployment problem. The President's recent messages call for budget deficits which will run until 1967. The administration intends to stand in 1964 on a platform of deficit spending which, without a curtailment of spending on nondefense items, must result in gradually cutting down the purchasing power of the dollar.

The economy at present is bogged down by labor troubles. The longshoremen's strike, which has obstructed the Nation's shipping, and the newspaper strikes in New York City and Cleveland do not augur well for the future. Such situations are not conducive to business planning despite the stimulants to private spending being offered through tax cuts.

For the President has been patently unwilling to deal with the growing monopoly power of labor unions. The administration has not hesitated to harass and slander American businessmen, but it has cravenly refused to use its inherent powers to quell the conspiracies that restrain commerce and provoke costly strikes.

From the standpoint of political morality, the huge campaign funds collected by labor unions from their members present a glaring example of an unholy alliance between the administration and a large group that enjoys a special privilege in America today. The country has been told little about this, and the Republican Party has not fought hard enough for an investigation by Congress to expose the truth.

To curry favor with political groups, President Kennedy, by his Executive orders on a variety of subjects, has ignored the law of the land. Yet the Republicans have failed to emphasize this usurpation of governmental power.

All in all, the country needs a purging of political immoralities. It needs an opposition party with the courage to present the facts to the American people consistently and persistently. For when the people are given both sides, they usually recognize truth.

National Geographic Society

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. BOLAND. Mr. Speaker, 75 years ago last Sunday a small group of scientists gathered here in Washington at the Cosmos Club, January 27, 1888, and their deliberations resulted in the founding of the National Geographic Society, respected and well known throughout the world for its fine publication of the literature and informative journal, the National Geographic.

Under leave to extend my remarks in the Appendix of the RECORD, I include herewith a history of the National Geographic Society that appeared in the Washington Sunday Post, January 27:

THE NATIONAL GEOGRAPHIC IS 75 TODAY

(By Sterling Seagrave)

Today is the 75th anniversary of the National Geographic Society.

Founded by a small group of scientists at the Cosmos Club in 1888 to promote "the increase and diffusion of geographical knowledge," the Society's thin, arid journal has blossomed into one of the most highly respected publications in the world, famous for its lavish color illustrations, a household furnishing adored by adults and children.

Its 3,500,000 readers loyally renew their subscriptions in advance each year. For their small annual fee, they become members of the society, participate by proxy in countless expeditions, and enjoy seven 10-color map supplements a year.

Washington members attend regular illustrated lectures at Constitution Hall from famous explorers, scientists, and off-the-beaten-path travelers.

The society has built an immense reserve fund of many millions and helps sponsor research programs, expeditions, and photographic junkets. "Junior Geographics" are sent to schools each week as part of a subsidiary educational program that helps maintain the society as a tax-exempt, nonprofit institution.

Its 1,500 staff members work in quietly elegant surroundings gorged with trophies and artifacts collected all over the world, slowly and painstakingly crafting each month's issue.

In autumn of this year, the society will move into a new building designed by Edward Durell Stone at 17th and M Streets NW., a \$10 million structure with thin fluted ribs, individual offices, and an expansive Explorers Hall filled with displays and exhibits.

Behind the success is Gilbert Grosvenor, the first editor of the magazine. Now in his eighties and retired to his estate in Coconut Grove, near Miami, Grosvenor built the society and magazine with a keen eye at public relations and less attention to the restrictive definition of "geography."

Grosvenor is probably the only man ever to have his name given to four babies, a fish, a seashell, a lake, and a plant.

He is a modest man, once described as having the "sprightly air of an inquiring grasshopper," and he usually cannot remember all the things named after him. However, when the Interior Department in 1925 decided to change the name of Grosvenor Lake because it did not seem right to name topographical features after living persons, Grosvenor contacted President Coolidge who was two classes ahead of him at Amherst. The President chided the Interior Department for even thinking of such a thing.

Although Grosvenor retired in 1954 to become chairman of the board of trustees, his influence, character, and personality still pervade the society and its offices. That influence has made the society condemned or complimented diversely as a brown study, an aristocratic fief, a stuffy and protectively dignified private club, or one of the last strongholds of all the good things that went with 19th century manhood, a mood of great adventure, bearded men with weathered faces, tweed and privacy.

For years, no staff member dared smoke in the building. One always wore a coat in the hallways and never went out without a hat.

Men and women staff members ate in separate cafeterias, and do so to this day, to permit "blue" conversation among the men without offending the women. Senior staff men dined sedately in a separate room.

Viewed as a benevolent monarchy, the National Geographic Society has a remarkable genealogy.

At its founding in 1888, Boston philanthropist Gardiner Greene Hubbard became first president. Hubbard had financed Alexander Graham Bell's experiments with the telephone. Bell married one of Hubbard's daughters and became second president.

By 1899 the National Geographic magazine was several thousand dollars in debt and had only 200 readers. It was cryptic reading for anyone outside the scientific community and not exactly inspiring to those inside the community who submitted its cold, learned papers.

Bell brought in Gilbert Grosvenor, a lad fresh from Amherst, and explained that he wanted to make the magazine a success by popularizing the science of geography and taking it into the homes of the people.

In half of a tiny office, Grosvenor took on the job of transforming bleak geographic facts expressed in hieroglyphic terms into a vehicle for carrying the human interest truth about this world of ours into homes everywhere.

The next year he married Bell's daughter, Elsie May. She later designed the Society's flag of brown, green, and blue, for earth, sea, and sky.

For 5 years Bell paid Grosvenor \$100 a month. Grosvenor did everything himself, including hand-addressing magazine wrappers. His first purchase as the new editor was a \$20 addressing machine.

Grosvenor was convinced that the magazine should use pictures to draw readers into the little-known corners of geography. A fluke gave him the opportunity—and simultaneously started the magazine on its way to setting many firsts in photography.

"I came into the office one December morning in 1904 deeply discouraged," Grosvenor said. "The printer was urgently demanding copy for 11 pages for the January issue. I simply had no manuscript available."

A bulky envelope lay on his desk. He opened it listlessly and out fell 50 striking photographs of Lhasa, Tibet, taken by a Russian explorer. Grosvenor took a chance on offending the handful of members and filled the 11 pages with the pictures.

During the following decades, the magazine printed the first natural color photos taken from the air, underground, and beneath the sea. The society helped finance

Peary's expedition to the North Pole, Amundsen's to the South Pole, Byrd's flights over both, and many other explorations into the darkest recesses of the earth. Each expedition brought fame and the gratitude of the explorers, not to mention their photographs and personal accounts for the magazine.

As the age of exploration became a page of history, so it became many colorful pages in National Geographic.

The magazine described everything from the first exploration of Carlsbad Caverns to the discovery of Machu Picchu, unearthing giant carved stone heads in Mexico, tribal customs in Borneo and New York City, fossils in Africa, mountains in Alaska and the Himalayas and the Alps, volcanoes hither and yon, bird life in New Zealand, ruins in Italy, unclad maidens in Africa and the Amazon, bird life in the Caribbean, coral reefs off Australia, bird life in Canada, balloon flights into the stratosphere, lizards in New Guinea, fishes in the Pacific, and bird life in Grosvenor's backyard in Maryland.

In the last 10 years alone, circulation (i.e., membership) rose by over 1 million.

A distinct style has evolved with Grosvenor's determination to make the science of geography both popular and intelligible. Known within the profession as the "Dear Aunt Sally," the style strives to give a refreshing first person account of faraway places with strange sounding names, exciting and sometimes frightening sights.

It is an effective style, and equally great pains are taken to select vivid photographs.

There is no reckless rush at the magazine, where care and precision are all important.

A crack newspaperman was hired once and his first assignment was to write captions for several pictures for the magazine.

Accustomed to the adrenal pressure and precipitous pace of a newspaper city room, the ex-reporter hammered out the captions adroitly and had them back in his new editor's office in 15 minutes.

"Good grief," said the dismayed editor, "you have 2 weeks to do those. Take them back and stew over them for a while."

The society's photographic staff is equally diligent and no man has yet been lost on an expedition, although several have plunged into the drink, equipment and all.

Volkmar Wentzel shot thousands of pictures during a month in Southwest Africa's skeleton coast diamond mines. He was about to clear customs on his way home when a diamond-conscious customs official decided to X-ray all his baggage for smuggled gems. Before Wentzel could stop him, the official had X-rayed out all of Wentzel's film.

The society's membership extends around the world, including King Paul and Queen Frederika of Greece.

A number of Presidents have written for the magazine, including President Taft and President Theodore Roosevelt. President Franklin D. Roosevelt had a National Geographic mapcase he liked so much he asked the society to make another as a gift for Winston Churchill. There is a similar mapcase in President Kennedy's office.

The present board of trustees, elected for life, includes Gilbert Grosvenor, chairman; Thomas W. McKnew, vice chairman; Robert B. Anderson, former Secretary of the Treasury; Lyman J. Briggs, director emeritus of the National Bureau of Standards; Leonard Carmichael, secretary of the Smithsonian Institution; Rear Adm. L. O. Colbert, U.S. Coast and Geodetic Survey (retired); Hugh L. Dryden, Deputy Administrator of NASA; and T. Dale Stewart, of the Museum of Natural History.

When Grosvenor retired, his longtime right-hand man John Oliver LaGorce succeeded him as president and editor. LaGorce, who had a few mountains named after him, retired in 1957 and died in 1959.

Melville Bell Grosvenor became president and editor, continuing the dynasty established by his father, grandfather, and great-grandfather.

An intense, nervous man deeply involved with his work, he has brought outward changes to the staff, which is younger, and added color pictures to the sacred yellow-bordered cover of the magazine.

While still conscious of the dignity, ethics, and discretion traditional to the society, the younger generation smokes, including the women; shirtsleeves appear in the halls, and that last stronghold of masculine privacy, the dining rooms, will be combined in the new building.

The birds have given way to missiles and satellites in the National Geographic's pages, fishes have been made obsolescent by nuclear submarines, and soon even the famous sections on native girls in more or less native costumes may give way to articles on the denizens of distant planets.

Melvin M. Payne, executive vice president and secretary, a man with a word gift who directs the society's worldwide research and exploration, thumbnailed just a few of the current projects.

They include the American team setting out to conquer Mount Everest; archeological undersea digging off Turkey on a sunken Byzantine ship; anthropological research at Olduvai Gorge, Tanganyika, where fossil beds are giving up clues to the ever-missing link; a photographic study of the brighter planets by astronomers at Flagstaff's Lowell Observatory.

Consumer Reports Calls for Safe Cosmetics Law

EXTENSION OF REMARKS OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mrs. SULLIVAN. Mr. Speaker, the February issue of the magazine, *Consumer Reports*, published by Consumers Union, contains a very worthwhile discussion on the need for tighter laws to protect the public in the purchase and use of cosmetics. This is an objective which I have been pursuing ever since coming to Congress in 1953. I have introduced safe cosmetics bills in every Congress since then, and I am delighted that this magazine which is held in such high esteem by so many consumers has also been championing the same cause over the years.

The article, which I am placing in the Appendix of the CONGRESSIONAL RECORD as part of my remarks, is entitled "Cosmetics Versus the Consumer," and is based on an address given by CU's medical adviser, Dr. Harold Aaron, as part of a symposium of the American Medical Association's Committee on Cosmetics at the annual meeting of the American Academy of Dermatology in Chicago last December.

There is one oversight or inaccuracy in the article which I feel I should mention, in placing it in the RECORD. After discussing gaps in the law which often prevent the Food and Drug Administration from moving effectively against an unsafe cosmetic item until a great deal

of harm has already been done to consumers, the article states:

When injuries do occur, especially allergic reactions, the problem is compounded for the victim and his doctor by the lack of a requirement that ingredients be revealed. The law proposed to the last Congress did not take cognizance of this problem. CU believes that cosmetics makers, like food processors and drug manufacturers, should be required to list ingredients on their labels.

H.R. 1235 CONTAINED REQUIREMENTS FOR IDENTIFICATION OF INGREDIENTS OF COSMETICS

Mr. Speaker, the omnibus bill which I introduced on January 3, 1961, to rewrite the Food, Drug and Cosmetic Act of 1938 and to require, among many other things, the pretesting for safety of all cosmetics, contained exactly the sort of cosmetic ingredient identification requirement Consumer Reports mentions. Hence, the bill the article refers to when it says: "the law proposed to the last Congress did not take cognizance of this problem" would not have been H.R. 1235.

Subsection (f) of section 9 of H.R. 1235 in the last Congress (it is now renumbered as section 8 in the new H.R. 1235 introduced January 9, 1963, in this Congress), would add a new subsection (3) to section 602 of the Food, Drug and Cosmetic Act dealing with misbranding, of cosmetics, to read as follows:

(e) Unless its labeling bears (1) the common or usual name of the cosmetic chemicals, and (2) in case it is fabricated from two or more ingredients, the common or usual name of each such ingredient: *Provided*, That to the extent that compliance with the requirements of clause (2) of this paragraph is impracticable, or results in deception or unfair competition, or is not in the best interest of the consumer, exemptions shall be established by regulations promulgated by the Secretary.

Mr. Speaker, with that one exception or oversight clarified, I think the article in *Consumer Reports* on the need for better laws to protect users of cosmetics represents an excellent outline of the problem. I am happy that H.R. 1235 covers all of the major points raised in this article, plus some additional ones not mentioned by *Consumer Reports* such as the exemption in the present law for soap, an exemption which H.R. 1235 would repeal.

The article referred to is as follows:

HEALTH AND MEDICINE—COSMETICS VERSUS THE CONSUMER—CU HOPES IT WON'T TAKE A THALIDOMIDE TRAGEDY TO TIGHTEN COSMETICS SAFETY LAWS

Although there have been no great cosmetics scares in recent years, an addition to consumer protection legislation to require that cosmetics be tested for safety before they are marketed is sorely needed. Legislation to require protection was introduced in the last Congress, but no action was taken; it will undoubtedly be reintroduced this year.

Americans now spend more than \$2 billion a year on cosmetics, a 300-percent increase from 1940. And despite the prominence of the word in the Federal Food, Drug, and Cosmetic Act, the protection afforded consumers of cosmetics under present Federal law is minimal.

PROVISIONS AND DEFICIENCIES OF THE LAW

The cosmetics sections of the law as it now stands do little more than require sanitary production, honest weights and meas-

ures, and disclosure of the manufacturer, packer, or distributor of the product. The buyer of an unfamiliar cosmetic has no assurance of its safety in normal use. The FDA has authority to act on a hazardous cosmetic before it actually does harm to a buyer only in the not very likely event that a manufacturer incorporates a known hazardous ingredient in his formula. New ingredients or elaborate new concoctions of ingredients may be placed on the market without previous testing, and, if the products turn out to be harmful, the FDA may step in only after enough people have been hurt—and have reported the fact—to demonstrate that the produce is harmful. With TenDay Press-on Nail Color a few years ago (*Consumer Reports*, May 1958), 700 women had reported damaged fingernails before the FDA could get the product off the market.

When injuries do occur, especially allergic reactions, the problem is compounded for the victim and his doctor by the lack of a requirement that ingredients be revealed. The law proposed to the last Congress did not take cognizance of this problem. CU believes that cosmetics makers, like food processors and drug manufacturers, should be required to list ingredients on their labels.

That a cosmetics tragedy of thalidomide proportions has not brought a precipitous correction of deficiencies in the law, CU's medical consultants believe, can be credited only to good fortune plus the instinct for self-preservation, if not social responsibility, on the part of the large cosmetics manufacturers. While there have been no recent serious outbreaks of injury comparable to the cases of blindness caused by hair dyes in the 1930's, it is almost impossible to obtain a reasonable estimate of the safety record of today's cosmetics. There is no systematic reporting program, and even if there were a great many of the less spectacular injuries, especially allergic reactions, would never be counted.

CU recently received a letter from a professor at Yale University telling of some inquiries he made after a bubble bath product had caused severe irritation of the vulva in his 3-year-old daughter. From talking to local physicians and friends he learned of eight similar cases in young girls. Although this seeming epidemic in one area is not likely to be an isolated instance, the FDA has not had a notable number of complaints on this product. Unless a severe complication sets in, an injured person apparently just crosses the product off her shopping list and lets the incident drop.

The regular channels for exchange of medical information show little interest in cosmetics injuries. Except where a novel and interesting kind of toxicity is involved, very few cases are given space in the clinical literature. Medical societies, State and local regulatory agencies, better business bureaus, consumer groups, and other such organizations receive reports of cosmetics injury sporadically, but they are often lax about passing the word on. If all these sources funneled to the FDA the information they receive, the protection of other people might be speeded. Consumers, too, could do a real service by taking the time to notify the FDA of any unhappy experiences they may have with cosmetics, giving the name of the product and details of their trouble with it (see "Government Aids to Consumers" in the current buying guide issue, p. 93).

LIMITATIONS OF TESTING

Pretesting, important as it is, cannot fully avert the possibility of cosmetics injury. There are inherent limitations in the testing procedures. The manufacturers which now test products before marketing them generally engage commercial laboratories which chiefly use animals. Such testing screens out highly toxic products. It is in the shift to human subjects, particularly in the search

for allergic reactions that problems arise. Often a cosmetics company carries out the first tests of a new product in significant numbers of human beings simply by selling it in a limited area. If there are no complaints, marketing is expanded.

While a law could bring this practice within better scientific and ethical control, the final verdict on the safety of a product might still have to await use more widespread than desirable from the point of view of maximum safety. Researchers know that in allergy investigations a test population as large as 30,000 may fail to reveal a reaction rate of 1 in 10,000, enough to bring complaints with a popular cosmetic. Pre-marketing tests for safety are unlikely ever to reach that scale.

Even large-scale testing might fail to uncover unusual hazards. Would it, for example, have revealed a potentially lethal effect of the powdered hair-coloring agent with which teenage girls put a streak in their hair: A 7-year-old boy in California recently had to have a tracheotomy to open breathing passages irritated by the powder inhaled as he watched a 12-year-old girl use it.

A good reporting network of consumer experience with cosmetics, then, will continue to be important whatever changes are made in the law.

THE NEED FOR CAUTIONARY LABELING

Even the best possible consumer protection would still leave open another source of injury, those products which are known to have some degree of potential hazard but are permitted on the market anyway, because their usefulness is judged to outweigh the hazard. A great many products fall in this class. Most cosmetics, for example, may be irritating when they get into the eyes. A commercial testing laboratory has found that nearly all of a group of 140 cosmetic products for use on the head, including various antidandruff products, shampoos, and hair sprays, would have to be labeled as eye irritants if they were subject to the Federal Hazardous Substances Labeling Act. Perfumes, which are most commonly the ingredients that cause allergic reactions, are added to almost every cosmetic product. And there are some products, depilatories, for example, which have to be potentially injurious to accomplish their purpose. Few cosmetics now bear any cautionary labeling.

What is needed, then, to assure a minimum of injury from the growing use of cosmetics is a combination of better laws, continued vigilance, and intelligent consuming.

COSMETICS ADVERTISING

It is not so easy to suggest an approach to another aspect of consumer difficulties with the cosmetic industry, the modus operandi of cosmetics promoters.

The world of cosmetics advertising is a strange one. A girl can spend her holiday on the deck of a sailboat beating into a 10-knot breeze, one would judge by the slant of the deck, without disturbing a hair of her well-sprayed head. A previously lonesome male suddenly has to fight off the feminine pursuers after he slicks down his unruly hair with a magic cream. In the commercials for another product the cream, in turn, becomes "that greasy kid stuff" in the he-man atmosphere of the locker room. In this remarkable world, you are invited to lubricate the skin with a product whose prime action removes fats and oils—Dove detergent bar. You can be tranquilized by a simple antiperspirant ("Ice Blue" Secret). And you can cure dishpan hands by washing dishes (Ivory Liquid).

All these exaggerations are embellishments attributed for promotional purposes to products of basically limited usefulness. Commonsense says the products cannot possibly do all that is claimed for them. Why, then,

does not the Federal Trade Commission step in?

The answer is simple if the remedy is not. The FTC must prove an advertising claim to be false before banning it. With cosmetics claims this raises a multitude of problems. For one thing, most cosmetics claims are not susceptible to proof, either true or false; what researcher would care to find proof, for example, of the claim that a cosmetic can make your body "a scented column of silken smoothness and your presence a sheer delight?"

Another group of claims difficult for the FTC to attack are those based on data which are scientifically weak but still can be dressed up to impress lay judges and juries; toothpaste claims often fall in this category.

Still other questionable claims rest on physiological notions which are extremely difficult if not impossible to disprove with today's knowledge and technology; the claims for products which cater to dry skin are cases in point. Virtually all these products are emollients of one sort or another; yet it has been shown that dryness of the skin is caused by escape of water from the tissues, not by the removal of fats or oils. The best that an emollient can hope to do is to give the dry skin a smooth feel and inhibit further evaporation of moisture. Moreover, there is no objective measurement for skin dryness.

SKIN ILLS MADE TO ORDER

Cosmetics promotion, both through advertising—especially on TV—and through the hidden persuasion of the women's magazines, is having a profound effect. Good Housekeeping, in surveying the purposes for which women apply substances to their skin, found a remarkable growth in skin problems between 1957 and 1961: dryness up from 35 to 41 percent; chapping, 10 to 18 percent; flaking, 14 to 21 percent. Such a marked increase in dryness, if real, could only have been produced by a meteorological upheaval resulting in unprecedented changes in the mean relative humidity or by a nationwide metabolic disturbance. But the survey also showed oily skin increasing, as well as freckles, large pores, and blemishes.

The commercial philosophy of this Nation invites anyone with initiative to enter the marketplace and sell whatever he can, short of harming his customers, and it need not be a better mousetrap. If it can be artfully enough promoted, it need not work at all. Considering the limited range of physical effects that cosmetics can have, one may argue that the purposes of cosmetics are mainly psychological; that if the buyer can be convinced she is benefited by using the product, full value is received. While this reasoning may contain some truth in respect to cosmetics, it is also a justification for any kind of deception, so long as the victim is unaware of it and makes no complaint.

CU has no ready answer to the ethical questions posed by the general acceptance of gross deception in cosmetics promotion. But there is perhaps some comfort in the thought that a mind well supplied with reliable information is less likely to be gullible. CU intends to continue contributing to its readers' fund of reliable information.

(The article above was prepared from material gathered for an address given by Harold Aaron, M.D., CU's medical adviser, as part of a symposium of the American Medical Association's Committee on Cosmetics at the annual meeting of the American Academy of Dermatology in Chicago last December.)

FULL TEXT OF COSMETIC PROVISIONS OF H. R. 1235

Mr. Speaker, the section dealing with cosmetics is only one of many sections in H. R. 1235 to rewrite our nearly 25-

year-old Food, Drug, and Cosmetic Act of 1938. Other provisions of H. R. 1235 would tighten the labeling requirements for all foods and drugs, as well as cosmetics, to prevent deceptive packaging and other consumer frauds; attack the sale of fake cures for cancer; require new therapeutic devices to be proved both safe and efficacious before they can be sold; provide more adequate controls over the distribution of habit-forming barbiturates and amphetamines—the sleeping pills and "pep" pills; strengthen the factory inspection laws for all products covered by the Food, Drug, and Cosmetic Act, and make other important and long-overdue changes in our basic consumer statute.

Relevant to the article from Consumer Reports which appears above, however, would be only section 8 of the bill as it now stands, applying entirely to cosmetics.

I, therefore, submit for inclusion at this point in the RECORD, section 8 of H. R. 1235, as follows:

PRETESTING COSMETICS

SEC. 8. (a) The following new section is added at the end of chapter VI of such Act:

"PRETESTING COSMETICS

"Sec. 604. (a) No person shall introduce or deliver for introduction into interstate commerce any cosmetic—

"(1) the composition of which is such that such cosmetic is not generally recognized, among experts qualified by scientific training and experience to evaluate the safety of cosmetics, as having been adequately shown to be safe for its intended use and other uses reasonably to be anticipated, or

"(2) the composition of which is such that such cosmetic, as a result of investigations to determine its safety for such a use, has become so recognized, but which has not, otherwise than in such investigations, been so used to a material extent or for a material time, unless an application filed pursuant to subsection (b) is effective with respect to such cosmetic.

"(b) Any person may file with the Secretary an application with respect to any cosmetic subject to the provisions of subsection (a). Such persons shall submit to the Secretary as a part of the application (1) full reports of investigations which have been made to show whether or not such cosmetic is safe for use; (2) a full list of the articles used as components of such cosmetic; (3) a full statement of the composition of such cosmetic; (4) a full description of the methods used in, and the facilities and controls used for, the manufacture, processing, and packing of such cosmetic; (5) such samples of such cosmetic and of the articles used as components thereof as the Secretary may require; and (6) specimens of the labeling proposed to be used for such cosmetic.

"(c) The Secretary, within ninety days after the filing of an application under this subsection, shall notify the applicant that the application is effective or shall give the applicant notice of opportunity for a hearing on the question whether to permit the application to become effective, except that prior to the ninetieth day after such filing the Secretary may notify the applicant in writing that the time for action by him has been extended to such time (not more than one hundred and eighty days after the date of filing the application) as the Secretary deems necessary to enable him to study and investigate the application.

"(d) (1) If the Secretary finds, after due notice to the applicant and giving him an

opportunity for a hearing, that (A) the investigations, reports of which are required to be submitted to the Secretary pursuant to subsection (b), do not include adequate tests by all methods reasonably applicable to show whether or not such cosmetic is safe for its intended use and other uses reasonably to be anticipated; (B) the results of such tests show that such cosmetic is unsafe for any such use or do not show that such cosmetic is safe for such uses; (C) the methods used in, and the facilities and controls used for, the manufacture, processing, and packing of such cosmetic are inadequate to preserve its identity, strength, quality, and purity; or (D) upon the basis of the information submitted to him as part of the application, or upon the basis of any other information before him with respect to such cosmetic, he has insufficient information to determine whether such cosmetic is safe for its intended use and other uses reasonably to be anticipated, he shall, prior to the effective date of the application, issue an order refusing to permit the application to become effective.

"(2) A cosmetic shall be deemed unsafe and an application with respect to it may not become effective—

"(A) if its intended use or any use which can reasonably be anticipated will or may result in ingestion of all or part of such cosmetic and (i) the cosmetic is found by the Secretary to induce cancer when ingested by man or animal or (ii) it is found by the Secretary, after tests which are appropriate for the evaluation of safety of cosmetics, to induce cancer in man or animal, or

"(B) if its intended use or any use which can reasonably be anticipated will not result in ingestion of any part of such cosmetic and, after tests which are appropriate for the evaluation of the safety of the cosmetics for any such use, or after other relevant exposure of man or animal to such cosmetic, it is found by the Secretary to induce cancer in man or animal.

"(3) An application with respect to a cosmetic may not become effective if the data before the Secretary show that its intended use or any use which can reasonably be anticipated would promote deception of the consumer in violation of this Act or would otherwise result in misbranding or adulteration within the meaning of this Act.

"(e) The effectiveness of an application with respect to any cosmetic shall, after due notice and opportunity for hearing to the applicant, by order of the Secretary be suspended if the Secretary finds that (1) for reasons set forth by him, there is reasonable doubt as to the safety of the cosmetic for its intended use or any other use reasonably to be anticipated, or (2) the application contains any untrue statement of a material fact.

"(f) An order refusing to permit an application with respect to any cosmetic to become effective shall be revoked whenever the Secretary finds that the facts so require.

"(g) (1) An order of the Secretary after a hearing under this section shall be based upon a fair evaluation of the entire record at the hearing and shall include a statement setting forth in detail the findings and conclusions on which it is based.

"(2) Orders of the Secretary under this section shall be served (A) in person by any officer or employee of the Department designated by the Secretary or (B) by mailing the order by registered mail or certified mail addressed to the applicant or respondent at his last known address in the records of the Secretary.

"(h) In case of denial or withdrawal of approval of an application under this section, the applicant may file in the United States court of appeals for the circuit in which such applicant resides or has his principal place of business, within sixty days

after serving of notice of such order, a written petition praying that the order of the Secretary be set aside. A copy of such petition shall be forthwith transmitted by the clerk of the court to the Secretary, or any officer designated by him for that purpose, and thereupon the Secretary shall file in the court a transcript of the record of the proceedings on which he based his order, as provided in section 2112 of title 28, United States Code. Upon the filing of such petition the court shall have jurisdiction, which upon the filing of the record with it shall be exclusive, to affirm or set aside the order. The finding of the Secretary as to the facts shall be sustained if based upon a fair evaluation of the entire record at the hearing. If any person shall apply to the court for leave to adduce additional evidence, and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceeding before the Secretary, the court may order such additional evidence to be taken before the Secretary and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Secretary may modify his findings as to the facts and order by reason of the additional evidence so taken, and he shall file with the court such modified findings and order. The court, on judicial review, shall not sustain the order of the Secretary if he failed to comply with any requirement imposed on him by subsection (g) (1). The judgment and decree of the court affirming or setting aside any order under this section shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code. The commencement of proceedings under this subsection shall not, unless specifically ordered by the court to the contrary, operate as a stay of the Secretary's order.

"(i) The Secretary shall promulgate regulations for exempting from the operation of this section cosmetics intended solely for investigational use by experts qualified by scientific training and experience to investigate the safety of cosmetics."

"(j) (1) Every person engaged in manufacturing, compounding, or processing any cosmetic with respect to which an application, filed pursuant to this section, is in effect shall establish and maintain such records, and make such reports to the Secretary, of data relating to experience and other data or information, received or otherwise obtained by such person with respect to such cosmetic, as the Secretary may by general regulation, or by order with respect to such application, prescribe on the basis of a finding that such records and reports are necessary in order to enable the Secretary to determine, or to facilitate a determination, whether there is or may be ground for invoking subsection (e) of this section.

"(2) Every person required under this section to maintain records, and every person in charge or custody thereof, shall, upon request of an officer or employee designated by the Secretary, permit such officer or employee at all reasonable times to have access to and copy and verify such records."

(b) Section 201(i)(2) of such Act is amended by changing the semicolon to a period and deleting the words "except that such term shall not include soap."

(c) Section 301 of such Act is further amended—

(1) by striking out in paragraph (d) thereof "or 512" and inserting in lieu thereof "512 or 604".

(2) by inserting before the period at the end of paragraph (e) thereof a semicolon and the following: "or the failure to establish or maintain any record, or make any

report, required under section 604 (i) or (j), or the refusal to permit access to or verification or copying of any such record."

(3) by inserting "604," in paragraph (j) after "507,".

(4) by adding at the end thereof the following new paragraph:

"(q) The using, on the labeling of any cosmetic or in any advertising relating to such cosmetic, of any representation or suggestion that an application with respect to such cosmetic is effective under section 604, or that such cosmetic complies with the provisions of such section."

(d) Section 304 of such Act is further amended—

(1) by striking out in subsection (a) thereof "or 512" and inserting in lieu thereof "512 or 604".

(2) by striking out in subsection (d) thereof "404 or 505" and inserting in lieu thereof "404, 505, or 604".

(e) Section 601 of such Act is amended—

(1) by changing the semicolon after the word "usual" in subsection (a) to a period, and deleting the remainder of the subsection.

(2) by changing subsection (e) to read as follows:

"(e) If it is, or it bears or contains, a color additive which is unsafe within the meaning of section 706(a)".

(3) by adding at the end thereof the following new subsection:

"(f) If it is a cosmetic to which the provisions of section 604 apply but with respect to which an application is not effective under such section."

(f) Section 602 of such Act is amended by adding the following subsection:

"(e) Unless its labeling bears (1) the common or usual name of the cosmetic chemicals, and (2) in case it is fabricated from two or more ingredients, the common or usual name of each such ingredient: *Provided*, That to the extent that compliance with the requirements of clause (2) of this paragraph is impracticable, or results in deception or unfair competition, or is not in the best interest of the consumer, exemptions shall be established by regulations promulgated by the Secretary".

Congressional Travel

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. LINDSAY. Mr. Speaker, I am delighted to see that the House Rules Committee is taking steps to institute urgently needed reforms in the business of congressional travel.

I strongly believe that Members of the House and Senate should educate themselves on world problems, problems which we often tend to judge with little knowledge of overall global conditions and international pressures. It is healthy for Members to be continually confronted by the other man's point of view. Proper travel under proper circumstances can, therefore, be a definite aid to the Member in discharging his responsibilities and such travel is to be encouraged. However, it would more than strain my imagination to justify some of the trips made by Members of Congress, trips which neither promote the

Members' understanding of world affairs nor contribute to the American legislative process. And we are all aware that some of the worst abuses of the Congress transpire in the use of counterpart funds by Members traveling abroad.

Hence, there is a need for the firm tightening of the rules and procedures concerning congressional travel. The least of these reforms should be an accurate and complete public accounting of all expenditures including both those itemized in travel vouchers and those taken from counterpart funds. Experiencing once again how the flagrant abuses of the few reflect upon the conscientious actions of the many, we should all recognize the need of exercising self-discipline and of establishing a code of ethics. This we owe to the public and to ourselves.

The Small Business Administration Must Remain an Independent Agency

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following correspondence between George J. Burger, vice president of the National Federation of Independent Business, and President Kennedy.

If the Small Business Administration is to continue its very effective and necessary work, it must remain independent of the Department of Commerce.

Those who know the value of SBA's work will be interested in the reply that Mr. Burger received from the White House expressing the President's strong support for an independent Small Business Administration.

The correspondence follows:

JANUARY 10, 1963.

Re: Small Business Administration.
HON. JOHN F. KENNEDY,
President of the United States,
White House, Washington, D.C.

DEAR MR. PRESIDENT: The record will disclose from the first instance the National Federation of Independent Business has been in the forefront supporting legislative action creating the Small Business Administration.

Our action was authorized by the registered vote of our nationwide membership, all independent business and professional men in the 50 States, now numbering approximately 200,000, all individual members comprising all types of industry in small business.

This agency has served a necessary and important function, opening up credit channels that heretofore, by State or Federal regulation in banking circles were prohibited.

During the life of this agency these past 10 years the Federation has stood in the forefront in supporting any legislative move that would strengthen this agency in its aid to small business, not alone in financial matters but all other actions within the agency, provided by law.

We understand that during the life of the agency, up to December 31, 1962, 35,072 small businesses have been able to help themselves through the help of this agency. Then

again, the agency has assisted, in no uncertain terms, in making certain that small business receives its fair share of Government contracts.

A more important aspect is that during the life of the agency the banks nationwide have taken more receptive action in cooperation with the Small Business Administration in loan participation.

If this agency had not been established by the Congress, all this needed help to small business would have been denied, which would have resulted in possibly increased small business failures.

There have been rumors that there is a movement underway for the Small Business Administration to be taken over as a Department within the Department of Commerce. This rumor has been in existence for nearly 2 months, and more recently the rumor is more or less confirmed by responsible sources.

Now, Mr. President, we are committed, in behalf of small business, to oppose any such action of the Department of Commerce absorbing the Small Business Administration, and we are further on record opposing any duplication of action within the Department of Commerce now being performed by and originating with the Small Business Administration.

This is a very serious matter if there is merit in the rumor.

Mr. President, can we expect your wholehearted cooperation in keeping the Small Business Administration as a separate and distinct agency of the Federal Government, and may we expect to hear from you at your very earliest convenience?

Sincerely,

GEORGE J. BURGER,
Vice President, National Federation
of Independent Business.

THE WHITE HOUSE,
January 17, 1963.

Mr. GEORGE J. BURGER,
Vice President, National Federation of Independent Business, Washington Building,
Washington, D.C.

DEAR GEORGE: The President has asked me to reply to your letter indicating there are currently rumors that the Small Business Administration is to have its functions transferred to the Commerce Department. I can reassure you without any reservations or qualifications, there is absolutely no justification for any such story.

As you know, the President has given strong and vigorous support to the Small Business Administration. I am pleased to advise you that this support will continue and that the Small Business Administration will remain an independent agency.

Sincerely,

LEE C. WHITE,
Assistant Special Counsel to the President.

Poem by a Golden Ager

EXTENSION OF REMARKS OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. O'HARA of Illinois. Mr. Speaker, I am happy to extend my remarks to include a letter from my friend and constituent, A. J. Goldsmith, and a poem the reading of which I recommend to all my colleagues.

This is the letter:

DEAR CONGRESSMAN O'HARA: I am taking the liberty of sending to you what I believe

is a very beautiful poem written by Alta Schoenbrod, a 75-year-old resident of the Jewish Federation's Drexel Home for the Aged located in your district.

The poem was published in a special Chanukah edition of the Drexel Home News that is written and edited by the residents.

Perhaps, Congressman, you could enter this poem in the CONGRESSIONAL RECORD as a tribute to the many golden agers who are seeking to live full lives in our great land.

Very truly yours,

A. J. GOLDSMITH,
Assistant Director of Public Relations.

Mr. Speaker, this is the poem written by Alta Schoenbrod, 75 years of age, a resident of the Jewish Federation's Drexel Home for the Aged located at 6140 South Drexel Avenue:

FREEDOM

While walking home to the Annex, across the street,

I stopped at a tree and heard the young birds tweet!

I am not fond of poetry, much more of prose

But the muse then got me, so here goes!

I was inspired many hours, to appreciate the twittering of birds,

A garden of beautiful flowers,

The sunshine, the air, that is free,

Also stars, and the moon.

A God-made tree! (Joyce Kilmer.)

The mountains, rivers, and lakes,

So numerous and lovely

In our United States!

We live and are blest, unaware

Of the many features, that are free as the air.

Freedom of speech, pursuit of happiness

Which we crave

Are in our beloved America!

Land of the free, and home of the brave.

We should pray for peace,

Thankful for natural courses

And take advantage of its many resources.

Khrushchey Charts a Course

EXTENSION OF REMARKS OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I wish to include in the RECORD an editorial entitled "Khrushchey Charts a Course," which appeared in the Phoenix Gazette, of January 19, 1963. This editorial is a grim warning of the method employed by Communists to infiltrate free nations in their quest for world domination, and should be of interest to every Member of Congress.

The editorial follows:

KHRUSHCHEV CHARTS A COURSE

Nikita Khrushchey has just made things a lot tougher for leaders of the Western alliance, particularly President Kennedy. In what may be one of the major speeches of his career, the world's boss Red has made it clear just where he thinks communism is going in the next few years, and how he thinks it is going to get there.

It is not at all beside the point that this Communist chieftain at the age of 68 boasts that he will be alive to see socialism, that is, the Communist system, triumphant in the world. It is highly significant that the boast

was repeated in the same speech in which Khrushchev inferentially warned Communists against provoking the United States into nuclear war.

The new cult of Kremlinologists in this country, beset by a fixation that compels them to picture Khrushchev on the defensive, hastily interpreted his Berlin speech of last Wednesday in terms of what they call a split between the Soviet Union and Red China.

It makes a great deal of difference if you look at the talk as a blueprint for a continuing attack on the free world. What Khrushchev said makes a great deal more sense in this light. He said he will live to see communism triumphant. He said the triumph can be achieved only by avoiding a head-on war with the United States. He noted that this country has 40,000 nuclear warheads—his spies are still at work—and that it would be folly to challenge this strength directly.

Then he cited Cuba as an example of the way in which communism will win. He had a point there. He had backtracked to avoid a head-on clash over Cuba, but by doing so he protected tremendous gains. Soviet troops are in Cuba. Soviet arms, short of nuclear missiles, are there. Communism is far ahead of what it was a year ago in Cuba. This is what Khrushchev was saying.

He was telling Communists throughout the world what Lenin first told them years ago, that it is orthodox Communist procedure to take one step back if you have taken two steps forward. Khrushchev took a step back in Cuba, a sensational step, it is true, but it left him still one step forward.

He took a step forward when he built the Berlin wall, and he has not taken a step back there yet. So he is ahead on that front. A troika government in Laos was his step ahead in Southeast Asia. His pal, Sukarno, took over West New Guinea, which was another half step ahead in that part of the world.

Against this, Khrushchev has taken nuclear missiles out of Cuba, one step backward, and withdrawn a deadline on a Berlin settlement, which was a psychological if not an actual step backward. Also he has engaged in a dispute over dogma with Red China's Mao Tse-tung, the question being whether it is better to destroy the free world piecemeal or all at once.

In view of this record, we believe Khrushchev was saying in his Berlin talk that he has measured Mr. Kennedy, and found him ready to fight when directly challenged. We believe this is a proper estimate. Khrushchev says further that communism cannot win in an all-out fight. Again, a proper estimate. So, he says, Communists must outsmart the free world. He says they have been doing it, and will continue to do it.

We can only hope Mr. Kennedy understands communism well enough to know what he means.

Report on Foreign Film Production

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. DENT. Mr. Speaker I would like to add to the RECORD at this time a report of an important meeting just held in the office of Secretary of Labor Wirtz dealing with the problems of the movie industry.

This meeting was the result of suggestions made in the report filed by the Committee on Joint Labor Management, which I had the privilege of chairing during its studies into the many problems posed by our trade policies.

All of us are hopeful that the end may be in sight of international trade piracy and discriminations against U.S. enterprises.

The report follows:

WASHINGTON, January 24.—Hollywood's Joint Labor-Management Committee on Foreign Film Production came to the Kennedy administration today, January 24, for help to increase domestic motion picture production.

The joint group formally petitioned Secretary of Labor W. Willard Wirtz for administrative assistance in obtaining the removal of unfair foreign trade barriers that lead to American film production abroad. The group urged our Government to work through appropriate international bodies to get rid of foreign subsidies, import quotas, screen time quotas, remittance restrictions, and other unfair competitive handicaps.

The group pointed out that a shifting of production to film centers overseas has been created by such foreign trade practices.

Secretary Wirtz is Chairman of the President's Advisory Committee on Labor-Management Policy, which is responsible for recommending to President Kennedy "policies designed to insure that American products are competitive in world markets."

The labor-management delegation was led by its cochairmen, Pat Somerset, president of the Hollywood AFL Film Council, and Charles Boren, executive vice president of the Association of Motion Picture Producers. Eric Johnston, president of the Motion Picture Association of America, introduced the delegation to Secretary Wirtz.

The joint committee was established a year ago as the result of a proposal by Representative JOHN H. DENT, of Pennsylvania, chairman of a House Education and Labor Subcommittee which held hearings on the problem. DENT suggested that the best solution would be found through joint labor-management action within the industry.

In its comprehensive 29-page petition, the joint committee said: "Only by standing together and energetically working together on a realistic and constructive basis can labor and management in the American motion picture industry perform the big internal job that needs to be done within the industry to encourage domestic production."

"But we need the willing and earnest help of the Federal Government too in fighting against the unfair and discriminatory trade practices engaged in by some foreign governments that attempt to place American-made pictures at an artificial disadvantage in foreign markets."

In addition to Johnston, Somerset, and Boren, the following labor-management representatives attended the meeting in the office of Secretary Wirtz:

Representing the Hollywood AFL Film Council: Richard Walsh, president, IATSE; George Chandler, president, Screen Actors Guild; Jeffrey Sayre, president, Screen Extras Guild; O'Neill Shanks, secretary, Film Council; John Lehnars, film editors; Cappy DuVal, property craftsmen; Phil Fischer, American Federation of Musicians; Tex Jarrard, studio utility employees; and Robert W. Gilbert, counsel for Film Council.

Representing the producers: Gordon Stulberg, Columbia Pictures; Alfred P. Chamie, secretary treasurer, AMPP; Maurice Benjamin, counsel, AMPP; and E. L. DeLeVigne, Metro-Goldwyn-Mayer.

Also attending was Herbert Aller, camera-men.

Judge Max M. Meltzer

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News on January 25, 1963, commemorating the anniversary of the death of Judge Max M. Meltzer, a friend of all of us who have long resided in the lower East Side of New York:

JUDGE MAX M. MELTZER, 1908-62

(By Abe E. Eisenstein)

January 30, 1 year ago, the last mortal breath left the lips of Max M. Meltzer, one of East Side New York's beloved sons, a friend of youth and adults, an outstanding lawyer, a noted community and civic leader, a great humane being, industrious, able, and respected jurist.

Max M. Meltzer, son of Mrs. Rose Meltzer and the late Israel Meltzer, was born in an old tenement house on the lower East Side. His father was for many years a secretary of a benevolent society. He died at the age of 59, on August 20, 1959. His mother is a typical East Side woman and well liked in the neighborhood.

"He was a marvelous soul, modest, unassuming, gentle, qualities that endeared him to us all. Service was his chief commitment in life."—Justice Birdie Amsterdam, New York Supreme Court.

Famed old public school 20, De Witt Clinton High School, St. John's University, New York University, and University Settlement alumnus, Max Meltzer's early life was far from easy and this developed in him an inner strength and courage reflected in his entire career. The late brother of Abe, Lillian, Phyllis, Anna, was employed during the day while attending New York University Law School. In 1931, Max was admitted to the New York bar and was an associate in the office of Skinner & Bermant. From 1945 to 1948, he served as law secretary to Lazarus Joseph, then comptroller of the city of New York.

"Judge Meltzer's word was his bond. We learned to know him as a scholar and gentleman. He bred in us a respect and admiration for his unselfishness and for his human sympathy and understanding."—Judge Eugene B. McAuliffe, of civil court.

Organizer and secretary of the HIP for the New York City civil service employees, member Alfred E. Smith Democratic Club, New York Lodge No. 1 Elks, Knights of Pythias, Samuel Dickstein Lodge, B'nai B'rith, New York County Lawyers Association, the Community Synagogue Center, University Settlement Alumni, Max M. Meltzer was appointed in May 1948 a judge of the municipal court (Manhattan Borough, second district) by the then Mayor William O'Dwyer. In the fall, he was elected for the full 10-year term. His popularity with all the people (endorsed by all political parties) was evidenced by his reelection in 1958.

"Judge Meltzer was one of the most beloved and respected jurist—possessing a fierce moral fire and exemplifying honesty, decency, integrity in the fullest sense of the word."—Judge Xavier C. Riccobono, of civil court.

Past president and charter member Forton Club Lodge, a director of Public School 20 Alumni Association, honorary member University Amigos, member East Side Chamber of Commerce, Manhattan Democratic Club,

East Side Housing Conference, Grand Street Boys' Association, Civic Center Synagogue (a plaque unveiled in his memory on April 2, 1961), board member University Settlement House, etc., Judge Meltzer was loyal to the traditions of his beloved East Side. His dreams, no less than his desires and talents, were always put at the disposal of the greatest possible good.

Judge Max M. Meltzer was a resident of 230 East Sixth Street. He was married to the former Miss Eva Paskin. They were the parents of three children: Mrs. Arlene Ochberg (grandchild Ricky), Miriam and Charles. He died on the Hebrew date of Shevat 25, 5722, and was buried in Beth David Cemetery, Elmont, N.Y.

We salute the memory of Judge Max M. Meltzer who has been a strong ally and a great influence for good in our midst.

Medical Aid for Senior Citizens Under the Social Security Program

EXTENSION OF REMARKS

OF

HON. JACOB H. GILBERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. GILBERT. Mr. Speaker, I am giving top priority to the proposal to give medical aid to our senior citizens under the social security program, and further liberalization of the social security laws.

I have again introduced my bill providing for such medical aid, and will spare no efforts to secure its passage. I consider this a major responsibility of the Congress and one which should be met without further delay. It is inconceivable that we should continue to ignore the hardships being suffered by our older citizens because of their inability to pay for adequate medical care. It is estimated that half of our senior citizens over 65 years old—8,000,000 of them—live in abject poverty. The average per capita income of those over 65 is now estimated to be slightly over \$20 a week—about \$1,000 a year. Now consider that medical costs during the 1950's went up by 36 percent, hospitalization costs rose by 65 percent, and group hospitalization costs—Blue Cross premiums—rose by 83 percent. When our senior citizens can barely afford to eat, they have no alternative except to deny themselves necessary medical attention.

I consider it a sad commentary upon our great Nation that we have so blithely and shamefully neglected this large portion of our population. Congress must be made to face, and effectively deal with, this grave problem and help our senior citizens.

I have also reintroduced my bill to remove the limitation upon the amount of outside income which an individual may earn while receiving benefits under social security and to provide that full benefits thereunder, when based upon the attainment of retirement age, will be payable to men at age 60 and to women at age 55.

Under existing law, social security annuitants are permitted to earn only up to \$1,200 per year; if they earn more than this sum, they are penalized; deductions are made from their social security payments. No one can possibly support a home on his social security check. When social security payments represent a pensioner's entire income, if he wishes to enjoy a dignified existence and not become an object of charity, he must find some employment. The law as it stands now hurts the very people for whose benefit it was originally intended—those who work for their living. If the morale and well-being of our older citizens is to be restored, the limitation must be removed.

Another important amendment provided in my bill would enable men to collect full social security benefits at the age of 60; women could collect at the age of 55. Many workers who wish to retire at an earlier age and are financially able to do so when they can include social security payments should be given that opportunity. They are entitled to enjoy their later years in leisure after many years of toil. Also, by retiring, they provide vacancies for the younger men and women who need employment. There are many workers in poor health who must struggle to work in their last years because they cannot afford to quit, looking forward to the age of 62 and their social security benefits and a lessening of their hardships. A realistic approach to the problem of assisting our senior citizens is to reduce the age limits as provided in my bill.

I have also introduced a bill to increase, in the case of children who are attending school, from 18 to 21 years the age until the child's insurance benefits may be received under the Social Security Act. Many of our young people are forced to leave high school after completing a year or two, upon reaching the age of 18, and go to work, because social security payments are stopped. Those who wish to attend college are prevented from doing so. This occurs when the family is in poor circumstances and dependent upon such payments to take care of the child's expenses and support. Education of our youth is important; the assistance provided by my bill is necessary, so that our young people may have the opportunity to secure the highest degree of education possible.

The Honorable John Bell

SPEECH

OF

HON. OMAR BURLESON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. BURLESON. Mr. Speaker, the death of our former colleague, John Bell, brings with it a sadness which occurs with the passing of one with whom we had an association and for whom a strong friendship was developed.

John Bell was a real friend to those who wanted a friend. He was quiet and unassuming, but his influence was felt wherever he was.

I join with my other colleagues from Texas in expressions of sorrow and extend deep sympathy to his lovely wife, Mable Claire, who also made many friends while they were in Washington.

Analyzing the President's Message on Education

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. ALGER. Mr. Speaker, everyone is for education the best for the most; in quality second to none; in quantity, all of our people, if that is possible. We all agree with the President when he says, "Education is the keystone in the arch of freedom and progress." The many general statements he makes are good reading, such statements as, "fundamentally, education is and must be a local responsibility, for it thrives best when nurtured at the grassroots of our democracy."

Where then is there any disagreement with the President. Here it is, on page 13 of his message:

The program here proposed is reasonable and yet far-reaching. It offers Federal assistance without Federal control.

There it is, the nonsequitur. The President's inconsistencies are the basis for honest disagreement.

Federal aid requires Federal control or else we fail to do our fiscally responsible job as Congressmen. And Federal control contradicts the local control the President eulogizes.

There is no need for me to evaluate selectively, as the President endeavors to do, the various programs because the statement is utterly self-contradictory and self-defeating.

The best and only maximum educational program in a free society will come from local and private effort, not government. This is the maximum to follow.

Perhaps the President's own language shows most pitilessly his misunderstanding and inconsistency:

In all the years of our national life, the American people—in partnership with their governments—have continued to insist that "the means of education shall forever be encouraged," as the Continental Congress affirmed in the Northwest Ordinance. Fundamentally, education is and must always be a local responsibility, for it thrives best when nurtured at the grassroots of our democracy. But in our present era of economic expansion, population growth, and technological advance, State, local, and private efforts are insufficient. These efforts must be reinforced by national support, if American education is to yield a maximum of individual development and national well-being.

Now study that statement. What did he say and mean. For example, "The American people, in partnership with their governments." This is impossible. We have a Government of, by and for people, do we not? So it follows according to the President that people are in partnership with themselves—a rather ridiculous situation. Such error of judgment and of the role of Government is particularly serious when it is our President who is erring. We must point out and correct his errors—not permit their acceptance as basic American thinking.

The President goes on:

In our present era of economic expansion, population growth, and technological advance, State, local, and private efforts are insufficient.

Mr. Speaker, under our system there is nothing but the private efforts and initiative of the people. The Government creates no wealth, only the industry of the people does that. What you propose is to take the wealth from the people at the local level and return it to them in whatever manner an all-encompassing Federal bureaucracy determines. This is not the way we have been taught to solve our problems. It is not in accordance with the spirit of the Constitution which gives to the people the right and the opportunity to do for themselves.

Because we are experiencing population growth, economic expansion, and technological advance are we to throw the Constitution out the window? Are we no longer sure the people can be the government? I do not believe it. The best way to handle education is still at the local level. The most help the Federal Government can give is to trim the fat from the budget so that people will be able to keep more of their own money and they, at the local level, will take care of building enough schools, hiring the best teachers, and providing for their children the best educational system.

The Fight Against Organized Crime

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to insert the report to the President from the Attorney General on the fight against organized crime. The report follows:

JANUARY 10, 1963.

DEAR MR. PRESIDENT: The administration during 1962 greatly expanded its coordinated drive against organized crime and racketeering.

In the Department of Justice, racketeering prosecutions involving the organized crime section of the criminal division increased approximately 300 percent over 1961 and 700 percent over 1960. Convictions increased more than 350 percent over 1961 and almost 400 percent over 1960.

Internal Revenue Service figures show a sharp decline in gambling, the source of the enormous profits which bankroll other forms of racketeering. We prosecuted gambling cases in 20 States and further gambling investigations are underway in 45 States. Federal law enforcement agencies also took major action against other types of racketeering, such as narcotics, labor-management payoffs, and, most important, corruption of public officials.

These actions, while significant and encouraging, are not conclusive. Organized crime continues to tap the pocketbooks and sap the morality of our citizens.

At the beginning of this administration's antiracketeering effort, we sought to develop close coordination among the 26 Federal law enforcement agencies; to develop within the Department of Justice the manpower and dedication required for an effective effort; and to obtain the antiracketeering laws necessary for the fight against modern crime.

FEDERAL COORDINATION

I can report to you that all the Federal law enforcement agencies have participated with total dedication and cooperation. The successful record of 1962 is in large part the result of their activity.

With their help, we have been able to set up and expand a central information pool on the background and activities of more than 1,100 major racketeering figures. Because of this intelligence and because of the agencies' accelerating assistance, the criminal and tax divisions of the Department of Justice have been able to prosecute cases not previously possible.

I mention particularly the outstanding work of the FBI, the Immigration and Naturalization Service, Internal Revenue Service, Federal Bureau of Narcotics, Secret Service, Bureau of Customs, Postal Inspectors, and Bureau of Labor-Management Reports.

DEPARTMENT OF JUSTICE ORGANIZATION

Within the Department of Justice, the work of the organized crime and racketeering section of the criminal division has been greatly expanded. Since January 1961, the personnel strength of this section has been more than tripled, from 17 attorneys to more than 60. Permanent field units have been set up in Chicago, New York, Los Angeles, and Miami and teams of special attorneys have been assigned to various other cities to develop and assist in specific cases. The work statistics of Assistant Attorney General Herbert J. Miller's entire criminal division reflect this section's intensified effort:

	1960	1961	1962
Man-days in court.....	283	555	809
Man-days in field.....	1,963	5,086	7,356
Man-days before grand juries.	388	1,052	1,146

NEW LEGISLATION

Passage of the new antiracketeering laws has been instrumental in this increased activity. Five of the laws now have been in effect for 15 months. They forbid interstate shipment or transmission of gambling information or paraphernalia and interstate travel in support of racketeering, and expand previous laws against flight to avoid prosecution and shipment of firearms.

In the 15-month period, the Federal Bureau of Investigation has investigated 852 cases under the new laws. Of these, we so far have secured indictments in 34 cases involving 134 defendants, and convictions in 12 cases involving 37 defendants. There were three acquittals but in one of these, the defendants were convicted under another law. While no case brought under these new laws has yet been appealed to the

Supreme Court, the constitutionality of the new gambling laws has been upheld in lower courts.

Last year, I reported to you that the passage of these laws had the immediate effect of forcing many of the Nation's major racing wire services to shut down. Since then, two more have closed their doors. So have telephone gambling information services. So have large- and small-scale bookmakers across the country. Others have seen their business greatly reduced.

We have taken action under the five laws against a variety of gambling enterprises. In one case, we uncovered a numbers game operation in an eastern seaboard State which alone took in more than \$20,000 a day and nearly \$6,250,000 annually.

In another numbers case, in the Northeast, we found that while the average daily bet was only about 30 cents, the annual gross of the operation exceeded \$2 million.

Action in a large western city resulted in the closing down of a multi-million-dollar sports gambling operation. A total of 19 different outlets were involved; the annual gross in only 1 of these exceeded \$600,000. Shortly afterward, the mayor declared that the city's policy of tolerating gambling had ended and sent police out to close down other betting operations.

Last fall, a national magazine conducted its own survey of the betting situation across the country. It concluded that "the new laws have succeeded surprisingly well. . . . Bookmakers all over the country are up against it as they never have been before."

Internal Revenue Service figures further indicate the decline in illegal gambling. Gamblers across the country reported accepting bets of \$53,490,000 during fiscal 1962. This represents a 20-percent drop from fiscal 1961 and is the lowest total since 1952, the first year this tax was collected.

Even more graphic are the figures for specific localities in which there has been sustained law enforcement activity. In fiscal 1961, for example, Kentucky bookmakers reported accepting a total of \$7,650,000 in bets. In fiscal 1962—following the cleanup of gambling in Newport, Ky.—the figure was \$2,200,000.

A sixth antiracketeering law was enacted in the last session of Congress and went into effect December 17. This law, greatly expanding an earlier statute, forbids interstate shipment of gambling machines and requires manufacturers, repairers, and sellers of such machines to register with the Department of Justice. Enforcement of this statute will further assist local authorities in action against illegal gambling.

Nevertheless, betting on sports events particularly remains a major problem. In both 1962 and 1961 we investigated reported attempts by gamblers to fix professional and amateur athletic events. Federal responsibility in this area is limited and further legislation might well be necessary. We will continue, however, to take action under present authority should it be required.

The combination of new coordination, new organization and new legislation has enabled the Federal Government to launch a sustained and successful effort against not only gambling but against all organized crime and racketeering.

One of the most insidious of the other aspects of organized crime is illegal traffic in narcotics. This administration sponsored the first coordinated inquiry into the causes and treatment of addiction—the recent White House Conference on Narcotics and Drug Abuse and the resulting effort to draft new legislation dealing with the problem. At the same time, continued outstanding work by the Bureau of Narcotics has resulted in important prosecutions.

For example, John Ormento and Carmine Galante, among the most important narcotics

fealers in the country, were convicted in New York of smuggling millions of dollars worth of heroin into this country over a 5-year period. Sentences for the 13 defendants in the case totaled 276 years, including 40 years for Ormento and 20 years for Galante.

In Chicago, Nathaniel Spurlark, organizer of a large-scale smuggling ring, and five other defendants were convicted and sentenced to terms of 5 or 10 years in prison. Other important cases were successfully prosecuted in Texas, Tennessee, California, Connecticut, Massachusetts, and elsewhere.

In the labor-management field, we have continued to intensify the efforts of the Federal Government both against employees who seek to bribe union representatives and against union officers who seek to extort funds from employers. In 1962, 79 persons were indicted and 44 so far convicted for violations of the Taft-Hartley, Hobbs, or Labor-Management Reporting Acts in cases involving our Organized Crime attorneys. These totals compare with 20 persons indicted and 11 convicted in 1961 and 15 indicted and 13 convicted in 1960.

During the year, the Department also secured favorable decisions in deportation actions against a number of foreign born racketeers, including Frank Costello and Paul "The Waiter" Ricca DeLucia.

Probably the most damaging of all the uses to which racketeers put their illicit profits is corruption of public officials, and we have exhorted particular effort to expose and prosecute such official corruption—in Newport, Ky.; Lake County, Ind.; New York City; and elsewhere. We have investigations of official corruption underway in 22 States.

The acceleration of our effort against all forms of organized crime is indicated by these statistics for cases involving the Organized Crime Section:

	1960	1961	1962
Number of indictments.....	17	45	118
Number of convictions.....	22	24	86
Number of individuals indicted.....	49	121	350
Number individuals convicted.....	45	73	138

¹ Includes trials of indictments returned in previous years.

Other important convictions of the past year include—

Anthony (Tony Ducks) Carallo, New York labor racketeer, Justice James V. Keogh of the New York State Supreme Court, and Elliott Kahane, a former assistant U.S. attorney, for conspiring to fix a Federal bankruptcy case;

George Chacharis, mayor of Gary, Ind., who recently pleaded guilty to charges that he failed to report and pay taxes on more than \$250,000 in payoffs from construction firms;

Henry Grillo, an Internal Revenue Service official in Boston, and three attorneys, for attempting to bribe another IRS official to fix a tax case;

Frank Andrews, well-known Newport, Ky., numbers game operator;

George Roxburgh, business agent of Detroit Teamster Local 299 on Taft-Hartley payoff charges;

Frank (Buster) Wortman, of St. Louis, Michael Coppola of Miami, and Metro Holo-vachke, former prosecuting attorney of Lake County, Ind., all on tax charges.

Los Angeles gambler Alfred Sica, brother of Joseph Sica, who was convicted last year with Frankie Carbo and Frank "Blinky" Palermo, on charges of making false statements to the Government.

Irving Tolub, New York City, a former offi-

cer of the International Ladies Garment Workers Union, on extortion charges;

Samuel J. Marroso, Detroit, labor consultant, on charges of transporting \$190,000 in stolen Ohio Turnpike bonds across State lines;

Anthony Zambito, West Virginia "layoff" gambler, on charges of conspiring to violate and actually violating the new antigambling statutes;

Christopher Columbus Parker, one of the leading gamblers in the Southeast, also on charges of violating the new laws.

We also have secured a number of important indictments, which have not yet come to trial. Defendants in these cases include James G. Cross, former president of the Baker & Confectionery Workers Union, on charges of embezzlement and conspiring to fix his trial for perjury; Leo Carlino, of New York on charges of making grossly exorbitant expense deductions; Benjamin Dranow, previously convicted for tax evasion and mail fraud, for jumping \$25,000 bail in Minneapolis; August J. Lippi, president of United Mine Workers District No. 1, on charges of embezzling more than \$300,000 from a Pennsylvania bank; Matthew (Mike) Rubino, Detroit, for a wide-ranging hundred-thousand-dollar retail sales fraud; Anthony Dolasco, Newark, N.J., and Abe Zimmerman, Chicago, gamblers charged with tax evasion.

The past year also was a successful one in law enforcement areas other than racketeering. The Department is charged with the responsibility for protecting the integrity of Government operations through enforcement of the bribery and conflict-of-interest laws.

Cases in this area include the indictment of two Members of Congress, Thomas F. Johnson and Frank Boykin, on charges involving nearly \$25,000 in payments and more than \$3 million in real estate transactions. Two military officials at Fort Monmouth, N.J., were indicted on charges of attempting to influence Government contracts. Continuing investigation also led to the return of additional indictments in Massachusetts in connection with Federal highway projects.

Cooperation with other agencies also has been extremely effective in areas other than organized crime. At the request of the Food and Drug Administration, the Department this year instituted more than 150 seizures of misbranded or otherwise legally sold food and drugs—including the sale of stale and falsely labeled human blood to hospitals.

In close cooperation with the Post Office Department, we have brought a record number of mail fraud arrests—an estimated 702—and have secured an estimated 500 convictions, also a record. Included in these cases was the initial prosecution of Texas Businessman Billie Sol Estes, for mail and securities fraud. He also is under indictment for filing false statements with the Government. The past year saw a particular resurgence of fraudulent retirement haven land sales and more than 150 investigations are underway in this area alone.

The record of the year, then, against crime generally and against organized crime in particular is an encouraging one. We have made significant progress. Again, let me make it clear, however, that no one believes the tide of the battle is turned. It is not likely to be decided by one set of laws, one anticrime program, or one administration. Ultimate success will require years of cooperation among Federal and local agencies. It will require energy and integrity on the part of all law enforcement officers. Most of all, it will require the interest and involvement of every citizen.

Sincerely,

ROBERT F. KENNEDY.

When the Communists Take Over

EXTENSION OF REMARKS OF

HON. FRANK J. HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. HORTON. Mr. Speaker, last Thursday we in the House and our colleagues in the Senate set aside time for Members to speak in tribute to the 45th anniversary of Ukrainian Independence. During that time, it was my privilege to address the House and to offer a resolution (H. Res. 175) calling for the establishment of a Special Committee on the Captive Nations.

Because of my concern for the Ukraine and the blatant example of Soviet suppression that exists in that country of proud people, I recently read with special interest a Rochester, N.Y., newspaper column about a naturalized citizen in my home community who had given a first-hand account of the Communist enslavement of his homeland. The story of George Kusiw as he told it to Bill Beeny, of the Democrat and Chronicle, is one that should not go unread by our fellow Members.

I hereby offer it for insertion in the RECORD:

STALIN'S 100 DOGS

(By Bill Beeny)

One evening recently I met a man named George Kusiw who pronounces the "s" in his name like "jsh" because he is a Ukrainian and that is the way they do it.

He is remarkable in a sense, and like many Europeans he also is a knowledgeable student of modern European history. Not by reading about it in books, but by having lived it.

After the manner of almost anyone who has felt the weight of the Communist yoke upon his shoulders, he is an outspoken critic of communism.

"If you think Hitler and his Nazis were bad—and they certainly were bad enough—you should know how the Communists treat the people in countries they take over. When they take over a town, they simply post the rules and regulations on the street corners; the first one is that no longer does any individual own any property, it belongs to the state.

"It is impossible to live a life of dignity and decency under communism. And little by little, in maybe 40 years, I believe communism will perish by its own inadequacies."

George operates a restaurant in Hudson Avenue. He is 44 years old, was born in Rohatin, Ukraine, and is a storybook example of what some people may shortsightedly consider a myth, that America is a land of golden opportunity.

"When the Russian Army advanced on the Ukraine in July 1944, I escaped to Czechoslovakia. I stayed there for about two years and as the Russians began taking over the country I fled to Germany and stayed there for a couple of years. It was always my dream to come to America; I made it in 1949."

He was nearly penniless when he arrived in this country alone (his wife and father had been killed in the war). He buckled down to work, getting a job at Wollensak Optical Co., also working part time as a

baker, and spending his spare time buying older houses, fixing them up and selling them. He saved his money.

He saved well. Exactly 7 years later, in March 1956, he was able to make a cash downpayment of \$16,250 for the \$44,000 restaurant he purchased at 858 Hudson Avenue. He had become a U.S. citizen in 1954.

The Russian philosophy has not always been clear to some of us. Perhaps George Kusiw shed some light.

"Have you ever heard the story about Stalin and the dogs?" said Kusiw. "It is a true story.

"Shortly after he took over, Stalin conducted an experiment. Or demonstration. He rounded up 100 dogs. He put 50 of them in one large kennel, and 50 in another.

"He gave one group of dogs everything it wanted—the choicest food, plenty of exercise, fine quarters. They had the run of the place and nothing was too good for them.

"He gave the other 50 dogs just enough food to keep them alive. He did not starve them, but he kept them going on the barest essentials. Their lives were bleak and barren.

"The dogs who were living high became arrogant, well muscled, independent. Stalin pointed that out to anyone who visited their kennel.

"The other dogs were pitifully abject to visitors. They wagged their tails and tried to lick the hands of the visitors and cried and whimpered as they begged to make friends.

"Stalin said: 'The way it is with these dogs is the way it will be with the people we rule. We will give them the barest essentials, just enough to keep them alive, and they will always be figuratively wagging their tails and licking our hands to try to better their lot.'

"That is the Communist way of operating."

Youth Conservation Corps

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. TOLL. Mr. Speaker, I am again sponsoring the bill to create a Youth Conservation Corps. Under this bill unemployed young men between the ages of 17 and 23 would be given the opportunity to undertake useful conservation work in America's great out-of-doors. The bill authorizes the establishment of a Youth Conservation Corps of 150,000 young men for a year's service.

This bill presents an approach which would go a long way in directing the energies of the youth of America, in developing our young men physically and morally, besides having an inestimable value in conserving our natural forestlands and parks.

I have been active for many years in the legislative field to eliminate some of the hazards which are attached to the problem of youth. Dr. John Otto Reine-mann, director of probation of the county court of Philadelphia, was a great supporter of the bill which I sponsored in the General Assembly of the Commonwealth of Pennsylvania to create forestry camps. It was enacted in the 1955 ses-

sion and it operates under the supervision of the department of welfare and the department of forests and waters.

In Philadelphia under the leadership of Commissioner Randolph Wise the city's welfare department has had considerable success with a youth conservation corps program since 1959.

I hope that this important legislation will be enacted in the 1st session of the 88th Congress.

Arab League Boycott Continues

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. ROOSEVELT. Mr. Speaker, many of my colleagues may recall that more than a year ago I initiated correspondence with the Departments of State and Commerce to express my profound concern and deep regret with reference to the policy and practice of the U.S. Government regarding the Arab League Nations' boycott and the consequent invasion of American rights. I later, in testimony presented to the Committee on Foreign Affairs, expressed my disappointment in the terminology used in the replies I received, for it was my opinion that both Departments were adopting an ostrichlike policy on a situation which demanded firm action.

While the Foreign Assistance Act of 1962 did not contain language as strong as that which I advocated, it did nevertheless contain the provision that the "President shall transmit to the Congress after the close of each fiscal year a report concerning operations in that fiscal year under this Act. Each such report shall include information on progress under the freedom of navigation and nondiscrimination declaration contained in section 102." I, for one, shall be eagerly awaiting such progress report.

Thus I found of particular interest an article in the January 25, 1963, issue of the Los Angeles Times by the noted columnist, Victor Riesel. In the belief that this is of vital interest to us all, I have requested permission to have this article inserted in the CONGRESSIONAL RECORD, and it follows:

CARGO FOR CASTRO AND RED CHINA: WHO HALTED THE BLACKLIST MOVE?

(By Victor Riesel)

Apparently some authority quite high in the State Department does not deem the Communist buildup in Cuba a personal insult nor offensive to the United States. For someone inside the State Department has prevented other Government bureaus from punishing those shipowners who have run Communist supplies into Havana.

There is definite evidence that this authority has insisted that the United States continue to do business with ship operators who have been serving mainland China as well as Fidel Castro's military and economic machines.

Just why the Department of State has reversed decisions of other Federal agencies no one really knows. But that it did is quite certain, as in the case of the SS *Nora*, a Norwegian vessel of 8,998 tons. As recently as last July, at the height of the Soviet's secret buildup in Cuba, the *Nora* ran for Castro.

On October 2, the U.S. Maritime Administration publicized a list of NATO nations ships trading with Cuba, and the SS *Nora* was on the sheet.

Not long after that the United Arab Republic chartered the *Nora* to pick up 12,000 tons of tallow in the port of New York. This tallow is a sheep and cattle fat. It is used in making soap and in industrial finishing processes, such as the finishing of leather. The UAR was to receive the tallow under our foreign aid program.

Since the U.S. Department of Agriculture handles such transactions and checks on the ships' charters to see that we're not getting rooked on transportation costs, it checked the *Nora*.

The Department's special unit discovered her on the Maritime Administration's list. The Agriculture people vetoed the vessel.

Then they heard from the Department of State, which is in almost daily contact with Agriculture. The word from the State Department was firm. If the UAR wanted to use the *Nora*, it must be used. That was final. The charter was approved on December 17.

But there was an outcry from the Seafarers, from the American Maritime Association, which follows such matters closely, and from many of us who take the Cuban fascism as a personal insult.

On December 22, the *Nora* left without the tallow. But that's just the beginning of this story. Why are the UAR's wishes so paramount and pressing inside the State Department? It appears to be almost forgotten that the Nasser government in Cairo has blacklisted 33 U.S. vessels.

This blacklist is operated out of Alexandria by the Arab League's Israel Boycott Office. Any ship which does any business with Israel not only is prevented from doing business with members of the Arab League, but is forbidden to use the Suez Canal.

Yet, the State Department insists on giving the UAR full rights, though Cairo denies 33 of our ships the right to pass through the Suez, at both ends of which are ports to which we send so much foreign aid. These harbors are Port Said and Alexandria.

Furthermore, the United Arab Republic could hire American ships, giving work to U.S. seamen to carry U.S. Government-generated cargoes of aid from our gulf ports to Egypt.

But to add insult to this injury to our shipping people, as well as to our national dignity, there is another United Arab Republic practice unreported until this very moment.

Here's what the United Arab Republic has done: It has boycotted some 300 ships in all by placing them on the proscribed list in Alexandria. These ships are operated by owners in Greece, Norway, Britain, Italy, Sweden, as well as in the United States. Any operator can get his vessel off the list if he pledges not to deal with Israel.

Recently the boycott office lifted the blacklisting of the Norwegian ship *Tove Lillian* after the owners promised not to trade with Israel.

Last summer this column discovered that the *Tove Lillian* was in the port of Leningrad being loaded. It was taking on vital cargo for Cuba.

Thus we find that the United Arab Republic prefers to deal with ships that supply Communist cargoes to Communist Cuba rather than vessels which deal with the

democratic Government of Israel. And our State Department then insists that we still defer to the wishes of the United Arab Republic when it comes to transporting the generous aid we send to Egypt, mostly at our expense.

President of All the West

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1963

Mr. MILLER of California. Mr. Speaker, the President of the United States has a very difficult role in these days of grave international crises. No other public official in the world is subject to more universal criticism than our President.

John F. Kennedy is constantly bringing new and greater respect to the office of the Presidency. A recent Gallup poll indicated almost unprecedented popular support in this country for his endeavors.

The other day I had the opportunity of seeing the London Sunday Telegraph for January 13, 1963, which contained a most glowing tribute to the President by an Englishman, Peregrine Worsthorne.

The critique of our President's accomplishments contained in this article certainly reflect in the eyes of one noted expert on the subject that the President is realizing his desire of molding Western interests together in a supranational spirit of peace and prosperity.

Mr. Worsthorne makes very significant points in his article and under leave to extend my remarks, I am very pleased to present this article for the RECORD:

PRESIDENT OF ALL THE WEST

(By Peregrine Worsthorne)

After 2 months of working in Washington from Cuba onward, I began to think about Mr. Kennedy, not as the 35th President of the United States, but as the first President of all the West, and to feel a much wider and stronger political involvement with him and his administration than I do with the British Prime Minister and his government.

For rather an old-fashioned Tory like myself this was a most disturbing experience, affecting my whole attitude to political relations, comparable in political terms to what a change of sex would be physically.

By this I do not mean that I began to feel in any way more American or less British. Nothing as straightforward as that. The magnetism of Mr. Kennedy's Washington is that it is genuinely supranational, with a style of government and an approach to the world which is quite as un-American as it is un-English, just as exhilaratingly—or disturbingly—new and strange and challenging for the native American from Chicago, say, as it is for the Englishman from London.

It is quite simply a Government which is the first in history to be absorbed, even obsessed to the exclusion almost of all else, with the revolutionary challenge of thermonuclear power.

Unlike Mr. Khrushchev, whose political attitudes are even now primarily governed by Communist ideology, or General de Gaulle,

still poignantly concerned with the glories of France, or Mr. Macmillan, urgently preoccupied with the search for new British alliments, or Mao Tse-tung, faced with the stark threats of famine and ruin, or Nehru, Adenauer, and the rest, all of whose past experiences and present political anxieties preclude concentration on the facts of thermonuclear life, President Kennedy is alone able and willing to put first things first.

