President Hoover himself gathered the institution's first documents during the Paris Peace Conference. Since that time six principal area collections have been established on Africa, the Americas, East Asia, Eastern Europe, the Middle East, and Western Europe. The Hoover Institution is now the largest private archive in the United States; its holdings include more than 3,500 individual collections that comprise manuscript memoirs, diaries, and personal papers of men and women important in public affairs, publications of ephemeral societies and of international bodies, both official and unofficial, as well as books and pamphlets, many of them rare and irreplaceable.

The library, which now contains some 1,250,000 volumes, provides research material for advanced scholarship on virtually every aspect of economic, social and political change in this century. It offers students and scholars from the United States and the rest of the world the opportunity to concentrate on one area, to undertake comparative studies, and at the same time to analyze important problems in the perspective of the world as a whole. Each year from 1,200 to 1,500 scholars spend weeks or months of intensive study at the institution. Typically, they represent 25 to 30 different countries and almost every State in the United States.

Hoover Institution collections have received praise from many sources. Prof. David Thomson at Cambridge University stated in the *Journal of Contemporary History* that

France has, for thirty years, had its *Institut d'histoire des relations internationales contemporaines*, but neither Britain nor France has any institution in the field that is comparable in importance with the Hoover Institution and Library at Stanford.

G. A. Belov, Director of the U.S.S.R. State Archives Administration, who visited the Hoover Institution as well as the National Archives, Columbia, Harvard, the University of California at Berkeley, and the Library of Congress, wrote in *Novaia i Noveishiaia Istoriia*:

The largest collection of materials in the United States on the revolutionary movement in Russia and also on the Soviet Union is to be found in the library of the Hoover Institution on War, Revolution and Peace at Stanford University (Stanford, California).

Finally, the Library of Congress in its bulletin has said of the Hoover Institution's East Asian collection:

It is generally agreed among specialists on the Far East that Hoover, through extensive expenditures of funds and effort, and the application of outstanding administrative flexibility in acquisitions procedures, has developed the strongest collection on modern China in the Western world.

The foregoing comments pertain in large part to the Hoover Archives, which comprise one of the largest and most significant documentation centers in the United States and indeed the world. Over 50 percent of the materials are in languages other than English.

THE HOOVER INSTITUTION

In a statement prepared for the Board of Trustees of Stanford University, Mr. Hoover wrote the following:

During this century there have developed forces and events which, as never before in our national life, have had so profound an effect on our independence, our form of government, our social and economic system, and the setting of the American people in the international world.

Here in this Institution [Hoover] is the greatest amassing of the records of these forces and events, which exist in the world. Its upbuilding and preservation have become doubly precious to the world because of the wholesale destruction of libraries and historical material during the Second World War. Over fifty organizations and sixty nations have contributed to the building up of this two score millions of documents, books, and items covering the two great wars and their aftermaths....

And finally, among the many other materials in the Hoover Archives is the record of the compassion of the American people, who, by self-denial and long hours of labor, provided the margins of food, medicines, and clothing which, in the wars of the present century, have enabled over one billion four hundred million human beings to survive who otherwise would have perished.

Since President Hoover's death in 1964 at the age of 90, the Hoover Institution has continued to honor the vision and devotion of the founder as well as the many friends and associates who helped to develop it into a world-famous center for advanced research. The documents and papers preserved in the Hoover Institution represent a precious heritage, accessible without charge to citizens of the United States and all foreign countries. As they provide the sources for scholarly research, so does the carillon of 35 bells on the Hoover Tower exemplify the purpose of the work done there. On the largest bell appears the inscription, *pro pace sono—I ring for peace.*

Over the several decades since the end of World War II, the efforts of five U.S. Presidents to achieve and maintain peace throughout the world have assumed more importance than ever before. The work of private citizens and public servants, researchers and scholars, as they have utilized the Hoover Institution archives, represents an uninterrupted effort to continue the work of Mr. Hoover and those following him, to analyze the causes of war, and to contribute "to freedom and peace." Herbert Hoover's dedication to public service for more than 50 years and his lifelong support of the institution that bears his name attest to the high value he placed on the preservation and use of the materials documenting the progress of peace in the 20th century.

When dedicating the Tower Building in June of 1941, Mr. Hoover stated:

The purpose of this institution is to promote peace. Its records stand as a challenge to those who promote war. They should attract those who search for peace.

It would be most appropriate, therefore, to memorialize Herbert Hoover's 50 years of devoted and selfless public service by providing grants to the institution which he founded at Stanford University. These funds will honor the memory of a great American on the 110th anniversary of his birth and enable the

work he began to continue. On one occasion, when describing the Institution, Mr. Hoover stated:

Here are the documents which record the suffering, the self-denial, the devotion, the heroic deeds of men. Surely from these records there can be help to mankind in its confusion and perplexities, and its yearnings for peace.

Mr. President, in closing let me demonstrate the timely relevance of Herbert Hoover's thoughts and life by reading the four following selected quotations from Mr. Hoover's speeches and writings:

MEMORIAL DAY ADDRESS—MAY 30, 1929

Today, as never before in peace, new life-destroying instrumentalities and new systems of warfare are being added to those that even so recently spread death and desolation over the whole continent of Europe. Despite those lessons every government continues to increase and perfect its armament. And while this progress is being made in the development of the science of warfare, the serious question arises—are we making equal progress in devising ways and means to avoid those frightful fruits of men's failures that have blotted with blood so many chapters of the world's history?

GRIDIRON CLUB—DECEMBER 14, 1929

There are discordant notes and discordant nations. The old fallacy has been again produced that making war more terrible will frighten nations to peace. War has become more terrible every year since the invention of gunpowder, and every half century has seen more and more men sacrificed upon the battle field. Human courage rises far above any terror yet invented. I have been told that one cannot furnish food to civilians without furnishing it to armies, but no body of armed men ever did starve when food existed. There was no army in the World War that did not feed in full up to the last hour of the armistice, no matter when rows of pinched faces and emaciated children stood by the roadsides and ransacked their offal for wasted bread.

... I have seen it stated that public opinion of neutrals had no effect in the last war. On the contrary, when the final verdict of history is given, it will be found that the loser lost, not for lack of efficiency, or valor, or courage, or starvation, but failure to heed the public opinion of what were originally neutral nations.

THE CHALLENGE TO LIBERTY—

HERBERT HOOVER, 1934

Modern despotism, in every case, has achieved its purpose by fanning the fires of Nationalism. To inflame hate, and to stir the sacred emotion of patriotism as a drug to liberty, is a favorite device of those who seek power. Their effect is to increase enormously the dangers of conflict.

NEW YORK CAMPAIGN SPEECH—

OCTOBER 22, 1928

It is a false liberalism that interprets itself into the government operation of commercial business. Every step of bureau criticizing of the business of our country poisons the very roots of liberalism—that is, political equality, free speech, free assembly, free press, and equality of opportunity. It is the road not to more liberty, but to less liberty. Liberalism should be found not striving to spread bureaucracy but striving to set bounds to it. True liberalism seeks all legitimate freedom first in the confident belief that without such freedom the pursuit of all other blessings and benefits is in vain. That belief is the foundation of all American progress, political as well as economic.

I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1418

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized to make grants to the Hoover Institution on War, Revolution, and Peace at Stanford University, Stanford, California. Such grants shall be made on condition that the funds so granted will be used for the construction of a new building, for the equipment of such building, and for the establishment of a capital fund administered by the Hoover Institution, the income from which shall be used for the purchase and processing of books and other documents for the library of the Hoover Institution.

SEC. 2. There is hereby authorized to be appropriated to the Secretary of the Treasury for making grants under this Act amounts in which the aggregate will not exceed gifts, bequests, and devises of money, securities, and other property, made to the Hoover Institution on War, Revolution, and Peace after the date of enactment of this Act, except that the aggregate amount so appropriated shall not exceed \$5,000,000. Funds appropriated under this Act shall remain available until expended.

Mr. CRANSTON. Mr. President, I am today cosponsoring—with Senator HATFIELD and others—a bill to commemorate the 100th anniversary of the birth of Herbert Hoover, the 31st President of the United States, by expanding the singularly important work of the Hoover Institution on War, Revolution, and Peace.

The bill provides grants to the Institution, located at Stanford University, for construction of a new building, for equipment, and for services. The total contribution, in Federal moneys shall not exceed \$5 million, with funds to remain available until expended.

Mr. President, Herbert Hoover was one of the most fascinating and complex of American Presidents. He was controversial; but controversy is synonymous with determined leadership in the turbulent years that preceded World War II and left our society forever changed. His role in shaping and responding to those forces of change will be debated for years to come, as we sort through the events of American history that led to this particular society at this particular time.

But the social controversy of Herbert Hoover ends where his international humanitarianism begins. His complete dedication to the cause of world justice and world peace is unique in our time. When he founded the Hoover Institution he characteristically wasted few words in describing the mission he envisioned:

The purpose of this Institution is to promote peace.

Since 1919, its founding year, the Hoover Institution has emerged as a comprehensive center for research and documentation on the currents of political, social, and economic change in the 20th century. As an alumnus of Stanford, I know from personal experience that the institution is a well-catalogued repository for important documents that are relevant to a myriad of issues in public and international affairs. There are some

1.25 million books on virtually every aspect of economic, social, and political change in this century. The institution is the largest private archive in the United States.

Mr. President, I have long been deeply impressed by the work of the institution. I believe, along with Senator HATFIELD, that our support of this measure to expand the facilities and services of the Hoover Institution on War, Revolution and Peace is not only an appropriate memorial to a former President who has received little such attention, but an important contribution by the Congress to the promoting of international peace and understanding.

Mr. BROCK. Mr. President, I am pleased to cosponsor the bill to honor President Herbert Hoover, which has been introduced by the Senator from Oregon (Mr. HATFIELD).

At one time, it was popular to say that history had been cruel to Herbert Hoover. It had blamed him for a great depression which was not of his making, and overlooked the immense contributions which he had made to his country, both before and since his Presidency.

Such sentiments, expressed over a period of time, have a tendency to be self-refuting, and this process has occurred with regard to Hoover. In the years since his death in 1964, Americans have increasingly come to understand that he was a man of remarkable achievements, and one whose selfless activities on behalf of his country and his fellow man deserve our highest admiration.

Thus it is fitting that we act now to establish a fitting memorial to his life and works.

Senator HATFIELD's bill would do just that, it would authorize the Secretary of the Treasury to grant funds to the Hoover Institution on War, Revolution, and Peace, at Stanford University for the purpose of constructing and equipping a new building there in President Hoover's memory.

It is particularly appropriate that the bill seeks to honor Hoover by improving and strengthening his institution, which is one of the very finest centers in America for scholarship on public affairs.

Founded by Hoover himself in 1919, the institution today is the largest private archive in the United States and has made an enormous contribution to the spread of knowledge vital to achieving and maintaining peace in the world.

Indeed, Hoover said in 1941—

The purpose of this Institution is to promote peace.

A similar statement might be applied to Hoover's own life. For his relief work in Europe during World War I, he became known as "The Great Humanitarian." He was a leading force at the Paris Peace Conference following the war, and was described as "the only man who emerged from the ordeal of Paris with an enhanced reputation."

The foreign affairs policies of his administration included many notable achievements in promoting peace among nations. He visited Latin America, and changed the old "dollar diplomacy" attitude with regard to that area of the world. He cooperated with the League

of Nations, supported disarmament, and the treaties of the London Naval Conference limiting naval arms.

He was a man of peace and a great humanitarian. He was motivated by the finest instincts of which man is capable.

In honoring his memory as Senator HATFIELD has proposed, we are indeed performing a public service.

By Mr. DOMENICI (by request):

S. 1419. A bill to designate the Aldo Leopold Wilderness, Gila National Forest, N. Mex. Referred to the Committee on Interior and Insular Affairs.

Mr. DOMENICI. Mr. President, I am pleased today, in response to requests by the New Mexico Wilderness Study Committee and other concerned environmental and conservation groups, to introduce a bill to create a new wilderness area—the Aldo Leopold Wilderness.

This area would comprise 231,737 acres to be incorporated into the Gila National Forest in New Mexico for addition to the National Wilderness Preservation System.

Much of the 231,737 acres which this legislation asks be set aside, would also be designated as wilderness under S. 601. That bill, introduced by Senator HENRY JACKSON, would set aside 188,095 of this Black Range Primitive Area as wilderness.

Mr. President, I am at this time expressing no opinion as to which piece of legislation I prefer. But I do believe it is important that those groups who would have the larger area designated as wilderness be given the opportunity to present their views and have their opinions brought forth at committee hearings.

I am introducing this measure so that the appropriate Senate committee will have the opportunity to investigate the request that 44,000 acres on the periphery of the core area also be designated as wilderness area.

I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1419

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in accordance with subsection 3(b) of the Wilderness Act (78 Stat. 891; 16 U.S.C. 1132(b)), the area classified as the Black Range Primitive Area, with the proposed additions thereto and deletions therefrom, as generally depicted on a map entitled "Proposed Aldo Leopold Wilderness", dated May 1972, which is on file and available for public inspection in the Office of the Chief, Forest Service, United States Department of Agriculture, is hereby designated as the "Aldo Leopold Wilderness" within and as part of the Gila National Forest, and shall comprise an area of approximately two hundred thirty-one thousand and seven hundred thirty-seven acres.

SEC. 2. As soon as practicable after this Act takes effect, the Secretary of Agriculture shall file a map and a legal description of the Aldo Leopold Wilderness with the Interior and Insular Affairs Committees of the United States Senate and House of Representatives, and such description shall have the same force and effect as if included in this Act; except that correction of clerical and typographical errors in such legal description and map may be made.

SEC. 3. The Aldo Leopold Wilderness shall

be administered by the Secretary of Agriculture in accordance with the provisions of the Wilderness Act governing areas designated by that Act as wilderness areas, except that any reference in such provisions to the effective date of the Wilderness Act shall be deemed to be a reference to the effective date of this Act.

Sec. 4. The previous classification of the Black Range Primitive Area is hereby abolished.

By Mr. KENNEDY:

S. 1421. A bill to amend the administrative procedure provisions of title 5 of the United States Code to make the rulemaking provisions applicable to matters relating to public property, loans, grants, benefits, and contracts; to provide for payment of expenses incurred in connection with proceedings before agencies; to provide for waiver of sovereign immunity; to provide for the enforcement of standards in grant programs, and for other purposes. Referred to the Committee on the Judiciary.

BUREAUCRATIC ACCOUNTABILITY ACT

Mr. KENNEDY. Mr. President, today I take pleasure in introducing the Bureaucratic Accountability Act, providing for various amendments to the Administrative Procedure Act which are designed to increase public participation in Federal agency decisionmaking and to make government officials more responsive to the American people. Congressman DELLUMS, along with a group of cosponsors in the House, introduced identical legislation yesterday.

It has been generally observed that government agencies seldom respond to interests not represented directly in their proceedings; likewise, however, the majority of citizens do not have a sufficient economic stake in the results of a particular proceeding to render practicable the full expenses of direct participation. Thus, the interests of the public which do not coincide with those of trade associations, large corporations, and other Washington pressure groups remain unrepresented for the most part.

This has led to a dissatisfaction from various perspectives with the workings of the day to day processes of government. Consumer advocate Ralph Nader claims that:

Most Americans are shut out of the Federal administration and regulatory system.

John Gardner writes that:

Most parts of the system have grown so rigid that they cannot respond to impending disaster.

Paul Tillich states:

There is a tendency in the average citizen, even if he has a high standing in his profession, to consider the decisions relating to the life of the society to which he belongs as a matter of fate on which he has no influence.

Even President Nixon has observed that:

Most Americans today are simply fed up with government at all levels.

Certainly no single factor can explain this attack on our basic system of government, but there does seem to be broad agreement that the individual's feeling of helplessness to affect those governmental

decisions which in turn will affect him may account in large part for this attitude.

The President's Advisory Council on Executive Organization 2 years ago came down with its own verdict after intensively studying the Federal regulatory agencies: those agencies are insufficiently accountable—to Congress, to the President, and ultimately to the public. The traditional theory on which many agencies were founded assumes that the agency itself can effectively represent the public's interests. Speaking in the context of reviewing an FCC license renewal proceeding, however, Chief Justice Burger, as a member of the District of Columbia Circuit Court, wrote that this:

Is no longer a valid assumption which stands up under the realities of actual experience.

The Bureaucratic Accountability Act is intended to strengthen the ability of the ordinary citizen to enforce his rights and voice his interests in administrative proceedings. Title I of the bill extends the procedural safeguards and requirements established by the Administrative Procedure Act relating to rulemaking proceedings to areas previously exempted by the act. This is similar to legislation I have introduced in the previous Congress and coincides in part with recommendations of the Administrative Conference of the United States.

Title II of my bill adds a new section to the APA that would authorize agencies to reimburse indigent participants in administrative proceedings reasonable costs of participation if the agency determines that the person has contributed substantially to promoting agency implementation of its legislated mission.

Title III is identical to a bill I introduced in two previous Congresses to narrow application of the doctrine of sovereign immunity and to implement other related recommendations of the American Bar Association and Administrative Conference.

Finally, title IV requires establishment of a complaint procedure by agencies authorized to make grants by their grantees. This requirement grows out of a desire to facilitate enforcement of standards in Federal grant-in-aid programs, a necessary predicate to which is a workable complaint-handling procedure on the part of grantor and grantee alike.

Let me explain these provisions a little more fully.

PROPRIETARY AND OTHER EXEMPTIONS TO APA RULEMAKING REQUIREMENTS REMOVED

The rulemaking provisions of the Administrative Procedure Act—section 553 of title 5, United States Code—afford an avenue for interested persons to participate in the process by which the policies of Federal agencies are formulated. The requirements for public notice and comment on proposed agency rules is not simply a palliative offered the public for letting off steam. To the contrary, these provisions impose upon the Government a duty to be responsive to commonly felt public needs by offering a genuine opportunity for interested persons—who are often in the best position to furnish needed information to administrative of-

ficials—to participate in the rulemaking process. Prof. Kenneth Culp Davis, one of the leading authorities on administrative law, has suggested that the APA rulemaking procedure "is probably one of the greatest inventions of modern Government." The opportunity accorded persons affected by agency rules to present their views enhances the quality of decisionmaking by Government officials and represents an element of our system of participatory democracy.

Exempted from the APA requirements, however, is all rulemaking related to public property, loans, grants, benefits, or contracts. These exemptions were based originally on the uncritical assumption that the activities excluded were "proprietary matters" wherein the Government is in the position of an individual citizen and is concerned with its own property, funds, or contracts. If that assumption was uncritical and unwarranted when the act was passed in 1946, it is even more so today.

The distinction between proprietary and nonproprietary functions of Government has been discredited both in law and in the public mind. The irrelevancy of the label "proprietary matters" is particularly apparent when we recognize that matters relating to public property, loans, grants, benefits, or contracts represent those very mechanisms most commonly employed by Federal agencies to accomplish their statutory missions. Burgeoning agency programs, involving billions of dollars and affecting millions of citizens, are effectuated through such mechanisms. Obviously these programs have a substantial impact on the public. Similarly, the rules and regulations themselves, developed by the agencies to achieve program objectives, have an enormous effect. Rules prescribing eligibility standards for, or imposing mandatory requirements upon, recipients of loans, grants, or contracts significantly affect substantive private interests and often have an impact beyond the public's choosing.

I have been pleased to see, over the past few years, that a number of agencies and departments have responded to the problems in this area—and to the recommendations of the Administrative Conference—adopting by regulation the APA requirements. HUD and HEW, the largest grant-making agencies, and Interior, with jurisdiction over public lands, led the way with commendable speed. Unfortunately, the major contracting agencies, including GSA and the Defense Department, have yet to recognize the benefit of adopting voluntarily a notice-and-comment rulemaking process. So the need for a general approach on this subject remains.

Title I will thus contribute substantially to achieving the objective, enunciated by the President a few years ago, of giving every American a chance "to participate in a system of government where he knows not only his votes but his ideas count."

REIMBURSEMENT OF EXPENSES INCURRED BEFORE AGENCIES

The Administrative Procedure Act guarantees public participation in agency proceedings, and the right of public par-

ticipation has been firmly established by the courts. This right of participation, however, is hollow and illusory without support from the agencies themselves. Title II recognizes this and provides that in appropriate cases the agencies may reimburse interested persons participating in administrative proceedings.

One of the early recommendations of the Administrative Conference recognized the financial barriers to full participation by the poor in Federal administrative proceedings. The conference suggested a series of procedures useful for insuring that agencies are informed concerning the relevant interests of the poor, and formally recommended:

Federal agencies should engage more extensively in affirmative, self-initiated efforts to ascertain directly from the poor their views with respect to rulemaking that may affect them substantially.

Certainly agencies, to some extent, are already expending funds to provide special representation for the public's interest in various proceedings. In every case in which agency attorneys call witnesses to support the Government's position, the Government pays witness fees and transportation. And the Government position is supposed to be the public-interest position. Thus it would appear desirable that agencies be given the authority to experiment with other methods of getting public inputs by directly supporting participation efforts on the part of those unable to absorb the costs of participation directly, where the participant has made what the agency determines to be "discernible contribution to promoting agency implementation of a purpose of the act of Congress pursuant to which" the proceeding has been conducted.

I personally believe that Government agencies already have both the statutory and inherent powers to allow public intervenors and litigants in administrative proceedings to participate in forma pauperis in agency proceedings, and to use governmental funds to effectuate this participation.

In fact, it would appear that many agencies have direct obligations in this regard. Since legislative authority may not be sufficiently clear, and some further indication of congressional intent desirable, title II is designed to provide adequate and flexible authority for agency support of public involvement. I am presently developing a more comprehensive approach on the question of recovery of attorney's fees in administrative proceedings, and I hope to introduce legislation on this subject during this session.

It should be noted that last year, pursuant to a request from the Federal Trade Commission and after over a year of deliberation, the Comptroller General informed the chairman of the FCC that, as to indigent respondents in adjudicative proceedings, the Commission has full authority to reimburse these parties for expenses incurred in the preparation of their defense. The Comptroller General wrote that:

The use of Commission appropriations to assure such full preparation of cases by impecunious litigants would constitute a proper

exercise of administrative discretion regarding the expenditure of appropriated funds.

As to intervenors, the opinion observed that the FTC is specifically authorized by law to grant intervention "upon good cause shown." The opinion concluded:

Thus, if the Commission determines it necessary to allow a person to intervene in order to properly dispose of a matter before it, the Commission has the authority to do so. As in the case of an indigent respondent, and for the same reasons, appropriated funds of the Commission would be available to assure proper case preparation.

This opinion, of course, related to but a single agency and a well-defined set of facts. The need to develop a general approach to this issue of agency reimbursement of expenses—and waiver of certain fees—is evident. Title II provides one approach; I am confident that hearings can further refine and develop this approach, as well as provide alternatives to effectuating full public involvement in administrative proceedings.

NARROWING OF SOVEREIGN IMMUNITY DOCTRINE

The doctrine that "the King can do no wrong" may have gone unquestioned in medieval England. I believe that we would all agree, however, that it has no place in 20th-century America. Yet this seems to be precisely the basis of the judicial doctrine of "sovereign immunity," developed during the past two centuries in this country. To the extent that this immunity doctrine prevents the orderly, rational review of actions of Federal officers, it is inconsistent with the principles of accountable and responsible government.

Under the law as it presently stands—and I emphasize that this judge-made law, since Congress has never spoken directly on this issue—an officer of the U.S. Government can act arbitrarily, capriciously, discriminatorily, illegally, and yet the aggrieved or threatened citizen may have no recourse to the courts. For if he should bring suit against the officer, Justice Department lawyers will surely cry "sovereign immunity" and judges across the land may, with no further analysis or investigation, respond "case dismissed."

The immunity doctrine, as presently applied, is illogical, artificial, erratic, and confusing. In some cases where there may have been strong arguments against judicial intervention, astute lawyers and judges have had little difficulty sidestepping the sovereign immunity doctrine. In other cases, where the Government may have had no substantive interest at stake, summary application of the doctrine has been a source of frustration, uncertainty, and injustice.

Basically, this bill would do two things: First, eliminate the defense of sovereign immunity in suits for specific relief against the Federal Government.

Second, simplify and clarify the law relating to naming the United States, its agencies, or officers as parties defendant.

Sovereign immunity has never been an absolute bar to judicial intervention in cases of nonstatutory review of administrative action. Courts have in case after case prohibited enforcement of Federal laws or regulation, halted official ac-

tion, and required official action. But a review of the cases—as confused as they are—reveals one certain conclusion: Where sovereign immunity has been held to be a bar to suit, and where no other defenses retained by the bill would have been applicable, unjust or irrational decisions have resulted.

Hearings were held in the Subcommittee on Administrative Practice and Procedure on an earlier version of this bill in the 91st Congress. Support was forthcoming from the Administrative Conference, the Judicial Conference, and the ABA. In the 92d Congress the subcommittee reported the legislation to the full committee, from which it unfortunately did not emerge. I am hopeful that this provision, as title III of the present bill, will be favorably acted on during the present session.

ENFORCEMENT OF STANDARDS FOR GRANTS

Title IV of the Bureaucratic Accountability Act is directed at ensuring the maintenance of Federal standards of performance and policy in the State and local programs that depend on Federal funds. Under title I of this bill, grant decisions are made subject to the formal notice-and-comment requirements of the APA, allowing many views to be heard before implementation of a grant program at the Federal level begins. This title requires procedures to be established for hearing complaints concerning the administration of a grant program, both at the Federal and at the State or local level. Minimum standards for complaint procedures are outlined.

This provision is based upon the recommendation of the Administrative Conference, which I would like to quote here:

RECOMMENDATION

A. The Federal Administrative Complaint Procedure.

The federal grantor agency should have an administrative procedure for the receipt and impartial consideration of complaints by persons affected by the grant-in-aid program that a plan, project application or other data submitted by a grant applicant or grantee as a basis for federal funding does not meet one or more federal standards. This procedure should afford the complainant an opportunity to submit to the grantor agency for its consideration data and argument in support of the complaint, and should afford the grant applicant or grantee involved a fair opportunity to respond. If the agency determines that the complaint is apparently ill-founded or is insubstantial, it should notify the complainant of its determination and should state in writing the reasons therefor. If the agency determines that the complaint appears to be substantial and supported by the information at hand, it should so notify both the complainant and the grant applicant or grantee of its present determination in this respect and should state in writing the reasons therefor. If the agency exercises discretion not to make a determination on one or more issues raised by a complaint, it should so notify the complainant in writing. The agency should pass upon all complaints within a prescribed period of time.

The complaint procedure administered by the federal grant or agency should also provide for the receipt and impartial consideration of complaints that a grantee has in its administration of the funded program failed to comply with one or more federal standards. It is anticipated that many grantor agencies will find it necessary to

limit their consideration of such complaints to situations in which the complainant raises issues which affect a substantial number of persons or which are particularly important to the effectuation of federal policy and will, therefore, dispose of most individual complaints concerning grantee administration by referring the complainant to such complaint procedures as are required to be established by the grantee. The grantor agency should seek by regulation to define the classes of cases that it will consider sufficiently substantial to warrant processing through the federal complaint procedure and those classes of cases wherein complainants will be required to pursue a remedy through available complaint procedures administered by the grantee.

B. The Grantee's Administrative, Complaint Procedures.

The federal grantor agency should require as a grant condition the establishment by the grantee of procedures to handle complaints concerning the grantee's operation of the federally assisted program. These procedures should afford any person affected by an action of the grantee in the operation of the program a fair opportunity to contest that action. The "fair opportunity" to contest will necessarily vary with the nature of the issues involved and the identity and interests of the complainant. In all cases, however, the complainant should have the right to submit to the grantee for its consideration data and argument in support of the complainant's position.

It is acknowledged that Government agencies should attempt to achieve compliance with Federal standards in grant programs by using the full arsenal of enforcement techniques provided by Congress, as well as by trying to keep grantees informed of their obligations under the program. But title IV specifically proposes that Federal agencies develop administrative procedures for handling complaints that a grantee has not complied with Federal standards, and requires that grantees shall also maintain a procedure for the receipt, consideration, and disposition of complaints. It also allows the Attorney General to go to court to enjoin grantees from violating Federal standards, so that fund cutoffs will not be the only alternative to allowing violation by a grantee of Federal regulations.

CONCLUSION

Mr. President, as Federal activities expand to affect more and more elements of our everyday lives, the need for greater public involvement in Government decisionmaking at all levels and the need for increased responsiveness of Government agencies to the needs and wishes of the public becomes more critical. The various provisions in the Bureaucratic Accountability Act are designed to build into administrative procedure further vehicles for insuring this citizen involvement and Government responsiveness.

By Mr. HUMPHREY (for himself, Mr. RANDOLPH, Mr. STEVENSON, Mr. MONDALE, Mr. PERCY, Mr. BIBLE, Mr. MOSS, Mr. BAKER, Mr. PASTORE, Mr. PELL, Mr. NUNN, Mr. INOUE, and Mr. BAYH):

S. 1422. A bill to establish a National Institute of Justice, in order to provide a national and coordinated effort for reform of the system of justice in the

United States, and for other purposes. Referred to the Committee on the Judiciary.

Mr. HUMPHREY. Mr. President, there is no more central issue in American society today than that of justice.

Since World War II, there have been vast social and economic changes in America. These changes have sharpened the need for a new look at our system of justice.

As the power of private and public organizations has increased, the need to assure that their economic or statutory powers are used in a just and equitable way has increased.

As the power and use of technology has increased, the need to prevent that technology from being misused has increased.

As the Nation has become freed from the constraints of tradition and the past, individuals act on their personal convictions. Thus the need to balance private freedom against public rights has increased.

Above all, as the Nation has become more urbanized and interdependent, the need to protect a small number of criminals from paralyzing the functioning of large sections of society, through the power of criminal acts, has become critical.

Justice is based on the rights of human beings to be protected from the arbitrary use of such powers.

But some of these rights are being eroded. The right to freedom of movement—I mean in our own neighborhoods—is being lost due to criminal power. The right to freedom of speech is being eroded due to State power. Both of those declines of freedom are a sign of increasing injustice.

As an abstraction, we have a system of justice to protect these rights. It is a relatively unified, neat system. We have lawyers. We have police. We have civil courts and criminal courts. We have jails and prisons. In theory, they all have their place in our system of justice.

As a reality, the historical changes since World War II have made each of these institutions increasingly unable to deal with the overall problem of criminal and civil justice in our Nation.

Essentially, each of these components tries to deal with its own particular problems in its own particular way. But there is no one focal point in the Nation for viewing each in relation to the other. Nor is there one place in the Nation where each is viewed as a system at the Federal, State, and local level.

The result of all this is that justice in this Nation increasingly falls short of any reasonable ideal. The ideal is that those committing crimes are found, arrested, given a fair trial, with a thoughtful verdict; the ideal is that the sentence is designed to rehabilitate the person as well as to protect society. These ideals are increasingly so removed from reality as to make a mockery of much of our present system.

We have never provided the means whereby our system of justice can be examined in all its parts and improvements made accordingly. Yet legislatures continue to enact new laws on the ashes

of the old—some 10,000 new laws each year—without, in most cases, the full examinations which would tell us of their potential impact. Our courts are seriously overburdened. Our law enforcement mechanism ever lessening in prestige, and our jails and prisons, institutions of higher education in crime.

We spend but a single dollar on justice research and development for every several hundred dollars on defense research and development. Justice has been too low, too long, on our priority scale.

Therefore, I propose the establishment of the National Institute of Justice, a nonprofit Institute to be comprised of the finest legal minds in our Nation, to undertake on a national scale the refinement and reform of our judicial and related processes.

Research would be an important function of the National Institute of Justice, as would information gathering and dissemination. But the Institute would go farther. Their review would culminate in the developments of objectives, and advice and assistance to accomplish these objectives. The Institute of Justice would not supplant existing State, local, or Federal entities, but it would both call upon them and be available to assist them, when requested. One of its prime functions would be to coordinate existing data, contracting from professionals in the field for research and evaluation expertise.

The five major functions of the Institute would be:

First, to survey, collect, analyze, and disseminate information about the operation of all levels of our judicial system, with emphasis on improvements and innovations.

Second, to conduct a study of the causes of delay in the administration of justice, identify the problems, and recommend solutions.

Third, to establish priorities, objectives, and continuing evaluation of the judicial system at all levels.

Fourth, to conduct research, either directly or through arrangements with institutions of higher education, law schools, bar associations, or other appropriate professional groups, on neglected aspects of the functioning of the judicial system; and

Fifth, to advise, upon request, Federal State, or local public agencies, professional legal societies, and/or members of the bar.

The National Institute of Justice would report periodically on progress and recommendations, including legislative changes, if indicated. It would be independent of partisan political activity, with its Director serving a 6-year term.

Mr. President, the administration has opposed the idea of a National Institute because it feels it would replace the Law Enforcement Assistance Administration. They are wrong. The Institute would replace nothing. The LEAA is a block grant program directed at criminal justice. It does not include civil justice. Moreover, it does very little in the way of trying to develop broad, systematic guidelines for the overall system of justice in this

Nation. For the most part, LEAA simply hands out block grants to states.

The Institute does, however, command the support of the American Bar Association. In fact, it was Mr. Bert Early, executive director of the ABA, who originally called for the creation of an Institute, in an article in the *West Virginia Law Review* in April 1972.

A conference was held by the American Bar Association, to discuss the idea of an Institute, on December 6-8, 1972. Following are excerpts from a report on this conference, by Charles Rhyne, chairman of the ABA Commission on a National Institute of Justice. The report shows that there was general agreement that the Institute might be the mechanism to deal with the serious problems of the reform of our system of justice.

I ask unanimous consent that excerpts from the report of the ABA conference be printed at this point in my remarks.

There being no objection, the excerpts were ordered to be printed in the *RECORD*, as follows:

EXCERPTS FROM ABA REPORT

The conference was convened with a reception and dinner on the evening of December 6. The Chief Justice of the United States extended his greetings to the conferees, at which time he stated:

"Although there are many questions to be resolved about the organization, scope and functions of a National Institute of Justice before final decisions of support can be made, we should not be confused or deterred by 'doom criers' who conjure up parades of horrors, but even as I say that, I would remind you that objections and opposition will sharpen the debate. This distinguished gathering was not convened to adopt any plan but to debate a wide range of alternatives."

On Thursday, December 7, and Friday, December 8, the conferees conducted their deliberations. They used, as a guideline, five questions, although the questions were not approached as a rigid agenda but rather as a broad framework for discussion:

- (1) What are the most important problems of justice today?
- (2) What institutions are most in need of improvements in the way of doing justice?
- (3) What kinds of improvements are most needed?
- (4) What contribution could a National Institute of Justice make towards these improvements?
- (5) What considerations should be kept in mind in the organization of a National Institute of Justice so as to permit it to maximize the contribution it might serve?

As had been anticipated, a plethora of ideas were articulated in response to each of the issues raised by these questions. Similarly, a number of alternative structures were sketched in an effort to mold the proposed Institute into a framework that was flexible and adaptable to the needs of the justice system as perceived by the various conferees. No consensus was sought nor achieved, except for what Professor Hazard summarized at the conclusion of the conference as "... a strongly shared sense that there should be a National Institute of Justice ..."

Despite the diversity and occasional disparity in opinions expressed, some common threads did emerge from the conference work sessions. The conferees almost unanimously agreed that public authority at all levels of government is suffering from a severe problem of "credibility". The public perceives the government agencies in all three branches which "dispense" justice as usually being less than truthful about their functions and per-

formance. Furthermore, the public is critical about the agencies' discharge of their responsibilities and, at times, these agencies fail to comprehend the consequences of what they are attempting to achieve. The view was therefore expressed that a National Institute of Justice could and should aim to be the conscience of a national community regarding the provision of equal justice through legally constituted processes and institutions.

Another widely shared recognition was that many of the institutions of justice had become fearful, defensive, and introverted. A qualified belief persisted that a National Institute of Justice could reduce fearfulness by putting the problems of administering justice in larger perspectives of place and time, reduce defensiveness by helping develop new methods and concepts in the administration of justice, and reduce the introversion and isolation of agencies of justice by establishing open and more general bases of communication among them and with the "consumers" of justice and the public at large.

Although no agreement was achieved on the specific questions of role, function, and structure for the proposed National Institute of Justice, the conference did provide invaluable input for the Commission. Professor Hazard summarized the composite perspective achieved in the work sessions as follows:

"Underlying the deliberations of the conference, from which these views emerged, there seemed to be certain fundamental beliefs shared by all who participated: That there is such a thing as objective reality, which may be discerned by careful examination and consideration; that every individual in the national community has a worth and dignity that must be made secure with the aim of law; that renewal of efforts is now necessary to enhance that security through inquiry and public discourse; and that a National Institute of Justice might be an appropriate agency through which to make the effort."

At this writing, the Commission is preparing for the publication of a conference report which will be widely circulated to organizations and groups to solicit a broad range of opinion and comment which will contribute to the further development of the Institute concept.

Respectfully submitted,
CHARLES S. RHYNE,
Chairman.

Mr. HUMPHREY. Mr. President, as these excerpts make clear, the Institute is an idea which is commanding increasing national attention and debate.

However, while it is of the greatest value to have the ABA developing this proposal, I am convinced the time has come for the Congress to take action.

I, therefore, ask unanimous consent that the text of the bill to create a National Institute of Justice be printed in the *RECORD*.

I also ask unanimous consent to have printed in the *RECORD* the excellent article I have referred to, written by Bert Early.

There being no objection, the bill and article were ordered to be printed in the *RECORD*, as follows:

S. 1422

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Institute of Justice Act".

POLICY AND PURPOSE

SEC. 2. In order to provide national direction and leadership that is responsible and responsive and in order to furnish advice to

all levels of the judicial system in the United States, it is the purpose of this Act to establish a National Institute of Justice.

ESTABLISHMENT

SEC. 3. (a) There is hereby established an agency to be known as the National Institute of Justice.

(b) The Institute shall be headed by a Director who shall be appointed by the President, by and with the advice and consent of the Senate, from among persons who have distinguished careers in the field of law, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service. The term of the Director shall be six years. The Director shall be responsible for carrying out the functions of the Institute and shall have authority and control over all personnel and activities of the Institute.

(c) A Deputy Director of the Institute shall be appointed by the President, by and with the advice and consent of the Senate, from among persons who have distinguished careers in the field of law, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service. The term of the Deputy Director shall be six years. The Deputy Director shall perform such duties and exercise such powers as the Director may prescribe, and shall act for, and exercise the powers of, the Director during his absence or disability.

FUNCTIONS OF THE INSTITUTE

SEC. 4. (a) In order to carry out the policy of this Act the Institute shall—

(1) undertake surveys, and collect, analyze, and disseminate information relating to the operation of the judicial system in the United States at all levels, with particular emphasis upon information with respect to improvements and innovations in the operation of that system;

(2) conduct, either directly or through contracts, grants, or other arrangements, an evaluation of the principal sources of delay in the administration of justice, criminal and civil, designed to identify existing problems and to provide a diagnosis of new anticipated problems in the timely and efficient disposition of civil and criminal cases;

(3) establish priorities, develop objectives, and provide for the continuing evaluation of administrative actions by Federal and State courts and research programs conducted by or for such courts, concerning any aspect of the effective and timely operation of the judicial system in the United States;

(4) conduct, either directly or by way of grants, contracts, or other arrangements with institutions of higher education, law schools, bar associations, and other appropriate legal and professional associations, research and an evaluation of research in the operation of the judicial system in the United States with particular emphasis upon areas of that operation in which research has been neglected and areas of that operation where judicial reform is an important consideration;

(5) provide advice, upon request, to Federal, State, and local public agencies, to professional legal societies and to members of the bar;

(6) prepare at least annually, and at such other times as the Director may deem appropriate, a report concerning its activities together with such recommendations (including recommendations for additional legislation) as the Director deems advisable.

(b) In carrying out the functions of the Institute under this section, the Director may establish such laboratories and facilities as he deems necessary to be operated by the personnel of the Institute. With a view to obtaining additional scientific and intellectual resources available, the Director shall, whenever feasible, enter contracts with public or private educational or research institutions for the purpose of undertaking any

particular study or research project authorized by this Act.

ADMINISTRATIVE PROVISIONS

SEC. 5. (a) In addition to any authority vested in it by other provisions of this Act, the Institute, in carrying out its functions, is authorized to—

(1) prescribe such regulations as it deems necessary governing the manner in which its functions shall be carried out;

(2) receive money and other property donated, bequeathed, or devised, without condition or restriction other than that it be used for the purposes of the Institute; and to use, sell, or otherwise dispose of such property for the purpose of carrying out its functions;

(3) in the discretion of the Institute, receive (and use, sell, or otherwise dispose of, in accordance with paragraph (2)) money and other property donated, bequeathed, or devised to the Institute with a condition or restriction, including a condition that the Institute use other funds of the Institute for the purposes of the gift;

(4) appoint one or more advisory committees composed of such private citizens and officials of Federal, State, and local governments as it deems desirable to advise the Institute with respect to its functions under this Act;

(5) appoint and fix the compensation of such personnel as may be necessary to carry out the provisions of this Act without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates, but no more than three individuals so appointed shall receive compensation in excess of the rate prescribed for GS-18 in the General Schedule under section 5332 of title 5, United States Code;

(6) obtain the services of experts and consultants in accordance with the provisions of section 3109 of title 5, United States Code, at rates for individuals not to exceed the rate prescribed for GS-18 in the General Schedule under section 5332 of title 5, United States Code;

(7) accept and utilize the services of voluntary and noncompensated personnel and reimburse them for travel expenses, including per diem, as authorized by section 5703 of title 5, United States Code;

(8) enter into contracts, grants, or other arrangements, or modifications thereof to carry out the provisions of this Act, and such contracts or modifications thereof may, with the concurrence of two-thirds of the members of the Board, be entered into without performance or other bonds, and without regard to section 3709 of the Revised Statutes, as amended (41 U.S.C. 5);

(9) provide for the making of such reports (including fund accounting reports) and the filing of such applications in such form and containing such information as the Director may reasonably require;

(10) make advances, progress, and other payments which the Director deems necessary under this Act without regard to the provisions of section 3648 of the Revised Statutes, as amended (31 U.S.C. 529); and

(11) make other necessary expenditures.

(b) Each member of a committee appointed pursuant to paragraph (4) of subsection (a) of this section who is not an officer or employee of the Federal Government shall receive an amount equal to the maximum daily rate prescribed for GS-18 under section 5332 of title 5, United States Code, for each day he is engaged in the actual performance of his duties (including traveltime) as a member of a committee. All members shall be reimbursed for travel, subsistence, and necessary expenses incurred in the performance of their duties.

PROHIBITION AGAINST POLITICAL ACTIVITY

SEC. 6. No officer or employee of the Institute shall take any active part in political management or in political campaigns and no such officer or employee shall use his official position or influence for the purpose of interfering with any election or affecting the result of any election.

COMPENSATION OF DIRECTOR AND DEPUTY DIRECTOR

SEC. 7. (a) Section 5315 of title 5, United States Code, is amended by adding at the end thereof the following new paragraph:

"(95) Director, the National Institute of Justice."

(b) Section 5316 of title 5, United States Code, is amended by adding at the end thereof the following new paragraph:

"(130) Deputy Director, National Institute of Justice."

DEFINITIONS

SEC. 8. As used in this Act—

(1) the term "Institute" means the National Institute of Justice; and

(2) the term "Director" means the Director of the National Institute of Justice.

AUTHORIZATION OF APPROPRIATIONS

SEC. 9. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

[From the West Virginia Law Review, April 1972]

NATIONAL INSTITUTE OF JUSTICE—A PROPOSAL (By Bert H. Early*)

FOREWORD BY WARREN E. BURGER†

From his long experience and the vantage point of his unique position in the organized bar, Mr. Early has given voice to a great need—a great void—in our system. He correctly and carefully disclaims any thought of "homogenizing" the systems of justice, but rather presses for some central means to energize the valuable programs for improved justice now in being and to probe for new solutions. We spend more than two billion dollars annually through the National Institutes of Health and the country is better for it. But the social, economic and political health of the country must be fostered by a comparable facility to revitalize the faltering machinery of justice—and happily that can be done for a mere fraction of the NIH budget. Whether it is financed by private as well as public funds is not central to the proposal—the key is the function of such an institute.

Mr. Early's provocative article is advanced by him to stimulate debate. It deserves a wide audience and I sincerely hope it will be challenged and debated—vigorously—by the bar and the public.

I. THE PROPOSAL

The intent of this article is to advance a proposal for the creation of a new type of organization, national in scope and purpose, to marshal our resources and energies for an accelerated program of modernization of our system of law and justice to serve better the needs of over 200 million Americans.

Such an organization might be called *The National Institute of Justice*. At the outset, it should be clearly understood that the Institute would not conflict with or duplicate the Federal Judicial Center, the National Center for State Courts or other existing organizations. It would, rather, complement their activities and encourage a broader base of support. In broad perspective the concept may be stated simply: the establishment of a national public agency, governed by the most eminently qualified individuals available, and dedicated to the mission of giving national cohesion and increased public and private support to the now inadequate and piecemeal efforts directed toward improving

the justice system at all levels. The National Institute must deal with the system of justice as a whole. That system consists of interlocking and interdependent components—substantive laws; procedures; legislative bodies; institutions for dispute settlement, such as courts and administrative agencies; law enforcement offices and agencies and corrections and rehabilitation facilities and services; and a host of individuals who work within the legal profession. The ultimate aim is to achieve a structure of civil and criminal justice that is more effective, expeditious and accessible to the present day needs of all our people.

The goal is unassailable. It was the dream of our founding fathers and it has been the aspiration of our nation's foremost leaders for nearly two centuries. And yet it has eluded us.

No less a figure in American jurisprudence than Roscoe Pound spoke prophetically of its elusiveness as early as 1906. In his historic paper, entitled *The Causes of Popular Dissatisfaction with the Administration of Justice*,¹ Dean Pound addressed the Annual Meeting of the American Bar Association with these words:

"I venture to say that our system of courts is archaic and our procedure behind the times.

"Uncertainty, delay and expense, and above all the injustice of deciding cases upon points of practice, which are the mere etiquette of justice, direct results of the organization of our courts and the backwardness of our procedure, have created a deep-seated desire to keep out of court, right or wrong, on the part of every sensible business man in the community. . . .

"But too much of the current dissatisfaction has a just origin in our judicial organization and procedure. The causes that lie here must be heeded. Our administration of justice is not decadent. It is simply behind the times. . . ."

Again in 1937, more than thirty years later, in *Law: A Century of Progress*,² Dean Pound tolled the same ominous bell:

"Looked at superficially, many features of the legal order of today may well give us pause. . . . The multitude of regulations required by an urban, industrial society encountering the pioneer habits of self-reliance and private judgment which have come down from the past make the time seem one of disrespect for law. . . . The inadequacy of the judicial organization and legal procedure of the past century to deal with the mass of litigation arising in our great urban centers leads to widespread complaint and popular dissatisfaction with the administration of justice. . . .

"Questions of law have ceased to be local. We are so unified economically that no question is limited by jurisdiction and venue as questions used to be. Questions of law today are likely to be questions of business as well. Creative work cannot be done under limitations of party and jurisdiction and venue.

"Even less may the work of reshaping the law be left to occasional legislative commissions or to the intermittent and hurried action of judiciary committees. In such matters as procedure the judicial councils which have been set up so generally in the past decade will do much. But the ministry of justice, which will take the functioning of the legal order as a whole for its province and give to the problems of peace the continuous study which is so generally given by governments to preparations for war, seems to be a long way off in the English-speaking world."

Progress in the administration of justice has been painfully slow. It has failed to keep pace with a burgeoning, automated, electronic society that is increasingly urban, impatient and demanding. Indeed, the situation has taken on crisis dimensions.

This is not to say or to imply that there

Footnotes at end of article.

has been no progress. Indeed, there has been much. However, its hallmarks too frequently have been a patchwork of effort lacking focus, continuity and adequate funding. Notwithstanding accelerating efforts to improve the administration of justice, Chief Justice Burger, in his address on the State of the Judiciary in July, 1971, was compelled to observe that:

"Essentially the problems of the federal courts, in common with state courts and indeed much of the entire fabric of our national life, are suffering from an accumulated neglect. This disrepair became an acute problem as the load increased, and we cannot ignore it any longer."

It is not the purpose of this article to dwell on the obvious and profound inadequacies of our present system of justice. It is rather to suggest that the evolution of our legal system makes it clear that vital elements still are missing. Those elements are focus, continuity, innovation, experimentation, and research, all melded under capable direction and with adequate funding. The catalytic agency to synthesize these elements can, in this writer's judgment, be a National Institute of Justice.

This article is then a document of advocacy. The historical details of our failure to attain the noblest purposes of our founding fathers are left to the legal philosophers and historians. It is sufficient to accept the fact of that failure as a point of reference and to move on to more promising methods that offer brighter hope for future progress.

II. A NATIONAL INSTITUTE OF JUSTICE

It is proposed that the National Institute of Justice take the form of an independent, not-for-profit, federally chartered corporation designed to coordinate and support the machinery of justice. It would be governed by a board composed of the most eminently qualified and widely representative individuals available. Its mission would be to make the administration of justice more fully responsive to the needs of our contemporary society.

Purposes of the institute

The primary purposes of the Institute would be as follows:

First, to provide direction and leadership that would be both responsible and responsive. The Institute would serve as consultant and advisor to all components of the machinery of justice at both federal and state levels.

Second, the Institute would provide a permanent body charged with the development of an overview of the law, with the establishment of priorities, with responsibility for the coordination of educational resources, research activities and projects of the organized bar.

Third, the Institute would serve as a fiscal agent to receive and disburse public and private funds for research, evaluation and action.

There is today no single body or individual in the federal or state governments charged with these ongoing overall responsibilities. Cooperation has improved between states and the federal government, but cooperation is not enough. Although each government has certain officers in each branch responsible for specific areas of the administration of justice, each is limited by constitution or statute to only a part of the law's sweep. It seems clear that the three branches of government should have the benefit of the research, counsel, advice and recommendations of an agency that has the primary mission for and a continuing commitment to the improvement of the quality of the legal system as a whole.

Footnotes at end of article.

Functions of the Institute

It is envisioned that the proposed Institute would perform the following functions:

1. Survey, Appraisal and Information Collection and Dissemination Function

It would be essential that the Institute undertake and maintain an ongoing survey and appraisal of the functioning of the legal system and of the principal efforts to modernize, reform and reconstitute legal processes and the administration of justice. The task of determining what has been and is being done by the federal, state and local governments, private foundations, law schools, interest groups, professional organizations and other educational institutions is a task of great magnitude, but is essential to any coordinated effort directed toward modernization and reform.

The collection and dissemination of information about the operation of our society—a *law society*—is presently conducted by a variety of federal, state and local government agencies, private foundations, the organized bar and private institutions. The present efforts are uncoordinated, frequently incomplete, redundant and permeated with frustrating, circular reference systems. The creation of a National Institute of Justice would, for the first time, provide a single source from which comprehensive and complete information might flow. The Institute could provide an invaluable national link among governmental, private and professional interest groups directly or tangentially concerned with the same or closely related problem areas. The use of modern computer technology makes the goal achievable within a reasonable time and within our economic means.

2. Diagnostic function

The diagnostic function would have as its goal the discovery and evaluation of the principal bottlenecks in the flow of civil and criminal justice and the recognition of new problem areas as they arise. This function has never been assumed by any agency or organization in the country on a continuing and permanent basis. So little attention and money have been devoted historically to this function that the legal profession is constantly in the posture of reacting to certain issues only after they have developed to crisis proportions. With an effective diagnostic function, problem areas can be dealt with more expeditiously and effectively.

3. Coordination function

Coordination would be one of the Institute's foremost roles. This necessarily includes the establishment of priorities, the development of long range goals and a continuing evaluation of the results of action and research programs of the various components of the law society, both public and private.

4. Research catalyst function

The disorganized and proportionately insignificant allocation of resources for legal research is evidence of the crucial need for a catalytic function of the Institute in this area. Although lack of sufficient funding is certainly one of the most crippling aspects of the anemic state of legal research in the nation today, a solution does not involve solely the infusion of more dollars. Continual inquiry must be made as to the value and relevance of research undertakings. The Institute could perform a highly valuable service as a catalyst in the development of areas in which research has been long neglected.

Most legal research of the past has been doctrinal research *in law*. However, studies have begun to appear which shed new light on the operation of the processes of law in society—research *about law*.¹

5. Advisory function

The Institute could play a significant and effective role as an advisor to all branches of government and to the profession. Its recommendation, based upon research and analysis, would certainly tend to carry great weight.

6. Continuity function

Perhaps one of the critical roles which the Institute would assume is to provide functional continuity for the modernization effort. History demonstrates clearly that continuity of direction and operation has been a principal weakness in the functioning of law and in the quest for more effective administration of justice.

7. Neutrality function

A seventh function of the Institute would be its mandate to insure neutrality. It should remain, as much as possible, free from political control of its decision making. While the rule of law in theory knows no party, the nature of our representative government inevitably brings political influences into the operation of the system of justice. An Institute governed impartially is both possible and essential.

Funding

It is contemplated that the Institute would be funded from both public and private sources. It would be both a grantor and a grantee of funds.

In its role as grantee, the Institute would be authorized to receive funds for its general administration, under contract for specific projects and programs and under grants for either specified or unspecified uses. As grantor, the Institute might serve as a funding agency for investment of public or private funds in research or action programs.

It is this writer's view that the creation by Congress of this Institute would not eliminate the continuing need for funding from numerous other sources including individuals, organizations, foundations and state and local governments. On the other hand, it is perfectly apparent to all who have examined the problem that the costs involved in modernizing the justice system—after generations of neglect—will be so large that additional responsibility for making funds available must necessarily rest with the federal government. As the Institute progresses in its survey function, it will only then be able to project accurately financial needs in a realistic way.

It should also be understood clearly that the Institute is not intended to supplant or put out of business existing agencies performing valuable work in the various areas of law and justice. Its aim will be to do more, not less. The Institute will be in posture to provide a common rallying point for concerned individuals and organizational efforts to obtain congressional and executive response for projected needs.

Staff

It is contemplated that the Institute would have an interdisciplinary, broadly experienced professional staff of modest size. The staff, as directed by the governing authority, would not assume the functions presently performed by other organizations; rather, it would undertake functions not now being performed or being performed on a very limited basis.

It is not anticipated, for example that the Institute would itself be a large research organization. It would contract with universities, law schools, bar associations, legal associations, bar foundations, other professional organizations, private corporations and governments to carry out evaluation and research projects.

The staff would be responsible to and serve under the direction of a governing body

which might be constituted as a Board of Directors.

Governing Authority

It does not seem desirable at this juncture to suggest the specific type, size, or constituency of a governing board. Suffice it to say that the governing body should be appointed for a term of years by the President with the advice and consent of the Senate. Ex officio members might include the Chief Justice of the United States and other high government officers. In all events, members of the governing body should be selected with due regard to their experience, knowledge and proven dedication to the mission of justice.

What the Institute Should Not Be

In any attempt to define what the National Institute of Justice should be, it is critical to inquire as to what it should not be.

The Institute should not usurp functions of existing entities. On the scene today are a number of public and private organizations dedicated to the modernization and efficient functioning of the law society. These include the Federal Judicial Center, the National Center for State Courts, the Law Enforcement Assistance Administration, the American Judicature Society, the American Bar Foundation and other private foundations of research and action in the field of justice, bar-related organizations and research centers. In its coordination role, the Institute would utilize existing organizations, and indeed nurture their further development and usefulness.

The role of the Institute would most certainly not include any attempt to federalize the state courts. Such a statement hardly seems necessary except for the extreme fear of some that action at a national level that involves funding by the federal government may be so motivated. It is contemplated that the Institute would be as much the servant of the states as it would of the federal government. If the Institute were to be successful, its reputation would depend upon its even-handed administration, its thoroughness and its understanding of the broad spectrum of problems in the administration of justice on the local, state and national levels.

It was said long ago and repeated many times since that the law is too important to be left to lawyers. The work of the Institute would be much too pervasive and too important to be other than interdisciplinary in its governing body, its staff and its concept.

The Institute is envisioned as a cooperating, coordinating, and consulting organization that would make its resources available for the investigation, analysis and solution of legal and law-related problems. Thus, its staff would primarily perform consulting services, as opposed to having direct responsibility for the implementation of reform movements. In short, the staff would provide insight into ways that modernization resources might be utilized most efficiently.

Because the Institute would not be possessed with coercive power, its effectiveness could only develop as a result of its creativity and its applied expertise in fulfilling its functions. Only if the Institute proves capable of performing that function would its services be in demand or its recommendations be heeded.

III. STRUCTURES OF RESPONSE IN OTHER DISCIPLINES

The concept proposed in this article is not entirely new. Almost precisely fifty years ago Mr. Justice Benjamin Cardozo urged the creation of a ministry of justice.⁶ He envisioned that a ministry consisting of five members might observe the law in action,

develop recommendations for reform in the civil law and report to Congress and the state legislatures where change was needed. In making his recommendations, Mr. Justice Cardozo observed that his thought was not novel, pointing to the prior proposals of Roscoe Pound, Lord Westbury, Lord Haldane and others.⁷

Other proposals have been made in Congress in more recent years. The late Senator Dirksen and Congressman Emanuel Celler proposed the creation of a national foundation of law in bills submitted in 1967.⁸ These bills were offered in full cooperation with the American Bar Association, the Association of American Law Schools and the American Association of Law Libraries. In both the 90th and 91st Congresses Senator Fred Harris submitted proposals for the creation of a National Foundation of the Social Sciences.⁹ Senator Harris' proposal envisioned a foundation designed to support academic research, education and training in the fields of political science, economics, psychology, sociology, anthropology, history, law, social statistics, demography, geography, linguistics, communications, international relations, education and other social sciences. In presenting his bill, Senator Harris called particular attention to the fact that his proposed foundation would perform no in-house research, but would, in keeping with the precedents set by the National Science Foundation and the National Foundation for the Arts and Humanities, underwrite, fund and support academic research, education and training in the social science field.

Appropriate inquiry might be made as to whether a National Foundation for the Social Sciences could adequately perform the functions of the proposed National Institute of Justice. The argument can be made quite forcefully that the interdisciplinary atmosphere of an organization devoted to the social sciences might indeed have a statutory effect.

This proposition has been thoughtfully analyzed by Robert B. McKay, Dean of New York University Law School, when he made the following observation:¹⁰

"[S]ocial scientists do not regard law as a kindred discipline. Accordingly it seems likely that in a social sciences foundation the law would always be the poor relation and that the important tasks we believe should be undertaken would not be supported except where there was an interdisciplinary study to be made in which law could play a complementary, but secondary, role."

With respect to the Dirksen-Celler proposals of 1967, it should be made clear that the leadership of the American Bar Association played a very significant role. Indeed, the leadership of the ABA, the Association of American Law Schools and the American Association of Law Libraries actively solicited the support of Senator Dirksen, Congressman Celler and their colleagues in both the House and Senate in support of that proposal. Why then, it may be asked, after four years has the proposal not been more actively pursued by the associations to the point that it might even today already be a reality. Such legislation commonly requires a germination period. At the time the Dirksen-Celler proposals were introduced it was assumed that it would take a number of years to bring about the adoption of them or similar legislation. Indeed, the history of the several models described above indicates that this has been the pattern in each case.

The present proposal is thus not reflective of any abandonment of the broad principles contained in the original Dirksen and Celler bills, but is rather reflective of the refinements in thought that have evolved during the past four years. Indeed, it is recognized that there may be other refinements of the

concept suggested from many sources before any proposal becomes a reality.

Both the Dirksen and Celler bills and the Harris bills envisioned the creation of their proposed foundations as independent administrative agencies of the federal government—one of four general types of independent government or government funded entities. These are the independent administrative agency, the government owned corporation, the federally chartered not-for-profit corporation, and federally chartered profit making corporation. The National Institute of Justice is envisioned as a federally chartered not-for-profit corporation.

Existing models of independent administrative agencies are the National Science Foundation and the National Foundation of the Arts and Humanities. An example of a federally chartered not-for-profit corporation is the Corporation for Public Broadcasting.

The National Science Foundation was created to strengthen both research and education in the natural sciences. It was brought into existence as the result of a report prepared at the request of the President describing how best to develop a national science policy and to support basic research and education in the natural sciences. The report was submitted in 1945 by Dr. Vannevar Bush, Director of the Office of Scientific Research and Development. It recommended the establishment of an independent federal agency composed of members to be selected by the President. The establishment of the National Science Foundation took some five years after submission of the Bush report. The Foundation is authorized to make grants to institutions and provide fellowship programs for individuals; it now receives about a half-billion dollars annually for its work.

The National Foundation of the Arts and Humanities was created to encourage and support the humanities and the arts through studies and grants. It was many years aborning. In 1951 President Truman requested a report on the status of the arts with respect to government. Two years later a report was submitted to President Eisenhower and in 1962 President Kennedy urged approval of a measure establishing a federal advisory council on the arts. Proposals were made in the next two years for a national council on the arts and a national arts foundation. In 1964 the National Council on the Arts was created and in the following year the National Commission on the Humanities joined forces with the Council to bring about the creation of the National Foundation of the Arts and Humanities. The Foundation has certain unique qualities of organization that are not here relevant. Its importance lies in the fact that responsible individuals in the field envisioned an independent agency modeled along the lines of the National Science Foundation, which would provide general support for research and education in the humanities. There appeared to be no other logical place within the federal establishment to provide a home for the arts and humanities.

The Corporation for Public Broadcasting was created in 1967 following a study by the Carnegie Commission on Educational Television. While acknowledging the free speech dangers implicit in government participation in the communications media, the Commission recommended extensive federal funding for television program production. In terms of structure, it is significant that the Commission proposed the establishment of a federally chartered not-for-profit corporation which would be neither an agency nor an establishment of the United States Government. Under the enabling legislation the President of the United States, operating under certain guidelines, appoints the fifteen members of the Corporation's Board of Di-

Footnotes at end of article.

rectors. The Corporation may receive funding from federal and other sources.

It was thought that the federally chartered not-for-profit corporate structure would most effectively provide the independence, continuity, funding and political insulation vitally needed for operation in this controversial and sensitive area.

Each of the foundations and corporations described above bears some similarities of purpose and function to the proposed National Institute of Justice. Each is designed to provide a home for a discipline or a profession with great public service commitment that will make possible a continuity of direction and leadership, will encourage development, research and education, will provide responsible funding grants and will insure competent, independent and neutral direction. Each of these provides an analogy and insight for considering the creation of a National Institute of Justice.

IV. THE MANY PRESSURES OF MULTIPLE CHANGE

An overview of developments within the profession emphasizes the need for the creation of a National Institute of Justice.

In addition, inquiry is justified as to whether any existing institution, or a combination of institutions, including the organized bar, are presently capable of performing along the functions deemed necessary for effective and comprehensive modernization.

Accordingly, some of the major areas of evolution in the modernization process are considered, followed by an analysis of the role of the organized bar in this process.

During the Twentieth Century the components of our machinery of justice—the courts, the practicing profession, legal education, the methods of practice, law related research—have too frequently lagged in their response to the problems and challenges of our rapidly changing society. Indeed, the practice of law in this country has been described as the last cottage industry. It should be observed that this has not been for want of concern on the part of dedicated lawyers, judges and numerous organizations of the profession. Rather, problems concerning the administration of justice and the practice of law have for too long been considered primarily the provincial concern of judges, lawyers and their constituent organizations. As has been described, in areas such as medicine, the natural sciences, and the arts and humanities, it was deemed in the national interest to create national organizations to foster development, research and innovation.

In contrast, the failure of this nation, until recently, to view problems concerning the effective administration of justice with sufficient seriousness to warrant a commitment of substantial resources from the federal government, has meant that those struggling to modernize the legal profession, legal education, and our justice machinery, have had to work with minimal funding wholly inadequate to meet the magnitude of the problems. We have too often gone in separate ways without carefully evaluating the merits and effectiveness of our efforts and without resources to interrelate results with the overall problems of judicial administration. The inescapable conclusion one draws from most of these past efforts is that the approach has been comparable to trying to construct a space vehicle by assigning a thousand engineers, each left in isolation, to design one specific component with little comprehension as to how the components would function together when assembled. It may, therefore, be helpful to look briefly at certain components of the justice system in terms of the recognized needs of an urban society.

How law is practiced

In comparison with other vital aspects of society, the practice of law today and the basic methodology of the courts have changed relatively little from the days of Thomas Jefferson and John Marshall.

For many early nineteenth century lawyers the primary and often sole source of legal research and knowledge * * * and Blackstone's *Commentaries*. And between 1790 and 1840 our courts produced only about 50,000 reported decisions. The next fifty years produced about nine times as many—450,000. From 1890 to the present the courts have added almost two million published decisions to our legal storehouses of knowledge. And this does not include the hundreds of thousands of new regulations which have been issued by administrative agencies or the approximately 10,000 new statutes adopted by legislatures each year.

New tasks and new demands have been placed on today's lawyer. The call for equal access to the machinery of justice and to professional legal counselling for the poor and for members of minority groups has created new demands to which the bar has responded. Increasingly, questions are being raised as to the adequacy of available legal services to middle income American families.

Inherent in the increased recognition and utilization of the courts as effective vehicles for social and political change has been the mounting pressure on the lawyers and his profession to promote and protect equally due process, and the "public interest" for those who could not individually afford a lawyer's services. New opportunities for public service by younger attorneys have developed. Law firms and bar associations have been challenged to attain an even higher level of public service activity.

Unlike industry and government, lawyers have not been able to reduce appreciably the number of expensive man-hours they devote to routine legal tasks. With certain exceptions, which will be discussed later, the ideal of the profession has long been to provide custom-tailored services to each client. The sources of essential legal research—court decisions, statutes, and administrative regulations—have skyrocketed quantitatively. Lawyers' research has become increasingly costly, and it is the client who must pay for the straining shelves of law books and the expensive manpower necessary to extract needed materials in them.

Yet young associates and solo practitioners, still pore through indices, digests, cases, commentaries and looseleaf services in the same manner as their great-grandfathers. These laborious methods remain the primary information retrieval system of the profession.

To this day routine legal research remains largely untouched by computer technology. The reasons are probably less the limitations of the computer than the high capital cost of better legal indices for computer use and for programming millions of bits of information. This high initial cost has certainly been a major deterrent to extensive utilization of automated information retrieval.

Another characteristic of the legal profession today is its increasing specialization. The lawyers image of himself as a generalist, fully proficient in the law as a whole, bears little relation to reality. New areas of legal practice and inquiry have been added steadily during this century, e.g., labor relations law, federal tax law, civil rights law, antitrust law, and securities regulation law. Numerous other examples could be cited. The practicing lawyer today is constantly confronted with the problem of how little of the "seamless web of the law" he can hope to practice with proficiency.

The growing national uniformity of laws harbors profound implications for the profession and its admission procedures. This century has been particular witness to the growing influence of federal laws and agencies regulating both man and his industry, labor and finance. The portion of a lawyer's time spent on matters regulated solely by state law has declined steadily. Suffice it to say that many practitioners today devote most of

their practice to federal matters which were unknown 75 years ago.

The move toward modernization: An unfinished saga

The American Bar Association and the legal profession as a whole have in recent years devoted increased time and resources to consideration of methods for modernization. There exists a growing awareness in the Bar that the profession as traditionally structured has not met many of the legal needs of individual citizens. Changes in society as a whole have exerted certain but incalculable pressure on the profession to change. They have been affected by the emphasis upon research and innovation and by the increasing demands first of the poor and now of the middle class to share in the benefits of an affluent society, including quality professional services of the doctor and lawyer.

Issues with respect to the modernization of the profession have arisen in two broadly defined areas. First, issues concerned with the internal organization of the legal profession, including specialization, use of paraprofessionals and computer technology are increasingly being considered. Second, issues related to the delivery of legal services to individuals are undergoing intensive scrutiny. These include, *inter alia*, prepaid legal cost programs, group legal practice, legal aid and judicare, and lawyer referral services.

Specialization

Specialization in the legal profession is a fact of life. A proportionately smaller number of lawyers today practice alone or with one partner—the standard form in rural small town America—the America of the Nineteenth Century. Industrialization and urbanization brought the growth of large industrial, financial and governmental organizations. As these institutions grew, so did the law firms which provided them with legal services. As large law firms developed, the lawyers within them often began to specialize and to organize into departments in order to provide better services to the client. Large corporations promoted specialization in the legal profession by employing lawyers as corporate counsel to serve the highly specialized legal needs of the corporation. The growth of widely diversified and specialized government agencies resulted in the need for large numbers of attorneys to work in the agency's specialized area. Government has become a vast training ground for specialized legal practice. As a result of these changes in the structure of the profession, over twenty percent of the lawyers who practice in the United States today are "one client"—government or corporation—lawyers. The move toward specialization also has affected the single practitioner and small firm. Specialties such as personal injury litigation, criminal law, domestic relations, and labor law are increasingly areas of specialization for the single practitioner or small firm lawyer.

While the de facto growth of specialization has been recognized both within the profession and by its clients, the bar has only begun to cope with the implication, opportunities, and problems of the formal recognition of specialization. Much experimentation will be necessary concerning certification requirements, e.g., the roles of law school curriculum, "internship" or apprenticeship, continuing legal education and graduate law study in training for a specialty. The area of examinations in specialty certification is still largely unexplored. No state as yet has developed a comprehensive specialist certification procedure, although California presently is experimenting with a certification system for specialists in workmen's compensation, tax law and criminal law.

The implications of specialization also remain largely unexplored. Careful study and

thought must be given to the role of the general practitioner in an era of increasing specialization. A determination must be made as to the appropriate mix of formal education and practice for training in various fields of specialization. For example, it may be reasonable to require a litigation specialist to have more courtroom experience than classroom experience. The mix of the practical and the formal education for a tax expert may be quite different. Heretofore, the resources for exploring these questions have been woefully lacking.

Paraprofessionals

The case for greater utilization of paraprofessional legal assistants was well stated by the ABA Special Committee on Availability of Legal Services, which observed that: "freeing a lawyer from tedious and routine detail, thus conserving his time and energy for truly legal problems, will enable him to render his professional service to more people, thereby making legal services more fully available to the public."

Traditionally lawyers have used clerks and secretaries as assistants for handling administrative aspects of the practice of law such as filing papers, searching court records, preparing forms, and other routine tasks. As the profession strives to extend legal services to more and more individuals in lower and middle income groups, the occasions in which routine operations may be performed by trained lay assistants will be multiplied.

The ABA Special Committee on Lay Assistants for Lawyers recently conducted a pilot training program for legal assistants and is developing model curricula for training law office personnel. The future for the development of educational programs for such training in colleges and law schools and of certification standards and procedures for this new vocation are virtually unlimited.

New systems for delivering legal services to individuals

The profession is in a state of ferment with respect to the development of new systems for the delivery of legal services to persons of moderate means and to the disadvantaged. There are genuine considerations of professional standards concerned with independence of the attorney and with conflicts of interest. Serious questions have been raised as to whether the present pattern of providing legal services to individuals is adequate to enable the average person to know when a problem confronting him is one in which a lawyer can help, to know whether the lawyer's service is worth its cost; and to locate a lawyer he is confident can and will provide the expert legal assistance he needs, at a cost he can afford. The conclusion is unavoidable that the profession, as presently structured, does not adequately meet these criteria, to serve low and middle income people.

Pressures of change have come from several sources. In the 1960s the Legal Services Program of the Office of Economic Opportunity was created, as a result of the widespread recognition of the inadequacy of the then existing legal services delivery system for low income Americans. Today about 2,000 legal services attorneys are handling approximately two million cases each year for the poor. The same questions are being raised now of the adequacy of legal services available to individuals above the poverty line—those in the middle and lower-middle income groups.

Probably the greatest force today behind the development of new systems to make legal services more readily available to middle income groups is the trade union movement. Labor organizations have obtained, through collective bargaining, substantial medical coverage benefits for their members in the form of insurance and group practice programs. It was predictable that they would

also turn their attention to legal services available to their members.

Group legal services

The term "group legal services" as discussed here connotes a plan in which a group or organization designates one or more lawyers to represent individual members of a group. Numerous group legal service plans are operating today, frequently under the sponsorship of unions.

These plans have created continuing controversy within the legal profession. However, the issue no longer primarily revolves around whether such plans may be allowed to exist. The United States Supreme Court, in a series of decisions, the most far-reaching of which was *United Mine Workers v. Illinois State Bar Association*,¹¹ has shielded such arrangements against charges of unauthorized practice. One commentator has stated that the holding in the *Mine Workers* case makes it "difficult to conceive a practical and attractive group legal arrangement that would not be protected by the rule it announces."¹²

Group legal services have been around for some time. Certain forms of group practice have been accepted by the profession. Probably the most common group legal service arrangement is in the automobile insurance industry. Individuals protected by automobile casualty insurers must, in the event of a claim, accept counsel of the company's choice. In addition, the legal needs to the poor served through the OEO-funded Legal Services Program are primarily met by a group legal services structure. A substantial amount of additional study and analysis must be performed to determine the effectiveness of group legal services plans. But the need for new methods to better meet the legal services requirements of large numbers of people can be said to constitute one of the most pressing problems facing the profession today. The Bar can ill-afford to ignore the reality of group legal service programs; a brochure published by the ABA Standing Committee on Lawyer Referral Service has observed that "the time may well come when a majority of the general public will receive all needed legal services from lawyers provided by lay organizations."

Prepaid Legal Cost Insurance

Another change in the structure, primarily in the funding of legal services for the middle class, has been embryonic development of prepaid legal cost programs. Examples of the growth and success of hospital and medical insurance plans have raised the question of the feasibility of financing legal services generally through pre-payment plans. The funding of "routine" legal services under this concept is, strictly speaking, a pre-payment or financing mechanism rather than a spreading of the risk. The automobile insurance industry has long had experience in calculating the cost of legal services as part of the insurance premium; but this has been primarily coverage for legal catastrophe. As yet we have had little experience with pre-payment mechanisms for routine legal services.

The American Bar Association Special Committee on Prepaid Legal Services is sponsoring a pilot program in Shreveport, Louisiana, in cooperation with the Shreveport and Louisiana State Bar Associations, which has been in operation since January, 1971, with Ford Foundation funding. The Committee is undertaking sponsorship of a pilot program in Los Angeles, California, which has not yet begun operation. Prepaid legal service programs are attractive to trade unions, and other consumer groups, including teachers and municipal, state and federal employee associations. However, problems concerning such sponsorship are myriad. For example,

employer contributions to such plans are presently not authorized under the Taft Hartley Act. Unlike health and medical service benefits, contributions to these plans are not tax deductible. Whether state insurance departments will consider prepayment plans as insurance for the purpose of state regulation is not presently known. These and other questions require further exploration.

Many members of the organized bar see prepaid legal cost programs as a vehicle for providing more effective legal services for individuals without placing a lay intermediary between the attorney and his client. Indeed, due in large part to efforts of the Association, twenty-three state bar committees have been established to explore the establishment of prepaid plans.

Lawyer Referral Services

Although lawyer referral systems have been in operation in the United States since 1937, there are today only 267 lawyer referral offices in operation, dealing with approximately 250,000 clients each year.

The present system bears some similarities to the legal aid system as it was constituted prior to the introduction of the OEO Legal Services Program. It is typically underfinanced, inadequately advertised, and underutilized. To be sure, the present system is making a substantial day-to-day contribution to the availability of legal services to the public, but those who have given the most penetrating consideration and study to the problem are generally dissatisfied with the capacity of the present system to meet the much wider unmet needs of middle-income families. The ABA Standing Committee on Lawyer Referral Service has indicated that a major problem is to provide some assurance to the public that the quality of service which an individual will receive would be significantly better than could be accomplished by selecting a lawyer at random from the yellow pages of the telephone book.

Judicare

The OEO Legal Services Program has almost exclusively utilized the approach of funding offices staffed by attorneys employed to perform legal services for the poor. Only a few OEO-funded programs permit the client to select a private practitioner who is then reimbursed by the funded agency. This system is known in the profession as "Judicare," and its supporters argue with considerable logic that it is the only practical method of providing legal services in rural and sparsely settled areas.

The need for evaluation of methods

Thus, there is a pressing need to intensify the study of the effectiveness and relative cost of new and old systems for the delivery of legal services. The basic obligation of the profession is to provide legal services to the public, to make such services available to all members of society, and, in so doing, to insure that they are performed by qualified persons who have been adequately educated.

Legal education—Law schools in lockstep

Law schools are today in a period of profound soul searching and re-evaluation. With striking uniformity they have followed curriculum and teaching methods developed in the late Nineteenth Century. Most are now revising their curricula to introduce more effective methods of educating and training lawyers to deal with the problems of the late Twentieth Century.

Traditionally, the source of most law school teaching materials has been appellate court opinions. Of course, any practicing lawyer knows that the world of the appellate court opinion is often a considerable distance from the real world of most legal practice. Until recently there was little innovation in law school teaching methods and content. The case method of teaching long reigned supreme.

Footnotes at end of article.

It has been suggested that the complete lawyer should receive three types of education which may or may not be subject to combination. He should be taught to analyze the legal significance of issues. He should be taught techniques of practice. He should learn the social, political and economic dynamics of our society inasmuch as the law is the basic regulator of these dynamics. Traditionally too, law schools have seen themselves as educating prospective lawyers to think like lawyers, leaving to others education in the technique of practice. Clinical teaching was relatively rare, with legal writing reserved, in the main, for the law review editor.

Until recently little concern was evidenced over the failure of legal education to familiarize prospective lawyers with how society works. But today, law schools are profoundly involved in a re-evaluation of their role and responsibility to themselves and to society as a whole. Law schools are increasingly concerned with the relevance of their curriculums. This concern has produced new courses and orientation. There has been increasing concern with interdisciplinary aspects of legal education. Clinical training is increasingly supplementing the traditional classroom curriculum.

In the past a major limitation of experimentation with curricula and teaching methods was the view perhaps accurate, that most law students were headed in the same direction, i.e., toward traditional private practice. Law schools today are faced with a far greater diversity of student interest. This is due in part to expanded opportunities for legal practice in government, legal aid, and other full-time public service activities, and to the increasing specialization of private practice. Teaching has been oriented to training legal generalists on the theory that even a specialist needs to know something about other areas of the law. However, the reality of specialization has raised questions about whether there is a role for law schools in the training of specialists. Moreover, continuing controversy revolves around the relevance and use of the third year of law school. Clinical training, interdisciplinary studies and specialization are all increasingly vying for that last year of the law student's education.

Increasingly, law schools are asking whether they should break the uniformity of past patterns and begin to develop specialties and particular emphasis, i.e., should urban law schools emphasize urban legal studies with perhaps a greater research and behavioral orientation.

Three major barriers have served to retard experimentation with new curricula; the conservatism inspired by the success of the case method in its time: bar examinations; and funding. The so-called "national" law schools are perhaps most affected by the first factor, because they have been most successful by traditional standards of legal education. On the other hand, although the national law schools have not oriented their course primarily toward bar examination, the majority of schools have been sensitive to that practicality. Undoubtedly, tradition-bound bar examinations have discouraged innovation in law schools. Some experimentation with a national bar examination is now going forward under the auspices of the Association of American Law Schools and the National Conference of Bar Examiners. This effort is being widely applauded and carefully observed.

Formal education in the law is still a remarkably young idea in this country. In fact, it has only been in the last half century that the majority of practicing lawyers have been trained by law schools. Historically, young aspirants to a legal career "read law" in the office of a licensed practitioner, and the requirement of formal legal education as a prerequisite to taking a bar exam-

ination is a comparatively recent development.

Many law schools had their beginning in the basement of a YMCA and as night schools catering to the part-time student. A large number of schools were started as proprietary institutions and there remain a surprising number of such institutions, especially in the State of California. Among the law-budget proprietary operations large classes are the normal mode of operation. It is also true that even the law schools forming a part of universities are expected to produce a profit. The notion of a university law school receiving research and educational grants from its parent organization generally has been a foreign thought. As an inevitable result, curricular innovation, including greater clinical and research programs, which would require significant increases in law faculties, facilities and funding, have been slow to develop.

Research by law school faculties and students has, over the years, been minimal, especially as compared with other disciplines. That which has been undertaken has largely been of a doctrinal nature.

The history of the funding of legal education and research from private sources suggests that significant change in the foreseeable future is unlikely, unless new and substantial sources of income are made available.

Continuing legal education

Continuing legal education has in recent years become a significantly more important component of the lawyer's training.

This, too, reflects a recognition of the incompleteness of law school education as preparation for legal practice.

The early efforts of the Practising Law Institute and the Joint Committee on Continuing Legal Education of the American Law Institute and the American Bar Association paved the way for rapid growth of programs of continuing legal education. Such programs are now widespread. Today most state and some local bar associations, as well as many law schools, sponsor continuing legal education programs.

Increasingly, the profession sees continuing legal education as at least a partial answer to a number of its problems. It is seen as a way of minimizing the learning which a new attorney might otherwise experience at a client's expense. It is looked upon as a method by which specialists can increase their proficiency and general practitioners develop specialties. It is an avenue for bridging the knowledge gap created every time major new legislation is enacted.

Funding is and will continue to be a major problem in continuing legal education. It restricts the types of programs which can be offered; programs must appeal to significant numbers of attorneys in order to pay for themselves. To a limited extent profitable programs can support the unprofitable ones, but this places serious limitations on developing programs for less profitable specialties or in areas of public service. The result is that these areas are likely to be neglected.

Two illustrations of education in the area of court administration are worthy of note. Until 1964 there did not exist in this country a school for state trial court judges. It was only with the inspired leadership of Tom C. Clark, then Associate Justice of the U.S. Supreme Court, and the infusion of substantial funding by the Kellogg and Fleischmann Foundations that the American Bar Association's National College of the State Judiciary became a reality. More than 30 percent of the state trial judges of courts of general jurisdiction have since attended the college.

Until last year there was no institution in the United States for the education of court administrators and executives. Under the leadership of the Chief Justice, Warren

Burger, and with a large grant from The Ford Foundation, the Institute for Court Management was created. It already has graduated two classes and has inspired some law schools to undertake the development of programs leading to a master's degree in Court Administration. It was a large factor in persuading Congress to enact the Court Executives Act creating "business managers" for each of the Federal Circuits.

Regulating professional qualifications

The state has conferred on the lawyer the exclusive right to provide legal services. Yet neither the profession nor the state has developed a procedure for admitting attorneys to the bar which assures the public that those who are licensed to practice have achieved a reasonable level of competency or possess the necessary moral qualifications. It is fair to say that there is near consensus within the legal profession that state bar examinations do not truly test whether an applicant is competent to practice law. Indeed, no law firm would base its decision to employ an admittee on the strength of his passage of such a written examination. The plain fact is that no written test can measure the ability of an applicant to perform many of the facets of practice. Furthermore, while specialization is a growing reality in the legal profession, bar examinations do not reflect this fact, and at the present time there is no later certification procedure regulating such specialization.

Many are of the view that the regulation of professional qualifications is not the concern of the law school. Some suggest that it is the responsibility of the organized bar. Others lay the responsibility on the judicial branch of the state government. In any event, it is certainly the responsibility of some group within the profession, and the plain fact is that professional competency is not now receiving sufficient constructive attention.

Research in and about law

One of the hallmarks of today's society is its reliance upon research as an instrument of development and progress and for the solution of problems. One need look no further than his television set to observe the constant emphasis on research in the advertisements of program sponsors. Typically, one hears such slogan as "progress through research;" "Ford has a better idea;" "progress is our business;" etc.

Insofar as research in the law is concerned, it may be divided into two types: doctrinal and empirical. They have been described by Professor David Cavers of the Harvard Law School as research in law and research about law. In the field of doctrinal research, or research in law, the legal profession has historically made important contributions. This kind of research required little money and could be traditionally performed in the library. This was pointed out by Dean Robert B. McKay of New York University Law School in his testimony before the Senate Subcommittee on Government Research¹² in which he observed that lawyers have made great progress in systematizing and unifying the law through their doctrinal research. This has been true despite the obstacles presented by a diverse federal system comprising more than fifty separate jurisdictions. By way of illustration, Dean McKay pointed to the substantial contributions of the American Law Institute and the Commissioners on Uniform State Laws as examples of what lawyers could do with modest sums of money.

However, it has been only in very recent years that the profession has come to realize the importance of empirical research and the responsibility of the profession for its conduct. This awakening concern for research about the law led to the establishment of the American Bar Foundation, the research arm of the American Bar Association. The work of the Foundation has been

primarily limited by the funds available to it. Law schools evidence a growing commitment to research about the law, but here, too, financial resources are limited.

As Chairman of a Special Committee on Financial Resources of the Association of American Law Schools, Dean McKay conducted a study financed by the Walter E. Meyer Research Institute of Law, the purpose of which was to ascertain the level of private philanthropic contribution to legal education and legal research. The results of that study indicated that private foundation support has not been large. During the twelve-year period of the study most of the funds were granted for construction, fellowships and individual research. Only a modest amount was made available for empirical research.

Of the funds granted to law schools, more than 60 percent was concentrated among five schools and nearly 80 percent was concentrated among ten. The Ford Foundation was the principal grantor, accounting for more than two-thirds of all foundation support. Grant money went primarily to international legal studies, graduate fellowships for law teachers and the administration of justice, particularly in the criminal field. In the final year of the period studied, only a little over one percent of all foundation grants allocated to the sciences and social sciences was directed to law.

In the same period, the government was providing only negligible support for legal research. At the time of Dean McKay's study, the National Science Foundation had made no grants for legal education or legal research. Likewise the National Endowment for the Humanities made no research grants to lawyers. Proposals introduced in Congress for a National Foundation for Social Sciences and a National Foundation of Law and Justice have not yet received wide support.

In contrast, research in support of the physical sciences has fared very well at the hands of both private and public agencies. Admittedly, the legal profession has been slow to awaken to its responsibilities and opportunities to improve the function of our law society through research about the law. But it has been demonstrated that lawyers working together and working in conjunction with other disciplines are quite capable of making the system work better. The obvious need today is to provide adequate funding, continuity and direction.

The crisis in the administration of justice

The inadequacy of our nation's judicial machinery, which was designed to meet the needs of an agrarian society in the late Eighteenth Century, has produced a crisis in our judicial system. This crisis is the result of a multitude of long-neglected problems which, because of increasing demands being placed upon our court system, now threaten much of the system with virtual collapse. There is hardly an urban court which is not touched by the crisis. Interminable delays threaten to destroy the usefulness of our civil courts for the peaceful and orderly resolution of conflicts. Delays in the criminal courts too often mock both the concept of deterrence or the rights of accused. Many judges now must devote an inordinate amount of time to administrative details which could be better handled by others. At the same time, assembly line justice often prevails. Appellate courts are equally affected. In many state systems the average time required to process an appeal can consume in excess of eighteen months.

The task of resolving the problems which contribute to this crisis is not easy, for resort to simplistic solutions usually creates a high risk of destroying the very system which such solutions are intended to save. What is needed is reform within the context of our legal traditions.

The focal point of the machinery of justice in our country is, of course, the judge himself. Too frequently judges, especially in the minor courts that process the bulk of the civil and criminal litigation, receive little or no judicial training or orientation. There remain substantial problems with respect to insuring that judicial officers are competent and have the requisite temperament to adjudicate disputes in a courtroom setting.

On the positive side of the ledger, this is an area which is receiving substantial direction and attention from Chief Justice Burger. He, for example, has been instrumental in the creation of the new National Center for State Courts. His predecessor, Chief Justice Warren, was the moving force in the establishment by Congress of the Federal Judicial Center. Under the broad mandate of Congress, one of the primary functions of the Federal Judicial Center is "to conduct research and study of the operation of the courts of the United States, and to stimulate and coordinate such research and study on the part of other public and private persons and agencies."

The new National Center for State Courts, together with the Federal Judicial Center, the National College of the State Judiciary under the sponsorship of the Section of Judicial Administration of the ABA, and the Institute for Court Management, all are recent examples of advances in strengthening judicial training and support.

V. TRANSLATING DESIRE INTO REALITY

Inherent in the efforts of most legal reformers, voluntary and professional, has been the assumption that if enough human energy were applied by enough dedicated groups existing machinery could be improved and the crisis in justice could be met. The piecemeal, uncoordinated nature of the various efforts seems not to have been regarded as a deterrent. At least they have been accepted as an inevitable fact of judicial life. But with it all, comprehensive, coordinated national planning is lacking and effective modernization of the system appears still to be an elusive and urgently needed element.

From the time of the creation of our constitutional government, the condition of justice has suffered almost directly in proportion to the increasing population and the increasing complexity of our society. The responsibility, although often the subject of partisan political debate, has fallen on the lawyer and ultimately the organized bar. Lawyers are educated to understand and deal with the application of the rule of law. Moreover, they are virtually the only professional group having complete access to the machinery of the administration of justice; the enforcement of societal mandates through law. In short, they are intermediaries between the theory of the law and its application to society.

Yet the very nature of the practice of law can be contradictory in terms of the interests of society and the interests of particular individuals, or organizational and governmental entities. They are paid advocates, ethically bound to consider the client's interest as paramount to virtually all other considerations. This obligation is to be juxtaposed with a commensurate obligation—also a matter of ethics—to work for the public good.

Efforts to accommodate these co-equal obligations have been pursued, in the past, mainly through the organized bar or through government. One has only to consider the makeup of the executive, judicial and legislative branches of government to note the intricate and pervasive involvement of the lawyer in the administration of justice. Chief Justice Burger aptly articulated this in his State of the Judiciary address at the 1971 ABA Annual Meeting several months ago:

"A strong, independent, competent legal

profession is imperative to any free people. We live in a society that is diverse, mobile and dynamic, but its very pluralism and creativeness make it capable of both enormous progress or debilitating conflicts that can blunt all semblance of order. One role of the lawyer in a common law system is to be a balance wheel, a harmonizer, a reconciler. He must be more than simply a skilled legal mechanic. He must be that, but in a larger sense he must also be a legal architect, engineer, builder and, from time to time, inventor as well. This is the history of the lawyer in America, and in this respect he is unique among the lawyers of all societies."

While it cannot be said that kinship among lawyers is so great that one may find them huddled together under one roof, they are gregarious enough that the vast majority of them belong to state and local bar associations. More than half of them voluntarily belong to the American Bar Association, the national organization of the profession.

The movement to organize lawyers into bar associations on a national, state and local level is a little over a hundred years old. The organization started in metropolitan areas and the more populated states. The early associations were voluntary in nature and had modest budgets. Permanent staffs did not exist; association projects were carried on by volunteers. The Bar was not seen in those days as responsible for the discipline of members and certainly not as the harbinger of reform.

The passage of time brought many changes. As bar associations assumed larger roles in professional standards of conduct and practice, and a larger share of responsibility for the machinery of justice, the so-called integrated bar began to develop among the states. This concept, requiring every practicing lawyer to belong to the professional organization of lawyers in a state, took place largely during the middle third of this century. Today, half of the States have integrated bars and the trend in that direction is continuing. Even with this movement, inadequate funding has in most states prevented the mounting of effective programs of discipline, education and improvement of judicial machinery.

It may surprise some to realize that the American Bar Association had no permanent staff for the first half of its nearly one hundred years. Indeed, not until the middle of the 1950's did it have sufficient funds to staff a limited number of projects and activities. Membership in the American Bar Association has trebled in the past fifteen years, while its income has grown by more than 600 percent. In the last decade an even more significant development has taken place—the funding of public service and educational projects through foundation and government funds. About half of the Association's annual income now comes from such sources. It is this writer's belief that that percentage will grow in the decade ahead to between 65 percent and 75 percent of the Association's entire income.

Indeed, the progress of the organized bar in the past decade has been so marked that some believe that the crisis in the administration of justice can be met by the organized bar under the direction and leadership of the American Bar Association. While the forward strides of the last decade are a source of encouragement and even some pride, and while the leadership of the American Bar Association is dedicated to the proposition that this organization has the potential for even greater and more significant contributions to the cause of justice, it must be recognized that there are some inherent qualities of a voluntary organization that militate against its completely effective fulfillment of this lofty role.

On the one hand, the ABA House of Delegates includes the widest possible range of

representation from all groups who constitute the legal profession today. The Association's present day structure is its strength when called upon to pass upon the conclusions or proposals of others.—Nevertheless, because it is a voluntary organization and represents so many diverse and often irreconcilable views, it should not surprise or discourage us to note that the contribution of the organized bar to the solution of today's social problems has been, of necessity, confined largely to the realm of ideas. Time freely contributed by volunteers, projects financed by volunteers, machinery tuned to decision by consensus, cannot produce the kind of massive, venturesome, sustained and coordinated attack which is required in the field of justice today. Volunteer bar associations, the American Bar in particular, perform at their maximum efficiency in unfolding and debating a wide range of views. By their very nature, however, voluntary bar associations cannot, at the same time, be fearless in research, forceful in exposition and confident in criticism.

Even if the organized bar could, through reorganization or otherwise, build a sufficient structure from which to conduct far-reaching research programs and substantial pilot programs in our quest for a better society, an argument can well be made against proceeding in that direction. As long as bar associations remain voluntary, their ability to represent all lawyers is impeded. Should the day come when all lawyers speak with one voice, the rest of society may nonetheless readily question both our method and our motive.

The very size of life and society today minimizes the effectiveness which any voluntary group can now offer. Individual contractors alone cannot produce coordinated space programs. Individual railroads cannot serve a sprawling nation. Society today requires a National Institute of Justice.

VI. CONCLUSION

The late Reginald Heber Smith once observed that men can learn, if they must to put up with physical imparity and economic inadequacy; but that a brooding sense of injustice makes them want to tear things down. We who bear the primary responsibility for the machinery of justice in this nation, if we are to be faithful to our oath, must be vigilant in our search to find new and better ways to make equal justice under the law a living reality. It is incumbent upon us to move forward with common purpose and high aspiration that is worthy of our heritage. The National Institute of Justice is a concept whose time has come.

By Mr. WILLIAMS (for himself and Mr. JAVITS):

S. 1423. A bill to amend the Labor Management Relations Act, 1947, to permit employer contributions to jointly administered trust funds established by labor organizations to defray costs of legal services. Referred to the Committee on Labor and Public Welfare.

PREPAID LEGAL SERVICES LEGISLATION

Mr. WILLIAMS. Mr. President, in a recent article entitled "Our Forgotten Client: The Average American," Robert W. Meserve, the president of the American Bar Association noted:

The rich and well-to-do are aware of their need for legal services and have no trouble obtaining them. The poor are being increasingly assured of services. But there is a large segment of the population between these extremes.

This [is a] vast, middle economic-group—the people of moderate means [who are] our forgotten clientele.

Mr. President, one of the glaring injustices in America is that Americans of moderate means neither know when they need legal services, how to obtain them, nor how to finance those services.

With the recognition of these major obstacles, several nongovernmental groups, primarily in the past decade, have begun to experiment with programs designed to insure the availability of legal services. Bar associations across the Nation are experimenting with insurance programs to provide these services. Labor organizations, on their own and jointly with local bar associations have begun establishing legal service programs. Even the U.S. Postal Service is now studying the possibility of establishing a private legal service program. My own State of New Jersey is experimenting with a Blue Cross-type prepaid insurance program.

One major obstacle to the experimentation with and creation of such programs is section 302(c) of the Labor-Management Relations Act which prohibits labor and management from jointly administering trust funds established to provide such legal services to employees, their families and their dependents. Today, management can establish such funds and labor can establish such funds but they are barred from jointly administering such funds.

Today, I offer legislation to remove this obstacle. The bill is a proposed amendment to section 302(c) of the Labor-Management Relations Act of 1947, which presently sets out the fringe benefits of which may be established through joint labor-management administration. These fringe benefits are presently limited to such subjects as pensions, health and welfare plans, life and accident insurance and such matters as

education, training, and child day-care centers. This bill would add legal service programs to this list.

The legislation has been made necessary because of the growing recognition that existing methods of delivery of legal services to middle- and working-class citizens are inadequate, and that the establishment of legal service programs through collective bargaining, in a manner similar to the way health benefit programs were established, would be an important step forward toward alleviating this problem.

This bill will not mandate the establishment of such programs, it will not dictate the terms and conditions of such programs, it will not interfere in any way whatsoever with the operations of such programs. And it will not finance such programs. Rather, it will merely remove an unwarranted and unintended Federal roadblock to the establishment of such programs by the private sector, with private funding.

This measure will not replace bar association procedures with Federal procedures, it will not subvert State control over the practice of law with Federal control. It will neither require nor prohibit open panels or closed panels, it will neither require nor prohibit the establishment of such programs, and it will neither require nor prohibit bargaining between labor and management over such programs.

Mr. President, I can conceive of no reason other than an accident of history and unintentional legislative drafting for the Federal Government to be the major obstacle to private arrangements to insure the availability of legal services to the millions of moderate income Americans. This bill will remove that obstacle.

I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1423

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 302 (c) of the Labor Management Relations Act, 1947, is amended by striking out "or (7)" and inserting in lieu thereof "(7)" and by adding immediately before the period at the end thereof the following: "; or (8) with respect to money or any other thing of value paid by any employer to a trust fund established by such representative for the purpose of defraying the costs of legal services for employees, their families, and dependents: *Provided*, That the requirements of clause (B) of the proviso to clause (5) of this subsection shall apply to such trust funds."

Mr. JAVITS. Mr. President, I am pleased to cosponsor the bill to permit jointly administered funds to be utilized for prepaid legal services programs under section 302 of the Taft-Hartley Act. The interest of the trade union movement in obtaining for union members legal services under prepaid plans of the type this bill would authorize is one which we in Congress ought to encourage. We are all aware of the problems which lower- and middle-income Americans have in obtaining adequate legal services. Just as prepaid medical plans now permit the

majority of all workers to have access to decent medical care, prepaid legal services may prove to be the mechanism to accomplish the same result for legal services.

At the time the Taft-Hartley Act was enacted, Congress did not foresee the growing trade union interest in securing various kinds of social benefits to their members through the mechanism of collective bargaining. As a result, section 302 was drafted in such a way as to permit only specified kinds of jointly administered funds. In recent years we have amended section 302 to permit the establishment of jointly administered funds to provide day-care facilities and educational scholarships when the Amalgamated Clothing Workers commenced such a program.

The time for prepaid legal services has clearly arrived. The basic idea of prepaid legal services, as well as this particular bill, have been endorsed by the house of delegates of the American Bar Association. Clearly we ought to act with dispatch to pass this bill in order to remove the present legal obstacles to the creation of jointly administered funds to provide prepaid legal services.

By Mr. SCHWEIKER:

S. 1424. A bill to provide certain benefits for members of the Armed Forces and civilian employees of the United States who were in a missing status for any period of time during the Vietnam conflict. Referred to the Committee on Armed Services.

POW BENEFITS LEGISLATION

Mr. SCHWEIKER. Mr. President, with the return of our prisoners of war and, hopefully, many of those men currently in a missing status, I believe our Government has an obligation to assist them in their transition to freedom.

The bill I introduce today is relatively simple. It contains only two provisions, but they will provide for a smooth transition to normalcy and extended medical care.

The first section provides that each day spent in a captured or missing status, by either civilian or military personnel, will count 2 days toward retirement, if the individual so desires. This two for one program will enable these men to retire from active duty earlier than usual. They can then begin a second career or try to make up the years of family life and enjoyment lost in captivity. This elective program will remain open for 2 years following the individual's repatriation. A man choosing to retire early under this program will do so with all retirement benefits entitled him, had he remained in service for his full obligation.

The second section of my bill provides that any member who elects not to remain in the service, will receive health care as long as it is needed to meet his psychological and physical needs. This assistance will be available also to any civilian Government employee, who was captured or missing during the Vietnam conflict.

We learned, following the Korean conflict, that most of the problems faced by

former prisoners of war did not manifest themselves until many years later. These psychological and physical problems frequently went undetected and unsuspected and then were not properly diagnosed and treated later.

The Department of Defense currently has a program—the Armed Forces Center for POW Studies—which will follow up on all former prisoners of war for 5 years following repatriation. I believe, however, that the health care program should continue for as long as it is needed by the POW's. Further, the benefits of this program should be available to dependents, who may also incur problems as a result of the prisoner's return, as well as to former POW's who elect to remain in service and their dependents.

These brave men have endured suffering and deprivation that most of us can only guess at. We owe them the opportunity to begin their lives anew. I believe my bill offers such an opportunity and I am hopeful that my Senate colleagues will concur.

By Mr. HRUSKA (by request):

S. 1426. A bill to amend sections 101 and 902 of the Federal Aviation Act of 1958 and chapter 2, title 18, United States Code, to implement the Convention for the Suppression of Unlawful Acts Against the Safety of Civil Aviation, and for other purposes. Referred to the Committee on the Judiciary.

Mr. HRUSKA. Mr. President, I introduce, by request, a bill to implement the Convention for the Suppression of Unlawful Acts against the Safety of Civil Aircrafts and ask for its appropriate reference. The Convention was signed in Montreal on September 23, 1971, and was forwarded to the Senate for advice and consent in the fall of last year. On October 3, 1972, the Senate agreed unanimously to a resolution of ratification. Before the Convention can be given full effect, however, it will be necessary for the Congress to enact implementing legislation.

The Montreal Convention is a necessary and desirable sequel to the Hague Convention for the Suppression of Unlawful Seizure of Aircraft, which, as my colleagues will recall, was ratified in the fall of 1971. The Hague Hijacking Convention was very significant in that it established a rule of law governing conduct by signatories for assuring the apprehension and punishment of hijackers. Each party to the Convention is required to prosecute hijackers found within its territory, regardless of where the piracy occurred, unless it extradites them. Legislation which in part implements that treaty—S. 39—was passed by this body on February 21.

As I mentioned, the Montreal Convention is a companion to the Hague Convention. Whereas the latter deals with aircraft hijackers, the former deals with individuals who commit related acts of terrorism against or on board aircraft, such as damaging or destroying an aircraft or performing an act of violence against a passenger. Also, like the Hague Convention, the treaty signed in Montreal is designed to impose the

same strict requirements upon contracting states. That is, each contracting state is required to take into custody and either extradite or prosecute the saboteurs and terrorists who attack aircraft and passengers, regardless of where these terrible acts take place. The clear purpose is to eliminate safe havens for these international outlaws.

Because of the great importance of the Montreal Convention in our efforts to curb terrorism against international civil aviation, and because of the necessity to pass implementing legislation to give full effect to the treaty, I strongly urge my colleagues to devote their early attention to the bill I introduce today.

I ask unanimous consent that the bill, the Attorney General's March 29, 1973, letter of transmittal to the Vice President as well as the Attorney General's analysis of the bill, be printed in the CONGRESSIONAL RECORD at this point.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 1426

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 31 of Title 18, United States Code, is amended by striking out the words "Civil Aeronautics Act of 1958" and inserting in lieu thereof the words "Federal Aviation Act of 1958," and by adding at the end thereof the following two paragraphs:

"In flight" means any time from the moment all the external doors of an aircraft are closed following embarkation until the moment when any such door is opened for disembarkation. In the case of a forced landing the flight shall be deemed to continue until competent authorities take over the responsibility for the aircraft and the persons and property aboard.

"In service" means any time from the beginning of preflight preparation of the aircraft by ground personnel or by the crew for a specific flight until twenty-four hours after any landing; the period of service shall, in any event, extend for the entire period during which the aircraft is in flight.

Sec. 2. Section 32, Title 18, United States Code is amended to read as follows:

"Whoever willfully sets fire to, damages, destroys, disables, or interferes with the operation of, or makes unsuitable for use any civil aircraft used, operated or, employed in interstate, overseas, or foreign air commerce; or willfully places a destructive substance in, upon, or in proximity to any such aircraft which is likely to damage, destroy or disable any such aircraft, or any part or other material used, or intended to be used in connection with the operation of such aircraft; or willfully sets fire to, damages, destroys or disables any air navigation facility or interferes with the operation of such air navigation facility, if any such act is likely to endanger the safety of any such aircraft in flight; or

"Whoever with intent to damage, destroy, or disable any such aircraft, willfully sets fire to, damages, destroys, or disables or places a destructive substance in, upon, or in the proximity of any appliance or structure, ramp, landing area, property, machine, or apparatus, or any facility, or other material used, or intended to be used in connection with the operation, maintenance or loading or unloading or storage of any such aircraft or any cargo carried or intended to be carried on any such aircraft; or

"Whoever willfully performs an act of violence against or incapacitates any passenger or member of the crew of any such aircraft if

such act of violence or incapacitation is likely to endanger the safety of such aircraft in service; or

"Whoever communicates information, which he knows to be false, thereby endangering the safety of any such aircraft while in flight; or

"Whoever willfully attempts to do any of the aforesaid acts,

Shall be fined not more than \$10,000 or imprisoned not more than twenty years, or both."

Sec. 3. Chapter 32, title 18, United States Code is amended by adding a new section to read as follows:

"32A. Offenses in Violation of the Convention for the Suppression of Unlawful Acts Against the Safety of Civil Aviation.

(a) Whoever commits an offense as defined in subsection (b) against or on board an aircraft registered in a state other than the United States and is afterward found in this country—

shall be fined not more than \$10,000 or imprisoned not more than twenty years, or both."

(b) For purposes of this section, a person commits an "offense" when he willfully—

(1) performs an act of violence against a person on board an aircraft in flight if that act is likely to endanger the safety of that aircraft; or

(2) destroys an aircraft in service or causes damage to such an aircraft which renders it incapable of flight or which is likely to endanger its safety in flight; or

(3) places or causes to be placed on an aircraft in service, by any means whatsoever, a device or substance which is likely to destroy that aircraft, or to cause damage to it which renders it incapable of flight, or to cause damage to it which is likely to endanger its safety in flight; or

(4) attempts to commit, or is an accomplice of a person who commits or attempts to commit, an offense enumerated in this subsection.

(c) The provisions of this section shall become effective one day after fulfillment of the following conditions:

(1) the entry into force for the United States of the Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation, signed at Montreal, Canada, on 23 September 1971; and

(2) the publication in the Federal Register by or on behalf of the Secretary of State of a notice referring to this Act and stating that the Convention has entered, or will enter, into force for the United States on a date specified in that notice.

Sec. 4. Section 101(32) of the Federal Aviation Act of 1958, as amended (49 U.S.C. 1301 (32)), is amended to read as follows:

"(32) The term 'special aircraft jurisdiction of the United States' includes the following aircraft while in flight—

"(a) civil aircraft of the United States;

"(b) aircraft of the national defense forces of the United States;

"(c) any other aircraft within the United States;

"(d) any other aircraft outside the United States—

"(i) that has its next scheduled destination or last point of departure in the United States, if that aircraft next actually lands in the United States; or

"(ii) having 'an offense' as defined in the Convention for the Suppression of Unlawful Seizure of Aircraft, committed aboard, if that aircraft lands in the United States with the alleged offenders still aboard; or

"(iii) regarding which an offense as defined in subsections (d) and (e) of Article I, section I of the Convention for the Suppression of Unlawful Acts Against the Safety of Civil Aviation is committed, provided the aircraft lands in the United States with an alleged offender still on board; and

"(e) other aircraft leased without crew to

a lessee who has his principal place of business in the United States, or if none, who has his permanent residence in the United States.

For the purposes of this section, an aircraft is considered to be in flight from the moment when all the external doors are closed following embarkation until the moment when any such door is opened for disembarkation, or in the case of a forced landing, until the competent authorities take over the responsibility for the aircraft and for the persons and property aboard."

Sec. 5. Section 902(k) of the Federal Aviation Act of 1958, as amended (49 U.S.C. 1472 (k)), is amended by adding subsection (3) to the end thereof, to read as follows:

(k)(3) Whoever while aboard an aircraft in the special aircraft jurisdiction of the United States commits an act which would be an offense under 18 U.S.C. 32 shall be punished as provided therein.

OFFICE OF THE ATTORNEY GENERAL,

Washington, D.C., March 29, 1973.

The VICE PRESIDENT,
U.S. Senate,
Washington, D.C.

DEAR MR. VICE PRESIDENT: Enclosed for your consideration and appropriate reference is a legislative proposal to implement the Convention for the Suppression of Unlawful Acts Against the Safety of Civil Aviation signed in Montreal, September 23, 1971, and for other purposes.

The proposal would amend existing Federal legislation dealing with offenses related to air piracy and the destruction of aircraft and aircraft facilities in order to bring our law into conformity with the requirements of the Convention.

The Convention requires, in Article 5, that each contracting state take such measures as may be necessary to establish jurisdiction over the offenses enumerated in Article 1 in specified instances. Article 1 proscribes certain acts, such as damaging or destroying aircraft or air navigation facilities, or committing violence against persons aboard aircraft, if the acts are likely to endanger the safety of the aircraft. In those cases where the signatories are required to establish jurisdiction, it is incumbent upon them to provide "severe penalties" for violations. (Article 3).

Section 1(a) of Article 5 requires that each contracting state establish jurisdiction "when the offense is committed in the territory of that state". To a great extent, our existing law already makes unlawful the offenses of Article 1, and the penalties are appropriately severe in most cases. Because of certain significant gaps, however, it is necessary to amend our law to achieve complete conformity. Therefore, the relevant statute—18 U.S.C. § 32, "Destruction of aircraft or aircraft facilities"—has been rewritten in section 2 of the legislation to reflect the changes necessitated by the Convention. Section 2 would also broaden the scope of 18 U.S.C. § 32, as well as make the language of the current statute more concise and clear.

Section 1(b) of Article 5 requires that each contracting state establish jurisdiction over the offenses when they are "committed against or on board an aircraft registered in that state". This is accomplished by the present definition of "special aircraft jurisdiction of the United States" which includes "civil aircraft of the United States". (Section 101(32) (a) of the Federal Aviation Act of 1958, 49 U.S.C. 1301(32) (a)).

Each signatory is also obligated to establish jurisdiction "when the aircraft on board which the offense is committed lands in its territory with the alleged offender still on board". (Article 5 section 1(c)). This is accomplished in part in section 3 of the legislation which creates a new section 32A of title 18, United States Code. The new section prohibits the commission of an offense

"against or on board an aircraft registered in a state other than the United States and [the alleged offender] is afterwards found in this country". An amendment to the definition of "special aircraft jurisdiction of the United States" found in section 4 of the legislation, brings our law into complete compliance with this requirement when viewed in conjunction with the new section 32A.

Section 1(d) of Article 5 requires each contracting state to establish jurisdiction over the offenses when committed "against or on board an aircraft leased without crew to a lessee who has his principal place of business or, if the lessee has no such place of business, his permanent residence, in that State". A further amendment to the definition of "special aircraft jurisdiction" has been added in section (4) to meet this obligation.

Lastly, Article 5, section 2, requires that each signatory establish its jurisdiction when "the alleged offender is present in its territory and it does not extradite him . . ." The new section 32A, mentioned above, is also designed to cover this situation to the extent required by the Convention.

The proposed legislation is necessary to fully implement the Montreal Convention, which is very important in the international community's efforts to curb air piracy and related offenses. I therefore urge the early consideration and adoption of this proposed legislation.

The Office of Management and Budget has advised that enactment of this legislation is in accord with the Program of the President.

Sincerely,

Attorney General.

ANALYSIS OF THE PROPOSED LEGISLATION TO IMPLEMENT THE CONVENTION FOR THE SUPPRESSION OF UNLAWFUL ACTS AGAINST THE SAFETY OF CIVIL AVIATION

Section 1 of the proposed legislation adds to 18 U.S.C. § 31 the definitions of "in flight" and "in service". These definitions are necessary because the terms are used in 18 U.S.C. § 32 as amended herein.

Section 2 amends 18 U.S.C. § 32, "Destruction of aircraft or aircraft facilities", in order to fully comply with Article 5, section 1(a) of the Convention which requires that each signatory establish jurisdiction over the Article 1 offenses when they are committed in the territory of that state. To a large extent domestic law already covers the offenses of Article 1, but several significant gaps exist which require amendments to section 32. (It should also be noted that the opportunity was taken to make the section more clear and concise. In this regard, it was not intended in any way to limit or lessen the scope of the proposed statute as compared to that of the current law.)

The first paragraph of section 2 of the proposed legislation essentially incorporates the first paragraph of current 18 U.S.C. § 32 as well as portions of the third and fourth paragraphs of the current statute insofar as the latter two paragraphs relate respectively to willfully placing a destructive substance in, upon, or in the proximity of any aircraft, or willfully setting fire to, damaging, destroying, disabling or interfering with the operation of an air navigation facility. However, it should be noted that the provisions which are being substituted for portions of the third and fourth paragraphs of the current law do not contain the requirement that the proscribed acts be committed with the intent to damage or disable the aircraft. Rather, the substituted provisions only require that the placing of the destructive substance be likely to damage or destroy any such aircraft, or any part, etc., or that the setting fire to, damaging, destroying or disabling of any air navigation facility be of such a nature that it is likely to endanger the safety of any such aircraft in flight. The

omission of the above-mentioned element of proof in the substituted provisions was necessary to avoid a requirement of proof for those offenses which would be greater than that required by the Montreal Convention. The phrase "any part or other material used or intended to be used in connection with the operation of such aircraft" is meant to include the various parts of an aircraft and any material including liquids and lubricants which might be damaged by a destructive substance. These materials are individually listed in the current statute.

Section 2's second paragraph essentially incorporates the second, third and fourth paragraphs of the current section 32 except for the provisions mentioned in the first paragraph of section 2. The phrase listing all of the various types of property including "other material used, or intended to be used in connection with the operation, maintenance or loading or unloading or storage of any such aircraft . . ." is meant to include all of the various types of property and material which are individually listed in the current statute.

Section 2's third paragraph replaces paragraph 2 of the current section 32 by adding passengers to the protected category of persons as required by Article 1, section 1(a) of the Montreal Convention. Since the conduct proscribed by this paragraph could likely endanger the safety of the aircraft at times prior to and after the time that such aircraft is in flight, the jurisdictional base has been extended to cover not only those times when the aircraft is in flight but also the period of time while the aircraft is in service. Although paragraph 5 of the current 18 U.S.C. § 32 requires that the conduct be accompanied with an intent to damage, destroy, disable, or wreck any such aircraft, the substituted paragraph omits this element of proof because it would establish an offense requiring proof exceeding the requirements of the offense established by the Convention.

The fourth paragraph of proposed section 2 of this bill has been added to meet the requirements of Article 1, section 1(e) of the Convention. Currently, the only statutory provisions covering false information are 18 U.S.C. § 35(a) and (b) with regard to bomb hoaxes and 49 U.S.C. § 1472(m) with regard to hijacking hoaxes. However, neither of these provisions has a requirement of endangering the safety of an aircraft while in flight as does Article 1, section 1(e) of the Convention. That is, our current statutory language is broader than that of the Convention and could stand on its own in meeting the Convention's requirements. However, it was felt that to fully implement the Convention this Government should establish more severe sanctions for imparting false information when such imparting endangers the safety of the aircraft. Currently, 18 U.S.C. § 35(b) and 49 U.S.C. § 1472(m)(2) carry maximum jail terms of five years and fines of \$5000, but do not require a showing of endangering the safety of the aircraft. Where this additional element is present, we believe it necessary to make the penalty associated with the activity more severe, which has been done by increasing the sanctions for such activities to a maximum of twenty years' imprisonment and a \$10,000 fine.

The fifth paragraph of section 2 of this legislation is taken directly from the sixth paragraph of current 18 U.S.C. § 32.

The penalties for violations of the amended statute are the same as those provided in the current law.

Section 3 of the proposed legislation adds a new section 32A to Title 18 of the United States Code, and is designed to implement Article 5, section 1(c), in part, and Article 5, section 2. Article 5, section 1(c) requires each contracting state to establish jurisdiction over the offenses of Article 1 "when the aircraft on board which the offense is com-

mitted lands in its territory with the alleged offender still on board." Article 5, section 2 requires each contracting state to establish jurisdiction over the offenses listed in Article 1, sections 1(a), (b) and (c), and in Article 1, section 2 insofar as that section relates to offenses listed in sections 1(a), (b) and (c), "when the alleged offender is present in [the state's] territory and [the state] does not extradite . . ." Normally, of course, the United States would lack jurisdiction to try such individuals.

Jurisdiction is established in subsection (a) of section 32A over anyone who commits one of the offenses listed in subsection (b) on or against an aircraft registered outside of the United States and is afterwards found in this country.

Subsections (b)(1), (2) and (3) of section 32A enumerate the offenses of Article 1, section 1(a), (b) and (c) as required by Article 5, section 2. (It should be noted that Article 5, section 2 of the Convention does not require that the offense of sections 1(d) and 1(e) of Article 1 be covered, so the obligations of Article 5, section 1(c) are met in the new section only to the extent of covering the offenses of Article 1, sections 1(a), (b) and (c). The offenses of Article 1, sections 1(d) and (e) are covered for the purposes of Article 5, section 1(c) in section 4 of the bill, which amends the special aircraft jurisdiction of the United States.) Subsection (b)(4) covering attempts to commit the proscribed acts, and also covering accomplices of those who attempt to commit these acts, is also required by Article 5, paragraph 2 of the Convention.

Section 4 of the legislation implements Article 5, sections 1(b), (c), in part, and (d) of the Convention. The former section requires each contracting state to establish jurisdiction over the offenses "when the offense is committed against or on board an aircraft registered in that state". This is accomplished by section 101(32) of the Federal Aviation Act of 1958 which defines the term "special aircraft jurisdiction of the United States" to include civil aircraft of the United States.

Concerning Article 5, section 1(c), to the extent that it is not implemented in the new section 32A discussed above, it is covered by subsection d(III) of the amended definition of "special aircraft jurisdiction".

Likewise, the requirements of Article 5, section 1(d) are implemented in subsection (e) of the amended definition.

Section 5 of the legislation adds a new subsection to section 902(k) of the Federal Aviation Act of 1958, 49 U.S.C. § 1472(k). It makes punishable the offenses of 18 U.S.C. § 32 in situations where they are committed aboard an aircraft in the special aircraft jurisdiction of the United States.

By Mr. HRUSKA (by request):

S. 1427. A bill to prohibit the unauthorized possession within any Federal penal or correctional institution, any substance or thing designed to damage the institution or to injure any persons within or part of the institution, and for other purposes. Referred to the Committee on the Judiciary.

Mr. HRUSKA. Mr. President, I am introducing today at the request of the Department of Justice a bill which would prohibit the unauthorized possession of weapons, or other dangerous things or substances in Federal penal or correctional institutions.

The purpose of this bill is to eliminate a loophole in existing law. Section 1792 of title 18 presently prohibits the conveyance of such weapons, things or substances into or within an institution,

but strangely enough does not proscribe the mere possession of these items by Federal prisoners. Thus, unless the evidence is sufficient to prove that a weapon was actually brought into or moved from one location to another inside of a prison, it is not possible to obtain a conviction.

This unfortunate result was reached in a case last year from the 10th Circuit Court of Appeals. In that case—*U.S. v. Bedwell* 456 F. 2d 448—the evidence showed that the defendant was found grinding a knife on a belt sander in the prison shoe factory, and that he dropped the knife when approached by the shop foreman. The defendant testified that he had discovered the knife on a nearby bench. While the court recognized that proof of possession under some circumstances could permit an inference of conveyance, it held that the evidence was insufficient in this case. The court concluded:

Perhaps the statute should make it unlawful for a prison inmate to possess a knife, but the simple fact of the matter is that it doesn't—*Bedwell*, supra, at 451.

I do not believe that the Government should be put to this additional burden when a convict is found with a weapon. The mere fact of possession should be enough to constitute a Federal offense.

I urge my colleagues to join with me in supporting this legislation.

I ask unanimous consent that the Attorney General's letter of transmittal and the text of the bill be printed in the RECORD at this point.

There being no objection, the letter and bill were ordered to be printed in the RECORD, as follows:

OFFICE OF THE ATTORNEY GENERAL,
Washington, D.C., March 29, 1973.

The VICE PRESIDENT,
U.S. Senate,
Washington, D.C.

DEAR MR. VICE PRESIDENT: There is enclosed for your consideration and appropriate reference a legislative proposal to amend Section 1792 of Title 18, United States Code, to prohibit the unauthorized possession within any Federal penal or correctional institution of any substance or thing designed to damage the institution or to injure any persons within or part of the institution, and for other purposes.

Under section 1792, it is an offense to convey such substances or things, including firearms and other weapons, from place to place within an institution, but mere possession is not explicitly prohibited. The bill is designed to insure that possession of such articles would also be covered. The present statute provides a penalty of imprisonment for not more than 10 years, and this would be made applicable to possession offenses.

A recent case from the Tenth Circuit Court of Appeals highlights the need for this amendment. In *United States v. Bedwell*, 456 F.2d 448 (1972), section 1792 was successfully challenged on the grounds that the defendant had not actually conveyed the weapon (a knife) within the meaning of the statute, even though he clearly had possession of it. The defendant argued that the statute required a substantial change in the situs of the weapon.

The Office of Management and Budget has advised that there is no objection to the submission of this proposal from the standpoint of the Administration's program.

Sincerely,

Attorney General.

S. 1427

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1792 of Title 18 is amended by inserting in the first paragraph thereof, after the word "therein" and before the words "any tool," and by inserting in the second paragraph thereof, after the word "therein" and before the words "any firearm," the following: "or possesses therein".

By Mr. HRUSKA (by request):

S. 1428. A bill to amend section 215, title 18, United States Code, Receipt of Commissions or Gifts for Procuring Loans, to expand the institutions covered; to encompass indirect payments to bank officials; to make violation of the section a felony; and to specifically include offerors and givers of the proscribed payments; and for other related purposes. Referred to the Committee on the Judiciary.

Mr. HRUSKA. Mr. President, today I introduce a bill at the request of the Department of Justice which would amend section 215 of title 18 of the United States Code dealing with the receipt of commissions or gifts for procuring loans and ask for its appropriate reference. By amending section 215, the proposal would incorporate the present provisions of section 216, which would be repealed.

Section 215 presently prohibits any officer, director, employee, agent or attorney of a Federal intermediate credit bank, a National Agricultural Credit Corporation, or any bank the deposits of which are insured by the FDIC from receiving or agreeing to receive any thing of value for the purpose of procuring a loan from the bank or corporation. Violations are punishable by a fine of \$5,000 or 1 year imprisonment, or both.

Section 216 deals with similar matters, but has a different scope. It prohibits any officer, director, attorney or employee of a Federal land bank or land bank association, a joint stock land bank organized or acting under authority of any law of the United States, or any small business investment company from receiving, directly or indirectly, any fee or gift in connection with any transaction of the bank or association. The same punishment is provided for violations of this section. Section 216 further prohibits anyone from causing any of the aforementioned banks or associations to charge or receive any fee or commission on pain, again, of a \$5,000 fine or 1 year imprisonment, or both.

The Department of Justice believes that these two statutes are obsolete and inadequate; they do not cover all of the institutions or individuals that should be included, nor do they prohibit all of the activities that should be illegal. In addition, the present penalty structure has proved ineffective to prevent violations.

The proposed legislation would make several major changes in the existing law. First, certain institutions would be added to the list of those covered by the statute, such as federally insured savings and loan associations or credit unions, member banks of the Federal Home Loan Bank System, and certain institutions governed by the Farm Credit Administration. The Department has reported

that cases have arisen involving these institutions which otherwise would have been appropriate for prosecution.

The legislation would also include bank holding companies and savings and loan holding companies. The employees of a holding company are in a position of influence personnel of the held institution and, therefore, should not be insulated from criminal liability.

Additionally, section 215 would be amended to include those institutions now covered in section 216. This will provide useful uniformity by combining all appropriate banking and financial institutions into one statute.

The bill would also expand the types of bank transactions that are covered. Receiving a gift in connection with any bank transaction would be prohibited. This would conform with the coverage of section 216.

Another significant change would be the revision of the penalty structure. Violations would be made a felony and would carry a penalty of \$5,000, or three times the amount of the thing of value which had been offered or received, or 5 years in prison, or both. In cases where the thing of value did not exceed \$100, the violation would be a misdemeanor.

Finally, those individuals who make the offer or payment in connection with a banking transaction would be included in the statute. These people are often the instigators, and there is no reason why they should not be covered.

The Department of Justice believes that this legislation would be a significant improvement over the present laws, especially in light of the infiltration of organized crime into legitimate banking activities. I, therefore, commend this bill to my colleagues' attention.

Mr. President, I ask unanimous consent that the Attorney General's letter of transmittal and his section-by-section analysis of the bill, be printed in the RECORD at this point together with the text of the bill.

There being no objection, the material and bill were ordered to be printed in the RECORD, as follows:

OFFICE OF THE ATTORNEY GENERAL,
Washington, D.C., March 29, 1973.

THE VICE PRESIDENT,
U.S. Senate,
Washington, D.C.

DEAR MR. VICE PRESIDENT: Enclosed for your consideration and appropriate reference is a legislative proposal to amend Chapter 11, Title 18, United States Code, to enhance the integrity and security of federally financed or insured financial institutions.

At the present time, the law governing the receipt of commissions or gifts for procuring loans is inadequate unduly complex, and obsolete. This proposal would improve our ability to maintain the integrity of federally financed or insured financial institutions by expanding the institutions covered and the type of activity prohibited, and by revising the penalty structure to more appropriately reflect the seriousness of the offense covered.

This proposal would effect seven major changes in existing law.

First, federally insured savings and loan associations, federally insured credit unions, member banks of the Federal Home Loan Bank System and certain banking institutions governed by the Farm Credit Administration would be added to the list of institutions covered by Section 215. It is desirable to include these institutions within the coverage of Section 215 because several situa-

tions factually appropriate for prosecution under Section 215 have arisen involving these institutions.

Second, the proposal would repeal Section 216 and incorporate into Section 215 those institutions now covered by Section 216. Worthwhile uniformity will be achieved by inserting within one statute all banking institutions which are organized, insured or regulated by the various federal agencies.

Third, the proposal would extend coverage to bank holding companies, and savings and loan holding companies. The additional coverage is warranted because holding company personnel are in a position to directly influence the operations of the held concern and, therefore, to manipulate its operations for their own purposes.

Fourth, the proposal would delete from the list of institutions covered by present Sections 215 and 216 National Agricultural Credit Corporations and joint stock land banks, neither of which are now in existence.

Fifth, the proposal would amend Section 215 by adopting the language of the bribery laws covering Federal officials in defining the solicitation and receipt of payment. The kinds of bank transactions covered would also be expanded to include any transaction or business. This would be in accord with the present coverage of Section 216.

Sixth, violation of Section 215 would be made a felony, except for minor cases involving less than \$100. Losses to the bank from bad loans and other transactions resulting from a bank official's activities proscribed by Section 215 can be as great as from his embezzlement, and the bank official's motive in receiving remuneration in connection with the performance of his duties can be as morally corrupt as in his making a false entry in the bank's records with the intent to injure or defraud the bank. Consequently, there is no reason to apply lesser sanctions against such activities. Moreover, an increase in the penalty is necessary in order to deal effectively with the problems created by the infiltration of organized crime into the banking business.

Finally, the proposal would incorporate into Section 215 a prohibition against the offer or payment of a thing of value in connection with a banking transaction. The offeror-payer is often the moving party in existing violations of Section 215, especially in cases involving organized crime. The proposal would eliminate the necessity of charging these persons as aiders and abettors and/or co-conspirators.

The need for enactment of this proposal is underscored by the difficulties in maintaining prosecutions under the present Section 215, the ineffectiveness of the punishment for its violation, and the inappropriateness of having to bring many prosecutions in this area under 18 U.S.C. 656 or 1005. Moreover, increasing involvement of organized crime in legitimate business activities, and especially in the field of banking, demonstrates the need for this amendment.

I urge the early consideration and adoption of this proposed legislation.

The Office of Management and Budget has advised that there is no objection to the submission of this proposal from the standpoint of the Administration's program.

SECTION-BY-SECTION ANALYSIS

SECTION 1

(a) This subsection makes liable any officer, director, employee, agent or attorney of any covered institution who, directly or indirectly, seeks, exacts, accepts, receives or agrees to receive from any person or entity, any thing of value for himself or any other person or entity, other than the financial institution with which he is connected, in connection with any business or transaction of the institution. The language is taken from the Federal bribery statute, 18 U.S.C. § 201, and like that statute, covers both the direct and indirect seeking and receiving of

payments by the employee of the financial institution. It also covers payments to third parties pursuant to an agreement between the giver and the employee other than those payments provided by law or those to the financial institution itself. Any payments "for or in connection with any transaction or business" of the financial institution are encompassed. This expands present law, which is limited to certain specific transactions. The intent of the Section is that the business of financial institutions which are regulated, organized or insured by the Federal Government should be conducted at arm's length.

(b) This subsection parallels subsection (a) in that it directly makes liable the giver or offeror of the proscribed payments to the financial institution employee. It is intended to correct a weakness in the present law which fails to directly provide sanction against the giver or offeror.

The penalty for violations of subsection (a) and (b) is a fine of not more than \$5,000 or three times the value of the thing asked, offered, received, given or agreed to be received or given, or imprisonment of not more than five years, or both, if the value of the thing exceeds \$100. However, if the value of the thing does not exceed \$100, the proposal calls for a fine of not more than \$1,000 or imprisonment of not more than one year, or both. Present law in this area provides for a misdemeanor penalty. This proposal makes violations a felony, except in minor cases. The upgrading of penalty reflects the belief that losses to the financial institution can be as great from these offenses as from embezzlement, and that the degree of moral turpitude is often as great. Moreover, the increased penalty is necessary to effectively deal with the infiltration of organized criminal elements into the banking business.

(c) This subsection defines the terms "financial institution", "bank holding company" and "savings and loan holding company". "Financial institution" is broken into six categories. The first includes all banks the deposits of which are insured by the Federal Deposit Insurance Corporation. This includes all national banks, 12 U.S.C. § 222, all banks in the Federal Reserve System, 12 U.S.C. § 1814(b), and all state banks insured by the Corporation.

The second category is composed of any member of the Federal Home Loan Bank System, 12 U.S.C. § 1422(4), and any Federal Home Loan Bank. Members of the System can include building and loan associations, savings and loan associations, cooperative banks, homestead associations, savings banks and insurance companies which satisfy the statutory criteria of 12 U.S.C. § 1424(a).

The third category includes institutions the accounts of which are insured by the Federal Savings and Loan Insurance Corporation. The Corporation must insure the accounts of all Federal savings and loan associations established pursuant to 12 U.S.C. § 1464, and it may insure the accounts of building and loan, savings and loan, and homestead associations and cooperative banks chartered or organized under the laws of any state, territory or district of the United States. 12 U.S.C. § 1726(a).

The fourth category is comprised of institutions the accounts of which are insured by the Administrator of the National Credit Union Administration. The Administrator must insure the accounts of all Federal credit unions established under 12 U.S.C. § 1761, et. seq., and he may insure the accounts of credit unions organized and operating under the laws of any state, territory or district of the United States. 12 U.S.C. § 1781(a).

The fifth category is composed of financial institutions organized or regulated by the Farm Credit Administration. Federal land banks are established and regulated by the Farm Credit Administration. 12 U.S.C. § 672,

et. seq. Federal land bank associations are chartered by the Farm Credit Administration, 12 U.S.C. § 719, as are Federal intermediate credit banks. 12 U.S.C. § 1021. Production credit associations are organized and chartered by the Farm Credit Administration, 12 U.S.C. § 1131(d), and banks for cooperatives are established by the same Administration. 12 U.S.C. § 1134.

The last category includes small business investment companies. Small business investment companies are licensed by the Small Business Administration, 15 U.S.C. § 681(c), and operate pursuant to the provisions of Subchapter III, Title 15, United States Code.

Necessarily, there exists some overlapping between the categories; a savings and loan association can be both a subscriber to the stock of a Federal Home Loan Bank and have its accounts insured by the Federal Savings and Loan Insurance Corporation. However, overlap does not occur in all instances and broad provisions are necessary. The coverage is coextensive with that contained in 18 U.S.C. § 2113, the Federal bank robbery statute, and 18 U.S.C. § 1014, which proscribes the making of false statements in order to influence the action of various Federal agencies.

The terms "banking holding company" and "savings and loan holding company" are defined to include any person or entity which controls a financial institution in such a manner as to be a bank holding company or savings and loan holding company under the Bank Holding Company Act of 1956 or the National Housing Act, codified in 12 U.S.C. § 1841, et. seq., and 12 U.S.C. § 1730, respectively.

SECTION 2

This Section repeals Section 216. The provisions of Section 216 are incorporated into proposed Section 215.

S. 1428

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 215, title 18, United States Code, be amended to read:

"(a) Whoever, being an officer, director, employee, agent, or attorney of any financial institution, bank holding company, or savings and loan holding company, except as provided by law, directly or indirectly, asks, demands, exacts, solicits, seeks, accepts, receives or agrees to receive any thing of value, for himself or for any other person or entity, other than such financial institution, from any person or entity for or in connection with any transaction or business of such financial institution; or

"(b) Whoever, except as provided by law, directly or indirectly, gives, offers, or promises any thing of value to any officer, director, employee, agent, or attorney of any financial institution, bank holding company, or savings and loan holding company, or offers or promises any such officer, director, employee, agent, or attorney to give any thing of value to any person or entity, other than such financial institution, for or in connection with any transaction or business of such financial institution—

"Shall be fined not more than \$5,000 or three times the value of any thing offered, asked, given, received, or agreed to be given or received, whichever is greater, or imprisoned not more than five years, or both; but if the value of any thing offered, asked, given, received, or agreed to be given or received does not exceed \$100, shall be fined not more than \$1,000 or imprisoned not more than one year, or both.

"(c) As used in this section the term 'financial institution' means (1) any bank the deposits of which are insured by the Federal Deposit Insurance Corporation; (2) any member, as defined in section 2 of the Fed-

eral Home Loan Bank Act, as amended, of the Federal Home Loan Bank System, and any Federal Home Loan Bank; (3) any institution the accounts of which are insured by the Federal Savings and Loan Insurance Corporation; (4) any credit union the accounts of which are insured by the Administrator of the National Credit Union Administration under the Federal Credit Union Act of 1934, as amended; (5) any Federal land bank, Federal land bank association, Federal intermediate credit bank, production credit association, bank for cooperatives; and (6) any small business investment company.

"As used in this section the term 'bank holding company' or 'savings and loan holding company' means any person, corporation, partnership, business trust, association or similar organization which controls a financial institution in such a manner as to be a bank holding company or a savings and loan holding company under the Bank Holding Company Act of 1956 or the National Housing Act.

"(d) This section shall not apply to the payment by a financial institution of the usual salary or director's fee paid to an officer, director, employee, agent, or attorney thereof, or to a reasonable fee paid by such financial institution to such officer, director, employee, agent, or attorney for services rendered to such financial institution."

Sec. 2. Section 216 of title 18 is repealed.

By Mr. STEVENSON:

S. 1429. A bill to amend the Federal Aviation Act of 1958 to authorize free or reduced rate transportation for severely handicapped persons and persons with sight attending such handicapped persons. Referred to the Committee on Commerce.

Mr. STEVENSON. Mr. President, I am today introducing a bill which would allow airlines the option under law to offer reduced rates on a reserved-seat basis to severely handicapped persons and persons with sight attending such handicapped persons.

The entire question of airfares is in a state of flux. The Civil Aeronautics Board last December found that youth standby, youth reservation, and family fares are discriminatory. This decision affects promotional fare policy generally. Consumers are now concerned about the maze of airfare costs and promotional fares.

It is my understanding that the Aviation Subcommittee of the Commerce Committee will hold hearings in the near future to determine whether present law—notably, the Federal Aviation Act of 1958—is adequate, and if not, what changes are needed to rationalize the fare structure. I believe that a general rationalization of the fare structure could benefit both the airlines and the air passengers.

In anticipation of these hearings I am introducing this bill. In any airfare system there is a place for reduced fares on a reserved-seat basis for the blind and the other severely handicapped—those who out of virtual necessity must travel with an attendant.

This legislation is permissive. It only permits commercial airlines to grant free or reduced fares. It does not mandate them to do so.

This legislation merely grants the airlines the same authority which is presently available to bus companies and railroads under the Interstate Commerce

Act and Amtrak's authorizing legislation. Before Amtrak was formed, virtually every railroad granted such reduced fares to the blind. Amtrak has continued the preexisting policies of the railroads in regard to the blind.

The situation is different with the airlines. Because of the controversy over youth fares, group fares, and other promotional fares, the airlines have been wary of moving without specific statutory authority. This has been compounded by the December CAB decision, and the CAB was and still is in the process of deciding whether any such reduced fares are allowable under present law.

This legislation would make clear in the law that the airlines can offer a reduced fare to a group which is disadvantaged under present law. The bill is designed to enable people to travel who have difficulty traveling alone and are discouraged by the high cost of traveling with a companion. From the airlines point of view, there is potentially a greater demand for travel and a smaller demand upon airlines personnel. If a handicapped person is to travel by airline, it is in the interest of the airline to encourage an attendant to travel with the handicapped person. In many cases the attendant makes it possible for the handicapped person to travel at all—and in all cases the attendant relieves stewards and other personnel of the attentions required by the severely handicapped.

This bill does not attempt to define "severely handicapped persons" other than in a general way, that is, to define them as "the blind, and other persons with physical or mental handicaps so severe or of such a nature as to make their travel by air possible only if accompanied by an attendant." It is possible to write in a stricter definition of blindness, as has been done in certain other pieces of legislation, but I believe this should be done by CAB regulation. There is no need for Congress to struggle over a more complete definition of other severe handicaps. The question—is a person so handicapped that in traveling he would be much aided by personal attention in the person of an attendant—lends itself to regulation and the administrative process.

This legislation contemplates that the potential reduced fares would apply on a reserved-seat basis. Simply offering the reductions on a space-available basis would not be in the interests of the handicapped. Indeed, it would be cruel and counterproductive to lure the handicapped and an attendant to the airport, perhaps for hours, never to get a ticket.

I reemphasize that this legislation is entirely permissive. Filling empty seats on an airplane is the name of the game. If those empty seats can be filled with a severely handicapped person and an attendant—even if filled at less than two full fares—then the airlines cannot but gain. Whether such gains from the offering of these reduced fares to the handicapped and their attendants if offset by the loss of revenue from full-fare passengers who would be displaced is a competitive economic decision that the airlines will have to make. This legislation

would merely provide the option to the airlines to institute such a reduced fare program.

This legislation would encourage the handicapped to travel. Travel has of course many purposes—to visit friends and relatives, to engage in business, to vacation, to just get away from it all. But travel is too often denied to the severely handicapped because they need an attendant—either on the plane or after they get to the destination—and the cost of two fares is prohibitive.

The Senate passed such a bill as this last year as an amendment to S. 2280, the antihijacking bill which later became entangled in conference and was never enacted. I am, therefore, hopeful the Aviation Subcommittee, and then the full Commerce Committee and the Senate, will act favorably on this proposal to offer reduced airfare rates to the severely handicapped.

I ask unanimous consent that the text of the bill be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1429

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That—

(a) Section 403(b) of the Federal Aviation Act of 1958 be amended by inserting after "persons in connection with such accident;" the following: "severely handicapped persons and persons with sight attending such handicapped persons, when the handicapped person is traveling with such a person in attendance;"

(b) Section 403(b) be further amended by adding at the end thereof the following new sentence: "As used in this subsection, the term 'severely handicapped persons' means the blind, and other persons with physical or mental handicaps so severe or of such a nature as to make their travel by air possible only if accompanied by an attendant."

By Mr. PELL (for himself, Mr. CASE, Mr. MUSKIE, Mr. HOLLINGS, Mr. MAGNUSON, Mr. MOSS, and Mr. WILLIAMS):

S. 1430. A bill to establish within the Department of State a Bureau of Oceans and International Environmental Affairs to be headed by an Assistant Secretary of State. Referred to the Committee on Foreign Relations.

Mr. PELL. Mr. President, during the last decade, the community of nations has begun to realize that this planet represents a closed ecological system, wherein seemingly local events may have a widely distributed international effect. We have become increasingly aware that the dense populations of this Earth are crowded onto relatively small continental islands embedded in the vast expanses of the ocean, and that man's activities are intimately linked to the sea. As a result, there has been a surge of international negotiations and activities designed to preserve and protect our oceans and global environment.

Mr. President, my capacity as congressional adviser to the United Nations Seabed Committee and to the U.N. Conference on the Human Environment has made me acutely aware of the international developments in oceans and en-

vironmental affairs, and has alerted me to the fact that our present governmental structure is inadequate to deal with the growing problems in this area.

This is particularly true of the Department of State. At the present time, there is no functional bureau responsible for the formulation and implementation of a comprehensive policy necessary to weld the separate elements of the Department into an effective instrument to deal with the emerging issues of this area.

It seems to me, Mr. President, that the creation of such a bureau is long overdue and that the national interest will be best served by enacting legislation which establishes within the Department of State a Bureau of Oceans and International Environmental Affairs.

Therefore, I introduce for appropriate reference a bill which will accomplish this objective. I hope that my colleagues will recognize the importance of this issue and will give this measure their full support.

Joining me in sponsoring this bill are Mr. CASE, Mr. MUSKIE, Mr. HOLLINGS, Mr. MAGNUSON, Mr. MOSS, and Mr. WILLIAMS.

By Mr. BEALL (for himself, Mr. DOMINICK, and Mr. BUCKLEY):

S.J. Res. 86. Joint resolution to suspend, for 2 years, Federal support of projects involving psychosurgery. Referred to the Committee on Labor and Public Welfare.

A 2-YEAR SUSPENSION OF FEDERAL SUPPORT OF PROJECTS INVOLVING PSYCHOSURGERY

Mr. BEALL. Mr. President, I am sending to the desk a joint resolution that would, if enacted, declare a 2-year moratorium on the use of Federal funds and Federal facilities in projects involving the medical procedures known collectively as psychosurgery or psychiatric surgery. This resolution would further direct the Secretary of Health, Education, and Welfare to undertake a comprehensive study of psychosurgery designed to determine the number and type of cases performed during the last 5 years in all public and private hospitals in the United States. I am further asking, Mr. President, that the Secretary compile and analyze data on a sufficient number of cases to provide the basis for an objective scientific evaluation of this surgical technique. This study, which will include followup information on an appropriate number of selected cases, is to be compiled within 1 year from the date of the enactment of this resolution and the Secretary is directed to present to the Congress his views and recommendations as to the circumstances, if any, when it is appropriate to perform psychosurgery. The Congress will then have a full year, before the expiration of the moratorium to determine what the public policy should be with regard to this surgical technique.

Mr. President, my interest in this issue was aroused last year when I read an article entitled "Eerie Brain Surgery—A Curse, or a Blessing?" which appeared in the March 25, 1972, issue of the National Observer. This article reflected the heated debate that took place at a psychiatric symposium conducted last spring in Houston, Tex. During the sym-

posium, one of my constituents, Dr. Peter R. Breggin, a practicing psychiatrist in the District of Columbia, vigorously raised the ethical issue of psychosurgery with several of its practitioners. The ensuing debate was ably reported in the *National Observer*, and I ask unanimous consent that the complete text of this article be printed at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. BEALL. Mr. President, last fall, Dr. Breggin visited my office to discuss language which appeared in Senate report 92-894 which accompanied the Labor-HEW appropriation bill. The language in the Senate report directs the National Institute of Neurological Diseases and Stroke to allocate \$1 million for continued work in this field. I promptly wrote to Senator MAGNUSON, the distinguished chairman of the Appropriation Subcommittee on Labor, Health, Education, and Welfare and Related Agencies, requesting a clarification of this language. I placed special emphasis on the need to fully implement the NIH peer review procedures which should carefully review any and all such projects. It should be pointed out, Mr. President, that Dr. Robert M. Vaetch, associate for medical ethics of the Institute of Society, Ethics, and the Life Sciences drew our attention to a serious shortcoming of the peer review procedure when he said:

Even when it is used in a serious way (which happens all too rarely) it is the peers of the researchers and not the peers of the subjects who are asked to evaluate the ethical acceptability of the proposed research. It is simply too much to ask individuals uniquely committed to the importance of medical research to judge the ethical acceptability of their colleague's work . . .

As a result to my inquiry, the distinguished Senator from the State of Washington (Mr. MAGNUSON) joined the ranking minority member on this subcommittee, (Mr. CORTON, and myself in a colloquy on the floor of the Senate during the debate on final passage of the Labor-HEW bill last October. This discussion sought to clarify the intent of Congress regarding this report language and I ask unanimous consent, Mr. President, that the text of this colloquy be printed in its entirety at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. BEALL. Mr. President, several weeks ago, the Health Subcommittee of the Labor and Public Welfare Committee held 6 days of hearings on the topic of human experimentation. During these hearings, it was clearly established that few, if any, meaningful controls exist to regulate the use of experimental drugs, new and untested medical devices, or experimental surgical techniques. For instance, DES—diethylstilbestrol—is a drug whose carcinogenic characteristics have caused the Food and Drug Administration to severely restrict its use in humans, while banning its use in cattle, but it continues to be widely used as a

morning after contraceptive in college infirmaries, clinics, and so forth. It became obvious to the members of the subcommittee that once a drug has been approved, even on a very restrictive basis, it is virtually impossible to prevent it from being prescribed for other unrelated uses. The testimony went on to clearly indicate that the Department of Health, Education, and Welfare has no effective authority to control experimental medical devices, such as the "super coil" which is used to induce midterm abortions, or surgical techniques such as the ones we are discussing today.

These hearings made it increasingly obvious that the Federal Government would have to play a larger role in regulating medical research on humans. My resolution is designed to assert a responsible Federal role in one such area of medical experimentation.

During the 20 years between 1935 and 1955, a surgical technique known as lobotomy was widely practiced in this country and throughout the world. It is estimated that approximately 50,000 Americans underwent this radical surgical technique which produced extreme changes in personality, emotional disturbances, impairment of judgment, and a frequent lack of control of basic impulses. During his testimony before the Health Subcommittee, Dr. Bertram S. Brown, the Director of the National Institute of Mental Health, stated:

Unequivocally, that no responsible scientist today would condone a classical lobotomy operation.

Mr. President, I do not wish to simplistically equate the more sophisticated psychosurgical techniques with the classical lobotomy, but I do believe that we should take reasonable and responsible steps designed to protect our citizens from these new and essentially experimental surgical procedures. The classical lobotomy, which permanently disabled tens of thousands of our fellow citizens, fell into disuse only after the American public became aware of its dire consequences. The Congress, the American Medical Association, and the American Psychiatric Association all failed to take decisive action to bring this practice to an end.

In the context of the current situation, it is estimated that between 500 and 700 psychosurgical operations are performed each year in this country. Many psychosurgeons, including Dr. O. J. Andy, who testified before our Health Subcommittee, no longer consider this technique to be experimental. Thus, the potential exists for rapid expansion in the number of operations taking place each year, and I believe that the time has come for the Federal Government to assert itself in such a way as to insure that our citizens are not once again victimized by the specious promise of a quick and lasting surgical cure for mental illness.

Mr. President, during the remainder of my remarks, I will attempt to raise, for the consideration of my colleagues, some of the complex and largely unanswered questions that surround the practice of psychosurgery. In his testimony, Dr. Brown stated that:

We need to know the answers to such questions as: What chemicals are responsible for transmission of nerve impulses within the brain and how do these chemicals control different forms of behavior? What chemical or physical changes occur when learning takes place or when a memory is recovered from the brain? What anatomical systems and what chemicals are responsible for aggressive behavior, sexual behavior, eating behavior, drinking behavior, and the common state of sleep and dreaming? How is the brain and central nervous system related to the autonomic nervous system which controls many life processes such as heart rate, blood pressure, and a wide variety of visceral functions? What happens to the behavior and cognitive processes of men when portions of the brain are damaged through accident, birth injury, malnutrition or disease? Can functions that have been lost through such disruption of the brain be recovered or taken over by other portions of the brain?

In response to a question, Dr. Brown stated that we know much more about the functioning of the human brain today than we did 30 years ago—"but we know very little of what we need to know." I believe that this observation succinctly sums up the reasons for suspending Federal support to psychosurgical projects until such time as we have, at our disposal, the type of comprehensive information needed to make a valid policy decision. Dr. Brown reinforced this point when he stated:

We have no reliable data on the extent of the practice or psychosurgery in this country, the types of patients subjected to this technique, or the after effects on patient behavior. The most systematic attempt (in this country) to assess the effects of psychosurgery on patient behavior and intellectual capacities was the Columbia-Greystone project which was conducted in 1954. Since then, many changes in psychiatric and medical practice have taken place: chemotherapy has dramatically changed the nature of the patient population in mental hospitals, and new surgical procedures have been introduced which are quite different from those studied by the Columbia-Greystone project. In order to make any specific recommendations for overseeing or controlling the clinical practice of psychosurgery a systematic survey of the field must be conducted—perhaps by one of the many professional societies and private foundations that have recently begun to focus on ethical issues in life sciences. We need to gather existing data available from patient histories and other sources which never come to our attention because they are not federally funded. In order to answer the "hard" questions, we must first find out what's going on.

Later on in his testimony, Dr. Brown sought to explain some of the problems confronting the Department of Health, Education, and Welfare with regard to human experimentation for medical purposes. He outlined the HEW regulations related to "informed consent" which cover only those cases involving Federal funds. It became clear during the course of these hearings that these guidelines are most often observed in the breach. I ask unanimous consent, Mr. President, that the portion of Dr. Brown's testimony dealing with the Department of Health, Education, and Welfare's policies on human experimentation and the initial NIH response to the current controversy regarding psychosurgery be

printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 3.)

Mr. BEALL. Mr. President, the observations of Doctor Brown were reinforced in a recent article entitled "Psychosurgery—Myriad Tough Questions" which appeared in the New York Times on March 18, 1973. In this article it was pointed out that psychosurgery—

... Raises some difficult questions. Is enough known about how the brain works to be sure the surgery will have the desired beneficial effect and not interfere with otherwise normal responses and feelings? Or will those subjected to the refined techniques of modern surgery be "semi-vegetables" as were some patients who underwent the gross lobotomies of the decade past? How can it be demonstrated with certainty that the patient is unresponsive to more conservative treatment, especially if the patient is in a State institution where treatment is notoriously inadequate?

I might add, Mr. President, that a similar question might be directed to those cases involving small children. Many of the psychosurgeons, including one who testified before our subcommittee, perform surgery on children as young as 5 or 6 or 7 years of age. In fact, many of these children undergo multiple operations—sometimes numbering as high as five or six—until the desired effect is achieved. How can we be sure that the traditional forms of drug and psychiatric treatment have been exhausted when children this young are involved?

Mr. President, I ask unanimous consent that this New York Times article be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 4.)

Mr. BEALL. The ultimate question is probably what types of patients are considered to be acceptable candidates for psychosurgery.

... Targets are supposed to be depressed women, hyperactive children, drug addicts, alcoholics, epileptics, neurotics, psychotics, convicts. Targets are often blacks.

Typical patients include those who display what psychosurgeons refer to as "symptoms of abnormal behavior," such as emotional tension, anxiety, aggressiveness, destructiveness, agitation, distractibility, suicidal tendencies, nervousness, mood changes, rage, stealing and explosive emotions. (*Current Magazine*—reprinted in the *Baltimore Sunday Sun*, March 25, 1973.)

The vastness of the range of potential psychosurgery patients is, in itself, a compelling reason for the Senate to give prompt and favorable consideration to the joint resolution I am introducing today. If we, as a government, are going to make an error in judgment, then let it be on the side of caution—not on the side of haste. A very pertinent point was made by Dr. Willard Gaylin, president of the Hastings Institute, when he testified that 90 percent of the psychosurgical operations that are presently taking place would not occur if the proper guidelines and precautions were adhered to. This seems to me to be a very compelling argument for us to pursue at this time—a policy that will restrain and not encourage this type of experimental research.

Dr. Breggin, who has emerged as a prominent spokesman in opposition to psychosurgery, expressed another area of concern when he summed up his views by stating that:

... The real issues are not scientific or technical. The real issues are moral, political, and spiritual. What is man—a machine, device, a space filled with molecules? Or is man a spiritual being, divine in origin, human in character, charged with life, with will, [and] with the ability to love...? And how should man best live—under the control of others through behavioral modification, or to the best of his capacities within an environment that respects his freedom and his unique human and spiritual quality?

Mr. President, in conclusion let me say that the controversy surrounding psychosurgery has grown increasingly intense in recent months. I believe that the people are deeply distressed by the implications of a large scale application of this surgical technique. Thus, the time has come for Congress to provide leadership in seeing that the Federal Government does not inadvertently promote the wide spread use of an experimental surgical technique unless and until a more clearly defined public policy has been determined. The resolution I have introduced today does not seek to preordain what that public policy should be, but it does mandate a pause in all Federal activities in this area until the appropriate officials with the Department of Health, Education, and Welfare have had an opportunity to compile and analyze the vast amounts of existing data. Once this process has been completed, well documented information along with the Secretary's views and recommendations will be presented to Congress for additional action. This study, plus the ensuing debate, will serve to increase public awareness regarding the implications of psychosurgery. I believe that intensified public interest will assist us in the establishment of a proper public policy.

Mr. President, I ask unanimous consent that the text of this Joint Resolution be printed in the RECORD at the conclusion of my remarks along with several additional articles that I have not previously referred to.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 5.)

EXHIBIT 1

[From the National Observer, Mar. 25, 1972]

A CURSE, OR A BLESSING?—EERIE BRAIN SURGERY

(By Jim Hampton)

She was 22 and psychotic, seized by outbursts of lethal violence. Twelve times she had attacked others, once knifing a girl through the heart, once plunging scissors into a nurse's lung. But this day she was quiet, the object of an eerie medical treatment that is being hailed for its dramatic promise for the mentally ill and damned for its irreversible effects and potential for mind control.

As the girl walked around her hospital ward, a tiny electrode implanted deep inside her brain worked steadily, silently, painlessly. It sensed minuscule electrical changes as mental reactions to her environment and fellow patients sluiced through her brain. A miniature transmitter-receiver, wired to the electrode, radioed her brain-wave pattern to an electroencephalograph 100 feet away.

There, out of view, her doctors alternately watched the girl and the recorder's rapid,

hill-and-valley squiggles. By merely pushing a button they could transmit a burst of low-voltage electricity into any of 12 areas of her brain surrounding the electrode. A burst to one area might evoke a smile of pleasure; to another, nothing; to a third, sudden rage and violence.

"A CRIME AGAINST HUMANITY"?

That scene, reminiscent of George Orwell's 1984, occurred in top-rated Massachusetts General Hospital. It was reported here the other day by Dr. Vernon Mark, a neurosurgeon and leading researcher in the rapidly developing field of psychosurgery, or brain surgery performed to correct severe behavioral disorders. And it illustrates techniques and results that a Washington, D.C., psychiatrist, Dr. Peter R. Breggin, says are ample evidence for banning psychosurgery in America.

During the past month Breggin has assailed psychosurgery and psychosurgeons in polemical articles in the Congressional Record, in Medical Opinion magazine, in a Washington newspaper, and in person before 175 physicians—including Mark—attending the Houston Neurological Symposium's session on "Neural Bases of Violence and Aggression."

"Psychosurgery is a crime against humanity," says Breggin, "a crime that cannot be condoned on medical, ethical, or legal grounds." Because it often leaves patients with flattened emotional responses and lessened intellectual capacity, he says, "Psychosurgery in all its forms is a partial absorption of a living human being."

"VOLUNTARY" MAY NOT BE

Breggin insists it is meaningless that psychosurgeons never operate without permission of the patient or his family. Most such patients are in mental institutions, whose custodians can use subtle threats or promises to obtain the patient's consent for surgery, he says. And he says families can become so distraught over a loved one's illness that they sign away his human rights simply because they can bear the stress no longer.

Breggin calls psychosurgery "a little murder" because the brain is a unique organ, the seat of man's intellect, emotions, and personality. "It's illegal for me to help you kill yourself," he says, so it should be illegal to perform surgery that partially kills the self. "What a human being is the sum total of his personality, not his body," Breggin adds. Thus he considers it unethical to operate—except where the patient's life is threatened, as by a tumor—if the surgery lessens one's humanness.

Finally, Breggin says psychosurgeons are operating not just on psychotic patients, but primarily on women and increasingly on children as young as 5. "The vast majority of patients now being operated on are not being wrested from the back wards [where hospitals keep violent, padded-cell cases]," he says. "In most cases the majority are labeled neurotic, simply neurotic."

Breggin says that even severely disordered psychotics can be made manageable through proper psychotherapy, which he says they rarely get because "psychiatry in this country is a farce. The state hospitals are a creation of our society. They are one of our most offensive and reprehensible institutions. The feeling that we have created these horrible institutions must never be used to justify psychosurgery," which Breggin says is for the convenience of the keepers, not the kept.

Slightly built and graying at 35, Breggin is in private practice and also teaches at the Washington School of Psychiatry. He has written two novels: *The Crazy From the Sane*, published last year, and *The Hebrew Disease*, to be published next fall. He graduated from Case Western Reserve University medical school after undergraduate studies at Harvard.

PSYCHOSURGEONS PLEAD INNOCENT

Breggin says he began gathering information on psychosurgery last April without intending to attack psychosurgeons. He decided to speak out, he says, when he discovered that 400 to 600 Americans a year are undergoing psychosurgery without doctors in general knowing about the trend, which he calls "the return of lobotomy." He adds: "It just got to the point where I couldn't stand it any more."

So, at his insistence, Breggin was placed on the Houston symposium's program as a representative of the Medical Committee for Human Rights, a group working for medical-care reform. The committee was particularly upset because a newspaper had revealed two weeks earlier that psychosurgery was performed on three California prisoners in 1968. All purportedly volunteered for it.

Breggin aimed his attack principally at Dr. Mark and his coworker, Dr. Frank Ervin, a psychiatrist who is director of the Stanley Cobb Laboratories for Psychiatric Research at Massachusetts General Hospital in Boston. Mark and Ervin are coauthors of *Violence and the Brain*, which proposes a nationwide screening program to detect and treat brain-damaged, violence-prone persons early in life.

Ervin and Mark met with reporters and denied Breggin's allegations point by point. They said Breggin has distorted their and others' published papers, slanted quotes by using them out of context, set himself up as an expert in a field that he is professionally unqualified to judge, and made false inferences that "these operations are being done on normal or near-normal people."

A STRONG COUNTERATTACK

"It's good for any field to have a critic," Mark says, but a responsible critic "has to be fair, he has to be accurate, and he has to be knowledgeable." Breggin, he implies, is none of these.

In telephone interviews with The National Observer, some of the other neurosurgeons whom Breggin excoriates expressed substantially the same reply. The strongest counter-attack came from Dr. William Beecher Scoville, 66, president of the International Association for Psychosurgery.

His voice etched with fatigue from a long day in surgery, Scoville explains that he is the great-grandson of Henry Ward Beecher, the famed Nineteenth Century preacher; the great-nephew of Harriet Beecher Stowe, author of *Uncle Tom's Cabin*; and the grandson of Thomas Gallaudet, founder of Gallaudet College for the deaf in Washington, D.C., and the American School for the Deaf in Hartford, Conn., where Scoville lives.

"I come of a crusading family," Scoville says, "and maybe that's why I want to fight when somebody like Breggin says we ought to be put in jail." (Breggin didn't go that far.) "I don't like to have all of us allegedly reputable scientists on one side of the fence and him on the other and have you act as if we were coequals. He's not. . . . He's not qualified [to judge psychosurgery]; he's prejudiced; . . . he has misquoted all of us. . . ."

"We object to this talk about 'lobotomies,' that we are taking away the soul of a person, making a vegetable out of him. The standard, complete lobotomy was given up 25 years ago," Scoville adds, agreeing that it was too destructive and *did* blunt human qualities.

TWO DIFFERENT ARGUMENTS

"But now selective procedures don't do that," he continues. "Now it's as different as day is from night. . . . To argue about the ethics of this seems a little bit absurd to me, because surgery of the brain has always affected behavior."

Any surgery is ethical, in Scoville's view, if two conditions are met. First, the patient and his family must consent in awareness of the possible risks and benefits. Second,

"Any operation is ethical if it makes the patient better than he was, and any operation is unethical if it makes him worse."

Here is where the arguments of Breggin and the psychosurgeons begin to pass one another like trains approaching one another on different tracks. For Breggin's chief point is metaphysical ("All psychosurgery is immoral because all of it dehumanizes"), while their chief reply is medical ("The doctor's duty is to relieve suffering, and psychosurgery helps far more than it harms").

Frank Ervin, a witty man with a chest-length beard, agrees with Breggin that American mental institutions "are miserable: badly designed, understaffed, underfunded." However, Ervin adds, "As long as he bases his debate on these moral grounds, his argument is medically unanswerable."

Yet Breggin raises questions that are not easily pushed aside. They stand despite the polemical nature of his attack on psychosurgery, his obloquies against individual surgeons, and the professional damage he has done to himself by taking his attack noisily into the public prints instead of the quiet gentility of professional journals.

VALID QUESTIONS RAISED

Mark and Ervin, for example, note that three Harvard Medical School "ombudsmen," unrelated to the patient, review all of their psychosurgery candidates beforehand. They say they themselves accepted for psychosurgery only 2 of the last 23 candidates referred to them by other doctors, recommending psychotherapy or drugs for the other 21. But Harvard's rigorous screening might not occur elsewhere, nor is it hard to find other surgeons willing to operate.

Breggin also raises the possibility that psychosurgery holds immense potential for behavior control. The prospect, real if distant, is getting serious consideration among both psychosurgeons and social scientists. Mark and Scoville, for example, took part in a recent seminar on the subject at the Institute of Society, Ethics, and the Life Sciences in Hastings-on-Hudson, N.Y.

Perry London, a psychologist from the University of Southern California and a seminar participant, writes in the institute's magazine that very soon "large domains of behavior, thought to be subject to the individual's own will, and thus his own responsibility, can be removed from his control and placed under the control of other people."

"Most of the other people, presumably, will be doctors" whose only aim is to cure sickness, London adds. "Some of them, on the other hand, will surely be legislators, policemen, and judges, who will have available the same apparatus, but to use on behalf of society, whether or not the individual likes it. At its greatest extreme, in fact, the problem that arises is that the controlled individual probably can be made to like it."

Electrodes in the brain's pleasure or erotic centers, for example, might be triggered to give the individual a euphoric or sensual jolt whenever he performed as the controller wanted him to.

"Since the methods in question are typically used only for the most benevolent purposes, such as medical treatment, their political implications are somewhat subtle, and they are sure to come into more and more widespread, unreflective use," London continues.

"The ethical and legal challenge of behavior control, therefore, is the common problem of how to maintain personal liberty in situations where its suppression may be rationalized both by the common welfare and the individual's happiness."

Breggin lumps today's psychosurgeons with the early lobotomists, but in doing so he appears to be firing for effect and not for accuracy.

LOBOTOMY VERSUS PSYCHOSURGERY

Portuguese neurologist Antonio Egas Moniz won the Nobel Prize for developing the lobotomy in 1936. A last-ditch procedure for severe schizophrenia, lobotomy involves severing the frontal lobes of the brain to reduce psychic tensions. The operation leaves patients passive, with "flattened" emotions, and with impaired ability to think into the future. Electroshock and chemotherapy replaced lobotomy in the 1950s, but by then an estimated 50,000 Americans had been lobotomized.

Vernon Mark's case—the 22-year-old psychotic girl who stabbed two women—illustrates the difference between Moniz-style lobotomy and today's psychosurgery. It also illustrates some of the points that Breggin and others are so concerned about.

The girl contracted encephalitis, a brain disease, before she was 2. She became epileptic at 10, and began having seizures and "racing spells," running mindlessly through the streets. Four times she attempted suicide. Twelve times she attacked others without warning, including stabbing the two women—both of whom survived. She had been treated in three major medical centers and had had psychotherapy, drugs, and 60 electroshock treatments—all to no avail—when Mark took her case.

Tests showed brain damage and electrical "spikes" indicative of temporal-lobe epilepsy, in which seizures are usually expressed as sudden violence. Mark inserted electrodes into both amygdalae, twin almond-shaped organs, one to a side, located in the midbrain. The midbrain and the forebrain make the limbic system, in which reside man's capacity for love, creativity, insight, judgment—all his higher functions.

To insert the electrodes, Mark used stereotactic surgery. This technique permits the surgeon to place the patient's head in a metal frame with cross-hair sights that, combined with X rays, allows precise visual placement of electrodes anywhere in the brain through small holes drilled in the skull. Some psychosurgery patients wear the electrodes for months or years, often under a wig. And some psychosurgeons implant many minuscule electrodes—Breggin says the record is 125—to study brain functions over wide areas.

THE SONG WASN'T FINISHED

Mark performed two amygdalotomies on the girl; neither required a scalpel. Instead, he used radio-frequency energy to heat the electrode, destroying (by baking it) a fingertip-size area of brain. Psychosurgeons also use ultrasonic waves, radium seeds, and, via small stereotactically placed catheters, injections of foreign matter such as olive oil to create lesions.

The girl's symptoms persisted after the surgery on her left amygdala, however. Tests showed that her right amygdala probably was causing her seizures, Mark says. He later operated on the right amygdala, after conducting 100-foot-distant tests.

Before the second operation Mark's team also stimulated the girl's brain with electricity while she sang and played the guitar. After one five-second electrical burst she stopped making music, went mute, and began producing epileptoid brain waves. "This was followed by a sudden and powerful swing of her guitar," Mark says. "She narrowly missed the head of the psychiatrist, and instead the guitar smashed against the wall."

The second operation stopped the girl's seizures, which have not recurred in four years. However, Mark reports, "Her preoperative psychotic behavior has not been modified by this procedure."

The question of psychosurgery on children is charged with both emotion and contradiction. Breggin says the chief U.S. prac-

tioner is Dr. Orlando J. Andy of the University of Mississippi, who, he says, told him that most of his 30 to 40 operations were on children, the youngest age 7.

NO "NEAR-NORMALS" INVOLVED

Andy declines to discuss his practice or Breggin's allegations. "I will give my reports in scientific journals and at [scientific] meetings," not in the newspapers, Andy told The National Observer. He adds: "If it's a matter of philosophy, then I think you ought to get opinions from philosophers. . . . All I can say is that I hope that in the long run we finally end up going in the right direction."

Other psychosurgeons, however, strongly deny Breggin's accusation that psychosurgery is being done on near-normal children, such as hyperactives, to make them easier for their parents to manage.

The typical child psychosurgical patient, Frank Ervin says, is a back-ward mental defective with "evidence of severe, diffuse brain damage" such as epilepsy, cerebral palsy, retardation, or paralysis or weakness of one side of the body. "Some are characterized by what looks like a high drive state: They're in constant motion, hyperactive, self-mutilating, biting themselves. They often attack others like wild animals. I've seen such a kid in a private home [as a consultant] who was kept naked in a room because he shredded everything in sight, including the drapes and the plaster. He even pulled the wiring out of the wall."

IN TIME, THE RIGHT PLACE

Ervin and Mark accept only those patients who have not responded to treatment by other doctors for at least two years. Scoville, the association president, says he requires three years of intractability before he will operate. In one group of six patients, Mark says, three are working full-time after psychosurgery—one for the first time in a decade.

A British neurologist participating in the Houston symposium put the psychosurgery argument into what may be its proper, unemotional perspective. "Clearly psychosurgery will not be the permanent answer," says Dr. Denis Williams, editor of Brain, a British journal. "Neurosurgons, no matter how good they are, can never put anything back. They can only destroy; they can only take out."

"This is what happens in medicine," Williams adds. "Something works. It's used. It's overused. Then it finds its place."

EXHIBIT 2

[From the CONGRESSIONAL RECORD, OCT. 3, 1973]

BRAIN DISEASE

Mr. COTTON. I would like to raise the issue of brain disease and violent behavior with my distinguished colleague.

I want to reassure the Members of the Senate that any funds in this bill added by the Senate committee for research into brain disease and violent behavior will be awarded to competent scientists and only after such scientists meet the high ethical and medical science standards demanded by the established NIH peer review process which is used in awarding all the grants at NIH. Is that not correct, Mr. Chairman?

Mr. MAGNUSON. The Senator has stated it very well. At this point, Mr. President, I ask unanimous consent to place in the RECORD some pertinent correspondence with the Director of the National Institutes of Health which I believe will serve to further clarify the issue and reassure my colleagues in this matter.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., September 22, 1972.
Dr. ROBERT Q. MARSTON,
Director, National Institutes of Health,
Bethesda, Md.

DEAR DR. MARSTON: This is to call your attention to a passage on page 55 of the Senate report (92-894) accompanying the first 1973 Labor-HEW appropriation bill. The report has earmarked \$1 million to continue and expand studies of violent behavior related to brain disease.

Subsequent to Senate action on the first 1973 Labor-HEW bill, the Committee has received several disturbing published reports regarding the use of an earlier appropriation of \$500,000 for this work. Consequently, it would be appreciated if NIH would delay the funding of this work at this time. It is the desire of the Committee that, as a condition precedent to the award of any funds to continue such work, the NIH should thoroughly study the earlier work conducted with appropriated funds and determine that the adverse reports regarding this project are without merit.

In the interim, the Committee would also appreciate receiving from you a statement on NIH policy concerning research into the relationships between brain disease and violent behavior.

Thank you for your consideration.

Sincerely,

WARREN G. MAGNUSON,
Chairman, Subcommittee on Labor-
Health, Education, and Welfare.

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
Bethesda, Md., October 2, 1972.

HON. WARREN G. MAGNUSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MAGNUSON: Thank you for your letter of September 22 about the funding of research on the relationship of brain disease to violent behavior.

We are well aware of the criticism that has been directed toward earlier research projects in this field which were supported by other agencies. We are also, of course, anxious to ensure that there shall be no valid basis for similar criticism in any future work that NIH might support through the appropriation for the National Institute for Neurological Diseases and Stroke.

The policy of NIH, briefly stated, is as follows:

1. There is evidence that some kinds of uncontrolled violence and other forms of unacceptable human behavior are due to abnormal brain development or brain disease. However, the evidence is fragmentary, scattered, and equivocal. We believe that further research is necessary but that a first step should be to collect, correlate, and assess the evidence currently available in order to determine what direction further research should take.

2. Consequently, the National Institute of Neurological Diseases and Stroke has established a task force, as a subcommittee of its Advisory Council, to plan a series of workshops on brain disease in relation to violence. The National Institute of Mental Health—which is not part of NIH but which has previously supported research in this field—has set up a similar task force to study the more restricted topic of psychosurgery. Close liaison is being maintained between these two task forces.

3. Research projects on abnormal behavior and on the physiological factors affecting behavior in animals, including non-human primates, will be supported if they are of high scientific merit and appear to be rele-

vant to the elucidation of behavioral problems in man.

4. Research projects on the genetic, hormonal, biochemical, and neurological factors in abnormal human behavior will be considered only if they conform to the established guidelines governing all research involving human subjects. These guidelines will be most rigorously enforced. The conditions include (a) a thorough initial review and continued surveillance by a multi-disciplinary committee at an institution of high repute that can, and does, accept responsibility for the protection of the subjects involved; and (b) specific grant or contract terms providing for the protection of human subjects including the right of privacy, and requiring their informed consent.

I can give you a firm assurance that no commitment to fund research projects using human subjects for the study of the relationship between brain disease and violent behavior will be made until the results of the discussions now being initiated by the NINDS task force have been completed and considered.

Please be assured of my personal concern in this matter and of my full appreciation of the committee's interest in it.

Sincerely yours,

ROBERT Q. MARSTON, M.D.,
Director.

Mr. BEALL. Mr. President, I wish to thank the distinguished chairman of the Appropriations Committee's Subcommittee on Labor, Health, Education, and Welfare, and Related Agencies, Mr. MAGNUSON, and the distinguished ranking minority member, Mr. COTTON, for engaging in a most fruitful colloquy designed to clarify the intentions of the committee with regard to the language appearing on page 55 of Senate Report No. 92-894—June 21, 1972.

I recently had an opportunity to meet with Dr. Peter R. Breggin who has, as many of us know, become an active and prominent spokesman in opposition to the use of brain surgery as a device to regulate behavior. As a layman, I am unable to pass judgment on a medical matter as complex and as specialized as psychosurgery, but I do share some of the concerns expressed by Dr. Breggin and his colleagues. Because nerve cells do not regenerate, psychosurgery produces a permanent and irrevocable change in the behavior of the individual. For this reason, Mr. President, I believe that we should move carefully and cautiously in this area. I would hope that the National Institute of Neurological Diseases and Stroke will not assume that the report language accompanying this bill constitutes a congressional directive that would override their normal peer review procedures. I believe that the remarks by the distinguished senior Senator from Washington and the distinguished senior Senator from New Hampshire have helped to still my concerns and clarified the congressional intent with regard to this matter.

EXHIBIT 3

(Taken from testimony by Dr. Bertram S. Brown, Director, National Institute of Mental Health, before the Subcommittee on Health, Committee on Labor and Public Welfare, U.S. Senate, Friday, February 23, 1973)

DHEW POLICY

I know the Subcommittee is quite familiar with the three cardinal principles of DHEW policy guidelines for the protection of human research subjects. They are, briefly: that the rights and welfare of the subjects involved are adequately protected, that the risks to the individual are outweighed by the potential benefit to him or by the importance of

the knowledge to be gained, and that informed consent is obtained in an adequate and appropriate manner.

The securing of informed consent poses a difficult problem even when the human subjects are of normal intelligence and are emotionally healthy and mature. It becomes infinitely more complicated when the subjects are seriously disturbed, below normal intelligence, or children and when the proposed procedures involve serious risks and irreversible consequences. But a clinical investigator may not avoid the solemn responsibility of securing informed consent merely because it is difficult.

DHEW guidelines describe the basic elements of an informed consent as follows:

1. A fair explanation of the procedures to be followed, including an identification of those which are experimental;
2. A description of the attendant discomforts and risks;
3. A description of the benefits to be expected;
4. A disclosure of appropriate alternative procedures that would be advantageous for the subject;
5. An offer to answer any inquiries concerning the procedures; and
6. An instruction that the subject is free to withdraw his consent and to discontinue participation in the project or activity at any time.

In other words, the clinical investigator may not withhold from the subject any facts which are necessary to form the basis of an intelligent consent to the proposed investigation. In addition, it forbids the inclusion of any exculpatory language in the consent form through which the patient waives or appears to waive any of his legal rights, or which he releases the institution or investigator from liability for negligence.

All this assumes that the human subject is himself capable of giving an informed consent. While the DHEW guidelines speak of obtaining consent from the subject "or from his authorized representative," they leave to applicable local law such difficult questions as (1) who may consent for the patient when he is incapacitated—next-of-kin? court appointed guardian? (2) under what circumstances can a substitute or agent consent instead of the patient? (3) may parents ever consent to a risky procedure on behalf of a child when the benefit is primarily for science and the benefits for the child are minimal?

Some hospitals and institutions have been drawing up very detailed and comprehensive procedures for solving these questions. They require the presence of the subject's personal physician, personal lawyer, and immediate kin with periods of time being allotted for reflection, questioning, and debate before consent is given. This is an area that will be receiving increased attention as we work with our sister agencies to refine and expand the DHEW requirements for research on human subjects.

Since most of the biological, medical, and behavioral research conducted in this country is supported by funds from the Department of Health, Education, and Welfare, the Department recognized its responsibility to take the lead in promulgating procedures which would adequately safeguard the rights of human subjects. The Division of Research Grants of the National Institutes of Health and, more recently, its Institutional Relations Branch was charged with the responsibility to formulate and oversee policies that would protect the welfare of human subjects involved in research projects supported with DHEW funds. The NIMH continues to work with NIH in proposing further refinements and modifications of the existing policies.

With respect to the specific issue of psycho-

surgery, the NIMH and the NINDS have established an Inter-Institute Work Group on Brain and Behavior to examine a variety of aspects of the problem. The Inter-Institute Work Group will be responsible for the formulation of a comprehensive report containing recommendations and policies for further activities in this area.

The ethical and moral problems posed by current medical, biological, and behavioral techniques are of considerable concern to Government agencies as well as the health professions, the scientific communities, religious groups, the Congress, and the lay public. Knowledge, or at least the application of knowledge to wield political or social power, has always been a potentially dangerous concomitant of scientific inquiry. Even new knowledge which at first appears to have only beneficial consequences can create new problems. Potter, in a book called *Bioethics* puts it quite succinctly: "... once we have made the choice to open Pandora's Box of Knowledge, we can never put back its contents, and mankind must continue to search forever for the wisdom that is needed to cope with the avalanche of new knowledge that is upon us." We must somehow evolve a system of technology assessment whereby the state of knowledge can be assessed and its readiness for application can be addressed within the context of relevant social, human, and ethical issues. Such a system would assure the timely application of relevant technology and help prevent the premature use of those techniques not thoroughly explored for their human and social implications.

PSYCHOSURGERY: MYRIAD TOUGH QUESTIONS

A surgeon can take out tonsils and tumors or transplant kidneys and hearts, and rarely is the appropriateness of his actions challenged. But one kind of surgeon—with a special practice called psychosurgery—has found himself in the middle of an international controversy.

The psychosurgeon destroys tiny pieces of tissue deep in the brain to change the way people feel and act—those who suffer from severe emotional or behavioral disorders that seem resistant to traditional treatments. His patients may include intractable depressives, incurable schizophrenics, uncontrollable aggressives, destructive hyperactives, among others.

From the psychosurgeon's viewpoint, he is performing a humane and noble service, rescuing desperate people. But to some, he is a tamperer who "mutilates" the brain, blunts the emotions, distorts the personality and exercises a form of behavior control.

Last week in Detroit the issue became the subject of a courtroom drama that could set a national precedent, not just for psychosurgery but for other radical treatments and for human experimentation in general.

The case centers on a research project in which patients from a state hospital for the criminally insane might be subjected to psychosurgery in an attempt to relieve them of their uncontrollable violent tendencies.

The goal of the project, which was to be carried out by the prestigious Lafayette Clinic, the psychiatric research and training arm of Wayne State University, was to rehabilitate patients and return them to society.

But just before the first patient was to be subjected to the in-depth brain wave studies that would precede surgery, a suit was brought by a civil liberties lawyer. Involuntarily committed persons, he charged, cannot give informed, voluntary consent to such a radical procedure when they may regard it as their only possible ticket out of the institution. The suit also asked whether psycho-

surgery should not be banned in any case as contrary to the public interest.

Although the original research proposal has now been scrapped as a result of the publicity it generated, the clinic is working on substitute proposals involving psychosurgery and the court has agreed to deal with the core issues of consent to radical treatments by institutionalized persons and the use of psychosurgery as a medical tool.

Modern psychosurgery, a technique that has evolved over the last decade and a half, is currently being used on some 500 patients a year in this country and many hundreds more elsewhere. In most cases, actual destruction of brain tissue is preceded by intensive studies of the brain's electrical activity under a wide variety of circumstances. Usually, electrodes are implanted deep in the brain in regions that are believed to be important in controlling behavior and emotion.

If electrical abnormalities are found in a certain region that appears to be linked to the patient's problem, then a section of brain tissue—probably no more than six-hundredths of an inch—might be destroyed by surgery, electricity, ultrasound or radiation. Sometimes, however, such in-depth brainwave studies do not precede surgery. In these cases, surgery is performed in an area of the brain (which may or may not be abnormal) that influences the behavior or emotion at issue.

The results of psychosurgery vary widely—from reports of 40 per cent to 95 per cent of patients experiencing significant improvement.

Even among supporters of the program, there is dissension. Some argue that only those patients with well-defined organic brain diseases, such as tumors or epilepsy, should be subjected to surgery. Others insist that behavioral or emotional evidence of brain disease is sufficient justification.

The practice raises some difficult questions. Is enough known about how the brain works to be sure the surgery will have the desired beneficial effect and not interfere with otherwise normal human responses and feelings? Or will those subjected to the refined techniques of modern psychosurgery be rendered "semi-vegetables" as were some patients who underwent the gross lobotomies of decades past?

How can it be demonstrated with certainty that the patient is unresponsive to more conservative treatment, especially if the patient is in a state institution where treatment is notoriously inadequate? On the other hand, if conservative methods are unavailable to some patients, is it fair to deny them a more radical treatment that may offer a realistic hope for relief?

How can a person whose brain is supposedly diseased give informed consent to an operation on the self-same organ?

If brain surgery can control aggressive behavior, will it be used to control politically violent individuals or, more realistically, to ease the custodial management of aggressive prisoners or hospitalized patients?

There is a real fear among some of letting psychosurgery out of the laboratory before enough is known about its effects and effectiveness. The present controversy, however, has had the effect of halting nearly all studies of the technique in this country, raising a not unfamiliar medical dilemma: Without further studies the potential of psychosurgery—for good or ill—will never be known.

—JANE E. BRODY.

EXHIBIT 5

SENATE JOINT RESOLUTION 86

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the two-

year period beginning on the first day of the first month which begins not less than 30 days after the date of enactment of this Joint Resolution, no Federal funds shall be expended, or available for expenditure, for the purpose of conducting, or providing assistance in the conduct of, any project or activity which consists of, or includes, the performance of psychosurgery; and during such period, no Federal facilities shall be available for the performance of psychosurgery or for any project which includes the performance of psychosurgery.

SEC. 2. The Secretary of Health, Education, and Welfare (hereinafter referred to as the "Secretary") shall (through the National Institutes of Health, or through other appropriate facilities of the Department of Health, Education, and Welfare) conduct a study of the employment of psychosurgery with a view to determining the number and types of cases, during the five-year period ending December 31, 1972, in which psychosurgery has been performed in all private and public hospitals in the United States, and of compiling an analysis, on a case by case basis, of a sufficient number of such cases (together with follow-up information thereon) to provide the basis for an objective scientific evaluation of psychosurgery performed during such period with regard to the types of psychosurgery performed, the conditions for which it was performed, and the results thereof. The Secretary shall complete such study and shall submit to the Congress, not later than one year after the date of enactment of this Joint Resolution, a full and complete report thereon, which report shall contain his views and recommendations as to the circumstances (if any) in which the performance of psychosurgery is appropriate, as well as the reasons and justifications for such views.

SEC. 3. It shall be the duty of each person who is the head of each department and agency of the Federal Government to cooperate with the Secretary in his conduct of the study authorized by section 2, and to provide to the Secretary such information as he may request and is available to such person.

SEC. 4. As used in this Joint Resolution, the term "psychosurgery" means brain surgery on (A) normal brain tissue of an individual, who does not suffer from any pathological disease, for the purpose of changing or controlling the behavior or emotions of such individual, or (B) on diseased brain tissue of an individual, if the sole object of the performance of such surgery is to control, change, or affect any behavioral or emotional disturbance of such individual. Such term shall not include brain surgery designed to cure, or ameliorate the effects of epilepsy; nor shall such term be construed to include electric shock treatments.

SEC. 5. There are hereby authorized to be appropriated such sums as may be necessary to carry out this Joint Resolution.

PSYCHOSURGERY: NEW DOUBTS

(By David Holmstrom)

SAN FRANCISCO.—A deepening moral conflict is developing in the United States over the increased use of psychosurgery—operations on the brain—to permanently alter human behavior.

The result, according to concerned lawyers, surgeons, and psychiatrists, is a grim challenge to the fundamental rights granted Americans in the U.S. Constitution—such as protection against deprivation of "life, liberty, or property without due process of law . . ." (5th and 14th Amendments).

The extent of psychosurgery, according to Dr. Peter R. Breggin, a Washington, D.C., psychiatrist and the leading opponent of psychosurgery, is greater in other countries—particularly England, where a total of 20,000

operations have been performed in the last 11 years.

UPWARD TREND SEEN

In the United States Dr. Breggin estimates from scant available data, between 400 and 600 operations have been performed in general hospitals and mental institutions during the last several years, "with the current rate going up rapidly."

He advocates taking psychosurgeons to court on charges of making "exaggerated claims" that lead to "uniformed consent" on the patient's part. He would also like to see federal and state legislation outlawing all forms of psychosurgery in the U.S. as they are in the Soviet Union.

Dr. Breggin and others assert that in the 1940's and 50's more than 50,000 operations were performed. "We are in the midst of a resurgence," he says, "including multiple forms of psychosurgery upon hyperactive children."

QUESTIONS POSED

At a recent symposium here entitled *A Clockwork Orange? Psychiatric Experimentation on Prisoners*, Dr. Breggin and a panel of lawyers and doctors discussed the legal and moral questions raised by psychosurgery. They asked:

How can mentally troubled patients with a long history of violent or "unacceptable" behavior be protected from brain surgery when mental turmoil is viewed as proof that psychosurgery is needed?

Who has the right to consent to psychosurgery? the patient himself? his family? the doctor? a professional committee?

Even if a person consents to psychosurgery how can he or she be sure that the "full story on the possible outcome" has been carefully explained? Who would explain it?

Does anyone, parents included, have the right to permit psychosurgery of children?

How can psychosurgery be stopped? Should penal institutions be allowed to expand experimentation on inmates?

Dr. Breggin says that "psychosurgery offends the whole Western ethical tradition of respect for the individual." He says all forms of psychosurgery blunt the individual's emotions and make him docile—"and of course they subject the individual to the control of others."

BIOLOGICAL ORIGIN SUGGESTED

The decline in the use of psychosurgery—or "lobotomies"—in the United States in the late part of the 1950's was apparently in proportion to the rise in the use of electroshock and exotic drugs on patients, noted Dr. Breggin, and the resurgence now hinges on the belief that mental illness may have a biological origin.

Dr. Breggin and others believe that aside from violating all ethical standards, psychosurgery is a tragic mixing of rehabilitation and punishment. And this is clearly seen in efforts by some penal institutions to deal with their most troublesome inmates by attempting to alter their behavior with drugs and psychosurgery.

How can experiments on humans that leave them permanently docile be considered rehabilitation? they ask.

At the symposium it was pointed out that in the recent California Supreme Court decision banning capital punishment there was a nearly overlooked statement that seemed to sanction behavioral control experimentation. The court said: "We do not interpret the constitutional prohibition of cruel or unusual punishments either as a license for the indefinite continuance of all punishments known to the common law . . . nor as a proscription of innovative types of punishment whose purpose is the rehabilitation or reformation of criminal offenders."

PRISONER USE WAS PROPOSED

According to Dr. Philip Shapiro, a Los Angeles psychiatrist, the key phrase is

"innovative types of punishment," which could lead to such behavioral control techniques as seen in the current movie, *"A Clockwork Orange."*

Only last year it was disclosed that the California Department of Corrections had considered using brain surgery on its more hostile and aggressive inmates. But a storm of protest in the press, and among doctors and psychiatrists, forced the state to drop the idea. But recently the Department of Corrections opened a new facility in Vacaville known as the medical-psychiatric diagnostic unit. It is designed to house California's most troublesome prisoners.

It is known that since 1966 some inmates in California prisons have been injected with a drug that causes loss of use of all voluntary muscles, including those used for breathing. It is part of an "aversion therapy" program in which the drug is administered and then the patient is "scolded" in an attempt to associate the drug's terrifying reaction with the crime the patient had committed. The theory is that the patient will no longer want to commit the crime, because he will remember the drug reaction. Many, it is charged, were given the drug without consent.

[From the Washington Star, Sept. 28, 1972]

"MIND CONTROL" HIT

(By Judith Randal)

Uneasy about the ethical implications of experimental surgery intended to alter behavior, scientists and activist groups are urging the Senate Appropriations Committee to drop a \$1 million item from the Department of Health, Education, and Welfare budget scheduled to be marked up today.

The budget item would provide money to the National Institute of Neurological Diseases and Stroke, part of the National Institutes of Health, to support violent behavior research at university-affiliated medical centers in Boston, Los Angeles and Houston.

Critics oppose the proposal because it includes provisions for so-called psychosurgery, the implantation of electrodes in the brain for the diagnosis and therapy of organic brain disease associated with violent behavior.

They say the surgery "blunts" personality and that it could be used as a weapon of oppression against women, prisoners and minority groups, for instance.

Furthermore, they charge, the operation—called an amygdalotomy and which destroys a part of the almond-shaped nucleus in the temporal lobes of the brain—is "just a new version of the old-fashioned lobotomy."

Supporters of the research proposal argue that patients are candidates for such surgery only when all other treatments have been tried to no avail. Such patients, they say, are often appalled by the damage their rage inflicts on themselves and others and are desperate for help.

And because so little is known about the physical basis underlying some forms of chronic violence, they add, research on what is called the "limbic system," or emotional brain, is crucial.

While the program would include surgery, it would concentrate at least as heavily on studies of biochemical tests, fingerprints, sex hormone levels and chromosomes. Abnormalities of these factors are often linked to violent behavior, they say.

During the surgery, electrodes are inserted in one or both almond-shaped nuclei in the temporal lobes, paired structures in the brain. The electrodes are used to record electrical discharges in these nuclei and to destroy the nuclei if the discharges are abnormal.

The object, the surgeons said, is to damage the brain as little as possible. Contrary to critics' allegations, they claimed, the op-

eration does not blunt the patients' personalities. Indeed, they said, they are still able to become angry but do not become violent.

"RIGHT OF PRIVACY"

In the last few weeks, Ralph Nader's Center for the Study of Responsive Law has been looking into the situation and Dr. Peter R. Breggin, a Washington psychiatrist and novelist, has urged several senators to withdraw their support for the proposal.

Besides basically objecting to psychosurgery for any reason whatever, Breggin argues that profiles of violence-prone prisoners are being developed from computerized data derived from a study being done for the Justice Department's Law Enforcement Assistance Administration. They say this is "unconstitutional because it constitutes an invasion of the right of privacy."

As a result of these and other pressures, Sen. Warren Magnuson, D-Wash., chairman of the Labor-HEW appropriations subcommittee has written to the director of the National Institutes of Health, Dr. Robert Q. Marston, to ask for clarification and some senators seem to be on the verge of withholding their support for the proposal, pending a thorough review of the issues.

Among these are Sens. Edward Brooke, R-Mass., Edward M. Kennedy, D-Mass., Glenn Beall, R-Md. and Norris Cotton, R-N.H.

One of the things that troubles Brooke, according to an aide, is that Dr. William Sweet, a top advocate of the proposal, told the Senate Appropriations subcommittee last spring that he was "speaking on behalf of the Neurological and Neurosurgical services of Harvard University at the Massachusetts General Hospital."

While Sweet is chairman of neurosurgery at the hospital, a spokesman there says he was not speaking on behalf of the MGH and that his research plans for human subjects were never approved by its research committees because of opposition from staff psychiatrists.

They acknowledged, however, that the hospital rents space to the Neuro-Research Foundation, of which Sweet is an officer, to do some diagnostic tests on outpatients and to conduct animal experiments.

At the hearing Sweet also spoke on behalf of the Neurologic unit at the University of Texas in Houston and the Neuropsychiatric Institute of the University of California in Los Angeles. No opposition witnesses appeared.

Meanwhile, the work has been going forward at the Boston City Hospital, also affiliated with Harvard, where Dr. Vernon L. Mark is chief of neurosurgery. Like Sweet, Mark is an officer of the Neuro-Surgery Foundation which has engaged a Washington lobbyist, Nathaniel Polster, to present its case to Congress and government.

Mark and Sweet said they have studied more than 100 patients subject to repeated violence with the aid of federal funds from LEAA and NIHM, but that only two of these had undergone the implantation of electrodes.

Neither of these, they said, was either a prisoner or otherwise a ward of the state. No patient in any of their work, they added, participates without providing informed consent.

In all, the surgeons have operated on 13 violence-prone patients, all with temporal lobe epilepsy. The progress of six has been followed for three years or more. Of these, two patients are "strikingly better" and two "considerably improved," according to Sweet and Mark.

Should Congress approve the controversial proposal, it will still have to be reviewed by scientists who act as advisors to the National Institute of Neurological Diseases and Stroke in order to be funded. Dr. Murray Goldstein, the Institute's associate director

said that approval would also entail both adherence to the NIH's regulations on human experimentation and extra ethical safeguards.

[From the Morning Star, Dec. 28, 1972]

MIND-CONTROL CURBS ASKED

(By Frederick P. McGehan)

WASHINGTON.—A panel of distinguished scientists called yesterday for increased controls over psychiatric experimentation ranging from brain surgery to encounter groups.

As it stands now, the panel told a session of the American Association for the Advancement of Science's annual meeting here, there are no effective controls over surgeons who wish to experiment on mental patients, or over non-professionals who organize encounter groups and sensitivity-training sessions.

Without guidelines and limits, the panel warned, a "small number of people will gradually gain control over greater numbers of other people." Such a move could have serious political, moral and ethical consequences, they stated.

The panel discussion was arranged by the Institute of Society, Ethics and the Life Sciences, a nonprofit "think tank" in Hastings-on Hudson, N.Y., concerned with moral and social implications of biological and medical advances.

Appearing on the panel were two psychiatrists, a neurologist, a lawyer, a psychologist and a social scientist.

They adopted both a personal approach—protection of the patient from unwarranted experimentation—and a broad social viewpoint—protecting society from mass-behavior control.

Harold Edgar, associate professor of law at Columbia University, said the only control over brain surgery experimentation now "is the integrity and self-discipline of the surgeon." He called for more formal controls either by professional organizations or by government.

Dr. Herbert G. Vaughan, Jr., associate professor of neurology at Einstein Medical School, Bronx, N.Y., said there has been unwarranted brain surgery in an attempt to cure alcoholism.

"There are no controls at the present time over any kind of surgery," said Dr. Vaughan.

He estimated that there are between 100 and 500 cases of psychosurgery in the United States each year. But because of the lack of any reporting system, it is impossible to determine the exact number, he added.

Willard Gaylin, president of the Institute for Ethics, told of a Mississippi surgeon who during the past 15 years has operated on some 30 children to correct abnormal behavior patterns. There is serious question whether the operations have had any impact on the children's conditions, Mr. Gaylin said at a news conference.

He also told of a Tulane University psychiatrist who has used electric shock therapy to treat one person suffering from recurrent episodes of rage and another man who is a homosexual.

"I feel some form of registry of psychosurgery and electric shock therapy should be developed," said Dr. Gerald Klerman, professor of psychiatry at the Harvard University Medical School.

Dr. Klerman also warned that mass manipulation of the population could theoretically be obtained by use of psychiatric medication or behavior-altering drugs.

Already, he noted, "one-half of the adult population" uses tranquilizers "for minor stress and tension anxieties of everyday life." He speculated that, in the future, drugs may note of caution about vasectomies, a popular memory.

In another presentation at the association's annual meeting yesterday, a group of scientists

from Long Island University issued a note of caution about vasectomies, a popular sterilization operation for men.

In studies on rats, the group found serious side effects in about half of a group of 30 that was vasectomized. The effects noted included "abnormal, smaller, soft purplish testes," the development of cysts in sperm ducts and a drop in male hormone production.

The group, led by Dr. A. M. Sackler of the Laboratory for Therapeutic Research in the university's College of Pharmacy, concluded that vasectomies "are not innocuous procedures."

PSYCHOSURGERY DEBATED AT NIH

(By Judith Randal)

Over the past 10 years or so, Dr. Orlando J. Andy, chief of neurosurgery at the University of Mississippi, has performed brain operations on "about 30" children to correct what he terms "their erratic hypersensitivity, aggressiveness and emotional instability."

Popularly known as psychosurgery, the procedures some performed on children as young as five years old—consist of the insertion of thin electrodes into small areas of the brain where they are used to stimulate the tissue and then destroy it.

Speaking at the National Institutes of Health here yesterday, Andy said that such surgery should be considered for both children and adults whenever what he calls "the hyper-responsive syndrome" occurs.

Andy was invited to speak at a panel discussion arranged by the National Institutes of Health-National Institute of Mental Health Ad Hoc Committee on Psychosurgery. The committee has been formed to focus attention on the social and political implications of the behavior-altering surgery and on a request made to Congress by Dr. William Sweet of Harvard University for a \$1 million grant to develop centers for the identification and treatment of violent or potentially violent persons.

Sweet, also an advocate of psychosurgery under some circumstances, was invited to participate in the discussion, but declined.

Andy described the conditions he thought justified such surgery.

These, he told an audience of several hundred, included the failure to respond to other treatments. Patients of this kind, he said "are a detriment to themselves and to society." In addition, he said, behavior-altering surgery should be considered when a patient requires "constant attention, supervision and inordinate institutional care . . . or requires such heavy drug dosage that he is nonresponsive and noncommunicative."

Usually, he said, such patients in addition to their antisocial behavior have movement disorders such as cerebral palsy.

As for psychosurgery for children who chronically misbehave, he said: "It should be used in the adolescent and pediatric age group in order to allow the developing brain to mature with as normal a reaction to its environment as possible."

The reason for this, he argued, is that personality patterns formed in youth persist in the behavior of adults.

Andy's views did not go unchallenged. Dr. Peter R. Breggin, a psychiatrist at the Washington School of Psychiatry here, called the operations Andy performs "old fashioned lobotomies in a new guise." Patients become "quiet and manageable" after such operations, he conceded, but the surgery "blunts" the emotions and irreversibly "reduces vitality."

Andy had reported that he prefers to operate on both sides of the brain and said of one patient that he had operated on him variously three, five, or six times—he wasn't sure which, although he did know that the boy was "nine or ten" at the time of the first surgery.

Breggin commented: "You operate and operate until you get the blunting effect." He also noted that one of Andy's patient's intelligence quotient tested at the same level when he was 16 that it had when he was 9, thus indicating that the surgery may have impaired his learning ability.

Other critics included Dr. David Eaton, senior minister of the All Souls Unitarian Church in Washington and Drs. P. D. MacLean and Larry Ng, both of the National Institute of Mental Health.

Eaton expressed fear that the poor, in general and blacks and other minority groups in particular, have been and will be used as guinea pigs for psychosurgery. He warned scientists that it will no longer be possible for them "to hide behind a white coat and say 'I'm being medically objective . . . and devoid of politics.'"

MacLean, said that his experience with brain surgery on animals has convinced him that psychosurgery is unjustified except when there is clearly something wrong with brain tissues. Dr. A. K. Ommaya of the NIH, however, disagreed. Ommaya, a neurosurgeon himself, said there are some rare exceptions. He cited some cases of intractable pain and chronic inability to eat because of an anxiety-producing disorder known as anorexia nervosa as examples.

Ng, a neurologist, summed up the psychosurgery dilemma.

"Compassion and curiosity," he said, "are two powerful elements in human existence. Compassion without curiosity is ineffectual but curiosity without compassion is inhuman . . . We can now ask not whether something can be done, but whether it should be done . . ."

[From the Star and News, Feb. 5, 1973]

CLERGYMAN ASKS PSYCHOSURGERY HALT (By Rebecca Leet)

A Washington minister yesterday called for an end to brain surgery operations whose sole aim is behavioral modification.

The Rev. David Eaton, senior minister at All Souls Unitarian Church at 16th and Harvard Streets NW, said that about 1,000 such experimental operations have been reported annually in recent years. He said that most of the patients are poor and from minority groups.

Eaton claimed, in his Sunday sermon, that at the present time, the intent of such operations—known as psychosurgery—is simply experimentation. He said research physicians performing them are more interested in collecting medical data than in treating the individual.

The minister said he recently served on a National Institutes of Health panel with four neurosurgeons, has talked with other doctors and has studied the subject.

He said: "Psychosurgery is unsound because no one really understands the brain and none of these experiments has helped in understanding the brain."

"(It is) ethically wrong because it is human experimentation in the guise of therapy, medically untenable because there is no accepted criterion for 'improvement' and politically ominous because it is a potent tool for controlling behavior."

He noted that, in the late 1960s, three Harvard University research doctors received a \$100,000 Justice Department grant to study how to control people who had "poor control of dangerous impulses."

"Who is going to determine what dangerous impulses are?" Eaton said.

Eaton noted that "the reason many of us are present today is a direct result of the . . . ingenious people who went before us" in medical research.

However, he added, "the vigil we must keep (over medical research) . . . cannot be lessened." Later, he said, "We must be aware of it (psychosurgery) . . . and fight to prevent its continuation."

Eaton said that, at the NIH panel, a Mississippi psychosurgeon said he had performed 20 such operations. The minister said he guessed the 20 people were poor blacks, but that the doctor would not answer a letter asking if they were. However, Eaton said, a follow-up study, which could locate only four of the 20, noted that all four were black.

Eaton praised the clinical physician, who is involved with treating the individual patient, but criticized the research doctor whose interest is in collecting medical data and not treating the individual.

He said other doctors have told him that some research doctors are not even able to do a thorough medical history of a patient.

Some, he claimed, "don't even want to touch the patient . . . or even see the patient" because they feel this lack of contact will enhance their research objectivity.

[From the Washington Post, Feb. 24, 1973]

PSYCHOSURGERY ASSAILED ON HILL (By Stuart Auerbach)

The government's chief psychiatrist said yesterday he opposes brain surgery for behavior problems—now being performed at a rate of about 500 a year—because doctors don't know enough about the brain.

The statement by Dr. Bertram S. Brown, director of the National Institute of Mental Health, was the first by a high government health official in open opposition to psychosurgery.

"The goal of responsible researchers in psychosurgery is to pinpoint the exact locus of the undesirable behavior in the brain and destroy only those tissues and nerve cells, leaving other functions and behaviors of the patient unaffected," Brown told a Senate Health subcommittee hearing.

"Frankly," he continued, "current practice of psychosurgery falls short of this goal, and even the best research in this field is not able to achieve such precision."

"My own view is that more knowledge and more refined techniques would be needed before one could determine unequivocal clinical indications for psychosurgical intervention."

Brown's view was disputed as being too hard on psychosurgery by Dr. Orlando J. Andy of the University of Mississippi, who said he has performed 30 to 40 such operations, and as being too easy on psychosurgery by Washington psychiatrist Dr. Peter Roger Breggin.

"It is well established," Andy testified, "that surgery is one of the most effective methods of treating structural pathology of the brain. Psychosurgical procedures are not experimental as implied by some critics."

He insisted that doctors know exactly where to operate on the brain to achieve the desired behavioral changes, that the operation is done only after lengthy consultations with both patient and family.

Subcommittee chairman Edward M. Kennedy (D-Mass.), however, read Andy's own reports on his operations which told how 75 per cent of one group of patients suffered a decrease in verbal intelligence and another patient suffered "intellectual deterioration."

Breggin said psychosurgery should be made illegal. "It's not even a medical procedure any more than the mutilation of an arm for a criminal act is a medical procedure," he told the subcommittee.

Brown said that neither NIMH nor the National Institutes of Health currently supports psychosurgery on humans although they both are supporting animal research on the brain.

"Until we do more animal research," he said, "we don't want to move into experimental psychosurgery."

He said psychosurgery may be of "potential benefit . . . in cases of extreme mental illness, especially those that are life-threatening to the patient or those around him. Psychosurgery should be performed only af-

ter extensive attempts at alternate modes of therapy had failed."

Asked by Kennedy about the possibility of psychosurgery being used for behavior control, Brown said it would be "an abuse of the highest order . . . I think it would be dreadful and unAmerican."

Dr. Willard Gaylin, a psychiatrist who heads the Hastings (N.Y.) Institute of Medical Ethics, said he doubted psychosurgery would be used for mass behavior control since there are more efficient means available such as education, television and drugs.

[From the Baltimore Sun, Mar. 3, 1973]

CURING SOCIETY'S ILLS WITH A SCALPEL (By Nick Timmesch)

WASHINGTON.—The scariest medical technique to be described before Senator Edward M. Kennedy's subcommittee on health is "psycho-surgery," a surgical procedure intended to alter human behavior. Some scientists believe that many violent people can be relieved of their uncontrollable impulses to assault, rape, kill or riot, if such surgery is performed.

When superficial information about psycho-surgery gets around, there is understandable fear among mental patients, prisoners and minorities, particularly blacks, that psycho-surgery might be performed on them in the interest of law-and-order.

And when large bundles of federal money are granted for studies and experimentation in brain disorders—including those of violent prisoners—well, the fear turns to paranoia, and even to wild charges against the government.

Psycho-surgery is not the type performed for brain disorders caused by injury, disease or tumor formation. Psycho-surgery is performed strictly to alter behavior, though there may be no evidence of brain damage or disease.

An estimated 500 psycho-surgery operations are performed annually. Dr. Orlando J. Andy of the University of Mississippi who testified that he performed 30 or 40, says these procedures are not experimental, but admitted that behavior improvement in many cases also involved reduced verbal intelligence.

Dr. Robert G. Heath of Tulane University's school of medicine testified as to how electrodes were implanted into brain regions of 65 patients in the department of psychiatry under carefully controlled conditions with "gratifying" therapeutic results. Dr. Heath said a medical school human-research committee, made up of scientists, attorneys and clergymen, reviews and approves all procedures of his department.

The Justice Department, through the Law Enforcement Assistance Administration, made an initial grant of \$108,931 to the Neuro-Research Foundation of Boston (followed by continuation grants of \$85,000) to study brain disorders in violent offenders. A contract totaling \$500,000 was made with the foundation by the National Institute of Mental Health, a federal agency, to "understand and control violent and destructive behavior that is presumed to be a direct result of brain disfunction."

What bothered civil libertarians and black spokesmen is that the three top scientists at the foundation, doctors William H. Sweet, V. H. Mark and F. R. Ervin, in 1967 signed a letter which discussed the possible role of brain disorders in "rioters who engaged in arson, sniping and physical assault." The letter cited medical reports of the high incidence of brain disorders in persons arrested for murder in other countries.

Also disconcerting was the recent revelation that three convicts underwent brain operations at the California Medical Facility at Vacaville for the reported purpose of making them more manageable. A request for

funds for more operations of this kind on violent inmates was put aside in the midst of a public uproar.

The trend toward behavior control, through surgery or otherwise, outrages a man like Dr. Peter R. Breggin of the Washington School of Psychiatry, who blames much of this thinking on Harvard's B. F. Skinner and Yale's Dr. Jose Delgado, both believers in medical control of humans.

"Man is seen as nothing more than a collection of molecules," cries Dr. Breggin rhetorically, "a machine programed by an environment, all of which leaves him completely at the mercy of these totalitarians." He sees America threatened by "a new collectivism based on hatred of the individual couched in psychiatric and behavioral jargon."

Well, it's not that bad yet, but I'm glad Dr. Breggin speaks out, and that Senator Kennedy conducts such hearings. The facts are that not a penny of National Institute of Mental Health or Justice Department money has gone for operations of the "psycho-surgery" type. An additional \$1 million grant to the Neuro-Research Foundation was suspended when President Nixon vetoed two Health, Education and Welfare bills, though that was not the express purpose of his vetoes. Moreover, Dr. Bertram S. Brown, director of the National Institute of Mental Health, testified last week that he is against "psycho-surgery" because not enough is yet known about it.

Some 50,000 Americans with severe mental illness had prefrontal lobotomies when that brain-damaging operation was the rage, between 1936 and 1955, and that experience is regarded as a mistake. We are fortunate that the Kennedy hearings, and other whistle-blowing actions by concerned Americans, makes medical science restrain itself in fooling around with the brain.

By Mr. KENNEDY:

Senate Joint Resolution 87. Joint resolution relating to the National Advisory Council on Indian Education. Referred to the Committee on Labor and Public Welfare.

INTRODUCTION OF JOINT RESOLUTION TO REQUIRE IMPLEMENTATION OF INDIAN EDUCATION LEGISLATION

Mr. KENNEDY. Mr. President, the administration's 1974 budget proposes rescission of the total funding provided by Congress for fiscal year 1973 to implement title IV of Public Law 92-318, constituting the Indian Education Act. The attitude of this administration toward providing quality education for American Indians has been negative from the start. Proposing no legislation in this area on their own, representatives from the Executive consistently opposed each effort on the part of congressional committees to work up constructive and far-reaching legislation on their own. Despite this opposition, the Congress acted last year and passed title IV, followed by appropriations of \$18 million for 6 months of operation of the programs established by the new law.

RESCISSION OF APPROPRIATIONS REQUESTED

As justification for its rescission request, the appendix to the budget suggests (at p. 1074):

Support for Indian education—which totaled more than \$80 million in 1973—is provided under several existing educational authorities. The proposed rescission would eliminate duplication of these existing authorities and programs.

It is clear that this request for rescission has no operative effect legally. The legislative language of title IV is clear: part A directs the Commissioner of Education to carry out a program of making grants to local educational agencies; part B directs the Commissioner to carry out a program of making grants for the improvement of educational opportunities for Indian children; part C directs the Commissioner to carry out a program of making grants for adult education. There is no discretion, express or implied, in this language. The Commissioner has no legal authority not to carry out these programs; nor does the President of the United States have any power not to effectuate the laws duly passed by Congress and signed into law.

The handwriting on the wall was unfortunately clear last summer, when in informal conversation the then Commissioner of Education suggested that appropriations might be allowed to "lapse" if they applied to fiscal 1973. Then, on November 24, 1972, in a memorandum to the Secretary of Health, Education, and Welfare, Assistant Secretary and Comptroller James B. Cardwell said that:

We are placing in reserve all discretionary funds appropriated above the level of the President's budget, e.g., program grants for Indian education.

I ask that this memorandum be placed in the RECORD as exhibit 1.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. KENNEDY. Mr. President, it now appears that this proposed action has become a fait accompli: title IV funds have been placed in limbo, with no sign that they will be released. The Office of Education has indicated that it will not expend or obligate the funds appropriated for fiscal year 1973 until Congress has rejected the proposed rescission. This position is clearly legally untenable. I do hope, however, that Congress makes resoundingly clear as soon as possible its intention to see title IV carried out.

Title IV was most assuredly not the product of superficial or hurried legislative action. A Special Subcommittee on Indian Education of the Senate conducted hearings over a period of 2 years, culminating in a final report recommending legislative action to meet the challenge and reverse the tragic history of Indian education programming in the past. After introduction of the Indian Education Act, 3 days of hearings were held by the Senate Labor and Public Welfare Committee, 1 day by the Senate Interior Committee, and 6 days by the House Education and Labor Committee. The act was passed without dissent by the Senate on two separate occasions, and was adopted as title IV of the Education Amendments of 1972 by the House and Senate before passage of that important legislation.

My own review of "existing authorities and programs" convinces me completely that any duplication is minimal and inconsequential. No other authority targets assistance to off-reservation Indian children; none promotes Indian control and

involvement in education programs; none provides special resources for Indian-controlled schools, or for Indian adult education programs.

REQUIRED APPOINTMENT OF NATIONAL ADVISORY COUNCIL

In addition to the funding problem, it appears that the White House does not intend to take seriously title IV's provisions for a National Advisory Council on Indian Education. Part D of that title calls for a 15-member Council of Indians and Alaska Natives appointed by the President from a list submitted by Indian tribes and organizations. Despite the compilation of such a list by HEW, the President has made no move to appoint the members of this Council.

The National Advisory Council is the first congressionally established body authorized to play a substantive role in the determination of policy and implementation of programs affecting Indian people. It is also the first Indian advisory body required to be appointed based on input from the Indian community itself. On August 18, 1972, the Commissioner of Education sent out hundreds of letters to tribes and organizations asking for recommendations for the Council. I ask that a sample letter be printed in the RECORD as exhibit 2.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. KENNEDY. Mr. President, the names are all in now. They were assembled and, according to criteria developed through consultation with Indian leaders, recommendations for appointment were transmitted from the Office of Education to the Secretary's office, for further transmittal to the President, last fall. That was the end of it.

This session Congress has already had to go through tortured processes to obtain "faithful execution" of our laws by the Executive, processes which were not contemplated by the Framers of the Constitution. The Constitution provides that Congress enacts legislation and the President, if he signs a bill into law, will carry it out. If the President does not want to carry out provisions of a bill passed by Congress, then he may veto the bill. He has no item veto power. And of course, Congress may override this veto. The Constitution does not suggest any further action on the part of Congress, once funds have been appropriated to enable execution of a law, to effectuate that law. Nonetheless, we find ourselves having to pass bills and resolutions saying that "we mean really!"—that we are serious about our desire that the law be carried out.

Although I do not believe this process ought to be necessary, and in fact I find it wholly undesirable, it does seem to be called for upon occasion. Thus, although part D clearly reflects Congress' intention that the President appoint a National Advisory Council on Indian Education, I have sent to the desk today a joint resolution, the provisions of which are simple and straight-forward:

Be it resolved that the members of the National Advisory Council on Indian Education for which provision is made by section 442 of the Education Amendments of 1972 shall be appointed not later than 10

days after the enactment of this Joint Resolution.

I expect a similar resolution to be introduced in the House and that Congress will act on this resolution without delay.

ADMINISTRATION RHETORIC

In discussing the failures of this administration to implement the Indian Education Act, I am reminded of the statement made a few weeks ago by the Under Secretary of the Interior, John Whitaker, in a press conference regarding Indian affairs. Introducing for the second time the administration package of Indian legislation, some of which has been strongly opposed by Indians, Mr. Whitaker said:

While the Federal Government has dramatically increased funding for Indian programs in the last four years we have exhausted the limits of existing authority to provide America's Indians the full opportunity to achieve self-determination. We need Congressional action—not inconclusive hearings or an expression of sentiment at a press conference.

I ask Mr. Whitaker, and the administration generally, to reflect on this language as applied to the situation in Indian education. Our hearings were not inconclusive; our expressions of sentiments were translated into direct legislative language which was responsive to the many constructive suggestions of Indian organizations and tribes and educators. Thus I would call upon the administration, with regard to the Indian Education Act, to take even the first steps required by the law, much less to "exhaust the limits of existing authority."

BUDGET PROSPECTS

It is accurate to observe that the Federal budget for Indian affairs has been on the increase. Administration spokesmen do not miss the opportunity to bring this point out at every occasion. But automatic raises in employee salaries, rapidly increasing construction costs, and inflation generally account for a large percentage of any increases. The Alaska Native claims payments account for another large chunk of increases. And some increases represent restoration of cuts from this year's budget, or movement of OEO programs to HEW next year. An excellent article written by Karen Ducheneaux and Richard LaCourse for the American Indian Press Association places the Indian budget in perspective, and I ask that this article be reprinted as exhibit 3.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 3.)

Mr. KENNEDY. Mr. President, I think that we must acknowledge that the resources of the executive branch are greater and more capable of making the initial determination of funding needs for various programs. By the same token, the congressional appropriations process allows for full input from outside the Government, as well as from members of Congress directly, and on the basis of these inputs Congress often determines that appropriation requests by the administration are either too high or too low, or that some specific need has been overlooked. The pattern adopted by the administration this year, of impounding

or withholding expenditure of funds that were not included in its original request, is unacceptable both from a practical basis—since the administration participates in the appropriation hearings and the President signs the appropriation bills—and from a constitutional basis—since the Constitution does not provide for item vetoes and clearly empowers Congress, not the Executive, to provide for the spending of Federal funds.

Finally, I want to take note of what seems to be a regression in the past few years in the area of tribal participation in the budget process. Extensive discussion of this subject occurred in hearings before my Administrative Practice Subcommittee on November 1971, and officials representing the Department of Interior assured us of their full commitment to tribal involvement in the budget-formulation process. Documents provided for our record contain the following:

From Deputy Commissioner John Crow: "It is our policy to seek the involvement and participation of the Indian people served by the Bureau in developing program and financial plans. . . . I want the FY 1974 PM [Program Memorandum] for each installation to reflect the thinking of Indian people served by the installation." (Italics in original.)

From the Commissioner of Indian Affairs: "I place absolute top priority on achieving Indian participation in program development. Until Indian people participate in planning and developing Bureau budgets at the Agency level, they will not be completely aware of the scope, commitment or, in some instances, the limitations of BIA programs or other BIA activities."

From Acting Deputy Commissioner Harold Cox: "It is our policy to provide Indian Tribes and other Indian organizations with the maximum opportunity allowed by law to become involved in the operation of BIA funded programs."

Unfortunately, these fine pronouncements have not been translated into action. Let me focus on the example of the Navajo area, which representatives of the Navajo Education Association recently brought to my attention.

It was agreed that there would be increased financial needs for education programs on the Navajo Reservation. Even to maintain programs at the previous year's level, increases in salaries and costs would require some addition to the budget. Despite the feeling on the part of the tribe that educational programs would suffer and many needs would remain unserved if a real expansion of the budget were not allowed, for the sake of economy and to remain within limitations imposed from above, the education association believed that it could not not only live without expansion—it could provide for absorption of the cost and pay increases within the previous budget level.

The education association, however, desired to control the process of absorption, determining itself which slots and programs were to be cut. The BIA could not live with this brand of self-determination; after all, some sacred cows—sacred especially to superfluous bureaucrats—would be gored. So the increased funds were budgeted to come from cutting meat issues to schools for food pro-

grams; from deleting the entire summer program; from eliminating a model dormitory program that had shown sufficient promise to have merited an add-on by Congress the previous year; and from curtailing other programs believed by the Indian people to be crucial to their children's needs. In short, the Navajo education budget dispute reveals a strange definition on the part of the BIA of "involvement and participation of the Indian people" in the budget process.

NATIONAL COUNCIL ON INDIAN OPPORTUNITY EDUCATION SUBCOMMITTEE

In the much heralded Presidential message on Indian affairs of July 8, 1970, the only specific proposal for Federal action in Indian education called for by the President was the establishment of an Education Subcommittee of the National Council on Indian Opportunity to assist local communities to take control over their schools. After reciting the statistics of the tragedies of Indian education, the President stated:

Consistent with our policy that the Indian community should have the right to take over the control and operation of federally funded programs, we believe every Indian community wishing to do so should be able to control its own Indian schools. This control would be exercised by school boards selected by Indians and functioning much like other school boards throughout the nation. To assure that this goal is achieved, I am asking the Vice President, acting in his role as Chairman of the National Council on Indian Opportunity, to establish a Special Education Subcommittee of that Council. The members of that Subcommittee should be Indian educators who are selected by the Council's Indian members. The Subcommittee will provide technical assistance to Indian communities wishing to establish school boards, will conduct a nationwide review of the educational status of all Indian school children in whatever schools they may be attending, and, will evaluate and report annually on the status of Indian education, including the extent of local control.

Let me remind my colleagues that this is the only comprehensive statement made by the President on Indian education. Let me also offer the observation that a Special Subcommittee on Indian Education in the Senate had studied the subject for over 2 years and reported to the Congress with specific remedial recommendations, and at almost the same time the Office of Education sponsored a \$500,000 study of Indian education. Yet the best the President could come up with was the mandate that a new group study the subject and, incidentally, provide technical assistance to communities wishing to establish school boards.

Mr. President, the Special Education Subcommittee of NCIO reported to the President on November 30, 1972. There was no fanfare or ballyhoo; there were no press conferences or public statements. In fact, the report has to this date been suppressed. I think the following quotes from the subcommittee's major findings tell us why:

The Federal Government is failing to implement its proposed policy that federal elementary and secondary day and boarding schools on or off reservations be placed under organizational and operational control of local school boards with all deliberate speed.

The Special Education Subcommittee, conceived as an action agency to provide technical assistance, was reduced to a token Indian group by withholding official and financial support. . . . The Subcommittee was promised, but did not receive, the resources necessary to form an effective technical assistance team(s) that would be accountable to them. . . . This lack of resources engendered the feelings of tokenism on the subcommittee and the impression that implementation of the self-determination without termination policy did not have strong or healthy roots in the Federal Government.

These are the words of a subcommittee set up under direct Presidential mandate, a subcommittee to a body chaired by the Vice President himself. There is little wonder, then, that there has been so little progress in Indian education over the past few years; little wonder that legislative attempts to provide solutions have been opposed by the administration; little wonder that Indian education today remains a national tragedy.

I believe that the major findings and recommendations of this NCIO subcommittee will be of interest to Indian people and to members of the Senate, and I ask that they be included at the end of this statement as exhibit 4. I also want to include in the RECORD as part of that exhibit a section on Scope and Limitations of the Report, which conclude that the subcommittee "made no attempt to recommend solutions for local situations." This can certainly be contrasted with the Presidential direction that the subcommittee work with local communities to assist them in achieving control of their education programs.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 4.)

WOUNDED KNEE AND BEYOND

Mr. KENNEDY. Mr. President, shortly after the occupation of Wounded Knee began, almost a month ago, a member of my staff traveled to South Dakota to talk with the Indian people involved. The complaints related were not new:

Exploitation of Indians by white traders and real estate operators.

Federal housing projects that are both inadequate and inappropriate for the life-pattern of the Oglala people.

Education programs that cost, per pupil, over twice the national average, yet yield a dropout rate of over 60 percent.

Local BIA officials who often appear at best insensitive or paternalistic, and at worst brutal or exploitive.

Discrimination in Federal and State programing.

Continuing failures on the part of Federal officials to abide by their own regulations in dealing with Indian lands.

These are the same complaints I heard in Washington and across the country when I chaired the Indian Education Subcommittee. They are the same complaints I heard in extensive hearings here and across the West and Southwest by my Administrative Practice Subcommittee. They come to me daily in letters from tribal chairmen in Arizona, from welfare recipients in the Midwest, from schoolchildren in Oklahoma, from landowners in the Southwest. Allegations are the same from everywhere: too much "white tape"; too much Government interference; too little funding; inadequate

recognition of Indian sovereignty. These are the issues also that were brought to my office by participants in the BIA occupation last November.

Certainly these complaints apply in the area of Indian education. The Office of Education has not implemented the Indian Education Act, and its revenue-sharing proposal threatens other programs benefiting Indians. The Bureau of Indian Affairs is not fully including tribes in the budget process and continues to be reluctant to abandon paternalistic control of Indian programs. The National Council of Indian Opportunity's Education Subcommittee has not been given adequate leeway or resources to achieve the goals set out for it. The White House has made no appointments to the National Advisory Council on Indian Education.

The list of particulars could go on indefinitely. In a test case in New Mexico a Federal judge found last month that the local public school district had "consistently followed a pattern of resource allocation that discriminates against the Indian students," had "violated both the Johnson-O'Malley Act and the title I act" in its regulations, thereby depriving Indian children of equal educational opportunity. As the court concluded, "the Indian children truly have not been given an even chance." The facts giving rise to these conclusions repeat themselves throughout the country.

Though admitting that substantial, and probably drastic, steps were needed to resolve the problems raised relating to off-reservation boarding schools, the BIA has yet to take definitive action. Revision of Johnson-O'Malley regulations has been in process now for 3 years, but new regulations have yet to be promulgated. For a year and a half the BIA has talked about the importance of its proposed student bill of rights; these have yet to take effect. With all the talk of Indian control of schools and other education programs, at this date there are still only 7 out of over 200 schools that are community controlled, and only two or three JOM contracts with tribes have been firmed up. Indian employment within the BIA's central office education division continues at disgracefully low levels, despite the growing number of qualified Indian educators and administrators. The backlog on school facility construction continues to grow. Inadequate attention is being given to higher education needs of Indians.

I believe that Congress has taken important first steps in reversing the tragic history of Indian education. Further action is needed, and I am confident that we will meet the challenge from the legislative standpoint. But there must be a corresponding commitment on the part of the executive branch, to carry out the will of Congress and to fulfill its trusteeship toward native Americans. So far, on this score, we have heard a lot but seen very little.

EXHIBIT 1

NOVEMBER 24, 1972.

To: The Secretary.

From: James B. Cardwell, Assistant Secretary, Comptroller.

Subject: Current Activity Report—Week Ending November 24, 1972.

Apportionments. All apportionments associated with the fiscal year 1973 supplemental

appropriation bill (except for the Social and Rehabilitation Service account) have been submitted to OMB. Those submitted include all of higher education, emergency school assistance, and the salary and expense accounts associated with those items, including the Office of the Secretary. Non-education items submitted include Head Start and drug abuse. We are requesting apportionment of all funds appropriated at or below the level of the President's budget and mandatory formula grants appropriated above the President's budget, e.g., the veterans cost of instruction payments to institutions of higher education. We are placing in reserve all discretionary funds appropriated above the level of the President's budget, e.g., project grants for Indian education. (Mr. Dukes, Ext. 22573)

Public Assistance Items. The Secretary, the Under Secretary, and others met with Cap Weinberger and staff on November 22 to discuss savings associated with the 1973 and 1974 budgets under cash assistance. The principal objectives of the meeting were to provide OMB with assurances that the savings already estimated could be achieved and also to discuss the possibility of advancing some of the 1974 savings into 1973. Additional staffing for SRS, GC, et al., required to carry out some of the proposed actions was not discussed.

The Under Secretary, SRS staff, and members of this office met with Paul O'Neill and staff on November 22 to deliver and describe the proposed new regulations on social services. Our target is to publish notice of proposed rule making in the Federal Register by December 1, and we alerted OMB to the fact that every month's slippage will cost us approximately \$60 million per month. OMB has requested another meeting for November 28, at which time they expect to either be able to give us the go ahead or describe the changes they recommend in the regulations. Presumably, these could be handled in time for the December 1 publication date. Prior to November 28, they have asked us to rack up, if possible, additional possible steps to tighten the regulations and the amounts each would save. (Mr. Canfield, Ext. 21773)

EXHIBIT 2

WASHINGTON, D.C., August 18, 1972.

Mr. THEOPHILE O. TRAVERSIE,
Chairman,
Cheyenne River Sioux Tribal Council,
Eagle Butte, S. Dak.

DEAR MR. TRAVERSIE: Since the passage of the Indian Education Act, Title IV, P.L. 92-318, the U.S. Office of Education has been busily engaged in reviewing the intent, direction, and ramifications of this new legislation.

One section in the law calls for the establishment of a National Advisory Council on Indian Education. This Council will have 15 members who are Indians and Alaska Natives representing diverse geographic areas of the country. They will be appointed by the President.

The Council will serve as advisors to my Office on a number of important matters concerning Indian education, including submission of nominations for the Deputy Commissioner of Indian Education.

In accordance with the new law, we are seeking broad participation from Indian tribes and organizations throughout the country. Therefore, I am writing to invite the recommendations of your Tribal Council for the National Advisory Council. If you wish to make any nominations, I would appreciate receiving them by September 25, 1972. In view of the large number of organizations expected to submit names, we ask that you limit recommendations to not more than five.

To assist you in submitting nominations, I enclose several items, as follows:

1. A general information sheet on P.L. 92-318, Title IV, the Indian Education Act;

2. The specific language in the law relating to the role of the Advisory Council; and

3. The forms to be used for submitting nominations. Please provide all the information requested for each nominee.

After my Office receives the nominations, I will move quickly to process them and make recommendations for membership.

I appreciate your assistance and look forward to a more effective joint working relationship with the Indian community as we seek to improve the educational circumstances of all Indian people.

Sincerely yours,

S. P. MARLAND, JR.,
U.S. Commissioner of Education.

EXHIBIT 3

NIXON'S NEW INDIAN BUDGET

(By Karen Ducheneaux and
Richard La Course)

WASHINGTON, D.C. — Analysis of the proposed federal budget for the coming fiscal year must be viewed from two standpoints in order to grasp what it will really mean for the Indian people of America.

The first standpoint is the definition of the term "Indians," and the second is the actual cuts or increases in the budget proposed to the Congress by President Nixon.

The most basic viewpoint is that of the definition of terms. Indians have been permitting the federal government to define what constitutes an Indian, what constitutes an "Indian expenditure," and the meaning of the phrase "spent on."

Four major facts emerge from a careful analysis of the new budget.

First, when the President's budget states that \$1.45 billion will be spent on the approximately 500,000 reservation Indians and Alaska Natives, it is patently false. At least one-third of the \$1.45 billion is money from non-Indian agencies which is available to all Indians on the basis of their U.S. citizenship, not on the basis of their legal Indian identity. Many of the approximately 500,000 non-federally recognized Indians participate in these programs.

Second, not all of the \$1.45 million is spent to "support" Indians. A portion is actually spent "against" Indians, or to rectify past mistakes on the part of the federal government. For example, money to support the Justice Department staff which works against Indians before the Indian Claims Commission is included in the total figure, as are monies to support the work of the commission itself, and funds to support the work of the General Services Administration which straightens out federal accounts of Indian money. Another portion is money spent by the U.S. Army Corps of Engineers to build dams on Indian reservations or to pay Indians for lands taken. None of this is money "spent on" Indians.

Third, some of the monies included in the \$1.45 billion are monies belonging to Indian tribes themselves, deriving either from claims payments or tribal revenues which the U.S. holds in trust. The figure for this area in Nixon's new budget is \$190,000,000.

Fourth, that money spent by the federal government on Indians which comes from non-Indian programs, such as the Veterans Administration or Labor's Manpower Training, is by no means money spent on Indians as Indians, but on taxpaying citizens who have fought in the wars of this country.

The result of this redefining of terms is to leave about half of the \$1.45 billion which can accurately be said to be spent "on" Indians. This is the money which will go to the Bureau of Indian Affairs, the Indian Health Service and the National Council on Indian Opportunity.

The second standpoint from which the new budget must be analyzed is that of increases and decreases in "Indian" expenditures and "citizen" expenditures.

At first glance, it would appear the BIA

will get a \$50 million increase. But analysis shows the increase to be a puff of smoke. Cuts in education and welfare services are hidden by including the \$20 million increase in payments on Alaska Native claims. Increases in resource management are due to the transfer of \$25 million from the Economic Development Administration to the BIA. This is hardly new money.

And there is some indication that a mix-up on the part of the administration may mean that this \$25 million will have to come out of the new BIA appropriation rather than through a supplemental appropriation.

The Indian Health Service budget shows a proposed increase of \$8,928,000. Upon analysis, however, one finds that \$4,708,000 was cut from the appropriation for the current year and is simply being added back in the new budget.

In their capacity as citizens, the funds Indians have been drawing from other agencies may disappear into special revenue sharing legislation, if the Congress passes the proposed Nixon legislation. Indians have no guarantee they will participate in special revenue sharing as they have in general revenue sharing. Two programs in which Indians have participated as citizens will fall under special revenue sharing concepts if the President has his way with Congress. These are the HEW Office of Education programs and Labor Department manpower training programs.

The purses strings will also be tightened for urban Indians. The federal government has assisted in funding a total of 13 urban centers, to the tune of \$1,405,000 during the past year. According to Nixon's new budget proposals, only four centers—called urban demonstration centers—will receive continued funding at their current levels. And Nixon has liquidated the Office of Economic Opportunity (OEO), which in his July 1970 Indian Message he billed as his "lead agency" for urban Indians.

On the brighter side, an increase in monies for the General Services Administration will mean a speed-up in the work of the Indian Claims Commission, due to expire in 1977. Although accelerated work and additional funds do not guarantee that Indians will win their claims, it means at least that many tribes will finally get their day in court.

Although there is a net increase in BIA appropriations, about \$23 million will be chipped away in the area of social programs. And while appropriations for Indian health facilities has been cut by about \$3 million (with about \$48 million needed for new facilities, modernization and repair), the appropriation request for Indian Health Services has gone up a net of about \$4 million.

Finally, the really good news in 1973 will be the money going to tribes and Indian communities through general revenue sharing. Indian tribes and communities are receiving about \$6 million in general revenue sharing in February. They will be receiving such checks henceforth on a quarterly basis.

EXHIBIT 4

BETWEEN TWO MILESTONES: THE FIRST REPORT TO THE PRESIDENT OF THE UNITED STATES

(By the Special Education Subcommittee of the National Council on Indian Opportunity, November 30, 1972)

CHAPTER I

Major Findings and Recommendations

The Special Education Subcommittee of the National Council on Indian Opportunity was initiated by the Presidential Policy Message of July 8, 1970 to 1) provide technical assistance to local American and Alaskan Native communities wanting to establish local boards of education and 2) to report the status and monitor change in American and Alaskan Native education through a national review and annual assessments. The Special Education Subcommittee

was established as the primary mechanism for implementing the policy of self-determination without termination in the educational sector of American and Alaskan Native affairs. The nine member Subcommittee conducted regional hearings in the contiguous forty eight states and Alaska.

Major findings

On the basis of testimony by American and Alaskan Native people and Subcommittee deliberations, the following summary of major findings is presented:

1. The Federal Government is failing to implement its proposed policy that federal elementary and secondary day and boarding schools on or off reservations be placed under organizational and operational control of local school boards with all deliberate speed. The federal bureaucratic agencies charged with this responsibility are reluctant to abandon the paternalism and patterns of influence which the new policy sought to eliminate. Since July 8, 1970, only eight, out of an approximate total of 200, federal day and boarding schools on-and-off reservations have been placed under the control of local boards of education with Native people as members. An additional six Native communities can be said to be in the process of establishing local boards to operate existing federal elementary and secondary schools. Those instances of actual and proposed assumption of control by Native people have generally been instigated and pursued by the people themselves.

Middle and lower echelons of the Federal Government have not planned for nor pursued implementation of the proposed policy. After two years under the new policy, many local advisory boards have been created, but the actual operational control of the federal schools for American and Alaskan Native children remains in the hands of the Bureau of Indian Affairs. The power to guide and effect this policy clearly resides in the agencies of the Federal Government; it has not been exercised.

2. The July 8, 1970, Presidential Policy Message also called for the vesting of a greater degree of programmatic control over education of Native children in public schools by contracting for the expenditure of Johnson O'Malley educational funds directly with the tribes and communities. During fiscal year 1971, approximately \$19,652,000 was allocated to Johnson O'Malley educational programs. Of this total, \$919,000 or about 4.67 percent was contracted directly with tribes or other Native communities. During fiscal 1972, \$2,750,000 or about 12.16 percent of the total Johnson O'Malley educational budget of \$22,600,000 was contracted directly with tribes and local communities. The Subcommittee interpreted the small proportions of Johnson O'Malley contracted directly to tribes to be evidence of hesitancy or actual failure in policy implementation.

The small proportion of Johnson O'Malley funds actually contracted directly with tribes may be in part due to the fact that needed enabling legislation has not yet been passed by the Congress. In its hearings, the Subcommittee found that the promise of vesting a significant degree of educational programmatic control with Native people at the local level remains largely unfulfilled.

3. A division of organizational authority and responsibility reduces the effectiveness of educational programs and services for American and Alaskan Native children attending public schools. Two uncoordinated federal agencies, the Bureau of Indian Affairs and the United States Office of Education, administer separate programs which have major significance for the education of Native children enrolled in public schools. The Johnson O'Malley program is managed by the BIA, and the USOE distributes resources authorized under P.L. 815, P.L. 874,

several Titles of ESEA, the Vocational Education Act, and other laws.

The Presidential Policy Message recognized the dual relationship of the Federal Government to American and Alaskan Natives stemming from: (1) special treaties, statutes, and executive orders; and (2) rights and responsibilities attending United States citizenship. Under treaty provisions or other arrangements, the Federal Government is obligated to provide educational services to Native children living on designated federal trust land. While the Subcommittee opposes centralized control and student boarding features of the federal schools, it recognizes the important and necessary function of the BIA as an organizational mechanism for implementing and supporting special federal relationships with Native people.

When American and Alaskan Native children attend public schools on or off reservation land, a different set of relationships stemming from citizenship applies. The principal channel of control for public schools flows from a state legislature through a state department of education to local school boards. The principal channel, aptly described by one Subcommittee member as a maze, for federal support and limited control flows from the legislative branch to the USOE and from there to state organizations. These channels of authoritative communication constitute the formal organizational structure for public education.

The BIA is not part of this organization, in spite of the fact that it disbursed \$22,600,000 in Johnson O'Malley funds and received an estimate \$16,316,226 in set-asides or project grants from the USOE during the fiscal year 1972. Beyond the amount of set-asides and grants to the Interior, the USOE has actual and potential impact on the education of Indian children through such varied programs as Compensatory Education, Bilingual Education, Drop-out Prevention, and other programs not aimed at particular ethnic groups. The passage of the Indian Education Act provides an important opportunity to provide better coordination of educational services provided for Native children enrolled in public schools.

4. The Special Education Subcommittee, conceived as an action agency to provide technical assistance, was reduced to a token Indian group by withholding official and financial support. The Subcommittee was appointed from the Office of the Vice President of the United States, but the prestige of that office was not infused in Subcommittee credentials in spite of repeated requests. The magnitude and importance of the specific charges to the Subcommittee merited greater official support from the Executive Branch of the Federal Government if performance expectations really went beyond the mere preparation of another written report. The effectiveness of the Subcommittee as an administrative mechanism was neutralized through inadequate allocations of financial and/or human resources.

The first charge to the Subcommittee was to provide technical assistance in the formation of local boards of education in Native communities wishing to assume local control of federal schools. Assumption of control of education is a complex task. A team of legal, financial, and educational specialists is needed to create a viable organizational structure. The Subcommittee members were experienced educators, but none of them were lawyers, accountants, or organizational specialists and all of them were employed on a full-time basis in demanding positions. Technical assistance in developing local boards of education to take over federal schools is not a part-time job. The Subcommittee was promised, but did not receive, the resources necessary to form an effective technical assistance team(s) that would be accountable to them.

The second charge to the Subcommittee was the preparation of a national review-status report on Indian education. The third charge called for an annual report that would serve a monitoring function. A national assessment is an undertaking of great magnitude. The 1928 Meriam Report and the seven volume Senate Subcommittee Report each took two years to complete, while the recent Havighurst Study required nearly three years from its inception. The Havighurst Study, for example, was performed on a grant of \$500,000.

The Special Education Subcommittee proposed to meet its charges on a rather conservative budget of \$191,000. The needed support was not forthcoming and, only after considerable negotiations, a total of \$21,000 plus travel was made available for the Subcommittee technical assistance, national status reporting and annual assessment functions. This lack of resources engendered the feelings of tokenism on the Subcommittee and the impression that implementation of the self-determination without termination policy did not have strong or healthy roots in the Federal Government. Only the collective and individual Subcommittee member commitments to improve the quality of education for Native people deterred resignation of the Subcommittee.

5. The Special Education Subcommittee sensed two general sentiments or points of view among native people toward local control of education at the hearings it conducted. One point of view was characterized by hesitancy and a fear that local control of education would eventually mean a loss of support; another approach to termination. Support for this point of view was phrased in arguments that Native people are not yet ready to assume control, that sufficient numbers of trained Native personnel are not available, and that an assumption of local control might jeopardize existing programs and the progress that has been made.

This point of view tended to be held by Native and non-native people whose status or career goals were linked to the perpetuation of the status quo. This point of view has a strong chance to prevail because its proponents tend to be in positions of influence or have access to those in power. If the implementation of local control of education is left to Natives and non-natives inclined toward this point of view, the process will be prolonged and difficult.

The second point of view toward local control of education by Native people was characterized by receptivity and enthusiasm. People who held this point of view were generally those who felt that they had little to lose as a result of change. These are the Native people who seek relief from the family strains of boarding school, who want curricula and programs which would help their children achieve better in basic subjects, and who want school climates which would be more sympathetic to the Indian and Alaskan Native experience. By and large, the Native people who advocate the assumption of local control see it as a means to better education for their children. Their concerns are not with formal organizational structure but with sensitivity to academic, personal, and social needs in the classroom.

6. The role of the Special Education Subcommittee is unclear. It was unable to execute the specific charges it was given. Its relationship to other American and Alaskan Native Education advisory groups in the Federal Government remains undefined. The future is even more uncertain. The recent Indian Education Act created a National Advisory Council on Indian Education in Health, Education, and Welfare. The language of the act charges the National Council with some of the same responsibilities as the Subcommittee. For example, in Section 442(b)(3) the National Council is charged with responsibility for the evaluation of any

program or project involving Indian children or adults carried out under the auspices of Health, Education and Welfare. This responsibility for evaluation overlaps with the second and third specific charges to the Subcommittee which call for a status report and annual assessments.

Section 442(b)(4) states that the National Council shall "provide technical assistance to local educational agencies and to Indian educational agencies, institutions, and organizations to assist them in improving the education of Indian children." The language of this provision clearly includes the primary charge to the Subcommittee in which it was to provide technical assistance to Native communities seeking to establish local boards of education.

The Special Education Subcommittee is concerned that the proliferation of advisory councils of American and Alaskan Natives can become counter-productive. Native involvement in policy formulation is essential, but too many councils or committees can impede real progress in the improvement of educational opportunity. The Federal Government must be commended for its efforts to involve Native people, but it must make a concerted effort to minimize role ambiguity for the advisory bodies it creates. The pressing educational needs of Native people cannot afford duplications of effort which may result in ineffective and inefficient use of available resources.

Recommendations

The educational concerns of American and Alaskan Native people go beyond the problems referred to in the charges of the Special Education Subcommittee. Hearing testimony and Subcommittee deliberations led to the following recommendations:

Recommendation No. 1

Whereas, the cultural backgrounds, economic circumstances, educational needs, and degree of desired responsibility for the management of education are too diverse to be implemented by a single set of operational policies or procedures without violating the individuality of Native people or the spirit of self-determination;

It is recommended that, all agencies of the Federal Government meet the obligation to support Native education and implement the policy of self-determination through a variety of contractual arrangements which are sufficiently flexible to meet the needs of Indian people living under the diverse circumstances of native communities on or off reservations and in pluralistic urban areas.

RECOMMENDATION No. 2

Whereas, the local community constitutes the fundamental level at which individuals, families, and other social groups act out their social, political and economic interdependence, and whereas, the local community is the institution which preserves, adapts, and reinforces group mores and cohesiveness, and whereas, people have the right to join together to provide educational opportunities for their children, and whereas, there exists a special relationship between the Federal Government and Native people, and whereas, Native people do exist in both rural and urban communities:

It is recommended that, social change in the Native community be officially accepted by all agencies of the Federal Government, and that, for educational purposes, native tribes, clans, bands, chapters, villages, land claims settlement corporations, or nonprofit educational corporations of parents, who trace their lineage to several traditional Native nations be recognized by the Federal Government as agencies eligible to contract with the Federal Government for the support of the education of their children, and that, guidelines for recognition and appropriation of support be legislated by the Congress of the United States.

Recommendation No. 3

Whereas, the family is the basic unit of social structure in American and Alaskan Native culture, and whereas, the family is the most important social institution for the rearing and nurturing of children:

It is recommended that, federal implementation of self-determination take policy directions and procedural forms which preserve, support, and reinforce the American and Alaskan Native family, that, boarding schools as a normative education process for Native children be phased out as the result of road construction and decentralization programs until the boarding school experience remains only a minor program component of some day schools to accommodate exchange students or local students with special personal circumstances, and that, the emerging day schools be governed by organizational structures which encourage and require direct and elected representative community educational government.

Recommendation No. 4

Whereas, Indian children attending public schools have rights to educational opportunity attendant upon state and federal citizenship, and whereas, the division of responsibility for the education of Native children in public schools between the BIA and the USOE tends to inhibit program coordination and effectiveness, and whereas, the Indian Education Act has created an organizational mechanism within the USOE capable of coordinating all educational efforts in the public schools;

It is recommended that, all programs involving the education of Native people through public school organizations be administered or coordinated by the Bureau of Indian Education in USOE under the direction of a new Deputy Commissioner, and that, the responsibility and authority vested in the new Bureau specifically include the management and distribution of Johnson O'Malley funds.

Recommendation No. 5

Whereas, schools serving children of Native communities need to become an integral part of that community, and whereas, Native people want a choice to hire competent Native teachers, counselors, and administrators, and whereas, it is to the benefit of the Native and non-natives to have Native educators working in public schools which serve few, if any, Native children, and whereas, colleges and universities training teachers should have Native people represented on their staffs;

It is recommended that, federal resources be made available to colleges and universities which have demonstrated involvement of Native communities and organizations of which are prepared to provide quality programs with Native policy input to recruit, train, and assist in placing Native teachers, counselors, curriculum specialists, librarians, special education teachers, school administrators and other educational specialists, and that, a Native organization with a research capability be employed to assess the supply and demand function for such programs.

Recommendation No. 6

Whereas, the revival of interest in Native history and culture is a vital part of an effort by Native people to gain a meaningful social perspective for their lives somewhere between a romantic, but unrealistic, return to the past and a complete, but artificial assimilation with transplanted European culture, and whereas, many of the educational materials are historically incorrect and prejudicial to the image of Native people;

It is recommended that federal resources be allocated to Native organizations for the development of instructional materials, curriculum and library resources which will lead to unbiased perceptions of Indian history and culture by both Native and non-native students in pursuit of Native studies

and for incorporation into the study of religion, art, music, dance, and other disciplines of study at elementary, secondary and collegiate levels.

Recommendation No. 7

Whereas, the knowledge and skills offered by institutions of higher education are essential in the conduct of native affairs, and whereas, it is important to Native people to have non-natives become better informed about the past, present, and future of Native life in the context of higher education, and whereas, Native people must have increased access to general and professional programs in established colleges and universities, and whereas, the emergence of Native institutions of higher education is a new trend which promises unique orientation to the needs of Native people, and whereas, the costs of higher education have risen beyond the means of most Native students;

It is recommended that federal resources continue to be made available to established colleges and universities to stimulate Native studies and special professional training programs for Native people with mandatory programmatic control shared with representatives from Native communities, and that, sufficient federal resources be made available to emerging Native institutions of higher education so that they have an adequate opportunity to demonstrate their effectiveness in meeting the needs of Native people, and that, the level of funding for both undergraduate and graduate Native students be increased.

Recommendation No. 8

Whereas, Native students are not adequately informed about undergraduate, graduate and vocational scholarship opportunities in the various colleges, universities, and technical schools, and whereas, there is no formal structure established for the effective dissemination of information already available;

It is recommended that, a central clearinghouse be established with assigned responsibility for collecting, cataloging, and disseminating information from federal, state, tribal and private agencies, regarding the nature of opportunities and levels of support available for Native students in vocational, technical, and higher education, and that, regional branches be established throughout the United States to facilitate communication and the accommodation of diverse geographical needs, and that, application procedures to various sources be consolidated to produce a more simplified, uniform, and expeditious procedure, and that, part of each clearinghouse organization be a Native Student Scholarship Opportunity Committee to actively disseminate scholarship information to Indian high school and college students and recruit applicants for these opportunities.

Recommendation No. 9

Whereas, the movement of Native people to urban areas is predicated on an often unfilled promise of economic opportunity to live a richer life, and whereas, the movement to urban areas tends to drain trained leadership away from Native communities which need the social presence and the services these individuals can provide;

It is recommended that, the policies and procedures for the implementation of self-determination in Native education should reach into other areas of Native affairs so that the impact of vocational, collegiate, and professional training of Native people is felt more strongly in Native communities, and that, long-range plans for staffing the Public Health Service, Legal Assistance, Land Management, and other services provide on-reservation jobs at many skill levels for Native people who have completed appropriate training programs and wish to render service,

other than in education, to their home or other reservation community.

Recommendation No. 10

Whereas, American and Alaskan Natives are citizens of the United States and enjoy all rights and privileges, and whereas, the Native people have a unique relationship with the Federal Government through treaties, statutes, executive orders, and whereas, such treaties, statutes, and executive orders conflict with other federal statutes such as the Civil Rights Act of 1964, and whereas, federal funds are appropriated for education and disbursed to public schools, universities and colleges, state and federal agencies and profit and non-profit organizations subject to the conditions of the Civil Rights Act, and whereas, educational funds must also be expended to meet the educational needs of Native citizens residing in either on-or-off-reservation communities;

It is recommended that, legal clarification be immediately undertaken to resolve the status of Native children in school desegregation plans of districts located on or adjacent to reservations; and that, such clarification provide that desegregation plans being enforced by the Federal Government through Civil Rights Act of 1964 not apply to Native people, and that, until such time as the Federal Government officially clarifies the implications of the Civil Rights Act for Native people, desegregation plans not be forced upon or accepted by reservation or non-reservation Native communities.

Recommendation No. 11

Whereas, the areas of technical, vocational and related skills are expanding rapidly and now offer career opportunities which were not previously available to Native students, and whereas, Native students have traditionally been educated for selected technical and vocational careers that have not reflected the diversity of vocational opportunities nor specific skills demanded in the society in which they must compete, and whereas, the need for skilled technicians and tradesmen is severe on reservations and other Native communities, and whereas, a shift of national priorities is reflected in increased federal and state funding for vocational and technical education;

It is recommended that, federal agencies provide human and financial resources for training Native people in all facets of vocational and technical education, and that, federal agencies pool their efforts to have maximum impact in supplying trained Native citizens in various occupations.

Recommendation No. 12

Whereas, American and Alaskan Natives have one of the highest dropout rates of any group of people in the United States, and whereas, educational achievement for Native students remains a critical issue, and whereas, traditional Adult Basic and Continuing Programs have not met the needs of Native people;

It is recommended that, additional federal resources be allocated to Adult Basic and Continuing Education, and that, these programs be redesigned with more mandatory involvement of Native people at the local level to increase their effectiveness in terms of existing opportunities.

Recommendation No. 13

Whereas, there are American and Alaskan Native children attending public federal, and mission schools who are in dire need of special education programs to deal with physical handicaps, emotional problems, mental retardation, and learning difficulties, and whereas, human, plant facility, and funding resources have been inadequate or non-existent by federal and state governments to accommodate these Native children, and whereas, special educational training programs for professional and para-professional staff have not been developed in colleges and

universities with a specific focus on the problems of Native children;

It is recommended that, the federal and state governments, schools, universities, and colleges make a concerted effort to provide the human and financial resources to develop comprehensive programs and special facilities to meet the special educational needs of American and Alaskan Native children, and that, such resources be extended to include follow-through programs as the children become adults by providing resources in developing skills and job placement, because special education is a continuing process.

Recommendation No. 14

Whereas, the Special Education Subcommittee established by the President's Message on July 8, 1970, related the following specific charges:

"The Subcommittee will provide technical assistance to Indian communities wishing to establish school boards, will conduct a nationwide review of the educational status of all Indian school children in whatever schools they may be attending, and will evaluate and report annually on the status of Indian education, including the extent of local control."

And whereas, the Subcommittee did not receive adequate resources to actively and adequately perform the responsibilities with which it was charged, and whereas, the relevance and need for a thorough performance of those responsibilities continue to increase, and whereas, the local school systems located on and near reservations and in urban settings have not been sensitized to the special and unique educational needs of Native youth, and whereas, the state and federal agencies have had limited effect in monitoring their programs and resources for the education of Native children, and whereas, the Indian Education Act has created a National Council with responsibilities overlapping those of the Special Education Subcommittee;

It is recommended that, the role of the Special Education Subcommittee be clarified, and that, the Subcommittee be continued with sufficient human and/or financial resources made available to insure effectiveness in pursuit of the assessment charge and further study and development of the local organizational control model.

Recommendation No. 15

Whereas, educational resources allocated under the Johnson O'Malley Act are of major importance in the education of Native children, and whereas, the utilization of these resources has been subject to recent intense criticism, and whereas, there appears to be extreme differences in the utilization of these resources among the various states;

It is recommended that, a comprehensive study of the distribution and utilization of Johnson O'Malley resources among the various states be conducted, and that, the data collected be employed to formulate more uniform guidelines for the allocation and expenditure of these important resources.

OVERVIEW OF THE REPORT

The major findings and recommendations presented in this chapter are the end result of activities and deliberations presented in subsequent chapters. Chapter II describes the information of the Subcommittee and presents the general guidelines for its operation. The Subcommittee's deliberations on the basic local control issue are presented in Chapter III. A research design for meeting charges two and three is proposed in Chapter IV. A summary of Subcommittee deliberations on other topics and issues is presented in Chapter V. An appendix to the report provides brief biographical sketches of the Subcommittee members, and a calendar of Subcommittee activities.

SCOPE AND LIMITATIONS OF THE REPORT

The Subcommittee members were concerned by the following factors which impeded the proceedings of the Subcommittee and imposed limitations on the report.

1. The Subcommittee was not provided with the resources necessary to marshal technical assistance teams which would help individual Indian communities to establish school boards to create new schools or take over existing federal Indian schools.

2. The Subcommittee, made up of Indian educators who have full time responsibilities, were unable to meet the charge of conducting a nationwide status study of Indian education. Available resources did not permit employment of a professional staff nor was assignment of staff personnel already employed by federal agencies sufficient to conduct a national study.

Subject to these limitations, the Subcommittee attempted to maximize the impact of those resources which were available. The Subcommittee members combined information from their experience, published documents, hearings, and visits conducted in diverse areas of the country. The report attempts to provide a national focus on the problems and policy issues involved in making equal educational opportunity available to Indian people. While the Subcommittee observed and discussed many educational problems in local Native communities, it made no attempt to recommend solutions for local situations.

ADDITIONAL COSPONSORS OF BILLS

S. 397

At the request of Mr. STEVENSON, the Senator from California (Mr. CRANSTON), and the Senator from New York (Mr. JAVITS) were added as cosponsors of S. 397, to require disclosure of financial interests by Members of Congress and certain congressional employees.

S. 587

Mr. BEALL. Mr. President, on January 29, 1973, I introduced along with Senators TOWER and TAFT, S. 587, the National Catastrophic Illness Protection Act, which would amend the Social Security Act to establish a national catastrophic illness insurance program, under which the Federal Government, acting in cooperation with State insurance authorities and the private insurance industry, will reinsure and otherwise encourage the issuance of private health insurance policies which make adequate health protection available to all Americans at a reasonable cost.

I ask unanimous consent that the name of Senator ROTH be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 909

At the request of Mr. HOLLINGS, the Senator from Colorado (Mr. DOMINICK) was added as a cosponsor of S. 909, amending the Federal Property and Administrative Services Act of 1949 to permit donations of surplus Federal property to State and local public recreation agencies.

S. 1133

At the request of Mr. METCALF, the Senator from Nevada (Mr. CANNON), and the Senator from Oklahoma (Mr. BELLMON) were added as cosponsors of S. 1133, to provide additional funds to

the States for carrying out wildlife restoration projects.

ADDITIONAL COSPONSORS OF A CONCURRENT RESOLUTION

SENATE CONCURRENT RESOLUTION 14

At the request of Mr. HUMPHREY, the Senator from Iowa (Mr. HUGHES), the Senator from South Dakota (Mr. McGOVERN), and the Senator from Illinois (Mr. STEVENSON) were added as cosponsors of Senate Concurrent Resolution 14, relating to national priorities.

SENATE RESOLUTION 87—SUBMISSION OF A RESOLUTION TO REQUEST THE PRESIDENT TO BEGIN A NATIONAL PROGRAM OF PUBLIC INFORMATION REGARDING THE BENEFITS OF CARPOOLING

(Referred to the Committee on Commerce.)

Mr. BARTLETT. Mr. President, on behalf of myself and Senators DOMENICI, McCLURE, and BELLMON, I have today introduced a resolution requesting that the President initiate a national program to encourage the increased use of carpools and economy cars.

The consequences of traffic saturation have adversely affected all America, but particularly our large cities.

No large city has escaped the ravages of pollution. The greatest contributor to pollution is the automobile. I recently read that during morning rush hour on the Shirley Highway leading into Washington, D.C., pollution created by auto exhaust is serious enough to create a present health hazard.

But the adverse effects of the automobile are not limited to pollution. Today, the United States is in the midst of a serious energy crisis. There is a real potential of gas rationing this coming summer. The automobile is the chief culprit in the consumption of gasoline.

Traffic congestion is a significant contributor to our accident rate, to employee loss of time and maybe most importantly, to the immense frustration which every commuter experiences during a typical rush hour.

A recent study by the Department of Transportation indicates that the average commuter car in Los Angeles contains 1.2 people—while the average in Washington contains 1.5. The study estimates that an increase in occupancy from 1.2 to 1.5 results in a 20-percent reduction in auto traffic—an obviously significant reduction.

My resolution requests that the President begin a program to familiarize people with these benefits of carpooling and similarly the smaller economy car. The resolution does not suggest any effort to supplant any other program of mass transit. However, carpools are the most economical and expeditious method of reducing traffic problems and this information should be made available to the American people.

Mr. President, I ask unanimous consent that the resolution be printed in full in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

S. RES. 87

Whereas, the United States is experiencing an energy crisis and there exists the potential of gas rationing in the months ahead and the automobile is the largest consumer of gasoline; and

Whereas, Automobile traffic has reached the saturation level in many American cities causing loss of time, accidents, and frustration; and

Whereas, The automobile has been a significant contributor to the pollution of our cities; and

Whereas, Some conventional methods of mass transit are necessarily expensive, involve a great deal of lead time and have questionable consumer support; and

Whereas, Studies by the Department of Transportation have shown that by increasing the average commuter auto occupancy from 1.2 persons to just 1.5 persons per car would result in a 20% reduction in auto traffic on the commuter highway; and

Whereas, A 20% reduction in traffic would have a significant beneficial impact on pollution, gasoline consumption, and traffic congestion, be it therefore

Resolved by the United States Senate, That the President of the United States is hereby requested to take such action as is necessary to begin a national program of public information to inform the commuter of the benefits of car pools and economy cars and that the President report to the Congress on possible legislative incentives to promote such a program.

AMENDMENT OF PAR VALUE MODIFICATION ACT—AMENDMENTS

AMENDMENT NO. 69

(Ordered to be printed and to lie on the table.)

Mr. NELSON. Mr. President, this amendment which I submit has three parts.

First. It establishes an expenditure ceiling of \$267,700,000 which is \$1 billion less than what the President has requested for fiscal 1974.

Second. It establishes a procedure for the President to follow in any reduction of funds to achieve this ceiling. The President must make such reductions proportionately and may not reduce any activity, program, or appropriation item by more than 10 percent.

Third. To the extent that the President exceeds the 10-percent limitation, or wishes to reduce expenditures for any other purpose, he must submit such recommendation of reservation of expenditure for Congress to act on within 60 days. If Congress does not approve such reduction, they do not take effect.

There is no debate between the President and Congress over the necessity for establishing a spending ceiling. Most representatives realize that failure to control spending within reasonable bounds would add further fuel to a dangerous inflationary situation. The debate then between Congress and the President is not over spending but over priorities. Many Members of Congress feel that President is proposing excessive spending for military, space, and foreign assistance while making drastic and unnecessary cuts in vital social programs.

AMENDMENTS NOS. 70 AND 71

(Ordered to be printed, and to lie on the table.)

Mr. McCURE submitted two amendments, intended to be proposed by him, to the bill (S. 929) to amend the Par Value Modification Act.

AMENDMENT NO. 52, AS MODIFIED

(Ordered to be printed, and to lie on the table.)

Mr. TAFT (for himself, Mr. BELLMON, and Mr. PROXMIER) submitted amendment No. 52, as modified, intended to be proposed by them, jointly, to Senate bill 929, supra.

AMENDMENT OF OMNIBUS CRIME CONTROL AND SAFE STREETS ACT OF 1968—AMENDMENTS

AMENDMENT NO. 72

(Ordered to be printed, and to lie on the table.)

Mr. STEVENS submitted an amendment intended to be proposed by him, to the bill (S. 800) to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide for the compensation of innocent victims of violent crime in financial stress; to make grants to the States for the payment of such compensation; to authorize an insurance program and death benefits to dependent survivors of public safety officers; to strengthen the civil remedies available to victims of racketeering activity and theft; and for other purposes.

AMENDMENT NO. 73

(Ordered to be printed, and to lie on the table.)

Mr. TALMADGE submitted an amendment, intended to be proposed by him, to Senate bill 800, supra.

NOTICE OF HEARINGS ON INTERIOR DEPARTMENT NOMINATIONS

Mr. JACKSON. Mr. President, I wish to announce for the information of the Members of the Senate and other interested persons that the Committee on Interior and Insular Affairs has scheduled open public hearings for Thursday, April 5, 1973, at 2 p.m., to take testimony on the nominations by President Nixon of Dr. Laurence E. Lynn, Jr., of California, to be Assistant Secretary of the Interior for Program Development and Budget, and Kent Frizzell, of Kansas, to be Solicitor of the Interior Department. The hearings will be held in the committee room, 3110 Dirksen Senate Office Building.

Persons wishing to testify or submit statements for the hearing record on either or both of these nominees should so advise the staff of the Interior Committee.

Mr. President, I ask unanimous consent that the texts of brief biographical sketches of both nominees be printed in the RECORD at this point in my remarks.

There being no objection, the sketches were ordered to be printed in the RECORD, as follows:

NOVEMBER 1972.

LAURENCE EDWIN LYNN, JR.

Address: 3269 Arcadia Place, N.W., Washington, D.C. 20015.

Date of Birth: June 10, 1937. Married, four children.

Education: Ph. D. (Economics) Yale University, 1966; A.B. (Economics) with honors, University of California, Berkeley, 1959.

Thesis: *U.S. Foreign Economic Aid and the U.S. Balance of Payments, 1954-1963.*

Honors: Phi Beta Kappa; Yale University Scholarship; Ford Foundation Doctoral Dissertation Fellowship; Secretary of Defense Meritorious Civilian Service Medal; Presidential Certificate of Distinguished Achievement.