PARAMOUNT PROBLEM

That is why of all the world's capitals, including Moscow, Washington is the only one today where the thermonuclear problem takes precedence over all else. To have an administration with its head permanently in the mushroom clouds is as irritating and frustrating to American Senators seeking to promote special State interests as it is to allied heads of government seeking to enlist U.S. aid for their own national interests. But to the visiting reporter, without any particular axe to grind, this absorption with the No. 1 new question of the age is precisely what has restored to Washington its pristine quality of revolutionary dedication.

This could not have been more apparent than in the weeks immediately after Cuba. Talking to Presidential aids like McGeorge Bundy and Walt Rostow, both of whom had been closely involved with decisions that could have destroyed the world, it was impossible not to recognize that this experience had introduced a new dimension into their political thinking almost wholly lacking among their counterparts in this country.

The kind of ordeal which they had just been through is almost impossible to imagine, particularly if it is extended even higher in the chain of responsibility to the President himself, who, on the fateful night just before Khrushchev blinked, had even ordered the transport to take him and his staff to the deep shelter Headquarters in Virginia from where thermonuclear war would be fought to its catastrophic end.

AND NOW IMPATIENCE

It is surely scarcely surprising that men who have lived through that week, and well realize that they, and only they, will have to live through it again in the event of another comparable crisis, find it difficult to understand why any ally should wish to complicate their problems. Against this background they find the arguments for a British national deterrent as irrelevant and archaic as those absurd demarcation disputes which used to convulse the pre-revolutionary French court about which duke should be allowed to carry the King's slippers.

Like so much else, British reactions to this American impatience is very much a question of generations, but since returning from the United States 10 days ago I have found nobody under 30 who is not fully prepared to accept American strategic leadership. What is more, it seems to me that more and more young people respond to Kennedy much more readily than they respond to their own Prime Minister; read his speeches, look at his television appearances, and talk about his family, etc., as if in their minds he was already far more relevant politically than any of the leaders whom they have themselves elected.

GLITTERING COURT

I do not believe this is just accident. One of the most revolutionary changes which President Kennedy has introduced into American government is a conscious effort to attract European popular support, even at the expense of shocking and alienating its own countrymen. In many ways Washington today is attempting to be what Versailles was in the 17th century, not merely a center of a great national Government, but a glittering court that casts its spell across the whole civilized world. Artists, philosophers,

couturiers, chefs, leaders of fashion and of thought, drawn for the most part from Europe than from America itself, throng the White House in a way that would have seemed shocking and shameful to its earlier occupants.

More un-American activities of this kind go on in the American capital than in any other place in the world. Senator McCarthy, not to mention George Washington, would turn in his grave. What other President's wife, for example, would have thought of inviting the Mona Lisa to Washington, or if she had, is it likely that the French would have sent it?

These are, of course, only the outward and visible signs of a new style of American life at the top—a determination to bring America's social and cultural horizons into line with her worldwide expansion of power. Under Truman and Eisenhower the United States sought to lead the world metaphorically speaking, from a log cabin. President Kennedy has purposefully discarded this traditional American approach, consciously choosing a style which owes far more to the Old World than to the New, and one which is likely to appeal far more to Europe than to the Middle West.

FAREWELL TO PRINCE HAL

This is not only conscious choice. It is also inescapable necessity, since Mr. Kennedy himself could not fit into the traditional folksy American style, even if he tried. His manner is essentially unplebian, harking far back to the early aristocratic 18th century leaders of the young Republic. Watching him perform at his first post-Cuba press conference I was tempted even to go further and see him almost in a Shakespearian light, as he marched to the rostrum, royally handsome and commanding, far more like a young king back from foreign wars than a Republican leader about to be questioned by the press.

Indeed, to someone like myself who had not seen him in the flesh since his carefree senatorial days, the occasion was intensely, almost theatrically, moving, reminding me of that superb scene in Henry IV, part II, when Prince Hal ceases to be the playboy friend of Falstaff and assumes the grave authority of sovereign power.

Nobody who saw Mr. Kennedy then, restrained, yet gloriously confident in his hour of victory, could avoid concluding that in him the West has a leader who in personal style can out-act any other figure on the world stage today, a glittering heroic figure out of an earlier age.

MAN OF DESTINY

Perhaps this sounds like the lucubrations of a "Limey at the Court of King Kennedy." But as the President's full impact begins to make itself felt I am convinced that many others will react in the same way.

For what we are witnessing is the conjunction of two historic facts. First the mounting evidence that the security of all the free peoples rests primarily on the shoulders of this man, and that he, more than anyone else in the next 6 years, is likely to take the decisions that most crucially affect our lives; and secondly that the man destiny has chosen for this role has the stuff of greatness about him.

I do not see how, in the long run, this conjunction of circumstances can fail to change the way Europe looks at the United States, making it possible for the first time to conceive of a new office, in fact if not in name: President of the West. With the grand old men, Macmillan, de Gaulle, Adenauer, Nehru, not to mention Khrushchev and Mao, still on the scene, perhaps this is merely fanciful. But it is more than likely that these venerable figures will soon pass away, leaving Mr. Kennedy behind to confront their successors, no longer as the brash young newcomer but as the only remaining

veteran of the old order. To his other qualities, in short, superior experience will soon also be added.

I find this, frankly, an exciting prospect and one which the Allies should welcome and exploit, since it offers the forces of freedom the greatest uncovenanted blessing since God gave us Winston Churchill.

New York State Republican Shenanigans

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following joint statement of Senator Joseph Zaretzki and Assemblyman Anthony J. Travia, Democratic legislative leaders in New York.

It is most unfortunate that the Governor of New York resorts to the political conduct, or should I say misconduct, referred to.

Under unanimous consent I insert the following statement in the Appendix of the RECORD:

JOINT STATEMENT BY SENATOR JOSEPH ZARETZKI AND ASSEMBLYMAN ANTHONY J. TRAVIA, DEMOCRATIC LEGISLATIVE LEADERS

This session of the legislature will be called upon by Governor Rockefeller to appropriate funds to finance his personal gestapo. The Governor seeks to have the legislature endorse and retroactively finance his re-creation of the one-man investigating commission—a post that the legislature itself previously abolished.

The one-man investigating commission originally was created under the Dewey administration, but the Republican legislative majority hastened to abolish the post when it came under the control of a Democratic State administration, and in its place established the four-man bipartisan State Commission of Investigation.

But Governor Rockefeller, for his own political purposes, wanted a personal gestapo beholden only to him to do his dirty work. He did not dare to propose this openly to the legislature. He waited until long after the legislature had adjourned and, in the midst of his reelection campaign, appointed Herman T. Stichman as a special commissioner and special assistant attorney general with vast and virtually unlimited powers to pry into anything the Governor chose. With the acquiescence of the Republican legislative leaders, he advanced \$300,000 of State funds to finance the job.

The Governor already had cut this year's appropriation for the State commission of investigation, thus curtailing its operations. He allowed the State investigation commission only \$600,000, but he gave his new private eye half of what the State investigation commission got to cover the entire State for one job only—to go into New York City to pry for purely political purposes; to do a hatchet job.

Why does this 1-man OGPU need \$300,000 to investigate in one city while the State investigation commission, with the responsibility for conducting investigations throughout the entire State is given only \$600,000?

If the Governor were at all sincere about wanting a job done on a bipartisan or non-partisan basis, then he should have given the additional \$300,000 to the State investigation commission, which already has the responsibility and the authority, instead of creating a new post to overlap the State investigation commission's field. Nor was there any need to assign the investigation of the telephone company boiler explosion in New York City to his own personal investigator instead of to the State investigation commission, except to make it a purely political probe for campaign purposes.

Why did he need a personal investigating agent when he already had an established State investigating agency if it were not to serve his own political purposes? Why did he take the underhanded method of creating this personal investigating agency by executive order in the absence of the legislature if it were not because he dared not do it openly?

But he had no qualms about using the taxpayers' money to set up his own private political detective agency as long as it could be done by executive order before the public knew anything about it.

We intend to demand a detailed accounting of the activities of this private eye before we approve any appropriation.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Administering a Public-Land State

EXTENSION OF REMARKS OF

HON. HOWARD W. CANNON

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 30, 1963

Mr. CANNON. Mr. President, on December 11 through 13 of 1962, the National Association of Counties held its grazing, water, and revenue conference in Las Vegas, Nev. During the course of the conference, Gov. Grant Sawyer gave an address entitled "Governing a Federally Owned State." In that address he pointed out some of the difficulties which arise as a result of the high percentage of federally controlled land and some of the efforts being made to facilitate the cooperative agreements that must necessarily be entered into.

His speech gives an interesting and informative résumé of the admission of Nevada to the Union and for these reasons should make interesting reading for Members of the Congress.

During past sessions I have attempted at different times to abate the view held by many people that Nevada was not a good place to hold conventions. In each case where meetings have been scheduled and held these reservations have been eliminated. Consequently, I am pleased that Governor Sawyer chose to begin his remarks by setting out for the record the true facts as they relate to some of these misconceptions.

I ask unanimous consent that Governor Sawyer's remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY GOV. GRANT SAWYER, OF NEVADA

I would like, at the outset of your gathering, to make an observation: I am most confident that you will find that the facilities and environment for serious deliberation in Las Vegas rank with the best in the world. After all, gentlemen, your meetings take place in the day time. And the dazzle of our entertainment grows brightest after sundown. So, unless you insist upon enjoying all of the sights of this remarkable city, you will find ample opportunity to get down to the business of good government.

But seriously, there has been concern in some quarters about the selection of Las Vegas for no-nonsense conventions.

The highly proper American Medical Association was invited in 1961 to hold its convention in this city. The bid was rejected for an outspoken minority felt the atmosphere was unfit for a serious-minded convention such as theirs.

This year, however, an equally august group, the American Academy of General Practice, held its convention here in Las Vegas. The membership was delighted with the results. The Las Vegas site drew the

largest turnout the academy had ever enjoyed at a convention.

In a letter to the Las Vegas convention director, the executive director of the academy had some words of advice for the other cautious groups. He wrote: "To whatever extent I may have felt originally that we were gambling in selecting Las Vegas, I can only say now that we hit the jackpot. To those other groups who have waited to see how the academy fared, I can give hearty reassurance that Las Vegas can be included in their future schedules with full confidence."

So the American Medical Association also came to Las Vegas, and enjoyed one of the finest conventions of its distinguished existence. AMA's success has been repeated by many other of the Nation's top-ranking organizations. During the first 9 months of this year, 91 convention groups, totaling 89,752 delegates and associates, have been held in our Las Vegas convention center. Our resort hotels, moreover, provide the best in convention facilities.

Las Vegas, then, offers the ideal package for conventions: the proper atmosphere for serious deliberations, and the drawing power of the world's finest entertainment. I am confident you will find this to be a fact during your visit in this city.

The subject of administering a public-land State is perhaps not too different than in States where a large percentage of land is in private ownership. Nevada does, however, point the problem up more than other States because Federal ownership controls all but about 13 percent of the land area of the State.

Before going into some of the statistics of the State, you might be interested in a brief review of some of the early history of Nevada. What is now Nevada was owned by Mexico up to the time of the treaty of Guadalupe Hidalgo in 1848 when Mexico ceded to the United States the area covered by the States of California, Nevada, and Utah, the larger part of Arizona, about one-half of New Mexico and small parts of Wyoming and Colorado. This cession, representing about 18 percent of the total area of the United States, cost about \$16 million.

It was in 1846, 2 years previous to the treaty of Guadalupe Hidalgo, that the fatal journey of the Donner party in its attempt to reach California over the Sierra Nevada Mountains a few miles westerly of Reno, took place, and it was in 1847, 1 year later that the Mormon people, led by Brigham Young, arrived in the region adjacent to Great Salt Lake. Some years after arriving in the great basin, Brigham Young and his people began to colonize this little-known region, and in 1849 organized the free and independent State of Deseret. This State embraced a large area extending south from the 42d degree of latitude, which is the northern boundary of California, Nevada, and Utah, to the 33d degree of latitude near the southern Arizona boundary and westerly from the Rocky Mountains to the Sierra Nevada Mountains, and including a section of territory now in southern California, with Salt Lake City as its capital. Congress rejected a memorial asking for recognition as a territorial government. In 1850 California was made a State, the territory of Utah was created, and also the territory of New Mexico. The Utah territory extended from the Rocky Mountains to the California State line and

from the 42d degree of latitude to the 37th degree of latitude.

At that time, what is now Clark County with Las Vegas as its county seat, was in the territory of New Mexico and remained so until it became a part of the territory of Arizona which was created in 1863.

On March 2, 1861, the Territory of Nevada was created and James Nye was appointed Governor of the Territory by Abraham Lincoln. When Governor Nye arrived to take over his duties he brought with him Orien Clemens as his secretary. Orien Clemens was accompanied by his secretary, his brother Samuel Clemens, better known by his nom de plume of "Mark Twain," who subsequently related in one of his books that he found out after arriving his job carried no salary.

On October 31, 1864, the Territory of Nevada became a State. Clark County and parts of Lincoln and Nye Counties were not in the State but were still in the Territory of Arizona. In 1866, by a congressional act, this southern boundary of the State was moved 2° southward, which took in Clark County. However, it was provided that this area could not be added to the State without approval by the State legislature, which was not obtained until 1867. History relates that during the legislative deliberations there was some discussion as to whether or not they should add to the State such a barren waste of volcanic rock. Little did the early pioneers visualize the present-day Las Vegas.

Nevada has an area of 70,265,000 acres of which 61 million is owned by the Federal Government. This represents 86.9 percent Federal ownership. Other than Alaska, Nevada has more Federal ownership than any other State. California follows with 45 million acres representing 44.9 percent, then Utah with 36,400,000 acres or 69.1 percent federally owned.

The federally owned land in Nevada is under the jurisdiction of a number of agencies, the major ones being Bureau of Land Management, 47,360,000 acres; Forest Service, 5,058,000 acres; Air Force, 3,331,000 acres; Fish and Wildlife, 2,927,000 acres; and Bureau of Reclamation, 1,160,000 acres.

The 9,240,000 acres not in Federal ownership includes the grants to railroads comprising 5,086,000 acres. The remaining lands in private ownership represent about 6 percent of the State's total area.

In 1867 Nevada, through its legislature, consented to take advantage of the 16- and 36-section grant, but in 1880, also through its legislature, it consented to relinquish the 16 and 36 section grant and to take in lieu thereof 2 million acres to be selected on any part of the surveyed open public domain. Apparently the State at that time felt it necessary to enter into that compromise. The surveys of the public lands were proceeding so slowly and the young State so desperately in need of revenue on which to exist that, at that time, there seemed no alternative.

Nevada received in total grants 2,733,564 acres of land. At this time, in 1962, there are only a few hundred acres of land remaining from the grants in State ownership. Of the 11 Western States, Nevada received by far the smallest acreage in grants. The next lowest was the State of Washington with 3,077,000 acres in grant land. New Mexico received 13,153,000 acres, Arizona 10,589,000 acres, California 8,837,000 acres, Utah 7,550,000 acres.

The basic industry in Nevada has until recently been agriculture and mining. Of recent years recreation has become one of Nevada's major industries and it is growing. Not content to rely upon this one industry, Nevadans have started a new State program to attract industry to Nevada and it is paying off in new payrolls of hundreds of thousands of dollars. Names such as Rolley, North American, Aerojet, and Sandia grace the State roll of home industries and many others are surveying the State as sites for branch offices and plants.

But what is most important, industry is discovering a political and personal climate created by aggressive, warm, friendly, imaginative, and progressive people. This is the greatest inducement of all, along with a low and limited tax structure. So, within the last 3 years small industries have been locating in both our large and small counties. I do not intend to indicate that we have scored an industrial breakthrough. But we have started, and we must walk before we can run.

The population of the State 10 years ago was approximately 150,000. Today it exceeds the 350,000 mark. Next to Alaska, we are the smallest State in population, but per capita we are the fastest growing State in the Union.

Informed predictions tell us to expect over 500,000 residents in the next 8 years. Of this number, more than 135,000 will be of school age. This would be 25,000 more than the entire population of the State in 1940.

As we daily lay the solid foundations for the future, we can also expect a record prosperity. The personal income of Nevadans, estimated at \$512 million in 1960, should increase to almost \$2 billion by 1970. Tourism, which should bring in about \$660 million this year, is expected to double in the same period.

This, then is a brief picture of Nevada. We are in a period of fantastic boom and we must do everything we can to develop all the resources at our disposal. Being a State with 87 percent of her land owned by the Federal Government, we have attempted to use another very valuable resource at our disposal—the Federal Government.

Along this line, I authorized the creation of a resources council under the direct charge of our State department of conservation. This council, known as the Governor's natural resources council was enacted in November of 1959 and is made up of 14 State agencies and 5 Federal agencies, all working in the field of natural resources. The five agencies are Bureau of Land Management, U.S. Forest Service, Soil Conservation Service, Fish and Wildlife Service, and Indian Service.

I cannot stress too much the important work this council has done in the field of better coordination and better operations. It has provided a mechanism to facilitate exchange of information so that each agency can plan its program with full knowledge and better understanding of the related programs of other agencies. The council provides a forum for discussion and clarification of matters of mutual concern. At the present time the council is working out the final details of a proposed State development plan.

Our relations with the Federal agencies has been good. We have made every effort to bring around good working relationship and have made them feel they are a part of our team. I can say that we have found the personnel of these agencies most receptive. This is, we think, important in a public-domain State such as Nevada if we are to develop our natural resources to meet the ever-increasing demands of rapid growth.

Fortune Magazine Article on Cuban Invasion Worth Rereading in Light of Recent Discussion

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. CURTIS. Mr. Speaker, after the ill-fated Cuban invasion, Charles J. V. Murphy, the respected and thorough Washington editor of Fortune magazine, did a full scale study of what had taken place and this I placed in the RECORD of September 20, 1961, A7456-A7460. It is noteworthy that at that time President Kennedy called the article "the most inaccurate" published about the Cuban affair, and although we have all become more used to the heavy handed pressures of the Kennedy administration upon the press, we had not reached the stage of "managed news" that exists now. The Murphy Fortune article was later awarded the best foreign reporting award by the Overseas Press Club of New York—CONGRESSIONAL RECORD, May 16, 1962, page 7829—an organization not exactly noted for being critical of the Kennedy administration. What happened was that honest reporters and editors knew these were the facts and were able at that time to vote as their consciences dictated. Now in a recent interview with President Eisenhower, David Kraslow, of the Chicago Daily News—St. Louis Post-Dispatch service, in an article dated December 23, St. Louis Post-Dispatch, says:

He mentioned favorably an article that appeared last year in Fortune magazine, purporting to give the inside story of what went wrong in the Bay of Pigs planning.

General Eisenhower repeated his praise for this article and its accuracy on CBS-TV during an interview with Walter Cronkite, Wednesday, January 23, as part of the "CBS Report" series. In view of the fact that reliable reports reached me at the time of the original Fortune piece that the White House had sent at least one general and others up to New York to try to suppress this story, and having failed to do so, sought to discredit it, it does seem appropriate for all of us to reread this Fortune article. This is all the more necessary in light of Attorney General Robert Kennedy's interview in U.S. News & World Report this month rewriting history about Cuba. It is to be hoped that the editors of Fortune will continue to report the news as they find it and that efforts to blackball, intimidate, and otherwise harass editors like Mr. Murphy will be stopped. We need a free press and the members of the press need to fight a lot harder for it.

The above-mentioned article follows:

[From the St. Louis Post-Dispatch, Dec. 23, 1962]

EISENHOWER ADVOCATES TRUTH OVER MANAGED NEWS POLICY

(By David Kraslow)

GETTYSBURG, Pa., December 22.—Former President Eisenhower believes that truth is a better weapon in the cold war against communism than managed news.

In an exclusive 1-hour interview in his office on the Gettysburg College campus, Eisenhower spoke with feeling on the controversy that erupted in the wake of the Kennedy administration's handling of news in the recent Cuban crisis. He spoke as one who had lived with the problem during 8 years in the White House.

His comments implied criticism of President Kennedy's news policies, but not once did Eisenhower refer by name to Mr. Kennedy or any official in his administration.

However, when Eisenhower wanted to urge more truth and less news management, he chose to turn around a statement made by a Department of Defense official in the Cuban crisis. The statement he chose was the one made by Arthur Sylvester, Assistant Secretary of Defense for Public Affairs. Sylvester admitted that news was used as a weapon in the showdown with the Soviet Union.

Eisenhower had known for several weeks that the interview would deal almost entirely with the news management issue. He was told so in the written request for the interview.

NECESSARY COLORING

We have to recognize, he stressed, that on sensitive international matters governments occasionally have to color or withhold news, but he warned that this can be heady stuff, that such a practice, unless sharply controlled, can easily lead to distortion and manipulation of news for political convenience rather than for national security.

He said that there was some indication of management of news not merely in the interests of national security, but for personal reasons. He did not relate this remark to the Cuban crisis or otherwise explain it.

Eisenhower said that he has no reason to think that the American people have not been told the truth on the Cuban situation, but he noted that he does not know all the facts.

He said that he sees no reason why the administration should not now release a full and official version of what happened in the abortive attempt to invade Cuba in April 1961. The Bay of Pigs invasion is history, he said, and the official story should have been told long ago.

He mentioned favorably an article that appeared last year in Fortune magazine, purporting to give the inside story of what went wrong in the Bay of Pigs planning.

Eisenhower expressed surprise when informed that Mr. Kennedy, at a press conference, branded the article as inaccurate. He said that he was not aware that the President had made such a statement.

A TOUGH QUESTION

If management of news is to be accepted, Eisenhower was asked, how can the people feel assured that the Government is not using this power to conceal mistakes and even scandals?

That, he replied, is a really tough question, one that he wrestled with in the White House. He is not sure that there is a satisfactory answer. He was aware, he said, that he had been criticized severely a number of times for what was called excessive secrecy.

He said that there must be a certain amount of trust in a President and that a

President should apply a rule of reason consonant with the first amendment's guarantee of a free press.

As a matter of principle, he said, he is against censorship, even in wartime, because he regards it as self-defeating. "We don't want to tell the enemy anything, of course," he noted, "but the important thing is to keep faith with the American people and our heritage. We must not confuse our people and undermine the credibility of our Government."

REGRETS ACTION IN U-2 CASE

Eisenhower then indicated his regret that he did not obey his instincts when Francis Gary Powers and his U-2 reconnaissance plane were shot down over the Soviet Union. His advisers urged him to put out the cover story that had long been prepared to disguise the spying mission in such an eventuality.

His instinct told him to say nothing, he said, but he finally accepted the strong advice of his aids.

Soviet Premier Khrushchev then proved to the world, by producing Powers and photographs of his plane, that the U.S. Government had lied.

Apparently the incident still nettles Eisenhower, and perhaps helps to explain the strong views he expressed on the danger of tampering with a flow of honest news in a free society. It is so easy to misuse power. Government should never fool the people for the sake of fooling the people, he said.

Msgr. Franklyn J. Kennedy and Catholic Herald Citizen Lead Fight Against Racial Prejudice

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. REUSS. Mr. Speaker, America's position in the world today requires that we remove from our shores all traces of prejudice, discrimination, and segregation. One of the most important leaders in this fight is Msgr. Franklyn J. Kennedy, editorial manager of the Catholic Herald Citizen, of Milwaukee.

The Herald Citizen recently covered the National Conference on Religion and Race in Chicago. This conference was attended by 700 Catholic, Protestant, Orthodox, and Jewish leaders from all over the country. I include an article from the Catholic Herald Citizen covering this conference. I also include the final statement which the conference issued, "An Appeal to the Conscience of America." Monsignor Kennedy has said of this document that it "is not only a stirring reminder of the 100th anniversary of the Emancipation Proclamation, it is a call to action":

RACIAL PREJUDICE IS AN INSULT TO GOD; IT MUST GO NOW, CONFERENCE STATES

CHICAGO.—More than 700 representatives of the Nation's major faiths met for 4 days here last week in a National Conference on Religion and Race. Because they agreed unanimously that "racial discrimination and segregation are an insult to God," they issued "An Appeal to the Conscience of the American People."

Catholic, Orthodox, Protestant, and Jewish clergymen confessed that their churches had done little in focusing their peoples' attention on the immorality of racial prejudice. Frequent references were made to the possibilities that if the churches had spoken out in a united voice more than 100 years ago the Civil War might have been avoided.

The conference did more than lament the failure of the churches and issue a statement. It decided to set up 10 pilot projects to provide religious leadership in an attack on racial bias on an interreligious basis. These cities were selected on a regional basis: Chicago, Detroit, New Orleans, Oakland, San Francisco, St. Louis, San Antonio, Seattle, and Pittsburgh. There is a possibility that other cities—including Milwaukee, Washington, and New York—will undertake the project at a later date.

The conference was convened by the social action department of the National Catholic Welfare Conference (its chairman is Archbishop Cousins); the Department of Racial and Cultural Relations of the National Council of Churches; and the Social Action Commission of the Synagogue Council of America.

At the plenary session on Monday evening, Cardinal Meyer was the Catholic spokesman on the subject: "Interracial Justice and Love: Challenge to a Religious America." Archbishop Cousins was chairman of this meeting. In addition to these members of the American hierarchy, there were 2 more archbishops and 19 bishops present. At the various workshops and forums, they shared the platform with rabbis and ministers and lay people from the 68 participating religious groups.

More than one speaker from each of the religious faiths commented publicly that the conference was an outgrowth of the Ecumenical Council called by Pope John XXIII.

Archbishop Cousins said: "He has shown us all the way to work together. In the past, misgivings and misunderstandings have hampered cooperative effort. Now, following our Holy Father's example, we meet as brethren in the fullest Christian sense."

AN APPEAL TO THE CONSCIENCE OF THE AMERICAN PEOPLE

We have met as members of the great Jewish and Christian faiths held by the majority of the American people, to counsel together concerning the tragic fact of racial prejudice, discrimination and segregation in our society. Coming as we do out of various religious backgrounds, each of us has more to say than can be said here. But this statement is what we as religious people are moved to say together.

I

Racism is our most serious domestic evil. We must eradicate it with all diligence and speed. For this purpose we appeal to the consciences of the American people.

This evil has deep roots; it will not be easily eradicated. While the Declaration of Independence did declare "that all men are created equal" and "are endowed by their Creator with certain unalienable rights," slavery was permitted for almost a century. Even after the Emancipation Proclamation, compulsory racial segregation and its degrading badge of racial inequality received judicial sanction until our own time.

We rejoice in such recent evidences of greater wisdom and courage in our national life as the Supreme Court decisions against segregation and the heroic, nonviolent protests of thousands of Americans. However, we mourn the fact that patterns of segregation remain entrenched everywhere—north and south, east and west. The spirit and the letter of our laws are mocked and violated.

Our primary concern is for the laws of God. We, Americans of all religious faiths, have been slow to recognize that racial discrimination and segregation are an insult to God, the Giver of human dignity and human rights. Even worse, we all have participated in perpetuating racial discrimination and segregation in civil, political, industrial, social, and private life. And worse still, in our houses of worship, our religious schools, hospitals, welfare institutions, and fraternal organizations we have often failed our own religious commitments. With few exceptions we have evaded the mandates and rejected the promises of the faiths we represent.

We repent our failures and ask the forgiveness of God. We ask also the forgiveness of our brothers, whose rights we have ignored and whose dignity we have offended. We call for a renewed religious conscience on this basically moral evil.

II

Our appeal to the American people is this: Seek a reign of justice in which voting rights and equal protection of the law will everywhere be enjoyed; public facilities and private ones serving a public purpose will be accessible to all; equal education and cultural opportunities, hiring and promotion, medical and hospital care, open occupancy in housing will be available to all.

Seek a reign of love in which the wounds of past injustices will not be used as excuses for new ones; racial barriers will be eliminated; the stranger will be sought and welcomed; any man will be received as brother—his rights, your rights; his pain, your pain; his prison, your prison.

Seek a reign of courage in which the people of God will make their faith their binding commitment; in which men willingly suffer for justice and love; in which churches and synagogues lead, not follow.

Seek a reign of prayer in which God is praised and worshiped as the Lord of the universe, before whom all racial idols fall, who makes us one family and to whom we are all responsible.

In making this appeal we affirm our common religious commitment to the essential dignity and equality of all men under God. We dedicate ourselves to work together to make this commitment a vital factor in our total life.

We call upon all the American people to work, to pray, and to act courageously in the cause of human equality and dignity while there is still time, to eliminate racism permanently and decisively, to seize the historic opportunity the Lord has given us for healing an ancient rupture in the human family, to do this for the glory of God.

Part 4: Let's Keep the Record Straight—A Selected Chronology of Cuba and Castro, March 12, 1962–September 13, 1962

EXTENSION OF REMARKS

OF

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. SHORT. Mr. Speaker, I now offer part 4 of my chronology of Cuba and Castro, as my continuing effort to refresh the memories of the Congress and of the American people on the course of events taking place between Cuba and the

United States and which now are a part of our modern history.

We find detailed here the desperation of Premier Fidel Castro in his efforts to cope with economic chaos in Cuba. We find the Cuban youth being urged to develop a more intense "Marxist spirit, a more Communist spirit," and their Premier promising them the glories of a "more advanced stage, not socialism, but communism."

Then we find on March 28, 1962, the first U.S. State Department reports of Soviet bloc military aid to Cuba.

We find \$62 million in ransom demanded for Cuban prisoners taken during the abortive uprising of the exiles.

And we find the odd spectacle of President Kennedy announcing that these Cuban prisoners are really a responsibility of the United States because they were "trained and armed for this invasion by the Eisenhower administration" and given the "signal to let them go by the Kennedy administration." However, he states the U.S. Government will not negotiate with Cuba to ransom the prisoners. And the thought occurs to us that the American public then must pick up the pieces and be responsible for Government actions of which they were never really officially informed—and at this late date still have not been—if we analyze the President's thinking correctly. And our thoughts further turn to the four Americans known to be imprisoned in Red China: Hugh F. Redmond, Richard G. Fechteau, John T. Downey, and Bishop James E. Walsh. These men are known to be political hostages and our State Department declares their release and return to this country to be an issue of utmost importance.

We remember, too, the 21 prisoners of war who first refused repatriation after the Korean war was ended. Ten finally became disillusioned with dialectical materialism and returned to this country. One died in Red China. And 10 still remain there.

We think of the 389 American soldiers still officially regarded as missing out of the original figure of 944—and of whom no trace, report, or record has been found—since the Korean war.

And we finally think of the eight American prisoners—one being held in the Soviet Union, three held in the Soviet Zone of Germany, one held in Czechoslovakia, and another still thought to be held in Czechoslovakia.

And we wonder how the families and friends of these American prisoners feel and if perhaps the American public should not be reminded that these men, too, were caught in a Communist trap and deserve to be considered a national responsibility by the public and the American Government.

In this portion of the chronology we find reports of weapons, ammunition, and propaganda in the form of a Communist-authored book on how to wage guerrilla warfare are being sent to nine Latin American countries from Cuba. Then we learn of 20 Soviet ships carrying from 3,000 to 5,000 Communist-bloc techni-

cians, goods and weapons, arriving in Cuba—with an acknowledgement 2 days later by the President that this was indeed true.

This recalls to mind the press conference on November 29, 1961, in which President Kennedy declared that the United States would be "most concerned" if the Castro regime in Cuba attempted to overthrow the existing government in the Dominican Republic or in any other Latin American state. And that prior to the news report of the shipments to Latin American countries of weapons and propaganda, the Guatemalan Government—on March 20, 1962—formally accused Cuba in a note to the Organization of American States of aiding an uprising in Guatemala.

The chronology details our military callup of 150,000 members of the Reserves to active duty and that three of our Republican Senators proposed amendments to the Presidential request for authority for the callup, which would give him added authority to prevent violation of the Monroe Doctrine and to intervene in Cuba, if it became necessary.

The American public, along about this time, was admonished by the President to "keep both their nerve and their heads." This brings to mind Plutarch, who in commenting on a man being praised for his foolhardy bravery, stated:

There is a wide difference between true courage and a mere contempt of life.

And this quotation—in a nutshell—describes the difference in the attitude of a truly republican form of government—and the Communist form of government—toward human life.

The chronology follows:

A SELECTED CHRONOLOGY ON CUBA, MARCH 12 TO OCTOBER 24, 1962, BY THE LEGISLATIVE SERVICE, THE LIBRARY OF CONGRESS

March 12, 1962: Premier Fidel Castro announces nationwide food and soap rationing to become effective March 19. He links shortages of food and consumer goods to a "brutal economic blockade" against Cuba. He denounces "Yankee imperialism" for making "desperate efforts" to destroy the Cuban revolution. He also says that "we have the shame of not being able to fulfill promises because we made subjective analyses" and because many of Cuba's most skilled workers were either "taken away by imperialism" or "driven away by our mistrust although they could have been won over."

March 14, 1962: Premier Castro (at a University of Havana rally) urges Cuban youth to develop a more intense "Marxist spirit, a more Communist spirit," and says that the young in Cuba will some day live "in another more advanced stage, not socialism, but communism."

March 17, 1962: Premier Castro (in a television broadcast) declares that "the revolution needs to revise all the revolutionary nuclei and all the political apparatus . . . to do away with the errors and abuses and to gain good performance." He singles out those "who think they are more revolutionary than anybody and have the right to mistreat and humiliate others." He also criticizes the watchdog defense committees set up to guard against counterrevolution (which exist in every big city and throughout the countryside) as having committed injustices. "Observers linked Premier Castro's statements to the advancement of

Communist Party assumption of authority in the Castro regime at Havana" (New York Times, Mar. 17, 1962).

March 20, 1962: Guatemala formally accuses Cuba of aiding an uprising in Guatemala: the charge is made in a note to the President of the Council of the Organization of American States.

March 22, 1962: House Government Operations Committee urges the U.S. Government to press a \$99.4 million claim against Cuba for seizure of the Nicaro nickel plant in Oriente Province, because the plant had been operated by the U.S. Government.

March 23, 1962: U.N. Security Council rejects by a vote of 7 to 2 a Cuban charge that the Organization of American States violated the U.N. Charter in barring Cuba from the Inter-American system. The Security Council also rejects by a vote of 7 to 4 a Cuban request that the question of the legality of the OAS action be submitted to the World Court.

On the same day, Fidel Castro and his brother Raul are named to the two top posts in the Secretariat of the Integrated Revolutionary Organization, the 25-man directorate which is to set up a single political party in Cuba. The Premier is named the organization's first secretary and Armed Forces Minister Raul Castro is named second secretary.

March 26, 1962: Premier Castro (in a radio-television broadcast) denounces Anibal Escalante, a long-time Cuban Communist leader, for having brought "real chaos to all the country" and having "tried to create an apparatus to pursue personal ends." He adds that Escalante has been "separated" and that he had much to do with inspiring a spirit of "sectarianism," leading many to believe that the only ones who could be given important posts "were the old and militant revolutionaries."

March 28, 1962: U.S. State Department issues report of Soviet bloc military aid to Cuba; it estimates that Cuba has received \$100 million of military aid to train several hundred Cuban pilots in Czechoslovakia and provide 50 to 75 MIG jet fighters, and provide modern weapons for Cuba's ground forces of 300,000 men. These weapons include: 150 to 250 heavy and medium tanks, 50 to 100 assault guns, 500 to 1,000 field artillery pieces, 500 to 1,000 antiaircraft artillery guns, 500 mortars, 200,000 small arms, and some patrol vessels and torpedo boats.

March 29, 1962: Government begins trial (at Principe prison, in a suburb of Havana) of 1,182 prisoners captured after the unsuccessful invasion last April.

On the same day, the Council of the Organization of American States votes by 16 to 0, with 3 abstentions, to express a firm hope that the rebel prisoners will have every legal guarantee of their trial.

April 3, 1962: Ecuador severs diplomatic relations with Cuba, and becomes the 15th nation of the Americas to do so.

April 8, 1962: Military tribunal sentences each of the prisoners to 30 years imprisonment, but offers to free them on the payment of a total of \$62 million in ransom. The ransom is set at \$500,000 each for the 3 leaders of the invasion force, \$100,000 for 221 others, and \$50,000 or \$25,000 for the remaining 995 men.

April 11, 1962: Pravda (official newspaper of the Soviet Communist Party) endorses the expulsion of Escalante by Premier Castro for trying to further his personal ambitions.

The Cuban exiles report from Havana that Cuba will release 54 sick and wounded prisoners, in return for ransom payment.

On the same day, President Kennedy (at a news conference) declares that the U.S. Government will not negotiate with Cuba to ransom the prisoners. "[These men] were

trained and armed for this invasion by the Eisenhower administration. The signal to let them go and the means to get them there were given by the Kennedy administration * * *. Can the U.S. Government * * * wash its hands of them? We think not. Though the idea of bartering with Castro for human lives is deeply repulsive, the United States still has a responsibility for those lives."

April 28, 1962: Premier Castro demands that the committee pay the \$2.5 million ransom within 1 week; if not, he states that the remaining prisoners will be sent to the Isle of Pines to begin serving terms of 30 years imprisonment.

May 14, 1962: Tass (Soviet news agency) reports that the Soviet-Cuban trade agreement for 1962 is to be increased to about \$750 million under an agreement signed in Moscow, a level of trade almost 40 percent higher than in 1961. The supplementary agreement calls for the supply of considerable quantities of wheat, corn, beans, fats, canned meat, and milk.

June 3, 1962: New York Herald Tribune states that President Kennedy has been given an intelligence report of clandestine movements of rifles, automatic weapons and ammunition from four dispersal centers in Cuba to nine Latin American countries: Nicaragua, Honduras, Venezuela, Brazil, Colombia, Peru, Ecuador, Paraguay and Bolivia. The report asserts that the arms have been accompanied by hundreds of copies of Maj. Ernesto Guevara's book, "Guerrilla Warfare."

June 16, 1962: Government parades tanks, troops, and artillery through the streets of Cardenas, a port 90 miles east of Havana, in response to popular demonstrations over food scarcities. President Osvaldo Dorticos Torrado denounces (at a political rally in Cardenas) "wretched counterrevolutionary provocations."

July 26, 1962: Premier Castro (in a speech at a celebration in Santiago de Cuba of the 9th anniversary of his 26th of July Movement) declares that President Kennedy "is set on launching an attack against our country." He announces to thousands of workers that rationing will be extended from food to shoes and clothing.

August 6, 1962: James Donovan, the U.S. lawyer representing the Cuban Families Committee, announces the opening of a public drive to raise the \$62 million ransom required to free the 1,180 Cuban rebel prisoners. (Donovan is the American who arranged for the exchange of U-2 pilot Francis Gary Powers for convicted Soviet spy Rudolf Abel.)

August 20, 1962: Press reports state that between July 27 and July 31, 20 Soviet ships arrived at 4 ports in Cuba—3,000 to 5,000 Communist-bloc technicians and large quantities of goods and weapons are said to have been landed. "The equipment may include ground-to-air missiles, largely defense weapons. There apparently is transportation, electrical and construction equipment, radar vans and mobile generators. These appear to be going into coastal and air defense."

August 22, 1962: President Kennedy acknowledges, at a press conference, that Communist "supplies and technicians of rather intensive quantity in recent weeks" have been landing in Cuba.

August 24, 1962: Several buildings in Havana are damaged by shellfire from two small powerboats sent from Miami by the Student Revolutionary Directory, an exile group of former University of Havana students. The U.S. State Department states that the U.S. Government was not involved in the raid and had no prior knowledge of it.

August 28, 1962: Tass, the Soviet press agency, reports that the volume of shipments from the Soviet Union to Cuba in 1962 will be double that of 1961, and that 10 Soviet ships and 5 ships of West German, Norwegian, Greek and Italian registry are on the way to Cuba.

August 29, 1962: President Kennedy (at a press conference) states that United States has no intention of invading Cuba "at this time." He adds that "the words do not have some secondary meaning. I think it would be a mistake to invade Cuba." He declares that the United States has already been in consultation with NATO nations whose shipping firms have chartered vessels to the Soviet Union to haul military goods to Cuba.— "Even to consider [blockade or invasion] as possibilities requires far greater Latin American sympathy for Washington's attitude than now exists."

August 31, 1962: U.S. Navy plane on a training flight over international waters near Cuba is fired on by two naval vessels. The White House announces that the ships are believed to be Cuban, and that U.S. aircraft and ships have been authorized to use "all means necessary" to protect themselves against any similar attack in the future.

September 2, 1962: Soviet Union announces (in a communique issued on the talks between Minister of Industries Ernesto Guevara and Premier Khrushchev and other Soviet leaders) that it has agreed to supply arms to Cuba and to provide specialists to train Cuba's armed forces. The communique states that the arms are intended to meet the "threats" of "aggressive imperialist quarters," a watershed in hemispheric history. It was a power move in the cold war by the Soviet Union, as if a pawn had been advanced on a global chessboard. It was also a daring and defiant gambit by Premier Castro to strengthen his regime and his revolution. Cuba now cannot be invaded * * * without killing Russians. The added dangers of an invasion are clear. Far more than Cuba and Fidel Castro are involved. The wrecked Cuban economy will take a long time to rebuild—4 or 5 years at least, if the revolution lasts that long * * *. No direct move on our part could succeed unless the other Latin American powers went along with us.

"It took 50 years to create the OAS, and only the most extreme emergency would justify breaking it up" (New York Times, Sept. 9, 1962).

On the same day, a U.S. State Department spokesman declares that the Moscow announcement "merely confirms what has been going on in recent months."

September 4, 1962: President Kennedy declares (in a statement issued after consultation with congressional leaders) that the United States would use "whatever means may be necessary" to prevent Cuba from exporting "its aggressive purposes by force or the threat of force" against "any part of the Western Hemisphere." The President adds that "there is no evidence of any organized combat force from any Soviet-bloc country: of military bases provided to Russia * * * of the presence of offensive ground-to-ground missiles * * *. Were it to be otherwise the gravest issues would arise." He states that the Cuban question must be dealt with as part of the worldwide Communist challenge and in the context of the "special relationships which have characterized the inter-American system."

On the same day, the Latin American Free Trade Association (in its second conference in Mexico City of the nine members who have signed the association's charter so far) votes by 7 to 0, with Mexico and Brazil abstaining over juridical procedure, to reject Cuba's application for membership of the association, declaring that a Communist economy is incompatible with the market principles of free enterprise and free competition.

September 5, 1962: U.S. Secretary of State Dean Rusk holds a meeting with 19 Latin American Ambassadors in Washington and informs them of the U.S. determination to prevent the export of communism from Cuba. Press reports state that there was "full unanimity" with President Kennedy's "containment policy" that the United States

would use "whatever means may be necessary" to prevent aggression by Cuba against any part of the Western Hemisphere.

September 7, 1962: President Kennedy asks Congress for authority to order 150,000 members of the military Reserves to active duty for a year, if necessary, "to permit prompt and effective responses * * * to challenge * * * in any part of the free world."

September 11, 1962: Soviet Union (in a statement issued by Tass, Soviet press agency) warns that any attack by the United States on Cuba or upon Soviet ships bound for Cuba would mean war. It asserts that Soviet arms in Cuba are for defensive purposes only. It adds that the Soviet Defense Ministry is taking "all measures to raise our armed forces to peak military preparedness."

On the same day, Premier Castro (in a speech to an educators' convention in Havana) declares that the United States is "playing with fire and with war," and adds that "we do not want imperialism to commit suicide on our coast."

Also on the same day, the Havana radio reports that a "pirate vessel" entered a harbor in north-central Cuba and fired more than 60 shots into a British freighter and a Cuban ship. An exile organization in Miami known as Alpha 66 acknowledges responsibility for the attack.

September 12, 1962: Three Republican Senators propose amendments to President Kennedy's reserve mobilization bill that would authorize the President to take "such action as is necessary" to prevent violation of the Monroe Doctrine and to intervene in Cuba.

On the same day, Moscow newspapers publish the statement of the Soviet Government warning of war if the United States interferes with Cuba.

The effect on Soviet policy of the Russian people's reactions toward Cuba: "There is considerable sympathy for the Cubans among the Russian people. However, there was an adverse public reaction in July 1960, when Premier Khrushchev implied that Soviet rockets would be launched if the United States attacked Cuba. The Premier later qualified this remark as symbolic. Experienced Western observers [in Moscow] believe that a large section of Soviet public opinion will feel unhappy about Soviet involvement in the Caribbean. Fear of war is often the dominant motivating factor in the reaction of the Soviet people to international crises. The defensive tone of the Soviet statement in describing the nature of military aid to Cuba lent support to this theory * * *. Mr. Khrushchev has barred world wars and * * * 'imperialist local wars' as instruments of policy * * *. However, he has appended two stipulations to this rule, both of which fit the case of Cuba * * *. First, Communists must support without reservation wars of 'national liberation.' Then, once such a war has been consolidated internally, as in the instance of the Castro revolution, it must be shielded by the Soviet Union under the slogan 'no export of counterrevolution.' In the Soviet statement this thesis was translated into the warning to the United States * * *. Western observers interpreted [the Soviet warning to the United States] as an indication that Soviet leaders were worried over the possibility that the United States might confront them with the necessity of intervening militarily in the Caribbean or retreating from their doctrine of 'no export of counterrevolution.' They believe that Premier Khrushchev, well aware of the attitude of his people, will go to great lengths to avoid a conflict with the United States. But few were willing to predict what the Soviet leader would do if a [rebel] motorboat * * * suddenly put a torpedo into a Soviet ship in Caribbean waters." (Seymour Topping, New York Times, Sept. 13, 1962.)

September 13, 1962: President Kennedy asserts (at his weekly news conference) that

the United States would move swiftly against Cuba if the military buildup there threatened U.S. security in any way, "including our base at Guantanamo, our passage to the Panama Canal, our missile and space activities at Cape Canaveral, or the lives of American citizens in this country, or if Cuba should ever attempt to export its aggressive purposes by force or the threat of force against any nation in this hemisphere, or become an offensive military base of significant capacity for the Soviet Union." He says that if the United States should ever find it necessary to take military action against the Castro regime, the Communist-supplied weapons and technicians "would not change the result or significantly extend the time required to achieve the result." The President adds that the Cuban economy is crumbling as a result of Premier Castro's "own monumental economic mismanagement" and the economic boycott by the United States. He criticizes loose talk in the United States which serves "to give a thin color of legitimacy to the Communist pretense that such a threat [of an American invasion] exists." He expresses the hope that "the American people, defending as we do so much of the free world, will in this nuclear age, keep both their nerve and their heads."

Cuban GI Bill

EXTENSION OF REMARKS

OF

HON. M. G. (GENE) SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. SNYDER. Mr. Speaker, under leave heretofore granted to extend my remarks, I am including a letter which was sent to the President of the United States, by two Senators and me.

I feel that this letter from one of my constituents echoes the belief of many people in this country in regard to the conscience money which is being spent as a result of the Cuban fiasco.

The letter follows:

LOUISVILLE, Ky., January 28, 1963.

His Excellency, JOHN F. KENNEDY,
The President of the United States.

Hon. THURSTON MORTON,
U.S. Senator.

Hon. JOHN S. COOPER,
U.S. Senator.

Hon. GENE SNYDER,
U.S. Representative.

DEAR MR. PRESIDENT AND SIRS: Enclosed is an article from our local paper, the Louisville Times, dated January 26, 1963. The title of the article, "Cuban GI Bill Due," is enough to make George Washington and the rest of this country's great past leaders turn over in their graves. Since when does the Government of the United States give veterans of other countries college and vocational training when it doesn't even give it to its own veterans who pay the taxes for such things. I am referring to the GI bill which was killed by Congress for the veterans of the cold war not so long ago. I ask you to tell me that these Cubans deserve such rights when Americans don't.

I spent 4 years on active duty and over a year in the Active Reserve. I received nothing for my time except the satisfaction that I was doing my duty for my country. I ask nothing in return as I feel I have been receiving my reward in the form of freedom that I enjoy every day. Thousands upon

thousands of other men did the same. Why all of a sudden do we now have to give such rewards to the veterans of the Cuban invasion. They are not citizens of the United States and they were not fighting for the United States. Why do we have to reward the Cubans, we did not reward the Chinese when they were driven from the mainland, nor many others.

Why, if the U.S. Government wants to educate someone, doesn't it retrain the coal miners who are fast losing their jobs because of machines, and this is just one of a dozen or more fields where men are becoming obsolete if they don't receive special training. I think our first responsibility is to the American people. Perhaps the American people should have something to say about this proposed bill, after all we will be paying for it. I think they would rather send their sons and daughters to college with those taxes than send someone they don't know. I feel we should help those who helped us in the past, namely the ex GI out of work, the fathers and mothers who gave sons to die for our country, etc. If we make this a business of wholesale giveaway, then it will lose its prestige to those who worked hard to earn it.

Not only are these men of the brigade being considered for such payments for fighting for their country, Cuba, but they are receiving well over a \$100 a month for living expenses. Do the unemployed in our country receive that much money when they are out of work, I think not. Even those Cubans who are at present in the armed services of the United States are receiving special treatment. Not long ago they were removed from Fort Knox, Ky., to the south because of the severe weather. If these men cannot stand all climates of weather what good will they be to the United States if we have to fight a future war in Russia. Our GIs have fought all over the world in all extremes of weather. Are these men going to be able to rest out their days in the sunny south. What would have happened if George Washington, that winter in Valley Forge, had taken his army and run off to Mexico or someplace else. I think Americans learned long ago that nothing is won by running, so why do the Cubans leave their homeland by the thousands. Perhaps if these men want lessons, they should take a course in American history. It could teach them many things. I could continue on and on, such as why the brigade leaders called the President of the United States a liar concerning the air cover story. Possibly they never heard the old saying, "don't look a gift horse in the mouth."

Let me state here that I don't dislike the Cuban people, nor am I criticizing my Government or its elected officials. I only want to know why the Cuban people are receiving preferential treatment when, I feel, that there are more deserving Americans. I think we should help these people to a reasonable extent. But I think the benefits mentioned are beyond reason. Our country is open to all peoples of the world as it should be, but why can't the Cuban people wait their turn as other peoples of other countries are doing. I don't feel we owe the people of Cuba anymore than the people of other countries.

I feel this matter should be taken before the American people. Abe Lincoln once said the Government was for the people and by the people. How are you going to know what the people want unless you ask them.

I would appreciate hearing an opinion from each of you gentlemen. Thank you for your time, and hoping to hear from you soon, I remain,

Sincerely,

DON L. THOMPSON.

New Civil Rights Organization Formed

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. CURTIS. Mr. Speaker, the field of civil rights is a vast one, and it requires a great deal of original work and study. Up to now, the American Civil Liberties Union of New York, with local branches in many States, has pretty much had this field to itself. During the past years, I have often had the occasion both to defend and to criticize this organization and its work. I have done this in the spirit of caring a great deal about the men and women whose fates hang upon the work done by American Civil Liberties Union and its opponents. I have had numerous RECORD items about American Civil Liberties Union and its projects. Last year I was honored to meet with the board of directors of American Civil Liberties Union, to share some rather frank thoughts with them. A new organization has sprung up called the Defenders of American Liberties. It will seek to handle cases which American Civil Liberties Union for its own reasons does not want to work with, or where limited funds allow only one organization to be active. Clearly the makeup of both organizations and their personnel is very different. This should not disturb people. Competition between a more conservative and liberal point of view in the civil rights field should help bring out new issues and assist thoughtful citizens in doing more in this field. The Newhouse newspapers story—St. Louis Globe-Democrat—and the Christian Science Monitor report of December 31, 1962, and January 2, 1963, respectively, follow:

[From the St. Louis Globe-Democrat,
Dec. 31, 1962]

MORRIS OUTLINES CIVIL RIGHTS FIGHT FOR CONSERVATIVES

DALLAS.—Two sparsely furnished rooms in a Dallas skyscraper are headquarters for an organization whose president says it is fighting for the civil rights of conservative Americans—and filling a vacuum by doing so.

The new organization is Defenders of American Liberties. Its president is Robert Morris, attorney, former New York City judge, former counsel to congressional investigating committees, and former president of the University of Dallas.

In 1960, Morris, then a Point Pleasant attorney, ran for the Republican Senate nomination in the New Jersey primary, but was defeated by Senator CLIFFORD P. CASE.

LIMIT CASES

Morris said the organization will not take any case in which a meritorious civil rights issue is not involved, and in any such case it limits its action to the cause of civil rights.

He said Defenders of American Liberties is looking for this kind of man in trouble: "A poor guy who is not a member of any particular organization, has no pressure group behind him—and, say, he's losing his farm because of a tax debt."

In fact, Defenders believes just such a man is L. R. Gajewski, a Mitchell, N. Dak., farmer.

Morris said Gajewski may lose all his land and buildings on an income tax lien, and on January 8 he is to go on trial on criminal charges growing out of the same circumstances. Defenders thinks his case has merit and will try to help.

NOT ALL OBSCURE

Not all cases taken on by Defenders are this obscure. Its most widely publicized case was that of retired Maj. Gen. Edwin A. Walker after his arrest following integration riots at the University of Mississippi last fall.

The officers of Defenders of American Liberties were convinced Walker was being railroaded into a mental hospital—and being denied his constitutional right to a speedy, public trial—through improper psychiatric evidence. Morris acted as Walker's civil rights counsel. As soon as the general's mental fitness was established, Morris removed himself and Defenders from the case. Morris has had no connection with Walker in any other legal capacity.

The organization is now preparing to defend seven New Yorkers charged with malicious mischief after they held a card party in a Yonkers store. In this kind of party, printed cards are hidden in merchandise to point out to purchasers that the store is dealing in Communist goods.

PREPARE BRIEFS

And Defenders is preparing briefs and hopes to intervene as a friend of the court in two cases involving public school prayers scheduled for hearing before the Supreme Court.

"The American Civil Liberties Union defends those who want to eliminate prayers and delete the word 'God' from public school," Morris said. "We are intervening on the side of those who would retain the word 'God.' Until now, those people had no group organized to help them. That's what I mean when I say we are filling a vacuum."

Defenders of American Liberties was founded in Chicago last June. Three of the founders—Morris J. Nelson, publisher of community newspapers in the Chicago area, attorney J. F. Schlafly, Jr., and Mrs. Carl Zeiss, widow of a vice president of the Northern Trust Co.—asked Morris to join them and serve as president. He took over the job on August 15.

[From the Christian Science Monitor, Jan. 2, 1963]

GROUP DEFENDS U.S. TRADITIONALISTS

DALLAS.—Two sparsely furnished rooms in a Dallas skyscraper are headquarters for an organization whose president says it is fighting for the civil rights of conservative Americans—and filling a vacuum by doing so.

The new organization is Defenders of American Liberties. Its president is Robert Morris, attorney, former New York City judge, former counsel to congressional investigating committees, and former president of the University of Dallas, a Roman Catholic school.

Mr. Morris said the organization will not take any case in which a meritorious civil-rights issue is not involved, and in any such case it limits its action to the cause of civil rights.

He said Defenders of American Liberties is looking for this kind of man in trouble: "A poor guy who is not a member of any particular organization, has no pressure group behind him—and, say, he's losing his farm because of a tax debt."

EXAMPLES GIVEN

In fact, Defenders believes just such a man is L. R. Gajewski, a Matchell, N. Dak., farmer. Mr. Morris said Mr. Gajewski may lose all his land and buildings on an income tax lien, and on January 8 he is to

go on trial on criminal charges growing out of the same circumstances. Defenders thinks his case has merit and will try to help.

Not all cases taken on by Defenders are this obscure. Its most widely publicized case was that of retired Maj. Gen. Edwin A. Walker after his arrest following integration riots at the University of Mississippi last fall.

The officers of Defenders of American Liberties were convinced General Walker was being railroaded into a mental hospital—and being denied his constitutional right to a speedy, public trial—through improper psychiatric evidence.

Mr. Morris acted as General Walker's civil rights counsel. As soon as the general's mental fitness was established, Mr. Morris removed himself and Defenders from the case. Mr. Morris has had no connection with General Walker in any other legal capacity.

The organization now is preparing to defend seven New Yorkers charged with malicious mischief after they held a card party in a Yonkers store. In this kind of party, printed cards are hidden in merchandise to point out to purchasers that the store is dealing in Communist goods.

And Defenders is preparing briefs and hopes to intervene as a friend of the court in two cases involving public school prayers scheduled for hearing before the Supreme Court of the United States.

"The American Civil Liberties Union defends those who want to eliminate prayers and delete the word 'God' from public school," Mr. Morris said. "We are intervening on the side of those who would retain the word 'God.' Until now, those people had no group organized to help them. That's what I mean when I say we are filling a vacuum."

PRECOURT ACTION

Defenders of American Liberties was founded in Chicago last June. Three of the founders—Morris J. Nelson, publisher of community newspapers in the Chicago area; J. F. Schlafly, Jr., an attorney; and Mrs. Carl Zeiss, widow of a vice president of the Northern Trust Co.—asked Mr. Morris to join them and serve as president. He took over the job on August 15.

Mr. Morris said he modeled the charter after that of the American Civil Liberties Union. However, Defenders of American Liberties, unlike the American Civil Liberties Union, has no members except for its officers and directors.

That, Mr. Morris said, is so the new organization cannot be labeled an extremist outfit, as it might be if "some wild-eyed characters joined and made indiscreet remarks in public."

So instead of election by a general membership vote, the directors will elect their own successors and may choose any Americans they want and can get to accept.

NO MEMBERS

Since Mr. Morris became president and counsel, Defenders has acted in about 30 cases and only a few of these have gotten as far as a courtroom.

Mr. Morris said he receives about five requests a day for help, about one in six is worth investigating and perhaps one-third of these will reach the stage of action.

In each case, Defenders has acted from the viewpoint generally labeled conservative. It is a label Mr. Morris does not particularly like. He prefers "traditional." He contends that as the U.S. Government becomes more international in viewpoint through its foreign aid commitments and support of the United Nations, the big civil rights battles in the years to come will have to be waged in behalf of conservative—or traditional—Americans.

Federal Mine Safety Act

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. DENT. Mr. Speaker, those of us who come from areas where coal mining has been a major industry have been seriously concerned with the lack of adequate protection of the workers in the coal mines of America.

I have been privileged to be the sponsor of legislation bringing to the small mines added protections afforded by Federal Government inspection. Unfortunately, after unanimous approval by our Committee on Labor and Education the Rules Committee failed to grant a rule for this legislation during the last term. I have again introduced this legislation and respectfully urge all Members to read the attached resolution and transmittal letter from the United Mine Workers of America, which calls attention to a recent mine disaster in southwestern Pennsylvania. Many large holdings in the coal industry are being subdivided into small contracts which enable the operators to qualify for small mine exemptions under the Federal inspection law. More and more this is becoming the rule rather than the exception. The very nature of this operation, which some claim to be a subterfuge, has increased the dangers to the men who work for a living in this industry.

I am hoping that during this session Members of Congress will give more attention to the seriousness of this situation and that we may be able to pass legislation that will give each miner, regardless of the size of operation in which he is employed, a reasonable protection against the loss of life and serious injury.

The United Mine Worker's covering letter and resolution follows:

UNITED MINE WORKERS OF AMERICA,
Washington, D.C., January 11, 1963.
To the Members of the 88th Congress.
DEAR SIR: The terrible tragedy occurring on December 6, 1962, at the Frosty Run shaft, Robena No. 3 mine, of the United States Steel Corp., Carmichaels, Pa., in which 37 coal miners lost their lives, was before the international executive board of the United Mine Workers of America during its meeting in Washington, D.C., December 12-15, 1962. During this meeting, the board adopted the enclosed resolution, which is self-explanatory.

We again urge earnest consideration by the Members of the 88th Congress to enact enforcement legislation to bring all employees in the coal industry under the provisions of the Federal Mine Safety Act.

Sincerely yours,

JOHN L. LEWIS,
President Emeritus.
THOMAS KENNEDY,
President.
W. A. BOYLE,
Acting President.
JOHN OWENS,
Secretary-Treasurer.

RESOLUTION, UNITED MINE WORKERS OF AMERICA

Whereas this board is horrified and appalled at the explosion which occurred December 6 at the Frosty Run Shaft, Robena No. 3 mine, United States Steel Corp., Carmichaels, Pa., in which 37 coal miners were killed violently; and

Whereas 31 of those who died were members of United Mine Workers of America, Local Union 6321, district 4, Masontown, Pa.; and

Whereas this pre-Christmas tragedy also symbolizes a growing trend in the industry toward placing production of coal ahead of human lives; and

Whereas many American coal miners who work in small underground mines do not now receive full protection under Federal law because of an arbitrary exemption granted their employers by the Congress: Therefore be it

Resolved, That this international executive board and all officers of this organization including local union officers and mine safety committeemen press with renewed vigor for strict compliance by coal operators with all Federal and State mine safety laws and with the Federal Mine Safety Code which is written into the national bituminous coal wage agreement; and be it further

Resolved, That the U.S. Bureau of Mines and mining departments in the various States be informed that that organization will insist on their strict and to-the-letter enforcement of existing mine safety regulations; and be it further

Resolved, That the international union, Labor's Nonpartisan League, and district officers urge with renewed vigor that the 88th Congress pass an amendment to the Federal Coal Mine Safety Act that would extend enforcement provisions of that act to all employments of underground coal mines regardless of size; and be it further

Resolved, That a copy of this resolution be forwarded to Local Union 6321, each Member of the U.S. House of Representatives and the U.S. Senate, the Director of the U.S. Bureau of Mines, and directors of mining departments in coal-mining States, and that it be printed in the United Mine Workers Journal.

Unanimously adopted by the international executive board, United Mine Workers of America, this 14th Day of December 1962.

Sincerely yours,

JOHN L. LEWIS,
President Emeritus.

THOMAS KENNEDY,
President.

W. A. BOYLE,
Acting President.

JOHN OWENS,
Secretary-Treasurer.

Block Back-Door Spending

EXTENSION OF REMARKS

OF

HON. FRANK J. HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1963

Mr. HORTON. Mr. Speaker, on January 24, I introduced a resolution—House

Resolution 174—to amend the Rules of the House of Representatives so that bills authorizing loans or advance contractual obligations against the Treasury could not receive House consideration unless reported by the Appropriations Committee.

The resolution, if adopted, would provide conformity with the Constitution's clearly stated limitation:

No money shall be drawn from the Treasury but in consequence of an appropriation made by law.

This provision was intended to assure that all expenditures from the public treasury would be carefully weighed in terms of necessity, available revenue and fiscal soundness.

However, because of an interpretation of the House Rules in 1949, legislative scrutiny and control of billions of dollars annually expended were eliminated. Consequently, whenever an administration becomes impatient with the tried-and-true method of financing projects, it merely seeks authority to borrow from Treasury trust funds—in some cases amounting to many billions—without bothering to get a legislative appropriation.

At a time when our country is challenged to fight against inflation and for a stable economy, the power and ability to control the public purse must be restored to Congress. At stake is national solvency and public confidence in our economy, both here and abroad.

Further back-door drains on the Treasury will occur until Government agencies are compelled to go before the Appropriations Committee and justify their expenditures of the taxpayers' money.

In offering this resolution, I joined with more than 120 other Members who introduced similar measures or announced their support of this bipartisan effort to oppose back-door spending.

Hon. John J. Bell

SPEECH

OF

HON. RAY ROBERTS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. ROBERTS of Texas. Mr. Speaker, the passing of a former Member of the House, the Honorable John J. Bell, of Texas, has been a great loss not only to the State of Texas, but to the entire Nation.

John Bell was one of those rare men whose great ability led him to success in every field he entered. It was a great privilege for me to have been a fellow student with John in the University of Texas Law School. John Bell's brilliant career on the campus, both in student politics and scholastics, left little doubt as to his future success.

In the following years I watched his climb to the top in business and politics. In the Texas Legislature, in the Second World War, and ultimately in the Congress of the United States he served with honor and distinction.

That a man of John Bell's stature should pass on so early in life is a great misfortune. To his devoted wife and family, I extend my deepest and heartfelt sympathy.

Great Progress in Civil Rights in 1962 Reported by Attorney General Robert F. Kennedy

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. BOLAND. Mr. Speaker, 1962 was "a year of great progress in civil rights" and we are pleased to hear these words of reassurance from Attorney General Robert F. Kennedy in his report on the "Progress of Civil Rights" to the President.

Under unanimous-consent agreement, I include in the Appendix of the RECORD an editorial from the Washington Post, Monday, January 28, 1963, on the Attorney General's report, together with the complete report:

CIVIL RIGHTS PROGRESS

The civil rights report which Attorney General Robert F. Kennedy has presented to the President has the especial value of putting into perspective the gains that were largely eclipsed by the spectacular events at Oxford, Miss.

Notwithstanding this untoward incident, it is plain that the year was one of achievement and one, moreover, in which the most notable progress was in the changing spirit of the South. The catalog of interventions to enforce voting rights, transportation rights, and education rights makes reading of which the country has reason to be proud. If there still remains a great deal of discrimination in the land, it is discrimination about which the Government continues a persistent and serious effort to do something. There must be no slacking in this effort, for as the Attorney General points out: "Substantial numbers of American citizens are being deprived of their right to vote because of race."

While progress sometimes seems slow, it is cheering to note, in the language of the report, that "there are no segregated airport facilities in the Nation" and that there is only one city in the Nation in which there still is segregation at interstate rail and bus facilities.

Prince Edward County, Va., continues to have the dubious distinction of being the only county in the Nation where there are no public schools. That nearly 1,500 of the 1,800 schoolchildren of that county have had no education in 3 years is, as the Attorney General puts it, "a disgrace to our country." It is to be hoped that the Court of Appeals for the Fourth Circuit will order the schools there opened, in accordance with the plea of the Justice Department.

The Attorney General has been wise to acknowledge that difficult racial problems remain throughout the country. He also has been wise to point out that they exist not only in the South "but throughout the country where Negroes are victims of school 'segregation,' bias in housing, or employment or other facets of society."

The report will unnecessarily offend many objective people by an excessive effort to exhibit this administration's comparatively

greater zeal in the civil rights fields. This repetition of comparative statistics on suits filed and actions undertaken introduces into the report a political note that might better have been omitted. If it had to be included, it would have been considerate and generous if the Attorney General had acknowledged that the Department of Justice under the administration of his predecessor pushed through to enactment in the face of great opposition the legislative foundation for many of the actions of this administration. Whatever progress that has been made is the result of the efforts of public men in all parts of the country and both parties.

A REPORT ON THE PROGRESS IN THE FIELD OF CIVIL RIGHTS BY ATTORNEY GENERAL ROBERT F. KENNEDY TO THE PRESIDENT, JANUARY 24, 1963

DEAR MR. PRESIDENT: For those only interested in headlines, rioting and violence at the University of Mississippi overshadowed the civil rights field and painted 1962 as a year of resistance by the South to law and the orders of our courts. The historian, however, will find, on the contrary, that 1962 was a year of great progress in civil rights, in large measures because of the responsibility and respect for law displayed by the great majority of the citizens of the South. In 1962, the United States took major steps toward equal opportunities and equal rights for all our citizens and in every area of civil rights—whether voting, transportation, education, employment, or housing.

There were outstanding efforts throughout the administration on behalf of the full and free exercise of civil rights. Let me take particular note of the successes of the Vice President and your Committee on Equal Employment Opportunity; the work of the Commission on Civil Rights; the impetus provided by the Executive order against segregation in housing; the impact area school efforts of the Department of Health, Education, and Welfare; and improved hiring practices and other activity by all parts of the executive branch.

This report, however, is limited to the work of the Department of Justice and here is a summary of our efforts in this field during the past year.

VOTING

The most significant civil rights problem is voting. Each citizen's right to vote is fundamental to all the other rights of citizenship and the Civil Rights Acts of 1957 and 1960 make it the responsibility of the Department of Justice to protect that right.

It has been the sustained policy of this administration—in all areas of civil rights—to consult with local officials and seek voluntary, peaceful compliance with the commands of our courts and our laws. Under this policy, legal action is brought only after such efforts fail. While we have secured cooperation and compliance in all civil rights areas, this policy has met with particular success in the voting field.

During this administration, officials in 29 counties in Georgia, Alabama, Mississippi, and Louisiana have voluntarily made voting records available to the Department in our investigations of voting complaints, without the need for court action.

In four southern counties we have been able to avoid bringing lawsuits because officials abandoned discriminatory registration or voting practices, and scores of other counties and cities, notably in Georgia, have abandoned segregated balloting at our request, in voluntary conformance with a court decision in one county.

There have, however, been a number of areas where voluntary local compliance was not forthcoming and where we were required to bring legal action. Between the passage of the 1957 Civil Rights Act and the change

of administration, 10 voting suits were filed in southern counties and 7 were tried.

In this administration, 23 more voting suits have been filed, including 1 this week. A total of 17 suits have been tried, including the 3 pending January 20, 1961. Thus, of a total of 33 voting cases filed in both administrations, 24 have been tried so far. Satisfactory results have been achieved in 16 of these. Three cases have been tried but are not yet decided and the other five are on appeal.

There also has been an acceleration in voting records inspections. In the previous administration, records were inspected in 20 counties and photographed in 12 of these. In this administration, 62 voting records inspections have been undertaken, including photographing of records in 53 counties.

In short, the total number of counties in which the Department has taken action, ranging from records inspection to lawsuits, has increased from 30 at the beginning of this administration to 115 at present.

Each of the lawsuits filed has required extremely detailed preparation. In the suit brought against Montgomery County, Ala., for example, it was necessary to analyze 36,000 pages of voter applications and to subpoena 185 witnesses at the trial. Such suits require the total attention of from 4 to 6 of the 40 attorneys in Assistant Attorney General Burke Marshall's Civil Rights Division for several months.

In some instances, we have had to take action even after obtaining court orders forbidding further discrimination against Negro registration applicants. In one of our suits, the registrar of Forrest County, Miss., was ordered by the Court of Appeals for the Fifth Circuit to register all qualified Negroes. He nevertheless rejected as unqualified 94 of the first 103 Negroes to apply after the judgment, including a National Science Foundation graduate student and a high-school science teacher with a master's degree. The Department prosecuted him in the first contempt case stemming from a court voter registration order. The case is awaiting decision.

In East Carroll Parish, La., the voting referee provisions of the 1960 act were used for the first time in 1962, with the Federal judge himself hearing registration applications. Although he approved the application of 26 Negroes, the State of Louisiana attempted to block their registration through a State court injunction. We acted to set aside the State injunction and obtained an order forbidding further interference. On July 28, 5 days later, Negroes voted in East Carroll Parish for the first time since Reconstruction.

The Department's total voting rights effort, from records inspections to law suits to follow-up activity, has produced significant results. In a number of counties such as East Carroll Parish, Madison Parish, La., and Clarke and Tallahatchie Counties, Miss., where no Negroes had been registered in decades, Negroes are now beginning to be registered.

In Macon County, Ala., Negro registration has risen from 1,100 to more than 3,000 since an end to discriminatory registration practices was ordered by the court in March 1961. Negro registration in Bullock County, Ala., has risen from 5 in September 1961 to more than 1,000. In Montgomery, Ala., the Department's suit was decided November 20, 1962, and 1,100 previously rejected Negroes were ordered registered immediately. All have now been registered.

Two particularly significant voting suits were filed in the past year. While our voting suits generally challenge discriminatory application of voter qualification laws in specific counties, we filed suits in both Louisiana and Mississippi challenging the constitutionality of the State voter qualification

laws themselves. Both cases are in pretrial stages.

In addition to suits challenging general discrimination against Negro registration applicants, we also have sought to guard against specific attempts to frighten, intimidate, or penalize Negroes who seek to register or vote. Of the 33 voting suits filed so far, 7 have been directed against such attempts at intimidation, verbal, economic, and physical.

The importance of these cases exceeds their specific circumstances. Negroes' fear of attempting to register is, perhaps, as great a problem as their being prevented from registering. These suits, like our follow-up actions in such cases as Forrest County and East Carroll Parish, have helped eliminate the fear by making it clear that the Government will meet its responsibility to guarantee not only the right to register and vote, but also the right to do so without intimidation or coercion.

A vivid example is provided by Haywood and Fayette Counties, Tenn., where intimidation actions were filed in the previous administration and successfully concluded in this administration. Last summer, we secured assurances, by consent decrees, against economic intimidation. Between late 1960, when the cases were filed, and the present, the number of Negroes registered has increased from none to more than 2,000 in Haywood County and from 58 to more than 3,000 in Fayette County.

Last summer, four Georgia churches used as centers for Negro registration efforts were burned and burnings were attempted at two others. In another illustration of our efforts against intimidation, the FBI investigated immediately. In one case, the FBI turned its findings over to local authorities, who arrested four men in connection with one burning. They were convicted in State court and sentenced to prison terms. In the second case, two men were arrested and face Federal charges. Our investigations of the other burnings continue.

In the field of voting, then, we have been able to make progress through both negotiation and litigation. The fact remains, however, that the heavy burden of effort lies ahead. Substantial numbers of American citizens are being deprived of their right to vote because of race, and we continue to believe that additional legislation in this field is necessary.

In 1962, Congress adopted the anti-poll-tax constitutional amendment, but did not enact legislation forbidding the discriminatory use of voting qualification tests. Even where we have brought suit, we often have been confronted with considerable delays between the time of filing and the time of trial.

We believe that additional legislation is necessary to insure prompt relief in such instances—where the facts indicate that substantial numbers of Negroes are being deprived of the right to register and vote because of race.

TRANSPORTATION

As the result of action taken by the Department and the Interstate Commerce Commission last year, I can report to you that in the past year, segregation in interstate transportation has ceased to exist.

The majority of segregated bus and rail stations were desegregated in 1961 in accordance with new ICC regulations. Others followed in 1962. During 1962, we surveyed 165 airports in 14 States and found 15 airports in 6 of those States which were still segregated. All of these desegregated during the year, 13 voluntarily and 2 after the Department brought legal action.

At present, then, there are no segregated airport facilities in the Nation. There is only one city in the Nation, Jackson, Miss., in which systematic segregation at interstate

rall and bus facilities—as exemplified by signs directing the use of separate facilities—is still attempted. Even in this case we have taken legal action, now on appeal.

There have been isolated instances of discrimination against Negroes in this field and there will no doubt be other such instances in the future. But systematic segregation of Negroes in interstate transportation has disappeared.

Again, I would like to emphasize that in the great majority of cases, this is the result of voluntary compliance with law and regulations by citizens and officials.

SCHOOLS

In the past year, the number of desegregated southern school districts increased 60, from 912 to 972. In a number of these districts the Department continued its policy of consulting informally with school officials to help assure peaceful and orderly desegregation. As in 1961, public schools in each of these districts were desegregated without incident.

Efforts also were made to secure peaceful compliance with a series of court orders requiring the admission of James Meredith to the University of Mississippi, before his scheduled enrollment. We appeared as a friend of the court in the case before the Supreme Court and the Court of Appeals for the Fifth Circuit and the Department sought continuously to induce Mississippi officials to fulfill their responsibilities to law and to order.

These efforts were unsuccessful, but the Federal Government's responsibility to enforce the laws and the orders of the courts remained. The responsibility was met.

In another area, the Department in the past year initiated action concerning impact area school funds. Various local school systems receive Federal funds because they educate children of Federal employees who may not be permanent residents. In the 12 years of this program, nearly \$2.5 billion has been paid to school districts across the country.

Again, we have sought abandonment of segregation through negotiation first. The Department of Justice and the Department of Health, Education, and Welfare have succeeded in obtaining voluntary desegregation, without going to court, in several districts and other negotiations or field surveys are underway in approximately 120 districts. Additional inquiries are scheduled for the coming months.

Negotiating efforts failed, however, in Prince George County, Va., which educates children of defense personnel stationed at nearby Fort Lee, and we filed suit. Four similar suits were filed last week regarding segregation in Huntsville and Mobile, Ala.; Gulfport and Biloxi, Miss.; and Bossier Parish, La.

In another kind of school case, also in Louisiana, the Department brought a contempt action against State education officials for failing to desegregate a State trade school, as had been ordered by a Federal court in a private suit. When the State board of education passed a formal resolution stating there would be no racial discrimination as to race, the Department agreed to dismissal of the case, but withheld the right to inspect the school records.

The Department also took action in Prince Edward County, Va.—the only county in the Nation where there are no public schools. They have been closed since fall, 1959, in order to avoid court desegregation orders. That nearly 1,500 of the 1,800 school-age Negro children in the county should have had no education in more than 3 years is a disgrace to our country. Last month, we asked the Court of Appeals for the Fourth Circuit, as a friend of the court, to order the schools opened promptly without racial segregation.

EMPLOYMENT

The Department has continued its policy of seeking out qualified personnel on the basis of ability and irrespective of race. Negroes are not denied employment because of their race. Neither are they hired because of their race. They, like all our employees, are selected on the basis of ability and merit. This policy has resulted in notable gains for Negroes in the offices of U.S. attorneys and marshals in the Nation's 92 judicial districts.

Of the approximately 350 assistant U.S. attorneys appointed in this administration, 32 are Negroes. Of these 32, 16 were appointed in 1962. Approximately 35 Negro assistant U.S. attorneys are now in service. Two Negro U.S. attorneys were appointed last year. This year, the first Negro assistant U.S. attorneys were appointed in at least seven States, including Southern and border States.

Of the 114 deputy U.S. marshals appointed in this administration, 14 are Negroes. Of these, 11 were appointed in 1962. Approximately 30 Negro deputy marshals are now in service. Luke C. Moore was appointed U.S. marshal for the District of Columbia in the past year, the first Negro to hold that position in a century. As with assistant U.S. attorneys, appointments of Negro deputy marshals were made in several Southern and border States, where no one of their race had ever before served.

The effort to assure that qualified Negroes are properly considered for these positions is continuing and Negroes are among the candidates for vacancies in several districts.

Improved hiring practices within the Department as a whole have resulted in continued gains for Negro attorneys. There were 10 Negro attorneys in the Department at the beginning of this administration. Now there are more than 70, out of approximately 1,900 in the Department.

There have, as well, continued to be a number of Negroes appointed to distinguished positions in the Government, such as Homer L. Benson, appointed to the Board of Parole.

OTHER AREAS

Albany, Ga.: The Department acted to the limit of its authority in Albany, where a series of mass protests by Negroes against segregation resulted in numerous arrests and civil rights complaints. All such complaints were speedily investigated by the FBI. Although no violation of Federal law was found in most cases, prosecutive steps were taken where appropriate. In August, the Department filed a voting intimidation suit against 16 officials of nearby Sumter and Terrell Counties and also filed a friend of the court brief in a suit brought in Albany. The brief asked the court to ignore the city's request for an injunction against demonstrations until the city first complied with the law and abandoned segregation. The two sets of arrests for church burnings in the area previously referred to were the result of FBI action. Throughout the Albany difficulties, the Department consulted with leaders on both sides in an effort to encourage an amicable resolution of the racial difficulties. All matters of dispute have now been brought before the Federal court in Albany, and I have no doubt that the constitutional rights of all citizens of that city will be protected.

Sit-ins: In a friend of the court brief filed in October, the Department asked the Supreme Court of the United States to reverse convictions of more than 30 Negroes for sit-in violations in four States. The Department argued that States cannot arrest Negroes for trespass when the States themselves, by law and policies, foster the discrimination which led to the sit-ins.

Hospitals: In May, the Department sought to intervene in a private suit seeking the desegregation of two North Carolina hospitals which were built with Federal Hill-Burton Act financial assistance. The Department asked the court to declare unconstitutional the separate-but-equal provision of the act. While the Department was permitted to intervene, the court subsequently dismissed the suit, filed by Negro doctors, dentists, and patients. An appeal appears likely.

Employment suit: Problems of racial discrimination are by no means peculiar to the South. The Department appeared as a friend of the court in an appeal to the Colorado Supreme Court by a Negro pilot who charged he was denied employment with an airline in violation of a State antidiscrimination law. The Colorado court denied the appeal, but the Supreme Court of the United States has agreed to review the case.

Police brutality: During 1962, the Department brought 18 police brutality prosecutions, many of them in Northern States. These cases included one in Indiana where two Negro detectives were convicted of brutally beating a Negro defendant to coerce him to confess several crimes.

In summary, 1962 was a year of progress for the United States in the field of civil rights. This is not to say the problems are disappearing. They remain, and they remain difficult—not only in the South, with open discrimination, but throughout the country where Negroes are the victims of school "resegregation," bias in housing, or employment, or other facets of society. Ugly incidents like the Mississippi riot may occur again.

But we are accelerating our progress. Again, let me say this acceleration occurs in large measure because of the emerging spirit of the South. In 1962 this spirit was not the brutal one of rioting and violence at the University of Mississippi. The spirit was that exemplified in Georgia last week by Gov. Carl E. Sanders, in his inaugural address.

"We revere the past," he said. "We adhere to the values of respectability and responsibility which constitute our tradition." Then he added, "We believe in law and order and in the principle that all laws apply equally to all citizens."

Sincerely,

ROBERT KENNEDY,
Attorney General.

**Private Enterprise Making Most Progress
in Latin America—Alliance for Progress
Could Learn From It**

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1963

Mr. CURTIS. Mr. Speaker, in the constant refrain and discussion as to why the Alliance for Progress, much over-press-released and ballyhooed by the Kennedy administration, is not working as well as expected, one item is all too often forgotten. American companies and loyal, dedicated American business men and women, have been doing a good job in South America in their own quiet way long before the massive Government spending programs began.

As one who was impressed personally last year while in South America as a member of the House-Senate Joint Economic Committee, I wish to bring to the attention of my colleagues the fact that there are many success stories which do not involve Government, but mainly private American initiative. Rereading the February 1962 issue of *Fortune* devoted to Latin America recently, I was struck by the number of men in private enterprise who are seldom discussed with all this emphasis on the Alliance for Progress.

The *Fortune* article follows:

PRIVATE ALLIES FOR PROGRESS

The inscription on a photograph in the Chicago office of a Sears, Roebuck vice president reads: "To John Gallagher, who has lived with us and understood and cared for Venezuela." It is signed by Venezuelan President Romulo Betancourt. Gallagher is one of many Americans who have lived in Latin America and made significant practical contributions to its economy. Long before President Kennedy proposed his Alliance for Progress these men were already engaged in private alliances with individuals, business firms, and government agencies in Latin America. They brought down the skills and experience of the U.S. economy and planted them in the local environment. These Americans do not preach or propagandize the American way of life. They offer practical guidance in such matters as mass marketing, credit unions, capital investments, housing, and farming. And most of them are making a profit for themselves or their companies at the same time. On these pages are portraits of 12 men who exemplify this personal diplomacy for free enterprise:

Richard O. Provost, 38, has introduced modern merchandising techniques in 18 supermarkets in Venezuela, enabling them to sell foodstuffs as much as 20 percent under the local markets. He is the general manager of CADA (C. A. Distribuidora de Alimentos), owned 51 percent by the Rockefellers' I.B.E.C. (International Basic Economy Corp.) and 49 percent by Venezuelan investors. The company's supermarkets buy most of their wares from local suppliers, whom Provost has trained in mass production, sanitation, packaging, and marketing. Ninety percent of the employees are recruited in Venezuela, and he has had to teach them how to stock supermarket shelves, keep up the inventory, and run the checkout counters.

John F. Gallagher, 43, uses his position as Sears, Roebuck's vice president in charge of Latin-American operations to help build a consumer-goods industry. Local manufacturers in nine Latin-American countries now supply Sears with 80 percent of the merchandise it sells in those countries. Under Gallagher's direction, Sears' buyers advise manufacturers on what and how much to make, and when to make it. Recently, for instance, Sears helped a Peruvian businessman to go into the manufacture of refrigerators. And 50 percent of Sears' Latin-American profits are reinvested in the countries where the stores operate. Before taking his present job in Chicago headquarters in 1960, Gallagher was Sears' local manager in Venezuela for 5 years.

Father Daniel M. McLellan, 45, is a Maryknoll missionary who fortifies his spiritual guidance with practical assistance. When he first arrived in the Peruvian mountains in 1950, he realized that he could best overcome the Indians' distrust by helping to alleviate their poverty. He spent 5 years gaining their confidence and then, in 1955, started a credit union to help his parishioners build houses and schools, start farms, and buy livestock. His first credit union had 23 members and a capital of \$32. The system has since spread throughout Peru, now has over 750,000 mem-

bers and capital of over \$2 million. The borrowers, who previously had paid up to 50 percent a month to usurers, are charged 12 percent a year on their unpaid balance.

Clarence J. Dauphinot Jr., 49, pioneered in raising investment capital from South Americans who had never thought of owning a share of stock before. Founder (in 1946) and president of Deltec, S.A., in Brazil, Dauphinot sent his crew of salesmen by jeep to villages in the mountains and jungles in a door-to-door campaign to raise capital for such companies as Willlys-Overland do Brasil and American & Foreign Power. He later extended operations, with a network of companies, into Argentina, Venezuela, Chile, and Peru. In such risky new ventures things don't always turn out successfully: investors claim they have lost over \$1 million in a Deltec-financed housing development in Venezuela that never got off the ground.

Thomas Jefferson Williams, 67, practices philanthropy in the U.S. style, where the giver carefully organizes the uses of his money. In 1943 he and his wife started the Williams Foundation to promote cultural and scientific exchanges between the United States and Argentina. ("We owe loyalty and gratitude to both countries.") A resident of Buenos Aires since 1914, Williams is one of the richest men in South America; his enterprises include textiles, chemicals, mining, and automobile manufacturing. His foundation sends young men to U.S. colleges, gives subsidies and scholarships for research, donates chemical laboratories to universities, and has recently established a cytology center, a cardiovascular laboratory, and a laboratory for plastic surgery.

William Max Pearce and James F. McCloud have been encouraging the growth of an automobile industry in Brazil and Argentina respectively. Pearce, 48, is managing director of Willlys-Overland do Brasil, and McCloud, 43, is president of Industrias Kaiser Argentina. Both companies were started by Kaiser Industries, but the majority of the stock is now owned by Latin Americans and all but a handful of the employees are local nationals. Pearce and McCloud have sought out local industries to produce parts for the cars they manufacture (less than 10 percent of the cars' components are brought in from overseas). And they have established educational programs to train skilled technicians and send bright young men abroad for further training. McCloud has recently spent almost \$3 million on a new training center. He has also set up an acceptance corporation to finance sales of Industrias Kaiser Argentina's cars, plans to branch out into cement and aluminum, and is studying the feasibility of building a steel plant in Argentina.

John D. J. Moore, 51, is vice president of W. R. Grace & Co., the great shipping and industrial firm, which has old and deep roots in South America. Nowadays Moore spends much of his time working with Latin American businessmen and government officials on noncompany projects to improve economic and social conditions. A regular commuter between New York and South America, he is chairman of the United States Inter-American Council, an organization of U.S. firms and business associations "dedicated to the defense of free enterprise in the Americas." He is a firm believer in helping Latin Americans to help themselves—but within their own traditional framework. Says he: "We're not trying to Yankify them."

William F. Coles, 54, has helped give the Venezuelan economy better balance by bringing in U.S. capital and technical skills. Coles, who has been in Caracas for more than 20 years, started as a lawyer for *Compañía de Fomento*, a Rockefeller-sponsored development agency that was among the first companies in Caracas to offer stock to the public. He is counsel for I.B.E.C. and a director of several Venezuelan finance and

investment companies as well as of the Caracas Daily Journal. Through I.B.E.C., Coles started a dairy company, an improved cattle-breeding ranch, and a supermarket chain. He believes that the influence of U.S. businessmen in the country has firmly established Venezuelan private enterprise in the U.S. pattern.

Angus C. Littlejohn, 45, channels U.S. corporate money into the Brazilian economy. He acts, on the one hand, as adviser and representative for foreign business investors in Brazil and, on the other hand, as director of more than a dozen important Brazilian firms. A wartime assistant U.S. naval attaché in Rio, Littlejohn started a one-man consultant firm there in 1946. Today he operates in fast-growing São Paulo—more or less out of his hat; his office staff consists of three Brazilian associates and two secretaries. But there is nothing small about his clients—among them are Pittsburgh Plate Glass, Koppers, Quaker Oats, and Container Corp. With his advice, offered after extensive research and study, they have invested millions in Brazilian enterprises.

Harry A. Jarvis, 52, is seeking ways to put U.S. oil profits to work stimulating Venezuelan industrial growth. As president of Creole Petroleum Corp., a subsidiary of Jersey Standard, Jarvis recently set up Creole Investment Corp. with initial capital of \$10 million to be invested in diversified enterprises. Creole's interest is "never more than 49 percent," says Jarvis. "We want Venezuelans to put up their own money and have control." Creole has helped finance three ventures: a firm to make starch and glucose from yucca plants, a company to make fiberboard from bagasse, and a fish-meal plant. Seventy-five other projects are under review. The scheme is not a philanthropic gesture, says Jarvis. "We expect it to show a profit."

Serafino Romualdi, 61, has been stumping Latin America for 15 years to promote "a constructive type of nonpolitical trade unionism." Romualdi, an Italian-born veteran of the U.S. labor movement (he was in the publicity division of the ILGWU), is now the AFL-CIO's inter-American representative. The most important result of his efforts is ORIT (Inter-American Regional Organization of Workers), which he helped found in 1951 to fight communism in organized labor. Now Inter-American Regional Organization of Workers has some 15 million Latin American affiliated members as against 2 million in Communist-dominated unions. Inter-American Regional Organization of Workers, says Romualdi, is "based not on the concept of the class struggle, but aimed at rapprochement with free enterprise—as a partner."

The President's Fiscal 1964 Budget Message

SPEECH

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. CURTIS. Mr. Speaker, President Kennedy has called his estimated fiscal 1964 budget deficit of \$11.9 billion a "temporary deficit" and an "investment in the future." A look at the recent past gives us little confidence that under this administration our deficits will be either temporary or serve as a useful investment in the future.

The history of the Kennedy administration is a history of persistent and ever-increasing Federal expenditures

and budget deficits. From fiscal 1962 through the estimates for fiscal 1964, deficits will total about \$27 billion, or about \$5 billion over the total net deficit of the 8 fiscal years of the Eisenhower administration.

In spite of the theories about the beneficial effects of budget deficits, experience shows that this kind of investment has failed to bring about the Kennedy administration's goal of a faster rate of economic growth.

Based upon the pattern of recent years, it would be surprising if the \$11.9 billion estimated deficit were not considerably higher by the end of the fiscal year. The President's estimated deficit is based upon highly favorable and "iffy" assumptions, both as to the stimulative effects of the tax cut and to new legislation, particularly in agriculture, which the administration intends to request.

The administration's excuse for its rising expenditure level—which next year will exceed spending at the peak of World War II—is that a large part of the increased spending has been devoted to our defense and space efforts. This raises the question whether we can build a sound defense and meet our other obligations as a great power on the basis of a policy of dangerous fiscal irresponsibility. Defense and space should not become sacred cows. The very rapidly rising level of expenditures in these areas should be subjected to the closest examination in order to insure that we get the most from our defense and space dollars. Unless this is done, programs may expand too fast and result in waste, which in the final analysis may slow our progress in space and impair our national security.

The President's claim that civilian expenditures next year will be below this year's level is somewhat misleading. Agricultural expenditures are shown dropping by about \$1 billion next year, a hoped-for decrease which will permit increases in almost all other civilian programs. Although spending on agriculture is supposed to decline, the administration will be asking for a sharp jump of \$1.4 billion in new obligatory authority for agricultural programs—or slightly more than new obligatory authority being asked for the Department of Defense, Health, Education, and Welfare is asking \$1.7 billion in new obligatory authority. This is the real test of the Kennedy administration's budget, since new obligatory authority is an indication of what future expenditures will be. The fact is that the administration is not holding the line on civilian expenditures, but is steadily increasing them, even while asking for a tax cut which will reduce Federal revenues.

Under unanimous consent, I include an article from the Wall Street Journal of Monday, January 21, discussing the trends in spending as indicated in the 1964 budget, in the RECORD at the conclusion of my remarks:

SMALL INITIAL OUTLAYS PROMISE STEEP RISE IN FEDERAL GOVERNMENT'S FUTURE SPENDING

(By Lindley H. Clark)

WASHINGTON.—Once the economy really gets rolling, the administration believes, it will generate big increases in revenue, even at reduced tax rates. And, the argument

continues, spending won't be allowed to rise as fast as revenue, so at some point—perhaps as early as fiscal 1966—the deficit will be eliminated.

But if this is to happen, according to many people here, the tax take will have to climb sharply if it is ever to overtake the spending envisioned by the administration.

The evidence of this comes in part from comments of officials who've had a hand in preparing the budget for fiscal 1964. In putting together that bulky document, says Budget Director Kermit Gordon, a large number of worthwhile projects were canceled or deferred, so that the spending requests of the various agencies were scaled down by \$7 or \$8 billion. But past history suggests that the deferred projects will be back on the tracks before long.

COSTS ARE CLIMBING

The bulk of the evidence is in the budget figures themselves. Consider first some of the projects that have been around for a while. Whatever the worth of many of these programs, there's no doubt that costs are climbing fast.

Outlays for the activities of the National Aeronautics and Space Administration for fiscal 1964, for instance, are estimated at \$4.2 billion, more than triple the figure for the year ended last June 30, and no slowdown is even remotely in sight. For the year beginning next July the administration wants congressional permission to commit the Government for \$5.7 billion of future outlays.

Some of this new obligatory authority—NOA in Federal lingo—will be used in fiscal 1964, but a lot of it is for spending beyond that year. In some cases, the NOA figures point to trends quite different from those shown by spending estimates.

Foreign aid is one example. Actual outlays under this program, which has been coming under increasing congressional fire, are estimated at \$3.7 billion for fiscal 1964, down \$100 million from the year ending next June 30. But the NOA figure heads upward. For next fiscal year it comes to \$4.9 billion, up more than \$1 billion from the amount for the 12-month period.

The statistics on Federal spending on agriculture paint a similar picture. Outlays in the fiscal year just ahead are estimated at \$5.7 billion, surely a sharp drop from the anticipated total of \$6.7 billion for the current year.

Although the saving may be illusory—the Government hopes to sell off next year a lot of cotton it expects to take into the price support shelter this year—economy advocates may still find some comfort in the bare figures. At least there may be a bit less money going out. But the NOA figure tells a quite different story: For fiscal 1964 it's \$7.2 billion, up more than \$1.5 billion from the current year.

TOTAL REQUESTS RISE

Nor are these activities the exceptions. Throughout the Government, agencies are seeking Congressional go-aheads for sharply increased amounts of spending. Total new obligatory authority sought for fiscal 1964 adds up to \$107.9 billion, \$4.7 billion above the current year and around \$15 billion over the figure for the year ended last June 30.

Another good gage of future spending trends is the figure for new commitments under Government credit programs. These commitments result when the Government either agrees to make direct loans or to insure or guarantee repayment of loans advanced by private lenders. The budget document declares that "new commitments are the best single measure of the trends in most Federal credit programs."

With that in mind, perhaps we shouldn't pay much attention to the fact that actual budget outlays under Federal credit programs are expected to drop to \$1.2 billion next year, down from \$2.7 billion in the current year. For one thing, that drop would

result partly from the Commodity Credit Corporation's hoped-for sell off of cotton. For another, it would stem to some extent from expected sales to private lenders of loans now held by the Export-Import Bank, the Federal National Mortgage Association and some other agencies. Nobody in Government seems to worry for a moment that the private lenders may not be eager to buy.

Most important, however, is that figure on new commitments. For fiscal 1964 it's expected to be \$27.5 billion, up \$1.4 billion from the year ending June 30. And lest anyone console himself with the thought that the Government may not have to make good on loan insurance and guarantees, it is perhaps worth noting that well over half of the projected increase is in direct loans.

Moving on from current programs into those that exist now only on paper, the portents are equally clear.

It may be, as President Kennedy says, that all the proposals for new programs have been culled carefully to set aside all but those which "represent a necessary payment on future progress and should not be postponed." But it is clear that all of the things which wound up in this select category will be expensive.

They will not be so expensive in fiscal 1964, of course, Government programs have a way of starting slowly, however big they eventually may turn out to be. But both the broad scope of these programs and, in some cases, the spending authority already being requested show that bigger outlays are expected.

Perhaps the most striking example is Mr. Kennedy's projected new program in education for which he says, "The Federal Government can provide only a small part of the funds."

As Government figures go, it's true that the proposed 1964 outlays for the new education program look fairly small—only \$144 million. But for the same fiscal year the administration is seeking new obligatory authority totaling \$1.2 billion.

A BROAD PROGRAM

And though the details of the program remain to be spelled out in a forthcoming special message, there's nothing small or temporary-sounding about the general aims outlined in the budget. The program, the budget says, will seek "the (a) buttressing of research in education and improvement, of course content, (b) expansion and improvement of teacher training programs, (c) improvement of community library services for people of all ages, (d) and strengthening of public elementary and secondary education. Very little, it would seem, is being overlooked.

The President is also proposing again a program to "revitalize" urban mass transportation. The projected outlay for fiscal 1964 looks modest: A scant \$10 million. But the administration also is asking the right to spend \$500 million on the program over the ensuing 3 years.

Though the figures on public housing spending already show a steady rise, the budget suggests more may be coming. It talks of studies under way and studies yet to come on how to "improve" Federal housing programs. Whatever "improve" may mean to anybody else, to a Government man it's likely to mean more money.

The list could be stretched onward a great deal further. Proposed legislation for hospital construction calls for 1964 outlays of only \$5 million but new obligatory authority of \$35 million. A proposal for medical education assistance lists 1964 spending at \$9 million but asks for a go-ahead on a total of \$34 million. The pattern elsewhere is much the same.

What the pattern shows is not necessarily that we won't ever achieve a balanced budget. Someday we perhaps will. But few readers of Mr. Kennedy's new budget would see it as a guidebook on how to get there.

Appendix

Industrial Growth in the City of Laramie, Wyo.

EXTENSION OF REMARKS

OF

HON. GALE W. MCGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, January 31, 1963

Mr. MCGEE. Mr. President, the State which I represent has one of the greatest potentials for growth and development in the Nation and it has been my continued effort to bring realization to that potential of natural resource, dynamic population, and efficient transportation and communication. The job has not always been easy but progress is being made. The most recent indication of the progress we have been working for is the development of a new industry in my home town, Laramie, Wyo.

This vigorous, dynamic city has attracted a new industry that bodes well for the future industrial growth of the city. The new industry is a \$500,000 low temperature bulk storage warehouse which will hold frozen foods and other commodities in transit across the Nation.

A recent article in the Laramie Boom-rang gives many details on the new storage facility and also illustrates the many attractions Laramie has for industries seeking new homes. An editorial in that same newspaper further spells out why Laramie has a future of growth and greatness. I ask unanimous consent that the article and the editorial be printed in the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

PACKERS' COLD STORAGE TO BUILD \$500,000 WAREHOUSE—LARAMIE TO GET NEW INDUSTRY

(By Vern Shelton)

Laramie has been selected as the site for a \$500,000 low-temperature bulk storage warehouse, according to Tom Henry, president of Packers' Cold Storage, Inc., of Fullerton, Calif.

The plant, located at the west end of Clark Street north of the Spiegelberg Lumber Co., will be in operation June 30 with completion scheduled 15 days earlier.

Construction on the new facility will start by the end of March.

Present plans call for construction of one 50,000-square-foot storage warehouse with the possibility of seven similar units in the future, boosting the eventual overall investment to approximately \$4 million.

Richard Wagner, Packers' Cold Storage vice president, estimated it will cost approximately \$10 per square foot to put the low-temperature warehouse and equipment in full operation.

The California company has leased a 20-acre site from the Union Pacific Railroad near the old Hahns-Peak depot, although

only 10 acres will be used initially. If additional units are constructed, the warehousing operation could eventually have as much as 400,000 square feet of storage under roof.

The warehouse will be for frozen, intransit storage on a contractual basis only and will not be open for public storage. Principal contractor at present is Safeway, Inc. Safeway officials in Oakland, Calif., Friday emphasized the facility will be used for storing frozen products enroute to other shipping points outside the State. The warehouse will provide a storage and distribution point for 43 production plants west of Laramie in Washington, Oregon, and Idaho.

The warehouse manager will be transferred to Laramie from southern California. All other labor will be employed locally. The warehouse payroll will list 10 to 12 persons on a permanent basis with other jobs becoming available as the operation expands.

Although the warehouse will be involved only in low-temperature storage, there is a strong possibility other industries might be attracted to Laramie. "Where you have this sort of facility, other manufacturing or packing operations generally come into the area," Henry said when in Laramie recently.

"The warehouse is probably one of the cleanest industries it's possible to have," he added. "We palletize all of our storage. There are no fumes or noxious gases. The building will be modern and well-maintained. The type of business doesn't attract undesirable people as employees. I feel it will be a very sound industry for the city to have."

Henry added, "Our biggest demand will be for power. This has been pretty well resolved. We'll have a need for water and we'll have to know the fire zone rating in the area."

A sewer line is already located in close proximity to the building site. An existing 3-inch water main in Clark Street is being relocated as part of the viaduct construction program and could be enlarged.

Packers' Cold Storage officials pointed out the warehouse could have been located anywhere between Laramie and Evanston but the Gem City was chosen because of its tax advantages and because of the city's location as a transportation center. Goods stored in Wyoming are not subject to tax until they have been in the State 9 months.

Other factors leading to the selection, in order of importance were Laramie's distribution potential, the University of Wyoming, the new viaduct which will provide quick access from the plant to the downtown area, Laramie's reputation as a progressive and clean city, a young and aggressive city council and the availability of part-time help.

The California corporation completed an 18-month survey of the city before making the decision to move here, company officials pointed out.

"This is an industry breakthrough for Laramie," Harold Flater and Floyd Harmston, president and first vice president of the Laramie Area Industrial Development Corp., said Friday night.

"We feel that the factors that caused the Packers' Cold Storage Co. to come to Laramie are the same factors that will attract other industries. These could be connected with the cold storage plant, with other distributive industries, with the university, or with the resources of the area."

The two men continued, "We have plenty of potential resources for expansion such as available land sites, utilities, transportation, and all of the things which appealed to these people.

"It would pay for any industry looking for room for expansion or for new plants to take a good hard look at Laramie. This is the first time we've had an industrialist look at our city and tell us what he likes about it. We know that Laramie has these advantages and it is good to hear it confirmed by someone willing to back his feelings with action.

"The water needs of this industry indicate the wisdom and farsightedness of the voters when they voted for the \$3,300,000 water bond issue in November.

"We are pleased to notice that Mr. Henry has emphasized the importance of research facilities at the University of Wyoming. We feel this will be a big factor, appealing to other industrialists who might wish to come to Laramie.

"This is probably the first time anyone has selected Laramie in relation to markets and this is highly significant. It's indicative of the growth of markets in the western area.

"Laramie AID officers and directors will continue to stand ready to assist Packers' Cold Storage and any other industrialists in locating their plant and facilities in Laramie. The selection of Laramie by Packers' Cold Storage is indeed an honor."

AT LAST A BREAKTHROUGH

The announcement of a new industry for Laramie in yesterday morning's paper was a welcome piece of news for Laramie residents, and particularly for those men who have been working with the Laramie Area Industrial Development Corp.

In deciding on Laramie for location of its storage warehouse, Packers' Cold Storage cited tax advantages and the city's location as a transportation center. Both of these factors could have a heavy influence on any other type warehouse industry seeking a good location.

The distribution potential of the city was another factor, along with the University of Wyoming. Also a deciding factor was Laramie's reputation as a progressive and clean city and a young and aggressive city council.

Another factor that might be overlooked except for Packers' mention of it as a deciding factor is the availability of part-time help and the use of the university in research work.

Packers' decision on Laramie was no quick move. The company studied the area for 18 months before making its decision. The fact that a plentiful power supply and water supply was available also helped in reaching the decision to locate in Laramie.

The coming of one new industry to Laramie can very well be the steppingstone to new industry. New industry is more likely to look over the area to see why Packers' chose this particular spot. A close look at the area can very well develop into an invitation to other industry.

Laramie's position as a transportation center is well established. The city is served by main line Union Pacific, by Frontier Airlines with connections possible to any airline a few short miles away in Denver, located on a main highway east to west and a good highway south to Denver, and served by two bus lines with a good schedule.

The city has plenty of power available and water will present no problem since passage of the water bond issue last November. Other factors include good fire protection and a mild climate with good recreation facilities.

Laramie has a lot to offer industry. We're not surprised that at least one industry has recognized that. We feel sure that more and more will study Laramie carefully before making a selection for a site for a new plant, particularly when Laramie AID is available to offer help and at the same time to supply adequate information on the town for any prospective industry.

Tribute to Richard Kunz, Hoosier Peace Corps Volunteer

EXTENSION OF REMARKS

OF

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 31, 1963

Mr. HARTKE. Mr. President, in view of the outstanding accomplishments of Peace Corps volunteers in an ever-growing number of countries and areas of activity, I believe the following article, printed December 21, 1962, in the Washington Daily News under the byline of one of our country's finest reporters, Dan Kidney, should be brought to the attention of all Americans in view of its content concerning the activities of one Peace Corps volunteer, 21-year-old Richard Kunz of Indianapolis, Ind. The example set by this young Peace Corps volunteer should serve as a challenge to all of us to strive for improved international relations.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A BRIDGE TO FRIENDSHIP—PEACE CORPSMAN IS NOW "THE MAN WHO KNOWS"
(By Dan Kidney)

When President Kennedy established his Alliance for Progress in Latin America, he had in mind how successful was the good neighbor policy of President Roosevelt, in building friendships there.

Now a Hoosier Peace Corpsman has changed that idea from a symbol to a reality by building a bridge and other much-needed facilities where he is stationed with the Peace Corps in Colombia, South America.

He is Richard L. Kunz, 21, of Indianapolis. A glowing report on his accomplishments has been received by Senator VANCE HARTKE, Democrat, of Indiana.

The Indiana Senator considers the report on Mr. Kunz's Colombian service, compiled by CARE, one of the best from the Corps, as it points up how in the last year his "technical know-how, combined with individual initiative, has resulted in building two aqueducts, as well as the bridge and other projects."

Here are excerpts from the report given Senator HARTKE:

"One of the aqueducts is bringing fresh water to a cluster of mountain villages in the Santander del Norte area and the other, now under construction, will serve the little town of Rosaria. The bridge has been built over a mountain stream near the village of Santa Teresita.

"Young Kunz, who was majoring in engineering and industrial management at Purdue University when he volunteered for the Peace Corps, also has guided construction of a road connecting the hamlet of Villa Nueva with the main highway of the Province."

Senator HARTKE, who always has supported Peace Corps legislation, said CARE, Inc., officials have told him that none of these projects, or smaller improvements introduced by Mr. Kunz, would have been carried out without the use of CARE tools and equipment and the voluntary labor of the villagers. The tools and other equipment being used by Mr. Kunz and others were donated by American contributors to CARE, Senator HARTKE said.

The report continues: "Mr. Kunz is working with a group of farmers banded together to improve their living conditions. Mr. Kunz reports it wasn't always easy to overcome the hesitancy of the farmers to accept an outsider.

"He uses the bridge at Santa Teresita as an example of what he means. He said that for years the people had done a great deal of wishful thinking about a bridge. It would provide a short cut, he explained, because the old road approached the town in a round-about way.

"Mr. Kunz surveyed the site he helped residents of the area to select for the bridge, then planned the structure. Mr. Kunz reported he foresaw no great engineering problems and then reported this conclusion to the farmers' committee. Meanwhile, he asked the CARE mission in Bogotá for the necessary carpenter, mason, and brush-clearing tools.

"But the farmers' committee failed to make a decision on whether to accept Mr. Kunz' recommendation to go ahead with the project.

"Finally, Mr. Kunz won the support of a young priest, Padre Moras, who headed the local parish. The 23-year-old priest gently insisted that Mr. Kunz' proposal be accepted. The villagers and farmers responded, gathering seasoned timber, stones, and cement for the bridge project. Once the Peace Corps volunteer removed the indecision, construction of the bridge was completed in 3 days.

"Mr. Kunz reports the Colombians he assisted in construction of the bridge showed their appreciation by scratching into wet concrete of an abutment that the span had been built by the Peace Corps with CARE tools."

Senator HARTKE said Peace Corps officials report Mr. Kunz' persuasiveness and winning ways with the villagers and farmers of Colombia have earned him the title of "Don Ricardo—El Hombre Que Sabe." That is, "The Man Who Knows."

A Peace Corps spokesman said Mr. Kunz is being sought out by Colombian farmers and villagers of the district to which he's assigned. They want his opinion and advice on construction of housing, schools, and other buildings.

He is becoming a familiar sight on backroads and village streets as he tours the district on mule-back, assisting the people of Colombia in their efforts to improve their living standards.

Small Is Big

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I include

the following article from the Rocky Mountain News of January 27, 1963:

SMALL IS BIG

In 1931, when the country was hobbled with one of its worst depressions, the Government created a banking agency, called the Reconstruction Finance Corp. (RFC).

It was to be a temporary agency, 2 years. It was just to tide over hard-hit businesses until they could get on their feet.

Thirty years later, after loans of \$50 billion, the RFC was liquidated, its still outstanding loans shifted to other agencies. Meanwhile, its lending, which had got so out of hand it became a scandal, had been shut off by a shocked Congress.

Another Congress in 1954 set up the Small Business Administration (SBA). There was no depression, lending money was plentiful from private banks. But a group in Congress had built up a belief that small business wasn't getting all it had coming, so the Government should help, with cut-rate loans on projects turned down by the banks as bad risks.

This, too, was to be a "temporary" agency. It began with a revolving fund of \$55 million and 600 employees.

Now, 10 years later, the "temporary" has become permanent. Today SBA has a revolving fund of nearly \$1.3 billion, and 3,200 employees. By 1967, the SBA expects, and hopes, it will have outstanding loans of \$2.5 billion. Big business, indeed. One of the biggest.

This is what happens to Government agencies. When they run out of one excuse for being, they dream up two more. The "small" businesses eligible for SBA loans get bigger and more diversified. Now the loans include bowling alleys, dude ranches, amusement parks, even offices for doctors and lawyers. It is easy to borrow from SBA.

Scrrips-Howard Writer Dickson Preston reported on the situation in Saturday's business pages. Just remember, it is the taxpayers who keep this small business banker in business by paying its losses.

Goals for the Electric Power Industry

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, January 31, 1963

Mr. AIKEN. Mr. President, on October 19, 1962, Chairman Joseph C. Swidler, of the Federal Power Commission, delivered before the Electric Council of New England, at Boston, Mass., a very good speech on the power situation in New England. I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

GOALS FOR THE ELECTRIC POWER INDUSTRY
(By Joseph C. Swidler, Chairman, Federal Power Commission)

I am delighted to be here today to talk to the members of the Electric Council of New England. Your program demonstrates the lively interest of your members in the improvement of New England power systems and in the developing technology of the industry, including not only the conventional power technology but the so-called exotic developments as well. It is gratifying to participate in a program of such broad intellectual interest.

You may be surprised to know that this is my first talk to an organization representing the investor-owned electric companies. I have made a good many talks since I became a member of the Federal Power Commission some 15 months ago, but most of them have been on natural gas problems. My experience has not been unique; so far as I can find out, in recent years the members of the Federal Power Commission have spoken rarely to electric utility groups although speaking engagements before natural gas industry organizations have been relatively frequent. This difference probably reflects the fact that the Commission has spent most of its time since World War II in attempting to master the deluge of natural gas cases brought on by the postwar development of the natural gas industry. However that may be, my own background is in the electric power field and I am glad to have this opportunity to talk about electric power problems, particularly in an area of the country which has pioneered in electric power technology, both steam and hydro.

I want to take the occasion of this first talk to the executives of the regulated power companies to emphasize that the Commission is now aware of the urgency and importance of its responsibilities in the electric power field and allocation of funds and manpower are being made toward the objective of fully discharging those responsibilities. Your invitation to speak here today is, I believe, evidence of the industry's awareness of this revitalization in the Commission's administration of its responsibilities under the Federal Power Act.

The Federal Power Commission has a variety of responsibilities in the electric power field, some of them regulatory in the strict sense, that is, relating to the regulation of rates, license proceedings and the like, and others which involve Commission programs for the encouragement of the optimum development of this country's system of power supply. I believe that the present Commission takes both kinds of responsibilities with equal seriousness and proposes to give great emphasis, in the words of the statute, to "assuring an abundant supply of electric energy throughout the United States with the greatest possible economy and with regard to the proper utilization and conservation of natural resources."

The resurgence of the Federal Power Commission's electric power activities comes at a most appropriate time in the technological development of the industry. In the last decade the industry has witnessed changes so drastic as to amount almost to a revolution in its technological base. In 1950, the largest steamplant unit on order was 225 megawatts, while today units ranging up to 1,000 to 1,100 megawatts are being manufactured. In the same period we have moved from pioneering at the 345-kilovolt level of transmission to the 500-kilovolt level, which represents more than a doubling in line capacity. The new developments in power generation, particularly in the construction of large units with their vastly improved economy in the use of fuel, labor, and capital, combined with the great improvements which are taking place in the transmission field, have changed the basis for evaluation of generating plant location. In some parts of the Nation these technological advances have substantially altered the balance of advantage away from sites close to load and in favor of sites which are located close to fuel sources and to the networks of neighboring utilities with which the new plants can be integrated for power pooling purposes. Inevitably these advances in the technology of the industry will lead to much more important movements of power in interstate commerce under the jurisdiction of the Federal Power Commission. It follows that the wise and effective exercise of the Commission's au-

thority is a matter of growing importance to the industry and its customers.

The major utilities of New England have operated for a long time on an interstate basis, and were among the first in this country to recognize the advantages of interconnections among individual companies. Some of your outstanding members have been working closely with the Commission in recent months in our efforts to bring a national perspective to the industry's interconnection and coordination plans through the Commission's Coordinated National Power Survey. The Commission is indebted in particular to William Webster and Bob Brandt of the New England Electric System, Howard Cadwell of Western Massachusetts Electric Co., Thomas J. Galligan of Boston Edison, E. C. Brown of the Hartford Electric Light Co., not to mention Eugene S. Loughlin, that outstanding member of the Connecticut Public Utilities Commission and leader in the field of utility regulation. Their assistance in the National Power Survey has been indispensable.

The New England region has always provided leadership in science and technology. Its magnificent schools and laboratories are among the best in the world. In this region there is a scientific ferment and excitement so sharp as to be almost palpable. Here there is taking place much of the pioneering in the newest frontiers of knowledge, including electronics and space. From this area, too, come some of the most advanced equipment used in the power industry.

There is evidence of great activity in New England to improve the efficiency and economy of the area's power systems and to restore New England to its former place as a leader in the electric power field. For example, the Yankee Atomic Power Plant built here in Massachusetts by a group of New England companies is probably the nation's closest approach to conventional thermal plants in terms of cost and dependability. Indeed, its success has stimulated plans for a larger sister plant at Haddam Neck, Conn. It may well be that we are witnessing here one of the great economic breakthroughs in the nuclear reactor program.

In the transmission field 230-kilovolt lines are now bringing lower cost hydro power into New England from the Niagara and St. Lawrence projects and are strengthening the interties among many of the New England utilities. Plans have been announced for a 345-kilovolt line which will tie New England with New York City.

In recent years, some relatively large generating units have been installed in New England. A unit of 340 megawatt capacity is on order for the L Street station of the Boston Edison Co. Two units of 250 megawatts each are scheduled for the new Brayton Point powerplant of the New England Power Co. and a 235-megawatt unit is being planned for the Middletown plant of the Hartford Electric Light Co.

There are steps in the right direction and I have no doubt that in normal course units of 500-megawatts and higher will be in use in the next decade. On the utilization side there are some New England companies which are leaders in promoting electric space heating and I know of one company in this region which is setting an enviable pace in load promotion by capturing one-third of the new homes in its service area for electric space heating—a record not matched by many companies operating under climatic conditions much more favorable to the promotion of electric house heating.

These are all important achievements and I do not mean to minimize them in pointing out that New England still has far to go in taking advantage of its opportunities to reduce the cost of producing and selling electric power. From the point of view of use, New England is still an underdeveloped

power market, even giving consideration to the fact that the housing pattern in New England is not as favorable to load growth as in some other areas. The average annual residential use has of course steadily increased from year to year in New England as in the rest of the country, but the pace of growth in this region has not matched the national average despite the fact that per capita income in New England is 11 percent above the national average. In 1961, the annual use of the average residential customer in New England had grown to 3,119 kilowatt-hours but this was 23 percent below the national average of 4,019 kilowatt-hours. These figures raise sharply the question whether consumers in New England are achieving the full benefits of electrical living.

Of course there are many reasons why per capita electric consumption in New England is below the national average and many of these reasons are beyond the control of the management of the New England electric companies. However, I should like to dwell for a moment on some factors that are within your control.

The low level of use in New England is accompanied by a relatively high level of rates. The average charge for 3,000 kilowatt-hours, which is close to the average annual use in New England in 1961 is 3.47 cents per kilowatt-hour, which is more than 15 percent above the national average. New England industry similarly paid approximately the same percentage over the national average for its power supply. True, the national average includes areas of low-cost fuel and of Federal power operations, but even if these are excluded, the retail rates in New England are still well above average. In fact, in 1961 the highest charges in the continental United States for residential use at prevailing levels were found in New Hampshire, Massachusetts, Maine, and Rhode Island, in that order.

As you all know, the electric power industry is a conspicuous example of an industry in which greater utilization of plant investment results in lower unit costs and in which low rates encourage greater utilization. Conversely, high rates discourage broader utilization which in turn leads to higher costs. The low level of use in New England therefore not only reflects the existing higher costs, but helps to keep the unit costs at a high level.

I realize that New England operates under handicaps in its efforts to reduce power costs. Fuel costs are higher in New England than in most of the rest of the country, and in all fairness this factor must be given full weight in comparisons among regions. The average fuel costs of New England steamplants in 1961 was 36.9 cents per million B.t.u.'s as compared to a national average of 26.7 cents. However, fuel accounted for only 15 percent of each dollar of revenue for the New England utilities in 1961 and if the fuel prices had been brought down to the national average and the whole benefit passed on to consumers, the bills to the ultimate consumer would have been reduced by less than 5 percent, leaving New England rates still well above the national average.

No one can blame the New England power systems because their area does not have large deposits of low-cost fuel, but with fuel costs high, it would be natural to expect the New England utilities to concentrate their efforts on the development and installation of highly efficient generating units which would make the best possible use of the expensive fuel supply. The more costly the fuel the greater should be the incentive toward efficiency in its use. Progress is now being made in New England toward installing larger and more efficient units, but there is still a long way to go to rectify past failure

to keep New England's power systems abreast of the industry technology in efficient use of fuel.

Not since 1953 has a generating unit installed in New England been included among the first 20 in the country in efficiency in the use of fuel as measured by the so-called heat rate. In 1953, New England attained an average heat rate of 13,317 British thermal units per kilowatt-hour, an average which had been reached in the United States a year earlier. In 1961, however, New England was 4 years behind. Its average heat rate in 1961 of 11,331 British thermal units per kilowatt-hour was reached in the United States as a whole by 1957, and is 7 percent higher than the national average today of 10,552 British thermal units per kilowatt-hour. I want to give full credit for the large progress which the New England companies have made in recent years in improving their average heat rate, but if New England had merely kept up with the national average in the efficiency with which it uses the fuel it imports, it could have reduced its fuel bill by more than \$7.5 million a year on the average in each of the last 5 years.

One of the basic reasons for New England's relatively less efficient use of fuel becomes apparent from an examination of the generating stations which make up the bulk of the power supply sources of New England. In brief, New England in the past has built and still relies on too many small and inefficient generating units and on too few of the large, low-cost units.

As of January 1, 1962, the total investor-owned steam-electric generating capacity in New England, that is to say in FPC power supply areas 1 and 2, was about 6,400 megawatts. Of this total, 88 units with an aggregate capacity of over 350 megawatts were of a size of 10 megawatts or smaller. Thirty-eight of these units were more than 40 years old, well past the age of honorable retirement by any standard. Equally surprising, five of these expensive small units have been added since World War II.

More significant than the figures on these small units, which account for only a small proportion of total capacity, are the figures with respect to units below 50 megawatts in size. Here we are talking not only of peaking units but of base load units as well. These small units total almost 3,500 megawatts or 53 percent of installed capacity in New England at the beginning of 1962. By modern standards, a 50-megawatt unit is not an efficient unit and an area which relies on units of this size for base load is not getting the benefit of modern power technology. Power from a 50-megawatt unit costs 30 percent more than from a 500-megawatt unit, some of which are in operation in the United States and others of which are on order. As a matter of fact, the calculations of our engineers show that power from such large units could be produced in New England, at existing higher fuel charges, at less cost than from 50-megawatt units at points where fuel could be bought at the national average price. Here, indeed, by realization of the benefits of present-day technology, is the path for New England to offset its fuel disadvantage.

Let me say a word about the small old units of which New England has so many. It is not uncommon to hear utility operators justify their continued existence on the ground that their cost has been written off and that they are adequate for reserve. However, many of them still have high taxes and other fixed charges and extremely high operating costs which penalize average costs. Their continued operation is justified only if they are held for emergencies of a high order of improbability of occurrence. If they are used to any substantial degree their operating costs become prohibitive. New England utilities should look and work toward the day when their reserves for load

growth will be in units with operating costs low enough to encourage load building.

The evidence suggests that New England's electrical progress is restrained by the chain of high costs, which in turn leads to high rates, which delays growth of energy use and thus tends to keep costs high. The challenge to New England power leadership is to break away from this chain to what I might call the wheel of progress—low costs which make possible low rates and high use and thus contribute to further cost reductions.

There is no sovereign road for achieving this transition. I cannot suggest to you any one step you could take which would transform the New England power economy because if there were an easy solution I am sure you would long ago have put it into effect. However, I am sure the transition can be made by pursuing progress along many paths. In not too many years, if the men in this room determine that New England shall again assert its leadership in the electric power field, it can make an increased contribution to New England's and the Nation's economy.

Specifically, I suggest to you the following paths of progress:

First, greater integration of facilities and operations. The modern concept of an inter-company power pool originated in New England and large advances have been made in the direction of interconnected system operations. However the New England companies have not taken full advantage as yet of the benefits of coordinated planning, construction and operation of the overall power supply system required to serve most economically and reliably the growing loads of this region. The direction of the future is toward a pooling of the programs of all the systems in the area, both publicly and privately owned, in the interest of the greatest possible economy. A look beyond the area itself is also required, in order to appraise the possible benefits of coordinated planning for adding capacity in joint ventures with neighboring systems. Distance is no longer as important a factor as it once was. Extra-high-voltage transmission will make the pool which New England could tap an ever growing one with rich potential rewards in savings from lower fuel costs, lower costs per kilowatt of installed capacity and reduced requirements for reserves.

Second, power pooling for the region as a whole and in cooperation with neighboring regions will also justify a review of the economic feasibility of many of the area's undeveloped hydropower sources for additional blocks of capacity. These hydro sources hold promise of greater rewards to the utilities of New England when explored and developed by an integrated regional and interregional power pool, than when considered only as a part of a single company system.

Third, I have already referred at length to the special need in New England to accelerate the movement from small to large generating units, and to make the most efficient possible use of the fuel which New England must import at high cost.

Fourth, greater use of power. The electric power industry in New England must plan on a greater utilization of its plants by building up average use at least to the national level. Since the rest of the country will not stand still during the next 10 years, the industry in New England is aiming at a moving target. Rate reductions should not be delayed until new plants are completed. On the contrary, every stimulus should be given to load development now by all known promotional means. For example, it costs very little to offer substantial rate inducements for usages which are still largely non-existent. Any increment above out-of-pocket costs for these new loads will make some contribution to net income, and as

more efficient capacity is added to the system, these loads will become increasingly profitable.

In the residential field, in particular, there is strong evidence of great elasticity of demand, of many unsatisfied wants for electrical equipment in the home which would be satisfied if rates were lower. When you know that new and cheaper generating capacity and low cost power imports are coming in, you should anticipate the savings and insure heavy and economical loading of your own equipment by load-building rate reductions.

The difference involved in attaining in New England a level of use equal to the national average would give a tremendous impetus to the whole economy of New England. Hundreds of millions of dollars of new investment would be required not only in generating and transmission facilities but also in the strengthening and improving of distribution networks, the rewiring and modernization of homes and places of business, and the sale and installation of hundreds of thousands of electric appliances.

My study of industry statistics suggested no way of reconciling the differences in rates of growth among various companies except in terms of people. Some companies do a much better job of selling electricity than other companies. This simple fact suggests a great opportunity for New England. It is evident from comparing the records of the various companies in New England that if all could increase their sales to the level of the best, the electric power industry in New England as a whole would show great progress and achieve approximately the level of the national average.

In urging upon you this aggressive program for building loads, I know that I shall not add to the tranquility of my job as chairman of an agency which regulates not only the interstate transactions of power companies, but of natural gas companies as well. Perhaps I should say that I regard it a part of my job to give them comparable advice. When both the natural gas companies and the electric power companies exert their greatest efforts to make low-cost energy available to the American consumer, both industries as well as their customers and the Nation will receive maximum benefits.

Coming back to the subject of system integration, I should like to say another word about the Commission's national power survey. Its purpose is to explore the full benefit potential to the country of integrating the planning and operation of the Nation's power systems. The survey assumes no changes in ownership or in utility responsibilities, but only carrying through in much greater degree and with greater completeness the strong trend which already exists toward system interconnection and integration. The results of the survey should be useful to the New England systems in planning their future. However, the emphasis will be on the requirements of the 1970's. We hope that the studies which are now being carried on throughout the industry as part of the survey will lead the industry to accelerate their own interconnection and integration programs, hopefully in ways which will lend themselves to future strengthening of interties and integrated operation to reflect long-term power survey recommendations.

From the long-term point of view, the future for New England power systems is bright. The technological progress in recent years in conventional equipment is constantly minimizing the importance of New England's distance from cheap fuel sources. Of course a continuation of the progress in the atomic reactor program should further narrow the gap in energy costs. The existing power sources in New England in the course of little more than a decade will be but half of the electric plant then in service,

and the opportunity for the addition and replacement of facilities offers enormous opportunities for improvement in average unit costs by supplanting equipment of low efficiency with the best units that the manufacturers can make available. I am confident that in the next decade the enterprise of the electric power industry in New England will find a way to bring power to New England consumers in amounts which are greater and at rates which are lower than those in the rest of the country. The Commission for its part will do everything it can to facilitate your efforts to meet this goal, which has great importance to the future growth of New England and to the Nation as well.

Postmaster General Farley Comments on Closing of Starkey (N.Y.) Post Office

EXTENSION OF REMARKS OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. STRATTON. Mr. Speaker, early this month the post office at Starkey, N.Y., in my congressional district, was closed down after a continued existence of 143 years. I am sorry that this center of Government service on the banks of Seneca Lake has ceased to function.

As a boy, on a canoe trip from the Rochester Boy Scout camp on Seneca Lake, I can still remember the long, hot climb up the road from the lake to the small community of Starkey and its post office.

To commemorate the passing of this historic landmark the other day former Postmaster General Farley, a man who has always had the "human touch" in abundance took the time out of his busy schedule to pen a note to the retiring postmaster at Starkey, Raymond Brewer, Jr., which I read with profound interest.

Under leave to extend my remarks, I include a story from the Geneva Times of January 25, which quotes the letter of that great American, Jim Farley.

The article follows:

IN LETTER TO STARKEY POSTMASTER—FARLEY RECALLS CLOSING HOMETOWN POST OFFICE

STARKEY.—Raymond Brewer, Jr., who was postmaster of the Starkey post office which closed January 4, has received the following letter from James A. Farley, a former Postmaster General.

DEAR POSTMASTER BREWER: When reading the National Observer several days ago I noted with interest the story about the closing of the post office there after 143 years of existence and that your grandfather also served as postmaster during that period.

I understand full well how you feel about the office being closed as I had a similar experience when I was Postmaster General. It was necessary for me to close the office at Grassy Point, N.Y., where I was born and raised, and placed it on a rural route about a mile and a half from the Grassy Point site. I received the last letter canceled and I sent it with my stamp collection and other material to the Smithsonian Institute in Washington.

The post office was as old as could remember and was run by the Ossman family in their general store. I used to go down there

every afternoon after the 5 o'clock train came in from New York with the mail. As a matter of fact, all the boys made that daily trip to the office.

When I became old enough to be interested in baseball I went down about a hundred yards from the post office to read the scores in the old New York Herald.

I think mine was the only instance of where a Postmaster General closed the post office in his old home town. It wasn't an easy task as there was, of course, much sentiment connected with the office. However, the rise in population and the rapid transit of the mail has caused many hundreds of small post offices to be closed since I was Postmaster General. I hope you won't misunderstand my writing you at such length but the story of your office brought back memories of Grassy Point office.

I have always felt rather close to the postmasters and the postal employees because of their loyalty and assistance during my tenure as Postmaster General. Whatever success any Postmaster General achieves is due to their loyalty and efficient performance of their duties.

Inasmuch as you and your father no doubt served during my time as Postmaster General, I thought you might like to have the attached autographed photograph.

With my very kind regards and best wishes to you and yours for success, good health and happiness during the new year.

Sincerely yours,

JAMES A. FARLEY.

JANUARY 16, 1963.

Declaration of American Principles by Benevolent and Protective Order of Elks

EXTENSION OF REMARKS OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 31, 1963

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a "Declaration of American Principles of the Benevolent and Protective Order of Elks."

There being no objection, the declaration was ordered to be printed in the RECORD, as follows:

A DECLARATION OF AMERICAN PRINCIPLES OF THE BENEVOLENT AND PROTECTIVE ORDER OF ELKS

The Benevolent and Protective Order of Elks is dedicated to the welfare of the United States of America. One of our order's purposes is to quicken the spirit of American patriotism. To that end our order has striven to advance the principles that guide our Nation, and has opposed all attacks upon them from whatever quarter.

Freedom, the historic goal of mankind, is our Nation's basic principle. Freedom has been under steady attack by international communism for many years. Now, freedom and communism are engaged in a struggle for survival. This struggle is not of our choosing but has been forced upon us. Freemen have no choice but to accept the challenge.

The Americanism Committee of the Grand Lodge of Elks believes that freedom too long has stood on the defensive. The time has come for us who believe in freedom to take the initiative; fight for what we believe in and stand against those who are against us

until freedom has defeated those who would destroy it. To rely on military power alone in this ideological struggle would be illusory and fatal. Our paramount necessity is internal strength which can come only from unity of understanding and purpose and a willingness to place our Nation's safety and welfare above personal interest.

Appealing, as did our Founding Fathers, to the Supreme Judge of the world for the rectitude of our intentions, we submit to our brothers this declaration of American principles on which we shall challenge the enemies of freedom, and to which we invite our fellow citizens to subscribe:

1. Moral values are the basis of our society, and the responsibility of each citizen to live by these moral values is fundamental to the welfare and progress of our society. These moral values include honesty of word, deed, and purpose; brotherly love that requires us to be fair with our fellow men and just in our relations with them; faithful performance of our labor in every honorable calling; and a recognition that each of us has the duty to contribute to the best of his ability to the advancement of the general welfare.

2. Freedom has made America. Not just political freedom, but the whole environment of freedom is responsible for the tremendous progress of our Nation since its Revolutionary birth in 1776. Freedom encourages initiative, experiment, invention, enterprise. Freedom lets citizens choose their work, encourages individuals to discover their talents, and make the most of them. In consequence we have a standard of living higher than any nation has enjoyed, a material abundance more widely shared among all our people than ever before, and a high level of intellectual and cultural attainment. Every citizen is the beneficiary of the freedom that has unleashed the abilities of the American people and provided the incentive for their maximum use.

3. Inherent in the American concept of freedom is the integrity of the individual. Individualism makes each person primarily responsible for himself, his welfare, his success or failure. Freedom lays upon each person the individual responsibility and duty of citizenship. A free society will emphasize individualism and individual responsibility as the sure way to produce democratic leadership and preserve freedom.

4. Self-government presupposes the duty of every citizen to obey the established government and to employ only those lawful methods of reason and persuasion that are open to all of us to achieve political action.

It follows that government by the majority must be reasonable in the exercise of its authority and protect the rights and interests of the minority.

5. Our ability to change our institutions and practices, through orderly process of law, to accommodate to changing needs has helped our Nation to develop, as it will in the future. All proposals for change in our institutions should be weighed carefully by all citizens to determine whether such change will reduce or add to our freedom. Our goal should be more freedom, not less. We must guard against the growth of governmental power through surrender of civil right and individual freedom for contemporary gain at the expense of future generations.

6. The tendency of groups to seek preferential treatment from government breeds rivalries dangerous to political stability, is harmful to genuine economic growth and leads to fragmentation of society rather than to unity and strength. All groups of citizens ought to measure political and economic proposals advanced in their own interest against their effect on the whole Nation.

7. We believe that the time has come when all citizens who believe in these principles

should speak up for them and set an example by applying them fully in their daily lives. We urge those in positions of leadership and influence—clergymen, educators, business executives, holders of public office, leaders of labor, intellectuals, editors, radio and television producers, motion picture producers and all others—to assume a greater responsibility for the wider understanding of these principles and their practical application in the day-to-day lives of the people.

Employment Trends

EXTENSION OF REMARKS

OF

HON. ROBERT T. McLOSKEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. McLOSKEY. Mr. Speaker, last Thursday I attempted to point out to my colleagues some of the fallacies contained in the budget message of the President.

As time goes on I am more and more convinced that the economic gains and advantages claimed in the President's tax program sound more and more specious. I base this conclusion on the inevitable truth that under the program proposed an individual's taxes are going up as well as down.

In my humble opinion an effective tax program must contain two elements. One, we must better control and reduce expenditures and; two, we must set up a more simple tax structure.

Instead of following these simple steps toward improvement we are hastening toward larger and larger deficits, creating more tax inequities, and becoming lost in a maze of fiscal redtape. If the present trend continues our Federal deficit could well reach \$50 billion by the end of the President's 4-year term of office.

Last week I also endeavored to point up the growing increase of Government employees. I believe the following excerpt from the Wall Street Journal of January 28 bears me out.

Under unanimous consent, I insert the following article in the Appendix of the RECORD:

THIRTY-SIX THOUSAND FIVE HUNDRED MORE

Now that Members of Congress and interested taxpayers have had time to read the fine print in the administration's budget for fiscal 1964, it's dawned on them what the President really was saying in his budget message about management improvement and cost reduction in Government employment.

What President Kennedy said was that his budget had been prepared "with special attention to employment trends in the Federal Government." And that "requests for additional jobs have been reduced or denied wherever possible." The key phrase there is "requests * * * have been reduced." For the President certainly did not say that the number of Federal employees is going to be reduced. Or even that he proposed to hold the line on Federal jobs. That fine print discloses that the President gave "special attention to employment trends," all right. And those trends, as usual, are ever upward.

For instance, the President asked for an increase of 5,315 employees in the Agriculture Department, which would raise the total to 121,583. For the Commerce Department, where Secretary Hodges has been making such stirring pare-the-payroll talks, an increase of 3,497 is being asked.

Indeed, in only two places is a decrease in the number of employees apparent, and these two cuts total only 78.

Altogether, the President is asking Congress for almost 36,500 more Government employees. It certainly makes for an interesting approach to management improvement and cost reduction.

J.F.K.'s Vigorous Double Standard

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. MICHEL. Mr. Speaker, ever since the President disclosed his budget plans to the Congress, people have been puzzled, at first, then indignant by the obvious contradiction of principles. Only last year Mr. Kennedy "lectured" the steel industry that any inflationary act would rob widows and ruin foreign trade, undermine the struggle for human freedom, and retard the economy. Now his spenders have convinced him that inflationary action by the Government is going to be good for us. As we review the budget line by line noting how each agency has hiked its estimate and left open the door for supplemental requests, we think that another "lecture" would be most appropriate—this time to the Cabinet. I believe that the following editorial from the Peoria Journal Star of January 23, 1963, expresses this need most effectively:

J.F.K.'s VIGOROUS DOUBLE STANDARD

It occurs to us that President Kennedy is a very forceful speaker. You might say in the language of these days that he speaks out with great vigor.

But we can't help wishing sometimes he would use the same logic in different places.

We think it would be interesting if he had lectured the Department heads who brought in a budget that forecasts something over a \$10 billion deficit, who knows how much? The last balanced budget forecast he made missed by several billions the same way he lectured the steel industry on a \$6-a-ton price hike.

We wish he had told them, and the post office with its 20- to 50-percent raise in rates, and the Defense Department with its 14½-percent increase in pay for all hands what he told Roger Blough about the effects of inflation.

Didn't he then say with great indignation that any inflationary act was an act to rob widows and orphans and the elderly?

Didn't he say that any such inflationary move would be a move to ruin our foreign trade? To sabotage our country in the great struggle for human freedom, the cold war, that is, to hold back our economy?

Ah, yes. We wish he had played that speech back to his henchmen grabbing with both hands at the Treasury moneys these days. But the tune has changed. Inflationary action by the Government is going to be good for us, now.

We wish he might have said, also to the State Department's million-dollar booze budget, and all like budgets for the Government's entertainment activities, the same rules apply to spending this as we have now applied under the income tax laws to entertainment expense of private business.

And there must be a thousand places in this budget where he could usefully offer that good, old line from the inauguration: "Ask not what your country can do for you."

No such luck. The New Frontier is progressive. They only look ahead. They never look back, not even to yesterday's speeches, and certainly not to yesterday's promises.

"Don't look back." That's the progressive watchword.

Of course. They are scared to death to look back. Especially at their record.

John Y. Yoshino Honored as Roosevelt University's Alumnus of the Year

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, January 31, 1963

Mr. DOUGLAS. Mr. President, last October 27, Mr. John Y. Yoshino was honored by his alma mater, Chicago's Roosevelt University, as its alumnus of the year and received the Eleanor Roosevelt Key.

Mr. Yoshino is the Deputy Director of Field Services for the President's Committee on Equal Employment Opportunity and has a fine record of leadership in the overcoming of racial discrimination.

I ask unanimous consent that a statement in connection with the honor bestowed on Mr. Yoshino be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

JOHN Y. YOSHINO HONORED AS ROOSEVELT UNIVERSITY'S ALUMNUS OF THE YEAR

A White House aid and Roosevelt University graduate, Mr. John Y. Yoshino, was honored as Roosevelt University's 1962 Alumnus of the Year at the university's 7th annual homecoming banquet, Saturday, October 27, in the Knickerbocker Hotel here in Chicago.

Deputy Director of Field Services for the President's Committee on Equal Employment Opportunity, this Japanese-American, a 1948 graduate of Roosevelt University, was presented with the Eleanor Roosevelt key, the highest honor this university can bestow on an alumnus, by the university's president, Dr. Edward J. Sparling, acting on behalf of the alumni association.

Working with the U.S. State Department and the Maryland Commission on Interracial Problems, Mr. Yoshino in 1961 helped to end the discrimination against Afro-Asian diplomats in public eating places along the stretch of U.S. 40 that leads from Washington to New York.

Prior to his government service, Mr. Yoshino was Chicago director of the job opportunities program of the American Friends Service Committee, a Quaker organization with the purpose of ending discrimination in employment.

Presented annually to a distinguished Roosevelt alumnus, the Eleanor Roosevelt key was presented to Mr. Yoshino for his "courageous efforts to end segregation" and for his "long, noble, and patient struggle for equal employment opportunities." The citation reads as follows:

"To you, John Y. Yoshino, alumni honoree, faithful public servant, for your long, noble, and patient struggle for equal employment opportunities for all Americans—a struggle which began in our very city and which has led you to the White House itself; for your especially courageous efforts to end segregation in public eating places along U.S. Route 40, a route which so many diplomats travel on their way from New York to Washington; for your constant and never swerving devotion to the promotion of sound inter-group relations through equal opportunity and through the recognition of the good deeds of all men; and for the singularly dignified, humble, yet truly courageous way in which you bore the burdens of all Japanese-Americans after Pearl Harbor and yet served your government and its cause with honor and with all your heart; for such meritorious achievement and for the high standard of moral courage you have shown, the Roosevelt University Alumni Association is proud to present you with its 1962 Eleanor Roosevelt Key Award."

A native of Alameda, Calif., Roosevelt's alumnus of the year was evacuated to a relocation camp in Utah following the Japanese attack on Pearl Harbor. Shortly thereafter, he joined the U.S. Army and served with a military intelligence unit in the South Pacific.

Coming to Chicago at the war's end, Mr. Yoshino obtained a bachelor of arts degree in labor relations from Roosevelt. In 1953 he received a master's degree in social and industrial relations from Loyola University (Chicago).

From 1956 to 1961, he was contract compliance adviser for the President's Committee on Government Contracts.

Mr. Yoshino has served two terms as President of the Capital's chapter of the Japanese-American Citizens' League. He is currently chairman of the league's eastern district council.

The award winner was a delegate to the recent White House conferences on youth and the problems of aging.

Accompanied to Chicago by Mrs. Yoshino, the homecoming guest of honor lives with his wife and son in Silver Spring, Md.

Roosevelt University was founded in 1945 to provide opportunity for learning and teaching in conditions of freedom and equality. The university's educational purpose is to produce well-informed, thoughtful individuals capable not only of adapting themselves to the world as they find it, but also of thinking critically and constructively about that world, so that they may act effectively for the betterment of human institutions. The University seeks to provide this opportunity and achieve its purpose by:

Admitting to its membership both teachers and students on the basis of individual merit and without regard to race, color, or creed;

Maintaining full freedom of inquiry, teaching, and expressions of opinion in the spirit of the Constitution and laws of the United States and the State of Illinois;

Providing to an unprecedented degree for participation by teachers and students in the government of the university, under conditions which ensure that those who have rights also share responsibilities;

Setting a goal of excellence in its teaching and research programs in the liberal arts, the sciences, and the professions, and expecting that teachers and students alike will strive toward this goal to the maximum of their powers;

Insuring that, from the standpoint of location, time, and cost, its educational facilities are made as accessible as possible to all qualified students.

Reduced Rates on Grain

EXTENSION OF REMARKS

OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, January 31, 1963

Mr. COTTON. Mr. President, one of the most interesting and controversial cases to come before the Interstate Commerce Commission in recent years involves the reduced rates on grain transported in the Southern Railway System's "Big John" hopper cars.

This case, and its ultimate resolution by the Interstate Commerce Commission and the courts, may have a considerable influence, not just on the transportation practices of the Nation, but also on the various legislative proposals dealing with the regulation of freight rates.

A three-member panel of the ICC, consisting of Commissioners Howard G. Freas, Abe McGregor Goff, and John W. Bush, recently unanimously approved the reduced rates sought by the Southern Railway System in this case. The 81-page decision of Division 2 of the ICC is too lengthy for insertion in the RECORD, but because of its importance and interest, I ask unanimous consent to have inserted in the Appendix to the RECORD a press release from the ICC announcing the decision, together with an article about it by John P. MacKenzie published in the Washington Post of January 26, 1963.

There being no objection, the press release and article were ordered to be printed in the RECORD, as follows:

DIVISION 2 APPROVES SOUTHERN'S MULTIPLE-CAR GRAIN RATES

Division 2 of the Interstate Commerce Commission today unanimously approved Southern Railway system multiple-car rates (except for a minor tariff provision concerning substitution of cars), minimum 450 tons in 5 jumbo cars, on grain from Mississippi and Ohio River crossings to destinations in the South and Southeast.

The proceeding in Investigation and Suspension Docket No. 7856, "Grain in Multiple-Car Shipments—River Crossings to the South," involved reduced rates on grain transported in Southern's "Big John" aluminum covered hopper cars of large loading capacity.

In a report by Commissioner Howard Freas, the division stated that "progress is achieved not by condemnation of innovation but by its encouragement" and noted that "technological efficiencies and managerial initiative constitute elements to be promoted under the national transportation policy rather than to be stultified." The division found the proposal to be "an effort by the Southern to obtain revenue, which has bypassed it over the years, to enable it, under honest, economical, and efficient management, to provide railway service at the lowest cost consistent with the furnishing of such service."

The rates were filed to become effective

August 10, 1961. Upon protest of numerous interests the Commission, in accordance with provisions of the Interstate Commerce Act, suspended the operation of the rates for a 7-month period ending March 9, 1962, and their effective date was voluntarily further postponed through August 7, 1962. The Supreme Court, however, extended lower Federal court orders preventing the rates from becoming effective pending its determination as to whether Federal courts have jurisdiction to enjoin or suspend rates published by common carriers before entry of a final order of the Commission.

The proceeding was one of the most sharply fought cases in the Commission's history. Some 140 days of public hearings concluded August 29, 1962. The voluminous record which was compiled included 15,815 pages and 766 exhibits. Briefs were filed by the parties on November 5, 1962.

The division noted that the proposal was designed to meet unregulated truck competition which has already upset the railroad grain rate structure and distorted relationships among markets, commodities, and shippers.

In dealing with numerous Interstate Commerce Act violations alleged by many protesting parties, the division declared that the Southern made a prima facie case of lawfulness, and that protestants failed to overcome it.

The proceeding marked the first instance wherein a formal determination was made as to "public costs" of barge transportation, i.e., what, if any, portion of public investment and maintenance costs must properly be assignable to barge transportation on the various rivers. The division indicated that "it is manifest that in competitive ratemaking where one mode does assert the inherent advantage of low cost in performing a service, sound economics plainly require that all costs, including 'public costs,' which go to make up the asserted inherent advantage must, in all justice, be considered."

Other rates of the Southern subject to minima of 900 tons in 10 cars and 1,800 tons in 20 cars were found not justified as were the proposed rates of other railroad respondents not utilizing jumbo-car equipment.

The Interstate Commerce Commission determined that the proceeding involves an issue of general transportation importance.

ICC STUDY HAILS RAIL EFFICIENCY

(By John P. MacKenzie)

If the ratemaking division of the Interstate Commerce Commission has its way, rewards in transportation will go to the resourceful, aggressive innovators in a rough-and-tumble competitive world.

The Commissioners' 81-page decision approving the Southern Railway system's proposal for drastic reductions in grain-hauling rates is full of language praising the virtues of rugged competition.

"Progress," the Commissioners declared, "is achieved not by condemnation of innovation but by its encouragement."

Southern's solution to growing truck competition, a solution which involved millions of dollars invested in new ways to haul grain, displayed "technological efficiencies and managerial initiative," they added, "elements to be promoted under the national transportation policy rather than to be stultified."

While striking a blow for rugged individualism, however, the Commissioners also took some of the steam out of the drive by the railroads to repeal the ICC's powers to set minimum rates. If upheld by the full 11-member ICC, the ratemaking Commissioners' ruling will be a strong counterpunch for regulation.

Railroads complain, and President Kennedy has backed them up, that they should

be placed on a more equal footing with the unregulated barges and trucks which are taking away much of their business.

In his transportation message last year, the President proposed an end to the ICC's power to suspend and outlaw minimum freight rates found to be too low to bring a profit and destructive of other modes of transportation. As an alternative, the President said Congress might decide to extend regulation to barges and trucks.

Either way, Mr. Kennedy said, the different forms of transportation should be treated alike. He made clear that he preferred his main proposal. The ICC, however, backed the alternative.

Among the chief spokesmen for "the dead hand of Government regulation" line of criticism has been D. W. Brosnan, president of Southern and beneficiary of Thursday's decision. What Brosnan did not say in his statement hailing the decision was that the ICC has demonstrated that it can use its regulatory powers to offer incentives to railroads.

Brosnan did say he was "gratified" by the ICC action. But he added he would be still more gratified if the ICC granted more of what he asked for.

The Commissioners approved Southern's bid to lower rates an average of 62 percent on grain shipments of 450-ton minimum as long as the shipments are in radically new "Big John" aluminum-covered cars specially designed to regain grain traffic. The Commissioners rejected lower rates for still larger volume shipments, and Brosnan said he would press for those rates also.

Barge lines, which haul grain and charge rates not subject to ICC jurisdiction, contested the Southern proposals bitterly in yearlong hearings. They said Southern was determined to drive the barges out of business.

The bargemen contended that Southern's rates actually were below cost. They claimed an inherent advantage over trains in their cheap operation and pointed to the Interstate Commerce Act's admonition to foster those inherent advantages.

But the Commissioners replied that, in weighing natural advantages, the barges could not utilize the "public costs" of Government expenditures to improve the waterways. These expenses, the Commissioners declared in a precedent-setting ruling, must be added to the cost of barge transportation.

Turning to the motor carriers, the Commissioners declared that unregulated trucking "has already upset the rail grain structure and distorted relationships among markets, commodities, and shippers."

"While Congress has exempted such carriers from the licensing and rate regulation," the Commissioners added, "we do not view such action as indicating any intent to isolate them from competition."

And competition is just what the Commissioners have ordered.

The Late John J. Bell

SPEECH
OF

HON. BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1963

Mr. CASEY. Mr. Speaker, I join with my colleagues from Texas in paying tribute to the late Honorable John J. Bell, a man who served his State and his Nation ably and well.

I knew John Bell when he served in the Texas Legislature, where I had the

privilege to serve. I knew him personally and by the distinguished reputation he left as a Member of the House of Representatives and a member of the Texas Senate, prior to his service in this body.

John Bell's untimely death saddens me, as I know it does all his friends. At a time like this, words are of little consolation to the family of such a great man. But the thought that we share this deep loss with them, may perhaps help ease the burden of sorrow they carry.

My deepest sympathy goes to this great American's devoted wife, and to the people of Texas, who lost a valued and proven public servant.

Tribute to Eleanor Roosevelt

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. GARMATZ. Mr. Speaker, Baltimore was one of the many cities in which memorial services were held for Mrs. Eleanor Roosevelt. The service was held on December 9 with prominent Baltimoreans participating. Among them were the Reverend Robert T. Newbold, Jr., the Reverend Don Frank Fenn, Rabbi Morris Lieberman, Father James B. O'Hara, and the Edmondson High School choir under the direction of Mrs. Georgeanna Chester, accompanied by Mr. Edward Roberts. Music was furnished by the Winterbourne Quartet.

I believe that the type of organizations sponsoring the memorial is a tribute to the high regard and esteem in which Mrs. Roosevelt was held by all of our citizens. They were the American Civil Liberties Union, Maryland branch; American Jewish Congress, Maryland chapter; Baltimore Council, AFL-CIO; B'nai B'rith; Baltimore Teachers Union; Baltimore Urban League; Congress on Racial Equality; International Ladies' Garment Workers Union; Maryland Council of Churches; Maryland League of Women's Clubs; National Association for Advancement of Colored People; National Council of Jewish Women, Baltimore section; National Council of Negro Women; United Nations Association of Maryland; United World Federalists; Women's International League for Peace and Freedom.

The assembly was fortunate in having as its speaker the former mayor of Baltimore and Governor of Maryland, Theodore R. McKeldin. In the belief that this tribute to Mrs. Roosevelt will be of interest to all Members, I am inserting his remarks in the RECORD:

MEMORIAL SERVICE FOR ELEANOR ROOSEVELT, MERGENTHALER HIGH SCHOOL, SUNDAY, DECEMBER 9, 1962

Nearly 25 centuries have passed since Pericles, the Athenian, noted that in his day it was already a time-honored custom of civilized men to gather at an appointed time to pay formal tribute to the dead who were held in honor by the survivors. It is for

that purpose we are gathered here today. A memorial service is a response to a human impulse as old as history; and nothing lasts so long unless it meets a deep-felt human need.