EXPERIENCE

June 1971-Present: Assistant Secretary for Planning and Evaluation, U.S. Department of Health, Education, and Welfare. Responsible for coordination of Department activities in economic and social analysis, policy development, policy and program evaluation, and long range planning. Develops and participates in the administration of the Department's planning and evaluation systems.

September 1970-June 1971: Associate Professor of Business Economics, Graduate School of Business, Stanford University. Taught courses in economic analysis, decision-making in the public sector, and business in the changing environment to MBA candidates. Consultant to National Security Council on strategic intelligence, defense programs and policies; Department of Health, Education and Welfare on higher education; Chief of Naval Operations on naval strategies and programs.

January 1969-August 1970: Assistant for Programs to Dr. Henry A. Kissinger, Assistant to the President for National Security Affairs. Directed the Program Analysis Staff (6 professionals), which was responsible for supervising comprehensive country and regional program analyses to be used as the basis for Presidential and NSC decisions on major policy and program issues; provide general staff assistance, direct interagency study groups, prepare studies and analyses on U.S. strategic intelligence estimates and capabilities, strategic arms limitation, defense strategies, programs and budgets, Vietnam policies and programs, other program-related issues.

April 1968-January 1969: Deputy Assistant Secretary of Defense (Economics and Resource Analysis), Office of the Assistant Secretary of Defense (Systems Analysis). Responsibilities included supervising and directing the work of a staff of 70, including 50 professionals, organized into the following divisions: Mobility Forces; Command Control and Communications; Cost Analysis; Manpower Requirements; Special Economic Studies. Worked directly with the Secretary and Deputy Secretary of Defense, Assistant Secretaries of Defense, Secretaries and other senior civilian and military officials of the military departments.

February 1966-April 1968: Director of Strategic Mobility and Transportation Division and then of Economics and Mobility Forces in the Office of the Assistant Secretary of Defense (Systems Analysis). Directed extensive program of research, studies and analyses on U.S. requirements for airlift and sea-lift forces, national maritime policy, economic impact of defense expenditures, related issues.

July 1965-February 1966: Weapon Systems Analyst, Office of the Assistant Secretary of Defense (Systems Analysis).

July 1963-July 1965: U.S. Army (1st Lieutenant, Infantry).

"Systems Analysis—Challenge to Military Management," in Cleland, David I., and King, William R., eds. *Systems, Organizations, Analysis, Management: A Book of Readings*, McGraw-Hill, 1969.

Other Research: Performed contract research and engaged in consultation of U.S. foreign economic assistance and the U.S. balance of payments for U.S. Agency for International Development. Reports submitted to A.I.D.: "U.S. Foreign Economic Assistance and the U.S. Balance of Payments, 1954-1962," "Analysis of Regional and Third Country Impact," "The Analysis of Tied Aid: Some Concepts and Methods," Author, "A Program to Compute Partial Correlation Coefficients," Yale Computer Center Memorandum No. 10, May 10, 1963, and "A Program for Obtaining Efficient Estimates of the Parameters of a Set of Single Equation Regressions," Yale Computer Center Memorandum No. 12, May 10, 1963. Participated in drafting chapter on defense programs and budgets for Brookings Institution analysis of the 1972 federal budget.

BIOGRAPHY—KENT FRIZZELL

Personal and Family: Born February 11, 1929, Wichita, Kansas; married, wife Shirley, 5 children.

Education: Wichita Public Schools; Undergraduate work at Northwestern University, Evanston, Illinois; B. A., Friends University, Wichita, Kansas; J. D., Washburn University Law School, Topeka, Kansas; Lecturer of Business Law, Wichita State University.

Business and Professional: Assistant Attorney General, Land and Natural Resources Division, Department of Justice, Washington, D.C., 1972-1973; Kansas Bar Association, Member; American Bar Association, Member; Federal Bar Association, Member; Legal Counsel for Kansas, Republican National Committee, 1970-1971; Phi Alpha Delta Legal Fraternity.

Public offices held: Republican Precinct Committeeman, 1950-1964; Wichita Board of Education, Member 1959-1965, President 1963-1964; State Municipal Accounting Board, State of Kansas, Member 1961-1964, Chairman 1963; State Senator, State of Kansas, Twenty-fifth Senatorial District, 1965-1969; Attorney General, State of Kansas 1969-1971; Republican Nominee for Governor, State of Kansas, 1970.

Civic and other: Sunflower Boys' State, Past President, 1960; Sedgwick County Campaign Chairman for United States Senator James B. Pearson, 1962 and 1966; State Legal Counsel, Kansas Jaycees, 1965; Judge Advocate, American Legion Department of Kansas, 1966; Trustee, Mid Continent Regional Educational Laboratory, 1966-1968; National Law and Order Committee of the American Legion, Member, 1968-1969; Who's Who in American Politics; Kansas Wildlife Federation, Member 1968-1971; March of Dimes, Campaign Director for Northeastern Kansas, 1971-1972.

Church: St. Luke's Methodist Church, Wichita, Kansas; Director, Methodist Youthville, Newton, Kansas, 1964-1971.

CXIX—646—Part 8

NOTICE OF HEARING ON AMENDMENT OF THE LAND AND WATER CONSERVATION FUND ACT

Mr. BIBLE. Mr. President, I wish to announce for the information of the Senate and the public that open hearings have been scheduled by the Subcommittee on Parks and Recreation at 10 a.m. on April 12, in room 3110, Dirksen Senate Office Building, on the following bill:

S. 1381, a bill to amend certain provisions of the Land and Water Conservation Fund Act of 1965, relating to the collection of fees in connection with the use of Federal areas for outdoor recreation purposes.

ADDITIONAL STATEMENTS

VIETNAM—CLOSING THE BOOKS

Mr. SCOTT of Pennsylvania. Mr. President, the American involvement in Vietnam ends today. The last of our prisoners is returned today. This has been a most terrible war. All wars are. But we have learned, I hope, many lessons from this involvement. Mr. President today's Christian Science Monitor clearly details this involvement and some of the lessons we should have learned. I ask unanimous consent that this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VIETNAM—CLOSING THE BOOKS

It's over now—largely. True, there is still American sea and air power around Indo-China. And, also true, President Nixon has threatened to use that power if there is a sudden effort to upset what he considers "peace with honor." And, again true, many more American dollars will be spent in and around Vietnam (North and South both) and there may be more American casualties. There will be tag ends of the great American intervention in Indo-China for a long time.

Yet, in the main, this is the time to close the books on the longest, the most remote and the most controversial military effort in the history of the still relatively young American Republic. In money, it has cost something over \$100 billion. No one can say exactly how much because military cost accounting is an art form, not a science. In human life, nearly 50,000 Americans went, and did not come home; roughly double the number killed in Korea, but small in comparison to the number of Vietnamese soldiers and civilians lost in the inconclusive struggle.

Many lessons have been learned.

American power is not all powerful. Lyndon Johnson did not "nail the coonskin to the door." Instead, he left the White House for the ranch on the Pedernales. Another President, Richard Nixon, was left with the thankless task of getting the United States out "with honor."

American ability to understand the outside world is limited and sometimes imperfect. The effort was begun to resist "monolithic" communism, but Mr. Nixon used the China-Russia break in communism as the fulcrum for his disengagement policy.

The American people will not willingly give "their last full measure of devotion" to a cause they do not understand or fully accept. They certainly will not again allow their sons to be conscripted into such a war. An "all volunteer" military force is one result of the Vietnam experience.

What was it really all about? It began with the Truman doctrine, way back in 1946. From then to now, the United States has used its power and spent its blood freely and lavishly on all the continents. In Europe, Greece and Turkey were saved from the Russian embrace and the NATO alliance sheltered the great capitals of the West. In the Middle East Lebanon was protected. In Latin America there was an expedition into Dominica—which some think was unnecessary—but then who can be sure? South Korea was sheltered and built into one of the more flourishing of the new countries which move in the Western orbit.

What would have happened if all this had not been attempted? Who can say? The fear was of Russian communism engulfing the world. Did it really have the capacity? But if there had been no resistance, it might have spread and the world would at the very least have learned how inefficient and heavy-handed the rule of Moscow has always been.

Need the Truman doctrine have been carried on into Indo-China? Probably not. Probably historians of the future will say that communism had spent its momentum and lost its unity before the commitment was made to Vietnam in 1965. Mr. Nixon himself substituted his more modest "Nixon doctrine" for the world-embracing Truman doctrine, and it seems the right thing to do.

Walter Lippmann labels the whole era from the Truman doctrine down to these times as "the romantic period of American imperialism." He links it with "the Great Society" as an example of Americans reaching for unrealistic and unreachable goals. There has been through it all something of the quality of a "noble experiment." The motives were high—all the way through. Certainly most Americans accepted the Vietnam commitment, at least in the beginning as being something which should be attempted. To John F. Kennedy it was necessary if only to show Moscow that he and his country could not be bullied.

And yet this moment of the end of the major American commitment in Vietnam certainly is an end of an era. The reasons which started it have receded into history. The world around is new and different. China and Russia are vying for American friendship, and machine tools. We are thankful that Mr. Nixon has succeeded in bringing this moment to pass. We can join with President Thieu in remembering Abraham Lincoln's injunction at the end of the Civil War. This is another time to bind up the wounds and work for reconciliation of all factions—everywhere. Let there be no more recrimination—although we should all think through the experience to be sure that we have drawn from it the right lessons. We do not want to repeat the old mistakes. There were mistakes. But above all—we are thankful today that the ordeal is substantially over.

CONGRESSIONAL APPROVAL OF PRO RATA REDUCTIONS

Mr. MONDALE. Mr. President, it is extremely important to have congressional review of the way in which the President makes his pro rata cuts in order to reach a budget ceiling.

First, of course, the executive branch might abuse its power to cut on a pro rata basis.

But more important, we must not be fooled into assuming that a requirement that cuts be made on a pro rata basis ends executive discretion. Control of timing and the size of cuts made early in the fiscal year confer enormous discretion on the executive branch.

Initial decisions on pro rata cuts will have to be made early in the fiscal year. These decisions will be based on administration estimates and assumptions of appropriations action to be taken by the Congress at a later time. And the executive branch may base a large cut on faulty assumptions.

They might, for example, respond to congressional appropriations to environment programs with impoundment—on the assumption that Congress would approve in total a large request for military foreign aid at a later time. The Congress might have no intention of appropriating the executive request in full.

I believe that congressional approval would be given in most cases almost automatically. But I also believe that Congress must retain the right to review Presidential actions in order to keep the executive branch honest.

CONGRESSIONAL REFORM CONCERNING THE BUDGET

Mr. BIDEN. Mr. President, the March 20, 1973, edition of the New York Times carried an editorial of considerable insight on the issue of congressional reform in handling of the budget.

The editorial referred specifically to the establishment of a unified congressional committee to study the budget in depth.

In commenting on a specific proposal the Times said:

Reforms of this kind may even surpass in importance the opening up of Congress' own committee hearings which has now begun in the House. An open budget openly arrived at would greatly enhance the education of Congress and the public about budget alternatives.

I request unanimous consent to have the editorial printed in its entirety in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OPEN BUDGET

The struggle between President Nixon and Congress over the content of the budget has directed attention to a long-standing Congressional weakness. The House and Senate lack a regular system for viewing the budget as a total entity.

As matters now stand, the budget once it reaches Capitol Hill is broken down into large chunks which are assigned to a dozen separate Appropriations subcommittees, whose decisions are usually conclusive.

These subcommittees are often painstaking in their examination of specific programs. Contrary to the impression which the Administration is seeking to create of an irresponsible, free-spending Congress, the Appropriations subcommittees have cut Mr. Nixon's budget requests in the last four years by a total of more than \$20 billion. The huge deficits of the Nixon years have been Presidentially-submitted budget deficits.

The fact remains that the subcommittees are too narrowly focused; they tend to concentrate on waste and day-to-day weaknesses in the management of Federal programs. But a Federal budget is much more than an adding up of expenditures or an exercise in cost accounting. It represents a series of judgments about the nation's needs and priorities; it is a kind of social accounting that requires examination in the broad context of the economy's condition and prospects and the society's strengths and weaknesses.

Out of recognition that Congress needs better independent machinery for assessing the unstated assumptions in the President's budget, Senator Humphrey of Minnesota and Representative Moorhead of Pennsylvania have introduced the Fiscal and Budgetary Reform Act of 1973, giving the Joint Economic Committee the power to study the budget and propose an over-all budget ceiling within which the Appropriations Committees would work. The committee would have its own professional staff and its own computers to enable it to analyze budget alternatives for the Congress, as much as the Office of Management and Budget analyzes them for the President.

The bill would also open up the budget process within the Executive branch. Agency heads would submit copies of their initial budget requests to the proposed Congressional Office of Budget Analysis as well as to the O.M.B. Governors and mayors would be permitted to testify; transcripts of all budget sessions would be made available to Congress and public.

Reforms of this kind may even surpass in importance the opening up of Congress' own committee hearings which has now begun in the House. An open budget openly arrived at would greatly enhance the education of Congress and the public about budget alternatives. It would correspondingly reduce the mystery which is now one of the chief props for the President's dominance in this field.

The joint study committee on the budget set by the last Congress is examining ways to strengthen procedures on Capitol Hill to respond to the President's aggressive challenge. The Humphrey Moorhead bill offers that committee a simple yet comprehensive plan which would gradually enable Congress to define its majority judgment on national priorities much more effectively than at present.

THE PUBLIC HEALTH SERVICE ACT EXTENSION OF 1973

Mr. MATHIAS. Mr. President, I was pleased to have voted in favor of S. 1136, the Public Service Act Extension of 1973 which was passed by the Senate Tuesday. My support for this measure stemmed from a longstanding concern which I have expressed to the Congress many times in recent months. In my opening statement last December at the ad hoc hearings on congressional reform in which I cochaired with the distinguished Senator from Illinois, ADLAI E. STEVENSON III, I stated that—

If we have not yet reached the point, then it is far too close for comfort, at which the Congress becomes a little more than a constitutional relic, a vestigial organ of the body politic.

I also pointed out that—

The fact is that, in relation to the executive branch of government, the Congress today has become a third-or-fourth-class power, a separate and thoroughly unequal branch of our national government. The fact is that the executive branch, not the Congress, has come, over the years, to exercise the more effective power over the federal purse.

I echoed this same theme in my remarks at a symposium on congressional reform sponsored by Time magazine in Boston, Mass., on December 12, 1972, and in an article which I wrote for the Washington Post last December.

What was at stake, therefore, in the effort to pass the Public Health Service Act Extension of 1973, was the reasser-

tion of the Congress role and responsibilities under our system of separate and equal powers; otherwise, this body would have taken another step backward toward becoming an archaic echo, bearing little resemblance to its original form and little relevance to contemporary needs.

I noted with great interest, that S. 1136 was reported out of the Labor and Public Welfare Committee by the overwhelming margin of 15 to 1 and that 5 of the 6 Republican members of the committee voted to support this bill.

The situation which has given rise to the need for legislation like the Public Health Service Extension Act of 1973 in a way epitomizes the key issue facing the 93d Congress; namely, should the Congress allow the executive branch to legislate through the budget process. By passing this bill, by the wide margin of 72 to 19, the Senate has demonstrated to the American people that the Congress is the one institution which is uniquely theirs, in which the issues that disturb and divide them can be openly and intelligently discussed and decided, in which various views are fairly represented and fully explored—an institution, in short, that functions as a genuinely democratic deliberative, decisionmaking body.

I am pleased to note that the distinguished ranking Republican of the Labor and Public Welfare Committee, Senator JACOB K. JAVITS, in his statement on March 8 in support of this bill pointed out that—

The legislative extensions of the Public Health Service Act now being considered are not intended to be indicative of any Senator's opposition or support of the President's position regarding a particular provision.

I certainly agreed with that observation. What this bill will do, however, is to provide the Congress with the opportunity to regain the confidence of the American people by demonstrating its competence to cope with the issues represented in the health programs encompassed in this legislation. If there are federally sponsored health programs that should be substantially altered from their present form either through expansion, modification, reduction, or termination, then it should be the Congress working in concert with the executive that determines the destiny of these programs. Mr. President, that is what the Constitution of the United States of America would have us do, and having the power, we also had the duty to act as we did.

ROCHESTER, N.H., STUDENTS SHOW THEY CARE

Mr. MCINTYRE. Mr. President, in the last week I have received 23 letters from students at Spaulding High School in Rochester, N.H., dealing with the plight of native Americans and the current situation at Wounded Knee, S. Dak.

If all Americans, of all ages, had thought as deeply and cared as much about this problem 50 or 100 years ago there would not be a confrontation there today and there would not have been a massacre there in 1890.

As I speak here today, there is no peace yet at Wounded Knee. We can only hope that the parties involved will arrive at a compromise that will mean not only peace, but a new beginning of justice for native Americans.

For as much as all of us deplore the violent nature of the Wounded Knee protest, we must all agree that a full investigation of the injustices committed against American Indians is long, long overdue. I am confident that the Senate will move to initiate just those kinds of hearings in the very near future.

Mr. President, I ask unanimous consent to place the letters of the students from Spaulding High School in the RECORD. I want to share with my colleagues their expression of the feelings of millions of Americans that the time has come for justice for native Americans.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

SPAULDING HIGH SCHOOL,
Rochester, N.H., March 12, 1973.

Senator THOMAS MCINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: Enclosed in this envelope are letters written by my eighth period freshman English class concerning the plight of the American Indian in general and the situation at Wounded Knee, South Dakota in particular. While reading *Bury My Heart at Wounded Knee* the students became aware and concerned about the problems of the American Indians. At this time the Oglala Sioux captured Wounded Knee and made the whole problem contemporary.

These letters here enclosed to you are an English assignment, but are, to my mind, far more important than just that. For most of these students, it is the first time they have ever written to a government official and expressed their opinion on an issue. I am well aware that you are a busy man and cannot answer each student individually. However, if you would please answer their letters with a general response to the class, I would most appreciate it. It was the class decision to write to you. In three years these young people will be voting and such positive reinforcement as an answer from you will aid them in the realization of the responsibilities and privileges of citizenship. Thank you for your attention.

Sincerely,

PANELA J. HUBBARD.

ROCHESTER, N.H.,
March 12, 1973.

Hon. Senator THOMAS MCINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I would like to express to you my feeling on the Indian Affairs. I feel that the United States government is neglecting the Indians of America. The Indian reservations are barren and contain unlivable conditions. The Indians on the reservations are mostly unemployed, uneducated, and lack good medical facilities.

Canada has three hundred and sixty thousand less Indians in their country than we do. They also have twenty two hundred more Indian reserves than we do. I feel the government should set up more reservations and provide them with the proper care.

The incident which is now going on at Wounded Knee, South Dakota is only one of many incidents to come if the United States government continues turning its back on the Indians.

Something must be done to help the Indians, before they decide to do something. We would not want another massacre at

Wounded Knee. I do hope you can understand why I feel this way.

Sincerely yours,

SUE BELLEMEUR.

ROCHESTER, N.H.,
March 12, 1973.

Senator THOMAS MCINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I am writing to you about the situation in Wounded Knee, South Dakota. I have been reading about Indian history and I am very concerned about the way they are being treated. The government has expected many of them to live on dry, barren wasteland without means of irrigation. The Indians live in shabby old buildings because they have no jobs. Their children receive little education. I am asking you to please consider the American Indians and help them to get a better education and better jobs.

Sincerely,

FREDERICK F. HELVIE.

ROCHESTER, N.H.

Hon. Senator THOMAS MCINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I am writing in reference to the incidents at Wounded Knee, South Dakota. We, at Spaulding High School, are in the process of reading "*Bury My Heart at Wounded Knee*," by Dee Brown. The book "painfully and shockingly conveys not how the West was won, but how it was lost."

I wholeheartedly believe that the Indians are being treated like savage, senile prisoners. We benevolently forced them on a two-bit, good for nothing reservation. Here we made them live on land that was unsuitable for whites, but good enough for the Indians.

I sincerely hope that you take into consideration the things I have said. Thank you.

Cordially,

KAREN LAMONTAGNE.

EAST ROCHESTER, N.H.,
March 12, 1973.

Senator THOMAS MCINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: I am writing to you about the conflict at Wounded Knee, S. Dak. I feel that even if you cannot grant the Indians all their demands, you should do something about some and consider the others. We are reading the book *Bury My Heart at Wounded Knee* in our English class, and it tells us how all through the years the Indians have been cheated out of all their agreements with the white people. I think that we are far more modern than we were back in the 1800's and the Indians should be given the chance to have better reservation facilities.

Sincerely,

KEVIN HARTE.

ROCHESTER, N.H.,
March 12, 1973.

Senator THOMAS MCINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: As a ninth grade student at Spaulding High School I am concerned over the dispute at Wounded Knee. My English class is in the process of reading *Bury My Heart at Wounded Knee* and I think throughout American history the Indians have been treated poorly, to say the least. The colony at Plymouth would have been wiped out if not for the American Indian. I think they should be given full possession of Wounded Knee and much more besides.

The Indians are as human as you or I. We both had good education and a chance for improvement. You certainly have proved that by your position as United States Senator. I feel the Indians should be given that chance also. I don't feel the least bit proud

of my American heritage when it comes to the treatment of the Indians by us Americans. Wounded Knee was an Indian land; so was much of our West. If anything should have happened back in those times, it should have been the Indians pushing out the white people as we moved West. In my opinion the reservations should be abolished and the Indians given educational and occupational opportunities, and Wounded Knee be forever theirs.

Yours truly,

LOUISE STODDARD.

UNION, N.H.,
March 8, 1973.

Senator THOMAS MCINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I am writing to you with concern about the American Indian. I attend Spaulding High School in Rochester, N.H. My English assignment has been to read the book *Bury My Heart at Wounded Knee*. In reading this book I have found out about how the Indians have been treated. I do not think it was fair to put them on reservations or to have them on reservations now. I would like to see some changes in the conditions of the Indians.

Yours Truly,

LORRAINE JOY.

SANBORNVILLE, N.H.,
March 12, 1973.

Senator THOMAS MCINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I am very concerned about the conditions of the Indians. When the white men tried to change the Indians to their way of life, the Indians followed the white man's life style. He wore white mans clothes and followed his laws and rules. The thing I really don't understand is if the Indians were to be like and live like the white man, why they are on reservations. Americans do not live on reservations, do they? Black men do not live on reservations, nor do Chinese, Mexicans, or any other nationalities that have become citizens of the United States. The Indians have lived in this country much longer than anyone else, yet they seem to have been treated much worse than many people who have just recently become citizens.

I feel that the Indians should be free of the reservations and that you should deal with the poor conditions of the Indians.

I am a student at Spaulding High School, in Rochester, N.H., and my English class and I have been reading the book *Bury My Heart at Wounded Knee* by Dee Brown. We have also been keeping up to date on the happenings at Wounded Knee, South Dakota. I hope you feel the same as I do about the welfare of the Indians and will try to do something for them.

Thank you.

Sincerely,

NANCY CLARK.

ROCHESTER, N.H.,
March 12, 1973.

Senator THOMAS MCINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I am writing this letter to express my feelings and concern for the American Indians, especially the ones at Wounded Knee. Their living conditions are somewhat less than luxurious. They are forced to live on barren wastelands called "reservations." By coincidence, we happen to be studying the book *Bury My Heart At Wounded Knee* by Dee Brown. This book really shows how the Indians were maltreated and abused, starting with Columbus and hopefully ending within a short period. I feel the Indians should have better land for reservations if they are forced to live on them. Like the buffalo and eagle, they should be preserved.

The battle at Wounded Knee was one of the last, let's keep it that way.

Sincerely,

MIKE COUCH.

ROCHESTER, N.H.,
March 12, 1973.

Senator THOMAS McINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I am writing to you in concern about the situation of the American Indian. In my English class at school we are reading the book *Bury My Heart at Wounded Knee*. We have learned how the Indians were abused and how most of their land was taken. Now that they are asking for some things from our government, I think that it would only be fair if we met some of their demands. I think that they should receive more aid from the government, and I hope that many changes will be made in their benefit.

Yours Truly,

CAROL BRYANT.

ROCHESTER, N.H.,
March 12, 1973.

Senator THOMAS McINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I am writing to you in regard to the incident at Wounded Knee. The reason I am writing to you is because I feel that the Indians have been totally mistreated. They are human, people with feelings. They have a right to the land that was wrongly taken from them. I do not feel killing is a peaceful way to settle a disagreement. If you don't agree, that is okay, for you also have your opinion. At least look into this as you would any other important incident. Right now it doesn't seem very upsetting, but it could result in the repeating of history mainly December 28, 1890. Please, look into this because people's lives are involved. Thank you.

Respectably,

PEGGY GILMORE.

ROCHESTER, N.H.,
March 12, 1973.

Senator THOMAS McINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I am deeply concerned about the Wounded Knee situation. I am a student in high school and our class by coincidence is reading the book "Bury My Heart at Wounded Knee." We haven't even finished the book yet and what I have read is terrible! And I hear conditions aren't any better. I truly hope you will do something about this to help the Indians.

I hope you make a thorough investigation on the subject and straighten this whole thing out. And tell the Indians I'm with them all the way!

Sincerely,

DONNA DESMARAIS.

ROCHESTER, N.H.,
March 3, 1973.

Senator THOMAS McINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: As a concerned citizen, I would like to voice my opinions on the situation in Wounded Knee, South Dakota.

The Indians were the first people to come to America, so I believe that they are entitled to any land they want. If you really thought about it, taxes probably should be paid to the Indians if to anyone. I agree with them for wanting to control their lives on the reservations. Indians also want better schooling for their children, which is something everybody wants with such importance set on education. I have also heard that they want

their children to learn their tribal customs and languages. I think this is great because I would like to learn more about my own heritage.

I am not very well informed of the situation, but I would like to learn more.

Sincerely,

DAWN ASHLEY.

ROCHESTER, N.H.,
March 12, 1973.

DEAR SENATOR McINTYRE: I am writing in regards to the Indian take-over of Wounded Knee, South Dakota.

I am a freshman at Spaulding High School in Rochester and my English class is reading *Bury My Heart at Wounded Knee*.

I think something should be done about the Indian reservations. From what I've heard they aren't fit to live on. Over the years the Indians' condition has been deplorable and something should definitely be done about improving this situation.

Thank you.

Sincerely,

KAREN OSGOOD.

ROCHESTER, N.H.,
March 8, 1973.

Senator THOMAS McINTYRE,
Senate Office Building,

DEAR SIR: As an informed senator you must listen to the news. One item that sticks in my mind is what is happening at Wounded Knee. It would be disastrous for another massacre to happen as it did so many years ago. You might be thinking that if they get slaughtered it is their fault, but, if they hadn't been cheated through the years, none of this would have happened. Please look into this and if you get a chance, restore the rights to the Indians.

Sincerely,

ANDRE LAURION.

ROCHESTER, N.H.,
March 9, 1973.

Senator THOMAS McINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: It is my opinion that some agreement should be drawn up between the Indians and the "white people." All along we have been unfair to the American Indian and it is my opinion that we should have the reservations checked. Also, if the Indians want to buy Wounded Knee for themselves they should be able to buy it, instead of leaving it open for people to go there and nose around on land that doesn't belong to them. The Indians should have their say in what to do about "The new attack on Wounded Knee."

Have you read the book called *Bury My Heart at Wounded Knee*? Well, if you have not, you should. We are now reading this book in English classes here at Spaulding High School. It tells of some really barbarous things that the "white people" did to the Indians for no good reasons at all. I sincerely hope that your vote can do some good for the American Indian.

Yours Truly,

PENNY MEARS.

ROCHESTER, N.H.,
March 12, 1973.

Senator THOMAS McINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I am concerned about the recent happenings at Wounded Knee, South Dakota. In my opinion I think it is ridiculous that this sort of thing has not been settled between the Indians and Whites a long time ago. You would think that with the highly developed society of today that this matter would have been resolved. Furthermore, I think something should be done immediately, whether it be exactly what the Indians re-

quest or some other improvements for the better.

A Concerned American,
JAMES L. KIROUAC.

ROCHESTER, N.H.,
March 12, 1973.

Senator THOMAS McINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: I am writing to express my concern for the Indians of America. It is very hard to put my feelings into words. Many people, including myself, feel that the Indians have been maltreated long enough. The white men have deceived them so many times, that they have no trust left in us. Very coincidentally, a day before this Indian conflict started, my English class started reading *Bury My Heart at Wounded Knee* by Dee Brown. This book has given me a better view of how unjustly we have treated the Indians. I thought a letter written to you would help to inspire you to try to do something about this situation. We are all very concerned and hope that in some way you can express our concern to others. Thank you so very much for listening.

Sincerely,

CHARLENE MAXFIELD.

OSSIPEE, N.H.,
March 11, 1973.

Senator THOMAS McINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I attend Spaulding High School and am reading *Bury My Heart at Wounded Knee* in my English class. For an English assignment we have to write to either our Senators or Congressman about what we think should be done for the Indians.

I feel that we are not doing enough for the Indians on the reservations. I think that it is terrible the way the Indians were treated in the past. I don't think that it is right for the Indians to have to be put on reservations when they are on worthless ground that nobody else wants. It was terrible the way men got the Indians to sign those papers when the Indians didn't know that they were signing away land.

I think that the Indians should be able to pick their own representatives for Washington. We should be able to have civilized discussions in Washington or wherever they choose with the Indians just like we had over in Paris. We shouldn't want to fight with them like long ago. In the Bible at Isaiah 2:4 it points out that we should not fight: "And they will have to beat their swords into plowshares and their spears into pruning shears. Nation will not lift up sword against nation, neither will they learn war any more." Peace will never come from violence, it has to be talked over in a decent peaceable manner.

Sincerely,

WENDY FISHER.

ROCHESTER, N.H.,
March 12, 1973.

Senator THOMAS McINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I am writing this letter to express my opinion and concern for the Indians in Wounded Knee. I don't think either side will accomplish anything by killing each other. The Indians were there first, we have no right to push them out into some barren little corner.

The Indians should be given their choice of better schools and living conditions. The land they have now (which isn't very much) isn't fit to live on. These Indians deserve a better environment to live in. I want to see something done about this!

Sincerely,

JOAN RINES.

ROCHESTER, N.H.,
March 8, 1973.

Hon. Senator THOMAS MCINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I would like to express my opinion to you on the Indian affairs in Wounded Knee, South Dakota.

Most of my opinions to the situation which has now arisen have come through class discussion on the book, "Bury My Heart at Wounded Knee," by Dee Brown, which my English class is now reading.

I feel that the Indians should be given a fair chance at living. My father says that the Indians should be going about this the wrong way, but I feel that if they would have gone about it a different way they wouldn't have been heard.

I believe the Bureau of Indian Affairs ought to be thoroughly investigated to show how, if, or why these Indians are being cheated.

All of their lives the Indians have been cheated by white men. Of course, I know that not all Indians were good and not all white men were bad, but I don't see why this should continue. People ought to see to it that they get something out of this instead of living on a reservation whose land is so fallow and dry it won't produce anything, and a water supply with a very high alkalai content.

I feel that all people involved, from the Senate to the Indians, themselves, should see to it that they will have a new start at living and be able to make it work.

After all the Indians are people, too, and there is a law against discrimination.

Thank you for taking the time to read my letter. I realize you must be busy with this going on, but I feel that since it was my parents and friends that elected you, you should at least hear my opinions and at least try to do something about them.

Sincerely,

BARBARA BADGER.

ROCHESTER, N.H.,
March 14, 1973.

Senator THOMAS J. MCINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I am deeply concerned with the situation at Wounded Knee, South Dakota. This country has treated the Indians badly in the past century or so.

I believe that the Indians have a right to the land at Wounded Knee. It belonged to the Indians once, but it was taken away from them. It is rightfully theirs. If the Indians are willing to buy the land, it should be sold to them.

I believe that you should do something about all of the Indians, not just the ones at Wounded Knee. They should have the right to speak what they think about the whole situation. They have their rights also. It is in your power to do something about it.

I am a Freshman in the Spaulding High School in Rochester, N.H. I am currently reading *Bury My Heart at Wounded Knee* for my English class at school. If you haven't read this yet you should. It tells how all the white men took away the Indian's land.

Please send me some information of the Oglala Sioux that are looking over the land at Wounded Knee, South Dakota.

Very Sincerely,

TERRY TOWLE.

DOVER, N.H.,
March 9, 1973.

Senator THOMAS J. MCINTYRE,
Senate Office Building,
Washington, D.C.

DEAR SIR: I would first like to open my letter with an explanation which is this: The students in our English class are reading the book *Bury My Heart at Wounded*

Knee. It happens that we started the day before the Indian attack on Wounded Knee, S.D. took place. Although we are not very far into the book, we can see an angering cruel treatment to the Indians as far back as Columbus' day. These facts led up to this attack some 460 years later. My question is this, Senator McIntyre: how do you stand on this matter? In this letter I would like to bring out some points that hopefully will show you how a vast majority of the public feels.

You see, when a baby is brought into this world, he has no say in the matter as to what race, religion, sex, and nationality he will be. These are decided by society long before he is born. And in this supposedly "free and democratic" country, unfortunately so are things like whom he'll associate with, where he'll live, what type he'll marry, and what his career will be. You say, that's not so for most, but think about it Senator McIntyre.

When the child before mentioned is born an Indian, these things are almost mandatory: He'll live on a reservation, which is worse than the ghettos and slums. This reservation land isn't good enough for whites or Negroes. So why is it all that great for Indians? Chances are he may never leave the reservation. His occupation and education will be next to nothing. He'll marry another Indian, his children will have the same kind of life he had, probably wishing they were never born. Man treats the Indian like a dog. Where do they get off putting themselves above the Indians?

Well, Senator McIntyre, again I ask: "What is your position on the matter?" "If they took a vote on this issue right now, how would you vote?" I think almost all the people in New Hampshire would want you to vote in the favor of the Indians. If there was anything I could do for the Indians' fight for right and freedom, I'd do it. But hopefully this letter is my one form of help.

Yours Truly,

MARILYN TAYLOR.

S. 1136—AN OPPORTUNITY LOST

Mr. DOMENICI. Mr. President, on Monday, March 26, I addressed this body on the need for the Congress to begin to confront the issues instead of confronting the President. I pointed out that it was much easier to find fault with what someone else is doing—namely the President—than it is to face up to doing a better job ourselves to develop our own game plan and have the courage to stick to it. I urged the Congress to find that courage and determination to discard its "business as usual" attitude and try to accommodate the President as he seeks to confront the issues.

Yesterday the Senate had a unique opportunity to do all these things in its actions regarding S. 1136, the bill to extend the expiring authorities of various health programs. As reported, that bill would extend those authorities from their expiration date of June 30, 1973, for one full year until June 30, 1974. The estimate of costs during that year's extension was in excess of \$2 billion.

The Committee on Labor and Public Welfare in its report recognized a need to reevaluate these authorities, to upgrade, improve, transfer, reduce, and even eliminate certain authorities to achieve more effective programs. The committee and proponents of S. 1136 maintained that the administration had failed to submit legislation for these purposes while admitting that the Senate

had likewise failed to do so. The solution suggested by this bill was simply to maintain the status quo for a year while the reevaluation process was being carried out, in spite of the fact that the status quo, admitted to need improvement, could cost the American taxpayer more than \$2 billion.

WALTER LIPPMANN AT 83

Mr. BIDEN. Mr. President, Walter Lippmann represented the more thoughtful aspects of journalism. One need not agree or disagree, in whole or in part, to recognize that whatever his judgments, they were arrived at thoughtfully and rationally and without the rancor that often scars contemporary writing today.

On March 25, 1973, the Washington Post published excerpts of an interview between him and Ronald Steel who is writing a biography of Mr. Lippmann. The interview appeared in question-and-answer format. Whatever our political and philosophical tendencies, I believe the interview offers insights to us all.

Mr. President, I ask unanimous consent that the interview be printed in the RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

Q. Nixon's been President for over four years. How would you assess his performance?

A. His role in American history has been that of the man who had to liquidate, defuse, deflate the exaggerations of the romantic period of American imperialism and American inflation. Inflation of promises, inflation of hopes, the Great Society, American supremacy—all that had to be deflated because it was all beyond our power and beyond the nature of things. His role has been to do that. I think on the whole he's done pretty well at it.

Q. Aside from his prolongation of the Vietnam war, which you've criticized, how do you feel about his domestic policies?

A. He will do anything he thinks is expedient.

Q. Is that necessarily a bad thing?

A. No, it isn't. He's a Keynesian when it suits him and he isn't when it doesn't suit him. That's the way public men have to act.

Q. You see him as responsive to public mood?

A. He's very cunning.

Q. So you would give him rather high marks?

A. Yes. He has played a very disagreeable role, but a role imposed upon him by historical necessity.

Q. Do you look on Nixon's crushing defeat of McGovern as merely a personal victory, or as something deeper—a repudiation of the philosophy of the New Deal and of the Great Society?

A. My feeling is that what happened in the Nixon-McGovern election is what happens in all elections of advanced modern industrial societies when the basic policy of the Jacobin or Rousseauistic philosophy is repudiated. By that I mean the belief that man is essentially good and can be made perfect by making the environment perfect, and that the environment can be made perfect by taxing the mass of people to spend money for improving it. Modern society won't accept that philosophy and it is usually repudiated. Sometimes the repudiation takes the form of fascism, but this rejection is morally and intellectually the equivalent of it, with-

out some of the ugly features of fascism.

Q. What do you mean by the "moral equivalent" of fascism?

A. The equivalent of fascism in my view is the repudiation by the society, by the masses of people, of the whole Rousseauistic belief in man's inherent goodness and perfectability. The mechanics of the repudiation is another matter. Whether the society takes the form of a dictatorship or a parliamentary system is a secondary question to what is being repudiated.

Q. Were these ideas repudiated because they were too ambitious or because they represented something incapable of achievement?

A. I think they represent something that is incapable of being achieved in human society. They are philosophically and morally untrue. Man is not naturally good, nor is his nature perfectable by economic means. The Jacobin philosophy is being repudiated in every advanced society because it involves attempting to do by taxation and appropriation things not possible to do. It's not possible by government action or any other action I know to create a perfect environment that will make a perfect man.

Q. Do you believe that those policies did in fact fail?

A. I don't think every detail of those policies, every reform, failed. But the idea that motivated them has failed.

Q. If the ideal has been repudiated then what happens to the effort to achieve social change through government action? Is that repudiated too?

A. It goes on, but there are a lot of errors that have been discarded in the course of human history, and this is one of them.

Q. Do you think the effort to achieve any kind of social change through the government is undesirable?

A. Certainly it's desirable. It's not the effort to achieve reforms that's wrong, but the inner ideological or philosophical content of these particular efforts. This is where the fallacy lies—the belief in human perfectability through government action.

Q. Did McGovern represent this philosophy?

A. Yes. McGovern believed in all the corollaries that go with this philosophy and he espoused any one of them that seemed to him promising. In this election, the people themselves showed that they won't have it. This is a philosophy that has been more or less prevalent in the Western world since the 18th Century. People have fallen for it for generations. But now it is being repudiated almost everywhere. Sooner or later it always gets repudiated.

Q. How would you distinguish what you all call Jacobinism from the kind of liberalism represented by Lyndon Johnson?

A. The difference is that liberalism is a much more measured form of human improvement. It neither claims nor seeks the exaggerated results claimed by Rousseauism and Jacobinism. It regards man as improvable but not perfectable; it takes a much more modest view of what mortal man is capable of doing.

Q. Were the goals of the New Deal and the Great Society rooted in this Rousseauistic or Jacobin approach?

A. Yes. We have been in the grip of this general view of the nature of society at least since Woodrow Wilson.

Q. If this philosophy has been repudiated, does this mean there will be less government intervention in the lives of the people?

A. No, I wouldn't say it would mean less intervention, but the difference between perfectability and improvable is a very big one. The belief in government as the agent of perfectability is what has been repudiated. People have rejected the idea that you can use the government—by controlling it, by getting the majority or physically seizing it—to do what I regard as what history has now shown to be impossible. Sometimes this

repudiation can take the form of facism. But it didn't here. Instead it took the form of Nixon Republicanism. But a corruption of that, or a more extreme form of it, could lead to fascism, just as fascism can lead to Nazism. The Jacobin-Rousseauistic view of society and human nature will lead to the most dangerous forms of fascism or even Nazism if it is not brought under control.

Q. So this administration should be welcomed by liberals because it's headed off a reaction that could have degenerated into facism?

A. I supported Nixon in '68 and I preferred him vastly to McGovern in '72. In that sense, yes. That doesn't mean I'm enthusiastically pro-Nixon. What he's done is historical: Nixon has performed a service that historically had to be performed if American society was not to be blown up or disintegrate or crumble.

Q. Nixon has certainly appealed to self-reliance and attacked the social welfare programs of the past four years. Won't this lead to a cynical neglect of the poor, the disadvantaged and the abandoned?

A. I thought there was no hope for those abandoned, if you call them that, members of society in those programs. These programs had been greatly excessive, as occurs in every advanced society. But it was much exacerbated in our society because actually taking from those who had really meant taking from whites to give to blacks. That was a cause of deep division and bad feeling in this country.

Q. But if the government does not play a big role, what hope is there for the disadvantaged?

A. I'm not accepting Nixon's philosophy. But no government can bring people up. They have to achieve it themselves. The belief that the government can do it is one of the great illusions of our time.

Q. In the kind of society we have, can the disadvantaged achieve economic and social equality?

A. I don't know. Nobody knows enough now to say yes or no to that question. There are all kinds of hidden assumptions we don't know the answers to.

Q. Being opposed to what you call Rousseauian Jacobinism, do you consider yourself a conservative?

A. I am a conservative; I think I always have been. But that doesn't mean that I'm a conservative who agrees with William Buckley.

Q. What kind of conservative are you?

A. I never joined Barry Goldwater or anybody like that. I don't consider myself that kind. I hope and trust I am a conservative in the line of Edmund Burke. I believe in certain fundamental things in philosophy and constitutional law which are conservative as against the Jacobins.

Q. One of the definitions of conservatism is a belief in a hierarchical traditional society. Do you believe in that?

A. Well, I believe in what we used to call meliorism. You can make things better, but you can't make them perfect.

Q. Is it effective to deal with the symptoms of poverty, for example, rather than the causes?

A. Can anybody know what the causes are? There are many causes: laziness, wastefulness. Those are traits inherent in human beings. Some make for poverty and some make for wealth.

Q. The liberal would say we can isolate and eradicate the causes of poverty.

A. Does he know them? If he thinks he does, he's mistaken.

Q. Is this rejection of the Rousseauian philosophy also a repudiation of the goal of social equality and progress?

A. Social equality, if you carry it far enough, is an absurdity. That doesn't mean that you have to be in favor of social privilege or inequality.

Q. I suppose the essence of Rousseau's

thought is that man is corrupted by his environment and by social conditions—"Man is born free but he is everywhere in chains." It's this conception you consider false?

A. Yes, if you like, that's one thing.

Q. If you reject Rousseau's argument that man is born free, but is enchained by unjust laws, how do you achieve equality and justice?

A. Look, man isn't born everywhere free and equal. It's impossible that he should be born that way. The Rousseau-Jacobin doctrine was that he could be perfected by changing his environment.

Q. If you reject this, isn't the alternative simply to ride along with the status quo?

A. I don't think so. I don't think it does at all. It just makes you work very hard. You have to do things specifically and practically and in accordance with the possibilities of man. I read the other day a quotation from a Chinese which seems to me to sum up that Jacobin view. He said, "On television we watched the men the Americans put on the moon. We are going to be the first to put a new man on earth." That, I think, is exactly the Jacobin revolutionary philosophy.

Q. I suppose the idea that man is not perfectable is based on the belief in original sin. Do you believe in original sin?

A. In that sense, yes.

Q. Government is playing a much greater role in the lives of its citizens. Do you see this as irreversible?

A. Yes, I do. We're a mass society and a great many of our troubles and evils come from that. There are too many people alive in order to govern, control them and inform them. You have to have things that you wouldn't have dreamt about if you had a smaller population.

Q. So even though the people have rejected the idea of the government as an agent of perfectability, they've accepted that the government must play a powerful role in their lives

A. We've accepted it, but we're very rebellious about it, too. I mean people hate filling out all the forms—I know we do in this house—and we have to employ lawyers and bank people and so on to fill out forms for us and tell us what they mean. That's a burden. There are a lot of people who have just resigned themselves, taken themselves out of what we would call the welfare state. They don't fill out the forms, they just don't live in it.

Q. As a result of this growing governmental role, do you see a danger of authoritarianism and repression?

A. There's always a tendency of the governing power to be repressive if it can be. That has to be resisted.

Q. What are the best means of resisting? Through the courts?

A. The role of people is crucial. We resisted Joe McCarthy in the 1950s by denouncing him. McCarthy didn't have enough power to arrest us, those of us who did denounce him, and so we revealed him for what he was. Finally a lot of people got angry with him.

Q. Do you see the government's prosecution of Daniel Ellsberg as an act of repression or intimidation?

A. No, I don't think it's an effort to do that. I think public papers which are classified and regarded as secret should not be stolen or revealed by anybody who is not willing to pay the price of doing it. It's the case of the Boston Tea Party: If the king's tea is there and you dump it in the harbor, then you expect to pay the penalty of dumping it in the harbor. One thing I like about Ellsberg is that he doesn't deny that he will take the penalty.

Q. If there's a higher loyalty than the law itself should those with the courage to defy it be applauded?

A. I think it was a good thing to reveal the Pentagon Papers because classification has become a vicious habit which needs to

be resisted. But that doesn't mean that every paper should be stolen or revealed. The penalty for doing that must be enough to deter anybody from doing it frivolously or easily.

Q. There's a great controversy now about executive privilege and whether members of the President's personal staff and his Cabinet should be obliged to testify before Congress. Do you feel the President is abusing this prerogative?

A. While there obviously has to be some kind of executive privilege, it must be used with the utmost discretion and restraint. Our system of government will simply not work if any principle is pushed to an extreme. There must be respect for the rules on the part of everybody—the President, the Congress, the courts. The men who wrote the Constitution were rational gentlemen. They knew the system they were devising could not work unless the rules were respected. Their primary assumption was that the kind of people who were running the government would play by the rules. If the President refuses to do this, nothing works and you don't have our constitutional system. The President of the United States is actually a king, with all the powers and all the limitations inherent in a king. What is important is that there be respect for the unwritten law, which is an important part of the American constitutional system.

Q. It's been said that one of the effects of the Vietnam war has been the questioning of all forms of authority—the family, state, religion. Do you think this is happening?

A. I don't think it's the result of the Vietnam war. The breakdown of forms of authority is a much deeper and wider process in modern history than the Vietnam war. I wrote a book back in the beginning of the century about the dissolution of the ancestral order. Clearly, the ancestral order of the family, for instance, has been much more affected by the contraceptive pill than it has by anybody's speeches or by the war.

Q. Is this breakup of the ancestral order dangerous?

A. Well, yes. It's dangerous in the sense that the fabric of society is of a cellular structure, of families related to each other in tribes and nations. Of course the destruction of that threatens to produce the chaos of modern times.

Q. You see this as leading to authoritarianism or fascism?

A. It's absolutely one of the things that will occur. Yes, there'll be all kinds of repression.

Q. It is said that we live in an age of permissiveness in which all the old values pretty much have been destroyed, including the belief in patriotism and the state. Can people live with that kind of uncertainty in their lives without any focal point of attachment?

A. I think it's a good question, but there's no easy answer to it. Whether people can live without an organized life around authority and the belief in something is a question that the modern age has been experimenting with, and hasn't solved.

Q. I suppose it's in periods like this that people have created new religions in the past.

A. When they've been lucky.

Q. How do you feel about the future of parliamentary democracy?

A. I think it's increasingly unworkable mechanically with the growth of population. Aristotle said long ago that there's a certain size a good city should have so that the human eye could see its limits. There is a limit which we have passed in these mass democracies. Societies are not capable of governing themselves if they're that crowded and that numerous.

Q. Then you look at parliamentary democracy as . . .

A. As a doubtful experiment.

Q. And a parenthesis in history perhaps?

A. Parliamentary democracy was the product of a much simpler, less numerous, stratified society, class system. Whether it can be

applied to these massive modern democracies, I don't know. It's very doubtful.

Q. What do you see as the alternative?

A. I don't think anybody can see an alternative. I certainly haven't got a panacea for it. That's a very American question you asked. I'll tell you what: Part of this illusion of what I call Jacobinism for short is that there's a remedy for every evil and a solution for every problem. A lot of things are not solvable.

Q. If they're not solvable, what attitude can we take toward these problems—stoicism?

A. Stoicism, resignation, acceptance. Part of the myth of the perfectability of man is that he can solve everything.

Q. If we're forced to live in a world where we recognize that problems can't necessarily be solved and also that America may not have anything very special to give to the world, we're in for a very difficult process of adjustment. Isn't the basis of our society that we can create the future?

A. It is the American myth.

Q. Other societies have something to fall back on: the continuity of their history, a religion, a strong social structure. We have nothing like that.

A. No, and we have this feeling—that this comes from the Puritans—that we are a chosen people with a mandate from God Himself to make a perfect world for ourselves and for everybody else. Of course that is a terrible myth.

Q. There's been a great concern over the freedom of the press recently—the right of newsmen to protect their sources, the effort of the government to intimidate the media. You've been concerned with this problem throughout your career. Do you think there is a serious threat to freedom of the press?

A. I think that very often troubles of the press come from a commercialized desire to get scoops, to be the first to print the news. These "sources" very often are places to get tips of what's going to happen. The desire of newspapers to be the first to print particular information is corrupting to the whole journalistic process. In the journalistic world I grew up in, it wasn't a question of law whether you had to divulge your sources. It was a question of whether the reporter had the guts to refuse to reveal where he got the information, whether he was willing to go to prison if necessary. That was regarded as the elementary code of a newspaper man. The reverse of that was—and this was always my practice—when someone told me something in confidence, I didn't pass it on to the reporters so we could get a scoop. I had a relationship with the man I was interviewing and I didn't want to print that.

Q. Does the press have a responsibility to publish what it thinks is newsworthy at whatever cost?

A. I wouldn't make a generalization. I think raw news, raw fact, is not intelligible anyway to the public, and has to be explained. The explanation is an important as the fact itself. The duty of the press is to put forth no raw news but explained news.

Q. Does the press have a responsibility to the government to keep secrets, even if it thinks the government is doing something wrong—as in the Bay of Pigs or the Pentagon Papers?

A. I think that's a matter of conscience. I would decide only in specific cases.

Q. You've known many officials during your career. What is the proper relationship between reporters and government officials?

A. I certainly have. I feel that newspapermen cannot be the personal or intimate friends of very powerful people. They just can't. It won't work. They'll either end in corruption of the press or a quarrel, and I've said that before. You cannot be in the confidence of a king.

Q. There is a lot of talk now about the press abusing its privileges and of government restraints on the press. Should the

press monitor itself through a public commission, as a way of preventing the government from interfering?

A. The press should be responsibility edited. But it shouldn't edit itself by law, decree or fiat or anything like that. Commissions to monitor the press and things like that are artificial anyway. They never work.

Q. You have probably been the most successful political journalist we've ever had in this country. But if you had it to do over again would you have chosen a different kind of life?

A. Had I been gifted to do it—and I wish I had—I would like to have been a mathematician.

Q. Why?

A. I would have liked that kind of life. The precision, the elegance . . . there's something about it that attracts me esthetically.

Q. Did you consider the writing of books or your journalism more important?

A. I considered writing books the more important thing. I always viewed journalism as the place where I accumulated facts and information that I used for my books. Being a journalist was rather like the doctor, you know, who has to go and practice.

Q. Forty years ago you launched a new kind of column—serious political analysis—that had never been done before. But with the growth of TV and news magazines, do you think the political column still plays an important role today?

A. I think it plays an important role whether or not it's signed and presented as a column. The columnist is really a specialist writing editorials. The column is an editorial, and an editorial really should be an explanation of a fact. A good editorial is something which makes a fact much clearer.

Q. Are the newspapers performing that task adequately today?

A. No, but it's a very difficult task to perform.

END OF VIETNAM WAR—FOUNDATIONS FOR PEACE

Mr. FONG. Mr. President, I rise to express my heartfelt thanksgiving that all known American prisoners of war of the Indochina conflict have been released and that our troops are now out of Vietnam. Great credit is due President Nixon for this happy day.

Words cannot adequately express the joy that I feel not only for the men themselves, but also for the wives, children, and families of our prisoners of war. Their long and patient vigil has finally come to an end.

At this time of rejoicing, we must not and we do not forget our men who are missing in action. I hope that in the weeks and months ahead total effort will be expended by everyone to have as full and complete an accounting of our MIA's as possible. Nothing less will fulfill our duty to those brave men and their families.

In addition, praise must be given to the millions of Americans who faithfully and loyally served their country at a time when people were criticizing our involvement in behalf of the South Vietnamese and when thousands chose to desert their country. I cannot help but have the highest admiration for those brave young men and women who answered their country's call to leave their families and their jobs, and to put their futures—even their lives—on the line in an effort to assist an ally in need of help. Many have been crippled or scarred or maimed for life; many others—over

50,000—gave their full measure in serving their Nation.

TRIBUTE TO PRESIDENT NIXON

That the prisoner exchange and the return of the last of our troops from Vietnam have been successfully accomplished is due in large measure to President Nixon. When the other side balked, he remained firm and resolute. When the other side refused to reveal the names of all the POW's, he insisted in full disclosure and full release of the men.

All Americans can be thankful that our Nation has in the White House a man of exceptional courage and fortitude and perseverance. He has demonstrated over and over again that he cannot be bluffed or intimidated. As a result, our men have been brought safely home.

As we give thanks for the safe return of our men and for the end of America's military involvement in Vietnam, we also say a prayer that peace will come to all Indochina.

However, in view of numerous cease-fire violations since the agreement went into effect 2 months ago, there is a cause for concern that the fragile cease-fire will be broken. Obviously, peace will not be restored to Indochina if the signatories to the Agreement on Ending the War and Restoring Peace in Vietnam do not live up to the provisions of the cease-fire document. I earnestly hope and pray that all parties to the agreement will realize the advantages to making the ceasefire work far outweigh the costs of resuming old hostilities.

President Nixon is to be commended for carrying out his pledge to end the Vietnam war as soon as possible in a way that will not invite future Vietnams.

Merely ending the war by withdrawing our troops as some suggested:

Without any foundation on which to build lasting peace;

Without provisions for the prompt release of all American prisoners of war and a full accounting of the missing in action;

Without safeguards to provide supervisions of the peace agreement;

Without guarantees that the people of South Vietnam would be given the opportunity to determine their own future;

Without these and other provisions which fulfilled our mission in Vietnam—would have made a mockery of the sacrifices that millions of Americans made, including the supreme sacrifice of over 50,000 lives, in behalf of the people of South Vietnam and their right to self-determination.

President Nixon's strong resolve and determination to make the American sacrifices meaningful—and not in vain—resulted in an agreement that can bring peace with honor in Indochina. If all the parties to the accord live up to it, there can be peace in war-torn Indochina for generations to come.

INSURING LASTING PEACE

Mr. President, although large-scale fighting has ended—with lesser attacks constituting violations of the cease-fire agreement still taking place—there is much more that we must do to insure that the peace will be a lasting one. As President Nixon stated in his television address to the American people:

We must recognize that ending the war is only the first step toward building the peace.

With the major fighting now over, we can concentrate on not only assisting the people of Indochina, but on reunifying the American people and healing the wounds that have been building up over the years.

Mr. President, I am mindful of the fact that no piece of paper or formal agreement can wash away overnight the hatred, distrust, and bloodshed that have been accumulating for the past generation. However, I am confident that if all the parties to the agreement carry out their responsibilities and duties in an honorable and sincere manner, the future can be a bright and peaceful one.

As Dr. Henry Kissinger, President Nixon's capable and dedicated national security adviser, wisely observed at one of his briefing sessions for reporters:

It will be our challenge in the future to move the controversies that could not be still by any one document from the level of military conflict to the level of positive human aspirations and to absorb the enormous talents and dedication of the people of Indochina in tasks of construction, rather than in tasks of destruction.

NIXON DOCTRINE FOR PEACE

As the thorn to better relations and détente between the United States and the Communist world is removed, we can now make a more objective appraisal and analysis of the Nixon doctrine—the foundation and guidepost for our country's foreign policy for the 1970's.

In his address to the United Nations General Assembly on September 18, 1969, President Nixon stated:

It is not my belief that the way to peace is by giving up on our friends or letting down our allies. On the contrary, our aim is to place America's international commitments on a sustainable, long-term basis, to encourage local and regional initiatives, to foster national independence and self-sufficiency, and by so doing to strengthen the total fabric of peace.

Since taking office, President Nixon has demonstrated his conviction that a world order for peace requires a strong but redefined role for America. The President has repeatedly expressed his belief that as the leader of the free world, the United States needs to strengthen its relations with allies and friends and evoke their commitment to their own future and to the international system.

The Nixon doctrine, therefore, seeks to reflect the following realities of the 1970's:

That America must continue to play a major role in international affairs;

That our friends and allies can and should assume greater responsibilities for the preservation and advancement of the free world;

That the change in the strategic relationship among the nuclear powers calls for new doctrines and new approaches; and

That the emerging polycentrism of the Communist world presents different challenges and new opportunities for the evolution of a relatively peaceful world order.

ALL NATIONS MUST WORK FOR PEACE

There cannot be a realistic structure of peace unless other nations help to fashion it. Indeed, in the recognition of this basic

fact lies both its hope and its pitfall. The structure of peace cannot be built except by the willing hands—and minds—of everyone.

In this new, dynamic era unprecedented challenges and opportunities beckon the nations and leaders of the world to set aside doctrine and focus on a common goal—world peace and cooperation. A new global partnership could promote a consciousness among all to work for the world's interests instead of narrow national interests.

PRESIDENT NIXON OUTSTANDING LEADER FOR PEACE

At this time in history our country is fortunate to have a leader of President Nixon's caliber at the helm in the White House—a man who has recognized the historic opportunity to seize the creative possibilities of a pluralistic world and to turn the changes of the last generation into new avenues for peace.

In his second annual Presidential review of the U.S. foreign policy, President Nixon made perfectly clear what his administration planned to do in international affairs:

We must begin with the vision of the world we seek, to infuse our actions with a sense of direction. We need a vision so that crises do not consume our energies, and tactics do not dominate our policies.

Mr. President, historians will undoubtedly give the Nixon administration high marks for its performance in international affairs during the President's first term in office—a performance that truly reflects his credo that crises should not be allowed to exhaust our resources, and tactics should not preponderate our policies.

MAJOR ACHIEVEMENTS FOR PEACE

By starting with proper vision and by making painstaking preparations, the Nixon administration has been involved in some historic and dramatic developments. These are:

Vietnam settlement.—The signing of a cease-fire agreement in Vietnam enabled us to see peace with honor come to Vietnam. This agreement made it possible for first, the release of all American prisoners of war held throughout Indochina; second, the fullest possible accounting of all those who are missing in action; third, the withdrawal of all American forces from South Vietnam; fourth, an internationally supervised cease-fire; fifth, a guarantee for the people of South Vietnam of the right to determine their own future, without outside interference.

Had we cut and run in Vietnam as many had advocated, President Nixon would not have been able to transform the spirit of the international community into one of accommodation and compromise. To wash his hands of the most unpopular war our country has ever waged would have been easy for the President to do, especially since it was not a war he started but a war he inherited. However, he chose to face the lonely vigils, the difficult decisions, the up-and-down emotions of the American people, and the anguish that accompanies the exercise of such immense responsibilities. It is to America's credit that, despite strong criticisms at home

and abroad, she did not abandon an ally; and it is to the President's credit and to the credit of the late President Johnson that they had the courage to persist in the pursuit of an honorable peace agreement.

Breakthrough with the Peoples Republic of China.—The end of President Nixon's first term in office saw the dramatic turn in Sino-American relations from hostility toward normality.

Upon assuming the Presidency, one of the great challenges that Richard Nixon faced was to redirect America from a collision course with the Peoples Republic of China to a pragmatic relationship opening the doors of both countries to trade, commerce and political dialog. In a matter of 4 short years, President Nixon has ended a quarter of a century of unyielding and inflexible hostility on the part of both countries toward each other. Fragile as the historic breakthrough is, this rapprochement between the most powerful nation and the most populous nation in the world could have greater significance for future generations than any other single act of the administration. It represents a necessary and giant step toward the creation of a stable structure for world peace.

Improved relations with the Soviet Union.—The Nixon administration has succeeded in creating a new momentum in the search for more constructive rapport with the U.S.S.R. through a series of concrete agreements which contribute to the lessening of tensions and the improving of relations.

Guided by the desire to place Soviet-American relations on a more stable and constructive foundation, and mindful of their responsibilities for maintaining world peace, the Soviet Union and the United States adopted on May 29, 1972, a document entitled: "Basic Principles of Mutual Relations between the United States of America and the Union of Soviet Socialist Republics." Among the agreements that were reached which will intensify bilateral cooperation in areas of common concern, as well as in areas relevant to the cause of peace and international cooperation, are the following: Limitation of Strategic Armaments; Commercial and Economic Relations; Maritime Matters; Incidents at Sea; Cooperation in Science and Technology; Cooperation in Space; Cooperation in the Field of Health; Environmental Cooperation; and Exchanges in the Fields of Science, Technology, Education and Culture.

Mr. President, at a time when all Americans are rejoicing over the return of our POW's and the final withdrawal of American forces from South Vietnam, it is only appropriate that attention also be focused on the total design of the Nixon doctrine and what it has accomplished over the past 4 years.

There were times when people strongly questioned the wisdom of the President's actions and policy regarding our goals and objectives in Vietnam. However, despite great pressures from his critics and many lonely vigils, President Nixon steadfastly refused to yield to his diehard detractors. He knew that if North Viet-

nam's aggression against South Vietnam went unchallenged this would mean that the extraordinary relaxation of tensions within the international community of nations would never have taken place.

Although this historic change is encouragingly underway, the transition is far from completed. During this difficult but important period, the task of maintaining a balance abroad and at home will test the capacity of our leaders and the understanding of the American people.

Now, more than ever, if the President's critics will restrain their doomsday rhetoric and give the President's peace plan a chance to bear real fruit, we will be able to bring in a new era of cooperation, good will, and peace.

Mr. President, let us all support our country's efforts to help create an environment that will be conducive to peace and the normalization of relations among all nations of the world—an environment that can nurture peace for generations to come.

TIMELY ACTION TO COORDINATE FEDERAL DRUG LAW ENFORCEMENT

Mr. PERCY. Mr. President, President Nixon sent to Congress yesterday Executive Reorganization Plan No. 2 of 1973. I welcome this as another affirmative step in the President's continuing effort to overhaul the executive branch and better coordinate existing programs and functions.

This plan strengthens the attack on illicit drug traffic and manufacture by realigning current Federal law enforcement functions. The President has keenly discerned several ongoing problems in drug abuse law enforcement and has submitted this plan to overcome those difficulties now.

Under the provisions of the Executive Reorganization Act of 1971, either House of Congress can disapprove this Reorganization Plan within 60 days, otherwise it becomes effective. Senator RIBICOFF has already announced that he will hold hearings in the Executive Reorganization Subcommittee of the Government Operations Committee. As a member of this subcommittee, I have participated in a 3-month study of the current drug enforcement efforts within the executive branch. Many of the problems which this study has uncovered would be alleviated shortly after implementation of the plan.

Specifically, the President's proposal clarifies the diffuse responsibilities of the Department of Justice and the Treasury Department by consolidating all drug law enforcement functions in Justice. The Bureau of Narcotics and Dangerous Drugs would be abolished as a separate institution within the Justice Department. Approximately 300 special agents, presently assigned to the Bureau of Customs, would be transferred to a new agency within the Justice Department—the Drug Enforcement Administration.

Thus, all principal investigative and law enforcement functions, some of which have been under the auspices of the Treasury Secretary, will be vested in

the Attorney General. Also transferred to the control of the Attorney General would be all law enforcement functions and resources of the Office of Drug Abuse Law Enforcement, the Office of National Narcotics Intelligence, and the funding for drug law enforcement research presently carried on by the Law Enforcement Assistance Administration.

The Treasury Department will assume responsibility for conducting ports of entry inspection of all goods and persons entering this country. This function is currently divided between Justice and Treasury, each conducting separate inspection procedures with differing priorities. With the Immigration and Naturalization Service now to be transferred to Treasury, the result will be a uniform border protection policy conducted solely by the Bureau of Customs.

During the last few years, the problem of drug abuse throughout the world has multiplied by a hundredfold. Federal Government reaction to this mushroom effect has been to keep pace, but the effort has been uncoordinated in several important respects. Federal spending on programs to combat and treat drug abuse has increased nearly 10 times since 1969, but currently nine Federal agencies perform related drug law enforcement functions. Seizures of contraband narcotics throughout the world have almost tripled in the last year alone, but illicit drug manufacture is estimated to have increased at an even faster rate.

This country's effort in combating illicit drug traffic has suffered due to overlap and an ineffective coordination of agency resources. It is imperative that our combative procedures be streamlined, along the lines proposed by the President, so we may keep pace with the rapidly growing sophistication employed by world drug traffickers.

The lack of adequate interagency communication of vital intelligence information is another problem which I hope will be substantially relieved when this plan goes into effect. Intelligence data gathering sources and responsibilities are spread throughout several Federal agencies. For all too long, the right arm of this network has been unaware of what the left arm has been doing. Each of the two cabinet departments involved in the reorganization will now have specific and distinct functions in this regard.

Just last week the National Commission on Marihuana and Drug Abuse issued a report based on 2 years' study of the Nation's drug crisis.

In making its recommendations for a more effective drug policy, the Commission concluded that the current Federal response has tended to perpetuate the problem. The report cites interagency rivalry and the lack of coordination at both the local and Federal level as among the primary difficulties with our current drug abuse effort. However, the members of the Commission further stated that "when such responsibility is clearly defined and delegated, such bureaucratic difficulties are much less likely."

This is precisely the course of action the President has proposed. Although the Commission report recommends the creation of a new Federal agency to ad-

minister all drug law enforcement and treatment and prevention, I do not believe that this is the best course to follow at this time—as indeed Senators HUGHES and JAVITS indicated in their judicious dissents on this issue. The Special Action Office for Drug Abuse Prevention, established statutorily last year in the Executive Office of the President, currently oversees all major Federal programs for drug abuse treatment, rehabilitation, education, and research. The Special Action Office, guided since its inception by the very capable leadership of Dr. Jerome Jaffe, has made remarkable progress during its short existence. Disbanding this group and coupling treatment with law enforcement within a single agency would for now only compound the bureaucratic problems we are already experiencing.

The President's proposal will eliminate the problems the Commission addresses without the cost and confusion which a totally new, independent agency would entail. The restructuring clearly outlines the duties and responsibilities of all the participants in our continuing struggle against drug abuse. The President is to be commended for his foresight and personal commitment to this effort.

WHO SPEAKS FOR CONSUMERS?

Mr. RIBICOFF, Mr. President, in today's Washington Post, Mr. Hobart Rowen has written an excellent analysis of the reasons for the present high prices of food products. As the article points out, Secretary Butz seems to be a good advocate for current price levels. But who speaks for consumers—who is arguing for lower prices? The answer is no one, because there is no consumer protection agency.

Mr. President, this article is another demonstration that the consumers of America need a consumer protection agency to speak for them in the departments and agencies of Government.

I ask unanimous consent that Mr. Rowen's article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOOD PRICES: PAYING NOW FOR PAST MISTAKES

(By Hobart Rowen)

Secretary of Agriculture Earl Butz and others who oppose price controls on food products argue that it's all a question of supply and demand. The artificiality of controls, they suggest, will merely bring about shortages and black markets.

We must suffer the thing through, they say, until the good old free market system, stimulated by high prices, increases producers' incentive to put more food on the table.

Well, where were Mr. Butz and Co a year or two ago?

The real answer, and it was supplied with great candor by none other than Economic Council Chairman Herbert Stein, is that they had forgotten all about the free enterprise system, and were concentrating on getting the farmer to the polling place where he would vote Republican.

Before the White House mafia descends on Mr. Stein, let me hasten to say that he didn't put it in just that language.

But in briefing the press on the worst cost of living data in 22 years, Stein conceded

that "one or two years ago," the Administration had not foreseen the extent of demand for agricultural products.

"Now," he said—referring to the desperate attempts to boost farm output—"we have a policy more conducive to the production of farm products than we had (then). . . . I would sound silly if I said we had forecast the situation correctly."

It is true that unfavorable weather conditions, including a corn blight in 1972, and the extraordinary demand from abroad have contributed to the rise in farm prices.

At the same time, the rise reflects the earlier policy of the Nixon Administration. Net farm income declined in 1970 after reaching the highest level in 20 years in 1969. Looking ahead to the 1972 election, the administration became anxious about the farm vote.

The 1971 Economic Report of the President, at a time when the President was saying that "free prices and wages are the heart of our economic system," was duty bound to report the following:

"To some extent, the rise in these (crop) prices was a consequence of Federal cropland adjustment programs, which had diverted substantial acreage from production in the past two years, and the large stocks of commodities built up earlier were thus somewhat diminished."

By early August, 1972, Butz knew the dimensions of the Soviet grain purchase. But as farm expert John A. Schnitker (a former Agriculture department Under Secretary in the Johnson Administration) pointed out in recent Congressional testimony, Butz as late as October wanted a conservative corn crop target. Then, in December, he announced a restrictive program for feed grains that had to be junked in January.

So the Nixon Administration record in the whole area runs from poor to dismal, and one is entitled to view with a jaundiced eye the bland assurances that everything that should be done is now being done, and that price controls would only mess things up.

Reasonable persons can differ about the long run impact of price controls. But there just can't be any doubt that controls would put an end to the present unacceptable level of skyrocketing food prices and put more meat in the supermarkets.

That much is conceded by David Stroud of the National Meat Board. But he contends that pig farmers and cattle breeders who have been urged lately by the administration to stimulate their production and who will—he insists—deliver more meat by the end of 1973, would quit under price controls and return to the old scarcity policy.

No one ever explains why this should be so. The attitude of the authorized spokesmen for the meat industry, such as Mr. Stroud, seems to be that the livestock farmer has gotten a bum rap in the distribution of national income since the end of World War II, and no one should interfere now, because for the first time, he is getting what's coming to him.

There is no reason why the livestock producers should not get a reasonable price for their meat, with controls in effect. If rising demand is there—and this is the element on which Mr. Butz puts most of the blame—it should be able to sustain good prices for heavy marketings over a long period of time, assuring a prosperous time for farmers.

Price controls now, for three or four months, with encouragements rather than discouragements to production, are needed to shoot down the soaring price balloon.

THE FUTURE OF SHIPS

Mr. BEALL, Mr. President, earlier this year I introduced S. 797, the "Bicentennial Advanced Technology Transportation Systems Demonstration Act."

This proposal would authorize a dem-

onstration high-speed land and water during the bicentennial. On December 7 of last year hearings were held on this proposal. During this hearing, we heard from the Navy with respect to their utilization of high-speed marine vessels. In the January issue of Sea Power there is an interesting article entitled "An Attempt to Determine the Future of Ships."

Because of the interest in the Congress in high-speed transportation systems, I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN ATTEMPT TO DETERMINE THE FUTURE OF SHIPS

(By James D. Hessman)

Chief of Naval Operations Admiral Elmo R. Zumwalt, Jr.: The SES program, represents "a technological breakthrough that offers the potential for revolutionizing naval warfare . . . [It] will change warfare at sea in ways we cannot yet fully foresee."

Assistant Secretary of the Navy (Research and Development) Robert A. Frosch: The SES will possess "at least twice what we believe to be the highest speed that we could contemplate building a submarine to go . . . [with a] best efficiency range somewhere between 80 and 100 knots. . . ."

"Such ships will provide a greater advancement in surface ship capabilities than any in the last century, and hold a potential for revolutionizing naval warfare."

Director of Defense and Research Engineering John S. Foster, Jr.: "We don't look on this as a small thing at all. . . . It is an extremely critical experiment in an attempt to determine the future of ships."

Vice Admiral Jerome H. King, Jr.: "[This is] a very exciting thing. It is an area of technology that we must exploit to the fullest."

Zumwalt again: "We believe the potential for [changing] the whole nature of warfare at sea is so great—it is like nuclear propulsion—we ought to go forward [with the SES program]."

The enthusiasm of the speakers—all of the above quotes are from testimony before the House and Senate Appropriations Committees during hearings on the fiscal year 1973 Defense Department appropriations bill—is understandable. They were talking about the Surface Effect Ship, or SES, which in its various future configurations could, among other things:

Literally run rings around a submarine, thus greatly diminishing if not completely eliminating the Navy's aggravating and long-standing ASW problem.

Serve as a super-fast PT boat, darting in from the shallows to deliver a knock-out punch against enemy ships operating in protected waters.

Deploy as a "mini" aircraft carrier, suited with a mix of helicopters, V/STOL (vertical/short takeoff and landing) and fixed wing aircraft, and capable of making the run from the East Coast of the United States to the Mediterranean in a day and a half—or from San Diego to Japan in two days.

Operate as a multi-purpose amphibious vehicle, scooting over shallow water, marshes, and swamps to drop troops and cargo not on the beach, but at staging areas far inland.

THIRTY HOURS TO EUROPE

Potential commercial applications of the SES are similarly mind-boggling. Commander Alfred Skolnick, Director of Technology in the Naval Material Command's SES Project Office (headed by Captain Carl J. Boyd) pointed out in a 1968 monograph that "transport for large volumes of high-value-per-ton cargo, always a problem for aircraft, [could]

be handled smartly by the surface effect ship and delivered, for example, on a *New York-to-Southampton* run in less than 30 hours [emphasis added].

"Passenger capability, ferry service, island hopping, transport of perishables, and numerous other applications are easy to perceive; roll-on and roll-off capabilities and containerized cargo enhance the vision," Skolnick said, adding, perhaps unnecessarily, that "The effect upon ship construction opportunities for existing yards and aggressive aerospace companies is clear, once feasibility of the concept is demonstrated."

Other experts agree with Skolnick. A 1969 SRI (Stanford Research Institute) study gets down to cases with an "actual realistic schedule" setting forth SES sailings "at the same day and time each week to achieve consistent scheduling from the standpoint of the shipper."

The "balanced schedule" wherein specified numbers of ships could maintain a consistent weekly service is laid out by SRI as follows: "[T]wo ships could provide a three-sailings-a-week service each way between New York City and one of . . . three ports in northwestern Europe (Tilbury, Göteborg, or Rotterdam) . . . Japan could be served by two SESs with two sailings each way one week and three the next, or by four [SESs] with five sailings each week."

Other uses are possible. Studies have been underway for some time on an Arctic Air Cushion Vehicle (ACV—one of the two major SES subcategories) which could operate with equal facility over the ice cap, open ocean, or Arctic tundra—in the latter case, without causing damage to the delicate tundra vegetation, a matter which has been a prime concern of the ecologists.

Also in the offing are short run SES cargo and passenger systems—possibly using U.S. inland and coastal waterways to ease urban traffic congestion.

THREE CENTURIES OLD

Despite the hyperbole of enthusiasts, the SES is not really a "revolutionary new concept." It is more "an idea whose time has come," as Skolnick points out in another 1968 article (co-authored by SESPO's Z. G. Wachnik) published by the American Society of Mechanical Engineers: "Waterjet [one of several possible SES propulsion systems] is the oldest known type of mechanical propulsions for ships. Patents were granted to Toogood and Hayes in England in 1661, repropoed by Benjamin Franklin in 1775, and actually applied by James Rumsey in 1782, when waterjets were used to propel an eighty-foot passenger boat on the Potomac between Washington and Alexandria."

But if the idea is not new, it was never before feasible on a large-scale basis. Now, with the dramatic advances in metallurgy, marine propulsion systems, and other technologies which have taken place in the last quarter century the time has come, say marine engineers, to get on with the program.

All SES vehicles literally ride on air, but the way they do it makes a difference. The Category I or "aerostatic lift" vehicle is supported by a cushion of air which is constrained in one way or another beneath the vehicle. The Category II or "aerodynamic lift" vehicle would get its support from aerodynamic lift provided by the vehicle's forward motion—which would cause air to pass over (and under) the upper and lower surfaces of SES "wing" components. Category I vehicles can hover, but Category II vehicles, which depend on their transit speeds to develop lift, cannot. Future SES vehicles may make practical application of aerodynamics principles, but current studies assume that, in Skolnick's words, "for multithousand ton SES, air propulsion is unrealistic." Present and prospective test programs are postulated on the assumption, therefore, that aerostatic lift will be "a basic vehicle design feature."

Other studies conducted over the past 12 years by various U.S. government agencies—principally the Navy and the Commerce Department—indicate the most practical aerostatic lift systems for future SES vehicles of the size planned for military and commercial application are those utilizing waterjet propulsion or supercavitating propellers (fully or partially submerged). Both systems use rigid sidewalls—running fore and aft on either side of the ship—and bow and stern seals, or flaps, to produce a CAB (Captured Air Bubble) effect. The waterjets or propellers, located at the after end of the sidewalls, provide the propulsion which enables the SES to ride the captured air bubble at speeds which could reach, in some theoretical studies at least, as high as 180 knots or better.

FAST SHIPS, SLOW TORPEDOES

It is the prospect of such never-before-attainable superspeeds, of course, which so excites senior Navy and Defense Department officials. A closer look at some of the possible combatant ship applications tells why:

In the destroyer mode—2,000 tons or so—a 100-knot SES would restore the combat advantage to the surface ship for the first time since the advent of nuclear propulsion. With several LAMPS (Light Airborne Multi-Purpose System) ASW helicopters aboard, the SES destroyer could patrol and control several hundred square miles of sea, moving in from miles away to destroy a remote contact within minutes. Cruise missiles might provide the submarine some attack capability but the destroyer likely could outrun any torpedo launched against it. (SES cargo ships, of course, would not need destroyers to convoy them; they could rely on their own speed for protection.)

On November 10 the Navy awarded four contracts—to Aerojet General (\$2.6 million); Bell Aerospace (\$3.0 million); Litton (\$2.7 million); and Lockheed (\$2.3 million)—to do preliminary designs of a 2,000-ton surface effect prototype ship which presumably could be used, somewhat larger and with several modifications, as an SES destroyer.

The patrol boat SES could hide along the coast line or even—in a "hovercraft" configuration (using a flexible "skirt" rather than rigid sidewalls)—on land. Such craft would have limited range, but a few of them armed with torpedoes and/or cruise missiles could easily control the choke points of vital waterways and deny access to enemy shipping. Two 100-ton SES vehicles built for the Navy by Aerojet General and Bell Aerospace as test beds for multithousand ton SESs have already demonstrated the feasibility of smaller-sized combatant SESs. (Tests indicate, it should be noted, that hydrofoils probably are more efficient than SES craft in the lower tonnages; they are, in fact, expected to be the Navy's patrol boats of the future.)

As a small aircraft carrier or Sea Control Ship (SCS) the 10,000- to 20,000-ton SES could be the end-of-century successor to present day 100,000-ton attack carriers, which Congress is understandably reluctant to replace at a price tag of \$1 billion per ship. For the same cost the Navy could have several SES carriers with three times the speed and, if nuclear-powered, virtually unlimited range. The SES would carry fewer but more capable aircraft. The high speed of the SES carrier would be sufficient in itself to permit launch and recovery of aircraft; catapults and arresting gear could be eliminated, a consideration which would hold down the cost, size and complexity of both the carrier and aircraft carried. Present naval aircraft must be extremely rugged to withstand the shock and strain of catapult launches and arresting gear landings. SES carrier aircraft could be appreciably lighter, and thus would be able to fly higher, faster, and farther than their heavier forebears. The SES carrier is still a long way over the horizon, however. As Defense's Foster told the Senate Defense Appropriations Subcommittee last year: "While

we might in the future want ships of 20,000 tons or more, we feel at this time 2,000 tons is as far as we can push it on an experimental basis."

TIPTOE THROUGH THE TUNDRA

More immediate—and soon, perhaps, a reality—will be 160-ton amphibious assault landing craft ACVs being developed for the Navy by, once again, Aerojet General and Bell Aerospace. The AALCs will be true amphibians, able to move over the water, through the surf, and onto the beach at speeds up to 50 knots, or five times as fast as World War II landing craft. Payload will be about 60 tons.

The Army and the Defense Department's Advanced Research Projects Agency (ARPA) also are deeply immersed in ACV/hovercraft technology. The Army's Voyageur Air Cushion Vehicle—developed and built by Bell Aerospace Canada—successfully completed its first ship-to-shore military transport trials in October during exercises off Fort Story, Va., near Norfolk. The Naval Ship Research and Development Center headquartered at Carderock, Md., is ARPA agent for a program to develop an Arctic Surface Effect Vehicle (SEV) which will be capable of carrying a variety of cargo, say NSRDC officials, "through ice rubble and snow at minus 65 degrees Fahrenheit as well as the open ocean and tundra quagmire in summertime at speeds averaging 60 knots."

Other countries have not been idle. The British are particularly active in the hovercraft field. The Navy's Frosch noted in his Defense appropriations testimony that 200-300 ton SES vehicles capable of carrying 250-300 passengers provide regular passenger service between Norway and Copenhagen. Lockheed's James G. Wenzel last month told the Senate Commerce Committee's Subcommittee on Surface Transportation—during hearings on Bicentennial Transport demonstrations—that "Commercial SES are proven. . . There are 11 small craft of this type now in worldwide service which have logged over five million fatality free passenger miles with a high mechanical reliability." And SESPO's Skolnick, referring to a 1966 article in Navy (now Sea Power), says "Recent interest has also been demonstrated by the Soviet Union; the obvious speed advantages of SES over submarines make them an attractive anti-submarine warfare platform which the Russians apparently intend to exploit."

As is always the case with "revolutionary new concepts" there have been problems with the SES program, and there undoubtedly will be many, many more. The test schedule for the 100-ton vehicles already has experienced a seven-month slippage. The Commerce Department has dropped out of what had been a 50-50 partnership with the Navy in conducting an SES R&D program—but only because commercial SES is less urgent, and can ride piggyback on the still ongoing naval program, now 100 percent Navy funded.

Numerous problem areas identified by the SESOC (Surface Effect Ships for Ocean Commerce) Advisory Committee have been arbitrarily classified into "crucial," "important" and "improvement" categories. A few examples of each:

Crucial—A reliable collision avoidance system is mandatory; better stability and control criteria are needed; effective flexible understructures must be developed; the problems of overloading sea conditions, waves of unusual height, and unforeseen structural failures must be solved.

Important—"Highly efficient, high powered, light-weight propulsion systems capable of continuous, reliable, and maintenance-free operation without efficiency degradation in the marine environment" must be developed; further exploration of materials "with regard to rupture, stress corrosion, cavitation erosion, and other special properties" is necessary.

Improvement—Means must be developed to reduce port delays to a minimum; special facilities at terminals "to accomplish fueling, servicing, and maintenance" will be required; special habitability problems must be identified and resolved.

FOCH AND J. P. JONES

Most if not all of these problems, staggering as they seem, fall into the "engineering" category, which means, SES program officials say, that "we know the problems can be solved; what we don't know is how." The test program on the 100-ton vessels—which Dr. Foster says will involve about 5,000 individual subsystem tests per vehicle, plus about an additional 160 "test events" involving the "whole SES system"—undoubtedly will resolve numerous problems (but find still more). At the present time, despite all the obstacles, known and unknown, which still must be hurdled, said one SES official, "we're closer to the SES carrier than the Wright Brothers were to the C-5."

Less optimistic persons find solace in the following from Robert D. Heini's admirable *Dictionary of Military and Naval Quotations*: "What can you conceive more silly and extravagant than to suppose a man racking his brains, and studying night and day how to fly?" William Law, 1728.

"That's good sport, but for the Army the airplane is of no use." Ferdinand Foch, 1910.

But most Navy men, not only those involved in the SES program, would prefer instead to follow the lead of John Paul Jones, who in a letter to le Ray de Chaumont in November 1778 said: "I wish to have no connection with any Ship that does not sail fast, for I intend to go in harm's way."

JAMES THOMPSON, U.S. ATTORNEY

Mr. PERCY. Mr. President, James Thompson, the U.S. attorney in the northern district of Illinois, has shaken up the politics of Chicago in ways few men before him have ever duplicated. He has brought a new vitality to the U.S. attorney's office and a new spirit to Chicago. Once everyone assumed that corruption was a political fact of life, which, like the weather, everyone talked about but no one did anything about. But now there is a renewed faith in the Government's ability to root out corruption.

For the first time in the lives of many of the people of Chicago, "equal justice under law" is not a joke. Jim Thompson has been looking into the nooks and crannies of city hall, the statehouse, and every other place where there is a possibility of corruption by public officials. The list of those he has prosecuted successfully is an impressive testimony to his ability and his determination to do his job.

There are many crimes which society abhors. Robbery deprives a person of his possessions; murder robs someone of his life. But corruption in office has an equally harmful effect on society because it robs society of its faith in its elected officials. Jim Thompson's crusade to eliminate this corruption has helped to shore up the lagging faith in our system of government, especially in Illinois.

Mr. President, I ask unanimous consent that an article from the April 2 edition of *Time* magazine, which describes the career of Jim Thompson, who I had the honor to recommend as U.S. attorney, be printed in the *RECORD*.

There being no objection, the article was ordered to be printed in the *RECORD*, as follows:

[From *Time* magazine, Apr. 2, 1973]

ILLINOIS—TROUBLE IN DALEYTOWN

In all his 20 years as boss of Chicago's Democratic machine, Mayor Richard Daley has seldom been so troubled. His most illustrious protégé, former Governor and now Federal Judge Otto Kerner, has been convicted of bribery, conspiracy, income tax evasion, mail fraud and perjury (*TIME*, March 5). Possibly even more damaging to the machine, one of Daley's oldest political associates, Edward Barrett, was recently convicted of bribery, mail fraud and tax evasion. Since 1955 Barrett had been Cook County clerk, an influential office that carries rich patronage powers. The clerk's office does everything from dispensing birth certificates to buying and operating voting machines—always an interesting function in Cook County.

The man most responsible for indicting both Kerner and Barrett, and shaking the once stubbornly secure Democratic domain, is James ("Big Jim") Thompson, 36. A coolly sagacious but easygoing 6-ft. 6-in. bachelor, he calls himself a "middle-of-the-road" Republican. In the 17 months that he has been U.S. Attorney for the Northern District of Illinois, Thompson has prosecuted scores of mostly Democratic politicians and city employees on a variety of federal charges. Among those indicted by Thompson and his aides are: 81 precinct workers, charged with vote fraud; eleven employees in the Democratic-controlled county assessor's office, charged with offenses that include bribery, tax evasion and mail fraud; and 40 Chicago policemen, charged with extortion of "protection" money from various tavern owners and storekeepers.

A federal grand jury is looking into evidence of even more corruption. Thompson says that the possibly illegal dealings involve race-track stockholders and some Illinois legislators, both Democrats and Republicans. He vows that other criminal indictments will be forthcoming. As he recently promised Attorney General Richard Kleindienst: "I'm going to kick ass until I get rid of the crooks."

Thompson, a Chicago native, became fascinated with criminal law while studying at Northwestern University. He taught the subject there for five years and co-authored two books. At the request of Senator Charles Percy, President Nixon appointed Thompson to the U.S. Attorney post.

Before getting the job, Thompson was acting U.S. Attorney and then first assistant to William Bauer, who quit to become a federal judge. Because they were the first Republicans in nine years to hold the top federal prosecution post in Northern Illinois, Bauer and Thompson had considerable incentive to look into the shenanigans of local Democratic administrations. They also got plenty of help from the Justice Department, which raised their budget, enabling the attorney's office to increase the staff of lawyers from 23 to 73. Many of the scrappy young lawyers whom Thompson recruited were his former Northwestern students, and they were hired on the basis of merit, not because of their political affiliations.

Unlike many Democratic predecessors, Thompson went far beyond the routine prosecution of kidnapping, mail fraud, income tax evasion and draft dodging. He put together a special division with units to handle matters as diverse as official corruption and civil rights violations. Last year the civil rights staff checked out more than 250 complaints of police brutality, mainly in black neighborhoods. Investigations prompted by Thompson's office led to the first guilty verdict ever handed down in the Northern District against a Chicago policeman on charges of a civil rights violation. Thompson's office recently filed suit charging that the Chicago Fire Department discriminates against blacks and Spanish-speaking people. The suit and the conviction of the policeman did much to

enhance the U.S. Attorney's credibility in the city's minority communities.

To speed the prosecution of consumer fraud, Thompson has formed a special "Public Protection" unit. "The goal," he says, "is to establish a federal presence in the consumer-fraud field so that the shylock merchant knows that he's got another pair of eyes looking over his shoulder." He says that the unit will keep a close watch on the ghettos, "where people get ripped off the most."

To get political corruption indictments, Thompson has made shrewd use of the immunity statutes. Witnesses, who would otherwise have faced prosecution, testified freely. The most damaging testimony against County Clerk Barrett came from a Philadelphia businessman who was given immunity and admitted that he had bribed Barrett.

Partly as a result of the corruption indictments, Mayor Daley has been increasingly criticized by rank-and-file Democrats. Several weeks ago, he called in heads of city department and issued an ultimatum: either be loyal to Daley or be forced out. Some Democratic chieftains, noting that Thompson is increasingly talked about as a candidate for the mayor's job when Daley steps down on corruption is politically motivated. The attorney convincingly denies the accusation. "I can't go out and hire Republicans to pose as defendants simply because I'm criticized," he says. "How in the world are you going to find Republican corruption in a city that has been under one-party rule for 50 years?"

NEW DIRECTION NEEDED IN FARM POLICY

Mr. McGEE. Mr. President, in the February 1973 publication of the *Rocky Mountain Union Farmer*, there appeared an editorial entitled "New Direction Needed in Farm Policy."

The writer notes that—

Agriculture—and the nation—needs a publicly-developed set of food and fiber objectives, short and long range; then legislation that stretches toward those goals. Assumably, healthy agriculture industry producing quality food at the lowest reasonable price would be among these goals. An examination and improvement of the inconsistencies and inefficiencies in the marketing system would probably be included.

Our current design is one of non-planning. . . .

The editorial writer offers what I feel to be an intelligent assessment of current farm policy and what direction this Nation should be taking in order to continue to assure all Americans of an adequate supply of quality food and fiber.

I ask unanimous consent that the editorial be printed in the *RECORD*.

There being no objection, the editorial was ordered to be printed in the *RECORD*, as follows:

NEW DIRECTION NEEDED IN FARM POLICY

Dozens of news items and opinion pieces have been written and spoken since the Christmas-time cuts in farm programs.

The agricultural press has been cautious, but much of the conventional public media have been on a high horse cheering the end of "hand-outs" and special treatment of the nation's farm sector.

It shows only their poor understanding of the nature of farm programs.

Farm policies are the nation's food and fiber policies and warrant our full attention. Now some of the farm programs are weak in structure and have been subject to abuse—which makes a total defense of them impossible. But instead of whipping up public imagination over a few million farmers, let's look at it from the long-range necessity of

feeding and clothing a few hundred million people:

Agriculture—and the nation—needs a publicly-developed set of food and fiber objectives, short and long range; then legislation that stretches toward those goals. Assumably, healthy agriculture industry producing quality food at the lowest reasonable price would be among those goals. An examination and improvement of the inconsistencies and inefficiencies in the marketing system would probably be included.

Our current design is one of non-planning. Only a few farm programs aim at basic agricultural problems; many treat the symptoms of illness. Every three years Congress passes a new agriculture act, every four or eight years a new president has different ideas about what is good for farmers. Agriculture people themselves get defensive, feel threatened, and fail to improve and update existing farm programs. This history of non-planning has driven people off the land with little to show for a life's work, adds tremors of decay to Rural America, and forces more problems and population on an uncoping urban America.

Now we're seeing broader manifestations of the problem. Rising food prices in the supermarket, shortages in certain areas, indications that the present marketing and handling system is entering convulsions brought on by inefficiency and old age.

The Administration movement toward a so-called "open market" is a paved road to outright disaster. It is an aggravation of what is already weak in agriculture.

Hopeful the nation-wide controversy over the problem will inspire agriculture and the public to new and decisive action and legislation.

Part of the necessary solution lies in reinstatement of programs until new decisions are made. Times change and needs change, but totally eliminating existing structure is nihilism.

Rural electrification and associated communication are critical to the future of Rural America. But adjustments may be necessary for those areas that have changed from essentially rural economy to mixed or urban.

Conservation programs for land, water, air and the total environment are essential if we seriously intend to pass on to our children a better nation than we inherited.

Price support and market stabilizing programs for commodity producers can be changed if we move into improved systems of production and consumption stabilization. The flowery language of open market proponents sound good only to those who habituate Las Vegas casinos and have sufficient money to survive market chaos. It is not an answer; it is a foolish gamble.

Good solutions are hard to come by and difficult to implement, but some answers are available:

1. Remove the potential food-shortage gamble through national legislation establishing a market-protected food reserve. Not one as large as the early 60's, but large enough to prevent hunger from stalking America. It must be protected for strategic use and not used as a government whip on the annual market.

2. Establish national legislation allowing producers, if they choose, to bargain with processors for price, volume, and conditions of sale. Such a system would provide incentives for a constant flow of food to the consumer; stability of the market and economy, and a practical level of income to the producer. Such techniques could assume many existing USDA functions and actually reduce bureaucracy. National food objectives would be incorporated into the structure while restoring the farmers' role in the marketplace. Such a system would provide even greater incentives for efficient skill among farmers, and with less of the "redtape" everyone objects to now.

3. International trade agreements could be entered which would stabilize the farm economy and aid the U.S. balance of trade. Good farm prices throughout 1973 can only happen if there are poor harvests in much of the world.

World food trade is annually expanding, of course, but the U.S. has no working arrangement with other exporting nations and is engaged in cut-throat competition, even with neighbors such as Canada. It is not necessary. World food objectives and agreements must supersede nationalistic gambles for high and inconsistent profit. There is a difference between competing for profit on transistor radios and the supply of food and clothing.

Some answers exist, therefore. But public and governmental understanding is not adequate. Rural people are cautious about supporting these proposals because they're new, and immediate benefit lies in restoration of existing programs. Understandably, they will not let go with one hand until the other hand has a grip on a better system. That's why renewing existing farm programs is a prerequisite to advancement.

Reaching toward solutions such as these would move this nation ahead of the hassle over "hand-outs." It would move agriculture into a new era, with the more positive goal of feeding the nation and much of the world.

GENOCIDE CONVENTION

Mr. JAVITS. Mr. President, on March 13, the senior Senator from North Carolina, Mr. ERVIN spoke at length on the Genocide Convention. Because his statement has raised questions about the wisdom of ratification, I felt it should be answered at length. At my request, the Department of State has prepared an analysis and rebuttal of these obligations to the Convention, and I ask unanimous consent that it be printed in the RECORD at the conclusion of my remarks. I hope it will be useful to other Senators in answering constituent mail since there appears to be an organized and widespread effort to circulate misinformation about the agreement.

Also I ask unanimous consent that an article in the American Bar Association Journal of February 1972 by Arthur Goldberg and Richard N. Gardner entitled "Time to Act on the Genocide Convention," be printed at the conclusion of my remarks. This article by the former Supreme Court Justice and U.N. Ambassador and the Columbia Law professor is a comprehensive refutation of arguments against the Convention and should be read by every Senator.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

POINT-BY-POINT REBUTTAL TO SENATOR ERVIN'S ARGUMENTS ON THE GENOCIDE CONVENTION

1. Senator Ervin argues that the Treaty is deficient in that it does not embody the real meaning of the term "genocide". He believes that the term contemplates the complete wiping out of a designated group.

Answer: It is entirely legitimate that the term "genocide" be defined in the Genocide Convention for the purposes of that Convention. "Genocide" was a new term and the definition in the Convention represented the international consensus on its meaning. It seems futile to look beyond that for the "true" meaning of the term.

The proposed understanding of the Senate (Executive Report No. 93-5) clarifies the distinction between genocide and ordinary crime by making clear that a requisite for the crime is an intent to destroy a national, ethnic, racial, or religious group by one of the geno-

cidal acts specified in the Convention in such a manner as to affect a substantial part of the group concerned.

2. Senator Ervin argues that, whether or not the provisions of the Convention are self-executing, they would immediately supersede all state laws and practices inconsistent with them and thereby deprive the states of the power to prosecute and punish in their courts acts condemned by articles II and III of the Convention.

Answer: The Convention is clearly non-self-executing in view of the requirement in Article V that the contracting parties enact the necessary implementing legislation. The proposed declaration (Senate Executive Report No. 93-5) would make clear that the Executive Branch had to await enactment of implementing legislation by the Congress before it could deposit an instrument of ratification, thus making the United States a party to the Convention. If, therefore, there is supersession of any inconsistent state laws, it will be by the federal legislation, not by the Convention. It is difficult to imagine in what way any existing state law or practice could be inconsistent with the Convention.

The enactment by Congress of legislation implementing the Genocide Convention need not automatically preclude the states from prosecuting the acts proscribed by the Convention. Whether or not a Congressional Act preempts an area of law depends on the intent of Congress. If, as could be reasonably argued, Congress did not intend completely to fill this area of law, states would be free to continue to act in this area. To ensure that states would still have such freedom, the Congress could provide in its implementing legislation that nothing in the legislation should be construed as indicating an intent on the part of Congress to occupy, to the exclusion of state or local laws on the same subject matter, the field in which the provisions of the legislation operate. Draft implementing legislation contained in the appendix to Senate Executive Report No. 93-5 does just that.

3. Senator Ervin argues that ratification of the Genocide Convention would have a drastic effect on our system of our criminal justice because many crimes which are now crimes under state law could, with the addition of an allegation with respect to intent, be made federal crimes. This, he argues, would create a situation where it would be uncertain whether it was appropriate to go to a federal or state court, and would allow for dual prosecution of defendants.

Answer: The intent requirements for the crime of genocide are set forth in Article II. In order for genocide to be committed, an act must be directed against the individuals involved *qua* members of a particular group, and there must be a specific intent to destroy the group as such in whole or in part. It would be reasonably difficult to prove this intent element in ordinary homicide cases, and it is unlikely that the United States attorneys would institute a large number of unfounded prosecutions. If an unfounded prosecution were instituted, federal criminal procedures provide many safeguards to ensure that the prosecution would be dismissed. Since the standard is so stringent, it is not reasonable to argue that a major incursion into areas of state law would occur.

4. Senator Ervin raises a series of objections based, on the one hand, on the alleged ambiguity of certain terms in the Convention, and, on the other hand, on the procedures in the Convention for ensuring its application.

a. Senator Ervin believes that the term "mental harm" in Article II(b) of the Convention is incomprehensible.

Answer: "Mental harm" means—and this has been made clear in the Senate Foreign Relations Committee's proposed understanding—permanent impairment of mental faculties. Thus, before a charge can be sustained, it must be proved that permanent

impairment of mental faculties in fact occurred and that the defendant brought about this injury with the specific intent of destroying one of the protected groups. This is reflected in the draft implementing legislation. Thus, the standard is rigid enough to protect against frivolous allegations of genocide.

b. Senator Ervin suggests that, under Article II(b) of the Genocide Convention, state or county officials, who refuse to give a member of one of the four designated groups the amount of welfare benefits being desirable, may be prosecuted for genocide.

Answer: Article II(b) of the Convention provides that one of the ways of committing genocide is by "deliberately inflicting on the group conditions of life calculated to bring about its physical destruction in whole or in part." This provision is aimed at conditions of life inflicted upon the group which are meant to cause death or grave bodily injury. Generally speaking, the provision covers "slow death" measures. (See Pieter N. Drost, *The Crime of State—Genocide*, pages 86-87.) Denial of adequate welfare benefits is of a completely different magnitude than measures calculated to bring about slow death. In addition, the requisite intent to destroy in whole or in part the members of a group would be lacking.

c. Senator Ervin argues that the provision of Article III(c), which makes direct and public incitement to commit genocide punishable, might deprive public officials and citizens of the United States of the right of free speech.

Answer: Under current law, while mere advocacy of illegal activities may well be protected by the First Amendment, direct and public incitement to commit legal activity is surely not protected. See e.g., *Brandenburg v. Ohio*, 395 U.S. 444, 447 (1969). Incitement crosses the bounds between protected and unprotected speech. The provisions of the Genocide Convention therefore do not violate the Constitution. Moreover, were there any conflict, the First Amendment clearly would control. *Reid v. Covert*, 354 U.S. 1 (1957); *Geoffroy v. Riggs*, 133 U.S. 258 (1890).

d. Senator Ervin asks what is meant in Article III(e) by "complicity in genocide."

Answer: The prohibition against complicity is clearly aimed at accessoryship in the crime of genocide, as defined in Article II (not the other genocidal acts listed in Article III). When Congress enacts implementing legislation for the Genocide Convention, it will not be necessary to enact a special provision implementing Article III(e) because accessoryship in federal crimes is already outlawed by the United States Code. 18 U.S.C. §§ 2, 3 (1970).

e. Senator Ervin argues that Article VI imposes upon the Congress an implied commitment to support the creation of an international penal tribunal.

Answer: In more than twenty years since the Convention was adopted no international penal tribunal has been created. While one was proposed at the time of the drafting of the Convention, this proposal has long been dormant and there is no reason to suspect that it will be revived. If such a court were proposed in the future, Senate advice and consent would at time be necessary for the United States to adhere to the treaty establishing the court and accept its jurisdiction. The Convention clearly would not require the United States to accept the jurisdiction of such a court.

f. Senator Ervin fears that Article I of the Genocide Convention would require the United States to go to war to prevent the crime of genocide.

Answer: Article I confirms the principle expressed in Resolution 96(I) of the United Nations General Assembly that genocide is a crime under international law in time of peace or in time of war. The parties to the

Convention undertake to prevent and punish the crime in the manner set forth in subsequent articles of the Convention. Aside from this declaration, the article has no substantive effect, the main operative provisions being contained in Articles II-VII.

5. Senator Ervin argues that the Genocide Convention would make American soldiers fighting abroad triable in the courts of our enemies for killing or seriously wounding members of the enemies' military forces.

Answer: First, it should be pointed out that combat actions of American troops against enemies do not constitute genocide. For example, it is difficult to conceive that acts committed by U.S. troops in Vietnam could fall within the definition of genocide in Article II. The article requires an "intent to destroy, in whole or in part, national, ethnical, racial, or religious groups, as such." Our involvement in Vietnam was to help the South Vietnamese defend themselves and therefore acts committed against other Vietnamese would not constitute genocide.

Of course, American soldiers who are captive in the country of an enemy of the United States could be subjected to prosecution by the enemy country for the crime of genocide regardless of whether the United States has ratified the Genocide Convention. Although we would feel such treatment entirely unjustified, we would be powerless to do anything about it other than to protest to the country or to the UN. The action of the Senate, in giving its advice and consent to ratification, would therefore have no relevance to this question.

6. Senator Ervin argues that if the Genocide Convention is ratified and legislation is passed implementing it, the executive branch would be under the duty of enforcing both the provisions of the Convention and the implementing legislation.

Answer: Senator Ervin is correct, but this observation is no argument against ratifying the Convention or against adopting the necessary implementing legislation.

7. Senator Ervin dislikes the fact that the Genocide Convention provides in Article IX the disputes between parties relating to the Convention's "interpretation, application, or fulfillment" shall be submitted to the International Court of Justice. He believes this provision nullifies the Connally and Vandenberg reservations to the jurisdiction of the Court. He further argues that the matter is a domestic one and that existing United States laws in this field are adequate.

Answer: Article IX is an entirely appropriate provision. The United States has, in many cases in its treaties, provided that disputes relating to interpretation, application, and fulfillment of a treaty shall be referred to the ICJ. Recent examples where the Senate approved a similar provision are the Convention on the Privileges and Immunities of the United Nations (1970), the Refugee Protocol (1968), and the Supplementary Slavery Convention (1967). A list of treaties with a similar provision is included in the 1970 hearings at page 215.

Article IX does not nullify the Connally or Vandenberg reservation. The Connally Amendment, or self-judging aspect of our domestic jurisdiction reservation, could be employed to prevent the International Court of Justice from deciding a case brought against the United States based on our 1946 across-the-board acceptance of compulsory jurisdiction to any international legal dispute under paragraph 2 of Article 36 of the Court's Statute. The Vandenberg reservation, or multilateral treaty reservation, could prevent jurisdiction under the same paragraph of the Statute in cases arising out of a multilateral treaty where all the parties affected by the decision are not parties to the case or the United States has not specifically agreed to jurisdiction. These reservations could not, however, be invoked under Article IX of the Genocide Convention since the

basis for the Court's jurisdiction would be paragraph 1 of Article 36 of the Statute, which gives the Court jurisdiction to decide disputes "specifically provided for . . . in treaties and conventions in force." Article IX of the Convention does have the effect of avoiding the application of the reservation in the extremely small class of potential cases that may arise from unresolved differences over the interpretation, application, or fulfillment of the Convention.

CONCLUSION

Entering into a treaty concerning the prohibition of the crime of genocide is entirely proper. On both moral and practical grounds, the commission of genocide, involving as it must mass action, cannot help but be of concern to the international community. An indication that this is so is the fact that 76 nations have subscribed to the proposition that genocide is an international crime. Similarly, Articles 55 and 56 of the UN Charter illustrate that the protection of fundamental human rights is a matter of international concern.

No one asserts that the physical acts of violence denounced by the Genocide Convention are not also punishable under existing laws of the United States and of its several states. What implementing legislation for the Genocide Convention would do would be to set a higher standard—to make clear that under domestic laws the United States considers genocide abhorrent and attaches severe criminal sanctions to the crime.

TIME TO ACT ON THE GENOCIDE CONVENTION

(By Arthur J. Goldberg and Richard N. Gardner)

It is now more than twenty-five years since the United Nations first took up the question of the prevention and punishment of the crime of Genocide. On December 11, 1946, the General Assembly unanimously adopted Resolution 96(I), which affirmed "that genocide is a crime under international law" and requested the Economic and Social Council to draft a genocide convention. Two years later, on December 9, 1948, by Resolution 260A(III) the General Assembly unanimously approved the text of the Convention on the Prevention and Punishment of the Crime of Genocide.

Seventy-five countries now have ratified the Genocide Convention. The United States is the most prominent U.N. member that has not. One reason for our country's failure to ratify—very possibly the principal reason—has been the opposition of the American Bar Association recorded in a decision of the House of Delegates on September 8, 1949.

Since 1949, however, sentiment within the Association has changed. At the Midyear Meeting of the House of Delegates on February 23, 1970, a proposal to reverse the 1949 position and to place the American Bar Association on record in favor of the Genocide Convention failed by a vote of 126 to 130. Still more significant, every Section and Committee of the Association having specialized competence in the subject matter has come out in support of ratification of the Genocide Convention during the last few years: the Section of Individual Rights and Responsibilities, the Section of International and Comparative Law, the Section of Criminal Law, the Section of Judicial Administration, the Section of Family Law, and the Standing Committee on World Order Under Law.

Ratification of the Genocide Convention also has been endorsed by a number of past Presidents of the Association, including Bernard G. Segal, William T. Gossett, Charles S. Rhyne and Whitney North Seymour; by the Chairman of the Standing Committee on Federal Judiciary, Lawrence E. Walsh; by Solicitor General Erwin N. Griswold and by many other leaders in the Association.

Two distinguished members of the Associa-

tion, Eberhard P. Deutsch and Alfred J. Schweppe, however, appeared on behalf of the Association to testify in opposition to the Genocide Convention in hearings held before a Senate Foreign Relations Subcommittee on March 10, 1971, and presented the legal objections that have been raised against the convention.¹ Given the almost evenly divided vote in the House of Delegates and the support for the convention from relevant specialized Sections and Committees of the Association, we believe that it is appropriate to present the different viewpoints now existing in the Sections and Committees.

The authors of this article appeared at the Senate hearings on behalf of the Ad Hoc Committee on the Human Rights and Genocide Treaties (a committee of fifty-two national, civic, religious and labor organizations) and presented legal arguments in favor of the convention.²

The full Senate Foreign Relations Committee reported favorably on the convention by a vote of 10 to 4 and recommended that the Senate advise and consent to ratification. After carefully reviewing the arguments, the committee concluded:

"We find no substantial merit in the arguments against the convention. Indeed, there is a note of fear behind most arguments—as if genocide were rampant in the United States and this Nation could not afford to have its actions examined by international organs—as if our Supreme Court would lose its collective mind and make of the treaty something it is not—as if we as a people don't trust ourselves and our society."³

REPORT OF SENATE PROVIDES AUTHORITATIVE REFUTATION

We believe the report of the Senate Foreign Relations Committee provides an authoritative refutation of the legal arguments opponents of the Genocide Convention have employed to justify their opposition for nearly a quarter of a century.

We present here a point-by-point rebuttal of the legal arguments against the convention, drawing from our testimony to the Foreign Relations Committee as well as the committee's own report, in the hope that it may clarify the legal issues and contribute to speedy and favorable action by the Senate.

1. *The convention that the Constitution prevents ratification of the Genocide Convention because genocide is a "domestic" matter is without foundation.*

In his testimony to the Foreign Relations Committee, Mr. Deutsch declared himself fully in agreement with the decision of the United States to vote in favor of the General Assembly resolution on genocide of December 11, 1946: "Standing foremost as a world leader in the protection of individual rights, she could do no less." But he added that "having joined in such a declaration as to a matter which lies, ultimately, within the domestic sphere of each of the world's nations, the United States has gone far enough" (italics supplied). The italicized language is clearly incompatible with statement in the General Assembly resolution that "genocide is a crime under international law". Mr. Deutsch's extensive quotations from Resolution 96(I) neglected to include this key provision.

Nowhere in his testimony did Mr. Deutsch explain his conclusion that genocide is a "domestic matter". His reasoning on this general issue may be found, however, in a report which he prepared in 1967 as chairman of the American Bar Association's Standing Committee on Peace and Law Through United Nations. It is there stated that a convention deals with "domestic" matters when it deals "with the relation between a state and its own citizens".⁴ But this is not the relevant constitutional test.

As the Supreme Court declared in *Geofroy v. Riggs* 133 U.S. 258, 267 (1890), the treaty-

making power may be exercised on any matter "which is properly the subject of negotiation with a foreign country". The United States is a party to numerous international agreements relating to the activities of its own citizens within the United States (and therefore "domestic" under Mr. Deutsch's definition) because those treaties nevertheless deal with matters appropriate for international negotiation. Examples include treaties on narcotics,⁵ public health⁶ and nature convention,⁷ and the Supplementary Convention on Slavery, which Mr. Deutsch initially opposed on the ground that it also dealt with "matters essentially within the domestic jurisdiction of the United States."⁸

In the words of the Special Committee of Lawyers of the President's Commission for the Observance of Human Rights Year, of which retired Supreme Court Justice Tom C. Clark was chairman: "Treaties which deal with the rights of individuals within their own countries as a matter of international concern may be a proper exercise of the treaty making power of the United States . . . It may seem almost anachronistic that this question continues to be raised."⁹

What is "properly the subject of negotiation with a foreign country" and, therefore, a valid subject of a treaty is something the Senate has an obligation to determine in each case. We do not take the position that the executive branch can make any matter "international" by putting it in a treaty. But the question should be determined objectively in the light of the current interests of the United States in an interdependent world and contemporary concepts of international law—not on the basis of notions that may have been appropriate to a different historical era.

By any objective standard, genocide is a matter of international concern and is, therefore, an appropriate subject for the exercise of the treaty-making power. In our shrinking world the massive destruction of a racial, religious or national group in one country has its impact on members of this group in other countries, stimulates demands for intervention and inevitably troubles international relations. The fact that the United Nations General Assembly unanimously declared genocide to be a crime under international law in 1949 and that seventy-five members of the United Nations are parties to the Genocide Convention (including, to name just a few, such democracies as the United Kingdom, Canada, France, Mexico and the Scandinavian countries) is further evidence that genocide can no longer be considered a matter wholly within domestic jurisdiction. As was said by the Senate Foreign Relations Committee: "On both moral and practical grounds, the commission of genocide, involving as it must mass action, cannot help but be of concern to the community of nations."

2. *The contention that the Genocide Convention would alter the balance of authority between the states and the Federal Government is unfounded.*¹⁰

The Constitution by Article I, Section 8, specifically gives Congress the power to "define and punish . . . offenses against the law of Nations". Genocide is an offense against the law of nations and is thus within the power of Congress to outlaw. Moreover, the power of the Federal Government in this field has been confirmed in the Civil Rights Acts of 1957 and 1964 and the Voting Rights Act of 1965. The Association's Section on Individual Rights and Responsibilities said in its report: "Ratification of the convention will add no powers to those the Federal Government already possesses."

3. *The contention that ratification of the Genocide Convention would subject American citizens to trial in foreign countries like North Vietnam on trumped-up charges of genocide is wholly false.*¹¹

There is nothing in the Genocide Conven-

tion that would provide warrant for charges by North Vietnam that our prisoners of war, being held under conditions in violation of the Geneva Convention, are guilty of genocide. This is a matter of great concern to the authors and, of course, many Americans regardless of their views about the war in Vietnam. As the Senate Foreign Relations Committee pointed out in its report, however, Hanoi can make trumped-up charges of genocide against our servicemen who fall into their hands with or without reference to the Genocide Convention. In the words of the committee: "It is reality that American prisoners of war in North Vietnam could now be charged by the Hanoi government for war crimes or genocidal acts on whatever trumped-up charges Hanoi wishes to make. Their peril will not be increased by approval of this convention while peril may be avoided for tens of millions by ratification of the convention."

As to the possibility of extraditing Americans from the United States to North Vietnam or other countries for acts of genocide allegedly having occurred there, it should be remembered that under the Genocide Convention, extradition would take place only in accordance with laws and treaties in force. We have no extradition treaties with North Vietnam. Nor do we make such treaties with countries whose legal systems do not afford basic procedural safeguards. We do not grant extradition in any event unless a prima facie case is established against the accused and unless the accused will be afforded by the requesting state the due process provided by our own law.

Finally, the Genocide Convention, in accordance with an agreed interpretation of Article VI which is contained in the relevant U.N. committee report, "does not affect the right of any State to bring to trial before its own tribunals any of its nationals for acts committed outside the State."¹² The Foreign Relations Committee expressed itself as fully satisfied on this point but recommended an understanding to this effect to remove any possible uncertainty. The Nixon Administration has further indicated that any agreements we make covering genocide will assert the right of the United States to refuse to extradite an accused if he is standing trial in the United States or if our Government elects to try him itself.¹³

4. *The argument that ratification of the Genocide Convention would subject the United States to irresponsible charges of genocide arising out of Vietnam, our treatment of American blacks or other situations is without foundation.*¹⁴

Here again, ratification of the Genocide Convention does not alter the present situation to our disadvantage. Even in the absence of our ratification, there is nothing to prevent a country from making baseless charges of genocide against this country in the U.N. If anything, ratification would improve our position, because the convention requires an "intent to destroy, in whole or part, a national, ethnical, racial or religious group as such".

The tragic events in Vietnam and the terrible loss of life, both military and civilian, that has occurred there do not meet this definition, whatever other domestic legal consequences may flow from allegedly illegal acts there. The treatment of the black community in the United States, which admittedly has suffered widespread discrimination for many years, also does not fall within the definition. In both cases the necessary intent to destroy a racial or ethnic group as such is missing.

As the Senate report indicates, ratification of the convention would, if anything, help us rebut these charges by subjecting our behavior to a precise legal definition of genocide.

5. *The argument that provision for the settlement of disputes by the International*

Footnotes at end of article.

*Court of Justice would override the Connally Amendment and unreasonably limit our sovereignty is without substance.*¹⁵

The Connally Amendment applies only to our acceptance of Article 36(2) of the court's statute, the so-called optional clause providing for compulsory jurisdiction across the board. Cases arising as a result of our adherence to the Genocide Convention would fall under Article 36(1) of the court's statute, which covers the court's jurisdiction as provided for in specific treaties. The United States has ratified many treaties containing the same type of provision for the settlement of disputes by the International Court of Justice as is contained in the Genocide Convention. Among these treaties are the Supplementary Convention on Slavery, the Antarctic Treaty, the Statute of the International Atomic Energy, and the Convention on the Privileges and Immunities of the United Nations ratified in 1970.

This provision for the settlement of disputes over the interpretation of the Genocide Convention does not unreasonably limit our sovereignty. Our interests are better served by having any charges of genocide against us considered in a judicial forum like the International Court of Justice than in more politically motivated forums. Of course, by this provision we do undertake a commitment to subject ourselves to third-party judgment in a limited sphere, as do the other parties to the convention. This exchange of commitments may be found in many treaties to which we have become a party. Where the exchange of commitments serves our national interest, as it does here, it provides no valid basis for objecting to the treaty.

It should be noted that the Soviet Union and other countries have ratified the convention subject to a reservation that they do not accept compulsory reference to the International Court of Justice. As a result, the United States will be in a position to invoke these countries' reservations in its own behalf to defeat the court's jurisdiction if a case charging genocide should be brought against us by those countries.

6. *The argument that various provisions in the convention—"in whole or in part", "mental harm", "direct and public incitement to commit Genocide"—are loosely drafted and potentially harmful to our interests is without foundation.*

Words in a statute or treaty are not self-interpreting. They must be read in the context of other provisions and in the light of the legislative or drafting history. The hypothetical interpretations of the Genocide Convention advanced by the critics are invalidated by the language of the convention itself and by the records of the negotiation.

Thus, "in whole or in part" does not mean that the killing of a single individual, profoundly deplorable as any killing is, becomes genocide.¹⁶ As the negotiating history makes clear, substantial numbers must be involved, and for the definition of genocide to be satisfied the acts of homicide must be joined by a common intent to destroy the group. The understanding recommended by the Foreign Relations Committee to confirm this point is wholly consistent with the drafting history.¹⁷

"Mental harm", in turn, would not support propaganda charges of harassment of minority groups, as charged by some critics,¹⁸ because mental harm becomes an element of genocide only when done with an intent to destroy a group. Moreover, as the negotiating history shows, this provision was inserted for the narrow purpose of prohibiting the permanent impairment of mental facilities, as through the forcible application of narcotic drugs. Once again, the understanding recommended by the Foreign Relations Committee is wholly consistent with the drafting history.

"Direct and public incitement to commit genocide" does not cover constitutionally protected speech.¹⁹ It covers incitement which

calls for the commission of mass murder, which is actionable under our Constitution as in other countries. As the Supreme Court declared in *Brandenburg v. Ohio*, 395 U. S. 444 (1969), "the constitutional guarantees of free speech and free press do not permit a State to forbid or prescribe advocacy of the use of force or of law violation except where such advocacy is directed to inciting or producing imminent lawless action and is likely to incite or produce such action" (emphasis added). In any case, as was stated in *Reid v. Covert*, 354 U. S. 1 (1957), no treaty can override a provision of the Constitution, and there is no doubt that the legislation passed in implementing the Genocide Convention must be interpreted in accordance with the First Amendment.

7. *The contention that ratification of the Genocide Convention would subject American citizens to trial before an international penal tribunal is without foundation.*²⁰

Article VI of the convention provides that persons charged with genocide shall be tried "by such international penal tribunal as may have jurisdiction with respect to those contracting parties which shall have accepted its jurisdiction". This part of Article VI, perhaps regrettably, is a dead letter. No such international penal tribunal has been established, and there is no negotiation under way to create one. If such a tribunal were established, action by the Senate would be required, either in the form of advice and consent to ratification of a treaty or action on legislation, before the United States could accept its jurisdiction.

Finally, it should be underlined that the International Court of Justice has no criminal or penal jurisdiction and considers only cases involving states, not individuals.²¹

8. *The argument that the convention does not define genocide as having been committed "with the complicity of government" is no objection to ratification.*²²

The convention is directed at "persons" whether they are "constitutionally responsible rulers, public officials or private individuals." Each government is committed under the convention to punish such persons. There is no reason why such individuals should not be held responsible for genocidal acts, even without government complicity.

9. *The argument that the Genocide Convention abolishes the defense of "superior orders" is without foundation.*²³

The convention says nothing about a possible defense of "superior orders", but it is significant that the convention includes "intent" as an element of the crime of genocide. An authoritative review of the drafting history on this point summarizes the matter as follows:

Ordinarily it would seem that no intent could be ascribed to persons merely fulfilling superior orders; intent implies initiative. However, superior orders would not be a justification in such cases where the guilty party was not only a tool of his superiors but participated in the "conspiracy to commit Genocide." Guilt could likewise be established in a case where, although acting under orders, the person was in a position to use his own initiative and thus act with the intent to destroy the group. The non-inclusion of a proviso relating to superior orders thus leaves the tribunals applying the Convention the freedom of interpreting it in accordance with the domestic legislation and the specific circumstances of the case.²⁴

10. *The argument that the omission of "political" groups makes the Genocide Convention worthless is unpersuasive.*²⁵

It is inconsistent for those who criticize the convention on the grounds that it subjects the United States to too much interference in its domestic affairs to complain at the same time that it fails to cover "political groups". In any event, the absence of one kind of group from the convention is no reason not to protect the groups that are covered.

RATIFICATION OF THE CONVENTION WOULD BE IN OUR BEST INTERESTS

We find the objections against ratification of the Genocide Convention to be without substance. The arguments in favor of ratification, on the other hand, seem to us compelling.

Our adherence to the Genocide Convention can make a practical contribution to the long and difficult process of building a structure of international law based on principles of human dignity. It will put us in a better position to protest acts of genocide in other parts of the world and will enhance our influence in United Nations efforts to draft satisfactory human rights principles.

We do not say that our adherence to this convention will work miracles. It may not bring very dramatic benefits in the short run. Let us remember, however, that none of the great documents of human civilization produced instant morality—not even Magna Carta or our own Bill of Rights. The point is that they did shape history in the long run. We believe the same may be true of the Genocide Convention, if we only give it a chance.

GENOCIDE CONVENTION OUTLAWES REPUGNANT ACTION

The Genocide Convention outlaws action that is repugnant to the American people and to our constitutional philosophy. We should not decline to affirm our support for principles of international law and morality in which we believe. Our country was founded on a passionate concern for human liberty reflected by the Bill of Rights and the Constitution. We believe that concern is very much alive today, as is reflected by the report of the Foreign Relations Committee supporting the convention. It is inconceivable that we should hesitate any longer in making an international commitment against mass murder. At a time when our commitment to human rights is being questioned by some of our own people and by others overseas, it is particularly important that we ratify a treaty so thoroughly consistent with our national purpose.

COL. ROBERT CRANSTON, RETIRING COMMANDER OF AFRTS

Mr. CRANSTON. Mr. President, I rise to pay tribute to Col. Robert Cranston, Commander of the American Forces Radio and Television Service in Hollywood. Colonel Cranston, who incidentally is not related to me, is retiring from the Army after 30 years of active duty.

Colonel Cranston has had a long and distinguished career in broadcasting, serving with AFRTS since its inception during World War II. Currently, as head of the facility's production center, he is responsible for programing 166 radio stations and 55 television outlets overseas. His vast experience and know-how have earned him the respect and admiration of leading motion picture, broadcasting, and recording executives with whom he deals on a daily basis. Colonel Cranston has been particularly instrumental in securing the release of first-rate, current television shows for airing to our servicemen and women stationed on land and sea all over the world.

His success may be summed up by the fact that he has always geared his efforts to the young enlisted personnel, knowing that since many were away from home for the first time, they would appreciate hearing and viewing the kinds of entertainment to which they were accustomed back in the States. That is the prime purpose of AFRTS. And

that is what Colonel Cranston has worked toward.

I congratulate Colonel Cranston on his accomplishments, both to the Defense Department and to our country. And I extend to him my very best wishes for an equally productive career as a civilian in the years ahead.

HOMEcoming FOR LAST TROOPS AND PRISONERS

Mr. DOLE. Mr. President, today is a proud day for America and a happy occasion for all its citizens. Our Nation takes pride in having achieved an honorable end to our involvement in the Vietnam conflict—and end which maintains the validity of our commitment to an ally and which achieves the goals established by three Presidents. And we join in happy thanksgiving for the safe return of our men who were held as prisoners of war for so many long years. We have known this day was coming for 2 months, now, since the signing of the Paris peace agreement in January. But it is still difficult to believe after so many years with so much death and loss, and division that the Vietnam war is now in the past, a chapter in history.

2-MONTH ANTICIPATION

The last 2 months have been a moving and meaningful period—a time of relief from the tensions and frustrations which plagued our people for more than a decade. First, came the long-awaited agreement in Paris; then release of the prisoners. Perhaps the tension and anxiety actually mounted between the signing in Paris and that first flight from Hanoi to Clark Air Force Base in the Philippines. Our prisoners were supposed to come out; the agreement was sealed. But would North Vietnam and the NLF comply? Would they live up to this commitment after having broken so many others? Would the men be well? Who knew; who could tell?

So we waited and watched our television screens in the early hours of that February morning when the big C-11 from Hanoi finally touched down at Clark.

And then Capt. Jeremiah Denton walked off the plane to salute our flag—straight and proud and free. And then he stepped to the microphones and said:

We are honored to have the opportunity to serve our country under difficult circumstances. We are profoundly grateful to our Commander in Chief and to our Nation for this day. God bless America.

"God bless America." With these words the tension was broken; the burden and anxiety began to lift. And time after time—as the 557 former prisoners have landed at Clark and we have followed the reunions with their families throughout the United States—the sight of them and the sound of their happy, proud voices have been the most refreshing and rewarding experiences in this Nation's recent memory.

MUST REMEMBER MIA'S

But in this time of rejoicing for our returned men and relief at the end of our involvement in the conflict, we must keep alert to the more sobering, but no less

crucial situation of some 1,300 men who are classified as missing in action.

Their situation was clearly illustrated by the unexpected but highly welcome news of the last prisoner of war to be released.

This news began with a confused statement from the Vietcong that they would also be releasing a captive named "Robert Wheme." No such name had appeared on any previous prisoner lists, and our forces had no record of any individual with this name. However, a check of the birth date released with the name revealed that "Robert Wheme" is really Army Capt. Robert T. White of Williamsburg, Va.

No word had been heard from him or about him from the other side since his observation plane was downed by ground fire in the Delta region south of Saigon on November 15, 1969. He had not written his family. He was not on the January lists handed over in Paris. He had, however, been carried in prisoner status on our rolls following verification of his capture.

THE LAST POW

As a story in this morning's paper reports, his wife had never lost faith or given up hope that somehow he was alive—somewhere. And of course we can all understand the relief and joy Mrs. White must have felt when she learned of her husband's safety and forthcoming release.

HOW MANY OTHERS?

But how many other Captain Whites are among the 1,300 MIA's and others who we still list as POW's throughout North and South Vietnam, Laos, and Cambodia? Of course we cannot expect that all of them are alive. Some surely died in combat, aircraft crashes, or while being held captive. But as Captain White's case shows, some may be alive; they may be prisoners. And we must fulfill our obligation to them through insistence on our rights to verification, information and inspection as provided in the Paris agreements.

And we know that others who have not been identified by the other side as captives or casualties while prisoners at one time were alive and well. One powerful reminder of this fact was a full-page advertisement in the December 19, 1972, New York Times. Sponsored by VIVA, the organization which made POW-MIA bracelets a universal symbol of concern for these men, it recounts the story of S. Sgt. David Demmon. Sergeant Demmon was listed as missing in action for 5½ years before his captive status was verified and he became a known POW. However, for all this time the Vietcong have refused to acknowledge holding him, and his family has not heard from him.

There are questions about other men, and there are other families who wait and agonize over a question no one can answer.

FULLEST DEDICATION

Of course our Government is fully dedicated to providing the answers to these questions. Every effort has been made at the highest levels to obtain concrete information and detailed explanations. Our verification center in Thailand is ready

to swing into full-scale operation to investigate every known aircraft crash, every rumor and possible recollection which might lead to some solid evidence of a man's capture or his place of burial. And the effort will not be slackened until the last possible attempt is made to determine the last facts and provide the scintilla of evidence that can be obtained.

MEMORABLE DATE

Today is, of course, a memorable date in our history, and nothing can detract from the significance it holds for the last troops as they depart Saigon and the last group of prisoners as they touch down on free soil once again. They all have earned our utmost respect and lasting gratitude for their service, sacrifice, and dedication.

But as we mark today as the end of our involvement in Vietnam and the completion of the POW's release, we must also maintain our support for those whose fates have not yet been ascertained—the 1,300 who are still missing in action.

The bracelets which many of us still wear cannot yet be removed, and we cannot allow our relief and joy at the return of these first 557 to diminish our dedication to seeing the most complete and thorough verification of those who are still MIA.

The strength and courage and untiring commitment of millions of Americans, and other millions around the world, were major factors in obtaining the prisoner's releases. I believe that same force can be—must be—focused even more sharply now on the verification of our MIA's. For, until that verification and accounting is complete, the Vietnam conflict can never be said to have been completely ended.

RIISING FOOD PRICES AND THE BEEF BOYCOTT

Mr. McGEE. Mr. President, in advance of the planned boycott of beef next week, I would like my colleagues to study the remarks of a ranchwife from my own State of Wyoming—Mrs. Gail O'Haver of Sundance.

Writing in the February 1973 edition of the Rocky Mountain Union Farmer, Mrs. O'Haver gives us an insight into a side of this issue for which very little attention has been devoted.

The planned beef boycott certainly will not affect the supermarkets, the chain stores, the wholesaler, and all those people in between the rancher and the meat counter. Once again, the rancher will be the object, or the victim, of efforts to drive meat prices down.

While I share the concern of the consumer over rising food prices, I think it would behoove us to view this problem realistically. I do not see organized boycotts against the housing industry, the automobile industry, the clothing industry, or any other industry in which there are also skyrocketing prices. I think it is unfair in many ways to single out the rancher or the farmer as a vent for our frustrations over rising prices.

I believe it is also worth noting that the farmer and rancher are also entitled

to a fair return for their labors. The farmer and rancher have not been getting this return for the past 20 years. Yet, they are entitled to enjoy the same quality of life as everyone else.