Perhaps in the dim, distant past men may have cherished the superstition that by word or act they could add somewhat to the honor of the dead, but we have long outgrown that delusion. Our need is not to contribute anything to the past, but to clear ourselves for the future of any suspicion that we were too blind, too dull of soul to recognize and respond to greatness in our own time.

Nothing said or done in this place at this time can add in the slightest degree luster to the name of Eleanor Roosevelt; but the fact of our presence here does acquit us of suspicion, in time to come, that we were too stolid, too lumpy to feel a lift of the spirit when we are touched by the splendor that radiates from a great heart and a noble mind.

It will be years, it may be a generation before history will be able to set in true perspective the contribution that this woman made to the advancement of American civilization. It is not my purpose or my desire to attempt that task. This is not the occasion for laborious documentation and careful analysis, even if it were practical. I take, instead, the Psalmist's view that, "We spend our years as a tale that is told," and from that point of view I tell you a tale of one woman's life, not for its historical significance, which is still to be assessed, but for its sheer beauty, which is before our eyes.

Every reader of Eleanor Roosevelt's autobiography has noted the persistence with which she insists upon her own insignificance in her early years. Most of us, I think, refuse to take that at face value, believing that she was overmodest, but she does convince us that she honestly regarded herself as lacking any of the qualities that the world most values in a woman—beauty, grace, sparkle, the power of fascination, all that goes to make up what in an earlier day was called a heartbreaker. Her own half-joking, half-rueful description of herself was "an ugly duckling."

At first, we may reject that as shocking, but if we stop to think it over perhaps we may change our minds. The "Ugly Duckling" in Hans Christian Andersen's story, you remember, was not a duckling at all, but a cygnet, a newly hatched swan; and in the course of time the cygnet developed the beauty and the grace of the swan, that put all the other birds to shame.

We usually classify the tale as a fairy story for children, but it is not, properly speaking, a fairy story; it is an allegory, a fictional presentation of a great literary artist's view of one aspect of human life. So understood, it is one of the most charming tales in literature, fascinating to children, but a help and comfort to many a grown man and woman.

For the cygnet, you remember, was not transformed into a swan by the touch of a fairy godmother's magic wand. It was the slow emergence of an inner grace, an inner beauty that had always been there. Time, the enemy of most of us, was a friend of the ugly duckling, for the swan, according to the old tradition, increases in beauty with the passage of time, and with the swansong, ends in music.

With this in mind, I am quite willing to accept Eleanor Roosevelt's description of herself, for while Anderson wrote, she lived the story of the "Ugly Duckling." The creation of art she brought into everyday life, high fantasy she transformed into plain fact. Any man or woman who can convert human life into art, who can make real what the storyteller was only a lovely dream, has achieved a wonder; and this woman did it.

To say that she was well born is true, but she was not born to great wealth or to great happiness. Her childhood, indeed, was bleak to an extent unknown to many poorer children in obscure families, and her young womanhood was touched by tragedy more than once. She was early acquainted with grief and sorrow was more familiar to her than pleasure. She did achieve the happiness of marriage to a man she sincerely loved, but even that did not last long, because her husband while still a young man, was stricken by a crippling malady, which gave her, first, weeks of mortal terror and then years of incessant care. But the more crushing her burdens became, the more she developed that inner strength, that spiritual power that alone can endow mortal beings with beauty and grace that last throughout their lives. Her husband rose to fame and more than imperial power, but at the very moment when he seemed in the way of achieving his greatest work, the hand of death intervened, and the woman who had richly earned the right to wear the purple had instead to put on widow's weeds.

It is hard to think of a more bitter demonstration of the irony of history, but if the bitterness entered the heart of this woman no word of it escaped her lips. Her response to the crushing burden that fate had laid upon her was to take on new burdens. Instead of being engrossed in her own sorrows she became more attentive than ever to the sorrows of others. Instead of walling over her losses she heard ever more clearly the cry of the oppressed.

Even if time permitted it would be useless for me to try to catalog her achievements, and I doubt that any human being knows them all, for much of her noblest work was done secretly. But we are all aware that Eleanor Roosevelt was known to the poor and distressed in New York City long before she was known to the Nation. In schools, and studios, and workshops, she brought sympathetic understanding to the problems of young people before she brought them to the problems of statesmen. Prisoners and outcasts knew her before she had entered any royal palace. She disdained the boundaries of race and creed; her hatred of injustice inflicted upon the children of Israel, or the children of Africa was as strong and relentless as her hatred of injustice inflicted upon her own household.

To the self-centered this was folly for which they upbraided her. But out of this seemingly folly she distilled, as the years passed, such wisdom that many of the wisest statesmen of her time sought her counsel on problems that baffled them. I do not believe that any other woman in American history was listened to respectfully by so many of earth's greatest and most powerful; and few, if any, have been so beloved by the poor and weak.

Well, the tale is finished. The story that Andersen wrote has been lived before our eyes. It has gone through all its phases, through grace to beauty, through beauty to splendor, through splendor to music, for it can be said of her as confidently as it was said of Mr. Valiant-for-Truth that "all the trumpets sounded for her on the other side."

Eleanor Roosevelt is done with us, but are we done with her? If we must answer, yes, then this is a vain assembly without purpose or effect. But we cannot answer yes, for the influence on humanity of a great life is never ended by the death of the great man or woman. Frequently it is at the moment of death that its most powerful influence begins; for once the great person is removed, envy, detraction and prejudice cease to obscure the splendor of fine deeds.

This life is certain to be remembered long because of its extraordinary effectiveness in

offering strength and encouragement to others. For it is not a story of Fortune's darling, who achieved without effort and conquered without pain; but a story of one who, like the rest of us, knew labor and sorrow, but who was not crushed by burdens nor dismayed by grief. It is a story reminding us that while not all of us can achieve greatness, the least of us can achieve growth; and that the grace and beauty that are everlasting are not those that are given by capricious Fortune, but those that are developed from within. Thinking on these things, who does not take heart of hope? Who is not encouraged by hearing such a story, who is not spurred to higher achievement by it?

This is the legacy that Eleanor Roosevelt has left the world. Destiny called her to high places, where she walked among princes and potentates, but all men know that it was not her great position, but her great heart that made her memorable. Because that memory remains with us, to cheer and inspire as long as human hearts respond to greatness, her death is no more than a punctuation mark, the period set at the end of a golden story. Death's stroke served only to give her a place among the honored dead of whom it is written—

Men from tears refrain,
Honor, and praise, but mourn them not.

A distinguished American, a great statesman and an ambassador of genuine ability and integrity by the name of Adlai Stevenson spoke for us all when he said:

"She lit candles instead of cursing the darkness, and their glow has warmed the world."

May God make us worthy of her memory.

Israel: A Real Friend of America and the Free World

EXTENSION OF REMARKS
OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. STRATTON. Mr. Speaker, I know we have all watched with pride and pleasure as the State of Israel has grown in strength over the years, and has extended its influence in the troubled Middle East as a genuine friend of the United States and of the same principles of freedom on which our own country was built.

I hope our foreign policy will always recognize this close tie which binds us with Israel and that we never let ourselves be diverted for transient objectives to any course that might even indirectly provide aid or comfort to those who are committed to the destruction of Israel and all she stands for.

One of Israel's latest achievements was recently paid tribute to in the pages of the Washington Post. Under leave to extend my remarks I include an editorial from the Post's issue of January 28:

The editorial follows:

ASSIST FROM ISRAEL

Israel is increasingly playing a unique role as a workshop for developing countries. Although pressed for funds for its own development, Israel has nevertheless undertaken technical assistance programs in a host of Afro-Asian countries. Doubtless there is a

political incentive, but Israel's way of extending here influence is commendable, successful and popular. It is welcome news that Israel is now expanding its technical assistance program in this hemisphere and plans to train about 200 Latin American students in agricultural techniques.

The special value of Israel's initiative is that the country is small and its problems akin to those in developing nations. What is especially important is that few can ascribe imperialistic designs to its aid programs. An increasing exchange between Israel and Latin America can be an effective supplement to the Alliance for Progress; it is good that it has already begun.

Catholic War Veterans Honor Max Steiner

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, January 31, 1963

Mr. MUNDT. Mr. President, at a recent meeting in Chicago, Edward F. McElroy, national commander of the Catholic War Veterans of the United States bestowed upon Max S. Steiner, of Chicago the Distinguished Service Medal of the Catholic War Veterans. The presentation address of Commander McElroy so clearly typifies the spirit of cooperation and togetherness which has helped to build the strength of this great Republic that I ask unanimous consent that the statement by Mr. McElroy be printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

ADDRESS BY COMDR. EDWARD F. McELROY

I stand before you as the national commander of the Catholic War Veterans of the United States of America to present an award to a most charitable man and a dedicated American. I can honestly say that I am experiencing one of the greatest moments of my life in making this presentation.

The highest medal that we of the Catholic War Veterans of the United States of America may present is the Distinguished Service Medal. That is the award that I am about to present to Max S. Steiner, president of the Clifford Peterson Tool Co., of the great city of Chicago.

Before this highlight of the day, I would like to tell you a little about this kind, considerate, loving, charitable man.

Max Steiner is a self-made man. As a boy, he came from little. But through his own dynamic wit, personality and congenial attitude, he became a topflight salesman. Almost a quarter of a century ago he came to Peterson Tool Co., and rose to be its distinguished and loving president.

Anyone in his employ feels as though he were working for Santa Claus 365 days of the year. Max S. Steiner's many charitable deeds are not limited to just those of the Jewish faith, of which he is a member, but to all faiths and denominations. He has assisted boys in becoming rabbis and Catholic priests. He has mended marital problems and has helped the young, struggling boys and girls get married. Max S. Steiner has helped develop and make leaders of our city, county, and State government. May I proudly and humbly say he played

an important role in my successful election as the National Commander of the Catholic War Veterans of this great country of ours. My family, my good Irish, Catholic mother and yours truly are eternally grateful.

There you have just a part of the life of a dedicated American and most charitable man of all causes. Max, I know you feel thrilled about receiving our Distinguished Service Medal, but I sincerely feel that it is more of a thrill for me to be able to do something for you. God bless you and good health to you for many years to come.

Tribute to Colin F. Stam

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 31, 1963

Mr. BYRD of Virginia. Tax Foundation, Inc., one of the finest independent institutions for research on governmental affairs in the United States, observed its 25th anniversary at the Plaza Hotel, New York, on December 4, 1962.

On that occasion the foundation's annual award for distinguished public service was presented to Colin F. Stam, Chief of Staff for the Joint Committee on Internal Revenue Taxation. The presentation was made by the Hon. Rosewell Magill, chairman of the foundation's board of trustees.

It was my privilege to be Chairman of the Joint Committee on Internal Revenue Taxation at that time. I wish to say that Colin Stam richly deserves recognition of his service to his country and the Congress, and such recognition by Tax Foundation is an honor indeed.

I ask unanimous consent to have published in the Appendix of the RECORD the remarks by Chairman Magill as he presented the award to Mr. Stam.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PRESENTATION OF AWARD TO COLIN STAM BY ROSEWELL MAGILL, CHAIRMAN, TAX FOUNDATION, INC.

The man the Tax Foundation has chosen to honor this year with its annual Award for Distinguished Public Service has been chief of staff for the Joint Committee on Internal Revenue Taxation for 24 years; he has been a member of the committee staff for 35 years.

The committee for which he has worked so long and so diligently was created by statute in 1926. Its purpose is to study the operation and effects of the Federal system of internal revenue taxes and the administration of such taxes. It is composed of the ranking members of the Ways and Means Committee of the House of Representatives and the Finance Committee of the Senate.

Our award recipient tonight was born in Chestertown, Md., was educated at Washington College and Georgetown University. He received a law degree in 1922 and began his career as an attorney for the Bureau of Internal Revenue in that year. Four years later he was named attorney in the office of the general counsel of the Bureau. He began his work with the joint committee in 1927 when he was named assistant counsel. He served as the committee's counsel from

1929 to 1938 when he was named chief of staff.

By nature, the man we honor in this presentation is a retiring man. His eminence is based on his ability and the quality of his work. He is a dedicated public servant and in the very best sense of the words.

Senator BYRD of Virginia, who has been a member of the joint committee since 1949 and has alternated as its chairman and ranking member since 1955 recently made this observation about our guest:

"I regard him as the best authority in the field of Federal tax law, in all of its aspects, in government and perhaps in the country * * * I know he has rejected positions outside of Government which would have been far more remunerative. His public service is invaluable. I know him as a man motivated by devotion to this work and his best endeavor to protect the interests of the Government with all justice to its taxpaying citizens."

The foundation is pleased and honored to give its award this year to a man who has so long and so well served the American people.

The award is represented by this silver plaque on which are inscribed the following words:

"Presented to Colin Ferguson Stam, Chief of Staff, Joint Committee on Internal Taxation, Congress of the United States, for His Distinguished Service to the American People of His Outstanding Contributions to Tax Law and Administration and for His Dedication to the Highest Ideals of Public Service, by the Tax Foundation, New York, December 4, 1962."

The Agricultural Program—Address by the Secretary of the Interior

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, January 31, 1963

Mr. AIKEN. Mr. President, on January 22, the Secretary of Agriculture, Orville Freeman, delivered before the National Limestone Institute an excellent speech relating to certain phases of our agricultural program. I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF AGRICULTURE ORVILLE FREEMAN BEFORE THE NATIONAL LIMESTONE INSTITUTE, AT ITS BANQUET ON JANUARY 22, 1963

It's a great pleasure and a privilege to be here with you tonight to enjoy this very generous hospitality, and I might add, to have the opportunity to speak to so many Members of the Senate and the House so early in the session; but according to ground rules, I understand they don't have much chance to talk back. I assure you that this is a very desirable situation, particularly for a Secretary of Agriculture. This is a most impressive gathering and it provides a very real opportunity to visit with you a bit about matters of common concern that we share. In agriculture and soil improvement and in the modern roads so vital to rural America and agriculture—the farm-to-market roads—we have very real and common interests to share.

I thought I might direct my remarks this

evening to some of the great changes taking place in rural America in this rapidly growing, expanding, and changing land of ours—to the broad subject in which I know we share a very real common interest—conservation. And I'd like to preface my remarks by saying at the outset that I dislike the words "soil bank," "diverted acres," "idle acres," and the whole concept of nonuse that they represent. To me these terms and the practices they describe are the direct opposite of true conservation. For true conservation in a real and meaningful sense means serving people—the use of land and water to meet human needs now and in the future. Unless we use the land and water to satisfy human needs—what purpose does it serve?

So the question is: Are we making the best and wisest use of our land and water to serve our national well-being?

I think we all would agree here this evening. The answer is "No."

But I believe we are moving in the right direction. Your organization, the National Limestone Institute, has contributed mightily to a more rapid movement toward the goal of real conservation. And I believe that in the future you will continue to play a critical role in pointing the way to proper and beneficial land use—true conservation in this great and changing land of ours.

Today and for the foreseeable future, our American family farm agriculture will be able to feed our people at home and to make available increasing amounts of food and fiber for trade and aid and economic development around the world. I make this most significant statement not as conjecture, or even as an estimate, but rather as a simple statement of fact.

From this statement of our very great potential for production flow some other very, very important facts that I think we need to keep in mind as we work together to chart the path to take maximum advantage of the changes, to apply our resources, for the betterment of the lives of our people; and, yes, for the building of a better world, for the road to a peaceful world is surely the building of a better world for people everywhere.

At home, this great miracle of abundance which we enjoy has meant great things to our people.

It has meant that the average farmworker now feeds himself and 26 others—freeing the vast majority of our people for productive work of other kinds.

Food in these United States today is the best bargain we have. A lot of people don't know that. A lot of housewives don't know that. The food budget of the average family accounts for less than 19 percent of the family's income after taxes. In 1952, Americans were spending 23 percent of their income for food—and in 1947 it was 27 percent. The people of this country are getting better food, better packaged, and more of it prepared—but at less real cost than any people, anywhere in the history of the world.

In the different countries of Western Europe—where living standards are relatively high—consumers spend anywhere from 30 to 45 percent of their after-tax incomes for food. In Russia the proportion is well over 50 percent.

Sometimes I think that the people of other countries have a finer appreciation of America's abundance than we do—because they have food problems. The hungry of the world know about American agricultural abundance because food for peace is supplementing the food resources of more than 100 countries. The Iron Curtain countries know it—and their leaders are struggling to find a formula for a similar success.

Every single country behind the Iron and Bamboo Curtains—and the Sugar Cane Curtain too—is having food problems.

Just 4 years ago Fidel Castro assumed power in Cuba. At that time farm production accounted for over one-third of the national income and employed about two-fifths of the labor force. Food supplies were adequate for the country's people, and farm exports brought in most of Cuba's foreign exchange earnings.

The situation today is quite different, I assure you. Cuba is in the midst of an agricultural crisis—and there is no change in sight. There simply is not enough food—and per capita consumption has dropped a fifth since 1958.

Russia is having its food problems—a failure of communism that even Khrushchev freely admits. Production is far behind the country's goals—especially for grains, meat and dairy products. And in Red China tonight, where agriculture has broken down, millions of people go hungry. East Germany, Hungary, Bulgaria—you name it—every one of the Communist countries has a serious food shortage problem.

There has been no such problem in this generation in the United States because of the productive ability of the American family farm—the most successful agrarian institution ever developed.

But this miracle of abundance of producing more and more on fewer and fewer acres has also meant sharp and very quick changes in the face of rural America. And these changes have brought with them a great deal of hardship.

Farmers and others associated with them in rural America have suffered unfairly as a product of these changes.

In most recent years, American farmers have produced 5 or 6 percent more food than we could consume or give away. And without adjustment programs, overproduction would have much more severe consequences. Individual farmers acting alone can do little to prevent overproduction.

Overproduction in a free enterprise economy means, of course, sharp downward pressure on prices. The result is the cost-price squeeze we are all so familiar with. In the decade of the 1950's, net realized farm income declined more than a tenth at a time when other incomes were rising steadily.

Many family farmers were pushed off the land. In the 5 census years between 1954 and 1959, the total number of farms declined 15 percent.

And it wasn't only farmers who suffered. I know that many of you in this room live in and serve small rural communities. Others of us have revisited the small towns we know. And we see many of these communities have fallen into the backwater of America's economic growth.

In many of them, agriculture was once—but no longer is—an economic mainstay. Many of these towns were once—but no longer are—bustling centers of opportunity in business and agriculture.

There are many ways to measure what has happened.

You can measure it in the changing character of our population. In the decade of the 1950's, our national population increased by 29 million people. Yet, population declined in most towns of fewer than 2,500, and increased only slightly in those of 2,500 to 10,000. The farm population that supports these smaller towns and cities fell off by a third.

You can measure it in the lack of adequate opportunities for education. Urban people over 25 years of age have on the average a fourth more formal schooling than do their farm counterparts.

You can measure it in the lack of job opportunities. Underemployment in rural areas is the equivalent of around 4 million entirely unemployed.

You can measure it in the unwillingness of younger people—especially the more am-

bitious—to remain and work in their hometowns. For many rural communities, this rapid outmigration of the young is particularly tragic. Opportunity could have been created locally as well as at a distance.

You can measure the rural problem in the incidence of actual poverty. More than half the poverty in the United States today is in rural America—a rural America which has at the same time created a worldwide success story in food production.

Yet these communities, even where economic problems are most acute, all have important resources—both natural and human resources. They deserve the best efforts we can give to their problems—through every public and private source available.

Change is inexorable. We may disagree as to whether or not a particular change is beneficial or otherwise, but we cannot disagree with the fact that change takes place. It is a law of life. Yet the threat to rural America does not lie in scientific and technical change itself. The threat lies in the failure to direct changes growing out of that progress in ways to meet the real needs and wants of all the people. Change must be shaped to work for people—not against them.

And I sincerely believe that if we are alert and willing to act, we can shape these changes so that rural America as well as urban America will prosper and benefit from the production miracle that is American agriculture.

There is no reason for income in rural America to lag—and I think we ought to be challenged as long as the income in rural America lags so significantly behind that in the urban areas. Even though we've seen in these past 2 years an increase of gross income in agricultural of over \$2 billion a year, which has reflected itself in a more prosperous business community, in higher bank deposits in rural towns, in farm machinery sales, in the sale of household appliances, and many, many other things we can name. Even so, this \$2 billion income increase, or \$1.1 billion net increase, still leaves per capita agricultural income only about 60 percent of that in our urban areas. And until we have real parity of income, by that I mean equality of income between rural and urban America, there is work to be done—the kind of work I know this institute seeks to contribute to. It all comes down again to conservation—to proper land use in the most meaningful sense of that word.

We know that we don't need all of our land and water to produce the food and fiber we require. During the past 2 years, we have been using for crop production less than two-thirds of the land we classify as cropland. With acre yields growing more rapidly than population year by year, we know that we can produce all the food and fiber we need with much less cropland than we have available.

At the same time, we do need land and water for other things. We have growing needs for recreation, for timber, for grazing for livestock, for industry. The expanding urban character of our population indicates a growing urgency for the preservation and use of green areas around cities and towns, or simply open spaces to look at, climb on, walk through, or mediate in.

We are a people with a pioneer tradition. Open space is a part of that heritage, and it is essential that we maintain the opportunity for Americans everywhere to make use of space as one of our natural resources.

So now as true conservationists, our challenge is clear—to make the land adjustments needed, we must work not idle, use not bank, apply not divert, our great natural resources of land and water.

We must seek alternative land and water uses that will serve our people in worthwhile ways, now and in the future. This isn't an easy proposition.

It is relatively easy to generalize about, but to do it in a free economy, to do it in an economic manner, that will contribute to the economic well-being and the standard of living of the people in the city and the country alike, is something that taxes our ingenuity, and that will tax our foresight, our thinking and our cooperation. But it is something, I believe, that can be done, and I believe that progress is beginning, or at least we see the glimmerings and the beginning of things that might be.

And as a part of this, we have developed a program in the Department which we call the rural areas development program. You may see more of these words—"rural areas development," "the rural areas development program." The philosophy behind this program is the effective use and adjustment of our great natural resources. Incidentally, as many of you may know, your president, Bob Koch, is a member of the national advisory committee on rural areas development, has been most faithful and attentive, and has contributed significantly as we've attempted to think our way forward and to test and to try and to experiment in terms of trying to move in the direction of real use and meaningful adjustment.

The rural areas development program is a blending and coordination of all available resources—private and public, local, State, and National—toward the common goal of a prosperous rural America.

Let me describe a number of things we have done in the Department. One has been a departmental reorganization. With us here this evening is Assistant Secretary John Baker, the man who directs the rural areas development program. Under him are related programs that contribute to the overall rural areas development purpose, mainly the Forest Service, Farmer Cooperative Service, the Farmers Home Administration, the Rural Electrification Administration, and the Soil Conservation Service. Playing a very vital part in all of this, too, are agencies working closely with him—particularly the Federal Extension Service and the Agricultural Stabilization and Conservation Service. Many of you know the Administrator of that program, whom you honored a year ago, Horace Godfrey and his assistant, Ed Jaenke, and their ladies who are with us here tonight. They work through Assistant Secretary John Duncan, whom many of you know. I mention this because I would like to emphasize that the rural areas development program is a top-priority effort within the Department of Agriculture, and I can assure you that it will continue to command our best energy, our know-how and all our resources.

In this description of rural areas development, I would like to pay tribute to the Members of the Congress here tonight. They have contributed vitally to what was highly significant legislation in the farm bill passed last year. You know the commodity programs—where there is always strong controversy and very heated feelings on occasion, and I am sorry to say sometimes partisanship—tend to attract the most attention. I would hazard a prediction that 10 years from now, or maybe 5, commodity programs will be long since forgotten. But the action in land and water conservation, in programs for credit, in providing cost-sharing and adjustment payments under long-term cropland conversion programs, in the authority to initiate rural renewal projects through technical assistance and loans to local public agencies will mark this act as one of the most significant in the annals of history.

Regardless of what we may do, however, and we're proud of the Department of Agriculture and the dedicated able people in it, and despite what Congress in their wisdom may do, any rural areas development program

rests on local people and local leadership. Happily we have found a great deal of enthusiasm in local communities. Today there are rural development committees in 1,800 counties—and they are preparing thousands of projects that will help create the conditions essential for economic growth.

One of the most encouraging things about the program is the growing evidence that Federal funds can be used to stimulate a many-fold investment from other sources. In other words, Government financing is playing a "seed capital" role by bringing about the investment of much larger sums by private and local sources.

For example, the Rural Electrification Administration surveyed about 400 industrial and commercial projects that REA borrowers had helped to launch. It was found that the 400 projects are being financed by more than \$250 million of private capital compared with only about \$15 million from Federal sources.

Incidentally, it is anticipated that those 400 projects will directly create some 30,000 new jobs—and indirectly, another 22,000.

Another, much broader survey discloses that throughout the country 133,000 jobs have been created or saved already as a result of rural areas development activity.

A key role in the rural areas development program is being carried out through cost-sharing under the agricultural conservation program. In the Food and Agriculture Act of 1962, agricultural conservation program was placed on a permanent basis for the first time—which is quite a landmark for the program. In the past, agricultural conservation program has been known as a "continuing" program that had to be renewed periodically by the Congress. This will no longer be necessary.

The 1962 act also amended the Soil Conservation and Domestic Allotment Act to provide for long-term agreements under the agricultural conservation program, to help farmers change their cropping systems and land use and to develop soil, water, forest, wildlife and recreational resources. And it authorized USDA to share with local public bodies up to half the cost of land, easements, and rights-of-way for small watershed projects to be dedicated to public recreation.

The Department is already developing pilot projects under this legislation—to help farmers shift unneeded cropland to other uses. Last month, we named 41 counties in 13 States for long-term test programs to shift land out of crops and tame hay. The main idea is to convert this land to grass and forest—although water storage, wildlife habitat, and recreation uses will also be encouraged. In addition, other counties throughout the Nation are eligible to participate in a pilot program to convert cropland to income-producing recreation uses.

In some States, the test program will be tied in with small watershed projects authorized under Public Law 566. Such watershed work is underway or approved in 13 of the 41 counties where conversions to grass and trees are being started.

Farmers who are interested in this cropland conversion program will be helped through adjustment payments, cost sharing on conservation practices, and technical assistance. Farmers can enter into long-range agreements to shift land under plans which they have developed in cooperation with their local soil conservation districts. In addition, farmers or groups of farmers will also be able to obtain credit to help pay their share of the cost of conversion.

As I said, this pilot program, under the leadership of our ASC committees, is limited to this year. Our intention is to expand this cropland conversion program very rapidly and widely.

So far pilot projects in cropland conversion and recreation are limited to an ex-

penditure of \$10 million. The extension of the conservation reserve authorized by Congress is for only 1 year. So this is something the Congress will again turn its attention to. The basic legislation and direction is there. The implementation to carry forward the blueprint is something that will be in active consideration in the days ahead as we seek to convert and use land for new purposes which serve the changing needs of all people.

This, then, is a kind of quick recap of an important new thrust and direction in rural America. I do not suggest that this is a complete answer for all problems, but I would suggest to you that it is a meaningful beginning.

May I then conclude this address as I began by repeating: The answer is not to idle land, but rather to use it to meet other needs, and, as we do so, to provide constructive opportunities in areas other than farming for those who remain by choice in the rural community. There is important work to be done by such people. Our challenge is to work out the proper balance—a better word is conservation—the proper use of land and water to serve people.

This is an exciting enterprise—and 1963 is a key year. I invite each of you to look at your own community in terms of these opportunities—and to give your cooperation to these long-term programs for conservation and rural development. The reward will be great and long lasting to rural communities and to the Nation.

Meaning of the Pledge of Allegiance to the Flag

EXTENSION OF REMARKS OF HON. NORRIS COTTON

OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, January 31, 1963

Mr. COTTON. Mr. President, the Parent-Teachers Association of Amherst, N.H., recently had a speaker who stated that children had little understanding of what they were saying. She used as an example the "Pledge of Allegiance to the Flag." One of the Amherst teachers decided to check on this statement and asked the members of her fourth grade class to write the "Pledge of Allegiance" in their own words. Two of these were selected as the best and published in the Milford (N.H.) Cabinet. Because I believe these so well indicate the feeling which the children of New Hampshire have for the United States and its flag, I ask unanimous consent that these statements be printed in the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

Alexander Buchanan: "I promise to be faithful to the flag of the United States of America and to the country for which it stands; one group of free people under God who work together with freedom and fairness to all."

Martha Gray:

"I promise to be faithful
In my duty
To the people in my country
And to the flag
Of the United States of America!
I shall not part
From these free people
Who give freedom and fairness to all!"

John Sharp Williams

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. WILLIAMS. Mr. Speaker, nearly 40 years ago the Nation suffered a loss when John Sharp Williams left Congress. His capacity for leadership, his intellect and his wit all helped shape the course of national legislation for 28 years; 16 in the House of Representatives and 12 in the Senate of the United States.

Mr. Robert W. Collins, of Yazoo City, Miss., where John Sharp Williams also made his home, has sent me a reprint of an article which appeared in the Saturday Evening Post under date of March 10, 1923.

Under leave to extend my remarks, I include the Saturday Evening Post article and the biographical sketch of John Sharp Williams which appears in the Biographical Directory of the American Congress. They follow:

Williams, John Sharp (grandson of Christopher Harris Williams) a Representative and a Senator from Mississippi; born in Memphis, Tenn., July 30, 1854; after the death of his parents moved to the family homestead of his mother in Yazoo County, Miss.; attended private schools, the Kentucky Military Institute near Frankfort, the University of the South, Sewanee, Tenn., the University of Virginia at Charlottesville, and the University of Heidelberg, at Baden, Germany; subsequently studied law at the University of Virginia and in Memphis, Tenn.; was admitted to the bar in Shelby County, Tenn., in 1877; moved to Yazoo City, Miss., in December 1878; engaged in the practice of law and also interested in cotton planting; delegate to the Democratic National Convention at Chicago in 1892; elected as a Democrat to the 53d and to the seven succeeding Congresses (March 4, 1893–March 3, 1909); was not a candidate for renomination in 1908; Democratic minority leader in the 58th, 59th, and 60th Congresses; temporary Chairman of the Democratic National Convention at St. Louis in 1904 which nominated Parker and Davis; elected to the U.S. Senate in 1910; reelected in 1916 and served from March 4, 1911, to March 3, 1923; declined to be a candidate for renomination in 1922; was a delegate to the Democratic National Convention at Baltimore in 1912, which nominated Wilson and Marshall; retired from public life and lived on his plantation, Cedar Grove, near Yazoo City, Miss., until his death there September 27, 1932; interment in the family cemetery on his plantation.

[From the Saturday Evening Post, Mar. 10, 1923]

WHO'S WHO—AND WHY—SERIOUS AND FRIVOLOUS FACTS ABOUT THE GREAT AND THE NEAR GREAT

A SENATOR OF THE OLD SCHOOL

The first families of the South have always been reluctant to apply the phrase "a gentleman and a scholar" to individuals who did not possess certain fundamental qualifications. Among these qualifications may be mentioned the possession of commodious plantations, preferably cotton plantations, an extreme sensitiveness concerning the honor of himself and his kin, an instinctive abhorrence for the Republican Party and all

its works, a marked willingness to fight at any and at all times for any cause that seems good, a large number of ancestors who have made notable contributions to the well-being of the South, a wide acquaintance with the classics and the ability to quote therefrom with precision and fluency, a thorough knowledge of the law of the land, a strong determination publicly to express dislike for offensive persons and measures, a complete command of invective in all its branches, an inexhaustible supply of hospitality, generosity and sentiment, and enough eloquence, religion and card sense to make himself a welcome and honored guest in any circle at all.

In the old days, for one reason or another, it frequently happened that Southern States were represented in the U.S. Senate by men who could be called both gentlemen and scholars without starting an argument anywhere in the South. Today the gentleman and scholar of the old school, as measured by the standards of the first families below the Mason and Dixon Line, is vanishing from the U.S. Senate with more vanishing power than that possessed by the American bison, and almost as much as that ascribed to the great auk.

Some people blame this unfortunate state of affairs on the high price of cotton plantations; still others on the direct-primary law, which so often permits demagogues to get further, nowadays, than statesmen. Whatever the reason, there are gentlemen from the South in the Senate, and there are scholars from the South in the Senate; but the last gentleman and scholar of the old school departed from the Senate Chamber on March 4, 1923, when John Sharp Williams, Democrat, of Yazoo County, Miss., voluntarily gave up the desk and chair once occupied by Jefferson Davis and repaired to his home near Yazoo City to devote himself to the varied pursuits of a cotton planter and to the reading of about as many books each day as Henry James used to produce each decade.

ORATOR AND KEEN DEBATER

It has not been the usual thing for gentlemen and scholars to retire voluntarily from the U.S. Senate; but much of the conversation that emerges from senatorial lips in these effete days can scarcely be classed as either stimulating or elevating. Book lovers, therefore, sometimes prefer to read books rather than listen to the sages of the Senate in action. John Sharp Williams is a book lover; and it is that fact, probably, which led him to remark not long since that he would rather be a dog and bay the moon than remain a Member of the U.S. Senate as at present constituted.

The records show that the branch of the Williams family, of which John Sharp Williams is the direct descendant, emerged from the mountains of Wales in a healthy and active state in the year 1678, and arrived in Hanover County, Va., in the same year, thus qualifying in the copper riveted and airtight group sometimes known as the First Families of Virginia.

Being fresh from the mountains, however, the Williams family found itself somewhat oppressed by the muggy climate of Virginia and moved on up to Yadkin County, N.C. At this point appears the first but not the last member of the Williams family to get a national reputation as a fighter, said member being John Williams, who, in addition to being the great-great-grandfather of John Sharp Williams, was captain of the Hillsboro, N.C. Minute Men and subsequently colonel of the Ninth Carolina Line Regiment.

Having duly accounted for the proper number of King George's cohorts, Colonel Williams was appointed by the North Carolina Legislature to the position of surveyor general of western North Carolina lands which were situated in what is now the State of Tennessee. So the Williams family

moved over into Tennessee, where its members became even more prominent and wealthy than they had previously been, and where they retained their prominence and wealth with Welsh thoroughness and tenacity. The gentleman who is somewhat loosely referred to by present-day Williamses as Uncle Robert Williams, but who was the uncle of John Sharp Williams' grandfather, was appointed Governor of the Territory of Mississippi before the Territory was divided into Mississippi and Alabama; and in this way the Williams family established connections in Mississippi.

John Sharp Williams was born in Memphis, Tenn., in 1854. His father was colonel of the 27th Tennessee Volunteers, Confederate States Army, and was killed in the Battle of Shiloh. His mother, who had died, was from Mississippi; so when Memphis was threatened with capture by the Federal Army, his family took him to his mother's homestead in Yazoo County, Miss.

Southern boys whose fathers died through the agency of northern bullets were remarkably free from any passionate devotion to the North; and John Sharp Williams was no exception to the rule. When he had absorbed the education that the South afforded through various private schools, the Kentucky Military Institute, the University of the South, and the University of Virginia, he was still bothered by a slightly uneducated feeling. Being an unreconstructed rebel of the most unreconstructed type, it was impossible for him to alleviate this feeling at any northern university; and he therefore set off for the University of Heidelberg, carefully dodging the city of Washington on his way in order that he might not be forced to see the hated symbol of the conqueror floating over the Nation's Capitol.

He spent 2 years at Heidelberg; and then he came back home and studied law at the University of Virginia and with a Memphis law firm. As a result, at the age of 23, he was licensed to practice in the courts of law and chancery of Shelby County, Tenn.

As a further result, he had laid the foundation of his education with such success that while he was a Member of the U.S. Senate he was almost universally regarded as being without a peer in sustained logic and eloquence, in strength in running debate, in his knowledge of the origin of politics, of political science, of the history of nations and of the classics, and in his fund of general and accurate information—and he was so regarded, too, in spite of the presence of that celebrated Massachusetts institution, Senator Henry Cabot Lodge, with his accompanying smokescreen of 11 university degrees and 19 bulky books.

At the age of 24 he went back to Yazoo City and practiced his profession and indulged in the various pursuits which are customarily pursued by the wealthy, gentlemanly, and scholarly cotton planter, and otherwise behaved as a gentleman and a scholar should behave; and in November 1892, he was elected to the 53d Congress, following which he was reelected with such persistence and enthusiasm that many southerners—and northerners, too, for that matter—began to think that he would be flowing up to Washington from Mississippi long after the Mississippi River had ceased to flow into the Gulf of Mexico.

He had no sooner entered the House of Representatives than he burst into eloquent speech; and those who sought to oppose this rambunctious youngster from the cotton plantations of the distant South discovered to their pain and chagrin that the keenness of his tongue was sufficient to remove the hide from a Siberian mammoth in long, quivering strips.

THE SENATOR IN ACTION

Since that time many a master of invective in both the House and Senate has confi-

dently entered a battle of tongues with him, only to limp painfully to a first-aid station in the nearest cloakroom and apply poultices to the blisters raised by the stinging Williams attack. In addition to rising to the position of Democratic floor leader in the House, John Sharp Williams was his party's candidate for Speaker of the House in the 58th, 59th, and 60th Congresses—a period when the Speaker of the House was almost as important a figure as the President of the United States. On January 23, 1908, he was elected to the U.S. Senate by the Mississippi Legislature; and on April 4, 1911, he took his seat, the same seat—not by chance or by coincidence, but because of the uproarious and determined demands which he made for it in his most unreconstructed and rebellious manner—that had been occupied by Jefferson Davis when that distinguished gentleman, scholar, and leader of a lost cause was sojourning in the Senate. In 1916 he was renominated and reelected to the Senate without opposition.

John Sharp Williams frequently deceived those awestruck souls from Coot Point, Maine, and Constantinople, N.Y., who entered the Senate gallery expecting to see the Senate floor populated with statesmen 9 feet in height, all busy debating with one another in words four syllables long. They were not greatly impressed by John Sharp Williams when he shambled through the center door opposite the Vice President's rostrum, and stood there in apparent helplessness, with his shock of white hair and his old gray suit that looked as though it had been slept in ever since the Civil War, and as though the pockets had been used as common carriers for dumbbells or other heavy weights since the Cleveland administration. Nor were they particularly thrilled or stirred when John Sharp supporting himself on adjacent desks, wobbled rather wearily over to a Senator who might be witching the other Senators with his own particular brand of oratory, and took up a sitting or a standing position some 3 feet in front of the speaker. Sometimes the galleries could be heard asking who the rude little old man was. Their attitude was more respectful, however, when they heard him make replies to speeches in the wavering drawl that, in conjunction with his white hair and mustache, makes him seem so much like Mark Twain.

In spite of the 2 years that he spent in Germany during an impressionable period of his life, he failed to develop that sympathy for the Germans that early in the war afflicted so many Americans who had spent more than 3 days on the far side of the Rhine. The Germans, he has always complained, haven't enough imagination to interest him.

On April 4, 1917, Senator Robert M. La Follette, of Wisconsin, made a long speech in the Senate against the United States entering the war. John Sharp Williams, who had listened carefully, then rose and delivered a few pointed remarks in the direction of Senator La Follette; and they were pointed so successfully that La Follette has never since acknowledged his existence by either word or sign.

John Sharp Williams was never one of that sturdy group of southern Democrats who believe in putting a protective tariff on nothing except the things that are raised or made in the South. One of his distinguished colleagues was one day ranting and ramping for a high tariff on Sea Island cotton, which is the same sort of cotton that John Sharp raises on his Mississippi plantations; but to his horror the ramper discovered that he did not have John Sharp's support.

"It is a very strange thing," bawled the ramper, "that the Senator opposes this tax when he himself is a raiser of long-staple cotton!"

John Sharp at once remarked in quavering tones, "Well, whenever my plantation can't

produce cotton without imposing a tax on the American consumer, I'll plant every foot of soil to other crops."

Being an idealist himself it was natural for John Sharp Williams to burn incense at the shrine of one whom he regarded as an arch-idealist, the same being Woodrow Wilson.

So he burned incense; and Wilson had a high regard for him, corresponding with him in affectionate terms. When, therefore, Senator James A. Reed, of Missouri, a brother Democrat, developed violent anti-Wilson tendencies, it gave John Sharp great pleasure to r'ar up, as the southern phrase has it, and skin him alive whenever the occasion offered. And, it should be understood that one who wishes to skin James A. Reed alive must be quick on the trigger and handy with the punch, for Reed has the qualifications to do some rather rough and painful skinning on his own account. One of the last occasions when John Sharp attended a skinning party was on September 22, 1922, when Senator Reed had been stalking proudly up and down the Senate Chamber and demanding dramatically and eloquently that the bonus bill be passed over the President's veto.

When Reed had sat down, steaming at every pore, John Sharp wobbled to his feet and replied to his passionate outcry in the following unemotional manner:

"Mister President, if it were true—and it is not—that the bonus bill was for the benefit of those who looked into the mouths of the cannon and who walked up the steeps against the German artillery and infantry, there would be some reason in the attempt at eloquence made during the last 5 minutes of the speech of the Senator from Missouri; but it is not true. This is a bill to give a bonus to something like 4 million men, over one-half of whom never faced a shot, over one-half of whom never went across the seas, about a quarter of whom never served outside of a military camp, about one-tenth of whom, men and women, were serving with shoulder straps in Washington departments, and never got anywhere to illustrate their courage."

WAR HEROISM

"For the man who marches forward facing the cannon's mouth, whether for glory or for self-respect or for his country's welfare, everybody has high respect. Why did they not confine this bonus bill to the men who faced fire, the men who, upon Flanders fields or France's fields, offered their breasts to gunshots? Why did they take in all the clerks around Washington, and all the men in the encampments who never did anything except subject themselves to a new process of being washed every morning and living a more sanitary life than they were accustomed to? Why did you put them all in? Why, you put them all in because you knew you could not carry off the steal without putting them all in. You knew that if you confined it to the 1 million men who went to France, and a little bit over a million, you would not have gotten much consideration from the politicians of America.

"Let us get rid of the pretense of eloquence and oratory and heroism about this bill. If you will confine it to the men who actually entered action in France or in Belgium in American uniforms, you will get my approbation; but if you dare do that, you know you cannot pass the bill.

"I suggest that the Senator from Missouri offer an amendment that nobody shall receive any benefit under this act unless he was actually under fire during the war. I will bet three plantations to two ginger cakes that he dare not offer the amendment, and I will deliver the plantations if I lose, in absolute hopelessness of ever collecting the ginger cakes if I win."

THE NORRIS BILL

The Members of the U. S. Senate who tag themselves Progressive and announce that everything they do or propose to do is Pro-

gressive, never aroused much of a thrill in the breast of John Sharp Williams. To those who came to him and urged him to join the Progressive Democrats he gave the hoarse rebel hoot and stated that he was a plain ordinary damn-fool Mississippi Democrat, and would so remain. When the urgers protested in horror that he must be either conservative or progressive, and that it would be better for him to be progressive, he replied baldly that they were crazy; before he could be either conservative or progressive he had to know what it was that he was to be conservative or progressive about, and anybody who said that he was going to be conservative or progressive without knowing what was being contemplated was well worth avoiding. About some things any sane person would have to be conservative; about others he would have to be radical; and about still others he would have to be reactionary. Careful observation over a long term of years had also convinced John Sharp Williams that professional radicals will never be found working along consistent lines, inasmuch as their bent to change everything will always lead each one to want to change the things that the others propose.

His sentiments toward the farm bloc legislators were stated in his remarks against the Norris bill to establish the Farmers' and Consumer's Financing Corporation, with a capital of \$100 million.

"Nobody who believes that this is a government of limited powers and delegated powers," he declared, "could vote for the Norris bill, which involves the idea that the Federal Government is to become a commission merchant at a possible percentage to deal in agricultural products, to buy and sell them, and an owner and operator of elevators and a warehouseman—mighty near as bad as the 'bosun tight, the midshipmite, and the crew of the captain's gig.'

"The old Ocala platform which the Populist Party adopted 30 years ago in this country was an angel of light in comparison with the Norris bill. After nearly 30 years of public service I have the honor to say that I still believe the best government in the world is the government which a man exercises over himself. I still have the honor to believe with Thomas Jefferson, and even with George Washington, that the power of government over the individual and over business ought to be restricted; and I still believe with Thomas Jefferson—not to the extent to which he went, but to some extent at any rate—that the least-governed people is the best-governed people.

"I would not want to live in a country where the state government under which I lived, much less the Federal Government should be my commission merchant and my warehouseman and elevator dealer. Government is one thing; individual affairs constitute another thing. To put the Government in the pawnbroking business, to put the Government in the warehousing business, to put the Government in the elevator business, to put the Government out as a competitor against every man in the world engaged in any sort of business, strikes me as an absolute prostitution of the purposes of all government.

"Mr. President, government was not intended to be you and me. Government was intended to restrain you and me from transgressing against each other. Government was not intended to carry on the business of a nation. Government was to see that in carrying on the business of a nation, justice and fair dealing and honor were maintained.

"So far as I am concerned, I would just as soon live in Prussia as to live in any country, whether my own or any other, that undertook to say that the government had the right to carry on with me every sort of business."

WILLIAMS ON SENTIMENT

On one occasion Senator Reed referred contemptuously to sentiment. This offended John Sharp deeply, and he reared up.

"To say that a man is sentimental," he declared, "is to pay him the highest compliment that one man can pay to another. I belong to a breed of men who for 400 years have been dying on the wrong side. Some of them fought like fools for the Stuarts in England. Some of them died under Tyrone's Roman Catholic insurrection in Ireland. Some of them followed the Stars and Bars until they fell in gloom, although not in disgrace, at Appomattox. We do not recognize that sentiment is to be referred to contemptuously, if it were to be so referred to, the man who died for the Stuarts was simply an infernal fool, and the man who followed Robert E. Lee to Appomattox did not have much sense; but all the same, he had heroism, he had courage, and he had communion with the immortal gods, because they were in his heart; and the very spirit of Jesus Christ was working before him, because Jesus Christ fought for the greatest lost cause that the world ever witnessed."

There are many things to be said of John Sharp Williams; such things, for example, as that he is as idealistic as a poet, and sensitively honest, and wholly conscientious in all things, and generous, and a linguist, and a student, and so on. These things, however, occupy too much space without getting us anywhere. He is a gentleman and a scholar, and a Senator of the old school; and that's as eloquent and as glowing a tribute as any man ought to have.

Growth of John Birch Society

EXTENSION OF REMARKS

OF

HON. GALE W. MCGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, January 31, 1963

Mr. MCGEE. Mr. President, as one who believes that our American way of life, our freedoms and respect for individual liberty can be subverted from the right as well as the left I have long held that the John Birch Society and its extremist fellow travelers are a threat to democracy. In recent months many people who hold similar views have been led to believe that the society is dying on the vine and is no longer an active force seeking to tear down our American house of traditions to protect it from a fire that only the society can see. An article in the Washington Post of January 31 summarizes a report of the B'nai B'rith which points out that the John Birch Society is increasing in strength in many areas. The report also notes other areas where prejudice is still a major force in this country.

Mr. President, I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GREATER POLITICAL ACTIVITY FORECAST—B'NAI B'RITH REPORTS BIRCH SOCIETY GROWS STRONGER

(By Morton Mintz)

The John Birch Society is growing stronger and may try to exert real political muscle in congressional, State, and local elections.

This was reported last night to the annual meeting of the Anti-Defamation League of B'nai B'rith at the Sheraton Park.

Lawrence Peirez, of New York, chairman of the league's factfinding committee, said it would be "superficial and incorrect" to conclude that the society was damaged by the defeat of four Birchers who ran for Congress last year.

The candidates were incumbent Representatives John A. Rousselot and Edgar W. Hiestand, both California Republicans; H. L. (Bill) Richardson, also a California Republican, and Mayor Jack Seale of Amarillo, Tex.

Each of them, Peirez said, ran a strong, well-financed campaign. In a number of States, particularly California, Michigan, Texas, and Wisconsin, the impact of the Birchers on the election campaigns "was far out of proportion to the numerical strength of the Birch members and their fellow travelers."

And, he added, the society's continued existence and growth depends not on election victories, but on extremist forces which are basic in American life.

Peirez presented a detailed report on the society which included these high points:

Founder Robert Welch has been indicated to be "seeking to unify all radical right forces under his own banner."

There are signs that a quiet move may be underway to organize the society around the country for more openly political activity, despite Welch's continuing stress on the society's educational nature.

Only the society's top leadership knows the actual membership, but an educated guess is that it is currently between 50,000 and 60,000, compared with 20,000 to 25,000 in 1961.

In 1961 the society claimed chapters in about 35 States, but Welch now claims chapters in all States but Alaska and Hawaii, 300 chapters in California and members in all 50 States.

Newer areas of reported growth include the Washington region, Long Island, N.Y. and parts of Louisiana, Mississippi, Alabama, Washington, Idaho and Arizona.

The home office staff in Belmont, Mass. numbered 24 in 1960, 41 at the end of 1961 and about 50 at last report. Members are being recruited by 38 paid organizers, 70 parttime paid and volunteer "coordinators" and hundreds of volunteer section leaders. The probable rate of staff payroll and expenses is \$750,000 a year.

The society's so-called American opinion libraries, or reading rooms that sell books, remain a top-priority program. At the end of 1961 there were about a dozen; now there are perhaps 45, excluding perhaps 50 in members' homes. Book sales reportedly have become a major source of income.

Towns from California, to Colorado, to Wisconsin, to Texas, to Florida, to New Hampshire have been split down the middle by Birch campaigns against alleged leftist influences in schools, churches, and local libraries, for the impeachment of Chief Justice Earl Warren, and against merchants selling products imported from Iron Curtain countries.

An effort has apparently been undertaken to convey the impression that the society is not being run by Welch alone, but by a group of sound, respectable men of substance and standing, such as the Boston area's Col. Laurence Bunker, and Attorney Robert H. Montgomery, Jr.

Society spokesmen continue to disavow anti-Semitism officially and publicly, but Welch's society still serves as a magnet which attracts anti-Semitic bigots and hate-mongers.

If other radical right organizations are declining, the Birch Society is not.

RELIGIOUS PREJUDICE IS SEEN IN TEXT BOOKS

A 3-year analysis of elementary social studies textbooks shows that most favor Protestantism over Catholicism and Christianity over Judaism.

This was reported yesterday by Samuel Dalsimer of New York, an official of the Anti-Defamation League of B'nai B'rith. He said that most of the texts fail to view religious history objectively, have definite sectarian tendencies and are grossly inadequate to the Nation's needs.

The study was conducted for the league by New York educator Judah K. Harris and disclosed at the league's annual meeting at the Sheraton-Park.

Harris reviewed 120 books, most of them in the collection of the Teachers' Central Laboratory of Hunter College in New York City. Here are some of his findings:

On anti-Catholic bias, "Many anti-Protestant acts of persecution are detailed, but no specific acts of anti-Catholic oppression by Protestants are included. Martin Luther is treated in a wholly favorable light, no hint is given of the intolerance he advocated and practiced toward those whom he considered heretics, although, religious intolerance of the 17th and 18th centuries was by no means a Catholic monopoly."

On Jewish history, "Practically all of the information conveyed about the Jews relates to the Biblical period. The little information * * * about Jewish history after the year 70 deals in the main with Jewish tribulations as victims of persecution and exile. Virtually nothing is given about the Jewish population of America. The strong impression is conveyed that the present-day Jew is not distinguished positively by his customs, religion or culture, but negatively by the hatred, contempt and scorn in which he is held by others."

On Hitler and nazism, this is a topic in 11 volumes, of which only 5 refer to persecution of the Jews under Hitlerism. "Of these five, one does not indicate whether Hitler's policy was right or wrong."

On the crusades, "The treatment usually stresses the misdeeds of the Moslems of the period. Only 2 of the 13 textbooks dealing with the crusades say anything about Christian persecution of Moslems."

On the crucifixion, this "delicate subject * * * is often dealt with in a way that tends to stimulate prejudice."

On the importance of religion, although textbooks stress that religion was a motivating force in the past history of mankind, they "treat contemporary religion as being primarily a matter of church going, with a limited role in welfare services and character education."

CAMPUS DEMOCRACY HELD LONG WAY OFF

Continuing discriminations in college fraternities was attributed yesterday principally to old grads who would flunk a course in how not to be prejudiced.

The oldtime defenders of the system are oblivious to contemporary attitudes and trends, according to a report published by the Anti-Defamation League of B'nai B'rith.

The study, released at the league's annual meeting at the Sheraton-Park, said that "democracy on the campus" is still a long way off.

"But," said the study, "pressure from undergraduates and college administrators has markedly lessened fraternity bias since the end of World War II."

The conservative old grads are influential because they are contributors to their alma maters and have a say about job opportunities for many new graduates, the survey said.

Tribute to the Late Warren R. Austin, Former Senator

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 31, 1963

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Mr. Ross Valentine, entitled "Warren R. Austin, a Tribute."

This article appeared in the Richmond Times-Dispatch on December 30, 1962.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WARREN R. AUSTIN, A TRIBUTE

(By Ross Valentine)

Twenty years ago Warren R. Austin's was a name to conjure with; a power in the U.S. Senate, a voice respectfully listened to in disputes involving international and constitutional law.

News of his death on Christmas day, at the age of 85, must have surprised quite a few people who had been under the impression that he had died years ago.

Yet he had served for 6 years as our first ambassador to the newborn United Nations until 1953, when he was succeeded by Henry Cabot Lodge, Mr. Eisenhower's appointee.

So much has happened during the past 9 years that Austin, tending his apple orchard in St. Albans, Vt., had dropped out of sight.

When he wired me immediately after his 1946 appointment by President Truman, I was startled, and a bit flattered; flattered because his message reached me some hours before the news appeared on the Associated Press teletype, startled because of Mr. Truman's unexpected appointment of a Republican leader.

Cynical editorialists speculated that he had been "kicked upstairs"; that he had been "named captain of the *Titanic* after she struck the iceberg." In 1946 very few realists expected the U.N. to survive.

Austin, also a realist, was an exception. He had tremendous faith in the concept of law, as a moral force to weld competitive peoples together, internationally—as well as nationally.

During the lend-lease debate in the Senate, (in 1941) he said in a floor speech:

"Ought we not to ask Britain now to join us in an endeavor to establish something new * * * in the world hereafter (the war)—a new and different sanction of peace? This is not a mere dream. I believe we are in one of the great movements of civilization in which it advances to a higher step after it has slid backward."

This was the first time the idea of a new world peace organization had been suggested in embryonic form, on the floor of the Senate.

When, the day after V-E Day in 1945, others rejoiced, I grimly predicted that Soviet communism would seek to profit from the chaos of a postwar Europe. Some ardent New Dealers condemned me for that. Austin allowed it was a distinct possibility to be considered. I mention this as an example of his independent mind.

He was a realist to the core, but he saw no reason why a man with both feet on the ground should not reach for the stars.

As Arthur Krock said of him (while Austin was still in the Senate) "He is one of those men who, in any legislature, although strong party leaders, are capable of rising above partisanship when national crises arise."

In that respect Vermont's Austin was much like Virginia's Byrd is to this day.

Austin vigorously disapproved of the New Deal and most of its works. He fought Mr. Roosevelt's "Court packing plan" and Senator O'Mahoney's ill-disguised economic proposals with fierce energy, denouncing such schemes as an approach to "a collective system akin to Nazi national socialism."

But he anticipated and later endorsed the Roosevelt foreign policy when he told the Senate:

"It is not his policy, it is not mine or any other person's. It is our traditional policy of siding and upholding democracy."

As early as 1937 he foresaw a militaristic Japan as an aggressor, and urged the United States to apply unilateral sanctions against the Tokyo government, in the event that the League of Nations failed to do so. This won him no love among fellow Republicans.

A week or two before Pearl Harbor GOP isolationists banded together to block Austin from serving as minority leader in the absence of Senator Charles L. McNary. But McNary had grown to respect Austin for his way of voting his convictions, and the revolt collapsed.

There were quite a few issues on which I could not see eye to eye with Austin, such as his bill to draft nonmilitary manpower for war production; but I respected him for the courage of his convictions and for his faith in international law as the only alternative to suicidal war.

When, at the request of Governor Tuck, I invited Austin, in 1947, to attend a dedicatory function in Richmond, I was happy to do so, because—as Governor Gibson of Vermont, who had married a southern girl, had said—"There's not much difference between a Vermont Republican and a Virginia Democrat."

Indian Wars Veterans Roll of Honor Made Known by Marion, Ind., Publisher

EXTENSION OF REMARKS

OF

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 31, 1963

Mr. HARTKE. Mr. President, there is today in our great land a small body of men who, having in their time endured extreme hardships and sacrifices for their country, and are now apparently relegated to obscurity.

I am speaking, Mr. Chairman, of the 26 known surviving veterans of the Indian wars, who, during the period 1865-98, fought the battles that won the West.

The dangers these men faced and their plight today, is told very admirably in a thoughtful story by Mr. Paul L. Hillsamer, in the News-Herald of Marion, Ind. Mr. Hillsamer has also assembled the names and addresses of the survivors in a "roll of honor" accompanying the article.

I ask unanimous consent that the text of Mr. Hillsamer's article, together with the "roll of honor" be printed in the Appendix of the RECORD.

There being no objection, the article and list were ordered to be printed in the RECORD, as follows:

THOUGHTS AT 4 A.M.

As far as the editor knows the full list of living veterans of the Indian wars, to the right of this column, is a News-Herald first. We know of no other publication in the country which has published this 1963 list. We hope more papers will. These men deserve honor and recognition in their old age.

An old gentleman named Charley Gibson died at Delphi, Ind., a couple weeks ago. He was 102 years old.

Born in 1860, Mr. Gibson was the oldest living veteran of the Indian wars, the engagements little and big between U.S. Army troops and Indian warriors in the period 1865-98.

The Veterans' Administration, for pension purposes, considers 1898 as the year the Indian wars ended.

Since Mr. Gibson's death, there are 26 living veterans of these wars whose service is recognized by the Veterans' Administration.

The oldest veterans, since Charley Gibson's death, are Charles Creek, of Annapolis, Md., and George Niehaus, of Greencastle, Ind. Both are, or will be, 100 years old, having been born in 1863.

These 26 old heroes are so aged that other deaths may have occurred since News-Herald procured their names, addresses, and years of birth some 6 days ago.

Not much attention has been paid the Indian war veterans by the Nation's press. But they are a part of our national past and now, in their twilight years, deserve honor and esteem.

There was not an easy life, in the 1870's, 1880's, and 1890's. The scores of engagements in which Regular Army troops participated ranged from small local scuffles to greater battles such as Little Big Horn, where George Custer lost his life, and his army.

But the bullets and arrows of those long-ago days killed and wounded just as effectively as the weapons used in our more publicized wars.

A trooper unfortunate enough to be captured could expect scalping or, far worse, torture. Anyone who served in the Regular Army's conflicts with the Indians of the West and Southwest was a brave man.

These 26 surviving veterans were American soldiers. They fought and risked their lives for less than a 14-year-old baby sitter earns today. They lived rough lives in the saddle, on the march or in the primitive Government forts of that era.

They deserve honor now, in their last years. Just as the last survivors of the Civil War deserved, and received, honor.

We have, to date, been unable to obtain the names of living Indians who are veterans of those same wars.

They, too, are Americans. They, too, were soldiers. The wounds of long ago have healed. We are one Nation now.

They, too, should be honored in their years of great age.

Indian veterans, as former enemies of the United States, do not receive pensions.

Carroll County Sheriff James Coghill gave the editor considerable information regarding Charley Gibson, in a telephone conversation last Tuesday.

Coghill said that Gibson was a rancher in the West for many years before retiring to Delphi.

The sheriff described Mr. Gibson as "a fine man" and added that his own young son greatly admired the old gentleman.

Mr. Gibson was baptized in the Catholic Church at Delphi at the age of 99. Sheriff Coghill said that the Delphi parish priest "probably knows more about Charles than anyone else" and promised to ask the priest

to forward detailed information to News-Herald.

THE ROLL OF HONOR

Surviving veterans of the Indian wars, recognized and being paid compensation by the Veterans' Administration:

Reginald A. Bradley, 2122 Lakeshore Avenue, Oakland, Calif.; born, 1867.

Harry E. Brockman, St. James, Mo.; born, 1874.

Isaac H. Burgess, 506 West Jefferson Street, Springdale, Ark.; born, 1872.

Charles Creek, 63 Spa Road, Annapolis, Md.; born, 1863.

John Crump, 106 H Street, Boston, Mass.; born, 1868.

John Daw, Red Lake Trading Post, Ariz.; born, 1869.

Charles Dickens, Fort McDowell, Scottsdale, Ariz.; born, 1870.

Jerome Faunce, 309 Magnolia Avenue, Hannibal, Mo., born, 1875.

Howard D. Fielding, Little River Station, Post Office Box 472, Miami, Fla., born, 1872.

Frederick W. Fraske, 3746 North Spalding Avenue, Chicago, Ill., born, 1872.

Henry W. Hanft, 666 Short Street, St. Paul, Minn., born, 1887.

Walter C. Harrington, 5622 Tangerine Avenue, Gulfport, Fla., born, 1869.

Frank Heidelberg, V.A. Center, Hot Springs, S. Dak., born, 1867.

Joshua Johnson, 415 Crawford Street, Boone, Iowa, born, 1871.

Charles G. Jones, 2743 Mount Vernon Avenue, Cedar Rapids, Iowa, born, 1873.

G. W. Kinnay, R.D. 1, Box 125, South Webster, Ohio, born, 1869.

Simpson Mann, 2101 Bartlett Street, St. Joseph, Mo., born, 1867.

Hugh McGuinness, Crandon, Wis., born, 1868.

James E. Moorehead, 1203 Robin Road, St. Petersburg, Fla., born, 1864.

George Niehaus, 11 Northeast St., Greenfield, Ind., born, 1863.

Robert Norman, 1002 Harris St., Kelso, Wash., born, 1869.

Walter J. Potter, 1011 Road 20, San Pablo, Calif., born, 1871.

John F. Roberts, 206 Peninsular Avenue S., New Smyrna Beach, Fla., born, 1869.

William Sutphin, Route 1, Box 542, South Boston, Va., born, 1873.

William Wilkinson, 504 Seminole St., Clearwater, Fla., born, 1865.

(EDITOR NOTE.—Mr. Henry Hanft seems very young to have fought before 1898. However, he is definitely listed. It is possible the year of his birth was a typing error in the list we obtained.)

Singular Demonstration of Heroism

EXTENSION OF REMARKS

OF

HON. GALE W. MCGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, January 31, 1963

Mr. MCGEE. Mr. President, the newspapers and newscasts of the past 2 days have been telling the story of a singular piece of heroism that occurred in my State, Monday. I refer to the man who piloted a light plane to a safe landing at Cheyenne, Wyo., after the pilot slumped dead of a heart attack in the air. The man, Lester Peterson, exhibited a cool head in the face of a real emergency. Another man whose ability to face down

panic and provide the necessary guidance in that perilous situation was Lou Domenico of Cheyenne, a flight instructor and air service operator. His coolness and competent instruction provided the key to a safe landing.

Mr. President, I would like to commend these two men for their heroism, presence of mind, and ingenuity and I ask unanimous consent that an article in the Washington Post of January 30, on their exploits be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"NOTHING," SAYS MAN WHO LANDED PILOT-LESS PLANE

(By Paul Albright)

CHEYENNE, WYO.—A construction engineer, who guided a small plane in for a safe landing after the pilot collapsed, said there was "nothing to it." He had never flown an aircraft before.

"My worst moment was when we hit down on the runway and bounced a couple of times," said Lester Peterson, 38, assistant project manager for the American Bridge Co., after he and two other passengers had completed the landing.

The pilot, Edgar R. Van Keuren, 56, of Rapid City, S. Dak., was dead on arrival at a hospital. He apparently suffered a heart attack.

Peterson had to grab the controls when Van Keuren was stricken as the craft headed for a landing at an Atlas missile site 45 miles northeast of Cheyenne.

"I grabbed the wheel and pulled it back," Peterson said. "It appeared we were heading straight for the ground. They said we missed the ground about 2 feet."

Peterson climbed the plane, a Cessna 180, to 7,900 feet while his companions, Lester Laun and John Pawlack, also engineers with the American Bridge Co., experimented with the radio.

"I was thinking of landing in a wheat field near the missile site," Peterson said. "But Les Laun suggested we head for Cheyenne where there were facilities for a crash landing."

When they reached Cheyenne they radioed the airport tower and explained the situation. Lou Domenico, a flight instructor, was summoned and talked the plane and its passengers down.

A recording of the conversation between Peterson and Domenico included these comments:

Plane: "You're gonna have an ambulance there for this pilot, aren't you?"

Tower: "Roger. We've got an entire crash crew standing by and don't let 'em bother you. It's an emergency precaution. I think we can talk you in."

Plane: "Aw, I know you can. Over."

Two planes and a helicopter were sent aloft to escort the plane in.

"All I did was steer the thing and follow instructions," said Peterson.

"What about flaps?" questioned the passengers from the cockpit as the plane nosed toward the field.

Tower: "No flaps. No flaps. Just pull back on your throttle and when you are down close to the runway pull the throttle all the way off and fly level to the runway. * * * Just ease back on the stick, get down real close, take all your power off now, throttle clear back let it roll. * * * When it gets on the ground just let it roll. * * * Just hold the stick clear back. * * * Hold it back. * * * You're doing fine."

Plane: "Nothing to it."

The plane landed on the runway, bounced some, blew a tire, and then ran off the strip, doing minor damage to the craft.

"He did a real beautiful job," said Domenico. "He kept his head."

It took 45 minutes from the time Van Keuren was stricken until Peterson landed the plane.

Peterson, formerly from Union City, N.J., said he had never wanted to be a pilot, "but I would like to learn how to land the thing."

Judges Visit Federal Prisons

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. CELLER. Mr. Speaker, the Congress has from time to time addressed itself to the problem of sentencing disparities in the Federal courts. In 1958, it enacted my bill which authorized the Federal judiciary to convene periodic institutes and seminars to study the problems of sentencing. The bill also gave the Federal courts for the first time the discretion to commit convicted defendants under diagnostic and indeterminate sentencing procedures. It was hoped that through the institutes the judges could work out a more consistent sentencing philosophy and practice and that sentences, therefore, particularly under the new procedures, would more commonly fit both the problems of offenders and the resources available for their treatment.

In the speeches which I have prepared for my own participation in a number of these institutes I have repeatedly urged the Federal judges, as a part of their institute program, to visit our Federal penal and correctional institutions to learn exactly what programs and facilities exist for the treatment of offenders. Without this background information the judges simply cannot do an intelligent job of formulating sentences for offenders whose crimes, backgrounds, and problems vary greatly by individual. Such visits would also enable the judges to see for themselves in selected instances whether the purposes they had in mind at the time they imposed sentence were being carried out. In other words, judges ought to find out what happens to the defendants whom they have sent to prison in order to have a sound basis of experience in sentencing similar cases in the future.

Although the Federal judges are making increased use of the diagnostic and indeterminate sentencing provisions of the 1958 legislation, the problem of disparity remains acute among those terms imposed under the old definite sentencing system. President Kennedy, with great justification I think, has used his powers of clemency to correct several of the more aggravated instances of disparity which the Attorney General has brought to his attention. In the final analysis, however, only the judges themselves can remedy the problem, and a greater knowledge of the implications of their sentences and the programs of our

Federal institutions would help them to do so.

Among the Federal judges who have responded to my suggestion for institutional visits and to the standing invitation issued them by Director James V. Bennett of the U.S. Bureau of Prisons have been Chief Judge Thomas M. Madden and his associates in the districts of New Jersey. I have received a copy of the very fine report which this group wrote to Chief Judge John Biggs, Jr., of the third circuit concerning their impressions and recommendations. I hope this report will be widely circulated among the Federal judiciary. It contains a particularly penetrating evaluation of the institutions and programs that these conscientious judges observed. The circulation of the report should also influence other Federal judges, both old and new, to make similar visits. Further, I hope that some action can be taken to fulfill the need for more adequate physical facilities in the Federal prison system as recommended in Judge Madden's report.

The report should also be of great interest to the Members of the Congress.

REPORT TO HON. JOHN BIGGS, JR., CHIEF JUDGE, U.S. COURT OF APPEALS, THIRD CIRCUIT

INTRODUCTION

A number of the judges of the district of New Jersey made arrangements with Director James V. Bennett of the U.S. Bureau of Prisons to visit several Federal institutions during the past summer. It was our expectation that in acquainting ourselves with the physical facilities, programs, and staffs of these institutions we would gain a greater measure of understanding of the problems involved in the treatment of offenders committed.

On June 18, 1962, the group that visited the Federal Correctional Institution at Danbury, Conn., included Chief Judge Thomas M. Madden, of Camden; Senior Circuit Judge Phillip Forman, of Trenton; Judge Arthur S. Lane, of Trenton; Judge Anthony T. Augelli, of Newark; Judge Robert Shaw, of Newark; U.S. Attorney David M. Satz, Jr., of Newark, and Mr. Michael Keller, Jr., clerk, U.S. district court, Trenton. In addition, Judges Madden, Lane, and Augelli, accompanied by Mr. Keller, visited the following institutions on the following dates:

July 10: Federal Reformatory for Women, Alderson, W. Va.

July 11: Federal Correctional Institution, Ashland, Ky.

July 12: U.S. Public Health Service Hospital, Lexington, Ky.

July 13: Federal Reformatory, Chillicothe, Ohio.

July 14: U.S. Penitentiary, Lewisburg, Pa.

September 14: Federal Detention Headquarters, New York, N.Y.

Danbury

This institution, built with funds made available by the Federal Public Works Administration in 1938, was opened in August 1940. Its buildings are arranged to form a rectangular enclosure about a central compound and recreation yard. It is located in beautiful, rolling, Connecticut countryside. It was originally designed for about 550 inmates, but the population now averages nearly 700. The prisoners are committed from the Federal courts in the New England and New York State area.

The institution has a total personnel complement of 130; 63 of this number comprise the correctional officer force and the

remainder are assigned to such institutional services as administrative, treatment, food, farm, mechanical, medical, and industrial. All are civil service employees, and fully half of them have seen prior service at other Federal institutions. Warden Frank Kenton, for example, is a 20-year veteran of the Federal prison system and was previously assigned as warden of the New York Detention Headquarters, and as associate warden at the Lewisburg Penitentiary and the medical center at Springfield, Mo.

The inmate population is rather heterogeneous. Their ages vary from 16 to 80; the average is about 33. Also, the sentences represent the full range that can be imposed by a judge, from 30 days to life; the average is about 22 months. The offenses involve violations of laws governing narcotics, theft of motor vehicles, income tax evasion, theft from U.S. mail, forgery, and immigration.

The newly committed inmate spends his first month under study and diagnosis in a unit set aside for this purpose. He is examined by a physician, his social history is compiled by a caseworker, and he is given a number of tests to determine his educational and vocational training needs. Also, during this period the inmate is familiarized with the program of the institution. At the end of the month he meets with the classification committee, and he is assigned to the quarters, employment, and training activities that best fit his needs. If the committee determines that he requires treatment services that are not available in the institution, it recommends his transfer to a more suitable institution.

The day for the inmate begins at 6 a.m. After performing his ablutions and cleaning his quarters, he may go to the dining hall for breakfast at any time between 6:30 and 7:30 a.m. At 8 a.m. he reports to his assigned employment in one of the institutional departments or industries. There is a break for luncheon between 11:45 a.m. and 12:45 p.m., and during the afternoon most inmates are again at work. Those inmates who are illiterate or nearly illiterate may be required to attend remedial classes during the afternoon. The evening meal is served between 4:15 p.m. and 5:15 p.m., and from then until 9 p.m. the inmates may engage in recreational activities, visit the library, or attend educational classes. Ten-thirty p.m. is lights-out time in the dormitories and cells.

We were favorably impressed by the general operation of the Danbury institution. The medical facilities were excellent, and the hospital beds were occupied only by those who were ill or required surgery. A new school had just been constructed by inmate labor, and in addition to classrooms, it had a fine library. Good facilities were also available for visiting between inmates and their families. We had lunch in the officers' dining room and the menu was exactly the same as that served in the inmate dining room; the food was nutritious, well-balanced and prepared in an appetizing manner.

Danbury gave us our first glimpse of the factories operated by Federal Prison Industries, Inc. The glove factory and the office machine repair shop employed about 25 percent of the inmate population. The men assigned to these activities earn a small wage, two-thirds of which is usually sent to their dependents and the remainder saved toward the day of their release or spent at the commissary. They are also credited each month with an extra 2 to 5 days extra good time, depending upon how long they have been assigned to industries.

The inmate industrial workers perform their duties with an amazingly high degree of diligence. In our opinion, they worked as rapidly and skillfully as their counterparts in private industry. We talked to a number of inmates in the factories, and although

they answered our questions politely and intelligently, they did not slow down in their work. The factories obviously provided an outstanding training situation for inmates. The work habits they gained at Danbury would be valuable assets to them in private industry and should substantially enhance their employability.

Alderson

The women's reformatory dates from 1927. Of all the institutions visited it is the least penal in appearance. It is located in the midst of the scenic beauty of the foothills of the Allegheny Mountains and is very much like a university campus with its two-story cottages, which stand on a hillside with groves of trees and mountains as a background. Yet, it is a penal institution and security measures not evident from the "campus" are adequate. After 35 years, some of the cottages are showing the effects of age.

Inasmuch as it is the only full-fledged institution for women in the Federal Prison System, its population consists of women of all ages, sentenced to all types of terms for a wide variety of offenses. The largest group has been convicted of narcotics offenses; it is unfortunate in this respect that nearly one-third the entire inmate population is not eligible for parole, under the terms of the Narcotics Control Act of 1956. The women prisoners come from all sections of the country and differ greatly in their backgrounds and mental, physical, and emotional makeup. The problems of treating such a wide variety of offenders are understandably numerous and complex.

The institution is staffed by approximately 200 personnel, tradesmen and department heads. Warden Gladys V. Bowman is a career civil service employee who entered the prison service in 1946 as a correctional officer and earned successive advancement to her present position. For a number of years she was also in charge of the women's division at the Federal Correctional Institution at Terminal Island, Calif.

The program is basically similar to that which we observed at Danbury, except that it is adapted to the needs of women. The educational program includes elementary and secondary classes as well as all basic subjects taught in accredited public schools; typing, shorthand, and filing receive special emphasis. The women may also receive training as beauticians, and Federal Prison Industries, Inc., operates a garment factory and laundry which provides special training and paid employment. The dress-making and arts department teaches sewing skills and makes all the inmate clothing, uniforms, hospital gowns, bedspreads, draperies, and other household articles, as well as the clothing and accessories for the women being released. Additional occupational training is afforded by the food service of the institution, where the women may be trained as waitresses, bakers, and cooks. Of particular value in this electronic age is the opportunity to become skilled in machines such as IBM key punch, IBM verifier, Varityper, calculators, et cetera. The State of West Virginia is to be commended for recognizing those inmates who complete the high school courses and for issuing certificates of proficiency in some of the acquired skills.

Discipline is handled in the same manner as it is at the other Federal institutions. Inmates who have been reported for infractions appear before the reformatory's adjustment committee, composed of three staff members representing the custodial, medical, and one additional department. The infraction is discussed with the inmate, and depending upon the nature of the infraction, the attitude of the inmate, and the staff's knowledge of her personality and problems, appropriate action is taken. This usually takes the form of counseling, but may in-

volve a reprimand, a temporary suspension of her privileges or a short period in seclusion. If the violation is serious enough to warrant a forfeiture of earned good time, a special board convenes for this purpose and the inmate may be represented before the board by a staff member of her choice.

We toured the entire institution and received the impression that it was operated on a high level of efficiency. The relative isolation of the institution, however, did present some obvious problems to the institution. It is difficult for the warden to recruit specialized types of personnel, who are typically reluctant to work and live at great distances from metropolitan areas. Also, while the other institutions may draw easily from the local communities for consultant medical services, the isolation of Alderson presents a distinct handicap in this respect. It is occasionally necessary, for example, for the doctors to take a difficult pregnancy case over the mountains a distance of 50 miles to a hospital that is equipped to handle this type of emergency.

We might comment at this point that we were rather surprised to learn that a number of babies are born each year at the reformatory; we were not aware that so many young women were pregnant at the time of their sentencing. While the babies may be born in the prison hospital, the reformatory has made arrangements with county authorities to issue birth certificates which bear no evidence that the birth took place in a penal institution. The babies are cared for in the reformatory hospital for a short period of time and then turned over to their father or to the families of the inmate mothers.

Although we were greatly impressed with the medical facilities available at Alderson, the lack of an elevator in the hospital gives rise to some serious problems. It is necessary that surgical and other nonambulatory patients be carried up and down stairs on stretchers. The kitchen is in the basement. Meals are served to the upper two floors by means of a human chain on the stairway passing the individual trays from hand to hand. This makes it more difficult to serve hot meals and also creates a sanitation problem.

Ashland

The institution, opened in 1940, was originally designed for the confinement and treatment of adult offenders. With the implementation of the Federal Youth Corrections Act in 1954 it was converted to the confinement and treatment of youths committed from the district courts west of the Mississippi. At the time of our visit, we were furnished with various statistics relating to the inmate population as of the last day of the previous month. They indicated that of 494 inmates, at the time of sentencing 478 were between the ages of 14 to 19, inclusive; and the remaining 16 were between 20 to 23, inclusive. As of the date the statistics were prepared, 428 of this total were still between 15 to 19, inclusive. It is understandable that there is a problem of "gross emotional insecurity," a need for "stabilizing influences" and the necessity of "finding ways to fulfill the youth's psychological needs" as set forth in the brochure for this institution. Most of the inmates are violators of the National Motor Vehicle Theft Act and, by reason of their ages and minimum prior records of serious crimes, they are excellent raw material for intensive efforts toward psychiatric and educational rehabilitation. However, as will be indicated below, needed personnel and facilities to this end are not available in sufficient quantity.

The institution has a staff of about 172 personnel. Although the institution has a number of problems stemming from staff shortages and the necessity of adapting an institution for minimum custody adults to one serving youthful offenders, we think it

is being operated as well as could be expected. The hospital is well equipped and at the time of our visit there were only a few patients in the wards. The food, as at the other Federal institutions, was excellent. Federal Prison Industries operates a wood furniture shop, and the boys learn the wood-working trade in the manufacture of book-cases, desk trays, costumers, and other articles of office furniture. The institutional shops building also affords training in a number of trades.

At the time of our visit the institution had no psychiatrists. In the course of our conversation with the warden we learned that one had just left and the new one assigned by the Public Health Service had not arrived. However, the professional staff did include a qualified psychologist and a number of trained workers. It was our feeling that the institution should have a staff of several psychiatrists, particularly in view of its designation as a youth center. The absence of a more adequate staff of psychiatrists may be partially attributed to the general shortage of psychiatrists in the Nation, which would make it difficult for the Public Health Service to recruit a sufficient number for service in the Federal Prison System, even if sufficient funds were appropriated therefor.

We had also expected to see a larger number of boys receiving instruction in the academic classrooms. But there were two successive escapes at the time of our visit, and the schoolrooms were closed while some of the staff were engaged in attempting to apprehend the escapees. The educational building did not appear to be large enough to meet the requirements of a youth center, but we understand that the construction of a more adequate educational building is on the long-range construction schedule for Ashland.

Although a large area in beautiful Kentucky countryside was acquired for this institution, we were somewhat disappointed with the physical plant at Ashland, for its appearance and layout were not what we had expected to see in a youth center. This is due to the fact that it was originally designed for adults. It is our understanding that the Federal Prison System at present does not have any institution which was specifically designed for youths, and funds have never been available to design and construct an institution of this type since the enactment of the Federal Youth Correction Act. Director Bennett has informed us that the long-range construction schedule of the Bureau of Prisons includes three such institutions, and it is our hope that the Congress will appropriate the necessary funds for this badly needed construction at an early date. Only through such construction can the full intent of the Federal Youth Corrections Act be realized.

Lexington

This narcotics hospital operated by the U.S. Public Health Service was activated in 1935. It is located on a tract of over 1,000 acres of rolling Kentucky bluegrass country. It accepts male addict patients from the section of the United States east of the Mississippi and female patients from the entire country. The number of patients at any one time averages about 1,000, including about 500 who are serving terms of imprisonment, about 375 who have voluntarily committed themselves, and a number of other types of addicts and nonaddicts.

We were informed that a very high percentage of the admissions during the year, however, are voluntary patients. The hospital has no authority to retain them, and at least half of them leave as soon as they have been withdrawn from drugs. Most of the remainder also leave before they have completed the full course of their treatment. A further defect in the treatment of the volun-

tary addict lies in the fact that there is no follow-up program in the communities. The high rate of relapse among these addicts therefore can be blamed not on the inadequacy of the treatment that is available for them but on the inability of the authorities to subject the addicts to the full benefits of that treatment. It seems to us that there should be some statutory requirement that the voluntary patient must remain at Lexington for the full period prescribed by the medical staff and not permitted to leave whenever he chooses.

The hospital has a complement of about 600 persons, all of whom are U.S. Public Health Service personnel. The newly admitted addicts are studied much as prisoners are in the institutions of the Federal Prison System. There are also a wide variety of opportunities for vocational training. In addition to training in the several institution departments the patients may learn occupations in the four industries: printing, woodcraft, needle trades, and agriculture.

In the absence of the medical officer in charge, the second in command gave us a thorough tour of the institution by means of slides; following the slide tour we inspected those parts of the hospital which particularly interested us. Our host explained to us the difficulty of convincing addicts that the desire to be cured of addiction must start with themselves and cannot be generated by anyone else. To bring about this insight the hospital depends on the group therapy technique, in which a group of 20 or 25 patients discuss the problems associated with their addiction. We participated in one of these discussions, and found that it was a particularly enlightening experience. The addicts in the group by and large were educated and intelligent men. Among the subjects they discussed and emphasized were those of entrapment and the mandatory phases of the Narcotics Control Act.

None of the visiting judges, incidentally, approved of the mandatory provisions of any penal statute. We feel that very often, particularly with reference to the addict seller of a few small packets of narcotics, the minimum mandatory sentence may produce an injustice. The judges should be given the same discretion in dealing with narcotics offenders as they have for any other type of offender; if a severe sentence is indicated the courts can recognize this requirement and impose a maximum term.

Chillicothe

This institution was built over a period of years beginning in 1926 and its buildings now spread over a 72-acre enclosure on its 2,000 acres of splendid Ohio rural country. Its age is apparent in the deterioration of some of the buildings, particularly the dormitories. At the time of our visit considerable construction was underway with the use of inmate labor, including the erection of new chapels for Protestant and Catholic services.

The population of the reformatory averages in excess of 1,200; the majority were committed under the Federal Youth Corrections Act, a few under the Federal Juvenile Delinquency Act, and others under regular adult procedures. Most commonly the inmates were convicted of violations of the Dyer Act and were committed from the district courts of the northeastern and midwestern regions of the United States.

We were tremendously impressed by the manner in which the reformatory is operated. It has a staff of 326 personnel, many of whom have seen service in other institutions of the Federal Prison System. All of those with whom we came into contact appeared to be well trained for their duties and dedicated to the basic mission of the institution.

The inmate training program appeared to

be particularly well organized and thorough. The Aviation Mechanics' School is an outstanding example. It is operated through the cooperation of the Civil Aeronautics Authority, which approves the instructors, supervises the examinations which are given to the students, and issues certificates of qualifications to those who pass. A similarly high level of operation characterized the reformatory school. The youths who successfully complete their high school courses receive certificates that do not bear any indication that they were earned in a penal institution; they are issued by the Sherman High School with the authorization of the State Board of Education. The certificates are therefore a considerable help to released inmates in securing employment.

The other training opportunities were also excellent. The reformatory has a chair factory where the youths may learn production skills and earn a small wage at the same time; the working conditions and safety measures of the factory compare favorably with those of modern factories in the free community. In addition, there is a large number of well-equipped shops where the youths may undertake trade training that meets the requirements of the Ohio State Apprenticeship Council. Trainees in these programs are registered with the Council, under a formal agreement, and receive apprenticeship credit which may be applied toward journeyman certification. Also, several of the trade courses have been approved by the Trade and Industrial Service of the Ohio Department of Education, and each graduate receives a certificate from this agency for successful completion of the courses. An employment placement officer on the institution staff helps these young men obtain employment in line with their training when they are released.

We were well satisfied with the hospital and medical situation at Chillicothe. The chief medical officer is an unusually dedicated individual who previously worked there many years ago, went into private practice long enough to earn a degree of financial security for his family, and then returned to reformatory work, his real interest. While visiting the hospital we observed the doctor performing cosmetic surgery on a boy whose skin was badly scarred from acne. This boy's rehabilitation should be considerably enhanced by an improvement in his appearance which will make him more presentable to prospective employers and society in general.

During the tour of the institution I had an opportunity to speak with one young man whom I had sentenced. At the time of sentencing, this offender had been antagonistic, fresh, and as difficult a defendant as I had ever met in 17 years on the bench; the defendant had appeared before me on five different occasions for violation of probation and as a last resort I committed him. At Chillicothe the young man greeted me with a smile, and during the course of our conversation said that he had learned his lesson, realized that I had been trying to help him, and intended to use his time at the reformatory to improve himself.

Lewisburg

The U.S. penitentiary at Lewisburg, Pa., is within a walled 26 acre tract on a 1,000-acre reservation. We visited it on a Saturday and therefore did not have an opportunity to view the program in full operation. Nonetheless, we were greatly impressed with the efficiency that characterized the institution, particularly in view of its size. It has about 1,450 inmates in the main institution, 150 in a farm camp, and another 300 in an honor camp about 14 miles north. The original penitentiary was built in 1932, and it is so constructed that many of its buildings radiate from a central corridor.

The inmates come from the district courts in the northeastern section of the United States and are older and more sophisticated in crime than those we saw in Chillicothe and Ashland. The penitentiary also affords a greater degree of custody; it is operated by a staff of 360 persons, about 175 of whom are custodial officers. Warden J. T. Willingham is a 25-year veteran of the Federal Prison System, and was warden at the Federal Correctional Institution at La Tuna, Tex., before coming to Lewisburg. Immediately responsible to him are three associate wardens, each of whom has several departments under his supervision.

Warden Willingham took us on a tour of the entire institution, and as at the other institutions, we were highly impressed by the industrial operation. The penitentiary has three factories—metal furniture, clothing, and custom furniture—which employ more than 500 inmates. The layout of the factories, the safety practices, and the products again can be favorably compared with those of up-to-date industries in the free community.

The hospital was the largest and best equipped that we saw on our trip. The staff includes a psychiatrist, psychologist, medical officers, two dental surgeons, and a number of medical technical assistants. Also, there are a number of specialists in the surrounding communities who are available for consultation when needed. The hospital fully meets the standards prevailing in a big city and has been accredited by the American Medical Association.

It is our view that Lewisburg is well prepared to perform the diagnostic studies on the defendants committed there under section 4208b of title 18, United States Code. The staff's ability in this respect is confirmed by the high quality of the reports we get from Lewisburg indicating a thorough study and evaluation of each case. While we are not bound to follow the recommendations made by the Lewisburg team, it is of considerable reassurance to us in sentencing these defendants to have at hand the studies and recommendations that have been so carefully and thoughtfully formulated.

In connection with the diagnostic studies being made of youth offenders under section 4208(b), it is unfortunate that youths who will eventually serve their sentences at a youth correction center must be mingled with the older and more sophisticated criminals. We are of the firm opinion that new facilities should be made available so that all diagnostic studies of youths may be made at centers specifically designated for such offenders.

New York

We concluded the tour of Federal institutions with a trip to Federal Detention Headquarters in New York City where prisoners committed from the district of New Jersey are first received for transshipment to other Federal institutions. In our estimation, this facility approaches a disgrace and it is unfortunate that one must confess that it is a Federal institution. It is a converted garage near the riverfront with a continual extermination problem because of vermin from adjoining and contiguous buildings. The so-called dormitories resemble medieval cages with bars on the sides and tops.

These remarks are not meant to be derogatory to the warden and his staff. As with the staffs of other institutions visited, they impressed us as well qualified and doing an excellent job despite the plant handicap under which they function. Our inspection of the cafeteria and kitchen indicated that the food was of the same high quality as that found in other Federal institutions. The medical facilities are also good, with a sufficient number of beds and trained personnel; also, when necessary, the ambulance

service can transport inmates to New York hospitals.

The jail has a severe problem in the daily in-and-out movement of prisoners. There is a steady flow of men to and from the courts in the southern and eastern districts of New York. Prisoners are also being removed to different jurisdictions, and others are being transferred by bus or by U.S. marshals to the institutions designated for service of sentence. In a single year there are nearly 14,000 such movements of men in and out of the jail, requiring a staggering amount of processing for the small staff of 64 persons.

Generally, there are three types of prisoners detained at the facility: first, there are those who are being held pending plea or trial and who are presumably innocent; second, there are those who have been sentenced to term imprisonment and who are being held for classification and/or transfer to the place of their ultimate incarceration; and third, there are those who are not criminals in the correct sense of the word—deportees and those held for administrative purposes. Although we appreciate the fact that a single detention headquarters is the most economical manner of handling the unique problems of this institution and we realize that the present available facilities offer no alternate solution, we feel a fundamental mistake is being committed in commingling the three different types of prisoners. Those who are not criminals in the correct sense of the word should not be compelled to associate with those accused or convicted of crime, and some attempt should be made to segregate those held in default of bail from those already convicted. Under the present physical conditions this is almost impossible.

General impressions

Except for the Federal Detention Headquarters in New York City, we wish to compliment the authorities for their selection of sites for the institutions we visited and the acreage acquired. The institutions are all located in beautiful areas of the various States and sufficient acreage exists for whatever expansion may be required.

We left each institution visited with the impression that it was efficiently administered. Any inadequacies we found and may have criticized in this report result from physical inadequacies of the plant and not of the personnel. The inmates are treated well and every effort is made to promote their health and well-being by personnel who are entitled to our highest regard and respect for their apparent dedication to their work. Our conversations with the inmates, including some whom we ourselves committed, indicated that their morale was quite good and that they were fairly treated.

Except for the lack of sufficient psychiatrists and the difficulty in recruiting them for prison duties, the medical facilities and services are in general quite excellent. Of particular significance was the fact that only a small percentage of the hospital beds were occupied; and those were cases where such treatment was necessary. It indicates a minimum of malingering which usually results from dissatisfaction with prison conditions.

Conditions in all the institutions regarding food were outstandingly excellent. Kitchens were clean and well managed; diets were balanced, the calorie and protein rate was high; the menus were prepared well in advance and met the high standards established by the Director of Prisons in Washington. A very salutary practice in each Federal institution is that the warden and staff eat the same food as the inmates. Of particular note was the fact that each cafeteria was pleasantly decorated and furnished with tables for four instead of the ancient regimentation at long, bleak, board tables.

It was noted that all of the institutions were racially integrated, and we saw no evidence of segregation other than that voluntarily chosen by the inmates themselves.

Religious services are available for all faiths and every effort is made to encourage the spiritual growth of inmates. The programs are fair and adequate and all areas of an inmate's religious welfare are thoroughly covered to permit him to meet his religious obligations. In some instances, it was with great interest that we noted the efforts made by the inmates to beautify the areas set aside for religious worship.

The inmates are afforded a wide range of education and vocational training opportunities. The prison libraries are well stocked and well attended.

Perhaps the greatest impression gained from our tour relates to prison industries, the factories operated by Federal Prison Industries, Inc. It was gratifying to see that almost 100 percent of all inmates were engaged in some vocational or industrial activity, earning money plus additional good time off their sentences. The standard 40-hour week, with overtime pay and extra good time, is the first regularity of employment for many. This is a very important factor in rehabilitation. The machinery and equipment are modern and in an excellent state of maintenance. Working conditions and safety features equal, if they do not exceed, private industry. Though we were aware of the importance of industry to the prison program in earning money and time off for the inmates, as well as the contribution to rehabilitation, it was of equal importance to learn that the products of the industry were not entering the general commercial market and were all being used by various governmental agencies.

On the basis of our observations, we concluded that the Federal judiciary has every reason to have full confidence in the operation of our Federal penal and correctional institutions. The personnel of the Federal system is trying conscientiously to carry out the sentences in the manner that the courts intended. They are also competent by experience and training to perform the diagnostic studies requested from time to time by the Federal courts under the procedures of section 4208(b).

Recommendations

Such deficiencies as we observed in the course of our inspections were traceable to conditions which cannot be directly controlled by the administration of the Federal system. Deterioration in physical plants, obvious personnel shortages, and deplorable overcrowding are matters relating to appropriations. In order to improve the socially valuable work that is being done in the Federal institutions we would recommend that:

1. The Bureau of Prisons should be given the funds to establish youth institutions especially designed, built and staffed to carry out the full intent of the Federal Youth Corrections Act.

2. The Federal Detention Headquarters in New York City be abandoned and a new and adequately designed institution constructed so that the three general types of prisoners can be segregated: (1) those awaiting bail and trial; (2) those committed and awaiting transfer; (3) those held pursuant to administration procedures.

3. Legislation be enacted to provide a minimum period of compulsory commitment and treatment of the addicts who presently are admitted to the Lexington narcotics hospital on a voluntary basis that permits the staff no control over their period of treatment.

4. The U.S. Public Health Service should explore every means of obtaining additional psychiatrists for the Federal Prison System, especially where younger prisoners are confined.

5. Such visits would seem to be a logical extension of the sentencing institute program. In order that the courts may achieve a more equitable sentencing practice, they should be more completely familiar with what happens to defendants after sentence has been imposed. This would improve the courts' ability to evaluate and use with intelligent discrimination the various sentencing alternatives now available. Every sentencing institute for newly appointed judges should recommend that new judges visit a number of institutions as soon as it is convenient to do so. Thereafter, additional visits be made from time to time. Judges who have been on the bench for some time should visit such institutions from time to time.

Conclusion

The judges of the district of New Jersey feel that their visits to the Federal institutions were well worth the time and effort. We gained a tremendous amount of information and more knowledge of the problems of rehabilitating Federal offenders than we had before. This experience will be highly valuable in sentencing the offenders who come before us. We intend to make more visits of this kind, and it is believed that all judges who do so will find them professionally refreshing and helpful.

It should be pointed out that the final report contained herein was prepared after conference with and suggestions from those who visited all the institutions described: Judge Arthur S. Lane, Judge Anthony T. Augelli and Michael Keller, Jr., clerk of the court.

Respectfully,

THOMAS M. MADDEN,
Chief Judge.

VFW Supports Pay Raise and Other Benefits for Military Personnel

EXTENSION OF REMARKS OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. RIVERS of South Carolina. Mr. Speaker, because of the tremendous technological developments taking place in our Armed Forces, there is an all too frequent tendency to overlook the importance of the most essential ingredient—the personnel of our Armed Forces. I share the opinion of many others in this House that the most important single factor in the defense of our Nation is the personnel who comprise our military services. The officer and enlisted personnel who are serving our Nation and protecting our freedom on land, sea, and air in the United States, as well as distant points of the world, deserve our appreciation and support.

As Members of the House are well aware, the Veterans of Foreign Wars of the United States, consisting of 1,300,000 oversea combat veterans, is one of the Nation's most effective organizations in supporting our military personnel and protecting the interests of those who are serving and have served in our Armed Forces. The alert action on the part of the VFW and other veterans organizations in legislative and administrative matters pertaining to military personnel, both active and retired, and their de-

pendents, has been of tremendous assistance.

Consequently, it was reassuring, although not surprising, to read the letter of the VFW commander in chief, Byron B. Gentry, to Mr. Leroy Whitman, editor of the Army-Navy-Air Force Journal and Register, pledging continued VFW support of military personnel. Commander in Chief Gentry's letter was printed in the January 19, 1963, issue of the Journal and Register. In that letter the VFW commander in chief outlined a few of the key issues of major interest to those in the Armed Forces and explained the VFW's position on these issues.

I am particularly glad to note that Commander Gentry pledged the support of a fair pay bill, and urged that it be passed quickly and given an early effective date. It is encouraging indeed to read Commander in Chief Gentry's forceful statement expressing opposition to proposals to delay the effective date of pay increases for our Armed Forces personnel. His statement that—

It is just not fair that military personnel should have their pay increases delayed, for budgetary purposes, while at the same time Government civilian employees are receiving pay increases granted during the past session of Congress—

Deserves the attention and support of both Congress and the Pentagon.

Also, I am confident that our military personnel, active and retired, and their dependents, will derive a genuine sense of reassurance in noting the clear-cut position of the VFW in support of hospitalization and the PX and commissary systems.

I invite the attention of the Members of the House to Commander in Chief Gentry's letter which is printed in its entirety at the conclusion of these remarks.

VFW COMMANDER STRESSES URGENT NEED FOR QUICK PASSAGE OF FAIR PAY BILL

I take this opportunity to assure you that the Veterans of Foreign Wars of the United States will continue to give full support to constructive legislation in the interest of military personnel, active and retired, and their dependents.

Also, I would like to express on behalf of the 1,300,000 combat veterans comprising the membership of the VFW, our appreciation for the longstanding and effective interest which the Army-Navy-Air Force Journal and Register has taken in matters concerning military personnel.

As a result of resolutions unanimously adopted at our 1962 national convention, the VFW is committed to a definite program in support of military personnel. These resolutions of our national convention, which establish guiding policy in such matters, call for support of commissary and post exchange rights of active and retired military personnel. In this connection, we will urge that action be taken to permit retired members of our Armed Forces full and unlimited post exchange and commissary privileges throughout the world. The VFW does not believe that these military personnel should be deprived of such well deserved entitlements because of local restrictions or monetary policies of countries in which the military installations are located. And certainly, it is vitally necessary that selfish commercial interests are not permitted, directly or indirectly, to undermine or curtail the PX and commissary systems either in the United States or abroad.

We also support continuation of adequate hospitalization and medical facilities for our active and retired military personnel and their dependents. The U.S. Government has a clear-cut obligation in this matter, and there must be no default in providing such services.

As a result, also, of the action of our recent national convention, the VFW vigorously supports legislation for an adequate and fair pay bill for military personnel. In this respect, the VFW is of the firm conviction that while it is an artificiality to compare military service with civilian employment as a basis for determining military pay, it is abundantly clear that military pay scales, both officer and enlisted, are far behind civilian standards of compensation.

We will oppose proposals for undue delay of the effective date of such increases as result from pending legislation. It is just not fair that military personnel should have their pay increases delayed, for budgetary purposes, while at the same time Government civilian employees are receiving pay increases granted during the past session of Congress.

In conclusion, I would like to point out that as an organization composed entirely of oversea combat veterans, the VFW realizes that active duty military personnel are, by the nature of their profession, unable to speak out in protection of their own interests. The VFW believes it understands the problems of our military personnel and we will continue our longstanding policy of supporting the interests of those who are serving and have served in our Armed Forces.

BYRON B. GENTRY,
Commander in Chief, Veterans of Foreign Wars of the United States.

Roll Out the Barrel (Pork)

EXTENSION OF REMARKS OF

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. NELSEN. Mr. Speaker, there is fun for all and something for everybody in the administration budget, in view of the editor of the Rock County Star-Herald of Luverne, Minn. Unfortunately, says Editor Alan McIntosh—

It now seems that we have been pushed, not led, to the precipice of national financial suicide.

I submit his editorial for inclusion in the RECORD:

ROLL OUT THE BARREL (PORK)

This administration's war cry which used to be "forward to the New Frontier" seems to be updated to "forward to the abyss."

It now seems that we have been pushed, not led, to the precipice of national financial suicide.

Only a few of the staunchest Democratic leaders in Congress are able to conceal how badly shaken and shocked they are by President Kennedy's \$98 billion budget.

This budget, prepared to suit the philosophy of a man who never met a payroll or earned a dollar in his own right, is so ghastly that people are frightened.

The budget is one gigantic "roll out the barrel" pork distribution for everything and everybody with fun for all and something for everyone.

There is brave talk about tax cuts ahead to get our economy moving again. Only someone who still believes in babies being

found in the cabbage patches will fall for that idea. The Government will continue to take away with its left hand what it giveth in tax cuts with its right.

A \$98 billion budget is beyond the comprehension of most of us.

Statisticians have translated \$100 billion into these terms: \$1.62 per second from Christ's birth to date, \$1 per second for 3,171 years.

The sum total of all the money spent by the U.S. Government from 1789 through 1930.

It would make a stack of dollar bills 6,774 miles high.

No use lamenting the "good old days" when they ran the entire Government on half a billion dollars. (1900.) Even the extravagant F.D.R., whose peak peacetime budget was \$9 billion, would roll over in his grave at the thought of \$98 billion.

Those days are gone forever because the defense of America is going to take a lion's share of all our tax dollars * * * and for years to come.

But the need for keeping America strong in its military posture makes it doubly imperative that we bolster America from internal financial collapse.

There is more than a bit of trickery in the defense budget figures inasmuch as more billions of foreign aid are tucked away in the total.

We do not strengthen America by adding 130,000 new employees to Federal payrolls * * * civilian employees having no connection with defense.

We do not strengthen America by doubling the deficit rate from \$4 to \$8 billion a year.

We do not strengthen America by increasing the civilian payroll from \$13.8 to \$15.4 billion per year.

We do not strengthen America by taking the attitude that we can afford every bit of do-gooder ventures in socialism just because they "only cost \$50 million."

Even the Peace Corps which started out in an itty bitty way now takes a \$47 million cut out of the taxpayer and now the wild eyed are talking of a Peace Corps for within America.

The only way this economy can be gotten off dead center is for the Government to set an example of sacrifice instead of that malarkey about "don't ask what the Government can do for you but what you can do for the Government."

Why Should All Other Taxpayers Pay This Bill?

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. JENSEN. Mr. Speaker, I have sent a letter to the Secretary of the Interior, asking that he disapprove two outlandish proposals now being considered by the Bonneville Power Administration, one of the agencies in his department. In one instance, the agency is proposing to extend its market area to sell power it does not have in an area that has plenty of power at reasonable rates. The taxpayers would be called upon to furnish around \$100 million for the extension at a time when our national debt exceeds \$300 billion and a deficit of nearly \$12 billion is forecast for the next fiscal year. It is unthinkable that any consideration be given to such a proposal at any time, and par-

ticularly so when BPA is currently running into the red at a rate in excess of \$15 million annually.

The second proposal is to extend the payout period and thus permit a new phony paper accounting through which a large part of the present deficits of the agency could be hidden.

In addition, I understand the two proposals taken together are to provide for setting up a basinwide payout scheme, whereby approval of uneconomic and unjustified reclamation projects would be requested on the basis that they could be paid for in the far distant future from presently nonexistent surplus BPA power revenue.

My letter to the Secretary follows:

JANUARY 23, 1963.

HON. STEWART L. UDALL,
Secretary of the Interior,
Washington, D.C.

DEAR MR. SECRETARY: In the early days of your administration of the affairs of the Department of the Interior, I had the feeling we were poles apart on many features of the Federal power program. However, some of your actions in 1962 lead me to believe that you desire to operate in a manner that will protect the taxpayers' interest and also provide a desirable degree of cooperation with both the private and public utility groups.

Recent articles in the press indicate that the Bonneville Power Administration—one of the Interior agencies—is considering two far-reaching proposals that I believe are neither desirable nor justified. I hope that you will come to the same conclusion.

The first of these is a proposal for a new payout system for Federal dams in the Pacific Northwest that would extend the payout on individual power projects to way beyond the 50-year payout periods currently in use.

When the funds for the construction of the Federal hydroelectric projects in the Pacific Northwest were approved by the Appropriations Committee and the Congress, it certainly was with the understanding that repayments would be based on a 50-year payout period. To now change the basis for repayment of the taxpayers' money appropriated for these power projects would not be keeping faith with the Nation's taxpayers.

The present Bonneville power rate is the lowest in the Nation. This low rate was only made possible by the use of—

1. Over \$2½ billion in taxpayers' money.
2. Interest charge below interest cost of long-term U.S. bonds.
3. No local, State, or Federal tax charge.
4. Excessive allocation of Federal project costs to nonpower uses.

Even with this subsidized low rate, Bonneville is currently operating at an annual deficit in excess of \$15 million. Bonneville contends that it will be ahead of scheduled payout by around \$6 million as of the end of the present fiscal year. Actually, if the payout was based on a proper interest charge in keeping with actual interest cost on long-term U.S. bonds, as it should be, there would be a deficit in payout of around \$100 million.

The Bonneville proposal for a change in the payout basis appears to be an attempt to show a paper reduction in Bonneville's tremendous annual losses. I am surprised that Bonneville would put forth such a proposal.

The Bonneville Act provides for making periodic examination of Bonneville power rates to see that the required revenue to meet the payout is obtained. It seems to me Bonneville should be spending its time, not on studies of how to hide its present losses but on studies of what increases in rates are necessary to provide for the actual interest cost on and the repayment of the taxpayers'

funds provided for the Federal hydroelectric projects in the Pacific Northwest. Personally, I think Bonneville power rates should also provide for in-lieu-of-tax payments to Federal, State, and local treasuries, equivalent to those being assessed against private utilities.

I am sure that you will not approve this outlandish proposal by Bonneville before it has been considered by the proper committees of Congress.

I cannot believe that the people in the Seventh Congressional District of Iowa which I have the honor to represent, as well as the people in most other areas of our Nation, should be called upon to help provide lower-than-cost power for the Pacific Northwest. Surely, if the Missouri River Basin power rate of 5½ mills per kilowatt-hour and the Colorado River Basin power rate of 6 mills can be absorbed in those areas, there can be no justification for trying to juggle figures in an attempt to justify holding the present BPA rate at a little over 2 mills.

The second Bonneville proposal relates to a proposed extension of the Bonneville power marketing area into southern Idaho. From the press reports, it appears that Bonneville and Bureau of Reclamation officials have held a number of public hearings in Idaho to build up support for their scheme. At such hearings, the Federal officials were forced to admit that no economic analysis had been made in the matter. Also, according to the press, an Idaho State official has labeled the proposed BPA report "an absolute farce" and said that the report was being made without the necessary background data.

I can agree with the Idaho State official that the BPA proposal is a farce of considerable magnitude, when by Bonneville's own admission it will be short of firm power in its present market area by 1965, and that there are estimated to be increasing deficits in firm power with the total reaching over a million kilowatts by 1970.

The extension of BPA power into southern Idaho appears to be coupled with a proposal for a sort of basinwide payout of reclamation projects to be accomplished by administrative action.

In my opinion, neither of these Bonneville proposals is justified in itself. Taken together, they constitute a brazen attempt to achieve by administrative action some very questionable end results not considered or approved by the Congress. It is an attempt to hide part of Bonneville's large annual deficit, on the one hand, and on the other hand to achieve a basinwide payout system to secure approval of regionwide projects on the claim that they can be paid for from theoretical surplus BPA power revenue in some far distant future.

In order that the other Members of Congress and the people of the Nation may be made aware of what these two bureaucratic agencies in your Department are proposing, I am inserting this letter into the CONGRESSIONAL RECORD.

I hope you can advise me that no serious consideration will be given either of these proposals.

Sincerely yours,

BEN F. JENSEN.

Thomas Kennedy

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. BRAY. Mr. Speaker, Thomas Kennedy, president of the United Mine

Workers of America, died January 19 at his home in Hazleton, Pa. He was a labor leader of the first rank; one who, over a long period of years, saw his industry and the union movement grow and increase in strength.

Among the many tributes sent to Mr. Kennedy's widow are the following comments from the men who had worked with him for many years:

The passing of President Thomas Kennedy has left a vast void within the ranks of our organization. He, for more than half a century, devoted his life in promoting economic benefits through legislation and collective bargaining which has brought about workmen's compensation laws, pensions, unemployment insurance, safety laws, increased wages, and improved working conditions to the coal miners and the working men and women of America. His voice was always raised publicly and privately in the legislative halls of the States and the U.S. Congress in behalf of a better America and a better way of life for all its citizens. He served with distinction as Lieutenant Governor of the Commonwealth of Pennsylvania and on many governmental boards to which he was appointed by the Presidents of the United States. He represented the United Mine Workers as a delegate to the International Confederation of Free Trade Unions and the Miners' International Federation while giving his vast knowledge and strength as one of the executive officers of our international union. His leadership was recognized by all who came in contact with him. He was admired and respected not only by the coal miners but the coal operators as well. His passing is a tremendous loss to our union and its membership. He was a gentleman, a labor statesman, and a great American. In behalf of our membership, we extend to you and the members of his family our sincere sympathy.

UNITED MINE WORKERS
OF AMERICA,

JOHN L. LEWIS,
President Emeritus.

W. A. BOYLE,
Acting President.

JOHN OWENS,
Secretary-Treasurer.

Washington: Mostly Boondoggling and Brassy Hypocrisy

EXTENSION OF REMARKS
OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial written by Charles Dancy.

WASHINGTON: MOSTLY BOONDOGGING

WASHINGTON, D.C.—There's not a thin dime that can be cut from the new, mammoth U.S. budget, you know, without sabotaging America in the cold war or wrecking our national security. It is the pure necessity of this bitter struggle for peace that makes a \$98 to \$99 billion budget absolutely essential even with an also essential tax cut—so we must just accept a \$10 billion-and-up deficit.

Sure, it's all essential.

Like the new airport at Peoria for private planes, and perhaps one at Peoria, too, and

in other cities and towns across the Nation. This is an urgent problem, friends.

And the new Federal buildings, each costing millions, that are sprouting up in LYNDON JOHNSON'S native Austin, Tex., and all across that fair State, nowadays—everywhere, that is, except in booming Dallas, Tex., where they have admittedly had a desperate need for new facilities and Federal agencies are scattered all over creation.

Republican Dallas can get along without, while Democratic Fort Worth, just next door, will join the list of other cities with much less urgency who will get new Federal buildings in this essential, "pared to the bone" budget just submitted.

Fort Worth, Austin, and so forth can get along without just as easily, and in most cases more easily than Dallas, and we fail to see how this multimillion-dollar boondoggle in Texas is going to get us to the moon faster, save the free world, or frighten the Russians.

Tragically, every cost control expert and major executive in any business in the land, large and small, knows that this very care-free attitude on "little" costs is precisely what accumulates into a fiscal disaster.

Sure, we want some, too. If they aren't going to leave it here, we want some of our money to come back here. We're sick and tired of leading the pack in paying taxes and being the tail-ender of all the 50 States of the Union in getting any of it back.

But that practical reality doesn't mean we have to pretend that this huge budget and its huge accepted deficit is really made up of life-or-death expenditures for the Nation.

It is just not the truth. It is armpit deep in politics and special interests—as usual.

AND BRASSY HYPOCRISY

The funniest thing in Washington these days is the screaming that goes up from the administration Democrats (that's just one of several categories) over Senator EVERETT DIRKSEN'S comment about the need for investigating the Cuban invasion attempt to set the historical record straight.

"No partisan investigation," they screech. "Nothing political." Yessiree, any political, partisan, or not completely objective investigation would be indecent, improper, and immoral.

So, they just want to let the record ride on the investigation that WAS made, and the beautifully "impartial" report that has just been made by said chief investigator, that impartial, objective, disinterested, nonpartisan, nonpolitical, noncontroversial young man—the President's brother, campaign manager, and Attorney General, Bobby Kennedy. The perfect, fair minded, unprejudiced investigator, obviously.

What classic, open-faced, brassy hypocrisy it is now to protest piously against any partisan or political investigation.

What the devil do they think we have just had?

The Chenango Union Comments on President Kennedy's Tax-Cutting Proposals

EXTENSION OF REMARKS
OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. STRATTON. Mr. Speaker, as the Members of this House begin their study of President Kennedy's 1964 budget, together with his proposals for substantial

tax cuts to get our economy moving again, I commend to their attention the following thoughtful editorial from the Chenango Union, one of the outstanding weekly newspapers in my district and indeed in the entire upstate New York area. The editorial appeared in the issue of January 24, 1963.

THAT BUDGET

The big newspapers are making a fuss over the President's budget. They keep asking how you can cut taxes and yet let the Government spend more money. Every big newspaper runs notices of sales of merchandise at cut prices. There would be no such sales if they didn't bring in more money. Cut taxes and you increase the number of taxpayers. The money left in the hands of the citizens will be spent. Every added transaction will bring in more taxes.

We have a certain number of people who have more money than they can use. Some of them will not invest in new industries or even to promote the growth of established industries. Our President intends to get some of that kind of money into circulation. The value of a dollar is usually measured by what you can get for it. Another measure is by what you can make it earn. Idle money earns nothing.

Without squeezing more dollars out of people who do not have enough the President intends to use the economic sinews of the Nation to get things moving in high gear. He knows what makes wheels go and what makes them stop. We are not making as much money as we should because we have too many people who will not spend some to make more. The President believes in a dynamic economy. Those big words mean let's put our money to work.

We have been plagued by strikes. Merchants, in cities, lose business because there are no newspapers to announce their sales. Other cities suffer from clogged traffic arteries because there are no public means of transportation. Docks have been loaded with merchandise that could not be moved. The unwillingness of some people to spend money in order to make more money has been a factor in most of these situations.

We do not say that labor is always justified in its demands. But when thousands of workers go without pay, for a long time, there must be some reason. Our President has made it clear that he will crack down on labor when it gets unreasonable. He proves himself to be a true friend to labor by proposals that will increase employment by increasing private purchasing power.

We have plenty of money in the United States of America. A man may have plenty of blood and yet die because his heart stops pumping to make the blood move. The President is asking the Congress to function with pulsating power to invigorate our economy. He wants all of that American money to be working for the American people. We hope our Congressmen get with the idea.

Federal Bar Association's "Justice" Series

EXTENSION OF REMARKS
OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. TOLL. Mr. Speaker, I believe that all Members of Congress will be pleased to learn about a new series of radio programs entitled "Justice" which has been inaugurated by NBC Radio Monitor in

cooperation with the Federal Bar Association.

For about 26 weeks on Saturday or Sunday, on approximately 200 stations around the country, millions of listeners will hear how the Government agencies safeguard the rights of all citizens.

The "Justice" series is intended to give listeners a more intimate knowledge of the various law enforcement agencies in the Federal Government from the Secret Service agent protecting the life of the President to the Food and Drug inspector protecting the interests of the corner drugstore shopper. The objective is to generate a greater respect for the law and those who enforce it by presenting a fuller understanding of the work of these Government agencies.

The National Broadcasting Co., Inc. is to be highly commended for this important public service. I want to especially mention the following representatives of NBC whose vision and creativity made this series possible: Howard Monderer, Esq., NBC Washington attorney and member of the Radio and Television Subcommittee of the Law Observance Committee of the Federal Bar Association; Russ Ward, NBC commentator; Ted Steele, NBC commentator; Bob Mauer, executive producer of Monitor; and Robert Wogan, director, programs, NBC radio network.

My distinguished colleague, the Honorable RICHARD E. LANKFORD, who is the national president of the Federal Bar Association, is to be congratulated on the work of the association's law observance committee, which arranged the series.

Address of Administrator John E. Horne of the Small Business Administration

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. EVINS. Mr. Speaker, Mr. John E. Horne, Administrator of the Small Business Administration, recently addressed the 21st annual convention of the Mid-South Farm Equipment Association in Memphis, Tenn. Mr. Horne in an excellent speech pointed out some of the services of the Small Business Administration and how the SBA is helping the small business community. He points out that our private free enterprise system requires the existence of a strong small business community.

He then tells some of the ways in which the SBA has contributed to the strengthening of the small business segment of our economy.

Mr. Speaker, I believe my colleagues who are interested in knowing more about the work and operations of the Small Business Administration and others interested in SBA will find Mr. Horne's speech quite informative.

I ask unanimous consent that this speech be reprinted in the Appendix of the RECORD.

The speech follows:

ADDRESS PREPARED BY JOHN E. HORNE, ADMINISTRATOR, SMALL BUSINESS ADMINISTRATION, BEFORE THE 21ST ANNUAL CONVENTION OF THE MID-SOUTH FARM EQUIPMENT ASSOCIATION, INC., HOTEL PEABODY, MEMPHIS, TENN., MONDAY, JANUARY 14, 1963

Good morning, it is a pleasure to be with you, and at the very outset I want to express thanks to your executive director, Thad Caraway, for inviting me here on behalf of your association.

As one who was born on a farm in Clayton, Ala., and can recall the days of horse-drawn plows and reapers, and the fields of cotton that were picked by hand, I am continually gratified and amazed at the vast changes that have come to the farm since I was a boy.

In 1910, there were about 24 million horses and mules and only about 1,000 tractors on farms in the United States. Today, there are some 5 million tractors and only 3 million horses and mules.

In my opinion at least, modern mechanized equipment has done as much for farming as rockets and satellites have accomplished for space science. We now have things down on the farm—"pop-up" bale loaders, straw choppers, "sure-feed" seeders, chisel plows, tillage tools, and whatnots, that would have startled farmers right out of their boots, except that most of them didn't wear boots, if they had even heard about them 40 or 50 years ago.

We have in the United States the most efficient and productive agricultural plant in the world. One American farmer today produces enough, on the average, to supply the food and fiber needs of 27 people.

As Secretary of Agriculture Orville Freeman pointed out in a recent speech, farm income has improved substantially, even since 1960. He said that net income from farming averaged \$373 higher per farm in 1961 as compared to 1960, and according to his figures, total net farm income in 1961 increased by \$1.1 billion over the previous year.

It is clear that our farm production is in better balance with our markets and needs than for many years. It also is clear that farmers constantly require additional tools and machinery with which to work their fields or produce their dairy and meat products.

New and better farm equipment is coming off the assembly lines every day. You are the people who buy this equipment from the manufacturers, so you are more aware than I of the progress that is being made in farm machinery and methods. You also are the people who sell this equipment to the farmers, and so are well familiar with their needs.

I am told that many of you are anxious to expand and modernize your businesses.

To do so, you may be in need of financial assistance. In this and in other areas, the programs of the Small Business Administration may be of deep interest to you. Before discussing these programs, though, let us examine briefly how the small businessman fits into our country's overall economic picture today.

When we speak of "American business," we are speaking largely, in numerical terms at least, of small business. Of all the business firms in operation in this country, more than 4½ million, or some 95 percent, are "small." And they account for about 45 percent of the Nation's employment and 40 percent of our total business activity.

During fiscal year 1962, there was a net nationwide increase of 40,000 firms, the vast majority of them being small independent concerns. In the first 7 months of 1962, more than 112,000 new businesses were incorporated, 3.4 percent more than during the same period of last year. Business failures

declined in every major industry category, and particularly in manufacturing and the retail trades.

Many business statistics bear a particular relevance to small firms. Retail sales reached an alltime high in October. For the nearly 2 million retailers this figure, like the high levels of personal income and of personal consumption expenditures, is encouraging news. A larger percentage of the gross national product has in recent years been attributed to the service industries which are predominantly characterized by small businessmen and are traditionally strong in adaptability, service and specialization.

I view these developments as encouraging news for the small business community.

Our private free enterprise system, which is basic to our liberty and to our prosperity, demands the existence of a strong and vigorous small business segment of the economy.

This is where the Small Business Administration comes in. This agency was established by Congress, not to dominate or control, but to provide the kind of services which will encourage and support the growth of small firms throughout the Nation.

We have four major areas of activity. They are, our financial assistance programs; our procurement programs; our management counseling services; and our activities as the small business spokesman in the executive branch.

First, let us take our lending activities. More than 9,000 loans for over half a billion dollars have been approved by SBA during the first 18 months of this administration, double the amount during the previous year and a half.

Several measures have been taken to speed up loan processing and otherwise to improve our lending procedures. The most recent was last September, when SBA and the American Bankers Association announced a new cooperative lending program which opened a significant new source of intermediate-term loans for small companies. Under this program, banks will lend 50 percent or more of approved loans and will receive repayment of their share of the loan before SBA is paid its share of the loan.

The chief purpose of this plan is to enable banks to participate in loans of up to 10 years.

This is simply the most recent step in our continuing efforts to increase participation with the banking community so as to make more adequate financing available to small businesses.

As you know, it is SBA's policy to supplement the bank, rather than to replace it, or to compete with it, in making loans to small companies. We actually have a requirement that before a small businessman can get a direct loan from us, he must be unable to obtain the financing from a private lender. We are pleased that about two-thirds of our loans are made with bank participation.

I want to emphasize, however, that we have the authority to make loans directly, and to approve the full amount of the loan. Thus, if for some reason a bank will not or cannot make a loan or any part of it, we will make the full loan if it is a sound and eligible application.

SBA has made a number of loans, many with excellent bank participation, to farm equipment dealers in your area.

For example, in one small town we made a \$50,000 loan with 25-percent bank participation to a dealer who needed the funds for working capital. We made him this loan at 4-percent interest, since he was located in an area of substantial unemployment. Our regular rate of interest is 5½ percent.

Another one of our loans went to a tractor company in Mississippi which had outgrown its building space and was using its parking lot for machinery and equipment.

This firm borrowed \$25,000 which it will use to construct a new building.

Thus, if you are in need of a loan and for some reason can't negotiate with the bank, you may want to visit one of our field offices. To try to give you personalized and convenient service, we have set up 60 field offices from coast to coast, and in Alaska, Hawaii, and Puerto Rico. In Tennessee, you will find one in Nashville and Knoxville. There also is one in Jackson, Miss.; Louisville, Kansas City, and St. Louis, and Little Rock.

In addition to our regular business loans, we give financial aid to victims of major disasters. We are also authorized to make loans to small business concerns, which have suffered substantial economic injury because of drought or excessive rainfall in their areas. This means that any dealer in an area officially designated as a disaster area because of either excessive rainfall or drought, may borrow money from SBA at 3 percent interest to tide him over until the farmers are in a better position to meet their debts.

You are all familiar, I am sure, with the financial aid we give to victims of major disasters, such as floods and storms. We have made a number of disaster loans in the Kentucky, Tennessee, Arkansas, Missouri, and Mississippi area.

Our lending programs also extend to the more than 630 small business investment companies throughout the Nation. Fifteen of these companies are located in Tennessee, Missouri, Mississippi, and Arkansas.

These small business investment companies, in many cases supplementing their own investments with funds borrowed from SBA, fill a great need in providing long-term loans or equity financing to small business. A larger firm can sell stock or borrow long-term money at reasonable interest rates from a private lender. A small businessman, as you know, usually cannot meet the cost of a public sale of stock, and private financing institutions have traditionally been reluctant to make such long-term commitments. Under the small business investment companies program, the small firm may be able to obtain either long-term debt or equity financing, or both.

Latest figures show that the small business investment companies have capital and surplus of more than half a billion dollars and have made over \$300 million in loans and investments to 4,200 small firms.

Small business investment companies are making and will, I hope, continue to make high-risk investment. This they must do if they are to fulfill their function of helping small business concerns needing ten, fifty or a hundred thousand dollars or more on a long-term basis to expand their businesses or to promote new markets. These are the firms which, up until the establishment of the small business investment companies program in 1958, had literally no place to go to obtain the long-term financing they required to meet their problems. As a result, they either had to find a partner or several partners or somehow generate their own funds, a slow and frequently unsuccessful procedure.

Now, I would like to review briefly some of our other services in which you might have a special interest. Lack of sound management practices constitutes the greatest single cause of small business failures, and we are endeavoring to help small firms overcome this difficulty. One of the ways we are doing this is through our management counseling programs. One such program includes management courses which are usually cosponsored with universities or colleges.

During the past 2 years we have greatly increased the number of these courses. To date, more than 50,000 small businessmen have taken these courses throughout the Nation.

In addition, we have a great number of publications which you may obtain from our field offices. We finance management research studies as another aspect of our counseling services.

For example, we financed a management research summary on farm equipment retailing in Louisiana. This summary has just been released. While the research was done by persons affiliated with Louisiana State University, I believe the contents pertain sufficiently to your areas to be of interest to you.

The study shows that in 1960 the State of Louisiana had 214 retail farm equipment dealers who sold about \$60 million worth of farm machinery. Farm expenditures for gasoline and other fuel amounted to another \$20 million.

Information received from questionnaires showed that on the average, 56 percent of a firm's business was realized from equipment sales, 24 percent from spare parts, and 20 percent from the service department.

About half of the firms sampled said they started with some borrowed capital, and more than half also borrowed part of their annual operating capital. Very few of the firms leased equipment to farmers, but interest in this practice appeared to be growing.

The study was made to obtain data that might lead to a better understanding of the farm equipment retail business, which is an important segment of Louisiana's economy. You may obtain copies of the full report from the Louisiana Agricultural Experimental Station at Louisiana State University.

Perhaps you are familiar with our set-aside program for small business through which we assist small firms to obtain a fair share of Government contracts. If you sell or have a desire to sell to the Government, you will want to explore the possibilities of this program.

Regardless of what the product is, the Government is doing its best to see that the small firms get full opportunity to share in Government business, and this includes everyone, from the businessman who sells office equipment to the manufacturer who makes airplane parts.

And I also wish to point out that the Small Business Administration acts as spokesman for the small business community in the councils of Government.

As you may know, one of the first things President Kennedy did after he took office was to establish a White House Committee on Small Business. This Committee, of which I am Chairman, includes representatives of the Departments of Commerce, Defense, Justice, Labor, and Treasury, and the representatives of the Bureau of the Budget, the Council of Economic Advisors, the Federal Trade Commission, the General Services Administration, and the Housing and Home Finance Agency.

Among other proposals, the committee thought it would be a good idea to hold tax clinics for small businessmen. And this we are doing jointly with the Internal Revenue Service. Kansas City and St. Louis, Mo., are among the cities in which these 1-day clinics are scheduled to be held this month.

SBA is constantly seeking new and proper avenues of assistance to help the small businessman to grow and prosper.

And for good reason.

Small business is part of our individualistic, independent way of life, one of the distinctions between this Nation's free and open society and a totalitarian state.

Small business constitutes a large and diversified source of employment opportunities. They serve the public interest by helping to preserve competition and to insure high quality and reasonable prices.

They can perform some services better than large firms. They are frequently the source of new products and new methods. And, since small business is dispersed

throughout the country, it becomes vitally significant in times of national emergency.

In conclusion, I want to leave these thoughts:

1. If you need counseling or other assistance, see our representatives at our field offices. The Small Business Administration exists solely to help you and other small businessmen.

2. The Small Business Administration and the national administration, President Kennedy and his Cabinet, are friendly to business, including small business. This, I think, is made clear by several things, but especially by the new tax depreciation tables, the tax investment credit program, and now by the proposed new tax reduction.

3. Finally, I read in a recent issue of your monthly magazine that the farm equipment business has improved 100 percent in the Midsouth in the last 3 years and that the outlook for the coming year is for further increases. This prediction ties in with an overall favorable outlook for a moderate business rise this year. Certainly, I wish you success in obtaining a good share of it.

How To Approach Your Congressman

EXTENSION OF REMARKS OF

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. LANGEN. Mr. Speaker, Mr. H. C. Warfield, a constituent of mine from Bemidji, Minn., has supplied me with a copy of a very interesting article. I would like to share it with my colleagues today. The article appears in *Span*, the Standard Oil Co. publication, and was written by our former colleague, Frank N. Ikard. His appropriate remarks are drawn from his experiences during the 10 years he represented the 13th Congressional District of Texas. I respectfully submit his article for inclusion in the CONGRESSIONAL RECORD.

HOW TO APPROACH YOUR CONGRESSMAN

(By Frank N. Ikard)

(EDITOR'S NOTE.—Many Americans have a sincere desire to have more of a voice in National Government than voting, but confess a lack of understanding as to how and when to communicate effectively with Congressmen. We asked Frank N. Ikard to provide some suggestions from a Congressman's point of view. Now executive vice president of the American Petroleum Institute, Mr. Ikard for 10 years represented the 13th Congressional District of Texas in the U.S. House of Representatives. His views follow.)

People have wanted to know how to influence Congressmen since the first days of our Republic. In recent years, even Madison Avenue has come into the act. Instructions, bulletins, pamphlets, and recommendations in depth have poured out from New York and Washington headquarters of various organizations to the grassroots level, urging each member to "write his Congressman" on issues affecting the organization.

As a Member of Congress for 10 years, including 6 on the Ways and Means Committee, I was on the receiving end of this barrage of response.

My recommendations for effective communications are simple: (1) Know your Congressman; (2) know your subject; and (3) know the procedure to follow.

1. Know your Congressman. If you don't, it is your own fault; a Congressman is about

the easiest public servant to meet. Up for reelection every other year, he has little time to mend fences, work up grassroots support, or find material support. He must continually maintain all of these prerequisites. If he ever loses these contacts, he will be replaced by a new man who has been "out meeting the people."

When he does get back to his district, he is eager to meet as many constituents as possible. He wants to know you and your problems even more than you want to know him. Next time your Congressman comes home, go to his office and meet him. Then, later, when you get in touch with him, he will have a personal feeling about your problems.

This applies to every constituent, regardless of party. Suppose you are a Republican and your Congressman a Democrat who knows you have not supported him in the past. Get to know him, anyway. More votes cast in the House and Senate cross party lines than those cast strictly along party lines. Your Congressman represents all his district, Democrats and Republicans alike. He desires to please all his people all the time, even though he knows this is impossible. Because you are on the opposite side, he should be doubly eager to find some common ground to win your support. To the true professional in politics, the best way to destroy one's enemies is to make friends out of them.

Don't fall out with him because, he doesn't vote your way on every issue. Keep your eye on the main issue. Suppose, for instance, your principal interest is legislation on the taxation of cooperatives. After discussing it with your Congressman, if you feel you see eye to eye on it, don't ruin this beautiful relationship by writing him a nasty letter when he votes for a new dam in the West, or more public housing in the East. You don't know what his commitments are on these subjects. Give him the benefit of the doubt. He will appreciate it.

2. Know your subject. Of the sackful of mail hauled into a Congressman's office every morning, only about 1 letter in 25 will be from a constituent who really knows his subject. The Congressman has, at best, only 3 or 4 staff members to answer about 300 letters a day. They can't tarry trying to explain in detail what the facts are, because tomorrow will bring in another 300 letters. So, the misinformed letterwriter receives a vague but pleasant stock reply that pleases no one, including the Congressman.

In 1962, the Senate Finance Committee was holding hearings on a tax bill that would have withheld, at the source, a percentage of interest and dividends. Senators on the committee averaged as many as 3,000 to 5,000 letters a day on this issue. They were appalled to learn from these letters that many of their constituents didn't know they already owe income tax on their interest and dividends. Their indignation only emphasized what the Treasury Department contended all along: that many citizens, through ignorance, were not paying this tax.

So, if you don't know your subject, your letter could do more harm than good.

The best evidence, as in court, is your own personal experience. Base your request on what you know from your own experience. Give your Congressman facts and figures clearly and concisely. Tell him how the issue would affect your own business.

One good source of information is your trade organization. Most of them have staffs in Washington who keep a constant stream of advice pouring out on every subject that would affect your business or organization. They're not always infallible, but on the whole, they do a good job in keeping you informed about what is happening in Washington.

3. Know the procedures to follow. Let us assume your primary issue is taxation of cooperatives. Your Congressman is, let us say, a member of the House Committee on Foreign Affairs. As such, he attends daily committee meetings from 10 a.m. until Congress convenes at noon. He's an expert on subjects under consideration by his committee, but not necessarily on other matters. From noon until about 6 p.m. he is on the floor of the House where legislation being voted upon requires his presence, or else he is back meeting with his committee. After 6 p.m. he gets a chance to read and sign the answers to today's 300 letters. Even putting in a 10- to 12-hour day, he won't know too much about the taxation of cooperatives, which is under the jurisdiction of the Ways and Means Committee.

Therefore, put your problem on a personal basis. He is a lot more interested in you and your financial well-being than in the impersonal problem of a general tax bill, which is the task of the Ways and Means Committee. He rarely knows what a bill will contain (unless it arises in his own committee) until the proper committee reports it out favorably. Often the bill reported out by the committee only faintly resembles the bill originally introduced. So, why should he waste time studying legislation before it is being considered in committee?

Let's go back to your letter about taxation of cooperatives. Ask your Congressman to discuss it with your regional representative on the Ways and Means Committee. Each Member elected to that committee represents a region of the United States. For instance, on the committee I represented not only Texas, but New Mexico, as well. Therefore, ask your own Congressman to consider your request, and, if he approves, to discuss it personally with the member on the Ways and Means Committee who represents your area. This is the most effective way to bring your position on an issue to the attention of the members of the proper committee. You may, of course, write directly to the members of the committee where the bill is pending. But you may not receive an answer. I tried to answer such letters from my region. But my first consideration was to letters that came from my friends and constituents in the 13th District of Texas, and to letters referred to me by my colleagues representing other districts in my region.

A constituent who follows the procedure I have recommended has not only the weight of his own testimony, in his letter, but the added persuasion of his Congressman's endorsement. Remember, it is your Congressman, regardless of his political affiliation or committee assignment, who will cast that vote on the floor of the House eventually. Also, by proceeding through him, you avoid the appearance of bypassing him in appealing to the members of the committee "over his head." Some Congressmen consider this an affront.

Timing is also very important. Write to your Congressman when the bill is pending in committee. Do not wait until the bill is brought to the floor. The place to "kill" a measure or amend it favorably is in committee. Your Congressman will be helpless if your appeal reaches him after the bill has been reported from the committee to the floor. This is particularly true in matters arising in Ways and Means Committee, because most of these bills are brought to the floor under a closed rule: no amendments can be offered from the floor.

Don't wait until a measure has already passed the House and is pending in the Senate committee. About all your Congressman can do then is refer you to your two Senators, who may not be in a position to assist you. A Senator, representing a whole State, has commitments to many more varied and conflicting interests than does your Congressman.

In general, here are some do's and don'ts: Do try to talk to him personally about your legislation. If this is impossible, write him a letter with your business letterhead printed, and your name signed legibly or typed at the bottom. Keep it simple and personal. Show by facts and figures how you, yourself, will be affected. A letter is better than a telegram. Each day a Congressman may get from 20 to 50 telegrams, urging his vote for or against legislation. Many of them don't give enough information about either the constituent or the bill he's interested in. And the Congressman and his staff don't have much time to dig up this information, especially toward adjournment.

If your Congressman pleases you with his vote on any issue, write him and tell him so. After each rollcall vote on any major issue, Congressmen are braced for a deluge of mail from displeased constituents. Those who agree seldom express their approval.

About half of a Congressman's mail pertains to things the constituent wants done. The other half consists of requests to vote a certain way on legislation. The conscientious Congressman—and most are—tries to fulfill all these requests. Once in a great while, he receives a letter thanking him. When he has voted your way, write and thank him. He will remember.

Don't feel your letter would impose on your Congressman. As long as he gets letters from home, he knows he is on the right wave length. If the mail drops off, he begins to wonder which fences have broken down. He wants to know what his constituency is thinking.

I have purposely ignored "pressure mail." This type of approach is of very little benefit to your cause. The Congressman cannot completely ignore it. But in the long run it carries very little weight, and sometimes it defeats its own purpose.

It is the straightforward letter that commands your Congressman's respect. He never tires of hearing from constituents who can contribute to the welfare of the Nation. He knows he is their voice in Washington. Your Congressman is profoundly influenced by your opinions.

How Much Is That Tax Cut?

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. MICHEL. Mr. Speaker, while a lot of folks in Illinois are busily deciding how they might spend their share of the highly propagandized tax cut this year, the administration is trying to pull the rug out from under them. Many of our solid, homeowners citizens will find themselves without that extra spending ability and some with even less than before if this Congress supports the proposed tax program. The January 25, 1963, editorial in the Peoria Journal Star, expresses my sentiments:

HOW MUCH IS THAT TAX CUT ANYWAY?

President Kennedy's proposed tax cut is beginning to look like a real slash—right across the wrists of everybody who itemizes his deductions.

It took quite a while for the administration to ballyhoo how great a break it was going to give us taxpayers and we were on cloud 9 over the whole thing. But we fell back to earth yesterday.

We would have to see a copy of the new income tax form Kennedy has in mind before we could even guess how much of a tax cut it would mean for a person who itemizes his deductions, but we don't have to wait any longer to see that his cut is going to be a lot less than the one proposed for the majority of people who take the Government's standard deduction allowance.

We can expect that the Kennedy proposal will be recast a great deal by Congress, and we hope that our Congressmen can see that striking at those who itemize their deductions is striking at those who are carrying the heaviest tax burdens right now.

The average itemizer is the owner of a home with a heavy mortgage and a heavy real estate bill. The fact that these costs are deductible gives him a break on his income taxes—just about the only break he gets from anybody. Now J.F.K. would take that break away.

We have yet to see any explanation for this except that the administration wants more people to use the short form to cut down on the expense of collecting the tax.

This is bureaucratic thinking at its best. In order to save \$1 on 5 million returns, it would set up a system which would discriminate against 5 million people to the tune of \$100 apiece.

Firsthand Report of a Recent Trip Around the World

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. YOUNGER. Mr. Speaker, it seems to me that we can always gain information from those of our citizens who travel around the world and take time to make reports concerning their visits to foreign lands as in the case of Mr. Calvin K. Katter, of Minneapolis, Minn.

He addressed a letter to the Wanderer published in St. Paul and it was printed in the January 10, 1963, issue. In my opinion, Mr. Katter proves himself to be a very observing traveler. His letter follows:

FIRSTHAND REPORT OF A RECENT TRIP AROUND
THE WORLD

EDITOR, THE WANDERER:

My wife and I have just returned from a trip around the world, visiting 30 countries, including a visit last summer behind the Iron Curtain. We drove along the wall in West Berlin and saw the crosses and flowers where many have been killed. While we did not actually get into Poland, we did spend some time in other satellite countries. On the first day there, we were assisted by a young lady, a Government tourist guide. She extended us every courtesy and we had no difficulties at any time. However, as we had some knowledge of their language and many of their people speak English, we were permitted to travel after that pretty much on our own. This gave us more opportunity to mix with the people.

People were friendly and approached us in museums, on the streets, and in cafes and restaurants. We traveled by bus, streetcars, boats, trains, and by plane. Usually, after some introductory remarks, we talked freely with the people on many subjects.

Generally, sooner or later, someone would ask the questions of us: "Why does your Government and/or State Department or, in some cases, certain officials coddle and favor Communist governments?" Some stated: "Your Government policies must be soft on communism, or why do you help them?" They had no reservations about letting us know they were not in sympathy with our aid to Communist governments, thereby keeping them in power, since such aid was not helping their people.

We found it difficult to give them a satisfactory answer, particularly after witnessing all the anti-American propaganda activities in these countries.

Americans simply have no idea of the immensity of the anti-American campaign being conducted constantly by Communist sources. On one Government tour we visited a large museum in a capital city. One long wall covered with anti-American propaganda for all to see—called to our attention by Hollanders, English and others on the tour.

There are more bookstores in these countries than drugstores in the United States, and all are peddling the Communist philosophy. These Communist countries also supply magazines, periodicals, literature, free, via their embassies, hotels, libraries, and public places in Asia, Africa, and the Orient as well, which carries a tremendous amount of anti-American material. I picked up a news magazine in a satellite airport and was shocked at the anti-American caricatures. Every phase of American life is covered. Unemployment, capitalistic profits, racial tension, etc. The information of course, is false or so twisted as to give false impressions, but how are these readers to know that? Every dollar spent on Communist products helps to support this vicious anti-American program.

Another question: "Didn't we know that the major part of all our foreign-bound production is taken by the Communist governments to use as they please?" For example, food is actually taken and being shipped to Cuba in spite of its scarcity in the satellite countries. (Actually these countries have been and are being sacked by Russia.)

After seeing the conditions under which these people have to live; after seeing the standing lines of people waiting to buy the simple staples of existence—such as meat, milk, eggs, butter—which we were told are sometimes not available for days or even weeks—I wouldn't accept a Polish ham as a gift. If the Polish people have surplus meat, why isn't it directed to other satellites where meat is in such short supply? Why is it directed to the United States to compete with our farmers when millions of their own people are going hungry? Moreover, we have learned that the Polish Government has an arms contract to furnish war material to the Government of North Vietnam. This material is killing our allies in South Vietnam as well as their American advisers.

Question No. 3: "What about the racial problems in the United States?" Communist propaganda never lets up on this one. Newspapers carried full-page stories, complete with photographs, of the James Meredith episode in Mississippi the day after it happened. When we carefully explained that a few million Negroes in the United States drive and own more cars than 220 million Russians, and that the American Negro in our country takes home more pay than the average European, they were flabbergasted. We couldn't tell them that many of our Negroes have a living standard that they, the Europeans have never dreamed of.

Eastern Europe is an economic poorhouse by any standards, both as to quantity and quality.

At one large city, we waited an hour at the depot for a taxi that never came, and then

were advised that taxes must be ordered a day in advance. While shopping, we were appalled at the number of people who came into the shops to sell rings, jewelry, dishes, china, to get money to buy food. Valuable art objects are padlocked in owners' homes to be "reserved" for the State. In one large city, a Lutheran church was made into a wine museum. The people have very little to say about anything.

In our humble opinion, when these nations provide the means for free elections and the people can select their own governments, that will be sufficient time to deal with their elected governments and negotiate on items of which they might have a surplus and which do not take employment from our own people.

In early August we were in Istanbul. On a boat trip up the Bosphorus, a Turkish professor who spoke good English told us that as many as 12 Russian freighters a day were passing through the Dardanelles. Most of these, he said, were loaded with war materials and other trouble-making equipment against the free world. Where does the payment for these war materials come from? Certainly not from Castro. He explained at length how it comes from out of the hides of the Russian and satellite peoples.

A few days later the papers in Greece carried the story of the Egyptian plane forced to land in Greece for violating Greek territory. On board was \$1 million in American gold bound for Yugoslavia, you can guess where it went from there—so whom are we helping?

Newspapers in the Orient carried press reports of serious food riots in Russia with many killed. Another one-half-page account told of the thousands of Rumanian "objectors" who have been liquidated in the past 10 years.

Communism is a tragic failure everywhere you look. It is kept in power by ruthless suppression. Their people told us frankly, we the free nations are their only hope; so why should our country help this diabolical masquerade? Why should Americans contribute to the torture of enslaved masses?

Karl Marx's life was a tragic failure. His children died of malnutrition, his wife died for lack of medical care. In his lifetime he earned less money to support his family than the average man of his day earned in a few months. He was kept alive by gifts and donations from Engels and others on a meager, bare subsistence level. This man is the dreamer—the schemer who is communism's symbol of success.

Communism is costing free nations billions of dollars that could be used to build schools, educational facilities, hospitals, roads, industries in many undeveloped nations. We saw many such opportunities in Africa, Asia, and the Orient. We visited many missionaries and mission stations of all denominations and have seen the phenomenal works of these groups. We've seen thousands of children and teenagers who have had an opportunity to get an education through these mission educational facilities. We visited hospitals, too. The American people can be proud of these groups and also of our embassies who are trying to help these less fortunate nations. These mission groups serve without reservation or political motives and, according to local businessmen and government officials, are among our best ambassadors abroad.

America could use many more thousands of these who get to and help the people with no strings attached.

Our best day abroad was the day the United States announced the blockade of Cuba, while we were in Hong Kong. Recognized as Americans, we were stopped on the street and

congratulated with "Hurrah for the U.S.A." and "America is finally waking up."

We found a world full of friendly people, but many spoke very frankly about our being soft on communism. Our coddling of Communists and lack of counteraction at home and abroad to them is incredible. We were chided about quick action in Mississippi and lack of action about Cuba.

People everywhere, particularly the Eastern European satellites, are happy to see tourists come and show an interest in their problems. We sensed the feeling among the satellite peoples that trade with Communist governments should stop. Such aid does not reach the people and only disturbs and confuses their confidence in our judgment. They know, as should we, that any help to such Communist governments is only aiding our own destruction.

CALVIN K. KATTER.

MINNEAPOLIS, MINN.

Inaugural Address of Elvis J. Stahr, Jr., President of Indiana University

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. BRAY. Mr. Speaker, just 2 months ago Indiana University inaugurated its 12th president. His name is particularly well known in this body because at this time last year he was the Secretary of the Army. I refer, of course, to Mr. Elvis J. Stahr, Jr.

The inauguration of a new president is of great interest to the university community and to the State of Indiana generally. Because of his former associations and the aptness of his remarks, I submit the inaugural address of President Stahr, made in the university auditorium, at Indiana University on Monday, November 19, 1962.

INAUGURAL ADDRESS OF PRESIDENT ELVIS J. STAHR, JR.

President Hickam, Governor Welsh, excellencies of the diplomatic corps, distinguished delegates and guests, colleagues, and friends of Indiana University, let me at the outset affirm most solemnly that this is a very great moment for me personally, that I appreciate deeply the honor just conferred upon me, that I am profoundly grateful for your confidence and support, and that my best efforts are and shall be pledged to the advancement of this university.

But beyond that, and more importantly, this is also a moment of significance for Indiana and for Indiana University, not because it formalizes a change in academic administration, for no change in institutional character, direction, or personality necessarily flows from that, but because it marks, perhaps as well as a single moment can, the beginning of a period in the life of higher education in this State and Nation so momentous, so fraught both with brilliant opportunities and with heavy penalties for failure, that it can without extravagance be termed a new era. It will inevitably be an era of great change, if only, though not only, because of the pace of our times and the impact of forces I shall mention in a moment.

The presence of each of you in this great gathering this morning contributes to both

the significance and the enjoyment of this ancient ceremony, and the university is grateful to you all, as I am. You will understand, I know, if I acknowledge with special happiness the presence of my mother and my father. And it is a most delightful thing to me that my alma mater, the University of Kentucky, is represented on this platform by her distinguished president and by her noble and beloved president emeritus, under whom I once served through 8 years of rich experience, and that my second alma mater, the University of Oxford, is represented by my warm friend, fellow Rhodes scholar and esteemed colleague, the president of Purdue University.

My feeling of pride in becoming the president of Indiana University is tempered with profound humility each time I reflect, as I often do, that I am succeeding one of the great educational statesmen of the 20th century, Herman B. Wells. Possibly no one but me will ever know fully what a source of continuing strength it is that he is actively with us as chancellor, inspiration, and friend.

No one should, and I shall not, take lightly the challenge inherent in the leadership of one of the great universities of the greatest nation on earth in the most exciting yet critical period in the history of our planet thus far, for American universities are closer to the heart of State, National, and global concerns than they have ever been.

"Universitas—all together, the whole, the universe"—custodian, discoverer, transmitter, interpreter, of all that is known, the university stands at the apex of the educational structure, symbolizing, if not, in fact, embracing, all knowledge, in its diversity and its unity.

In the contemporary surge of creativity and discovery, knowledge doubles and redoubles, each new fact or proposition lighting new paths for exploration and revelation beyond the anticipation or imagination of the most sophisticated. Long established divisions of related knowledge, categorized for convenience and manageability, are stretched beyond the original concepts. Subsequent splinterings into specializations and subspecializations are soon themselves made to seem arbitrary as changed awareness of the grand pattern follows each new discovery and insight.

The function of the university becomes the more important as the accumulation of what we know defies the individual mind to contain it, and frequently challenges the human mind even to classify it so that it may be retrieved with the aid of wondrous new machines and meaningfully interrelated.

Where today, but in the traditional university, can the unity in knowledge be constantly sought and honored whilst the pursuit of new knowledge along all its diverse paths is encouraged and nurtured?

THE NEW PLACE OF THE UNIVERSITY

These dual responsibilities place an exclusive and unique charge upon our traditional universities, and with the breakthroughs of basic research and the unbelievable pace of technological development, the new place of the university in the total fabric of society begins to unfold.

At the pinnacle of new specializations, new discoveries burst forth, whereupon new relationships suddenly reveal themselves. That which was a research device becomes the heart of a production machine. That which was a theory becomes a fact. The processes of research and development across the whole spectrum of knowledge have pushed universities into a new essentiality to our life and times. Exploring the unknown has always been at the heart of all that education stands for, but the products of its own efforts have placed upon the university of today a mantle of central responsibility for the future of civilization.

Postulate what worthy goals you will for man in this modern world: justice, knowledge, human dignity, economic vitality, international concord, the conquest of space, government by and for the people, the opportunity of every child, every man and woman, to realize the best that God put in him—and ignorance is the bar, education the gate, to each such goal.

The current chapter in the long annals of man's earthly adventure is an unusually dramatic one, with all the elements of high drama focused into an incredibly fast-moving plot. All here present are familiar with the simultaneous bursting upon us of the almost inconceivably powerful forces of what have been called the "explosions" of population, of knowledge, of technology, and of the aspirations of billions of people who for centuries had played but minor roles in the world's affairs. We dare not discount the potentials and rapidly emerging effects of any of these forces, nor the long shadow which intrudes persistently into our contemplation of them and of the future. For looming over every horizon is a deep and seemingly irreconcilable conflict—not a new one, to be sure, but one which in our time has reached heights of danger and suspense never before seen on a global scale. It is at bottom the age-old conflict between slavery and freedom, between deceit and honesty, between aggressive force persistently seeking to invade any vacuum it can find and defensive strength which will move only when there is no answer save a protecting shield.

What a pity that this should be. From the moment victory over fascism was won on the field of battle, this Nation and most of the war-weary peoples of the world turned their backs on armies and conquest. We in America disbanded the greatest military forces ever seen on earth; we offered to every surviving veteran the greatest opportunity our country or any country could offer, the opportunity for higher education; we gathered tens of billions of dollars of our treasure and used them to help friend and foe bind up their wounds and renew their search for a decent life in freedom; we went further and extended a helping hand to hundreds of millions of newly awakening peoples who were yet illiterate and ignorant in the ways of the modern world, but who had legitimate human aspirations. We envisioned and struggled hard, asking all others to join us, to help create a world in which all men might have the opportunity to live in peace, with freedom to pursue their finest goals, each in his own way. And we are still struggling toward those ends.

What a pity, indeed, that the only nation in that postwar world with even the possibility of rivaling America in world leadership should have been one whose own leaders found all of this repugnant, who could not accept the prospect of success of this great effort, this great dream, and who deliberately turned the world into a kind of living hell for country after country, people after people.

Perhaps it was inevitable; I don't know. Maybe we, who ourselves are not free from sin, are doomed on earth to cope with Satan till the day of judgement. Be that as it may, I refuse to believe that we are doomed to surrender to him. We therefore must not succumb to self-pity or to self-righteousness, any more than to the overt challenge of arms.

There are many big and little things we must all do in these anxious years, many day-to-day decisions our elected leaders must make, but, if we are to stay alive, and to keep alive the things that make it worth being alive, there are two overriding tasks confronting America and all free people. The first is to continue to build societies in which man can cultivate the full fruits of freedom, and the other is to maintain mili-

tary power which will deter the enemies of freedom from attempting to destroy or overrun us.

And education is today indispensable to both.

Military power of the most advanced kind will be essential to protecting freedom so long as the forces of antifreedom themselves have such power and are not content to stay at home. But true education is essential to extending freedom; indeed, it is part of the essence of freedom, and, without it, there can be neither a great deal worth defending nor any means adequate to defend it.