I ask unanimous consent that Mrs. O'Haver's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RICIDULOUS PROBLEMS CITED BY RANCH WIFE (By Gail O'Haver)

The city housewife looks at a piece of fresh American beef all packaged ready to cook and exclaims at the price, "This is ridiculous!" and slams it back in the meat case. There's a good many ranchers and farmers that think it's ridiculous that she thinks it's ridiculous.

It's ridiculous that the producer gets only 40¢ of the food dollar that the consumer spends. The producer pays out 30¢ in expenses, leaving only a dime for his labor, investment, management, and income taxes.

The producers' percentage would be even less if records could be kept of food that consumers eat at a restaurants. There seems to be no fall-off of the amount of "eating out" and big juicy steaks continue a favorite on the menu.

Beef prices are not so high they are ridiculous—they have always been so low they were ridiculous.

The President is busy promising cheaper food prices by putting more land into production, removing import quotas, and making other crippling cuts into the farmers' livelihood. We know from experience higher labor costs are one of the main reasons for food prices to go up; and we know lower farm prices for food and fiber means "broke" ranchers and farmers with no money to spend in local stores and businesses.

Keep in mind that we farm housewives too, go to the stores and buy much of our food at the same prices city housewives do.

Most business investments expect a return of 12 to 16 percent. It takes 6 to 10 percent return from any business to make it attractive from the investor's point of view. Even the bank will pay 5½ percent interest and that sure beats feeding cows on a cold winter day. Imagine what would happen if ranchers and farmers stopped being "next year" creatures—always hoping for better crops, less loss, less expense, and better prices—"next year."

Does the city housewife think it is ridiculous that many workers get \$10 to \$15 per hour and hardly any below \$3.62 per hour? They need as little as 6.9 minutes to 18 minutes to earn a pound of nutritious American beef.

Would the city housewife think it's ridiculous that a tractor costing \$3,300 in 1955 costs \$5,800 now? And a combine costing \$5,900 in 1955 goes for \$13,000 now? We do.

It is also ridiculous that we must face uncontrolled waves of imports since quotas have been lifted. If ranchers and farmers are to continue to keep this nation the best fed, consumers must pay enough for our products to give us and the people who work for us as fair return for our labors.

Farmers and ranchers don't want pity, just a chance to share equally in the rising national prosperity and to earn a fair return on their investments and efforts.

Instead of asking "Why are food prices rising?" consumers should be asking "How can they manage to raise food for prices so low in light of the low prices they receive for their products?"

Does the same city housewife think it's ridiculous that our highways are jammed with the working man vacationing with his family in new campers, trailers, tents, boats, motorcycles, and snowmobiles?

Well, we think it's ridiculous when she comes to the food store and expresses dissatisfaction over small increases in food prices.

So much has been and is being said and written about the elimination of farm programs that I shouldn't go into it, but I wonder why our government spends so much rebuilding enemy countries, on foreign aid, on defense and other programs, and then suddenly a program to help preserve the environment for all the people must be scrapped?

If American consumers would devote the same energy and time protesting the extravagance of the government as they have over food prices, their savings would be considerably more.

It is time we as farm and ranch people stopped feeling apologetic and fight for farm programs and "subsidies" that help preserve this land, water and air that is so precious to us all. And never, never should we feel apologetic about the prices we're finally getting for some of our food products.

THE PRESIDENT'S DRUG ENFORCEMENT REORGANIZATION PLAN

Mr. JAVITS. Mr. President, the reorganization plan which President Nixon sent to Congress yesterday represents a major step toward the strengthening of the capability of our law enforcement agencies to deal with the magnitude of illicit drug trafficking in the United States and abroad. It represents a continuing determination of the President to end bureaucratic rivalries which have in the past undermined enforcement efforts in the drug area.

As the ranking minority member of the Subcommittee on Executive Reorganization, I will urge my colleagues to give this important proposal expeditious consideration. Senator RIBICOFF, our distinguished chairman of the subcommittee has indicated his intention to hold hearings on the plan and on bills which both he and I have introduced to deal with this same problem.

The plan is a good one and deserves the support of every Member of Congress. I note with satisfaction that in preparing this plan, the administration has responded to the suggestions of both Senator RIBICOFF and myself that a more effective role for the Federal Bureau of Investigation in drug enforcement matters is warranted, proper, and urgently necessary. Particularly, I am pleased that the President has restated his determination to deal more effectively throughout the Federal Government with the terribly difficult and sophisticated problems of international narcotics trafficking.

As I previously pointed out in connection with the introduction of my bill, S. 1138, I believe it is critically important that we have more effective government-wide coordination of drug related law enforcement activities, not only among agencies located within the Department of Justice, but also among those located in other agencies, most particularly the Internal Revenue Service, the Department of State, and the Central Intelligence Agency. I commend the administration for making this commitment.

There is a great deal more that must be done.

We need more careful evaluation of

law enforcement efforts at all governmental levels, particularly in terms of quality of cases and real impact of effort.

We must build more relevant and useful data and intelligence capabilities both at the Federal and local levels.

We must expand the use of mobile joint Federal, State, and local task forces of law enforcement and other personnel to reduce trafficking.

We must strengthen bilateral agreements with individual "drug source" nations aimed at more effective international control of illicit narcotics trafficking.

We must have a comprehensive review by the Justice and State Departments of our existing extradition treaties dealing with drug offenses with a view toward expanding the scope of extraditable offenses and facilitating the extradition process.

We must have more effective Federal efforts designed to impact with greater effect upon the problem at the local level.

Mr. President, I commend the President for his proposal.

PROBLEMS OF THE FARMER IN THE STATE OF NEW YORK

Mr. JAVITS. Mr. President, I ask unanimous consent that a letter from Agway, Inc., detailing many of the important problems concerning farmers in my State be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AGWAY, INC.,
Syracuse, N.Y., March 2, 1973.

Hon. JACOB K. JAVITS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JAVITS: As chief executive of Agway, a diversified purchasing and marketing organization owned by 110,000 farmers in 12 Northeastern states, I am deeply concerned with the serious challenges facing our country in the 70's.

The forces at work that threaten to undermine our nation's vitality take no pause—nor can we, who are dedicated to the principle that vitality springs from hope and hope from opportunity. It is my belief that the highest form of security for an individual or a nation lies in a climate of rationally guaranteed opportunity.

Agriculture has consistently shown its ingenuity in this regard by improving its productivity to a point where plentiful high quality food is taken for granted by an entire nation for the first time in history.

I understand and appreciate that in your high office the task is immense, the pressures strong, and the issues often clouded. I do ask that you consider with me a few concerns simply stated that often become obscure.

(1) Inflation.—Directly correlates to spending more than income. The biggest loser to this insidious attack on our domestic monetary security is nearly always the one who can least afford it and is least responsible for it. There are definite limits to the amounts a family, a business or a government can spend without incurring serious consequence.

Since the Federal government by size of deficit and its influence on the supply of money is the prime contributor to this destructive trend, I ask your consideration and support of ways to search out efficiencies of operation and to achieve the discontinuance of outmoded programs after proper review.

(2) Realistic resource planning.—The complexity of our society and the increasing interrelationship among broad issues of resource allocation suggest an immediate need to establish long range, practical national policies in the areas of energy, transportation, agriculture and the environment. American farmers have a great stake in the optimum and efficient utilization of these resources.

(3) Understanding our economic system.—The present trend is for proportionately fewer people to be directly involved with the production of goods and services. Consequently, understanding of where our money initially comes from in relation to GNP tends to diminish significantly. This lack of understanding seriously endangers our society in that it allows negative prejudices regarding our system of economics to develop based on emotion and misinformation rather than fact.

An example of this is the fact that it is not generally known that Northeastern farmers are as gravely affected as the individual consumer by the high prices and shortened supplies resultant from such national problems as balance of trade, energy shortage and transportation limitation.

In view of the problems created by this broad lack of understanding, it is my feeling that our nation's leaders should direct themselves to the task of taking the appropriate steps to insure an informed general public.

We who represent Northeast agriculture have great faith in our form of government as well as in our economic system of private enterprise.

We know that the leadership qualities which brought you to your present position will serve you well in making the many difficult decisions which lie ahead.

We believe that the time is upon us to exercise responsibility through bipartisan cooperative action in dealing with those broad issues that affect not only your constituency but the nation.

Sincerely yours,

RONALD N. GODDARD.

EMERGENCY LOAN PROGRAM

Mr. KENNEDY. Mr. President, yesterday the Senate adopted overwhelmingly the House version of H.R. 1975 to restore the emergency loan program for farmers. The bill included the Bergland amendment which is critically important to the farmers of 555 counties in 28 States across this country, including all 14 counties in the Commonwealth of Massachusetts.

On January 18, over 300 farmers in western Massachusetts met in Spencer to protest cutbacks in agricultural programs. The farmers at this meeting signed a petition to the President to extend the emergency loan program which had begun in September, but ended in December before most of them had a chance to qualify for the program.

On February 6, I telegraphed the Secretary of Agriculture to express my concern over the cutback of assistance programs under the Farmers Home Administration including the elimination of the emergency loan program. I ask unanimous consent that a copy of that telegram be inserted in the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

FEBRUARY 6, 1973.

Hon. EARL L. BUTZ,
Department of Agriculture,
Washington, D.C.

Mr. SECRETARY: Massachusetts farmers are seriously disturbed over administration's cancellation of Farmers Home Administration programs and other measures desperately needed to insure the livelihood of rural Americans.

I refer specifically to the rural environmental assistance program which has for many years offered farmers an incentive to carry out environmental projects on their land; the Farmers Home Administration emergency loans designed for individuals who have suffered losses from natural disasters; and to cutbacks in the school milk program. In addition, the Farmers Home Administration, primary source of mortgage credit to rural homeowners, has been instructed to cut off all subsidized loans effective January 8.

I share the disappointment and disillusionment of many inhabitants of small towns and rural areas who feel the Administration has failed in its commitment to those Americans who earn their living from the land.

In view of these announced cancellations and cutbacks, I feel that alternate solutions must be found to assist these distressed farmers. I would be happy to arrange a meeting between your representatives and the farmers of Spencer, Massachusetts, to this end and I look forward to hearing from you as soon as possible.

With best wishes,

EDWARD M. KENNEDY.

Mr. KENNEDY. Mr. President, the Department of Agriculture responded that extension of the emergency loan program would be possible if legislation were enacted which eliminated the forgiveness clause and which established a reasonable interest rate. The legislation which the Senate passed and which I fully supported accomplished these objectives.

The Congress has by an overwhelming majority recognized the critical situation for those counties across the country which had been designated by the Secretary as qualifying for emergency loans where natural disasters had adversely affected farming operations. These 555 counties were not given the 18-day period from December 27 to January 15 to apply for emergency aid and many of them had not yet made application though they were relying on the availability of emergency assistance. Every county in Massachusetts was seriously affected by the announcement: Barnstable, Berkshire, Bristol, Dukes, Essex, Franklin, Hampden, Hampshire, Middlesex, Nantucket, Norfolk, Plymouth, Suffolk, and Worcester.

On September 8, 1972, the Secretary of Agriculture declared the counties of Massachusetts disaster areas qualifying for disaster relief. As of March 16, 1973, 804 loans under this program had been approved for farmers in Massachusetts totaling \$4,894,404. The designation for disaster relief followed upon excessive rainfall from early spring in 1972 aggravated by the effects of Hurricane Agnes and accompanied by wind and hail storms.

Mr. President, many of the other 5,000 farmers in Massachusetts have protested the cutoff of the loan program on December 27; and it is clear that many of these would have qualified for assistance if they had time to make application. H.R. 1975 passed by the Senate yesterday will give them an additional 18-day period during which to apply;

and I am delighted that this program which I fully support was extended for those farmers hurt by natural disasters in Massachusetts and across the country.

CONGRESSIONAL BUDGET PROCESS

Mr. CRANSTON. Mr. President, I believe that Congress and the President must come to grips with the urgent need to balance overall spending with expected revenues. Frankly, I think the Congress and the President have lost control of expenditures. Countless Californians have expressed to me their deep concern over the prospect of further governmental ravages of their earnings and their savings. They feel caught in a fiscal vise through no fault of their own. I believe our Nation's taxpayers have every right to demand a ceiling on spending. This is what I supported in 1972 when the debt ceiling bill, H.R. 16810, was before the Senate.

I firmly believe that it is the responsibility of Congress as representatives of the people to set budgetary priorities and impose a spending limit. I have joined with Senator PERCY and Senator BYRD of Virginia in introducing a bill, the Legislative Budget Act, S. 846, that would create a permanent, systematic procedure for setting a spending ceiling, determining priorities and revenues, and for controlling expenditures.

I am supporting the budget ceiling bills on the floor today which contain a proportionate limitation on cutting of programs by the President, because the above extension budgetary reforms cannot be enacted in time to affect spending levels for fiscal year 1974. I view what we are doing today as only an interim step to control Federal spending and reassert Congress' role in the appropriations process for the coming year. It is my hope that Congress will take further steps regarding the fiscal 1974 budget to insure that Congress fits all appropriations within a sensible spending ceiling, thereby making all the decisions itself—as it should.

Executive discretion to take unilateral action to impound funds and discontinue programs without being subjected to congressional approval has reached crisis proportions and created havoc across the Nation. For this reason I support the position that the President be required to cut all programs by the same percentage to remain within the budget ceiling as set by Congress, but the cuts cannot exceed 10 percent. Any cuts above this percentage would have to be approved by Congress. Certain programs must be exempted from these cuts, because they are "uncontrollable" budget items.

The power of the purse is the fundamental power of Government. The Founding Fathers framed the Constitution deliberately to keep this power out of the hands of the Executive—placing it instead in the Congress as a to prevent one-man government. This is what a constitutional democracy of three independent coordinate branches with defined, limited powers is all about. I stand firm behind the principle that we must balance the budget, and that Congress,

having raised the revenues, must exercise the responsibility to decide among the various competing programs the priorities of the Nation.

RIISING PRICES

Mr. MONTOYA. Mr. President, as is true in all parts of the Nation, the citizens of my State, New Mexico, are viewing with increasing alarm the spiraling rise in prices, and particularly in food prices. This concern was clearly stated in an Albuquerque Journal response to a recent statement by Herbert Stein, Chairman of the Council of Economic Advisers, that the administration is "prepared to move," but that "It is not clear that the best move would be to reintroduce the formalities of phase II." The editorial expressed concern that what really is "not clear" is whether the administration is truly prepared to move in any effective direction.

There is little wonder that this concern is growing. We know, for example, that the overall cost of living as measured by the Consumer Price Index, rose 0.8 percent last month alone, the greatest 1-month increase since the Korean war 22 years ago. Grocery store food prices rose 2.4 percent—2.4 percent in 1 month. Meat prices were 13 percent higher last month than a year ago. The story goes on. Since phase III and during the 3 months ending February 1973, grocery store food prices have risen at a seasonally adjusted annual rate of 20.3 percent. Meats, poultry, and fish prices have risen at an annual rate of 38.7 percent, and fruits and vegetables at an annual rate of 13.2 percent.

Higher prices are also hitting Americans where they live. During the last 3 months, the cost of fuel and utilities has risen at an annual rate of 8.5 percent. Rents have gone up at a 5.4-percent annual rate during the same time interval. Then there has been the totally uncontrolled rise in lumber prices that has placed new housing out of reach for many American families. A businessman in my home State tells me, in addition, that lumber prices have become prohibitive and that quotation on future delivery is virtually impossible.

Relief for the consumer does not appear to be near; for wholesale prices—the retail prices of tomorrow—are also on the rampage. Prices for all commodities in February were 8.2 percent above a year ago. Those for farm products were 25 percent higher.

Food-price changes are, of course, in large part due to the varied forces at work in the market; and, given tight supply conditions in many of our key products, one might well question the action of the administration when on January 11 it placed most sectors of the economy under a purely voluntary system of controls. Indeed, administration policies in many instances contributed to current shortages.

It appears, based on testimony before the Subcommittee on Consumer Economics of the Joint Economic Committee, that President Nixon and his advisers have no well thought-out plan for the future to stop the price spiral. In fact, they warn of continued price hikes. In-

flation is a cruel taxer, falling disproportionately upon those with low and with fixed incomes. It is time to stop inflation. It is time to restore order to our economy.

RIISING LUMBER AND PLYWOOD PRICES

Mr. SCOTT of Pennsylvania. Mr. President, the administration announced yesterday a number of steps it is taking to relieve the current problems associated with rising lumber and plywood prices. I am certainly hopeful that the action taken will soon lead to a significant decrease in the price of lumber and wood products, which in turn will be reflected in lower housing costs.

Representative DAVID MARTIN, of Nebraska, and I on March 20, brought to the President's attention the fact that rising lumber and plywood prices can add \$1,200 to the cost of an average new house. Administration moves are designed to roll back these costs.

The problem is relatively simple in economic terms. There is an enormous demand and an inadequate supply. The Japanese are buying huge quantities of logs for their own housing boom—and the domestic supply is reduced. The Government's own timber reserves are not being used to the fullest capacity—and the domestic supply does not increase. I believe the only way to meet the problem is to increase the supply to match the demand. The administration is now moving in that direction.

First, the administration is proposing to increase the internal supply of timber and lumber, in the realization that the Government's forests, in contrast to private forest lands, must serve as the primary source of our wood products. From the Forest Service lands this year, 11.8 billion board feet will be sold. This represents an increase of 18 percent over last year's sales of Government-owned timber.

Second, the administration is consulting with the Japanese Government to explore the possibilities of decreasing U.S. log exports through the discovery and utilization of new markets, such as Canada and the Soviet Union. The Japanese Government is expected to instruct its importers on the situation in the hope that some favorable adjustments can be made.

Mr. President, I regret that we have to add "lumber" to the list of existing Washington crises. It need not stay on the list for long if Government, private industry, and our allies work hard at a solution. The key point here is an increase in supply. Federal land is available and I have no objection to a reasonable harvest of timber. My only concern is that there be an absolute requirement that for every tree taken, one is planted in its place. We simply must have an ambitious reforestation program if American generations to come are to benefit from our timber resources.

REPORT OF THE COMMITTEE ON THE DISTRICT OF COLUMBIA REGARDING OVERSIGHT ACTIVITIES

Mr. EAGLETON. Mr. President, in accordance with section 118(a) of the Leg-

islative Reorganization Act of 1970 I am pleased to report that the Committee on the District of Columbia during the 92d Congress engaged in the following oversight activities.

Oversight hearings were held on the District of Columbia correctional system; drug addiction and treatment; the operation of the bus company; election reform; the future use of R. F. K. Stadium; teachers pay; the solid waste disposal program of the District of Columbia; and veterans unemployment problems, focusing especially upon Vietnam veterans.

In addition, the General Accounting Office was requested to report on the following matters:

First. Investigating the right of set-off of moneys which had been due D.C. Transit for subsidies of schoolbus fares as against payments that were owed the city for track removal undertaken by the Highway Department which were to be billed to D.C. Transit under its charter;

Second. Audit of expenditure of funds by Public Schools of the District of Columbia with the view to assuring that systematic internal controls are being developed which will facilitate sound financial management practices;

Third. Report on the cost of stopping all work on incinerator No. 5 as of November 1, 1971, including paying all penalties for terminating work on the project; and the moneys committed to this project but not expended as of November 1;

Fourth. Request to monitor the work of the internal audit division of the D.C. Government to insure that all Federal requirements are met in their audit of D.C. public school system to determine whether there are any deficiencies in the expenditure of funds by that school system during fiscal years 1970 and 1971. Also requested report as to GAO's view of the audit after its completion.

Finally, the staff of the committee held a series of discussions with the officials of the D.C. Government regarding such matters as the effective operation of the zoning system; the revision of the personnel system; the operation of the police department during the May Day confrontations; revision of the D.C. income tax system; and the operation of the health delivery system in the District of Columbia.

JOHN A. KOSKINEN

Mr. RIBICOFF. Mr. President, fortunate indeed is the Senator with a capable and loyal staff. The keystone of this staff is the administrative assistant. The administrative assistant must organize the office and manage procedural matters. He must be the clearinghouse for ideas and suggestions from constituents. He must oversee casework and deal with the executive branch and with State and local governments. He must be an adviser on world affairs and still be knowledgeable about the problems of each constituent with the huge Federal bureaucracy. He must be a legislative analyst, a public relations specialist, a seasoned politician and a public official all at once. Being administrative assistant means being the first in the office in the morn-

ing and the last to leave at night. It means receptions after work and breakfast meetings before. In short, being administrative assistant to a Senator is a tough assignment. It is not the job for a person frail in spirit or constitution.

In my 10 years in the Senate, I have been fortunate in that my three administrative assistants have been very capable men and close personal friends. Jon Newman, my first administrative assistant, is now a Federal judge. Wayne Granquist, my second AA and the manager of my 1968 reelection campaign, is the president of one of Connecticut's leading banks. These are both extraordinary men who went on to assume responsible, challenging roles in their communities. Today, I am announcing that my present administrative assistant, John Koskinen, is going on to a new career.

John Koskinen, who joined my staff as AA in May of 1969, is one of the most brilliant, enterprising, highly motivated men I have ever known. I have never been associated with anyone with a greater capacity for hard work and all-around brilliance. In addition he is the most organized man I know. John also demonstrated—time after time after time—a flawless sense of good judgment. That is an unbeatable combination—hard work and good judgment—and John has it in abundance. He thinks clearly. He writes well. He runs the office efficiently. He comes to work to work. John can field any position and homer every time he comes to bat.

Born June 30, 1939 in Cleveland, Ohio, John Koskinen began building a record of achievements as a young man. He was a national merit scholar and the State public speaking champion while attending Ashland Senior High School in Ashland, Ky. He graduated magna cum laude in physics from Duke University in 1961. His accomplishments included membership in Phi Beta Kappa and being nominated by his university to be a Rhodes scholar.

At Yale Law School, John earned an LL.B. cum laude and was note and comment editor of the Yale Law Journal and was admitted to the Order of the Coif. He was awarded a Yale Law School grant in international law, studying from September 1964 to June 1965, at Cambridge University, Cambridge, England.

Returning to the United States, John went to work as a law clerk to Judge David L. Bazelon, chief judge, U.S. Court of Appeals, Washington, D.C. In August of 1966, he joined the Los Angeles law firm of Gibson, Dunn & Crutcher where he worked until August of 1967 when he was named special assistant to the Deputy Executive Director of the National Advisory Commission on Civil Disorders. In April of 1968, John joined the staff of New York City Mayor John Lindsay, serving as his legislative assistant for congressional affairs with an office in Washington, D.C.

John is an elected member of the executive committee of the Yale Law School Association; a member of the Bar Associations of the U.S. Supreme Court and the States of California and Connecticut; and is the area chairman of the Duke University Alumni Fund.

John and his wife, Patricia, and their son, Jeffrey, live in Washington and New Haven.

John Koskinen has been a close friend and advisor to me for the past 4 years. His administrative skills and his valued counsel will be missed. Mrs. Ribicoff and my entire staff wish him Godspeed success and a full constructive life.

INTERVIEW ON ECONOMIC RELATIONS WITH JAPAN

Mr. JAVITS. Mr. President, I was recently interviewed by a special correspondent for the Japanese newspaper Yomiuri Shinbun on the subject of United States-Japanese economic relations. I feel it might be beneficial to the Members of Congress if they were to see the depth of interest in this subject in Japan. Accordingly, I ask unanimous consent that the text of the interview be inserted in the RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

UNITED STATES-JAPAN ECONOMIC RELATIONS?
FIVE-POINT PROPOSAL INCLUDES LIBERALIZATION:
NEW TRADE BILL IS THE ONLY WAY

(By Special Correspondent Takahama)

An influential Republican (dove faction) Senator. A native of New York, age 68, born in 1904. Graduate of New York University. After practicing law in New York he became a special assistant to the Chief of the Chemical Warfare Service, U.S. Army. Served in the Congress as a Representative, and was elected attorney general of New York. Elected to the United States Senate in 1957; presently serving his third term. He is currently a member of the Senate Foreign Relations Committee and the Joint Economic Committee, and his views, therefore, carry weight in foreign policy matters and international economic affairs. He first visited Japan in 1956, then later again in 1970 and 1971. He has made wide contacts with key Japanese government officials, economists, and students. In the Senate, he is known as one of the leading Japan specialists. He was among the first to approve reversion during the 1971 Okinawa Reversion Deliberations. [End of biographical sketch].

President Nixon will soon submit a new trade bill to Congress, which remains cool towards Japan as protectionist sentiment continues to increase. Accordingly on [Feb.] 28th the Yomiuri correspondent interviewed Senator Javits, on questions dealing with currency reform and U.S.-Japan relations in the wake of the recent yen float. In this context, Senator Javits emphasized that the yen float is merely the first step toward improving U.S.-Japan relations. As measures which Japan must undertake, he proposed five items: (1) A "bona fide" liberalization of trade and capital; (2) Currency reform with surplus nations, and a fixed yen rate based responsibility borne by balance-of-trade on "clean float"; (3) Joint strategy with the EC (European Community); (4) Increasing Japanese investments in the United States; and (5) Economic assistance to the developing countries, particularly in Asia.

Senator Javits considers the new trade bill as the only way to prevent stiffer protectionist legislation, and favors the idea of granting the President the authority to raise tariff rates. However, he is opposed to indiscriminate imposition of import surcharges.

Earlier in Japan, Secretary-General Hashimoto of the Liberal Democratic Party (LDP) said in a speech at the International Economic Meeting sponsored by the Yomiuri, "Despite the economic power that Japan represents, she has not been given an appropriate role in international society." To that

statement, Senator Javits countered with a strong rebuff. "In order for Japan to achieve that position, Japan must first realize her role as a responsible member of international society and conduct herself accordingly." He requested that Japan provide capital for economic assistance to the developing countries. It is noteworthy that he said, "And this is not to be provided in an imperialistic manner as during World War II."

The questions and answers with Senator Javits are as follows.

Q. Japan has been accused of hoarding foreign currency, and thus contributing to the unrest in international monetary transactions. However, now that Japan has embarked on floating the yen, how do you evaluate this?

A. The yen float is a good initial step toward improvement of U.S.-Japan relations. But the question is whether Japan is going to conduct a clean float without government intervention. A dirty float makes no sense at all. How strong the yen really is depends on actual market conditions. But whatever may be said, the fact that a trade imbalance of 4 billion dollars exists cannot be tolerated by the United States. If the imbalance were to continue indefinitely, even I, a free trade advocate, must consider resorting to protectionist measures.

To arrive at such a situation is perilous for Japan which relies on the United States to absorb one-third of her exports. There are five steps which must be taken now to prevent this:

1. Establish a new international monetary agreement in place of the now collapsed Bretton Woods formula. In this new agreement, a country with a surplus in the international balance of payments will be obligated to adopt an adjustment mechanism with deficit countries under international supervision. It is essential to reach a settlement along the line of the U.S. proposal presented at the IMF General Meeting in September of last year.

2. Japan must take realistic steps in trade and capital liberalization. Based on our experience up to now, Japan has liberalized only on the surface, and in reality there are many restrictions still in force. The important thing is liberalization from a spirit of sincerity. This will prove beneficial to both United States and Japanese consumers.

3. Japan and the United States should cooperate in opening the door to the EC. Only then will Japan be able to obtain fair treatment.

4. Japan should actively invest in the United States and elsewhere.

5. Grant long-term loans to developing countries by using the strength that Japan possesses. But this must not be done in an imperialistic manner as during World War II which Asian countries fear. As a consequence, the penetration of the U.S. market will also be eased. At any rate, Japan is now a world success, and must be willing to carry out her responsibilities.

Q. The United States has devalued the dollar for the second time in a 14-month period. Some say that this has hurt America's pride....

A. I don't think so. Even Christ did not fear poverty. America is not poor at all. The dollar is as strong a currency as ever. But we have chosen humility instead of pride. This can be done because, as before, we are great and strong in productivity, and brimming over with power.

Q. Will the effects of the dollar devaluation be felt immediately?

A. The devaluation of the dollar should be construed as allowing us a little more than a year's time for a basic reform. But don't place too great a hope on it. Of course, it can be said that owing to this, the situation will turn for the better. However, we are on the brink of danger. If a currency crisis erupts once more, it may be much

worse than now. We are only buying time now.

Q. Compared to the 360 yen to one dollar era the yen has been upvalued approximately 36%. In Japan, some say that this is enough....

A. This problem cannot be resolved in a clear-cut manner as in a mathematical formula. It is enough for the moment to say that the money market will decide the actual value. Finally, it will be up to each country to decide the rate of exchange on an individual basis.

Q. President Nixon is trying to incorporate into the trade bill not only the authorization to lower but also to raise trade barriers. Isn't this carrying trade protectionism too far?

A. That is absolutely necessary. The reason is that it is the only way to prevent enactment of stiffer protectionist legislation. It is necessary for Congress to retain its veto power lest this authority be abused.

SENATOR JAVITS OPPOSES IMPORT SURCHARGES

Q. Representative Wilbur Mills, a Democrat (Chairman of the House Ways and Means Committee) has been vigorously pushing for import surcharges. Do you agree?

A. I am opposed to it. The import surcharge has nothing to do with what is vital for America at the present, and would lead to indiscriminate restraints. Rather, it is more important to have the authority to take retaliatory steps against the offending country. Two years ago, the President imposed an import surcharge, but that was done only as an emergency measure.

Q. There is criticism that the reason the dollar has weakened is that the American people don't work. Has this type of attitude weakened the international competitive position of U.S. goods?

A. That's a misunderstanding. It is not that the American people are not working hard. It is a fact that only some people waste manpower. For example, there are too many diesel trainmen on American railroads. Also within labor unions, job classifications are so narrow that a man with a certain job classification is prohibited from working in another capacity. In that sense, I recognize the need for raising work incentives. In Japan, the workers have a strong sense of loyalty to their job. In order to increase this sense of loyalty, it is necessary for us to promote such measures as old age security, profit sharing system in industries, and stock ownership plans.

JAPAN'S POSITION SPEAKS FOR ITSELF

Q. In Japan, one hears that the international position of Japan remains very low, in spite of her economic power. As a matter of fact, in a recent speech, at the Yomiuri-sponsored economic talks, Secretary-General Hashimoto of the LDP said, "Japan has not even been invited to participate in the Paris talks, and, moreover, cannot become a member of the U.N. Security Council. For Japan to be so isolated is not desirable for the world economy or for peace." What do you think about this statement?

A. Both the United States and Japan have begun to normalize relations with China. Both countries do not intend to make normalization mutually unprofitable. Rather, an opportunity has been created whereby good relations can be maintained by cooperating even in matters concerning China. Speaking about Japan, Japan has been able to promote her diplomacy from an independent standpoint without compromising with other countries. That many Japanese have decried the need for political power commensurate with Japan's economic power, is worthy of consideration. On that score, the point made by Secretary-General Hashimoto strikes at the truth. What can be clearly said is that Japan, without having her political responsibility in international society recognized by other countries and busy only in amassing money, must not only manifest her in-

tentions of making contributions to the world, but should give proof of it. When her political responsibility measures up to her powerful economic role, it is then for the first time that the world will recognize Japan's real strength. Moreover, Japan's dream would be fulfilled. At that moment, Japan will find an eminently good friend, in the United States.

Q. It appears that the Emperor may visit the United States sometime during this year. What do you think?

A. I believe it would be a wonderful thing. I believe that for U.S.-Japan relations, there is nothing better than having as many Americans as possible see the Emperor with their own eyes, and listen to him talk.

EXTENSION OF REGULATION Q—RATE CONTROL ON INTEREST PAID BY FINANCIAL INSTITUTIONS

Mr. SPARKMAN. Mr. President, as the Senate knows, the Subcommittee on Financial Institutions—Committee on Banking, Housing and Urban Affairs—has just completed hearings on a series of matters important to the financial institutions of this Nation.

One of the subjects of the hearings was whether or not and for how long the Congress should extend Regulation Q, the provision that authorizes rate control on interest paid depositors of financial institutions.

John E. Horne, former Chairman of the Federal Home Loan Bank Board and now Chairman of the Board of Investors Mortgage Insurance Co., a private mortgage insurer of conventional home loans, submitted a concise statement explaining why he thinks the rate control act should be extended for a minimum of 2 years behind its scheduled date of expiration this June. I commend his statement to you, and ask unanimous consent that it be printed at this point of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

INVESTORS MORTGAGE INSURANCE CO.,
Washington, D.C., March 22, 1973.

HON. THOMAS J. MCINTYRE,
Chairman, Subcommittee on Financial Institutions, Committee on Banking, Housing and Urban Affairs, U.S. Senate,
Washington, D.C.

DEAR MR. CHAIRMAN: I appreciate the opportunity to submit this brief statement in connection with the hearings by the Subcommittee on Financial Institutions on the extension of existing interest rate control authority.

As you know, this authority was established in its present form by an Act of Congress in September, 1966. A most significant and essential feature provided under the Act is that which makes possible the payment to savings depositors of thrift institutions a slightly higher rate of interest than that paid to savings depositors of commercial banks. It was my honor to be Chairman of the Federal Home Loan Bank Board at that time, and thus I know from experience that the legislation was timely and indeed quite necessary.

In fact, without such a rate differential provision in the Regulation Q legislation passed in 1966 and its implementation by appropriate agencies of the Government, the viability of the thrift industry, which is composed of savings and loan associations and mutual savings banks, would have been jeopardized. Moreover, the volume of home

building which had already reached a perilously low level would have been further reduced.

Congress has acted wisely since the Fall of 1966 in extending Regulation Q in the form then adopted. More than any other one thing, this farsighted provision accounts for the sensational growth of the thrift industry these last six years—an industry which now has more than \$300 billion in assets—and its ability to supply approximately two-thirds of the funds invested in housing accommodations. Unquestionably, without Regulation Q as now structured the almost unbelievable growth of the savings and loan and the mutual savings banks industries would not have been possible. And neither would it have been possible to reach the unprecedented volume of more than 2 million housing units annually, excluding mobile homes.

For several reasons, the thrift industry cannot now compete with commercial banks for savings without Regulation Q as presently structured and administered. For example, the investment authority of the thrift industry is far less flexible or diversified. Moreover, the composition of its portfolio is largely in long-term mortgage instruments and thus not subject to quick turnover and higher income opportunities. Because of these and other conditions, the thrift industry cannot adjust to rapid changes in the interest income paid by other investment sources. Since banks are their best known and potentially their most vigorous source of competition for savings, members of the thrift industry must continue to be shielded from unbridled or unrestrained interest rates paid to bank depositors. The American Bankers Association has taken cognizance of this logic and has recommended a two-year extension.

As I have indicated, there are sources other than banks that frequently pay higher interest rates to investors than can the thrift industry. Such instruments as Government bonds, corporate issues, Government agencies, etc., are examples. These, though, are not always easily available to or understood by the general public. Moreover, Congress has provided some protection to the thrift industry by setting a minimum in certain cases on the size of the investment instrument the investor can purchase. Too, the rate of interest or dividend varies from time to time depending upon money market conditions.

Currently, however, these competitive sources appear to be an increasing threat to the thrift industry in capturing savings. Interest on short-term Government bonds has risen rapidly. Surveys show that business expenditures for plant and equipment will rise sharply during the year. Continued and exorbitant inflation is a grave concern and can inhibit savings if not offset by increased salaries to wage earners.

All these factors make for uncertainty in the volume of savings for the year, in the type of investments savers will engage in, and in the availability of funds to meet even our minimum housing needs. These conditions also threaten to force up the interest rates paid by home buyers. Indeed, this has already happened during recent months.

Thus, it would appear to be imperative that Congress extend Regulation Q, and preferably for a minimum of two years. If other legislation that might be considered later in this Congress should necessitate any changes in the two-year extension, and that seems doubtful, the necessary adjustments can be made. Already there are so many disturbing uncertainties faced by financial institutions and the home building industry, it seems wise and proper that all appropriate steps be taken to provide stability to the thrift industry and to prevent repetition of

that frightening experience termed disintermediation which we suffered in two of the last five years of the 1960's.

Respectfully,

JOHN E. HORNE,
Chairman of the Board.

John Horne did an outstanding job as Chairman of the Federal Home Loan Bank Board. He brought the savings and loan industry through a stage of its most trying and significant history since the early 1930's. He restructured the legislative foundation to enable the industry to meet its greatly expanded obligations to provide the bulk of housing funds during the coming decades; and he otherwise fulfilled the duties of his office in a highly ethical and satisfactory manner.

To give you some idea of the needed reforms and changes made possible by enabling legislation passed during his membership and term as Chairman of the Board, I ask unanimous consent that this partial list of the alluded to accomplishments be made a part of the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

PARTIAL LIST OF ACCOMPLISHMENTS

1. The structure of Regulation Q in a manner to enable the thrift industry to pay a higher interest rate on deposits than commercial banks.

More than any other one thing, this arrangement accounts for the tremendous net savings inflow to the thrift industry during the past six years.

2. Legislation authorizing service corporations, with authority left with the Board to determine the activities of such entities. This eliminates the necessity of passing new legislation every time the Board approves a new activity for a service corporation.

3. The receivership law which gives the Federal Savings and Loan Insurance Corporation (FSLIC) the right to take over the assets of a disappearing association when the depositors have been paid off. Prior to this law, there were growing examples of successful efforts to prevent the merging of a sick association, and of authorities other than FSLIC becoming the receiver of the assets with little or no protection for FSLIC.

4. The Financial Institutions Supervisory Act which enables the Board to do case-by-case supervision and thus to liberalize rules and regulations for the industry. This legislation also empowered the Board to prevent or stop an unsound practice without having to cancel insurance of accounts of an association. The advantages to the industry of this new Board authority are far-reaching in scope.

5. The Savings and Loan Holding Company Act, not to impair appropriate holding company activities but to prevent abuse and crippling by a handful of such companies of their savings and loan subsidiaries. This Act has benefited the entire industry, both holding companies and individual associations.

6. The authority for associations to invest required liquidity in a multiplicity of items rather than just in Government bonds. Now the required liquidity may also be invested in Government agencies (FNMA, FHLBB, TVA, Export-Import Bank, etc.); bank CD's; municipals; bankers' acceptance, etc. This provides greater opportunity for earning on liquidity and also a more flexible liquidity posture.

7. The right for associations to offer a variety of savings accounts, both in passbook and certificates, in order to appeal to various desires of savers. The ability to compete for savings is thereby greatly strengthened.

8. The right to make loans in the mobile home field.

9. The right for insured associations to sell debentures.

10. The right for associations to make consumer or equipment loans on numerous items that go into furnishing a home.

11. An increase in the amount that can be loaned for home improvement.

12. A 50% increase in the level of insurance of savings accounts.

13. The right for associations to invest in urban redevelopment areas, including equity investments.

14. The authority to make educational loans.

15. The change in terminology from share accounts to deposits, and from dividends to interest. This change enables the thrift industry to be more competitive with commercial banks.

16. Legislation to increase the percentage of an associations' investment in multiple apartment units and other commercial properties.

17. The authority for savings and loan associations to invest up to 1% of their assets in associations and housing activities in foreign countries. These loans carry a 100% AID guaranty.

18. Authority for the Board and for each District Federal Home Loan Bank to erect or otherwise acquire its own office facilities.

A matter not requiring legislation but of tremendous importance to the savings and loan industry is the agreement Horne's Board reached with the Federal Deposit Insurance Corporation (FDIC) to issue identical insurance regulations. This agreement officially established for the first time that FSLIC for the savings and loan industry and FDIC for the banks were on par with one another. Prior to this, banks frequently advertised and otherwise claimed that FDIC was superior.

Horne's Board also began the monthly Federal Home Loan Bank Board Journal to serve as a more effective means of communication between the Board and System members.

Since leaving the Board, Horne has continued to work for the passage of legislation beneficial to the thrift industry.

Among outstanding examples is the Emergency Housing Act of 1970, which among its provisions includes:

First. The authority to establish the Federal Home Loan Mortgage Corporation—FHLMC—as a new source of liquidity for the industry, and the buying and selling of FHA, VA, and privately-insured conventional mortgages.

Second. The authority for the Federal National Mortgage Association—FNMA—to conduct a secondary market operation in conventional loans using private mortgage insurance as one of its tools. Prior to this authority, FNMA could only buy FHA's and VA's.

NATIONAL STRATEGY FOR DRUG ABUSE

Mr. PERCY. Mr. President, the national strategy for drug abuse issued yesterday by the White House represents a quantum leap forward in its candid assessment of the awesome drug problem which currently afflicts this country. It also provides a constructive agenda for action aimed at dealing with the under-

lying causes of drug experimentation and dependency.

The strategy avoids the pitfalls of posing simplistic solutions to what must be recognized as a very complex problem involving pervasive drug use by a large segment of our society. Such use can only be fully explained by reference to the political climate, customs, rituals, laws, and peer group pressures which underlie this society.

The document modestly recognizes, in its conclusion:

... that the problems are so diverse and that the responses cut across so wide a spectrum of human activity, that developing a totally coordinated, consistent response is an elusive goal that must be constantly pursued.

That is precisely what I, and my colleagues, Senators RIBICOFF, JAVITS, and MUSKIE, had in mind when we included the requirement for promulgation of an annual national drug strategy in the Drug Abuse Office and Treatment Act of 1972—Public Law 92-255—which I introduced in the 92d Congress and which was unanimously approved by both Houses in March of last year.

I believe that the national strategy also reflects a recognition that, in the past several years of increasing and alarming drug use, the President has acted forthrightly in conceding that a grievous situation existed and was in immediate need of priority attention. The President has personally involved himself in that effort by urging a substantial redirection of Federal drug policies—redirection organizationally, and redirection philosophically. There can be no question that the attention, effort, resources, funds, and, most important of all, the commitment that has gone into this effort represents a bold and positive response.

This is not to say that the strategy document constitutes the be-all and end-all of the Federal drug abuse effort. On the contrary, within the policy and organizational framework which has now been created and which will be furthered by implementation of the President's recently announced Reorganization Plan No. 2 of 1973, substantial issues still remain unresolved. Most of this relates to differences in the treatment versus law enforcement approaches which in the past have accounted for much of the confusion on specific issues evidenced at both the Federal and State levels.

Thus, for example, I think we must give more concerted attention to the needless upset and alienation within our society caused by untold prosecutions and jailings of young people for engaging in an activity—marijuana use and possession—which they themselves do not consider a crime and as to which the best available scientific and medical evidence to date does not justify the severe sanctions which our society imposes. Particular consideration must be given to the effect of Federal crackdowns and border seizures of large amounts of marijuana on the tendency of potential users, deprived of that relatively benign drug, to turn to far more dangerous drugs such as heroin, LSD, barbiturates, cocaine, and speed.

A second, not unrelated issue, which I believe must be given greater considera-

tion, involves the propriety of using Federal and other undercover agents on college campuses and at gathering places for youth for the purpose of busting unsuspected drug users or entrapping them into using or selling dangerous drugs.

Further, while there is considerable factual discussion in this strategy message concerning the proliferation and use of such drugs as amphetamines and related stimulants, and barbiturates and related sedative hypnotics—including methaqualone—I personally believe that it is time to call into question the corporate morality of those ethical drug companies who collectively manufacture literally billions of these tablets. They do so with certain awareness in the face of available evidence that these drugs are being flagrantly abused, and that the potential for serious psychological and physical harm is very great.

In sum, I welcome this national strategy and commend the efforts of the President and Dr. Jerome Jaffe of the Special Action Office for Drug Abuse Prevention in providing us with a particularly valuable assessment of the drug problem in America today, and where we go from here. Because of the urgency and importance of the problem, I am hopeful that we can now move ahead with dispatch in dealing with the diverse aspects of this problem and that some of the policy issues that remain unsolved can now be addressed in short order with the same degree of candor and commitment as are expressed in this strategy.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the summary findings and observations contained in the National Strategy for Drug Abuse:

There being no objection, the material was ordered to be printed in the RECORD, as follows:

FEDERAL STRATEGY FOR DRUG ABUSE AND DRUG TRAFFIC PREVENTION

IV. SUMMARY

There can be no simple solutions to the problems of drug abuse, and no simple solutions are presented in this first Federal Strategy. The use of drugs for non-medical purposes in the United States in these terms. Tictular drug is used in a given society is not only a matter of what that drug does but also of how the people of that society feel about what the drug does and what the majority of people want their society to be. We have reviewed the various drugs that have been and are being used for non-medical purposes as old as history. Whether a par-

It was the clear intent of the Drug Abuse Office and Treatment Act that the strategy concentrate on those drugs covered by the Controlled Substances Act of 1970. Therefore, although our strategy acknowledges the high social costs of the use of alcohol and tobacco, these are not the foci of this analysis. An entire Institute within the National Institute of Mental Health is devoted exclusively to the problems of alcohol.

Yet, our response to the use of drugs such as alcohol and tobacco that have already been incorporated into our customs, commerce, rituals, and regulations cannot, realistically, be the same as our response to those dangerous drugs that are not used by a majority of citizens, and whose use, possession, and sale are currently defined as illegal by Federal and State laws.

The history and the nature of non-medical drug use is such that the medical and social consequences of using a particular drug do not always correlate with the attitudes and

use-patterns that develop. For example, the use of an artificial sweetener that, in large doses, has a cancer producing effect in some animals is prohibited, while the smoking of material that is believed to be responsible for cancer in man is not. Nevertheless, inconsistencies of our overall response should not be a justification for abandoning all efforts at developing a rational system that seeks to minimize the harmful effects of drug use.

The medical utility and the medical and social consequences of different drugs produce different patterns of misuse for non-medical purposes. Thus, the approach to each drug necessarily involves varying degrees of legal regulation and control of availability as well as varied allocation of resources to the enforcement of drug-control laws, to the treatment of the adverse consequences of using the drug, to informing the public of the issues related to its use and abuse, and to developing the increased understanding that will help us to minimize the social costs of abuse in a modern society.

We recognize the difficulty in reaching consensus on the best approach to drug problems in general and to the use of any one drug in particular. Part of the difficulty stems from our incomplete understanding of why certain drugs are used, what factors lead from use to addiction, and what the long term consequences of use and abuse are likely to be. In reviewing the causes of drug use and addiction, some factors emerge as more critical than others. Unfortunately, some of these factors are difficult to influence through direct governmental action.

One of the most important factors determining whether a drug will be used is the availability of the drug itself—in general the use rate is directly related to availability. Another major factor is peer acceptance. While many forms of drug use are solitary behaviors, the varieties that have arisen over the past decade, particularly among young people, are highly dependent on the behaviors and attitudes at the group level. If an individual's friends are drug users or experimenters, then that individual will be much more likely to use drugs regardless of his or her family background or personal characteristics. In this sense, drug use is communicated from one person to another.

Use and experimentation are not necessarily equivalent to abuse and addiction, but should be discouraged. We have lived through times where departure from traditional values and standards, and even the breaking of law, became commonplace. Under these conditions many young people, and older people as well, experimented with marijuana, LSD, barbiturates, amphetamines, and sometimes heroin. Most of these experimenters used the drugs once or a few times and stopped. Others, for a variety of reasons, continued.

The factors associated with continued use are related to the personality of the user, as well as to family structure, the alternative behaviors that are available, and the nature of the drug being used. Some drugs are much more likely to lead to an overwhelming compulsion to continue use (addiction) than others.

Broadly speaking, there are two overlapping and interacting approaches to reduce drug use and abuse in any society. These are those efforts directed at controlling the availability of drugs (drug traffic prevention) and those activities that attempt to reduce the demand for drugs (treatment, prevention, education, research, etc.). We recognize that, without compromising basic constitutional rights, no one of the major approaches available to government—control of drug traffic or efforts at treatment and prevention—can, in and of itself, accomplish the goal of minimizing the social cost of drug abuse and drug addiction. But taken together in appropriate balance and accompanied by broad and the general public, these approaches

have proved to be effective in moving toward this goal.

In considering the drugs covered by the Controlled Substances Act of 1970, we have found the problems related to heroin addiction to be most serious and we have placed emphasis on approaches to reducing the high toll that this form of addiction exacts from our society.

Heroin is among the most addictive of the commonly used substances. The use of heroin showed a sharp rise in the mid-1960's. The number of people becoming addicted increased each year from 1964 through 1969, with each new group adding to the overall growth in the total number of active addicts. While the totals for the years after 1969 are still incomplete, preliminary data indicate that there were fewer new addicts in 1971 than in 1970 and 1969.

Over the same years, the use of marihuana has also become increasingly common. One response has been to learn more about the implications of this increase use and to reflect this information in changes in our policies. Marihuana is no longer considered as hazardous as heroin and its designation under Federal law and associated penalties for its use, possession and sale have been modified accordingly. Nevertheless, our understanding of marihuana is still very incomplete. There are some who now advocate removal of all penalties for use and possession or even total legalization. With such a change or with legalization there would undoubtedly be a substantial increase in the use of this drug. More significantly, there would be an incorporation of the drug into the customs and values of our society that in the cases of alcohol and tobacco has proved irreversible. Given the flexibility of present Federal laws relating to marihuana, no legislative changes are recommended. However, uniform codes for States that are consistent with the Federal standards continue to be recommended and encouraged.

Increases in the use rates of other drugs such as amphetamines and barbiturates and related sedatives are, as with other drugs, partly a function of their availability. Last year amphetamines and related drugs were re-classified to permit the Federal Government to set limits on their production and distribution, and the medical indications for their use were restricted. The impact of these changes on the availability of these drugs should become increasingly apparent over the next two years. The Attorney General's recommendation to reclassify selected barbiturates and related drugs, after receiving legally required concurrence of the Secretary of Health, Education, and Welfare, will permit the establishment in the near future of production and import quotas and better record keeping for these drugs.

Given the wide range of drug abuse problems and the different kinds of people who at some point require some form of treatment, it is not surprising that no single treatment or intervention approach is found to be adequate. Instead, we have set out a policy of developing a variety of treatment approaches, each with its own special advantages and disadvantages, each appealing to somewhat different groups within the heterogeneous population of drug users and addicts, but each with at least one common goal—the return of former drug abusers to a useful role in society.

Some treatment approaches are more controversial than others—for example, the use of synthetic narcotics such as methadone in the treatment of chronic heroin addicts, and the use of civil commitment or other involuntary approaches. We find that the maintenance approach may be necessary for some long-term narcotics addicts at least as an interim step toward full recovery. However, it should not be used indiscriminately or without concern for the hazards caused by illicit methadone diversion. Over the past year we have developed new regulations that

will minimize these hazards without interfering with the provision of treatment.

We have launched research efforts that if successful will further reduce the hazards, increase the likelihood of successful withdrawal, and provide further alternatives to the maintenance approach.

Non-voluntary approaches to the treatment of addiction will continue to be required at least for selected groups of addicts—such treatment is currently available through the Federal government (under the Narcotic Addict Rehabilitation Act) and in several States. We have noted, however, that when the power of the court is not used to retain patients in treatment under civil commitment procedures, the results seem no better than voluntary approaches and the overall costs are considerably higher. We have, therefore, advocated maximum expansion of voluntary treatment approaches before investing substantial resources in non-voluntary treatment systems.

The different approaches to treatment of drug addiction are not equally effective or efficient. It is the responsibility of government to determine the reasons for the differences in outcome and efficiency and, where appropriate, redirect Federal resources. Such evaluative efforts are now underway.

Until the data provide for a more precise policy, we will continue to make a variety of treatments available to those who want treatment, and we will continue our attempts to develop more effective treatment methods.

This general policy has resulted in a very balanced—or multimodality—treatment system for the country as a whole. All treatment approaches funded directly by the Federal government have grown dramatically. Over the past 18 months we have created more treatment capacity than in the previous 50 years. In programs directly funded by the Federal government, more than 60,000 people can be treated at any one time and this translates into treating more than 100,000 on an annual basis; additional thousands are treated in programs funded indirectly by the Federal government through block grants and other revenue sharing devices. The combined Federal, State, local and private capacity is estimated at more than 120,000 at any given time, an annual capacity of more than 200,000.

The use of maintenance treatment in Federally funded programs has approximately doubled (from 10,000 in October 1971 to 21,000 in December 1972) but non-maintenance approaches have almost quadrupled—from 10,000 in October 1971 to 39,000 in December 1972. We renew our commitment to continue the expansion of treatment until no one can say he committed a crime to get drugs because there was no treatment available. This Federal commitment requires a similar commitment on the part of State and local governments to continue their present level of support for drug treatment developed with resources under their discretionary control.

While treatment of those who become addicted to drugs is but one facet of an overall approach, it is a keystone of the strategy we have outlined. We believe that once treatment is available to all who want it, there will be substantial changes in the attitudes of courts, and of probation and parole systems. With treatment readily available, the use of drugs will no longer be viewed to the same extent as a mitigating factor in the handling of those who sell drugs or commit crimes against others.

Even so, there will be many accused of minor crimes or of simple possession of drugs whose willingness to consider treatment may not develop until they are arrested.

We have developed programs that will link the criminal justice system more closely to the network of treatment and rehabilitation programs. The linkage is TASC—Treatment Alternatives to Street Crime—which identifies drug users (particularly heroin users)

at the point of arrest. If ordinarily these individuals would be released pending trial, the linkage would permit them to be admitted directly to treatment programs. In some programs, entering and remaining in treatment may be a condition of release; in others, progress in treatment may weigh heavily in sentencing or in the decision to prosecute.

Several pilot TASC programs are operational, and more may be developed pending evaluation of present projects.

Preventive efforts should flow from an understanding of causes of excessive drug use. However, with the exception of controlling drug availability, there is little consensus about root causes and ways to effectively deal with them.

Informing the public of the risks and consequences of drug use and abuse is a responsibility of government at all levels, and of many other social institutions. But if conveying knowledge about possible adverse effects has had any substantial impact to date on the rate of experimentation or addiction, the impact has clearly been inadequate.

Many educational efforts do not have clearly articulated goals.

For example, they have not stated whether they are trying to stop all experimenting with drugs or to prevent experimenters from becoming regular users and addicts; nor have they stated whether they are intended to affect all drug use including alcohol and tobacco or only those drugs that are illegal.

Few of the efforts relying on communication of information, whether through the school systems, social institutions or mass media, have been rigorously evaluated, and where evaluation has been attempted, the data do not show significant impact.

There have been too many films, pamphlets, brochures, posters, and television spots produced by too many agencies, public and private—most of which remain unevaluated in terms of their impact for various target audiences.

Current large scale educational efforts, particularly those aimed at potential or current drug users, whether through school or mass media, must be more carefully evaluated to ensure they are not counter-productive; that they do not stimulate curiosity more than they dampen active interest.

The Federal government has directed all agencies to stop all direct production and the support of the production of new educational and mass media materials related to drug abuse until the impact of presently available materials can be better assessed. In addition, new efforts at developing an evaluation methodology are now underway.

Thus, we are refocusing our efforts on devising creative pilot preventive approaches with more clearly articulated goals, designed in ways that will permit objective evaluation.

It is also clear that education is not synonymous with prevention. In some situations the most effective way to reduce the social cost of drug use is to provide meaningful alternatives to the use of drugs. Other effective approaches have involved early intervention efforts that bring drug users into treatment situations before drug use progresses to addiction or becomes incorporated into the individual's values.

Once we accept the premise that a drug should not be freely available, we are obliged to take whatever steps are necessary and appropriate to limit its availability. What is necessary or appropriate is, in turn, a matter of what happens when we fail to limit availability.

In the case of narcotics such as heroin, failure to limit availability leads to increased experimentation, and this, all too frequently, leads to addiction, with its many adverse consequences. Among them are crimes committed to get money to buy drugs.

We have rejected suggestions that low cost heroin be made available in order to reduce crime, because such suggestions do not

deal with the problem of preventing more heroin addicts, and because we believe that a continued increase in the number of heroin addicts is unacceptable to the majority of the American people even if the heroin were to be distributed under medical supervision and were not associated with crime.

Reducing the availability of narcotic drugs involves us in a massive effort to control illicit traffic in narcotics at every point from its origins in the poppy fields of a dozen nations to the addict who gives narcotics to his friends. We have found no point in this chain that is significantly more vulnerable than others. To affect the entire chain requires the cooperation of other nations, vigilance at our borders, and vigorous pursuit of traffickers within our borders.

The keys to effective international narcotics control are better intelligence and better overseas law enforcement, both of which require international cooperation and a firm commitment from foreign governments to act against drug traffickers operating within their borders. United States efforts toward this end are coordinated through the Cabinet Committee on International Narcotics Control chaired by the Secretary of State. Its success, to date, is indicated by the fact that we now have cooperative drug control programs with fifty-nine foreign governments and that global seizures of heroin and morphine-base doubled during 1972.

Drug law enforcement responsibilities have been divided among the Bureau of Narcotics and Dangerous Drugs, the Bureau of Customs, the Office of Drug Abuse Law Enforcement, the Office of National Narcotics Intelligence, the Internal Revenue Service, and a number of other Federal agencies such as the Defense Department, the Central Intelligence Agency, and the Coast Guard, which have specialized drug control expertise or resources.

The combined efforts of these agencies have met with considerable success. Drug seizures and arrests are at an all time high; the price of heroine on the streets of the United States has more than doubled during the past two years; and over the Eastern half of the United States there has been a severe heroin shortage that has lasted longer than any similar shortage since the heroin epidemic began in the mid-sixties.

Much more, however, remains to be done with respect to curtailing the availability of illicit drugs. Among the most serious of our current problems is that major narcotics traffickers are far too frequently automatically released on bail pending trial without regard to their threat to the community. Furthermore, even when they are arrested and convicted, they frequently do not receive sentences appropriate to the seriousness of their crimes. Current Federal drug laws are not sufficiently stringent and have far too often been leniently applied by the courts.

The President has recommended to the Congress new legislation which would sharply reduce the availability of bail for those arrested for heroin trafficking and which would create minimum mandatory sentences for heroin traffickers and life imprisonment without the possibility of parole for major repeat offenders. We urge approval of this bill by Congress and recommend that states adopt similar legislation.

During the coming year, we plan to intensify further the effort to reduce the availability of heroin, and the Federal budget provides increased resources for the attack on illicit heroin traffic.

Coordination of the diverse activities related to drug traffic prevention poses a difficult management problem. The task are so diverse and require such a variety of resources and skills that it is impossible as a practical matter to collect them all within any one operating department.

The efforts of the seven Federal entities which contribute to the international control program will continue to be coordinated

through the Cabinet Committee on International Narcotics Control.

The presently fragmented Federal drug law enforcement effort will be rationalized by the creation of the Drug Law Enforcement Administration which will report directly to the Attorney General. This agency will assume all the functions of the Bureau of Narcotics and Dangerous Drugs, the Office for Drug Abuse Law Enforcement, the Office of National Narcotics Intelligence, and investigatory responsibilities of the Bureau of Customs. The consolidation will be accomplished through Congressional Reorganization Plan Number Two of 1973. Because of its central importance in securing more effective drug law enforcement, we urge the Congress to give this plan its prompt endorsement.

The Drug Abuse Office and Treatment Act of 1972 (PL 92-255) created a temporary structure (the Special Action Office for Drug Abuse Prevention) for coordinating those activities that were related to treatment, prevention, education, and research. This Act also mandated the creation of Single State Agencies that would coordinate all such activities at the State level.

Over the past year, the Special Action Office for Drug Abuse Prevention has moved to concentrate more and more of the discretionary funds for treatment, prevention, education and research into the Department of Health, Education, and Welfare and within HEW into the Division of Narcotic Addiction and Drug Abuse of the National Institute of Mental Health.

We have also taken major steps toward routing an increasing proportion of resources through the states to local programs rather than by-passing state and local government.

The objective is to move support for service projects through the state to communities as much as possible over the next several years, thus shifting responsibility for setting priorities to local jurisdictions. Communities should view drug abuse in context with their other problems and deal with it accordingly with an emphasis appropriate to local conditions.

Eventually, emphasis at the Federal level will be on research and demonstration programs in the areas of treatment, prevention, and training. The exceptions will be the programs of the Bureau of Prisons, Veterans Administration, and Department of Defense where direct care of drug users and addicts, and associated research and evaluation will continue.

The necessary coordination between drug abuse prevention and drug traffic control (both foreign and domestic) will continue to be provided by the Executive Office of the President. A new Office of Federal Drug Management is being created within the Office of Management and Budget to assist in this effort.

Much is still unknown. In every area from treatment to prevention, from control of illicit traffic to the long-term consequences of drug use, there are gaps in our knowledge.

A rational strategy should include a systematic effort to acquire the needed information. Such an effort requires the setting of research priorities. Current priorities include the efforts to measure the size and the rate of change in the drug using population, the adverse consequences of the use of various drugs, the natural history of drug use and addiction, and new approaches to treatment and early intervention, including the advantages and disadvantages of educational efforts and mass media campaigns.

Research efforts are also needed to improve our capacity to control availability. These take the form of better methods to determine the origins of samples of illicit drugs, and to gather and analyze intelligence on illicit traffic and to analyze the relationships between law enforcement activity, judicial actions, and the price and availability of illicit drugs.

Until the gaps are filled, our policies and

strategies must be considered tentative and subject to revision. This first Federal Strategy is an attempt to present the background and rationale for the Federal government's policies with respect to problems of drug abuse. It recognizes that the problems are so diverse, and that the responses cut across so wide a spectrum of human activity, that developing a totally coordinated, consistent response is an elusive goal that must be constantly pursued.

This Strategy will be reviewed continuously, modified as new knowledge develops, and promulgated again within one year from the date of this report.

SENATOR DOMENICI CALLS FOR CONTINUED ATTENTION TO TECHNOLOGICAL GROWTH

Mr. HELMS. Mr. President, I rise on this occasion to commend my colleague, the distinguished junior Senator from New Mexico (Mr. DOMENICI), for a fine discussion of one of the major issues facing our Republic today.

In an address to the National Soundings Rocket Conference of the American Institute of Aeronautics and Astronautics, my distinguished colleague called for a balanced commitment to support our domestic programs, while keeping our technological growth vigorous.

I feel the speech of the junior Senator from New Mexico will be of interest to the Members of this great body.

Mr. President, I ask unanimous consent that the speech by the junior Senator from New Mexico be printed in the RECORD at the conclusion of my remarks.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS OF SENATOR PETE V. DOMENICI

New Mexico's contribution to national rocket research began as far back as 1930, when Dr. Robert Goddard began firing his rockets near Roswell.

It went on to include the famous WAC Corporal in 1954, the first living things carried into space in 1951, the first tropical storm photographed from space in 1954 and the first man-made objects in space in 1957.

I consider myself fortunate to represent a state which—with 40,000 civilian, military and contractor personnel involved full time in science—can truly be said to have a great deal in common with the future of America. Because that is so, when I, as a Senator, address such a great and sustaining national concern as the advancement of science, I know that New Mexico has a vital role and a deep interest in the subject.

Today, our nation, as I see it, is dangerously reducing its research and development efforts. If we ignore this critical priority or slight it, it is my firm belief that we will repeat the historical decay of other countries, in other centuries.

It takes vision and courage to maintain a healthy economy, to keep our position in our collective productive capacity. It is world trade and to continue the growth of impossible for me to conceive that we can do these things without committing ourselves to continuous and aggressive advances in the fields of science and technology.

We are now in an era of peace. I pledge to you that I will look at everything we do in this era of peace from a historical point of view. That perspective demonstrates clearly that we have always made our greatest scientific and technological gains in our country during times of war. But if science and technology are sacrificed to peace, that peace will not bring us the abundance we desire and the solutions to our social problems.

It is a simple fact that today's pure science is tomorrow's technology; that is the day after tomorrow's position as a trader with the world and as a solver of our own national problems.

Make no mistake about this: our country's investments in science and technology have always paid off for America. In large measure it is because of them that we rose to a position of world leadership in less than 200 years of history.

But today, some people seem to think that technology has become a dirty word. They shout, "Less money for technology; more money for social purposes."

They don't understand—or they don't want to understand—that technology is not good or bad in and of itself; it is how we use technology that is good or bad. After all, technology simply means pursuing and applying knowledge to solve man's problems. How, under any circumstances, can that be intrinsically anti-social?

It seems clear that what our country needs is a balanced commitment, one which will support our social action programs but will also keep our technological growth vigorous. Unless we can manage to combine these two, we cannot retain our position of importance in the world. There is little need to remind scientists of how Galileo was ridiculed and imprisoned, the Wright brothers laughed at, and automobile pioneers met with cries of "Get a horse."

There have always been men who voted against new ideas. Almost all Americans would agree that Daniel Webster was one of history's greatest senators, yet the record shows that when Congress was asked to appropriate funds to explore and settle the western part of the United States, he voted against the idea. After all, as everyone knows, the West has nothing but scrub cactus, deserts, high mountains and uncivilized savages.

Actually, when Congress voted funds to open up the western frontier, it spent ten per cent of the gross national product to build railroads through the West. At the present time we devote to opening up the space frontier not even one per cent of our gross national product. Actually, the figure is closer to one-third of one per cent, and it is declining.

It is easy to take positions against things, and most of us are all too comfortable when we are doing so. I would like to read you some language from a commission report on the evaluation of a proposal. I am sure that the approach will sound familiar to you. The report says:

"The committee judged the promises and offers of this mission to be impossible, vain and worthy of rejection; that it was not proper to favor an affair that rested on such weak foundations and which appeared uncertain and impossible to any educated person, however little learning he might have."

That is an excerpt from the report of the Talavera Commission. It was made in Spain in 1491 after consideration of a proposal by a fellow named Columbus, who wanted some financing for some kind of exploration he had in mind.

History is full of such examples, but it also teaches us that progressive societies have always invested part of their annual profit in their own future. It is axiomatic, it seems to me, that no first-rate country can ever be or continue to be first-rate unless it has first-rate science and technology.

It is equally true that you can't turn science and technology on and off as you do a faucet, depending on the state of our international and domestic crises. Technology's advance must be steady and constant, and the space program must continue to spearhead that progress.

When we stand at the peak of technological leadership, as our country does today, there are certain questions which we must ask ourselves. Have we learned anything from our past? Is it possible for us to stay

at this peak? Are we in fact smart enough and capable enough to solve international and national problems and still advance technology?

I am sure that it is no mere accident of speech that leads us to refer to each new attack we mount on social problems as a War—the War on Poverty, the War on Hunger, the War on Disease. We use the word because we are conscious of the fact that it is a war which has led us to most scientific advances and to most scientific answers. Now it is our job to reach those advances and answers in a time of peace.

We can only do that if our forward motion in science and technology is on an all-encompassing base. It is true that we have made progress to stamp out polio, but we would not have done it unless we had previously developed microscopes which made it possible for cures to be discovered. Heart pacers, in our older citizens and even in children, came into being, not so much directly from an impetus to create them as from research which was done in our space program on totally different uses. The same is true of any future solutions to our environmental problems. They will not come solely from focusing our attention upon environment. They will come only if the whole body of scientific advances, so that we can then select from it those technological improvements which will in fact be the solution to these problems.

We are presently in a period of much soul-searching, considerable fear, doubt and trepidation. But these things merely show that we are mortal men, every doubt is excusable.

What is not excusable is a lack of vision and a lack of courage, at a time when greatness can only come from men of vision and of courage. To lack them would be unforgivable. If, at this juncture in our nation's history, we lack vision and courage, future generations will not forgive us—and they will be right to condemn.

LATIN AMERICAN TEACHING FELLOWSHIP PROGRAM

Mr. JAVITS. Mr. President, I have served for 5 years as a member of the National Advisory Board of the Latin American Teaching Fellowships—LATE—program of the Fletcher School of Law and Diplomacy, Tufts University. I have watched this program develop from a very modest beginning to a point today where it has 95 teaching fellows in Latin America. What has been the key to its success? The central theme has always been that LATF is responsive to educational needs that are defined—and largely financed—by the Latin Americans themselves. A number of my constituents have participated in the LATF program. They have informed me of their good experience with the LATF program.

I have been informed that both AID and the Ford Foundation are going to make some modest administrative support available to the LATF program. I welcome this continued support of this fine program.

I ask unanimous consent that a brochure on the program be printed in the RECORD.

There being no objection, the brochure was ordered to be printed in the RECORD, as follows:

LATIN AMERICAN TEACHING FELLOWSHIPS—1973-74

THE I.A.T.F. PROGRAM Program description

Latin American Teaching Fellowships are offered by the Fletcher School of Law and

Diplomacy, Tufts University. This program responds to requests from Latin American universities for junior and intermediate level faculty assistance in the natural and social sciences, engineering, business administration educational theory and administration, and law. Professors selected for the program directly assist local Latin American institutions in teaching and research. They dedicate between half and full time to their university responsibilities. The LATF professors usually fulfill one of two functions: they replace a faculty member currently studying outside the host country, or they offer courses which otherwise would not be offered due to absence of necessary expertise and personnel. Curriculum design and development within the specialized discipline is an important contribution LATF professors can make. The LATF program currently operates in the following countries: Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama, Peru, Uruguay, and Venezuela.

Some of the positions currently offered by LATF carry an "internship" component. This requires the Fellow to work approximately half-time for a corporation or public agency in the host country. The LATF program is financially supported by major foundations, universities, and corporations in the United States, Canada and Latin America.

Program objectives

The objectives of the LATF program are two-fold:

(1) to assist universities in Latin America to expand and develop their teaching programs by providing highly trained instructors capable of communicating effectively in Spanish or Portuguese.

(2) to provide opportunities for teaching experience and field research to pre- and post-doctoral individuals, and to recipients of law, business and medical degrees.

An additional long-range objective of the LATF program is to improve the quality of North American university instruction relating to Latin America, by maximizing the Teaching Fellow's academic and institutional contacts while in Latin America, in anticipation of his teaching in the United States of Canada.

INFORMATION FOR APPLICANTS

Eligibility

Preference is given to applicants who have completed doctoral or professional degrees, and to doctoral candidates who have completed all degree requirements except the dissertation. There are no citizenship or age requirements. In most cases, selected candidates are required to write and speak the language of the country to which they are assigned at the commencement of their teaching period. Prior teaching experience is desirable but not mandatory.

Time commitment

LATF program positions in most cases are offered for 24 months, although both shorter and longer periods may also be granted. Departure date will be determined by the program, in accordance with university and internship arrangements.

Internships

Some LATF positions are wholly or partially self-supporting through the internship component. In most cases, the Fellow serves as a consultant or advisor to a corporation or agency in his area of competence. The host agency in turn assists in financing the LATF arrangements. Fellows should anticipate spending up to half time on teaching duties, and up to half time on internship responsibilities.

Financial stipends

The financial arrangements for each LATF position are worked out on an individual basis, depending on degrees of support from the host institution, internship payments,

other fellowship or research stipends, and other factors. Average monthly income for 1973-74 Fellows will be between \$400 and \$700. Incremental increases are frequently provided.

Application process

Application forms may be obtained by writing: Latin American Teaching Fellowships, Fletcher School of Law and Diplomacy, Tufts University, Medford, Massachusetts, 02155. Those applicants deemed eligible and suitable for teaching positions in Latin America will be personally interviewed by an LATF staff officer. Since final selection is contingent upon the applicant's acceptability to a Latin American university, applicants should anticipate some delays in selection notification.

L.A.T.F. ADMINISTRATION

The Latin American Teaching Fellowships program is administered and coordinated at the Fletcher School of Law and Diplomacy, Tufts University. Collaborative relations are maintained with approximately 90 major universities throughout Latin America.

L.A.T.F. Officers

Gary A. Glenn, Executive Director.
William M. Cloherty, Director of Operations.
Lizbeth Lyons, Director of Academic Affairs.
Stephen M. Johnson, Director of Latin American Operations and Representative, Colombia/Venezuela.
Jeanell Cunningham, Staff Officer for Communications and Budgeting.
Oscar F. Porter, Staff Officer for Recruitment and Selection.
Susanne D. Tiktin, Staff Officer for Liaison with Fellows and Representatives.
Janet Ballantyne, Representative, Peru.
Jan Dill, Representative, Central America and Panama.
Theodore Reutz, Representative, Argentina.
Kevin Kinsella, Representative, Mexico.
David H. Gold, Chief of Operations, Sao Paulo, Brazil.

National Advisory Board

William S. Barnes, Fletcher School of Law and Diplomacy (Chairman).
Frank W. Archibald, Southern Peru Copper Corporation.
Lawton M. Chiles, United States Senate.
Frank Church, United States Senate.
Alphonse De Rosso, Exxon Corporation.
Dante B. Fascell, Member of Congress.
Donald M. Fraser, Member of Congress.
James Goodsell, Christian Science Monitor.
Edmund Gullion, Dean, Fletcher School of Law and Diplomacy.
Jacob K. Javits, United States Senate.
Nicholas A. Libertore, Lone Star Cement Co.
Torbert H. Macdonald, Member of Congress.
F. Bradford Morse, Under Secretary General of the United Nations for Political and General Assembly Affairs.
Thomas P. O'Neill, Member of Congress.

FIXED COMMISSION RATES—A GIANT STEP BACKWARD

Mr. WILLIAMS. Mr. President, the new Chairman of the Securities and Exchange Commission announced yesterday that contrary to previous commitments to the Congress and the investing public, the SEC would not require the securities industry to lower the breakpoint for competitive brokerage rates this year. In other words, all charges for brokerage service on exchange transactions below \$300,000 will continue to be fixed, and investors who do not trade in such gargantuan amounts will continue to be denied the opportunity to select and

pay for the services and only the services they require.

The SEC's decision constitutes a breach of faith with the industry, the Congress and the investing public. There can be no pause in reaching the goal of eliminating fixed rates in the securities industry. They have not preserved profitability; they have not insured market liquidity; and they have not prevented market fragmentation. Quite to the contrary, fixed rates have encouraged inefficiency; they have led to a misallocation of economic resources; and they have obstructed movement toward a true central market system.

The Subcommittee on Securities had been assured by former Chairman Casey that the SEC was inexorably moving toward competitive pricing and that there would be a further reduction in April of this year. Mr. Cook, prior to yesterday, had expressed to me and to the full Senate Committee on Banking, Housing and Urban Affairs his commitment to continue this program. Therefore, I am genuinely shocked by the Commission's reversal of policy.

The Commission's decision not to reduce the competitive breakpoint has neither solid economic data to support it nor sound policy presumptions to explain it. I am forced to conclude that it represents a capitulation, however temporary, to the forces which have consistently opposed all steps toward interjecting much-needed competition into this industry.

Nearly a year ago the subcommittee received testimony from William Salomon, a forward-looking industry leader, who stated:

At every move to lower the level for negotiated rates, we have been bombarded from many sides with the argument that time is needed to adjust to the change so that the impact of each downward move could be evaluated.

As yet it has not been made clear what adjustments are being made by the firms who oppose negotiated commission rates. The gradual stepping down process presently underway just seems to invite the same opposition at every further downward adjustment. They say "move slowly." There haven't been any plans for adjustment brought forward. Their only aim seems to be to delay the downward movement as long as possible in the hope that it can be permanently stalled.

The resistance to competitive rates continues unabated, and the SEC decision to postpone further progress can only give heart to those who desire the perpetuation of price fixing in the securities industry.

It is appropriate to recall the Commission's own conclusion in its Statement on the Future Structure of the Securities Markets:

Fixed minimum commissions, at least on institutional-size orders, may well make it very difficult, if not impossible, to create the central market system.

I am in full agreement as apparently is Mr. James Needham, chairman of the New York Stock Exchange. The Commission, however, seems to have lost sight of its own point, and by its decision yesterday it has inevitably delayed the startup of a true central market system within which competition can play its necessary role.

In February, when Mr. Cook was ap-

pointed chairman of the SEC, I had high hopes that he would be a vigorous chairman, able to lead the industry in the adoption of necessary reforms and modernized procedures. My hopes were reinforced 2 weeks ago, when, in a speech in New York City, Mr. Cook outlined a plan for a central market system which was thoughtfully conceived, workable, and in the public interest. As could have been expected, Mr. Cook's speech brought anguished cries from vested interests on Wall Street that his proposals would bring chaos to this country's securities markets and destroy our capital-raising capacity. Nonsense, of course; Mr. Cook's proposals for a central market system were basically the same as those contained in the Subcommittee on Securities' securities industry study report and in the recent report of the House Subcommittee on Commerce and Finance. The proposals are sound and will create for the investors of this country a fairer, more orderly, more liquid market.

But those on Wall Street whose ox will be gored by the proposals in Mr. Cook's speech are not without power and political influence—and Mr. Cook it appears is highly susceptible to pressure from such quarters. Last Friday a delegation from Wall Street visited Mr. Cook. It is my understanding that they voiced their displeasure with his speech. His reversal of policy on Commission rates appears to have been the direct result of this visit.

Mr. Cook's willingness to compromise established Commission policy in order to appease Wall Street bodes no good for public investors and the integrity of our market system. This action makes more clear than ever the responsibility of Congress to legislate the final abolition of fixed pricing in the securities industry. I believe we can and should act promptly.

SOVIET COPYRIGHT LAW

Mr. McCLELLAN. Mr. President, on March 26 I introduced S. 1359 to amend section 9 of the Copyright Act in response to recent developments in the Union of Soviet Socialist Republics. According to the information currently available there is reason to believe that the Soviet Union may intend to use its adherence to the Universal Copyright Convention as an additional means of suppressing the circulation of works by dissident Soviet authors.

The New York Times of March 28 contains an article from Moscow reporting a statement issued by a group of distinguished Soviet intellectuals to the effect that the Soviet membership in the Universal Copyright Convention could be used to deprive Soviet authors of their rights. In an open letter to the United Nations Educational, Scientific, and Cultural Organization they wrote:

It would be impermissible that censorship should now acquire the possibility of operating on an international scale supported by the Geneva Convention.

The Wall Street Journal of March 29 in its lead editorial entitled "From Russia With Vengeance" states that it concurs in the view that the Soviet membership in the Universal Copyright Convention "was aimed primarily at suppressing for-

eign publication of underground works by Russian authors critical of the regime."

I am pleased that the Wall Street Journal has endorsed the legislation which I sponsored earlier this week. The Journal editorial concludes with advice which is appropriate to all our understandings and arrangements with the Soviet Union. It states:

It is important to enter such agreements with a clear understanding of the regime we are dealing with, rather than entertaining naive expectations that Moscow is finally more interested in international cooperation than in ideological advantage.

In view of the growing interest in this subject, I ask unanimous consent that the articles from the New York Times and the Wall Street Journal be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal,
Mar. 29, 1973]

FROM RUSSIA WITH VENGEANCE

Two months ago, when Soviet Russia announced its intention to abide by terms of the Universal Copyright Convention, we expressed skepticism about Soviet motives. We would have liked to join the optimists who viewed the Moscow announcement as an example of Russia's growing maturity and responsibility, but we were worried that the underlying reason for the Soviet turnabout was bound up in the broader purposes of Russian ideology.

We feared that the Soviet announcement, saying it will become a party to the convention effective May 27, was aimed primarily at suppressing foreign publication of underground works by Russian authors critical of the regime. Unhappily, it seems clear that our fear was well taken.

Just recently the Kremlin unveiled Decree 138 of the Supreme Soviet, passed only days after the announcement that it would agree to the copyright convention, saying the pact will apply to all Soviet works—even those not published "but found on the territory of the U.S.S.R. in any objective form." The decree is clearly directed at "samizdat," that clandestine literature that comprises serious Russian literature today, much of which naturally protests the oppressive Soviet regime.

Under this law, a writer could be prosecuted if he admitted authorizing foreign publication of his work. If he denied authorizing foreign publication, as Nobel Prize Alexander Solzhenitsyn denied authorizing foreign publication of two of his major works, Russia could bring legal action against the foreign publisher for violating the copyright convention.

In return for acquiring this club with which to batter dissident intellectuals in the guise of international legality, Russia will give up very little. For years Moscow pirated literary works and compositions at will, picking and choosing from among the world's creative output in order to satisfy domestic propaganda purposes.

Not only did it publish such works without paying royalties (except in a few cases making token payments in rubles spendable only in Russia)—it also distorted much of what it did pilfer, changing dialogue, altering characters and subverting plot. Recently, David Rabe, author of "Sticks and Bones," wrote to the Russian producers of an unauthorized production of his play, protesting the distortions. He wrote, "I feel that you and your entire cast and crew spend the two hours of your performance each night spitting in my face."

When it signs the copyright convention,

Russia presumably will have to end such distortions and it can no longer pirate foreign works. And there is always the possibility Moscow may in fact do so, although it will mean reversing a policy that is now deeply ingrained. But there would seem to be no lack of Russian writers capable of grinding out their own propaganda productions. And if Moscow has to get by on home-produced distortion, that will be little enough price to pay for silencing those intellectuals whose eloquent voices are still being heard beyond the grave dug for them by their Soviet jailers.

The board of the American Association of Publishers recently announced that members intend to fulfill the spirit of the copyright convention, as expressed in its preamble, ensuring respect for the rights of the individual. And the Authors League of America properly has urged Congress to change the U.S. copyright law to disallow claims to copyright control by any foreign government, a move that would prevent Moscow from using American courts to enforce its claim over the works of Soviet authors.

As a separate discussion on this page today suggests, it probably is in America's interest to try to reach agreements with Russia on a whole range of technical, cultural and trade arrangements; but each such pact must be weighed on its own merits. It is important to enter such agreements with a clear understanding of the regime we are dealing with, rather than entertaining naive expectations that Moscow is finally more interested in international cooperation than in ideological advantage.

[From the New York Times, March 28, 1973]
SIX SOVIET INTELLECTUALS WARN OF DANGER IN MOSCOW'S ACCEPTANCE OF WORLD COPYRIGHT LAW

(By Hedrick Smith)

Moscow, March 27.—Six Soviet intellectuals, including the physicist Andrei D. Sakharov, warned today that Soviet adherence to the International Copyright Convention could be used to deprive some Soviet authors of their rights rather than to protect them.

"It would be impermissible that censorship should now acquire the possibility of operating on an international scale supported by the Geneva Convention," they declared in an open letter to the United Nations Educational, Scientific and Cultural organization.

On Feb. 27 the Soviet Government formally notified UNESCO of its intention to adhere to the copyright convention beginning May 27. Subsequently, the Government published an amendment to Soviet copyright laws tightening control of foreign publication of Soviet writings by requiring that foreign copyrights be granted only through an official Soviet agency.

Western specialists immediately noted that this would open the way for the Soviet Government to take legal action against such iconoclastic writers as Aleksandr I. Solzhenitsyn for allowing foreign publishers to print works that Soviet censors would not pass.

They also suggested that the new law would provide Moscow with grounds for filing suit against Western publishers who printed works of Soviet authors on the basis only of personal authorization, though it is not clear whether the Soviet case would stand up in Western courts.

In any event, both Western and Soviet observers saw the Government's move as a step to try to shut off the flow of dissident writings published in the West. The letter today was the first publicized warning from Soviet citizens about the potential dangers of the move.

The letter of Mr. Sakharov and the others, including two writers who have encountered official pressure for having privately permitted publication of their works abroad, asserted that Soviet censorship had always been "extremely rigorous" and in recent

years had become "even more harsh and arbitrary."

If in the past Soviet censorship had had the force of international law through the International Copyright Convention, the letter warned, "world culture would have been deprived of many remarkable works" by the poets Anna Akhmatova, Boris Pasternak and Aleksandr T. Tvardovsky, by Mr. Solzhenitsyn and Aleksandr Bek and by "other writers, composers, painters, historians and publicists."

The letter asserted that a peculiarity of the Soviet system of state monopoly in foreign trade raised special problems for Soviet authors.

"The international concept of copyrights implies that this right is purely a personal one that the author may transfer to any publishing house, theater, movie studio and so on," it said. "Governments may and must protect copyrights of their citizens but not appropriate them. In the special conditions of our country the law on the monopoly of foreign trade would be transformed into a power that limits and even suppresses international copyrights of Soviet citizens."

The six signers said that while they approved of the Soviet move on the whole as a potentially significant contribution to the cause of free exchange of information and cultural rapprochement among people, they felt it their duty "to express several apprehensions."

They said that their apprehensions were sharpened by the publication of the amendments to the Soviet copyright law published on Feb. 28.

THE OTHER SIGNERS

In addition to Mr. Sakharov, the signers include two other members of the committee on Human Rights—Igor Shafarevich, a mathematician, and Grigory Podyapolsky, a geophysicist; two writers, Alexander Yalich and Vladimir Maxemov, and Alexander Voronel, mathematician.

Both Mr. Galich and Mr. Maximov have been under official pressure because of publication abroad of works that have not been passed by censors here.

Mr. Galich, a well-known screen writer, was expelled from the Writers Union more than a year ago, reportedly for refusing to disavow publication of a Russian émigré publication of politically controversial songs attributed to him.

Mr. Maximov reportedly feared expulsion from the Writers Union after the publication in the West of his novel, "The Seven Days of Creation."

MUSKIE SPEECH CALLS FOR GET-TOUGH POLICY WITH DETROIT

Mr. BIDEN. Mr. President, there has been much discussion recently of the feasibility of meeting the requirements of the 1970 Clean Air Act. This is a matter which deserves the thoughtful consideration of all of our citizens. Senator EDMUND MUSKIE, chairman of the Senate Subcommittee on Air and Water Pollution, responded today to the critics of this act who have suggested that the act be amended and that Congress and the public have asked too much from the automobile manufacturers. I believe that Senator MUSKIE has presented his argument cogently and that the points that he has made should be carefully considered.

Senator MUSKIE pointed out that:

The industry has had the opportunity for a decade to clean up the automobile with only general supervision from the Federal Government. These minimal controls now appear to have been inadequate . . . The harsh truth is that German and Japanese auto companies have developed more new

control technology and have contributed more to the protection of America's health than have General Motors, Chrysler and Ford.

In reference to the auto manufacturer's response to the Clean Air Act requirements for the development of a clean car, Senator MUSKIE said that:

Apparently American auto companies have decided to substitute politics for engineering and public relations for technological progress.

Because the auto manufacturers have made no secret of their intentions to seek a change in the law, Members of Congress should examine carefully what Senator MUSKIE had to say:

Any proposed amendments to the Clean Air Act must improve our capacity to ensure that the goals of the Act are met . . . The Congress will have to consider imposing standards of engine design, performance and fuel economy, and we will need to examine the arguments for improving the competitive structure of the industry.

I ask unanimous consent that the full text of Senator MUSKIE's remarks to the Environmental Writers Association be printed in the RECORD at this point.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR EDMUND S. MUSKIE

Fifty years ago, the first Henry Ford wrote an autobiography that set out the principles he said had guided him to success. "All that I have done," he wrote in *My Life and Work*, "is to endeavor to evidence by works that service comes before profit and that the sort of business which makes the world better for its presence is a noble profession."

The mass-produced automobile, the creation of Henry Ford's genius, has made the world better. Cheap, rapid transportation has broken down distinctions of class, of geography, of wealth. It has opened up opportunities that now extend into a space and a future we can only dimly imagine.

But America—the most advanced and dependent automotive society in the world—has now reached a time of testing with the automobile. We are faced with the fact that the private car involves grave public risks. We are being forced to examine what Henry Ford put down as a truism: "The machine is the symbol of man's mastery of his environment."

The examination has now reached a critical phase in the issue of standards for automobile exhaust emissions. The question is before the Environmental Protection Agency. It is before the auto manufacturers. It is before the Congress, and it is before the public.

A few weeks ago I discussed the problem with the heads of Ford, Chrysler and General Motors. Today I want to set out my views to you and ask you to reflect on the choices America must make and the forces at work to determine their resolution.

While the immediate problem is the question of extending for one year the deadlines on auto emission levels set by the 1970 Clean Air Act, it is necessary to begin this discussion with some of the background of that legislation. As the principal author of the Act, I am anxious to put on the record the concerns that must govern the implementation of the law.

This year Americans will buy 11 million new trucks and cars. They will spend over \$40 billion with the U.S. auto manufacturers whose activity now constitutes roughly one-fifth of our economy. Americans will receive, in return, the means to get to and from their jobs, their schools, their families, and their recreation, the vehicles to carry their goods from maker to buyer and the machines

to till their farms and harvest their crops.

Essential as the automobile is, however, its costs must be weighed. One is the cost in fuel—65 billion gallons of petroleum products just for private cars in a year, and 40 percent of all our petroleum consumption committed to use in motor vehicles. Another is the cost in health—the area I will concentrate on today.

Using air quality data of the Public Health Service, whose validity was only recently reaffirmed by new studies by EPA's National Environmental Research Center—we have to conclude that the automobile is a danger to the Nation's health. This year, automobile exhaust will account for two-thirds of the carbon monoxide, half of the hydrocarbons and two-fifths of the nitrogen oxide that pollute our air. And that pollution will be concentrated in our great cities.

The NERC report reached the following conclusions:

PARTICULATE MATTER

"All recent evidence has strengthened the research base upon which the Administrator made his judgment. Thus, the present standards are not deemed unreasonable and it is not recommended that they be changed at this time."

PHOTOCHEMICAL OXIDANTS

"In light of old and new evidence to date, the present primary national air quality standard for photochemical oxidants of 160 ug/m³ (1.08 ppm) maximum concentration for one hour is reasonable. The evidence does not warrant a different standard."

NITROGEN OXIDES

"Based on . . . existing health intelligence, the margin of safety provided by the primary NO₂ standard of 100 ug/m³ (0.05 ppm) is adequate . . . Present evidence does not compel us to suggest a change in the existing standard."

CARBON MONOXIDE

"In view of [the] relatively small margins between present standards and observed health effects, it does not seem that existing standards are unduly restrictive and it does not seem prudent that they should be raised. Although the margins are relatively small, the carboxyhemoglobin levels that will result from adherence to the standard is sufficiently close to background, that no lowering of the standard is recommended either."

The EPA data, when applied to the urban concentration where more than 70 percent of America's population lives, prove the existence of a clear and present danger to health. In 67 metropolitan areas automobile-related pollution produces a level of air quality which is considered unsafe. In many of these cities, emissions from motor vehicles are responsible for 80 percent of the urban air pollution.

In Baltimore, for instance, motor vehicles produce 96 percent of the carbon monoxide which, on city streets where children live and play, often goes higher than 50 parts per million. Ten parts of carbon monoxide per million dulls thought. One hundred parts per million brings on dizziness and headaches. One thousand parts per million kills.

And the situation in Baltimore is not exceptional. On North Capitol Street, just a few blocks from the Senate Chamber, the carbon monoxide levels often rise to 100 parts per million, twice the maximum health limits for factory workers' safety. In Chicago, the standard of 48 parts of carbon monoxide per million in any one hour is exceeded 48 times a year, and the eight-hour standard is breached 713 times annually. In Washington itself the eight-hour standard is violated 99 times a year.

Of course, one of the worst hit areas in the Nation is the Los Angeles Basin. And it is from there that the pressure has grown for a national response to a problem that never was simply a local concern.

In the fifties, California legislated a requirement that the development of workable

pollution control mechanisms—add-on devices—must be followed by the installation of those devices on vehicles sold in that State. By 1964, California was able to certify that three independent manufacturers had developed functioning add-on devices, and the State then required their installation on 1966 model cars.

For years the auto manufacturers had been saying the technology necessary for such emission control was not available. They also argued that the law was unnecessary as they could clean up motor exhausts without such pressure. But within weeks of California's firm stand, they announced they had the means to comply without resorting to add-on devices.

Nevertheless, they opposed the decision of the Congress in 1965 to set Federal standards, applied in 1968, for exhaust levels from new car engines. In 1967, Congress made the Federal standards preemptive over those individual states had set. The Congress made an exception only for California and in return for the preemption of State laws, Congress insisted that Federal controls be sufficiently strict to protect areas with the worst pollution problems.

Studies by the Public Health Service showed that the law was not producing the desired air quality results. The automobile industry was making little progress in developing either a clean conventional engine or a viable alternative. The Nixon Administration called auto and oil industry officials to a White House meeting in 1969, and from that session emerged an agreement for stiffer emission standards in 1975 and a set of goals for clean cars by 1980. These goals and standards, however, fell short of the real requirements. Because of the used car problem, they would not have removed automobiles as a major contributor to air pollution until 1990.

The Congress found the timetable too slow. The Clean Air Act of 1970 required instead that the White House goals be made standards and that they be applied in 1975 and 1976. The Act required in 1975 a 90 percent cut below 1970 emission levels of hydrocarbon and carbon monoxide and set for 1976 a 90 percent reduction below the 1970 levels of emissions of nitrogen oxide.

That Congressional determination rested on four considerations.

First, we weighed the necessity of protecting public health against the disputed facts of economic or technical feasibility, and we decided that public health could no longer be compromised by these lesser considerations.

Second, we insisted on independent monitoring of the facts the manufacturers had, until then, nearly monopolized the true measure of their own efforts and of the technology available to them.

Third, we provided that the deadlines could only be extended by one year and only by the Environmental Protection Agency. It could grant the delay after a finding that the standards were not technologically feasible, that the manufacturers had made a good faith effort to comply, that the National Academy of Sciences could find no available alternatives and that an extension of one year would serve the public interest.

Finally, we established the principle that as long as America could not live without the automobile, it required an automobile it could live with. The burden of producing such a car—without specific inhibitions on the kind or size of engine—was left with the industry itself. And so long as the industry did not want to be told how to manage that burden—so long as the industry insisted that the internal combustion engine should not be abandoned, that the car or engine size need not be restricted, or that no specific fuel economy should be required—it was enough to tell them simply that it had to be done. So we set standards for performance, not for design.

Nearly three years have passed. And now

the auto manufacturers are asking for both the one-year extension and for a relaxation of the law itself.

They say the public health data on which the 1970 determination rests are "arbitrary."

They say the danger is not so great as to require such strict reductions in emission levels.

They say that existing technology cannot effect such reductions.

They say the technology that could do the job would cost too much.

And, they say, it would produce a car that consumed more fuel with less drivability; a car that would not sell.

So the issue is joined. It is appropriate that we examine the conflicting claims and the available evidence. The evidence is detailed and technical. Complicated as it may be to present, it is still essential to understand.

The reports issued during the last several weeks by the National Academy of Sciences and by the Environmental Protection Agency provide the kind of information we need to evaluate the results of the industry's efforts. The information is discouraging.

It indicates that the industry has attached more importance to preserving the internal combustion engine than to finding the best and most effective means of meeting the standards.

It strongly suggests that the industry has failed to seriously consider alternative engine systems as an approach to solving the automotive emissions problems and meeting the statutory deadlines.

The reports of both the National Academy of Sciences and the Environmental Protection Agency conclude that the 1975 standards for hydrocarbons and carbon monoxide emissions might be met by using catalytic, add-on systems coupled with the internal combustion engine (ICE)—the approach followed by each of the major domestic manufacturers.

The reports also indicate that the standards can be met by using alternative engine systems, the Wankel rotary engine, the diesel engine, or the stratified charge engine—the approach followed by several foreign manufacturers such as Mercedes-Benz, Honda, and Mazda.

But now the domestic manufacturers argue that the passage of time has eliminated the alternative engine approach to meeting the 1975 standards as far as they are concerned.

With respect to the 1976 standards for nitrogen oxides, both reports conclude that the prospects are still hazy; but both reports also indicate that the prospects for meeting those standards with the alternative engine system are clearly better than are the prospects for success with the catalytic, add-on systems.

Most importantly, however, the NAS report also compared the catalyst and alternative engine approaches in terms of cost, durability, and fuel economy. These comparisons make clear the price the public will have to pay for the industry's decision not to develop alternative engines. The Report states that the dual catalyst system pursued by the domestic manufacturers "is the most disadvantageous with respect to first cost, fuel economy, maintainability, and durability. On the other hand, the most promising system—the carbureted, stratified-charge engine—is superior in all these categories."

According to Philip Handler, President of the Academy, the high costs for the catalyst systems are dominated by the fuel penalty associated with such systems. "These costs," he said, "in dollars and in depletion of fuel reserves, are so great that they should serve as a national incentive to hasten the development of reliable lower-cost alternatives to the dual catalyst system as a solution to the problem of emissions control."

But those prospective costs do not appear to have had that effect. Neither the higher

costs to the consumer nor the greater drain on our energy resources has discouraged the U.S. auto manufacturers from choosing the catalyst patch-up over alternative engine systems. And the public will pay the price for that choice. The harsh truth is that German and Japanese auto companies apparently have developed more new control technology and have contributed more to the protection of America's health than have General Motors, Chrysler or Ford.

In the midst of compiling this record with respect to the 1975 and 1976 standards, the companies have repeatedly ignored and violated current requirements of the law. Some of the most flagrant violations occurred in 1971 when Ford shipped 200,000 cars to their dealers in violation of the law, and in 1972 when Ford committed 350 separate criminal violations of the law for which it recently paid a \$7 million fine.

Several other companies are involved in an action which began in March of 1972 when EPA sent a memorandum to all the auto manufacturers stating the clear intent of the Clean Air Act that vehicle certifications granted by EPA would apply for only one year. EPA stated: "The statutory language limits to 365 consecutive days the period of time (production period) during which a manufacturer may produce individual models."

EPA revealed on June 19, 1972, that despite this clear direction, ten auto companies planned to produce models under 1972 certifications for periods longer than 365 days. The ten auto companies were: Alfa Romeo, Avanti, Chrysler, Citroen, Ford, General Motors, Lamborghini, Maserati, Mercedes-Benz, and Nissan.

EPA chose not to enforce their March directive, but instead wrote a new memo saying that a year is not 365 days but is any "model year" the auto companies choose to make it. Thus, the manufacturers' preferences prevailed over the clear intent of the Congress.

The most outrageous violations were reported in July, 1972. EPA learned that auto makers were installing emission control devices on 1973 cars which would shut off automatically under many normal driving conditions.

Specifically, it was reported that emission control systems would shut off when the engine is idling, when the outside air temperature was below the minimum test level of 68 degrees, or when major accessories such as air conditioning units were operating. None of these faults were discovered during regular EPA testing because the manufacturers had rigged their cars so that shutoff devices would not be discovered by EPA's tests. And when EPA ordered the removal of these devices in January of this year, the auto makers protested that their production schedules would be disrupted.

We have examined what the industry has done. Let us now look at what they are saying.

Apparently, American auto companies have decided to substitute politics for engineering and public relations for technological progress. The past several months have seen the beginning of a major effort on their part to discredit the requirements of the Clean Air Act and the basis on which it was enacted.

In questioning the basis of the law, for example, General Motors has spent thousands of dollars for special canned presentations, including a slide show and accompanying speeches, in which the Clean Air Act standards are called "arbitrary," "unrealistic," and "overkill." General Motors' memory is very short; the standards in the Act were virtually identical to standards to which the auto industry agreed at the White House meeting in November, 1969. These standards were further supported by extensive studies discussed during hearings on the Clean Air Act in 1970, and have been confirmed again by the studies of the National Environmental Research Center.

Chrysler recently sent to their dealers a slide show, a speech, and pamphlets attacking the Clean Air Act. In the pamphlet, Chrysler argues that "nature produces up to fifteen times more of the automotive emissions than man." That is not the whole story according to Reid A. Bryson of the University of Wisconsin's Institute for Environmental Studies:

"It is true that nature produces more carbon monoxide than man does, but not in the high concentrations that are found on city streets. Nature does produce more hydrocarbons than man, but not in high concentrations in the air. In fact, we burn naturally produced hydrocarbons in our automobiles, but we concentrate the wasted part in the air of our cities. It is totally meaningless to argue that because nature produces more carbon monoxide over the whole world (including the oceans, which are a major source) that concentration of 80-110 ppm in some sections of our cities are of no consequences. The methane produced by a herd of flatulent elephants in Africa has nothing to do with whether there is too much hydrocarbon in the air of Washington, D.C. The argument is even more absurd than telling the condemned man in the electric chair not to worry because lightning kills far more people every year."

And a recent Chrysler newspaper advertisement tells us that: "The automobile industry has not been asleep. We were working hard to reduce harmful emissions from cars some twenty years before the Clean Air Act." Chrysler apparently has forgotten that the auto industry was sued by the Justice Department in 1969 for an illegal conspiracy to suppress the development of emission control technology. "The automobile manufacturers," said the Justice Department, "collectively did all in their power to delay [the] research, development, manufacturing, and installation of control devices from 1953 through the middle 1960's."

The industry has made three principal arguments in attacking the requirements of the law:

First, the companies have argued that the 1975 and 1976 standards will lower the fuel efficiency of new cars, require greater fuel consumption, and substantially worsen the energy crisis. According to the NAS, the catalyst approach the industry has chosen over the alternative engine approach will involve increased fuel consumption. But the truth is that we pay even greater fuel penalties in exchange for vehicle size and accessories than for pollution control devices. And there is no need to pay any fuel penalty at all for emissions control, according to the NAS; in fact, two of the alternative clean engine systems—the diesel and the stratified charge—are more fuel efficient than the 1973 internal combustion engine.

The Environmental Protection Agency has described in detail the relationship between fuel economy and pollution control devices, vehicle size and accessories. Their report indicates that automatic transmissions involve a 5-6 percent fuel penalty, emission control systems an average penalty of 7.75 percent, and air conditioners an average penalty of 9 percent (up to 20 percent on very hot days); vehicle weight increases over the past few years have caused penalties of up to 150 percent.

The second major argument which the industry has advanced is that the technology to meet the 1975-76 standards does not exist. It is the same argument that has been made every time new automotive emission standards have been considered over the last fifteen years; and every time, when the crunch has come, new technology has appeared.

The truth is that the technology *does* exist; we just don't know whether it exists for the domestically manufactured internal combustion engine. General Motors mass produces a diesel car in Europe which meets the 1975 standards. Mercedes-Benz, Mazda

and Honda expect to meet the 1975 standards without serious effects on current performance levels with the diesel, the Wankel and the stratified charge engines, respectively. In fact, EPA has said that Honda will meet the 1975 standards with fuel economy 12 percent better than comparable 1973 vehicles, and that Mercedes will meet the 1975 standards with fuel economy 75 percent better than conventional 1973 vehicles. Honda has also publicly stated that they expect to meet the 1976 standard. In addition, a Mercedes-Benz diesel apparently has been tested and found to meet the 1976 standards.

The third argument is that plant closures will be inevitable unless the government relaxes the enforcement of the law. Thus, the industry is trying to use the livelihoods of hundreds of thousands of workers as a huge bargaining chip in its struggle with the government.

But the truth is that if plant closures should be threatened it will be because of bad business decisions of company management, not requirements of the Clean Air Act.

That is the context in which the manufacturers are petitioning for more time. In light of the past performance of the auto industry in resisting, evading, and circumventing laws to control automotive emissions, I hope that the Administrator of the Environmental Protection Agency will examine the manufacturers' request with at least the same degree of skepticism which has marked the manufacturers' approach to the law. In any event, we all must examine carefully the implications of the industry's apparent failures or limited success, and consider the possibility of even stricter controls on automobile design and performance.

The Administrator of EPA is confronted with a difficult task. In deciding whether or not a one-year extension is warranted, the law requires that the industry show that control of technology is not available, that good faith efforts have been made, that an extension would be in the public interest, and that the National Academy of Sciences has not found available alternatives.

The public interest determination will not be easy.

It will require more than an analysis of the impact of the possible suspension of operations of one or more manufacturers.

It will require more than an analysis of the impact of delayed introduction of new models, or of the impact of importing platinum for catalysts from Russia or South Africa, or of the impact of an imperfect technology on energy consumption.

Any test of the public interest must also include an evaluation of what the public can buy in exchange for a one-year extension.

The industry asserts that a commitment to catalytic systems to meet a 1975 deadline is not in the public interest. They urge an extension of time to perfect the catalyst system.

The Administrator must go beyond that premise. He should determine whether the industry's emphasis on catalysts has forced a direction which is not in the public interest, and whether there is any real possibility that a one-year extension will in fact facilitate the development and application of alternative systems.

The industry has argued that an extension would provide time to develop more fuel-efficient control technologies or engine systems. The Administrator must determine whether or not that can in fact be the result of an extension.

The industry has argued that an extension would provide an opportunity to improve the durability, reliability, and drivability of the new vehicles. The Administrator must determine whether or not an additional year can in fact achieve that purpose.

In short, the Administrator must determine not just what the industry says it hopes to do, but what the industry is willing to commit itself to do. If the Administrator finds that the law does not permit sufficient flexibility to pursue those kinds of commitments, he should make appropriate recommendations to the Congress.

The auto companies have indicated that they intend to seek a change in the law regardless of the Administrator's decision on the pending extension request.

As far as I am concerned, any change in the law will be even more sharply focused on what must be done to achieve a clean car.

What this country is entitled to is a fuel efficient, clean car which is durable, drivable, and economical. That must be the objective of the industry.

Until now we have attempted to reach that objective by setting performance standards for the industry rather than design standards. We have depended on their evaluations of their own technology. But, now we have learned that our reliance on the industry was mistaken.

When the auto manufacturers argued against Federal adoption of California's auto emissions standards in 1964-65, the Managing Director of the Automobile Manufacturers Association argued that "controlling potential pollutants at the engine, instead of with accessories added to the exhaust pipe, would in the long run, prove to be technically most sound and economically most feasible." In other words, the industry told us that engine design changes were preferable to add-on devices such as catalysts. But in 1973, in asking for an extension of the 1975-76 deadlines, the manufacturers are making the opposite argument. Yet they have never seriously explored alternatives to the internal combustion engine.

In light of this reluctance, the Congress must consider what alternative engine systems are available, what their possibilities and limitations are, how much it would cost. In this connection, the Congress will have to consider imposing standards of engine design, performance and fuel economy, and we will need to examine the arguments for improving the competitive structure of the industry.

Any proposed amendments to the Clean Air Act must improve our capacity to ensure that the goals of the Act are met.

We may have to allow States such as New Jersey and California, which have developed responsible emission control programs on their own, to assume a greater role in controlling emissions from automobiles operating within their boundaries.

We may have to upgrade the Federal role in supervising the development and manufacture of devices relating to the emission control systems.

We may have to broaden the prohibition and criminal penalties under the Act to deter any alterations of emission control systems—not merely those performed by manufacturers or their dealers.

And, finally, we will have to assure that auto workers are not victimized by irresponsibility in the executive offices.

We come back then to what Henry Ford said about his "noble profession". In another portion of his autobiography he spoke of "something sacred about a big business which provides a living for hundreds and thousands of families", and he said, "continuance of that business becomes a holy trust."

But he added the following words: "The employer is but a man like his employees and is subject to all the limitations of humanity. He is justified in holding his job only as he can fill it."

The top officials of the American automobile industry rightly maintain that the health of their industry is crucial to the Nation's prosperity. That reality does not put them beyond the law, nor does it justify

their dictating the terms on which they will operate.

Over the past half century this industry has demonstrated ingenuity and enterprise in fashioning an automobile which both whetted and catered to the consumer's appetite for comfort and convenience. We have asked it to assume the high responsibility of turning that same capability to the service of the country's health.

And what is their response?—They are saying that the disease is not grave enough to warrant the costs of cure. And, using their enormous weight in the productive sector, they appear to be issuing all of us an ultimatum. They say, in effect, that the price of protecting public health from air pollution is an unthinkable dislocation of their industry and the American economy—that the public health is inconsistent with the health of the industry.

The American automobile industry has been on notice for a decade that air pollution is a grave national concern, that the motor vehicle is a major contributor to the crisis and that Congress is resolved to impose the requirements necessary to preserve the nation's health. The industry has had the opportunity for a decade to clean up the automobile with only general supervision from the Federal government; standards have dictated performance, not design. These minimal controls now appear to have been inadequate. The further steps that I have suggested may be necessary—because we must solve the automotive air pollution problem, and solve it without making the public pay for the industry's mistakes.

So it falls to industry—most of all because of its vast importance—to add responsibility to responsiveness. The size of the automobile industry itself requires of its leaders the highest degree of public responsibility.

During the 1970 consideration of the Clean Air Act in the Senate, I said, "Detroit has told the nation that Americans cannot live without the automobile. This legislation will tell Detroit that if that is the case, they must make an automobile with which Americans can live."

To that I would only add one more thought from Henry Ford. "Our invariable reply to 'It can't be done,'" he wrote, is "Go do it."

AUTO EMISSIONS STANDARDS: DO THEY STILL MAKE SENSE?

Mr. HART. Mr. President, Congress, as was intended by the authors of the Constitution, tends to be the most tentative branch of government.

Because of its size, because of the diversity of philosophy represented here, because of occasionally conflicting regional and political interest, Congress is a pot where legislative ingredients tend to simmer slowly until they are indistinguishable in the gruel that finally arrives at the table.

This, in balance, is fine. Programs do stand a better chance if the opposition sector's sharpest teeth are blunted. Minority philosophies should have a degree of influence. Regional interests should not be totally ignored.

Our problem very often is that once we have polished some program into enactable condition with all the compromises, commitments, and political considerations tucked in, it must succeed or fail in that form no matter what changes in circumstances may befall it.

Congress somehow finds itself with little ability to adjust, to trim, to add ballast or remove it once the program has been launched.

The war on poverty might be cited as an example. It was admittedly a some-

what emotional concept structured into legislative form. It was a somewhat uncertain craft—tending at times to be cranky and inefficient but it was nevertheless an inspiring sight as it set out on its rescue mission.

Some parts of it worked. Some parts not. But Congress never really restructured it, cutting off the dragging anchors and providing a better compass.

And as a consequence, an insensitive administration—citing the program's deficiencies—finds itself politically able to scuttle the whole concept of a unified poverty program.

Certainly, it is our obligation—although an admittedly difficult one in view of the nature of the body in which we serve—to make sure that the programs we enact are not made rapidly obsolete by circumstance, not made unrecognizable by bureaucracy, not left to sail through uncertain seas without an occasional change of course or sail.

All of this is a rather wordy prolog to my reexamination of problems that are soon to descend on us—problems generated by the 1970 enactment of the Clean Air Act.

When we passed that legislation many of us—with considerable justification, I think—were particularly sensitive to the distortions of congressional intent that often result when a public law is passed through a bureaucratic filter.

Previously, in matters of health, Congress has left the technical details of discovery and enforcement to the executive branch.

We traditionally let them figure out what the dangers are and what enforcement levels are needed to meet the dangers. This time, we decided that we would be the technicians, that we would determine the requirements and set standards far into the future.

So we did not leave much discretion to the enforcing agencies. We built the ship but before we pushed it off from shore, we set the sails, we locked the rudder, and sent it on its way under the guidance of a largely automatic pilot.

But now it is clearly our responsibility to monitor that voyage closely. I hope we can do that and make whatever adjustments that logic may demand without undue loyalty to the decision that Congress made under other circumstances in 1970.

My suggestion that the act be reexamined will not, I hope, be totally suspect because I am the senior Senator from Michigan. It is true that my constituency is heavily involved in automobile manufacture, but I think many colleagues will recognize that I am not exactly a favorite in the boardrooms of Detroit.

In fact, I have no hesitancy in stating that the crisis we find ourselves in today is in no small part the result of myopia on the part of the auto manufacturers themselves.

They had little or no response to early pollution warnings. Moreover, it is undeniably true that the now-famous California consent decree arrangement offered strong evidence that the companies did, in fact, conspiratorially drag their feet on pollution control.

It might be justifiably said that, had

the auto companies in 1970 been more highly thought of in regard to fairness, integrity and consumer concern, the Clean Air Act may have passed in a more moderate form.

The American auto industry certainly has not been noted for individual innovation. When it moves, it almost always moves in lockstep, a characteristic common to concentrated industries.

Nevertheless, I find myself in accord with the National Academy of Sciences, which after reviewing the energy, economic and social impact of the act, recommended:

These matters are so complex and important that the committee urges an early and thorough examination by Congress, EPA and the academy of all aspects of the motor vehicle pollution standards established in the Clean Air Amendments of 1970—their premises, underlying assumptions, the goals that were set and the interplay among the three pollutants dealt with specifically in the act.

In the light of the material developed in its study, CMVE believes that such a re-examination would be extremely valuable in relating motor vehicle emissions control to the many issues relevant to a sound national environmental policy.

Why is it appropriate for us to now reexamine that 1970 act?

We have grown increasingly concerned about our energy supplies, and it now appears that the systems most likely to be installed to meet the statutory standards will require increased fuel consumption.

We still have no medical evidence—however tentative—of the degree to which public health will be improved by the end-step requirements of the act; thus the cost-benefit ratio is difficult, if not impossible, to compute.

If industry and government do not deviate from their present course, it is apparent that the devices needed to bring cars into compliance with 1975 and 1976 requirements will add about \$272 to the price of an auto. The consumers putting out those dollars will be justified in asking precisely what benefits will accrue to themselves and their communities. I am not sure our answers will be very satisfactory, especially to that 30 percent of the Nation's population not living in urban areas.

Technological advances now on the horizon promise cleaner engines at lower prices.

News reports—confirmed by private conversations with EPA staffers—indicate there is new scientific evidence that nitrous oxide—the most difficult of all exhaust gases to eliminate—may not be the national hazard that we earlier thought it to be.

If we elect to continue a breakneck charge toward the 1976 goals, let us all at least understand that the path leads through a swamp of uncertainties.

Certainly, I am aware that many now maintain that the industry made a mistake in its persistent devotion to the conventional internal combustion engine. The automotive genius, Charles Kettering, would have understood that.

It was always his contention that in a factory there is nothing harder to sell than a new idea.

The essential problem as I see it is that we are at present locked into a course that will require additional expenditures by the consumer of at least \$2 billion a year if catalytic converters are standard equipment.

It is possible that the total extra car expense may go even higher than that if increased demand drives up gasoline prices.

Many experts in the oil industry, in fact, are predicting gasoline prices of \$1 a gallon, the cost being propelled upward by no-lead requirements and by the increased consumption required of pollution devices now being contemplated for installation.

The National Academy of Sciences concludes that:

These costs, in dollars and in depletion of fuel reserves, are so great that they should serve as a national incentive to hasten the development of reliable lower-cost alternatives to the dual-catalyst system as a solution to the problem of emissions control.

Certainly, everyone will agree that they should. But will they? In view of Mr. Kettering's law and in view of past performance, we cannot at this time promise the consumer that the industry, once the dual-catalyst is comfortably in place, will quickly seek to replace it.

But if we are to require the consumer to spend an extra \$2 billion a year, we have to promise him something, right? We almost have to be able to pledge, do we not, that the 1975-76 emissions standards will make his environment either healthier or pleasanter or both.

Well, we assume the environment will be healthier in some selected parts of the country, particularly concentrated urban areas. No one is sure, but we think so.

On the other hand, evidence indicates that in most areas of the country, the new emissions standards won't make a whit of difference. We might as well face it—on our present course we will sooner or later be compelled to tell the auto owner in Germfask, Mich., why he has to pay \$272 more for his car because distant cities that he has no prospect of there are serious pollution problems in visiting.

And he might ask some embarrassing questions.

He might ask if the last, and most expensive, emissions controls are really necessary from a health standpoint.

He might ask if local pollution outbreaks might not be more efficiently and more cheaply controlled by local regulation designed to cut back auto traffic.

He might ask, for example, why a federal government worried about pollution in Washington, D.C. might not simply prohibit the use of at least government parking lots to cars carrying fewer than three people.

He might ask why we are not more actively pressing for mass transit systems in stricken areas.

He might point out that a mandatory inspection system that insisted on well-tuned auto engines in high-pollution areas could reduce hydrocarbon and monoxide emissions by some 40 percent at a cost of perhaps \$35 a car.

If we stay on our present course, we will also have to prepare a strong case for presentation to families of low and middle income. All the additional costs demanded by the 1975-76 steps will represent a sizable percentage of their income when car-buying time comes around.

Those families will have a right to know precisely what benefits will accrue to them and the Nation as a result of the extra charges we require them to pay.

Once again, I quote from the Academy report:

Whereas pollutant emission is undesirable anywhere, emissions control does not appear, today, to be essential on the basis of either essentially aesthetic or health consideration in large areas of the nation.

Indeed, overall, natural production of hydrocarbons, carbon monoxide, and perhaps nitrous oxide far exceeds that from man-made sources.

In view of the costs to the nation, in dollars and in fuel consumption, of early implementation of the 1975-76 standards, attention seems warranted to the possibility of temporarily enforcing the established emissions only in those specific urban areas where air quality is known to be adversely affected by automotive emissions, reserving national implementation when there are available reliable, relatively inexpensive emissions control systems which exact no fuel penalty.

What the Academy is saying, I think, is that the extra cost of near-total emissions control may be easy to explain to the fellow in Los Angeles but extremely difficult to explain to the fellow in Fayette, Miss., or Germfask, Mich.

It is undeniably true that we have experienced serious outbreaks of pollution in a number of urban areas. But if there is an outbreak of rabies in, say, a dozen cities, is it reasonable to insist that everyone in the Nation undertake an expensive and inconvenient series of inoculations?

And if we think it is, do we not have the duty to prove it?

And certainly a fellow who happens to be employed in making cars will have a right to know precisely what is gained in return for whatever reduced demand results from the higher prices.

After all, hundreds of thousands of families depend on the auto industry for their livelihoods, their very survival.

We cannot responsibly continue on a hasty and uncertain course that may damage their interests unless we are very positive that the damage will be justified by measurable benefits to society.

In 1970 and 1972, we did not budget a great deal of time to the cost-benefit questions. Everyone was in favor of the principle of cleaner air so we banged ahead toward that goal on the basis of whatever information we could scratch together at the time.

But once the costs of that cleaner air are applied, all these questions are going to come. They are legitimate questions deserving factual answers.

It might be appropriate at this moment to note that there is indeed a study underway to determine the relationship between health and emissions.

However, it is my understanding that the study, being conducted by EPA, is not scheduled for completion until the end of this year.

Someone might also ask whether all these expensive devices will really work once installed. I guess no one really knows. If the devices go out, then the companies are supposed to recall them for service. But the owner is not required to accept the offer, and we can justifiably guess that many of them will not. So that raises the specter of millions of cars carrying expensive, and useless, control mechanisms.

More uncertainty is injected by the appearance on the horizon of newer and cleaner powerplants that may offer cheaper alternatives.

The question must also be raised as to whether we can wisely deliver all production and maintenance of pollution devices to the auto makers, thus freezing out the possibility of competition from small manufacturers and perhaps adding to the concentration problem already besetting the industry.

These are questions that we would be irresponsible to avoid. Even environmentalists must agree that the Clean Air Act should be reexamined.

If it is allowed to plow blindly ahead with nothing more to guide it than the automatic pilot set in 1970, the disaster potential is impressive.

If it credibly can be said 4 years from now that we have caused the expenditure of billions to no purpose or to questionable purpose, the clean air cause will have been dealt a blow from which it will be hard put to recover.

These concerns, it should be emphasized, are not about whether the act's standards can be met. That is a problem that Mr. Ruckelshaus is puzzling over and one that he will have to resolve. What we in Congress will have to determine is whether the standards should be met in light of new considerations. And only Congress can make that decision.

For all of us, I know, it is more comfortable to pretend that our legislation, once deliberated, debated, and enacted, can be safely entrusted to the ages.

Moreover, we will risk the appearance of going to the rescue of an industry that is not held in impressively high regard. The trouble with the auto companies is that every time you feel inclined to listen to their logic they commit some new outrage that turns everybody off.

Let me make it clear that the 1970 act has brought the Nation some very good results. And the problem of air pollution is not solved by any means.

Whatever we do, we must maintain all possible pressure on that problem. If we are going to live with ourselves around here, we had better make certain that we continue to push hard.

But let us make sure that when we push, it is toward a technological solution that we can comfortably defend as having a sound cost-benefit ratio.

It is now our responsibility to provide whatever flexibility makes sense. Circumstances have changed. We are clearer as to what we know and what we do not know.

What appeared in the public interest 3 years ago demands constant monitoring if the public interest of 3 years hence is to be served.

We should get at it—and quickly.

DIPLOMATIC RELATIONS WITH CUBA

Mr. McGEE. Mr. President, I ask unanimous consent that there be inserted in the RECORD at the conclusion of these remarks an article from the Chicago Tribune of March 22, 1973, reporting the results of a Harris poll on establishing diplomatic relations with Cuba.

The poll shows that 51 percent favor such action, 33 percent are opposed, and 16 percent are not sure.

Significantly, 2 years ago a similar poll showed 21 percent in favor and 61 percent opposed.

Thus in the last 2 years, there has been a marked shift of public opinion on this subject.

This poll provides further evidence that that opinion is changing with respect to Cuba, not only in Latin America, but also in the United States—everywhere, it seems, except in the State Department.

The Subcommittee on Western Hemisphere Affairs of the Foreign Relations Committee intends to explore U.S. policy toward Cuba further in the coming weeks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW FAVOR FOR DETENTE WITH CUBA

(By Louis Harris)

By 51 to 33 per cent, a majority of the American people favors the United States "reestablishing diplomatic relations with Castro Cuba."

This marks a complete turnaround from the 61 to 21 per cent opposition to such recognition of the Communist regime in Cuba recorded by the Harris Survey in early 1971.

In mid-February, a cross section of 1,513 households was asked: "It is argued that with the war in Viet Nam over and with relations with Communist Russia and China getting better, the U.S. ought to reestablish diplomatic relations with Cuba. However, others say that as long as Cuba is under Castro's Communist rule, we ought not to have anything to do with that country. All in all, do you favor or oppose the U.S. establishing diplomatic relations with Cuba?"

As the thaw has taken place in the Cold War vis-a-vis Russia and China, at least a plurality of each major segment of the population across the country now favors diplomatic recognition of the Castro government.

Recently, of course, the United States and Cuba reached an accord governing the handling of hijackers who take American planes to Havana.

When asked for the basis of their opinions, seven major reasons were volunteered by the

American people in support of reestablishing diplomatic relations with Cuba:

"We can benefit by maintaining contact with all nations, even if we disagree with their politics." The reasoning here is that it is better to be talking with Communist countries, even those we have had problems with in the past, than to allow differences to build up into tensions that might lead to war.

"With Cuba so close to the U.S., we should be on good terms with them." This feeling expresses the uneasiness among many Americans over having a hostile power only 90 miles off the Florida coast. Implicit is the sense that we should get along with countries in close proximity to our shores.

"We should be friendly with all nations." In the spirit of accord that has grown over the last year or more, many Americans want this country to extend the olive branch everywhere it might be accepted.

"We have relations now with Communist Russia and China, so why not with Castro Cuba?" This rhetorical question expresses the view of those who see an inconsistency in this country seeking out new relations and rapprochement with Communist superpowers but not with the much smaller and less powerful Cuban Communist government.

"By recognizing them, we have a much better chance to ease tensions with them." The implication of this line of thought is that if the U.S. gives Cuba diplomatic recognition, then it might be possible to obtain from the Cuban regime some agreements to end some of the continuing hostilities that now exist between our countries directly and through Latin America.

"It is ridiculous for the U.S. to ignore an established country; we can't isolate the U.S. from Communism forever." People who feel this way are aware that considerable time has passed since the 1962 Cuban missile crisis and that Castro still remains in power. So, they say, why not recognize an "established fact?"

"We have reached an agreement on hijacking, why not extend it to other areas, such as trade?"

Three main arguments were volunteered by those who still firmly oppose diplomatic recognition:

"Recognizing them will only start trouble all over again; we should leave Castro alone." These people feel that although no crises over Cuba have surfaced for a rather extended period, recognition would legitimize radical elements in that country.

"They are Communists and we should have nothing to do with them." This represents the residue of a generation of Cold War thinking.

"Castro is bad and has not let the Cuban people have their freedom." The thinking here is that until the Communist regime has been removed from Cuba, it would be anti-democratic to extend recognition.

It is significant, perhaps, that American attitudes toward diplomatic recognition of Cuba now stand at just about the same point they did in May of 1971 toward Communist China, at the time the U.S. Ping-Pong team had been received in friendly fashion in Peking. Since then, public opinion has kept pace with each move to bring Red China into the channels of diplomatic communication.

NATIONAL COMMISSION REPORT ON DRUG ABUSE

Mr. JAVITS, Mr. President, last Thursday, the National Commission on Marihuana and Drug Abuse—of which I and the senior Senator from Iowa (Mr. HUGHES) are members—made its final report to the American people.

The results of its extensive inquiry into the use and abuse of drugs in the United States are impressive in scope and

insight, yet sobering to all who have painstakingly sought out answers to the long line of drug related problems which plague our society.

Despite the alleged affluence of the American people, we find reflected in the analysis of the Commission the impact of complex, disordered, and constant change: a population with 9 million alcoholics, 1 million barbiturate addicts, hundreds of thousands of heroin addicts, and uncounted thousands on amphetamines. We found 26 million who have used alcohol, 57 million who smoke tobacco, 26 million who have used marihuana, and millions more who have used cocaine, heroin, LSD, sedatives of all kinds, tranquilizers, and other drugs for nonmedical purposes.

In its 481 page report, entitled "Drug Use in America: Problem in Perspective," the Commission has provided us with a dispassionate, comprehensive, and rational analysis of our national drug problem. Its findings are thoroughly documented and are the springboard to a calm and well ordered discussion of what our national policies should be in the area of drug abuse control. I believe that the major contribution of this Commission will be found in the fact that it dealt, not only with the symptoms of drug use, but also with the underlying assumptions that we have all made regarding drug use in the United States.

Much of the Commission's report is devoted to defining the nature of social concern about drug use. The Commission found that popular conceptions and definitions of drugs and drug use, are in an important sense, the drug problem. It found that many failures of current drug policies reflect failures in perception.

The Commission found that the present institutional response to drug abuse, despite many constructive efforts to have a positive impact on the problem, continues to be predicated upon mistaken assumptions, and indirectly, tends to perpetuate the "problem." Accordingly the Commission set about to examine carefully the goals toward which our policy has been directed and the extent to which our present governmental responses have achieved those goals.

It found that because of the intensity of public concern surrounding the topic of drugs, all levels of Government have become involved in a wide variety of action programs. The result in some cases unfortunately has been the establishment of programs which have not been adequately evaluated and have not been looked at comprehensively, with a view toward longrange community planning and objectives.

In its report, the Commission categorized drug using behavior into five classes:

First. Experimental drug use, motivated primarily by curiosity and occurring most often among young persons in the company of one or more friends or acquaintances;

Second. Recreational drug use, occurring in social settings among friends or acquaintances who desire to share an experience which they define as both acceptable and pleasurable;

Third. Circumstantial drug use, motivated by the user's perceived need to achieve an anticipated effect in order to cope with a specific problem, situation, or condition—including students who use stimulants during exam preparation, long-distance truckers who rely on stimulants for extended endurance, and housewives who seek to relieve tension, boredom, or other stress through sedatives or stimulants;

Fourth. Intensified drug use, occurring at least daily and motivated by an individual's perceived need to achieve relief from a persistent problem or stressful situation; and

Fifth. Compulsive drug use, occurring when drug use dominates the individual's existence and preoccupation with drug use precludes other social functioning.

The Commission found that the overwhelming majority of people who have used psychoactive drugs, whether legally or illegally, can be classified as experimental or recreational users. In most cases, their drug use is not a matter for serious social concern. The Commission also found that the prevalence of circumstantial use has increased substantially in recent years, as more and more Americans resort to drugs to cope with stresses or problems of living. The Commission pointed out that there is a major risk associated with circumstantial drug use in that a person will become conditioned to drug-using responses, escalating to more serious use patterns.

Concluding that major social concern should be the prevention of intensified and compulsive use, the Commission states that public agencies have failed to gather sufficient information on the extent and consequences of these patterns of drug use.

Looking at drug use from another perspective, the Commission's report describes the ways in which drugs can affect the behavior of the user. Noting that the public tends to associate the drug problem with crime, the Commission found that available data justify the following tentative conclusions:

First. Alcohol, the most commonly used drug, is strongly associated with violent crime and with reckless and negligent operation of motor vehicles;

Second. Research findings linking barbiturate and amphetamine users with criminal behavior, especially assaultive offenses, are increasing. While no definitive association has yet been documented in this country, a strong association between amphetamine use and violence has been demonstrated in Sweden and Japan;

Third. Research data regarding the actual relationship between cocaine use and criminal behavior are generally lacking; however, the pharmacologic effects of this drug suggest a potential for drug-induced violent behavior similar to that shown for amphetamine and barbiturate users;

Fourth. Marihuana use, in and of itself, is neither causative of, nor directly associated with crime, either violent or nonviolent. In fact, marihuana users tend to be underrepresented among assaultive offenders, especially when compared with

users of alcohol, amphetamines, and barbiturates;

Fifth. Use of opiates, especially heroin, is associated with acquisitive crimes such as burglary and shoplifting, ordinarily committed for the purpose of securing money to support dependence. Opiate users are significantly less likely to commit assaultive offenses, especially in comparison with users of alcohol, amphetamines, and barbiturates; and

Sixth. Except in relatively rare instances generally related to drug-induced panic and toxic reactions, users of hallucinogens, nonbarbiturate sedative-hypnotics, glue, and similar volatile inhalants are not inclined toward assaultive criminal behavior. It should be noted, however, that some of the nonbarbiturate sedatives, notably methaqualone, and the hydrocarbon solvents have potential for inducing violent behavior.

Mr. President, the Commission has made more than 100 recommendations for both public and private action. Among the proposals are:

First. Increasing control mechanisms on the availability of many psychoactive drugs, particularly cocaine, alcohol, and methaqualone;

Second. Improving and reorienting law enforcement efforts to minimize and interdict the illicit distribution of psychoactive drugs;

Third. Revising the role of the criminal justice system dealing with the consumption of illicit drugs;

Fourth. Establishing an integrated process for providing treatment to drug users and drug-dependent persons, including those who seek treatment voluntarily as well as those apprehended for drug-related crimes;

Fifth. Revitalizing the capacity of private institutions to prevent and respond effectively to disapproved drug use;

Sixth. That the United States work to persuade other countries not to manufacture cocaine for exports, and that the Federal Government reduce legitimate cocaine production in this country to the quantities needed for domestic research and highly limited medical uses;

Seventh. That the medical profession establish guidelines on prescribing practices relating to barbiturates and that State medical societies police these practices;

Eighth. That the National Institute on Alcohol Abuse and Alcoholism devote substantial effort to the development of better nonprohibitory plans for controlling the availability of alcohol;

Ninth. That marijuana be removed from the International Single Convention on Narcotic Drugs where it is improperly classified with the opiates;

Tenth. That the United States not ratify the proposed Convention on Psychotropic Substances in its present form since this treaty is inconsistent with U.S. domestic policy as established in the Controlled Dangerous Substances Act of 1970, and

Eleventh. That the Federal drug response be totally reorganized, and that a single Federal agency be created to administer law enforcement, prevention, treatment, research, and evaluation programs.

Mr. President, while Senator HUGHES and I concurred in virtually all of the Commission's findings and recommendations we did file a dissent in connection with the last mentioned recommendation of the Commission. I ask unanimous consent that the text of our joint statement be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT

Commissioners HUGHES, Senator from Iowa, and JAVITS, Senator from New York, while concurring in some of the findings of the Commission with respect to the present lack of coordination and effort, do not concur in the recommendation that a single agency be created to house all federal activities in the areas of drug law enforcement on the one hand and, on the other, drug use prevention, that is, education, research, treatment, and rehabilitation.

First, during the 92d Congress both Commissioners were members of the Senate Committees which together carefully examined the administrative problems entailed in developing a coherent federal response to the nationwide drug problem. The Congress and the President then agreed on the Drug Abuse Office and Treatment Act, signed in March, 1972, which provided the legislative foundation for the Special Action Office for Drug Abuse Prevention and directed it to lead in developing federal policy and to coordinate all federal prevention activities.

Several months passed before funds could be appropriated and the Special Action Office could become fully operational. Therefore, the administrative design provided by the Act has been tested for less than a full year. The Special Action Office has faced a most difficult and complex task, and it would be a rare situation indeed if it were not without some problems. But its performance in carrying out its statutory responsibilities must be carefully reviewed by the appropriate committees of Congress in the proper exercise of their responsibility for legislative oversight. In this respect, both Commissioners agree with the recommendation that Congressional Committees undertake an in depth review of the situation. Commissioners HUGHES and JAVITS believe that it is premature to conclude that the design has failed and must be replaced with a new federal agency.

Second, based on their experience in government, at both the state and the federal levels and in both executive and legislative positions, the Commissioners are not now convinced that it is wise to place within one agency functions which are for the most part entirely unrelated and which must be carried out by officials with widely differing training and perspectives. Placing these activities and personnel within one agency might well create more serious problems than those which the proposal is intended to solve. For example, the most difficult task would be the selection of a director who could maintain a steady course while successfully resisting undue pressures from either group. The presence of both sides within the agency could in itself create temptations to compete for dominance on matters of policy. It would perhaps be unrealistic to expect one man to preside over such disparate interests.

Third, Commissioners JAVITS and HUGHES are not persuaded that the Commission has identified major problems of coordination between law enforcement and prevention agencies that require a single agency for their solution. The primary problems of duplication and lack of coordination arise between agencies carrying on similar or closely related activities. The Customs Bureau and the Bureau of Narcotics and Dangerous Drugs have frequently disagreed, and there

have been failures of coordination among treatment activities funded by the National Institute of Mental Health, the Office of Economic Opportunity, and the Model Cities programs of the Department of Housing and Urban Development.

As between law enforcement and prevention agencies, the administrative problems most commonly occurring stem from the fact that some of the law enforcement agencies support treatment activities, which are somewhat peripheral to the primary tasks of these agencies. Such activities could be transferred to the prevention agencies.

Finally, while fully sharing the Commission's interest in improving the governmental response to the drug problem, both Commissioners believe that the Commission's analyses do not support the conclusion that a single agency would best serve that goal. The Commission's studies have identified many real problems, but there has been no thorough examination of either the advantages or the disadvantages of a single agency. This can best be done by the Congressional Committees with jurisdiction over these matters.

Mr. JAVITS. Mr. President, the Commission has made available a compilation of all of its recommendations for action and I ask unanimous consent that it also be printed in the RECORD.

There being no objection, the compilation was ordered to be printed in the RECORD, as follows:

EXHIBIT B

DRUG USE IN AMERICA: PROBLEM IN PERSPECTIVE

RECOMMENDATIONS FOR PUBLIC INSTITUTIONS

Government organization

Federal

1. Congress should create a Single Federal Agency similar in its legal and political status to the Atomic Energy Commission.* The agency, which might be called the Controlled Substances Administration, would establish, administer and coordinate all drug policy at the federal level and would be the principal, if not sole, point of contact with the state drug programs. The Single Agency would remain separate from all other federal departments and agencies and would be responsible for its own organization and fiscal management.

2. The appropriate Committees of Congress, in reviewing authorizations and appropriations of funds for all federal departments and agencies with drug-related functions, particularly the Special Action Office for Drug Abuse Prevention, should consider this year the feasibility of such a reorganization.

3. The Single Agency should have the authority and capability to do the following:

Distribute and monitor block or formula grants to states for drug dependence treatment, rehabilitation, prevention, education, and law enforcement programs.

Coordinate all substance-related programs

* Commissioners HUGHES and JAVITS, Senators from Iowa and New York, do not concur in the Commission's recommendation that Congress immediately establish a Single Agency. Both feel that many problems would be presented by placing law enforcement and prevention, treatment and scientific functions together in one agency. Further, they believe that the Special Action Office for Drug Abuse Prevention, which has been in operation for less than a year, should not now be abandoned. However, the Senators agree with the Commission that the Congress should now undertake a comprehensive review of the activities of all departments and agencies having drug-related functions and should determine the feasibility of such a reorganization.

which remain external to the agency itself, such as those of the Department of Defense and the Bureau of Prisons.

Provide evaluative capabilities for federally funded drug programs operated at the federal, state and local levels.

Maintain and monitor an ongoing collection of data necessary for present and prospective policy planning, including data on incidence, nature and consequences of drug use.

Develop and implement a general directed research plan.

Provide discretionary funds for those areas in which innovative and experimental programs are necessary at the local level and for other essential programs which cannot be performed adequately by the states.

Direct the federal law enforcement response in the drug field and provide assistance to state law enforcement.

4. In assuming these tasks, the Single Agency would absorb the following functions and agencies:

Those functions now assigned to the Special Action Office for Drug Abuse Prevention.

All functions presently performed by the Bureau of Narcotics and Dangerous Drugs.

Those parts of the Bureau of Customs, including Customs Agency Service, which are involved in drug matters other than routine border inspections.

The Office of National Narcotic Intelligence presently within the Department of Justice.

The Office of Drug Abuse Law Enforcement of the Department of Justice.

All functions now performed by the Division of Narcotic Addiction and Drug Abuse, National Institute of Mental Health.

All drug-related functions that are performed by the Law Enforcement Assistance Administration or that are, or were formerly, performed by the Office of Economic Opportunity.

All research functions related to psychoactive drugs and responsibilities under the Controlled Substances Act now performed by the Food and Drug Administration, other than those relating to the marketing of new drug products.

All drug education and information functions now performed by the Office of Education.

All drug education and information functions performed by the National Clearinghouse for Drug Abuse Information.

5. To avoid institutionalizing the drug "problem," the concept and accomplishments of the Single Agency should be re-examined four years after its creation; and the agency itself, by law, should disband within five years, its surviving components being reassigned to the agencies or departments from which they came (or into others more appropriate), and integrated into the larger social concerns of those organizations.

6. Congress should establish a commission four years hence, with the specific responsibility to:

Evaluate the social response to drug use during the preceding four years.

Consider the results of both directed and undirected research programs.

Recommend to Congress whether the unified federal agency should be continued, dissolved, or modified.

Determine which measures have justified their costs and which have not.

Propose needed new policies, programs and techniques.

Reexamine fully the basic issues and consider whether departures from the present response are required.

State

1. Each state should establish a unified drug agency on the same model as that proposed for the federal government. The single state agency should be equipped to provide

information about programs and drug use patterns, and to assume joint responsibility for evaluating federally funded programs.

2. Each state agency should have sufficient powers to coordinate all drug programs at the state level and provide guidance and funding to community programs. The agency should have the responsibility of monitoring implementation of the state plan, as well as all programs operating under it, and should be required to report yearly to the designated state authority on the progress of the state effort measured against the enunciated objectives. All state plans should budget adequate funds for these managerial functions.

Community

Each community with a significant drug use problem should create a coordinating council to insure communication and concert of action between the various drug-related functions in the community.

Legal controls

International

1. The State Department, in conjunction with the Department of Justice, should immediately undertake a comprehensive review of existing extradition treaties dealing with drug offenses with a view toward expanding the scope of extraditable offenses and facilitating the extradition process.

2. The United States should encourage law enforcement agencies in all concerned countries to increase both formal and informal exchanges of information concerning drug traffic and traffickers.

3. The membership of the Commission on Narcotic Drugs should be expanded to permit representatives of the health authorities of member nations equal participation in its deliberations and decisions. Further, the United States should convene, in cooperation with the United Nations, a world-wide conference to consider the issues surrounding prevention of demand for drugs.

4. Both the Single Convention and the proposed Psychotropic Convention should be redrafted to make clear that each nation is free to determine for itself which domestic uses for controlled substances it will allow, provided only that each nation prevent diversion and prohibit exportation and production for exportation for illegal use in other countries.

5. The United States should take the necessary steps to remove cannabis from the Single Convention on Narcotic Drugs (1961), since this drug does not pose the same social and public health problems associated with the opiates and coca leaf products. Similarly, the proposed Psychotropic Convention should be revised to include all cannabis substances, but not under Schedule I, since cannabis products are used for medicinal or self-medicating purposes in many parts of the world.

6. The United States should work through diplomatic channels to persuade other countries not to manufacture cocaine for export.

7. The United States should not ratify the Psychotropic Convention in its present form. If, however, for diplomatic or other reasons, the United States Government does adopt the Convention, the instrument of ratification should include the following declarations:

That it is the understanding of the United States that scheduling decisions adopted by the Commission on Narcotic Drugs and ratified by the membership are not effective within the United States until and unless the procedures established by Section 201 of the Comprehensive Drug Abuse Prevention and Control Act (PL 91-513) are complied with and the Secretary of Health, Education and Welfare and the Attorney General of the United States agree that the substance is subject to control.

That it is the understanding of the United

States that the provisions of the Convention do not affect the manner in which the United States restricts availability of substances included in the Convention to medical and scientific purposes.

That it is the understanding of the United States that the definition of punishable offenses in Article XXII, paragraph 1, subparagraph (a) does not include possession of substances in Schedule I for personal consumption.

That it is the understanding of the United States that in Article VII, paragraph (a), the word "establishments" contained in the phrase "in medical and scientific establishments which are directly under the control of their government or specifically approved by them," includes the offices of physicians licensed to practice under the law of the United States.

Federal

1. The American Medical Association should survey the medical profession to determine what, if any, unique therapeutic benefits cocaine has. At the same time, the United States, working through the United Nations and the World Health Organization, should encourage world-wide discussions on the therapeutic uses of cocaine and on its dangers. Taking into account the AMA survey and the results of the international deliberations, the federal government should reduce legitimate cocaine production in this country (including import of coca leaves for purposes of extracting cocaine) to the minimum quantities needed for domestic research and medical uses. If no unique therapeutic use of the drug remains, the government should eliminate manufacture altogether.

2. At this time, none of the barbiturate drugs, including the short-acting barbiturates, should be placed in Schedule II of the Federal Controlled Substances Act. Instead, the AMA should immediately design and furnish to physicians guidelines on the prescribing of barbiturates and actively encourage state medical societies and individual practitioners to respect these guidelines.

3. Since, unlike the barbiturates, methaqualone does not have large-scale medical uses, and does present a significant problem of misuse, it should be placed in Schedule II, along with the amphetamines.

4. Appropriate federal agencies should conduct studies on all other ethical hypnosedative drugs not presently covered by the Controlled Substances Act to determine whether or not further controls are required.

5. Except where the Commission has specifically recommended a change, the present levels of control on availability of psychoactive substances established by the Federal and State Controlled Substances Laws should be maintained.

6. The National Institute on Alcohol Abuse and Alcoholism should devote substantial effort to the development of better non-prohibitory means of controlling the availability of alcohol. In particular, society should alter availability controls to minimize the social costs of alcohol use.

7. With respect to the drug trafficking laws, the trafficking offenses and penalty structure presently in force under the 1970 Comprehensive Drug Abuse Prevention and Control Act should be retained.

Federal and State

1. The Commission reaffirms its recommendations concerning marihuana as set out in its First Report.

2. The unauthorized possession of any controlled substance except marihuana for personal use should remain a prohibited act. As a matter of statutory or enforcement policy, assertion of control over the consumer should not be tied to concepts of criminal accountability but rather to concepts of assistance appropriate in the individual case. The primary purpose of enforcement of the possession laws should be detection and selec-

tion of those persons who would benefit by treatment or prevention services.

3. For those drug-dependent persons who are apprehended for consumption-related offenses, including possession, one of the following dispositions should be mandatory:

(a) Diversion to a treatment program in lieu of prosecution;

(b) Diversion to a treatment program after conviction but before entry of judgment by the court. Failure by an individual to comply with the conditions of treatment would result in his return to the court for prosecution or sentencing. In that event, he should be subject to punishment by up to one year imprisonment, a fine of up to \$500 or both.

For those non-drug-dependent persons who are apprehended for consumption-related offenses, including possession, one of the following dispositions should be mandatory:

(a) Diversion to a prevention services program in lieu of prosecution;

(b) Diversion to a prevention services program after conviction but before entry of judgment by the court;

(c) A fine of up to \$500; or

(d) Probation with appropriate conditions.

Failure by an individual to comply with the conditions of prevention services under alternatives (a) or (b) would result in his return to the court for prosecution or sentencing. In that event, he should be subject to punishment by up to one year's imprisonment, a fine of up to \$500 or both.

State

1. All states should attempt to rationalize the operation of the criminal justice system as a process for identifying drug-dependent persons and for securing their entry into a treatment system. The states should establish, as part of the comprehensive prevention and treatment program, a separate treatment process which runs parallel to the criminal process and which may be formally or informally substituted for the criminal process.

2. States which have not already done so should adopt the Uniform Controlled Substances Act, with the modifications suggested in our Reports.

3. Each state should review its penalty structure for trafficking offenses and determine whether the penalties are commensurate with the relative severity of the offenses. The Commission endorses the criminal provisions in the 1970 Federal Controlled Substances Act and recommends that the states use them as a model for their own trafficking penalties.

Law enforcement

Federal

1. Federal criminal investigative agencies should concentrate primarily at the top levels of the illegal drug distribution network: importation, exportation, and large-scale foreign and domestic trafficking.

2. The federal regulatory effort should concentrate on preventing diversion of drugs at the manufacturing and wholesale levels, leaving to the states primary responsibility for supervising retail pharmacies, hospitals and physicians.

3. To deal more effectively with the higher levels of the illegal distribution systems, federal law enforcement agencies must develop long-range strategies. The degree to which an investigation can penetrate the illegal market depends directly on how long it remains undercover before surfacing to make arrests and obtain convictions.

4. Criminal investigation activities at the federal level should not have regional offices, as BNDD and Customs have now, but instead should deploy strike forces, not tied to any one region, which are able to follow the illicit distribution networks wherever they lead.

5. Federal agencies should give high priority

to recruitment of qualified drug investigative agents. Screening of recruits should include testing to insure suitability for this type of enforcement.

6. Federal drug law enforcement personnel should receive more intensive training. Career agents should periodically take refresher courses to keep them abreast of current trends.

7. Federal agencies should encourage skilled criminal investigators to remain in the field, giving them equal promotion opportunities within the investigative area.

8. To minimize corruption and the appearance of corruption, a separate unit should be established to maintain internal security among federal drug law enforcement agencies. This unit should be distinct from all other drug law enforcement activities and report directly to the Attorney General of the United States.

9. A separate evaluation unit, distinct from both criminal and regulatory investigative units, also should be created to monitor performance of all operational units.

10. All federal law enforcement agencies, especially the Bureau of Narcotics and Dangerous Drugs and the Bureau of Customs, should use uniform reporting forms to the maximum extent possible so that the information can be combined, studied, and shared.

11. The federal government should provide state and local agencies technical and funding assistance necessary for the development of a national uniform reporting system on drug arrests and case dispositions which can provide reliable, valid and comparable data.

12. The federal government should also make available to state and local law enforcement, through the Law Enforcement Assistance Administration, substantial amounts of "buy money" to enable them to make better quality cases and reach the higher echelons of the illicit drug traffic.

State

In order to complement the federal effort, state enforcement should concentrate on the lower levels of both licit and illicit distribution networks. State criminal investigative agencies should focus on middle-level illicit trafficking within the states. State regulatory agencies, to insure compliance with laws and regulations, should concentrate on inspecting pharmacies, hospitals, physicians and researchers. Both regulatory and investigatory state agencies should work on the problem of pharmacy drug thefts, developing standards to minimize this serious problem.

2. Every state should systematically review and evaluate the operations of its boards of pharmacy and medicine, to insure that they are adequately enforcing the provisions of state and federal law. Professionals who knowingly or repeatedly violate state drug regulations and laws should lose their licenses to practice, in addition to being prosecuted under criminal statutes. Each state should also establish an advisory medical body to act as liaison between the state medical society and law enforcement officials, giving advice and assistance on matters within their area of medical expertise.

3. State and local enforcement agencies should actively recruit younger men and women into their drug investigation units, in order to broaden and update the agencies' perspective. Recruits should be carefully screened and receive extensive training. Federal agencies should continue to provide technical and financial training assistance to state and local police.

4. Each state with a substantial trafficking problem should have a separate unit, responsible to the state attorney general, charged with the responsibility of investigating any evidence of corruption in drug law enforcement agencies.

Community

1. Local police departments should participate with other community institutions in the development of a preventive services program. As part of this program, the departments should formulate precise guidelines for non-arrest dispositions of persons apprehended for consumption-related offenses and for their referral to appropriate prevention or treatment services. Each police department should consider using citations, or other formal means of directing persons into the appropriate program.

Those states which have not already done so should authorize law enforcement officials or public health officers to make non-criminal referrals of persons under the influence of controlled substances or in possession of controlled substances for personal use.

2. Local police should receive appropriate training in dealing with the medical needs of drug-dependent persons, including alcoholics. In particular, guidelines should be developed for diverting such persons to treatment facilities for emergency care, and, if necessary, for formal treatment.

3. Local police should act as an early warning system on emerging patterns of drug use in the community, including changes in at-risk populations and non-drug developments which may be relevant to drug-using trends. For example, a constant analysis of drugs on the street can be extremely useful in preparing other community agencies to launch specifically-targeted preventive efforts.

Treatment and rehabilitation

Federal

1. Though block and formula grants to the states, the federal government should have major responsibility for fundings treatment and rehabilitation services administered by the States. However, the federal government should retain discretionary funds for direct funding of demonstration and special projects in the field of treatment and rehabilitation. Such funds should be used for innovative and experimental programs, as well as for providing services to communities not receiving sufficient funding from the state.

2. Except for offenders within federally-operated correctional institutions, the federal government should not have direct operating responsibility for providing treatment and rehabilitation services. Services provided to persons entering treatment on a voluntary basis or through involuntary civil commitment proceedings should be provided only at the state level. Services provided to persons charged with or convicted of federal criminal offenses who are not in a federal correctional facility should be provided through state-operated programs and facilities on a reimbursable basis. The public health hospital operated by the federal government in Lexington, Kentucky should continue to be utilized for clinical research purposes only, and the fifty-bed clinical research unit of the facility should be maintained for human research.

3. The federal government should sponsor a program to evaluate existing drug treatment and rehabilitation programs to see whether they (1) are cost effective; (2) are designed to deal effectively with their client populations; and (3) have established suitable criteria and objectives. After such an evaluation the federal government should establish performance criteria for state drug treatment and rehabilitation programs.

4. All drug treatment and rehabilitation programs receiving federal funds should demonstrate effective efforts consistent with the performance criteria established, and undergo an annual evaluation by independent agencies having no vested interest in either the funding agency or the service delivery agency.

Federal and State

1. To avoid destroying program effectiveness, federal and state regulations concerning maintenance programs should emphasize treatment flexibility, coupled with reasonable measures to prevent diversion.

2. Opiate antagonists, or similar chemical agents, should not be administered involuntarily under any circumstances, either as a method of treatment or as a method of prevention.

3. The government should continue to prohibit heroin maintenance as a treatment modality.

State

1. Each state should establish a comprehensive statewide drug dependence treatment and rehabilitation program including integrated health, education, information, welfare and treatment services, which should be administered as part of the state's broader health care delivery and human resources development systems. The program should:

(a) Provide a full range of treatment and rehabilitation services throughout the state, including emergency, residential, and outpatient services for drug-dependent persons, persons incapacitated by controlled substances or persons under the influence of controlled substances.

(b) Include medical, psychiatric, psychological and social service care; vocational and rehabilitation services; job training and career counseling; corrective and preventive guidance; and any other rehabilitative services, including maintenance, designed to aid the person to gain control over or eliminate his dependence on controlled substances and to make him less susceptible to dependence on controlled substances in the future.

(c) Emphasize the development of community-based emergency, outpatient and follow-up support services.

(d) Utilize and coordinate all appropriate public and private resources, wherever possible utilizing the facilities of and coordinating services with community mental health services and general hospitals.

(e) Allocate services within the state according to an overall plan based on the estimated size and location of the current and potential populations of drug-dependent persons in various communities.

2. The state administrator of such a comprehensive drug dependence treatment program should have statutory responsibility to:

(a) Establish standards and guidelines for effective drug dependence treatment services provided by public or private agencies participating in the program.

(b) Evaluate, on a continuing basis, all public and private treatment services included in the program, in order to assure that such services are adequate and effective according to defined objectives and standards.

(c) Prepare, publish and distribute annually a list of all public facilities and those private facilities to which public agencies are authorized to refer individuals for treatment services.

(d) Assure that the courts of each jurisdiction within the state are periodically notified of facilities through which services are available within the jurisdiction and of the types of treatment offered at each facility, thereby assuring that formal control is not asserted over a person for purposes of treatment when appropriate facilities are not available.

(e) Assure that the services offered within each community include drug-free programs as well as maintenance programs, thereby assuring that persons seeking or referred for treatment have the option of participating in a drug-free program.

3. Each state should review its current statutory mechanisms regarding the process

by which drug-dependent persons are permitted or compelled to enter treatment. Those states which have not already done so should modify existing legislation to encourage drug-dependent persons to seek treatment voluntarily. In order to maximize the attractiveness of voluntary programs, formal legal processes should be avoided entirely and absolute confidentiality of the treatment records should be assured.

4. Whenever a state chooses to exert formal control over a drug-dependent person for purposes of treatment, either through the criminal process or an involuntary civil process, treatment services should be administered in accordance with the following standards:

(a) Each person has a right to receive such individual treatment as will give him a realistic opportunity to overcome his dependence on controlled substances.

(b) An individual treatment plan, guided by sound medical and clinical judgment and maximizing freedom of choice of the patient, shall be prepared and maintained on a current basis for each person.

(c) No person should be required to receive chemical treatment or maintenance services without his consent, and in the case of a person under 18 years of age, without additional consent of his parents or legal guardian.

(d) Each individualized treatment plan should employ methods which restrict the drug-dependent person's liberty only when less restrictive alternatives would be inconsistent with necessary and effective treatment.

(e) No person should be required to be a subject for experimental research without his expressed and informed consent.

(f) All persons should be required, as a condition of participation in a treatment program, to comply with reasonable conditions, including surveillance techniques such as urinalysis.

5. The state, through legislation or administrative action, should assure that private and public hospitals do not discriminate in either admission or treatment policy against any person on the grounds of use of or dependence on controlled substances.

6. Every state should have confidentiality-of-treatment laws, modeled after the provision in the Uniform Drug Dependence Treatment and Rehabilitation Act currently before the National Conference of Commissioners on Uniform State Laws.

7. In connection with the above recommendations, the Commission supports the adoption of the Uniform Drug Dependence Treatment and Rehabilitation Act presently being considered by the National Conference of Commissioners on Uniform State Laws.

EMERGENCY TREATMENT

1. With respect to drug emergency victims, the federal government should fully enforce Section 407 of the Drug Abuse Office and Treatment Act of 1972, which provides that "Drug abusers who are suffering from emergency medical conditions shall not be refused admission or treatment, solely because of their drug abuse, or drug dependence, by any private or public general hospital which receives support in any form from any program supported in whole or in part by funds appropriated to any federal department or agency."

2. At the state level, emergency services should be provided as an integral part of a comprehensive drug-related treatment and rehabilitation program. Where necessary, state funds should be expended to assure the availability of such services. Emergency treatment facilities should always be associated with a general hospital, though they need not be physically located in one.

3. The states should provide by law for emergency detention and treatment of per-

sons so incapacitated by use of a psychoactive drug that they cannot intelligently determine whether they are in need of treatment. Such detention should not exceed 24-hours time, unless further restraint is ordered by a court, in accordance with other applicable law.

*Prevention**General*

1. Drug use prevention strategy, rather than concentrating resources and efforts in persuading or "educating" people not to use drugs, should emphasize other means of obtaining what users seek from drugs, means that are better for the user and better for society. The aim of prevention policy should be to foster the conditions of fulfillment and instill the necessary skills to cope with the problems of living, particularly the life concerns of adolescents. Information about drugs and the disadvantages of their use should be incorporated into more general programs, stressing benefits with which drug consumption is largely inconsistent.

2. Drug dependence prevention services should include educational and informational guidance for all segments of the population; job training and career counseling; medical, psychiatric, psychological and social services; family counseling; and recreational services.

3. From both cost-benefit and philosophical-constitutional standpoints, the government role should be limited to assuring the availability of accurate information regarding the likely consequences of the different patterns of drug-using behavior. With this basic determination in mind, the Commission recommends the following actions as essential to assure the production and the dissemination of accurate information.

(a) That the federal government establish a procedure for screening all federally-sponsored or funded information materials for accuracy.

(b) That, after institution of the clearance procedure, a single agency, such as the National Clearinghouse for Drug Abuse Information, coordinate dissemination of information. This agency should also maintain up-to-date lists and critiques of all information materials and make them available, together with the federal guidelines for accuracy, to state and local governments as well as to interested private group.

(c) That a moratorium be declared on the production and dissemination of new drug information materials. This step, presently being considered by SAODAP, will enable the federal government to develop necessary standards for accuracy and concept, and allow sufficient time to conduct a critical inventory of presently existing materials.

(d) That policy makers, in recognition of ignorance about the impact of drug education, seriously consider declaring a moratorium on all drug education programs in the schools, at least until programs already in operation have been evaluated and a coherent approach with realistic objectives has been developed. At the very least, state legislatures should repeal all statutes which now require drug education courses to be included in the public school curriculum.

4. Government should not interfere with private efforts to analyze the quality and quantity of drugs anonymously submitted by street users and to publicize the news about market patterns and dangerously contaminated substances.

5. The government should not support, sponsor or operate programs which compel persons, directly or indirectly, to undergo chemical surveillance, such as urinalysis, unless the person is participating in treatment services, is a prospective or actual public employee, is charged with a crime or is a member of the military.

Federal

The federal government should fund prevention services through block and formula grants to the states, and sponsor basic research in the prevention area. The federal government should also retain discretionary funds for direct assistance to innovative and experimental programs, as well as to programs in communities receiving insufficient aid from the state.

State

1. The primary responsibility for designing a prevention strategy and operating appropriate programs should reside at the state and local levels. Each state should establish a comprehensive, statewide drug dependence prevention program including a full range of prevention services attuned to the needs of local communities and designed to reduce the likelihood that an individual or class of individuals will become drug dependent.

2. The state should assist local communities and institutions (such as universities, business and youth groups) to develop prevention services attuned to their respective needs; specifically, state agencies should help communities to select appropriate services and referral procedures and develop evaluative criteria.

Community

1. Prevention requires community-wide strategy, in which all members of a community, and not merely the schools, acquire information about drug use, so that all can work at improving the situation.

2. Community-based prevention services should be initiated only after local policy planners have assessed the needs of their particular target populations.

3. Each community should give high priority to the development of crisis-intervention services for particular populations as part of its overall prevention services.

4. Local communities, with federal assistance and perhaps regional cooperation, should ensure that "hot line" information programs have qualified people running them and that the information they dispense is reliable.

Research

1. Congress should provide SAODAP now, and the Single Agency when and if it is created, with sufficient funds to design and direct an extensive program of research covering all studies touching on drug use. The Department of Health, Education, and Welfare should participate in the design of the research plan to avoid overlap and maximize the cost-effectiveness of federal research efforts. The research design itself should deal not only with the immediate information needed but also with requirements of future and long-term policy making. It should fund not only projects which produce quick results, but also those often overlooked, requiring several years to generate useful data.

2. Money should also be available for non-directed research projects, not included in the plan. These should be handled separately from the directed research, but coordinated with it to avoid duplication of effort.

3. SAODAP (or the Single Agency) should continually monitor all reports of independent research in the biological, behavioral, or social sciences, for further leads in understanding drug-taking behavior.

4. In particular, the directed research plan should include:

(a) A continuing series of projects similar to the two Commission-sponsored National Surveys, as well as other studies to provide a longitudinal data base on public attitudes and drug-taking behavior.

(b) Etiological research focused on populations exhibiting low, as well as high, incidence of use. It is of equal importance for policy purposes to examine and understand those groups who explicitly disavow drug use and faithfully abide by this norm. Techniques, such as medication, which have been employed as alternatives to drug use should also be studied.

(c) Continued support of the basic clinical research program at the NIMH Addiction Research Center in Lexington, Kentucky.

(d) Examination of how well drug offenders perform while on conditional release, including bail, parole, probation and treatment, so that the criminal justice system can better design and implement diversion programs. Also of importance are studies to determine the effect of incarceration for drug offenses on users, especially young users and first offenders.

(e) Longitudinal studies of persons who have completed treatment, comparing them to those who left treatment programs before completion and those who never entered treatment.

(f) Careful systematic study of the dynamics and consequences of systems in other countries where heroin is freely available.

(g) Study of synergistic effects of various psychoactive substances currently used, whether licitly or illicitly. In particular, the National Institute of Alcohol Abuse and Alcoholism should perform ongoing research into the effects of taking alcohol with other drugs, since alcohol is legally available and often used this way.

(h) Research on the effects of drug use on driving. For both research and traffic safety purposes, simple and quick methods for detecting presence of drugs in the body must be refined.

5. The federal government should provide technical assistance and necessary funding to establish a uniform reporting system, together with necessary laboratory support, on drug morbidity and mortality statistics. The current absence of reliable and comparable data in this area has left serious gaps in effective planning with respect to prevention, treatment and control.

6. Government should remove legal and bureaucratic obstacles to research into the possible therapeutic uses of currently prohibited substances, such as marijuana and hallucinogens.

RECOMMENDATIONS FOR PRIVATE INSTITUTIONS

Health professions

1. Schools of medicine, pharmacy, nursing, and public health should include in their curricula a block of instruction dealing with the social and medical aspects of drug use. This instruction should be so designed that health professionals are adequately informed of the problems and possibilities of treating drug use and dependence and understand as well the wider social implications of both licit and illicit drug use.

2. The medical profession should prepare criteria for use of all psychoactive drugs in medical practice. These guidelines should stress restraint in use of such drugs, emphasizing that they are not a treatment of first resort and that when prescribed, they should be given in the smallest dosage units and doses possible. Medical societies should see that the guidelines are widely distributed among health professionals and, in simplified form, made available to patients themselves. Professional organizations should also conduct continuing education courses in the uses and dangers of psychoactive substances.

3. Both doctors and pharmacists should expressly warn patients of the risks of dependence, overdose, and use in conjunction with similar drugs such as alcohol.

Pharmaceutical industry

Manufacturers

1. Manufacturers of psychoactive substances should undertake a major campaign to educate both health professionals and the public about the appropriate role of these drugs in treatment of conditions of anxiety, tension, and depression. Information and ad-

vertising aimed at physicians should: emphasize the need for restraint in use of these drugs, particularly the more powerful ones; point out alternative therapies; and plainly disclose harmful side-effects, risks in prolonged use, and dangers in combining use with that of other drugs, including alcohol. In non-technical language, a series of public service advertisements should carry the same message to the lay public.

2. Drug companies should end the practice of sending doctors unsolicited samples of psychoactive drugs.

3. Manufacturers should contribute a significant part of their considerable research capacity to exploring the technical side of the drug use problem: the nature of drug dependence, the development of less harmful substitutes for those substances most often associated with disruptive use patterns, and the search for "anti-drugs"—chemical correctives to dependent and chronic use of psychoactive substances. In particular, the industry should continue to pool its knowledge and resources in the search for effective opiate antagonists.

4. Advertising of proprietary, mood-altering drugs should omit suggestions that the substances can result in pleasurable mood alteration or deal with malaise caused by stress or anxiety. Proprietary drug producers should develop clearly defined standards, which reflect correct use of home-medications, and establish a procedure for insuring industry-wide compliance with these standards. At a minimum, the procedure should contain the following elements:

(1) An independent mechanism to review any advertisement for compliance with the advertising standards;

(2) Opportunity for any member of the public to submit an advertisement for review; and,

(3) Specific sanctions to be imposed on advertisers who do not abide by decisions of the review board.

Retail pharmacies

1. At the retail level, all pharmacists should verify the identity of persons seeking prescription psychoactive drugs. They must also vigorously enforce the regulations which apply to over-the-counter cough preparations containing codeine.

2. Steps should be taken to reinvolve the community pharmacist in the consumption-decision, particularly with respect to psychoactive substances.

Alcohol industry

1. The alcohol beverage industry should take the lead in funding research into the nature of compulsive alcohol-using behavior and the relation between alcohol use and traffic accidents, violent crimes, and domestic difficulties.

2. Manufacturers and distributors of alcoholic beverages should inform the public that compulsive use of alcohol is the most destructive drug-use pattern in this nation. Advertising should emphasize moderate, responsible use and point out the dangers of excessive consumption.

3. The industry should reorient its advertising to avoid making alcohol use attractive to populations especially susceptible to irresponsible use, particularly young people.

Legal profession

1. Bar associations should conduct seminars and courses on handling criminal drug cases. Law schools should develop courses dealing with drug use and behavior as part of the wider socio-legal problems confronting the legal profession.

2. Lawyers, operating both individually and through bar associations, must point out to the public the need for alternatives to the legal response and the urgency of involving other social institutions in the effort to control drug-using behavior. By the same token, the bar has an equally important ob-

ligation to discourage any violations of the law.

Industry

1. Management and unions, supported by the Departments of Labor and Commerce, should cooperatively undertake a comprehensive study of employee drug use and related behavior.

2. The business community should not reject an applicant solely on the basis of prior drug use or dependence, unless the nature of the business compels doing so. When pre-employment screening is necessary, companies should establish appropriate screening procedures, including physical examinations, for job applicants and keep the results confidential.

3. Industry should consider alternatives to termination of employment for employees involved with drugs. Where the nature of the business allows, employees should be referred to company-run or other public and private rehabilitation or counseling programs.

4. The business community should consider adopting employee programs patterned after the "troubled employee" or "employee assistance" concept. This program consists of a management control system based on impaired job performance, determined by minimum company standards. It seeks to determine and treat the underlying causes of poor performance—whatever they may be—rather than limiting itself to the standard responses.

5. The fact of treatment and rehabilitation should be confidential to encourage employees to accept counseling and other assistance. No record of the employee's drug problem should be carried in any file which is open to routine inspection. If treatment requires a temporary absence, the company should attempt to keep the employee's job open for that person.

Colleges and universities

1. Colleges and universities should make their policies and practices regarding drug use, including alcohol, explicit, unambiguous, and readily available to all students.

2. Even those colleges and universities which strongly disapprove of student drug-use behavior should expand their counseling services, rather than rely upon disciplinary measures alone.

3. Counseling, treatment and rehabilitation programs on campus should ensure confidentiality to their student clients. Specific rules should be set up indicating to whom confidentiality will be extended and under what circumstances.

Mass media

1. Since governmental intervention is inappropriate here, the media, on their own initiative, must reexamine the impact of informational messages on youthful interest in psychoactive drugs. They should look not only at advertising but also at anti-drug public service announcements, at program content, and at news coverage of "drug stories."

2. In conjunction with their self-appraisal, the media should sponsor and support long-term, longitudinal research into effects of various communications on behavior.

Mr. JAVITS. Mr. President, one of the most informative and useful studies conducted by the Commission was a nationwide survey of drug experience, attitudes, and related behavior prepared by the Response Analysis Corp., of Princeton, N.J. It was based upon a national probability sample designed to study these factors among those under 18 years of age and adults. The Commission has issued a summary of the major statistical data found in this survey. I ask unanimous consent that these excerpts be printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

NATIONAL COMMISSION ON MARIHUANA AND DRUG ABUSE EXCERPTS FROM NATIONAL SURVEY OF DRUG USE AND ATTITUDES

The nationwide survey of drug experience, attitudes and related behavior, conducted for the Commission by Response Analysis Corporation of Princeton, New Jersey, is based upon a national probability sample designed to study two parts of the population: adults (18 years and older) and young people (12-17 years old). The findings are based upon responses to face-to-face interviews, conducted during September and October, 1972, given by a total of 3,291 persons (2,411 adults and 880 youth). The data show that:

(1) 24 percent (5,977,200) of youth and 53 percent (74,080,220) of adults had consumed an alcoholic beverage within the week prior to the Survey.

(2) Within the same seven day period, 17 percent (4,233,850) of youth and 38 percent (53,114,120) of adults had smoked tobacco.

(3) 14 percent (3,486,700) of youth and 16 percent (22,363,840) of adults had used marihuana at one time or another; (a two million increase from last year); 13 million stated they consider themselves present users.

(4) 6.4 percent (1,593,920) of youth and 2.1 percent (2,935,254) of adults have experimented at some time with inhaling glue vapors or other volatile solvents.

(5) 3 percent (747,150) of youth and 4 percent (4,590,960) of adults have taken sedatives (barbiturates, hypno-sedatives) for nonmedical reasons.

(6) 3 percent (747,150) of youth and 6 percent (8,386,440) of adults have used tranquilizers (librium, meprobamate, etc.) for nonmedical purposes.

(7) 4 percent (996,200) of youth and 5 percent (6,988,700) of adults have utilized prescription stimulants (amphetamines) for nonmedical reasons.

(8) 6 percent (1,494,300) of youth and 7 percent (9,784,180) of adults have tried proprietary or over-the-counter sedatives, tranquilizers and stimulants for nonmedical purposes.

(9) 4.8 percent (1,195,440) of youth and 4.6 percent (6,429,604) of adults have used LSD or some other hallucinogenic drug.

(10) 1.5 percent (373,575) of youth and 3.2 percent (4,472,768) of adults have tried cocaine at least once.

(11) 0.6 percent (149,430) of youth and 1.3 percent (1,817,062) of adults have tried heroin at least once.

The Survey data on heroin and cocaine use undoubtedly underestimate the amount of use. The majority of street heroin-dependent persons were unlikely to be counted in a household survey such as was conducted by the Commission, because these persons frequently do not have fixed addresses and are otherwise likely to remain "invisible" from census tabulations and other means of identification and enumeration.

Among the number of persons whom the Commission has identified as having used heroin, only a very small percentage, probably less than one-half of one percent, could be classified as heroin-dependent. What this means is that in addition to the substantial but unknown number of heroin-dependent persons at large, we have a substantial number of adults and youth who are not dependent upon heroin but who are "chipping" or experimenting with this very dangerous drug.

Alcohol and tobacco, along with marihuana, are the most widely used drugs in America among both adults and youth. The Commission's study further indicates that about 10 percent of all adults are "heavy smokers" or persons who use more than one pack a day. Among the youth the survey found relatively few "heavy smokers," with most of the teenage group reporting usage

of a half pack or fewer cigarettes daily. The National Survey sought to find out about the use of ethical psychotropic drugs (sedatives, tranquilizers, and stimulants) for other than medical purposes. The Survey findings indicate that there is a substantial amount of use of these drugs for nonmedical purposes. The actual amount of such non-medical use of prescription drugs is very likely to be even higher than the Commission's study found because many persons are unfamiliar with these drugs and, consequently, may not have known of or reported their use. Few persons, adults as well as youths, are aware of the potential effects of these drugs, especially when they are used in combination with another drug, including alcohol, or, as frequently happens, when the dosage taken is substantially greater than medical practice would prescribe.

NATIONAL COMMISSION ON MARIHUANA AND DRUG ABUSE—REPORTED EXPERIENCE WITH DRUG USE FOR RECREATIONAL AND NONMEDICAL PURPOSES BY AMERICAN YOUTH AND ADULTS¹

[Based on 2d national survey, 1972]

	Youth		Adults	
	Percent	Population	Percent	Population
Alcohol beverages ²	24.0	5,977,200	53.0	74,080,220
Tobacco, cigarettes ²	17.0	4,233,850	38.0	53,114,120
Proprietary sedatives, tranquilizers, stimulants ³	6.0	1,494,300	7.0	9,784,180
Ethical sedatives ³	3.0	747,150	4.0	5,590,960
Ethical tranquilizers ³	3.0	747,150	6.0	8,386,440
Ethical stimulants ³	4.0	996,200	5.0	6,988,700
Marihuana.....	14.0	3,486,700	16.0	22,363,840
LSD, other hallucinogens.....	4.8	1,195,440	4.6	6,429,604
Glue, other inhalants.....	6.4	1,593,920	2.1	2,935,254
Cocaine.....	1.5	373,575	3.2	4,472,768
Heroin.....	.6	149,430	1.3	1,817,062

¹ Figures are not additive, thus, they do not total 100 percent. Youth include ages 12 to 17, total population 24,905,000. Adults include ages 18 and over, total population 139,774,000.

² Within past 7 days.

³ Nonmedical use only.

Mr. JAVITS. Mr. President, the more than 60 research studies undertaken by the Commission, together with the technical papers from which our report was drawn will be published in several volumes and made available as an appendix to the report early next summer.

As the Commission has now concluded its work, I wish to commend its members and staff for the extraordinary commitment which they made in time and energy to this important work. The Commissioners—all of whom had difficult and time-consuming responsibilities in their own private and professional lives—brought a wide diversity of experience and viewpoint to the deliberations of the Commission. In addition to Senator HUGHES and myself, the members were:

Chairman, Raymond P. Shafer, former Governor of Pennsylvania and presently chairman, TelePrompster Corporation, New York, N.Y.

Vice Chairman, Dana Lyda Farnsworth, M.D., professor emeritus, Harvard School of Medicine.

Henry Brill, M.D., director, Pilgrim State Hospital, West Brentwood, N.Y.

John A. Howard, president, Rockford College, Rockford, Ill.

Charles O. Galvin, school of law, Southern Methodist University, Dallas, Tex.

J. Thomas Ungerleider, M.D., associate professor of psychiatry, U.C.L.A. Neuro-psychiatric Institute, Los Angeles, Calif.

Mrs. Joan Ganz Cooney, president, Children's Television Workshop, New York, N.Y.

Mr. Mitchell Ware, deputy superintendent of police, Chicago Police Department, Chicago, Ill.

U.S. Representative TIM LEE CARTER of Kentucky.

U.S. Representative PAUL G. ROGERS of Florida.

In addition, I should like to mention the considerable contribution to the report made by four of the Commission's staff members. Mr. Michael Sonnenreich, the Executive Director of the Commission and its chief of staff, Deputy Director Louis P. Bozzetti and Associate directors Richard J. Bonnie and Ralph M. Susman performed their extraordinarily difficult tasks with great competence and singular dedication.

Mr. President, an editorial in Tuesday's New York Times comments upon the work and recommendations of the Commission. The Times points out that our drug laws must rest on reason and fact to win public respect. Our Commission has sought to respond to the American drug problem with reason and fact. I believe that it has thoroughly achieved that objective and that it has done so with intelligence, insight, and great distinction.

I ask unanimous consent that the Times editorial referred to be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STILLING DRUG HYSTERIA

The National Commission on Marijuana and Drug Abuse has just issued a carefully documented final report that is sweeping in scope and fully reflective of a two-year effort to dig into the difficult area of excessive drug use in modern society. The report's major contribution is to substitute a calm appraisal for the nation's lingering hysteria about drugs, especially in regard to their use by the young. It is perhaps a measure of this hysteria that the report found it necessary to reassure Americans that the drug problem will not "collapse our society."

In its useful sections putting today's drug problems in historical perspective, the report notes that alcohol and tobacco should also be classified as drugs and that the compulsive use of alcohol remains the nation's most serious drug problem. It suggests that drugs should be judged not only for their impact on individuals but also for their impact on society and that, under any reasonable standard, marijuana ought to be decriminalized. Marijuana is assigned a "low priority" of risk, and the commission reiterates the recommendation it made earlier that penalties be abolished for its private use and possession.

Noting that Federal spending to combat the drug problem approaches the \$1-billion mark, this cautious report warns against "an entirely new drug abuse industrial complex" dedicated to developing preventive and treatment programs but with a stake in perpetuating, rather than solving, the drug problem. It quite properly stresses a need for audit and evaluation of drug programs which sometimes may be doing more harm than good while wasting taxpayer dollars.

The commission's proposal for concentrating all governmental efforts dealing with drug problems, whether with their medical or criminal aspects, in one giant Federal agency is of dubious value, but the report commands unanimous agreement of its dis-

tinguished signatories on a number of other solid points.

What is manifestly true is that laws, including marijuana laws, must rest on reason and fact to win public respect. And spending programs, even crash programs mounted in a spirit of crisis, require diligent auditing. In all, the report of the commission, chaired by former Gov. Raymond P. Shafer of Pennsylvania is a sound battle plan for a more intelligent attack on this nation's drug scourge.

ADMINISTRATION REVERSAL OF HOUSING COMMITMENTS

Mr. MOSS. Mr. President, the Department of Housing and Urban Development is apparently reversing commitments it has made to housing projects throughout the country. This action goes beyond the freeze announced by the President stopping all new housing programs. That freeze was deplorable, but the decision to go further than that—to pluck out of the project files and reverse commitments that have actually been made creates a very serious attack on the credibility of our Federal Government.

I am talking about projects when an actual notification of contract approval has been issued by HUD. These notifications have been issued to congressional offices, and we in turn have announced them to local authorities who have heralded the approval of these long-sought funds. In many cases, years have been invested by the local housing authority to prepare applications, to revise them according to HUD directives, and to pursue them to completion. The joy that came with the announcement of the approved contract has now crumbled into the dust of despair brought by the suspension of funds and action that clearly indicate that HUD is attempting to reverse firmly made commitments.

This problem is pervasive throughout the country. In the Denver Regional Office, 13 projects are reported to be in need of "reprocessing"—six of these fall in Colorado, and three fall in my home State of Utah. All three projects are ones that I have announced to local authorities in Beaver, Utah, the Ute Indian Tribal Housing Authority at the Uinta and Ouray Indian Reservation, and the Salt Lake Housing Authority. These announcements were made after receiving a formal HUD notification, in writing. I ask that copies of these notifications appear in the RECORD at the end of my statement. The commitments made to these housing authorities should not be allowed to be reversed by HUD. To do otherwise will compromise the integrity of the whole process of announcing the approval of Federal projects. A credibility gap will be created between the public, their congressional representatives, and the administration. Such arbitrary and unwarranted actions will undermine the trust of the people in their government. We have heard much about building such trust, and reversing negative views held for government, but such promises become empty in the face of concrete actions that threaten the mutual trust of local officials, Members of Congress, and Federal agencies.

How did HUD reach a decision to reverse previous commitments and call for "reprocessing" of applications? Review teams were dispatched from Washington to the regional offices of HUD in January and February. Ostensibly their purpose was to review applications that were still in the pipeline to see whether or not they qualified for funding before the President's freeze was announced. In fact, it appears that these review teams were instructed to cut off and reverse as many projects as possible. The review teams have presented the arguments that many projects were approved in a flurry of action in December when rumors of a possible freeze in HUD projects began to circulate. This is flatly not true. Each of the projects now jeopardized in Utah were based on years of work, careful planning, proper requests for bids, and careful evaluation of community needs. The arguments used by the review teams sent from Washington appear simply to be a cover for brutally jeopardizing projects that have been approved through mutual good faith by local and Federal authorities. The case of the application of the Salt Lake City Housing Authority for the construction of 50 low-rent housing units for families illustrates the arbitrary action of the administration. A contract—an actual contract, not simply a letter of commitment—was received by the Salt Lake City Housing Authority, signed and executed, and returned to HUD. No further word has been received by Salt Lake. Then a notification of contract approval was released by HUD to congressional offices. This in turn was forwarded to the local authority. Based on this documentation, the housing authority has made specific commitments to the developers selected and now finds itself in the position of a possible legal responsibility should HUD withdraw its contract.

I believe there are serious legal ramifications to the actions being taken by HUD. But even more fundamentally, that action threatens the basic relationship between people and their government.

I would hope that the administration would reconsider its ill-conceived actions. I would also urge Senators to join in urging the administration to take a more rational and responsible stand on the housing program.

There being no objection, the notifications were ordered to be printed in the RECORD, as follows:

HUD NOTIFICATION: U.S. DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Project Number Utah 3-5.
Approval by Secretary George Romney.
Type: — Loan — Grant X — Contract — Reservation —

Name of Program Low-Rent Public Housing Program—Turnkey Method.

Amount Obligated Today \$——.
Amount Previously Obligated \$—— Total Amount \$352,200 (TDC).

Recipient and Location of Project Housing Authority of the County of Salt Lake, Salt Lake County, Utah.

Purpose and Brief Description of Project Construction of 15 low-rent housing units for families.

Other Agencies/Contractors Involved —.
Additional Information —.

For Further Information: Brian L. Sellers, Executive Director, Housing Authority of the

County of Salt Lake, 2880 South Main Street, Office 206, Salt Lake City, Utah 84111.

HUD NOTIFICATION: U.S. DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Project Number Utah 4-3.
Approval by Secretary George Romney.
Type—Loan—Grant X—Contract—Reservation—

Name of Program Low-Rent Public Housing—Turnkey Method.

Amount Obligated Today \$——.
Amount Previously Obligated \$——.
Total Amount \$1,145,000 (TDC).

Recipient and Location of Project: Salt Lake City Housing Authority, Salt Lake City, Utah.

Purpose and Brief Description of Project: Construction of 50 low-rent housing units for families.

Other Agencies/Contractors Involved——.
Additional Information——.

For Further Information: Mr. Paul Herrick, Executive Director, Salt Lake City Housing Authority, Room 101, City & County Building, Salt Lake City, Utah 84111.

HUD NOTIFICATION: U.S. DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Project Number Utah 1-6.
Approval by Secretary George Romney.

Type—Loan—Grant X—Contract—Reservation—

Name of Program Low-Rent Public Housing Program—Turnkey Method.

Amount Obligated Today \$——.
Amount Previously Obligated \$——.
Total Amount \$922,000 (TDC).

Recipient and Location of Project: Ute Indian Tribal Housing Authority, Uintah & Ouray Indian Reservation.

Purpose and Brief Description of Project: Construction of 40 low-rent housing units—30 for Indian families and 10 for Indian elderly.

Other Agencies/Contractors Involved——.
Additional Information——.

For Further Information: Thomas G. Appah, Executive Director, Ute Indian Tribal Housing Authority, Uintah & Ouray Indian Reservation, Fort Duchane, Utah 84026.

HUD NOTIFICATION: U.S. DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Project Number Utah 6-1.
Approval by Secretary George Romney.

Type—Loan—Grant X—Contract—Reservation—

Name of Program: Low-Rent Public Housing—Turnkey Method.

Amount Obligated Today: \$——.
Amount Previously Obligated: \$——.
Total Amount: \$370,000 (TDC).

Recipient and Location of Project: Beaver City Housing Authority, Beaver, Utah.

Purpose and Brief Description of Project: Construction of 20 low-rent housing units for elderly Indians.

Other Agents/Contractors Involved: ——.
Additional Information: ——.

For Further Information: Mr. Halbert T. Lund, Chairman, Beaver City Housing Authority, P.O. Box 469, Beaver, Utah 84713.

Senator FRANK E. MOSS,
Capitol Hill,
Washington, D.C.:

The Ute Indian Tribe received a telephone message from the local housing authority that a delay in elderly and low rent projects number D227-U1-S, forty units was announced by the Housing Urban Development Regional Office, Denver, Colorado on March 13, 1973. The program was approved May 2, 1972 with an \$8,000.00 preliminary loan. Invitations to bid were published October 12, 1972; a developer was selected and plans were approved by the authority. The program was publicly announced on January 1, 1973. Delays are a handicap in the short

summer construction period in this area and we urgently request your immediate assistance in getting our program started by April 1, 1973.

FRANCIS WYASKET,
Chairman Ute Indian Tribe.

ENERGY-ENVIRONMENT-ECONOMY CRISIS

Mr. FANNIN. Mr. President, a very interesting and unusual article by J. T. Claiborne, Jr., chairman of the board of Consolidated Appraisal Co., appeared in the March 22, 1973, New York Times.

The article is short, striking directly to the heart of our energy-environment-economy crisis.

I request that this brief article be printed in the RECORD for the benefit of Senators who are concerned about how we will deal with these crucial issues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A CRISIS NOT OF ENERGY BUT OF MONEY-CHANGERS

(By J. T. Claiborne Jr.)

We are no longer energy-rich. We have become energy-poor, and until we solve our energy shortage, the world's currency managers will distrust the dollar—even when our inflation rate is below that of other nations. They see that we have a new and progressing malignancy that plagues our hopes and even our treadmill efforts.

A measure of our new vulnerability are the projections by Ford, Bacon & Davis Inc., that we will need to import \$14 billion of oil and gas by 1975; \$30 billion by 1980 and \$54 billion by 1985. Until a few months ago, that import rate was \$5 billion. It is now over \$7 billion, about the same as our over-all trade deficit, which is already intolerable.

The projections are fantasies. Long before 1985, such import needs would bankrupt America, eliminating us as a customer. Our only realistic alternatives are: (a) promptly developing our indigenous reserves of fossil fuel, (b) violently forcing our will on the Arabs, who own two-thirds of the world's developed oil, or (c) collapsing our economy and living standards to Spartan levels.

Of the three alternatives, only the self-improvement one is acceptable. It is also attainable. We have more than enough undeveloped oil, gas and coal. Make that useful and we could be reasonably independent and affluent until, as we must, we have economically and amply harnessed the energy of uranium, the sun, the tides and the heat in the earth's depths.

Unlike China, which is largely a human energy society, we have long been both liberated and straitjacketed by an economy which is totally dependent upon growing quantities of mechanical energy, 75 per cent of it coming from petroleum and natural gas. Western Europe, Israel and Japan are equally dependent. Our joint enthrallment to the Arabs is now stringent and obvious to our potential enemies.

America is uniquely vulnerable. Foreigners now hold over seventy million of our dollars, at least half of which are a nervous glut. Moreover, our people regard it as an inalienable right to receive ever-rising wages and salaries that are always substantially above those paid elsewhere. That bounty would not have been possible without our uniquely abundant and cheap mechanical energy. Stripped of that advantage, and possibly forced to import half or more of our energy needs, we must begin to compete, man to man, in a fierce arena. The money-changers fear the social and political implications of that ugly transition.

We can eliminate our economic cancer. Fortunately, simply giving convincing evidence that we will immediately attack this problem aggressively and wisely could significantly moderate the attitudes of the money-changers and the Arabs even though adequate, concrete results might not be achievable for seven or more years. Until we are validly dedicated, our negotiating strength, and that of our friends, will degrade at a shocking rate.

The wisdom we shall need to avoid economic disaster will entail some bitter choices. It will demand a far greater willingness to compromise on that sacred cow, "tax reform," and such truly sacrosanct issues as Alaska's pristine beauty and the purity of the air we breathe. Unless we now compromise sensibly, the rigors of economic contraction could, before 1975, politically force roughshod abuses on our environment. The ecologists' trading stance, now strong, is in grave danger.

Remember, we must convince savvy, cynical money-changers. They will only question our political sophistication. That type always looks for the Achilles heel. For more than a dozen years we have persisted on a self-destructive political course even though our energy crisis was an obvious threat. We have been naive.

The Federal Power Commission artificially stimulated consumption of natural gas with regulated prices that also discouraged exploration and development. While nature was forcing prospectors to drill deeper, costlier wells in the most hostile places, "tax reformers" sharply reduced the incentive for such endeavors. They used the large Alaskan discoveries as their excuse and then well-meaning but uncompromising ecologists blocked the shipment of this oil. Amateur fears stopped the building of atomic energy plants.

We have neglected our heritage by disbanding to caterwaul ideological opposites instead of jointly seeking our common good. It is high time we exercised enough political maturity to save our economy and make the dollar creditable. We need to be rescued by serious students. The dilettantes are clobbering us.

RESOLUTION OF APPRECIATION TO FORMER SENATOR ALLOTT

Mr. JACKSON. Mr. President, at a recent meeting the Committee on Interior and Insular Affairs adopted a resolution expressing appreciation to our former colleague and ranking Republican member, the Honorable Gordon Allott, of Colorado.

I am especially pleased that the committee has taken this means to give recognition to the outstanding and dedicated service Senator Allott rendered to the committee and to the Senate.

For some 16 years I had the pleasure of working closely with the Senator from Colorado, and at all times I found him to be cooperative, fair and, above all, interested in bringing out of the committee the best legislation possible. I know that without the leadership he so willingly brought to our many tasks there would not have been the volume of progressive legislation the Interior Committee has been able to report in recent years. We shall miss Senator Allott's invaluable assistance very much.

Mr. President, I ask unanimous consent that the resolution adopted by the committee, be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS, U.S. SENATE

Whereas, the Honorable Gordon Allott, of Colorado, did serve as a Member of the Senate Committee on Interior and Insular Affairs for some sixteen years, having been appointed to said Committee at the beginning of the 85th Congress; and

Whereas, Senator Allott served as ranking Republican Member of the Committee from January 1969 to January 1973; and

Whereas, Senator Allott did during the years of his association with the Committee play a key role in the consideration and shaping of legislation affecting the Indian tribes, mines and mining development, water and power resources, the public lands, parks and recreational facilities, and the territories of the United States:

Now, therefore, be it resolved, That the Members of the Senate Committee on Interior and Insular Affairs in executive session assembled do hereby express sincere appreciation to the Honorable Gordon Allott for his years of dedicated service to the Senate, his State, and the Nation.

RESOLUTION OF APPRECIATION OF CHARLES F. COOK, JR.

Mr. JACKSON. Mr. President, the Committee on Interior and Insular Affairs, at the executive meeting of January 23, adopted a resolution expressing appreciation to Mr. Charles F. Cook, Jr., for the dedicated service rendered to the committee during the period in which he was minority counsel.

Mr. Cook was appointed by Senator Allott, of Colorado, at the outset of the 91st Congress. During the 4 years of his association with the committee, as the resolution states:

Mr. Cook's services, both professional and personal, were equally available to all Senators on the Committee from either Party and were rendered with professional skill, enthusiasm, and conscientiousness in conformity with the highest traditions of the legal profession of which he is a member.

Mr. President, I ask unanimous consent that the text of the resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS, U.S. SENATE

Whereas, Charles F. Cook, Jr., did serve as the Minority Counsel of the Senate Committee on Interior and Insular Affairs for some four years, having been appointed, with the full concurrence of the membership of the Committee, by Senator Gordon Allott of Colorado at the beginning of the 91st Congress; and

Whereas, Mr. Cook's services, both professional and personal, were always equally available to all Senators on the Committee from either Party and were rendered with professional skill, enthusiasm, and conscientiousness in conformity with the highest traditions of the legal profession of which he is a member:

Now, therefore, be it resolved, That the Members of the Senate Committee on Interior and Insular Affairs in executive session assembled do hereby express appreciation for the dedicated service rendered by Charles F. Cook, Jr., to the Committee, the Senate, and to the Nation.

HIGH PRICES FOR NONFOOD ITEMS

Mr. CURTIS. Mr. President, I wish to speak about inflation and the great in-

crease in the nonfood costs of the American households.

Inflation is here. It is a real problem. The farmers did not cause it. The farmers' income is still only 80 percent of the income of nonfarm people, and food costs have not increased as much as nonfood costs.

According to Labor Department statistics, a 1-year market basket of food for a family that cost \$985 in 1952 now costs \$1,409. This means that food has gone up by 43 percent in a period of 21 years. Back in 1952 the farmers' share of the food dollar was 47 percent. In February 1973 it was down to 43 percent.

Now let us look and see what has happened in reference to some nonfood items. I have selected some items that are common to every household. These figures are from Labor Department statistics.

A man's suit costs 87 percent more now than it did in 1952—and 62 percent more than in 1962.

A set of tires is 22 percent more than in 1952—28 percent more than in 1962.

A pair of men's shoes costs 81 percent more than in 1952—and 47 percent more than in 1962.

Women's shoes cost 94 percent more than 1952—47 percent more than in 1962.

Your stay in a hospital is 371 percent higher than 1952—165 percent more than in 1962.

It costs 97 percent more for automobile repair than it did in 1952—34 percent more than 1962.

These percentages are interesting and show how most of these nonfood products and services have steadily increased over the past 20 years—while farm prices fluctuated greatly. As the percentages show the trend, I would also like to present the actual dollar cost of some of these items.

A lady's dress that cost \$5.94 in 1952 now costs \$13.80.

A man's suit that cost \$43.60 in 1952 now costs \$79.80.

A pair of work shoes that cost \$6.98 in 1952 now costs \$14.30.

Your telephone bill has increased from \$3.06 per month to \$6.26.

The newspaper subscription has increased from \$8.50 to \$17 per year—this is the average price and includes all newspapers, weeklies and daily alike, and does not reflect the home delivery costs we pay for our metropolitan dailies.

That household hammer that you paid \$2.42 for in 1952 now costs \$5.15.

To have your car brakes relined is up from \$17.10 in 1952 to \$39.70.

While I have not attempted to enumerate every item that is used, I believe these items are representative of the general price increase that we have experienced. It is clear that the price for nonfood items has increased a great deal more than food prices.

Here I want to stress, however, that farmers do not sell bread—they sell wheat. Farmers do not sell meat—they sell cattle and hogs. Those prices are not out of line. They have been substandard for a long time. Farmers are facing a tremendous increase in their costs, a breakdown of railroad transportation, and many other problems. Within the last few days the prices paid to farmers

for hogs and cattle have dropped materially. Wheat is down 60 cents per bushel.

There is a temptation on the part of some to mislead the public on the basis of causes of inflation and mislead the public on the fact that nonfood prices have gone up more than food prices in an effort to place price controls on raw agricultural products and in an effort to drive down the price of food.

When a politician or a writer clamors for a reduction in the price of food, where does he think the reduction will come? Does he think that the wages paid in the supermarket will be lowered? Of course not. Does he believe that the rent, utilities, insurance and other costs of running the supermarket will be lessened? Of course that will not happen. Does he expect that the costs of paying the social security tax by the supermarket will be reduced? It is not going to be reduced—it is going to be increased.

Many are demanding a reduction of prices paid to farmers. This I resent. It is unjust. It is an attack upon a minority of the American people whose income amounts to only 80 percent of the income of nonfarm people. I am making this statement in an effort to appeal to fair play for American agriculture.

WALTER LIPPMANN'S POLITICAL VIEWS

Mr. BROCK. Mr. President, Walter Lippman has been one of the giants of American political thought for decades. His opinions have generally been controversial, but they have always been respected. His credibility has been total; his intellectual honesty unchallenged.

Recently, in an interview with his biographer, Ronald Steel, he revealed some perspective on current political questions and on the long-range prospects for our American Republic.

I believe that his insights deserve wide currency. I ask unanimous consent that they be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIPPMANN: NIXON HANDLING ROLE WELL

EDITOR'S NOTE.—Walter Lippmann, the retired columnist renowned for his political commentary, was interviewed by his biographer, Ronald Steel, who also is the author of "Pax Americana" and "Imperialists and Other Heroes." The interview took place in Lippmann's New York City apartment Feb. 25. Lippmann was hospitalized this week.)

(By Ronald Steel)

QUESTION. Nixon's been President for over four years. How would you assess his performance?

ANSWER. His role in American history has been that of the man who had to liquidate, defuse, deflate the exaggerations of the romantic period of American imperialism and American inflation. Inflation of promises, inflation of hopes, the Great Society, American supremacy—all that had to be deflated, because it was all beyond our power and beyond the nature of things. His role has been to do that. I think on the whole he's done pretty well at it.

Q: Aside from his prolongation of the Vietnam war, which you've criticized, how do you feel about his domestic policies?

A: He will do anything he thinks is expedient.

Q: Is that necessarily a bad thing?

A: No, it isn't. He's a Keynesian when it suits him, and he isn't when it doesn't suit him. That's the way public men have to act.

Q: You see him as responsive to public mood.

A: He's very cunning.

Q: So you would give him rather high marks?

A: Yes. He has played a very disagreeable role, but a role imposed upon him by historical necessity.

Q: Do you look on Nixon's crushing defeat of McGovern as merely a personal victory, or as something deeper—a repudiation of the philosophy of the New Deal and of the Great Society?

A: My feeling is that what happened in the Nixon-McGovern election is what happens in all elections of advanced modern industrial societies when the basic policy of the Jacobin or Rousseauistic philosophy is repudiated. By that I mean the belief that man is essentially good and can be made perfect by making the environment perfect, and that his environment can be made perfect by taxing the mass of people to spend money for improving it. Modern society won't accept that philosophy and it is usually repudiated. Sometimes the repudiation takes the form of fascism, but this rejection is morally and intellectually the equivalent of it, without some of the ugly features of fascism.

"I supported Nixon in '68 and I preferred him vastly to McGovern in '72. . . . Nixon has performed a service that historically had to be performed if American society was not to be blown up or disintegrated or crumble."

Q: What do you mean by the "Moral equivalent" of fascism?

A: The equivalent of fascism in my view is the repudiation by the society, by the masses of people, of the whole Rousseauistic belief in man's inherent goodness and perfectibility. The mechanics of the repudiation is another matter. Whether the society takes the form of a dictatorship or a parliamentary system is a secondary question to what is being repudiated.

Q: Were these ideas repudiated because they were too ambitious, or because they represented something incapable of achievement?

A: I think they represent something that is incapable of being achieved in human society. They are philosophically and morally untrue. Man is not naturally good, nor is his nature perfectable by economic means. The Jacobin philosophy is being repudiated in every advanced society, because it involves attempting to do by taxation and appropriation of things not possible to do. It's not possible by government action or any other action I know to create a perfect environment that will make a perfect man.

Q: Do you believe that those policies did, in fact, fail?

A: I don't think every detail of those policies, every reform, failed. But the idea that motivated them has failed.

Q: If the ideal has been repudiated, then what happens to the effort to achieve social change through government action? Is that repudiated too?

A: It goes on, but there are a lot of errors that have been discarded in the course of human history, and this is one of them.

Q: Do you think that the effort to achieve any kind of social change through the government is undesirable?

A: Certainly, it's desirable. It's not the effort to achieve reforms that's wrong, but the inner ideological or philosophical content of these particular efforts. This is where the fallacy lies—the belief in human perfectibility through government action.

Q: Did McGovern represent this philosophy?

A: Yes. McGovern believed in all the corollaries that go with this philosophy, and he espoused any one of them that seemed to

him promising. In this election the people themselves showed that they won't have it. This is a philosophy that has been more or less prevalent in the Western world since the 18th Century. People have fallen for it for generations. But now it is being repudiated almost everywhere. Sooner or later it always gets repudiated.

Q: How does this philosophy of human perfectibility through government action differ from the kind of liberalism represented by Lyndon Johnson?

A: The difference is that liberalism is a much more measured form of human improvement. It neither claims nor seeks the exaggerated results claimed by Rousseauism and Jacobinism. It regards man as improvable, but not perfectable; it takes a much more modest view of what mortal man is capable of doing.

Q: Were the goals of the New Deal and the Great Society rooted in this Rousseauistic or Jacobin approach?

A: Yes. We have been in the grip of this general view of the nature of society at least since Woodrow Wilson.

" . . . The men who wrote the Constitution were rational gentlemen. They knew the system they were devising could not work unless the rules were respected. Their primary assumption was that the kind of people who were running the government would play by the rules. If the President refuses to do this, nothing works, and you don't have our constitutional system. The President of the United States is actually a king, with all the powers and all the limitations inherent in a king. What is important is that there be respect for the unwritten law, which is an important part of the American constitutional system."

Q: If this philosophy has been repudiated does this mean there will be less government intervention in the lives of the people?

A: No, I wouldn't say it would mean less intervention, but the difference between perfectibility and improbability is a very big one. The belief in government as the agent of perfectibility is what has been repudiated. People have rejected the idea that you can use the government—by controlling it, by getting the majority or physically seizing it—to do what I regard as what history has now shown to be impossible. Sometimes this repudiation can take the form of fascism. But it didn't here. Instead, it took the form of Nixon Republicanism. But a corruption of that, or a more extreme form of it, could lead to fascism, just as fascism can lead to Nazism. The Jacobin-Rousseauistic view of society and human nature will lead to the most dangerous forms of fascism or even Nazism if it is not brought under control.

Q: So this administration should be welcomed by liberals because it's headed off a reaction that could have degenerated into fascism?

A: I supported Nixon in '68 and I preferred him vastly to McGovern in '72. In that sense, yes. That doesn't mean I'm enthusiastically pro-Nixon. What he's done is historical; Nixon has performed a service that historically had to be performed if American society was not to be blown up or disintegrated or crumble.

Q: Nixon has certainly appealed to self-reliance and attacked the social welfare programs of the past four years. Won't this lead to a cynical neglect of the poor, the disadvantaged and the abandoned?

A: I thought there was no hope for those abandoned, if you call them that, members of society in those programs. These programs had been greatly excessive, as occurs in every advanced society. But it was much exaggerated in our society, because actually taking from those who had really meant taking from white to give to blacks. That was a cause of deep division and bad feeling in this country.

Q: But if the government does not play a big role, what hope is there for the disadvantaged?

A: I'm not accepting Nixon's philosophy. But no government can bring people up. They have to achieve it themselves. The belief that the government can do it is one of the great illusions of our time.

Q: In the kind of society we have, can the disadvantaged achieve economic and social equality?

A: I don't know. Nobody knows enough now to say yes or no to that question. There are all kinds of hidden assumptions we don't know the answers to.

Q: Being opposed to what you call Rousseauistic Jacobinism, do you consider yourself a conservative?

A: I am a conservative; I think I always have been. But that doesn't mean I'm a conservative who agrees with William Buckley.

Q: What kind of conservative are you?

A: I never joined Barry Goldwater or anybody like that. I don't consider myself that kind. I hope and trust I am a conservative in the line of Edmund Burke. I believe in certain fundamental things in philosophy and constitutional law which are conservative as against the Jacobins.

Q: One of the definitions of conservatism is a belief in a hierarchical traditional society. Do you believe in that?

A: Well, I believe in what we used to call meliorism. You can make things better, but you can't make them perfect.

Q: Is it effective to deal with the symptoms of poverty, for example, rather than the causes?

A: Can anybody know what the causes are? There are many causes: Laziness, wastefulness. Those are traits inherent in human beings. Some make for poverty, and some make for wealth.

Q: The liberal would say we can isolate and eradicate the causes of poverty.

A: Does he know them? If he thinks he does, he's mistaken.

Q: Is this rejection of the Rousseauian philosophy also a repudiation of the goal of social equality and progress?

A: Social equality, if you carry it far enough, is an absurdity. That doesn't mean that you have to be in favor of social privilege or inequality.

Q: I suppose the essence of Rousseau's thought is that man is corrupted by his environment and by social conditions—"Man is born free, but he is everywhere in chains." It's this conception you consider false?

A: Yes, if you like, that's one thing.

Q: If you reject Rousseau's argument that man is born free, but is enchained by unjust laws, how do you achieve equality and justice?

A: Look, man isn't born everywhere free and equal. It's impossible that he should be born that way. The Rousseau-Jacobin doctrine was that he could be perfected by changing his environment.

Q: If you reject this, isn't the alternative simply to ride along with the status quo?

A: I don't think so. I don't think it does at all. It just makes you work very hard. You have to do things specifically and practically and in accordance with the possibilities of man. I read the other day a quotation from a Chinese which seems to me to sum up that Jacobin view. He said, "On television we watched the men the Americans put on the moon. We are going to be the first to put a new man on earth." That, I think, is exactly the Jacobin revolutionary philosophy.

Q: I suppose the idea that man is not perfectable is based on the belief in original sin. Do you believe in original sin?

A: In that sense, yes.

Q: Has the power of the President grown because of the particular Presidents we've had, or as a result of America's vastly increased world role over the last 30 years?

A: Of course, as America's growing importance in the world has enlarged and America has accumulated more wealth and power, the presidency has gotten bigger. I suppose 50 years ago the world thought about the United States, but now they would never do anything without consulting it.

Q: Government is playing a much greater role in the lives of its citizens. Do you see this as irreversible?

A: Yes, I do. We're a mass society, and a great many of our troubles and evils come from that. There are too many people alive in order to govern, control them and inform them. You have to have things that you wouldn't have dreamt about if you had a smaller population.

Q: So even though the people have rejected the idea of the government as an agent of perfectability, they've accepted that the government must play a powerful role in their lives?

A: We've accepted it, but we're very rebellious about it, too. I mean, people hate filling out all the forms—I know we do in this house—and we have to employ lawyers and bank people and so on to fill out forms for us and tell us what they mean. That's a burden. There are a lot of people who have just resigned themselves, taken themselves out of what we would call the welfare state. They don't fill out the forms, they just don't live in it.

Q: As a result of this growing governmental role, do you see a danger of authoritarianism and repression?

A: There's always a tendency of the governing power to be repressive if it can be. That has to be resisted.

Q: What are the best means of resisting? Through the courts?

A: The role of people is crucial. We resisted Joe McCarthy in the 1950s by denouncing him. McCarthy didn't have enough power to arrest us, those of us who did denounce him, and so we revealed him for what he was. Finally, a lot of people got angry with him.

Q: Do you see the government's prosecution of Daniel Ellsberg as an act of repression or intimidation?

A: No, I don't think it's an effort to do that. I think the public papers which are classified and regarded as secret should not be stolen or revealed by anybody who is not willing to pay the price of doing it. It's the case of the Boston Tea Party: If the king's tea is there, and you dump it in the harbor, then you expect to pay the penalty of dumping it in the harbor. One thing I like about Ellsberg is that he doesn't deny that he will take the penalty.

Q: If there's a higher loyalty than the law itself, should those with the courage to defy it be applauded?

A: I think it was a good thing to reveal the Pentagon papers, because classification has become a vicious habit which needs to be resisted. But that doesn't mean that every paper should be stolen or revealed. The penalty for doing that must be enough to deter anybody from doing it frivolously or easily.

Q: There's a great controversy now about executive privilege and whether members of the President's personal staff and his Cabinet should be obliged to testify before Congress. Do you feel the President is abusing this prerogative?

A: While there obviously has to be some kind of executive privilege, it must be used with the utmost discretion and restraint. Our system of government will simply not work if any principle is pushed to an extreme. There must be respect for the rules on the part of everybody—the President, the Congress, the courts. The men who wrote the Constitution were rational gentlemen. They knew the system they were devising could not work unless the rules were respected. Their primary assumption was that the kind of people who were running the government

would play by the rules. If the President refuses to do this, nothing works, and you don't have our constitutional system. The President of the United States is actually a king, with all the powers and all the limitations inherent in a king. What is important is that there be respect for the unwritten law, which is an important part of the American constitutional system.

Q: It's been said that one of the effects of the Vietnam war has been the questioning of all forms of authority—the family, state, religion. Do you think this is happening?

A: I don't think it's the result of the Vietnam war. The breakdown of forms of authority is a much deeper and wider process in modern history than the Vietnam war. I wrote a book back in the beginning of the century about the dissolution of the ancestral order. Clearly, the ancestral order of the family, for instance, has been much more affected by the contraceptive pill than it has by anybody's speeches or by the war.

Q: We have this feeling—that comes from the Puritans—that we are a chosen people with a mandate from God Himself to make a perfect world for ourselves and for everybody else. Of course, that is a terrible myth.

Q: Is this breakup of the ancestral order dangerous?

A: Well, yes. It's dangerous in the sense that the fabric of society is of a cellular structure of families related in each other in tribes and nations. Of course, the destruction of that threatens to produce the chaos of modern times.

Q: You see this as leading to authoritarianism or fascism?

A: It's absolutely one of the things that will occur. Yes, there'll be all kinds of repression.

Q: It is said that we live in an age of permissiveness in which all the old values pretty much have been destroyed, including the belief in patriotism and the state. Can people live with that kind of uncertainty of their lives, without any focal point of attachment?

A: I think it's a good question, but there's no easy answer to it. Whether people can live without an organized life around authority, and the belief in something, is a question that the modern age has been experimenting with, and hasn't solved.

Q: I suppose it's in periods like this that people have created new religions in the past?

A: When they've been lucky.

Q: How do you feel about the future of parliamentary democracy?

A: I think it's increasingly unworkable mechanically, with the growth of population. Aristotle said long ago that there's a certain size a good city should have, so that the human eye could see its limits. There is a limit which we have passed in these mass democracies. Societies are not capable of governing themselves if they're that crowded and that numerous.

Q: Then you look at parliamentary democracy as...

A: As a doubtful experiment.

Q: And a parenthesis in history perhaps?

A: Parliamentary democracy was the product of a much simpler, less numerous, stratified society, class system. Whether it can be applied to these massive modern democracies, I don't know. It's very doubtful.

Q: What do you see as the alternative?

A: I don't think anybody can see an alternative. I certainly haven't got a panacea for it. That's a very American question you asked. I'll tell you what: Part of this illusion of what I call Jacobinism for short is that there's a remedy for every evil and a solution for every problem. A lot of things are not solvable.

Q: If they're not solvable, what attitude

can we take toward these problems—stoicism?

A: Stoicism, resignation, acceptance. Part of the myth of the perfectability of man is that he can solve everything.

Q: If we're forced to live in a world where we recognize that problems can't necessarily be solved, and also that America, may not have anything very special to give to the world, we're in for a very difficult process of adjustment. Isn't the basis of our society that we can create the future?

A: It is the American myth.

Q: Other societies have something to fall back on. The continuity of their history, a religion, a strong social structure. We have nothing like that.

A: No, and we have this feeling—that comes from the Puritans—that we are a chosen people with a mandate from God Himself to make a perfect world for ourselves and for everybody else. Of course, that is a terrible myth.

Q: No government can bring people up. They have to achieve it themselves. The belief that the government can do it is one of the great illusions of our time.

Q: There's been a great concern over the freedom of the press recently—the right of newsmen to protect their sources, the effort of the government to intimidate the media. You've been concerned with this problem throughout your career. Do you think there is a serious threat to freedom of the press?

A: I think that very often the troubles of the press come from a commercialized desire to get scoops, to be the first to print the news. These "sources" very often are places to get tips of what's going to happen. The desire of newspapers to be the first to print particular information is corrupting to the whole journalistic process. In the journalistic world I grew up in, it wasn't a question of law whether you had to divulge your sources. It was a question of whether the reporter had the guts to refuse to reveal where he got the information, whether he was willing to go to prison if necessary. That was regarded as the elementary code of a newspaperman. The reverse of that was—and this was always my practice—when someone told me something in confidence, I didn't pass it on to the reporters so we could get a scoop. I had a relationship with the man I was interviewing, and I didn't want to print that.

Q: Does the press have a responsibility to publish what it thinks is newsworthy at whatever cost?

A: I wouldn't make a generalization. I think raw news, raw fact, is not intelligible, anyway, to the public, and has to be explained. The explanation is as important as the fact itself. The duty of the press is to put forth not raw news, but explained news.

KNOXVILLE JOURNAL COMMENTS ON CIVIL RIGHTS COMMISSION POLL

Mr. BROCK. Mr. President, a recent editorial in the Knoxville Journal made some very cogent comments upon reviewing the publication of a poll conducted by the U.S. Commission on Civil Rights.

The poll purported to demonstrate that busing would be more popular if a majority of the people were not so ignorant of what is involved.

The Journal effectively demonstrates how the poll used confusing language and tricky questions to arrive at its point. As many persons are likely to be misled by other reports on the poll, I ask unanimous consent that the Journal editorial be printed in the Record, as an extremely well-considered rebuttal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SALES PITCH FOR BUSING

The U.S. Commission on Civil Rights deserves to be reprehended, in our opinion, for its recent "interpretation" of a survey it had done last November and December by Opinion Research Corp. on busing of public school pupils in relation to integration. The manifest purpose is to make busing more popular with the people. The report relies heavily on the theme that busing would be more popular if a majority of the people were not so ignorant of what is involved.

In the first place it is regrettable that the terminology used in the commission's report is inexact and confusing. Likewise some of the questions put to the 2,006 persons interviewed were of inexact meaning and also could be confusing. And some were more or less tricky. (There is no quarrel with the study because of its results, for it showed that 70 per cent of the people oppose busing to implement integration; our complaint is over the failure of the poll questions and of the report to define terms accurately, which added to confusion in the public mind.)

The "interpretation" uses the words desegregation and integration as if they were precise synonyms. They are not, though many people and some judges may not realize the distinction. Webster's New Collegiate Dictionary defines desegregate as "to free of any law, provision or practice requiring isolation of the members of a particular race in separate units." It says to integrate is "to form into a whole; to unite or become united so as to form a complete or perfect whole." In other words, as we understand this a school is desegregated when it does not bar any pupil because of race; it is integrated when there is a deliberate mixing of black and white pupils according to some formula, usually one along the lines of what is called "racial balance."

One question in the poll was: "A law (sic) has been introduced in Congress to prohibit busing of children beyond the nearest schools even where the courts have found unlawful segregation. Do you feel it would be right for Congress to pass such a law?" There were 57 per cent who says yes, 29 per cent said no and 14 per cent gave no opinion.

A companion question was: "Would you favor a constitutional amendment which would make it lawful to keep schools segregated?" Only 30 per cent said yes, 53 per cent were opposed and 17 per cent expressed no opinion. The commission professed to find in these two answers a "contradiction in public opinion." We think not.

Although the word segregation was used in both questions, the meanings were not the same. In responding to the question about busing, it would appear, many were thinking in terms of integration according to a formula. In answering the second they were thinking in terms of a reversion to de jure segregation by which schools formerly could close their doors arbitrarily against members of a race. So far as we are aware, no one is proposing that.

The report uses the term "unlawful segregation" over and over again. What is that? Are there still schools in this nation which will not permit a black student to pass the portal?

Unfortunately there has not been a full analysis of this report for public information. All the people have been favored with is the "interpretation" given by the commission. How are the people to know, when meanings are so mingled, what they should think, how they should respond?

Here is an example of the tricky questions. Those interviewed were asked to say true or false to various statements. One was: "Court-ordered busing of children from suburban school districts into central city school dis-

tricts is now taking place in some American cities." Another was: "The courts now require the busing of children from suburban school districts into central school districts."

In each case the majority thought the affirmative was the correct answer. It was wrong for the tricky reason that while such actions have been ordered by lower courts they have not yet been upheld by higher courts. So the persons who knew such situations had been ordered but did not know they were being held in abeyance were termed ignorant by the commission. Also, how many did not understand what the word "districts" implied? Were they thinking of areas, not official districts?

Little notice may be taken of the commission's point that so far busing for integration has added less than 2 per cent to overall education costs. It is obvious, of course, that this is only the beginning if busing is to be upheld as a general policy. And there is a lack of candor, too. For example, the report says that in the Charlotte-Mecklenburg, N.C., school system it cost only 1.1 per cent of the overall educational budget to provide extra busing. It did not mention that the actual increase was from \$784,000 to \$1,600,000 more than double nor that the 1.1 per cent figure did not include the cost of buying new buses or the funds furnished by the state, only the increased money furnished locally.

This editorial is not concerned so much with the pros and cons of the busing issue as with the credibility of an official agency of the U.S. government like the Civil Rights Commission. Surely accuracy and honesty are due the voters.

THE NEED FOR RESEARCH AND DEVELOPMENT OF COAL TECHNOLOGY

Mr. STEVENSON. Mr. President, as consumers we depend on natural gas and oil to supply 79 percent of all our energy needs. Yet natural gas constitutes only 9 percent of our total domestic fossil fuel resources, oil 8 percent, and uranium only 4 percent. The rest—almost 80 percent of our total fossil fuel resources—is made up of our 3,000 billion tons of coal reserves. In short, we have come to rely on those fuels in shortest supply for the greatest part of our energy requirements, while our greatest single source of energy is relatively underutilized.

Coal formerly made up a greater percentage of our energy consumption. It fired the furnaces in many homes and in most of our electrical powerplants. But because it was both cheap and cleaner burning, natural gas began to supplant coal after World War II as a major home fuel. For similar reasons No. 2 heating oil maintained and expanded its competitive edge over coal in the same market.

We also know that in the last several years environmental demands have cut down on the use of high-sulfur coal for use in the stacks of our powerplants—again substituting the use of No. 2 heating oil and the inefficient but cleaner burning natural gas.

We are aware of the increasing pressures on our oil and gas reserves, the more so after the frightening shortages of this relatively mild winter and now the predictions of gasoline shortages this summer and even for this spring's plowing. Given the present demand and domestic supply curves, if we continue our present policies, the situation will

become much worse before it becomes any better. The demand for oil by 1985 may reach 10 billion barrels per year, and some experts say that upwards of two-thirds of this demand, given our present methods of producing oil, may have to be met by imports. Even a conservative estimate puts the figure at 50 percent.

Similarly, recent estimates of the natural gas situation predict a near doubling of the demand for natural gas between 1971 and 1985, from 22 trillion cubic feet per year to from 35 to 40 trillion. The gap between this demand and what our domestic reserves can supply in 1985 has been variously estimated at 13 to 17 trillion cubic feet—even with pipelines for Alaska and Canadian imports. As of 1969, the United States had only 18 percent of the world's 1,550 trillion cubic feet of proven natural gas reserves while still producing well over half the world's supply of natural gas.

The implications of importing the 1985 differences in oil and gas are staggering—for our foreign policy, our balance of payments and domestic economy and ultimately for our way and quality of life. We are already seeing the first manifestations. This year's dollar figure for oil imports is expected to be about \$6 billion; and there has been much talk that the wealth which has been speculating on the dollar in Europe has a source in the oil-rich countries of the Middle East.

One answer to this dilemma upon us is to turn back to coal, but in new ways. Coal will not be a complete answer, and definitely will not be the final answer. But it is an answer with much potential for the next 30, 50, or even 100 or more years.

It is true that under present technologies coal burning presents environmental dangers. But we have had the capability for some time now to utilize new technologies to transform our tremendous untapped coal reserves into environmentally sound fuels—clean burning gas and oil.

The idea of coal gasification is not a new one—indeed, as recently as the early 1940's, most of the gas being used in the United States was produced from coal. But this was relatively low-grade gas in terms of its energy qualities—400 to 500 Btu's—and with the advent of long distance pipelines which could bring in 1,000 Btu natural gas, coal gasification fell into decline. In addition to its inefficiency, in today's terms it was not, environmentally speaking, clean burning.

As early as 1946, however, work was initiated at the Institute of Gas Technology in Chicago in search of an economical method of synthesizing gas of a quality equal to natural gas. The work proceeded slowly, but was given much impetus in 1964 following the signing of a contract between the Office of Coal Research—a governmental agency in the Department of Interior established pursuant to the Coal Research Act of 1960—and the IGT. This led to the HYGAS demonstration plant in Chicago, which was dedicated in October of 1970. This plant recently achieved 53-hours of sustained operation.

The Office of Coal Research has funded other pilot plants to research and develop other coal gasifying technologies—in Rapid City, S. Dak.; Tacoma, Wash.; Princeton, N.J., and Homer City, Pa. At present, however, the HYGAS plant shows the most promise of early commercial application, perhaps by 1976 or 1977.

The HYGAS plant is for high-Btu coal gasification. It is aimed at producing gas for use in homes through the same pipelines which presently feed homes natural gas. With minimal time and funding low-Btu coal gasification could be utilized at electric power plants. Coal can also be converted into crude oil and then refined into oil's many other products. With a "fluidized bed" process it could be burned cleanly and used to power electrical generating plants.

The implications of this work are staggering. Improved mining techniques, some of them also in the research stage, might make it environmentally feasible to recover about 2,000 billion tons of our Nation's 3,000 billion tons of coal reserves. At a conversion rate of 2 barrels or more of synthetic oil per ton—a much better conversion rate than that expected per ton from oil shale—we would have over 4,000 billion barrels of oil in the form of coal—or 10 times the world's proven reserves. And if this coal were converted to pipeline quality gas, it would yield about 32,000 trillion cubic feet of synthetic gas. Our proven recoverable reserves of natural gas worldwide, as already mentioned, are about 1,550 trillion cubic feet.

These incredible prospects may be for naught if the funds and a coordinated Federal policy for general energy research and development are not present. Industry can provide some of the funds, but to develop this potential in time the Federal Government must join in partnership with industry.

Various bills have already been introduced in the 93d Congress on the subject of energy research and development—such as S. 357 introduced by Senators MAGNUSON, HOLLINGS, and others and S. 1283, Senator JACKSON's mammoth energy R. & D. bill. Senator JACKSON's bill would set up an overall energy research coordinating body, "the energy research management project, and five COMSAT-like quasi-governmental corporations, one of which would be a Coal Liquefaction Corporation. The Nixon administration in the last Congress rejected such corporations. As of this writing, the President has yet to send to Congress his long-heralded energy message, but it may well be that coal research and development will be handled in the "traditional way—through the Office of Coal Research, although at a slightly higher funding level. The proposed 1974 budget calls for a funding level in OCR of \$51.3 million contract research; in fiscal year 1973 OCR received \$43.4 million for contract research.

I believe that the administration's proposed funding level is not enough, not only for the energy and development of methods for utilizing coal—high and low Btu coal gasification, coal liquefaction, and the fluidized bed process—but also for the concomitant research and de-

velopment that must accompany this technology.

If about 15 trillion cubic feet annually of synthetic gas will be needed by 1985 to meet the additional demand for gas of the quality of today's natural gas, the Office of Coal Research predicts that 176 commercial gasification plants putting out 250 billion Btu's daily will be required. Coincidentally, the Institute of Gas Technology did a study which found that there were about 176 potential sites in the United States which satisfied the requirements for the commercial utilization of coal gasification—a 20- to 30-year coal reserve, an adequate water supply, and access to markets and pipelines.

Environmental impact statements have been done on the pilot plants the Office of Coal Research has funded. The individual plants have been shown to be environmentally acceptable. But various environmental groups, perhaps correctly, would like to see the broader environmental questions of full-scale coal gasification and liquefaction looked into, such as:

Where will be commercial plants be located?

To what extent will they use strip-mined coal?

If located in the arid or semi-arid western states, where will the large supplies of water necessary for the gasification plants come from?

What will be the general demands and effects on our water resources?

If the plants are located near coal reserves under fertile farm lands, to what extent will there be strip mining and what are the prospects for reclaiming as fertile farm lands, to what extent will there be strip mining and what are the prospects for reclaiming as fertile farm lands the land so strip mined?

The concomitant research and development, then, which must accompany the development of methods to utilize our coal reserves, must include mining techniques. Some experts believe that there can be developed a satisfactory technique midway between the labor-demanding but hazardous technique of deep mining and the environmentally dangerous technique of strip mining. The authority for such research and development has been in the Office of Coal Research, but it has never been adequately utilized.

If there must be strip mining, at the very least adequate reclamation can be demanded—and if the methods to reclaim adequately are unavailable, research and development funds should also be available to develop such methods. There is a growing awareness of the need by the industry to provide adequate reclamation. The National Coal Association recently sponsored the first industry symposium on reclamation—but adequate Federal standards for reclamation are still necessary, as well as Federal funds for reclaiming previously strip-mined lands inadequately reclaimed and funds for the research and development of better reclamation techniques.

This is the general thrust of S. 425, the strip-mining bill before the Interior Committee on which hearings have already begun. As I am not a member of

that committee, I hesitate to comment on the merits of particular provisions within the bill without the benefit of a hearing record or a committee report.

I have introduced a bill, S. 946, which would provide \$20 million annually for demonstration projects that would utilize residues from sewage treatment processes, such as sludge, to reclaim strip-mined land. Such a project is ongoing and is proving successful in Fulton County, Ill., where sludge from the metropolitan sanitary district of Chicago is being transported. That project and others like it, however, need more funding at the Federal level.

What may be most important for the longer term is to give overall direction to our energy policy—not just to our policy in regard to coal, but also to nuclear energy, oil and natural gas energy, solar energy, geothermal energy, and so on. We must address the implications of our energy policy on our foreign relations and on our economy. Some agency should oversee and coordinate all aspects of energy policy, and in addition closely coordinate them to our environmental needs. The Nixon administration would do this through a supra-Cabinet official, and secondarily through a Department of Natural Resources.

Others recommend a Council on Energy Policy within the Executive Office of the President, similar to the Council on Economic Advisers and the Council on Environmental Quality. Such a Council is called for in S. 70. This three-member Council would establish a central point for the collection, analysis, and interpretation of energy statistics and data necessary to formulate policies for wise energy use and management. It would prepare a long-range comprehensive plan for energy utilization in order to foster improvement in the efficiency of energy production and utilization, reduction of its adverse environmental impacts, conservation of energy resources for future generations, reduction of excessive energy demands, and the development of technological capabilities to produce alternative clean energy. Perhaps most important of all, the Council would coordinate all energy activities of the Federal Government, and provide a measure of leadership to State and local governments and various other persons and organizations concerned with energy.

In the meantime the development of coal use technology and improved extraction technology could proceed through the Office of Coal Research. This could help supply our energy requirements and also accelerate economic development in many parts of the Nation.

CONDITIONS IN CUBA HAVE NOT CHANGED A BIT

Mr. HELMS. Mr. President, by every report, conditions in Cuba have not changed. The people of Cuba still exist on a semistarvation diet. The mechanical equipment of the country is near collapse. Some 3,000 Soviet "advisers" are still on hand to make sure that the Castro regime adheres to the Communist line. And the Castro regime is as rigorous as ever in extinguishing the liberties of the Cuban people.

It is significant, I think, that the Castro regime is the last one-man military dictatorship in Latin America. There are military juntas, it is true; but Castro is the only one-man dictator in the Western Hemisphere. He has his Soviet advisers and Soviet military equipment to impose his rule on the people. His economy works only because of massive infusions of Soviet aid.

There is no change, then, in the Cuban situation. The reasons for isolating Cuba are as valid now as when they were applied. If we have any decency at all, any sympathy for an oppressed people, we will take no steps whatsoever to stabilize the Castro regime either politically or economically. It is of the utmost importance when the Organization of American States meets here in Washington next week that the United States make it clear that our continued adherence to our present policy does not depend on whether or not the OAS resolution for the isolation of Cuba is reaffirmed.

There may be moves made at the OAS to rescind this resolution, which calls for both diplomatic and economic isolation, as long as Cuba remains a threat to the peace and security of the hemisphere. I presume that they will not be successful. But such moves should not have any coloration whatsoever of U.S. covert support. Nor, if such a move is successful, should the United States seize upon that action as an excuse for resuming diplomatic relations or other type of active liaison.

In addition, we should make it clear that there will be no economic support for Castro or for any other totalitarian regime on Cuba. We should flatly oppose, for example, any attempt to restore Cuba's sugar quota. Nor should there be direct economic aid programs. Just as it is unthinkable that the United States would give aid to North Vietnam under the same enemy leadership and Communist government, it is also unthinkable that we would help Castro to get a firmer grip on his despairing population.

I say it is unthinkable. But our Government has already committed an appalling act in urging the deportation of two Cuban refugees who were attempting to flee from the institutional terrorism of the Cuban regime to a third country—not even to the United States. As fate would have it, their engines failed and they were towed to U.S. waters by the U.S. Coast Guard. The State Department says that it is in the "spirit" of the anti-hijacking agreement to deport these refugees, even though the agreement itself does not literally apply. If there is a change in the Cuban situation, it is the United States that has changed. If it is indeed in the spirit of the agreement, then America has lost its honor and lost its soul.

Mr. President, the WRAL-TV "Viewpoint", in Raleigh, N.C., recently discussed the attempted deportation of the Cuban refugees at greater length. The editorial was presented by Mr. William P. Cheshire, the editorial director. I endorse it, and I commend it to your attention.

Mr. President, I ask unanimous consent that the text of the WRAL-TV "Viewpoint" for March 23, 1973, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WRAL-TV VIEWPOINT

To the sound of many glad hosannahs, the Nixon administration last month signed an anti-hijacking agreement with Fidel Castro's Communist regime in Cuba. Hijacking was defined as seizing an airplane or a boat—almost the only way out of Cuba for enemies of the regime—and each country agreed to deport hijackers or put them in jail. The agreement was hailed by those responsible for it as a stunning diplomatic triumph, causing Cold War temperatures to plummet worldwide.

This week it produced its first fruits when Washington ordered the prompt deportation of two young Cubans whose adversity was such that, when they tried for freedom last week, their boat was tossed up on the once-hospitable shores of the United States.

The two men—21-year-old Orildio Hernandez and 23-year-old Caridad Perez—are not even hijackers within the meaning of the agreement. True, they tried to take over a fishing boat in international waters, hoping to make Mexico and freedom. But the engine quit off the Florida coast, and the disabled vessel was taken in tow by the U.S. Coast Guard. As soon as the engine quit, the men surrendered to their shipmates. So what the Coast Guard towed into Key West for repairs was not a hijacked boat, but a boat with two prisoners on board. Under the treaty, it makes a difference.

The two men waited until the boat was fixed and then escaped. When the boat headed out to sea again, they jumped over the side and swam ashore. With the help of Cuban exiles, they made their way to Miami, where they surrendered to U.S. Immigration authorities and asked for political asylum. The request was refused. Washington ordered the men deported; and while that callous ruling had been appealed, Washington is still trying to have these men returned to Cuba—evidently so that Dr. Castro will not think us unneighborly.

It is inexcusable. By any reasonable test, these men are political refugees, and political refugees stand outside the terms of the anti-hijacking agreement if there is reason to think—as there is in this case—that deportation means handing them over to their executioners. What we have in the making here is another bungle like the one two years ago when a Lithuanian sailor was beaten and dragged back aboard a Soviet ship while American sailors stood by, hands in pockets, because the brass in Washington didn't want to create an "international incident."

In this case, even Washington acknowledges that, technically speaking, the anti-hijacking agreement has no application. But that doesn't bother the bureaucrats who have effectively pronounced on Hernandez and Perez a sentence of death. State Department spokesman Charles Bray explains that Washington wants to keep, not just the letter of the agreement, but "the spirit" as well.

How nice. And what about the spirit of America—a spirit once exemplified by that bronze lady with the torch out there in New York harbor and all those fine words about "Give me . . . your huddled masses, yearning to breathe free"? What about that spirit? What about, not just Hernandez and Perez, but all those other nameless millions, tempest-tossed and friendless, who once looked to America for hope? And when we have turned our backs on the last of these, what has become of us?

THE WOUNDED KNEE LEADERS

Mr. BROCK. Mr. President, many people think the Indians who challenged the Government in the Wounded Knee, S. Dak., confrontation were a group of high-principled advocates for the down-trodden Indian people. That simply is not accurate.

They are a gang of unprincipled thugs. Worse yet, their operation was financed by you and me, through our tax dollars.

Wounded Knee is situated within the reservation of the Oglala Sioux, but less than 20 of the 250 or more Indians who terrorized the town were of that tribe. In fact, the Oglala Sioux chief and the tribal council wanted the renegades off their property worse than anyone else.

It is no wonder, for it is hard to imagine a more unsavory bunch of characters. One is Dennis Banks, who has a criminal record showing 15 convictions for such offenses as assault and battery and burglary.

Other leaders include Clyde and Vernon Bellacourt. Both have long police records, including armed robbery and burglary.

In fact, they might still be in the crime business if they had not discovered that Government subsidized "social action" pays better. Banks and Clyde Bellacourt first went into the line in 1967, when they joined the staff of a Minneapolis anti-poverty program funded by the Office of Economic Opportunity.

At that time, the Minneapolis program was getting about \$400,000 a year from OEO, and the Indians quickly learned that it was much easier to live off that money than it was to rob banks.

All told, this program got over \$25 million of your tax money before the Nixon administration cut them off in 1970.

Meanwhile, the Bellacourts, Banks and others had formed their now-famous Indian protest group, AIM, which has also been getting a big piece of the Government pie.

They spent the money on projects like the armed takeover of Alcatraz Island, the occupation of the offices of the Bureau of Indian Affairs in Washington, and Wounded Knee.

The whole story was uncovered by the Detroit News. Frankly, I think the News deserves a Pulitzer Prize for revealing one of the most amazing scandals in recent years, and demonstrating again why the administration and I believe so strongly that OEO must be discontinued.

FINANCIAL STATEMENT OF SENATOR AND MRS. LAWTON CHILES

Mr. CHILES. Mr. President, I ask unanimous consent to have printed in the RECORD the financial statement of Mrs. Chiles and myself, compiled as of January 1973.

There being no objection, the financial statement was ordered to be printed in the RECORD, as follows:

U.S. SENATE,

Washington, D.C., March 15, 1973.

HON. FRANCIS R. VALEO,
Secretary of the Senate,
The Capitol,
Washington, D.C.

DEAR MR. SECRETARY: My purpose in writing is to report to you a statement of the financial status of my wife and myself. This

statement includes holdings and liabilities and is compiled as of January 1973:

ASSETS	
Cash in checking and savings accounts approximately.....	\$1,500.00
Carr & Chiles accounts receivable (approximately).....	8,000.00
Stocks and other securities (see Schedule A).....	238,976.76
Real Estate (see Schedule B).....	351,999.15
Miscellaneous assets (see Schedule C).....	12,000.00
LIABILITIES	
Accounts payable.....	500.00
Notes payable.....	96,000.00

These figures disclose a net worth of approximately..... 515,975.91

The foregoing, Mr. Secretary, I attest as being a true and accurate statement of the financial holdings and liabilities of my wife and myself.

Most sincerely,

LAWTON CHILES.

SCHEDULE A—STOCKS AND OTHER SECURITIES

Total real estate: \$351,999.15.

SCHEDULE C—TOTAL MISCELLANEOUS ASSETS
Furnishings..... \$12,000

SOCIAL SERVICES

Mr. HUGHES. Mr. President, for weeks now the mail has been pouring into my office about the administration's proposed social services regulations of February 16, 1973. With the exception, I believe, of one letter, it has all been condemnatory. The letters have come from parents, children, charity organizations, lawyers, doctors, church groups, specialized agencies, welfare agencies. All have been knowledgeable, indicating an understanding of what is at stake. Many have expressed shock and dismay that the U.S. Government would take such a course of action. And while the humanitarian aspects are most often stressed, the shortsightedness in terms of economic consequences is well documented.

Mr. President, the documentation I have received from Iowa indicates clearly that thousands of Iowans will suffer if the promulgated regulations are allowed to stand. Virtually all of the social services agencies in the State have estimated the effect of the regulations in their localities in terms of services affected, funds lost, and persons eliminated from programs.

Typical of the studies made is that of Quentin Emery, Director of the Polk County Department of Social Services in Des Moines, and I ask that his study be included in the RECORD at the conclusion of my remarks. Also to be inserted are the general comments of the Iowa Department of Social Services on the regulations, as well as a copy of the Department's letter to the Administrator of the Social and Rehabilitation Service. In addition, the Johnson County United Way has prepared an analysis of the adverse effect of the regulations on Johnson County and has offered suggestions for changes which would improve administrative and fiscal procedures without sacrificing the thrust of the programs themselves. I ask that this, too be printed in the RECORD.

The final document I ask to be printed at this time is Senate Concurrent Resolution 28 of the Iowa General Assembly. This resolution was passed by a Republican-controlled legislature and bears the signatures of two of Iowa's foremost Republicans, our Lieutenant Governor and President of the Senate Arthur A. Neu, and Speaker of the House Andrew Varley. The resolution states the commitment of the State of Iowa to the principle of assisting families, children, the aged, blind and disabled toward maximum self-support, and urges HEW to rescind or modify its proposed rules. This should dispel, I believe, any claim that opposition to the February 16 regulations is a partisan matter. Iowa cares

about its less fortunate and rejects this latest effort to eliminate proven, valuable programs of assistance.

I ask unanimous consent that this material be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

REPORT ON RESULTS OF NEW FEDERAL REGULATIONS PUT OUT BY HEW

On February 16, 1973 the Health, Education and Welfare Department of the Federal Government published new proposed regulations for social and rehabilitation services 45 CFR parts 220, 221, 222, and 226 titled "Service Programs for Families and Children and for Aged, Blind and Disabled Individuals: Titles I, IV, parts A and B: X, XIV, and XVI of the Social Security Act."

The following information has been compiled by the Polk County Department of Social Services and is designed to inform concerned people of the effects these proposed regulations would have on programs presently providing services to the people of Polk County and on programs that were to begin in 1973.

If the federal government no longer supports these services, either state governments, local governments, or the private sector will have to provide the funding for the continuation of these services or service to the people will simply not be available. If the local governments in Polk County and the private sector would decide that they did not have the means to continue these services there would be 10,162 people who would not receive help with a problem they are having. If the local governments in Polk County and/or the private sector would decide to provide money for continuation of these services it would take \$1,396,375.00 for the remainder of 1973. This kind of money is just not immediately available in Polk County, either in local government or in the private sector.

The federal administration has stated that their intent in these regulations is to eliminate those programs that have not proven to be useful and productive in relation to the amount of money that they cost. We also feel that programs that are not producing as they were designed or services that are not correcting the situation they were designed for should be modified or cut back; but as the regulations are written, many of the social service programs that have been successful are also being cut back. A few examples of these are day care, services to the mentally retarded, services to people who have problems with alcoholism and child welfare services to the abused and neglected child.

In the following narrative summary, each section describes a specific service program that is in effect or was about to be put into effect, and the effect of HEW's proposed regulations on that program. Following the narrative summaries there are tables that break down the regulations and show the effect in terms of people that will no longer be able to receive service and the amount of dollars that will have to be generated by local governments, state government, or the private sector in order to continue the service. Unless designated otherwise, all figures are based on an estimated projection of numbers of clients and dollars for April 1 through December 1, 1973.

CHILD GUIDANCE

The Polk County Department of Social Services had developed a contract with the Child Guidance Center of Des Moines to provide four different services.

1. Consultative services for improving foster care services.
2. To develop ADC mothers group for peer support in obtaining or retaining employment.
3. Provide service to children and their

families who are on the verge of being suspended from school for behavior problems.

4. A project to do screening for pre-school children to detect behavior problems before they enter the public school system.

A total number of 120 people will not be eligible to receive services under these contracts. The main reduction in the services will be with the children who are being suspended from school and the pre-school evaluations with a small amount of reduction in the foster care area. The main result of this cut back will be that we will not prevent a number of children, who are not able to handle the public school system, from dropping out, and becoming high risk candidates for the Juvenile Justice system. In the long run the same result will happen with the pre-school evaluation as it's purpose was to get to those children that would be likely to have trouble with the public school system and correct their problem before they get into the school system. If the local governments or the private sector felt that this service was needed it would cost \$9,000 to provide it to these children. See Table I.

MENTAL HEALTH SERVICES FOR ADULTS

Two hundred-ninety people during the year 1973 will not receive mental health services from the Polk County Department of Social Services unless the county decides to fund the total cost of providing this service. This means that the local government will have to come up with \$284,394 to continue to provide a service to the people of Polk County who are having mental problems. The services that are provided to these people through our agency are geared at getting them back into the community as self-sufficient functioning individuals who would not have to rely on institutionalization or public welfare to survive. If local government can not pick up the cost of continuation of this service, the clients will be left without anything to provide them support to move back into the community. See table II.

PSYCHIATRIC CARE FOR CHILDREN AND OTHER COUNSELING SERVICES

There are very few families who are able to afford the purchase of psychiatric care for their children who are having emotional and psychological problems. These families have, by necessity, depended on government monies to provide this psychiatric care for their children. Under the new proposed regulations this type of care is not allowed because it is not defined as a service for which federal funds can be spent. In order to provide this service to the twenty-nine children of this community who are or will have emotionally or psychological problems during 1973 would require local government or the private sector to come up with \$48,950. See Table III.

BIG BROTHERS

People who work with children from single parent families feel that one of the big needs is a Big Brother for male children. In many single parent families the male child has no male to "look up" to, therefore he tends to grow up with a distorted view of how to function in our society. In an effort to provide this service to the male children of ADC families in Polk County, Polk County Department of Social Services was proposing to purchase this service for 75 boys in the community. If we are to provide this service to 75 boys, the local government or private sector will have to provide an additional \$11,500.00. See Table IV.

INFORMATION AND REFERRAL SERVICES

A great number of people call the Polk County Department of Social Services seeking help for a problem with marital problems, with children, alcoholism, elderly, etc. Polk County Department of Social Services has four staff members whose function is to help these people with referrals and provide information to them; that will enable them to

get the needed service. Our projection at this time would be that we will no longer be able to provide this service to approximately 5,040 people. If the local governments decided that they wanted to maintain this service to the people of Polk County, it would cost \$4,989.00. Our estimate is that 25% of the people who call in seeking information or referral would not be eligible under the proposed federal regulations and will have to be told that we are unable to help them. They will have to randomly seek help from all of the agencies in the community. See Table V.

FAMILY PLANNING

Family Planning is a mandatory service to be provided by the states to eligible persons. However, there will be very few people who will be eligible within the guidelines who are not already current recipients of ADC or some other program. An interesting twist in these regulations is that a potential recipient must have a problem that can be dealt with within six months. Therefore, to provide birth control counseling, a person would have to be three months pregnant at the time of initiation of services.

If we are trying to prevent people from having to rely on welfare for subsistence people will need to understand family planning and receive birth control services. In Polk County we are estimating that 2,385 will not be able to receive family planning services during 1973 as a result of the new federal regulations. This results in a \$145,125 decrease in federal monies available to the people of Polk County for family planning services. It would cost this same amount (\$145,125) if the local government were to decide to provide the funds for continuation of the services. See Table VI.

ALCOHOLISM SERVICES

The federal regulations state that before services can be provided to a person who is defined as alcoholic he must be engaged in an active treatment program for alcoholism. We estimate that 600 people would not be eligible to receive alcoholic treatment services prior to their needing an active treatment program as a result of the proposed HEW regulations. What this means is that 600 people will not be able to receive services that has the potential to prevent them from becoming full fledged alcoholics. In order that preventive services be available to persons inclined towards alcoholism the local governments will have to expend an additional \$112,500.00 of local tax funds. See Table VII.

ADOPTIONS

Polk County Department of Social Services provides services to those people who adopt children independently of other adoption agencies. Most of the children who are placed in adoption this way are those of unwed mothers who release their child while in the hospital. The court orders that an adoption study be done by the Polk County Department of Social Services. At the present time we are able to get a 75-25% match for the staff's salaries, that complete the adoptive studies. Under the proposed HEW regulations the funding for staff members engaged in this activity at the Polk County Department of Social Services will have to be transferred to Title IV-B which will cost the state an additional \$15,289.00.

Polk County Department of Social Services also had in the proposal stage the Black Adoption project designed to recruit Black adoptive parents for Black children. Black children often remain in long-term foster care because Black parents are not available to adopt. This means that twenty-seven kids will have to remain in foster care unless the local government would provide \$9,933 for the project. See Table VIII.

DAY CARE LICENSING

Day care licensing is required by the state law for family day care homes. This respon-

sibility has been delegated to the Polk County Department of Social Services with funding through the Iowa Department of Social Services for the staff members to do the licensing of these homes. The funding for these two positions have been through Title IV-A but with the new regulations will have to be transferred to Title IV-B and will cost the State an additional \$15,289.00. See Table IX.

MENTAL RETARDATION

If HEW's proposed regulations go in effect, fifteen mentally retarded individuals from Polk County will no longer be eligible to be involved in service programs. These are basically the services that are given through private institutions throughout the country for the retarded, aimed at helping them to develop to their fullest potential. It will cost the local government \$21,822.00 to maintain this service for these individuals. Also the Polk County Department of Social Services has two staff persons who work with the mentally retarded and their families. Under the new regulations, their salaries will have to be transferred to Title IV-B at a cost of \$12,447.00 to the State of Iowa. See Table X.

FOSTER CARE LICENSING

Responsibility for licensing of foster homes is delegated to private child placing agencies and county offices of social services. In Polk County the county social service office has two staff members whose job is to recruit and license foster homes. The total funding for these two staff members will have to be transferred from Title IV-A to IV-B at a cost of an additional \$14,904 to the State of Iowa. See Table XI.

CHILD NEGLECT AND CHILD ABUSE

Due to the more stringent guidelines for eligibility under HEW's proposed regulations in Title IV-A we estimate that approximately 30% of the cases of child neglect and abuse investigated would not meet the new eligibility guidelines. The costs of investigation of child neglect and abuse would have to be transferred to Title IV-B. This will mean that the State of Iowa will have to bear an additional cost of \$4,587.00 for these services provided in Polk County during the remainder of 1973. See Table XII.

SERVICES TO THE ELDERLY

Polk County Department of Social Services provides very few services to the elderly who are not on categorical assistance programs, but we estimate that approximately 15 of those that we do serve will not be eligible under the new federal guidelines. It will cost \$1,671.00 to continue the service to these 15 people. This cost will have to be borne by local county government or by the private sector in the community. See Table XIII.

FOSTER CARE FOR CHILDREN

On January 1, 1973 the money to purchase foster care for children was transferred from the Polk County Juvenile Court to the Polk County Department of Social Services. This move was made to allow the Polk County Department of Social Services to be able to provide voluntary foster care and to seek more federal reimbursement for the money spent on foster care in Polk County.

Under the proposed federal regulations for social services, the Polk County Department of Social Services would not be eligible to receive federal reimbursement for voluntary foster care placement. During the first month of operation the Polk County Department of Social Services received seven requests for voluntary foster placement. The Polk County Department of Social Services estimates that 50.2% of the foster care cases will not be eligible under Title IV-A, because they have not been adjudicated as neglected. Therefore 50.2% of the costs will have to be transferred to Title IV-B. This will mean an increased expenditure to the

State of Iowa of \$40,608 for foster care within Polk County. See Table XIV.

FAMILY AND CHILD DEVELOPMENT SERVICE

Polk County Department of Social Services is currently funding day care services for 589 children. Two hundred eighty-eight of these children will no longer be eligible for services because of the restrictive income guidelines in the proposed regulations. Polk County Department of Social Services was also planning to expand the services to cover an additional 488 children effective June 1, 1973. It now appears that only 200 additional children will be eligible for the service because of the proposed regulations. The net effect of the proposed regulations in regard

to this program will be a loss of child care services for 576 children. If the program was to be continued at the level projected, a total of \$737,000 would need to be found at the State or local level. We also project that a sizable number of these families will be forced on welfare because they will be unable to meet the full cost of child care services. See Table XV.

In summary the regulations for social services proposed by the Department of Health, Education and Welfare in the Federal Register of February 16, 1973 are going to severely limit the social services available to people experiencing problems. In Polk County 10,162 people will either have to

solve their own problems or pay for the service themselves during the nine month period of April 1, 1973 to December 31, 1973. If the local governments and/or the private were going to provide funds to continue the provision of these services \$1,381,684 would have to be raised within the next nine months. Due to the stringent eligibility guidelines in the proposed regulations for Title IV-A many of the costs will have to be transferred to Title IV-B. Since the State of Iowa is spending its total allotment under Title IV-B any additional costs would have to be borne by the State of Iowa. Just for Polk County this represents a total cost of \$102,584 for the nine months in 1973.

Total			3,475	145,125	

¹ 9 months.

The above figures reflect the number of people in need of service who would not be eligible under these guidelines and the amount of money lost due to the inability to serve them.

Plan was to use \$250,000 (\$25,000 local—\$225,000 Federal) to focus on serving the past and potential recipient (\$187,497 for nine months).

This amount would serve approximately 4,100 persons over a one-year period.

An estimated 850 of these would probably remain eligible—thus we would lose 3,250 probable clients at a cost of \$146,250 for nine months (14,625 local—131,625 Federal). This assumes CDA would be willing to donate money to serve those few remaining eligibles.

In fact, however, if eligibility guidelines remain this stringent, Community Development will choose not to donate any money to Polk County Department of Social Services and will explore other funding methods—possibly contracting directly with their \$25,000. This action would result in the loss of any federal match (a maximum loss of 9 x \$25,000, or \$225,000 over one year—\$168,750 over nine months).

TABLE VII.—SERVICE: ALCOHOLISM SERVICES; S.S. TITLE: XIV

Proposed social service regulations by HEW in Federal Register of Feb. 13, 1973	Effects			Federal money lost to Polk County and cost of maintaining service by local government; private	Federal money lost to State; cost to State to operate the program

EFFECT OF PROPOSED FEDERAL REGULATIONS

The regulations proposed by HEW on February 16, 1973 contain many changes and restrictions to current service programs. The greatest impact are in the following areas:

1. Definition of former or potential recipient:

At the current time most low income persons are eligible for social services, as either a former or potential recipient of welfare. The new regulations sharply limits the number of low income people who can be served by imposing:

(a) An income limit of 133 1/3 % of the ADC payment for gross family income. This means, in Iowa, that a family of four with a gross income of \$325 is not eligible for day care or any other service.

(b) A former recipient can only receive a service for 3 months after discontinuance of assistance. This time period is now 2 years.

(c) A potential recipient can only receive service for the specific problem. That would cause him to become a recipient. In addition the specific service can only be provided for a 6 month period. This period is now indefinite.

The effect of these provisions is to remove any possibility of providing preventive or rehabilitative services that keep people from becoming welfare recipients.

2. Prohibitions against private funds:

Present regulations encourage a partnership of the public welfare agency with the community in providing those services that the community feels that it needs. Private funds from United Way, church groups, and individuals are donated to the county for a specific purpose such as day care or Big Brothers. The county then purchases or provides the service and obtains 75% federal funds for the services as they are actually provided.

The proposed regulations eliminate this partnership by prohibiting the use of any privately donated funds to attract federal matching funds.

3. Services that cannot be paid for:

At the current time the county welfare department can purchase educational and training services leading to employment, psychiatric and psychological treatment to correct or alleviate mental illness or retardation.

The proposed regulations prohibit any purchase of these services. This means that facilities that provide training and rehabilitation for the mentally ill or retarded, and facilities that treat mentally ill or retarded children can no longer be paid from funds with federal participation. This effectively eliminates any extensive county effort to rehabilitate children or adults who have any kind of problem that currently or potentially limits their employment and functioning in the community.

4. Foster Care:

County staff who place and supervise children in foster care are currently paid

from 75% federal funds. Facilities which treat children in foster care, such as Orchard Place and Iowa Family and Children's Service are also paid from 75% federal funds. The children now in foster care can be these because their parents have recognized their child's problem and voluntarily agree to foster care. Also a court could place the child in foster care because he is neglected by the parents, or because the court has found that a child is dependent upon the state for help.

The proposed regulations prohibit payment for any foster care from federal 4A funds except for adjudicated neglected children. They also prohibit payment for any treatment provided by a foster care facility. These provisions effectively limit early treatment of parents' or children's problems before they are extremely serious.

The proposed changes in regulations will affect 10,162 people in Polk County. If current services are to be maintained, it will cost the county \$1,382,000 and the state \$102,600.

GENERAL COMMENTS OF THE IOWA DEPARTMENT OF SOCIAL SERVICES ON PROPOSED FEDERAL REGULATIONS AFFECTING SOCIAL SERVICES

Officials of the Iowa Department of Social Services say they are "violently opposed" to the new social services regulations proposed by the federal government which are tentatively scheduled to go into effect April 1.

Commissioner James N. Gillman called the regulations "extremely negative" and an indication of the federal administration's "compulsive budget-cutting without recognizing the very basic human needs."

The U.S. Department of Health, Education and Welfare says the proposed new rules seek to eliminate abuses in the use of federal matching funds and refinancing of existing state programs; concentrate the use of federal matching funds for social services mainly in behalf of current welfare recipients since funds no longer are available to the states on an "open ended" basis; and to give the states greater flexibility in the way they administer and operate their social services programs by placing fewer federal mandates on them.

Said Harold Templeman, director of the Bureau of Family and Children's Services, which administers the assistance payments programs and service programs: "Our concern is not that Iowa will lose a large amount of federal matching funds in the area of services, but that we will be forced, in the focus of our services, to move away from the area of helping people stay off the welfare rolls. Instead, we will be serving only those who are currently on the rolls."

This, in effect, compounds the very problem the federal government most wants to control: more people needing financial assistance, which costs more in the long run than helping them stay off in the first place."

He said: "The proposed regulations would by June 1, 1973, eliminate federally matched services for 12,947 clients currently receiving those services." (This and the following information is contained in the accompanying charts.)

In projecting for the fiscal year 1974, Templeman said the number will have grown to an estimated 28,196 clients, which would be more than the total number of clients receiving such services now.

An additional appropriation of \$9,600,442 would be necessary for the state to assume the total financial responsibility for these programs in 1974.

The negative aspects of the proposed rules can be more easily understood by looking at specific program areas. For instance, the Governor's Youth Opportunity Program which is funded 5 per cent (\$127,000) with state funds, 20 per cent (\$496,000) with local public and private funds, and 75 per cent (\$1,870,000) federal funds, would no longer be eligible for federal funds. This is because the proposed regulations would no longer pay for work training programs. That means that the current enrollment of 4,721 disadvantaged young people, will be cut to 1,180, perhaps even lower if privately donated funds are also withdrawn. That means a lot of kids who would have been working, might not be.

In the area of day care, the department is currently serving 3,201 children. The projected increase by June of 1974, indicates 7,105 children would be served. The proposed regulations would affect at least 4,000 of these children as a result of the loss of federal matching funds, which are currently available to Iowa.

Templeman characterized the proposed regulations as "taking us full-circle, back to where we were when a client had to be destitute and receiving financial assistance before he or she could receive social services. The whole concept of a person being a 'potential' client, was originally introduced into the regulations years ago, to enable us to provide social services to people in order to keep them self-sufficient. Now, practically speaking, all sense of that idea is gone since the definitions on 'potentiality' are so restrictive. Eligibility under the proposed rules will be so restrictive that a mother with one child, will have to be earning less than \$1.15 per hour for a 40-hour week to be eligible for day care or any other services as a 'potential' client. Today's minimum wage is \$1.60." Another limitation placed on the definition of potentiality is a reduction in the period of time in which a person can be considered a potential client. Presently that period is five years. The proposed regulations would reduce that to six months, making it particularly harsh on certain groups of people presently eligible for services.

For example, a survey by the department of 21 private training facilities for the men-

tally retarded, serving 822 persons, indicates they will have to close if the proposed regulations go into effect. This is because most of their residents would not qualify as "potential" clients, and because privately donated funds to these facilities could no longer be used in getting federal matching funds. If these community and private facilities close, their clients will either return to their parents or be crowded into public or private institutional facilities.

The limitations will have a devastating effect on the elderly. Many older citizens have been able to receive services as potential clients, starting at age 60, because of the present 5-year interpretation of the "potential" client status. The proposed regulations will mean they will not be eligible for those same social services (on a federally matched basis) until they are 64½ years of age. Now, these people maintain themselves in their own homes. The new rules would likely cause them to go to county homes or nursing homes, or onto the Old Age Assistance rolls.

We believe that one tragic consequence of the new regulations is going to be a drastic

increase in all categories of public assistance. For example, in Iowa we have 350,000 citizens over the age of 65. 29.1% of these live at or below the federally defined poverty level. Yet presently only 5.8% of these are on the Old Age Assistance rolls. If we discontinue services for those not on public assistance, it is estimated that an additional 4,200 OAA cases would be opened. Moreover, it is certain that significant numbers of these will be forced out of their homes and into institutional situations.

In light of all this discussion, we have prepared the following recommendations:

1. A six-month limitation in the definition of potentiality is far too constrictive. At the very minimum the period should be at least a year; and, in any case, specific groups should be exempted from any time consideration at all: particularly the retarded, particularly the elderly. We urge that the definition be broadened so that we will be able to provide services before a person has started on an irreversible course toward receipt of public assistance.

2. To further restrict the definition of "potential" to a gross income of less than 133½% of our present payment schedules and resources to less than \$1100 is, in effect, to eliminate the whole concept of "potentiality" since their income would still be beneath the minimum needs standard.

Practically speaking, the new regulations limit our service caseloads to people eligible for public assistance grants. If there is to be an income ceiling it should be far more than 133½% of our present public assistance levels; or should include formulas for adjusting such gross income to allow for taxes, social security, day care and other factors.

3. The absence of federal funding for training and educational programs (other than WIN) means that such programs designed to help people help themselves off public assistance to keep them off our rolls will be discontinued. We believe strongly in such programs and urge that they still be eligible for federal matching funds.

4. Because of the catastrophic impact on our community facilities, we strongly urge that privately donated monies remain eligible for federal matching funds.

IMPACT OF FEDERALLY PROPOSED REGULATIONS ON DIRECT SERVICES (ESTIMATED MONTHLY AND FISCAL YEAR 1974 COSTS)¹

	Current monthly figures			Federal funds no longer available fiscal year 1974 ²

¹ Governor's youth opportunity program—During the year of 1972, the program cost \$1,682,160, serving 4,721 youth. These youth are mainly served during the summer months, therefore total reporting is not captured on our baseline data used Feb. 5, 1973; 678 of the 4,721 are shown because of their year-round participation. Based on the

number of youth anticipated through June of 1974, 7,081 young people will be deprived of G.Y.O.P. services, at a projected cost for that year of \$2,522,964.

² Monthly count inappropriate.

The above services purchased by the Department are very specialized services purchased from agencies throughout the State of Iowa. Our only resource for sheltered workshops and alcoholism services at the present time is through purchases.

DEPARTMENT OF SOCIAL SERVICES,
Des Moines, Iowa, March 18, 1973.

ADMINISTRATOR,
Social and Rehabilitation Service, Department of Health, Education, and Welfare,
Washington, D.C.

DEAR SIR: This letter is in response to the proposed Regulations, New Part 221, Serv-

ice Programs for Families and Children, and for Aged, Blind, or Disabled Persons; Purchase of Service, published in the Federal Register of Friday, February 16, 1973.

The Iowa Department of Social Services, after reviewing the proposed regulations, strongly urges that they be withdrawn. These regulations would seriously restrict the current services being delivered within the State of Iowa. Our concern is not the possible loss of a large amount of federal matching in the area of services, but that we will be forced in the focus of our services to move away from the areas of protective and preventive services and helping to prevent the need for public assistance to serving only those who are currently receiving public assistance. We believe it is extremely important that we serve current recipients and, when possible, help them become totally or partially self-supporting. We also realize that if we are able to intervene and provide services to individuals and families before they are forced into applying for assist-

ance that their chances of staying off and maintaining themselves at a level of self-support are much higher. We believe these services will also be much cheaper to provide. One major concern is the proposed definition of "potential recipient." In the case of an ADC potential child or family, the definition of potential recipient will almost require that the families or individual be eligible for assistance. They are required to have resources which fall within the public assistance guidelines and the income limitation for Iowa will actually be lower than the income level for persons with earned income to be eligible for public assistance.

We are in agreement with the change in the regulations to remove from the general requirements some of the administrative rules, such as use of professional staff, use of sub-professional personnel and staff development. We are concerned that reference to some of these items was excluded from the sections dealing with expenditures in which

federal financial participation is available. Reference is made only in very broad terms and we believe that serious questions can be raised as to whether any of the activities will, in fact, be matched. An example of this is the requirement for advisory committees. Our agency feels that it is important that we continue to use the services of advisory committees, particularly at the state and area level. Under the present regulations such committees are required and expenses for these committees are clearly reimbursable at the 75% rate. In the proposed rules, reference to advisory committees other than the state day care advisory committee have been removed from both the general administrative provisions and the provisions regarding expenditures for which federal financial participation is available. We understood that the general administrative provisions that were being removed were removed on the basis that the states would normally be following these provisions in the course of administering their programs and that having them in the regulations did not serve any real purpose. We further understood that the federal agency still supported these activities as positive features of service programs and that federal financial participation would be available. We believe that there is now serious question as to whether these provisions will be reimbursable.

Specific concerns center in the following areas:

Section 221.2(c). We strongly disagree with moving from the requirement in the present rules for a fair hearings and appeals process to a grievance system. We believe that having a grievance system alongside a fair hearings and appeal system will be confusing to recipients of services, will mean duplication of an already established system, while denying clients what we believe is their right to a fair hearing. The very use of the phrase "grievance system" is obviously intended to lessen the stature of the procedure and we believe this would be a step backwards.

Section 221.3. At several points throughout the regulation, terminology "services which are available without additional cost" is used in the old regulations but was never clearly defined, and we feel that the regulations must contain some definition of what availability without additional cost means.

Section 221.4. We heartily support the concept of giving a client the freedom to accept or reject services. There is one major exception to this freedom of choice in the case of protective services. Having protective services mandated and then giving the client the freedom to accept or reject services is incongruous. We believe this section of the regulations needs to have a clearly stated exception covering protective services for families and children.

Section 221.6(c)(2). We believe the definition of former recipient is too restrictive. The present definition should be retained.

Section 221.6(c)(3). As mentioned earlier, we are particularly concerned about the definition of potential recipient as contained in this regulation. Such a definition is so restrictive that it will not enable states to serve people and prevent people from going on assistance and will instead lead to an increase in the assistance roles. During the past five months, the ADC caseload in Iowa has been decreasing. We believe these regulations will reverse that trend. The most glaring example of the inadequacy of this definition relates to the prevention of births out of wedlock. The regulations clearly place a responsibility on the states to attempt to prevent or reduce the incidence of births out of wedlock with the goal of keeping people from going on assistance. Under this proposed definition, a person who is not currently a recipient of public assistance will have to be three months pregnant before we

can define her as a potential recipient of assistance and thus then try to prevent the birth out of wedlock. We are concerned about the income limitation since, first, it does not indicate whether it is gross income or net income and, second, as mentioned before, any person in Iowa who has earned income and can meet the income guideline will already be eligible for public assistance. Couple the income guideline with the resource limitation and you have effectively eliminated the category of potential recipient since most people will be eligible for assistance if they meet these guidelines. If the goal of social services is to prevent people from becoming dependent upon assistance, then such restrictive guidelines are self-defeating. We are further concerned about the severe age limitations with regard to the adult programs, again from the standpoint that being able to provide services only when a person is on the threshold of eligibility for income maintenance often is too late. In most cases, the person will go ahead and fall into the income maintenance program and then it is a much more difficult and a much more expensive job trying to extract him. With the aged, much preventive work can be done to forestall the problems of aging which lead to the need for assistance. We believe that for all practical purposes the proposed definition of potential has eliminated the category of potential recipient. There are a maximum of six conditions of eligibility that have to be met and failure to meet even one of these conditions means that the person does not meet the definition of potential. We strongly urge that this definition be broadened so that we can provide services before the person has already started on an irreversible course toward dependency upon public assistance.