THE ESSENCE OF EDUCATION

I am scarcely saying anything new when I remind all of us that under our American system, from its beginning, the major responsibility for military power has been that of the Nation as a whole through the agency of the Federal Government, while the major responsibility for the education of our people has been reserved to the States and to the people. It might be supposed that this indicates that education was thought the less important by the framers of the Constitution, but I am confident they had quite a different view. They knew full well that no democracy can function without an educated citizenry. They also knew that while military efficiency by its very nature requires strict discipline of large groups of men, centralization of authority, and absolute loyalty to that authority when asserted, education by its very nature requires diversity, decentralization, experimentation, dissent, and inquiry. The higher learning in particular is, at its best, a disciplined approach, not to indoctrination, but to the full development of the individual intellect and to the searching out, through many approaches, of the deepest roots of truth, whether about nature, the universe, society, or that wondrous creature, man himself. Therefore, the framers may well have reasoned, nationwide responsibility for all of education should not be vested in any single authority. But it should not be overlooked today that education is too vital to the Nation to be permitted for long to be inadequately supported.

All of this presents exceptional challenges to the State of Indiana, for upon each State still falls responsibility under our American system for providing most of the financial resources needed for the work of public education.

Frankly, I doubt one could find more than a handful of citizens of this State who don't want Hoosier children to have opportunity as full and real as is open to any other children of their generation. And I doubt there can be found any instance in history where a high level of educational opportunity failed to make any society more advanced and more prosperous than it was before. But it is enough to recognize that no state or nation can advance without it today.

Many have asked me in recent months how I like it here. It has been clear in every case that they hoped I do like it, that they wanted me to like it, because they like it and are proud of it. My answer was and is unequivocal, I like it wholeheartedly, and so do my wife and our children. This is a beautiful place, conducive to contemplation and learning, as anyone can see, and it is a warm and friendly place, as anyone with good will can feel. It is also an exciting place, a place where more than 17,000 young people, among the brightest of their generation, are striving to complete the process of truly growing up, are gathered with hundreds of mature and superb scholars in pursuit of answers to all the great questions of the centuries and all the new questions of the age of space and the atom, are trying to digest knowledge which daily probes deeper into the unknown, are trying to prepare for life in a world greatly changed, and still

changing, from what their elders have known. These eager students are not data processing machines into which mere information is fed and then regurgitated; they are questioning, debating, impatient, ambitious, sometimes confused, always expectant, never wholly good, rarely really bad, sons and daughters of humankind, and heirs to whatever world we may leave them. This is a very large institution, and I am all the more proud of the living reality of its tradition of active, personalized concern for every individual member of its family, be he student, teacher, or staff member.

The most wonderful thing of all is that this is an intensely vital place: a place of teaching and learning, of searching and finding, of thinking and creating, of high challenge to youth, of profound stimulations and satisfactions for the scholar, the artist, the curious mind, the discriminating taste, and the imaginative spirit. We must keep it that way.

The university itself, though seemingly embodied in lovely acres and impressive buildings, is in truth far more spirit than stone, its beauty but a backdrop for its high endeavors. Dedicated to the pursuit of knowledge for its own sake, it also has a deep sense of mission in the service of both society and of the individual human being. We must keep it that way.

It is even justifiable to say that the entire State, much of the Nation, and most of the world's continents contain parts of this great institution. I speak not just of our alumni, who are found throughout this State and all over the world, nor just of our students, who come from every county of the State, every State in the Nation, and 86 countries around the world, but also of our direct working relationships with many other institutions, in this State and this Nation, and in Europe, Asia, Africa, and Latin America. In this, as in other ways, we are helping to fulfill that sense of mission of which I spoke. We must keep it that way.

Nearly half of our credit students are enrolled in places other than this Bloomington campus, mostly in our fine center for the schools of the health professions in Indianapolis and on our several regional campuses. Together with our sister institutions of higher learning, both private and public, we have provided for Indiana a system which places opportunity for education beyond high school within 25 miles of almost every boy, girl, and adult in the State of Indiana. We must work to strengthen all these institutions, and we shall continue to work with them, constructively and cooperatively, for the benefit of the entire State.

What else must we do, particularly we of Indiana University? The list of specific challenges is far too long to be compiled in this address, but I hope that mentioning a few will suggest many of the others.

WE MUST KEEP THE DOOR OPEN

First, we must keep the door of educational opportunity open. In the face of the great upcoming surges in college-age population, we must do every practical thing to insure the continuing vitality of the proposition that ability to learn, not ability to pay, is the key to that door. We must help our fellow citizens understand that the oncoming waves of young people seeking preparation for productive careers should be looked upon not as a problem, but as a blessing.

Second, we must insure that when a youth or an adult enters our door, he will find education of excellence, never of mediocrity. This means that our libraries, our laboratories, our facilities for study and growth, and above all our faculties, must be of the high quality needed to educate for tomorrow, for it is in the complex and demanding world of tomorrow that our students must live their lives and make their contributions. The competition for first-rate faculty na-

tionwide is becoming so fierce that some institutions may not be able to obtain or retain them. Will our own institution be among these? I pray not. The numbers of bright, ambitious young people who will graduate from high school will increase so vastly and so rapidly, beginning in the middle of the very next biennium, that in some places many will find either closed doors or greatly diluted opportunity inside the doors. Will Indiana be among these? I pray not. Should we at any time be faced with resources inadequate to provide education of high quality to all young Hoosiers who are qualified and determined to pursue it here, then some must be turned away; for it is better truly to educate a few than to defraud many. But we must strive with great energy to prevent such a tragic choice from being forced upon us, for the future of all of us and of our children is bound up with the level and quality of education of our total citizenry.

Third, I would urgently add that we have a heavy obligation within the university to insure in every feasible way that the hard-earned tax dollars entrusted to us are so used as to get every last penny's worth of educational mileage out of every last dollar. This we have done and shall continue to do. Through imagination, ingenuity, sound planning, and determination we can even turn the necessities of doing larger tasks into stimulations for doing them better.

Fourth, we must insist that the university retain its leadership in the fields in which it is nationally distinguished. It cannot and will not try to be all things to all people, but it has special obligations in a number of fields in which its contributions to the State and to mankind have been and will be signal. Central among these, and basic to all cultural, technological and professional advancement, must always be the liberal arts and sciences. I was thrilled, as all of you must have been, last month when a graduate of this university received the Nobel Prize in the field in which he had studied here under a very distinguished faculty which itself includes a Nobel Prize winner. I was thrilled again earlier this month when one of our faculty, himself an alumnus, presided at the dedication of the world's largest solar telescope, a joint enterprise of the 10 leading universities in the field of astronomy, spanning the Nation from Harvard to Indiana to California. There have been other great moments in the life of this institution and there will be again if we keep our sights on the finest and best. It is worthy of mention now, I think, that we will soon be bringing to this campus the editorial officers of the Mississippi Valley Historical Review, probably the most distinguished periodical in the field of American history. Our distinction in linguistics and in languages, of which we regularly teach more than 20, and in international studies, is recognized worldwide. Few universities between the Atlantic and Pacific coasts have as many fellows of the National Academy of Sciences and the other great learned societies as do we. Indeed, several of our departments in the academic disciplines clearly rank among the Nation's best, and I am aware of none which is less than excellent.

These vital assets enable us to carry on our largest single function, undergraduate education, with both thoroughness and high standards, in a rich intellectual environment. They also enable us to provide graduate work of demonstrably superior quality. We must keep it that way.

There are two other major concerns of this university—one is professional training; the other is research.

Each of our many professional schools and divisions today is strong; some are among the Nation's leaders; one or two are probably unexcelled. Yet we are determined to

improve them all, for complacency is a dangerous enemy of excellence.

The general public is perhaps not fully aware of how important to its own well-being are the professional schools of their State university. Here are the sources of very substantial percentages of the State's physicians, dentists, nurses, lawyers, college teachers, librarians, schoolteachers, and administrators, business managers, scientists, coaches, journalists, artists, musicians, optometrists, medical technicians, public administrators, and others who play key roles in the service of the people. Most professional training is relatively expensive, but it is indispensable to the progress of our society.

Whether in the realms of the natural sciences, the fields of the literary, creative and performing arts, the study of the affairs of man and nations, or the development of competent and ethical practitioners of the learned professions, both the disciplines and the professions at Indiana, at both the undergraduate and graduate levels, are dedicated to objectivity and creativity, are uncompromising toward mediocrity, are hostile to extreme rigidities of thought. We must keep them that way.

The reference to rigidities of thought may profit from a further word. In the presence of such rigidities on both the extreme left and the extreme right, in a world of terrible tensions, the university's role must be to maintain its even-tempered but relentless search for truth. We shall not stifle, but shall promote, restless seeking and inquiring and debating, so long as it is honest. But we shall insist that there be an atmosphere of basic objectivity. We shall encourage intellectual excitement, but shall firmly suppress both physical violence and efforts to provoke it. We shall be intolerant only of intolerance, and of deceit.

ON THE IMPORTANCE OF RESEARCH

As to research, a symposium of several days' duration would be required to report on the university's accomplishments, activities, and aims, covering as they do a wide range, from seeking the causes and cures of cancer and heart disease to probing the secrets of the universe and of life itself, from the motivations of human behavior to ways of making responsible freedom more real to more people, from the management of great enterprises and the administration of justice and government to ways of making education itself more efficient and more fruitful.

There is a further point in this connection. From the basis of two vantage points I have been privileged to occupy in this single calendar year, I am convinced that the economic future of this State and region depends upon intensified efforts in several fields of research. If adequate investment is not made in this area, and in the highest development of our abundant native brainpower, the center of gravity of industrial productivity will move out of the Middle West to the two seacoasts, as it has already begun to do, and an economic wasteland could replace it.

Today, as we have noted, higher education is more directly and significantly involved in technological advancement and economic progress than ever before. Of even private universities is this true; and public universities have felt this responsibility keenly, and with ever-increasing benefits to us all, at least since the inception of the land-grant college movement whose centennial is celebrated this very year.

Both Indiana and Purdue are particularly alert to this challenge, and both stand ready to help. To Purdue's splendid new McClure Park will shortly be added at Indiana University a new Center for Industrial Applications of Aerospace Research, supported in part by the National Aeronautics and Space Administration, in part by Indiana business firms, and in part by the Indiana University

Foundation and the university itself. There are other contributions the university can and must make to its own economic base, without which the university itself cannot go forward.

All I have said thus far may help to explain my earlier statement that exceptional challenges are presented in this new era to the State of Indiana. Why "exceptional"? Almost every State faces the exceptional effects of the great population explosion which began throughout the country following World War II, and the resulting necessity of educating greatly increased numbers of youth; in this sense, Indiana is no exception, and Indiana University and her sister institutions of Indiana must play greatly expanded roles. Every university faces the exceptional effects of the explosive expansion of knowledge in recent years, and the cumulative, spiraling demands it places upon the functions of organizing, preserving, and transmitting this knowledge, seeking new applications for it, integrating its specialized fields, and, not least, adding to it. In this Indiana University is certainly no exception. But few States will feel quite as acutely as will Indiana the problems resulting from the explosive changes in technology, still only in their infancy. Like an automobile, they are capable of carrying us forward or of running over us. Here, the modern university can play an important, indeed an indispensable, though never an exclusive, role, particularly through research, carried forward vigorously and with the finest talent available.

Alas, there is no magic by which either the State or her colleges and universities can expect to meet these exceptional challenges without a substantial increase in the level of resources invested by the State in higher education. And this decade would be the worst possible time in the history of either our State or Nation for Hoosiers to turn away from the obvious and inevitable facts confronting us. May I bluntly restate just one of these facts, for emphasis? During the next biennium, there will be ten thousand more Hoosier boys and girls, fully qualified, seeking education at the four State colleges and universities of Indiana than during the current biennium—and the numbers will go on up from there, for the foreseeable future.

THE WAY TO A HAPPY ENDING

This part of our story can have a happy ending. Life sometimes, even often, calls for permanent sacrifices for the achievement of worthwhile goals. But not always. Education is one of those wonderful things which is purchased at a profit to the buyer, which only enriches the State which provides it, which returns infinitely more, even in dollars, than it is ever given, which, as in the moral of the parable of the talents, costs only those who will not invest. For Indiana, the needed investment may now appear large, but it will be both small and temporary compared to the enduring richness of the dividends.

In sum, my friends, we at Indiana University are a significant part of the great world of scholarship, and our first allegiance as an institution must always be to that world. Other agencies, other people, have other worthy missions, but ours needs no apology; it is basic to them all.

In the years ahead, if God be willing, we shall carry forward with all our strength the great work in which we are engaged, building upon the splendid foundations erected by our predecessors, striving for excellence in all we do, alert to the complex problems, deep conflicts, and tremendous challenges in the world around us, and keeping before us the vision of bringing light to our youth, knowledge to our people, progress to our State, strength to our Nation, and, hopefully, wisdom to ourselves and to our fellows.

Remarks of Honorable Robert Moses

EXTENSION OF REMARKS

OF

HON. JAMES C. HEALEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. HEALEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I am privileged to present the remarks of the Honorable Robert Moses at the opening ceremonies of the Alexander Hamilton Bridge, the George Washington Bridge Bus Station, and sections of the Cross-Bronx Expressway, on January 17, 1963.

This new bridge runs into my congressional district and the Cross-Bronx Expressway runs through the center of my district. Eventually this will be one of the most important links between New York, New Jersey, and Connecticut.

It was my privilege to participate in the ceremonies and to hear Mr. Moses' fine address, which follows:

REMARKS OF ROBERT MOSES AT THE OPENING OF ALEXANDER HAMILTON BRIDGE, GEORGE WASHINGTON BRIDGE BUS STATION, AND SECTIONS OF THE CROSS-BRONX EXPRESSWAY

Sloan Colt, your excellencies, Mr. Mayor and friends, these great metropolitan land and water crossings and incidental traffic facilities represent no happy impulse, no mere gleam in an official eye, no ambitious political and planning gestures. They are thrown open to the traveling public today as the result of much thought, conviction, and stubbornness in the face of misrepresentation, misunderstanding and other formidable obstacles.

As you ride next year over this roadway to the World's Fair at Flushing Meadow, the rock outcrop below grade on the Cross-Bronx Expressway, which we made into monolithic landscaping, will show no scars and will seem always to have been there. This is no gasoline gully, no elevated eyesore. As it sinks below and soars over the heart of the great city, this is metropolitan architecture in the finest sense.

Those who profess to believe such results are obtained within the conventional political framework, in a congested, highly critical community, by diplomacy, smoothness and clever avoidance of criticism and controversy, are never in evidence in the hours of trouble and conspicuous only after the event when success is acknowledged. In this, as in other similar contexts, the cost of prolonged delays has been enormous. I suppose we must charge it more or less cheerfully to the inherent expensiveness of the democratic process.

The remaining east and west crossings from Long Island through Manhattan and the Bronx, over and under the East River, Harlem and Hudson and across the Palisades to the Jersey meadows and beyond, will be increasingly difficult to realize as those in charge are thwarted, lampooned and libeled and without steady support. It is easy for demagogues to shout about bulldozer methods and indifference to the wishes of small people. If Government Smith were here, he would call the Lower Manhattan Elevated Expressway a Kathleen Mavourneen—"It may be for years, and it may be forever." On the other hand, like the maid in St. Matthew, it may not be dead, but sleepeth.

Nothing is easier than to drum up opposition to any major public work where the press leans to sensation, libel goes unpunished and officialdom worries about block votes and reprisals. In these rhu-

barbs the less durable characters are broken like old matches. Only the tough survive. Over and over again I have seen dead projects miraculously revived, minority opposition disappear and early opponents admit to being ashamed of their initial bitter denunciations.

Without a lower Manhattan elevated expressway, bridge and tunnel congestion will be appalling. If there is no midtown Manhattan elevated expressway, the essential third tube of the Queens Midtown Tunnel and its maze of Queens arterial approaches will be impossible to finance. With all due respect to the elected officials who suffer most from the pressures of vociferous minorities, time will tell them how shortsighted the opposition to these links in the great metropolitan chain has been. Is there a sane economist who proposes to curtail the production of motorcars? If there are more cars, there must be roads for them to run on, and in building these roads, through traffic must be separated from the local street pattern.

This building of public works to meet the challenges of urban growth is a fascinating and baffling business, and the number of those willing to take it on grows less. Nobody can clear the way for these swaths, which lift and depress expressways above and below the local streets and over and under rivers, without moving people and business, and it can't be done with mirrors, by sleight of hand or by magic. The task is for those more concerned with ultimate respect than with immediate popularity.

Perhaps this is why, in addition to any energy we may still possess, those of us who have been in the game a long time and want nothing further, have something to offer. Wise men were living before us. We have invented little. At most, we have supplied the guts and elbow grease to build what others previously urged but lacked the gumption, support and luck to achieve.

If it were not for the big authorities with their relative independence and private financing, the task would be hopeless, but the authorities are not automatic, electronic business machines. They perform no miracles without men. The port authority came into its own slowly. Triborough was a paper organization for a decade and the power authority was dormant for 24 years before anything significant happened.

Some of us who have been called upon by the heads of the State and city governments to establish new or rescue and revitalize sluggish or dying authorities, have accepted the task as a public duty, without expectation of plaudits. The success of agencies like the Port of New York Authority, the Triborough Bridge and Tunnel Authority, and the Power Authority of New York is evidenced upon the sound reputation and rating of their bonds and the confidence imposed in them by banks, bankers, and prudent investors. If this confidence is undermined, the authorities will soon decline, and this ingenious device, combining government, business, and private financing, will no longer have merit or validity.

We of the Triborough have been most happy in our close association with the Port of New York Authority, and I can speak also as the link which cements the authorities with the city, Federal, and State arterial program. Many public agencies, private corporations, engineers, and technicians have joined the building trades and the makers of steel and other materials in this notable example of cooperation.

Much remains to be done to finish the metropolitan arterial complex, and the end is not in sight. Mayor LaGuardia's pet slogan was "patience and fortitude." It is as good a motto as any, but there is today less time for patience and more demand for fortitude. If the distinguished officials who speak here

today will give us the tools and the backing before it is too late, we can finish the job.

We have traversed in good company the spine of Manhattan. We have met rocks, rivers, and resistance of modern redskins. The whole island of Manhattan cost only \$24. Maybe in time this arterial expenditure too will be considered a bargain. In any event, the job has had its enduring satisfactions, and that's all there is to public work.

The REA Program

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. EVINS. Mr. Speaker, the Rural Electrification Administration, which has provided through the years one of the greatest benefits to the rural citizens of our Nation, has again come under attack from one of our Nation's large newspaper chains.

On the same day that the REA was being taken to task for providing long-term loans to assist many rural areas in our country in obtaining electricity and in improving their electrical service, Secretary of Agriculture Orville L. Freeman was addressing the National Rural Electric Cooperative Association Convention in Nevada on the service that REA has provided the Nation.

Secretary Freeman pointed out the very valuable assistance the REA has provided our farm citizens through the years and particularly some of the more important achievements of the last 2 years.

The Secretary points out that in order to serve the sparsely populated rural areas rather than the high-density urban areas it is necessary to provide the REA cooperatives with low-interest-rate financing and that through this type of financing REA cooperatives have provided a great benefit to our Nation's farmers and residents of rural areas.

He states as one example that REA cooperatives have built 1.4 million miles of electric lines in order to serve 4.8 million rural customers. This means that the REA cooperatives serve 3.3 customers per mile and the average urban-based utility has 32.2 customers per mile. Thus, it is much less profitable to serve the areas covered by REA cooperatives than by the urban-based utilities. Therefore, a low interest rate for REA loans is both justifiable and needed.

Mr. Speaker, the Secretary points out other important services of the REA in his very interesting and informative speech.

Under unanimous consent, I include the remarks of Secretary Freeman in the Appendix of the Record, as follows:

ADDRESS BY SECRETARY OF AGRICULTURE ORVILLE L. FREEMAN BEFORE THE NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION CONVENTION, LAS VEGAS, NEV., JANUARY 14, 1963

I welcome this opportunity to speak to the 21st annual meeting of your association for several reasons:

First, it is a good time to review the prog-

ress of the last 2 years, progress in rural America, in agriculture, and specifically, progress by the Rural Electrification Administration.

Second, it gives me an opportunity to take a close look with you at some of the policies which guide REA, to reexamine their validity in this time of change.

Third, I want to discuss the need to apply more broadly the local leadership tradition which REA cooperatives have developed to such a significant degree.

As 2 years of the Kennedy administration draw to a close, it is appropriate to bring to farmers and city people a report of the highlights of the activities of the Department of Agriculture.

Since 1960, through actions by the Administrator and by the Congress, we have seen:

An increase in gross farm income of \$2 billion in 1961 and \$2.5 billion in 1962, as compared to 1960. Net farm income in both years averaged \$1.1 billion higher than in 1960.

Grain surpluses have been reduced 700 million bushels, and taxpayer costs will be down some \$300 million this year as a result. With continued progress over the next 2 years, we can see the end of feed grain surpluses in 1964. The end of wheat surpluses is in sight, if favorable action is taken this spring by wheat farmers in the referendum for the 1964 crop.

With a favorable vote, wheat farm income can be maintained at the favorable 1960-62 level, and the wheat surplus can be scaled down to near an adequate level in about 3 years. If the referendum fails, the surplus will remain and wheat income will decline sharply, as wheat prices fall from \$2 to \$1. per bushel. The effects will be disastrous to farm and city and to foreign markets alike.

While these advances in agriculture have been taking place, the cost of food has remained stable, increasing about as much as the overall cost of living.

Today we are sharing our food abundance more widely at home and abroad, thus fulfilling our moral responsibility to those who do not have enough. In March 1962, as many as 7.4 million persons in needy families in this country shared in our food supplies through the direct distribution program compared with 4.1 million in March 1960. The food stamp program launched by direction of the President is being expanded to 48 areas, and has become one of our most successful programs. The food-for-peace program during fiscal 1962 moved a record volume of \$1.6 billion worth of food and fiber overseas to feed needy, hungry people. Food and fiber is becoming an increasingly vital tool in our programs to stimulate the progress of developing countries all over the world.

We have launched a massive, all-out effort to infuse new economic vitality in rural areas through the redirection of old programs and the creation of new programs in rural areas development, a subject I will have more to say about shortly.

Now these are just a few of the accomplishments of 2 years, all of them together represent only the beginning of our effort to meet the task ahead in agriculture and rural America. But I am proud of the start we have made.

I am proud, too, of what we have done in REA where, as you are well aware, there is much progress to report.

Last year the President requested and the Congress authorized an increase in REA loan funds to permit the financing of additional generation and transmission facilities. For fiscal year 1963, \$400 million was authorized for the REA loan program, including \$100 million for a contingency fund. This made a record \$250 million available for generation and transmission loans. By comparison, 1960 authorizations were \$161 million, and

only \$89 million was loaned for G. & T. purposes.

Since January 1961, REA has approved 28 loans to borrowers seeking new or additional sources of power. Seven of these loans represented new starts. Overall, these 28 loans will mean a 10-year saving of more than \$47 million as compared with the power supply arrangement available to the borrowers at the time their loan was approved.

An equally significant measure of progress in REA is the recognition by the President of those policies which are essential to the vitality of the REA idea, to the integrity of the rural electric cooperative.

Let me be more specific.

This administration supports the 2-percent interest rate. This is not a recent or a capricious decision. It is based on a careful analysis of conditions inherent in the job you are trying to do. There are vast differences between the conditions under which you operate and the conditions which prevail on the city-based utility systems.

Some of the special handicaps you face in providing areawide service which will permit your consumers to use power fully and efficiently bear repeating. They are not generally known, and need to be emphasized. I want to take this occasion to set them down clearly and carefully.

Low density: In order to serve 4.8 million rural consumers, the REA cooperatives have built 1.4 million miles of line. It means that you have 3.3 customers per mile. The average urban-based utility has 32.3.

Lack of diversity: Where farms in a particular area are of the same type, and this is usually the case, power needs tend to be heavy during certain periods of the day, and often negligible in the rest. REA systems, with few small commercial or large powerloads to provide diversity, must make proportionately greater investments in facilities used only a few hours a day. Interest charges are based on a 24-hour day.

Low revenues: Low density and lack of diversity keep revenues low. In 1960, for example, when commercial utilities reported revenues of \$6,580 per mile, REA-financed systems had average revenues of \$414 per mile. On a per customer basis, your revenues averaged \$127, or a little more than half the \$204 reported by commercial utilities.

Low load factor: Whether you generate power or buy it, low density and lack of diversity work to increase REA co-op power costs. This is true because the capacity and the facilities you build for certain peak loads, a necessity, are used on an average of only 50 to 60 percent of the time.

Isolated systems: REA co-ops have undertaken to serve the remote and out-of-way pockets in America. Here in the West, for example, you have mountains, deserts, and large forest areas which create special problems. These and other factors have kept many systems small and separated from other REA borrowers. Low interest rates enable such borrowers to perform the services expected from rural systems.

Yet, despite these handicaps, rural electric cooperatives have made an outstanding record in repayment of their loans. Last year, repayments passed the billion-dollar mark, representing 29 percent of the funds advanced. Only two electric borrowers are behind in their payments and these total only \$140,000.

Another policy of great importance is the increased emphasis on generation and transmission loans. We propose to continue this emphasis.

During the past 2 years, G. & T. loans have accounted for about 57 percent of all approved loans. Each was in response to a demonstrated need for lower cost power, the low-cost kilowatt that permits your consumer-owned systems to get on with their essential job in rural areas.

This policy which has made possible the expansion of the REA co-ops as their task has grown is also designed to meet two other particular needs, to enable you to take advantage of new technology, and to help preserve your territorial integrity.

It is essential that the REA-financed generating stations, which account for less than 1 percent of the Nation's total electric power capacity, be geared to the technological advances within the electric power industry.

In the last 2 years, this new emphasis on G. & T. loans has been applied by rural systems to take practical advantage of savings in power pooling, system interconnections, large-scale generating units, and in the location of plants adjacent to sources of low-cost fuels.

The use of G. & T. loans to block raids by private power companies seeking the historic area of rural electric co-ops is new. Where such situations arise in the future, G. & T. loans will be approved.

This criterion has been used only once. It was in an area where a supplier, who was serving several distribution co-ops at wholesale, insisted that he be able to go into their territory and pick off retail consumers as he chose. This demand posed a distinct threat to the service capabilities, and to the existence, of the cooperatives.

I hope raids on REA territory will stop. But as many rural electric cooperatives build their power volume, this problem remains a very real threat. It must be recognized that the expansion of urban areas into the surrounding rural countryside provides a particularly inviting target to raid.

It is possible, therefore, that more G. & T. loans will be made to strengthen REA co-ops in the immediate months and years ahead. In the long run, however, I hope and I believe raids will cease as the more moderate leaders in the private power field prevail.

When that day comes, real cooperation between all commercial and cooperative power systems, with the resulting maximum use of all systems, will mean increased benefits to all users.

I repeat, it is not asking too much to recognize that the service areas you have developed are rightfully your own, and that the consumers within them, new and old, are rightfully your consumers.

On review, then, I believe these past 2 years have shown that the pledge which President Kennedy made in 1960 in Billings, Mont., has been kept. He said that his administration would: "Restore REA to its former role of preeminence, freeing it from constant concern over political interference, higher interest rates and budgetary starvation, and enabling that remarkable American institution to get on with its work of providing low cost electricity and telephones for every American farm family."

For my part, the contribution which rural electric cooperatives have made to my own State of Minnesota, to its farm families, has long ago earned them my dedicated support.

I have worked on farms before, and after, REA. To me, REA is more than a concept, it is the difference between a kerosene lamp and an electric light; between a hand-cranked cream separator and one driven by an electric motor; between a refrigerator and an icebox with an overflowing pan of water; between milking by hand and by machine; between an electric clothes washer and the old type of washer I pumped back and forth when I was a boy.

Each of you can be extremely proud of the accomplishment you have made in electrifying rural America, in meeting a challenge which many people considered beyond hope. I salute you for progress. At the same time I challenge you as we look to the future.

If one reason had to be selected as to why the REA idea has achieved its great success, I would give the credit to the unique pattern of local leadership which you have developed.

Perhaps other factors, such as effective Government assistance and a helpful attitude from local, State and Federal governments, have been important—but the quality and leadership of REA people have been the determining factor.

And this brings me to the third point I made in my opening remarks, there is a very real need to apply your local leadership pattern to a new program, to use your skill for a task greater than REA, a task which encompasses all rural America, and for which you are only beginning to mobilize your talents and resources.

That task is to wipe out the causes of rural poverty.

Let me briefly describe the nature of this new challenge.

First, there is more poverty in rural America today than in all the urban sector combined. More than 15 million Americans in rural areas live under poverty conditions by our standards today. Of the 8 million families in this country today who earn less than \$2,500 annually, some 4.1 million live in rural America. In other words, rural areas account for only a third of our population but for over half the poverty.

Second, the commodity programs which have monopolized public attention for so long will, at best, even when full parity income is attained, provide adequate incomes for less than half of those who now live on farms.

Strangely, much of this poverty has come in the wake of astonishing advances in farm technology and production. It underscores the fact that an expanding rural economy necessary to combat this problem cannot be achieved by conventional commodity programs alone.

In fact, I believe that farm programs as we are familiar with them will at best be able to do only half the job that must be done.

This, then, is a real challenge. It is a challenge that I am confident we can meet. But nothing less than a massive counter-attack combining the resources of both government and local people will do the job and reverse the downward spiral in which rural America finds itself today.

Such a counterattack has been launched through a dynamic new action program. Most of you have heard something about this program called Rural Areas Development—or RAD, for short.

The RAD program is a blending and coordination of all available resources of the Department—conservation, credit, forestry, recreation, industrial development, education and other public services—into a long-range effort to erase the blight of rural poverty.

A very important responsibility in this program has been assumed by the leadership of the cooperative movement, and your REA co-ops, in particular, have much to contribute. As you know, your dynamic and driving general manager, Clyde Ellis, recognized the importance of this program very early, and has been a strong force in it for effective action.

As a result, the REA has been assigned primary responsibility for developing industrial and commercial projects under the area redevelopment program, and other programs, as well.

You already have some experience in this task through the use of consumer facility loans authorized in section 5 of the REA legislation. Under this section, some of you have assisted industries and businesses in your areas with the financing of electrical equipment and plumbing. Using these funds only when financing is not available on reasonable terms from any other source, public or private, you have made possible new job opportunities that could not otherwise have been created. Since July 1961, you have used these funds 14 times and for only a little over a million dollars, but the avail-

ability of section 5 loans has made much else possible.

In helping the local community within your territory to increase jobs, and expand the benefits of economic growth, you also are increasing your own business. It is a natural combination, and fulfills the basic aim of REA to bring progress to rural America in many forms.

However, REA leadership in stimulating community development is not always tied to a direct REA power benefit. The manager of a local electric cooperative in Pennsylvania, for example, has led the drive in his community to get four new industries, and each buys power from a private power supplier.

The manager maintains, and correctly so, that both the private and cooperative power suppliers are benefiting, the co-op from new consumers who live in its territory. But most importantly, the community, the people, will benefit from new opportunities.

I am encouraged to see the dedication and energy which local REA co-ops are giving to the RAD program. Reports from about one-third of the REA borrowers indicate that since July 1961 they have helped to launch 400 industrial and commercial projects. It is anticipated that they will directly create 30,000 new jobs, and indirectly, another 22,000. When reports are in from all co-ops, undoubtedly these figures will be higher.

More than one-fourth of these new enterprises involve processing and marketing of farm and wood products, which mean additional outlets for farm and forest products as well as new jobs for rural citizens. This is a real "double shot" in the arm.

It is also important to note that in these newly launched projects, Government financing is playing a "seed capital" role by stimulating the investment of much larger sums by private and local sources. The REA figures indicate that the 400 projects are being financed by more than \$250 million of private capital compared with about \$15 million from Federal Government sources.

These projects are scattered throughout the country. They include a lumber project in Idaho, a furniture factory in Kentucky, a commercial recreation enterprise in Illinois, a packing plant in Nebraska, and a chipping plant in Mississippi. In addition, the 600 REA borrowers report they have assisted their communities in launching a number of public facilities, hospitals, water systems and sewerage systems.

Thus, we have, with your assistance, made a good start with the RAD program, but it is only the beginning, for we have only scratched the surface of the need in rural America.

A good start means that rural electric cooperatives will have more and more to do as rural America responds to the challenge of the sixties, as it moves positively forward once again. And as these things take place, demands for power will expand rapidly.

Presently your members are doubling their power needs every 7 to 10 years. Today, the power requirements of your systems are about 37 billion kilowatt-hours. By 1970, those requirements will soar to 68.6 billion (or more) and by 1985 to almost 200 billion (or more).

President Kennedy has said that power is the key to this century, power on the farms and in rural areas as well as in the cities. At Oahe project in South Dakota last summer he said: "The role of the REA is not finished, as some would believe. To be sure, most farms now have electric lights. Most REA cooperatives and power districts are well established. But we are rapidly approaching the time when this Nation will boast a 300 million population, a \$2 trillion national income, and a grave responsibility as the breadbasket and food producer for a world whose population will have doubled.

That is the prospect for the end of this century, and the key to this century is power, on the farm, in the factory, in the country as well as the city."

The role of the REA is not finished, it is only beginning.

This, I submit, is sound policy and one that will serve the Nation well. Let us, working together, militantly carry it forward.

It's Only Money

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. BRAY. Mr. Speaker, we have seen a great many comments about the administration's proposals to increase spending by several billions of dollars and to reduce Government income by several billions at the same time. Perhaps few of these comments are as much to the point as the following editorial taken from the January 29 issue of the Washington Daily News:

IT'S ONLY MONEY

Sly adulteration and debasement of money probably started with the first coinage. The names of Polycrates of Samos (500 B.C.) and Dionysius of Syracuse (400 B.C.) are associated with the great monetary frauds of antiquity.

Besides setting fire to Rome, Nero reduced the precious metal content of the coinage by 10 percent and pocketed the difference. Henry VIII of England is remembered for his many wives. He also issued a silver-plated shilling, bearing his likeness. When the plating wore off, starting with his most prominent feature, he was known as Old Coppernose.

All this was done in the dark of night. During the Middle Ages the penalty for doctoring the coinage was to have the head held under in a kettle of boiling water. After Hastings, William the Conqueror decreed mutilation, such as having the ears cut off, for anyone caught fooling with the coinage.

As we note, this practice was frowned upon into modern times. It took John Maynard Keynes, in the depression years of the 1930's, to figure out that legal counterfeiting not only was respectable, it actually would help the economy. Lord Keynes probably never intended to go that far but such, in effect, is the deduction of his disciples who are as thick as hors d'oeuvres around Washington.

Since, between Nero and Keynes, paper money had been invented, probably by Kubal Khan or his mandarins, procedures were simplified. It no longer was necessary to melt up the silver and gold, adding copper or other inexpensive metal in the reissue. The printing presses merely could be turned loose to print unlimited quantities of certificates that at least looked like money.

That, in substance, is what we've been doing in the United States for a generation. The sum of this production is tabulated in a major part of the public debt, now \$305 billion in round numbers.

But just as the Romans found the new denarius wouldn't buy as much as the old one, Americans have found the new dollar has lost its punch. At last accounting it had declined in purchasing power to 46 cents as compared to what it would buy just less than 25 years ago.

And the tax cut—spending program thought up by the disciples of Keynes to get

the economy moving again involves more of the same—a great deal more.

In the administration plan it is contemplated that at the end of the 3-year program, \$8.5 billion a year in personal tax-cut money will be pumped into the economy. Every dime of this, and more besides, will be borrowed money—which is just another way of saying it will be printing press money. The deficit for next year alone is very conservatively estimated at just under \$12 billion and even Treasury Secretary Dillon can't look ahead to the year in which the budget may be balanced.

This trick practically is guaranteed to bring a quick flush to the economy. But over the long haul it never has worked in the whole history of money finagling—and never will, except as a means of siphoning away the savings of the people. It is within the power of the Government to call 50 cents a dollar but no government ever has been able to make it buy more than half a dollar's worth.

But they never quit trying.

Part 5: Let's Keep the Record Straight— A Selected Chronology of Cuba and Castro—September 13–October 14, 1962

EXTENSION OF REMARKS

OF

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. SHORT. Mr. Speaker, part 5 of my chronology of Cuba and Castro begins with a series of newspaper quotes on our U.S. policy for dealing with Cuba.

While the Monroe Doctrine and its application to the present situation was endlessly debated by our newspapers, our columnists, commentators, and newspapers in other countries—our Congress stubbornly went ahead adopting resolutions upholding the right of the United States to invoke the Monroe Doctrine, protect our country, and protect the entire hemisphere against an extension of the Marxist-Leninist Cuban Government.

Because of the reluctance of our NATO allies to cease shipments of materials and goods to Cuba which would be detrimental to the interests of this hemisphere, the House of Representatives boldly included amendments to our foreign aid appropriations bill which would cutoff aid to any country that permitted its ships to transport goods to Cuba. This perhaps was not what we might call a diplomatic approach but it certainly was a practical approach to the problem. It underlined the psychological approach of appealing to self-interest when the idealistic approach failed.

And on September 21, 1962, Adlai E. Stevenson admitted in the United Nations, in answering Soviet threats, that it was officially known that the U.S.S.R. was stuffing Cuba with planes, rockets, and other arms.

It began to be clear to all who followed the situation that some of our news columnists were about to find themselves

with "egg on their face," because of their weighty—and in some cases—frightened pronouncements on what we as a Nation should do or what we could not do.

A SELECTED CHRONOLOGY ON CUBA AND CASTRO—PART 5

September 13, 1962: U.S. policy for dealing with Cuba: "If necessary we can take care of Cuba; and if the necessity is obvious, the Russians, despite what they now say, will acquiesce. They do not have any greater desire to fight a nuclear war over Cuba than we do. Force might some day prove the lesser of two evils for us; but it could never provide a solution for the Cuban problem" (New York Times, Sept. 12, 1962). "The only plausible employment for [the Russians] in Cuba * * * is to do more or less exactly what the Americans are doing in South Vietnam; that is, to train the local army to fight a more advanced kind of war . . . the defense of Cuba against another invasion. Whether [the Russians] are troops or technicians is at bottom immaterial . . . in the sense that the Americans cannot very well assert the right to intervene, whatever the Russians are. Doubtless, in a perfectly ordered world, the Monroe Doctrine would require the removal of these alien intruders. But in the imperfect real world, where the Americans keep troops along the border of the Communist block (in one case, within it; remember Berlin), and claim an unhindered right of access to these outposts, it is going to be awkward, to say the least, to expel or blockade the Russians in Cuba. Mr. Khrushchev has made the neatest of moves in the international chess game; take my pawn in Cuba, he says, and you risk your castle in South Vietnam—or your Berlin queen. If Dr. Castro is one day replaced by a democratic government, it will not be as a result of the one threat against which Russian advisers can give his army any real help—a regular invasion, a la D-day, from over the sea. The United States learned its Cuban lesson in April last year. The United States can perhaps help to organize and supply a rebellion, as the Communists do elsewhere; it cannot import a rebellion, prepackaged. Given enough time, and enough rope, the Cuban regime may yet produce the internal disaffection that will be its downfall. If [Dr. Castro's] support in the countryside begins to fade, one of the conditions of a successful revolt against him will have been established. And if the test ever came, it would be far harder for the Russians to keep an unpopular government in office in Cuba than it is for the Americans to do a similar job in other parts of the world which are better left unnamed. Mr. Khrushchev has no 6th or 7th Fleet to keep his supply lines open. If things go the way the United States hopes—if discontent grows inside Cuba—any further investment in Dr. Castro is going to look very risky indeed to Moscow. Patience, not a choleric lunge, is the Americans' best policy" (Economist, London, Sept. 8, 1962).

"In the hemisphere, in the United Nations, with the uncommitted nations, the reaction [to a U.S. invasion of Cuba] would be most unfavorable for us" (New York Times, Sept. 14, 1962). "The United States is, of course, able easily to blockade Cuba. But stopping ships under threat of seizure or sinking would be an act of war not only against Cuba but against the Soviet Union. The invasion of Cuba would, of course, be an act of war against Cuba. But what we could not be sure of doing is to prevent the retaliatory moves to which we would have laid ourselves wide open, moves against Berlin or against Turkey, or against Iran. For we would have acted on the rule that a possible threat against our security or our interests justifies us in going to war. We would be saying that because Cuba is in

the grip of an unfriendly European power, we have a right to blockade or occupy the island; we would be saying too that the Soviet Union has no such right to act against the American military positions in Turkey, Iran, Pakistan, right on her own frontier. Let us not fool ourselves. Such an argument does not wash. It would be rejected, probably even laughed at, not only by all neutrals but by powerful elements among our closest allies. We could go to war if Castro injures us. But we cannot go to war, even against Castro, because of what he may do in the future. We cannot wage a preventive war against Castro without establishing the rule that a preventive war is legitimate against our military position in Berlin, Turkey, Iran, Pakistan, Thailand, South Vietnam, Formosa, Okinawa, South Korea, and Japan" (Walter Lippmann, in the New York Herald Tribune, Sept. 18, 1962). "Cuba has made Mr. Kennedy look like a man with not one, but two, Achilles heels [Berlin and Cuba]. Americans are suffering from the all too familiar affliction of frustration. They think that they were ineffectual in dealing with the Berlin wall and they fear that the administration is going to be ineffectual again in dealing with Cuba * * * acknowledging that an armed invasion of Cuba would mean the deaths of thousands of Cubans, of an untold number of Americans. Not totally precluded are landings by anti-Castro Cubans, avoidance, this time, of a Bay of Pigs disaster and the start of serious guerrilla warfare. Almost everyone is perfectly aware of the dangers of Cuba becoming the scene of another Spanish civil war, in which Russians as well as Cubans would no doubt kill and be killed.

"Perhaps the chief restraining factor on bitter American impatience is that action by the United States against Cuba, including a naval blockade, might tempt Mr. Khrushchev to snap shut the trap in which Berlin finds itself. Yet the administration's own view of the world remains essentially unaltered. It is still thought that Mr. Khrushchev will not in fact risk a third and final world war over Berlin; that, whatever happens there, he still has his own difficulties and that one of them is that his own country is changing, on the whole for the better; and that an eventual easing of tensions through disarmament and bans on nuclear tests is in Russia's interest as well as the West's. Recent events suggest, however, that Mr. Khrushchev, having grasped the fact that general war has become impossible, is tempted as a result to be more rather than less provocative" (Economist, London, Sept. 15, 1962).

On the same day, U.S. Senator BARRY GOLDWATER, Republican, declares that "the American people will not be satisfied with President Kennedy's reiteration of a do-nothing policy toward Cuba."

September 15, 1962: Press reports state that the U.S. Government has had little success in persuading its Allies to withhold ships being chartered to carry Soviet supplies to Cuba. The Governments of Britain, West Germany and Norway are reported to have begun inquiries among their ship-owners, but these are regarded as polite responses to U.S. diplomatic pressure, and center on the question whether Allied ships are carrying arms among their cargo to Cuba. U.S. officials have pointed out to these Governments that the use of Allied ships for ordinary goods releases Communist-block shipping for arms deliveries to Cuba.

September 17, 1962: U.S. Secretary of State Rusk briefs members of the Senate Foreign Relations and Armed Forces Committees at a joint closed door session. "Rusk took pains to assert a direct relationship between events in Cuba and Berlin, particularly in the next 3 months. * * * It is widely assumed [in Washington] that the Russians will make the big push in Berlin before the first of

the year, but after the November 6 elections [in the United States].

September 18, 1962: Former U.S. Vice President Richard Nixon urges President Kennedy to take stronger action on Cuba and suggests a program including a naval blockade of the island and the obtaining of commitments from U.S. allies that their vessels will not be used by the Soviet Union for shipments to Cuba. He concedes that the risks of nuclear war are raised by a blockade, but asserts that "the risks of inaction are far greater." He adds that immediate action is needed to "revitalize" the Monroe Doctrine.

The present state of the Monroe Doctrine in relation to Cuba: "The policy of the United States in the Western Hemisphere is guided by two main considerations: its own national security and the peace and security of its hemispheric neighbors. On the one hand, the United States has the tradition of the Monroe Doctrine, enunciated more than a century ago as a warning to European powers that the United States would move against intrusions into the hemisphere. On the other, the United States is pledged, under the Rio Treaty of 1948 which formed the OAS, and under the U.N. Charter, to abstain from unilateral military action. The United States, nevertheless, has affirmed that it would take whatever steps are necessary to move, unilaterally if necessary, against a clear and present threat to its security and that of its allies in Latin America. * * * There is a vocal body of opinion that the Russian shipments of arms to Cuba is a clear threat to U.S. security and therefore a violation of the Monroe Doctrine demanding immediate action. This opinion holds that the Cuban buildup, in effect, constitutes the establishment of a military base by Russia in the Western Hemisphere" (New York Times, Sept. 16, 1962).

"The Monroe Doctrine has been modified to apply only to situations which directly endanger the security of the United States; 'The United States will consider any attempt by European powers to extend their system to any portion of this hemisphere as dangerous to our peace and safety.' * * * Soviet Russia has made this extension in Cuba, and is amplifying the activity. But President Kennedy has evaluated it thus far as not endangering our peace and safety, thereby narrowing the original scope of the Monroe Doctrine. The fact is clear. But the only administration spokesman who has publicly conceded it is Senator HUMPHREY" (Arthur Krock, in the New York Times, Sept. 18, 1962). "It is true, of course, that the Soviet lodgment in Cuba is a gross violation of the Monroe Doctrine. Yet we cannot invoke the Monroe Doctrine. Why not? The crucial point is that the American claim for the isolation of the Western Hemisphere was coupled with a renunciation of American interest in the Eastern Hemisphere: 'In the wars of the European powers in matters relating to themselves we have never taken any part, nor does it comport with our policy so to do.' * * * This basis of the Monroe Doctrine disappeared in the 20th century, in the two World Wars, the Korean war and the cold war. We cannot invoke the Monroe Doctrine without meeting the question of what we are doing all over Europe and Asia. Our right to put Cuba under surveillance, and if necessary to blockade an invader, rests not on the Monroe Doctrine but on the elementary right of a people to insure its own security. * * * This right can, however, be exercised only when there is a clear and present danger. Castro is an insulting nuisance but he is not, and is not now remotely capable of becoming a clear and present danger to the United States. So we must practice watchful waiting, and hold ourselves in readiness, never for a moment forgetting the vastly greater dangers elsewhere" (Walter Lippmann, in the New York Herald Tribune, Sept. 18, 1962).

On the same day the U.S. State Department announces that an informal, private meeting of American Foreign Ministers will take place in Washington on October 2 to review the Soviet military buildup in Cuba and possible steps for dealing with the whole Cuban problem.

September 20, 1962: U.S. Senate adopts by 86 to 1 a resolution stating that the United States is determined to prevent by whatever means may be necessary, including the use of arms, the Marxist-Leninist regime in Cuba from extending by force or threat of force its aggressive or subversive activities to any part of this hemisphere; to prevent in Cuba the creation or use of an externally supported military capability endangering the security of the United States.

On the same day, the U.S. House approves the foreign-aid appropriation bill, including three amendments intended to cut off aid to any country permitting the use of its merchant ships to transport arms or goods of any kind to Cuba.

The House approved the foreign aid appropriation bill without restoring any of the \$1,124 million urged by President Kennedy. By a 249-to-144 vote, the measure was sent to the Senate after the Democratic leadership decided not to risk deeper cuts in a floor fight. In earlier voice votes, the House shouted its approval of three amendments to cut off aid to any country that permits its ships to transport goods to Cuba (New York Times, Sept. 20, 1962).

A resolution endorsing the use of arms, if necessary, to prevent Cuban aggression or subversion in the Western Hemisphere was adopted by the Senate, 86 to 1, after 3 hours of debate (New York Times, Sept. 20, 1962).

September 21, 1962: The Soviet Union issued a new warning that any U.S. attack on Cuba would precipitate a nuclear war. The threat was made by Foreign Minister Gromyko in a tough and uncompromising policy statement to the United Nations General Assembly. Adlai E. Stevenson replied that the threat to peace came from the Soviet Union, which is "stuffing Cuba" with planes, rockets, and other arms.

September 24, 1962: Secretary of State Rusk met yesterday with the Norwegian Foreign Minister, Halvard M. Lange, in an effort to win cooperation in blocking shipments of strategic goods to Cuba. They conferred in New York where Mr. Rusk has been making similar appeals to other allied diplomats. Italy and West Germany were said to be responding more favorably than Britain and Scandinavia.

September 25, 1962: Russian trawlers will operate out of Cuba under a plan disclosed by Premier Castro in a television speech. He said the two nations would build a port somewhere on Cuba's coast for a joint Atlantic fishing fleet.

September 26, 1962: The House of Representatives completed congressional action on a declaration of the U.S. determination to oppose with force, if necessary, Communist aggression or subversion based in Cuba. The House approved the joint resolution as anger and concern mounted in Washington over Moscow's plans to help build a port in Cuba for Soviet fishing trawlers. Moscow portrayed the project as a routine agreement for aid to the Castro regime.

Ways to guard against Cuban-based aggression and subversion were discussed in New York by Secretary of State Rusk and foreign ministers of the Latin-American nations. One proposal is the establishment of a Caribbean military organization.

September 29, 1962: Cuba stands in greater danger of attack, Premier Fidel Castro asserts, because U.S. politicians facing November elections are "trying to push the country toward aggression."

In a television address last night, Premier Castro said that in the U.S. House of Repre-

sentatives and Senate "there is a competition to see who can shout most. It doesn't matter to them that they play with the destiny of the world and play with war."

He said armed intervention in Cuba could lead to World War III.

"We know the Soviet forces are with us," Dr. Castro declared. "If the imperialists think the Soviet Government's words are merely words, they are wrong."

September 30, 1962: At a White House luncheon, the President and Britain's Foreign Secretary discussed ways to contain further Communist expansion and subversion in the Caribbean. A joint communique suggested that Britain might have changed her policy of regarding the Cuban problem as a matter of concern only to Washington.

October 1, 1962: OAS meets today to discuss Cuban crisis.

October 2, 1962: Behind closed doors at the State Department, Secretary of State Rusk assured Latin America's foreign ministers that the United States was prepared to give the necessary leadership to efforts to defeat Communist inroads in this hemisphere.

October 4, 1962: A U.S. program to penalize all shipowners who transport Soviet-bloc supplies to Cuba will be even tougher than expected. The four-point program, to be started within 2 weeks, will threaten foreign shipowners with the loss of all U.S. Government-owned or financed cargo if even one of their vessels engages in such trade.

October 8, 1962: Amid the applause of some delegates and the cries of hecklers, Cuban President Dorticos urged the United Nations yesterday to condemn the American "naval blockade" of his country. Gripping the rostrum, the bespectacled President had to shout his speech to the General Assembly. He was interrupted 4 times by hostile demonstrators in the visitors' gallery and about 12 times by applause, mainly from the Soviet bloc.

Havana sources predicted that the release of 1,113 captives held since last year's abortive invasion would be announced soon after final talks today between Premier Castro and James B. Donovan. In a move against Cuban trade, leaders of the International Longshoremen's Association planned to ask their men not to load cargoes to or from the Soviet Union and to boycott all lines servicing Cuba.

October 9, 1962: On Cuba, Secretary of State Rusk vowed U.S. aid for Cuban development if Communist rule is ended there, but he said the big issue now was Communist use of Cuba as a military and subversive base. Meanwhile, Washington said the release of anti-Castro Cubans seized in last year's invasion attempt still was not set. In Havana, however, James B. Donovan, who is negotiating for the prisoners' release, was optimistic about an early agreement.

October 10, 1962: A Cuban exile group—Alpha 66—announced that its members made a successful raid Monday on the Cuban port city of Isabela de Sagua. The exiles said that a commando group of 15 to 25 men had killed about 20 defenders, including Russians.

October 12, 1962: Britain has discussed with the United States a threat by a Cuban exile group, Alpha 66, to attack all merchant ships carrying supplies to Cuba. A carefully worded statement by a Foreign Office spokesman avoided saying that any complaint had been made. Washington indicated it was not yet ready to act against the exiles.

October 14, 1962: Responding to a radio message, the Coast Guard picked up two wounded crew members of a Cuban patrol boat and flew them to a Miami hospital. The Cubans were shot when their craft was sunk by a raiding vessel manned by exiles off the Cuban coast.

Women Play a Good Part in Soil Conservation

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. JENSEN. Mr. Speaker, my quarter century of service in this House has gained for me, so I am told, a reputation of being rather tight-fisted with the people's money. I own up to the charge.

However, one place where I am quite generously disposed to spend tax dollars is in the field of soil conservation. I am even willing to support amounts in excess of budget figures for this important work.

No undedicated person is ever likely to rise to become head of the Soil Conservation Service, so there is not going to be any chance to compare good and bad administrators or administrations in this vital field. The country started out in 1937 with the daddy of soil conservation, the late great Hugh Hammond Bennett, heading the service. And now for several years we have had another director with conservation in his blood, Don A. Williams.

As a matter of fact, the country gets twice as much for its money in having Don at the head of the Soil Conservation Service, because with him we get the fine supporting cooperation of Mrs. Williams, the experienced Ruth, who is a true champion of conservation practices throughout this blessed land.

Mr. Speaker, I desire to insert at this point in the Record an article entitled "Women in Conservation Are All Alike—They All Are Doing Their Part," by Ruth Williams, from the January 1963 issue of Soil Conservation:

WOMEN IN CONSERVATION ARE ALL ALIKE—THEY ALL ARE DOING THEIR PART

(EDITOR'S NOTE.—This "women in conservation" issue of Soil Conservation would not be complete without this personal observation by the wife of SCS Administrator Donald A. Williams, one of the many wives who have been through the soil and water conservation ranks with their husbands. A South Dakota farm girl, she has since 1935 shared with him, and with the wives of the farmers and ranchers with whom he worked, the fight against soil erosion and water waste—lived and "preached" conservation from coast to coast.)

(By Ruth Williams)

It was the spring of 1932 and I was on my way from Aberdeen to Clark, S. Dak., to see my prospective husband. It was spring and like James Russell Lowell's poem:

"Now is the high tide of the year
And whatever of life hath ebbed away
Comes flooding back with a ripply cheer
Into every bare inlet and creek and bay
And no matter how barren the past may
have been

"Tis enough for us now that the leaves are green."

But the poem we memorized back in the fifth grade just didn't make sense this spring morning. Another "black blizzard" had just roamed through the Plains States and had again left it a sea of desolation. There were no songs of the birds to herald the morning,

for birds must have water and cover. There was neither—only powdery dust.

The road passed through miles of once-fertile fields and pasture—now a vast nothingness—broken down fences half buried in dust, trees trying desperately to put forth a few leaves—that is if they still survived. We were stopped at the railroad crossing as a long train of cattle cars filled with bawling, bawling, half-starved animals on their way to Omaha or Sioux City crawled past. They should have been in green pasture with new calves.

Along the road were farmhouses, once painted white with gandy curtains and potted plants in the window. Now they are like the landscape about them—gray and forlorn, and some abandoned. The man at the next filling station, once a farmer, muttered: "I just can't take it any more." Even hope for many had become a meaningless word.

The dust bowl was only one of nature's rebellions against man's misuse of her resources. For example, I remembered the little city of Vanport, Oreg., destroyed in minutes by a flood on the mighty Columbia River, made mightier by uncontrolled water runoff from melting snow on the watersheds. Then there was a lovely little lake back from the coast a mile or so—where Don actually caught fish. A clear-cut logging outfit had raped the bordering mountains, leaving the slashings. Fire followed, and then flood silt drained into the lake, and it no longer had an abundance of fish. And who can forget the Tillamook Burn in the Cascade Mountains in Oregon. Thousands of Douglas-fir trees lay waste—a scene as desolate as the dust bowl itself. And how about the strip-mining spoils and debris in the Appalachian Mountain country at the other end of our great country?

These are all dreary pictures we would like to forget, as we would like to forget the week of October 19, 1962, with its possibility of laying waste our Nation. But we dare not forget! It often takes disaster or near catastrophe to start a movement for a better way of life. So it was that out of disaster the Nation's modern soil and water conservation program as we know it today was born 30 years ago.

Men everywhere joined in the movement and with them, as the coworkers, the moral support, the "power behind the throne," the "no dollar a year gal"—the women. I have yet to meet a wife of a conservationist or of a conservation farmer or rancher who was not a conservationist in her own right. She may not build stockponds, terrace the hills, or make contour furrows; but I'm sure she's approved his conservation program, pushed it, preached it, and cut the budget so it could be done.

There is no greater pleasure than to go with Don to conservation meetings. It doesn't matter which State you go to, the women in conservation are all alike. They all are dedicated and are doing their part in conservation.

We have a Ladies Auxiliary of the National Association of Soil and Water Conservation Districts. It is an effective education arm of the association; and there are growing numbers of State association auxiliaries, and even some local district auxiliaries. You will find the conservation women also have left their mark on the public school course of study, on garden clubs, General Federation of Women's Clubs, League of Women Voters, 4-H clubs, Girl Scouts, and Camp Fire Girls. You name it and, if by chance they missed, well, just give them time.

I knew a little Camp Fire Girl several years ago who could classify land like an expert. And I've heard more than one teenager proudly express the wish in typical teenage fashion that just once they'd like something dished out, other than conservation, at the evening meal. So you see this conservation movement is not for men only, but a family affair.

Standardization of Firehose Coupling Threads

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. BOB WILSON. Mr. Speaker, the International Association of Fire Chiefs Committee on the Standardization of Firehose Coupling Threads has made numerous appeals to higher authority to standardize firehose coupling threads and thus avoid undue disaster. Therefore, I have reintroduced my concurrent resolution calling for the President to appoint a commission to study the feasibility of requiring by the enactment of Federal legislation the standardization of threads on the couplings on fire hoses used by fire departments.

Under unanimous consent to extend my remarks in the RECORD, I wish to include both an address to the International Association of Fire Chiefs Committee on Standardization of Firehose Coupling Threads by Robert Ely, chairman, and a highly applicable and illustrative poem entitled "Tragedy."

REPORT OF INTERNATIONAL ASSOCIATION OF FIRE CHIEFS' COMMITTEE ON STANDARDIZATION OF FIREHOUSE COUPLING THREADS

First I want to thank our committee members, Chief John Garthe, and Chief Nicholas R. Warner for their help in making our progress possible. We also want to thank Chief Ray W. Shukraft and Chief Roi B. Woolley for their invaluable assistance. The help and guidance received from your executive director, B. Richter Townsend, and your public relations director, Al Drayton, has been a great help. The support of your president, Chief Edward F. Delgnan, and the entire membership has been greatly appreciated.

Your committee has continued to urge the use of national standard firehose threads and standard gasket grooves on all couplings and fittings used for fire protective purposes. It has been a pleasure working for you and we appreciate your continued support on this worthwhile project.

From history we find that standardization of firehose coupling threads was the main topic of the first convention of the International Association of Fire Engineers in 1873. Concern in 1873 was caused by confusion due to misfits of hose coupling threads experienced in the great Boston fire of 1872. Ninety years later we are still trying to get all sizes of firehose coupling screw threads converted to the recommended national standard dimensions.

According to the New York Times, non-standard firehose coupling threads were a contributing factor in the disastrous fire aboard the aircraft carrier *Constellation* on December 19, 1960. Forty-nine workmen lost their lives and there was a property loss of \$47,942,000. A lot of threads could be standardized for that price. Refer to the New York Times of December 28, 29, and 31, and January 4, 1961.

We are happy to report that the U.S. Forest Service has converted their 1½-inch firehose coupling in southern California to the national standard thread and they are now in the process of converting their equipment in northern California.

Yes, progress has been made, but as long as any firehose coupling threads are in use

that don't comply to the national standard dimensions there is still work to be done.

We suggest that each divisional organization of the International Association of Fire Chiefs appoint a committee to assist in the standardization of firehose coupling threads in its particular district. Our international committee will assist in any way possible. We have had experience in the standardization program which should be a help. Methods have been developed to rethread existing equipment at considerable savings. We are also open for suggestions and will welcome any assistance to help get the job done.

In last year's report we enclosed a copy of our letter to the President of the United States informing him of the use of so many nonstandard firehose coupling threads and asked that he take the necessary steps to aid and assist the fire service in standardizing all firehose coupling threads nationwide. Our letter was answered by Mr. Barent F. Landstreet, Deputy Assistant Director for Emergency Community Services, Department of Defense, and as yet there has been no help from the President or Office of Civil Defense to help get firehose coupling threads standardized.

The International Association of Fire Chiefs 1959 Resolution 5 asking OCDM for matching funds to help defray the costs of the equipment necessary to accomplish the standardization has apparently been ignored. We urge OCDM to reconsider the resolution and assist the fire service in the standardization program.

On September 27, 1961, Congressman Bob Wilson, of California, had our letter to the President of the United States, with the supporting material on firehose coupling threads read in the House of Representatives and inserted in the CONGRESSIONAL RECORD. You may find it in the CONGRESSIONAL RECORD Appendix on pages A8028 and A8029 of the October 10, 1961, issue.

The fire service is on record asking that all coupling threads be standardized and has notified the responsible people of our country of the dangerous condition that exists with the use of so many nonstandard firehose coupling threads. The fire service cannot be held responsible for loss of life and property by fire where nonstandard firehose coupling threads are a contributing factor if the fire chief has gone on record in writing to his superiors asking that their nonstandard firehose coupling threads be converted to the recommended national standard firehose coupling screw thread dimensions as soon as possible. Have we protected ourselves in writing?

The NFPA, NBFU, and IAFC have adopted standards for the coupling screw threads for all 10 sizes of firehose used for fire protective purposes. The American Standards Association has adopted seven of these standards. However, the 4-, 5-, and 6-inch sizes which were the last to be adopted by the NFPA, NBFU, and IAFC have not been adopted by the American Standards Association as yet. It is desirable to have these standards adopted by the ASA as it will make the NFPA, NBFU, and IAFC coupling thread standards more secure and will help to get wider adoption of the standards. There has been a committee appointed by the ASA to study the firehose coupling threads.

Having worked with the development of the 4-, 5-, and 6-inch standards and through the recommendation of your executive director I have been appointed to represent the IAFC on the ASA coupling thread committee. A meeting of the ASA coupling thread committee will be held soon.

Funds should be appropriated for traveling expenses so that I can attend the meeting and help to get your IAFC 4-, 5-, and 6-inch thread standards adopted as the American standard.

It has been a pleasure working for you and your continued support for the standardization program is appreciated.

Respectfully submitted,

ROBERT ELY,
Chairman, IAFC Committee on Standardization of Fire Hose Threads.

TRAGEDY

(By Bill Pitts)

The huge ball of fire rose fearsomely
As the "H-bomb" rent the night.
And the heart of the great metropolis,
Dissolved in the hellish light.

Though 50 percent of the city
Was beyond the help of man.
Most of the rest might still be saved
By a previously set up plan.

As the "fire storm" ate like a cancer,
Apparatus began to roll
From fire departments far and near
The stricken town their goal.

This was to be the ultimate test
Of Disaster Defense of the State.
Untried as yet, only theoried,
If not right, it was far too late.

The companies arrived to make their stand.
Then frustration forced them to quit.
Despair took over as the cry rang out,
"The fire hose threads won't fit!"

That just couldn't happen, may be your
thought,
And it shouldn't happen, it's true.
But it does and will continue so,
While hidden from public view.

A hundred or more different hose threads
Are manufactured today.
Instead of one national standard thread,
As national requirements say.

And who do you think bears the added cost,
Of producing these various threads?
Is it those who won't listen and correct this
mess,

But like ostriches bury their heads?

No, it isn't they, it's someone else
Like me and you and you.
The tab for payment with public funds
Is picked up by old John Q.

And what of the added fire loss,
Caused by this national disgrace.
It seems 'tis time for responsible men
This serious fact to face.

So start the clamor for action,
Ere disaster with accompanying dreads,
Overtakes your State and catches it short,
Without national standard threads!

Straining the Imagination

EXTENSION OF REMARKS
OF

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. NELSEN. Mr. Speaker, the comments of F. A. Douglass, editor of the Lakefield (Minn.) Standard, on the hazards of the administration fiscal program are so much to the point that I include the editorial on the subject as a part of the RECORD.

STRAINING THE IMAGINATION

President J. F. Kennedy's plan for raising national spending while bringing about a reduction in taxes may test the imagination a little too much for the average American.

We are sure that Mr. Kennedy had the advice of some of our Nation's leading economists and we are just as certain that both they and he are convinced the plan can be consummated with no ill effects on the economy.

And for every economist so inclined, we could probably find another who would insist, also with good reasoning, that deficit spending does constitute a danger to our economy.

The danger, however, is not with the deficit itself. It is the danger that the American people, conscious that a good business cannot continue to run successfully at a deficit, will lose faith in their Government and in its monetary system.

If that faith is badly shaken, a panic or depression could ensue.

We are not saying that will happen if Mr. Kennedy's plan is enacted. And we would be foolish not to admit that the economics of our Nation has become much too complicated to break down in such simple terms.

It may be that it is this very complication which has been the salvation of the American system during record spending and record deficits.

The whole subject will undoubtedly come under close scrutiny in the Halls of Congress before the budget is approved.

We cannot help but conclude, however, that while the possibility of a tax cut captures the imagination of all of us, a plan to cut taxes while raising spending may strain that imagination just a little.

Federal Intrusion

EXTENSION OF REMARKS
OF

HON. ROBERT T. McLOSKEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. McLOSKEY. Mr. Speaker, I recently received information calling to my attention what appears to be another step toward moving into the field of private enterprise by the Federal Government. This, as often is the case, is done under the guise of being for the public good. Not through the legislative process but rather by rules established by governmental bureaus.

A case in point, I believe, is the proposed rulemaking as it appears in the Federal Register of December 29, 1962, relating to electric power transmission lines traversing public lands under the jurisdiction of the Secretary of Interior and the Secretary of Agriculture.

It should be pointed out that federally owned land, whether a large national forest or a tiny post office lot, are held in public trust. As the Government is the servant of the people, so are its lands similarly expressed. It would thus appear reasonable that they should not be used as a pawn in the intrusion of government into the field of gainful activity.

One can only ask, what is the real motive behind this proposed rule change? Within reasonable bounds of public safety and welfare and the preservation of natural resources from unconscionable dispersion of destruction, government lands have always been available to persons for traversal upon payment

of a fair price. If this statement is correct and I am confident it is, then I ask in all candor, are the proposed rules reasonably appropriate or are they arbitrary and capricious?

Mr. Speaker, today we hear much of back-door referendums and back-door spending. Well, it occurs to me that this sort of low by regulation is a kitchen-door approach—a foot-in-the-door entry by government into the field of gainful production.

Both departments in this particular instance allude to the right to withhold a right-of-way grant if it is not consistent with the Federal marketing program. What is this program? Nowhere in the proposed rule change is it described nor its limits defined.

Once more we tread on dangerous ground. Let us all be more alert to the dangers ahead. Thanks for the opportunity to express myself on this subject.

Education

EXTENSION OF REMARKS
OF

HON. HENRY C. SCHADEBERG

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. SCHADEBERG. Mr. Speaker, in his message to the Congress on Tuesday the President said:

Education is the keystone in the arch of freedom and progress.

I think that statement would be meaningful if the word "to" were substituted for the word "and." It would read:

Education is the keystone in the arch of freedom to progress.

Thus the arch is freedom and it leads to progress.

Of course the message was the President's appeal for Federal aid for education—a 25-point program which some observers say is the most all-inclusive ever. It is not my purpose at this time to go into detailed comment on the subject. I am sure I will have plenty to say about it in the future.

Many proponents of the President's education program will in the weeks and months ahead be insisting that Federal funds for education and the best possible education for America's children are synonymous.

A most timely and appropriate message places the emphasis where it really belongs, and focuses on the greater need. It suggests that more attention be given to the "thinking" of our young people, and the best kind of "learning" will follow. It is contained in an editorial in the January 26, 1963, issue of the Janesville (Wis.) Daily Gazette, a highly respected newspaper published in my district. The editorial reflects the grass-roots thinking of people who are concerned with both providing the best education for our children and seeing that their thinking as they approach their studies is straight. I believe every Mem-

ber of the Congress would profit from reading this thoughtful message.

KEEP THEIR THINKING STRAIGHT

The future of this society will depend upon the thinking of young people who are now learning what life is in this country and elsewhere. It is vital that they learn the basic truths that make this country great and that the facts be correct. In coming years their thinking will be based upon the information they are given today, by teachers, by what they read and what they hear.

It is important that young Americans learn what freedom means, how precious it is, how dearly it was paid for, and what they as individuals must do to preserve it. Likewise, it is important that they learn why the American system of a free economy produces more than the systems of other nations.

Allied with this is the basic truth that without freedom they would not be attending such a school and that freedom to work is as vital and as rewarding as the freedom to worship.

Rather than following the demoralizing concept of "security from cradle to the grave" they should be taught the satisfactions of giving of themselves to whatever work they undertake, of contributing to society, of producing and adding to the knowledge and wealth of mankind.

Too often a youngster, avid for learning, arrives at adulthood with the concept that society is made for his benefit, that he has only to go to an office for a check, that government—near or remote—will take care of his illness, provide security, pay him when he is unemployed, take care of his old age, his children and even provide life insurance.

There is no such thing. His thinking ought to be started right so that he is imbued with the pride of independence, with the desire to stand on his own feet, with the purpose to give more to life than he takes from it, with the spirit of doing something for his fellow man.

Social security is not a gift from some genie or government uncle, it is bought and paid for by the employer and the employee in equal shares. Nothing is free. Government has nothing to give that it does not first take away.

Unemployment compensation, which many believe, is free, is paid entirely by the employer. The employee pays nothing but receives all the benefits.

Working people receive sick benefits, hospital, and surgical benefits because their employers provide such group insurance or the employer and employee pay for it together. But it is not a gift of some government. Hundreds of millions of American workers have these benefits because they pay for them with their employers. Some employers even offer hospitalization insurance to their pensioned employees.

Most companies offer pensions of some kind to their employees, and most of these likewise are paid either by the employer or by the employer and employee together. Many unions also have pension trusts which members pay for.

The so-called four freedoms include freedom from want, as though this were an individual right. It is no more a right than is the right to steal. As a matter of fact freedom from want, from toil, and from need would reduce man to a worthless, shiftless idler. Let the Government feed him from cradle to grave and he would deteriorate into a spiritless, spineless beggar. Man is not made to be fed at the hand of Mammon.

One of the problems of young people today is that they are encouraged to seek security first. As one schoolboy wrote, "Security is the problem of keeping people free from worry." Since when have Americans been free from worry? That is as unnatural as

for them to be kept free from want. No largess from Uncle Sam can lift these human driving forces.

Young America should be inspired by the tales of the Edisons, Ketterings, the Lincolns and the Morgans and Clarks. If they are taught that Government is the solution to their problems, they will soon be trading freedom for socialism.

Tax Bill

EXTENSION OF REMARKS OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mrs. ST. GEORGE. Mr. Speaker, the following analysis of the President's tax bill was sent to me by a friend and constituent, Mr. J. Fletcher Gillinder, of Port Jervis, N.Y.

What Mr. Gillinder writes is an exact statement of how the new proposals will affect him as an individual. It is not the rosy dream of a Keynesian egghead or the griping of a bloated plutocrat.

It is the truth as it affects an average citizen, and will affect many more like him:

GILLINDER BROS., INC.,

Port Jervis, N.Y., January 28, 1963.

Re income tax reduction.

HON. KATHARINE ST. GEORGE,
House Office Building,
Washington, D.C.

DEAR MRS. ST. GEORGE: I have just completed my income tax report for 1962. I also have studied "Kennedy's Tax Blueprint" as printed in the Wall Street Journal of Friday, January 25.

With my figures before me for 1962, I applied the proposed "tax reduction" to them. The resulting tax was actually higher. To be sure I was correct, I had a CPA do the same for me—not merely check my figures but make the entire calculation. The result was the same.

The main reason for this is that part of the blueprint which would allow as a deduction only that part of itemized deductions, including taxes, interest, etc., that exceeds 5 percent of income.

About 45 percent of the increase is due to the proposed loss of dividend received credit and removal of the dividend exclusion.

The dividend received credit and the dividend exclusion are surely an incentive for capital investment in industry to produce growth and expansion. It should not be overlooked that there already is a double taxation on dividends as they have already been taxed 52 percent at their source. Contrary to the avowed purpose of the administration to stimulate such growth, it is proposed that this be eliminated.

The limitation on the deduction from income of real estate taxes and interest on loans likewise is contrary to the stated purpose of the administration of stimulating growth. It will surely be a deterrent to home building and will penalize consumer credit purchasing.

This same limitation, as applied to contributions, will unquestionably adversely affect the work of organizations, such as the Red Cross, and many others, and will probably and unfortunately be felt by the churches throughout the Nation as well.

I well realize these are proposals only and are a long way from enactment. Doubtless, some will be eliminated—perhaps were

put there for that purpose so there can be something on which to appear to yield in the showdown.

In my thinking, there are not grades of honesty. A policy is either honest or dishonest. To foster a tax reduction of this kind on the public under the sole guise of helping the economy, when it is obviously to woo votes of a certain bracket of taxpayers, is anything but honest.

Sincerely,

J. FLETCHER GILLINDER.

Surrender to Russia?

EXTENSION OF REMARKS OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. DEROUNIAN. Mr. Speaker, ever since Mr. Rostow went to Russia it seems almost according to his plan that we are stripping ourselves of first-strike capability. In the January 26 issue of the Long Island Press, Edith Kermit Roosevelt makes an excellent analysis of the danger of current thinking of the President insofar as it affects our security:

RUSSIAN ROULETTE, AMERICAN STYLE

(By Edith Kermit Roosevelt)

WASHINGTON.—Cancellation of the Skybolt under investigation by Senator RICHARD B. RUSSELL, chairman of the Committee on Armed Services, is only one of a series of disarmament steps by our Government in recent months.

We are in the process of abandoning all our first strike capability weapons which preserve our standing as a class A nuclear power. First strike weapons are all those weapons which could be destroyed by an enemy attack—or those in stationary, unprotected positions. Here is the record to date:

B-58 supersonic medium bombers—production stopped.

B-70 bombers with speeds of 2,000 miles per hour and an altitude range of more than 70,000 feet—development halted.

Nuclear powered bombers—development halted.

RS-70 reconnaissance planes—cutback in research funds.

The Dyna-Soar or manned spacecraft bomber system—cutbacks in funds in the new defense budget.

Goal of military use of outer space replaced by Presidential announcement of "peaceful uses of outer space." Instead of developing a satellite weapons system capable of delivery nuclear weapons, funds are diverted to the moonshot. As one grim-faced Army colonel expresses it, "While the Russians have parties all over the world, we're planning a tea party on the moon."

Finally, there is the replacement of Thor surface-to-surface missiles in England and Italy by the Polaris, a second strike capability weapons system designed to fire missiles from submarines.

Second strike capability weapons include all those weapons groups which cannot be destroyed by receiving the first blow because they are either mobile or hardened. However, erosion of our second strike capability also has already begun.

Defense Secretary Robert S. McNamara bluntly told Congress that he would not put component parts of the Nike-Zeus system into production even though this system had been successfully tested. Yet the Nike-Zeus system, an antimissile system, was de-

signed to defend the United States and Europe from Communist attacking ballistic missiles.

But disarming unilaterally, policymakers apparently hope to induce the Soviets to compete with us in this Americanized form of Russian roulette. But irrespective of any philosophical motivation, concentration of all the defense apples in the missile basket constitutes in itself a disarmament measure.