Section 221.7(a). We believe it is impractical and, in most instances, administratively impossible, to make an eligibility determination prior to the delivery of some service. Eligibility should be determined early, but in some instances it cannot be determined before the start of services.

We believe that the information and referral services, offered by public welfare offices, are a vital service to the community. The proposed rules should provide for these services, acknowledging that complete information and referral services may involve several interviews with the person and contacts with other people and community resources. Also, protective services are, by nature, such that service should await eligibility determination.

We believe protective services should be an exception to the proposed rule, allowing public welfare service workers to intervene in all cases of neglect, abuse or exploitation. For people of all ages, this is urgently necessary since no other social service agency is specifically charged with this responsibility and none are equipped by experience to handle these cases, in most communities.

Section 221.7(a)(1). We are concerned that this regulation will require us to set up another administrative procedure which will be rather complicated and which we feel could possibly be accomplished in other ways. The regulation does not appear to permit any latitude in the method of determining a person's current status as a recipient. We feel that in Iowa and in possibly other states, this determination could be made on the basis of the Medical Assistance Card, which in Iowa is issued monthly, and indicates those members of the family who are receiving public assistance. We would urge that this regulation be rewritten to give some latitude as to the method of determining eligibility.

Section 221.7(b). We are concerned that the requirements for re-determination of eligibility for services will be unnecessarily complicated. The regulation contains four separate time periods for re-determining eligibility, and we believe it will require an

extremely complicated, if not impossible, administrative system to comply. It is particularly difficult to understand why in the case of those current recipients of assistance who are receiving services, a re-determination of eligibility for services has to be made every three months, while for a public assistance grant re-determination has to be made only every six months. Also, it seems unnecessary for a separate requirement for re-determination within 30 days when a family or a person goes off assistance. We would strongly urge that this rule be changed to provide for a re-determination of eligibility every six months for all cases.

Section 221.8(a). As a pilot state for the implementation of the Goal Oriented Social Services program, we strongly protest the attempt in these regulations to move from a system with four goals to a system with only two goals. We believe that this would, in effect, eliminate the concept of Goal Oriented Social Services. Also, the two goals, as defined, are unclear; it is particularly confusing when the term self-sufficiency is not only one goal, but is also used in defining the other goal. We are not able to distinguish between these two goals. Since we already have in operation a Goal Oriented Social Services System, we question whether we will be required to go back and re-do our present system or whether we will be permitted to use the four goals. We believe that the Goal Oriented Social Services program needs to be implemented, along the lines which it had been proposed originally. We believe that the proposed regulations would only give token recognition to the system and in the end will again be self-defeating. Much concern has been expressed over the past five years about the inability of Social and Rehabilitation Services to explain to Congress what is happening as a result of the money being spent on services. We believe that this will continue unless the Goal Oriented Social Services System is maintained as planned before these proposed regulations.

Section 221.8(b). We agree that the service plan should be reviewed at least every six months, but we would hope that this review could be coordinated with or incorporated into the requirement for service eligibility re-determination. Not having the service plan tied to the eligibility review is very inefficient and only further complicates our problem of trying to determine who has to be reviewed for what and when.

Section 221.8(c). We are concerned as to how this particular rule might be interpreted. It appears to say that only services which will prevent a person from becoming eligible for and requiring public assistance should be provided. We do not particularly argue with that interpretation except that it could be further interpreted to mean that if it appears inevitable, regardless of the provision of services, that a person would become dependent upon public assistance that we would then not be able to provide him any service. This would be particularly true in a case of the mentally retarded where, regardless of the services provided, we will not be able to correct or possibly ameliorate their mental retardation, and yet if we are able to provide some services we may be able to lower the amount of public assistance they require. We believe this question needs to be clarified.

Section 221.8(d). Will this section limit purchase of service contracts to a period not to exceed six months?

Section 221.8(e). This paragraph seems to be in conflict with Section 221.8(a), which requires that before any service can be given that a case plan has to be established. This section indicates that we will be able to help families clarify their need for services, but does Section 221.8(a) mean that before we can help them clarify their needs, we have to write a case plan saying that we are going to clarify their needs? Does this section say that

before an intake (service) is provided, a case plan must be established?

Section 221.9(b)(3). We believe that the definition of day care services for children needs to be broadened. The title of this service is misleading in that services are not really provided because of the needs of the child, but are initiated and provided because of the needs of a mother or relative for employment or training. This definition needs to be broadened so that it would be possible to provide day care services, in some instances, to meet the needs of the child. This could be particularly important if we are to provide protective services as mandated in 221.5(b)(1). This regulation also appears to prohibit payment of a relative for the care of a child. We believe that there should be an option for paying a relative when it is in the best interest of the child. Many relatives will provide free care, but to expect it in all situations is unrealistic. If a relative says no, then the alternative will be to pay someone else at, most likely, a higher price.

Section 221.9(b)(5). We are deeply concerned that this regulation will not permit federal participation in the cost of training or education for clients. With the implementation of the Talmadge Amendments in the Work Incentive Program, it has become increasingly important for us to offer employment services other than through the WIN Program. Our experience since the implementation of the Talmadge Amendment has been that the number of people enrolled in the WIN Program has steadily decreased while the use of our Individual Work and Training Program has sky-rocketed. Withholding federal matching in the cost of training or education will further hamper our training program and will make it that much more difficult to move people off the assistance rolls. Of the total costs of the Individual Work and Training Program, the cost for training and education represents 15 percent. While it represents a small portion of the total cost, we believe that it is a very crucial part and that payments for training and education should be retained. Failure to retain these provisions will just further indicate to the states that the federal government is not really interested in providing meaningful programs of training and education to enable people to escape the public assistance programs.

Section 221.9(b)(8). The definition of foster care services needs to be broadened to include counseling with children while they are in foster care. The regulations include practically every other service that is needed in any foster care program but fails to recognize the child's emotional and reality problems and his consequent need for counseling. The proposed provision for "supervision of the care of such child in foster care" does not seem to contain any provision for counseling or skilled casework with the child. The inclusion of this service is further questioned since the listed services clearly indicate counseling with the natural parent. If, the intent is to include counseling for the child, then it should be clearly stated; if not, then we strongly disagree and believe that it should be included. The definition of foster care should also include recruitment and evaluation of foster homes. This is an important part of any foster home program and expecting the states to pay for this part of a foster care program is unrealistic and would result in poor recruitment and evaluation of foster homes for children being cared for under these regulations. We are deeply concerned about the restriction contained in this proposed regulation in regard to the payment of services to the foster family home or facility under purchase of service contracts. The regulation clearly permits federal participation in the cost of the direct service staff who in our agencies provide the listed foster care services. It would only seem logical that if this is an allowable expense for direct

service staff, that it would also be an allowable expense in the case of a purchase of services contract.

Section 221.30(a)(9). We are not clear as to the intent of all parts of this regulation, particularly where it says that we have to assure that recipients pay for their services. There is no statement as to how to discharge this responsibility, or what our responsibility is if the recipients fail to pay. This section would appear to place on us the responsibility of being a collection agency to which we strongly object.

Section 221.52(d). As mentioned previously, while the rules do require the state's day care advisory committee and clearly spell out that expenses of the day care advisory committee are reimbursable, there is no mention as to whether the expenses of other advisory committees are reimbursable. We believe that this section should be changed to clearly indicate that the expenses associated with other advisory committees will be reimbursable.

Section 221.53(f). These regulations require licensing of foster care facilities, which we believe is an integral product of the overall evaluation of a foster care facility. In most instances the same person who is supervising the placement of the child in the home and periodically reviewing the placement as to its appropriateness is also the person who submits the material for licensing. Because of these overlapping purposes in workers' visits, we believe it impractical to try and factor out the cost of licensing. Also, in view of the fact that licensing is mandated by these regulations and since it is vital to an overall foster care program, we believe that the cost associated with licensing should be matchable at the service rate.

Section 221.62. We recommend that this section of the regulations be changed to permit the use of private funds as the state's share. We cannot understand the rationale for abandoning the use of these funds, except for possible misuses and we believe the current regulations contain adequate guidelines to prevent the misuse of this provision if they were enforced. We believe the present regulations should be retained.

Section 221.53(e). We object to this limitation being placed in the regulations. The WIN Program in Iowa has been moving backwards since the passage of the Talmadge Amendments. The number of persons enrolled in WIN has decreased and while our program was operating strictly on a voluntary basis (with a waiting list), we have now had to resort to mandatory callups. To offset the negative impact of the Talmadge Amendments, we have put more emphasis on our Individual Work and Training Program statewide. Restricting non-WIN employment services to non-WIN areas of the state will mean 80 percent of our assistance caseload will not have this as an option available to them. Further evidence that these regulations will force people to remain on assistance.

We strongly urge that these regulations not be adopted in their present form. While it has been indicated that the purpose of these regulations is to improve the administration of the service programs and to provide the states with more latitude in the operation of their service programs, we believe the opposite to be the result of these regulations. The definitions of persons eligible for services and the definitions of the services themselves are so severely restrictive that there would be very little latitude for states in administering their service programs. The administration of the service programs will become more complicated, particularly with the initial determination process and the re-determination process. A stated goal of these regulations was to reduce federal expenditures in the areas of social services. In our state we believe that the amount of federal participation in social services will not be reduced, and that in-

stead the implementation of these regulations will cause an increase in the cost of the public assistance programs. With the very limited definition of former and potential, we will not be able to prevent dependency; once they are on assistance, the cost of services to help them get off is considerably higher than the cost of helping them stay off initially. We believe there is a need to seriously examine the impact these regulations would have on other programs, such as the categorical assistance programs. We think the end result would be an overall increase in federal expenditures and unnecessary duress and discomfort to many people, especially those who are very poor, yet do not qualify and those in need of protective services. The ultimate effect of the enforcement of these regulations will be testimony to the poor that their full range of service needs will be ignored—that those which relate to employment are considered most important, regardless of individual situations and potential for self-support. Also apparent will be an insensitivity to the social service needs of those at the fringes of poverty, whose incomes may be just over 133 percent of state payment levels.

They will effectively serve to further reinforce the isolation from the rest of American society that has been brought about through other "programs for the poor" in the past. Concentration on this group alone, rather than working to treat all recipients of federal subsidies in a consistent manner is counterproductive to the goals of the Administration for sharing of the "good life" for all Americans.

Sincerely yours,

JAMES N. GILLMAN,
Commissioner.

UNITED WAY OF JOHNSON COUNTY,
Iowa City, Iowa, March 15, 1973.

HAROLD HUGHES,
U.S. Senator, New Senate Office Building,
Washington, D.C.

DEAR SENATOR HUGHES: The Johnson County, Iowa, community has reviewed the proposed regulations of the Department of Health, Education, and Welfare published February 16, 1973, as it pertains to Services to Families and Children, Aged, Disabled, and Blind. We are enclosing our comments as to the manner in which we feel it will affect our community along with suggestions for change.

It is our understanding that these comments will be reviewed before the regulations go into effect. Thank you for your consideration of these comments and we sincerely hope there will be significant reconsideration and change in the regulations.

Anything you can do to support changes in the proposed regulations in the direction contained in the document will be greatly appreciated. If we can be of further help to you please contact us.

Sincerely,

MR. RICHARD BARKALOW,
President, United Way of Johnson County.

MR. ROBERT HILGENBERG,
Executive Director, Johnson County Regional Planning Commission.

MRS. CLEO MARSO LAIS,
Director, Johnson County Department of Social Services.

JOINT AGENCY POSITION PAPER ON PROPOSED
DEPARTMENT OF HEALTH, EDUCATION, AND
WELFARE RULE CHANGES, MARCH 14, 1973

INTRODUCTION

The position paper was compiled by a diverse group of representatives from agencies who serve the citizens of Johnson County including the following: Johnson County Social Service Department, Johnson County Regional Planning Commission, and many United Way of Johnson County agencies, i.e. Goodwill Industries of Southeast Iowa,

Lutheran Social Service of Iowa, Johnson County Association for Retarded Children, and Mayor's Youth Employment.

The group would first like to express agreement with the general concept of making social services accountable to improve the delivery of services to clients. The emphasis on goal oriented services is appropriate for social workers and the potential for greater local control is commendable.

However, placing too many restrictions on this local control could cripple it. The Proposed Rule-Making which was published in the Federal Register, Vol. 38, No. 32, Friday, February 16, 1973 tends to stress the limitation of client who can be served more than benefits to clients.

Further the proposed rules need to take into account that there are those individuals who always will require some form of income maintenance and supplementary counseling which enables them to maintain their highest potential.

The above listed representatives from agencies are presenting herewith what they hope to be a compromise proposal between the present Rules and Regulations and the Proposed Rule-Making which might provide both for accountability and improved service to clients.

The suggested amendments are listed with accompanying rationale for the amendments summarized at the conclusion of the paper.

AMENDMENTS

Suggested amendments to the Proposed Rules as written are the following:

I. Section 221.6 Services to additional families and individuals.

Subpoint (C), (2) As Proposed: "(2) families and individuals who have been applicants for or recipients of financial assistance under the State plan within the previous [three-months] one year, but only to the extent necessary to complete provision of services initiated before withdrawal or denial of the application or termination of financial assistance."

Subpoint (C), (3) As Proposed: "(3) families and individuals who are likely to become applicants for or recipients of financial assistance under the State plan within [six-months] two years; i.e., those who:"

II. Subpoint (C), (3), (1) As Proposed: "(1) Do not have income exceeding [133½ percent of the State's financial assistance payment level under the State's approved plan] current poverty guidelines, i.e., Office of Economic Opportunity Poverty Guidelines updated."

III. Subpoints (C) (3) (II); (C) (3) (IV); (C) (3) (IV) (b); (C) (3) (IV) (C), and (C) (4) "[with six months] within two years."

Suggested additions to the Proposed Rules include the following:

IV. Guidelines in determining social functioning:

1. Stability of Family Relationship
 - a. Is this a recent teenage marriage?
 - b. Does either parent have a pattern of repeated separation or divorce?
 - c. Was this a forced marriage because of out of wedlock pregnancy?
 - d. Has either parent been involved in repeated criminal behavior?
 - e. Is there a current divorce or separation or is one contemplated?
 - f. Is there evidence of poor family functioning?

Q. Have the children been referred by the community for protective services?

2. Emotional Stability of Individual or Parents

a. Is there a past history of hospitalization for psychiatric care?

b. Is one of the parents currently having serious emotional problems that could lead to hospitalization?

c. Is there a past or current history of alcoholism, depression, psychosis, character disorder, schizophrenia, or paranoia of such a degree to impair the individual's social functioning?

GUIDELINES IN DETERMINING ECONOMIC FUNCTIONING

1. Income Level
 - a. Is the family income at or below public assistance standards?
 - b. Is the family income at poverty level?
 - c. Is the family income creating a chronic situation?
 - d. Is the family heavily in debt?
2. Employability
 - a. Does the head of the family have less than a high school education?
 - b. Is the head of the family unskilled?
 - c. Does the head of the family have previous work experience that shows frequent job changes, menial jobs, seasonal work, and frequent periods of unemployment?
 - d. Does the head of the family have a physical handicap that prevents employment?
 - e. Is one member of the family approaching retirement age without a visible means of support?

V. Subpoint (c) (5)
 "(5) The severely handicapped persons (SRS Definition) shall be considered potential recipients and shall be exempted from having their eligibility determined exclusively on the basis of income guidelines. A sliding fee scale will be established in order that families with higher incomes would pay a proportionately higher cost for services."

VI. Section 221.8 Individual Service Plan

Subpoint (a) (1) and (2) As Proposed:
 "(1) Self-support goal. To achieve and maintain the feasible level of employment and economic self-sufficiency. (Not applicable to the aged under the Adult Services program.)
 (2) Self-sufficiency goal. To achieve and maintain personal independence, self-determination and security."

Suggested Additions:

"(3) Community-Based Assistance goal. To achieve and maintain a degree of autonomy for the individual who is unable or precluded from functioning in a home setting by allowing the individual to reside in facility within the Community that approximates a home environment and may permit the client to exercise some control on day-to-day activities. This may or may not require continued services."

(4) Institutional Assistance goal. To achieve that condition of living in which the individual resides in a largely publicly operated long-term care facility that exercises continuous supervision over day-to-day activities. The goal of Institutional Assistance is achieved once placement of the individual occurs."

VII. Section 221.9 Definition of Services

Suggested additions:
 "(18) Self-support-services-for-the-handicapped. Such services must include, but are not limited to:

- (a) Exploring interests and potentials for self-support in whole or in part.
- (b) Individual counseling, necessary to deal with family barriers which prevent or limit individuals in their use of training and employment opportunities.

(c) Providing for referral to and use of public and voluntary agencies in the fields of vocational rehabilitation, health, education, and employment, including special attention to the capabilities of rehabilitation centers and sheltered workshops, neighborhood centers, and similar organizations."

VIII. Suggested Amendment:

"Section 221.62 Private sources of State's Share. Donated private funds or in-kind contributions may be considered as the State's Share in claiming Federal reimbursement."

The study group feels that all of the above listed amendments taken together would make for much more realistic departmental rules for social services to follow.

RATIONALE

It is difficult to pinpoint the benefit each preceding proposed amendment and addition would have for clients since the real affect

on services occurs when all of the changes are viewed together.

Amendment I has the greatest meaning when combined with Amendments and Additions II, III, IV, V, VI, VII, and VIII, but as much as possible we shall try to identify affects separately.

Amendment I would allow for a more reasonable time criteria for eligibility of clients for services either before or after receiving financial assistance.

An example of the effect of the Proposed Rule-Making without Amendment I is that a retarded child could not be given services until he or she is 17½ years old. The present Rules and Regulations have allowed these youth to be served at 13 years. Amendment I would compromise with the retarded child eligible to receive services at age 16, or two years prior to turning 18 and becoming an adult.

The income guidelines under the Proposed Rule-Making for the state of Iowa could change from the below listed Present Guidelines to the Proposed Rule-Making Guidelines.

PRESENT GUIDELINES

[Based on gross income]

Family size:	Income per month
1 person.....	\$433.00
2 people.....	550.00
3 people.....	666.00
4 people.....	784.00

Proposed Rule-Making Guidelines

Family size:	Income per month
1 person.....	\$168.00
2 people.....	200.83
3 people.....	264.67
4 people.....	323.19

Amendment II would set guidelines similar to the Office of Economic Opportunity Poverty Guidelines which would be standard for the entire United States instead of varying according to state.

An example of how the Proposed Rule-Making without Amendment II would affect a family would be the case of a mother with one child who is a recipient of ADC. She could receive only \$200.83 a month for their living expenses. If she wanted to work to get off ADC she could not afford the \$75.00 a month a day care center would cost her in Iowa City, even if she would be reimbursed. She simply would not have the working capital.

Amendment III covers the same issues as Amendment I.

Amendment IV and V would give the Proposed Rule-Making some flexibility in determining eligibility on individual merits. For example, a middle income family with three retarded children would not meet the poverty guidelines as proposed, but would obviously be having financial and emotional strains placed on their family far beyond their limits. At \$5.00 to \$10.00 a day charge for keeping retarded children on foster care (if a willing foster family is available) even temporary care to allow for a brief vacation away from the children would be prohibitive financially for these people. Complete foster care would cost at minimum \$150.00 a month per child.

Although the family pays above average taxes their retarded children can not benefit from education at the public schools and Nelson School costs \$8.17 per day per child and is not subsidized at all by tax money. So, in order to provide their children with any kind of education or training this family would have an additional outlay for their three retarded children of \$492.60 per month. Can they in addition afford services for themselves?

Amendment VI would allow for more realistic goal setting and would take into account the fact touched upon in the Introduction, that certain individuals, i.e., the severely handicapped, will never be completely self-

sustaining or self-supportive, but could possibly manage with community based or institutional assistance. Amendment V is related to this concept also.

Amendment VII allows the handicapped to be served by Sheltered workshops for which there is no replacement. Either a handicapped person receives training and continued supervision in this type of situation or they are left to endure empty, meaningless, and unproductive lines as burdens to society.

Amendment VIII would allow organizations such as the United Way of Johnson County to continue to match Federal monies under the Social Security Act. This Amendment would provide for the continuance of the communities' effective use of funds from the public and private sectors. In combination these funds have been able to serve people far beyond what they could accomplish separately.

Specific programs which would be affected would include the Mayor's Youth Employment Program which last year received \$10,000.00 in local money, a combination of tax and voluntary dollars, to match \$35,000.00 federal and \$5,000.00 state funds. Obviously this program's total budget of \$50,000 can not be picked up locally nor can the \$10,000.00 be raised by any method other than United Way. This program has served those families who meet the current income guidelines well. When an adolescent from a lower socioeconomic background can hold a job the extra income benefits the entire family in self esteem as well as materially.

These Amendments in combination would prevent the following cuts in services by the Johnson County Social Service Department's direct service, and Purchase of Service from Nelson School, Goodwill Industries of Southeast Iowa, and Lutheran Social Services of Iowa—located in Iowa City. Without these Amendments the following clients would not be served by these agencies:

JOHNSON COUNTY SOCIAL SERVICE DEPARTMENT: DIRECT SERVICES—HOMEMAKER SERVICE

Class	People	Households	Percent	Cost
Private.....	30	13	18.8	\$907.04
Nonpublic assistance elderly.....	30	24	34.9	1,683.91
Nonpublic assistance family.....	52	10	14.5	699.58
All public assistance.....	77	22	31.8	1,534.15
Total.....	189	69	100.0	4,824.68

Those who can presently be served will be reduced by an estimated 40%.

Counseling Cases: Number of Cases at beginning of month:

November, 663.
December, 694.
January, 751.
February, 768.

Covered by new regulations: 289 Public Assistance Families.

Not covered by new regulations: 479 non-Public Assistance Families.

Intake Unit:

Female Worker, Interviews 10% ADC Families, 90% non-ADC Families.

Male Worker, Interviews 33% ADC Families, 67% non-ADC Families.

Purchase of Service—Two Major Programs.

1. Day care for the Mentally Retarded—Nelson School, System Unlimited, Inc: Potentially hoped to serve 14 eligible clients in a year period of the contract.

2. Sheltered work services for the Handicapped—Goodwill Industries: Potentially hoped to serve 34 eligible clients in a year period of the contract.

1. Day Care for the Mentally Retarded—Nelson School Development Center.

A. As of January, 1973: 10 clients—eligible for Federal Purchase of Service reimbursement

ment for services—4 ineligible clients currently (\$686.28 per month cost).

Total County Expenditure for services \$2,222.24 per month.

Reimbursement from Federal Government for eligible children \$1,129.47 per month.

B. Under New Federal Guidelines: 6 clients eligible; 8 clients ineligible for services.

Total cost to the County per monthly—\$2,222.24 (projected for 1 month).

Reimbursement of Services—\$637.26 per month.

We would lose reimbursement for 4 children—\$514.71 lost per month in reimbursement.

C. Based on Above Figures—Cost for Total Year: Under Current Program, \$26,666.88 cost per year, \$13,553.64 reimbursement per year.

Under New Rules Proposed, \$26,666.88 cost per year; \$7,627.12 reimbursement per year; \$6,176.62 lost in Federal Reimbursement for the year.

II. Services to the Handicapped—Goodwill Industries Based on January, 1973 Statistics:

A. Under Current Program: 24 clients eligible for services now \$4,992.50; Total cost for the month; \$3,744.38; Total Reimbursement would receive.

B. Under Proposed Guidelines: 19 clients eligible: \$4,446.00 projected cost; \$3,334.50 possible reimbursement.

C. Services Lost: 5 people ineligible with subsequent unmet needs \$1,110.00 amount of cost no longer met for these 5 people would have to be picked up by the County or State with no reimbursement.

Mentally Retarded and excluded from "former" and "potential"

Alcoholics and Drug Abusers are also excluded if they are involved in an "active treatment" program.

Lutheran Social Services:

Result: 1. Johnson County must first support its own structure and existing funds which means that its own staff will have to serve many who might otherwise been referred under purchase of service.

2. They will have to take a harder look at a person's ability to pay even partial for his or her service and refer that person on possibly to free up its staff to provide services in required areas. It will not be able at this point to reimburse the serving agency totally or in part for the services it provides.

3. Lutheran Social Services will continue to be asked as in the past to subsidize costs for clients unable to pay cost of service whether they do or do not fall within ADC guidelines, so the 90-10 factor is academic at this point.

4. A result: our service deficit to Johnson County last year was in excess of \$25,000, we will be forced eventually to say no to people who cannot support the cost of their service. A subsequent result of course is that people needing service will not receive it either from Johnson County Social Service or Lutheran Social Service.

5. In effect, needed services in family counseling services to single parents, marriage counseling etc. will be severely affected unless other community funding sources fill the gap.

SENATE CONCURRENT RESOLUTION 28

Whereas, we believe in assisting families, children, the aged, blind and disabled toward maximum self-support; and

Whereas, day care services, employment and training services, delinquency prevention services, foster care services, services to the mentally retarded, services to the alcoholic and drug abuser, and family planning services are supportive of this belief; and

Whereas, proposed rules for the Social Security Act (Titles I, IV-A, IV-B, X, XIV, and VI) would reduce federal support of these services in Iowa by at least \$5.6 million, effective April 1, 1973,

Now therefore, be it resolved by the Senate, the House concurring, That the Iowa General Assembly urges the Department of Health, Education, and Welfare to rescind or to modify its proposed rules.

Be it further resolved, That copies of this resolution be sent to the President, the Secretary of Health, Education, and Welfare and the Iowa congressional delegation.

ARTHUR A. NEV,
President of the Senate.
ANDREW VARLEY,
Speaker of the House.

I hereby certify that this Resolution originated in the Senate and is known as Senate Concurrent Resolution 28, Sixty-fifth General Assembly First Session.

RALPH R. BROWN.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

AMENDMENT OF THE PAR VALUE MODIFICATION ACT

The PRESIDING OFFICER. Under the previous order, the Senate will now resume its consideration of S. 929, which the clerk will state.

The legislative clerk read as follows: A bill (S. 929) to amend the Par Value Modification Act.

The PRESIDING OFFICER. By unanimous consent, the Senator from Texas is to be recognized at this time.

Mr. TOWER. Mr. President, I ask unanimous consent that I may suggest the absence of a quorum without losing my right to the floor.

Mr. EAGLETON. Mr. President, will the Senator withhold that request?

Mr. TOWER. For what reason?

Mr. EAGLETON. I have a substitute amendment pending, which I wish to modify.

Mr. TOWER. I ask unanimous consent that I may yield to the Senator from Missouri for that purpose without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. EAGLETON. I thank the Senator from Texas. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. EAGLETON. Is my amendment offered yesterday the pending matter before the Senate?

The PRESIDING OFFICER. It is the pending question.

Mr. EAGLETON. I would like to send up a modification of that amendment.

The PRESIDING OFFICER. The Senator has that right. The modification will be stated.

The legislative clerk proceeded to read the modification.

Mr. EAGLETON. Mr. President, I ask unanimous consent that further reading of the modification be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. EAGLETON's modification of his amendment (No. 58) is as follows:

On page 2, beginning on line 11, strike all beginning with the words "the amounts" and

ending on line 11 with the word "proposal" and insert in lieu thereof:

"on a proportionate basis the amounts necessary to comply with paragraph (a) of this section (Other than amounts made available for expenditures for interest, veterans' benefits and services, payments from social insurance trust funds, public assistance maintenance grants, medicaid, social service grants under Title IV of the Social Security Act, food stamps, military retirement pay, and judicial salaries.)"

On page 2, line 17, beginning with the "if, before," strike all through line 22.

Mr. EAGLETON. Mr. President, the purpose of the modification is twofold; first, to provide that where Congress fails to come up with alternative budget reductions, the President will be required to make the reductions on a pro rata basis. This is in place of the original amendment which provided that should Congress fail to act, the President's recommendations would stand.

Second. The second modification eliminates that provision of the bill which says in the event the President vetoes the reduction passed by Congress, the ceiling will be adjusted upward accordingly. Rather than that, I think it better to simply require a pro rata reduction in the event the President vetoes.

The basic thrust of the amendment as it stands is:

First, to establish the President's recommended ceiling of \$268.7 billion; second, to provide for pro rata cuts in the event that that is necessary; third, to give Congress an option of making other kinds of cuts.

Mr. President, inflation has become a bread-and-butter issue for millions of American families. The cost of food has risen to the highest level in 20 years. Interest rates, after a brief decline, are again on the climb. Rents have soared out of sight in many areas of the country. The prices of other goods and services are not far behind.

In my opinion, the inflation we are experiencing today owes far more to the failure of this administration's economic policies than any failure of Congress to establish a statutory spending ceiling. The administration says Congress is spending recklessly and that is what is heating up inflation. The fact is, regardless of any act of Congress, the Federal Government is spending this year only what the administration decides it should.

At the beginning of this fiscal year, the administration called on Congress to establish a spending ceiling of \$250 billion, which it said was consistent with efforts to fight inflation. Congress failed to take that step but that did not prevent the administration, through vetoes, impoundments and other means, from holding Federal outlays this year to the recommended figure. In short, we have a de facto ceiling.

I happen to believe that in many instances the administration acted without legal or constitutional authority. But the fact remains it has acted. Federal spending has been held to the level which the administration certified and maintains today is not inflationary. And yet we are experiencing some of the worst inflation in this country since the Korean war.

The administration cannot have it both ways. If it is going to assume the power to impound and to hold Federal expenditures to the level it chooses, it cannot deny responsibility for the inflation which continues. The administration's effort to make a scapegoat of Congress is a crude diversion designed to draw attention away from the obvious failures of its own economic policies.

Nevertheless, that tactic could succeed if Congress fails to expose it. The best way to do that would be to accept a statutory ceiling and provide a means to assure that the ceiling is honored.

In the past, efforts to establish such a ceiling have foundered on the question of how reductions which may be necessary to stay within the limit should be made. I believe the amendment which I have introduced offers a better solution to the problem. Briefly, it would work this way:

First. The President would advise Congress when the cumulative total of appropriations and other spending bills exceeded the ceiling and offer his recommendations for cuts.

Second. Congress would take those recommendations under consideration. If it failed to act within 30 days the President would be authorized to proportionately reduce all budgets, except for certain uncontrollable, in the amount necessary to meet the ceiling.

Third. However, Congress would have the right, operating under special procedures to assure that the resolution reaches a vote within the 30 days allowed, to substitute its own rescissions equal to the amount needed to stay within the ceiling. Such a resolution would be open to amendment.

Fourth. If, after both Houses passed such a substitute measure, the President failed to sign it into law or vetoed it, the reductions would have to be made on a pro rata basis.

I consider this approach preferable to others which have been offered. But I would agree with the observation made yesterday by the Senator from Minnesota (Mr. MONDALE) that the best approach of all would be to link the spending ceiling and whatever procedure we agree upon for making necessary reductions to legislation which controls executive impoundments. As was pointed out yesterday, this proposed legislation is now before the Government Operations Committee with action on the bill scheduled soon.

Since introduction of my amendment, I have had discussions with other Senators who have amendments. I now understand that the Senator from Wisconsin (Mr. PROXMIRE) will accept modifications of his amendment which will meet my other reservations; namely, that the ceiling is too low and that too much discretion is given the President.

Mr. President, I see that the distinguished Senator from Wisconsin (Mr. PROXMIRE) has now come into the Chamber. May I be privileged to ask a brief question of him, as to whether he will accept modifications of his amendment.

Mr. TOWER. Mr. President, I ask unanimous consent that I may yield to

the distinguished Senator from Missouri (Mr. EAGLETON) and the distinguished Senator from Wisconsin (Mr. PROXMIRE), without losing my right to the floor.

The PRESIDING OFFICER (Mr. BIDEN). Without objection, it is so ordered.

Mr. EAGLETON. I thank the Senator from Texas.

I ask the Senator from Wisconsin, it is my understanding that perhaps he will accept some modifications to his amendment, the combined Proxmire-Bentsen amendment discussed and debated yesterday.

Mr. PROXMIRE. Yes, indeed. I expect to do that. I expect it to be modified along the lines the Senator from Missouri is interested in. We had discussion with some Senators on it this morning. It is desirable and necessary. I will be very happy to do that.

Mr. EAGLETON. I thank the distinguished Senator from Wisconsin.

Now, Mr. President, I want to make it clear, however, that I believe it is essential that Congress early this year impose on itself a statutory spending ceiling. It is necessary not only to restrain Federal spending but also to bring into focus the real causes of our economic difficulties.

Mr. President, I withdraw my amendment, reserving the right to bring it before the Senate if necessary at another time.

The PRESIDING OFFICER. The amendment is withdrawn.

QUORUM CALL

Mr. TOWER. Mr. President, I ask unanimous consent that I may suggest the absence of a quorum, without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TOWER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. TOWER. Mr. President, I ask unanimous consent that the other for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TOWER. Mr. President, I ask unanimous consent that I may yield to the Senator from Louisiana (Mr. JOHNSTON) without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSTON. Mr. President, I should like to direct a question to the Senator from Wisconsin.

The PRESIDING OFFICER. Will the Senator from Wisconsin send his modification to the desk, or is he going to do it later?

Mr. PROXMIRE. I will do that a little later.

Mr. JOHNSTON. The so-called Bentsen amendment provides that if there is to be a reduction, that reduction must be applied pro rata—"proportionately." I believe the word is—on all appropriations or other obligational authority. It

further states, in section 3, that in carrying out the provision of the paragraph, "no amount specified in any appropriation or other obligational authority for fiscal 1974 for any activity, program, or item within such appropriation or other authority may be reduced by more than 10 percent."

My question is this: In applying this amendment, if it becomes necessary to reduce any of the appropriations or obligational authority, is it not a fact that all those appropriations or obligational authorities or activities, programs, or items within the appropriations must be reduced proportionately?

Mr. PROXMIRE. Yes, that is certainly the purpose of it.

Frankly, I say to the Senator from Louisiana that we have not absolutely decided on the modification. I had a discussion with Senator BENTSEN and others this morning, and we have considered the possibility of simply providing that any deviation from a proportional reduction would be prohibited, that any cut would have to be proportionate; and the 10-percent leeway matter is something that we have not absolutely determined would be in the modification.

Mr. JOHNSTON. Without regard to the question of 10 percent but with regard to the proportionate nature of each cut, it would seem to me that this language with respect to proportionate cuts for any "activity, program, or item" would require, for example, with respect to the defense budget, that military personnel in the Army, which is a line item within the military budget, would have to be cut, as well as military personnel for the Navy, for the Air Force, for the Marine Corps, for operation and maintenance of the Army or aircraft procurement or weapons procurement—Navy. All these are line items, and there are quite a number of them just in the defense budget itself.

Mr. PROXMIRE. That is correct. The idea is that if that is not feasible, the President can propose a different kind of cut and come back for congressional approval. We want to have some trigger, so that the President would not be in the position of abolishing programs as he has been doing and substitute his priorities for what Congress intended. For example, the President might want to make all the military cuts in the Army. He would no doubt have other preferences, and Congress would go along, to the extent that they were appropriate and logical and did not destroy some of the programs we were interested in.

Mr. JOHNSTON. Is it not true, though, that under the language of the amendment, the coming back to Congress applies only should the President find it necessary or desirable to exceed the 10-percent limitation?

Mr. PROXMIRE. Under the Bentsen language, that is correct. As I say, we have been considering the possibility of further modification, and we are holding our options open on that.

Mr. JOHNSTON. Is it not true that under the present language, until or unless it is changed, the President has no authority even to come back to Congress,

except in those cases in which it exceeds the 10 percent, and in all other cases the reductions must be made pro rata, in every line item in every budget, regardless of the fact that, for example, he may find it possible to exceed the proportion with Navy procurement and might need every cent of it in Army personnel salaries?

Mr. PROXMIRE. That is right. That is one of the reasons why we are concerned with it and want to modify it. That is an excellent point.

May I just say that the one kind of language we are considering here is that if it is a roughly proportionate cut, the President does not have to come back to Congress. If it is disproportionate, he would have to do so.

Mr. JOHNSTON. As a matter of fact, it is not a question of being roughly proportionate. It must be exactly proportionate.

Mr. PROXMIRE. That is correct. That is the way it is in its present form. That is why we are concerned with modifying it.

Mr. JOHNSTON. One of the things that concerns me about this amendment—and I say this as a strong supporter of the idea that Congress must seize the initiative, that Congress should be the one to set a spending limit and to set the priorities—is that, without the time for committees to consider this bill, without the time for committees to go over every word very carefully and to consider the implications, we may reach inadvertently the kind of situation, I just outlined, where neither the President nor Congress intends for different items to be cut in the budget, but we might be stuck with a situation where we would have to do it with absolutely no discretion and no flexibility.

Mr. PROXMIRE. I think the Senator raises a highly legitimate point. But the problem is if we do not act now, the other options for acting are limited would not occur until the very end of the fiscal year, and that would be too late. If so, we are in a difficult position. It is not easy to resolve this matter. We will do the best we can.

The matter the Senator is raising on the floor is helpful in highlighting one of the most difficult problems.

Mr. TOWER. Mr. President, I am fully in sympathy with the purpose of the amendments of Senators who would like to see some meaningful restraint placed on governmental spending. A spending ceiling is something that I myself will support in a separate measure, and I think that the President will approve such a separate measure if it is reasonable. The impoundment question does need to be resolved, perhaps through some defined procedure for obtaining congressional participation and approval, as long as adequate allowance is made for some discretion in the Executive to deal with this problem unilaterally where justified. This, too, merits consideration in a separate measure, or together with the spending ceiling measure—but these issues should not be dealt with in the devaluation bill.

There are three very strong reasons why these items should not be taken up

in connection with this bill—any one of which is sufficient to justify tabling these amendments:

First. The House will not consider this type of amendment as germane nor as complying with the Constitutional requirement that revenue bills originate in the House.

They would take our bill and not act on it. They would pass a bill of their own and bring it to conference and they would not accept this in conference. Representative MAHON is already considering legislation on the question of impoundment, on the question of a spending ceiling, and certainly the House is not going to preempt the Committee on Appropriations. I think we should study the House a little more in depth, because it is not going to happen.

Second. The Senate has already established a Subcommittee on Budget Management and Expenditure in the Government Operations Committee, given it a budget of \$180,000, and asked it to come up with well-considered legislation on spending limitations. This subcommittee does not start hearings until next week, and already the Senate is jumping the gun to take the issue to the floor as a rider on another bill. This is a complex and very important measure and should be the subject of hearings and committee action before the Senate acts—if it is important and justified, it can meet the challenge of passing both Houses and obtaining the President's signature on its own merits, and not because it has to be coattailed onto another measure. Let us give this issue the separate and full consideration that it deserves.

In this same connection, the Government Operations Committee also has before the full committee an Ervin bill on impoundment procedure, which will apparently be acted upon next week. The same considerations apply to this question—the Senate should wait until a committee has taken action on a measure of this type after due deliberation, rather than to jump the gun by going directly to the floor and acting precipitously on a very complex measure.

Third. And, finally, the Senate should take recognition of the fact that this devaluation bill has a very significant role to play in assuring foreign governments and dollar-owners that our Government will meet its international obligations that are involved in parity changes. Money markets are notoriously skittish and subject to sudden and drastic changes due to even a casual word from a major country's finance minister or a mild delay in the legislative process on a bill affecting the monetary system. Right now the United States is in the hotseat of the international monetary system. Any unusual treatment of the devaluation bill will tend to start the international rumor mill going again. One interpretation that might be placed on such amendments as the one presently before us could be an assumption by nervous dollar-owners that Congress does not think that the dollar has yet reached its market-bottom and is, therefore, trying to shore it up with special budgetary action. In any event, any dilatory action by Congress will tend to cause uncertainty

in the money markets about U.S. intentions, and uncertainty is an anathema to restoring stability in the money markets and to preventing another—this time unjustified—devaluation of the dollar.

Mr. President, I, therefore, ask that the Senate support the motion I will make in due course to table this amendment, not to voice opposition to the substance of this and other related amendments, but to express the view that they should properly be taken up independently and after the Committee on Government Operations has reported such measures to the floor.

Mr. President, I ask unanimous consent that I may yield 3 minutes to the Senator from Ohio without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TAFT. Mr. President, I shall at a later time on this bill have a considerably broader discussion and I anticipate presenting the Bellmon-Taft amendment as it presently has been proposed, with minor changes. However, I do wish to address myself at this time merely to the question of the budget ceiling proposed in the Proxmire amendment.

Despite my concurrence in the belief that budget control for the immediate future must be one of our highest priorities, I do not think that it would be wise to enact a \$265 billion budget ceiling for fiscal 1974. I feel that such action would result in an unnecessarily high level of impoundments by the executive branch, and could be the cause of needless unemployment, perhaps unemployment in the Federal Government and otherwise in the Nation generally, and other economic developments, and I think it would also unnecessarily broaden the powers whatever they be of the executive to engage in impoundments.

The enactment of any spending ceiling is necessarily accompanied by the implied power to impound funds if it is likely that the spending ceiling would otherwise be exceeded. The Office of Management and Budget can justify impoundments on the grounds that they are necessary to faithfully execute the spending ceiling law. In fact, an OMB official indicated to my staff that in view of the uncertainty of appropriations totals until all appropriations bills are actually passed, OMB might try to help effectuate a spending ceiling by reserving funds from the very beginning of the fiscal year.

It follows that the lower the spending ceiling figure is set, the more massive the impoundments are likely to be. We must, therefore, be careful not to set a ceiling which is lower than necessary, particularly if we are likely to have difficulty keeping spending at or below the ceiling level.

The \$265 billion spending ceiling is certainly a case in point, because that goal is going to be tremendously difficult to achieve. It is \$3.7 billion below what the President wants to spend, which means that a total of \$3.7 billion more in budget cuts than those proposed by the President would have to be made. Senators on both sides of the aisle have already expressed their disapproval with

many of the proposed cuts and indicated their intention to restore these cuts. The only way to do this and still keep the budget in line would be to cut expenditures in some budget categories by much more than the President has requested.

I believe that achieving a congressional consensus to make cuts of this type which are large enough to keep the fiscal 1974 budget within the President's proposed spending level is going to be an extremely difficult task. Since the 93d Congress began slightly more than 2 months ago, this body has already approved measures opposed by the President which make available for obligation \$2.54 billion. The combined vote on these measures was 529 to 67. Although this record may simply indicate a difference of priorities between Congress and the President, it certainly does not instill overwhelming confidence into the hearts of those who are relying upon Congress to fight inflationary Government spending.

If we require that an additional \$3.7 billion of cuts must be made to reach the spending ceiling, our task will become even more difficult. Yet, once we set a budget ceiling at \$265 billion, we must either accomplish the task or face inevitable impoundments, possibly on a large scale.

This effort should be made despite its formidable nature only if such an effort is likely to contribute significantly to inflation restraint. The administration does believe, however, that \$268.7 billion can be spent without generating inflationary pressures. We should not complicate our job significantly by adopting a budget ceiling much lower than this figure unless we are extremely confident that the administration's assessment is wrong. I have not seen convincing evidence to this effect.

We should also be concerned that if the administration's analysis is correct, a \$265 billion budget would be less expensive than the economic situation demands. To the extent that this is true, our efforts to promote full employment would be compromised. Considerable progress has been made during the last year on the employment front. Nevertheless, at 5.1 percent the unemployment rate is still too high. I am sure most of us agree that Government policy must continue to combat unemployment in every responsible way.

I believe, therefore, that it would be wiser to set a ceiling at the President's proposed level of spending than at the \$265 billion level.

I noted that in the colloquy which occurred a few moments ago the Senator indicated that perhaps he might be willing to compromise on this point.

Of course, this would not prevent the Government from spending less than \$268.7 billion. Congress could still limit the budget to \$265 billion, or any other level below \$268.7 billion, if it decides that this is desirable and it is able to agree upon cutbacks of sufficient magnitude. On the other hand, if Congress accepts the \$265 billion ceiling and then agrees to spend \$268.7 billion, \$3.7 billion has to be impounded.

I am well aware that some Senators

consider the idea of setting a spending ceiling below the President's proposed budget level to have great political attractiveness. In my judgment, however, it would be unwise to support this amendment on partisan grounds. Democrats, at least as much as Republicans, have emphasized the necessity for Congress to retain control of spending priorities and for minimizing the budget control process. Setting an unrealistically and perhaps unnecessarily low budget ceiling level is likely to work against these extremely important goals.

The PRESIDING OFFICER. The 3 minutes of the Senator have expired.

Mr. TOWER. Mr. President, I ask unanimous consent that I may yield an additional 1 minute, with the same understanding that I do not lose my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TAFT. I thank the Senator.

These budget ceiling amendments are too important to be decided upon political considerations. We should enact the amendment which is most likely to facilitate responsible budget control by the Congress. I am convinced that such an amendment should set a budget ceiling of \$268.7 billion rather than \$265 billion, and that we should set it now. I think that is important.

We have had much discussion as to whether this type of amendment is proper on this particular piece of legislation. I believe it is proper. It has been thoroughly considered. It has been argued in Congress, and actually was done by the Senate last fall when it took the Jordan amendment requiring proportionate cutbacks. So the principle is understood by all Senators. This is not a matter requiring additional committee hearings or additional explanations by Senators as to what is required.

I think what is needed is an expression by the Congress now, before we reach the point in June when it is too late, and that we should proceed under the principle of setting a budget ceiling, and setting it at a responsible level, at this time, at \$268.7 billion. So, along with other Senators, I hope that the amount can be cut.

Mr. TOWER. Mr. President, the point remains as to whether this is an appropriate vehicle. The House will not take it; that is all there is to it. So all we are doing is using the Senate as a forum for a very enlightening discussion as to whether this bill is an appropriate vehicle for an amendment that should not be on it.

But the discussion is useless, because the House has said it will not take the bill with the amendment in it. The House is going to be very tough, and we do not have much chance to get the bill through conference.

We are holding up the passage of an important measure, one that the money market people in Europe are waiting for to see what will happen.

The spending ceiling is an extremely important question, one that should be taken up in special legislation. It is entitled to be considered thoroughly by the various committees of Congress, not only those in the Senate.

I hope that when the motion to table is offered, it will be acted on favorably, because this is an extremely important bill.

Mr. President, I ask unanimous consent that I may yield 3 minutes to the Senator from Virginia without losing my right to the floor.

Mr. HARRY F. BYRD, JR. I thank the Senator from Texas, but I cannot do much in 3 minutes. Suppose I wait and get the floor in my own right. I prefer to do that.

Mr. TOWER. If the Senator wants the floor, he will have to wait until the motion to table is acted upon.

Mr. HARRY F. BYRD, JR. I do not think the Senator wants to do that.

Mr. TOWER. How much time does the Senator wish?

Mr. HARRY F. BYRD, JR. Ten minutes.

Mr. TOWER. Mr. President, I yield 10 minutes to the Senator from Virginia—12 minutes.

The PRESIDING OFFICER. Without objection, the Senator from Texas yields 12 minutes to the Senator from Virginia.

Mr. HARRY F. BYRD, JR. I thank the Senator from Texas.

I think this question should be put in perspective. There has not been a reduction in the budget. I will read into the RECORD in a little while the new figures, the new budget submitted by the President, which calls for an increase in spending in the amount of \$19 billion. There is no reduction by the President.

I support the amendment offered by the Senator from Wisconsin (Mr. PROXMIRE), because I think there should be a ceiling on expenditures. The question is, What ceiling? As I understand the proposal by the Senator from Ohio (Mr. TAFT), he would set the ceiling at \$268.7 billion. The ceiling proposed by the Senator from Wisconsin (Mr. PROXMIRE) would be \$265 billion. The way to put this question in perspective, as I see it, is this: If we take the Proxmire proposal, there would be an increase of \$15 billion in spending permitted under the proposal. If we take the Taft proposal, the increase in spending would be \$18.7 billion. I favor the lower proposal, although I think that even it is too high.

As to which bill it should be attached and what the House might do, I am not impressed by the argument that the House might not agree with what the Senate does. The Senate is a responsible body.

The Senate has a responsibility. If the House does not want to accept what the Senate does, that is the prerogative of the Members of the House. However, the Senate has a responsibility. And I submit that the Senate has a responsibility to put a ceiling on expenditures. And that ceiling should be not more than—and in my judgment it should be less than—\$265 billion. That in itself is a 6-percent increase over what is being spent this year.

What better proposal to put such a ceiling expenditure amendment on than a dollar devaluation bill? Why is this legislation before the Senate today? Why is the dollar devaluation bill before the Senate today? It is because of the excessive governmental spending by Congress and by the President.

It is before the Senate and House for consideration, because of the excessive expenditures and the huge deficits the Government has constantly been running which have caused a deterioration in the value of the dollar. That is why the devaluation measure is before the Senate. If that were not the case, we would not have the bill up for consideration. The devaluation bill formally recognizes what has already taken place, namely that the dollar is less valuable now than it was in the past.

Secretary Volcker under questioning before the Senate Finance Committee said that devaluation is a radical step. Those are not the words of the senior Senator from Virginia. They are the words of Under Secretary of the Treasury Mr. Paul Volcker. He says that devaluation is a radical step. And there have been two devaluations in 14 months.

I think the Senate should proceed and should put a ceiling on expenditures at a time when so clearly what is needed more than anything else, as I see it, is to put a ceiling on the amount of money that the Government can spend.

The proposal of the Senator from Wisconsin (Mr. PROXMIRE) provides for an increase of \$15 billion in spending. I think that is too much. However, it is better than the other proposals. The other proposals would permit an increase in spending of \$18.7 billion.

I say again that the new budget submitted by the President calls for an increase in spending of \$19 billion. The proposal which the Senator from Wisconsin has introduced and which I have cosponsored proposes that the increase be held to \$15 billion.

If we are going to do anything about Government spending at all, certainly we should be willing to go as far as to say that \$15 billion is the maximum increase that will be permitted. I think it should be much lower than that. However, I do not think there is any chance of getting through legislation much lower than that. And for that reason I am supporting the \$265 billion figure. And I hope that the Senate will approve it, because I do believe that we are in a very dangerous financial position.

I say again that the appropriate vehicle for a debt ceiling is the devaluation bill. The figures that are significant to me, Mr. President—and I will put them in the RECORD in a moment—are that during the 4 fiscal years 1971 through 1974, the accumulated unified budget deficit—and that means after we apply to the total deficit the surplus from the trust funds—will be \$85 billion. If we take only the Federal funds deficit—and that is in my judgment what we should take, the Federal funds deficit, the administrative budget—then the accumulated total deficit in that 4-year period will be \$121 billion.

I suggest that we are in a very awkward and a very difficult position financially, and that Congress would be well advised to put a ceiling on expenditures. And I understand that is what the President would also prefer. Of course, he prefers the figure of \$268.7 billion, while the Senator from Wisconsin and the Senator from Virginia want a figure of \$265 billion.

Mr. TAFT. Mr. President, I wonder if the Senator from Texas would yield for the purpose of my engaging in a colloquy with the Senator from Virginia for a few minutes.

Mr. TOWER. Mr. President, could the Senator give me any idea about the time frame?

Mr. TAFT. Mr. President, I think that certainly within 5 minutes I could cover the points I want to cover.

Mr. TOWER. Mr. President, I will first yield to the Senator from Minnesota, because I promised him I would do so, and I will then yield to the Senator from Ohio for that purpose.

Mr. MONDALE. Mr. President, I would be pleased to follow the Senator from Ohio.

Mr. TOWER. Mr. President, I yield 5 minutes to the Senator from Ohio and the Senator from Virginia for the purpose of engaging in a colloquy with the understanding that I do not lose my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TAFT. Mr. President, I thank the Senator from Texas for yielding. The matter on which I want to engage in a colloquy with the Senator from Virginia relates back to the remarks of the Senator from Texas. The Senator from Virginia just mentioned that we should not take note of what the House might or might not do in connection with the legislation if we should put on a spending ceiling and send it to the House.

I find myself very much in agreement with him. In that regard I point out that the House has in their various proposals in this regard set a ceiling after having had only a very few preliminary hearings and no executive session hearings at all. As I understand it, the legislation which would come to the Senate from the House would not come until far later in the fiscal year when there would still be doubt as to what the financial picture of the Nation might be.

Would the Senator from Virginia comment on what the effect of that might be?

Mr. HARRY F. BYRD, JR. The Senator is quite right. This is now Thursday. By next Monday it will be April 2. The fiscal year ends on June 30. The new budget and the appropriations for fiscal year 1974 are under consideration now. Under the rules of the Congress, they should be enacted by the 30th day of June. There is not much more time left between now and the end of this fiscal year.

It seems to me that the more we would like to put on a ceiling—if we are going to put on a ceiling on expenditures at all—the more difficult it will be for the entire appropriating process because, as I mentioned, it is only 3 months from now that the fiscal year will end. And most of the legislation I have seen to help correct this situation for the future would require that a ceiling be put on in January.

Yet we are almost into April.

Mr. TAFT. I thank the Senator for his remarks. Continuing on the same subject, I feel strongly in agreement with the views expressed by the Senator that there is no telling what the House of Representatives might do with this legisla-

tion unless we enact it in this form and send it over to them. Particularly, I would note the comments yesterday of the distinguished chairman of the Finance Committee, in which he admitted, in effect, that this is not a revenue measure, but stated that the House of Representatives would nevertheless not agree to go ahead with it.

I certainly agree that it is not a revenue measure in any sense, under the Constitution, requiring initiation in the House of Representatives. I do not believe anyone in the Senate would take the position that it is, and I doubt whether many Members of the House of Representatives would take such a position. The facts as to the House problems in this regard really relate far more to committee jurisdiction, and the Ways and Means Committee jealously guarding its jurisdiction in relation to debt ceilings, than anything else.

I ask the Senator from Virginia if he would not agree that this is the problem, and that it could be very easily solved by the House of Representatives, if they should agree that this is a proper time and a proper vehicle on which to go ahead with the debt ceiling, by simply referring the matter to Ways and Means, or Banking and Currency and then Ways and Means, both procedures which I think could be handled in a fairly expeditious way.

Mr. HARRY F. BYRD, JR. Yes, I think the Senator from Ohio makes an excellent point, and it occurs to me that there probably is no other bill that would be more appropriate to put a spending ceiling on—

Mr. TOWER. Why not independent legislation?

Mr. HARRY F. BYRD, JR. Than this piece of legislation.

Mr. TOWER. What is wrong with independent legislation? I think the matter is sufficiently important to deserve independent legislation, rather than being just the tail on a smaller dog.

Mr. TAFT. Mr. President, in response to the Senator's inquiry, I can only say that independent legislation does not seem to be forthcoming from the appropriate committees, on one of which the Senator from Texas serves.

I refer again to the remarks of the Senator just a few minutes ago as to whether the world money markets might not be shaken if we failed to pass gold devaluation legislation right away. I ask the Senator from Virginia what effect a spending ceiling might have on those markets. I feel that in this field there is no single step we could take that would be more helpful in stabilizing the overall world monetary situation than an expression of the Senate by a strong vote to the effect that we wish to establish and support a spending limitation.

Mr. HARRY F. BYRD, JR. I strongly agree with the Senator from Ohio. It seems to me that would be one of the best things that could be done to stabilize a weakening dollar, for the Senate and Congress to establish a ceiling. That is far more important to the money markets of the world, in my judgment at least, than formal legislation devaluing the American dollar.

Mr. TAFT. I thank the Senator for yielding, and I thank the Senator from Texas.

Mr. HARRY F. BYRD, JR. If the Senator from Texas will permit me to put an insertion in the Record, Mr. Presi-

dent, I ask unanimous consent to have printed in the Record three tables which I have prepared, one showing receipts and expenditures for fiscal years 1968 through 1974, another showing deficits in Federal funds and interest on the national debt for the 20-year period 1955 to 1974, inclusive, and a third showing U.S. gold holdings, other reserve assets, and liquid liabilities to foreigners.

There being no objection, the tables were ordered to be printed in the Record, as follows:

DEFICITS IN FEDERAL FUNDS AND INTEREST ON THE NATIONAL DEBT, 1955-74 INCLUSIVE

(In billions of dollars)

	Receipts	Outlays	Surplus (+) or deficit (-)	Debt interest
1955.....	\$58.1	\$62.3	-\$4.2	\$6.4

CXIX—650—Part 8

Mr. TOWER. Mr. President, I ask unanimous consent that I may yield to the Senator from Minnesota (Mr. MONDALE) without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MONDALE. Mr. President, I understand that shortly the Senator from Texas will move to table the pending amendment, and I shall vote to support that motion.

I want to make it clear that I believe

Congress must swiftly impose an overall spending ceiling on Federal Government expenditures. I also believe that we should impose rules on the Executive which would determine the manner in which the President may reduce expenditures, so as to assure that congressional priorities would be observed. And third, I think we must pass an amendment like the Ervin amendment, which, without any doubt, would prevent the President from continuing on his present course of illegal and unconstitutional

impoundment of duly enacted laws and funds.

For several reasons, I do not believe the pending amendment fulfills these objectives. First of all, it does not deal with impoundment. If the present amendment is enacted, the President can cut as much as he wishes under this amendment, and then cut anything else he wants to under his present invalid views of his powers. So not only would impoundments continue, but I predict Congress would be blamed for all the cuts, and that, in addition to endorsing impoundments, we would be voluntarily taking the blame for them.

Second, it seems to me that this amendment is ahead of the proper scheduling, because, as I understand it, the Committee on Government Operations at this time is in the process of marking up a bill dealing with impoundments, a spending ceiling, and the rest. Also, we meet at a time when Senator ERVIN, chairman of the Government Operation Committee and chief sponsor of the bill, cannot be here because of a personal tragedy in his family which prevents him from participating in this debate.

Finally, of course, we have the point which the Senator from Louisiana (Mr. LONG) made yesterday—that these spending ceilings have traditionally been included as part of a revenue measure, on the grounds that the House of Representatives, properly or improperly, considers them to be revenue measures and not germane to nonrevenue measure such or the bill now before the Senate.

It seems to me we would be very foolish—indeed, I think it would be among the worst mistakes we have ever made—to pass a spending ceiling without also including ironclad protections against the kind of illegal impoundments that we see today; because I predict that if we give this President official power to impound, we will never get an anti-impoundment bill across his desk. We have got to make him limit his powers of impoundment as a part of the bargain of getting a spending ceiling; otherwise, I think we will never get a limitation upon illegal impoundment. And if we do not get that, let us face it, Congress is nothing more than an overpaid advisory body. The legislative dictates will henceforth be purely advisory to the administration, and we can point out hundreds of examples now of that kind of disrespect for the law.

Therefore, for all these reasons, I think the worst thing we could possibly do at this point is act on this amendment and, I, therefore, shall support the motion to lay on the table to be made by the Senator from Texas.

However, I hope that shortly we can have recommended out of the Committee on Finance the debt ceiling legislation, and that on that legislation we can attach an amendment which will meet the need which Senator PROXMIRE has raised for an overall spending limitation which would meet the need which Senator BENTSEN has raised to require balanced program reductions in all controllable expenditures, together with Senator ERVIN's amendment on impoundment. Then I think we would have a

package an overwhelming majority of the Senate could agree with, it would be on a proper bill, we would have Senator ERVIN here to help, and we could do the job the way I think it ought to be done.

So I shall support the motion of the Senator from Texas.

Mr. TOWER. Mr. President, I want to finally emphasize again my dedication to legislation supporting a spending ceiling, and I shall support such legislation when it is presented to the Senate. I should also like to reiterate my conviction that Congress must be responsible, and I shall demonstrate that conviction by voting against some rather popular measures, and to sustain some rather unpopular vetoes. Let there be no mistake about that.

But this is not the appropriate vehicle for that kind of amendment. Such legislation should be more carefully considered.

Therefore, Mr. President, I move to lay on the table the amendment of the Senator from Wisconsin; and I ask for the yeas and nays.

Mr. PROXMIRE. Mr. President, I withdraw my amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

AMENDMENT NO. 66

Mr. PROXMIRE. Mr. President, I call up my amendment No. 66 and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read the amendment as follows:

At the end of the bill, add the following:

TITLE II—FOREIGN CURRENCY REPORTS

STATEMENT OF FINDINGS

SEC. 201. The Congress finds that—

(1) the stability of the international monetary system is threatened by the existence of substantial sums of short-term liquid assets at the disposal of large United States business enterprises and their foreign affiliates;

(2) only a small percentage of United States business enterprises need to engage in speculative foreign exchange transactions in order to trigger an international financial crisis;

(3) the Government of the United States does not receive adequate and timely information on foreign exchange transactions conducted by large United States business enterprises and their foreign affiliates; and

(4) periodic and timely reports on foreign exchange transactions on the part of large United States business enterprises and their foreign affiliates would be useful in deterring the possibility of speculative exchange transactions and in providing the Government of the United States with information needed to deal with international financial crises.

AUTHORITY TO PRESCRIBE REGULATIONS

SEC. 202. (a) The Secretary of the Treasury (hereafter referred to as the "Secretary") is authorized and directed, under the authority of this title and any other authority conferred by law, to prescribe regulations requiring the submission of reports on foreign currency transactions consistent with the statement of findings under section 201. Regulations prescribed under this title shall require that such reports contain such information and be submitted in such manner and at such times, with reasonable exceptions and classifications, as may be necessary to carry out the policy of this title.

(b) Reports required under this title shall cover foreign currency transactions con-

ducted by any United States person and by any foreign person controlled by a United States person as such terms are defined in sections 7(f)(2)(A) and 7(f)(2)(C) of the Securities Exchange Act of 1934.

ENFORCEMENT

SEC. 203. (a) (1) Whoever fails to submit a report required under any rule or regulation issued under this title may be assessed a civil penalty not exceeding \$10,000 by the Secretary.

(2) In the event of the failure of any person to pay any penalty assessed under this subsection, a civil action for the recovery thereof may, in the discretion of the Secretary, be brought in the name of the United States.

(b) Whenever it appears to the Secretary that any person has violated any rule or regulation issued hereunder, the Secretary may in his discretion bring an action, in the proper district court of the United States or the proper United States court of any territory or other place subject to the jurisdiction of the United States, seeking a mandatory injunction commanding such person to comply with such rule or regulation, and upon a proper showing a permanent or temporary injunction or restraining order shall be granted without bond.

EFFECT ON OTHER LAWS

SEC. 204. Nothing in this title may be construed to alter or affect in any way the authority of the Secretary under any other provision of law.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that I may yield to the distinguished Senator from Virginia (Mr. HARRY F. BYRD, JR.) without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HARRY F. BYRD, JR. Mr. President, I want to say that I regret very much the Senator from Wisconsin has withdrawn his amendment providing for the spending ceiling. I submit that today is the time to vote for a spending ceiling.

Mr. PROXMIRE. I could not agree more with the distinguished Senator from Virginia. I intend to press for a spending ceiling before we are through with the bill. We have had a series of conferences with Senators and I have come to the conclusion that this is not the time, today, at this moment at least, to offer this particular spending ceiling provision. There is an excellent chance that, before this bill passes, we can attach a spending ceiling to it.

I want to thank the Senator from Virginia for his excellent speech just a few minutes ago in which he supported the proposal I made. I agree with everything he said, and that the spending ceiling should be lower than \$265 billion. I should like very much to have the opportunity to attach a spending ceiling to the bill, which I plan to do subsequently. But at the moment, it is necessary, for a number of reasons, that we postpone that for at least a little while.

Now, Mr. President—

Mr. NUNN. Mr. President, will the Senator from Wisconsin yield briefly?

Mr. PROXMIRE. I am happy to yield.

Mr. NUNN. I should like to commend the distinguished Senator from Wisconsin for advocating a spending ceiling, and also for his sound judgment in withdrawing the amendment at this time. We will have it at the proper time. I should

also like to associate myself with the remarks of the Senator from Minnesota in saying that the impoundment measure and the spending ceiling should be joined as one unit, because that is what we are dealing with here.

Also, I should like to restate the position which 13 new Members of this body took in a letter to the majority and minority leaders, in which we said that this is very important, and that in view of the public interest we have in the overall situation this year, and with the great financial crisis we face today, in devaluation, and otherwise, it is imperative that we deal with the subject of the spending ceiling, and also with the subject of impoundment, and do it prior to going into appropriation measures. If we are going into appropriation measures, it will be a great mistake, because it is important for us to put our congressional house in order first. I shall be happy, at the appropriate time, to join the distinguished Senators from Wisconsin and Virginia and other Senators who are pushing for a spending ceiling and I hope that we will not in any way dilute that effort.

Mr. PROXMIER. Mr. President, I cannot agree with the Senator from Minnesota when he said that we should wait for the debt ceiling, because that will not come up until next week, and then it will be discussed next week, and the next week, and the next week, and that will take a great deal of time. It will originate in the House with hearings and could not come down to us until a few days before the end of the fiscal year, perhaps. The President himself has said that we should act, as the Senator from Georgia just said, on the spending ceiling, before we take any kind of spending action for 1974. That means that we have to act, in my view, within the next week or so.

I thank the Senator very much for the point that he has made, that one of the reasons why we have done this is that we think, on next Monday, we will be in a much better position to act when the distinguished Senator from North Carolina (Mr. ERVIN) comes back to give us his most important advice. Yesterday the Senator from Georgia raised that point, that he should be consulted and be given the opportunity to give us his opinions on the impoundment measure, as the Senator from North Carolina is the most expert Senator in this body on the subject of impoundment. So we want very much to have his counsel and advice before we proceed.

Mr. NUNN. Mr. President, I should like to state at this point in the RECORD so that it will reflect my understanding, that the Government Operations Committee will be considering the Ervin impoundment measure, originally scheduled to be held yesterday, but because of Senator ERVIN's family tragedy, he had to be absent from the Senate. It is my understanding that there will be a considerable series of hearings as early as possible. I would join the Senator in hoping that we can get any benefit we may from it and that we should deal with the spending ceiling before we go into appropriations.

Mr. PROXMIER. I thank the Senator from Georgia.

Mr. President, the amendment now before the Senate would require reports on the foreign exchange transactions of these companies. My amendment would in no way restrict the freedom of large firms to buy or sell foreign currency. Nor does it require the repatriation of foreign currency holdings. Instead, it merely requires that periodic and timely reports be furnished by these companies when they buy or sell foreign currency.

NEW MONETARY SYSTEM

There was a time when the fixed exchange rate system agreed to at Bretton Woods functioned with reasonable stability. However, in the past few years, the international monetary system has been rocked by one financial crisis after another. One of the most important developments leading to instability in the international monetary system has been the growth of large, multinational corporations whose international financial transactions are virtually unregulated. The financial resources at the disposal of multinational corporations are now truly staggering.

I recall reading a book by a distinguished French journalist Sevan Schreiber on "The American Challenge," and he pointed out that the largest group of resources in the world, after only the United States and the Soviet Union, is not a third country, but American corporations abroad.

That is something that indicates the great power and strength of America. It is something that offers a challenge and indicates the great competence and know-how of our country.

But I think there are some problems involving some of these multinational corporations with which we must deal, especially in this particular bill.

The financial resources at the disposal of multinational corporations are now more than double the total volume of financial reserves held by all countries and more than triple the reserves held by industrialized countries.

We sometimes think of international money speculators as consisting of Arab sheiks, deposed Latin American dictators, international gamblers, and other sinister characters. However, in today's market, the bulk of currency flows are accounted for by large, multinational corporations.

Fortunately, there is a newly released study, and a superlative study, by the Tariff Commission—I hold a copy of it in my hand—of some 929 pages. It is a very timely study. The findings by the Tariff Commission point toward action by Congress on the amendment I am offering today.

FINANCIAL ASSETS OF MULTINATIONALS

According to a recent study of multinational corporations by the Tariff Commission, the short term assets of companies and individuals active in the international money market reached the staggering sum of \$268 billion by the end of 1971. Moreover, these assets have grown at the rate of 30 percent a year over the past 2 years.

U.S. multinational corporations including banks have acquired the lion's share of private funds in international finance. Of the total \$268 billion avail-

able to private firms and individuals, U.S. firms and individuals accounted for \$190 million, or 71 percent of the total. From these figures, it is clear that U.S. multinational corporations dominate our international monetary system.

To put the problem in perspective, consider the \$83.5 billion in currency reserves and other assets held by the central banks of the major developed nations. The combined holdings of U.S. multinational corporations alone, is nearly twice this amount.

Who, then, are the really big boys in international currency speculation? It is very clear that they are U.S. owned, multinational corporations. They dominate.

Consider—if the U.S. multinational corporations were to shift their total holdings by just 3 percent, the resulting currency flows would total nearly \$6 billion, or more than enough to trigger an international financial crisis. No single country has the reserves to sustain a concerted attack upon its currency on the part of large corporations.

In the words of the Tariff Commission report, central banks are "outclassed" by the resources of the private sector. Given the size of multinational corporations and their rapid growth, it is amazing that the international monetary system agreed to at Bretton Woods has survived as long as it has.

DO U.S. CORPORATIONS SPECULATE?

In reviewing our changing international financial system, a key question must be asked concerning the role of large multinational corporations: Are their activities stabilizing or destabilizing? Do they merely react to financial crises, or do they precipitate those crises? Are U.S. corporations to blame for the attack upon the dollar or were they merely acting to prevent losses in their financial position?

After reviewing the operations of multinational corporations, the Tariff Commission study concluded that—

While it is not appropriate to judge that speculative behavior characterizes the international financial dealings of the great majority of multi-national corporations, it is appropriate to stress that they have been a primary force in the growth of the international money and capital markets. This is the sense in which the multi-national corporations have altered the international realities around which policies of governments—and the international monetary system in general—are framed. . . . In an earlier time, central banks and governments had more freedom to work out appropriate monetary policies because the institutions of international finance were sufficiently underdeveloped that national money markets remained partially isolated from one another. The development of a strong, flexible international money market has taken away that advantage, allowing the international financial community to focus its flows quickly and directly—a focus which, as the recent international monetary crises have shown, has caused serious problems for the world's central banks.

WHO SOLD THE DOLLAR SHORT?

This conclusion was written before the latest dollar devaluation. Recent events have thus amply confirmed the warnings contained in the report. The role of U.S. corporations in the latest financial crisis

is difficult to assess. German bankers report that over one-half of the dollars purchased by the West German Central Bank came from U.S. corporations. The AFL-CIO has charged that by selling dollars abroad, "U.S. corporations and banks put profits ahead of patriotism, selling their country's currency in order to make swift profits for themselves."

Although U.S. corporations were heavily involved in selling dollars, corporate spokesmen maintain their actions were defensive rather than speculative. A GM vice president told a Senate committee that—

General Motors has not and will not speculate in the world money markets.

On the other hand, the Los Angeles Times on March 4 reported that—

Interviews with international bankers, multi-national corporation treasurers, economists and commercial banking officials show the outlines of a speculative pattern.

Business Week, which I think all of us recognize as a responsible and conservative publication, reached a similar assessment. In its February 17 issue, it reported that—

With the announcement of the mammoth \$6.4 billion U.S. trade deficit, many multinationals approached the thin line between protection and outright speculation.

The New York Times cites unconfirmed reports that American banks were selling dollars in Frankfurt in the final days before the devaluation.

PROFITS FROM DEVALUATION

All told, American corporations made at least \$300 million by switching from dollars to marks. While some or most of this profit may have been "defensive," when the stakes are this large, it is difficult to draw the line between protection and speculation.

Corporations also profit from devaluation to the extent that they have fixed assets in hard currency countries. The value of these assets increase with the upward appreciation of the country's currency. Peter Baer, a partner of the Baer banking house in Zurich, said that IBM, IIT, and Eastman Kodak were among concerns that got a devaluation dividend because of their substantial assets in hard-currency countries.

In one of the most forthright statements on the dollar crisis, the chairman of Gulf & Western Industries warned that—

Continued speculation on the dollar could lead to a wave of protectionism in the United States which in turn would result in the greatest depression ever. . . . The speculators operating in Europe today make Monte Carlo look like a silly little place. . . . There is a \$90 billion thundercloud hovering over Europe now which smells bad, and it is equalled only by the wind of isolationism sweeping throughout the United States.

This corporate official hinted that multinational corporations were adding to the wave of currency speculation in Europe, but vehemently denied that Gulf & Western Industries did any speculating.

Similar denials were issued by IBM, Union Carbide, and Pepsi-Cola.

TREASURY DOES NOT KNOW

Mr. President, with all these large companies denying they were involved in speculation, it makes one wonder just

who was involved. The sad fact is that we simply do not know. The Treasury does not have the foggiest idea which companies were dumping dollars in foreign currency markets.

This was something that bothered me during the committee's hearings; and when Under Secretary Volcker came before the committee, I questioned him on it. It seemed to me that the Treasury of the United States should have some knowledge, some basis for understanding, about speculation against our dollar, in view of the fact that by far the biggest element in the holding of reserves were the multinational corporations. In view of the great importance to their well-being, as well as the well-being of our country, of a stable dollar and a sound dollar, it seemed to me that the Treasury Department should know the extent to which these very large corporations were involved. So during the committee hearings on the devaluation bill, I asked Treasury Under Secretary Volcker what role U.S. multinational corporations played on the speculative inflow of funds to Germany and Japan. As I say, we have established the fact that more than two-thirds of all the internationally held assets are held by these multinational corporations, that they dominate the field.

Secretary Volcker replied:

I can't answer that question. We don't have the data.

Mr. Volcker went on to say that he would like to have the information, but that a reporting system just had not been set up.

Now, Mr. President, I cannot imagine a more absurd situation. The Government collects statistics on practically everything. Small business firms are flooded with a sea of paperwork, yet the Treasury does not know which corporations are selling dollars during foreign exchange crises, when they are such an important element.

Large multinational corporations receive daily reports on their kinds of businesses. They employ computers and the most sophisticated techniques and management science in managing their cash balances. They collect and disseminate information on a worldwide scale.

By contrast, our Government officials and those of other countries are still scribbling figures on the backs of envelopes.

According to the Tariff Commission report, much of what happens in the international monetary crisis is listed under errors and omissions in the balance of payments accounts. That category has always fascinated me. It is always billions and billions of dollars. It is a confession that we don't know what is going on. The corporations know what is going on. It would not involve a great deal of paperwork. They have the information, but we make no effort to pick it up.

The Tariff Commission report concluded with this strong recommendation:

There is a need for governments—primarily central banks—to develop information systems at least as good as those possessed by the multi-national corporations. Since the multi-national corporations, at least the important ones, already are developing such information for themselves about themselves,

it would seem possible and not excessively costly for central banks to require such information, on a confidential basis, from the multi-national corporations. Access to reports on short-term asset and liability positions and where they are held would greatly enhance the perspective of the monetary authorities respecting international financial problems as they develop, and it would provide insights into the possible solutions to solve such problems before they degenerate into international monetary crises.

Mr. President, I think a strong case can be made for keeping this bill as germane as possible. I hope we can still adopt a ceiling amendment. I think that is highly germane. But what could be more relevant and central to our being able to prevent this kind of problem in the future than an amendment that requires the multinational banks to make confidential, regular, periodic reports—which is what my amendment does—to the Treasury.

After all, this is a congressional power we are talking about. The Constitution is very clear on this matter. Congress has the right to coin money and regulate the value of that money. It is our power. The President acted, rightly or wrongly, when he devalued the dollar. This was a devaluation, a usurpation of congressional authority.

I am saying it was necessary for the President to take that action, but when we accept his devaluation action we should at the minimum require a reporting system so that we have data on which the Treasury can inform Congress in the future as to the basis of speculation in the dollar so that we can take the steps necessary to correct the situation.

Mr. TOWER. Mr. President, the Senator might be surprised to know I agree with him. This is germane and an appropriate vehicle for this legislation. I shall oppose the amendment of the Senator, but I am in agreement with him in spirit that something must be done. I will cite my reasons for opposing it. But I do feel the Senator has offered an amendment that is quite germane and pertinent.

Mr. PROXMIRE. I thank the Senator from Texas. He has looked into this matter carefully and he is very well informed in this area.

I am willing to modify my amendment, if there is an amendment by the Senator from Texas with the same thrust, but I think we should act now rather than in a future bill. This is an amendment that would go to the devaluation problem. This is the only time it will be before us forever because Dr. Burns said we will not have another devaluation.

Would the Senator enlighten us as to why we cannot act now?

Mr. TOWER. Rather than give all my argument now I would prefer to wait until the Senator completes his remarks and then I will make my presentation and perhaps we can engage in a colloquy.

Mr. PROXMIRE. Mr. President, the European financial officials also support the need for better information on U.S. multinational corporations. We tend to regard this as a situation in which Monte Carlo gamblers and sheiks are doing this, but Europeans are not under that illusion. They know the facts. About three-fourths of this activity is within the con-

trol of U.S. multinational corporations. They have indicated in about as emphatic and clear way as they can, without being undiplomatic and rude, that the United States should know what is going on by its own companies.

The current chairman of the Common Market Council of Ministers, Mr. Willy Leclercq, suggested that governments should require multinational corporations to disclose how much and what kind of money they are holding, both at their home offices and their foreign branches. This official placed most of the blame for monetary instability on large multinational corporations.

That is about as appropriate an official as I can imagine to comment, who has a position in this area. He is chairman of the Common Market Council of Ministers. He placed most of the blame for monetary instability on large multinational corporations. These gentlemen who occupy positions of this kind are inclined to be extraordinarily careful and guarded in their statements. His conclusion was clear and emphatic:

Most of the blame for monetary instability is on large multinational corporations.

I am not suggesting we should limit them or prohibit their opportunity to buy and sell currency. All I am saying is they should let us know what is going on so Congress can be informed and the President and the country can be informed about these matters, and we would then be in a position to act.

Mr. President, my amendment authorizes and directs the Secretary of the Treasury to require periodic and timely reports from large U.S. corporations dealing in foreign currency.

Originally we had decided we would require daily reports. That might seem to be a great burden. The fact is that the reports are confined to large corporations. They know what is going on. I have modified and changed my amendment before the Senate. It does not require daily reports. It gives that discretion to the Treasury. But it does require timely and periodic reports. These reports could be daily if the Treasury needs the information to keep itself informed about a potential currency crisis.

The reports would cover the activities of the U.S. parent as well as any foreign affiliate. While U.S. laws cannot directly extend to foreign companies, the United States can require U.S. corporations to assemble and report information from their foreign affiliates. Moreover, most of this information is already available in corporate headquarters. As the Tariff Commission report points out:

Basic to the efficient, centralized management of the finances of a large multinational corporation is the existence of only one or a few central profit centers with the ability and the resources to plan the firm's worldwide operations in fine detail.

Under my amendment, the Treasury would have flexibility to determine the extent and timing of these currency transaction reports and to make reasonable exceptions and classifications. For example, it is expected that the reports would be required of only the largest corporations and then only to the extent their foreign exchange operations had

a significant effect upon the market. I would envision that daily reports would be required for large and unusual currency transactions which depart from the firm's customary trading pattern.

That would be my intention. The language of the law requires simply periodic and timely reports. I think the experts in the Treasury, under those circumstances, would require daily reports under these circumstances. With the kind of crisis the country and the world had to undergo in January, for example, daily reports would have been enormously helpful.

Furthermore, I believe the following advantages will flow from my amendment if it is adopted:

First, the mere requirement of disclosure would help eliminate unwarranted currency speculation.

So that to the extent that there is speculation—and I think it is obvious that there has been a substantial amount of it—the speculative activity is very likely to be restrained except to the extent that it can be fully justified and that it would not be construed as being counter to the best interests of our country.

Under today's climate of instability, the foreign exchange market is not unlike the securities market of the 1920's. Foreign currency markets can be subject to manipulation the same as securities markets.

We had all kinds of talk about how gold speculators were deliberately driving up the price of gold and making killings along the way; how they were deliberately driving down the value of the dollar and making enormous sums moving their currency into marks and into yens. Of course, there was an opportunity for firms to make tens of millions of dollars, and in some cases hundreds of millions of dollars, in a matter of days, with just a few decisions, and those decisions become easy with colossal assets in the hands of corporations, and with the momentum they generate it is not very difficult to do that.

What is lacking here and in our securities markets is disclosure, so that we can have some knowledge of what is going on, that there is concerted action to drive up a price, which action can be disclosed and watched.

We therefore need to apply the same disclosure approach. Given the size of our international financial system, it only takes a few companies to trigger a worldwide financial crisis. I am not charging that this has been done in the past. But we need to insure that it cannot be done in the future.

Second, my amendment will give our financial officials the information they need to understand what is happening and to prevent another currency crisis. A reporting system will serve as an early warning system for detecting possibly disruptive currency movements.

So not only would it tend to discourage unwarranted and unjustified speculation; it would also give our financial officials information with which to understand what is happening and to prevent and avert a monetary crisis.

Third, my amendment will serve to

build confidence in the stability of the international financial system. Because the financial currency transactions of large corporations are often conducted in absolute secrecy, many people feel that they contribute to instability. A reporting system will provide some assurance to our major trading partners that our multinational corporations are subject to some governmental scrutiny.

Mr. President, I believe the events of the last few weeks have demonstrated the need for my amendment. No one knows for sure how much power multinational corporations really have and whether their activities are destabilizing. We will never know unless we have more information. That is what my amendment calls for—more information. I am hopeful that the disclosures called for by my amendment will help us to understand the role and function of large multinational corporations.

Mr. President, I would like to read some of the highlights from this very appropriate and pertinent report.

Mr. TAFT. Mr. President, I wonder if the Senator would yield for some questions at this point.

Mr. PROXMIRE. I am happy to yield to the distinguished Senator from Ohio.

Mr. TAFT. I thank the Senator for yielding.

I have listened with interest to his remarks about the possible effect of American multinational corporations dealing with currencies. I am not certain as to what the situation is with respect to disclosure. As I gather from the simple wording of the amendment before us, the information required to be made available to public officials here involved would be disclosed to the public generally. I would like to inquire if that is the case and whether the Senator thinks there are some other restrictions upon disclosure that would apply.

Mr. PROXMIRE. Well, it would depend. It would not be disclosed if it was not required under the Freedom of Information Act. It would be a matter of determination and judgment—the judgment, in the first place, of the Secretary of Treasury, and, in the second place, of the courts if it were challenged. That act does permit the withholding of confidential business information.

Mr. TAFT. If the American multinational corporations are indeed engaging in transactions in money markets for the purpose of making money or taking favorable advantage of foreign exchange situations—whether they are in it or not, they are good businessmen and are aware of the situation in foreign exchange, and whether in addition to their regular operations abroad, nevertheless they are from day to day making decisions as to foreign exchange—would not this really mean they would have to disclose such information, and should not we try to provide a basis over and beyond that which would protect them from being put at a disadvantage insofar as dealing in foreign exchange markets is concerned, with large foreign competitors who would not have to disclose such information?

It seems to me we do not want to put American companies at a great disadvantage.

vantage, particularly at a time when many see some new bogeyman coming into the international money market with respect to our dollars as a result of our energy crisis?

Mr. PROXMIRE. The Senator makes an excellent point. Certainly we do not want to put our companies at a disadvantage as compared with other corporations. The way this amendment would operate, the Secretary of the Treasury would have authority to decide the extent to which information which was confidential should be confidential.

And it would be up to him to comply with the Freedom of Information Act.

It would seem to me that he would have the discretion to protect the interest of American corporations so that they would not be subjected to a competitive disadvantage. At the same time, he would be in a position to inform both himself, the President of the United States, the Chairman of the Federal Reserve Board, and other relevant and appropriate officials as to the situation.

There would be sometimes, such as during the currency crisis we have gone through, when some of this information should be disclosed without seriously inhibiting the action of American corporations in competition with other corporations.

Mr. TAFT. Mr. President, I thank the Senator.

Mr. PROXMIRE. Mr. President, I might say to the Senator from Ohio that this amendment comes from a recommendation in the Tariff Commission report. It is not just my recommendation.

As the Senator knows, the Tariff Commission is a bipartisan body. It explained this matter with great comprehensiveness and thoroughness. It is a remarkable report.

The report in discussing the role of the multinational corporations in generating liquid short-term capital flows and international monetary crises, says:

Since 1967, the international monetary system has been subjected to a series of shocks that have threatened its foundations, called into question the utility of the Bretton Woods Agreements of 1944 on which it is based, and, finally, forced the abandonment of the parity of its linchpin, the United States dollar. The only comparable period of such strain on the system within living memory was that of the hectic international monetary history of the 1920's and 1930's. Indeed, the threat of a return to the disordered condition of those two decades—and the fear of it—lend urgency and fire to the current debate about just what is wrong with the present system. It should be clearly underlined, however, that despite the recurrence of severe international financial crises in recent years (especially since 1967), the economic troubles which beset the major countries in the 1920's and 1930's have been absent. Despite disruptions in the monetary sphere, world economic growth, world trade, and international investment have reached record levels.

THE TYPICAL "CRISIS"

The international monetary crises of recent years have been more alike than different. They have so many characteristics in common that it is an easy matter to describe the "typical" financial crisis, which begins with a balance of payments disequilibrium between one country with a relatively large deficit and one or more countries with large surpluses, the counterparts of that deficit.

National policies are applied with greater or lesser enthusiasm in order to correct this disequilibrium. Generally, they are applied more severely in the deficit country than in the surplus ones, and sometimes the policies applied by the surplus countries turn out to be perverse, from the balance of payments point of view. That is, they find themselves, despite payments surpluses, in inflationary situations which they attempt to combat with tight money and high interest rates. These kinds of policies work to increase rather than decrease payments disequilibrium.

In any case, exchange rates begin to reflect the payments problems. The deficit country's rate becomes "weak" and the surplus countries' rates become "strong." Under a par value system of the Bretton Woods type, exchange rates are fixed within the short run; in practice, the monetary authorities of the developed countries have attempted to keep them fixed in the long run too. Central banks have bent every effort to defend existing rates. In this process, the deficit country must sell off its reserves, while the surplus countries accumulate them.

In fairly short order, this process has led to huge and heavily disequilibrating flows of liquid short-term capital. Funds move away from the weak currency and toward the strong ones.

The deficit country loses its reserves at a rapid rate; the surplus countries gain them equally as fast. The deficits get bigger, and so do the surpluses. Soon, the question of the appropriateness of policies to rectify balance of payments problems in the long run—or even the extended short run—becomes academic. Capital flows have depleted the deficit country's reserves and swelled the surplus countries' holdings to the point of unwellcomeness.

THE ACCUSATION AGAINST THE MNCs

Opponents of the MNCs argue that they play a crucial, destructive role in international monetary crises. The argument sometimes includes an accusation that they bear responsibility for at least part of the balance of payments problems that originally generate the crises, but this accusation is not central to the argument. Rather, the central point is that the MNCs are a source of the large flows of liquid short-term capital that are the proximate cause of the wreckage. Moreover, it is argued that these flows arise because the MNCs are predilected toward sustained, unstoppable "speculative" attacks upon exchange rates. Thus, it is held, speculators, with the MNCs in the van, can cause enough havoc within the system to produce the threat of devaluations or revaluations of exchange rates even if underlying national economic policies are appropriate and severely enough applied to rectify the balance of payments disequilibrium—if only the speculators would give them the necessary time, which they do not.

Mr. President, this is an extraordinary indictment by the Tariff Commission. What they are saying is that no matter what kind of monetary policies are adopted by the United States and other countries, and no matter how sound those policies may be, they can be frustrated by the actions of multinational corporations and banks.

We can have an effective monetary policy limiting the growth in the money supply to an annual rate of 3 percent. We can adopt other policies to improve our balance of payments including restrictions on tourism and direct investment abroad. These policies would all go for naught if the multinational corporations, two-thirds or three-quarters of which are American, took a different course.

I am not asking for regulation; I am asking for information, so that we will know what they are going to do.

Mr. President, the Tariff Commission goes on to say:

An evaluation of the allegations made against the MNCs should involve an analysis of flows of liquid, short-term capital as they show up in the balance of payments, isolating and measuring those flows that are attributable specifically to the MNCs. Unfortunately, this is not possible.

Unfortunately, we do not have the information with which to do that. But this is just the information my amendment would provide. Data for the flows attributable to the MNC's are not available. In this respect, central banks and governments are technologically inferior to the MNC's which, in their own operations are able to gather, analyze, and act upon the information necessary to them.

Let me say that this amendment takes no pro or con position on multinational corporations, which are highly controversial. Many people in international business feel that multinational corporations are an addition to our economic operations and serve us well. Many in labor organizations are highly critical, saying they have resulted in an exportation of jobs.

Either position may be partly right or entirely wrong, or partly wrong or entirely wrong. My amendment does not move to that at all. Regardless of the position one takes pro or con on multinational corporations, I do not know how anyone could say that the Treasury of the United States, under the Freedom of Information Act, with a proper opportunity to safeguard confidentiality, should not have this information available so that we would be in a position at least to know what is going on.

As a matter of fact, Under Secretary Volcker, in the hearings before the Senate committee, confirmed that. I asked if he had information on the part that the multinational corporations played. He said, "No." He said, "I would like to have it."

He would like to have it, but he did not have it. This amendment would give it to him.

As the Tariff Commission points out, there is a useful alternative, however. This approach, the one taken in the following analysis, involves, first, an identification of all those kinds of institutions—banks and business firms—which have dealings in the international money markets, as opposed to strictly domestic ones. Once this identification is made, the next step is to add together, as accurately as possible, the total resources—assets and liabilities vis-a-vis each other—which these institutions have at their command. Essentially, this procedure estimates the amounts of short-term funds that can flow in a crisis situation. If the numbers turn out to be small, then it can be concluded that these institutions' financial muscle is overstated by the critics. If they are large, then it can be concluded at least that the possibility of disequilibrating behavior becomes strong. All that is left to ask in the latter two cases is whether this behavior is speculative. That is, do the

MNC's speculate aggressively—by risking assets for financial gain—or do they merely react protectively, to guard their assets against possible loss in value due to an exchange rate change brought on by the underlying balance of payments disequilibrium?

How do you find that out? Well, the Tariff Commission suggests at least seven discrete types of institutions can be identified as significant participants in the international money markets. These are:

First. United States commercial banks;

Second. United States "nonbanks"—that is, nonbanking business enterprises, including the parent firms of the MNC's;

Third. Foreign commercial banks, not including foreign branches of U.S. banks;

Fourth. Foreign governments, central banks, and international organizations;

Fifth. Foreign nonbanks, the counterpart of U.S. nonbanks in second above;

Sixth. Foreign affiliates of U.S. nonbanks—the MNC's affiliates;

Seventh. Foreign branches of U.S. banks.

Assets and liabilities of these groups should be included only to the extent that they are connected closely with the international markets, either because of the nature of the institutions which hold them or because of the kinds of transactions from which they derive. Also, the balances measured should be defined as carefully as possible as those short-term, liquid items that could and would move

across international boundaries in times of crisis. Thus, one should exclude reserve holdings of the principal central banks, even if they happen to be held as deposits in commercial banks, because it is highly unlikely that the major central banks would engage in speculation with those assets; they probably would remain so loyal to their fraternity that even protective movements against a weak-currency central bank would not take place.

The appropriate estimates for the seven sets of participants appear in a table, which I ask unanimous consent to have printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

ESTIMATED SHORT-TERM ASSET AND LIABILITY POSITIONS OF PRINCIPAL INSTITUTIONS IN INTERNATIONAL MONEY MARKETS, 1969-71

[Billions of U.S. dollars]

Holder of assets or liabilities	Denominated in dollars		Denominated in foreign currencies		Total	
	Assets	Liabilities	Assets	Liabilities	Assets	Liabilities
U.S. banks: ¹						
1969	8.9	28.1	0.5	0.2	9.4	28.3
1970	10.1	21.8	.6	.2	10.7	22.0
1971	12.1	15.8	.9	.2	13.0	16.0
U.S. nonbanks:						
1969	3.5	1.7	.7	.4	4.2	2.1
1970	3.6	2.2	.6	.5	4.2	2.7
1971	4.7	2.2	.5	.4	5.2	2.6
Foreign banks: ²						
1969	64.9	52.3	10.7	10.6	75.6	63.0
1970	43.0	31.7	5.8	5.8	48.8	37.5
1971	44.3	38.3	8.4	8.2	52.7	46.5
Foreign governments, central banks, and international organizations: ⁴						
1969	4.9	(⁵)	.4	(⁵)	5.3	(⁵)
1970	10.0	(⁵)	2.8	(⁵)	12.8	(⁵)
1971	10.7	(⁵)	8.0	(⁵)	18.7	(⁵)
Foreign nonbanks:						
1969	7.3	6.2	(⁵)	(⁵)	7.3	6.2
1970	7.6	9.4	(⁵)	(⁵)	7.6	9.4
1971	6.8	11.4	(⁵)	(⁵)	6.8	11.4
Foreign affiliates of U.S. nonbanks: ⁷						
1969	(⁵)	(⁵)	(⁵)	(⁵)	59.9	34.9
1970	(⁵)	(⁵)	(⁵)	(⁵)	80.6	46.9
1971	(⁵)	(⁵)	(⁵)	(⁵)	110.0	63.0
Foreign branches of U.S. banks: ⁸						
1969	(⁵)	(⁵)	(⁵)	(⁵)	(⁵)	(⁵)
1970	34.6	36.1	12.7	11.3	47.3	47.4
1971	40.2	42.1	21.2	19.4	61.4	61.5
Totals:						
1969	89.5	88.3	12.3	11.2	161.7	134.5
1970	108.9	101.2	22.5	17.8	212.0	165.9
1971	118.8	109.8	39.0	28.2	267.8	201.0

¹ Data are total foreign short term assets and liabilities of U.S. banks as reported in U.S. sources, less claims on and liabilities to official monetary institutions.

² Basically, these data are those reported to the BIS by banks in 8 European countries (Belgium-Luxembourg, France, Germany, Italy, Netherlands, Sweden, Switzerland, and the United Kingdom), plus Canada and Japan. Figures from U.S. sources relating to foreign branches of U.S. banks have been subtracted from these figures and are shown separately in the table for 1970 and 1971. Also, the 8 European countries' asset and liabilities vis-a-vis the United States (denominated in dollars) were removed from the totals, and data from U.S. sources on total dollar claims and liabilities against foreigners were added.

³ Includes foreign branches of U.S. banks.

⁴ Data cover (1) identified official holdings of Eurodollars, (2) unidentified holdings of Eurocurrencies plus residual sources of reserves—both as estimated by the IMF—plus (3) claims on U.S. banks of nonmonetary official institutions such as the IBRD and IADB.

⁵ Not available.

⁶ Available data cover United States and foreign banks' claims on and liabilities to all foreign nonbanks, including foreign branches/affiliates of U.S. nonbanks. To insure elimination of double-

counting, since positions of the U.S.-affiliated firms are shown separately, the available data have been reduced by 50 percent—i.e. it is assumed that half of the assets and liabilities reported by United States and foreign banks against foreign nonbanks actually are liabilities and assets, respectively, of foreign affiliates of U.S. nonbanks.

⁷ Data are estimated current assets and liabilities of nonfinancial affiliates of U.S. firms.

⁸ Figures are from U.S. sources citing total assets and liabilities of branches. Therefore, some long term items are included.

⁹ Included under "foreign banks."

Sources: Federal Reserve Bulletin, September 1972; U.S. Treasury Bulletin, September 1972; Bank for International Settlements, Annual Report, 1971 and 1972; International Monetary Fund, Annual Report, 1972; U.S. Commerce Department, Office of Foreign Direct Investment, Foreign Affiliate Financial Survey, July 1971 and Foreign Direct Investment Program, Selected Statistics, July 1971; and data furnished by U.S. Department of Commerce, Bureau of Economic Analysis, Foreign Investment Division.

Mr. PROXMIRE. This table contains some purposeful double counting, in the following sense: as the table is constructed the assets of any one set of factors listed constitute the liabilities of all the others to it. The powers of debtors as well as creditors should be borne in mind. The decision to move a balance from one location to another depends not only on the motivations of the balance's owner—who clearly can shift a deposit, say, from a bank in one country to a bank in another—but also upon those of the institution which owes the money; it can transfer its liability with equal facility. The thrust of the analysis is to identify the decision points and measure the resources that are available at each of them.

There is absolutely no doubt that the table I have placed in the RECORD contains figures that should not be there, either because they are not to be considered volatile or because they represent

balances of an essentially domestic, rather than international character. On the other hand, it fails also to account for large balances that should be included, such as the assets and liabilities of non-U.S. MNC's. On balance, there is an error in the overall estimates, in one direction or the other. However, as the subsequent analysis will imply, substantial errors could be present in the estimates without necessitating any fundamental alteration of the conclusions which are derived from them.

The key figures in the table are the overall total asset and liability estimates in the lower right-hand corner. These measure the amounts of short-term funds that may have been capable of flowing within the system at the end of each of the 3 years covered—\$162 billion in 1969, \$212 billion in 1970, and \$268 billion in 1971 on the assets side. Mr. President, note that enormous increase in 3 years: An increase of \$100 billion

between 1969 and 1971. In fact, in 2 years—and on the liabilities side—\$135 billion in 1969, \$166 billion in 1970, and \$201 billion in 1971.

These indeed are very, very large numbers, and what is even more important, they are increasing and expanding at an enormous, almost geometric rate. They should lay to rest any doubts that the seven sets of organizations involved are capable of generating figures that could disrupt normal payments relationships among countries and, in fact, help to generate international monetary crises and tensions.

As I say, no matter how sound our fiscal policy and monetary policy may be, no matter how truthful and careful we are and our Government may be, and all other governments may be, unless we are able to get the Treasury report, how can we know what is going on and have some basis for activity, so that we can protect the dollar?

Consider the total assets estimated as available at the end of 1971: \$268 billion. A movement of a mere 1 percent of these, or \$2.7 billion, in response to exchange rate weakness or strength, is quite sufficient to produce a first-class international financial crisis.

Mr. President, I ask unanimous consent that I may suggest the absence of a quorum without losing my right to the floor.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROXMIRE. Mr. President, I ask for the yeas and nays on the pending amendment.

The yeas and nays were not ordered.

Mr. PROXMIRE. Mr. President, I modify my amendment, and I send the modifying language to the desk.

The modification is as follows:

On page 3, strike lines 6 through 11 and insert the following:

"may be assessed a civil penalty not exceeding \$10,000 in a proceeding brought under subsection (b) of this section."

On page 3, line 13, after the word "has", insert the following:

"failed to submit a report required under any rule or regulation issued under this Title or has".

On page 3, line 21, change the period to a comma and insert the following:

"and additionally the sanction provided for failure to submit a report under Section (a)".

Mr. MANSFIELD. Mr. President, I ask for the yeas and nays on the amendment. The yeas and nays were ordered.

Mr. PROXMIRE. Mr. President, let me briefly summarize this amendment by saying that what this amendment requires is that U.S. multinational corporations, which have \$190 billion of the \$268 billion that was available at the end of 1971—much of which is available for speculation or for legitimate transactions in foreign currencies—should make periodic and timely reports to the Treasury of the United States, so that the Treasury can inform Congress and inform itself on the speculative activities of these corporations.

It is not a regulatory amendment. It is an amendment that prevents these corporations from doing whatever they wish. They are protected, under the Freedom of Information Act, at the discretion of the Secretary of the Treasury. He is in a position that he does not have to disclose confidential business matters which would in any way prejudice or endanger the competitive strength of these corporations.

Mr. President, I have modified my amendment, in accommodating the Senator from Ohio, to provide that in order to impose a civil penalty to require compliance, it would be necessary for the Secretary of the Treasury to go to court, and only the court would be in a position to require that compliance.

Mr. President, I yield the floor.

Mr. TOWER. Mr. President, the Senator from Wisconsin has hit on an important subject, the matter of short-term capital flows across national borders that have been attacking monetary stability. There obviously is a large supply of dollar balances, particularly, in the hands of both foreign holders and U.S. citizens and corporations, which have been wired across national boundaries in great volume every time there is any tremor in the fixed-rate system. Some of this movement is totally justified for business reasons that come under the category of "hedging"—that is, preparing in advance against the risk that future payments against debts or obligations in foreign currencies will become more expensive to the holders of dollars, if they are depreciated. Some of this movement is "speculative," however, and is simply the result of betting against the dollar's future value by holders of dollar balances who have no business purpose in mind, and who are simply pursuing possible gain from international monetary developments.

We do not really know the extent to which multinational corporations are engaging in the speculative type of foreign exchange operations, as opposed to the hedging type. Many dollar-balance holders are not U.S. citizens or corporations, and we know even less about the extent to which they speculate against the dollar. It probably would be helpful to know more about the capital transactions of our business firms, and at the present time the Treasury is studying improvements in its information gathering system to accomplish just that. Treasury already has statutory authority to gather any monetary-related information it may desire from U.S. citizens and corporations, under the Emergency Banking Act and the Bretton Woods Agreement Act, and it currently has regulations requiring certain types of capital transactions information to be reported.

The information which Treasury now requires is the following:

First. Banking liabilities to foreigners, deposits and assets held in custody—end month;

Second. Banking claims on foreigners—loans, acceptance credits, deposits and other assets held abroad—representing assets of the banks and their domestic customers—end month;

Third. Transactions in long-term securities with foreigners—monthly;

Fourth. Nonbank firms' liabilities to nonaffiliated foreigners—borrowings, trade payables, other payables—end of quarter,

Fifth. Nonbank firms' claims on nonaffiliated foreigners—loans, trade receivables, deposits abroad, other assets—end of quarter.

In addition, the Commerce Department gets quarterly reports from business firms covering their accounts with their foreign affiliates—branches, subsidiaries, and head offices—including short-term claims and short-term liabilities, under authority of the Emergency Banking Act.

As I said, Treasury is studying improvements in this information system now, which we can expect would meet

the purposes of the Senator's amendment. Also, the International Monetary Fund in a meeting 2 days ago issued a communique expressing the Fund's intention to study this problem. I quote from the release:

An intensive study should be made of effective means to deal with the problem of disequilibrating capital flows by a variety of measures, including controls, to influence them and by arrangements to finance and offset them. It was noted that the Deputies are establishing a technical group on disequilibrating capital flows, including those associated with Euro-currency markets.

Under Secretary Volcker of the Treasury Department has written to me expressing his concern about his proposal, and I will subsequently read his comments to the Senate before this matter is voted upon. As the Senate is aware, Under Secretary Volcker has been the principal negotiator for the United States in the recent monetary negotiations and is the official most knowledgeable about the impact of the present amendment on the international situation.

I should like to read into the RECORD at this time the letter from Under Secretary Volcker:

THE UNDER SECRETARY OF THE
TREASURY FOR MONETARY AFFAIRS,

Washington, D.C., March 28, 1973.

Hon. JOHN G. TOWER,
U.S. Senate, Committee on Banking, Housing
and Urban Affairs, Washington, D.C.

DEAR SENATOR TOWER: I understand that in connection with consideration in the Senate of the Par Value Modification Bill (S. 929), some members have expressed a desire to institute a new reporting system which would be designed to obtain information on short-term and speculative capital flows. I would very much hope that such initiatives would be resisted. This is a real problem area here, but I feel that a mandatory legislative initiative of this kind would be untimely and might well have undesirable side effects.

I can assure you that the Administration is quite concerned about the problem of speculative capital flows and that it is being given serious attention both internationally and domestically.

We are examining this problem in cooperation with the other leading financial countries. I have just participated in the meetings which were held by the Committee of 20 on international monetary reform in Washington, in which the Committee specifically endorsed an intensive study of effective means to deal with the problem of disequilibrating capital flows. The Deputies of the Committee of 20 are establishing a technical working group for this purpose.

We are also considering internally how our existing reporting system on capital flows and related statistics can be improved. Decisions on changes that may be administratively feasible and statistically meaningful require very careful planning and study. Our existing legislative authority on reporting is fully adequate to implement any improvements that may be found desirable.

Since we have adequate existing authority in this field, there is a clear danger that new legislative action could be misinterpreted as evidencing an intention to go beyond mere statistical reporting. However unfounded, such misinterpretation could readily fuel new capital movements of the kind that have disturbed exchange markets in recent weeks.

Sincerely yours,

PAUL A. VOLCKER,

In short, one thing the Treasury, I believe, is concerned about is that if the

amendment of the Senator from Wisconsin is passed, it will appear to many to be the harbinger of exchange controls and in anticipation of exchange controls, Mr. President, you could set off another round of speculation that could have very serious consequences.

The department now feels it has the authority it needs and it is in opposition to the amendment of the Senator from Wisconsin.

I agree in spirit with what the Senator is trying to do, and I think we are perhaps very like minded on this matter. But the Treasury Department and Mr. Volcker, who has been an adviser in this matter, feel they have adequate authority and the information the Treasury will require will be available.

Mr. President, I urge that the amendment be rejected.

Mr. PROXMIER. Mr. President, I shall be brief. I already have spoken on this matter.

I do wish to point out that this is something the Secretary of the Treasury says formally he does not want but I wish to read from the hearings. During the hearings I asked:

Senator PROXMIER. What role did these corporations play on the speculative inflows of funds to Germany and Japan?

Mr. VOLCKER. I can't answer that question. We don't have the data.

Senator PROXMIER. Isn't that pretty important to understand what is causing this type of thing to the extent that these are companies that may have an obligation to the United States and be to some extent under our jurisdiction?

Mr. VOLCKER. I would like to know the answer. If we had a good enough statistical reporting network I would respond more intelligently than I am.

We are told we cannot do anything on this; but the President devalued the dollar. There is clear congressional authority and responsibility to determine the value of currency. Of course the President has to act under these circumstances. I do not believe he should not have acted but I say we have every right to modify the bill and that we must act in any way we can to prevent devaluation in the future. It has been established by Senator Byrd and others that devaluation is very expensive. It requires additional appropriations and additional spending by American consumers. So if Congress is going to act on any measure the administration sends down, we have the duty to say that it does not have to be left to big brother, that only he knows. That may be true in some areas. It may be true in connection with foreign policy or military policy, but not in something of this kind.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. PROXMIER. I yield.

Mr. DOMINICK. I gather the Treasury was against this on the ground they already have sufficient authority to do what the Senator is asking. What is the Senator's answer to that?

Mr. PROXMIER. This is not an indictment of Secretary Volcker or Secretary Shultz, or the President. This is something that the President has had authority to act on for 40 years, ever since the Emergency Banking Act of 1933. In

the last 10 years multi-international corporations have gotten so big and have such enormous influence on short flow assets of this kind. They have done nothing. It seems to me this will perpetuate action by them in a modest way.

Mr. DOMINICK. I thank the Senator.

Mr. PERCY. Mr. President, I intend to vote against this amendment. I have read the letter dated March 28 from Under Secretary Volcker to Senator Tower with regard to this matter. I believe we must be cautioned by, and honor, the Under Secretary's assertion that there is a "clear danger" that our approval of this amendment could be misinterpreted by speculators, and that it could thus "readily fuel new capital movements of the kind that have disturbed exchange markets in recent weeks." In my view this is too great a risk to run. I am in full agreement with my distinguished colleague from Wisconsin (Senator PROXMIER) that capital flows originated by multinational corporations may pose a serious problem. I also agree that, in ordinary circumstances, a reporting requirement of the kind he suggests would not seem inappropriate.

There is another reason for my vote against the amendment. The Multinational Corporations Subcommittee of the Committee on Foreign Relations, of which I am a member, is in the process of conducting a thorough study of all aspects of the operations of multinational companies. We will certainly look into the problem of such corporations' alleged speculation against the dollar. I think we will be able to frame well-considered legislation to deal with the problem, if we determine that, in fact, the problem is a real one, and that it requires legislation in addition to that which Under Secretary Volcker assures is already available to the Treasury.

Mr. PROXMIER. Mr. President, we are ready to vote.

The PRESIDING OFFICER. The question is on agreeing to the amendment as modified. The yeas have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. ROBERT C. BYRD. I announce that the Senator from Nevada (Mr. CANNON), the Senator from Arkansas (Mr. FULBRIGHT), the Senator from Indiana (Mr. HARTKE), the Senator from Hawaii (Mr. INOUE), the Senator from New Mexico (Mr. MONTROYA), and the Senator from California (Mr. TUNNEY) are necessarily absent.

I further announce that the Senator from South Dakota (Mr. ABDOUREZK) is absent on official business.

I also announce that the Senator from Mississippi (Mr. STENNIS) is absent because of illness.

I further announce that the Senator from North Carolina (Mr. ERVIN) is absent because of death in the family.

Mr. GRIFFIN. I announce that the Senator from Oklahoma (Mr. BELLMON), the Senator from Florida (Mr. GURNEY), and the Senator from Wyoming (Mr. HANSEN) are necessarily absent.

The Senator from Massachusetts (Mr. BROOKE) is absent by leave of the Senate on official business.

The Senator from Nebraska (Mr. CUR-

TIS) is detained on official business and, if present and voting, would vote "nay."

The result was announced—yeas 46, nays 40, as follows:

[No. 70 Leg.]

YEAS—46

Allen	Hollings	Moss
Baker	Huddleston	Muskie
Bayh	Hughes	Nelson
Bible	Humphrey	Pastore
Biden	Jackson	Pearson
Burdick	Javits	Pell
Case	Johnston	Proxmire
Chiles	Kennedy	Ribicoff

NOT VOTING—14

Abourezk	Ervin	Inouye
Bellmon	Fulbright	Montoya
Brooke	Gurney	Stennis
Cannon	Hansen	Tunney
Curtis	Hartke	

So Mr. PROXMIER's amendment (No. 66), as modified, was agreed to.

Mr. HATHAWAY. Mr. President, I ask unanimous consent to insert in the RECORD at this point a communication I have received from the Hon. Paul A. Volcker, Under Secretary of the Treasury for Monetary Affairs, in response to a question I posed in the hearings on this bill.

I asked whether it would be possible to devise a formula for automatic adjustments in currency values in response to changes in certain economic indices. I believe it is essential to search for ways to avoid the monetary crises and abrupt devaluations which have plagued the international monetary system in recent years.

Under Secretary Volcker, in his reply, discusses the problems involved in developing such a formula, from the standpoint of both economic theory and national policy, and concludes that major changes in reserve positions provide the best indicator of payments disequilibrium, and thus of need for adjustments. He encloses a paper which discusses these points in greater detail. I ask unanimous consent that these materials be inserted at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C.,

March 28, 1973.

Hon. WILLIAM D. HATHAWAY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HATHAWAY: This is in response to your letter of March 13, requesting information on the state of inquiry into the possibility of developing a formula for automatic exchange rate adjustment in accord-

ance with economic indices. I should mention that I was not aware that you desired a further response on this question for the record—had I been, we certainly would have attempted to provide any information requested.

The possibility of developing an automatic formula or indicator of the need for exchange rate change has been studied extensively. A bibliography of the major publicly available studies in this area is enclosed.

These studies examine a number of schemes for linking exchange rate adjustments to various economic indices. The most commonly advocated indices have been movements in spot or forward exchange rates or a country's international reserves. Other criteria which have been discussed include movements in various price indices, and in categories of the balance of payments, such as the "basic" balance. Our assessment of the various studies suggests strongly that no single index or set of indices appears to give a reliable enough indication of needed longer run changes in exchange rates to make it desirable or feasible to link exchange rate adjustments automatically to the behavior of an index. Research looking at how various proposals for automatic exchange rate adjustments would have worked in the face of international monetary experience during the postwar period suggests that, while several of these indices might have been helpful guides to adjustment, none is precise enough to serve as a reliable basis for automatic parity adjustments.

In my view, all of the various schemes for automatic adjustment contain three basic problems. First, as indicated above, no single indicator or set of indicators has proved capable of pointing unambiguously and unerringly to the form which payments adjustment should take. Second, even if it were possible to develop such an indicator, I would have strong doubts that it would always point to the exchange rate as the instrument to be used. Important as the exchange rate is, it is not the only instrument of adjustment policy available; nor, in specific instances, will it necessarily be the most desirable. Third, all proposals for automatic adjustment formulae, whether tied to the exchange rate or not, fail to recognize the need and desire on the part of governments to have flexibility of choice in the use of sensitive and powerful economic policy instruments. We believe countries should have the ability to choose from a range of internationally acceptable adjustment policies those best suited to their own particular needs and circumstances.

In developing U.S. proposals for monetary reform, we have attempted to establish a framework within which countries will have effective and equitable incentives to correct their payments imbalances, but will also have needed discretion as to the choice of adjustment policies to be used. Conceptually, and on the basis of historical experience, we believe that major changes in reserve positions provide the best, most comprehensive and least ambiguous indicator of serious payments disequilibrium. We have therefore proposed that movements in countries' reserves be used as a quantitative indicator of the need for payments adjustments. The adjustment actions taken might involve exchange rate changes or other types of measures. While we believe that this indicator would be highly reliable, we also recognize the need to have available provisions enabling the international community to "override" the indicator in cases where it is judged to be wrong.

I am also enclosing a paper presenting the U.S. proposal for the use of a reserve indicator which discusses these questions in greater detail. I hope this information is of use to you. If you have further questions, please do not hesitate to call me.

Sincerely yours,

PAUL A. VOLCKER.

THE U.S. PROPOSALS FOR USING RESERVES AS AN INDICATOR OF THE NEED FOR BALANCE-OF-PAYMENTS ADJUSTMENT

I. INTRODUCTION

1. There appears to be general agreement that a reformed international monetary system should promote prompt and more effective adjustment of balance-of-payments disequilibria. The U.S. proposals are based on the premise that each country will be willing to work within the context of a system that provides strong, equitable and balanced incentives to achieve and maintain external balance.

2. In the U.S. view, the most promising approach is a system in which disproportionate changes in a nation's reserves in either direction serve as objective indicators that balance-of-payments adjustment measures are needed. We visualize a system in which disproportionately large gains in reserves for a particular country indicate the need for adjustment measures to eliminate a balance-of-payments surplus, just as, in any system of convertibility into reserve assets, disproportionately large losses of reserves indicate the need for adjustment to eliminate a balance-of-payments deficit. A variety of adjustment instruments would be acceptable. The purpose of this paper is to develop the logic of this approach.

3. The international monetary system in past years has failed to provide adequate inducements to achieve and maintain balance-of-payments equilibrium, defined as a situation in which external payments are in reasonable balance at normal levels of employment and economic activity, and without inappropriate utilization of controls. This failure was reflected in both large and persistent imbalances, and in recent years in some tendency toward increased use of controls. Deficit countries could often maintain disequilibria for a considerable period through measures distorting trade, capital flows, or the internal economy; they were usually permitted or even encouraged to borrow extensively. (In the case of the United States, this "borrowing" in large part took the form of increased holdings by foreign monetary authorities of U.S. dollar obligations.) Surplus countries, able to accumulate reserves more or less indefinitely, felt under even less pressure to adjust, and an increasingly common response has been controls on the inward flow of capital.

4. Viewed from the perspective of a single country—particularly a country in a relatively advanced stage of development—balance-of-payments surpluses have been considered a more comfortable and more desirable state of affairs than deficit or balance. A surplus country could avoid the politically embarrassing adjustment actions which a deficit country might be forced to take. A strong trading position was frequently considered a vehicle for domestic economic expansion and maintenance of full employment. A persistently strong currency and large reserves might be felt to provide useful protection against unexpected external influences, and even to symbolize prudent economic management. Prior to the introduction of the SDR scheme, the system depended on balance-of-payments disequilibrium for growth in reserves—growth in global reserves over time could be accomplished only as other countries ran surpluses offset by U.S. deficits, financed through an expansion of U.S. liabilities.

5. Some of these incentives to run surpluses were recognized in the discussion leading up to Bretton Woods, and they were reflected in the strictures placed on competitive devaluation. Nevertheless, while overt competitive devaluations have not been important, many countries still more or less consciously have aimed for payments surpluses and adapted their economic policy instruments to that end. At the very least,

surpluses were tolerated while deficits were a source of concern and action. There was nothing in the system to assure compatibility of nations' balance-of-payments objectives—nothing to assure that the surpluses which many countries sought would be offset by targeted deficits in equal amounts on the part of other countries.

6. Within this general context, there were systematic tendencies for surpluses and deficits to fall in a particular pattern. From the viewpoint of the United States, as the largest unit in the world economic system and in important ways in the least flexible position, these pressures toward surplus and currency undervaluation by others have had their counterpart in a persistent deficit in its own accounts. It was long felt inappropriate, in the light of the disturbing implications for stability in world financial markets, for the United States to initiate exchange rate action to correct this deficit. When the imbalance increased substantially and such action was undertaken the resistance by its trading partners seemed to confirm their reluctance to lose a surplus position as well as to demonstrate the difficulty of achieving the needed adjustment in the absence of agreed criteria for reconciling balance-of-payments objectives. From the viewpoint of some other countries, the mechanism that permitted the chronic U.S. deficit and their surpluses to persist—namely, the tendency for that imbalance to be financed, in part, by increased dollar holdings of other countries—indicated that the United States was not subject to the usual constraints of a deficit country. In concept, the introduction of the SDR successfully freed the system of the need for continuous U.S. deficits to meet reserve needs. But by itself that reform was not sufficient to change the basic bias in the system.

7. While the system operated satisfactorily for a number of years—in fact it may have been preferable to any realistic alternative—it was a system of continuous imbalance, of protracted disequilibrium. From the viewpoint of both the U.S. and other nations, the results were increasingly unsatisfactory, creating major stresses that undermined stability. The system failed, in the end, because it depended on a measure of broad equilibrium for sustained satisfactory operation, yet failed to induce the adjustments required to achieve equilibrium. The actions taken by the United States on August 15, 1971, signaled the untenability of the previously existing arrangements. The interim arrangements developed since that time, including the Smithsonian Agreement of December 1971, do not provide a long-term solution to these problems.

8. The U.S. proposals for a future system are designed to encourage equilibrium by promoting needed adjustments actively, rather than simply prohibiting unwarranted moves; and to apply equivalent incentives for adjustment evenhandedly to all nations. The proposals are evolutionary, in the sense that they would build on certain areas of widespread agreement incorporated in past arrangements: the SDR, convertibility, the prohibition on competitive devaluation, and emphasis on the need for international financial arrangements to support liberal trade and payments. They would differ from the past in building these and other elements of the system into arrangements for actively promoting adjustment, reconciling balance-of-payments objectives, and overcoming the systematic bias toward surpluses.

II. THE NEED FOR OBJECTIVE CRITERIA

9. The U.S. proposals take as a point of departure that the stability and durability of a new monetary system will be crucially dependent on finding an equitable and effective means of promoting the adjustment of external imbalances.

10. In approaching that objective, we be-

lieve success is dependent upon finding an appropriate blend among these possible approaches, each of which contains some advantages, but none of which is satisfactory by itself. The three approaches are:

(a) national discretion—a degree of which is essential in a world of sovereign nations and desirable in allowing maximum practicable freedom of action among individual countries, but which, relied on alone, assures neither equilibrium nor an equitable sharing of adjustment responsibilities;

(b) discretionary authority of a central institution—which can bring to bear the influence and collective wisdom of the entire world community on particular adjustment problems, but which can lead to endless debate, indecision or unbalanced decisions in a potentially politically charged atmosphere, and which requires at least the appearance of ceding more authority to an international body than nations will yield at this stage of international development; and

(c) objective criteria—which can be helpful in establishing measurements for indicating adjustment needs for various nations and various situations on a standardized basis, but which do not unerringly point to appropriate adjustments or permit needed discretion by national authorities.

11. The U.S. proposal aims at a balance among these approaches—to utilize the advantages of each, while avoiding the disadvantages which might result from excessive or single-minded reliance on any of the three. We propose that objective criteria be established to note and locate the existence of an undesirable degree of balance of payments disequilibrium, and to create a strong presumption that effective adjustment policies should be implemented. But we would leave to the country concerned substantial discretion in determining the composition of those adjustment policies. And international consultations would be utilized to determine the applicability of the criteria to particular situations and to consider exceptional cases in which the rules might be overridden.

12. Use of objective indicators as an important element of the adjustment mechanism appears essential on grounds of efficacy and equity. Adjustment decisions are frequently difficult for any government, and there is a tendency to postpone and avoid such decisions until long after the time when adjustment policies should have been adopted. Equally, international groups are reluctant to deal promptly with difficult and politically sensitive adjustment questions. Without objective indicators there is a danger that needed actions will not be taken. It is much better to get advance agreement in principle that when certain internationally agreed indicators, recognized as being objective, signal adjustment is needed, there will be a strong presumption that appropriate measures will be adopted—but recognizing there might be valid reasons for overriding the indicators in exceptional cases. Such an approach is much more likely to result in equal treatment for all nations; it would call for comparable adjustment inducements for all countries—whether large or small, developed or developing, reserve currency country or not—to eliminate payments disequilibria, whether surplus or deficit.

III. ADJUSTMENT, RESERVES, AND CONVERTIBILITY

13. The U.S. proposals assume that most nations will want to maintain established values for their exchange rates—par values or central rates—in conjunction with a generalized system of convertibility of national currencies into international reserve assets. In a system of established exchange values and convertibility, there is a close relationship between balance-of-payments disequilibria and reserve changes. Accordingly, in our view the single most valid indicator that a country is in actual or emerging disequilibrium—as well as the most readily

available, the most comprehensive, and the least ambiguous—is a persistent movement of its reserves in one direction or another.

14. To be viable, a convertibility system must be capable of satisfying the sum of individual countries' normal needs for and secular growth in reserves. Nations individually, either explicitly through formulation of overt balance-of-payments objectives, or more implicitly through their behavior, express an effective demand for reserves. Unless the international monetary system is capable of meeting these national demands in the aggregate and changing the level of reserves to meet changes in such needs over time, a satisfactory reconciliation of national balance of payments aims, and therefore sustained balance-of-payments equilibrium, cannot be assured. For if reserves are not adequate to these demands in the aggregate, nations are incapable by definition of reaching their desired reserve positions simultaneously. A decision to provide the system with too few reserves induces—and sanctions—a destabilizing and ultimately fruitless competition for scarce reserves. Creation of too many reserves pushes too great a share of the adjustment pressures onto surplus countries and facilitates world inflation.

15. A critical defect of the system in the past was that while it tried to promise unlimited convertibility, and while fundamentally it required a broad measure of balance-of-payments equilibrium for sustained operation, it did not provide the supply of acceptable reserve assets or the discipline on adjustment policies necessary to achieve these objectives. A basic feature of the U.S. proposal is that nations must, through the process of negotiation, reach a collective decision on the appropriate normal stock and rate of increase of reserves, and be prepared to accept the consequences of that decision in terms of their own individual reserve positions and their own freedom of action to run surpluses or deficits.

16. It would be essential in the proposed system that countries regard their balance of payments disequilibria, whether surplus or deficit, as a source of concern before the agreed indicators came into play. In other words, countries would not be expected to ignore imbalances blithely until their disequilibria had become so extreme as to prompt strong international concern through the indicator mechanism. Reserve fluctuations would signal emerging disequilibria; movement to outer indicators signalling strong international concern would occur only when countries failed to make the appropriate responses as the disequilibria built up.

17. Convertibility itself cannot promote adequate or equitable adjustment. Convertibility is in that sense an asymmetrical tool, operating only on deficit countries. In the framework of the U.S. proposal, the inherent link of convertibility to reserve fluctuations would result in broadly symmetrical pressures upon surplus and deficit nations.

18. In short, the logic of the U.S. proposals is that a) better balance of payments adjustment is required and is essential to the maintenance of a convertibility system; b) such an adjustment process, in turn, requires recognition by both surplus and deficit countries of their obligations and responsibilities to take action; c) in that context, objective indicators of the need for adjustment are essential; d) a broad equality between the availability of, and demands for, reserves in the system must be satisfied; and e) all of these needs can be brought together, in the context of a system of established exchange rates supported by convertibility, by the use of reserve movements as the main indicator of the need for adjustment.

IV. DESCRIPTION OF THE PROPOSED ADJUSTMENT/RESERVE/CONVERTIBILITY SYSTEM

19. These principles could be incorporated into several alternative operational frame-

works. Such alternative formulations could, for example, (a) emphasize the use of net or gross reserves as the basis for measuring fluctuations in reserves; (b) focus attention largely on changes in reserves from an existing starting level or on an appropriate distribution of individual countries' reserves in relation to some "objective" standard; and (c) provide for either relatively narrow or relatively wide ranges of fluctuation in reserves before international disciplines come into play. While the underlying principles and logic of the various approaches would be broadly similar, the particular formulation chosen would determine the speed, force and manner with which the adjustment pressures would operate. For its part the United States wishes to continue to examine the advantages and disadvantages of the alternatives with care, and would welcome the contribution toward this effort that others can make.

20. The use of fluctuations in countries' reserves as the main indicator of adjustment need requires a judgment about a "base" level and trend of reserves for each country. Abstracting from transitional problems (noted later), these "base levels" could be established in several different ways. For instance, the distributional pattern of national quotas in the IMF (allowing for any agreed revisions in the future) might represent one approach toward determining a broadly acceptable distribution of reserves in normal circumstances. Another approach would be to give heavy weight to the actual level of reserves at the start of the system for the majority of countries, relying on separate negotiations for those countries whose reserves at the start of the system were judged to be seriously excessive or inadequate. Countries' "base levels," in any case, would be expected to rise over time, consistent with collective decisions about world SDR creation. The manner in which "base levels" should be calculated would clearly be a matter for careful negotiation. What is necessary is that some pattern be accepted that is generally satisfactory.

21. Use of reserves fluctuations to achieve an evenhanded stimulus to adjustment will require a broad consistency between the total of established "base levels" for individual countries and the actual supply of reserves in the system as a whole. Conceptually, in a system which did not provide for reserve currencies, this need could be met simply by assuring that the aggregate of gold, SDR's and IMF positions—that is, "primary reserves"—equalled the aggregate of countries' "base levels" of reserves. If in such a system aggregate "base levels" were above total primary reserves, a destabilizing and potentially deflationary competition for reserves could result; if "base levels" were below the total of primary assets, too large a share of adjustment pressures would be shifted toward surplus countries and world inflation might be facilitated.

22. In practice, we assume that some nations will wish to hold foreign exchange in their reserves and should be permitted to do so. Some nations will want flexibility of reserve management, and the system as a whole will benefit from an ability to respond flexibly to sudden and reversible increases in the need for liquidity during periods of strain related to speculative or other factors. Thus, in structuring the proposed system consideration will need to be given to the complication introduced by the existence of a possibly fluctuating margin of foreign exchange holdings. In a convertibility system, foreign exchange holdings are potential claims on primary reserves. Consequently, a stable system must provide enough primary reserves in relation to the whole to meet reasonable demands for conversion of these potential convertibility claims and/or must limit demands for conversion by individual countries

that would otherwise claim an excessive proportion of the available supply of primary reserves.

23. There are a number of complementary approaches which could reconcile the existence of foreign exchange holdings in reserves with the stability and even-handed working of a system of reserve indicators. One approach would be to equate the aggregate of "base levels" with the total of primary reserves and provide limits on the disproportionate accumulation of primary reserves by a country above its base level. Some assurance against excessive claims for primary reserves growing out of past accumulation of foreign exchange could also be provided by arrangements providing for bilateral or multilateral funding of existing foreign exchange reserves to the extent the holder wished to fund such balances, or by a facility for exchange of such balances—initially or over time—into SDR's. These aspects of the question should receive careful study, but are not further considered here.

24. Under a reserve-indicator system, certain points would be established above and below each country's base level to guide the adjustment process and to assure even-handed convertibility disciplines. Such points would be set according to uniform procedures for each country, and could be described as follows, again abstracting from special arrangements that would be appropriate during a transitional period.

(a) A "low point" would be set at some point below the "base level." In concept, this might approximate a level of reserves considered to be close to the minimum level ordinarily necessary to maintain confidence and to guard against extreme emergencies. If a country's reserves fell below its "low point" for a period of time, definite adjustment pressures would be anticipated and acceptable adjustment measures would be expected. In the absence of adequate policies over a specified period, international sanctions—for example, refusal to provide credit, or loss of scheduled SDR allocations—might become effective. Such sanctions would be avoided only if the IMF, through approval of a satisfactory program of adjustment, made a finding that sanctions were not warranted. Negotiated credits to deficit countries would ordinarily be permitted—but excessive or prolonged borrowing to circumvent the indicators would not be allowed.

(b) A "lower warning point" would be set at a point between a country's "base level" and the "low point." Small devaluations would be freely permitted a country at any time its reserves were below its base level. Proposals for larger devaluations would always require IMF approval; such proposals would not ordinarily be looked upon with favor unless a country's reserves had fallen below its "lower warning point."

(c) An "outer point" would be established above a country's "base level." As a country moved toward its "outer point," it would be expected to apply adjustment measures of progressive intensity. If reserves rose to the "outer point," remained at or above that level for a specified period, and an adequate program of adjustment were not in place, international action to induce adjustment would take effect. For example, the IMF might authorize other countries to impose general import taxes or surcharges against the country concerned, there might be a loss of scheduled SDR allocations, or there might be a tax on the country's excess reserve holdings with proceeds to go to development assistance. Such sanctions could be avoided, or postponed, only if the IMF made a positive finding they were not warranted, on the basis of an agreed program of adjustment—involving, for example, major moves toward liberalization of import restrictions, removal of any controls on the outward flow of capital, provision of concessional untied aid, or revaluation. Standards should be developed

for judging the adequacy of such programs and their consistency with progress toward a liberal world economic order. If reserve gains persisted despite the agreed program, authorization for sanctions would, after a further period, take effect. In any event, the IMF would review the country's position periodically, and make such recommendations and authorizations as it deemed appropriate.

(d) An "upper warning point" would be set between the "base level" and the "outer point," analogous to the lower warning point, representing an international judgment that adjustment is called for. The IMF would be expected to report on the country's balance of payments position and prospects, and revaluation or other adjustment measures would be anticipated.

(e) Depending on the volume of total reserves relative to primary reserves in the system, this "upper warning point" might coincide with a "convertibility point" representing the maximum accumulation of primary reserves for each country that would be justified, consistent with the level of aggregate primary reserves in the entire system, for the convertibility mechanism to operate equitably with respect to both deficit and surplus countries. Both to provide an incentive for adjustment, and to prevent countries from placing further convertibility pressures on others, a country reaching such a "convertibility point" would be unable to acquire additional primary reserves, through either purchase or SDR allocation.

25. A reserve-indicator system such as the one sketched above should be supplemented and elaborated by consultative procedures within the IMF concerning adjustment programs and problems. For such procedures to be effective, national policy officials at a politically responsive level should be drawn into the process. Such IMF review could take into account supplementary criteria in considering the nature and magnitude of any need for adjustment.