Presently, the 200-missile U.S. missile right arm includes 126 Atlases, 54 Titans, and 20 Minutemen. This missile force represents a firepower of about 600 megatons. If you add the firepower of 144 Polaris missiles and 100-odd Jupiters and Thors remaining, our present missile force has a 1,000-megaton punch. But about 1,600 B-52's, B-58's, and B-47's are able to drop in excess of 10,000 megatons. This is their single mission punch. (These figures do not take into account carrier aircraft, fighter bombers, and tactical missiles.) And even if the Soviet defenses were perfect many of these planes would fly several missions.

If we wish to replace our bombers with missiles, we will need a minimum of some 10,000 missiles. But no one has yet talked about a U.S. force even approaching this size. If we reduce our strategic force to 2,000-odd missiles, as seems to be the present plan, our deterrent and retaliatory power would be cut by four-fifths or more.

Furthermore Khrushchev stated recently that the Soviet Union has invested in a defense effort against ballistic missiles equal to that invested in the missiles themselves. Obviously, the invulnerability of our Intercontinental Ballistic Missile system cannot last.

As Dr. Stefan T. Posony, former adviser Chief of Staff Air Force intelligence, points out aircraft must come out on top in the offense-defense race because (a) it is manned and therefore, genuinely maneuverable; (b) it can carry defensive armament and (c) it would be used jointly with ground-to-ground and air-to-ground missiles which would be aimed at the enemy's missile and aircraft interceptor bases.

The missile is unable, by itself, to identify and pinpoint targets; attack moving targets; and destroy very hard targets. Hence, a missile force cannot function without aircraft and cannot be the main element of a strategy designed to knock out the enemy's offensive force and stop the invasion of Western Europe.

"If the manned aircraft fleet is dead," says Dr. Posony, "perhaps the United States should prepare for its dignified funeral."

The Russell committee should investigate the entire spectrum of defense policies. A one-sided "peace race" could result in war sooner than an arms race since military weakness invites aggression. It could be a war the United States would lose.

It is indeed gratifying that over the years, the policy of our Government in these regards has been broad, permitting vessels to be named for leaders on both sides in the supreme catastrophe of our history—the War Between the States.

One such recent example is that of the missile destroyer named in honor of James Iredell Waddell, the 138th graduate of the U.S. Naval Academy in 1847, who joined the South in 1861 and won fame as commanding officer of the Confederate States ship *Shenandoah*.

An informative article by Ruby R. Duval in the December 1962 issue of *Shipmate*, magazine of the Naval Academy Alumni Association, summarizes the career of Captain Waddell.

The article follows:
U.S. NAVY HONORS JAMES IREDELL WADDELL
(By Ruby R. Duval)

A guided missile destroyer has been assigned the name *Waddell* in honor of James Iredell Waddell, Naval Academy class of 1847, who distinguished himself in later years as captain of the Confederate States ship *Shenandoah*.

The *Waddell* (DDG-24), a highly maneuverable combatant ship larger than destroyers of earlier years, is designed for a complement of 24 officers and 330 enlisted men. Her armament, and that of her sister *Tartar* guided missile destroyers, will greatly increase the antisubmarine and anti-air warfare capability of our Navy.

When James Iredell Waddell, of North Carolina, received a midshipman's warrant at the age of 17 from Secretary of the Navy George E. Badger he was destined to become a Marylander by adoption and one of the most colorful citizens of Annapolis after the War of 1861-65. He reported for duty aboard the ship-of-the-line *Pennsylvania* at Norfolk, Va., in December 1841. Later assignments led to duty in the *Vandalia* and, during the war with Mexico, he was one of the complement of the brig *Somers* off Vera Cruz.

While attending the naval school midshipmen had ample opportunity to meet Annapolis families and their young ladies; and young Waddell soon lost his heart to Miss Anne Sellman Iglehart, daughter of James Iglehart, whose home was within a few blocks of the Old Fort. He claimed Miss Anne as his bride in 1848 and his effusive "Lines to Miss Iglehart," U.S. Naval School, December 8, 1845, are found among treasured keepsakes in the late Mrs. Waddell's scrapbook.

In the summer of 1859 Waddell received orders to the U.S.S. *Saginaw* under construction at Mare Island, Calif., and scheduled for duty in the Far East. Two years later, while serving aboard this vessel off Hong Kong, he received news of the distressing political situation in the United States and the impending war. He was fortunate to be detached from the *Saginaw* and ordered to the *John Adams*, a sloop-of-war, about to sail for New York.

When the *John Adams* reached New York in November 1861, James Iredell Waddell lost no time submitting his resignation to Secretary of the Navy Gideon Welles, explaining that he could not bear arms against the South. Not until late January 1862 was his resignation acknowledged, and he was informed that his name had been "stricken from the rolls." He soon made his way to Annapolis, where his wife awaited him at her father's home, and he promptly made preparations for departure to Virginia and the Confederate capital.

In the interim between assignments at sea, Waddell was under instruction at the Naval School which had been established under Comdr. Franklin Buchanan at old

Fort Severn, Annapolis, and was graduated as a past midshipman in 1847.

The whole State of Maryland was under Federal martial law by this time and normal means of travel were avoided by Southern sympathizers to escape possible detention and arrest. It was the latter part of February when Waddell sadly took leave of his wife and little daughter and started his trek South, via southern Maryland, where he crossed the Potomac and made his way to Richmond.

In the spring of 1861 James D. Bulloch, of Georgia, formerly an officer in the U.S. Navy, was selected to serve as the Confederate States naval agent in Europe to seek ships and necessary supplies with which to build a Confederate States Navy. At that time the South had only one fighting ship—the *Sumter*, skippered by Raphael Semmes—and Bulloch was arranging not only for the construction of vessels but for the purchase of seaworthy ships already completed. It was through his cautious negotiations that the Confederate States government was able to acquire the *Sea King* in the fall of 1864. Built at Glasgow and known to be one of the fastest ships afloat, the *Sea King* was readied to begin an epoch-making voyage around the world.

James Waddell had been commissioned as a lieutenant in the Confederate States Navy in March 1862 and ordered to a ram under construction at New Orleans. Later he was detailed as ordnance officer at fortifications erected at Drewry's Bluff overlooking the James River below Richmond, and eventually duty took him to Charleston, S.C., where he received letters of instruction in regard to an impending command. It can be justly stated that his most significant opportunity came when he was ordered to Europe for foreign service in August 1864 and, upon reaching England, learned that he was slated to skipper the swift cruising *Sea King*, soon to be commissioned as the C.S.S. *Shenandoah* and to work havoc with commerce and the whaling fleets of the United States.

Among the officers detailed for Waddell's command and who joined the *Shenandoah* off Funchal, when the Stars and Bars of the Confederacy were run up and the cruiser was duly commissioned, were: William C. Whittle, of Virginia, first lieutenant and executive officer; Lt. John Grimbail, of South Carolina, Sidney Smith Lee, Jr., of Virginia, Francis T. Chew, of Tennessee, Dabney M. Scales, of Virginia, and Sailing Master Irvine S. Bulloch, of Georgia. Whittle and Grimbail were former classmates at the Naval School, Annapolis, Class of 1858; Sidney Smith Lee, Jr., was a son of Capt. Sidney Smith Lee, C.S.N., and a nephew of Gen. Robert E. Lee, C.S.A.; and Bulloch had served under Capt. Raphael Semmes in the Confederate cruiser *Alabama*, sunk off Cherbourg in the engagement with the U.S.S. *Kearsarge* in June 1864. Lieutenants Chew and Scales had received their initial training at the Naval School, Annapolis, and resigned in the spring of 1861 to offer their services to the South.

Promoted to the rank of captain, Confederate States Navy, James Iredell Waddell lost no time in getting underway to follow his official orders and headed the *Shenandoah* into the South Atlantic to leave in her wake many burning merchant vessels. He rounded the Cape of Good Hope and set sail for Australia, en route to the South Pacific and thence to the Arctic Ocean, where the *Shenandoah* took heavy toll among the large wooden whaling ships of Siberia. In her historic cruise of 1 year and 17 days this swift sailing vessel ran down and captured approximately 39 ships and took many prisoners. Many of the captured ships were sunk and others, considered too valuable to destroy, were manned by prize crews and sent to the nearest Southern ports.

U.S. Navy Honors James Iredell Waddell

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. FLOOD. Mr. Speaker, in the course of their history the United States have produced many leaders who have been honored in many ways. One of the most effective means of the U.S. Navy in recognizing the just fame of its heroes, has been in the naming of certain types of war vessels after them.

On August 2, 1865, the *Shenandoah* fell in with a British merchantman which had sailed from San Francisco 13 days earlier, and Captain Waddell learned that the war of 1861-65 was over, that General Lee had surrendered at Appomattox nearly 4 months before. Realizing that his officers and crew had been waging war on Yankee-owned vessels after the official surrender, Waddell pondered his next maneuver with a view of just what it would mean to each and every man of the *Shenandoah's* complement. He decided to spike the ship's guns and set a course for England via Cape Horn—a journey of approximately 17,000 miles.

The *Shenandoah* put it at Liverpool on November 6, 1865—still flying her wind-torn and faded Confederate flag. This was the only Confederate flag to circumnavigate the world—it waved on every ocean, except the Antarctic, and was hauled down over 6 months after the termination of the war. Captain Waddell surrendered his proud ship to the neutral British Government and begged asylum for his officers and crew.

For several years after his arrival in England, James Iredell Waddell remained abroad. When he returned to the United States and to his family in Annapolis he sought employment in keeping with his wide experience in maritime service and procured command of the *San Francisco*—one of the steamships of the Pacific Mail Co.'s passenger fleet. In 1877 the *San Francisco* struck an uncharted reef off the coast of Mexico and sank. Fortunately for all concerned, Waddell's rigid discipline and excellent leadership prevented any loss of life even though over 400 passengers were aboard in this disaster.

Soon after this trying exigency he returned to Annapolis where he and Mrs. Waddell made plans for the erection of their home on a lot at the south corner of College Avenue at the intersection of Prince George Street and overlooking the campus of St. John's College. Eventually he was appointed by the Governor of Maryland to command a flotilla known as the "State Oyster Fleet," a small number of patrol vessels serving as an enforcement agency to protect the State's oyster beds from the raid of illegal tongers.

When Captain Waddell died in March 1886, the Maryland Legislature adjourned to attend his funeral service at historic St. Anne's Church, and to thus pay their respects to the man who won the distinction of commanding the only man-of-war to fly the Stars and Bars of the Confederate States of America all around the world.

Let's Get the Facts

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. DEROUNIAN. Mr. Speaker, it is astounding that President Kennedy should be so exercised over the French veto, when he has been so condescending at Russian vetoes in the United Nations. Perhaps I, too, do not like the result of the French decision on the Common Market, but nevertheless, France is still an ally of this country and our differences should be talked out. Here again, why does President Kennedy want so much to talk with Khrushchev and not with Mr. de Gaulle?

To show the other side of the coin, an excellent article by David Lawrence in yesterday's Washington Star and an analysis by Ted Lewis in the January 26 Boston Herald indicate that Mr. de Gaulle is not solely to blame in this matter.

It is my view that the Kennedy administration has generated this serious deterioration in relations between France and the United States.

Just as the great Winston Churchill thought of Great Britain first, so does Charles de Gaulle think first of France. I wish President Kennedy would show that same concern for the United States.

The articles follow:

[From the U.S. News, January 30, 1963]

DE GAULLE: REALIST FOR FRANCE

(By David Lawrence)

There's no use getting mad at General de Gaulle just because he is a realist in a world of anxiety or just because he doesn't see things the way Washington or London see them.

The French President has lately been the subject of some rather severe criticism as a stubborn, self-centered individual who would rather mess up NATO and the whole defense plan of the West than give up his concept of a united Europe based on continental supremacy without Britain. Naturally this irritates many people and causes intimations to be given in White House circles that maybe General de Gaulle is living in the 19th century.

Yet General de Gaulle has merely stood firm on the principle that a leader's first obligation is to take care of his own countrymen. He hasn't swallowed the propaganda of the supranationalists who think the many nationalities in Europe can be best governed by a single council of state.

It was on January 14 that General de Gaulle gave comprehensive answers to questions asked at a press conference in Paris. He has not modified his position since. While his views were not accepted with enthusiasm here or in London, they were by no means opposed fundamentally to allied solidarity or to the organization of a common defense against the Communist menace. His statement explained that France would welcome Britain into the Common Market on terms of equality, but not as a special partner with trade concessions for the benefit of its home agriculture and its Commonwealth associates.

Nor did General de Gaulle exclude the strategy of a common military defense. He said:

"In these conditions, no one in the world—particularly no one in America—can say if, where, when, how and to what extent the American nuclear weapons would be employed to defend Europe. Moreover, this does not in the least prevent the American nuclear weapons, which are the most powerful of all, from remaining the essential guarantee of world peace. * * * But it remains that the American nuclear power does not necessarily and immediately meet all the eventualities concerning Europe and France.

"Thus, principles and realities combine to lead France to equip itself with an atomic force of its own. This does not at all exclude, of course, the combination of the action of this force with the action of the similar forces of its allies."

Referring to the agreement reached at Nassau between President Kennedy and Prime Minister Macmillan, the De Gaulle statement said:

"It is a question of constituting a so-called multilateral atomic force, in which Britain

would turn over the weapons it has and will have and in which the Americans would place a few of their own. This multilateral force is assigned to the defense of Europe and is under the American NATO command. It is nevertheless understood that the British retain the possibility of withdrawing their atomic weapons for their own use should supreme national interest seem to them to demand it. As for the bulk of American nuclear weapons, it remains outside the multilateral force and under the direct orders of the President of the United States.

"It is true that we, too, can theoretically retain the ability to take back in our hands, in the supreme hypothesis, our atomic weapons incorporated in the multilateral force. But how could we do it in practice during the unheard of moments of the atomic apocalypse? * * * In sum, we will adhere to the decision we have made: to construct and, if necessary, to employ our atomic force ourselves. And that without refusing, of course, cooperation, be it technological or strategic, if this cooperation is, on the other hand, desired by our allies."

Here is a nation's leader who is thinking primarily of his own country and who is not willing to entrust its safety to the trigger finger of an executive in another country. General de Gaulle thinks this would entail "a web of liaisons, transmissions, and interferences within itself, and, on the outside, a ring of obligations such that, if an integral part were suddenly snatched from it, there would be a strong risk of paralyzing it just at the moment, perhaps, when it should act."

The lesson of all this is that there is need for soul-searching conferences and consultation without the emotional discords that arise when the head of a foreign state is described as "egotistic" just because he thinks of the future of his own people and is unwilling to entrust their safety to a strategy that relies wholly on missiles or, to a large extent, looks on conventional weapons as obsolete. Yet the possibility of a big war in Europe without nuclear weapons remains as always, on a continent in which the Soviet Union today has the biggest standing army in the world.

BRITAIN NOT BLAMELESS IN TIFF

(By Ted Lewis)

WASHINGTON.—The amount of hysteria generated here by French President de Gaulle's alleged attempt to keep Britain out of the Common Market definitely requires the application of a cold towel.

This can be supplied only by French sources which scarcely anyone here has bothered to contact, preferring instead to froth at the mouth over de Gaulle's activities without trying to find out the whys and wherefores of the general's position.

NEW PARTNERSHIP

Nobody here in high or low authority has blamed the British for the Common Market mess.

In fact, without trying to determine what really has been going on, such Senators as New York's Jacob JAVITS have now joined the Anglophile ranks with a "down with de Gaulle" statement proposing a new trade partnership of the United States, Britain, and Japan.

Close friends and aids here of de Gaulle are understandably furious about his being made the whipping boy. They certainly, whether right, or wrong, should have their case put on the record.

French officials, for example, insist that de Gaulle did not slam the door on Britain's entry into the Common Market. He still stands ready to accept this momentous step, however many misgivings he might have personally.

The real reason for the present snafu, in the French view, is simply that Britain has refused and is still refusing to agree to the rules of the club it wants to join—even after many concessions have been made to meet its special problems. All de Gaulle did in his now famous press conference a week ago, the French say, is to lay it on the line to the British to fish or cut bait, to accept the Market terms or forget about full membership.

With all the inexorable logic of a man of destiny, De Gaulle sharply questioned whether Britain would ever be willing to cut its ties to the Commonwealth or its special relationship to the United States to join the European Community "without restriction and without reservation."

NO ULTIMATUM

This was widely interpreted as an ultimatum to Britain to drop its links with the United States—the Nassau agreement on the Polaris missile, for example—or forget about getting into the market. But the French say nothing of the sort was intended.

They insist that De Gaulle's worry about what Britain might do to his ideas regarding the future political organization of Europe doesn't rule out the admission of the United Kingdom to the Market now.

Strong currents are propelling the Market along toward an eventual political organization, but this hasn't happened yet. At the moment, the Market is still purely and simply an economic union. And in the French view the reasons for the current snag over Britain's admissions are basically economic.

Negotiators for Britain and the six Market countries have been haggling for 15 months over the terms of Britain's admission. Concessions have been made on both sides, but two critical issues still stood in the way of agreement at the time of the De Gaulle press conference.

Britain still refused to agree to the Market proposals for solving the knotty problem of British agriculture. France and its partners insisted that Britain immediately accept the Market rules on farm tariffs, price supports and other issues, but agreed to permit a transition period of 7 years.

Britain insisted it should be allowed to continue its own farm subsidy program. It promised to adapt progressively to the Market system but did not agree to the 7-year limitation.

As De Gaulle put it, the British nourish themselves "by importing foodstuffs purchased at low prices in the two Americas or in the former dominions, while still granting large subsidies to British farmers." He said this is "obviously incompatible" with the Market system.

Small Business Administration

EXTENSION OF REMARKS

OF

HON. GILLIS W. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. LONG of Louisiana. Mr. Speaker, I have read with interest, and I may say some dismay, a series of articles which appeared recently in the Washington Daily News concerning the Small Business Administration.

The articles, written by Mr. Dickson Preston, give a biased, incomplete, and distorted account of both the functions of this agency and the services it offers to the Nation's small business firms.

If I may, Mr. President, I would like to mention just one of the several very important functions of SBA which Mr. Preston either overlooked or chose not to discuss. And I am rather surprised, too, at this omission, inasmuch as Mr. Preston's articles discussed at length SBA's lending activities.

One of the most important facets of SBA's lending program, is that of making loans to local development companies organized specifically to assist small firms.

This authority, given to SBA by Congress through enactment of the Small Business Investment Act of 1958, has proved invaluable to small communities interested in improving their economic position.

I know of one small community in my own State of Louisiana for example that formed its own local development company and got a \$250,000 loan from SBA to assist a small lumber company. In this one instance alone, 150 new jobs were created.

Throughout the country, SBA has made about 250 of these local development company loans totaling over \$32 million. SBA has advanced nearly \$29 million and local banks have added another \$3 million. The development companies have in addition put up about \$13 million, and the total value of these projects is nearly \$45 million.

These loans have resulted directly in the creation of nearly 16,000 new jobs.

Of course, the total effect of these loans is not apparent in the basic figures cited. But loans of this type have a cumulative or "snowballing" effect. As a result of these loans a community gains more people, more households, more schoolchildren, higher personal income, higher bank deposits, more passenger cars, more retail establishments, and more retail sales.

This beneficial effect on the Nation's economy is the net result of this one program offered by SBA.

Of course there are also other valuable services rendered by the SBA which were not mentioned in Mr. Preston's articles but which are, nevertheless, an integral part of the functions of SBA which represents the more than 4½ million small businesses in the country and does so most effectively.

That is why I do not wish to let Mr. Preston's slurs on the SBA—and his omissions—go unchallenged.

SBA is doing a good job and we should all work to help it become still more effective.

Eliminate the Two-Price Cotton System

EXTENSION OF REMARKS

OF

HON. ROY A. TAYLOR

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. TAYLOR. Mr. Speaker, under leave to extend my remarks in the Record, I include the following statement which I made yesterday before the Cot-

ton Subcommittee of the House Agriculture Committee which is considering legislation to end the two-price cotton system:

STATEMENT OF HON. ROY A. TAYLOR, OF NORTH CAROLINA

Since 1956 the Federal Government has subsidized the purchase of U.S. cotton by foreign buyers to the extent of 8½ cents per pound, creating a two-price system for U.S. cotton. A substantial quantity of U.S. raw cotton is exported under this subsidy plan and later shipped back into this country in a manufactured form to compete with the output of U.S. mills.

It is not right that foreign buyers should be permitted to continue purchasing American cotton on the world market 8½ cents per pound cheaper than American manufacturers can buy the same cotton on the domestic market and then sell the finished products on the American market in competition with the American textile industry.

In the past 10 years U.S. imports of cotton products have risen from the average cotton equivalent of 68,000 bales in 1952 to 225,000 bales in 1956, to 234,000 bales in 1958, to 526,000 bales in 1960, and approximately 672,000 bales in 1962. This upward trend in the main has occurred since 1956 when the two-price cotton system was created.

Since the advent of two-price cotton in 1956 active cotton spindles have dropped 9.1 percent. Textile employment has declined 176,000 workers. Mill consumption of cotton has declined and imports of cotton textiles continue an upward surge.

The textile industry is the second largest employer in the United States and has been hard hit by imports from low-wage countries. The American cotton farmer is being hurt by this decline in the textile industry on which he must depend. A bale of cotton has little value until it is processed. The export market is uncertain so the strength of our Nation's cotton production industry must depend on a healthy American textile industry. The two-price cotton system is not only weakening the textile industry but is hurting the American cotton farmer.

I have received numerous letters and telegrams from textile and garment manufacturers in my congressional district pointing out the necessity of early action to eliminate the two-price cotton system. I hope that new cotton legislation can be passed by Congress in time to apply to the 1963 crop. We cannot afford to delay, with textile employment shrinking, and the number of cotton spindles being constantly reduced. Our textile workers deem it most unfair to suffer unemployment and shorter hours while their foreign competitors are supplying so much of the American market.

President Kennedy has characterized the two-price cotton system as "a unique burden upon the American textile industry for which a solution must be found in the near future."

We must quickly eliminate the system under which oversea textile mills may buy American cotton at \$42.50 less a bale than U.S. mills must pay.

Native of Southwest Missouri Heads Associated Press

EXTENSION OF REMARKS

OF

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. HALL. Mr. Speaker, as the Representative in this House of the Seventh

Congressional District of southwest Missouri I am honored to call the attention of my colleagues to the remarkable and well-deserved success of a talented man who was born 56 years ago at Diamond, Mo.

That gentleman, Paul Miller, is the president of Gannett newspapers and has just become president of the worldwide news service of the Associated Press.

Mr. Miller, who is to receive the William Allen White Journalism Award in a few weeks, is the son of the late Reverend James T. Miller, of Diamond and Neosho, Mo. The new AP chief executive was educated in the fine schools of the city of Neosho and from there began the career that has led him to this high post.

Mr. Speaker, I include in the RECORD at this point an editorial honoring Mr. Miller which appeared January 25 in the Carthage, Mo., Evening Press:

THE RISE OF PAUL MILLER

The world's biggest, most comprehensive news wire service is the Associated Press. It taps the flow of current events at a thousand points on the globe, and transmits concise summaries of everything from an international incident to an individual's case in municipal court to newspapers, radio, and television stations on every major continent.

And the president of that vast organization is a man from Diamond, Mo., a town well known to all Carthaginians. According to the 1960 decennial census it had 453 residents. Not only is Paul Miller new head of the Associated Press, he's president of the Gannett Co., which publishes 17 newspapers in 4 States, operates 4 radio and 2 television stations. He's also editor and publisher of the Rochester (N.Y.) Times-Union and publisher of the Rochester Democrat and Chronicle.

How did the 56-year-old Miller, eldest of eight children of a circuit-riding Christian Church preacher, get from Diamond to leadership of the world's most powerful wire service?

He started as sports editor of the Daily O'Collegian at Oklahoma A. & M. College at a salary of \$15 a month plus another \$25 for college publicity work. The money enabled him to enroll as a student there. Two years later he quit to become editor of the Guthrie Daily Leader, although later, while working in Oklahoma City, he finished out his college education with 2 years at the University of Oklahoma.

Hired as a member of the Columbus AP bureau, in 5 years he advanced to the New York cable desk, then to the general news staff and work as a correspondent in Kansas City, served as bureau chief in Salt Lake City, then chief at Harrisburg, Pa., and on to Philadelphia.

After serving as executive assistant to the general manager, Miller was named chief of the Washington bureau in 1941. In 1947 he left AP and became executive assistant to Frank E. Gannett of the Gannett chain, and upon Gannett's death in 1955 became operating head of the group and president of the Frank E. Gannett Newspaper Foundation. Meanwhile, he served three terms as an AP director, and was elected first vice president last April, leaving that post for the presidency.

And that's how you get from Diamond to the leadership of the Associated Press.

His achievement makes Miller another of the national leaders of whom southwest Missouri is justly proud, and under his direction the citizens of Diamond, of Missouri, and of the Nation can expect to see the Associated Press rise to new heights of service to the free world.

Congressional Fellowship Program Benefits Fellows and Congress

EXTENSION OF REMARKS

OF

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. HALL. Mr. Speaker, it has been my privilege to participate this year for the first time in the congressional fellowship program of the American Political Science Association. As many of the Members of this House already know, this program provides congressional experience for young journalists, political science teachers, and career Government employees, and also includes a group of fellows from Asia.

I would like to point out that this nationwide fellowship program is the only one operating in Congress which provides congressional offices with the services of professional men, who already have proved their talents in their chosen professions. While the program benefits the fellows in large measure, it also is a boon to the congressional offices able to utilize their services.

I highly commend to my colleagues the nonpartisan congressional fellowship program. And I submit for publication in the RECORD the following list of congressional offices, the names of the fellows working in them this session, and the newspapers, colleges, and Government positions from which the fellows came:

HOUSE OFFICE ASSIGNMENTS—1963 CONGRESSIONAL FELLOWSHIP PROGRAM

Hon. F. BRADFORD MORSE, of Massachusetts—Agustus Adair, of Gramling College, Louisiana.

Hon. NEIL STAEBLER, of Michigan—Dale Arnold, of the Detroit Free Press.

Hon. ROBERT H. MICHEL, of Illinois—Bruce Beacher, of the Department of Agriculture.

Hon. RICHARD BOLLING, of Missouri—Jerald Bilzin, of the St. Petersburg, Fla., Times.

Republican Policy Committee—Terry Cahabug, of the Philippine Senate.

Hon. HERMAN T. SCHNEEBELI, of Pennsylvania—Everett Cataldo, of Ohio State University.

Hon. JOHN BRADEMAs, of Indiana—Carl Chelf, of the University of Nebraska.

Office of the Speaker of the House—George Condon, of Washington State University.

Interstate and Foreign Commerce Committee—Howard Farkas, of the Public Health Service.

Hon. JAMES ROOSEVELT, of California—Fariborz Fatemi, of Syracuse University.

Hon. KEN HECHLER, of West Virginia—Daniel Fleming, of Marietta, Ohio, High School.

Hon. DURWARD G. HALL, of Missouri—Jerry W. Friedheim, of the Joplin, Mo., Globe.

Hon. W. R. POAGE, of Texas—George Herzog, of the Rural Electrification Administration.

Hon. JOHN A. BLATNIK, of Minnesota—Andrew Hickey, of the Housing and Home Finance Agency.

Hon. FRANK THOMPSON, of New Jersey—James Hoge, of the Chicago Sun Times.

Hon. DONALD M. FRASER, of Minnesota—William Jacobson, of NASA.

Hon. CHARLES A. MOSHER, of Ohio—Coit Johnson, of Columbia University.

Hon. WILLIAM S. BROOMFIELD, of Michigan—S. K. Law, of the Sarawak Information Service.

Government Operations Committee—Thomas King of the Atomic Energy Commission.

Hon. WILLIAM S. MOORHEAD, of Pennsylvania—John Lim, of the Korean Foreign Service.

Hon. CARLTON R. SICKLES, of Maryland—Richard Melton, of the Department of State.

Hon. JOHN E. MOSS, of California—John Morgan, of the Appleton, Wis., Post-Crescent.

Hon. JOHN KYL, of Iowa—Shams Nizami, of the Pakistan Ministry of Justice.

Hon. CHARLES E. BENNETT, of Florida—Kenneth Olson, of Smith College.

Hon. ROBERT W. KASTENMEIER, of Wisconsin—Ronald Steel, of Scholastic Magazine.

Hon. ROBERT E. JONES, of Alabama—George W. Tourtillot, of the Forest Service.

Hon. PETER FRELINGHUYSEN, Jr., of New Jersey—Thomas van der Voort, of the Public Health Service.

Hon. GERALD R. FORD, of Michigan—Bruce Van Dusen, of the Providence, R.I., Journal.

Hon. WILLIAM F. RYAN, of New York—George Von der Muhll, of Harvard University.

Office of the majority whip—Eric Wentworth, of the Portland Oregonian.

A Salute to Fleet Reserve Association, Branch 63, for Their Distinguished Contributions and Patriotic Efforts

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. BOB WILSON. Mr. Speaker, I wish to include the very worthy comments taken from a letter to Mr. Roy Baker, branch president, from Capt. C. D. Simonsen, regarding the distinguished contributions and patriotic efforts of the Fleet Reserve Association's Branch 63, located at Iwakuni, Japan. Under unanimous consent, I include these remarks in the CONGRESSIONAL RECORD:

January 15, 1963.

Mr. ROY BAKER,
President, Iwakuni Branch No. 63
Fleet Reserve Association
Iwakuni, Japan.

Dear Mr. BAKER: Because of the honorary membership your branch afforded me at the outset of my tour, and also because of the close association I have had with many of the members of Branch 63, it has been my pleasure and privilege to observe closely, and often participate in, the many tremendously beneficial programs and projects continuously being sparked and sponsored by your dynamic group. All who benefit directly and indirectly from your well-placed support and sponsorship efforts realize beyond all doubt that you provide a most meritorious and indispensable service to your country, the Navy and this very important overseas community.

In particular the numerous youth activities backed by branch 63 including all categories of Scouting, Pee Wee Basketball League, Little League, Pony League, bowling leagues, are of inestimable benefit to the youngsters of this base and the city of Iwakuni. These efforts will produce untold dividends in terms of character, health, and

teamwork for the upcoming generation. The works your members accomplish in terms of the President's people-to-people program in helping support the Iwakuni Home for Destitute Children, assisting elderly U.S. Navy Japanese retirees, counseling many Japanese in their problems relating to U.S. customs and procedures, coming to the fore in emergencies such as the recent Guam typhoon disaster and providing generous help and cheer for less fortunate orphans at Christmas and other holidays, are most commendable.

It has also been my privilege to attend your traditional and impressive Fleet Reserve Association Memorial Day services in both 1961 and 1962. Indeed, I have never known a group which has been so active and achieved so much in the realms of meaningful community and human relations. The noteworthy achievements you have accomplished for the good of the U.S. forces stationed here and our Japanese hosts in Iwakuni are absolutely superlative in every way. Speaking as one whose problems concerning morale, personnel welfare, recruiting, youth activities, and wholesome recreation have been immeasurably eased and benefited by your fine organization I am deeply thankful to every member of branch 63. Your works are of great importance. They bespeak a true Christian and American endeavor.

I am proud to commend Branch 63, Fleet Reserve Association for its distinguished efforts, its vitality, patriotism, and the high ideals for which it stands. I thank you all again for the many courtesies and hospitality extended to me during my stay in Iwakuni, and I shall pray for continued success, growth, and development of your outstanding association.

Sayonara,

C. D. SIMONSEN,
Captain, U.S. Navy, Commander Fleet
Air Wing 6, U.S. Marine Corps Air
Station, Iwakuni, Japan.

Eighth Air Force, Strategic Air Command, With Headquarters at Westover AFB, Observes 21st Anniversary of Founding

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1963

Mr. BOLAND. Mr. Speaker, the battle-hardened 8th Air Force of the Strategic Air Command, with headquarters at the great Westover Air Force Base at Chicopee Falls, Mass., in my congressional district, is celebrating its 21st birthday this week. I include with my remarks a story on the history of the 8th Air Force published in the Springfield Daily News on January 28:

BATTLE-HARDENED 8TH AIR FORCE COMES OF AGE (21 YEARS) WITH ICBM

WESTOVER AIR FORCE BASE.—The 8th Air Force reached voting age today—its 21st birthday.

A fair argument might be whether any organization, military or civilian, has traveled farther or faster in reaching majority than has the 8th—or has endured more.

Born and nurtured in warfare, the 8th Air Force, fittingly enough, recently marked its coming of age with the takeover, at frigid Plattsburgh Air Force Base, N.Y., of an intercontinental ballistic missile complex.

That move ushered in the space age for the historic, battle-hardened command, and is an augury of its future. Already the most powerful arm of the Strategic Air Command, its devastating retaliatory striking power was enormously increased by the addition of the dreaded, nuclear-tipped ICBM to its weaponry.

NINE HUNDRED AIRCRAFT

Headquartered at Westover, the 8th Air Force now has more than 900 aircraft, including B-52, B-47, KC-135, and KC-97 models, along with its ICBM's. Its more than 78,000 personnel are assigned with 21 units spread along the eastern coastline, anchored north and south at Thule Air Base, near the Arctic Circle in Greenland, and Ramey Air Force Base, Puerto Rico, and inland in Ohio.

Actually, the 8th Air Force has been "man-sized and shaving" for many years.

The 8th Air Force was activated on January 28, 1942, at Savannah, Ga. By the summer of that year, on August 17, the first of its great Flying Fortress B-17's were in combat. On that date, a small force of 12 Flying Forts took off at Grafton Underwood, England, in the first daylight, unescorted raid of Europe. Almost as an anticlimax, all 12 planes returned undamaged to their base.

DAYLIGHT BOMBING

The decision of the Army Air Force generals to send their four-engine bombers against German Luftwaffe fighters in broad daylight was a momentous experiment, the significance of which may be lost on Air Force recruits today, many of whom were not yet born. The entire concept of strategic bombing—and, indeed, the Strategic Air Command itself—were founded on it—and thus the maintenance of the peace today.

Commanded by such legendary figures as Gen. Carl "Tooley" Spaatz, Gen. Ira Eaker and Gen. Jimmy Doolittle, the 8th grew to tremendous size during World War II. By the end of the war, its record stood at 600,000 sorties flown during which 700,000 tons of bombs were dropped. Its aerial gunners and fighter pilots destroyed 15,000 enemy aircraft.

This was not without cost, however, as hundreds of its planes were shot down, and thousands of its personnel killed or taken prisoner. Thirteen of its members were awarded the Nation's highest decoration—the Congressional Medal of Honor.

Eighth Air Force reached its wartime peak of power on Christmas Eve of 1944 when the command sent 2,000 bombers and 800 fighters over Germany.

DESTRUCTION POWER

Today, however, the nuclear tips on 8th's Atlas ICBM's at Plattsburgh or carried in the bomb bays of the B-52 Stratofortresses represent far more destructive power than in all the weight of bombs dropped during World War II.

Its 200-ton B-52's, utilizing air refueling, a concept developed by the command, can range the world in reaching targets.

The command has never stood still during its 21 years, moving from plane to better plane and concept to better concept as they developed. As signified at Plattsburgh, its eyes are to the future when the Air Force and the 8th, shall become true space powers. Its huge personnel—as was proven recently during the Cuban crisis—stands ready on the instant to swing into wartime footing.

But its mission, like that of all armed service branches, remains the same—"Peace through power."

The American Textile Industry

EXTENSION OF REMARKS

OF

HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1963

Mr. WHITENER. Mr. Speaker, the American textile industry is suffering a great disadvantage in the highly competitive textile market by reason of the advantage enjoyed by foreign textile manufacturers in the purchase of American cotton. Under the existing law foreign mills can purchase American cotton 8½ cents a pound cheaper, or at a cost of \$42.50 less per bale than can the American manufacturer.

Legislation has been introduced by the gentleman from North Carolina [Mr. COOLEY] and the gentleman from Arkansas [Mr. GATHINGS] to remove the inequity existing in our two-price cotton program. Yesterday I appeared before the Cotton Subcommittee of the House Agriculture Committee in support of the legislation, and it is my earnest hope that some relief will be secured for the textile industry in the immediate future.

I commend the members of the Agriculture Committee on the approach that the committee is taking to this vital matter, and I include the statement I made before the Cotton Subcommittee yesterday on the two-price cotton program in the Appendix of the RECORD.

STATEMENT OF HON. BASIL L. WHITENER, 10TH DISTRICT, NORTH CAROLINA, BEFORE COTTON SUBCOMMITTEE OF THE HOUSE AGRICULTURE COMMITTEE ON JANUARY 30, 1963

Mr. Chairman and members of the subcommittee, I am deeply grateful for the opportunity that is being given for the presentation of my views with reference to the two-price cotton problem. As I understand it, the committee has two bills before it; one of these is the Cooley bill and the other is the Gathings bill. I further understand that these bills are intended generally to be a basis from which to work in arriving at legislation which will serve the public interest.

By way of introduction let me say that I represent a congressional district which has a very keen interest in the entire cotton economy. One of the counties in my district is the second largest cotton producing county in North Carolina, and the district is the largest textile manufacturing congressional district in the United States. It is, therefore, necessary that I take into account the interest of agriculture and industry in what I say and do in dealing with legislation affecting cotton.

The members of this committee are well aware of the genesis and history of the two-price cotton system. It is, therefore, not necessary that I take your time to give any detailed statement as to reasons for the present price differential of 8½ cents per pound, or \$42.50 per bale, which is enjoyed by foreign textile manufacturers in their competition with the domestic textile industry.

I would also hasten to point out that I believe that it is important to our economy that our cotton farmers continue to receive a fair price for the cotton which they produce upon their farms. I think it is equally important that we take the long-range view and try to protect the cotton farmer from

losses of his market in future years. If we confine our action to the picture as it exists today and disregard the future, we will not have served either the farmer or the public generally in a very commendable fashion.

Already your subcommittee has had testimony from economists and other interested parties giving you statistical data with reference to the failure of cotton fiber to keep pace with the growth and use which has been experienced in the use of manmade synthetic fibers. You have had testimony which is uncontradictable setting forth the reasons that there has been a great acceleration in the use of these manmade synthetic fibers in the production of many end products which were formerly produced entirely from cotton fiber.

Let me first deal with the matter of the future of the cotton farmer as it relates itself to the question of eliminating the two-price cotton system.

On November 13, 1961, Secretary of Agriculture Freeman, in a letter to the President of the United States, recommended that the President request the U.S. Tariff Commission to make an immediate investigation, under section 22 of the Agricultural Adjustment Act, with reference to the effect of the two-price cotton system upon the cotton programs being carried out under the supervision of the Secretary. I know that no one would even suggest that the Secretary of Agriculture in making this request was speaking as a representative of industry. It is abundantly clear that his concern was for the future of the American cotton farmer. His request to the President was made solely with the view of serving what he deemed to be the best interest of our cotton agricultural economy.

In his letter the Secretary pointed out that the programs and operations for upland and long-staple cotton which were being threatened by the two-price system included our price support programs, acreage allotment, marketing quota program, and the export subsidy program for cotton and cotton products.

The Secretary pointed out that during 1961 525,500 bales of cotton were used to manufacture cotton textiles imported into the United States and that this was a new high. He further pointed out that for the 5-year period ending in 1960 there had been an average annual rate increase of 69,000 bales of cotton imported into the United States in the form of cotton textiles.

It was also interesting to note that Secretary Freeman found that the aggregate mill consumption of cotton in the United States had shown a decline in the average of about 29.3 pounds of cotton per person in the 1946-55 period to about 23.9 pounds per person in the period between 1956 and 1960 and that imports of cotton textiles had increased from about the equivalent of 0.5 pound per person in 1955 to approximately 1.4 pounds per person in 1960. These findings by the Department of Agriculture properly alarmed them with reference to the future of the cotton programs heretofore enacted by the Congress.

Related to this problem and its threat to the farmer is the rapid growth in the total textile output of goods made of synthetic fibers. Wherever possible, textile mills have been shifting into the use of synthetic fibers or blends of such fibers with cotton in such a manner as to turn their spindles and looms away from cotton textile productions. This has been done for several reasons, but primarily because of the price situation. Of course, there has been a great deal more attention given to research and development and promotion of synthetic fabrics than has been given to cotton fabric. Another factor which enters into this shift to synthetics is the uniformity and quality of the synthetic fiber as compared to the lack of uni-

formity in cotton, together with a predictable source of supply at predictable price rates in a manner not enjoyed by industry when dealing with cotton.

I am told by many of our manufacturers that in recent years this item of quality of cotton fiber has been a major consideration with them in the operation of their plants. Within the past few days members of the textile community have told me that it is most difficult to find cotton grown in the eastern part of the United States which measures up to the requirements for the production of fine-combed yarns. They attribute this to a multiplicity of factors. Some of these factors are the production by the farmer with the view of producing quantity rather than quality because of our supported price situation; the use of mechanical pickers and subsequent overginning of cotton; and the weather elements which always enter into the cotton-producing experience of our farmers. These are problems which do not face the producer of synthetic fiber who can bring forth his production with chemical processes under fully regulated climatic and plant facilities.

So, the cotton farmer today is threatened in his domestic market by the rapid growth of the synthetic fiber industry with its advantage in price, quality, and convenience.

The legislation that the committee has under consideration would approach this price differential problem by an additional subsidy which would reflect itself ultimately in the price paid by the domestic textile manufacturer for the cotton fiber which he processes in his plant. Candor compels me to state that from my contact with industry people that they do not feel that they should be paid a direct subsidy at the expense of the taxpayers. Their reasoning, in my judgment, is sound when they say that they do not want to be accused of seeking a direct subsidy for themselves when they have no responsibility for creating the situation which makes an artificial price equalization program necessary. They correctly aver that the two-price system results from the action of our Government in placing artificial prices upon domestically grown cotton through the price support program at such a level as to make our American cotton sell at such prices as to remove it from competition in the world market with foreign-grown cotton. They contend that it was not by any action on their part that the price of American cotton has reached the level at which it has become necessary for our Government to place a price on our cotton in the foreign market place at a level of 8½ cents per pound or \$42.50 per bale cheaper than the same American cotton may be bought by an American manufacturer.

The American cotton textile manufacturer, however, does take the position that he should be permitted to purchase American-grown cotton at the same price that the same can be purchased by a foreign textile manufacturer. He further feels that it is the obligation of his Government to bring about this result and that this should be done in such way as not to have a direct subsidy paid by the Government into the hands of the textile manufacturer and subject him to the accusation of taking a handout from his Government. Basically, gentlemen, I believe that it is the attitude of our American textile people that they are entitled to be dealt with equitably and fairly by their own Government. So long as the price differential in the raw material which they use in their plants exists by reason of Government action, equity and justice will not have been meted out to this important segment of our economy.

I would also like to present for your consideration another contention which I do not believe has been presented to this committee

in connection with its consideration of the problem of two-price cotton. This relates to the effect that it would have upon the pocketbook of the American taxpayer.

I know that there are those who apprehend that the subsidy approach encompassed in the bills now under consideration would constitute an excessive burden on the American taxpayer. I believe, however, that it can accurately be said that when we talk in terms of subsidy from the taxpayers that we are engaging in illusory conversation. This is true for the reason that it seems logical that a reduction in the cost of cotton to the American mills to the extent of 3½ cents a pound would result in a substantial price reduction in the end product which is purchased by the American consumer. In fact, when profit margins are considered in the various stages of manufacture and distribution, the reduction in raw cotton prices of 8½ cents per pound could result in savings to the consumer equal to 17 cents per pound, or in excess of \$700 million annually.

You will no doubt immediately ask how this is possible. Consider with me some of the basic facts which lead to this conclusion.

The cotton textile industry is one of the most competitive industries in America. A study of mill margin reports over a period of years indicates that the price of cotton tends to follow closely trends in the price of market cotton. Any reduction in the price of raw cotton would be reflected in reduced raw material costs to processors of cotton textile products and would ultimately pass on to the consumer. In the industry there is a tendency for a savings at an early stage in the productive and distributive process which is magnified on an absolute basis through later stages, resulting in the maintenance of a more or less constant percentage price.

During the early stages of a reduction in raw cotton prices this reduced cost of the end product to the ultimate consumer would not, in my judgment, dramatically present itself. This is because of a general tendency of prices to remain at a certain level pending the industrywide experience of reduced production costs to the extent necessary to make the normal competitive practices come into play. You can well understand that this delayed action, insofar as price reduction to the ultimate consumer is concerned, would be a natural experience because of the considerable period of time involved between the opening of the bale of cotton and its being converted into yarn, and then fabric, and then cut and sewed into wearing apparel, and then going into the retail market. In the case of wearing apparel this could vary from 3 to 8 months from the opening of the bale until the date that the apparel is placed on the retail counter. So, when I project the thought that the ultimate consumer—the American taxpayer—would realize a saving in excess of the so-called subsidy, I would want you to understand that I am not predicting that it would be an overnight occurrence.

As a basis for this projection I would point out that in the years 1958-61 approximately 4.2 billion pounds of raw cotton was consumed in the United States. Of this total 0.6 billion pounds went into industrial goods, and 3.6 billion pounds went into consumer goods, including 1 billion pounds for home furnishings and 0.4 billion pounds for other consumer-type products. Experts estimate that a reduction of 5 cents per pound in the production of raw cotton would result in a minimum saving to ultimate consumers in nonindustrial goods of \$180 million per year. These same people state that in their judgment the savings to the ultimate consumer of industrial fabrics would be even greater and that it would probably amount to \$30 million per year as a minimum. They state

that as a broad overall figure that it can be assumed that the percentage of markup on the value of goods moving through manufacturing and distributive channels beyond the stage of first consumption of cotton can be taken as approximately 100 percent. This would mean that while the savings to the ultimate American consumer flowing from a 5-cent-per-pound reduction in raw cotton would eventually be a minimum of \$210 million per year that the more probable figure is \$420 million per year.

Based upon an estimate that the saving to the consumer resulting from each 1-cent-per-pound reduction in the price of raw cotton would amount to \$84 million in the United States and that the saving can be estimated on the most conservative possible basis at no less than \$42 million a year, it appears that it is probable that a reduction of 8½ cents per pound would bring to the ultimate consumers in America a saving of \$714 million.

If these projections from expert observers are at all accurate, it is readily apparent that in the final analysis the American taxpayer will be benefited rather than burdened by the equalization of the price which he pays for cotton with that paid by his foreign competitor.

Another benefit that would no doubt flow from elimination of the two-price cotton system would be the improvement of our competitive situation in the world market for finished yarns and fabrics of the type having a high cotton content. As you no doubt know, coarse carded yarns and cotton fabrics made of that type yarn have a high cotton content which means that the ultimate price of this type product is more greatly influenced by the price of cotton than is true in fine combed yarns and products made of that type yarn. American manufacturers of these types of textile products have particularly felt the cutthroat competition from foreign textile manufacturers, and the elimination of the price differential of 8½ cents per pound on cotton would open up new foreign markets for our domestic manufacturers because of the ability that they would then have to meet the lower cost of foreign-produced yarn and fabric. Generally such foreign-made products are quoted in America at approximately 10 cents per pound lower than domestic prices. The 8½ cent per pound reduction in the cost of cotton to the American manufacturer, together with the loss resulting from waste, would make the American manufacturer more nearly competitive on the foreign market and would clearly make him competitive with the foreign producer in the American market.

It is apparent that once we have attained this goal of unquestioned competitive equality for the American textile market and possible competitive opportunity for the foreign textile market, we will see a greater demand for the product of our cotton farmers and at the same time will be creating American jobs for our own people.

Mr. Chairman, there are so many aspects of this problem that I would like to discuss with this subcommittee, but out of consideration for others who have come here to testify I do not feel that I should consume more of your time. Let me conclude, however, with the expression of my sincere hope and the hope of the people that I am privileged to represent, that this committee will act with real dispatch in bringing out legislation which will bring about equality of opportunity for our American industry and the people who earn their livelihoods in the American textile industry insofar as cotton pricing problems are concerned.

I have said that I hope you will act with dispatch because this is essential. You gentlemen are familiar with the devastating effect that the uncertainty of the course of

action which the Congress will take has brought about at all levels of the cotton industry. Cotton purchases have been limited by industry to the bare minimum, and the purchase of finished textile products by the customers of the mills are being held at a minimum awaiting the outcome of the matter which you are considering today. Mills are already curtailing because of this condition. Certain types of textile products are becoming more difficult to buy because of this uncertainty. For these and other reasons with which you are familiar I believe it is imperative that we give to the American people an answer on this question at the earliest possible date.

In closing I express to you again my deep appreciation for your willingness to hear me today in my effort to present to you the need, as I see it, for legislation eliminating the unfavorable differential which has been forced upon our domestic textile industry.

Thank you.

America's Answer—A Commonsense Market

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. MILLER of California. Mr. Speaker, one of the great executives of the shipping industry, Mr. George Killion, has presented a most thought-provoking expression of views on the American economy and the resurgent national interest in foreign trade.

Mr. Killion's views are contained in the December 1962 issue of the *Industrial News Review*. In this article the point is made that the merchant marine of the United States will have a prominent role in the future economic progress of our great Nation.

Under leave to extend my remarks, I am pleased to insert in the *Record* this significant article entitled, "America's Answer—A Commonsense Market."

The article is as follows:

AMERICA'S ANSWER—A COMMONSENSE MARKET

(By George Killion)

Not for a century and a half has the future of America been so unpredictable as it is now. As we struggled simultaneously to conquer a frontier and to form a nation, it would have taken a bold and prophetic eye to envision the industrial giant and the economic marvel we were to become.

By the combined grace of geography and of an enterprising cast of mind and character, we had become by the early part of this century the world's foremost economic power. Our success was not then primarily due to our foreign trade, but to the almost incredible growth and development of our internal market.

For most of the last half century, however, our economic growth and our prosperity have been dependent upon our foreign trade. About 10 percent of our manufactures are sold abroad, about 8 percent of our goods consumed come from abroad. This is the sensitive 10th of our economy. Without it, we stagnate; with a vigorous and growing foreign trade, the whole Nation prospers. We can no longer build a wall, of customs duties or of prejudices, about our shores.

Our economy must draw nourishment from abroad.

We are no longer the unquestioned economic masters of the world. Our gross national product, that handy, stylized index of how a nation is getting along in this world, is increasing at the rate of about 3 percent a year. That of Europe is increasing at the rate of 6 percent; that of Japan at 7 percent; and so far as we can tell that of Soviet Russia at a rate of about 5 percent.

A few years ago we had a statistical consolation. A war-ravaged economy, with a low industrial base, would naturally register a larger percentage growth as its recovery progressed. We have outlived an easy statistical rationalization. I suggest that we must start from the premise, however novel and however disquieting, that along with the United Kingdom we represent in this year 1962 one of the less dynamic of the major industrial areas.

THE CHALLENGES

Who are our competitors, and what are their challenges?

First, there is Soviet Russia. It has a vast internal market with great natural resources, about three times the extent of the United States and with a third more population. It operates with a ruthlessness we can never match. In terms of purchasing power its best paid workers would come up only to about the level of our minimum wage laws. Its products are sold abroad at prices which reflect not their costs but the tactics and strategy of economic and political warfare.

We should not stand in dread of this competition. We have the greater assets of individual decision, of the flexible adaptability of the profit economy, and of free workers. But let none believe that we don't have a hard and rocky road ahead.

Second, there is Japan. Their natural resources are negligible, unless one includes in this category their wonderfully persevering, shrewd, and enlightened people. They are able, almost without effort it seems, to match the best of Western innovation, efficiency, and daring and to mask it disarmingly behind the centuries-old graces and dignity of the Orient.

Finally, and probably most formidable of all, we face that vigorous young giant, the Common Market of Europe. Taken together, the seven countries have, even before the entry of the United Kingdom, the largest population of any of the industrial powers. It is a skilled, educated, and civilized population which has been endowed by the Common Market not with the languid spirit of an aged civilization but with the bursting, ambitious drive of a newly expanded and newly invigorated economy.

Dr. Robert R. Dockson, Dean of the Graduate School of Business Administration at the University of Southern California, recently told the Pacific Coast Association of Port Authorities that in the next 13 years the United States must double or triple its exports if "the private enterprise system is to remain predominantly private."

How well equipped are we, at home and abroad, to hold our own?

THE OBSTACLES

We still have, in the ranks of government, industry, and commerce, vigorous leaders who have in their blood the inherited vigor of the frontier and the daring of the 19th century. We have a freedom of business decision which is, much as some may from time to time denounce Washington and all its works, probably greater than any of our great competitors and incomparably greater than that of the Soviet business-government bureaucracy.

We have also some major obstacles to overcome, and they can be overcome. Probably most of our obstacles come down to the question of price. There aren't many areas left where we can sell products simply

and solely because they are American made. By and large, the American exports are no longer the world's cheapest. We have no longer a near-monopoly on the economics of mass production. We have, to be brutally frank about it, in many areas a high-wage and high-cost industrial and commercial structure where either the ingenuity of the machinemakers, or our ability to put their machines to efficient use, has lagged behind the constantly mounting wage bill. The wages of the Japanese and the Russian worker are about equal; the European worker is almost twice that amount, and the American rate is about double that of the European.

High wages make for healthier, happier, and better people. They make also for expanded markets and active economies. But there is an obvious limit. If we are not to price ourselves out of the world markets, our high wage rates must go along with prices equal to or lower than those of our competitors.

This is not impossible. This country has for many decades typically produced the cheapest product with the highest paid labor. That has been due to two things, the ingenuity, scale and efficiency of our mechanical plant and the enterprise of our managers. Both, from quite divergent sources, are endangered today.

In our Nation today automation is in many areas limited not by the ingenuity of the engineers nor the capital of the investors but instead by the attitude of labor. It is human and perhaps natural that the union leaders should try to drive out, by frontal assault or by costly conditions, the machines which will cost jobs in his plant. But somehow they have got to learn that high wages, in a worldwide market, are based only upon major reliance on machinery. Somehow they have got to learn that full employment can be reached only by making the economy thrive, only by joining with industry in making production improvements so that the plant can continue and so pave the way for the creation of different jobs and more jobs in other fields in our economic civilization.

Business does not ask the impossible of labor. John Lewis has brought the coal worker from the bottom to the top of the wage brackets by fighting for the maximum of mechanization. He has half the number of coal miners paying dues, but they are well-paid and contented men. Many other examples, most especially in the oil refining and aluminum industries, can be found. But these are, by and large, the exception rather than the rule.

The second major deterrent to effective American competition seems to be found in the ranks of management rather than of labor. It is much less tangible and just possibly much more dangerous.

I refer to the organization man, to the conformist, and to his company's policy. To an increasing degree we demand of our junior, and sometimes even of our senior executives, not only that they do the right kind of job but that they live in the right kind of house, drive the right kind of car, marry the right kind of wife, read the right kind of books, wear the same distinctive kind of clothes, and play the right kind of games.

It would not be so bad if the young men of today were in rebellion against the neat and tidy pattern of the company life. But vast numbers seem to welcome it. When a youngster of 22 asks about the company's retirement plan before he takes his first job, quite likely he is going to be a docile man around the office but he is never going to lead the company, or any part of it, to new and greater heights of accomplishment.

We need daring, nonconforming minds. We need men who believe individual enterprise means doing something on their own,

not just lower taxes or fewer antitrust suits. We need men who will take risks, who will do new things. Where are we going to find them if we will hire and promote only those who fit tidily into the company pattern? Where, if we grow up a race of pensioners, will business find the new thoughts and the bold innovations which have in the past made business prosperous and the Nation great?

THE SHIPPING INDUSTRY

Now let me get down to particulars, in the industry I know best and the one which is an essential part of almost every export or import transaction.

The shipping industry is a sizable one. The U.S. merchant marine employs more than 200,000 in seafaring, shoreside, and shipbuilding jobs—54,000 seamen, 72,000 longshoremen, 52,000 shipyard workers, 24,000 office workers. The merchant marine's total contribution to the national economy is estimated at \$5,300 million annually.

In a speech last August, Donald W. Alexander, Maritime Administrator, U.S. Department of Commerce, told the Propeller Club of the Port of Los Angeles-Long Beach that our active merchant fleet today numbers about 900 oceangoing ships. Nearly 1,900 other vessels are located in reserve fleet anchorages around the country. He then pointed to the rising curve of the Soviet shipping offensive, which will bring its deadweight tonnage to within 2 million tons of ours in less than 3 years, and will surpass ours in less than 10 years. He then ascribed our shipping decline in large part to what he considered "poor labor-management relations," and warned that "unless there is improvement in this area there will, in the foreseeable future, be no American merchant marine at all."

U.S. foreign commerce has more than doubled during the past 10 years, from 65 million tons in 1950 to 155 million tons in 1960. Yet during this decade the share of that doubled foreign commerce carried by the U.S.-flag merchant fleet has dwindled to less than half of what it was immediately following the end of the Korean war. It dropped from 28 percent to a mere 11 percent. Today, U.S.-flag ships carry 16 percent of the export trade and only 8 percent of the imports of the United States.

Also decreasing has been the number of ships available under the U.S. flag. Since 1954 the decline has been about 22 percent.

One would expect that as the fleet declined, the number of active seafaring personnel who derive their livelihood from sailing U.S.-flag ships would decline in approximately the same ratio. But this is not so.

Since 1954, the number of active seafaring personnel has increased by about 8 percent. An 8-percent increase in the face of a 22-percent decrease in the number of ships that needed manning. In terms of the ratio of the number of seamen to the deadweight tonnage of the U.S. flag merchant fleet, it has since 1954 risen from something less than 3.5 men per 1,000 deadweight tons to 4.5 men per 1,000 deadweight tons.

This may be illustrated perhaps more concretely by the fact that the west coast U.S.-flag privately owned merchant fleet has decreased in the number of vessels during the past decade from close to 300 ships to a little over 100. Yet at the same time, the number of seamen employed on each ship has increased from 50 to 61, an increase in manning of 22 percent.

It should be clear from these figures that as ships have been driven out of service by the heavy cost-price squeeze, seamen have been effective in artificially maintaining work opportunity and even in forcing expanded manning of the remaining ships in the fleet. Wages, including fringe benefits, paid to seamen who man the U.S. ships sail-

ing from Pacific coast ports, have risen at twice the rate of the increases in the Consumer Price Index. They have risen at a rate 50 percent greater than the index of general freight rates in the Pacific West-Bound Conference.

Wages, including fringe benefits, paid to longshoremen on both the east coast and the west coast have nearly doubled in this same period. While national productivity has gone up 31 percent, longshore productivity has dropped 14 percent.

In contrast with most onshore industries a generation ago, and with many today, our wage costs can't be absorbed by the economies of a more efficient factory. There is today almost nothing to choose in the way of efficiency of operation between a foreign and an American-built ship. Yet there is a very great deal to choose in the way of the price of the vessels. The costs of shipbuilding in the United States are the highest in the world. Since 1950 the costs of acquiring a ship have increased 65 percent.

Because freight rates must be kept competitive on an international basis, whereas wages must be kept competitive on a domestic basis, those of us in international commerce find ourselves bound to a sort of two-way procrustean bed: stretched out to fit labor's demands, cut off short to meet competition.

It is highly doubtful, and sad to contemplate, that we would have any American-flag ships sailing in our foreign commerce today if it were not for our subsidy program and our cargo preference laws.

THE STEPS THAT MUST BE TAKEN

First. We can no longer afford to put aside automation and any other mechanical or procedural road to efficient operations. We should of course make generous provision for displaced workers, but neither the Nation nor they can afford to have our industrial machine build unnecessary work into the price of our products.

Mr. Stanley Powell, president of Matson Navigation Co. of San Francisco, recently said:

"Our studies reveal that the average C-3 freighter now requiring a crew of 51 can be operated safely and efficiently with a crew of 15. And without developing any new technologies or equipment. What's more, the capital investment for such a conversion would not be large. Our studies have also shown that an orderly and economically attractive procedure can be developed to alleviate the burden on the unions involved." If we could operate our C-3 freighters with 15 men, we would be competitive with any foreign vessel, and I dare say to the delight of our Government and taxpayers.

The unions must be made to recognize that the choice is between all 51 men losing their work or, eventually, having them employed on several vessels. We can sail three ships with competitive costs where we now sail one and may in a few years sail none.

Second. We must have a machinery to permit settlement of basic and critical labor-management disputes. These, incidentally, are to an increasing degree arising out of labor-saving proposals of management which are most bitterly resisted by many of the unions. We are in a world market, and ground so lost can never be regained.

Senator Butler at the last session of the Congress introduced S. 3511 which would permit, when all other alternatives were exhausted, compulsory arbitration of off-shore maritime labor disputes. The west coast steamship industry, which had by then been battered by three strikes within a year, gave it their unanimous support.

Third. We must re-think our anti-trust laws. When the Sherman Act was passed in 1890, and the Clayton Act in 1914, our markets and our economy were essentially domestic. A near monopoly, or a trade com-

mination, in the domestic market gained powers which would not be limited by foreign competition.

Consolidation and integration of separate units tend to increase efficiency and to lower costs. In areas where there is intensive foreign competition, this sort of efficiency should be encouraged and not prosecuted.

Fourth. Let us recruit and train our young executives so that we reward the innovator, the man who builds new roads to travel, and give to our stereotyped young organization men the dim, gray and modest careers many seem to want. We need boldness and initiative, not simply inoffensiveness. We are not going to keep our customers, and certainly we are not going to win new markets, simply because our top executives play a good game of golf at the right clubs.

TWO STEPS ALREADY TAKEN

The 87th Congress has within the past few months taken two gigantic steps toward a realization of our national goal of a resurgent foreign trade.

The first is President Kennedy's trade expansion program. It embarks us firmly on the course of greatly increasing our foreign trade, not stagnating behind immovable tariff barriers. It gives us the tools by which we can in many areas work out an effective partnership with the enormously important European Common Market.

The second is the Communications Satellite Act of 1962. It represents the beginnings of what might be a bright and brilliant future. The Congress has now opened the way for this country to achieve what should be a permanent leadership of the world in global communication. It has done so, what is more, in a fashion that gives appropriate recognition both to the advantages of private enterprise and to the regulatory responsibilities of the Government.

CONCLUSION

We are going to need the most thoughtful analysis and the most vigorous action of which we are capable. Given that, surely the world can erect no barrier to a resurgent American economy. The American merchant marine, whose own life depends upon that success, will do all that it can to aid, to work and cooperate, in fighting for the economic progress of our great Nation.

Little People to Little People

EXTENSION OF REMARKS

OF

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. MINISH. Mr. Speaker, the young son and namesake of our distinguished colleague, the gentleman from New Jersey, PETER W. RODINO, has already evidenced outstanding qualities of mind and heart that bespeak a brilliant future for him. Young Peter III, troubled by today's bitterly divided world, conceived the idea for a little-people-to-little-people organization that would increase the contacts and cooperation between and among children all over the world. Peter has pursued his goal of a better world with tenacity, undaunted by the pessimism of older folks who would let the obstacles in the way overcome their will and determination to secure peace with justice and liberty for all. Not

Peter—he knows that all great achievements in all ages have been great precisely because they had seemed beyond our reach. Who can measure the influence for good that young Peter and his children's crusade will exert through the years ahead?

Among those who have recognized the value of young Peter's work is the illustrious organization, UNICO National, which presented him with an award on January 2, 1963, at the Newark UNICO meeting. Prof. Hugo W. Senerchia, past national president, delivered a brilliant speech on the occasion that will be of interest to all Members. I commend UNICO for its wisdom in selecting for this signal honor "this youthful crusader for international understanding." As Professor Senerchia stated:

If we share in his vision for world peace through the mobilization of young hearts, we too shall hope for a better tomorrow.

Professor Senerchia's full remarks follow:

PRESENTATION OF AWARD TO PETER RODINO III AT NEWARK UNICO MEETING, JANUARY 2, 1963

(By Hugo W. Senerchia)

In all the years UNICO has been presenting awards, the reasons for such recognition have been as diverse as the personalities of the recipients. They have been honored for exceptional bravery, for their generous gifts to worthy causes or simply because they exemplify those noble qualities we all admire so much as they struggled to overcome adversities to attain success in their fields of endeavor. As for the recipients themselves, they have always been adults with years of worldly experience, and with different religious and ethnic elements that are found in our democracy. But no matter how richly deserved and meritorious their achievements have been, none of them can parallel the significance of the award and of the recipient we honor tonight.

Tonight we place in the UNICO spotlight for honor and public commendation, a 10-year-old boy. He has done nothing heroic or sensational such as rescuing someone from drowning; his youth obviously does not carry the weight of worldly experience. Nevertheless, he has conceived an idea that bespeaks of the wisdom of the ages; his magnificent and tremendous idea embraces the community of the whole world. An idea of such universal proportion is in itself remarkable, but that it should be conceived in the mind of a 10-year-old boy is astounding.

With the innocence and the simplicity of a child's heart, he penetrated the knotty problems that beset the world today to arrive at a solution. If youngsters of all countries could unite in mutual understanding and hope for peace, their protest against war could be an important beginning for the avoidance of war. With this in mind, he wrote a letter to Khrushchev and one to President Kennedy.

What shall we say of young Peter's little-people-to-little-people's program? We certainly cannot dismiss it as too visionary or impracticable, or as a child's fanciful dream or a passing whim. It strikes a responsive chord in our hearts because we too feel the same need and desire for peace through better understanding. But because we are oppressed with a superior knowledge of the frailties and the deceptions of human nature, we remain timid and silent.

Hope in survival against the forces of nature and against the greed and stupidity of man has grown painfully slow through his-

tory. Many times hope has yielded to cynicism and despair. And yet, because we have had apostles of faith and hope in human nature, man has survived. The rest of mankind lived like dwarfs on the shoulders of those giants.

Who can forget the fateful week in October when we hung perilously on the brink of destruction and chaos? There was fear, despair, and gloom as we recalled the annihilating consequences of an atomic war. One bomb alone, we were warned, could kill between 30 and 70 million. Many were ready to accept this doom as inevitable because faith and hope were regarded as useless and outmoded luxuries or myths.

When confronted with such a crisis, we can appreciate the significance of Peter's dream. When we stand in need of inspiration and renewal of faith in human values, we can find them in this youthful crusader for international understanding. If there will be a future and if men will learn to live in peace, they too will be like dwarfs living on the shoulders of this youthful giant.

Tonight, therefore, UNICO takes pride in honoring this young man who expresses our universal dream for peace. If we share in his vision for world peace through the mobilization of young hearts, we too shall hope for a better tomorrow.

Address of Mayor Robert F. Wagner

EXTENSION OF REMARKS

OF

HON. HUGH L. CAREY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. CAREY. Mr. Speaker, the manifold problems which confront the youth of America are nowhere as much in evidence on a broad scale as in the city of New York. The effort through the several agencies in the administration of Mayor Robert F. Wagner to cope with these problems is a matter of interest to all of our people who live in urban areas.

I believe the following address by Mayor Wagner pointing out many facets of youths' fitness will be of interest to my colleagues.

Under unanimous consent I insert the address in the Appendix of the RECORD.

REMARKS BY MAYOR ROBERT F. WAGNER AT MEETING OF ADVISORY COUNCIL OF PRESIDENT'S COMMITTEE ON JUVENILE DELINQUENCY AND YOUTH CRIME

I am pleased to be at this meeting of the Advisory Council of the President's Committee on Juvenile Delinquency and Youth Crime. I am particularly happy that the Council has chosen New York City for its first field meeting. We can benefit from your experience and observations, and I very much hope, vice versa. We do have the problem here, and a few of the answers. But all of us are still looking for the answers to the main questions.

Here, as all of you know, the city government provides an unprecedented variety of services to its citizens, especially in those humanitarian categories which can be labeled "human services."

In general, in my judgment, the quality of the "human services" provided in our metropolitan communities and the manner in which we approach and handle our human problems, are among the great challenges of our time. I am referring to those

Government programs which are designed to achieve the following basic social purposes:

1. Education of the young.
2. Integration of minority groups into the life of the community.
3. The full development and utilization of our potential manpower, by the development of skills and aptitudes and their use without discrimination by reason of sex, race, color or creed.
4. The promotion and protection of the physical, mental and moral well-being of all our inhabitants.
5. The special care and comfort of the aged, the sick and the emotionally and mentally disturbed, and
6. Promotion of the constructive and restorative use of leisure time through exercise, instruction and cultural development.

The number and extent of governmental services in these categories, especially as they concern youth, has increased spectacularly, almost astronomically, within recent years, as I shall illustrate in a moment by fact and figure. Yet there is both pressure and need for a continued expansion in these services. But in my judgment the real touchstone of progress today lies in the quality of the services being rendered, as much as in the quantity and variety of them.

How greatly we strive, how deeply we resolve, and how well we succeed in raising this quality and in meeting the need will serve as a principal measure of what we who are engaged in government on the local level have been able to give to our times and our country.

We live in days full of tension and danger, but also of infinite promise. The depression of the thirties, the wars of the forties and early fifties, the surge toward equality of Negroes and other peoples in the United States and throughout the world, the great migration of Americans from one part of the country to another, the fearsome danger of nuclear holocaust, these powerful forces have shaken and reshaped our lives. They are beyond the control of any municipal government, and in many ways beyond the control of even national governments.

The impact of these forces on the lives of children is even greater than on those of adults. This is a fact we sometimes overlook or fail to recognize. The young personality is far more vulnerable and sensitive to external impact. Generally we know this. Yet we sometimes seem to be surprised that the young should react so violently to the impact of the violent forces all around us. But this impact which can do enormous damage can also help develop enormous strength. There is evidence that both effects are being achieved today.

This is not the occasion further to discuss these factors or to weigh their impact. We know that the effects are there, and we believe that the basic factors I have mentioned have contributed to these effects and to the present problems.

In New York City, the government expends a major portion of its energies and income on and in behalf of the youth of this city. An analysis of our budget shows that the city government spends \$100,000 annually, or we will this year, on social and educational services for our young people. Let me break this figure down into the classifications and the specialized undertakings which seek to give our services the quality I referred to a few moments ago.

The basic teaching process in the public schools has been under continuous improvements through the expansion of the size of staff and the quality of teachers and of the curriculum.

More than 6,000 additional teaching positions including 900 additional remedial reading teachers have been filled during the past 8 years. Teachers' salaries have been increased most substantially, a 75-percent in-

crease in the minimum salary and a 60-percent increase in the maximum salary between 1953 and 1962.

In the public school system, there has been a growing emphasis on meeting the special problems of children coming from severely deprived backgrounds. Thus, the number of full-time guidance counselors in the schools has been increased from 100 in 1955 to 600 during the current school year.

The higher horizons program, an innovation of the New York City school system, which is now being widely copied in many cities of the country, serves over 60,000 children in 76 schools.

Municipal recreation services have been substantially increased during the past decade; over 175 playgrounds, 250 community and recreation centers in schools and public housing projects have been added to the facilities previously available. It has been estimated that during the last 6 years the cost to the city for recreation serving all age groups has increased by approximately \$10 million.

Social services for seriously troubled children and families have been expanded and intensified. The street-club project of the New York City Youth Board, which was in contact with 22 gangs in 1955, has been so greatly expanded that it now serves 250 of these groups.

Yes, the city government is engaged in a great many different youth activities through the schools and through many other public and semi-public agencies which I have not taken the time to mention.

This listing, however, and this citation of the total amount of money we are spending on youth does not in any way mean that we are satisfied with the amount or the quality of what we are doing. As I said at the very beginning of my remarks, we do not know the answers to the really tough questions about youth. In order to dig more deeply in the direction of these answers and to make our existing programs more effective, we have embarked within the year on a second major approach epitomized by the mobilization for youth project on the lower East Side. This will be followed next year by another major effort, in Harlem; Harlem Youth Opportunities Unlimited. These are area projects. In these areas we are attempting to find the ways not only to improve the educational training opportunities for low-income youth, but to give them better access to jobs; to enable them to find the jobs that they can do, and to train them for the jobs that they can find.

By raising the levels of opportunities for these young people, we are attempting to affect the root causes of delinquent behavior. We have also been trying to help forge a true partnership between the local voluntary agencies, the local population, the city government and a great university.

I am convinced that these demonstration projects hold forth great promise, and the role of this council and of the President's Committee has been of inestimable value in stimulating these and other innovations on a national scale.

At the same time, we are reviewing the proliferation of governmental youth services and their relationship to the organization of the city government itself. It is apparent to me, as I reflect on the activities of our complex municipal government, that it is becoming increasingly difficult to separate the planning and coordination of services from the other activities of government.

It is clear that the problems of different age levels are both interrelated and interdependent. The problems of juvenile delinquency cannot be separated from the problems of family life generally.

Mindful of this fact, we have been greatly concerned over the adequacy of the city's administrative machinery for planning and

coordinating its mammoth efforts for children and youth. Hence, we have recently commissioned a thorough administrative review, by the Institute of Public Administration, of our machinery for the planning and coordination of youth services. We expect the report of this survey late this spring.

I see the need for greater emphasis on social planning in our metropolitan communities. We need fresh approaches to using our human resources, to unleashing the full potential within each individual for his own well-being and the welfare of the community. We may compare this need for social planning to the recognition a generation ago of the need to establish machinery for urban planning. In order to face current social problems, we need to define basic goals, arrange priorities and evaluate our efforts.

I said that New York City's direct expenditure for its children and youth is \$1,100 million. Of this sum, almost \$300 million is spent for children who need special kinds of care because of handicaps, dependency, delinquency, or neglect. The balance is spent as part of the general educational, recreational, and cultural services of the city government. In the past 7 years, expenditures for financial assistance and rehabilitation services have increased by \$140 million. Our costs for the care and treatment of narcotic addicts, for example, have increased manifold in this period; our expenditures for case-work and related services have increased fourfold, from \$3 million in 1955 to \$31 million currently.

These expenditures constitute a great proportion of our total expenditures for youth. Moreover and unfortunately, we have found that these expenditures are not self-reducing. They do not reduce the size of the problem. Instead, there is a constant pressure to increase these expenditures. This diverts funds from more fundamental undertakings.

Today we clearly realize that we must devote increasing energies to creating new jobs and to training our young people in new skills, and to breaking down the barriers of discrimination. Unless we do this, we will be compelled to meet the steadily mounting costs of public assistance, rehabilitation services, and of police activity. This pattern has become increasingly clear. Let us hope that this pattern may be reversed by an increase in communitywide social planning for the creation of better social conditions which will, in the end, greatly reduce both the human and financial costs of social and economic maladjustment.

I believe this to be among the truths which we must take into consideration in our further spending and working on the youth problem.

Recognizing these truths, the President's Committee on Juvenile Delinquency and Youth Crime has given strong support to comprehensive planning, but with a neighborhood focus. This, of course, is what the mobilization for youth is all about. I believe that the time is approaching to consider broadening these planning efforts. We must look at the problem and plan for the attack on the problem on a citywide basis, and also on a nationwide basis, even while we continue to seek ways to mobilize neighborhood energies for the attack on the neighborhood problem.

For this broader social planning approach, we will need the experience and dedication of the voluntary agencies as well as the objectivity and scientific skills of our academicians. We must make it possible for all to work together, and not, as in separate worlds.

We must be ready to move in new directions and to follow untrodden paths. We must be willing to follow any course of action which holds promise, no matter how unorthodox.

What is at stake is not just the welfare of a few maladjusted, socially disadvantaged individuals, but the welfare and fate of all our children and of our country and the world whose destiny will one day be guided by the emerging generation.

With the Boy Scouts, Character Counts

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. NATCHER. Mr. Speaker, the week of February 7 through February 13 marks the 53d anniversary of the Boy Scouts of America. An organization incorporated in 1910, chartered by the U.S. Congress in 1916, with the President of the United States as honorary president, and dedicated to the development of good citizenship among the rising generation, is an organization which we as a nation proudly salute.