26. Countries would not be expected to delay adjustment action until they had reached the indicator points. The purpose of a reserve-indicator system is to provide strong incentives for countries to act in limited steps, using a variety of tools suited to their circumstances before their situation becomes so urgent as to involve international concern and action. Moreover, while countries would at given points be brought under overt international pressure for adjustment, they would still have a range of policy options at their disposal. The range of "acceptable adjustment measures" for the system would, however, be limited to those consistent with market mechanisms and a liberal world trade and payment order. Exchange rate changes are not seen as the only, or necessarily the most desirable, means of adjustment in all cases.

27. Even though the aim of the system is to promote equilibrium, some scope for fluctuation in reserves is obviously necessary and desirable. No workable system can or should try to assure lock-step economic performance from 124 nations differing greatly in size, stage of development, and economic circumstance. Through the process of negotiation, an international consensus should be reached in defining the indicator points so as to get "enough" elbow room for some fluctuation in reserves to meet transitory payments imbalances, but not "so much" that adjustment is inappropriately delayed.

28. The reserve-indicator system should be designed to permit countries maximum flexibility to the extent compatible with maintaining the system's basic principles:

(a) As noted, a small devaluation without requirement for approval might be permitted at any time a country's reserves were below base level. Small revaluations might be permitted at any time. While in practice, situations would seldom, if ever, arise for withholding international approval from

larger revaluations, restraint will continue to be necessary to guard against competitive devaluation.

(b) A country could opt for a transitional float, under agreed rules, in lieu of a discrete exchange rate change. If it intended to reestablish and maintain a central value for its currency within a given period, a reserve-deficient country could be permitted, under suitable guidelines, to increase its reserves toward its base level. If a country's reserves were above its base level at the time of initiation of the transitional float, it would not be permitted further reserve accumulation.

(c) A country could depart from the regime of established parities to float for a period of indefinite duration but only if it adhered to internationally agreed standards that would assure the consistency of its actions with the basic requirements of a cooperative order. These standards would relate, for example, to movements in its reserves, its intervention policies, elimination of controls on the inward flow of capital, avoidance of restrictive trade controls imposed for balance-of-payments purposes and elimination of any existing extraordinary balance-of-payments measures. Exchange rate systems nominally establishing a central or par value but envisaging very frequent changes such as those now in force in some less developed countries, could be integrated with this rule.

(d) Any group of countries in the process of forming a monetary union—with an implicit high degree of political and economic integration—could choose to operate as a unit. In this instance, the relevant criteria would be applied to the unit as a whole, which would be expected to speak with one voice in international forums. The reserve norms for the unit would have to be recalculated to reflect external trade and appropriate treatment of intra-unit assets.

(e) On a selective basis, consideration should be given to special arrangements for exclusion from reserves, and thus from measurements of adjustment need, of an "investment fund" of foreign securities or other foreign assets held by official agencies. Such funds might be appropriate for selected countries that wanted to hold over a prolonged period of time within official accounts (or with official inducements), foreign assets for long-term investment purposes. Such countries could be asked to observe certain criteria with respect to term, size and nature of the holdings. Oil producing countries with relatively large external assets would be candidates for such arrangements.

(f) Negotiated official credits (including IMF credits) should be permitted. Satisfactory procedures for the recording of such credits under the reserve-indicator system would need to be devised.

(g) In general, the system should neither ban nor encourage official holdings of foreign exchange. However, in the context of the proposed system, such holdings would presumably not loom so large relatively as in recent years. Each country should have the right to place limits on the further accumulation of its own currency of issue by official instructions in any other individual country or group of countries. Each country that chose to permit foreign official holdings of its currency must provide reasonable and normal investment facilities for those holdings.

29. The United States proposal neither gives special rights to nor imposes special obligations on any country or group of countries. It assumes a monetary system in which all countries are treated equally. All would have the same freedom to use the full exchange rate margins permitted in the system. All would have the same rights to allow their currencies to float, transitionally or indefinitely, under the same internationally agreed rules of behavior and surveillance. All maintaining established values for their currencies would have the same obligation to

assure convertibility of their currencies—meaning that officially held balances of foreign currencies could be freely presented to the issuing country for conversion into primary reserve assets, with the choice among SDR's, reserve positions in the IMF and gold to be made by the issuing country.

V. TRANSITIONAL ARRANGEMENTS

30. At the present time there is a highly unbalanced pattern of reserves and balance-of-payments positions among the major industrial nations. Unquestionably there would be a need for special transitional arrangements to put into being the system proposed by the United States. Various approaches for dealing with these problems can be developed. For example, proposals that have been put forward for funding, consolidating or otherwise dealing with foreign exchange balances which holding countries may regard as excess may be particularly relevant. The U.S. has an open mind on particular arrangements that might be proposed. We merely want to note that some generally acceptable transitional arrangements are necessary. This transitional problem is not unique to the proposed system. Any monetary system based upon concepts of equilibrium and convertibility will require special measures to deal with transitional problems.

VI. SOME QUESTIONS ABOUT THE PROPOSALS

31. Three questions which might be raised about the operational feasibility of the U.S. proposal are discussed below. These questions could arise under any system based on reserves as an indicator of adjustment need. Indeed, we should note comparable problems will arise, perhaps in a different form, in any par value-convertibility system, and often in more severe form.

32. The first question is: Is it possible to define reserves so as to assure they are useful and accurate criteria?

33. Based on reserves as the key indicator of disequilibrium and the need for adjustment, the system proposed by the U.S. depends on clear and reliable definitions of what constitutes both primary and total reserves, to assure that they give the appropriate signals in a given situation and to assure that the rules cannot be easily circumvented by artificial reserve transactions or concealment of reserves.

34. Primary reserves are more easily defined. They would consist of SDR's, reserve positions in the IMF, and monetary gold. There would be a precise and known amount of primary reserves for each nation and for the system as a whole.

35. Primary reserves would, of course, be widely transferred among nations for settlement purposes. Primary reserves might also be borrowed and lent. In order to assure the consistency of the aggregate level of primary reserves in the system with the operation of the system, appropriate rules would need to be devised to assure against double counting of primary reserves. For example, it might be agreed that lending and borrowing should not increase the calculated primary reserves of the borrower, nor reduce those of the lender.

36. Definition and measurement of reserves other than primary reserves have in the past been more complicated and more ambiguous. Possibilities for evading the adjustment rules might arise unless there were agreement on a suitability broad definition of what constitutes reserves. An appropriate approach to this problem would be to start from a very broad definition of reserves—all official claims on foreigners, liquid or non-liquid, whether held by or on behalf of the monetary authorities or by other government agencies. Exceptions would be made as appropriate. Long-term aid loans, for example, and normal export credits would presumably be omitted; approved "investment funds," as described above, would be excluded—though care must be taken that such funds not be used as a subterfuge for reserve increases. At

any rate, with experience in operating the system, technical discussions would probably help to refine the definitions, so as to reduce the risks of window-dressing and make the system function as effectively as possible.

37. The second question is: How do we deal with problems of heavy speculative capital flows?

38. Speculative problems will be a factor in any system—indeed, they proved to be a critically important factor in the Bretton Woods system. The system proposed by the U.S. actually contains a number of features which should reduce the problems of speculation, as compared both with the past and with other approaches to reform of which we are aware.

39. The proposal aims at a system which fosters balance, and prompt adjustments to restore equilibrium, through a variety of adjustment measures. Thus, the persistent payments imbalances which in the past were a major factor in generating massive speculative capital movements would be eliminated or sharply diminished.

40. With the system based broadly on the concept of equilibrium, it cannot be overemphasized that national behavior which is truly in the spirit of this concept must help to assure that crisis points are not reached. The existence of the various indicator points on reserve movements does provide limits on disequilibria, and it is possible that movement close to those limits could stimulate some speculative activity, just as very large reserve gains or losses trigger speculative activity in the present system. But for fully satisfactory operation of the system, countries should endeavor to adjust their positions as the disequilibria emerge, and well before they reach the extremes, both because of the consequences involved in reaching the limits, and because they have accepted external balance as a practical, operative balance-of-payments objective. If a country persists in avoiding adjustment, it will eventually—and appropriately—be subject to the disciplines of the system, including speculative pressures. Much as in the past system, adjustment of some kind becomes unavoidable when disequilibria become extreme. What is missing in the past and present systems, and what the proposed system attempts to provide, is a real incentive for needed adjustment to occur before it is forced by crisis.

41. Also, the proposal has to be looked at in the context of a system of adequately wide exchange rate bands, which would be expected to reduce the prospect for large capital flows significantly.

42. Nonetheless, even with an improved adjustment system there could still be some question of whether false signals could result from speculative capital flows. The answer is that the proposed system contains several important "safety valves." First, there are areas, or zones, within which reserves can move in response to speculative or other pressures without bringing overt international requirements for adjustment measures. Second, there is a time factor envisaged at both the "low point" and the "outer point" which would provide scope for speculative or other flows to occur and reverse themselves, without bringing strong international action to induce adjustment. (This factor could also play an important role in inhibiting speculative movements themselves.) Third, if a nation were pushed across its "outer point" by, say, a heavy inflow of speculative capital, and remained above that point, it need not necessarily appreciate its exchange rate—the requirement is for any "acceptable" adjustment program. Fourth, if the reserve increment were due to capital inflows based on unfounded speculation on an exchange rate change—and the IMF agreed that basic adjustment was not needed—a program dealing exclusively with that problem in an internally acceptable manner would presumably satisfy the international community.

The international community could vote to override the reserve indicators in a case where the signals are judged to be obviously wrong.

43. In discussing these "safety valves," however, it should be remembered that signals are not necessarily "wrong" simply because speculative capital flows arise—such flows may indicate a genuine need for adjustment measures. The system cannot enable nations to avoid needed adjustments simply by blaming their problems on speculation.

44. The third question is: Aren't reserve indicator retrospective and insufficiently refined, pointing to past maladjustments rather than present or future needs and unable to take account of the composition of the balance of payments?

45. Reserves are more comprehensive, more reliable and more quickly available indicators than other criteria of external balance. While reserves may be distorted in the short run, no other single series provides a superior basis for analysis. In a convertibility system, reserve data are necessarily indicative of disequilibrium in the adjustment process: this has always been understood in terms of inducements to adjust for deficit countries—and the concept applies with equal logic to adjustment needs of surplus countries. While other data may provide useful information affecting international judgments of adjustment need, such data should be supplementary.

46. It would, of course, be helpful to have reliable indicators of future economic performance. But we don't. It would be useful to know each nation's balance-of-payments position for the next year or two or three—but the present state of the art does not provide data of such reliability that governments can place primary reliance on them in formulating policies for the future. Nor are governments likely to agree on any given assessment of prospects. Attempts to rely on such projections can lead to endless disputes. One has only to recall the discussions prior to the Smithsonian Agreement, of prospective cyclically adjusted current account balances, to realize the opportunities for disagreement.

47. The U.S. proposal does envisage that such "supplementary criteria" as are available should be used to assist the reserve indicators in pointing to adjustment needs. In particular, some countries may have objectives with respect to certain elements in their balance of payments, such as for the current account. And these elements in some cases may be considered more stable. Since inconsistent objectives in that respect could inhibit the process of balance-of-payments adjustment, attention to current account results and objectives could be useful. However, in the end we will require a consistency in the total balance-of-payments results (as reflected in reserve movements) and primary attention to one sector of the balance of payments, however important, would not be consistent with this requirement.

Mr. TAFT. Mr. President, I call up amendment No. 52, as modified, on behalf of Mr. BELLMON and myself and ask unanimous consent that the Senator from Wisconsin (Mr. PROXMIER) be added as a cosponsor of the amendment.

The PRESIDING OFFICER (Mr. BARTLETT). Without objection, it is so ordered. The clerk will state the amendment.

The legislative clerk proceeded to state the amendment.

Mr. BELLMON. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment, as modified, is as follows:

At the end of the bill insert the following new section:

LIMITATION OF EXPENDITURES AND NET LENDING FOR FISCAL 1974

SEC. 2. (a) Expenditures and net lending during the fiscal year ending June 30, 1974, under the budget of the United States Government shall not exceed \$268,700,000,000.

(b) (1) In order to effectuate the provisions of subsection (a), the President shall not make reservations from expenditure and net lending, from appropriations or other obligational authority, heretofore or hereafter made available for—

- (A) interest;
- (B) veterans' benefits and services;
- (C) payments from social insurance trust funds;
- (D) medical;
- (E) public assistance maintenance grants;
- (F) social services grants under title IV of the Social Security Act, as amended;
- (G) food stamps;
- (H) military retirement pay; and
- (I) judicial salaries.

(2) If, in order to effectuate the provisions of subsection (a), the President reserves amounts proportionately from all budget accounts, except those budget accounts for which reservations are prohibited pursuant to paragraph (1), the provisions of subsection (c) shall not apply.

(c) (1) If the President determines that in order to effectuate the provisions of subsection (a) or pursuant to subsection (d) below, it is necessary to make reservations from expenditure and net lending, from appropriations of other obligational authority, heretofore or hereafter made available, he shall make such reservations subject to the provisions of this subsection. The President shall report to the Congress, by special message, each such reservation so made with respect to any single budget account. Each such special message shall be transmitted to the Senate and the House of Representatives within ten days after such reservation has

been made, and shall be delivered to the Secretary of the Senate, if the Senate is not in session, and to the Clerk of the House of Representatives, if the House is not in session. Each such special message shall be printed as a document of both Houses.

(2) Any reservation from expenditures and net lending shall cease to be effective if the Senate and the House of Representatives agree to a concurrent resolution disapproving such reservation during the first period of sixty days of continuous session of the Congress after the day on which the special message reporting such reservation is transmitted to the Senate and the House of Representatives. For purposes of the preceding sentence, (A) continuity of session is broken only by an adjournment of the Congress sine die, and (B) days in which either House is not in session because of an adjournment of more than three days to a day certain shall be excluded in the computation of the sixty-day period.

(d) During the fiscal year ending June 30, 1974, nothing contained in any law (other than this section) shall be construed to authorize or empower the President to reserve any amount of obligation or other budget authority or any amount of authority to make outlays, unless (1) the amount so reserved is not necessary for the efficient operation of the activity, program, or project for which such amount was made available at the level intended by the Congress in enacting the laws which authorize such activity, program, or project, and provide such budget authority, and (2) the activity, program, or project can and will be fully carried out at such level without the amount so reserved.

(e) In the administration of any program as to which—

(1) the amount of expenditures is limited pursuant to this section; and

(2) the allocation, grant, apportionment, or other distribution of funds among receipts is required to be determined by application of a formula involving the amount appropriated or otherwise made available for distribution; the amount available for obligation (after the application of this section) shall be substituted for the amount appropriated or otherwise made available in the application of the formula.

(f) The following subsections of this section are enacted by the Congress—

(1) as an exercise of the rulemaking power of the Senate and the House of Representatives, respectively, and as such they shall be considered as part of the rules of each House, respectively, but applicable only with respect to the procedure to be followed in such House in the case of resolutions (as defined in subsection (g)); and such rules shall supersede other rules only to the extent that they are inconsistent therewith; and

(2) with full recognition of the constitutional right of either House to change such rules (so far as relating to the procedure in such House) at any time, in the same manner, and to the same extent as in the case of any other rule of such House.

(g) As used in the following subsections of this section, the term "resolution" means only a concurrent resolution of the two Houses of Congress, the matter after the resolving clause of which is as follows (the blank spaces being appropriately filled): "That the Congress disapproves the reservation(s) of expenditures reported in the special message of the President dated _____, 19__ (Senate Document Numbered __, House Document Numbered __)."

(h) A resolution with respect to a special message shall be referred to a committee (and all resolutions with respect to the same special message shall be referred to the same committee) by the President of the Senate or the Speaker of the House of Representatives, as the case may be.

(1) (1) If the committee to which has been referred a resolution with respect to a special

message has not reported it before the expiration of ten calendar days after its introduction (or, in the case of a resolution received from the other House, ten calendar days after its receipt), it shall then (but not before) be in order to move either to discharge the committee from further consideration of such resolution, or to discharge the committee from further consideration of any other resolution with respect to such special message which has been referred to the committee.

(2) Such motion may be made only by a person favoring the resolution, shall be highly privileged (except that it may not be made after the committee has reported a resolution with respect to the same special message), and debate thereon shall be limited to not to exceed one hour, to be equally divided between those favoring and those opposing the resolution. No amendment to such motion shall be in order, and it shall not be in order to move to reconsider the vote by which such motion is agreed to or disagreed to.

(3) If the motion to discharge is agreed to or disagreed to, such motion may not be renewed, nor may another motion to discharge the committee be made with respect to any other resolution with respect to the same special message.

(j) (1) When the committee has reported, or has been discharged from further consideration of, a resolution with respect to a special message, it shall at any time thereafter be in order (even though a previous motion to the same effect has been disagreed to) to move to proceed to the consideration of such resolution. Such motion shall be highly privileged and shall not be debatable. No amendment to such motion shall be in order and it shall not be in order to move to reconsider the vote by which such motion is agreed to or disagreed to.

(2) Debate on the resolution shall be limited to not to exceed ten hours, which shall be equally divided between those favoring and those opposing the resolution. A motion further to limit debate shall not be debatable. No amendment to, or motion to recommit, the resolution shall be in order, and it shall not be in order to move to reconsider the vote by which the resolution is agreed to or disagreed to.

(k) (1) All motions to postpone, made with respect to the discharge from committee, or the consideration of, a resolution with respect to a special message, and all motions to proceed to the consideration of other business, shall be decided without debate.

(2) All appeals from the decisions of the Chair relating to the application of the rules of the Senate or the House of Representatives, as the case may be, to the procedure relating to a resolution with respect to a special message shall be decided without debate.

(1) If, prior to the passage by one House of a resolution of that House with respect to a special message, such House receives from the other House a resolution with respect to the same special message, then—

(1) If no resolution of the first House with respect to such special message has been referred to committee, no other resolution with respect to the same special message may be reported or (despite the provisions of subsection (1) (1)) be made the subject of a motion to discharge.

(2) If a resolution of the first House with respect to such special message has been referred to committee—

(A) the procedure with respect to that or other resolutions of such House with respect to such special message which have been referred to committee shall be the same as if no resolution from the other House with respect to such special message had been received; but

(B) on any vote on final passage of a resolution of the first House with respect to such special message the resolution from the other House with respect to such special message

shall be automatically substituted for the resolution of the first House.

(m) For the purposes of this section the term "budget account" means any appropriation account or other account granting obligational authority including, but not limited to, contract authority, authority to spend public debt receipts, and authority to spend agency debt receipts.

(n) The President shall not establish separate ceilings on expenditures or net lending for any budget account which will prevent the obligation of all funds made available for obligation pursuant to this section.

(o) In order to assist Congress in its efforts to prevent expenditures and net lending during the fiscal year ending June 30, 1974, from exceeding \$268,700,000, the President shall promptly report to Congress any revised estimates of total expenditures and net lending for fiscal 1974 which have been made by the Office of Management and Budget for those budget categories listed in subsection (b), and any other revised estimates of total expenditures and net lending for fiscal 1974 which have been made by the Office of Management and Budget.

(p) For the purpose of effectuating the provisions of subsection (b) the amount of any single budget account which shall be considered to be available during fiscal 1974 prior to any reservation which may be made pursuant to subsection (b) shall be the amount made available for such budget account for obligation by the Congress during fiscal 1974, or in the case of a budget account available for obligation in more than one fiscal year, the estimated amount to be obligated during fiscal 1974 in the Budget of the United States Government for fiscal year 1974.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. TAFT. Mr. President, I yield to the distinguished majority leader.

UNANIMOUS-CONSENT AGREEMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent, if I may have the attention of the Senate, that the pending business be laid aside until the hour of 12 o'clock noon, Wednesday next.

Mr. TOWER. Mr. President, if the distinguished majority leader would yield, I think that if the Senator would perhaps propose the entire unanimous-consent request, the Members of the Senate would be more familiar with the matter.

Mr. MANSFIELD. Mr. President, I yield to the distinguished assistant majority leader.

Mr. ROBERT C. BYRD. Mr. President, I am authorized by the distinguished majority leader, after having consulted with various Senators on both sides of the aisle, to propose the following unanimous-consent request:

That further debate on S. 929, the dollar revaluation bill, be limited to 4 hours; that time on any amendment thereto be limited to 1 hour; that time on any amendment to an amendment be limited to 30 minutes; that time on any debatable motion or appeal be limited to 30 minutes; that time under the control of the managers of the bill may be yielded to any Senator on any amendment, debatable motion or appeal;

Provided further that no nongermane amendment be in order with the exception of any nongermane amendments

which may be at the desk at the close of business today, regardless of their germaneness;

Provided further that any amendment dealing with ceilings or impoundments may be in order regardless of its germaneness;

Provided further that the time on the bill is to be under the control of the distinguished manager of the bill, the Senator from Alabama (Mr. SPARKMAN), and the distinguished Senator from Texas (Mr. TOWER), with the time on any amendment, debatable motion, or appeal to be divided and controlled in accordance with the usual form.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia? The Chair hears none, and it is so ordered.

Mr. MANSFIELD subsequently said: Mr. President, the Senate may recall that before the unanimous-consent request was made, I had made a unanimous-consent request which I had intended to incorporate in the request that has just been agreed to.

Mr. President, I ask unanimous consent that the pending business, S. 929, be laid aside until the hour of 12 o'clock noon, Wednesday next, at which time it will become the pending business again, at which time the distinguished Senator from Ohio would be recognized for the consideration of his amendment, and at which time the limitation already agreed to would begin to run.

The PRESIDING OFFICER. Without objection, it is so ordered.

The unanimous-consent request reads as follows:

UNANIMOUS-CONSENT AGREEMENT

Ordered, That, effective Wednesday, April 4, 1973, during the further consideration of S. 929, a bill to amend the Par Value Modification Act, debate on any amendment shall be limited to 1 hour, to be equally divided and controlled by the mover of any such amendment and the manager of the bill, the Senator from Alabama (Mr. SPARKMAN), and that in the event that the manager of the bill is in favor of any such amendment, the time in opposition thereto shall be controlled by the minority leader or his designee; and that debate on any amendment to an amendment shall be limited to 30 minutes, to be equally divided and controlled by the mover of the amendment and the author of the amendment in the first degree, and that in the event that the author of the amendment in the first degree is in favor of the amendment, the time in opposition thereto shall be controlled by the manager of the bill; and that debate on any debatable motion or appeal shall be limited to 30 minutes, to be equally divided and controlled by the mover and the manager of the bill, and that in the event that the manager of the bill is in favor of any such motion or appeal, the time in opposition thereto shall be controlled by the minority leader or his designee: *Provided*, That no amendment that is not germane to the provisions of the said bill (except those at the desk at the close of business Thursday, March 29th, or those dealing with expenditure ceilings or impoundments) shall be received.

Ordered further, That on the question of the final passage of the said bill debate shall be limited to 4 hours, to be equally divided and controlled, respectively, by the Senator from Texas (Mr. TOWER) and the Senator from Alabama (Mr. Sparkman): *Provided*, That the said Senators, or either of them,

may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, motion or appeal.

CIVIL REMEDIES FOR VICTIMS OF RACKETEERING ACTIVITY AND THEFT ACT OF 1973

Mr. MANSFIELD. Mr. President, I move that the Senate turn to the consideration of Calendar No. 84, S. 13, that it be laid before the Senate and made the pending business.

The PRESIDING OFFICER. The clerk will state the bill by title.

The legislative clerk read as follows:

Calendar No. 84, S. 13, a bill to amend title 18 of the United States Code to provide civil remedies to victims of racketeering activity and theft, and for other purposes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana? The Chair hears none, and it is so ordered.

The Senate proceeded to consider the bill.

Mr. SCOTT of Pennsylvania. Mr. President, I rise to point out that this is the first of a series of five crime bills, so that Senators may be on notice that following action on this bill it is expected that other crime bills will be called up. I did not mean to say that crimes will be perpetrated.

Mr. MANSFIELD. Many of them are perpetrated on the floor, I am sure.

Mr. SCOTT of Pennsylvania. At any rate, other crime bills will be called up. I was going to ask whether they would be brought up today or tomorrow or when.

Mr. MANSFIELD. Mr. President, it is anticipated that they will be brought up today.

These bills were passed unanimously in an omnibus package by the Senate last year. They were not taken up in the House. It would be the hope of the leadership that no one would request a roll-call vote, because basically there is no opposition to them.

I express that hope because some of our Members on both sides of the aisle would like to get away at a reasonable hour. And if we finish this bill at a reasonable hour, we will go over until Monday. If not, we would have to go over until tomorrow.

I would like the Members of the Senate to keep that in mind. There is certainly no doubt how anyone feels on any of these bills.

Mr. SCOTT of Pennsylvania. That is why I spoke with malice prepense. I hope that Senators will find it possible to cooperate. These bills, I am told, are noncontroversial.

Mr. MANSFIELD. Quite the contrary, Mr. President, I think they fit in very well with the splendid crime message sent down by the President on yesterday, which shows that the crime rate has gone downward.

May I say to the distinguished Republican leader that if we finish these crime bills today, we will go over until Monday.

On Monday we will take up the meat inspection bill and also the bill authoriz-

ing an additional appropriation for an international center for foreign chanceries.

On Tuesday we will have the vote on the veto.

Mr. SCOTT of Pennsylvania. Do we have a time limitation on that measure?

Mr. MANSFIELD. We do. The time will begin to run at 12 o'clock.

Mr. SCOTT of Pennsylvania. Mr. President, I thank the distinguished majority leader.

QUORUM CALL

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRIVILEGE OF THE FLOOR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the distinguished Senator from Nebraska, the ranking member of the Judiciary Committee, may be allowed to have Mr. Lazarus of his staff on the floor at this time.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAYH. Mr. President, I make the same request in behalf of Mr. William Hickman and Mr. Mike Helfer.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCLELLAN. Mr. President, I ask unanimous consent that the following members of the staff of the Subcommittee on Criminal Laws and Procedures may be allowed the privilege of the floor of the Senate during the consideration of S. 13, S. 15, S. 33, S. 300, and S. 800: G. Robert Blakey, Paul C. Summitt, and Dennis C. Thelen.

Mr. HRUSKA. Including the votes, if any, thereon.

Mr. McCLELLAN. Yes; including the rollcall votes, if any, on these measures.

The PRESIDING OFFICER. Without objection, it is so ordered.

CIVIL REMEDIES FOR VICTIMS OF RACKETEERING ACTIVITY AND THEFT ACT OF 1973

The Senate continued with the consideration of the bill (S. 13) to amend title 18 of the United States Code to provide civil remedies to victims of racketeering activity and theft, and for other purposes.

Mr. McCLELLAN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. McCLELLAN. Is S. 13 the pending business?

The PRESIDING OFFICER. S. 13 is the pending business.

Mr. McCLELLAN. Mr. President, S. 13 was introduced by myself and the distinguished Senator from Nebraska (Mr.

HRUSKA). Its provisions also reflect S. 742, introduced by the distinguished Senator from Nevada (Mr. BIBLE). They would extend certain of antitrust type remedies—injunction, treble damages, and so forth—to the victims of the typical techniques employed by racketeers to invade legitimate businesses. They would also strike at the problem of cargo theft by enabling persons entitled to legal possession of goods to sue for treble damages persons responsible for stealing, buying, or reselling goods moving in interstate commerce.

This legislation was introduced last year as S. 16 and S. 2426. It was also processed by the Subcommittee on Criminal Laws and Procedures—see hearings, supra. It was reported by the Judiciary Committee on August 16, 1972—see Senate Report No. 92-1070, 92d Congress, second session—1972. And it passed the Senate by a record vote of 81 to 0 on September 5, 1972—see CONGRESSIONAL RECORD, volume 118, part 22, page 29379. No action was taken by the House.

Since there was no objection last year by the Senate to the passage of this bill, and I know of none this year, I think that further debate is unnecessary.

However, I notice the distinguished ranking minority member of the Subcommittee on Criminal Laws and Procedures is present. I am delighted to yield the floor to him for his comments.

Mr. HRUSKA. Mr. President, I am pleased to join the distinguished chairman of the Subcommittee on Criminal Laws and Procedures as a cosponsor of S. 13, the Civil Remedies for Victims of Racketeering Activity and Theft Act of 1973, and I now take pleasure in urging Senators to support the measure as reported.

A similar bill (S. 16) passed the Senate last year, but, unfortunately, it did not receive action in the House. It is hoped that the measure will receive House consideration this year.

The Department of Justice supports the enactment of S. 13 with the expectation that it will afford civil remedies to those victims who suffer loss due to theft or embezzlement of cargo by allowing injunctive relief and civil actions to recover threefold actual damages and costs of the action.

I salute the senior Senator from Arkansas for his imagination and initiative in processing the bill and for bringing it to the point of Senate passage.

Mr. McCLELLAN. I thank the distinguished Senator from Nebraska.

Mr. BIBLE. Mr. President, may I commend the distinguished senior Senator from Arkansas (Mr. McCLELLAN), chairman of the Subcommittee on Criminal Laws and Procedures of the Judiciary Committee, for the prompt and efficient manner in which his subcommittee has reported this series of anticrime bills for Senate action. His concern for victims of all types of crime merits great commendation, because government in our society these days is unable to protect the lives and property of our citizens.

For the benefit of other Senators, may I trace the background of S. 13 and in-

dicate just how deeply the problem has been examined. It was my pleasure to first propose this legislation (S. 2426) in August, 1971. Through the cooperative efforts of the distinguished senior Senator from Arkansas (Mr. McCLELLAN) and the capable staff of his Criminal Laws Subcommittee, we refined this concept with legislation introduced as my proposed amendments to S. 2994 on December 11, 1971.

We believed at that time and we believe even more strongly today that the Federal tool supplied by this legislation would provide an antitrust-type, treble damage, civil remedy approach to get at all types of property theft, estimated to cost the American public \$16 billion per year.

The Senate Judiciary Committee favorably reported and the Senate subsequently passed, on September 5, 1972, this concept as a part of S. 16, by a vote of 81 to 0. Several weeks later, on September 18, 1972, S. 16 as an amendment (No. 446) to H.R. 8389, a House-passed, drug abuse bill, cleared the Senate for the other body. Because the Congress was approaching sine die adjournment, the other body was unable to consider either measure. Early in this session, steps to enact this anticrime concept were taken again through S. 800 and the identical bills S. 13 and S. 742.

Today the Senate has an opportunity to do what it did in passing this bill last September and move it along to the other body for appropriate consideration.

Mr. President, the genesis of this legislation came out of some 3½ years of hearings before the Senate Small Business Committee, which I have the honor to chair, during which time our committee listened to testimony about thievery of goods from air, truck, rail, and maritime carriers, showing that the American shippers lose over \$1.5 billion a year to the cargo thief. These losses are naturally passed on to the American consumer in the form of crime-inflated prices.

Witnesses before our committee have repeated the same theme, that these goods stolen from trucks, railroads, air carriers, and maritime carriers are passed on to unscrupulous buyers for eventual resale in both legal and legitimate markets.

My bill would place a new enforcement tool in the Federal arsenal to reach these criminal dealers, taking the profit out of marketing these stolen goods.

We believe that in past years the criminal fence has been ignored in our efforts to develop measures to curb crimes of theft and burglary. For example, Robert Earl Barnes, one of the better known thieves, said:

Perhaps the most underrated criminal in the underworld is the receiver of stolen property, the burglar's fence. Few citizens actually understand just how essential the fence is to the burglar. When you think about where your stolen property has gone, don't think about the burglar. He usually doesn't have it, and probably would have trouble getting rid of it alone.

The fences are the key, not only to the burglar, but also to the shoplifter, the petty thief, the automobile-parts thief, mail par-

cel-post thieves, shipping-dock thieves, hijackers, and narcotics addicts—all dealers in merchandise which can be resold in a legitimate market. In connection with all of these criminal acts, the fence indeed plays as major a part as the persons actually doing the stealing. In some cases he may be more important.

Without the receiver of stolen property, none of the burglars—cat burglar, monkey man, or business specialist—could survive. For their efforts, they would have garages full of goods, and merchandise is useless to the thief unless he can sell it.

Mr. President, in my judgment there are two basic elements of a property theft crime: One, the theft itself, and two, the distribution of stolen property. Most prevention efforts have been geared toward combating the crime of theft itself but little is being done to stop the equally, if not more important, aspect of illegal distribution of stolen property or, as it is most commonly known, fencing.

Our Small Business Committee prepared a staff report which analyzed the criminal redistribution systems and their economic impact on small business. Three basic assumptions were made in this report which I think succinctly describe the role of the criminal fence:

First, fences play a vital role in the successful completion of a crime involving a major theft. Without the fence, the theft is a meaningless act.

Second, stolen goods eventually reach a legitimate marketplace. The magnitude of theft is so great that the only reasonable outlet must be to legitimate consumers.

Third, the illegal distribution system from the thief to the marketplace must adversely affect legitimate business enterprises such as storage companies, transporters, manufacturers, wholesalers, retailers, lending institutions, and others who are normally involved in a legal distribution system.

The logic that follows is that whether the theft and distribution process takes place interstate, intrastate, intracity, or even intracommunity, the detrimental effects on legitimate business and commerce have national ramifications.

The logic behind this legislation is to help destroy the thief's market for stolen goods. If a thief does not have a buyer to purchase and resell his "hot cargo," it becomes valueless to him. It is self-evident that if a fence or purchaser of such hot cargo is vulnerable to a lawsuit in a civil proceeding which is governed by a less stringent rule of evidence than a criminal trial, for threefold the fair market value of the stolen goods, then the hot cargo purchaser's marketing ability will be adversely affected, not to mention his pocketbook.

For the benefit of my colleagues, I would like to advise that a number of States are now considering comparable legislation to deal with the intrastate criminal middleman. An example is California, whose legislature last year unanimously passed an act similar to the provisions of this bill.

It was signed into law by Governor Reagan on August 16, 1972.

To acquaint the remaining 49 States with the scope of the problem and to as-

sist them deliberate as to the merits of this approach, I wrote to each of the Governors and provided them with an in-depth background of both the Federal concept and the new California law.

If I remember correctly, in the heyday of the Al Capone reign in Chicago, he was convicted not for murder, theft, the Volstead Act, or other mobster activity, but for income tax evasion. It is now time we go after the modern-day cargo thieves indirectly, too, as this bill proposes and more directly as other pending legislation suggests.

We are hopeful that a coordinated program may evolve, with criminal and civil enactments of legislation at both the Federal and State levels, aimed at dislocating the marketing ability of the criminal fence, thus lowering the value of billions of dollars worth of stolen goods and the ease with which they are reintroduced into legitimate commercial channels.

This, in turn, should result in a substantial lessening of property crimes such as burglary, theft, and shoplifting, while assisting the legitimate merchant to sell his commodities in the marketplace and not compete against the fencing marketer.

I thank the distinguished Senator for permitting me to provide additional information for Senators with respect to the basis for this legislation. I hope both the Senate and the other body will act expeditiously on this measure and thereby add a new tool to the Federal arsenal of tools to combat this criminal activity, one which nurtures and supports so many forms of thievery for which every consumer pays a higher price in increased costs for goods and services.

Mr. President, I know of no amendments to be offered to the bill. Since there are none, I ask for the third reading and passage of the bill.

The PRESIDING OFFICER. If there are no amendments to be proposed, the question is on the engrossment and third reading of the bill.

The bill (S. 13) was ordered to be engrossed for a third reading, was read the third time, and passed as follows:

S. 13

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as "Civil Remedies for Victims of Racketeering Activity and Theft Act of 1973".

RACKETEER CIVIL REMEDIES

SEC. 1. (a) Section 1964 of title 18 of the United States Code is amended by—

(1) inserting in subsection (a) "without regard to the amount in controversy," immediately after "jurisdiction";

(2) inserting in subsection (b) "subsection (a) of" after "under" each time it appears;

(3) striking the word "action" in subsection (b) and inserting in lieu thereof "proceedings"; and

(4) striking subsections (c) and (d) of such section and inserting in lieu thereof the following:

"(c) Any person may institute proceedings under subsection (a) of this section. In any proceeding brought by any person under subsection (a) of this section, relief shall be granted in conformity with the principles which govern the granting of injunctive relief from threatened loss or damage in other cases. Upon the execution of proper bond

against damages for an injunction improvidently granted and showing of immediate danger or irreparable loss or damage, a temporary restraining order and a preliminary injunction may be issued in any action before a final determination thereof upon its merits.

"(d) Whenever the United States is injured in its business or property by reason of any violation of section 1962 of this chapter, the Attorney General may bring a civil action in a district court of the United States, without regard to the amount in controversy, and shall recover the actual damages sustained by it, and the cost of the action.

"(e) Any person who is injured in his business or property by reason of any violation of section 1962 of this chapter may bring a civil action in a district court of the United States, without regard to the amount in controversy, and shall recover threefold the actual damages sustained by him, and the cost of the action, including a reasonable attorney's fee.

"(f) The United States may upon timely application intervene in any civil action or proceeding brought under this chapter, if the Attorney General certifies that in his opinion the case is of general public importance. In such action or proceeding, the United States shall be entitled to the same relief as if it had instituted the action or proceeding.

"(g) A final judgment or decree rendered in favor of the United States in any criminal or civil action or proceeding under this chapter shall estop the defendant in any subsequent civil proceeding as to all matters respecting which said judgment or decree would be an estoppel as between the parties thereto.

"(h) Except as hereinafter provided, any civil action under this section shall be barred unless it is commenced within five years after the cause of action accrued. Whenever any civil or criminal action or proceeding, other than an action under subsection (d) of this section, is brought or intervened in by the United States to prevent, restrain, or punish any violation of section 1962 of this chapter the running of the period of limitations prescribed by this subsection with respect to any cause of action arising under subsections (c) and (e) of this section, which is based in whole or in part on any matter complained of in such action or proceeding by the United States, shall be suspended during the pendency of such action or proceeding by the United States and for two years thereafter."

(b) Section 1965 of title 18 of the United States Code is amended by—

(1) striking out in subsection (b) "action under section 1964 of" and inserting in lieu thereof "civil action or proceeding under";

(2) striking out in subsection (c) "instituted by the United States"; and

(3) inserting in subsection (d) "civil or criminal" immediately before "action".

(c) Section 1966 of title 18 of the United States Code is amended by striking "any civil action instituted under this chapter by the United States" in the first sentence and inserting in lieu thereof "any civil action or proceeding under this chapter in which the United States is a party".

(d) Section 1967 of title 18 of the United States Code is amended by striking "instituted by the United States", and inserting in lieu thereof "or proceeding".

(e) Section 1968 of title 18 of the United States Code is amended by—

(1) striking out "prior to the institution of a civil or criminal proceeding" in the first sentence of subsection (a) and inserting in lieu thereof "before he institutes or intervenes in a civil or criminal action or proceeding";

(2) striking out "case" the first time it appears and inserting in lieu thereof "civil

or criminal action" in paragraph (4) of subsection (f) and striking out "case" each time it appears thereafter and inserting in lieu thereof "action";

(3) striking out "case" each time it appears in paragraph (5) of subsection (f) and inserting in lieu thereof "action"; and

(4) striking out "case" and inserting in lieu thereof "action" in paragraph (6) of subsection (f).

THEFT CIVIL REMEDIES

SEC. 2. (a) Section 659 of title 18 of the United States is amended to read as follows:

"§ 659. Interstate or foreign shipments by carrier; State prosecutions; civil remedies for victims of theft

"(a) It shall be unlawful for any person to embezzle, steal, or unlawfully take, carry away, or conceal, or by fraud or deception obtain, with intent to convert to his own use, any money, baggage, goods, chattels, or other property which is moving as, or which is a part of, or which constitute an interstate or foreign shipment from any pipeline system, railroad car, wagon, motortruck, or other vehicle, or from any tank or storage facility, station, station house, platform, or depot, or from any steamboat, vessel, or wharf, or from any aircraft, air terminal, airport, aircraft terminal, or air navigation facility, or to buy, receive, or have in his possession any such money, baggage, goods, chattels, or other property, knowing, or having reason to know, that it has been embezzled, stolen, or otherwise unlawfully taken, carried away, concealed, or obtained.

"(b) It shall be unlawful for any person to embezzle, steal, or unlawfully take, carry away, or conceal, or by fraud or deception obtain, with intent to convert to his own use, any money, baggage, goods, chattels, or other property, which shall have come into the possession of any common carrier for transportation in interstate or foreign commerce, or to break into, embezzle, steal, unlawfully take, carry away, or conceal, or by fraud or deception obtain, with intent to convert to his own use, any of the contents of such baggage, goods, chattels, or other property, or to buy, receive, or have in his possession any such money, baggage, goods, chattels, or other property, knowing or having reason to know that it has been embezzled or stolen or otherwise unlawfully taken, carried away, concealed, or obtained.

"(c) It shall be unlawful for any person to embezzle, steal, or unlawfully take, carry away, conceal, or by fraud or deception obtain, with intent to convert to his own use, any money, baggage, goods, chattels, or other property from any railroad car, bus, vehicle, steamboat, vessel, or aircraft operated by any common carrier moving in interstate or foreign commerce, or from any passenger thereon, or to buy, receive, or have in his possession any such money, baggage, goods, chattels, or other property, knowing or having reason to know that it has been embezzled, stolen, or otherwise unlawfully taken, carried away, concealed, or obtained.

"(d) Whoever violates any provision of subsection (a), (b), or (c) of this section shall in each case be fined not more than \$5,000 or imprisoned not more than ten years, or both; but if the amount or value of such money, baggage, goods, chattels, or other property does not exceed \$100, he shall be fined not more than \$1,000 or imprisoned not more than one year, or both.

"(e) The district courts of the United States shall have jurisdiction, without regard to the amount in controversy, to prevent and restrain violations of this section by issuing appropriate orders, including, but not limited to: ordering any person to divest himself of any interest, direct, or indirect, in any enterprise; imposing reasonable restrictions on the future activities or investments of any person, including, but not limited to, prohibiting any person from engaging in the same

type of endeavor as the enterprise engaged in, the activities of which affect interstate or foreign commerce; or ordering dissolution or reorganization of any enterprise, making due provision for the rights of innocent persons.

"(f) The Attorney General may institute proceedings under subsection (e) of this section. In any proceedings brought by the United States under subsection (e) of this section, the court shall proceed as soon as practicable to the hearing and determination thereof. Pending final determination thereof, the court may at any time enter such restraining orders or prohibitions, or take such other actions as it shall deem proper.

"(g) Any person may institute proceedings under subsection (e) of this section. In any proceeding brought by any person under subsection (e) of this section, relief shall be granted in conformity with the principles which govern the granting of injunctive relief from threatened loss or damage in other cases. Upon the execution of proper bond against damages for an injunction improvidently granted and a showing of immediate danger of irreparable loss or damage, a temporary restraining order and preliminary injunction may be issued in any action before a final determination thereof upon its merits.

"(h) Whenever the United States is injured in its business or property by reason of any violation of this section, the Attorney General may bring a civil action in a district court of the United States, without regard to the amount in controversy, and shall recover the actual damages sustained by the United States, and the cost of action.

"(i) Any person who is injured in his business or property by reason of any violation of this section may bring a civil action in a district court of the United States, without regard to the amount in controversy, and shall recover threefold the actual damages sustained by him, and the cost of the action, including a reasonable attorney's fee.

"(j) Any civil action or proceeding under this section against any person may be instituted in the district court of the United States for any district in which such person resides, is found, has an agent, or transacts his affairs.

"(k) In any civil action or proceeding under this section in any district court of the United States in which it is shown that the ends of justice require that any other party residing in any other district be brought before the court, the court may cause such party to be summoned, and process for that purpose may be served in any judicial district of the United States by the marshal thereof.

"(l) In any civil or criminal action or proceeding under this section in the district court of the United States for any judicial district, subpoenas issued by such court to compel the attendance of witnesses may be served in any other judicial district except that in any civil action or proceeding no such subpoena shall be issued for service upon any individual who resides in another district at a place more than one hundred miles from the place at which such court is held without approval given by a judge of such court upon a showing of good cause.

"(m) All other process in any civil or criminal action or proceeding under this section may be served on any person in any judicial district in which such person resides, is found, has an agent, or transacts his affairs.

"(n) The United States may, upon timely application, intervene in any civil action or proceeding brought under this section if the Attorney General certifies that in his opinion the case is of general public importance. In such action or proceeding, the United States shall be entitled to the same relief as if he had instituted the action or proceeding.

"(o) A final judgment or decree rendered in favor of the United States in any criminal

action or proceeding under this section shall estop the defendant in any subsequent civil proceeding as to all matters respecting which said judgment or decree would be an estoppel as between the parties thereto.

"(p) Except as hereinafter provided, any civil action or proceeding under this section shall be barred unless it is commenced within five years after the cause of action accrued. Whenever any civil or criminal action or proceeding, other than an action under subsection (h) of this section, is brought or intervened in by the United States to prevent, restrain, or punish any violation of this section, the running of the period of limitations prescribed by this subsection with respect to any cause of action arising under subsection (g) or (i) of this section, which is based in whole or in part on any matter complained of in such action or proceeding by the United States, shall be suspended during the pendency of such action or proceeding by the United States and for two years thereafter.

"(q) A violation of this section shall be deemed to have been committed not only in the district where the violation first occurred, but also in any district in which the defendant may have taken or been in possession of the said money, baggage, goods, chattels, or other property.

"(r) The carrying or transporting of any such money, baggage, goods, chattels, or other property in interstate or foreign commerce, knowing, or having reason to know, it had been embezzled, stolen, or otherwise unlawfully taken, carried away, concealed, or obtained, shall constitute a separate violation and subject the violator to criminal penalties and a civil cause of action under this section and the violation shall be deemed to have been committed in any district into which such money, baggage, goods, chattels, or other property, shall have been removed or into which it shall have been brought by such violator.

"(s) To establish the interstate or foreign commerce character of any shipment in any criminal or civil action or proceeding under this section the waybill or other shipping document of such shipment shall be prima facie evidence of the place from which and to which such shipment was made. The removal of property from a pipeline system which extends interstate shall be prima facie evidence of the interstate character of the shipment of the property. Proof that a person was found in unexplained possession of any money, baggage, goods, chattels, or other property, recently embezzled, stolen, or otherwise unlawfully taken, carried away, concealed, or obtained by fraud or deception in violation of this section, shall be prima facie evidence that such person knew that such property was, or that such person had, embezzled, stolen, or otherwise unlawfully taken, carried away, concealed, or obtained by fraud or deception such money, baggage, goods, chattels, or other property in violation of this section. Proof that a person bought or received for consideration substantially below its fair market value money, baggage, goods, chattels, or other property embezzled, stolen, or otherwise unlawfully taken, carried away, concealed, or obtained by fraud or deception in violation of this section shall be prima facie evidence that such person knew that such property was embezzled, stolen, or otherwise unlawfully taken, carried away, concealed, or obtained by fraud or deception in violation of this section.

"(t) A judgment of conviction or acquittal on the merits under the laws of any State shall be a bar to any criminal prosecution under this section for the same act or acts. Nothing contained in this section shall be construed as indicating an intent on the part of Congress to occupy the field in which provisions of this section operate to the exclusion of State laws on the same subject

matter, nor shall any provision of this section be construed as invalidating any provision of State law unless such provision is inconsistent with any of the purposes of this section or any provision thereof."

(b) The analysis at the beginning of chapter 31 of title 18 of the United States Code, for section 659, is amended to read:

"659. Interstate or foreign shipment by carrier; State prosecutions; civil remedies for victims of theft."

SEVERABILITY

SEC. 3. If the provisions of any part of this Act are found invalid or any amendments made thereby or the application thereof to any person or circumstances be held invalid, the provisions of the other parts and their application to other persons or circumstances shall not be affected thereby.

EFFECTIVE DATE

SEC. 4. This Act shall become effective upon the date of enactment.

Mr. McCLELLAN. Mr. President, I move to reconsider the vote by which S. 13 was passed.

Mr. TALMADGE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

PUBLIC SAFETY OFFICERS' BENEFITS ACT OF 1973

Mr. McCLELLAN. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 85, S. 15.

The PRESIDING OFFICER. The bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 15) to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide a Federal death benefit to the surviving dependents of public safety officers.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on the Judiciary with amendments on page 2, line 4, after the word "parts", strike out "G, H, I, and J" and insert "I, J, K, and L"; in line 6, after the word "part", strike out "E" and insert "G"; in line 8, after the word "Part", strike out "F" and insert "II"; on page 7, line 6, after the word "part", strike out "F" and insert "II"; and in line 19, after the word "after", strike out "October 16, 1972" and insert "October 17, 1972".

Mr. McCLELLAN. Mr. President, S. 15 was introduced by myself and the distinguished Senator from Nebraska (Mr. HRUSKA). It would provide a lump-sum Federal death gratuity of \$50,000 to the dependent survivors of public safety officers, including police, firefighters, and correction guards, killed in the line of duty as a result of a criminal act.

This legislation was introduced last year as S. 2087. It was also processed by the Subcommittee on Criminal Laws and Procedures—see Hearings, supra. It was reported by the Judiciary Committee on August 18, 1972 (S. Rept. No. 92-1069, 92d Cong., 2d Sess. (1972)). And it passed the Senate by the record vote of 80 to 0 on September 5, 1972 (CONGRESSIONAL RECORD vol. 118, pt. 22, p. 29379).

The House of Representatives passed similar legislation, a conference was held and a report filed. (See H. Rept. No. 92-1612, 92d Cong., 2d Sess., Oct. 17, 1972.) It was not possible, however, to secure a House vote on the Report prior to adjournment. (See CONGRESSIONAL RECORD vol. 118, pt. 28, pp. 36966 and 37063.)

The text of title III of this proposed legislation is the text agreed upon by the Conference with one exception. The date of the death benefits is made retroactive to the date of the conference agreement, that is, October 17, 1972.

I urge its immediate passage.

Mr. THURMOND. Mr. President, I ask unanimous consent that Mr. Raymond Sifly of the Judiciary Committee staff be allowed the privilege of the floor.

The PRESIDING OFFICER (Mr. McCLELLAN). Without objection, it is so ordered.

Mr. McCLELLAN. Mr. President, I yield now to the distinguished Senator from Nebraska, the ranking minority member of the Criminal Laws and Procedures Subcommittee of the Judiciary Committee.

Mr. HRUSKA. Mr. President, S. 15, the Public Safety Officers' Benefits Act of 1973, has the wholehearted support of this Senator.

On June 4, 1971, President Nixon called for Federal legislation to provide \$50,000 to the family of any policeman slain in the line of duty. In the President's words, this was done "in further indication of the administration's support of law enforcement officers across the country."

S. 2087, the subject bill in the last Congress, passed the Senate by a unanimous vote. The House passed another version; a conference was thereafter held and agreement was reached to file a conference report, but the Congress adjourned prior to the time when final action could be taken.

The bill which is currently under consideration is substantially the measure agreed to in the Senate-House conference. The primary amendment of that form of the bill is contained in section 5 of S. 15 and would provide that the effective date of the act be October 17, 1972, so as to authorize a death benefit for public safety officers who have been killed since the day of the agreement reached between House and Senate conferees.

I was pleased to join as a cosponsor of the subject bill and believe it is an appropriate recognition of the support due to State and local policemen, firemen, corrections personnel, court personnel.

I urge its enactment.

Mr. McCLELLAN. Mr. President, I now yield to the distinguished Senator from South Carolina (Mr. THURMOND).

Mr. THURMOND. Mr. President, I was pleased to join the able and distinguished Senator from Arkansas and the able and distinguished Senator from Nebraska in introducing this bill. It is a very simple one for the public safety officers of the United States, and I sincerely hope that it will pass.

In recent years many of our public safety officers have been killed by felonious assaults, and it is increasingly ap-

parent that violent crime is spreading. Crime knows no jurisdictional boundary, nor respects the color of a law-enforcement officer's uniform. Each officer, whether sheriff, deputy, highway patrolman, or policeman, must be fully cognizant that death may come to him in the performance of his sworn duties.

The administration supports this measure and believes it is warranted because police officers throughout the country are facing a rising tide of violence and need a minimum death benefit that is not tied into State or local compensation programs.

Public safety officers, dedicated to their law-enforcement careers, are not nearly so concerned with their low salaries as they are maintaining and preserving the security of their families.

Mr. President, this is a vital bill and one of great importance and I sincerely hope that it will be passed.

Mr. McCLELLAN. Mr. President, I ask unanimous consent that the committee amendments be agreed to en bloc and that the bill as thus amended be considered as original text for the purpose of amendment.

The PRESIDING OFFICER. Without objection, the committee amendments are considered and agreed to en bloc.

The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Public Safety Officers' Benefits Act of 1973".

SECTION 1. The Omnibus Crime Control and Safe Streets Act of 1968, as amended, is amended by—

- (1) redesignating sections 451 through 455 respectively as sections 421 through 425;
- (2) redesignating sections 501 through 522 respectively as sections 550 through 571;
- (3) redesignating parts F, G, H, and I of title I respectively as parts I, J, K, and L of title I; and
- (4) adding at the end of part G of title I of the Act, the following new part:

"PART H—DEATH BENEFITS FOR PUBLIC SAFETY OFFICERS

"DEFINITIONS

"SEC. 525. As used in this part—

"(1) 'child' means any natural, adopted, or posthumous child of a deceased public safety officer who is—

"(A) under eighteen years of age; or

"(B) over eighteen years of age and incapable of self-support because of physical or mental disability; or

"(C) over eighteen years of age and a student as defined by section 8101 of title 5, United States Code.

"(2) 'criminal act' means any crime, including an act, omission, or possession under the laws of the United States or a State or unit of general local government, which poses a substantial threat of personal injury, notwithstanding that by reason of age, insanity, intoxication, or otherwise, the person engaging in the act, omission, or possession was legally incapable of committing a crime;

"(3) 'dependent' means a person who was wholly or substantially reliant for support upon the income of a deceased public safety officer;

"(4) 'intoxication' means a disturbance

of mental or physical faculties resulting from the introduction of alcohol, drugs, or other substances into the body;

"(5) 'line of duty' means within the scope of employment or service;

"(6) 'public safety officer' means a person serving a public agency, with or without compensation, as—

"(A) a law enforcement officer, including a corrections or a court officer, engaged in—
 "(1) the apprehension or attempted apprehension of any person—

"(a) for the commission of a criminal act, or

"(b) who at the time was sought as a material witness in a criminal proceeding; or

"(ii) protecting or guarding a person held for the commission of a criminal act or held as a material witness in connection with a criminal act; or

"(iii) the lawful prevention of, or lawful attempt to prevent the commission of, a criminal act or an apparent criminal act or in the performance of his official duty; or

"(B) a firefighter; and

"(7) 'separated spouse' means a spouse, without regard to dependency, who is living apart for reasonable cause or because of desertion by the deceased public safety officer.

AWARDS

"Sec. 526. (a) Upon a finding made in accordance with section 527 of this part the Administration shall provide a gratuity of \$50,000.

"(b) (1) Whenever the Administration determines, upon a showing of need and prior to taking final action, that a death of a public safety officer is one with respect to which a benefit will probably be paid, the Administration may make an interim benefit payment not exceeding \$3,000 to the person entitled to receive a benefit under section 527 of this part.

"(2) The amount of any interim benefit paid under paragraph (1) of this subsection shall be deducted from the amount of any final benefit paid to such person or dependent.

"(3) Where there is no final benefit paid, the recipient of any interim benefit paid under paragraph (1) of this subsection shall be liable for repayment of such amount. The Administration may waive all or part of such repayment.

"(c) The benefit payable under this part shall be in addition to any other benefit that may be due from any other source, but shall be reduced by payments authorized by section 12(k) of the Act of September 1, 1916, as amended, 4-531(1) of the District of Columbia Code.

"(d) No benefit paid under this part shall be subject to execution or attachment.

RECIPIENTS

"Sec. 527. When a public safety officer has been killed in the line of duty and the direct and proximate cause of such death was a criminal act or an apparent criminal act, the Administration shall pay a benefit as provided in section 526 of this part as follows:

"(1) if there is no surviving dependent child of such officer, to the surviving dependent spouse or separated spouse of such officer;

"(2) if there is a surviving dependent child or children and a surviving dependent spouse or separated spouse of such officer, one-half to the surviving dependent child or children of such officer in equal shares and one-half to the surviving dependent spouse or separated spouse of such officer;

"(3) if there is no such surviving dependent spouse or separated spouse, to the dependent child or children of such officer, in equal shares; or

"(4) if none of the above, to the dependent parent or parents of the decedent, in equal shares;

"(5) if none of the above, to the dependent

person or persons who are blood relatives of the deceased public safety officer or who were living in his household and who are specifically designated in the public safety officer's duly executed authorization to receive the benefit provided for in this part.

LIMITATIONS

"Sec. 528. No benefit shall be paid under this part—

"(1) if the death was caused by the intentional misconduct of the public safety officer or by such officer's intention to bring about his death;

"(2) if voluntary intoxication of the public safety officer was the proximate cause of such officer's death; or

"(3) to any person who would otherwise be entitled to a benefit under this part if such person's actions were a substantial contributing factor to the death of the public safety officer."

MISCELLANEOUS PROVISIONS

Sec. 2. Section 569 of the Omnibus Crime Control and Safe Streets Act of 1968, as amended and as redesignated by this Act, is amended by inserting "(a)" immediately after "569" and by adding at the end thereof the following new subsection:

"(b) There is authorized to be appropriated such sums as are necessary for the fiscal year ending June 30, 1974, for the purposes of part H."

Sec. 3. Until specific appropriations are made for carrying out the purposes of this Act, any appropriation made to the Department of Justice or the Law Enforcement Assistance Administration for grants, activities, or contracts shall, in the discretion of the Attorney General, be available for payments of obligations arising under this Act.

Sec. 4. If the provisions of any part of this Act are found invalid or any amendments made thereby or the application thereof to any person or circumstances be held invalid, the provisions of the other parts and their application to other persons or circumstances shall not be affected thereby.

Sec. 5. This Act shall become effective and apply to acts and deaths occurring on or after October 17, 1972.

Mr. McCLELLAN. Mr. President, I move that the vote by which the bill was passed be reconsidered.

Mr. ROBERT C. BYRD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

PUBLIC SAFETY OFFICERS' GROUP LIFE INSURANCE ACT OF 1973

Mr. McCLELLAN. Mr. President, I ask unanimous consent that the Senate proceed to the immediate consideration of Calendar No. 86, S. 33.

The PRESIDING OFFICER (Mr. BARTLETT). The bill will be stated by title.

The assistant legislative clerk read as follows:

S. 33, to amend the Omnibus Crime Control and Safe Streets Act of 1968, to authorize group life insurance programs for public safety officers, and to assist State and local governments to provide such insurance.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on the Judiciary with amendments on page 1, line 4, after the word "of", strike out "1972" and insert "1973"; at the beginning of line 6, strike out "title" and insert "Act"; on page 2, line 8, after the

word "through", strike out "521" and insert "522"; and in line 9, after the word "through", strike out "570" and insert "571".

Mr. McCLELLAN. Mr. President, S. 33 was introduced by the distinguished Senator from Massachusetts (Mr. KENNEDY). It would establish a nationwide, federally subsidized program of group life, accidental death, and dismemberment insurance for State and local public safety officers defined to include firefighters, correctional guards, and court officers in addition to police. The plan is patterned closely after the Servicemen's Group Life Insurance program which is available to members of our Armed Forces. Coverage would be at a level of the officer's annual salary plus \$2,000, starting from a floor of \$10,000 coverage and rising to a maximum of \$32,000. The Federal Government would pay up to one-third of the total cost of the premiums, leaving the remainder to be covered by the insured officer or the State or local government.

Where existing State or local group life insurance plans already provide coverage for public safety officers, or where it was desired to establish such a program within a year after the effective date of the bill, eligible officers would choose by ballot between the Federal and the State or local plans. If they chose the State or local programs, it would be eligible for the same subsidy which would go to the Federal plan.

This legislation was introduced last year as S. 33. It was also processed by the Subcommittee on Criminal Laws and Procedures. [See Hearings, supra]. It was reported by the Judiciary Committee on September 13, 1972. [See S. Rept. 92-1124, 92d Cong., 2d sess. (1972)]. And it passed the Senate by the record vote of 61 to 6 on September 18, 1972 (CONGRESSIONAL RECORD, vol. 118, pt. 24, p. 31024). No action was taken by the House.

I urge its immediate passage.

Mr. President, I believe there is opposition to this measure. Therefore, I am glad to yield to my friend from Nebraska (Mr. HRUSKA) who is the ranking minority member on the Judiciary Subcommittee on Criminal Laws and Procedures.

Mr. HRUSKA. Mr. President, I am opposed to the enactment of S. 33 and respectfully request that my colleagues consider my views as set forth in the report of the Committee on the Judiciary relative to the subject bill.

I ask unanimous consent that these views be printed in the RECORD, and I take this opportunity merely to highlight them.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM ADDITIONAL VIEWS OF SENATOR HRUSKA

I am opposed to the enactment of S. 33.

This opposition does not stem from any lack of appreciation or understanding for the contributions made by public safety officers to all of the citizens of our Nation. Indeed, this Senator was an original sponsor of S. 2087, the Public Safety Officers Benefits Act of 1972, in the last Congress. This bill passed the Senate by a vote of 80 to 0, on September 5, 1972. The House passed another version of the proposal; a conference was held

and agreement was reached to file a conference report, but the adjournment of the 92d Congress did not allow time to take up the conference report.

In the current Congress, I am a cosponsor of S. 15, the Public Safety Officers Benefits Act of 1973, a bill identical to S. 2087.¹ This proposal, which is scheduled for early consideration this year, would provide a \$50,000 gratuity to the surviving dependents of public safety officers killed in the line of duty as the result of a criminal act or an apparent criminal act. To this Senator, S. 15 is an appropriate recognition by Congress of its responsibility to provide support for those of our citizens who are in the front lines of our efforts to deter crime in this Nation.

I felt duty-bound to oppose the instant bill in the last Congress and do so again.² In my view, it suffers a number of serious defects of both a conceptual and practical nature.

LACK OF NEED

Contrary to the statements made by some of the sponsors of S. 33, there is no established need for this legislation. During the course of its consideration of S. 33, the Subcommittee on Criminal Laws and Procedures contacted approximately 100 life insurance companies across the Nation covering a cross section of small, medium, and large group underwriters.³ In response to the subcommittee's inquiry with respect to the current availability of group life insurance programs for "public safety officers," there was virtual unanimity in the responses of the insurance companies.⁴ Private insurers in this country are ready, willing, and able to supply group insurance to law enforcement personnel. Typical of the reaction of group life underwriters to the question of need was the statement from Nationwide Life Insurance Co.—

"It was somewhat of a surprise to us to read a statement that indicated that insurance programs are not generally available to public safety officers. Nationwide Life Insurance Company makes these programs available to legitimate groups applying for coverage at standard minimum group rates for life insurance * * *."

Any public safety officer interested in group life insurance coverage can easily find numerous insurers looking for an opportunity to serve him. In fact, approximately 82 percent of the 700,000 public safety officers across the Nation have taken advantage of this opportunity and have enrolled in fully or partially paid group life insurance programs conducted under the auspices of State and local governments.⁵ This represents a fairly high participation percentage, likely due in no small measure to the fact that under these existing programs, the employer normally pays at least 50 percent of the total premiums involved.⁶

With respect to the cost of existing group life insurance programs, it is a gross distortion of fact to suggest, as some have, that public safety officers pay inordinately high premiums due to any added risks of their profession. The single most important factor in computing premiums for a group life insurance program is the age distribution of enrollees. Since public safety officers as a group are relatively youthful, premiums are low. For example, in New Jersey a group life insurance program covering over 20,000 State and local police and firemen calls for a total premium of \$.60 per month per \$1,000 of coverage.⁷ Compare this with the life insurance protection available to Senate employees which involves a total premium of approximately \$.73 per month per \$1,000 coverage.⁸

Although the vast majority of life insurance groups covering public safety officers are not "loaded," i.e., charged a higher premium, to cover additional risk across the

board as just indicated, that portion of the premium which is attributable to the accidental death and dismemberment feature is in a small minority of cases marginally increased. The most common increase in this regard is \$.03 per \$1,000 per month.¹⁰ This small difference does little to disturb the basically attractive picture for public safety officers seeking group life protection.

Public safety officers are simply not a high-risk group. General construction workers, miners, bartenders, and longshoremen are rated much higher in risk.¹¹ Policemen and firemen, with minor exceptions, pay the same rates for group life insurance protection as other employee groups with similar age distributions.

FEDERAL/STATE CONFLICTS

As with so many other aspects of life in this country, Federal assumption of responsibility for life insurance for State and local public safety officers is not the answer. Law enforcement has always been primarily a non-Federal responsibility and function in the United States. It was so conceived at the time of the founding of the Nation and it has remained so. This local responsibility for law enforcement has been an instrumental factor throughout our history in preserving justice and equality during periods of war and peace.

Any effort to establish a national police force has always been strongly resisted by Congress and the great bulk of the citizenry. As recently as the establishment of the Law Enforcement Assistance Administration in 1968 and the numerous crime bills approved in 1970, Congress went on record as approving and adhering to the traditional allocation of law enforcement responsibility to State and local governments. Indeed, the declarations and purpose of the Omnibus Crime Control and Safe Streets Act of 1968 (Public Law 90-351) contained the following:

"Crime is essentially a local problem that must be dealt with by State and local governments if it is to be controlled effectively."

This Senator does not contend that Federal life insurance policies will ipso facto result in the creation of a national police force; such a simplistic analysis would be wide of the mark. However, we should be mindful of the maxim that "he who pays the piper calls the tune." A Federal insurance program as envisioned by S. 33 is an additional step away from the traditional policy of having local officials supported primarily by local funds and under local control.

Although the paragraph immediately above sets forth a somewhat academic and general argument with respect to proper State-Federal relations, subpart 2 of S. 33 as presently drafted, in my view all but guarantees the prompt disruption of existing group life insurance programs and is also coercive with respect to the orderly operations of State and local governments.

Subpart 2 would provide assistance to group life insurance programs operated under the auspices of any State or unit of general local government as an alternative to the Federal group life insurance program established by subpart 1.

In order for a State or local group life insurance program to receive a contribution to premiums under S. 33, it would have to be established by date of enactment or within 1 year from the date of enactment. Moreover, there is the additional requirement that eligible public safety officers vote to remain in the existing group. Should they vote to drop out of the State or local program on the other hand, the employer-government must abide by their wishes and seek enrollment under the Federal group established by subpart 1.

One year after enactment of S. 33, all public safety officers desiring a Federal contribu-

tion to a group life insurance program would be forced to enroll in the Federal program. This fails to take into account a basic tenet of federalism—the differing needs of citizens of different States and localities. In this regard, I can only note that appropriate benefits for public safety officers may differ from one jurisdiction to another. For example, one State may provide substantial death benefits under a retirement program which would obviate any need for large amounts of life insurance. Costs and expenses vary from region to region across the country and are appreciably different in rural and urban areas.

Rather than a single national program of life insurance, separate ones molded to meet the specific and individual needs of the State or community would be far more equitable, workable, and realistic. Other aspects of public safety employment such as pay, working conditions, pension plans, and types of hospitalization coverage are allowed differing regulation from jurisdiction to jurisdiction. Why should life insurance be singled out for special national treatment?

The second disturbing feature of subpart 2 noted above, raises a problem of perhaps greater dimension. A substantial number, if not a majority, of the existing group life insurance programs operated under the auspices of State and local governments include within the group not only public safety officers but also all other employees of the respective government entity.¹² Under the provisions of S. 33, public safety officers may elect against their current enrollment. This would require modification of the existing plans and a potential increase in premiums for the perhaps older enrollees left behind. This points to the inherent disruptive potential of S. 33's "rippling" effect with respect to the order operation of employment affairs by State and local governments.

ANTICOMPETITIVE FEATURE

Section 501(a) of the subject bill requires that the primary insurer of the Federal group life program established by subpart 1 be:

(1) licensed to issue insurance in every State and the District of Columbia; and (2) have control of at least 1 percent of the group life insurance market in the country.

Although this might not sound terribly restrictive at first glance, detailed study would reveal that only the 10 largest group life insurance underwriters in the country could qualify under the provision.¹³ Arguably, the class of eligible primary insurers need not be so restricted.¹⁴

Section 502 of the bill authorizes reinsurance with other life insurance companies which elect to participate in the insurance pool and this provision, to some extent, ameliorates the harshness of section 501. However, the overall effect of sections 501 and 502 is to severely restrict competition in this segment of the group life insurance market. Although small underwriters are allowed to maintain their status quo if they have an identifiable share of the market, they are prevented from increasing their current share of available business. This approach is of dubious validity, in my view, in a multi-employer situation as is the case in these circumstances and it is ironic that this anti-competitive feature has been condoned by the very Committee on the Judiciary which is charged with the responsibility of maintaining the vigil over our laws in the area of antitrust and monopoly.

INEQUITY

If the Senate approves S. 15, the "Public Safety Officers Benefits Act of 1973," referred to above, all that the adoption of S. 33 would mean is that Congress is approving the purchase out of Federal funds of ordinary life insurance to protect against off-duty mishaps and natural events that are not a function of the occupations of public safety officers. Having provided for protection against the

Footnotes at end of article.

risks that are a function of the public safety professions, why should these citizens be singled out for Federal insurance against an automobile accident which occurs on the way to the grocery store or the movie, a fall sustained on a family picnic, or even simply death in bed? There are numerous other citizens, particularly other public service employees, who legitimately may feel that they are entitled to the same consideration.

To the extent that contributions to life insurance premiums are properly considered as just another mode of employees compensation—part of a "wage package," as it were—other State and local government employees would, of course, question the singling out of public safety officers for preferential treatment.

BUDGETARY LIMITATIONS

In addition to the obvious and substantial cost of providing the insurance specified in the bill, there are indications that large administrative and additional expenses would be involved.¹⁵ As public safety officers are now defined, the one-third Federal share of the premium for all public safety officers would be more than \$20 million annually. However, this figure does not include the extra expense of collecting the premiums from State and local units of government or administrative costs.

One estimate of this cost of collection and administration is one dollar (\$1) per month for every public safety officer insured. This expense would have to be borne by the employing agency or the Federal Government and could amount to approximately \$8 million annually for the more than 700,000 public safety officers who would be eligible for insurance under this bill. The appropriation necessary to carry out the purposes of S. 33 should be borne in mind as the Senate considers this bill.

Last year, general revenue sharing became a reality. This revenue sharing program should go a long way in free up State and local funds to meet the increasing wage needs of their personnel.

President Nixon has indicated his desire to hold Federal spending this year to \$268.7 billion. By passing ill-conceived and loosely drafted legislation with significant cost considerations such as the subject bill, the Senate would be contributing to mounting congressional pressures for a tax increase.

For the above-stated reasons, I cannot support S. 33. With respect to proper Federal responsibilities, it is my view that S. 15, the "Public Safety Officers Benefits Act of 1973" logically supplants rather than supplements the subject bill. I urge my colleagues to reject S. 33.

Mr. HRUSKA. Mr. President, this opposition does not stem from any lack of appreciation or understanding of the contributions made by public safety officers to all of the citizens of our Nation.

For example, in the current Congress, I am a cosponsor of S. 15, the Public Safety Officers Benefits Act of 1973.

S. 15 is an appropriate recognition by Congress of its responsibility to provide support for those of our citizens who are in the front lines of our efforts to deter crime in this Nation.

The subject bill, however, suffers a number of serious defects.

It should first be pointed out that there is no established need for this legislation. Private insurers in this country are ready, willing and able to supply group insurance to law enforcement personnel.

As a matter of fact, approximately 82 percent of the 700,000 public safety officers across the Nation have taken advantage of this opportunity and have enrolled in fully or partially paid group life insurance programs conducted under the auspices of State and local governments.

With respect to the cost of existing group life insurance programs, it is a distortion of fact to suggest that public safety officers pay inordinately high premiums due to any added risks of their profession. The single most important factor in computing premiums for a group life insurance program is the age distribution of enrollees. Since public safety officers as a group are relatively youthful, premiums are low.

Public safety officers are simply not a high-risk group. General construction workers, miners, bartenders, and longshoremen are rated much higher in risk.

The second basis of my objection to S. 33 is that it all but guarantees the prompt disruption of existing group life insurance programs and is also coercive with respect to the orderly operations of State and local governments.

One year after enactment of S. 33, all public safety officers desiring a Federal contribution to a group life insurance program would be forced to enroll in the Federal program. This fails to take into account the differing needs of citizens of different States and localities. In this regard, I can only note that appropriate benefits for public safety officers may differ from one jurisdiction to another. For example, one State may provide substantial death benefits under a retirement program which would obviate any need for large amounts of life insurance.

Additionally, a substantial number, if not a majority, of the existing group life insurance programs operated under the auspices of State and local governments include within the group not only public safety officers but also all other employees of the respective government entity. Under the provisions of S. 33, public safety officers may elect against their current enrollment. This would require modification of the existing plans and a potential increase in premiums for the perhaps older enrollees left behind.

Third, under the provisions of S. 33 only the 10 largest group life insurance underwriters in the country could qualify as the primary underwriter of the Federal group. The bill does authorize reinsurance with other life insurance companies which elect to participate in the insurance pool and this has some ameliorating effect. Nonetheless, even though small underwriters are allowed to maintain their status quo if they have

an identifiable share of the market, they are prevented from increasing their current share of available business.

Fourth, S. 33 is basically inequitable at its core. To the extent that contributions to life insurance premiums are properly considered as just another mode of employee compensation—part of a "wage package," as it were—other State and local government employees would question the singling out of public safety officers for preferential treatment.

Finally, this legislation would be very expensive. The one-third Federal share of the premium for all public safety officers would be more than \$20 million annually. Additionally, the cost of collection and administration would be approximately \$8 million annually. President Nixon has indicated his desire to hold Federal spending this year to \$268.7 billion. This bill would contribute to mounting congressional pressures for a tax increase.

For these reasons, I cannot support S. 33 and urge my colleagues to reject it.

Mr. KENNEDY. Mr. President, first, I commend the chairman of the Criminal Laws Subcommittee, the Senator from Arkansas (Mr. McCLELLAN), for bringing this measure to the floor this afternoon and for his cooperation and help in the development of the bill.

The bill before the Senate, S. 33, is based upon a recommendation that was made in the 1967 Report of the National Crime Commission. The 1967 study was, of course, the basis for the 1968 Law Enforcement Assistance Act, but this was one recommendation that was not included in the law at that time.

I have introduced it as a separate measure in each Congress since then. This is the third time it has been before the Senate. Each time it has been considered, it has been overwhelmingly supported by Members of the Senate, for a very simple and fundamental reason—because there is a crucial need for it among our first line of defense in our communities and towns, our law enforcement personnel, as well as our firefighters and correctional personnel.

We on the Criminal Laws Subcommittee have had an opportunity to work with the International Conference of Police Associations, the Fraternal Order of Police, the International Association of Chiefs of Police, the National Sheriffs' Association, and the International Association of Fire Fighters, all of whom have made a very important contribution in the development of the proposed legislation, and all of whom support the measure.

The fact remains that 70 percent of the State law enforcement personnel in this country have insurance of less than \$5,000. In my State of Massachusetts, the level in the State program is \$2,000, which it has been for approximately 20 years. The cost of individual insurance for those involved in law enforcement is often exceedingly high.

This is an extremely modest measure. The Senator from Nebraska has quoted the figures accurately: approximately \$20 million if all the public safety people in the country would take full advantage of the program. Quite clearly, it

will not be so, although I hope it would be so. In any event, it seems to me that \$20 million is not an excessive sum to provide security to the families of people who every day of their lives are providing security to the homes and streets and villages of America.

I cannot think of an effort we could make in the whole area of law enforcement that could do as much for the morale and the standing and security of the families of law enforcement personnel as this measure would.

I am hopeful that, once again, the measure will be passed here. I think it is important.

In my own State, police officers have been supported by a club called "The Hundred Club," which is a charitable club made up of public-spirited citizens, mostly in the business community, who contribute a hundred dollars to help pay off the mortgages of firefighters and policemen killed in the line of duty. This club has been very successful in doing so, and similar organizations have been started in various parts of the country. I commend the leadership within the business community that has shown this kind of social consciousness, and I have fully supported their efforts. But I say that the law enforcement people of this country should not have to depend on the charity of well-intentioned businessmen and other citizens to pay off the mortgages of families whose loved ones have been killed in the line of duty. This effort is a modest step toward eliminating that possibility, and the other tragedies which occur when public safety officers die without adequate insurance coverage largely because of their occupation.

Mr. President, for these reasons, I hope this bill will become law, and I want now to go into some detail on its origins, history, and content.

In 1967 the President's Crime Commission submitted its comprehensive report, which spoke of the need to provide our police with more adequate benefits such as group life insurance. In that year I first proposed a national program to make such coverage available to all State and local police officers. Since then the public has become more and more aware of the need for life insurance for policemen, as the rate of assaults on law enforcement officers has risen tragically. And as we have continued to work on legislation in this area, we have become familiar with the difficulties many officers encounter in getting enough insurance at regular rates and conditions, and with the low coverage for which many are forced to settle.

The Senate took action on this problem in 1970 when it passed, as part of the Omnibus Crime Control Act, a law enforcement officer's group life insurance program. Early in 1971 I reintroduced the program as S. 33, and the corresponding House bill was sponsored by Chairman Emanuel Celler of the House Judiciary Committee. The bill was considered at hearings in the last Congress, substantially revised and strengthened and passed by the Senate both separately and as part of the victims of crime package.

This year the bill is again numbered as S. 33 and is also title II of S. 800, the current victims of crime bill. In this

Congress a companion bill has been introduced in the House by the new chairman of the House Judiciary Committee, Congressman RODINO.

The arguments against the bill are old, outworn, and unpersuasive. Despite all the protestations from certain narrow commercial interests about what might be able to happen without this legislation, nothing has happened and vast numbers of public safety officers remain without low cost, comprehensive life insurance protection on and off the job. There has now been ample consideration on both sides; there were full hearings in both the Senate and the House during the last Congress. The Senate Criminal Laws Subcommittee, under the leadership of Senator McCLELLAN, has now twice reported a much improved and broadened bill along with other proposals to aid civilian and governmental victims of crime.

S. 33 in its reported form would establish a nationwide, federally subsidized program of group life, accidental death, and dismemberment insurance for State and local public safety officers, defined to include firefighters, correctional guards, and court officers in addition to police. The plan is patterned closely after the highly successful Federal employees' and servicemen's group life insurance programs, which are available to all Federal civilian employees and to members of our Armed Forces. The Law Enforcement Assistance Administration would buy a national group policy from a nationwide life insurance carrier, so that the underlying coverage would be provided—and much of the administrative work would be handled—by the private sector.

The standard reinsurance formula, favoring small companies, would be used to spread the risk and the income beyond the principal carrier.

Any unit of State or general local government could apply to participate in the program. Officers in participating units could elect not to be covered; those remaining in the program would have their share of the premiums deducted from their wages. Coverage would be at a level of the officer's annual salary plus \$2,000, starting from a floor of \$10,000 coverage and rising to a maximum of \$32,000. Accidental death and dismemberment insurance would be included with the usual double indemnity feature. LEAA would pay up to one-third of the total cost of the premiums, leaving the remainder to be covered by the insured officer or the employing agency.

Where existing State or local group life insurance plans provide coverage for public safety officers, or where it was desired to establish such a program within a year after the effective date of the bill, eligible officers would choose by ballot between the Federal and the State or local plans. If they chose the State or local program, it would be eligible for the same subsidy which would go to the Federal plan. In this way the bill respects existing insurance programs and allows governments and insurance companies a reasonable time to set up programs of their own if they want to, but it still protects the officers' interests by leaving the final decision in their hands. Yet, by also hav-

ing available a single Federal program in which many officers would presumably participate, the bill ensures the availability of coverage to all officers without regard to their particular employer's wealth or generosity and at minimum cost because of efficient large scale operation.

Totaling the four categories of public safety officers—police, firefighters, correctional guards, and court officers—the bill would make its benefits available to approximately 700,000 to 900,000 persons, depending on the administrative application of its definitions. LEAA's estimate of the total annual cost to the Federal Government, which must be regarded as the highest possible figure since it assumes the full one-third Federal subsidy and 100-percent officer participation, is under \$22 million including all Federal administrative costs, which LEAA estimates at just over \$1 million.

For this sum it is estimated that insurance could be provided to officers at a total rate of less than 70 cents per month per \$1,000 of coverage. After the Federal subsidy, the cost to the officer—even assuming no State or local government help—would be under 50 cents a month per \$1,000, or under \$60 per year for the basic \$10,000 coverage. At a relatively low cost to the Government, in other words, we could make a decent amount of life insurance available at very reasonable rates to every full-time public safety officer in the country.

There are many reasons why this program is vitally needed. Most tragically and most prominently of all, the rate of crippling and killing assaults on officers is high and rising alarmingly fast. The number of police killed by criminal acts rose from 86 in 1969 to 100 in 1970 and 126 in 1971. Firefighters, too, are still subject to criminal assaults while on their job; from 1967 through 1969 injuries during civil disorders averaged over 200 per year, and in 1970 the rate remained almost the same at 195.

But this problem is only part of a much larger picture, and measures to deal with it alone will ignore much that should be done. For in their service to protect us all, public safety officers must run several other unusual risks of accident, injury, and death. Among police, those who are in situations of such extraordinary hazard include traffic patrolmen, motorcycle policemen, and police helicopter pilots. Firefighters are, of course, in constant danger of death or serious injury from flame, smoke, and collapsing buildings; in 1970, 115 died in the line of duty. Prison guards and court officers are endangered by riot, jailbreak, and violent suspects and defendants.

Because of these hazards, some public safety officers find regular life insurance coverage hard to come by, unusually expensive, or restricted in the benefits offered. For example, in my own State of Massachusetts the State police helicopter pilots encountered reluctance to issue insurance at all and higher rates as well. The chief actuary of the Life Insurance Association of America told our criminal laws subcommittee that rates for accidental death and dismemberment coverage for policemen could

run up to 100 percent above ordinary rates. A major national life insurance company wrote the Criminal Laws Subcommittee that it normally charges a police or firefighters' group about 20 percent extra for group life insurance and up to 2½ times its regular rate for accidental death and dismemberment coverage.

Yet if a public safety officer tries, even though he may run into such obstacles, to buy as much insurance as he needs for himself and his family, he is held back by the disgracefully low salaries we so often pay. As Quinn Tamm, executive director of the International Association of Chiefs of Police, told our subcommittee—

Salary medians for police officers fall below the pay scales for those positions which we may refer to as nonprofessional semiskilled labor.

In a survey this year of 300 New York City police, 95 percent said they felt their salaries were too low for them to afford adequate life insurance. And for public safety officers other than policemen, the salary situation is even worse.

Further, employer-aided group plans to remedy the insurance problems of public safety officers differ widely in their coverage and are frequently not offered at all. Our data are most complete on police officers; for about 30 percent of them, employer-supported group coverage is simply not provided. For almost 40 percent more, coverage is in the very low zero to \$5,000 range, meaning that almost 70 percent of our police have State or local group life insurance no higher than \$5,000. S. 33 would make available minimum of \$10,000 coverage to 100 percent of our police; now, fewer than 4 percent are in State or local government programs which offer as much. To offer a concrete example, in Massachusetts the basic coverage is only \$2,000 and we have had to establish an organization called the Hundred Club to help tide over widows of slain officers. When I testified in support of Chairman Celler's counterpart bill on the House side, two subcommittee members over there mentioned similar organizations in their home communities. But there are not a great many such programs, and a public safety officer should not have to rely on uncertain private charity to assure his family of financial security in the event of his death.

So because of job hazards, low salaries, and employer inaction—all factors which are related to their public service jobs—many officers and their families are inadequately protected against death or disability on or off the job. This is one important problem that is too often overlooked—that public safety officers' work situations make it difficult or impossible for many of them to obtain adequate life insurance to cover them on or off duty. In other words, if we wish to respond adequately to the problems created by the risks of officers' work, we have to enact legislation which will help them whether they are killed or injured on the job or not, whether by a criminal act or by accident or by natural causes. That is precisely what S. 33 would accomplish, and I am confident that is a major reason

why the bill has the enthusiastic support of the leading police and firefighters' organizations in the country, including the International Conference of Police Associations, the Fraternal Order of Police, the International Association of Chiefs of Police, the National Sheriffs' Association, and the International Association of Firefighters.

To summarize the situation as we have seen it in our studies, a few public safety officers are offered quite good benefits at reasonable rates, but many more have little or no coverage, high cost, or unfavorable conditions. Many areas are unable or unwilling to provide group life insurance, which is important both to officers personally and to recruiting and keeping highly qualified personnel. The Federal Government has committed itself in legislation since 1968 to providing major financial aid to State and local law enforcement, in an effort to help all law enforcement agencies attain a 20th-century level of performance. The basic rationale behind the Federal Government's assumption of this limited additional role, then, is like that underlying the law enforcement assistance program, which we created 4 years ago and have generously supported since. In fact, the small Federal administrative role under the S. 33 insurance program would be handled by the Law Enforcement Assistance Administration.

Given the problem as I have described it and the LEAA precedent, and in full recognition that public safety functions are and must remain a local responsibility, I suggest that the best role for the Federal Government is making available a reasonable minimum nationwide level of life insurance protection. If it is felt that particularly outrageous situations demand additional compensation, as the Senate recognized with respect to killings of public safety officers when it passed the S. 2087 gratuity bill earlier this month, these proposals surely deserve serious consideration.

If a locality or individuals want more coverage, obviously they should and would remain completely free to arrange for it. But the national floor concept of S. 33 would assure that no matter how much legislators might be diverted by officers' most headline-getting problems, and no matter how poor or miserly an officer's area in contrast to its neighbors which provide good coverage, no public safety officer in the country would have to face the risks of his job without being able to get a reasonable amount of full life insurance coverage at a reasonable rate. All of this could be accomplished at low cost to the Federal Government because the Federal share would not be 100 percent or anything like it, merely the one-third or less needed to keep rates within officers' reach.

And there would be no Federal intrusion into the running of State or local public safety affairs. The dealings of the officers and their employers would be almost entirely with each other and with the primary insurance carrier, which would be a private company. The Federal Government's role would consist mainly of a small administrative operation within LEAA and the forwarding

of the Federal subsidy to the primary carrier. Finally, as part of the law enforcement assistance statute, the program would be governed by the law prohibiting all Federal departments and personnel from exercising "any direction, supervision, or control" over any State or local law enforcement agency.

I mentioned earlier that there are some changes in this bill from the version that passed the Senate in 1970. The most important, of course, is the addition of firefighters, correctional guards, and court officers. In the course of our work we realized that the reasons why we were concerned about policemen's life insurance applied to some other public servants as well. The rationale on which we made our carefully limited expansion of eligible groups is that all perform a public protection function at unusual risk with inadequate provision available for death or disabling injury, and national pooling of risks can help here to reduce administrative costs. I call our extension a "carefully limited" one because it does not even double the number of persons eligible, though it adds three important groups. The basis on which these groups' inclusion rests should dispel any fears of uncontrollable addition of other hazardous occupation categories.

There are many other changes which we think improve the bill substantially, though most of these individually are too minor and technical to discuss here. I do want to mention three of the most significant, however. First, the bill now includes the same reinsurance requirements as are written into the Federal employees' group life insurance statute. Reinsurance is a standard industry technique by which the business and the risks of a large policy are shared among insurers, and this statutory formula is drafted to favor small companies. Since we expect the program will raise both the number of insured persons and the average coverage level substantially, and since the bill also contains a standard conversion provision, many companies will enjoy business that no one would have gotten at all without the bill.

Second, the permission for State and local governments to set up new group life insurance programs of their own for public safety officers for a year after the bill takes effect, and still be eligible for Federal aid, is a new feature. Before, only preexisting State and local plans were eligible for a Federal subsidy; some such cutoff is essential for the viability of the nationwide program. But the cutoff was moved back a year, which is another example of the lengths to which the bill goes to respect the desires of local governments and officers to set up programs of their own if their particular needs will thereby be better served than under the Federal plan. The same balloting protection, to give each group of eligible officers a choice between the State or local plan and the Federal one, would apply to new State or local programs as to existing ones. Of course, any group which wanted to join the Federal program but keep or add a State or local plan without Federal subsidy would be free to do so.

Third, the subsidy available to State and local plans has been raised from 75 percent to 100 percent of the portion being given to the Federal program. Again, this was done to respect State and local programs by not tipping the balance against them. Of course, there would have to be some limitations on the Federal subsidy available to these plans. Consistently with the uniform national floor concept I mentioned, there would be a Federal subsidy only for amounts of coverage up to the level in the Federal plan. Similarly, the Federal subsidy would be limited to the amounts per unit of coverage available for the Federal program; it would make little sense for the Federal Government to subsidize the inefficiently expensive portion of a State or local plan if it were providing a less expensive program itself.

Finally, I should like to mention how this program relates to the S. 2087 gratuity bill which the Senate passed 2 weeks ago. That bill provides \$50,000 to survivors of a public safety officer killed by a criminal act in the line of duty, and a lesser amount for dismemberment.

Some of the two bills' relation has been covered in my remarks already; I do wish to emphasize again that officers' duty hazards make them bad general risks, which can create problems for them in getting insurance to cover them on or off duty. This fact means that to respond adequately to the problems which public safety officers' hazardous duties create for them, we cannot be satisfied with measures which only touch on-duty happenings. I would hope, therefore, that S. 33 could be viewed as the basic vehicle for Federal benefits in this area; alone among the bills on this subject now before the Senate, it does not leave off where the problem continues.

S. 2087 can be a valuable complement to the broader S. 33 insurance approach, but the gratuity plan does not even cover all the extra on-duty hazards of the public safety professions. For S. 2087 allows benefits only when death or dismemberment resulted from a criminal act, and we do not need statistics to know that public safety officers—police helicopter pilots and motorcycle patrolmen, for example, but above all firefighters—are unusually exposed to accidents which have nothing to do with criminal acts. Indeed, S. 2087 would do little for firefighters despite their inclusion in its eligible categories; although they are in danger from arson and attacks, the large majority of their deaths and injuries result from accidents and fires not started by criminal acts.

In conclusion, let me say that I regard this bill as one over which there should be no partisan division. I have supported—despite some reservations—all the other bills in the victims of crime package, some primarily Democratic in origin and others primarily Republican. S. 33 itself has attracted support from Republicans and Democrats, liberals and conservatives alike. It is also supported by the major public safety officers' organizations and by many insurance companies. It will help with morale and in recruiting and keeping good public safety

officers, and hopefully it will thereby improve the protection we all receive. And it will go a long way toward alleviating a serious human problem on which the Federal Government is uniquely qualified to act. We owe these men and women no less, and the time for action is now.

Mr. McCLELLAN. Mr. President, I ask unanimous consent that the committee amendments be agreed to en bloc, and that the bill as thus amended be considered as original text for the purpose of amendment.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. McCLELLAN. Mr. President, I know of no amendment to the bill. Since there is no amendment, I ask for the third reading of the bill.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 33

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Public Safety Officers' Group Life Insurance Act of 1973."

Sec. 101. It is the declared purpose of Congress in this Act to promote the public welfare by establishing a means of meeting the financial needs of public safety officers or their surviving dependents through group life, accidental death, and dismemberment insurance, and to assist State and local governments to provide such insurance.

INSURANCE PROGRAM AUTHORIZED

Sec. 102. The Omnibus Crime Control and Safe Streets Act of 1968, as amended, is amended by—

- (1) redesignating sections 451 through 455, respectively, as sections 421 through 425;
- (2) redesignating sections 501 through 522, respectively, as sections 550 through 571;
- (3) redesignating parts F, G, H, and I of title I, respectively, as parts I, J, K, and L of title I; and
- (4) adding at the end of part F of title I, as amended by this Act, the following new part:

"PART G—PUBLIC SAFETY OFFICERS' GROUP LIFE INSURANCE

"DEFINITIONS

"Sec. 500. For the purposes of this part—

"(1) 'child' includes a stepchild, an adopted child, an illegitimate child, and a posthumous child;

"(2) 'month' means a month that runs from a given day in one month to a day of the corresponding number in the next or specified succeeding month, except when the last month has not so many days, in which event it expires on the last day of the month; and

"(3) 'public safety officer' means a person who is employed full time by a State or unit of general local government in—

"(A) the enforcement of the criminal laws, including highway patrol,

"(B) a correctional program, facility, or institution where the activity is potentially dangerous because of contact with criminal suspects, defendants, prisoners, probationers, or parolees

"(C) a court having criminal or juvenile delinquent jurisdiction where the activity is potentially dangerous because of contact

with criminal suspects, defendants, prisoners, probationers, or parolees, or

"(D) firefighting,

but does not include any person eligible to participate in the insurance program established by chapter 87 of title 5 of the United States Code, or any person participating in the program established by subchapter III of chapter 19 of title 38 of the United States Code.

"Subpart 1—Nationwide Program of Group Life Insurance for Public Safety Officers

"ELIGIBLE INSURANCE COMPANIES

"Sec. 501. (a) The Administration is authorized, without regard to section 3709 of the Revised Statutes, as amended (41 U.S.C. 5), to purchase from one or more life insurance companies a policy or policies of group life insurance to provide the benefits specified in this subpart. Each such life insurance company must (1) be licensed to issue life, accidental death, and dismemberment insurance in each of the fifty States of the United States and the District of Columbia, and (2) as of the most recent December 31 for which information is available to the Administration, have in effect at least 1 per centum of the total amount of group life insurance which all life insurance companies have in effect in the United States.

"(b) Any life insurance company issuing such a policy shall establish an administrative office at a place and under a name designated by the Administration.

"(c) The Administration may at any time discontinue any policy which it has purchased from any insurance company under this subpart.

"REINSURANCE

"Sec. 502. (a) The Administration shall arrange with each life insurance company issuing a policy under this subpart for the reinsurance, under conditions approved by the Administration, of portions of the total amount of insurance under the policy, determined under this section, with other life insurance companies which elect to participate in the reinsurance.

"(b) The Administration shall determine for and in advance of a policy year which companies are eligible to participate as reinsurers and the amount of insurance under a policy which is to be allocated to the issuing company and to reinsurers. The Administration shall make this determination at least every three years and when a participating company withdraws.

"(c) The Administration shall establish a formula under which the amount of insurance retained by an issuing company after ceding reinsurance, and the amount of reinsurance ceded to each reinsurer, is in proportion to the total amount of each company's group life insurance, excluding insurance purchased under this subpart, in force in the United States on the determination date, which is the most recent December 31 for which information is available to the Administration. In determining the proportions, the portion of a company's group life insurance in force on the determination date in excess of \$100,000,000 shall be reduced by—

"(1) 25 per centum of the first \$100,000,000 of the excess;

"(2) 50 per centum of the second \$100,000,000 of the excess;

"(3) 75 per centum of the third \$100,000,000 of the excess; and

"(4) 95 per centum of the remaining excess. However, the amount retained by or ceded to a company may not exceed 25 per centum of the amount of the company's total life insurance in force in the United States on the determination date.

"(d) The Administration may modify the computations under this section as necessary to carry out the intent of this section.

"PERSONS INSURED; AMOUNT

"SEC. 503. (a) Any policy of insurance purchased by the Administration under this subpart shall automatically insure any public safety officer employed on a full-time basis by a State or unit of general local government which has (1) applied to the Administration for participation in the insurance program under this subpart, and (2) agreed to deduct from such officer's pay the amount of such officer's contribution, if any, and forward such amount to the Administration or such other agency or office as is designated by the Administration as the collection agency or office for such contributions. The insurance provided under this subpart shall take effect from the first day agreed upon by the Administration and the responsible officials of the State or unit of general local government making application for participation in the program as to public safety officers then on the payroll, and as to public safety officers thereafter entering on full-time duty from the first day of such duty. The insurance provided by this subpart shall so insure all such public safety officers unless any such officer elects in writing not to be insured under this subpart. If any such officer elects not to be insured under this subpart he may thereafter, if eligible, be insured under this subpart upon written application, proof of good health, and compliance with such other terms and conditions as may be prescribed by the Administration.

"(b) A public safety officer eligible for insurance under this subpart is entitled to be insured for an amount of group life insurance, plus an equal amount of group accidental death and dismemberment insurance, in accordance with the following schedule:

"Loss	Amount payable
For loss of life.....	Full amount shown in the schedule in subsection (b) of this section.
Loss of one hand or of one foot or loss of sight of one eye.....	One-half of the amount shown in the schedule in subsection (b) of this section.
Loss of two or more such members.....	Full amount shown in the schedule in subsection (b) of this section.

The aggregate amount of group accidental death and dismemberment insurance that may be paid in the case of any insured as the result of any one accident may not exceed the amount shown in the schedule in subsection (b) of this section.

"(d) Any policy purchased under this subpart may provide for adjustments to prevent duplication of payments under any program of Federal gratuities for killed or injured public safety officers.

"(e) Group life insurance shall include provisions approved by the Administration for continuance of such life insurance without requirement of contribution payment during a period of disability of a public safety officer covered for such life insurance.

"(f) The Administration shall prescribe regulations providing for the conversion of other than annual rates of pay to annual rates of pay and shall specify the types of pay included in annual pay.

"TERMINATION OF COVERAGE

"SEC. 504. Each policy purchased under this subpart shall contain a provision in terms approved by the Administration, to the effect that any insurance thereunder on any public safety officer shall cease two months after (1) his separation or release from full-time duty as such an officer or (2) discontinuance of his pay as such an officer, whichever is earlier: *Provided, however*, That coverage shall be continued during periods of leave or limited disciplinary suspension if such an officer authorizes or otherwise agrees to make or continue to make any required contribution for the insurance provided by this subpart.

"CONVERSION

"SEC. 505. Each policy purchased under this subpart shall contain a provision, in

"If annual pay is—	The amount of group insurance is—	
	But not greater than—	Accidental death and dismemberment
Greater than—	Life	
0.....	\$8,000	\$10,000
\$8,000.....	9,000	11,000
\$9,000.....	10,000	12,000
\$10,000.....	11,000	13,000
\$11,000.....	12,000	14,000
\$12,000.....	13,000	15,000
\$13,000.....	14,000	16,000
\$14,000.....	15,000	17,000
\$15,000.....	16,000	18,000
\$16,000.....	17,000	19,000
\$17,000.....	18,000	20,000
\$18,000.....	19,000	21,000
\$19,000.....	20,000	22,000
\$20,000.....	21,000	23,000
\$21,000.....	22,000	24,000
\$22,000.....	23,000	25,000
\$23,000.....	24,000	26,000
\$24,000.....	25,000	27,000
\$25,000.....	26,000	28,000
\$26,000.....	27,000	29,000
\$27,000.....	28,000	30,000
\$28,000.....	29,000	31,000
\$29,000.....	30,000	32,000

The amount of such insurance shall automatically increase at any time the amount of increase in the annual basic rate of pay places any such officer in a new pay bracket of the schedule and any necessary adjustment is made in his contribution to the total premium.

"(c) Subject to conditions and limitations approved by the Administration which shall be included in any policy purchased by it, the group accidental death and dismemberment insurance shall provide for the following payments:

"Loss	Amount payable
For loss of life.....	Full amount shown in the schedule in subsection (b) of this section.
Loss of one hand or of one foot or loss of sight of one eye.....	One-half of the amount shown in the schedule in subsection (b) of this section.
Loss of two or more such members.....	Full amount shown in the schedule in subsection (b) of this section.

terms approved by the Administration, for the conversion of the group life insurance portion of the policy to an individual policy of life insurance effective the day following the date such insurance would cease as provided in section 504 of this subpart. During the period such insurance is in force, the insured, upon request to the Administration, shall be furnished a list of life insurance companies participating in the program established under this subpart and upon written application (with such period) to the participating company selected by the insured and payment of the required premiums, the insured shall be granted life insurance without a medical examination on a permanent plan then currently written by such company which does not provide for the payment of any sum less than the face value thereof. In addition to the life insurance companies participating in the program established under this subpart, such list shall include additional life insurance companies (not so participating) which meet qualifying criteria, terms, and conditions, established by the Administration and agree to sell insurance to any eligible insured in accordance with the provisions of this section.

"WITHHOLDING OF PREMIUMS FROM PAY

"SEC. 506. During any period in which a public safety officer is insured under a policy of insurance purchased by the Administration under this subpart, his employer shall withhold each pay period from his basic or other pay until separation or release from full-time duty as a public safety officer an amount determined by the Administration to be such officer's share of the cost of his group life insurance and accidental death and dismemberment insurance. Any such amount not withheld from the basic or other

pay of such officer insured under this subpart while on full-time duty as a public safety officer, if not otherwise paid, shall be deducted from the proceeds of any insurance thereafter payable. The initial amount determined by the Administration to be charged any public safety officer for each unit of insurance under this subpart may be continued from year to year, except that the Administration may redetermine such amount from time to time in accordance with experience.

"SHARING OF COST OF INSURANCE

"SEC. 507. For each month any public safety officer is insured under this subpart, the Administration shall bear not more than one-third of the cost of insurance for such officer, or such lesser amount as may from time to time be determined by the Administration to be a practicable and equitable obligation of the United States in assisting the States and units of general local government in recruiting and retaining their public safety officers.

"INVESTMENTS AND EXPENSES

"SEC. 508. (a) The amounts withheld from the basic or other pay of public safety officers as contributions to premiums for insurance under section 506 of this subpart, any sums contributed by the Administration under section 507 of this subpart, and any sums contributed for insurance under this subpart by States and units of general local government under section 515 of this part, together with the income derived from any dividends or premium rate readjustment from insurers, shall be deposited to the credit of a revolving fund established by section 517 of this part. All premium payments on any insurance policy or policies purchased under this subpart and the administrative costs to the Administration of the insurance program established by this subpart shall be paid from the revolving fund by the Administration.

"(b) The Administration is authorized to set aside out of the revolving fund such amounts as may be required to meet the administrative costs to the Administration of the program and all current premium payments on any policy purchased under this subpart. The Secretary of the Treasury is authorized to invest in and to sell and retire special interest-bearing obligations of the United States for the account of the revolving fund. Such obligations issued for this purpose shall have maturities fixed with due regard for the needs of the fund and shall bear interest at a rate equal to the average market yield (computed by the Secretary of the Treasury on the basis of market quotations as of the end of the calendar month next preceding the date of issue) on all marketable interest-bearing obligations of the United States then forming a part of the public debt which are not due or callable until after the expiration of four years from the end of such calendar month; except that where such average market yield is not a multiple of one-eighth of 1 per centum, the rate of interest of such obligation shall be the multiple of one-eighth of 1 per centum nearest market yield. The interest on and the proceeds from the sale of these obligations, and the income derived from dividends or premium rate adjustments from insurers, shall become a part of the revolving fund.

"BENEFICIARIES; PAYMENT OF INSURANCE

SEC. 509. (a) Any amount of insurance in force under this subpart on any public safety officer or former public safety officer on the date of his death shall be paid, upon the establishment of a valid claim therefor, to the person or persons surviving at the date of his death, in the following order of precedence:

"(1) to the beneficiary or beneficiaries as the public safety officer or former public safety officer may have designated by a writ-

ing received in his employer's office prior to his death;

"(2) if there is no such beneficiary, to the surviving spouse of such officer or former officer;

"(3) if none of the above, to the child or children of such officer or former officer and to the descendants of deceased children by representation in equal shares;

"(4) if none of the above, to the parent or parents of such officer or former officer, in equal shares; or

"(5) if none of the above, to the duly appointed executor or administrator of the estate of such officer or former officer.

Provided, however, That if a claim has not been made by a person under this section within the period set forth in subsection (b) of this section, the amount payable shall escheat to the credit of the revolving fund established by section 517 of this part.

"(b) A claim for payment shall be made by a person entitled under the order of precedence set forth in subsection (a) of this section within two years from the date of death of a public safety officer or former public safety officer.

"(c) The public safety officer may elect settlement of insurance under this subpart either in a lump sum or in thirty-six equal monthly installments. If no such election is made by such officer, the beneficiary or other person entitled to payment under this section may elect settlement either in a lump sum or in thirty-six equal monthly installments. If any such officer has elected settlement in a lump sum, the beneficiary or other person entitled to payment under this section may elect settlement in thirty-six equal monthly installments.

"BASIC TABLES OF PREMIUMS; READJUSTMENT OF RATES

"Sec. 510. (a) Each policy or policies purchased under this subpart shall include for the first policy year a schedule of basic premium rates by age which the Administration shall have determined on a basis consistent with the lowest schedule of basic premium rates generally charged for new group life insurance policies issued to large employers, taking into account expense and risk charges and other rates based on the special characteristics of the group. The schedule of basic premium rates by age shall be applied, except as otherwise provided in this section, to the distribution by age of the amount of group life insurance and group accidental death and dismemberment insurance under the policy at its date of issue to determine an average basic premium per \$1,000 of insurance, taking into account all savings based on the size of the group established by this subpart. Each policy so purchased shall also include provisions whereby the basic rates of premium determined for the first policy year shall be continued for subsequent policy years, except that they may be readjusted for any subsequent year, based on the experience under the policy, such readjustment to be made by the insurance company issuing the policy on a basis determined by the Administration in advance of such year to be consistent with the general practice of life insurance companies under policies of group life insurance and group accidental death and dismemberment insurance issued to large employers.

"(b) Each policy so purchased shall include a provision that, in the event the Administration determines that ascertaining the actual age distribution of the amounts of group life insurance in force at the date of issue of the policy or at the end of the first or any subsequent year of insurance thereunder would not be possible except at a disproportionately high expense, the Administration may approve the determination of a tentative average group life premium, for the first of any subsequent policy year, in lieu of using the actual age distribution. Such tentative average premium rate may be

increased by the Administration during any policy year upon a showing by the insurance company issuing the policy that the assumptions made in determining the tentative average premium rate for that policy year were incorrect.

"(c) Each policy so purchased shall contain a provision stipulating the maximum expense and risk charges for the first policy year, which charges shall have been determined by the Administration on a basis consistent with the general level of such charges made by life insurance companies under policies of group life insurance and group accidental death and dismemberment insurance issued to large employers, taking into consideration peculiar characteristics of the group. Such maximum charges shall be continued from year to year, except that the Administration may redetermine such maximum charges for any year either by agreement with the insurance company or companies issuing the policy or upon written notice given by the Administration to such companies at least one year in advance of the beginning of the year for which such redetermined maximum charges will be effective.

"(d) Each such policy shall provide for an accounting to the Administration not later than ninety days after the end of each policy year, which shall set forth, in a form approved by the Administration, (1) the amounts of premiums actually accrued under the policy from its date of issue to the end of such policy year, (2) the total of all mortality, dismemberment, and other claim charges incurred for that period, and (3) the amounts of the insurers' expense and risk charge for that period. Any excess of item (1) over the sum of items (2) and (3) shall be held by the insurance company issuing the policy as a special contingency reserve to be used by such insurance company for charges under such policy only, such reserve to bear interest at a rate to be determined in advance of each policy year by the insurance company issuing the policy, which rate shall be approved by the Administration as being consistent with the rates generally used by such company or companies for similar funds held under other group life insurance policies. If and when the Administration determines that such special contingency reserve has attained an amount estimated by the Administration to make satisfactory provision for adverse fluctuations in future charges under the policy, any further excess shall be deposited to the credit of the revolving fund established under this subpart. If and when such policy is discontinued, and if, after all charges have been made, there is any positive balance remaining in such special contingency reserve, such balance shall be deposited to the credit of the revolving fund, subject to the right of the insurance company issuing the policy to make such deposit in equal monthly installments over a period of not more than two years.

"BENEFIT CERTIFICATES

"Sec. 511. The Administration shall arrange to have each public safety officer insured under a policy purchased under this subpart receive a certificate setting forth the benefits to which such officer is entitled thereunder, to whom such benefit shall be payable, to whom claims should be submitted, and summarizing the provisions of the policy principally affecting the officer. Such certificate shall be in lieu of the certificate which the insurance company would otherwise be required to issue.

"Subpart 2—Assistance to States and Localities for Public Safety Officers' Group Life Insurance Programs

"Sec. 512. (a) Any State or unit of general local government having an existing program of group life insurance for, or including as eligible, public safety officers during the first year after the effective date of this part,

which desires to receive assistance under the provisions of this subpart shall—

"(1) inform the public safety officers of the benefits and allocation of premium costs under both the Federal program established by subpart 1 of this part and the existing State or unit of general local government program;

"(2) hold a referendum of the eligible public safety officers of the State or unit of general local government to determine whether such officers want to continue in the existing group life insurance program or apply for inclusion in the Federal program under the provisions of subpart 1 of this part; and

"(3) recognize the results of the referendum as finally binding on the State or unit of general local government for the purposes of this part.

"(b) Upon an affirmative vote of a majority of such officers to continue in such State or unit of general local government program, a State or unit of general local government may apply for assistance for such program of group life insurance and the Administration shall provide assistance in accordance with this subpart.

"(c) State and unit of general local government programs eligible for assistance under this subpart shall receive assistance on the same basis as if the officer were enrolled under subpart 1 of this part, subject to proportionate reduction if—

"(1) the program offers a lesser amount of coverage than is available under subpart 1 of this part, in which case assistance shall be available only to the extent of coverage actually afforded;

"(2) the program offers a greater amount of coverage than is available under subpart 1 of this part, in which case assistance shall be available only for the amount of coverage afforded under subpart 1 of this part;

"(3) the cost per unit of insurance is greater than for the program under subpart 1 of this part, in which case assistance shall be available only at the rate per unit of insurance provided under subpart 1 of this part; or

"(4) the amount of assistance would otherwise be a larger fraction of the total cost of the State or unit of general local government program than is granted under subpart 1 of this part, in which case assistance shall not exceed the fraction of total cost available under subpart 1 of this part.

"(d) Assistance under this subpart shall be used to reduce proportionately the contributions paid by the State or unit of general local government and by the appropriate public safety officers to the total premium under such program:

Provided, however, That the State or unit of general local government and the insured public safety officers may by agreement change the contributions to premium costs paid by each, but not so that such officers must pay a higher fraction of the total premium than before the granting of assistance.

"Subpart 3—General Provisions

"UTILIZATION OF OTHER AGENCIES

"Sec. 513. In administering the provisions of this part, the Administration is authorized to utilize the services and facilities of any agency of the Federal Government or a State or unit of general local government or a company from which insurance is purchased under this part, in accordance with appropriate agreements, and to pay for such services either in advance or by way of reimbursement, as may be agreed upon.

"ADVISORY COUNCIL ON PUBLIC SAFETY OFFICERS' GROUP LIFE INSURANCE

"Sec. 514. There is hereby created an Advisory Council on Public Safety Officers' Group Life Insurance consisting of the Attorney General as Chairman, the Secretary of the Treasury, the Secretary of Health, Education, and Welfare, and the Director of the

Office of Management and Budget, each of whom shall serve without additional compensation. The Council shall meet not less than once a year, at the call of the Chairman, and shall review the administration of this part and advise the Administration on matters of policy relating to its activity thereunder. In addition, the Administration may solicit advice and recommendations from any State or unit of general local government participating in a public safety officers' group life insurance program under this part, from any insurance company underwriting programs under this part, and from public safety officers participating in group life insurance programs under this part.

"PREMIUM PAYMENTS ON BEHALF OF PUBLIC SAFETY OFFICERS"

"Sec. 515. Nothing in this part shall be construed to preclude any State or unit of general local government from making contributions on behalf of public safety officers to the premiums required to be paid by them for any group life insurance program receiving assistance under this part.

"WAIVER OF SOVEREIGN IMMUNITY"

"Sec. 516. The Administration may sue or be sued on any cause of action arising under this part.

"PUBLIC SAFETY OFFICERS' GROUP INSURANCE REVOLVING FUND"

"Sec. 517. There is hereby created on the books of the Treasury of the United States a fund known as the Public Safety Officers' Group Life Insurance Revolving Fund which may be utilized only for the purposes of subpart 1 of this part."

Subpart 4—Miscellaneous

Sec. 103. Section 569 of the Omnibus Crime Control and Safe Streets Act of 1968, as amended and as redesignated by this Act, is amended by inserting "(a)" immediately after "569" and by adding at the end thereof the following new subsection:

"(b) There is authorized to be appropriated \$20,000,000 for the fiscal year ending June 30, 1973, for the purposes of part G."

Sec. 104. Until specific appropriations are made for carrying out the purposes of this Act, any appropriation made to the Department of Justice or the Law Enforcement Assistance Administration for grants, activities, or contracts shall, in the discretion of the Attorney General, be available for payments of obligations arising under this Act.

Sec. 105. If the provisions of any part of this Act are found invalid or any amendments made thereby or the application thereof to any person or circumstances be held invalid, the provisions of the other parts and their application to other persons or circumstances shall not be affected thereby.

Sec. 106. This Act shall become effective on date of enactment.

Mr. McCLELLAN. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. TALMADGE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

VICTIMS OF CRIME ACT OF 1973

Mr. McCLELLAN. Mr. President, I ask unanimous consent for the immediate consideration of S. 300, Calendar No. 87.

The PRESIDING OFFICER. The bill will be stated by title.

The bill was read by title as follows:

A bill (S. 300) to provide for compensation of persons injured by certain criminal acts, to make grants to States for the payment of such compensation, and for other purposes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Arkansas?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on the Judiciary with amendments, on page 2, line 9, after the word "through", strike out "521" and insert "522"; in line 10, after the word "through", strike out "570" and insert "571"; on page 8, at the beginning of line 14, strike out "taking office after June 30, 1972,"; at the beginning of line 16, strike out "after June 30, 1972,"; in line 19, after the word "years", strike out "after June 30, 1972,"; on page 14, at the beginning of line 8, strike out "based upon a change in circumstances of the claimant" and insert "based upon a change in financial circumstances of a victim or one or more of his surviving dependents that eliminates financial stress"; on page 15, line 13, after the word "possession," insert "or related series of such acts, omissions, or possessions,"; in line 20, after the word "may", insert "proportionately"; on page 23, at the beginning of line 25, strike out "section 454(e) of part I of this title and with respect to the adequacy of State programs assisted under section 105" and insert "section 454(e) of part F of this title with respect to the adequacy of State programs receiving assistance under paragraph (10) of subsection (b) of section 301 of part C of this title"; on page 27, at the beginning of line 5, strike out "fiscal year ending June 30, 1973" and insert "fiscal year ending June 30, 1973, \$5,000,000 for the purposes of part F,"; and, after line 6, strike out:

"(1) \$5,000,000 for the purposes of part F; and

"(2) \$10,000,000 for the purposes of paragraph (10) of subsection (b) of section 301 of part C."

Mr. McCLELLAN. Mr. President, S. 300 was introduced by the distinguished Senator from Montana (Mr. MANSFIELD) and the distinguished Senator from Minnesota (Mr. MONDALE). It would establish a direct Federal program, estimated to cost \$6 million a year, to meet the financial needs of innocent victims of violent crime, when the crime is committed within the District of Columbia, Federal territorial or maritime jurisdiction or on an Indian reservation. The program would compensate for out-of-pocket losses by a victim, where there was some showing of "financial stress"; it would exclude only those in the upper income strata from coverage. The title would also provide for a grant program, estimated to cost \$22 million a year, with a 50-State participation, covering 75 percent of the costs of State crime compensation plans. Nine States now have such programs: Alaska, California, Hawaii, Massachusetts, Maryland, Nevada, New Jersey, New York, and Rhode Island.

This legislation was introduced last year as S. 750. It was processed by the Subcommittee on Criminal Laws and Procedures, and a hearing record of some 1,112 pages was compiled. See Victims of Crime, hearings before the Subcommittee on Criminal Laws and Procedures, Committee on the Judiciary, U.S. Sen-

ate 92d Congress, 1st session, 1972. It was reported by the Judiciary Committee on September 8, 1972—see Senate Report No. 92-1104 92d Congress, 2d session, 1972. And it passed in the Senate by the record vote of 60 to 8 on September 18, 1972—see CONGRESSIONAL RECORD, volume 118, part 24, page 31009. No action was taken by the House.

I urge its immediate passage.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield to me for 1 minute?

Mr. McCLELLAN. I yield.

Mr. ROBERT C. BYRD. Mr. President, as Senators know, the distinguished senior Senator from North Carolina (Mr. ERVIN) is away today because of the death of his brother. He asked me to insert in the RECORD a statement by him in opposition to the bill. I ask unanimous consent that the statement by Mr. ERVIN be printed at this point in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

ERVIN OPPOSES RAID ON FEDERAL TREASURY

Mr. President, on its face, the Victims of Violent Crimes Act of 1973 is an attractively packaged and labelled extension of Federal generosity. Nevertheless, there are fundamental reasons which compel me to express my opposition to this proposal.

I believe the Federal government must be just—must balance its budget and pay its debts—before it is generous. Currently, the Federal Treasury has a staggering deficit in excess of \$450 billion. We cannot continue to add straws to the Treasury's back.

The proponents of the Victims of Violent Crimes Act conservatively estimate the cost per year of this program to be \$30 million. The bill proposes to finance compensation to innocent victims of violent crimes with fines collected in Federal criminal courts. Yet, according to the Attorney General's office, the total fines collected thereby in 1971 was only \$8 million.

The financial losses to victims which are covered by this bill are all insurable risks. In many cases they are risks insured by private insurance companies. This legislation provides that government compensation to victims will be reduced by the amount of insurance compensation recoverable. Logically, from the date of enactment of this measure, no insurance company interested in taking profits would provide coverage in any instance where the government would provide compensation. Thus, the cost of the program would immediately escalate geometrically, from \$30 million to as much as \$150 million. As a matter of theory, it seems superfluous and unwise to tax American citizens to establish another Federal bureaucracy and program for the disbursement of benefits which are presently available through private insurance.

In addition, it is interesting to note what persons are compensable under the provisions of this legislation. According to the bill, eligibility is determined by "financial stress" caused by pecuniary loss resulting from an act of violence. Thus, upper middle class and wealthy Americans would not be eligible because they could not demonstrate resultant "financial stress." Moreover, poor Americans would also be ineligible because their "financial stress" would not be the result of the crime. Such a pattern of compensation is patently unjust.

Mr. President, at a time when Americans are opposed to a further extension of Federal omnipotence, more bureaucracy, and more red tape, the establishment of a Federal program funded out of an empty Federal Treasury cannot be justified. Continued deficit financing can only lead us to two unaccept-

able alternatives—national bankruptcy or confiscatory taxes.

Mr. HRUSKA. Mr. President, I appreciate and applaud the concern of the distinguished majority leader for the unfortunate victims of crime in our country. I, too, believe that we pay far too much interest to the rights of the accused when balanced against the rights of the victimized. However, I am compelled to part company with him on the merits of the subject bill. It is my view that S. 300 is largely inapposite to the real problems of victimization and could indeed be counterproductive with respect to the total operations of the Nation's criminal justice systems.

I ask unanimous consent to have the views of Senators THURMOND, ERVIN and myself as contained in the report of the Committee on the Judiciary printed in full in the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

ADDITIONAL VIEWS OF SENATORS HRUSKA, ERVIN, AND THURMOND

It is likely the height of naivete to expect that any argument would convince a majority of our colleagues to vote against a legislative proposal so fetchingly captioned the "Victims of Crime Act of 1973." Nonetheless, we welcome this opportunity to put forward the basis of our opposition to the subject bill.

It is not for any lack of sympathy for the victims of violent crime that we oppose enactment of S. 300 at the present time. Rather, it is because we believe that this legislation is largely inapposite to the real problems of victimization and could indeed be counterproductive with respect to the total operations of the nation's criminal justice systems.

Perhaps if consideration of this measure had been more deliberate, we would not find ourselves in this unenviable position. Although the genesis of the notion that the federal government ought to compensate certain victims of crime for certain financial losses can be traced to a bill introduced by former Senator Ralph W. Yarborough almost eight years ago,¹ only two brief days of hearings have been held in the Senate on the subject to date.²

S. 750, the subject in the 92nd Congress, passed the Senate by an overwhelming vote. At that time, only five other members of the Senate joined us in opposing the measure.³ However, we continue in the belief that the arguments supporting our position are compelling.

BASIC THEORY

Why should government assume the cost of a program to assist those unfortunate enough to have become the victims of violent crime?

We are first told by the proponents of this program that precedent for such action dates back to the Code of Hammurabi (circa 2380 B.C.) and continues undisturbed through various legal systems which have developed during the course of the ensuing 4,000 years.⁴ This is interesting, but hardly responsive to the question. Moreover, it should be noted that much of this precedent was based on a questionable premise that denied the existence of free will and called for social responsibility for a crime.⁵

It is elsewhere intimated that such a program is really one of restitution. Thus, through the establishment of a system of criminal fines, subrogation rights and an indemnity fund, the government would be merely acting as a financial clearing house,

but the net effect of the program would be that "criminals" as a class would compensate "victims" as a class.⁶ However, the Department of Justice reports that total criminal fines imposed by the Federal government in 1971 approximated only \$8 million. Since even the proponents of S. 300 readily acknowledge that their program will cost approximately \$30 million per year,⁷ it is obvious that the net effect of this bill would be government assumption of the substantial portion of associated costs.

Arguments favoring government compensation to the innocent victims of violent crime must properly proceed along one of two defined approaches. First, one can urge that the state is responsible for the maintenance of order and, failing in that responsibility, must compensate the victims of lawlessness and disorder.⁸ Alternatively, one can take the premise that criminal violence is endemic to society, and that the only tolerable way to sustain the resultant financial damage is to share it in common.⁹ Compensation, therefore, must be viewed as either a matter of individual right or legislative grace.

The rationale that the state is primarily responsible for violent crimes inflicted upon its citizens has fortunately met with little acceptance even among proponents. Most advocates of victim compensation will therefore agree that primary responsibility for the damages inflicted by crime must ordinarily be assigned to the injuring criminal. One obvious reason behind this conclusion is the fact that if one concludes the State is responsible for losses associated with crime, logic would require that property damage also be included. This judgment in turn, would raise the cost of such a program to many billions of dollars per year.¹⁰

Thus, we come to the realization that the underlying theory for this victim compensation program is the same as that which supports every other mode of public assistance—the responsibility to provide for the general welfare.

REFLECTION ON THEORY: RESERVATIONS

What class of individuals would be eligible for the public welfare dollars which would be distributed through these victim compensation programs?

Proponents of S. 300 take great pains to point out that this proposal does not employ a "means" test.¹¹ The approach of the bill in determining the economic class of persons eligible for compensation is to require a finding of "financial stress" which is defined as:

- * * *
- ... the undue financial strain experienced by a victim or his surviving dependent or dependents as the result of pecuniary loss from an act, omission, or possession giving rise to a claim under this part, disregarding ownership of—
- (A) a residence;
- (B) normal household items and personal effects;
- (C) an automobile;
- (D) such tools as are necessary to maintain gainful employment; and
- (E) all other liquid assets not in excess of one year's gross income or \$10,000 in value, whichever is less.¹²

Thus, it is anticipated that the so-called average middle class American would be eligible for benefits under this program.¹³

The upper middle class and the very wealthy of our nation generally would be ineligible for compensation as they would not be able to demonstrate a state of "financial stress" as the result of any violent crime committed against them. The very poor, on the other hand, would also be ineligible, since under the terms of the bill, the requisite "financial stress" must be the result of the crime giving rise to the claim.¹⁴ This latter class of individuals would continue to

receive any assistance for which they might be eligible through the modality of existing public assistance programs.

The notion of middle class welfare strikes us as an anomaly.

INSURABLE RISKS

Our misgivings with respect to the basic rationale of S. 300 are heightened by the fact that the losses which are covered by the bill are all insurable risks.

Section 450 (16) of S. 300 sets forth the so-called "pecuniary losses" which would be compensable under this legislation. Included are medical expenses, loss of earnings, child care expenses, burial costs and loss of support. All of these potential losses could, of course, be covered by private insurance coverage with life, medical and income protection policies.

It would be wise for the so-called average American citizens who would come within the purview of this proposal to consider whether they want to be taxed for the establishment of a program which would set up yet another Federal bureaucracy to provide coverage that is now available to them in the private sector. It is our belief that Government participation in this area is best kept to a minimum.

ADMINISTRATION

Statistics available from those states which currently have victim compensation programs in operation reveal that inordinate portions of their budgets are expended to cover administrative costs. For example, during the last fiscal year, the State of New York spent approximately 22 percent of its total budget on administrative expenses.¹⁵ During the same period, the corresponding percentage figure for this purpose in Maryland was approximately 27 percent.¹⁶

In the Federal victim compensation program which would be established by Part A of S. 300, it is likely that the administrative costs would be even higher. Salaries would be far greater than those provided by the states,¹⁷ and it can also be anticipated that a relatively larger staff would be employed.¹⁸

STATE PRIORITIES

At the present time, the program of the Law Enforcement Assistance Administration may be characterized as a block grant approach to federal assistance for states and units of general local government in the area of criminal justice.

To these Senators, the subject bill is regressive to the extent it moves toward the outdated notion of categorical grants. Moreover, this suggestion comes at a time when the President has just proposed another logical step towards a "New Federalism"—special revenue sharing in the area of law enforcement.

On March 14, Senator Hruska introduced S. 1234 at the request of the Administration.¹⁹ The sum of this bill is a new mechanism placing crime control at the state and local levels of government where results can be best achieved and where it will be most responsive to the needs of the people. The subject bill flies in the face of this newly proposed direction for LEAA and, in this respect, is ill-advised.

FEDERAL VICTIMS

S. 300 would operate on two levels.

Part A would establish a Federal Compensation Program to provide compensation to victims of crime when the act, omission, or possession giving rise to the claim for compensation occurred—

- (1) within the "special maritime and territorial jurisdiction of the United States" within the meaning of section 7 of title 18 of the United States Code;
- (2) within the District of Columbia; or
- (3) within "Indian country" within the

Footnotes at end of article.

meaning of section 1151 of title 18 of the United States Code.²⁰

Part B of the bill would function on a second level by providing LEAA funds for similar programs on a State level.²¹

Of the nine States that currently have victim compensation programs in operation, four require as a condition of eligibility, that the offense giving rise to a claim be a crime under State law. Generally, the remaining five States require only that the situs of the crime giving rise to the claim be within the geographic limitations of the jurisdiction.²²

Under this approach, one can recognize the imminent possibility that in at least four States, a citizen could be injured while assisting a Federal officer in the performance of his law enforcement duties and yet not be eligible for any Federal assistance through the modality of either part A or part B.²³ More importantly, if S. 300 were enacted it would not ensure the availability of compensation to the victims of Federal crimes in the future since this would depend upon whether all of the States enacted similar programs.

It would seem to us more appropriate for the Senate to first consider the advisability of providing compensation to the victims of crime which falls within the jurisdictional reach and responsibility of the Federal Government.

COSTS OF COMPENSATION

The proponents of S. 300 urge that the total of this program would approximate only \$30 million per annum at a full operational level.²⁴ I believe this figure is totally unrealistic in view of one extremely significant feature in the bill.

Any compensation due to a victim of crime under this plan would be reduced by the proceeds of insurance which are recovered or recoverable by the victim.²⁵ This provision all but invites insurance companies to amend their existing life, health and income protection policies so as to disclaim coverage in instances where protection would be afforded by S. 300. This course of action would then permit them to reduce premiums and presumably, attract more business.

The same analysis which led to the \$30 million total cost figure referred to above, also indicated that the overwhelming majority (perhaps 80%) of our population is currently covered by health insurance. Should insurers amend their policies around S. 300, the total cost of the bill would increase by perhaps as much as 500%, thus requiring as much as \$150 million per year in Federal outlays.

Furthermore, we do not believe it would be advisable to attempt to amend S. 300 to preclude this possibility. Such action would have the net effect of punishing those responsible individuals who have attempted to protect themselves and their families from financial disaster by purchasing insurance.

CONCLUSION

For the above-stated reasons, we are compelled to vote against S. 300, and urge our colleagues to do likewise.

ROMAN L. HRUSKA.
SAM J. ERVIN, JR.
STROM THURMOND.

²⁵ S. 300, Secs. 450(15)(c) and (16) and 453(b).

Mr. HRUSKA. Mr. President, we ought first explore the basic underlying theory of S. 300. Why should Government assume the cost of a program to assist those unfortunate enough to have become the victims of violent crime?

There are only two arguments for Government compensation to the innocent victims of crime. First, one can urge that the State is responsible for the maintenance of order and, failing in that responsibility, must compensate the victims of lawlessness and disorder. Alternatively, one can take the premise that criminal violence is endemic to society, and that the only tolerable way to sustain the resultant financial damage is to share it in common. Compensation, therefore, must be viewed as either a matter of individual right or legislative grace.

Since even most proponents disassociate themselves with the former argument, we come to the realization that the underlying theory for this victim compensation program is the same as that which supports every other mode of public assistance—the responsibility to provide for the general welfare.

Now, by the terms of S. 300, the upper middle class and the very wealthy of our Nation generally would be ineligible for compensation. Additionally, the very poor would also be ineligible. This raises a profound reservation with respect to theory as the notion of middle-class welfare strikes this Senator as an anomaly.

My misgivings with respect to the basic rationale of S. 300 are heightened by the fact that the losses which are covered by the bill are all insurable risks.

The subject bill would cover medical expenses, loss of earnings, child care expenses, burial costs, and loss of support. All of these potential losses could, of course, be covered by private insurance coverage with life, medical, and income-protection policies.

It would be wise for the so-called average American citizens who would come within the purview of this proposal to consider whether they want to be taxed for the establishment of a program which would set up yet another Federal bureaucracy to provide coverage that is now available to them in the private sector. It is my belief that Government participation in this area is best kept to a minimum.

The subject bill is also regressive to the extent it moves toward the outdated notion of categorical grants. Moreover, this suggestion comes at a time when the President has just proposed another logical step toward a "new federalism"—special revenue sharing in the area of law enforcement—which would provide a new mechanism placing crime control at the State and local levels of government where results can be best achieved and where it will be most responsive to the needs of the people.

If S. 300 were enacted it would not even ensure the availability of compensation to the victims of distinctly Federal crimes in the future since this would depend upon whether all of the States enacted similar programs.

It would seem to me more appropriate for the Senate to first consider the advisability of providing compensation to the victims of crime which falls within the jurisdictional reach and responsibility of the Federal Government.