The young people of our great country are today, as in the past, faced with the task of preparing themselves to meet an uncertain future, one which holds many grave responsibilities and duties, both private and public; many opportunities, rights and privileges, both those granted by law and those gained through individual initiative. Perhaps never before in the history of our democratic process have the meeting of these responsibilities, and the utilization and exercise of these opportunities and rights been so necessary to the perpetuation of the doctrines and beliefs upon which this country is founded. The Boy Scouts of America is an organization in the finest American tradition. It teaches the values of both responsibility and opportunity.

The principles underlying the Boy Scouts' activities and practices are framed to develop character, intelligence, skill, handicraft, physical, mental and moral health, self-care and reliance, and the practice of service for others. The efficient individual becomes an asset to his community and in turn to his Nation.

The thousands of men and women who have contributed countless hours to perpetuate the teachings of the movement deserve our respect and gratitude, for without their tireless efforts, the high ideals and purposes set down in the charter would not be fully met. The feeling of belonging to a group is a basic need in every young boy, and the competition, group activity, firm and able leadership offered to a Scout do much to meet this need. It is therefore not surprising that where the scouting movement is strong and vigorous, the amount of juvenile delinquency is proportionately less.

The Explorer Scout has a code by which he tries to live. It is a code from which every American might profit:

I believe that America's strength lies in her trust in God and in the courage and strength of her people.

I will, therefore, be faithful in my religious duties and will maintain a personal sense of honor in my own life.

I will treasure my American heritage and will do all I can to preserve and enrich it.

I will recognize the dignity and worth of my fellow men and will use fairplay and good will in dealing with them.

I will acquire the Exploring attitude that seeks the truth in all things and adventure on the frontiers of our changing world.

Private Initiative Wins Foreign Friends

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. WIDNALL. Mr. Speaker, so often, in the constantly increasing whirl of public activity and government involvement, we overlook the important role being played by countless voluntary private efforts to help those less fortunate, here and abroad. One such effort has taken place in Sussex County, N.J., within the confines of my district.

Two young missionaries, Joe and Jeri Blakeslee, son and daughter-in-law of Mr. and Mrs. Jacob Blakeslee, of Halsey, N.J., have been serving unselfishly in the Amazon jungle reaches of Ecuador. A mission school has been established among the Indians, but a need was recognized also in relation to the task of making a living from the soil. For this reason, friends and neighbors of the Blakeslees in Sussex County organized a Mission to Ecuador Tractor Fund Committee, to buy a tractor and equipment for use in the jungle environs.

The contributions and efforts have been rewarded with the shipment and arrival of the tractor in Ecuador, at the seaport of Guayaquil. Joe Blakeslee and two other drivers took the tractor on a truck over the Andes Mountains. From there, the Ecuadorian air force, free of charge, made three trips with the dismantled tractor to the mission area.

We can only speculate on the good will, as well as the good works, springing up from this voluntary effort by private American citizens, but there can be no doubt as to its existence. The following article from the November 25, 1962, edition of the New Jersey Sunday Herald gives further details on this inspiring activity:

The young missionaries have been in Ecuador for just about a year now, and are slowly making progress in their endeavors to bring a better way of life to the Aucas, the seminomadic Indians there. With the Blakeslees is their young daughter, Jill, who is 16 months old.

In his letters home, Joe refers with deep feeling to the people back home who made the gift of the tractor possible. With it, the backbreaking work of carving farmland out of the jungle is eased for the missionaries and the Indians.

The mission project is based on the belief that, with civilization encroaching on the Amazon jungle, these people will be pushed to the bottom of the social and economic ladder unless they can wrest a living from

the soil. This will, in turn, make it increasingly difficult for the Indian to have a strong church and evangelize his people.

The Blakeslees have established a school for the missionary children, with a teacher who is a widow from Indiana. She has seven students in grades 3 to 6, each on a different level, a situation she considers quite a challenge. Joe is also learning—in turn teaching—the art of butchering.

MEMORIES OF HOME

About a month ago, he wrote that Gene Hawk, the mission-building foreman, had returned from a visit to Sussex County, where he spoke in Lafayette. Among the contents of the barrels he took back with him were such things as a meat slicer, grinder, and lard press which, Joe's letter said, "we used to use at home. I confess * * * I felt a little homesick."

He has also written that a film is being made showing the great spiritual strides made by the Aucas, and that a 20- to 30-minute silent film of the work at his base will soon be available. Any interested group in Sussex County may make arrangements to use the film, when it is received here, by calling Mrs. J. A. Blakeslee, DU 3-4537; Mrs. Alfred Snook, DU 3-4241, or the Reverend Carl Luthman, DU 3-4451.

The fund committee here in Sussex County met this past week to hear a report on the project. A total of \$700 was received for the fund this month, leaving \$3,300 still due on the note. A committee spokesman said "We hope you will remember this project when making your special thanks offering this holiday season."

Civil Rights and the Cold War

EXTENSION OF REMARKS

OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. MOORHEAD. Mr. Speaker, the Center for Study of Democratic Institutions recently held its 10th anniversary convocation at the Americana Hotel in New York City. Leaders from all over the world attended and many fine analyses were presented under the subject "Challenges to Democracy in the Coming Decade." Among these was an address by the Honorable Robert F. Kennedy, entitled "Civil Rights and the Cold War." As we read his speech, I am reminded what James Baldwin has said, "Great men have done great things here and will again, and we can make America what America must become."

Under unanimous consent I insert the speech in the Appendix of the RECORD. CIVIL RIGHTS AND THE COLD WAR BY HON. ROBERT F. KENNEDY

First, I want to congratulate President Hutchins and the Board for Directors of the Fund for the Republic for the imagination and the initiative that have gone into the preparation of this 10th anniversary program, Challenges to Democracy in the Coming Decade.

Secondly, I wish to express my appreciation for being asked to consider with you the question of individual rights and privileges in this troubled time. It is a time of hope as well as we have seen in recent months even days.

But bright as we believe the world could be, we must face it as it is, a world of nation states seeking public solutions to what are inherently personal questions. This is the dimension of the time we live in and which we call the cold war, a struggle very grand in scope but very personal in importance. For this reason an examination of those personal questions, the rights and interests of individual human beings is as timely as ever before.

Some of you may be familiar with the recent classroom scene in a Russian elementary school. A little boy, when asked to describe the United States, said, "The United States is a sad country where workers and peasants are starving under capitalist exploitation by the cynical ruling classes." "Correct," said the teacher, "and what is the major goal of the Soviet Union?"

"To catch up with the United States," was the sober reply.

Throughout our parallel histories, I believe the United States, as a whole, has lagged behind Russia in the exploitation of one class by another.

The comparison is an old one. De Toqueville concluded his treatise on America with these prophetic words:

"There are at the present time two great nations in the world which started from different points, I allude to Russia and America." "The principal instrument," of America he went on, is "freedom" and of Russia, "servitude."

"Their starting point is different and their courses are not the same; yet each of them seems marked out by the will of heaven to sway the destinies of half the globe."

In today's terms this may seem a generous oversimplification. We have only to look at the growing power of free Europe, or the snarling giant tiger that is Red China, or the awakened democracy of India, or the rising nations of Africa and Latin America, to know that there are other handholds on the globe, other forces capable of swaying its destiny. It would be quite wrong, and quite unlike a group such as the one assembled here, to become mesmerized by the present confrontation of the Soviet Union and the United States. Yet in this brief moment in time we can see some polarization of allegiance, some to the Communist way, some to the way of freedom.

This is the tug of the cold war. We should be excused if we venture the opinion we are winning. As the President said last week in his state of the Union message: Not a single 1 of the nearly 50 United Nations members to gain independence since the Second World War has succumbed to Communist control." In one case, a wall has gone up to prevent a great people from accepting the tug of freedom. History will record that while the Great Wall of Old China was built to keep barbarians out, this brooding ugliness by the Brandenburg gate was built to keep civilized people in. And men may speculate on the current Soviet proficiency in the high jump.

But overall, we are winning—Why? What is it we have that others will reach for, run for, die for? Surely, it is more than houses, cars, and dishwashers. Even communism, with some rearrangement of production priorities and a few other sacrifices by the new class, could provide these things. No, the attraction of the so-called materialist West is more a thing of mind than of matter. Why then do young foreign students become disaffected with Iron Curtain curriculums and seek out our consuls? What is it that brings tears to the eyes of new Americans as they take the oath of citizenship? What is it they sought? What is it men want? Isn't it freedom of conscience and action conditioned only by the legitimate needs of private and public security?

Our civil rights laws and actions are founded on that premise. No recitation of them should be necessary. Observance of them is entirely necessary. Encouraging lip-service is paid also in articles 124 and 125 of the Soviet Constitution to the principles of freedom of religion, speech, press, and assembly. But they have gone the way of many a New Year's resolution. The British have proved a constitution needn't be written. The Soviet have proved a constitution must be more than written.

This discussion deals primarily with the United States and the Soviet Union, not because we are the only nations involved, but because there is still some reason to believe we are the leaders respectively of the free and Communist worlds.

Our Bill of Rights, particularly in the first nine amendments, holds out a series of personal promises. The addition of the 14th amendment increased the commitment of the National Government to insure that those promises are kept. In most respects, our legislatures have followed with the greatest care the mandates implicit in the Bill of Rights and the 14th amendment. An independent judiciary has served well to correct misconstructions of those principles. And while the matters affected have ranged from freedom of speech and press to questions of search and seizure, and right to counsel, most of these protections were well established from our early times and are invoked today not at all with regard to their validity, which is certain, but to their vitality in a modern society.

But the matter which the very term "civil rights" brings most immediately to mind in our time is the position of the American Negro in American society and the treatment accorded him in all walks of life.

In this respect I would like to glance at the record.

For the headline hunter the violence at Mississippi has been the most noticeable event of the current period. The historian, however, will record the progress made, not only in the unflinching commitment of the Federal Government to civil rights, but more importantly, and more notably in the amount of voluntary compliance by southern officials and citizens in this area. For example, over the past year in voting—in 29 counties in Georgia, Alabama, Mississippi, and Louisiana, officials have voluntarily made voting records available to us without need for court action.

In about 50 counties in the same States, discriminatory practices have been abandoned voluntarily, avoiding the need for suit.

Where voluntary action was not forthcoming, however, we have brought suit.

Under the 1957 Civil Rights Act, the Department of Justice has undertaken 32 suits and 82 voting record inspections.

In transportation: Discrimination of interstate travel has disappeared. Virtually all bus and rail terminals were desegregated in 1961 pursuant to ICC regulations sought by this administration. In 1962 we surveyed 165 airports and found 15 still segregated. All are now desegregated, 13 voluntarily and the other 2 after suit.

At present, the only such segregated facilities in the country are bus and rail terminals in Jackson, Miss., and there we took successful legal action, which is now on appeal.

In education: In 1962, 28 more southern school districts desegregated voluntarily and peacefully, many after consultation with the Department of Justice.

As Chairman of the President's Committee on Equal Employment Opportunity in the Federal Government, Vice President JOHNSON pointed out in November that Negro employment in the Federal Government stood at 28,986 at grades GS-5 through GS-11, an increase of 18.3 percent over the

previous years, although the increase in such job vacancies was only 4 percent.

In grade GS-12 through GS-18, the number of Negroes increased from 343 to 1,380—a 33.1-percent increase, as compared with a raise in the total number of such jobs of 7.8 percent. In the private sector 104 major national business firms have signed equal employment pledges under the plans for progress program.

The right to travel, to share public facilities and accommodations, together with the right to equal education, these rights have been given Federal impetus as never before, but again, more importantly, they have received wide public acceptance in a quiet, normal way that hasn't hit the headlines.

The President's order last November prohibiting discrimination in federally assisted housing, together with the actions of some 17 States and 55 cities barring discrimination in that area is a milestone on the march. And on this march the American Negro himself has walked well. Much depends on the scope and dignity of Negro leadership; and it is equal to the test.

The trail is long, we've crossed rough terrain; and there's more ahead, much more to do for the American Negro, the American Indian; the migrant worker, minorities yes, as the American people themselves a minority in this world.

Meanwhile, back in the Kremlin's shadow, what do we find? We find over 100 persons executed in the past year for economic crimes, most of them Jews. We find Christian faiths harassed and Christian peoples persecuted. We find a statement last year by Roman Rudenko, Soviet Public Prosecutor, that the very causes of crime in capitalist countries are absent in the Soviet Union. Then we find a complaint in Pravda that Muscovites removed daily without paying, 77,000 bus tickets from help-yourself dispensers. We find a law branding as treason any unauthorized departure from the country, and the unhappy story of a Jewish woman sentenced to be shot last February for "currency manipulation," after a prior 3-year sentence in Siberia for trying to escape to Israel, and long after seeing her two daughters murdered by the Nazis. And we find a 1961 commentary on lawyers in a Soviet paper as follows:

"There are two groups of lawyers—one: Modest, quiet, unobtrusive, who will acknowledge guilt (if his client is guilty) and refer to mitigating circumstances.

"The other, working with his vocal chords and elbows, even shedding some tears. His voice going through the whole courtroom. 'My client's arrest is due to a mistake.' When the case was retried at the public prosecutor's demand, the same man was found guilty when another lawyer took his defense."

Another unobtrusive lawyer no doubt. Save us from them.

What is the difficulty here? What's missing in communism's instant utopia?

An appreciation for the natural rights of man? I should think so. It suffers from an overdose of Marxism-Leninism and a deficiency of Lockism-Jeffersonism. It would benefit so much from just a little exposure to first amendment principles.

If freedom is to thrive in any corner of the world, there must be communication and a sense of law. There can be no meaningful discussion of civil rights until these concepts have been examined.

Turning first to communication, if our Constitution had followed the style of St. Paul, the first amendment might have concluded, "But the greatest of these is speech." In the darkness of tyranny, this is the key to the sunlight. If it is granted, all doors open. If it is withheld, none. But a truth unheard is as much a social force as a tree falling in the lonely forest is sound. Truly

free speech implies a guarantee of the right to listen, in passing, it was my impression that it was to prevent truth from going unrevealed that the center itself was established on Eucalyptus Hill. There's no such hill in Russia.

Those matters which a government tries to conceal from the outside world are guides to its personality, but what it would hide from its own people is a reflection of its character. Thus, the secret speech denouncing Stalin in 1956, hidden from the public, told as much about its authors as its subject. More recently, in the past year, mobs of angry people have tested the laws of many nations. We read about the Walloon-Flemish differences in Belgium, violence in Paris and Mississippi. But what did we hear of the wage and price riots in southern Russia—that left hundreds of dead and wounded, what beyond vague references to rowdiness, while during that same week both Pravda and Izvestia highlighted the following earthshaking events:

The stock market dropped in New York.

A group of New Jersey students protested U.S. atomic tests.

Two unknown persons slipped into the Soviet sector of Germany.

This is the fact of Soviet news policy. What is the doctrine? I take it we can still look to Lenin for guidance on Soviet doctrine.

In 1903 he wrote indignantly: "Until freedom of speech and of the press is declared there will not disappear the shameful Russian inquisition which persecuted profession of unofficial faith, unofficial opinions, unofficial doctrines."

Later he wrote: "The periodical and non-periodical press and all publishing enterprises must be entirely subordinated to the Central Committee of the Party."

Thus, today's Soviet leaders have a fairly wide latitude of Leninist press policies to draw on.

There is, of course, freedom in the U.S.S.R. to say the right thing. This was brought home to a young American visitor to Moscow who was earnestly explaining how any American could openly denounce the life and morality of the United States, even ridicule the President.

"It is the same here," said the guide. "A Soviet citizen may also denounce life and morality in the United States and ridicule your President."

Freedom of communication involves both information and expression. I have touched on information. It is crucial to a dynamic society, which communism claims to be. But expression is no less so. Thus we read with concern the Soviet party's reply last month to Russian intellectuals who had claimed that "without opportunity for different artistic directions, art is condemned to death." The reply said that the party does not tolerate experimentation in the arts, and "is determining the tasks and directions of artistic creativeness." What sad rebuff, but what a fine claim.

And we shall wait to see if and how a young Soviet poet changes a now famous poem of protest, particularly so since it concerns racial persecution.

The Soviet Government seems to have good working relations with the Soviet press. If the Soviet chief of state should take exception to the editorial policies of a paper, he needn't cancel his subscription; he just cancels the paper. But that is hardly necessary at present.

Soviet papers serve their party well, rewriting human history even as it rolls off the presses of human endeavor. As the great hand writes, and having written, moves on, the agitation that follows is a team of Soviet historians with erasers. Someone should tell them to relax.

I have tried to explain how difficult it is for me at least to picture the struggle for

civil rights where there is a limit of communication.

It seems to be recognized by some Soviet authorities that terror is inefficient. The so-called Special Board of Ministry of Internal Affairs has been abolished, and with it, its function, which was to send people to labor camps without a hearing, in secret procedures without right of counsel or appeal. Confessions must now be corroborated by other evidence. And all in all there seems to be a growing appreciation for what the Soviet calls legality, and a growing awareness among the Soviet legal profession itself of the obligation of law to society, and of lawyers to the law. The outcome of this trend remains uncertain. You may recall that after a great deal of noisy pride about abolishing the death penalty, the Soviet Union in 1961, reinstated it for crimes described as economic and specifically for illegal transactions in foreign currency. Subsequently, two men were executed under an *ex post facto* application of the currency law.

From Harvard's expert on Soviet law, Prof. Harold Berman, I learned of a conversation he had on this incident with a leading Soviet jurist. Berman had remarked on the unusual nature of the trial and sentence and suggested it violated the 1958 Soviet Principles of Criminal Procedure. The jurist replied, "we lawyers didn't like that," a response, Berman noted, which was no less remarkable for its "we lawyers" as for its "didn't like that."

I suppose what is needed is more lawyers who don't like things.

The law's slow progress in the Soviet Union may be due, in large part, to the lack of public debate. Thus the recent "anti-Parasite" laws by which people not doing socially useful work may be exiled to remote areas for 2 to 5 years, went into effect as quietly as the falling tumblers of a combination lock.

All great questions must be raised by great voices, and the greatest voice is the voice of the people, speaking out in prose, or painting, or poetry, or music, speaking out, in homes and halls, streets and farms, courts and cafes—let that voice speak and the stillness you hear will be the gratitude of mankind. Man giving thanks—Jews thanking the God of Abraham for their lives, Siberian Christians thanking the Lord for their children—people giving thanks. It is a good sound.

And the world is listening, watching, weighing, deciding.

Latin Americans listen to the stifled sounds of Cuba, Macao and Hong Kong receive the gaunt refugees of Red China and hear the unspeakable. Europeans watch what they hope is the final chapter in subjugation on that continent.

Africans can see these things, and there is much to occupy their own moralists on their own vast continent.

There is ample evidence that dictatorial conduct is not confined to societies ruled by whites. South Africa's sabotage bill, and restrictive laws on voting and free speech, are no less encouraging than the Preventive Detention Act of Ghana, which empowers the government to imprison without trial for up to 5 years all persons suspected of subversion, or Ghana's dignity-of-the-President bill passed last year which subjects presidential detractors to £500 fines or 3 years' imprisonment. (If there is a Ghanaian Vaughn Meader, he's laughing on the inside.)

Wrongs that passed as white no color can make right.

A nation, it is true, must work its own evolution in its own way and at its own pace. Time and tide have favored ours. The best hope we can have perhaps is that governments may listen to the voices of their people, American governments have tried to

do that. We have found that when people find a willing ear they are more disposed to lend a willing hand. We think with Jefferson that our Government is, "The world's best hope; the only one where every man at the call of the law would fly to the standard of the law and would meet invasions of the public order as his own personal concern." This is a Virginian's answer to the demagogues of today, both foreign and domestic. It is the answer of thousands of southern citizens and of the U.S. marshals, most of them southerners, who held the line at the Lyceum in Oxford.

It is clear that the standard of law in America files to protect the civil liberty of all American citizens from private as well as public invasions. Thus the Sherman Antitrust and Interstate Commerce Act give protection from excesses of the business community. Other legislation guards the public and the workingman from the abuses of labor. And today we face in this country a conspiracy which could be extremely erosive of the rights and liberties of our citizens, organized crime. So when we move against these excesses, we do so on behalf of all our people, and at their call. And the agencies and bureaus of government which answer this call, with the patience and care their work requires, deserve the respect of all Americans.

Finally, we have found that man's handhold on the globe is a precarious one. But we had always believed that. We always thought that our destiny was cradled in another Hand. And when Mr. Khrushchev reported that the cosmonauts, like the Bolshevik pilots of the early twenties, reported seeing "no signs of God," we can only suggest that they aim, with the rest of mankind, a little higher. In the meantime, there is work to do here on earth, to that day when Caesars render unto man what is man's.

Eulogy for Robert Frost

EXTENSION OF REMARKS

OF

HON. HENRY B. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. GONZALEZ. Mr. Speaker, I was deeply saddened to learn of the death of Robert Frost, dean of American poets, and know that all my colleagues in this House join me in mourning his loss.

Frost was close to nature, and wrote of it as perhaps no other American poet ever has. His poetry was quiet and deep and brought the spirit of nature close. All Americans are familiar with the fields and woods of New England as Frost described them. We all know of his immortal, "Road Not Taken," in which the poet faced two imaginary roads. He took "the one less traveled." Few men indeed travel the road of art, and fewer still travel it with such success as Frost did. His poetry came to be read and loved more than that of any living poet in our country.

In an age of cynicism and helter-skelter, he provided a breath of freshness and rest.

He has now passed. But he has left behind an enormous and immortal contribution to the American spirit and culture.

Social Security Amendments

EXTENSION OF REMARKS

OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. HOLLAND. Mr. Speaker, today I am introducing legislation which, if passed, would amend our Social Security Act to permit both men and women to retire at the age of 60 and receive full benefits at that age.

It would also eliminate the age requirement for spouse's benefits—thereby permitting the payment of spouse's benefits simultaneously with that of an eligible retiree. In other words, should a man reach the legal retirement age and secure his social security pension, his wife—although she may be younger than he—would also be eligible to receive her benefits. This, too, would be true in the case of a wife becoming eligible first—the husband would then be eligible to receive benefits as her spouse, unless, of course, his own earnings would entitle him to greater benefits and he chooses to wait for benefits under his own eligibility.

It would also permit the retiree to receive a larger annual income from other sources and still be eligible for social security benefits. The present allowance is \$1,200 annually, and my proposal would allow \$2,000 annually.

I feel that these amendments would not only be beneficial to the recipients of our social security benefits but would also be most helpful to our general economy.

By permitting full benefits to be paid at a lower retirement age, many who are still employed would be more inclined to retire, with the possibility of job opportunities then being available to younger people. With both husband and wife receiving benefits simultaneously, and with a slightly larger outside income permitted, the consumer purchasing power of our retirees would be increased, and this—in turn—would help out the national economy.

The 1960 census disclosed the fact that we had 17 million citizens 65 years of age and older. The Department of Health, Education, and Welfare estimates that we have—each day—a net increase of 1,000 persons reaching the age of 65. In fact—by 1980—it is expected that 10 percent of our national population will be comprised of this group of 65 and older. Today it is 9.3 percent.

If we lower the retirement age to 60—this percentage would be increased.

In our present list of unemployed—we have many in the age bracket from 60 to 65—too old to be reemployed but too young to retire on full benefits. This results in ever-increasing public assistance rolls.

My amendment would remove many from public assistance—from mere existence, so to speak—and permit them to qualify under a program to which they have paid their money for many years. My amendment would reduce the

amount of money the State and Federal governments must pay out of general taxation for relief, while—at the same time—assure these recipients of a better income and increase their purchasing power for consumer products.

A prospective consumer market of 15 percent of our total population would be quite an incentive for our small business people throughout the Nation, if one cares to look at this problem strictly from a monetary viewpoint.

However, from a humanitarian viewpoint the wealthiest nation in the world could well afford to permit its elder citizens in this age of rapidly advancing technology to live their remaining years with dignity and respect, especially when you stop to consider the benefits which they receive are from a program to which they have contributed since 1937.

This legislation permits the Members of this Congress to be both practical and humane and I sincerely hope it will receive the support of all.

Father Junipero Serra

EXTENSION OF REMARKS

OF

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. EDWARDS. Mr. Speaker, the date of November 24, 1963, marks the 250th anniversary of the birth of Father Junipero Serra, the Franciscan priest who was the founder of the 21 California missions. One of the most beautiful of these missions is Mission San Jose, situated amongst the vineyards in the foothills of southern Alameda County, in the Ninth Congressional District of California. We Californians are proud that a statue of Father Serra stands in Statuary Hall, here in our Capitol.

At the annual convention of the 17 Serra Clubs of northern California, held in Monterey, October 19, 1962, the following resolution was unanimously adopted:

Whereas it is the custom of the U.S. Post Office to issue commemorative stamps marking significant dates and events in history; and

Whereas November 24, 1963, will be the 250th anniversary of the birth of Father Junipero Serra, founder of the California Mission; and

Whereas Father Junipero Serra is regarded by the people of California, of all denominations, as a leader, a teacher, an administrator and a perfect exemplar of the humility and spirituality of St. Francis; Now, therefore, be it

Resolved, That the northern California districts of Serra international, in regional convention assembled, does hereby urge the Postmaster General of the United States to provide for the issuance of a commemorative stamp in 1963 in honor of the 250th anniversary of the birth of Father Junipero Serra.

Mr. Speaker, I think the request of Serra international that we honor the birth of this gentle and saintly priest in this way is entirely fitting. I am therefore today introducing a bill providing

for the issuance of a commemorative stamp, and respectfully request the favorable consideration of my colleagues and the Postmaster General.

The 20th Anniversary of the Women Marines, February 13, 1963

EXTENSION OF REMARKS

OF

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. BURKE. Mr. Speaker, the proud history of the U.S. Marine Corps dates back to 1775. February 13 marks the 20th anniversary of an important part of this organization, the Marine Corps Women's Reserve, now known simply as the Women Marines.

The history of women serving in the Marine Corps, however, goes back much more than 20 years. During World War I, the Marine Corps was authorized to enlist and train women reservists in order to free men from clerical duties for combat in France. Over three hundred women thus served their country in this capacity from 1918-19.

In February 1943 the call went out once again for women to serve in the Marine Corps. This time, under the great demands of World War II, women were needed by the thousands to free combat-capable Leathernecks from scores of duties which tied them down behind the front. Thus, under provisions of the Naval Reserve Act of 1938, the Marine Corps Women's Reserve was formed on February 13, 1943. By June 1944 the authorized quota of 18,000 enlisted women and 821 officers had been met, and these women were serving in their assigned duties. Over two hundred skilled categories were filled by these women, supporting Marine Corps capabilities on the ground and in the air. They served at every major Marine Corps post and station in the continental United States, and by 1945, were serving in Hawaii as well.

Following the war, the need was seen to maintain a nucleus of trained Women Marines as a mobilization base. At the same time difficulties were seen in maintaining this nucleus as nothing more than a volunteer reserve organization. These difficulties were resolved with the passage in 1948 of the Women's Armed Services Integration Act.

Today, the women marines, under its Commandant, Col. Margaret M. Henderson, numbers about 150 officers and 1,600 enlisted women on active duty with the corps, throughout the United States, England, France, and Italy. These women perform important duties in aviation, personnel, administration, management, intelligence, communications, supply, transportation, disbursing, and many other fields which support the activities of the combat arm of the U.S. Marines.

Mr. Speaker, all of the women serving in our Armed Forces serve proudly, but

the women marines especially have earned the highest respect of their fellow servicemen and their fellow citizens. Therefore it gives me great pleasure to mark the 13th day of February as their 20th anniversary.

I include for the RECORD a copy of a proclamation issued by His Excellency, Gov. Endicott Peabody, of Massachusetts:

A PROCLAMATION BY HIS EXCELLENCY, ENDICOTT PEABODY, GOVERNOR, 1963

"Whereas the women marines freed thousands of men for combat during World War II, thereby aiding and assisting the Marine Corps in the achievement of their great victories in the South Pacific and elsewhere during this world conflict; and

"Whereas the women marines performed an equal service during the Korean conflict enabling thousands of marines to participate in the heroic battles which stemmed the tide of communism in the Far East; and

"Whereas the women marines have manned a host of key positions in our peacetime Marine Corps, buttressing greatly this branch of our armed service and strengthening its role as a prime deterrent against aggression; and

"Whereas the women marines have, by their diligence, ability, and patriotism served as a model for all women who wish to serve their country and community; and

"Whereas the 13th day of February 1963, marks the 20th anniversary of the women marines as part of the U.S. Marine Corps: Now, therefore, I, Endicott Peabody, Governor of the Commonwealth of Massachusetts do hereby proclaim as Women Marines Day February 13, 1963, and urge that all the citizens of the Commonwealth give every recognition to this observance."

Given at the executive chamber in Boston this 24th day of January, in the year of our Lord 1963 and of the independence of the United States, the 187th.

ENDICOTT PEABODY.

By His Excellency the Governor:

KEVIN H. WHITE,

Secretary of the Commonwealth.

We Must Work Out a Truly Equitable Answer to Aid to Education Within the Framework of Our Constitution

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address which I delivered at the closing dinner of the Catholic Youth Organization Diocesan Youth Congress, in Providence, R.I. on January 27, 1963.

The address is as follows:

ADDRESS BY THE HONORABLE JOHN E. FOGARTY

Your Excellency, the most reverend bishop; right reverend and very reverend monsignor; Father Charles W. McConnell, diocesan CYO director; and reverend members of the clergy; distinguished representatives of State and local governments; CYO regional officers and representatives; members and friends of our outstanding Catholic Youth Organization here in Rhode Island, in an address to a group of teachers, the late Pope Pius XII urged them to take as their ideal the training of fine young Christian men

and women, who would be prepared to participate as active members of modern society. And the Pope went on to say, "By the perfect Christian we mean the Christian of today * * * a citizen and not something apart from the life led in his own country."

It seems to me that these words perfectly express the aims and objectives of the CYO, which is an organization that applies the eternal truths of religion in the daily life of young people who are learning to become the future leaders in both civic and religious activities.

And I would like to thank you for giving me the opportunity to be with you and to participate in this evening's program. As chairman of the House Subcommittee on Appropriations for the Departments of Labor, Health, Education, and Welfare, I have long been identified with the battle against juvenile delinquency. Consequently, I have heard a lot of testimony about what is supposed to be wrong with our youth. But I have also been impressed with the fact that in spite of the seriousness of the delinquency problem, the vast majority of our young people are doing a very fine job with the difficult task of growing up in this complicated modern world. Looking at this CYO congress tonight, I know that it represents a very important part of what is right with America's youth.

The five CYO members who have been awarded the Eagle of the Cross Medal certainly deserve special congratulations. In order to gain this honor they have had to demonstrate, not only real moral integrity, but they have had to work in apostolic activities and display true Christian leadership. As we all join in honoring them, I feel sure that their example is truly symbolic of what every CYO member believes in and works for.

Here is an organization in which laymen and the clergy are working together with young people to improve, not only the physical, but the spiritual and intellectual life of its members and the entire community. All of us owe a debt of gratitude particularly to the lay directors; past, present, and future; who volunteer their help in this good work.

Men and women of all faiths have been impressed and encouraged to hear of the deliberations of the Vatican Council, in which our own bishop is a participant. And we know that the Council is much concerned with the important responsibility of laymen in the field of Catholic action. Here in Rhode Island the hard-working lay directors of the CYO are certainly among those who have already shown practical proof of the good that can come when members of the laity assume their responsibilities for service to their church and their fellow citizens.

In every area of our national life today cooperation is essential if we are to defeat the drive of atheistic communism and build a better life of peace and freedom from want and fear. But in no area is cooperation more important than in matters which pertain to youth and its education. Our whole American educational system is, in fact, a great partnership. It is a vast and varied cooperative enterprise, which involves publicly and privately controlled schools. It is the responsibility of government at every level and of taxpayers who are parents, as well as taxpayers who are not. The American ideal of democracy calls for equality of educational opportunity, and we cannot rest satisfied until that goal is achieved for every American child and young person of school age, regardless of the type of school to which his parents, in the free exercise of their conscience, may decide that he should go.

It should be obvious that in the face of mounting costs and rising enrollments, we cannot achieve a national goal of equal educational opportunity without an increas-

ing degree of cooperative effort between all concerned, especially in solving the problem of financing. Local school districts will have to be given more cooperative help from the States and the States in turn will have to be given more cooperative help by the Federal Government, without undermining either local autonomy or destroying local incentive.

Admittedly, this presents what looks like an almost insurmountable problem, to which no one has yet offered a complete solution. And the problem is complicated by the complex constitutional questions which arise when it is pointed out that our democratic goal of equality of educational opportunity must include consideration of those who exercise their free right to choose independent schools, many of which have religion as a part of their curriculum and are church related.

In this connection, I should like to point out a few facts that are revealed in the most recent Government survey of enrollment in public and nonpublic elementary and secondary schools.

Between 1950 and 1960 nonpublic school enrollment increased by an estimated 82 percent, while public school enrollment increased by 43 percent. If this trend continues, it is estimated that nonpublic school enrollment will increase from 100 to 123 percent during the period between 1960 and 1980, while public school enrollment will increase 48 to 66 percent. In 1960 there were 6,224,000 children in the grades from kindergarten through high school enrolled in nonpublic schools, but in 1980 that figure may well go over 12 million.

Today, at the precollege level, about 15 percent of the total enrollment is in nonpublic schools; but the comparative growth rate shows that this percentage will rapidly increase. At the level of higher education, where private institutions have always played a vitally important role, 40 percent of the present enrollment is in nonpublic institutions.

In the light of these facts, it would be most unrealistic to talk about educational equality of opportunity without giving consideration to the private or independently supported segment of our educational structure. We must, and will, work out a truly equitable answer within the framework of our Constitution. The best legal minds do not yet agree as to what the precise relation between Government and church-related schools ought to be under our Constitution. A study of the decisions of the Supreme Court from the Cochran Louisiana textbook case of 1930, the Everson bus case of 1947, and the Zorach released time case of 1952 does, however, point to a possible solution: Wherever aid directly benefits the pupil and his parents and is not directed to church-related institution or does not use public facilities for direct sectarian instruction, that aid can be considered to be constitutional. As time goes on and more legislation is tested, our understanding will be further clarified. I see the method of educational tax relief for parents as very desirable and I have sponsored such legislation. But we are not going to solve all the questions affecting elementary, secondary, and higher education in one law or one court decision. As is the case with civil rights, so it is with achieving real equity in the question of school aid. The constitutional process is deliberative; it is not going to be rushed. But all who believe in constitutional democracy know that this deliberation is the firm guarantee of that justice which will, in the end, be done.

And I think that considerable progress has been made under the provisions of the National Defense Education Act, with which I have been closely identified. For example, under that legislation, private nonprofit elementary and secondary schools are eligible

for loans to purchase equipment, instructional materials, and to do minor remodeling in order to improve their teaching of science, mathematics, and modern foreign languages. Such loans have already amounted to more than \$2 million.

As the Supreme Court pointed out in the released-time case of *Zorach v. Clauson* in 1952, the first amendment "does not say that in every and all respects there shall be a separation of church and state." A rigid theory of secularism in government may fit the ideas of communism, but it does not accord with either the spirit or the history of this Nation, which has inscribed upon its coinage the motto, "In God we trust." As Dr. Robert Hutchins, the noted educator and president of the Fund for the Republic, has recently observed in an address before the University of Chicago Law School, the theory of an absolute wall of separation is an unworkable idea that is "hampering us in our search for what we need * * * a national idea of education and a national program to carry it out."

The history of America is a story of the search for the attainment of equality of opportunity, not only in education but in every aspect of our social, political, and economic life. This is in complete accord with the ideals of the great social encyclicals of the Popes, which teach that every person has a right to the opportunity to live a reasonable, moral life, and the right to social justice. Through legislation, through court decisions, through cooperation between the agencies of government, steady progress is being made in this direction. But each American also has the responsibility to rid his heart and mind from social, ethnic, and class prejudice. In this effort, the CYO spirit can and should continue to play an important part, for it is the spirit of true Christian charity and loyal citizenship. It is the spirit which can help most to make this truly "one nation, under God."

Many of the old prejudices which once divided America are disappearing. Who would have thought a generation ago that we would have a Catholic as our President or that Protestants would send official observers to a Vatican council? Here in Rhode Island the discussion of textbook aid to nonpublic schools has been conducted in an atmosphere of reason, good will, cooperation and understanding which has set an example to the whole country. In the same way, I believe, we are moving away from the habit of judging people on the basis of what country their ancestors came from. Ethnic prejudice is just another form of racial discrimination, which has not only been condemned by the Popes but also by the leaders of all our major faiths at a recent conference in Chicago. Those of us in public life who believe, as I do, that no candidate should be either elected or defeated on the basis of his ancestry look to young people like yourselves to help us in our fight to end ethnic prejudice. As Americans, and as Catholics, I know that we share the belief that God made all men equal, with a right to equal opportunity, not only for personal development but also for public responsibilities.

Mass Transportation Compact: A Focal Point for Action

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. WIDNALL. Mr. Speaker, earlier this session I introduced a resolution,

House Joint Resolution 126, which would authorize eight eastern seaboard States and the District of Columbia to form an interstate compact and authority designed to ease the plight of the railroad commuter and the industry itself. This bipartisan measure is, in my opinion, one possible approach to the solution of one of America's most pressing problems in the area of mass transportation—the deteriorating and deficit-ridden rail commuter system.

Far from being a call for supergovernment, my proposal is an attempt to offer an alternative solution, one that is recognized in the Constitution itself, to the ever-growing centralization of authority in the Federal Government. Sooner or later this problem will have to be viewed on a wider scale than the piecemeal local-state approach. Transportation systems, like metropolitan areas, do not stop at State or city lines, and neither does the problem.

My own district contains a large number of the commuting population working in New York City, and in neighboring metropolitan communities. A significant editorial reaction to the compact proposal appeared in the January 19, 1963, edition of the Record, a daily newspaper of wide circulation in the Bergen County commuter area of New Jersey. It grasps one of the main points of importance in connection with my resolution—this is an opportunity for the States, the industry, labor, and interested citizens to express their views and needs in relation to a proposed solution, specific in nature. What better way to test the idea of an interstate compact in this area of national concern?

The editorial follows:

ONE WAY OF GETTING THE SHOW ON THE ROAD

Aside from the fact that it strangely finds Representative WIDNALL, Republican, seventh district, sponsoring something which sounds much like supergovernment, the proposal to have 8 Eastern States operate a passenger rail system sounds a great deal like more of the same except bigger.

There is one thing in its favor. It's in the grand manner. Proposed is a compact composed of New Jersey and seven other Atlantic seaboard States and the District of Columbia, to be approved by the Congress. Created would be an authority which would take over operation of eastern railroads' unprofitable passenger services, leaving the paying freight business in the hands of their present owners. Existing right of ways would for the most part be used.

The idea was proposed but failed to get off the ground last year. It's chief Senate sponsor is Senator PELL, Democrat, of Rhode Island. It requires that a presidential delegate participate in negotiations among the States and report on them to Congress and that the compact be not binding until it has been ratified by all the States and by Congress. This last provision in itself would seem to doom the idea for any immediate purposes. It took years to get New York, New Jersey, Delaware, and Pennsylvania together on the Delaware Basin project, and only 4 States were involved.

But Mr. WIDNALL does bring out and effective point in favor of the resolution:

"[It] does, however, provide one special solution to a special problem in one geographical area and its introduction, I hope, will give the States involved a focal point for comment and action."

Perhaps creating a focal point for comment will generate the chief benefit. Be-

ing asked here is an authority which would take over a gigantic deficit operation and run it, with or without a profit—more likely without. That would certainly mean some form of public subsidy, very likely switching this unattractive burden to Washington and away from the several States, all of which except New Jersey have shown a chronic distaste for doing out hard-cash financial help to passenger railroads.

But the project could accomplish at least one purpose—perhaps, just by being introduced, has accomplished it. It would show that in an area of 37 million persons containing 30 percent of the Nation's manufacturing capacity our chief means of mass transportation is in such sorry straits that it needs help this big. The idea may not be the solution, but it certainly is a graphic way of posing the problem.

Our Vanishing Surplus

EXTENSION OF REMARKS

OF

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. NELSEN. Mr. Speaker, I read with a great deal of interest an editorial in the *Watonwan County Plaindealer*, St. James, Minn., which vividly expresses a concern which I share—bigger spending, bigger deficits and bigger controls. The able editor of the *Plaindealer*, Leslie G. Curtis, states the case very well. I submit his editorial for inclusion in the RECORD:

OUR VANISHING SURPLUS

When President Kennedy delivered his state of the Union message to Congress just a year ago, he stated that he was "submitting for fiscal year 1963 a balanced Federal budget".

A few days later he sent Congress a budget showing there would be a \$500 million surplus for the fiscal year beginning July 1, 1962, and ending June 30, 1963. After the election last November Kennedy changed his estimate to an \$8.8 billion deficit. And it may be more before the end of the year. Thus his original estimate was in error by only a mere \$9.3 billion.

This year President Kennedy is pushing for a tax reduction with a promise that he would hold the spending to the present level. He estimated that his proposed tax reduction and holding down of domestic spending would produce a deficit for fiscal year 1963 of about \$11.8 billion.

Then he submitted a budget of \$99.8 billion, the largest peacetime budget in history, full of new welfare and other spending projects that have made many congressional leaders fairly gasp. If he is as far off in his estimates this year as he was last year, that \$11.8 billion deficit could amount to \$15 or \$20 billion.

The thing that knocks any advance estimates into a cocked hat is the fact that Congress is controlled by a bunch of Democratic spenders who have no consideration for the already overburdened taxpayer. They concentrate all their efforts toward bringing more and more of our daily activities under Federal control.

Never in the history of our country has so much power and control been concentrated in Washington. Never have we had an administration that even dreamed being able to bring such a dictatorship of authority to the maze of bureaus and departments that we now have in the Federal Government.

All of this concentration of power in Washington costs money—taxpayers' money. The pressure for increased spending mounts higher and higher under the encouragement of a false philosophy of government that believes we can spend ourselves into prosperity.

We are certainly in agreement with President Kennedy that both individuals and industry need a reduction in taxes to help stimulate employment through increased investments of profits. However, we do not believe that any tax relief can be accomplished unless there is a corresponding reduction in Federal spending.

When the administration proposes to cut income taxes on the one hand and then takes it right away from us by increasing other forms of taxes, there isn't much prospect of bettering our economic condition.

A promise of tax reduction is a good propaganda piece, and will be exploited to the nth degree. But until there is also a reduction in Federal spending, there will be no real tax relief.

Key West Naval Base 140 Years Old

EXTENSION OF REMARKS OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. FASCELL. Mr. Speaker, 140 years ago tomorrow—February 1—naval orders were issued to the distinguished Commodore David Porter, U.S. Navy, to take command of the West Indies Squadron; to sweep away the buccaneering brethren of the coast, whose piratical domination of the seas extended from the West Indies into the Gulf of Mexico; and to establish a naval depot on Key West in the Territory of Florida to supply the vessels of the squadron.

Today, from that embryonic post—which was the first U.S. naval base in the Territory of Florida—the U.S. naval base at Key West, Fla., has evolved into an expansive and strategically significant naval complex ranging over 135 miles from Key West to Florida City, Fla.

Commodore Porter, when he first saw the area, called it the "Gibraltar of the gulf" and envisioned the naval base as the place "to watch and guard our commerce passing to and from the Mississippi" as well as the "key to the commerce of Havana."

The missions carried out with high honor by the men of the Key West Naval Base since that time have paid tribute to Porter's words.

The function of the naval base from its birth until the Civil War was one of a coaling and supply depot. When the conflict between the States arose, the base fulfilled its first strategic mission as the home port for the Eastern Gulf Blockading Squadron. This naval group, operating under the commands of Flag Officers Farragut and McKean—with some 32 ships—cut off southern commerce and captured a total of 229 blockade runners and brought them to the island.

As the only Southern port in Union hands throughout the war, great quantities of contraband were amassed at Key West and it was from this naval station that the joint Army-Navy amphibious operations were launched leading to the destruction of the Confederate-held Florida salt works.

Following the war, the Key West Naval Station quickly returned to activities of peacetime progress and assisted the International Ocean Telegraph Co. in 1866 to lay the cable connecting Key West with the mainland of the United States and with Cuba. In 1881, a naval lieutenant named Robert E. Peary—who was to make history far to the North—reconstructed the Naval Wharf and further storage facilities were added in 1895.

As it was during the October days of 1962, the Key West Naval Base took on a role of major significance during the Spanish-Cuban days of the decade of the 1890's.

The battleship *Maine* departed from Key West on its death cruise and her dead and wounded were returned to this base. On April 23, 1898—reminiscent of recent days again—military observers on the Key West shores saw the first shot of the Spanish American War when the U.S.S. *Nashville*, operating out of Admiral Sampson's squadron, encountered the Spanish steamer, *Buena Ventura*, fired across her bow and took the first prize of the war.

During the crest of this struggle, the entire Atlantic Fleet operated from the Key West Naval Base as well as the entire force of correspondents who reported on the war.

By 1903 Key West was the headquarters for the newly established Seventh Naval District and a radio station marked Navy technological advance in 1906.

As the ravages of war swept across Europe in 1914, the Key West Naval Base began to take on its present day appearance with the arrival of seaplanes, submarines and blimps.

The primary mission of the base as the war raged on was then, as it is now, "supply and maintain the forces afloat." These were active years with the establishment of a seaplane training center, yachts being converted for destroyer patrol, submarines from the German patrol to be serviced, a naval magazine constructed, hospital facilities going up, and the radio operations reaching our farflung fleet in action.

With the return of the hope of peace following World War I, Key West relaxed in the magnificent Florida sun with only a single officer and 16 men operating the radio station until the Cuban revolutionary activities in 1934 brought the return of destroyers and Coast Guard craft.

Quiet returned again for a few years—civilian yachts used the submarine basin and swimmers used the military piers. The relaxation was halted with the return of war to the nations of Europe and the naval station was reactivated on November 1, 1939.

Destroyers pulled alongside the piers—the men of Patrol Wing 5 arrived—and

Key West's role as an essential base for the neutrality patrol had begun.

The wartime role of the Key West command illustrated Commodore Porter's vision of the island's place in national defense. Missions were flown from the air station against German submarines in the gulf—the blimps resumed patrol—support of our submarines became a major activity—and a convoy control center effectively operated to reduce ship sinking from 107 in 1942 to only 4 in 1943.

Seventh District Headquarters returned to Key West in February 1942, and the gulf sea frontier was established in May 1942, with both commands moving to Miami in June of that year.

Following the cessation of hostilities, there was little retrenchment at Key West for the strategic importance and ideal climate for year-round operations—as recognized in 1823 by Porter—came to be recognized. The Atlantic Fleet's submarine development detachment transferred to Key West and the island was redesignated as a submarine base.

Soon came the helicopters and the jets—training and research brought expansion of land and facilities and the base acquired a tridimensional strength—on, under, and above the sea.

The eyes of the world focused on the Key West Naval Station just a few short months ago as we escalated toward the threat of nuclear war—a crisis once again involving Cuban affairs.

As we mark the 140th anniversary of the establishment of this stronghold in our defense system, I wish to join Presidents Roosevelt, Truman, and Kennedy in saying to the officers and men of the U.S. Navy at the Key West Naval Base: "Well done."

Miss Norma Lindsay Picked as Birmingham, Ala.'s Ambassador to Birmingham, England

EXTENSION OF REMARKS OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. HUDDLESTON. Mr. Speaker, my hometown of Birmingham, Ala., has a unique tie with the city of Birmingham, England. For many years there have been people to people exchange programs of one kind or another. Our mayors have exchanged visits, and travelers from Birmingham make a point of visiting our sister city in England.

It was during World War II that the people of Birmingham, Ala., became so deeply impressed with the spirit and indomitable character of their English counterparts. At that time, I can remember how packages of food and clothes were sent to Birmingham, England, in those dark and storm-tossed days of World War II.

These great steel producing communities have much in common. Last fall

the people of Birmingham, England, sent us their ambassador, a lovely English lass, Miss Shireen Dixon, to visit our city. She toured the eastern part of the United States and was treated regally everywhere.

After the visit of Miss Dixon to Birmingham, the Birmingham Advertising Club decided it would be a good idea to send our own Birmingham girl to visit in England.

Miss Norma Lindsay, of 401 Poinciana Drive, has been picked as Birmingham, Ala.'s, ambassador to Birmingham, England. This charming young lady is the granddaughter of Mrs. Belle Leftwich, of Birmingham.

She will represent the people of Birmingham, Ala., as she travels from Magic City to Birmingham, England. Miss Lindsay was the choice of a committee of outstanding Birmingham citizens who were seeking "a typical American girl who is poised and proud of her city."

She will carry the friendship and goodwill of the people of Birmingham, Ala., to the people of Birmingham, England. She will also be carrying typical products of Alabama manufacturers as gifts to industrialists and dignitaries of the cities she will visit.

I am inserting herewith an article from the Birmingham News concerning this program, which I believe all of the Members will be interested in:

**FLASHING-EYED BRUNETTE WINS
BIRMINGHAM, ENGLAND, TRIP**

A lovely, flashing-eyed 20-year-old brunette accepted the delightful task Saturday night of carrying the friendship and goodwill of the Magic City to our sister city, Birmingham, England.

Norma Lee Lindsay, of 410 Poinciana Drive, was chosen from 20 finalists at the Ambassador Ball sponsored by the Jaycees in the Terrace Ballroom of the Dinkler-Tutwiler Hotel.

First alternate to the ambassador is Nancy Carolyn James, 23-year-old youth director for the Birmingham Baptist Association, and second alternate is Martha Lackey, 21, a senior at the University of Alabama.

Birmingham's ambassador is a tall, willowy, 5-foot-6 native of Birmingham who sings in the choir at the First Presbyterian Church. She lives with her grandmother, Mrs. Belle Leftwich.

As the representative of the people of Birmingham, she will put to use valuable acting experience gained with Actor's Theater and the Jewish Community Center Players.

Sponsors for the event who will present her a dazzling 9-day trip to Washington, D.C., New York City, Birmingham, and London, England, are WBRC-TV, the Birmingham Ad Club, and TransWorld Airlines.

Local industries and manufacturers in Alabama have been asked to send some of their typical products along for the Ambassador to present to industrialists and dignitaries of the cities she will visit.

Her first appearance will be this morning at 9:30 when she and the alternates are presented on Harry Mabry's "Sunday Morning Show" over channel 6.

Monday night she will be presented by Robert T. Schlunkert, general manager of channel 6, and Jim Crim, president of the Ad Club, at the annual banquet of the Birmingham Chamber of Commerce in the Tutwiler Hotel.

Tuesday, she will choose her wardrobe for the trip at Taylor's of Eastwood Mall, accompanied by Mrs. Alyce B. Walker, associate

editor of the Birmingham News, and will receive a matched set of luggage from the Birmingham Trunk Factory.

Tuesday afternoon she will meet Gov. George Wallace and tour state offices in Montgomery.

She will be a guest at the Birmingham Ad Club luncheon at the Thomas Jefferson Hotel Friday.

She will leave Birmingham February 10 for Washington, where she will meet Senators LISTER HILL and JOHN SPARKMAN, and Representative GEORGE HUDDLESTON.

February 11 she will go to New York City for a night and a day of interviews and touring. She will stay at the beautiful Belmont-Plaza Hotel.

The next night she will leave for London via TWA's royal ambassador jet service. She will be met in London by a committee from Birmingham, England.

Awaiting her are appearances on the British Broadcasting Co. radio and TV stations, press interviews, and appearances and interviews in all the cities that she visits.

**Thelma King Wants Republic of Panama
Opening of Bridge**

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. FLOOD. Mr. Speaker, on October 12, 1962, the new bridge across the Panama Canal at Balboa, designated by act of Congress as the Thatcher Ferry Bridge, was inaugurated with impressive ceremonies, which were marred by radical demonstrations of communistic inspiration.

This bridge and its approaches lie wholly within the Canal Zone territory and the cost of its construction was borne by the taxpayers of the United States.

Despite these facts, a bill to rename the bridge and to provide for its inauguration by authorities of Panama was introduced in the National Assembly of that country by Assemblywoman Thelma King, an outspoken sympathizer of Soviet Cuba. A news story in the November 16, 1962, issue of a Panamanian newspaper, giving the text of the bill and other details follows:

Under unanimous consent I insert the article in the Appendix of the RECORD:

**THELMA KING WANTS REPUBLIC OF PANAMA
OPENING OF BRIDGE, BUT TIME RUNS
SHORT**

A bill which would require Panamanian authorities to carry out the official inauguration of the new bridge over the Panama Canal on November 28 was introduced in the National Assembly yesterday by Assemblywoman Thelma King.

Miss King is an outspoken nationalist and sympathizer of Fidel Castro.

Assembly sources pointed out that, apart from other considerations, there is hardly time available to complete the legislative process required for enactment of the bill into law prior to November 28.

A bill upon presentation is referred to a committee, in this case the Foreign Relations Committee, which calls for hearings on it. The law allows 10 days for this purpose.

The days are working days, not calendar days.

If the bill is reported on favorably by the committee, it remains in the office of the clerk of the Assembly for 2 days before it can be included in the agenda for the Assembly's daily sessions.

Once it is posted on the agenda, the measure is required to pass two additional readings on separate days and once this has been done then it goes to the President for signature or veto. The law gives the Chief Executive so many days, depending upon the length of the bill, to act upon legislation requiring his signature.

If he elects not to sign the bill, but does not veto it outright, the measure then is returned to the National Assembly for signature by the president of the Assembly.

But even after it has been signed, a law requires publication in the Official Gazette before it can be enforced.

There are 8 working days left between today and November 28, which itself is a national holiday in commemoration of Panama's independence from Spain.

Miss King's bill reads:

"The National Assembly,

"Whereas the 28th instant marks another anniversary of our independence from Spain;

"Whereas, last October 12 a project known as the Thatcher Ferry Bridge was inaugurated, which project the National Assembly named the Bridge of the Americas;

"Whereas the project has not yet been inaugurated by the National Government, which has sole right to do so,

"Decrees:

"ARTICLE 1. The Bridge of the Americas will be inaugurated, officially, by the authorities of the Republic of Panama on November 28 next.

"ART. 2. The Protocol Office of the Ministry of Foreign Relations will issue the invitations to the national authorities, the diplomatic corps and any others whom it deems convenient."

The formal inauguration of the new \$20 million bridge on October 12 was attended by President Robert F. Chiari and other high Panamanian dignitaries and by U.S. Under Secretary of State George Ball and local Canal Zone officials.

The bridge was built by the United States to fulfill a treaty commitment with Panama. It lies in the Canal Zone, which is under U.S. jurisdiction.

**Federal Water Pollution Control
Act Amendments**

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. BLATNIK. Mr. Speaker, water, its adequacy both in quantity and quality, continues to be without question the most significant consideration confronting the Nation in the entire resource conservation field. These two water aspects, quantity and quality, are inseparably linked together in our concern. We have only to recall the plight of the ancient mariner to remind us that water supplies are less than useless when they lack the necessary quality for the specific uses they are called on to fill.

The measures authorized in the Federal Water Pollution Control Act, as

amended, encompassed the preservation and maintenance of water quality adequate for all legitimate uses, public water supplies, propagation of fish and aquatic life and wildlife, recreational purposes, and agricultural, industrial, and other legitimate uses as well as the protection of the public health. Water pollution control is not, therefore, any longer solely a health problem. Its impact extends to all water resource considerations. The 1961 amendments to the Federal Water Pollution Control Act, Public Law 87-88, stressed the significance of this wide sweep of Federal interest and responsibility by vesting in the Secretary of Health, Education, and Welfare the former responsibilities of the Surgeon General for administering the act's provisions. It was fully anticipated and intended that in this manner the upgrading within the Department of the Federal water pollution control program required for the effective achievement of its purposes would be satisfactorily resolved. Only one of the desired effects has resulted. Overseeing responsibility has been assigned to an able and conscientious Assistant Secretary additionally burdened with other Department affairs. At the same time, however, the operating program, itself, remains submerged in its long occupied basement within the Public Health Service.

The bill, which I introduce today, would establish the Federal Water Pollution Control Administration as an independent operating agency within the Department of Health, Education, and Welfare. It would be headed by a Commissioner acting under the supervision and direction of the Secretary and an Assistant Secretary. My proposal in no way impugns the Public Health Service but the realities involved point to this action as the best means of securing effective administration of all of the act's provisions.

In accord with the emerging necessities for keeping our waters clean for the future, my bill states the purpose of the act in establishing a positive national policy in this regard as opposed to the irresponsible policy of using our streams for waste assimilation to the limits of their capacity.

Major concentrations of our population reside in our larger cities. Provision by these cities of treatment facilities to service the needs of their inhabitants demands the expenditures of proportionately great amounts. To remedy the ratio of inequality that obtains in regard to the provision of construction grants funds as concerns these larger municipalities, and to provide a more adequate degree of inducement toward their construction of needed treatment plants, the dollar ceiling limitation presently authorized in the act are proposed to be increased from \$600,000 to \$1 million for a single project and from \$2,400,000 to \$4 million for a joint project.

Municipal and industrial wastes are admittedly the major contributory sources of this pollution. Accordingly, the predominant share of our current water pollution control effort is focused

on these two major contributors. The stimulatory grants-in-aid to municipalities for construction of waste treatment works provided by the Federal Water Pollution Control Act have been greatly successful in this respect, so much so that the Congress in enacting the 1961 amendments authorized a continuation of this program at twice its previous rate.

Little if any regard has been given, however, to the outmoded waste collection systems in many of our older cities that in themselves serve to greatly reduce the benefits to be expected from the installation of new treatment plants. This is because, on an annual average, 10 percent of the municipality's sanitary sewage never reaches the treatment plant. This amount of the city's raw wastes is carried off by storm overflow directly into the nearest waters. The fact that many cities collect the wastes from their industries in their municipal sewers to receive treatment at the central plant adds to the gravity of the situation.

Many municipalities at the turn of the century constructed a system of combined sewers to carry their sanitary wastes and to collect the runoff from their streets after a rainfall. At that time, this was an economic course for the cities to take. The sanitary wastes from their smaller populations used only a small portion of the combined sewer capacity. The portion of this sanitary sewage that was carried off by storm overflows into the receiving wastes was readily diluted by the proportionately larger street runoff collected by the sewers.

As a result of the vast population increase, the huge centers like New York, Chicago, Detroit, Philadelphia, Washington, D.C., and others find that their combined sewers are sufficient only to handle the sanitary sewage with little or no capacity remaining to cope with storm runoff. With these combined sewers filled to capacity with sanitary wastes, the runoff resulting even from a short summer afternoon rainfall causes the sewers to overflow at spillways necessarily provided for this purpose directly to the stream. It is conservatively estimated that as much as 35 percent of the sanitary sewage bypasses the treatment plant and is carried directly into the watercourse after a heavy rainfall fills the sewers and pours out of the convenient spillways.

In the opinion of experts it is this factor which is directly responsible for the serious interference with recreational and other legitimate uses of the waters that are adjacent to our larger communities. For example, the city of New York administers conscientious treatment of its sanitary waste discharges. Its bathing beaches, however, are to a great extent posted as unsafe due to the unusually high coliform count samples obtained there. This situation is attributed in large degree to the storm overflow from its combined sewers, carrying a large amount of raw sanitary sewage. Similarly, the closed beaches at Milwaukee, now an annual affair, are also traceable to storm overflow. The pollution

of the Potomac River caused by storm overflow from the combined sewers in the Nation's Capital was recognized and cited as a principal cause of the shameful condition of this stream in the Federal enforcement action begun in 1957 to restore the quality of these waters. The conferees recommended as one of the absolutely necessary remedial measures that pollution from storm sewer overflows be substantially alleviated by the end of 1966.

Our programs of municipal treatment works construction should be accompanied by the construction of separate storm and sanitary sewers in our metropolitan areas. This is necessary and imperative to assure the efficiency of the treatment plants themselves, which are designed to handle sanitary sewage without the complicating factor of intermixture with storm runoff. And, more importantly, the deleterious discharge of raw sewage will be effectively halted—allowing our streams to recover without the necessity of experiencing periodic heavy doses of the pollutants that have so long plagued them.

In order to alleviate this problem my bill includes provisions for a program of grants assistance to municipalities in separating their combined systems. For these purposes, outlays of \$1 million annually are proposed, from which grants in the amount of 30 percent of the estimated reasonable costs of combined sewer systems projects would be made.

The impairment of the growth and well-being of our urban centers must not be permitted to result from the injudicious use of Federal funds no matter how well-intentioned. In order to assure that grant-assisted projects conform with metropolitan area plans for their regulated development, an additional 10 percent of the grant amount would be authorized to be made in the case of projects so certified by an official State, metropolitan, or regional planning agency.

Pollution control and prevention guideposts are increasingly sought and requested by conscientious water users mindful of their responsibility for preserving water quality. Equally, the furnishing of such guideposts would greatly facilitate taking enforcement measures against those who perform acts in disregard of officially promulgated regulations. To this end, my bill would require the issuance of regulations by the Secretary setting forth standards of quality applicable to interstate or navigable waters and the type, volume, or strength of matter which may be safely discharged into these waters. The regulations are to be based on consideration of the present and future uses of interstate or navigable waters for all legitimate uses. Violation of the regulations is declared a public nuisance and made subject to abatement under the act's enforcement provisions.

Our efforts to control and prevent water pollution must be fully and aggressively responsive to the challenge before us. In order that we may not fail through any lack of sufficient powers and resources, I ask for the early consideration and enactment of my bill.

Gaitskell: A Leader in Perspective

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 10, 1963

Mr. COHELAN. Mr. Speaker, it was my good fortune to meet and know the late leader of the British Labor Party, Hugh Gaitskell, during my stay in England almost 10 years ago. Although a Londoner, he represented the Leeds constituency where I lived for some time with my family. He was a man of brilliance, dedication, and courage. The United States and the free world have lost a great and true friend.

As Max Freedman stated so well in his Washington Post editorial of January 21:

The death of Mr. Hugh Gaitskell, leader of the British Labor Party, has done more than to change the balance in British politics. It has robbed many honorable causes of a voice of reason that has often filled the world * * *. Other leaders will come, but he will be remembered with affection and gratitude.

Mr. Speaker, the Freedman article is a fitting tribute to a great citizen of the Western World, and I commend it to our colleagues' attention:

MR. GAITSKELL IN PERSPECTIVE

(By Max Freedman)

The death of Mr. Hugh Gaitskell, leader of the British Labor Party, has done more than change the balance in British politics. It has robbed many honorable causes of a voice of reason that has often filled the world. For his friends, there will be personal grief at the knowledge that the sword at last has worn out the scabbard. There will be other battles, but his flashing spirit no longer will point the way. Other leaders will come, but he will be remembered with affection and with gratitude.

In these last few days we have seen a dramatic example of the way the fortunes of free nations have become entangled. We have all known that in the course of time the political period associated with aged leaders like Adenauer, De Gaulle, Nehru, and Chiang Kai-shek must end. Mr. Gaitskell, measured in these terms, was still young, and was out of power. We had the right to expect that long years of service awaited him. Now our vigil on the medical bulletins has ended in sadness.

Mr. Gaitskell followed his own path of leadership. It was said of the first great leader of the labor party, Keir Hardie, that he hated the palace because he remembered the pit. He was almost as eager to tear down the rich as he was to raise up the poor. This passion for social justice, never tumultuous in Ramsay MacDonald, thinned out in the latter days to little more than a timid advocacy of tentative reform.

An interlude of pacifism marked the party's history as it followed the brief leadership of George Lansbury, who mistook the mandates of his conscience for the facts of life. The labor party reached its glory under the guidance of Clement Attlee, whose threadbare personality concealed a mind of surprising power and dexterity.

Poverty never cradled Mr. Gaitskell into

socialism nor did trade unionism give him its rewards. He was an intellectual, and the slovenly waste of the British economic system irritated his precise mind even more than the curse of injustice outraged his conscience. For many years he was the respected spokesman of the Labor Party in the age of the welfare state. Neither a pioneer nor a prophet, he brought into the British debate an instructed conscience without which public controversy would more easily have fallen into a mere argument over managerial techniques.

He stirred Englishmen to think anew of the perils as well as the hopes of an equal society. In the process he persuaded British socialism to disenthral itself of many ancient dogmas. He was a liberator even more than a leader, for the verdict in national elections went against him.

Inside the Labor Party, he never lacked rivals and opponents. Aneurin Bevan, who was born, like Lloyd George, with a silver tongue in his cheek, once derided Mr. Gaitskell as a desiccated adding machine. The gibe was a victory of invective over accuracy. Mr. Gaitskell's offense consisted in being far more interested in the rights of Englishmen than in the wrongs of man. It is a small offense, and for it his friends need offer no prolonged atonement.

Always in British politics the Liberal or progressive party has wavered between two distinct groups. Gladstone as liberal leader had to remember the protests of John Bright and the campaigns of the young Joseph Chamberlain. In a later period, Rosebery suffered under the more imperious spirit of Harcourt, and Asquith bowed to the mercurial genius of Lloyd George.

It is not surprising, therefore, to find the Labor Party, in our day, divided by quarrels and quivering with antagonisms. Mr. Gaitskell managed to compose these disagreements even though he never could end them. His departure has raised many anxious questions about the future of the Labor Party.

During the Suez crisis of 1956 Mr. Gaitskell never hesitated to denounce British policy even while British troops were moving into action. This conduct is more consistent with British than with American experience. The tradition here calls for the closing of ranks in an emergency, to be followed by a loud and painful postmortem when it can do very little good. The British people are no strangers to national unity. But they respect the voice of conscience amid the crash of arms. Mr. Gaitskell convinced few voters that he was right about Suez. But even his critics honored his independence, and his refusal to be stamped by organized appeals to national emotion.

In the last period a shadow crept across Mr. Gaitskell's career. He had every right to be critical of British entry into the Common Market. But his tone was wrong. He was querulous and bitter where he should have been sedate and constructive. He winced from the embrace of Europe. The friend of the Commonwealth was reluctant to go on the new pilgrimage.

Walter Bagehot said the House of Commons has more brains than everyone in it. It has a corporate judgment and sense of honor more sensitive and profound than the qualities of all its members. Soon the Labor Party must find a new leader. One hopes he will be as good a friend of this country as Mr. Gaitskell was at every stage of his career. Meanwhile there is a lonesome place in Parliament, and a burden of sadness in the hearts of many Americans who never had the privilege of his friendship.

If Depletion Laws Are Changed

EXTENSION OF REMARKS

OF

HON. RICHARD (DICK) ICHORD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1963

Mr. ICHORD. Mr. Speaker, Missourians interested in the oil industry and new mining developments in Missouri are greatly concerned about any proposed changes in the percentage depletion tax laws.

A very informative feature story containing statements of the feelings of Gov. John Dalton, Dr. Thomas Beveridge, State geologist, and Laurence Schneider, director of Missouri's division of commerce and industrial development toward depletion tax and the effect of such changes upon Missouri's economy changes, appeared in the Sunday News and Tribune of Jefferson City, Mo.

Under unanimous consent I ask that the article be printed in the Record.

MISSOURI'S ECONOMIC GROWTH WILL BE RETARDED—MANY JOBS WILL BE LOST SHOULD CONGRESS ALTER MINERAL, OIL PROVISIONS

If exploration for oil, iron, lead, zinc, and other minerals suddenly came to an end, this Nation's economy would suffer a near fatal blow.

Sound fantastic?

It could happen if some groups succeed in their efforts to remove or alter provisions in the law that are essential to bring out risk capital for such ventures.

Early in its experience with the income tax amendment, Congress adopted a provision to cover depletion of discovered reserves in oil and other mineral industries. After experimenting with an arrangement based on discovery value of a well or mine, Congress in 1926 adopted the percentage depletion law.

The rates of this provision vary according to the nature and characteristics of the affected minerals. For example, oil and gas being the most difficult and expensive to hunt for and find, the depletion rate for these minerals is 27.5 percent. This takes into account the special problems involved in discovering and developing replacements for depleting reserves.

Sulfur, uranium, bauxite, lead, zinc, nickel, and tungsten are part of a long list of minerals receiving a 23-percent depletion rate.

MORE THAN 100 MINERALS

A 15-percent rate applies to all metal mines and many other minerals; a 10-percent rate to such resources as iron, coal, sodium chloride, and lignite.

Persons who locate brick and tile clay are entitled to a 5-percent rate.

Altogether, more than 100 minerals are now included under the percentage depletion tax provision.

These rates have been examined repeatedly over the years by committees of Congress and other official groups.

In the face of these recurring inspections, the rate for oil and gas has remained unchanged, rates for some other minerals have been increased, and new minerals of strategic or economic importance have been added to the list.

MISINFORMED

Why is the subject now being agitated again? Because some people are uninformed and others misinformed about the nature of the mineral industries and the problems involved in mineral exploration and development.

Without bothering to study the situation deeply enough to understand it, they advocate their own rigid ideas of what the Nation's economic policy should be. They say their proposals would stimulate the economy. But the fact is any tampering with percentage depletion could only have adverse effects in a nation that depends upon the energy supplied by oil, gas and coal to run most of its machines.

If opponents explored the subject with open minds, they would find the depletion provision is a break for the general public. In the case of oil and gas, it is the key to the low-cost energy readily available in the United States.

POSITIVE FORCE

This law has also been a positive force in encouraging the development of other industries vital to a modern America, helping to spark the exploration for and development of iron, lead, zinc, coal, sulfur and many other minerals important to the economy and to defense.

An illustration from the oil industry shows what the producer is up against and why he needs to have the depletion factor recognized in the law. Of every 100 wells drilled in the search for new fields, only 3 find enough oil or gas to be commercially successful. Besides losses on ventures that do not measure up commercially, the oil producing industry pours about \$1 billion annually down dry holes, wells that do not produce a drop of oil or gas.

Without the depletion law, risk capital for ventures as chancy as wildcatting would be almost impossible to find. Rising production costs and depressed crude oil prices provide enough financial problems for the oil industry now without the added handicap of laws that fail to recognize or that recognize inadequately the depletion factor.

CONSEQUENCES

Contrary to some widely held misconceptions, the depletion provision applies only to the production of oil and gas.

It is not available for such other petroleum industry operations as refining, transportation or marketing. If this law should be changed, the consequences would include:

Ultimate increases, probably quite drastic, in the price of gasoline and other petroleum products.

Retardation of the economy of the entire United States and of Missouri as a State.

Losses of jobs in many communities directly or indirectly affected by mineral enterprises.

Suspension or curtailment of the development of many domestic resources, thus impairing America's defense.

Losses of Federal and State revenue resulting from the decline in mineral industry operations.

ANY DEPLETION LAW CHANGE "CONCERNS" MISSOURI'S GOVERNOR

Gov. John M. Dalton said he is "concerned" over reports that Congress may be asked to reduce the depletion law as it affects oil, gas, and possibly other minerals.

A reduction in the oil depletion rate could possibly cause higher prices for Missourians for gasoline and discourage consumption, he said. The Governor explained that any drop in gasoline consumption "could have had consequences for Missouri, which now collects about \$85 million from its gasoline tax each year."

Governor Dalton added: "Any change in the depletion tax laws could affect the economy of Missouri. I am concerned that any material change could halt or seriously retard searches for oil, iron ore, lead and other minerals."

STATE'S TOP DEVELOPMENT LEADERS BACK PRESENT LAW

Missouri's top economic and development leaders oppose any change in the depletion law. Here is what they say:

Thomas R. Beveridge, State geologist: "The present mineral situation in Missouri is most encouraging. If Congress wipes out depletion rates or cuts them, the picture will change to a dim outlook. Neither Missouri nor the Nation can afford such economic inhibitors. In cases of our mineral industries in the past, we have seen properties close because of a drop of less than 1 cent in prices."

Lawrence Schneider, director of Missouri's Commerce and Industrial Development Division: "At least 16 major metal mining companies are spending millions of dollars annually in the State on exploration. These are tremendous risks yet provide hundreds of jobs. Such explorations led to the huge Pea Ridge iron mining project and the lead plant at Viburnum. Without percentage depletion at present rates, neither may have become a reality. Missouri and the Nation must continue these provisions to provide job opportunities and an increased standard of living."

A photograph of the Pea Ridge mine project was captioned as follows:

The huge Pea Ridge iron mining project near Sullivan, Mo., has a big stake in any congressional attack on percentage depletion rates. The \$40 million project was a gamble by the St. Joseph Lead Co. and Bethlehem Steel Co. It is estimated to contain between 50 and 100 million tons of high-grade iron ore.

Another mining development at Viburnum, Mo., also illustrated, was captioned:

Intensive exploration since 1955 resulted in this \$17 million lead producing project in Missouri's Ozarks. A new industrial plant and the town of Viburnum developed from another gamble of the St. Joseph Lead Co. Lead, like iron ore, oil and some 100 other minerals, depends upon the depletion provision to help make possible the financing of such explorations.

The caption for an illustration of Missouri's oil industry was:

Missouri's only oil refinery is located at Sugar Creek near Kansas City. It has a daily capacity of 55,100 barrels of crude oil. Nine counties in Missouri produce oil or gas and there are six petrochemical plants in the State. Almost 22,000 persons are employed in some phase of the petroleum industry in Missouri. State motor fuel taxes provide Missouri with nearly 14 percent of its tax revenue.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Daily Digest

HIGHLIGHTS

Both Houses received President's farm message.

Senate voted 53-42 to table question of its right to terminate debate at beginning of new Congress and to proceed to vote on rule change despite the rules.

See Congressional Program Ahead.

Senate

Chamber Action

Routine Proceedings, pages 1353-1414

Bills Introduced: 47 bills and 1 resolution were introduced, as follows: S. 603-649; and S. Res. 79.

Pages 1355-1356

Reports were made as follows: Written report on S. Res. 62 (reported without written report on January 24), authorizing Committee on the Judiciary to spend \$360,000 for investigation of administration, operation, and enforcement of the Internal Security Act (S. Rept. 5).

Page 1355

President's Message—Agriculture: Message from President transmitting his legislative recommendations on farm program was received—referred to Committee on Agriculture and Forestry.

Page 1382

U.N. Conference: Senator Young, of Ohio, was appointed to U.N. Cultural and Scientific Technological Conference to be held at Geneva February 4-20, 1963.

Page 1353

Cloture: By 53 yeas to 42 nays (motion to reconsider tabled), Senate voted to table the question submitted to it on January 28 by the Vice President, namely, "Does a majority of the Senate have the right, under the Constitution, to terminate debate at the beginning of a session and proceed to an immediate vote on a rule change notwithstanding the provision of the existing Senate rules?"

The question now recurs on the Anderson motion of January 16 to resume consideration of S. Res. 9, providing for amendment of rule XXII so as to provide that cloture may be invoked by affirmative vote of three-fifths of Senators present and voting.

Pages 1414-1420, 1423-1444

Authority To Report: Committee on Government Operations was granted a 60-day extension for filing report under S. Res. 359 of the 87th Congress (Subcommittee on Intergovernmental Relations).

Authority was granted for extension of time until February 8, 1963, for filing of report under S. Res. 238 of the 87th Congress (Special Committee on Aging).

Pages 1382, 1456

Authority To Meet: Subcommittee on Privileges and Elections of the Committee on Rules and Administration was authorized to meet on Monday, February 4, while Senate is in session.

Page 1447

Nominations: The following nominations were received: Frank Kowalski, of Connecticut, to be member of the Subversive Activities Control Board; Kenneth A. Cox, of Washington, to be member of Federal Communications Commission; Ronald R. Renne, of Montana, to be member of Board of Directors, Commodity Credit Corporation; Richard H. Holton, of California, to be an Assistant Secretary of Commerce; Sigurd S. Larmon, of New York, to be a member of the U.S. Advisory Commission on Information; two Navy in the rank of admiral; and six Air Force in the rank of general.