Finally, I believe that the \$30 million cost estimate for S. 300 is totally unrealistic in view of one extremely significant feature in the bill.

Any compensation due to a victim of crime under this plan would be reduced by the proceeds of insurance which are recovered or recoverable by the victim. This provision all but invites insurance companies to amend their existing life, health and income protection policies so as to disclaim coverage in instances where protection would be afforded by S. 300. Should insurers amend their policies around S. 300, the total cost of the bill would increase by perhaps as much as 300 percent, thus requiring as much as \$150 million per year in Federal outlays.

Furthermore, I do not believe it would be advisable to attempt to amend the bill to preclude this possibility. Such action would have the net effect of punishing those responsible individuals who have attempted to protect themselves and their families from financial disaster by purchasing insurance.

For these reasons, I am opposed to the measure. I shall cast my vote in opposition to its passage.

Mr. MANSFIELD. Mr. President, in early February, Senator JOHN McCLELLAN introduced again the Victims of Crime Act of 1973. The proposal consists of sections dealing with compensation of victims of crime, a special insurance incentive program for public safety officers, the injury benefit plan for police officers, and the extra remedies provided for victims of racketeering. Senator McCLELLAN responded promptly and the bill has been on the calendar since February 7.

On final passage this same measure passed by a vote of 74 to 0 on September 18, 1972—6 months ago. Every Senator is on record in favor of each provision of the bill.

Every feature of this proposal has undergone exhaustive Senate Committee investigation and consideration. On the calendar today it appears both as a single omnibus bill and as four separate proposals.

The hearing record consists of 1,112 pages of testimony, exhibits, and supporting documents, including cost projections.

Forty-three witnesses appeared in person or submitted statements in support of one or all of the various features of the bill. Not one individual appeared to testify or submitted a statement in direct opposition to the bill as a whole.

The merits of the bill now under consideration are compelling, indeed. Because of violent crime and its effects—and the most up-to-date figures show a sharp increase in crimes of violence, despite the fact that there has been an over-all decrease in crimes, on the basis of the report issued yesterday, for which we are thankful—there are many victims in society who simply cannot pay the bills.

The criminal is taken care of. The constitutional processes for the benefit of the criminal are in the forefront. But the person who is raped, the person who is mugged, the person who is robbed gets little or no consideration.

The legislation would see to it that no citizen is left financially destitute because of crime. Important, too, are the features in this measure that encourage individuals to take the risks law-enforcement officials are compelled to take. The law officer, or the bystander who intervenes to prevent crime, just as the victim, deserve special consideration in our system of justice; and while the victim would be compensated under this proposal, the intervener and the police officer would be singled out for particular attention. When it comes to injuries he receives in the line of duty and when it comes to obtaining insurance against such injuries, the police officer deserves and, under this measure, would obtain, special consideration.

In short, it appears to me that every reason exists to pass this bill as expeditiously as possible. The Committee on the Judiciary has considered it in great detail. The Senate already passed it unanimously.

In response to the points raised in the additional views filed on S. 300, the com-

pensation program for victims of violence, I would only refer to an account of a victim of violence carried in last weekend's press. It tells the story of a young, 14-year-old boy, who was savagely beaten by a gang of roughnecks. He suffered severe injuries, including brain damage. So far his medical costs alone have totaled \$25,000. The crime was committed in Maryland, however, and Maryland happens to be one of just nine States in this Nation that provides a compensation remedy to the criminal victim. This young boy and his parents are able to offset some of the enormous costs that stemmed from this vicious and senseless act of violence. Forty-one States would have provided no similar remedy. And there is no such remedy provided at the Federal level covering crimes committed in Federal criminal jurisdictions.

It is to fill this gap in this Nation's system of criminal justice that I introduced S. 300. It does the job. And it reflects what has already been done in so many other areas of the world—in England and Canada, for example, and in Scandinavia, Australia, and New Zealand.

In conclusion, I would like to comment briefly on procedural matters. While all of these crime victim proposals are to be considered separately and jointly as well, it is my firm conviction that when justice for the victim of crime is at long last provided as a part of this Nation's criminal system, every facet of the victims' rights ought to be covered. To do that, in my judgment will require the consideration, as a single proposal, of the omnibus approach as contained in S. 800. S. 800 provides for the victim of violence, the victim of racketeering, and, importantly, it gives special consideration to those who because of their occupations are most vulnerable to crime and lawlessness—the police and public safety officer. As a crime victim, the public safety officer suffers most. He risks his life daily so that others may be protected.

I am confident that the able chairman of the Subcommittee on Criminal Laws agrees with the proposition that if the victim is to be treated, then Congress should see to it that he is treated fully, effectively and adequately. The Omnibus Victims of Crime Act of 1973 does just that. For achieving such a comprehensive and outstanding work product, the Senate owes to Senator JOHN McCLELLAN its deepest gratitude and appreciation, and the same goes also for the Senator from Nebraska (Mr. HRUSKA), even though we may disagree on items here and there. With their strong leadership, the victim of crime who is today's stepchild in the criminal arena will tomorrow obtain the degree of justice that is long past due.

Mr. THURMOND. Mr. President, I rise in opposition to S. 300. I am going to say only a few words, as the views of the distinguished Senator from Nebraska (Mr. HRUSKA), the distinguished Senator from North Carolina (Mr. ERVIN), and myself are set out in the report on this bill, beginning on page 23 and ending on page 27.

I simply want to say that this bill is injecting the Federal Government into another field of activity. The responsibility for law enforcement rests with the 50 States of the Union, and not with

the Federal Government. We have passed some bills here. We have gone as far as we can. We have probably extended the Constitution in trying to enact legislation to stop crime. And crime has become rampant. A burglary is committed every 17 seconds in this Nation. There is a rape every 13 seconds. A murder is committed every 30 minutes. But the primary responsibility, I would remind my colleagues, for law enforcement rests with the States of the Nation. That is not a Federal responsibility, except for interstate crimes, and there we have laws pertaining to them.

I am convinced that this is a responsibility of the States of the Nation. The argument is made that only nine States have assumed this responsibility. Just because only nine States have assumed their responsibility is no excuse for injecting the Federal Government into a field where there is no legal responsibility under the Constitution. The other States may assume it. They probably will not now, if we pass the bill. If we do not pass the bill, the probability is the States will assume their responsibility.

There is no right to pass any piece of legislation on the ground that the States have not acted, and therefore, we at the Federal level must protect the public. What is the use of having a Constitution if we are not going to obey it? The Constitution has certain limits. Law enforcement, I repeat, is the responsibility of the States of the Nation, and that is where it should rest.

Mr. President, I am not going to make an extended talk on this subject, but I want to say that this Congress, for the 18 years I have been here, has been injecting the Federal Government into field after another. That is the reason why I came here with about three men and four secretaries. Now I have about 10 or 12 men and 20-odd secretaries and can hardly keep up with the work. Any Senator knows it is a rat race around here. Why? Because the Federal Government has gone into so many fields of activity. And where is the constitutional authority? I have not found it, and it is not in this field.

It is a nice thing to award compensation to victims of crime. Everybody feels sorry for a victim of crime. Who would not feel sorry for one who has been criminally assaulted or injured in some other way by a criminal? But that is no reason to say the Federal Government should do it. Let the State governments do it. It is a State responsibility.

I would simply point out that it has been estimated that the projected cost of this bill is \$30 million. In my judgment, that is an unrealistic figure. I believe the figure will come nearer running \$150 million, because crime has been increasing, it is on the rise, and it looks like it will continue to increase.

Also, I want to say this bill appears to be a general welfare bill. The very poor and the wealthy would be ineligible, because they could not show that financial stress was a result of the crime. That is what they would have to show—financial stress. Well, a wealthy man could not show financial stress. A poor man could not show it because he has no finances that are under strain. Therefore, it would

be a welfare bill only for the middle class.

I would remind my colleagues that the losses which are covered here are already insurable risks.

Mr. President, I would also remind my colleagues that the States presently on some of the programs spend up to 27 percent of their budget on administrative costs. Federal costs would probably be higher. And it seems always to cost the Federal Government more to do anything than it does the States.

I am pleased that President Nixon is trying to reverse the flow of power in this Nation and turn the power from the Federal Government back to the States and back to the people. This bill does just the opposite. It brings more power here. It assumes an additional responsibility, a new responsibility, which the Federal Government does not have now, and that is going in the opposite direction from that which the President has recommended and in a direction which I have felt for years had been the wrong direction.

I want to see the power turned back to the States and to the people. I want the States to assume some responsibility.

I want to say that the President has also proposed public revenue sharing in the area of law enforcement. The States will have some funds with which to take care of their responsibility. However, if they do not have any funds coming from the Federal Government to help take care of it, it is their responsibility. And they ought to meet that responsibility. We at the Federal level have enough to take care of already where we do have constitutional authority. And where we do not have constitutional authority, why should we go into another field?

In my judgment, it is a serious error. And I hope that the bill will be voted down.

Mr. McCLELLAN. Mr. President, I support the enactment of the Victims of Crime Act of 1973. I reject arguments advanced against it which would characterize it as "middle-class welfare," impute to it a rejection of individual responsibility, or read into it the assumption of social responsibility for crime.

Mr. President, crime knows no age, sex, or class barrier. All of us—old or young, male or female, rich or poor—may be or have been victims of crime.

This legislation does nothing more than alleviate some of the untoward consequences of such victimization.

It does not relieve the criminal of his legal responsibility to society or to the victim. His responsibility remains the same in both respects.

The bill merely recognizes that more often than not the perpetrator cannot be found, and when he can be found, he is judgment proof. Where that situation occurs, this legislation would help the victim in "financial stress" to meet his needs. Is that "middle-class welfare?" Do we call disaster relief for tornado victims "welfare?" Do we call flood relief "welfare?" Is society responsible for the damage done by wind or water?

I see no reason to use argumentative labels here, or to suggest that this program undermines concepts of individual responsibility any more than special pro-

grams of aid to victims of national disasters.

Mr. President, this legislation does not, in my judgment, rest on a "failure to protect" rationale. Society has a duty to provide police services, but this general duty does not give rise to individual liability.

This legislation rests solely on humanitarian considerations. All of us share together the risks of crime in our society. This proposal recognizes that we ought to share together some of its more serious financial consequences.

Mr. President, the resources our society today allocates to the criminal justice system are spent to see that individuals are not victimized by crime in the future. If society may rightfully use its resources to prevent crime from occurring in the future, I can see no reason why it ought not use its resources to repair the consequences of crime in the present.

Are we to look to the future victim, who must always remain nameless, and forget the present victim, who stands before us in need?

I urge the immediate passage of this legislation.

Mr. President, I ask unanimous consent that the committee amendments be agreed to en bloc and that the bill as thus amended be considered as original text for the purpose of amendment.

The PRESIDING OFFICER. Without objection, the amendments are agreed to en bloc.

Mr. McCLELLAN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MONDALE. Mr. President, I strongly support speedy enactment of the legislation under consideration—S. 300, introduced by the distinguished Senator from Montana (Mr. MANSFIELD) and myself. I am privileged to have had the opportunity to help shape this vitally needed measure, which I view as a major step in meeting our obligations as a society to those victimized by criminal activity.

For over 2 years, the Senate has been grappling with the need for comprehensive legislation to meet the need for such compensation. In particular, I would note the leadership of the distinguished Senator from Montana (Mr. MANSFIELD), who since 1971 has played a vital role in leading the fight for compensation of crime victims, and the distinguished Senator from Arkansas (Mr. McCLELLAN), whose own comprehensive legislation has done much to expand the scope of coverage of crime victims legislation. In addition, I am pleased that many features of legislation which I originally introduced in late 1971, as S. 2817, are now embodied in S. 300.

This effort to provide compensation for crime victims has been undertaken by many Members of this body, because of our shared recognition of the need for Federal involvement in the area. In 1971,

the FBI uniform crime statistics reported that over 800,000 crimes of violence—murder, rape, robbery, and aggravated assault—took place in the United States. This was almost three times the number of these crimes which occurred in 1960, and even these figures may be severely understated.

In fact, crime victimization studies now being undertaken by the Census Bureau, in cooperation with the Law Enforcement Assistance Administration, may show the American people for the first time the true extent of crime victimization in the United States. Whatever the final victimization figures, however, each of us knows the psychological and physical toll which crime takes on our society—and, most importantly, on the victims of crime.

Unfortunately, in modern times the victim has often become the forgotten person in the criminal triangle. Criminal cases pit the State against the accused suspect, with scarcely a mention of the victim. Yet, it is the victim who is often left to suffer a life of disability. And, all too often, it is the victim's family which is left to mourn a senseless death, which strikes without notice or purpose, and leaves no means for any type of recovery.

S. 300 does much to tangibly express society's concern with the victim of crime. This legislation would establish a direct Federal program designed to meet the financial needs of innocent victims of crime, if such crimes are committed within the District of Columbia, on an Indian reservation, or in Federal territorial or maritime jurisdiction.

Under this program, both victims and "intervenor"—the so-called good Samaritan—would be eligible for compensation. And, while "financial stress" would be a required condition for compensation in most instances, this concept as defined in this legislation is sufficiently broad to allow participation in benefits of all except those in upper-income brackets for whom such compensation would be a "windfall."

In addition, S. 300 establishes a grant program, which would compensate States for 75 percent of the costs of State compensation of crime victims programs which are "substantially comparable" to the Federal grant program. In this regard, I am particularly pleased that S. 300 includes a provision of mine to aid in the study of State plans to determine whether such plans are adequately providing the type of compensation designed to meet the real needs of crime victims.

It is estimated that total annual Federal costs of both the Federal direct program and the grant program to the States will stabilize at approximately \$28 million per year. This is a modest amount, yet the benefits which this expenditure should provide will underscore our willingness to compensate in whatever tangible way possible for the results of criminal activity. These payments should enable thousands upon thousands of families to better bear the heavy burden which injury or death as a result of criminal activity may bring.

I am also pleased that other measures we are considering provide for a special

insurance incentive program for public safety officers, for additional remedies for victims of racketeering, and for provisions for payment of death benefits to dependent survivors of public safety officers.

This latter feature is particularly significant, in that it expresses our concern for the welfare of the families of policemen, firefighters, and corrections guards. Under this legislation these public safety officers would be provided a \$50,000 Federal death benefit if they were killed in the line of duty as a result of a criminal act. This provision, similar to a section of S. 2817, which I introduced in 1971, provides one means of expressing national recognition of the hazards undertaken by those men and women who constantly risk their lives in protection of the lives and property of others.

Taken together, these measures are a highly significant step in our attempt to provide recognition by our society—through a program of public compensation—of its obligation toward the victims of criminal acts. This legislation does much to right the scales of criminal justice as it is now administered, not by removing rights which the Constitution provides to all citizens, but by recognizing the rights of victims of crime and by providing one tangible means of implementing these rights.

Mr. McCLELLAN. Mr. President, I know of no amendments to the bill.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill (S. 300) was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Victims of Crime Act of 1973".

COMPENSATION FOR VICTIMS OF VIOLENT CRIME

DECLARATION OF PURPOSE

SEC. 101. It is the declared purpose of Congress in this Act to promote the public welfare by establishing a means of meeting the financial needs of the innocent victims of violent crime or their surviving dependents and intervenors acting to prevent the commission of crime or to assist in the apprehension of suspected criminals.

PART A—FEDERAL COMPENSATION PROGRAM

SEC. 102. The Omnibus Crime Control and Safe Streets Act of 1968, as amended, is amended by—

(1) redesignating sections 451 through 455, respectively, as sections 421 through 425;

(2) redesignating sections 501 through 522, respectively, as sections 550 through 571;

(3) redesignating parts F, G, H, and I of title I, respectively, as parts I, J, K, and L of title I; and

(4) adding at the end of part E of title I, as amended by this Act, the following new part:

"PART F—FEDERAL COMPENSATION FOR VICTIMS OF VIOLENT CRIME

"DEFINITIONS

"Sec. 450. As used in this part—

"(1) 'Board' means the Violent Crimes Compensation Board established by this part;

"(2) 'Chairman' means the Chairman of the Violent Crimes Compensation Board established by this part;

"(3) 'child' includes a stepchild, an adopted child, and an illegitimate child;

"(4) 'claim' means a written request to the Board for compensation made by or on behalf of an intervenor, a victim, or the surviving dependent or dependents of either of them;

"(5) 'claimant' means an intervenor, victim, or the surviving dependent or dependents of either of them;

"(6) 'compensation' means payment by the Board for net losses or pecuniary losses to or on behalf of an intervenor, a victim, or the surviving dependent or dependents of either of them;

"(7) 'dependent' means—

"(A) a surviving spouse;

"(B) an individual who is a dependent of the deceased victim or intervenor within the meaning of section 152 of the Internal Revenue Code of 1954 (26 U.S.C. 152); or

"(C) a posthumous child of the deceased intervenor or victim;

"(8) 'financial stress' means the undue financial strain experienced by a victim or his surviving dependent or dependents as the result of pecuniary loss from an act, omission, or possession giving rise to a claim under this part, disregarding ownership of—

"(A) a residence;

"(B) normal household items and personal effects;

"(C) an automobile;

"(D) such tools as are necessary to maintain gainful employment; and

"(E) all other liquid assets not in excess of one year's gross income or \$10,000 in value, whichever is less;

"(9) 'gross losses' means all damages, including pain and suffering and including property losses, incurred by an intervenor or victim, or surviving dependent or dependents of either of them, for which the proximate cause is an act, omission, or possession enumerated in section 456 of this part, or set forth in paragraph (B) of subsection (18) of this section;

"(10) 'guardian' means a person who is entitled by common law or legal appointment to care for and manage the person or property, or both, of a minor or incompetent intervenor or victim, or surviving dependent or dependents of either of them;

"(11) 'intervenor' means a person who goes to the aid of another and is killed or injured while acting not recklessly to prevent the commission or reasonably suspected commission of a crime enumerated in section 456 of this part, or while acting not recklessly to apprehend a person reasonably suspected of having committed such a crime;

"(12) 'liquid assets' includes cash on hand, savings accounts, checking accounts, certificates of deposit, stocks, bonds, and all other personal property that may be readily converted into cash;

"(13) 'member' means a member of the Violent Crimes Compensation Board established by this part;

"(14) 'minor' means an unmarried person who is under eighteen years of age;

"(15) 'net losses' means gross losses, excluding pain and suffering, that are not otherwise recovered or recoverable—

"(A) under insurance programs mandated by law;

"(B) from the United States, a State, or unit of general local government for a personal injury or death otherwise compensable under this part;

"(C) under contract or insurance wherein the claimant is the insured or beneficiary; or

"(D) by other public or private means;

"(16) 'pecuniary losses' means net losses which cover—

"(A) for personal injury—

"(1) all appropriate and reasonable expenses necessarily incurred for medical, hospital, surgical, professional, nursing, dental, ambulance, and prosthetic services relating to physical or psychiatric care;

"(2) all appropriate and reasonable expenses necessarily incurred for physical and occupational therapy and rehabilitation;

"(3) actual loss of past earnings and anticipated loss of future earnings because of a disability resulting from the personal injury at a rate not to exceed \$150 per week; and

"(4) all appropriate and reasonable expenses necessarily incurred for the care of minor children enabling a victim or his or her spouse, but not both of them, to continue gainful employment at a rate not to exceed \$30 per child per week, up to a maximum of \$75 per week for any number of children;

"(B) for death—

"(1) all appropriate and reasonable expenses necessarily incurred for funeral and burial expenses;

"(2) loss of support to a dependent or dependents of a victim, not otherwise compensated for as a pecuniary loss for personal injury, for such period of time as the dependency would have existed but for the death of the victim, at a rate not to exceed a total of \$150 per week for all dependents; and

"(3) all appropriate and reasonable expenses, not otherwise compensated for as a pecuniary loss for personal injury, which are incurred for the care of minor children, enabling the surviving spouse of a victim to engage in gainful employment, at a rate not to exceed \$30 per week per child, up to a maximum of \$75 per week for any number of children;

"(17) 'personal injury' means actual bodily harm and includes pregnancy, mental distress, and nervous shock; and

"(18) 'victim' means a person who is killed or who suffers personal injury where the proximate cause of such death or personal injury is—

"(A) a crime enumerated in section 456 of this part; or

"(B) the not reckless actions of an intervenor in attempting to prevent the commission or reasonably suspected commission of a crime enumerated in section 456 of this part or in attempting to apprehend a person reasonably suspected of having committed such a crime.

"BOARD

"Sec. 451. (a) There is hereby established a Board within the Department of Justice to be known as the Violent Crimes Compensation Board. The Board shall be composed of three members, each of whom shall have been members of the bar of the highest court of State for at least eight years, to be appointed by the President, by and with the advice and consent of the Senate. The President shall designate one of the members of the Board to serve as Chairman.

"(b) No member of the Board shall engage in any other business, vocation, or employment.

"(c) The Board shall have an official seal.

"(d) The term of office of each member of the Board shall be eight years, except that (1) the terms of office of the members first taking office shall expire as designated by the President at the time of appointment, one at the end of four years, one at the end of six years, and one at the end of eight years and (2) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term.

"(e) Each member of the Board shall be eligible for reappointment.

"(f) Any member of the Board may be removed by the President for inefficiency, neglect of duty, or malfeasance in office.

"(g) The principal office of the Board shall be in or near the District of Columbia, but the Board or any duly authorized representative may exercise any or all of its powers in any place.

"ADMINISTRATION"

"SEC. 452. The Board is authorized in carrying out its functions under this part to—

"(1) appoint and fix the compensation of an Executive Director and a General Counsel and such other personnel as the Board deems necessary in accordance with the provisions of title 5 of the United States Code;

"(2) procure temporary and intermittent services to the same extent as is authorized by section 3109 of title 5 of the United States Code, but at rates not to exceed \$100 a day for individuals;

"(3) promulgate such rules and regulations as may be required to carry out the provisions of this part;

"(4) designate representatives to serve or assist on such advisory committees as the Board may determine to be necessary to maintain effective liaison with Federal agencies and with State and local agencies developing or carrying out policies or programs related to the provisions of this part;

"(5) request and use the services, personnel, facilities, and information (including suggestions, estimates, and statistics) of Federal agencies and those of State and local public agencies and private institutions, with or without reimbursement therefor;

"(6) enter into and perform, without regard to section 529 of title 31 of the United States Code, such contracts, leases, cooperative agreements, or other transactions as may be necessary in the conduct of its functions, with any public agency, or with any person, firm, association, corporation, or educational institution, and make grants to any public agency or private nonprofit organization;

"(7) request and use such information, data, and reports from any Federal agency as the Board may from time to time require and as may be produced consistent with other law;

"(8) arrange with the heads of other Federal agencies for the performance of any of its functions under this part with or without reimbursement and, with the approval of the President, delegate and authorize the redelegation of any of its powers under this part;

"(9) request each Federal agency to make its services, equipment, personnel, facilities, and information (including suggestions, estimates, and statistics) available to the greatest practicable extent to the Board in the performance of its functions;

"(10) pay all expenses of the Board, including all necessary travel and subsistence expenses of the Board outside the District of Columbia incurred by the members or employees of the Board under its orders on the presentation of itemized vouchers therefor approved by the Chairman or his designate; and

"(11) establish a program to assure extensive and continuing publicity for the provisions relating to compensation under this part, including information on the right to file a claim, the scope of coverage, and procedures to be utilized incident thereto.

"COMPENSATION"

"SEC. 453. (a) The Board shall order the payment of compensation—

"(1) in the case of the personal injury of an intervenor or victim, to or on behalf of that person; or

"(2) in the case of the death of the intervenor or victim, to or on behalf of the surviving dependent or dependents of either of them.

"(b) The Board shall determine the amount of compensation under this part—

"(1) in the case of a claim by an intervenor or his surviving dependent or dependents, by computing the net losses of the claimant; and

"(2) in the case of a claim by a victim or his surviving dependent or dependents, by computing the pecuniary losses of the claimant.

"(c) The Board may order the payment of compensation under this part to the extent it is based upon anticipated loss of future earnings or loss of support of the victim for ninety days or more, or child care payments, in the form of periodic payments during the protracted period of such loss of earnings, support of payments, or ten years, whichever is less.

"(d) The Board may order the payment of compensation under this part to a victim or his surviving dependent or dependents held in abeyance until such time as the victim or his surviving dependent or dependents has exhausted his liquid assets.

"(e) (1) Whenever the Board determines, prior to taking final action upon a claim, that such claim is one with respect to which an order of compensation will probably be made, the Board may order emergency compensation not to exceed \$1,500 pending final action on the claim.

"(2) The amount of any emergency compensation ordered under paragraph (1) of this subsection shall be deducted from the amount of any final order for compensation.

"(3) Where the amount of any emergency compensation ordered under paragraph (1) of this subsection exceeds the amount of the final order for compensation, or if there is no order for compensation made, the recipient of any such emergency compensation shall be liable for the repayment of such compensation. The Board may waive all or part of such repayment.

"(f) No order for compensation under this part shall be subject to execution or attachment.

"(g) The availability or payment of compensation under this part shall not affect the right of any person to recover damages from any other person by a civil action for the injury or death, subject to the limitations of this part—

"(1) in the event an intervenor, a victim, or the surviving dependent or dependents of either of them who has a right to file a claim under this part should first recover damages from any other source based upon an act, omission, or possession giving rise to a claim under this part, such damages shall be first used to offset gross losses that do not qualify as net or pecuniary losses; and

"(2) in the event an intervenor, victim, or the surviving dependent or dependents of either of them receives compensation under this part and subsequently recovers damage from any other source based upon an act, omission, or possession that gave rise to compensation under this part, the Board shall be reimbursed for compensation previously paid to the same extent compensation would have been reduced had recovery preceded compensation under paragraph (1) of this subsection.

"(h) The Board may reconsider a claim at any time and modify or rescind previous orders for compensation based upon a change in financial circumstances of a victim or one or more of his surviving dependents that eliminates financial stress.

"LIMITATIONS"

"SEC. 454. (a) No order for compensation under this part shall be allowed to or on behalf of a victim or his surviving dependent or dependents unless the Board finds that such a claimant will suffer financial stress from pecuniary losses for which the act, omission, or possession giving rise to the claim was the proximate cause.

"(b) No order for compensation under this part shall be made unless the claim has been made within one year after the date of the act, omission, or possession resulting in the injury or death, unless the Board finds that the failure to file was justified by good cause.

"(c) No order for compensation under this part shall be made to or on behalf of an intervenor, victim, or the surviving dependent or dependents of either of them unless a minimum pecuniary or net loss of \$100 or an amount equal to a week's earnings or support, whichever ever is less, has been incurred.

"(d) No order for compensation under this part shall be made unless the act, omission, or possession giving rise to a claim under this part, was reported to the law enforcement officials within seventy-two hours after its occurrence, unless the Board finds that the failure to report was justified by good cause.

"(e) No order for compensation under this part to or on behalf of a victim, his surviving dependent or dependents, as the result of any one act, omission, or possession, or related series of such acts, omissions, or possessions, giving rise to a claim, shall be in excess of \$50,000, including lump-sum and periodic payments.

"(f) The Board, upon finding that any claimant has not substantially cooperated with all law enforcement agencies incident to the act, omission, or possession that gave rise to the claim, may proportionately reduce, deny, or withdraw any order for compensation under this part.

"(g) The Board, in determining whether to order compensation or the amount of the compensation, shall consider the behavior of the claimant and whether, because of provocation or otherwise, he bears any share of responsibility for the act, omission, or possession that gave rise to the claim for compensation and—

"(1) the Board shall reduce the amount of compensation to the claimant in accordance with its assessment of the degree of such responsibility attributable to the claimant, or

"(2) in the event the claimant's behavior was a substantial contributing factor to the act, omission, or possession giving rise to a claim under this part, he shall be denied compensation.

"(h) No order for compensation under this part shall be made to or on behalf of a person engaging in the act, omission, or possession giving rise to the claim for compensation, to or on behalf of his accomplice, a member of the family or household of either of them, or to or on behalf of any person maintaining continuing unlawful sexual relations with either of them.

"PROCEDURES"

"SEC. 455. (a) The Board is authorized to receive claims for compensation under this part filed by an intervenor, a victim, or the surviving dependent or dependents of either of them, or a guardian acting on behalf of such a person.

"(b) The Board—

"(1) may subpoena and require production of documents in the manner of the Securities and Exchange Commission as provided in subsection (c) of section (18) of the Act of August 26, 1935, except that such subpoena shall only be issued under the signature of the Chairman, and application to any court for aid in enforcing such subpoena shall be made only by the Chairman, but a subpoena may be served by any person designated by the Chairman;

"(2) may administer oaths, or affirmations to witnesses appearing before the Board, receive in evidence any statement, document, information, or matter that may, in the opinion of the Chairman, contribute to its functions under this part, whether or not such statement, document, information, or

matter would be admissible in a court of law, provided it is relevant and not privileged;

"(3) shall, if hearings are held, conduct such hearings open to the public, unless in a particular case the Chairman determines that the hearing, or a portion thereof, should be held in private, having regard to the fact that a criminal suspect may not yet have been apprehended or convicted, or to the interest of the claimant; and

"(4) may, at the discretion of the Chairman, appoint an impartial licensed physician to examine any claimant under this part and order the payment of reasonable fees for such examination.

"(c) The Board shall be an 'agency of the United States' under subsection (1) of section 6001 of title 18 of the United States Code for the purpose of granting immunity to witnesses.

"(d) The provisions of chapter 5 of title 5 of the United States Code shall not apply to adjudicatory procedures to be utilized before the Board.

"(e) (1) A claim for compensation under this part may be acted upon by a member designated by the Chairman to act on behalf of the Board.

"(2) In the event the disposition by a member as authorized by paragraph (1) of this subsection is unsatisfactory to the claimant, the claimant shall be entitled to a de novo hearing of record on his claim by the full Board.

"(f) (1) Decisions of the full Board shall be in accord with the will of a majority of the members and shall be based upon a preponderance of the evidence.

"(2) All questions as to the relevancy or privileged nature of evidence at such times as the full Board shall sit shall be decided by the Chairman.

"(3) A claimant at such times as the full Board shall sit shall have the right to produce evidence and to cross-examine such witnesses as may appear.

"(g) (1) The Board shall publish regulations providing that an attorney may, at the conclusion of proceedings under this part, file with the Board an appropriate statement for a fee in connection with services rendered in such proceedings.

"(2) After the fee statement is filed by an attorney under paragraph (1) of this subsection, the Board shall award a fee to such attorney on substantially similar terms and conditions as is provided for the payment of representation under section 3006A of title 18 of the United States Code.

"(3) Any attorney who charges or collects for services rendered in connection with any proceedings under this part any fee in any amount in excess of that allowed under this subsection shall be fined not more than \$1,000 or imprisoned not more than one year, or both.

"(h) The United States Court of Appeals for the District of Columbia shall have jurisdiction to review all final orders of the Board. No finding of fact supported by substantial evidence shall be set aside.

"CRIMES

"Sec. 456. (a) The Board is authorized to order compensation under this part in any case in which an intervenor, victim, or the surviving dependent or dependents of either of them files a claim when the act, omission, or possession giving rise to the claim for compensation occurs—

"(1) within the 'special maritime and territorial jurisdiction of the United States' within the meaning of section 7 of title 18 of the United States Code;

"(2) within the District of Columbia; or

"(3) within 'Indian country' within the meaning of section 1151 of title 18 of the United States Code.

"(b) This part applies to the following acts, omissions, or possessions:

- "(1) aggravated assault;
- "(2) arson;
- "(3) assault;
- "(4) burglary;
- "(5) forcible sodomy;
- "(6) kidnaping;
- "(7) manslaughter;
- "(8) mayhem;
- "(9) murder;
- "(10) negligent homicide;
- "(11) rape;
- "(12) robbery;
- "(13) riot;
- "(14) unlawful sale or exchange of drugs;
- "(15) unlawful use of explosives;
- "(16) unlawful use of firearms;
- "(17) any other crime, including poisoning, which poses a substantial threat of personal injury; or
- "(18) attempts to commit any of the foregoing.

"(c) For the purposes of this part, the operation of a motor vehicle, boat, or aircraft that results in an injury or death shall not constitute a crime unless the injuries were intentionally inflicted through the use of such vehicle, boat, or aircraft or unless such vehicle, boat, or aircraft is an implement of a crime to which this part applies.

"(d) For the purposes of this part, a crime may be considered to have been committed notwithstanding that by reason of age, insanity, drunkenness, or otherwise, the person engaging in the act, omission, or possession was legally incapable of committing a crime.

"SUBROGATION

SEC. 457. (a) Whenever an order for compensation under this part has been made for loss resulting from an act, omission, or possession of a person, the Attorney General may, within three years from the date on which the order for compensation was made, institute an action against such person for the recovery of the whole or any specified part of such compensation in the district court of the United States for any judicial district in which such person resides or is found. Such court shall have jurisdiction to hear, determine, and render judgment in any such action. Any amounts recovered under this subsection shall be deposited in the Criminal Victim Indemnity Fund established by section 458 of this part.

"(b) The Board shall provide to the Attorney General such information, data, and reports as the Attorney General may require to prosecute actions in accordance with this section.

"INDEMNITY FUND

"Sec. 458. (a) There is hereby created on the books of the Treasury of the United States a fund known as the Criminal Victim Indemnity Fund (hereinafter referred to as the 'Fund'). Except as otherwise specifically provided, the Fund shall be the repository of (1) criminal fines paid in the various courts of the United States, (2) additional amounts that may be appropriated to the Fund as provided by law, and (3) such other sums as may be contributed to the Fund by public or private agencies, organizations, or persons.

"(b) The Fund shall be utilized only for the purposes of this part.

"ADVISORY COUNCIL

"Sec. 459. (a) There is hereby established an Advisory Council on the Victims of Crime (hereinafter referred to as the 'Council') consisting of the members of the Board and one representative from each of the various State crime victims compensation programs referred to in paragraph (10) of subsection (b) of section 301 of this title, each of whom shall serve without additional compensation.

"(b) The Chairman of the Board shall also serve as the Chairman of the Council.

"(c) The Council shall meet not less than

once a year, or more frequently at the call of the Chairman, and shall review the administration of this part and programs under paragraph (10) of subsection (b) of section 301 of this title and advise the Administration on matters of policy relating to their activities thereunder.

"(d) The Council is authorized to appoint an advisory committee to carry out the provisions of this section.

"(e) Each member of the advisory committee, other than a member of the Board, appointed pursuant to subsection (d) of this section shall receive \$100 a day, including traveltime, for each day he is engaged in the actual performance of his duties as a member of the committee. Each member of the Council or advisory committee shall also be reimbursed for travel, subsistence, and other necessary expenses incurred in the performance of his duties.

"REPORTS

"Sec. 460. The Board shall transmit to the Congress an annual report of its activities under this part. In its third annual report, the Board upon investigation and study shall include its findings and recommendations with respect to the operation of the overall limit on compensation under section 454(e) of part F of this title with respect to the adequacy of State programs receiving assistance under paragraph (10) of subsection (b) of section 301 of part C of this title."

COMPENSATION OF BOARD MEMBERS

SEC. 103. (a) Section 5314 of title 5 of the United States Code is amended by adding at the end thereof the following new paragraph:

"(58) Chairman, Violent Crime Compensation Board."

(b) Section 5315 of title 5 of the United States Code is amended by adding at the end thereof the following new paragraph:

"(95) Members, Violent Crime Compensation Board."

CRIMINAL VICTIM INDEMNITY FUND FINES

SEC. 104. (a) Chapter 227 of title 18 of the United States Code is amended by adding at the end thereof the following new section:

"§ 3579. Fine imposed for Criminal Victim Indemnity Fund

"In any court of the United States, the District of Columbia, the Commonwealth of Puerto Rico, a territory or possession of the United States, upon conviction of a person of an offense resulting in personal injury, property loss, or death, the court shall take into consideration the financial condition of such person, and may, in addition to any other penalty, order such person to pay a fine in an amount of not more than \$10,000 and such fine shall be deposited into the Criminal Victim Indemnity Fund of the United States."

(b) The analysis of chapter 227 of title 18 of the United States Code is amended by adding at the end thereof the following new item:

"3579. Fine imposed for Criminal Victim Indemnity Fund."

PART B—FEDERAL GRANT PROGRAM

SEC. 105. Subsection (b) of section 301 of part C of title I of the Omnibus Crime Control and Safe Streets Act of 1968, is amended by adding at the end thereof the following new paragraph:

"(10) The cost of administration and that portion of the costs of State programs, other than in the District of Columbia, to compensate victims of violent crime which are substantially comparable in coverage and limitations to part F of this title."

SEC. 106. Paragraph (a) of section 601 of title I of the Omnibus Crime Control and Safe Streets Act of 1968 is amended by striking "and" the second time it appears, striking "or" the sixth time it appears, striking

the period, and inserting the following: "or programs for the compensation of victims of violent crimes."

SEC. 107. Section 501 of part F (redesignated as part I by this Act) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, is amended by inserting "(a)" immediately after "501" and adding at the end thereof the following new subsection:

"(b) In addition to the rules, regulations, and procedures under subsection (a) of this section, the Administration shall, after consultation with the Violent Crimes Compensation Board, establish by rule or regulation criteria to be applied under paragraph (10) of subsection (b) of section 301 of this title. In addition to other matters, such criteria shall include standards for—

"(1) the persons who shall be eligible for compensation;

"(2) the categories of crimes for which compensation may be ordered;

"(3) the losses for which compensation may be ordered; and

"(4) such other terms and conditions for the payment of such compensation as the Administration deems necessary and appropriate."

PART C—MISCELLANEOUS PROVISIONS

SEC. 108. Section 569 of the Omnibus Crime Control and Safe Streets Act of 1968, as amended and as redesignated by this Act, is amended by inserting "(a)" immediately after "569" and by adding at the end thereof the following new subsection:

"(b) There is authorized to be appropriated for the fiscal year ending June 30, 1973, \$5,000,000 for the purposes of part F."

SEC. 109. Until specific appropriations are made for carrying out the purposes of this Act, any appropriation made to the Department of Justice or the Law Enforcement invalid, the provisions of the other parts and their application shall, in the discretion of the Attorney General, be available for payments of obligations arising under this Act.

SEC. 110. If the provisions of any part of this Act are found invalid or any amendments made thereby or the application thereof to any persons or circumstances be held invalid, the provisions of the other parts and their application to other persons or circumstances shall not be affected thereby.

SEC. 111. This Act shall become effective upon the date of enactment.

Mr. McCLELLAN. Mr. President, I move that the vote by which the bill passed be reconsidered.

Mr. TALMADGE. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

VICTIMS OF CRIME ACT OF 1973

Mr. McCLELLAN. Mr. President, I ask unanimous consent for the immediate consideration of Calendar No. 25, S. 800.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows:

Calendar No. 25, S. 800, a bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide for the compensation of innocent victims of violent crime in financial stress; to make grants to the States for the payment of such compensation; to authorize an insurance program and death benefits to dependent survivors of public safety officers; to strengthen the civil remedies available to victims of racketeering activity and theft; and for other purposes.

The PRESIDING OFFICER. Is there objection to the request of the Senator

from Arkansas? The Chair hears none, and it is so ordered.

The Senate proceeded to consider the bill.

Mr. McCLELLAN. Mr. President, I ask unanimous consent that the name of the Senator from Rhode Island (Mr. PASTORE) be added as a cosponsor to the bill, S. 800.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCLELLAN. Mr. President, the Senate has once again passed each of the separate component parts of the "Victims of Crime Act of 1973." It now has before it S. 800, which integrates these separate bills into one comprehensive measure. Similar legislation was acted on last year. At that time, this comprehensive measure was cosponsored by the following 43 Senators:

Senators Allen, Bayh, Bentsen, Bible, Burdick, Cannon, Case, Chiles, Church, Cook, Cranston, and Eastland.

Senators Gravel, Griffith, Gurney, Harris, Hart, Hartke, Hollings, Hughes, Humphrey, Inouye, Jackson, Kennedy, Mansfield, Mathias, McClellan, McGovern, McIntyre, Metcalf, and Mondale.

Senators Moss, Muskie, Nelson, Pell, Percy, Randolph, Ribicoff, Roth, Schweiker, Stevenson, Tunney, and Williams.

It was drafted as an amendment to a House bill to give the House an opportunity to act on it as a package prior to adjournment. The amendment was accepted by the Senate by a record vote of 70 to 4—See CONGRESSIONAL RECORD, volume 118, part 24, page 31058. The amended House bill was then passed by a record vote of 74 to 0. No action, however, was taken on this comprehensive measure by the House prior to adjournment.

Mr. President, this legislation has the overwhelming support of the Senate and the Nation. Indeed, on January 31, 1973, the Democratic caucus unanimously called for the taking of immediate action to bring to the Senate this sorely needed legislation. Consequently, I am hopeful that it will be possible for the House to process it during this Congress and that a mutually satisfactory compromise can be sent to the President without delay. I urge its immediate passage.

Mr. President, I yield to the distinguished Senator from Indiana.

The PRESIDING OFFICER. The Senator from Indiana is recognized.

Mr. BAYH. Mr. President, I sent an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk proceeded to read the amendment.

Mr. BAYH. Mr. President, I ask unanimous consent that the amendment be considered as having been read.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAYH's amendment is as follows:

On page 51, after line 14, add the following new subsection:

"(e) In lieu of the benefit provided under subsection (a), any recipient eligible under section 527 may elect to receive compensation under the provision of Subchapter I of Chapter 81 of Title 5, United States Code,

except section 8135(a) thereof, as if the public safety officer were a deceased employee as defined by section 8101(1) of such Title 5, whose death resulted from an injury sustained in the performance of duty."

Mr. BAYH. Mr. President, I salute the distinguished senior Senator from Arkansas for the excellent effort that has gone into this proposed legislation, as well as the rest of the package of bills which the Senate has been considering this afternoon.

The amendment I am proposing to S. 800 would permit the dependents of a public safety officer killed in the line of duty to choose to be compensated under the Federal Employees Compensation Act instead of receiving the \$50,000 lump-sum payment provided by the bill now.

While in many cases the \$50,000 lump-sum benefit is preferable for the survivors, there are situations in FECA benefits which would more adequately provide for a public safety officer's family. For example, a widow with three children would receive, under the relevant FECA provision (8133 U.S.C.), \$7,500 a year, assuming her husband's salary was \$10,000. This payment would continue until she remarried or died and until her children reached 18 or 23, if full-time students. On the other hand, the \$50,000 lump-sum payment, invested at 6 percent, would provide just \$5,000 a year for only 14 years, or \$3,000 a year in interest indefinitely.

Indeed, I can imagine situations in which the widow and children would prefer the security of the FECA monthly payments, rather than having to maintain as an investment the \$50,000 lump-sum payment—even if the resulting benefits were substantially the same. This is an option we ought to give to the families of public safety officers who give their lives in the line of duty.

Though the amendment I propose will ease the hardships of the families of public safety officers, its impact on the Federal budget will be minimal if not positive. I have asked the Library of Congress to review the cost implications of this amendment. Such projections, of course, are very difficult because the cost will turn on individual decisions of the survivors of public safety officers, who will have to consider their own financial situation, personal situation, and desire for security. But, as the Library points out, "to the extent that survivors did choose the option available under the amendment, the immediate budget impact would reflect a saving"; that is, the expenditure in that fiscal year would be 1 year's benefits instead of \$50,000. This is important in view of the tightness of our present budget. The long-run costs might or might not be higher than the \$50,000 lump-sum payment, depending on the size of the typical benefit under my amendment, the length of time it is paid, and the interest rate the Government pays when it borrows. Even if the cost might eventually be greater, the amount of money involved would not be significant to the Federal Government but would be vitally important to certain families.

Mr. President, title III of S. 800 is de-

signed to assure that the families of slain public safety officers receive a sufficient amount to continue to live in dignity after a tragic loss. We are doing this because of the moral obligation of the Nation to compensate adequately those who risk their lives to protect all of society, as the distinguished Senator from Arkansas (Mr. McCLELLAN) has eloquently pointed out before. And we are doing this because it will improve law enforcement by increasing the morale of those who are on the front lines, as professionals in this field have testified at our hearings. I believe that my amendment furthers these purposes and I hope that it will be adopted.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Indiana.

Mr. McCLELLAN. Mr. President, I yield to the Senator from Nebraska.

Mr. HRUSKA. Mr. President, I am sure that the initiative and the concern of the Senator from Indiana in proposing the instant amendment to the bill now under consideration are very commendable. However, I feel that there are some things that should be said about it.

Title III of S. 800 is designed to provide a flat \$50,000 gratuity to the dependent survivors of public safety officers killed in the line of duty as the result of a criminal act or an apparent criminal act. It will provide recipient survivors with a generous cash reserve to supplement annuity-type payments which would very likely be received from State and local government employers as the result of workmen's compensation plans and other survivor benefits paid on a monthly basis.

This cash reserve would allow a widow to meet large cash demands such as college costs or payoff of a mortgage, while annuity-type benefits would operate to satisfy day to day costs of operating a household in place of lost income.

The amendment now under consideration has not had the benefit of committee consideration to resolve technical problems.

There are very possible technical problems, because such problems would be inherent under the terms of the amendment which incorporates the myriad of benefits available under Federal workmen's compensation, and these should come under the scrutiny of the appropriate committee that deals with the Federal compensation system.

I am also wondering Mr. President, if there would not be a dangerous precedent set by this amendment. After all, the payments would be made under the provisions of the Federal Employees' Compensation Act, and it suggests that State and local public safety officers be treated as employees of the Federal Government, for the reason that only employees of the Federal Government come under the provisions of the Federal Workmen's Compensation Act.

It is for these reasons that I raise some apprehension—if for no other purpose than to send up a warning flag to indicate that when the time comes for consideration by the other body, these matters will be taken into consideration.

Again I say I think the Senator should

be commended for his initiative and his concern, but I do think that the technical difficulties inherent in the amendment could come back to haunt us.

Mr. BAYH. Mr. President, I appreciate the concerns raised by the Senator from Nebraska. I am hopeful that the amendment will be accepted, and that the questions that the Senator raises would be addressed when we get to the conference stage. I do not share his concern about the technical matters, having studied the matter with great particularity, and realizing that these specific provisions are the same provisions that already apply to the millions of people who work for the Federal Government and who are already covered by the act.

What we are saying to the widow is not "You are forced to take advantage of the Federal Employment Compensation Act," but "If you would rather have the regular annuity payments that any Federal employee has, you may take advantage of that, or you may instead take a \$50,000 lump sum."

Mr. McCLELLAN. Mr. President, I see no objection to this amendment on its face. The alternative proposed is, from my viewpoint, entirely satisfactory. If they prefer to choose compensation under the Workmen's Compensation Act, I see no serious objection.

However, it is bad practice to bring up an amendment to a bill on the floor, where the committee has had no opportunity for consideration, study, and the taking of testimony to support it, we ought to give the committee the opportunity to work out the technical issues that may be involved.

I am going to accept the amendment, however, with the hope at least that the House will hold hearings on it and give careful consideration to it. I believe that if it did that, there might be no serious objection.

I should like, however, to have the cooperation of my colleagues hereafter in getting these amendments to us when we consider bills, so that they can be given the proper committee consideration that such legislation as important as this deserves.

The PRESIDING OFFICER (Mr. BARTLETT). The question is on agreeing to the amendment of the Senator from Indiana (Mr. BAYH).

The amendment was agreed to.

Mr. TALMADGE. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

On page 65, immediately preceding line 5, insert the following new titles:

"TITLE V—ADDITIONAL SENTENCES FOR COMMISSION OF A FELONY WITH USE OF A FIREARM

Sec. 501. Subsection (c) of section 924 of title 18 of the United States Code is amended to read as follows:

"(c) (1) Whoever—

"(A) uses a firearm to commit any felony for which he may be prosecuted in a court of the United States, or

"(B) carries a firearm unlawfully during the commission of any felony for which he may be prosecuted in a court of the United States.

shall, in addition to the punishment provided for the commission of such felony, be sentenced to a term of imprisonment for not less than five years or more than fifteen years. The imposition or execution of such additional sentence shall not be suspended and probation shall not be granted.

"(2) Whoever, after having been convicted of any such felony while so using or unlawfully carrying a firearm as provided in paragraph (1) of this subsection and sentenced to an additional term in connection therewith under paragraph (1), is again convicted of a second or subsequent offense involving the commission of a felony for which he may be prosecuted in a court of the United States while so using or unlawfully carrying a firearm shall, in addition to the punishment provided for the commission of such felony, be sentenced to a term of imprisonment for not less than ten or more than thirty years. The imposition or execution of such additional sentence shall not be suspended, probation shall not be granted, and section 4202 and chapter 309 of title 18, United States Code, and the Act of July 15, 1932 (D.C. Code, secs 24-203-24-207), shall not be applicable.

"(3) In no case shall any additional term of imprisonment imposed pursuant to this subsection run concurrently with any term of imprisonment imposed for the commission of any such felony.

"(4) A conviction shown on direct or collateral review to be invalid, or for which the defendant has been pardoned on the ground of innocence shall be disregarded for purposes of paragraph (2) of this subsection."

"TITLE VI—CONTROLLED SUBSTANCES ACT AMENDMENTS

"Sec. 601. The Controlled Substances Act, approved October 27, 1970 (84 Stat. 1242), is amended by adding immediately after section 405 thereof the following new section:

" 'PUBLIC MENACE

" 'SEC. 405A. (a) Notwithstanding any other provision of this Act or of any other law, any person who violates section 401(a) by distributing any controlled substance classified in Schedule I or II which is a narcotic drug shall, if such person is a public menace, be sentenced, in addition to the punishment provided for such violation, to a term of imprisonment for not less than ten years or more than thirty years; except that if such person has previously been convicted of such a violation and sentenced as a public menace, such person shall be sentenced, in addition to the punishment provided for such violation, to life imprisonment. The imposition or execution of any such additional sentence shall not be suspended, probation shall not be granted, and section 4202 and chapter 309 of title 18, United States Code, and the Act of July 15, 1932 (D.C. Code, secs 24-203-24-207), shall not be applicable; except that any person so sentenced to life imprisonment may be released on parole after serving not less than thirty years of his life sentence (but in no event shall any period of imprisonment served by him in connection with his punishment for such violation be included within or considered as a part of the thirty-year period which he is required to serve prior to his eligibility for consideration for parole). In no case shall any such additional term of imprisonment (including life imprisonment) imposed pursuant to this section run concurrently with any term of imprisonment imposed for such violation.

"(b) For purposes of this section, the term "public menace" means any person convicted on or after the effective date of this section of a violation of section 401(a) of this Act by distributing, in an amount in excess of four ounces, any controlled substance or any mixture containing any controlled substance classified in Schedule I or II which is a narcotic drug and, who, at

the time he committed such violation, was not an addict.

"(c) A conviction shown on direct or collateral review to be invalid, or for which the defendant has been pardoned on the ground of innocence shall be disregarded for purposes of this section."

On page 65, line 5, strike "TITLE V" and insert in lieu thereof "TITLE VII".

On page 65, line 7, strike "SEC. 501." and insert in lieu thereof "SEC. 701."

On page 66, lines 2, 10, 17, strike "Sec. 502", "Sec. 503" and "Sec. 504" respectively and insert in lieu thereof "Sec. 702", "Sec. 703" and "Sec. 703".

On page 66, line 17, strike "and IV" and insert in lieu thereof ", IV, V and VI".

Mr. TALMADGE. Mr. President, the amendment which I offer would add two new titles to the pending bill, S. 800, the Omnibus Crime Control and Safe Streets Act Amendments of 1973.

Most major crimes involve one of two implements—firearms or drugs—and, thus, there has been an increasing tendency at the Federal level to attack the implements of crime. I question this approach since, in my view, it serves no useful purpose to legislate against inanimate objects. We need to get at the man who sells the dope and the man who wields the gun. Accordingly, one aspect of my amendment represents a clear and preferable alternative to Federal efforts to require licensing, registration, and confiscation of firearms. These are efforts which I have never supported.

In this regard, the first part of my amendment would require that severe and mandatory penalties be imposed on individuals who use or unlawfully carry a firearm in the commission of a Federal felony. Its operation is simple. When a person is arrested for and convicted of committing a Federal felony, the court must make only one finding in order for this provision to be applicable—that the defendant used or unlawfully carried a firearm in the commission of that underlying felony. If the court makes such a finding, then it must impose the additional punishment required by my amendment. This punishment would be added to the penalty imposed for the underlying felony, and the two sentences could not be served concurrently.

In the case of first offenses under this provision, the additional penalty would be a term of imprisonment for not less than 5 or more than 15 years. The court could not suspend this sentence or grant probation. In the case of second or subsequent offenses under this provision, the additional penalty would be a term of imprisonment for not less than 10 or more than 30 years. The court could not suspend this sentence or grant probation and, furthermore, parole and good time allowance would be prohibited.

The second part of my amendment is aimed at dope peddlers, and specifically the drug pusher who is not himself an addict. His is not a crime of passion. He does not need money to feed his habit. His is a crime of cold, calculated greed. His is a crime which breeds more crime and more suffering. This man is a culture who preys on the vitals of our society.

My amendment brands the nonaddicted pusher for what he is—a "public

menace"—and imposes additional penalties on him.

When an individual is arrested for selling hard drugs, the court must make two findings in order for the "public menace" provisions of my amendment to be applicable. First, the court must find whether or not the defendant is an "addict," as defined by the Hazardous Substances Act. If he is not an addict and if the court finds that the mixture he sold weighed four ounces or more, then the court must hold that he is a "public menace."

In the case of first offenders under the "public menace" provisions of my amendment, a term of imprisonment for not less than 10 or more than 30 years would be imposed. This sentence would be added to and may not be served concurrently with whatever punishment the defendant received for the underlying crime of selling hard drugs. The court could not suspend this additional sentence or grant probation and, furthermore, parole and good time allowance would be prohibited.

In the case of second or subsequent offenses under the "public menace" provisions of my amendment, the additional penalty would be life imprisonment with no eligibility for parole until 30 years of that life sentence has been served. The court could not suspend this additional sentence or grant probation.

Mr. President, I have drafted the provisions of my amendment for the sole purpose of imposing punishment for certain actions which took place or certain circumstances which existed during the commission of the underlying Federal felony. My intention is not to create a separate and independent crime.

In my judgment, we do not need a multiplicity of new laws defining Federal crimes. Rather, we need to vigorously enforce and, when necessary, strengthen laws already on the books. There is no greater deterrent to crime than the realizations that justice will be swift, stern and impartial, and that criminals will be prosecuted to the full extent of the law.

Virtually every American lives in the shadow of crime. No one is completely safe from the ravages of the lawless elements. For too long, innocent, law-abiding citizens have been defiled and terrorized by crimes involving guns and drugs. We need to scourge the gunmen and the drug pushers from our society like mad dogs.

This is the purpose of my amendment, and I urge its adoption.

I have conferred with the distinguished and able manager of the bill. I hope that he is agreeable to accepting the amendment. I hope the Senate will do likewise.

Mr. McCLELLAN. Mr. President, I regret that the committee has not had an opportunity, as I said about the other amendment, to study and consider the provisions of this amendment. However, the objectives of the amendment have a strong appeal to me, because I favor a strengthening of our laws.

We often pass a law with the idea that it will be a deterrent to crime. I have said, and I repeat again, that it is not the enactment of a law—it is not the

fact that there is a law on the statute books—that serves as a deterrent to crime. It is the enforcement of our laws and the penalties that serve as a deterrent; it is not the law itself.

This amendment deals exclusively with punishment for crimes that are already on the books. My judgment is that the present penalties for the crimes are not adequate. So the enactment of this amendment may strengthen those penalties. If it is enforced, it will serve as a deterrent to the commission of the crimes.

I am perfectly willing now to accept the amendment, but I hope the House will hold hearings on these particular features of the bill and make a record of them.

The Senate will have another opportunity to consider these amendments in conference and to vote on the conference report, I will reserve my final judgment on their merit until then.

As I say, I have no objection to the amendment now. But I do not want my acceptance of this amendment or the previous one to be taken as a precedent that the Subcommittee on Criminal Laws and Procedures is going to accept all possibly worthy amendments that may be offered to the bills we report.

I hope Senators having legislation in mind in this field will introduce bills and give the committee an opportunity to consider them.

Mr. President, we have pretty strong laws now which prohibit the carrying of concealed weapons in most States. There is such a law in my State. We have them throughout the country. It is not the law that deters. The reason it does not deter is that the law is not enforced.

I am not persuaded that the enactment of so-called gun laws, to which the Senator from Georgia referred a few moments ago, is a solution to the problem. If we cannot enforce laws against carrying a gun, against hoodlums and thugs who carry them today as weapons, I do not know how we are going to enforce the law against them with respect to the registration of weapons.

So I have been apprehensive that the enactment of laws such as the bills we have considered here in the gun field would simply disarm the law abiding citizens of this country, and the thugs and others who carry these weapons and use them to commit crime would remain armed.

This increased penalty may have some wholesome effect on strengthening the deterrence of the laws we have today.

So I have no objection to the amendment, and unless there is objection to the amendment, I am willing to accept it.

Mr. BAYH. Mr. President, will the Senator yield?

Mr. McCLELLAN. I yield.

Mr. BAYH. Mr. President, I do not want to be discourteous to my friend, the distinguished Senator from Georgia, but I, for one, feel, as a member of the Committee on the Judiciary, looking for the first time at the content of this amendment, and remembering that within the last week we have had a message from

the President addressing itself to this matter, that I am not prepared to accept this amendment without serious study. I am not in the position of accepting it or not accepting it. I am in the position, and I feel I have the responsibility, of bringing this particular issue to the awareness of enough Senators so that we actually know what we are doing. Not one person in this body is for crime. Let us look at some of the wording here. It refers to a person who violates section 401(a) by distributing any controlled substance classified under schedules 1 or 2, which is a narcotic drug. That is a violation of the law now. If that person is a public menace—would the Senator from Georgia care to describe what a public menace is?

Mr. TALMADGE. Yes. It is one who peddles drugs; and he is not, himself, an addict. This drug pusher would receive a mandatory sentence, as a public menace, under the provisions of my amendment.

The amendment is aimed at two people: One is the nonaddict, the drug peddler who goes around selling drugs and leads people into lives of degradation and crime. The other is a person who uses or unlawfully carries a gun in the commission of a felony. And the amendment tightens up and stiffens the sentences in both instances.

The only way I know to stop these criminals is to make the penalty more severe, and that is what the amendment would do.

Mr. BAYH. I do not know of anybody on the floor of the Senate who has had any more chance to study gun control. The Senator from Georgia and I do not agree, perhaps, on the final conclusion; but, if he studied these records as carefully as I have, he would find that one of the major problems we have with firearm control is that you cannot get the law providing for strict penalties enforced now. We have people on the streets of Washington carrying firearms. They are brought before the judge and are turned loose, and 48 hours later they have another firearm. That is part of the problem. We also, of course, need laws which prevent criminals from getting a hold of cheap handguns useless for other purposes.

Mr. TALMADGE. My amendment is aimed at the criminal, not the gun. If someone commits a felony and possesses a firearm in the commission of that felony, he will receive a mandatory, separate sentence of at least 5 years for the first offense and a mandatory, separate sentence of at least 10 years with no eligibility for parole for the second offense.

Mr. BAYH. I have talked about the mandatory sentence business, particularly so far as drugs and juvenile activities are concerned, at great length with the Senator from North Carolina (Mr. ERVIN). He has grave reservations about mandatory sentences for a number of reasons.

This amendment does not distinguish between adult three-time felons and a first-time loser who may be 16, 17, 18, or even younger.

I would like us to have enough humanitarianism that we try to have a sys-

tem that really puts the hard-nut characters where they belong and gives us enough flexibility so that we can recoup some of these lives. I am afraid we are going to make that impossible with this amendment. That is why it should be studied further. Let us put these pushers and killers in prison, of course, but let us help those who can again become useful taxpaying citizens to do so.

Mr. TALMADGE. If the Senator really wants to stop crime and drug peddling, this amendment is the surest way to do it. It declares a man who sells drugs and is not addicted to drugs himself, to be a public menace, if the mixture which is sold is at least partially composed of hard drugs and weighs 4 ounces or more. The 4 ounces is generally determined to be more than an addict would need for his own use and thus, he could only be described as a pusher or peddler.

Mr. BAYH. Does the Senator from Georgia really believe that this is a measure that ought to slip through here at a little after 5 in the afternoon, without having the opportunity to examine it at any length.

Mr. TALMADGE. I had some doubts about the wisdom of the Senator's amendment that was put through in a little less than two minutes. His related to taking money out of the Treasury. Mine relates to getting at hard criminals who commit crimes and are the scourge of this country today.

I do not see how anyone who is a member of the Judiciary Committee can stand on the floor of the Senate and oppose a proposal aimed against a peddler of drugs who is not himself an addict. That is what the amendment is designed to get at.

Mr. BAYH. Since the Senator from Georgia raised this matter—I was not going to—I did mention to the distinguished committee chairman, the Senator from Arkansas, that the amendment of the Senator from Indiana was submitted last year and again this year. It is not something that for the first time saw the light of day at a quarter after five.

Mr. TALMADGE. I have no abiding objection to the Senator's amendment. I voted for it.

Mr. BAYH. What I am suggesting is that we are talking about mandatory sentences, and I want to know exactly what we mean. I would like to have the testimony of some people who are involved on the street in catching these criminals, to see what impact a mandatory sentence is going to have.

I am not at all clear on what we really mean by "public menace."

Mr. TALMADGE. I have explained it twice for the Senator. I will explain it again.

This amendment attempts to get at the pusher of hard narcotics who is not an addict himself. It says that in all cases where a man has been arrested for selling drugs, the court must determine whether or not he is a public menace. A public menace is one who is not addicted to drugs and who has sold a mixture which at least is partially composed of hard drugs and which weighs 4 ounces or more.

Mr. BAYH. What is a mixture composed partially of hard drugs? How much is it? How much is the mixture? Is it 1 percent, is it 0.1 percent? Could it be an accidental adulteration?

I am not saying I am opposed to the amendment, but I am opposed to it being considered now until we have an opportunity to study it further. If people are going to be put in jail under a mandatory sentence for life, I want to know exactly under what circumstances and according to what standards—and with what prospect of reaching the goals we all share—this punishment will be applicable.

Mr. TALMADGE. Any amount would be covered which weighs 4 ounces or more, and is at least partially composed of a "narcotic drug" as defined in schedule II of the Hazardous Substances Act. This amendment provides a mandatory sentence for anyone who sells 4 ounces or more of such a mixture, and is not an addict himself.

Mr. BAYH. I am advised by my staff, in reading the language, that the 1970 act already provides that for this type of continuing criminal enterprise, if you have someone who is a pusher, someone who is in the business, that for the first prosecution he mandatorily gets 10 years to life, and a \$100,000 fine; for the second offense, he mandatorily gets 20 years to life and a \$200,000 fine.

I would hope that the Senator would withhold his amendment. The measures that are going to come down from the President will be referred to the Committee on the Judiciary. I may be for it. I will support any sound, effective measure which combats crime. I want to give these matters careful consideration. These people who stick up stores with firearms and who push drugs must be dealt with. At the same time I want to make sure our laws do not make it impossible to rehabilitate the juvenile offender that we may have a chance to make a member of society instead of making them wards of the state.

Mr. TALMADGE. This is not aimed at addicts, or children, but at the hard, cold-blooded pushers. The first conviction would carry an additional, independently served sentence of 10 to 30 years, with no parole; the second conviction would carry an additional, independently served life sentence with no parole until 3 years of the life sentence has been served.

I think the worst criminal problem we have in the United States is the spread of narcotics by cold-blooded knaves anxious to make money. They peddle drugs and get people hooked on them. Once they are hooked on drugs there are only two ways for them to go. If the person is a female they usually resort to prostitution and if he is a male they resort to burglary and holdups to support their habits. This is aimed at getting pushers of drugs off the street and putting them in the penitentiary where they belong.

That is the best way I know of to stop this drug problem.

The PRESIDING OFFICER. Is there objection to the amendment?

Mr. BAYH. Yes; the Senator from In-

diana will have to object to the amendment at this time.

The Senator from Rhode Island addressed the Chair.

The PRESIDING OFFICER. The Senator from Rhode Island is recognized.

Mr. PASTORE. Mr. President, I realize what the doubts of the Senator from Indiana may be, but I think we have reached a critical point in our society when something drastic needs to be done.

As I understand the amendment being proposed by the Senator from Georgia, he is not out to get that addict, the person who in order to satisfy his own addiction might be persuaded to possibly sell the drug to someone else; he is dealing with the individual who is doing this commercially, the hardened criminal, the man who has no conscience at all, the man who is engaged in the most nefarious sort of crime.

When we realize that a person becomes addicted, as the Senator from Georgia said, there are only two outlets: He either gets himself involved in crime to satisfy the habit or he ends up giving himself an overdose and committing suicide.

I say the only way to stop this is to be drastic and severe. I have no compassion for any individual who for the sake of money, who is not an addict himself, and in many instances may be a member of organized crime, will approach this drug and victimize the young of this country to the point where there is no return.

I tell Senators frankly I am going to support the amendment.

Mr. TALMADGE. I thank the Senator.

Mr. BAYH. Mr. President, I have been sitting in my subcommittee all afternoon trying to get the Food and Drug Administration to reclassify barbiturates and methaqualine, which are the next step before heroin, so it is clear on the record that I am no less concerned about jailing pushers than others in our society.

I do not think however we have given careful enough consideration to this particular legislation. I have not had a chance to weigh it and the effect it will have on other legislation. The Senator is talking about putting someone away for life. I want to be sure this is the kind of person we really ought to put away for that period of time.

I just finished reading the Controlled Substances Act to the FDA people. After studying the matter for a year they admit they do not have the expertise to deal with sleeping pills. It is a complicated area.

Mr. PASTORE. I made no disparaging remarks about the Senator from Indiana. I gave the Senator credit for his point of view. I said I understood the reasons for his position. I am only giving my own feelings. Maybe the Senator from Indiana wants to study the matter further. That is all right with me. I am saying I agree with the Senator from Georgia.

The time has come when we have to become severe if we are going to bring any kind of restraint in this nefarious activity.

Since the amendment of the Senator from Georgia deals with addicts, I assume the Senator from Georgia has made a study as to whether this is a drug which relates to addicts.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

Mr. BAYH. The Senator from Indiana is going to discuss it for a while.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. BAYH. If I might make one observation. I have been in executive sessions of the Committee on the Judiciary with a man whom I have as much respect for as any other Member of this body in this area and that is the senior Senator from North Carolina. For us to go ahead here and proceed right now without any advance notice would not be appropriate. I do not say this in any disparaging way at all to the Senator from Georgia. He feels very strongly about this matter, and I share his concern about this problem, but it is fair to say that few Members of the Senate have been put on notice that this kind of amendment was going to be discussed.

If we could have over the weekend to study this matter I might come down on the side of the Senator from Georgia as far as pushers are concerned. But I want to make sure that we are putting away the kind of people that ought to be put away.

Mr. MANSFIELD. Mr. President, will the Senator yield to me briefly so that I can suggest the absence of a quorum, without his losing his right to the floor?

Mr. BAYH. Yes.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMPENSATION FOR ELDERLY VICTIMS OF VIOLENT CRIME

Mr. DOLE. Mr. President, I fully support the purpose of the Victims of Crime Act of 1973. The day is long past when our society should start providing means of restoring those who, through no fault of their own, suffer at the hands of violent criminals.

Over the past several decades, court decisions and developing publicity of the various news media have seemed to demonstrate a greater concern and compassion for the criminal in America than for the victims who frequently suffer much more in terms of monetary loss, injury, suffering, and even death, than the criminal himself. A few years in prison, a light sentence or acquittal have frequently been the criminal's lot while permanent crippling injury, ruined financial resources, or loss of a provider or loved one have befallen the victim and his family.

PRIORITY TO VICTIMS

It is time that our system give priority to the innocent victim who bears the harshest burden of the law's violation, and I believe the Victims of Crime Act is a long overdue measure, and I support it again this year as I did when it was considered in the 92d Congress.

By establishing a compensation sys-

tem, based on the theories of damages which govern our civil tort law, the act presents a reasonable, fair, and manageable means of measuring injury and loss and setting the level of compensation for this injury.

By setting realistic minimum and maximum limitations on damage claims, the act assures, first, that inconsequential and frivolous claims will not clog the compensation board's docket; and, second, that the act's aid will go to the greatest number of those in greatest need of aid.

PROTECTION FOR AVERAGE CITIZEN

There is, however, one point of the act's application which concerns me as possibly working against the intent behind it. Wisely, the act establishes a standard of financial stress for determining eligibility for receipt of compensation. As set forth the term means, "the undue financial strain experienced by a victim or his surviving dependents as the result of pecuniary loss" from something giving rise to a claim. And in an effort to assure that the ordinary property and possessions of an average American do not disqualify an individual from receiving compensation, a number of factors are specified which should not be taken into account in computing financial stress. Thus a person's residence, his normal household items and personal effects, his automobile, the tools of his trade, would not be counted in. And other "liquid assets"—such as stocks and bonds, bank accounts, and other similar personal property—up to the amount of 1 year's income or \$10,000—whichever is less—would also be excluded from consideration.

The effect of this latter provision would assure eligibility for compensation under the act for the overwhelming majority of American wage earners who have accumulated a modest savings or a few stocks. It would exclude those who were fortunate enough to have saved or acquired these types of assets in excess of \$10,000, but these individuals are not really the ones this bill is designed to reach. This bill is designed for the average citizen who owns his home, has a car, and who perhaps has managed to build up a savings account or purchase a few stocks. And this is as it should be, for these are the people who suffer the harshest and most serious loss at the hands of the violent criminal.

CONCERN FOR ELDERLY

But, as I mentioned earlier, this provision might serve to exclude a great number of individuals who should be major beneficiaries of the act.

The elderly in America are among the violent criminal's most pitiful victims. They are often forced by illness, infirmities, and economic circumstances to give up their automobiles and must walk to the grocery store, to visit friends and family, to obtain the exercise they need to remain alert and involved in life. Being on the streets, particularly in the cities, they are easy prey for the mugger, the strong arm bandit, and the purse snatcher. Frequently in these crimes, elderly victims are assaulted—often

senselessly. They may be hospitalized for long periods as a consequence. Their losses may be catastrophic, both in monetary terms and in physical harm.

But many of these people could possibly be excluded from compensation under the Victims of Crime Act because of the liquid assets provision of the financial stress definition.

As it presently reads, the definition provides ample eligibility for those who could be classified as having "high incomes" but "low assets," that is without "liquid assets" not in excess of the lesser of a year's salary or \$10,000—in effect savings or stocks up to \$10,000 in value.

SPECIAL SITUATION OF THE ELDERLY

However, the great majority of retired, elderly people could be considered to have "low incomes" but relatively "high assets" in comparison. They live on fixed payments from social security or other pensions which may be a fraction of the income of an employed wage earner and far below \$10,000. But they may also have a part-time job or a few stocks or other investments which yield a modest supplementary income. I believe the vast majority of retired people fall into this profile. But by the terms of the act's "financial stress" definition of "liquid assets" any property of this type of a value in excess of the lesser of their "annual income"—which might be extremely low—or \$10,000 it seems possible could make them ineligible for compensation if they were the victim of a violent crime. In effect their yearly income—even if from a part-time job or a few stock dividends—would eliminate them from the act's coverage.

Thus I am concerned about the possible construction of this language and would hope that when this act is considered by the house and taken up subsequently in conference that assurances can be provided that such an effect is not intended and would not result.

Perhaps a simple additional provision would be sufficient. It could merely provide that the "financial stress" test for anyone over 65 years of age take into account liquid assets in excess of either a year's income or \$10,000, whichever is greater. Thus even if an elderly person did earn an income—up to \$10,000 yearly and owned a few liquid assets, he or she would still be covered by the act.

I do not believe anyone supporting this act has any intention to deny compensation to elderly citizens who are fortunate enough to have small additional incomes to supplement their basic social security or pension benefits. I would hope we might clarify this possible oversight and provide the meaningful coverage and benefits which our older citizens so richly deserve.

UNANIMOUS-CONSENT AGREEMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the pending business, S. 800, be laid aside temporarily; that the Senate return to the consideration of the Talmadge amendment at the conclusion of the vote on the veto of the vocational rehabilitation bill on Tuesday next; that there be a time limitation of 1 hour, the time to be equally divided between the distinguished Senator from Georgia (Mr. TALMADGE) and

the distinguished Senator from Indiana (Mr. BAYH); and that there be a time limitation of 30 minutes for other amendments, to be equally divided, under the usual rule.

Mr. McCLELLAN. Mr. President, will the Senator amend his request to allow 10 minutes under the control of the manager of the bill, so that I may have something to say about it if I so desire?

Mr. MANSFIELD. Mr. President, I will make that a part of the request for this amendment and any other amendment.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request? Without objection, it is so ordered.

The text of the unanimous-consent agreement is as follows:

Provided, That, effective on Tuesday, April 3, 1973, at the conclusion of the vote on the reconsideration of S. 7, the Senate return to S. 800, a bill to amend the Omnibus Crime Control and Safe Streets Act of 1968, with the pending amendment by the Senator from Georgia (Mr. Talmadge) limited to 1 hour, to be divided 10 minutes to the Senator from Arkansas (Mr. McClellan) and the remaining time (50 minutes) to be equally divided and controlled by the Senator from Georgia (Mr. Talmadge) and the Senator from Indiana (Mr. Bayh), with time on any other amendment to S. 800 to be limited to 30 minutes, to be divided 10 minutes to the Senator from Arkansas (Mr. McClellan) and the remaining time (20 minutes) to be equally divided and controlled by the mover of the amendment and the manager of the bill.

Mr. MANSFIELD. Mr. President, the four bills which have been passed this afternoon will be sent to the House. Is that correct?

The PRESIDING OFFICER. That is correct?

What is the will of the Senate?

Mr. HOLLINGS. Mr. President, the crime control legislation passed by the Senate today is one of the most comprehensive approaches to fighting crime and it could not come at a better time.

One of the most vital features of this bill is what it does for the law enforcement officer and his family. All safety officers—police, firemen, prison guards, are covered in this bill which grants up to \$50,000 to the family of an officer killed in the line of duty. It provides needed insurance incentives for people involved in these high-risk occupations. We have to do more to provide for those who daily risk life and limb for the protection of society.

The people of America are tired of living in fear. No one in America feels safe except the criminal element. Over the past few years, we have witnessed the fact that crime does pay. It has been the criminal whose rights are protected not the law-abiding citizen. Murder and violence have become a way of life in America. Drugs are available everywhere—even in our grammar schools.

I feel the legislation passed today gets to the heart of our judicial system—the individual will be directly accountable for the results of his own actions. Criminals will be made to contribute to the fund for his victim. Crime will no longer be free.

The time has come for tough, direct

legislation that proves America is a land of law and order. Fear should be taken from the hearts of our law-abiding citizens and placed in the minds of the criminal element. We have been too soft for too long.

I think the drugpusher is going to think a long time before he goes back into our schools.

People who use guns in criminal acts have no regard for property and human life and should be put away for a long time.

I predict this legislation will be a most important step in bringing an end to the era of permissiveness in America.

ORDER FOR RECOGNITION OF SENATORS ON MONDAY, APRIL 2, 1973

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Monday, after the two leaders or their designees have been recognized under the standing order, the following Senators be recognized, each for not to exceed 15 minutes, and in the order stated: Mr. HELMS, Mr. STAFFORD, Mr. GRIFFIN, and Mr. ROBERT C. BYRD.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR PERIOD FOR TRANSACTION OF ROUTINE MORNING BUSINESS ON MONDAY NEXT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that following recognition of Senators on Monday for 15 minute orders, there be a period for the transaction of routine morning business of not to exceed 30 minutes, with statements limited therein to 3 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATORS ON TUESDAY NEXT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Tuesday, after the two leaders have been recognized under the standing order, the following Senators be recognized, each for not to exceed 15 minutes, and in the order stated: Mr. RIBICOFF, Mr. DOMENICI, Mr. GRIFFIN, Mr. ROBERT C. BYRD.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT UNTIL MONDAY, APRIL 2, 1973

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 12 o'clock meridian on Monday.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF THE PAR VALUE MODIFICATION ACT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return now to the consideration of S. 929, the unfinished business, a bill to amend the Par Value Modification Act, with the understanding that there be no action thereon and that no time under the agreement be charged today.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will state the bill by title.

The legislative clerk read the bill by title, as follows:

A bill (S. 929) to amend the Par Value Modification Act.

THE PANAMA CANAL

Mr. HARRY F. BYRD, JR. Mr. President, the U.S. Ambassador to the United Nations, John Scali, told a meeting of the United Nations Security Council in Panama last week that the United States supports the Panamanian Government's demand for an end to the 1903 treaty under which the United States was granted the Panama Canal Zone in perpetuity.

It was the Johnson administration, in 1967, which put a head of steam behind Panama's resolve to wrest the canal away from undisputed American control. The draft treaties of 1967 made concessions to Panama which many Members of Congress felt were unwise and were, indeed, a submission to Panamanian political blackmail.

I spoke out against the Johnson administration proposals on November 11, 1967. I talked with many of my colleagues in the Congress, who agreed that the United States should not give up its control of the Panama Canal. So great was the opposition that President Johnson never put the proposed treaty changes to a test.

Now we come to 1973—and the same political blackmail is being attempted again. And our State Department is again showing its timidity.

By refusing to show firmness at a January meeting of the United Nations Security Council in New York, it set the stage for a propaganda coup by Panama and her allies. Panama proposed that a special meeting of the Security Council be held in Panama in March of 1973 so that Panama could dramatize to the world the issue between Panama and the United States. The previous American Ambassador to the United Nations spoke against such a proposal, characterizing it as an attempt to pressure the United States into renegotiating the Panama Canal Treaty while bilateral negotiations are still underway between the United States and Panama. But he did not exercise his veto power.

So the meeting was held last week in Panama. A resolution was presented to the Security Council, demanding that

the United States conclude "without delay" a new Canal Zone treaty. The American Ambassador, using the third American veto in United Nations history, killed the resolution. The vote was 13 to 1, with only the United States dissenting.

As one who has consistently supported the United Nations, I resent this attempt on the part of the United Nations to inject itself into this matter of a treaty between the United States and Panama.

While I applaud the use of the veto by Ambassador Scali, I feel the United States would be in a much stronger position had the State Department made known its determination in advance that it would not submit to United Nations dictation in a bilateral issue between Washington and Panama. We gained nothing—and perhaps lost much—by not exercising the veto in New York.

The State Department seeks to appease Panama by giving in to part of her demands. It is completely obvious, I feel, that the more we seek to appease, the more appeasing Panama will demand.

There can be no compromise of the basic issue: will the United States voluntarily forfeit its sovereignty over the canal—sovereignty which has been recognized as a part of international law for 70 years?

The United States, by treaty, obtained the right to hold in perpetuity the Panama Canal; as a part of the treaty, the United States paid Panama an initial sum of \$10 million; we indemnified neighboring Columbia to the tune of \$25 million, and we agreed to pay Panama substantial annual rent, which figure has since been increased several times.

The total cost to the United States for 647 square miles of the Canal Zone far exceeds the price of many other American territorial acquisitions, including the Louisiana Purchase—that vast area stretching from the Mississippi River to the Rocky Mountains, and from the Gulf of Mexico to Canada—and such notable additions as Alaska and Florida.

I have visited the Canal Zone and have looked into this matter first-hand. I see no justification for submission to threats by Panamanian political leaders.

The Congress was told in 1967 that there would be a series of anti-American riots in Panama if the American Government does not give the Panamanians what they want. We are being told the same thing today.

It is vitally important that the United States maintain its position of strength in Latin America, and the pivotal point in those defense arrangements is the Panama Canal and the Canal Zone.

I feel that a canal somewhere in Central America, linking the Atlantic and the Pacific, is vitally important to the United States and to Latin America.

But until a new sea-level canal is constructed, I think it would be unwise for the United States to forfeit voluntarily its sovereignty over the present canal.

I am persuaded that new treaties compromising our rights in the Canal Zone would weaken this country's defense posture in the Western Hemisphere. Could

anyone seriously contend that Panama, with a population of 1,500,000—less than a third of Virginia's—could defend the Canal by itself? Could the uninterrupted movement of commercial or military ships be guaranteed under any Panamanian regime of the moment? Is there assurance against some Castro-type government taking control of Panama?

Panama has been notoriously susceptible to political upheaval, with 44 Presidents having come and gone in 70 years.

It was only a few years ago that the President of Panama was assassinated; his First Vice President then assumed office, but was shortly deposed as having been involved in the assassination; the Second Vice President then became President; and he was thrown out the next year.

The Nixon administration should ignore the threats of Panamanian politicians. It should ignore the hypocritical howls from the United Nations.

But if it does not, the Senate of the United States will have the final word.

The United States obtained the Canal Zone in perpetuity as a result of the Hay-Varilla Treaty of 1903. That Treaty cannot be abrogated except by a two-thirds vote of the U.S. Senate.

As to the attitude of my Senate colleagues, I do not know.

But so far as the senior Senator from Virginia is concerned, I shall fight long and hard—until such time as a sea-level canal is built—against any change in the present Treaty which would have the effect of giving up permanent U.S. control over the Panama Canal.

Through the years, the American taxpayers have invested millions of dollars in maintaining and improving the canal. The Panamanian economy has greatly benefited from all this and, as a result, has one of the highest per capita incomes in Latin America.

I have not objected to increasing the annual payments to Panama. This has been done several times.

In addition, the foreign aid we give Panama is substantial—\$30 million for 1972, up sharply from \$22 million the year before. In fact, U.S. dollars last year made up \$167 million of Panama's \$363 million in foreign exchange earnings.

I do not want to see our country give up its sovereignty—nor do I regard such action as being in the best interests of Panama or other Latin American countries.

I deplore the American Ambassador's assertion that the State Department supports the Panamanian demand for an end to the 1903 Treaty under which the United States was given sovereignty over the canal.

If the U.S. public becomes aroused, I believe we can defeat the appeasement policies of the State Department and thus protect our vital interests in Latin America.

OUR MONETARY PROBLEMS

Mr. HARRY F. BYRD, JR. Mr. President, the Wall Street Journal of Wednes-

day, March 28, published an excellent commentary by Vermont Royster.

This is one of the most commonsense pieces of writing that I have read in regard to our monetary problems, problems which the Senate has been debating today in regard to the devaluation of the dollar.

Vermont Royster was at one time editor of the Wall Street Journal. He is one of the ablest men in the newspaper business and one of the clearest and ablest writers in the business.

Mr. President, the article has so much good commonsense in it that I ask unanimous consent that the article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONEY, MONEY, MONEY
(By Vermont Royster)

If you recall that introductory economics course of your college days, you'll remember that money must perform three basic functions. It is a medium of exchange. A measure of value. And, finally, a storehouse of value.

All of these functions can be performed, and in times past have been, without money. If you need a suit of clothes you can obtain it by making shoes for the tailor; you and the tailor have exchanged goods without the intervention of money.

The value of clothes can also be established without the use of money; in competition with other shoemakers you bargain over how many pairs of shoes equal one suit of clothes, and gradually it is established in the market place that so many pairs of shoes are worth one suit.

Any commodity can also be a storehouse of value. You can make shoes and instead of exchanging them right away you may store them on the shelf so that at some future time you can exchange them for what you need.

Some goods, of course, make a better storehouse than others. Shoes vary widely in quality and also deteriorate. So in practice the more useful commodities in terms of the storehouse of value are those in which quality can be readily measured and which can be stored for a long time without deterioration.

There is another important quality in making a commodity a storehouse of value. That is that the supply of it not be subject to rapid changes. If you tried to store the fruits of your labor for future exchange use in shoes, clothes, or wheat, you might find the market glutted from a sudden increase in production so that in terms of their exchange value they would be less tomorrow than they were yesterday.

Hence the universality, from historic times until the present, of the metals and such precious stones as diamonds in performing the three functions as a medium of exchange, a measure of value and a storehouse of value.

Their quality is readily measured by both buyer and seller, and they do not deteriorate with time. Of these gold has been the most widely used, not because it is both useful and pretty, for so are diamonds and silver, but because the supply of it is less subject to wide fluctuations.

So much for the basics of Economics I. The principles may seem simplistic. But they are not unrelated to our present problems of inflation at home and the sagging value of the dollar abroad. They help explain not only our present monetary troubles but also offer some clues as to what to do about them.

For when money first came into use, the monetary unit was substantially nothing

more than a warehouse receipt for one of these metals, mainly gold. A dollar was a receipt for so many ounces of gold held in the Treasury warehouse.

Hence the possessor of a dollar bill knew that he could, if he wanted to, exchange the bill for actual gold. In practice, though, it was more convenient to have the bills since they were much more easily handled and—so long as others trusted their value as warehouse receipts—you could exchange them for any number of other commodities. Prices could be measured in terms of dollar bills. Moreover, the receiver could, if he wished, use the bills as a storehouse of value, believing he could spend them tomorrow with reasonable assurance that their value would not have greatly altered.

But here enters another simple principle, that of supply and demand. If a bumper crop of wheat multiplies the supply, wheat will decrease in value relative to money. Any sophomore can understand this. Also, though, if the supply of money multiplies, then money will decrease in value relative to wheat—or shoes, or clothes, or what-have-you. And hardly anybody seems to understand this.

Yet it is the root of all our monetary troubles. In the past quarter century the supply of dollars has multiplied astronomically relative to the supply of wheat, clothes and everything else. You can say, as most people do, that the price of goods has risen and curse the farmer, butcher and automaker. It is more accurate to say that the price of money has decreased, and curse those who have carelessly multiplied the supply of money.

They have been able to do this by divorcing money from any commodity whatever. You can't take a dollar to the Treasury warehouse and get anything for it but another piece of paper. Therefore the monetary authorities could, and have, been free to print up as many dollars as they wished.

There have been several results from this inexorable working of the principle of supply and demand. One, of course, is that it takes more dollars to buy a pound of meat here at home.

Another is that it takes more dollars abroad to buy a Japanese yen or German mark. The latter has happened because we have poured out dollars abroad; that is, multiplied the supply of them floating around the world. To argue about the "intrinsic" value of the mark relative to the dollar is to talk nonsense. The Eurodollar market being flooded with dollars, that law of supply and demand does its work. The dollar falls in value—i.e., is devalued.

This hasn't yet destroyed two of the functions of money. You can still exchange dollars for meat or German marks if you have enough of them. We still use dollars to measure the relative value of a pound of meat and a pound of fish.

What has been destroyed is money as a storehouse of value. People no longer believe that a dollar saved is a value saved, for tomorrow that dollar will buy less.

The consequences of this can already be glimpsed. The laborer seeks a wage increase not only for today's needs but to offset the lesser value of that wage tomorrow. Interest rates rise to cover not only the hire of money today but to protect against future deterioration. The pressure on prices intensifies as anyone receiving a dollar rushes as fast as possible to exchange it for something—anything—that may retain future value.

So destroying this basic function of money, we approach the point where all faith in the dollar is lost, with results terrible to contemplate.

It all happened because clever, sophisticated men thought they could do magic

tricks with your money. And the only cure is to learn again the simple lessons of Economics I.

QUORUM CALL

Mr. HARRY F. BYRD, JR. Mr. President, I suggest the absence of a quorum. The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORITY FOR THE COMMITTEE ON LABOR AND PUBLIC WELFARE TO FILE A REPORT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Labor and Public Welfare have permission, up until midnight tomorrow, March 30, to file a report pursuant to the Legislative Reorganization Act of 1970.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORITY FOR COMMITTEES TO FILE REPORTS DURING THE ADJOURNMENT OF THE SENATE

Mr. ROBERT C. BYRD. I ask unanimous consent that during the adjournment of the Senate over until Monday next, all committees be authorized to file reports.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORITY FOR THE SECRETARY OF THE SENATE TO RECEIVE MESSAGES DURING THE ADJOURNMENT OF THE SENATE

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that during the adjournment over until Monday next, the Secretary of the Senate be authorized to receive messages from the House of Representatives and the President of the United States, and that those messages may be appropriately referred.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORITY FOR THE VICE PRESIDENT, THE PRESIDENT PRO TEMPORE, AND THE ACTING PRESIDENT PRO TEMPORE TO SIGN DULY ENROLLED BILLS AND JOINT RESOLUTIONS DURING THE ADJOURNMENT OF THE SENATE

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that during the adjournment of the Senate until Monday next, the Vice President, the President pro tempore, and the Acting President pro tempore be authorized to sign duly enrolled bills and joint resolutions.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the program for Monday is as follows:

The Senate will convene at 12 o'clock meridian.

After the two leaders or their designees have been recognized under the standing order, the following Senators will be recognized, in the order stated, each for not to exceed 15 minutes:

Mr. HELMS, Mr. STAFFORD, Mr. GRIFFIN, and Mr. ROBERT C. BYRD.

At the conclusion of the orders for recognition of Senators on Monday, there will be a period for the transaction of routine morning business of not to exceed

30 minutes, with statements therein limited to 3 minutes.

The Senate on Monday will take up S. 1021, a bill having to do with the costs of any cooperative meat or poultry inspection program, and S. 1235, a bill which would authorize an additional appropriation for an International Center for Foreign Chanceries, but not necessarily in that order. Yea-and-nay votes could occur on Monday.

ADJOURNMENT UNTIL MONDAY

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come

before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 12 o'clock meridian on Monday next.

The motion was agreed to, and at 5:51 p.m., the Senate adjourned until Monday, April 2, 1973, at 12 meridian.

NOMINATIONS

Executive nominations received by the Senate March 29, 1973:

DEPARTMENT OF STATE

Marshall Wright, of Arkansas, a Foreign Service officer of class 2, to be an Assistant Secretary of State.

EXTENSIONS OF REMARKS

REMARKS ON THE PASSING OF
SENATOR WILLIAM BENTON

HON. ROBERT H. STEELE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1973

Mr. STEELE. Mr. Speaker, I would like to take this opportunity to express great sorrow at the passing of former U.S. Senator William B. Benton on March 18, 1973, and pay tribute to this devoted educator and statesman.

In 1929, Mr. Benton launched his advertising agency with his close friend, former Gov. Chester B. Bowles. When he sold his interest 9 years later, the agency had grown into the sixth largest in the world.

When Mr. Bowles was Governor of Connecticut in 1949, he appointed Mr. Benton to fill a Senate vacancy created by the resignation of Senator Raymond E. Baldwin, who became chief justice of the State supreme court. In 1950, Mr. Benton defeated Republican Prescott S. Bush by 1,100 votes in a special election which enabled him to retain his seat in the Senate until 1953.

Senator Benton was a vigorous supporter of the United Nations, NATO, and the administration's foreign aid program. Despite the silence of most of his colleagues, he introduced a Senate resolution denouncing Senator Joseph McCarthy at the height of the latter's popularity.

Appointed Assistant Secretary of State in 1945, Mr. Benton organized the first peacetime program of international information, including Voice of America broadcasts, U.S. Information Offices overseas and student exchanges.

President John F. Kennedy appointed Mr. Benton as the first U.S. Ambassador to UNESCO in 1961, a post which he held for 3 years.

Earlier in his career of public service, Mr. Benton served as vice president of the University of Chicago. While at the university, he helped launch two network radio programs, "The University of Chicago Radio Round Table," a seminar on political, economic and social issues, and "The Human Adventure," which dealt with university research.

In 1945, he was named assistant to the chancellor at Chicago and consequently was named a university trustee, a post he held to his death. He also was a trustee at Carleton College, the University of Bridgeport, the University of Connecticut, Hampton Institute, and Brandeis University.

Additionally, Mr. Speaker, I submit the following editorial published in the Hartford Times on March 20, 1973, for the RECORD:

[From the Hartford Times, Mar. 20, 1973]

It was a happy coincidence that Chester Bowles and Bill Benton were students at Yale University at the same time. Their friendship produced two statesmen whose services were significant to Connecticut and the nation.

Their partnership in an advertising agency made them financially independent while they were still young. In the many offices, both elective and appointive, they held during their public lives, they were free of the responsibilities of earning a living and providing for their families. When a call to service came along, each of them could consider it on its merits.

Early in his career of public service, Bill Benton associated himself with education. His connection with the University of Chicago, among others in higher education, made him known in national affairs and enabled him to attract offers from government.

Except in Connecticut, Mr. Benton's name probably is not widely recognized outside business circles. Yet he exerted significant influence on the nation and the world.

He was the first United States senator to call for the resignation or censure of the demagogic Joe McCarthy of Wisconsin. He was an assistant secretary of state, and in that post he organized the Voice of America and helped establish UNESCO—two accomplishments whose effects will outlive his generation.

As a citizen of Connecticut, he was an able United States Senator and was generous with his time and talents in behalf of the University of Connecticut and the University of Bridgeport, among other institutions. His art benefactions are remembered in the art museum of the University of Connecticut, which last year was named for Mr. Benton.

Bill Benton's story is not the Horatio Alger cliché. Though he achieved financial success early in life and thereafter was not primarily interested in making money, he had a kind of Midas touch, a feeling for a good investment at the right time.

He has been praised for his political courage—in attacking McCarthy at the high tide

of the other senator's popularity, for instance. His courage also displayed itself in decisions affecting his personal life. It took courage to refuse a Rhodes scholarship in favor of going into the advertising business, and it took courage to buy Encyclopedia Britannica when encyclopedia salesmen were joked about as pests.

It is safe to predict that his obituaries are not the last word on Bill Benton. His stature and reputation will surely attract biographers, and posterity may know him even better than do we, his contemporaries.

NATURAL RESOURCES AND NATIONAL PRIORITIES

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 29, 1973

Mr. METCALF. Mr. President, for 4 days last week, Washington was the host for an important Conference on the Environment that was attended by 1,400 representatives from across the United States, Canada, Mexico, and Europe—the 38th North American Wildlife and Natural Resources Conference, sponsored by the Wildlife Management Institute.

In his remarks at the opening session of the conference on March 19, 1973, Mr. Daniel A. Poole, president of the Wildlife Management Institute, has directed our attention to the important topic of natural resources and national priorities, the theme of the conference.

Though the theme was chosen months ago, its timing could not have been better, so Mr. Poole's remarks concerning natural resources should be of considerable interest, especially at a time when the Nixon administration, in conflict with the role of the Congress, claims the sole prerogative of determining national priorities.

His remarks should also be notable because of President Nixon's budget proposals for fiscal year 1974, the category of natural resources and environment is among the lowest ranking of the 14 major budget classifications by function. Only two other categories receive a smaller share of the Federal budget.

I ask unanimous consent that Mr. Poole's speech be printed in the RECORD. There being no objection, the speech

was ordered to be printed in the RECORD, as follows:

WILDLIFE MANAGEMENT INSTITUTE,
Washington, D.C.

Welcome to the 38th North American Wildlife and Natural Resources Conference.

The Conference theme—Natural Resources and National Priorities—was not selected deliberately to capitalize on the current Washington crossfire over executive and legislative prerogatives. The theme was chosen many months ago, but its timing could not be better.

The interest of conservationists, environmentalists, resource specialists, and their allies—in short, of all of us—is caught up in the President's argument with Congress, or the Congress' argument with the President, or however one happens to see it. The outcome will contribute little to our mutual interest if it fails to produce procedures for establishing priorities and assuring their sustained support.

Environmental renovation, enhancement, and protection will continue to be piecemeal without fundamental reform. This is unavoidable because both the Executive and Legislative Branches lack policies and procedures to assure coordinated response to environmental and conservation needs and opportunities. This is not said in criticism of any individual, of Congress, or of the Administration. It is a fact of life to anyone who has served an apprenticeship in the nation's capitol.

Executive agencies lack comprehensive, long-term environmental objectives. Most have scant understanding of what is expected of them in terms of a coordinated, national approach. Their inclination is to ride out their luck in four-year strings, to react to conservation and environmental problems and opportunities in terms of single agency missions. This sometimes involves the process of wetting one's finger, testing the political wind, and riding off in a favorable direction. The environmental impact statement process, although still being refined, has helped to broaden the agencies' environmental horizons. Much obviously remains to be done.

This piecemeal approach is encouraged by the situation in Congress where committee jurisdictions lack the flexibility to encourage an ecological approach to resources and environmental management. Authorizations and appropriations are handled by separate committees, and the members of each rarely have equal grasp of the purpose, need and relative importance of program elements. And, in the absence of national environmental priorities, both lack a yardstick for evaluating programs and budget requests. The functional structure of Congress contributes to the irregular and sometimes adversary consideration of environmental and conservation issues.

Standing squarely between the agencies and Congress is the Office of Management and Budget, where largely inaccessible persons, acting for the Administration, cut and shape programs to an economic template entirely of their own. When there are budget constraints, as there are this year, OMB's cutting and fitting challenge environmental credibility. Budgeteering treats only of dollars. It forces programs to conform to fund ceilings, a physical division of the pie. But it requires no tough-minded analysis and justification of programs for which money is requested. If it did, we would not be faced with continued substantial federal encouragement of environmental degradation, as will be the case in the coming fiscal year.

Of the fourteen listed major budget categories for fiscal year 1974, the natural resources and the environment function is in next to last place, tied with international affairs and finance in its percentage claim

of the federal dollar. And nearly half of the money in the natural resources and the environment account is allocated for water resources and power, activities that do not always get high marks in the conservation and environmental marketplace. There are some pluses in the agriculture and rural development account, but two-thirds of the funds requested there are for farm income stabilization. Little is for protecting the basic soil and water base.

Some of these issues may be sharpened in Wednesday's general session when the Assistant Director of the Office of Management and Budget addresses the subject of justifying budget priorities. Other speakers will explore federal and state agency organization in respect to establishing priorities in resource management.

These are important and timely subjects, for it is becoming increasingly clear that environmental goals cannot be achieved readily by more of today's hit or miss approaches. Our recognition of the need for a better response exceeds our current capability to attain it.

Resources and environmental programs cannot be turned on and off like a water tap. They are long term and continuing in nature. They should be buffered from the vandalism of short-term expedience. Successful discharge of environmental responsibility requires a factual data base, determination of priorities, coordinated planning, and professional execution. Adequate and continuing funding is needed at every level to see programs through to their stated objectives.

If one accepts the thesis that national outlay over time should bear a relationship to national income, then serious questions can be raised about budget constraints in fiscal year 1974. Will available money be invested in programs that contribute to greatest environmental gain? I think not. The same question holds for those who may suggest that government perennially can run in the red. No amount of money will get the environmental job done if it is squandered, rather than invested.

Without better definition of priorities there is no rationale for understanding either an Administration's budget requests or a Congress' actions on appropriations. Until priorities are determined and firmly established, we lack a means for measuring progress. What actually is being achieved in terms of the environment as a whole?

In his recent environmental message to Congress, President Nixon said, "It is appropriate that this topic be the first of our substantive policy discussions in the State of the Union presentation, since nowhere in our national affairs do we have more gratifying progress, no more urgent problems."

The President enumerated substantive legislation in the areas of air and water quality, pesticides control, noise abatement and ocean dumping, coastal zoning, the National Environmental Policy Act, parks, recreation areas, wildlife refuges and wilderness, and regulations regarding oil and other spills in ports and waterways.

The record is impressive. But is the progress that has been made more in the laying of a foundation than in erecting a building? The boards and nails and wiring for environmental reconstruction largely are missing. Funds are not being sought to finance new activities at anywhere near projected levels. Old projects are withering on the vine. The outlook for fiscal 1975 is equally dim. If progress is being made against the tide of environmental deterioration, it mainly may be in standing still, in not being swept away.

For example, the most recent report on Fish Kills by Pollution, an annual service report begun in 1960 and issued by the Environmental Protection Agency, advises that "The number of fish reported killed by pollution in 1971 is greater by 81 percent than the number reported in any previous year on record. The data do not indicate whether this is due to better reporting by a concerned public or to greater fish kills."

Contrast that ambivalent conclusion with the more recently released results of a statewide water pollution survey by Maryland health and natural resources agencies. There, one-third of the 128 sewage treatment plants presently are not complying with the state's anti-pollution laws. One-fifth of nearly 900 businesses known to discharge industrial waste do not meet the state's water quality regulations. State and federal installations are among the violators.

In his message, the President recommended many new programs for managing the land, for improving agriculture, controlling pollution, and protecting our natural heritage. Some, like a national land use policy, control over the siting of power plants, public lands management, mining and mineral leasing reform, mined area protection, and endangered species protection, are vital. Others, like adjustment of Land and Water Conservation Fund allocations, are highly controversial. Controversial, too, are administrative decisions which are directing more and more of the limited outdoor recreation money into metropolitan situations and uses to which the Land and Water Conservation Fund never was intended. Abolition of the Open Space Grants of the Department of Housing and Urban Development places even greater pressure on the Fund. And in face of all of this, appropriations to the Fund would be greatly reduced under the 1974 budget request. Despite great need, the money cannot be fully used, we are told. Incredibly, hundreds of millions of dollars of land acquisitions are going unserved in new park and recreation area authorizations. And older, established areas, including wilderness, are splattered with incompatible inholdings and developments. Senate oversight hearings will be held on this subject in early April.

Some question the breaking of new ground if older, equally fertile, and already broken ground remains unseeded. There is reason to ask if new authorities will receive any stronger support than older and equally needed authorities are receiving today. To continue with this environmental roulette may impart a sense of motion, certainly not an unwelcome illusion in our political system, but will it help the train get away from the station?

My remarks, to some, may sound unduly pessimistic or critical. They are not offered in that vein. Many elements of our environmental fix have their origins in the distant past. I do not imply either that today's leaders are unmindful of the many contradictions and inadequacies. My purpose is not to throw stones. Instead, it is to express the hope and to urge that our people's concern for their environment not be dissipated on frivolous or superficial things. Let's insist that their energies and enthusiasms be used in ways and places to overcome entrenched impediments to substantial environmental gain.

Among the most reliable barometers of the state of the environment are fish and wildlife. Man's use of water, soil, air and plants has a direct influence on the distribution, diversity, and abundance of these habitat-dependent creatures.

Tomorrow morning at a special session, Dr. Durward L. Allen of Purdue University will set before this Conference a new North American Wildlife Policy Report, the second but much broader focus on this subject. The Conference program has been arranged to enable all conferees to attend and participate in the discussion. Everyone who has registered already has received a copy of the report.

The Conference is deeply indebted to Durward and to the members of his working and

honorary committees. There has been a labor of devotion. An undertaking of this magnitude takes many hours out of the busy schedules of the committee's chairman and its members. But Durward and his associates believe their assignment to hold the greatest urgency, for the sole previous policy, with its sound advice, was published more than four decades ago.

Certainly, it is unrealistic to presume that all parts of the 1973 wildlife policy report will receive unanimous agreement. But there is acute need to refocus professional and public thinking and action. In fact, the welcome but sometimes misguided public enthusiasm for wildlife today, suggests that our profession has been negligent in keeping the public acquainted with the necessity for and the positive aspects of all facets of wildlife management.

The report undoubtedly will be the subject of much discussion in coming months. Perhaps it may be possible to give further consideration to these policy matters at the 1976 Conference here in Washington. A joint bicentennial observation of our interest in resource conservation is being planned by major conservation and professional groups that year.

A final point about wildlife concern. Under this country's leadership, and with fine support from friends Russ Train, Nat Reed, and others, a convention has been concluded on world traffic in endangered and threatened species. It also importantly commits nations to uphold the conservation laws of other countries—an international application of the Lacey Act, in effect.

The Convention also stipulates that the Secretariat, which will be placed in the U.N. Environmental Program, shall convene occasional wildlife meetings. The U.S. 1969 Endangered Species Act also authorizes the Secretary of the Interior to provide technical assistance to nations desiring such help.

Last fall, I attended three international meetings—that of the IUCN, the Second World Parks Conference, and the 7th World Forestry Congress—at which individuals with substantial wildlife interest were in attendance. Some penetrating questions were asked, particularly by representatives from developing nations where wildlife and their habitat are under extreme pressure from population expansion and economic development. At no meeting did these questions receive adequate attention or answers. Program schedules did not permit it, and, in some cases, the required expertise was not available. The result is that development and habitat alteration are proceeding with minimum or no consideration for either flora or fauna.

Perhaps the time is at hand to convene a World Wildlife Conference, a conference that treats of animals and their habitats as distinct entities rather than adjuncts of other but not well-focused social and resource considerations. The interest of wildlife demands the attention of the wildlife profession, and much more is involved than biological and ecological considerations.

CANADA CONTINUES TO PARTICIPATE IN ICCS

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. LEGGETT. Mr. Speaker, yesterday afternoon the State Department was informed that Canada will continue its participation on the International Com-

mission for Control and Supervision of the Vietnam Peace Agreement.

External Minister Sharp of Canada has stated that Canadian members of the ICCS will remain in place for at least 60 days more, after which Canada will give 30 days' notice of any intention to terminate her participation. In effect, this announcement commits Canada to participate in the ICCS at least until June 26 of this year.

Mr. Speaker, the people of the United States owe a debt of gratitude to our Canadian neighbors for their activities in this area. Serving on the ICCS is not an easy thing; indeed, Minister Sharp stated in his announcement that Canada was staying on with the expectation that things would improve, and that her continued presence would depend on that improvement. This is not an unreasonable position, for no one could expect any government to expend the effort that Canada has for the sake of mere window-dressing.

Canada's obvious concern for peace in Southeast Asia parallels our own; for this reason, I am indeed glad that she has seen fit to continue her efforts toward that end.

THE CUBA SYNDROME

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1973

Mr. RARICK. Mr. Speaker, there seems to be a concerted effort afoot to condition the thinking of American people into accepting "normalizing relations" with Communist Cuba and its dictator, Castro. This mental conditioning is occurring in so-called newstories, magazines, sermons, and common talk on the street. It follows the equality syndrome and seeks to justify itself as progress.

The line goes, "I don't believe in trading and normalizing relations with Russia and Red China or giving aid to North Vietnam, but since the President has already done this, then I feel that all Communists should be treated equally and we should give similar recognition to Cuba." The past is completely forgotten.

Present conditions in these countries, including their sophisticated weapons and the thousands of divisions of troops under arms just to maintain control over the deteriorating condition of the bankrupt economies are conveniently ignored.

Many Americans tend to see only what they want to see. Those internationally minded investors, who think money and profit await them in Communist dominated countries, do not realize that if they make money there it will come from the taxes of their own fellow countrymen—in the form of U.S. subsidized trade agreements with those countries.

Those who have eyes to see, but see not, and ears to hear, but hear not, can be expected to repeat the mistakes of history.

I insert a related newsclipping:

[From the Washington Star and News, Mar. 27, 1973]

ISOLATION OF CUBA CRITICIZED

The continuing U.S. policy of attempting to isolate Cuba has come under fire from the Senate Foreign Relations subcommittee on the Western Hemisphere.

— yesterday told the State Department that the time is overdue for a re-examination of that policy.

"It is ridiculous to sit on our hands to wait for a signal from Cuba," — told Deputy Assistant Secretary of State Robert A. Hurwitch at a hearing on the problem. Hurwitch has just finished testifying that U.S. policy toward Russia and China changed "because we had previous indications of interest in a new relationship and have received no such signal from Cuba."

HOSTILE ATTITUDE

"We're the big country. The initiative ought to come from us," said —. "And I wouldn't even care whether Castro shaved or not. I don't see why you maintain this rigid idea. It isn't worthy of this country. Are you saying that Cuba is too small and insignificant to bother with?"

Hurwitch had testified that the United States believes that Cuba remains a threat to the peace and security of the hemisphere. He also said he was mindful of Cuba's hostile attitude toward the United States.

"You can't make policy on the basis of rhetoric," — said. "We're in a state of intransigence because Castro calls us names. We ought to be chipping away at this intransigence."

He said that the State Department ought to be devising options between the alternatives of embracing Cuba or shoving her away. He suggested cultural exchanges, visits by tourists and the press and a loose economic flow, contending that the rigid U.S. policy deprives this country of its many options.

ADJUSTMENTS CITED

"The cold war is now thawing in the frigid climes of Moscow and Peking," said —. "Henry Kissinger has even been to Hanoi. Why should tropical Havana continue to be regarded as an arctic wasteland?"

— said that the other hemisphere governments, one by one, are beginning to adjust to Castro, mentioning that Mexico, Peru and Chile, plus some English-speaking Caribbean nations have relations with Cuba and that Ecuador, Panama, Venezuela and Argentina seem headed in that direction.

One of the basic objectives of U.S. policy, — said, was to isolate Cuba from the rest of the western hemisphere. The question now is, he declared, whether it is we or the Cubans who will be isolated.

Hurwitch conceded that the question may come up at the meeting of OAS foreign ministers here next week. He said it would have a debilitating effect on the OAS if the organization voted to let each nation take unilateral action with regard to relations with Cuba.

VOTES NOT AVAILABLE

He emphasized that the OAS sanctions are a binding obligation on the United States and other member states, to be lifted only by a two-thirds vote. He said by the U.S. count there are not two-thirds of the OAS nations ready to change.

Hurwitch also said he did not think the Russian military relationship with Cuba would change even if a U.S. embassy were re-established in Havana. He said the United States and Russia have about the same number of military personnel, about 5,000 each in Cuba, with the U.S. contingent in the Oriente Province enclave on the Guantanamo Bay Naval Base.

He said Cuba is locked into a dependent relationship with the USSR and he doubted if the Russians would let their Cuban foothold slip away.

LET THE FARMER CATCH UP

HON. CHARLES THONE

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. THONE. Mr. Speaker, the American public is being unfair to the farmers. The consumer seemingly does not want the farmer to catch up with the cost of living. The price of food, particularly of meat, has been depressed for years, while all other prices were rising. In 1972, the price that a farmer could obtain for a steer finally equalled what he would get back in 1952.

Consumers are being unrealistic about meat prices. The highest price a farmer has been able to get for a choice steer has been 45 cents a pound. That was several weeks ago. Since then, the price the farmer can get has dropped.

In 1959, a farmer could sell a choice steer for about 29 cents a pound. If the price the farmer receives had gone up as much as the price of a postage stamp, the farmer would now be getting 77 cents a pound. If his price had gone up as much as average hourly wages in the past 22 years, the farmer would now be getting 80 cents a pound. If the farmer's price went up as much as the cost of hospital care, the farmer would now be receiving \$1.76 per pound for a choice steer. Prices for livestock producers and livestock feeders just have not kept pace with other increases.

Henry Trysla, publisher and editor of the South Sioux City Star in Nebraska, recently wrote an editorial which succinctly pointed out that consumers are unfairly picking on farmers. Members of the House from urban areas can further their education on food prices if they will read this article. Mr. Speaker, I insert this editorial in the RECORD:

FARMER HAS A POINT

We heard from a farmer the past week and by gosh we believe he's got a point.

He expressed dissatisfaction with the daily newspapers in proclaiming in page one articles: "Cattle Were Higher Today," "Highest Markets Ever" and "Records in Livestock Prices Are Broken."

The farmer continued by saying the newspapers don't say, "The Subscription to This Newspaper Is The Highest Ever," or "Lumber Prices Rose Again," or, "Clothing Is Higher Than Ever" . . . just meat prices. The farmer concluded:

"If any of those guys had to plow in this mud to feed these cattle, hogs or sheep they wouldn't be so fast in putting the blame on the farmer."

We think perhaps the farmer has a point! Unfortunately food being the necessary commodity that it is—most people spend more of their income for food than for some other necessities.

And unlike food, an individual doesn't have to buy a new suit, a pair of shoes or lumber for that matter, virtually every week.

Even though we sympathize with the farmer we also know that food prices will always be of great concern to the greatest number of people.

And, unfortunately, the farmer will continue to draw the most criticism.

It's time we recognized that the huge increase you've seen in meat prices lately didn't

all go to the farmer. Labor . . . labor to move, kill, process, ship, display and sell the meat had a good hand in it, also.

It might just be that the farmer is getting his just reward for the first time while labor has reaped its benefits for years and years.

MAKING SCHOOLBUSES SAFE

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. MOSS. Mr. Speaker, I would like to share with my colleagues, an editorial from the Washington Post concerning schoolbus safety. Mr. ASPIN's bill on schoolbus safety which I have the pleasure to cosponsor, is a much needed safeguard to insure the lives of future generations.

MAKING SCHOOLBUSES SAFE

The nation is so accustomed to highway death and injury that usually only large scale crashes receive public notice. For school buses, this is equally true. Accidents, like the one three months ago near Fort Sumner, N.M., that took 19 lives, are apparently needed to arouse interest in school bus safety, and then the interest is usually passing. Against this background of indifference, important bills have been introduced in the Senate and House that may lead to safer school buses. The need is surely present. In 1971, 46,000 accidents occurred, with 150 killed and 56,000 injured.

A specific goal of the legislation is to provide greater structural strength to the bodies of buses that Rep. Les Aspin (D-Wis.) has called "rolling death-traps for our school children." The legislation asks that standards be developed for emergency exits, interior protection for occupants, floor strength, seating systems, crashworthiness of body and frame, vehicle operating systems, windows, windshields and fuel systems. Unlike the situation in some other parts of the transportation industry which resist progressive changes because "the technology isn't feasible," the way to design and build safer school buses is common knowledge. Two companies—Ward and Wayne—have been constructing proto-type safe buses.

Some of the resistance to getting such buses to serve the 20 million school children who could be riding them comes, first from the Department of Transportation. It has never shown a very sustained serious interest in school buses and has taken years even to get up a proposal for safer seats. It is true, as the department has often pointed out, that in comparison with other vehicles, school buses represent one of the safest modes of transportation. Yet, as many have observed, this is less because of federal diligence than because most motorists are cautious around school buses and because the buses are usually driven at low speeds. The second resistance comes from school districts that buy buses according to cost, not safety. Yet, an increase of only \$300 per bus is the estimate to make new ones structurally safe. Many parents never dream that the local school buses might not be the safest possible, thus they do not protest to the school boards.

There is no reason not to provide safe transportation for the nation's schoolchildren; the technology is available and at a reasonable cost. The congressional legislation is not the total answer but, if passed, it promises to be more effective than any protection offered to date.

THE POSTAL (SERVICE?)

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. WALDIE. Mr. Speaker, I would like to bring to the attention of my colleagues an article that appeared in the March 4 edition of the Independent.

In this article Mr. Robert Several, editor of the Independent, points out the deterioration of the mail service. He links this deterioration to the change of the Postal Department to a supposed profit making Postal Service. The question he raises in his article reaches the heart of the problem, should public service or the profit motive be the objective of the Postal Service?

I am happy to state that I and several other members of the Post Office and Civil Service Committee agree with Mr. Several that in this vital area of communication public service should come first.

At this point I insert Mr. Several's article into the RECORD:

THE POSTAL (SERVICE?)

(By Robert Several)

A fundamental conflict in our capitalistic society arises from the question of what comes first, the profit motive or the public service ethic.

I'm among those who believe that the public service ethic should come first.

Profit is nothing to disparage or to run away from, but when it becomes the end-all, public service invariably is sacrificed.

The question is especially relevant when it involves crucial endeavors which affect masses of people—endeavors such as health, utilities, food, transportation, the press . . . and mail delivery.

Mail delivery: that's where the issue of service versus profit is coming to a head these days.

The Mailbox in today's Independent contains a letter from Contra Costa County Congressman Jerome Waldie about that issue. Waldie, a member of the House of Representatives Postal Service Subcommittee, is gravely concerned about the state of affairs in the post office and is planning an investigation which hopefully will lead to reform.

Mail delivery, as we all are aware, has become a national disgrace and joke. Whereas in the old days our mail came twice a day and came promptly, now delivery comes once a day and letters or packages from across town take a week to get to you.

It's not the fault of the poor guys and gals working in the post office. God knows, they're doing their best. They're understaffed and they're working for a pay that's hardly enough to support a family without a second job. But they're laboring under an insurmountable burden.

That burden is the profit motive. Somewhere along the line it was decided that the postal service had to make a profit. The post office was phased out of the realm of pure public service and was turned into a semi-private corporation.

The service, which had been slowly deteriorating thanks to the government's stinginess in funding the post office department, immediately sank through the floor when the service-oriented Post Office Department became the profit-oriented Postal Service.

My father worked in the post office during his career. This column frankly is sort of

an extension of the grumbling he pours into my ears when I visit him. "A profit! We might as well ask the military to make a profit too!" he declares.

Congressman Waldie in his letter has a similar comment: "... do we ask our fire departments, police departments, and schools to make a profit? Public services such as delivering mail promptly and efficiently ought to be the primary concern of the postal service. What we have today is a postal service that neither provides adequate service nor makes a profit."

My father has pointed out to me that much of the work handled by the post office requires painstaking human contact—it can't really be mechanized—and that if the government spent more money to upgrade the service, the result would be not only better mail service but more jobs.

Congressman Waldie wants citizens to write to him about their experiences with the postal service. I hope many readers will indeed do that, demanding that public service be reinstated as the primary goal of the U.S. Postal Service.

UNITED STATES-LATIN AMERICAN ECONOMIC RELATIONS IN THE 1970'S

HON. HENRY B. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. GONZALEZ. Mr. Speaker, a few days ago, the President of the Inter-American Development Bank gave a profound and important address at the University of Texas, dealing with the future of economic relations between the countries of this hemisphere. Because of the importance of this topic and the very perceptive comments of Mr. Ortiz Mena, I wish to place it in today's RECORD.

Also, I am placing into the RECORD a San Antonio Light report on a related matter.

The material follows:

UNITED STATES-LATIN AMERICAN ECONOMIC RELATIONS IN THE 1970'S

(Speech prepared for delivery by Mr. Antonio Ortiz Mena, President of the Inter-American Development Bank, at the Conference on Latin America—United States Economic Interactions)

Dean Kozmetsky, honored guests and ladies and gentlemen, it is specially gratifying to be invited here this evening as your principal speaker. The theme and issues which this Conference is considering are of the highest importance; moreover, it is timely that they are being discussed at this moment of great changes in the world economic order. A brief glance at the list of conference speakers, assures one that the very best talent has been assembled here both from the United States and the countries in Latin America to lead the analysis and treatment of these important issues. Indeed, I recognize among them many good friends of longstanding who, from their respective positions in the academic, governmental and business sectors of both parts of our hemisphere, have exercised intellectual leadership in the forging of new approaches for Inter-American economic relations.

Perhaps never in the past has the future of the United States-Latin American economic relations been beset by so many uncertainties. At this point in 1973 it is clear that the interaction between the two parts

of this hemisphere will be profoundly affected by the change now taking place in world political and economic arrangements. Moreover, certain changes underway within both the United States and Latin America have also begun to assert an influence on the future of this relationship.

Among the many currents of change in the world today, perhaps none is so far reaching in its consequences than the dismantling of the cornerstone premise which underlay the bipolar concept of the Cold War. In its place is emerging a more pluralist system in which power and responsibility both political and economic is shared among a growing number of countries.

The United States has taken history-making initiatives in some of the crucial areas of international relations. On the one hand, by calling the historic meeting which culminated in the Smithsonian Agreement, the United States started an intensive international effort aimed at the reorganization of the world monetary and trade system, which until then had been subject to the rules of the Bretton Woods Agreement and to a lesser extent, of the General Agreement on Tariffs and Trade (GATT).

Furthermore, after the Smithsonian Agreement, new developments have been taking place in the monetary field, the more recent of which was the three per cent revaluation of the Deutsche Mark. This measure was taken against the Special Drawing Rights, thereby substituting the U.S. Dollar as a frame of reference on international markets.

On the other hand, the starting of intensive contacts by the United States and other nations with China and the latter's admission into the United Nations system, the improvement of the political and economic relations with the Soviet bloc and the peace agreements in Vietnam, bring new dimensions and prospects to international relations, which in turn bear profound implications in the economic area, and with respect to hemispheric relations.

I believe that these initiatives have made a very important contribution to world peace, international understanding and, in turn, may create better possibilities for economic and social progress of all nations.

The consequences of these events for Latin America could hardly be more profound and meaningful. For in place of a one-sided dependent relationship reinforced by the tensions existing between two unrelentingly hostile camps—the East and the West—comes a fresh opportunity for a more diversified relationship between the countries of Latin America and the economic and political centers of the world. By the same token, the United States is becoming less of a predominant factor in the economic and political life of the Latin American countries as the hegemony of the cold war years is converted into a relationship more solidly based on mutual interest.

In turn, these trends have helped to strengthen the view within the region, that Latin America has no alternative but to assume full responsibility and initiative in solving its problems, and that whatever solutions or recognition needed from the United States or the rest of the world, should be the result of the effectiveness with which Latin America is able to increase its bargaining strength. No longer content to deal with arrangements and policies determined by others, Latin America is aggressively seeking to have a role in their determination. The establishment of the Committee of 20 with some relevant participation by the region's representatives, has been encouraging to the Latin American countries. Central Banks and Finance Ministers have maintained active and intensive contacts with each other in order to present a united front in the negotiations. It is of particular interest that the United States officially noted

that the formation of the Committee of 20 will facilitate the full reflection of the developing countries' concerns in the discussions of the reform in the monetary system.

Turning specifically to the United States-Latin American relationship, we should recall that during the 50's, the Latin American countries were only starting to apply the policy of the rationale of development as understood in its contemporary meaning, and as elaborated mainly by ECLA. A combination of nationalistic politicians and new elites of technocrats appeared in several countries, and started to promote a regionally-concerted effort to intensify the cooperation of the United States to Latin America, mainly through public financing and expansion of trade in basic commodities.

The fact that the United States was still the totally dominant world power at the time in the financing and trade fields, induced the Latin American neighbors to carry on both bilaterally and multilaterally an uninterrupted effort to obtain its support for the region's development.

The United States attached political and economic importance to its bilateral relations with the Latin American countries and tried, through varied efforts of cooperation with many of them, to build up a hemispheric system of economic relations, in which in addition to the bilateral institutions, the International Monetary Fund, the World Bank, the Organization of American States and later the Inter-American Development Bank played significant roles.

A greater effort of technical assistance and research on Latin America took place during this decade. A very large number of United States universities and individual economists participated in the diagnosis of development problems, in the formulation of economic policies, in the creation of economic and financial institutions and in the design and execution of development programs and projects. A very large number of Latin Americans were trained as economists in United States universities. A number of United States universities assisted Latin American universities in the modernization of their curricula.

After the Meeting in Bogotá of 1959, the Inter-American System was strongly supported by the commitment of the United States to create the Social Progress Trust Fund.

For a decade starting in 1961, the bilateral and multilateral cooperation of the United States with Latin America was put under the conceptual framework of the Alliance for Progress.

Parallel with the process of world change, important economic developments, within Latin America have been at work. Over the past decade many fundamental changes in the economies of various countries have given rise to new attitudes on the part of their leaders, and radically changed the outlook on the world. All this has resulted in a new economic nationalism which is at once more articulate about the needs and aspirations of these countries, and vastly more assertive in the pursuit of these aspirations. The principal expression of this assertiveness is a demand to take into its own hands the decisions which will determine its own economic destiny. This force is at work to a greater or lesser degree in each country. Perhaps less well recognized is the extent to which it is also at work in the processes of economic integration which are tying the countries of the region closer together, and uniting them around the fundamental principles of the new economic nationalism. To the extent that integration succeeds in this goal it will magnify Latin America's voice and leverage in the bargaining in world trade forums, and in enforcing new approaches to foreign investment and related issues; to that extent will the developed countries find that the achievement of a

satisfactory economic relationship will require negotiated resolution of the issues which presently divide them.

As we witness two processes of change underway at the same time—one concerning the organization of world monetary and trade and the other within Latin America itself—one is tempted to ask: are these two processes inevitably headed to a hopeless collision? It is my conviction that such is not inevitable; indeed given patient negotiation and some reasonably long term view of growing world economic interdependence, I think the chances are good for an improved economic relationship between the United States and Latin America.

When I say this I have in mind that at the bottom of all future sources of conflict between the two, there are really two or three key issues which overshadow all others. From Latin America's point of view I would judge that these would be: first, an expanded opportunity to sell the products of its manufacturing industry and labor in the markets of the United States, and those of other developed countries; second, greater control over the terms and conditions which apply to foreign investment and multinational companies in their countries; and third a flow of financial resources for development on some basis more stable than the present.

Of course, these are not three separate issues at all; they are rather intertwined and what happens with respect to one, has impact on the other two. It is useful to recall that trade between Latin America and the United States is at a level of US\$12 billion; while this represents a fraction of total US trade, the balance of that trade remains in favor of the United States by an average of about US\$600 million annually. Investments in Latin America by US companies and individuals are estimated to have reached US \$16 billion; and it is interesting to note that expropriation of certain natural resource properties in some countries has not prevented the total amount of US investment in Latin American countries from increasing.

In the past, it might have been said that these figures were indicative of the dependence of Latin America on the United States, than of mutual interdependence. While that may have been true in the past, particularly up to the early 1960's the changes which have occurred in both the economies of Latin America and that United States render this judgment outdated and empty. During the past 30 years the economy of the United States has progressively become more open to external influences. 1971 and 1972 were years in which the United States ran heavy deficits on its trade account for the first time in this century. Although corrective measures are being taken to restore balance in the United States trade accounts, the judgment is inescapable that the United States along with all advanced economies, are gradually becoming more—not less—dependent on imports from other countries and, in turn, on exports to pay for them.

New factors coming into view will accelerate this trend. The pressure of the world's great industrialized economies on the available supply of energy and mineral products has reached such proportions that one now hears talk of their dependence on the developing countries for assured supplies of fuels, minerals and raw materials. The so-called energy crises marks the beginning of a growing dependence of the United States on imported petroleum and other forms of energy. Whereas United States imports of fuels were only US\$8 billion in 1970, some analysts expect that by 1985, this country will need to import up to US\$30 billion in fuels alone. On top of this, it is estimated that the United States will have to depend on foreign sources for more than one-half of its supplies of several certain basic mineral products.

I do not want to suggest that Latin Amer-

ica is capable of filling the entire United States need for all these products. Nevertheless, with its large petroleum reserves, and still to be exploited deposits of minerals, one can confidently foresee that Latin America will remain and become even more important as a source of these basic products to the United States. This will, of course, depend on the ability of the countries to mobilize an adequate volume of investments to develop these resources. But, if this were the extent of it, the problem we are discussing tonight and during this three day conference would be simple indeed. The pattern of relationships between less developed countries exporting raw materials to industrialized countries which, in turn, supply manufactured goods is becoming obsolete as it applies to Latin America.

Latin America's approach to its future economic relationships with the United States reflects, in turn, some basic changes which have occurred in the structure of the Latin American economy. The steady and inexorable progress of the industrial sector of the region, a phenomenon of the past 40 years, has finally, in the seventies, arrived at a most significant point. Throughout the decade of the sixties, manufacturing industry in Latin America has been growing at rates considerably in excess of overall GNP growth rates, with the result that manufacturing industry has become the largest single sector in the Latin American economy. By 1970, manufacturing industry was generating some 25 percent of the region's GNP, while agriculture accounted for about 16 per cent. I dare say there is insufficient awareness of the import of these statistics in the minds of many in the United States and elsewhere in the developed world.

As industrial production in the region advances at these high rates, we are beginning to see evidence that Latin American industry is reaching a new stage. In past decades, the growth of industrial capacity in Latin America has been largely based on the exploitation of internal markets and the opportunities for import substitution. In the decade of the seventies, as these internal markets become satisfied, we are beginning to see a new posture of active and aggressive search for external markets for the products of its industry. This is the meaning behind some recent economic events in the region. It is reflected in the intensive search to broaden limited national markets through economic integration arrangements such as the Andean Group and the Central American Common Market, and it is mirrored in the rapid increases being registered in the region's exports of manufactured goods during the past decade. That category rose faster than any other element of the region's exports. Between 1960 and 1970, manufactured exports from Latin America increased at an average annual rate in excess of 15 per cent—a rate which doubled the proportion of manufactured products to the total of the region's exports—that is, from a level of nine per cent in 1960 to a level of about 18 per cent of the region's exports in 1970. This expansion of export of manufactures by the region continues to accelerate. Recently, several United States and Japanese companies have announced new investments in production facilities for export. The Ford Motor Company will shift its production of engines for one of its products to Brazil. RCA and Sony have announced similar intentions with respect to their color television production.

The meaning behind these statistics could hardly be more profound for Latin America. Fundamentally, this trend signifies a progressive increase in value added within the region; in turn this signifies not only a most promising line of growth and development for these economies, but, more important, expanded employment opportunities for Latin America's vast reserves of underem-

ployed and unemployed manpower residing in the cities of Latin America. As these cities are growing annually at nearly six per cent, a rate double that of the total population of these countries, the problem becomes more urgent every year. It is clear that Latin America cannot give employment to these masses by exporting its raw materials to other centers to be processed. The only hope of meeting the need lies in determined efforts to increase processing operations within the region and being able to market the resulting products in the markets of the developed world.

Thus, as Latin America confronts a world of changing economic relationships, its interest in assuring access to markets for the products of its maturing industries will be primary. The strong protectionist sentiment which currently exists in the United States represents a real threat to Latin America; if that sentiment prevails it is not difficult to foresee conflict between the United States and Latin America. On the other hand, a more hopeful trend is represented in the United States proposal to put into effect a system of generalized preferences. Following discussions in the OECD, several developed countries have moved to put into effect their versions of the generalized preference system. Each of these is hobbled by varying types of restrictions; but clearly, further progress toward a true world system of trade preference for developing countries hinges on the implementation of the United States system. To date protectionist sentiment in this country has been considered too strong to permit passage of the necessary legislation. The outcome is still in the balance; and whatever the outcome, it will have a heavy influence on the future economic relationship between the United States and Latin America.

At the same time that many Latin American countries have turned outward seeking a larger role in world trade, attitudes within the region concerning an acceptable role for foreign investment have also been changing. These changes usually take the form of demands for national control of key enterprises through participation by the state, or majority ownership by national investors and entrepreneurs. The problem is further complicated by the growth of great multinational companies presiding over great numbers of subsidiaries located in many different countries having the power to make decisions affecting the national life in any one of these countries, without reference to the authorities of that country. This feeling of vulnerability gives persuasive support to the contention of some that these great multinational systems unchecked by any authority are in fact a threat to basic sovereignty.

These fears are not new; but their re-emergence in coincidence with several sensational cases of expropriation of natural resource and utility companies has combined to give rise to renewed tension between the United States and Latin America. The emotional dust raised by these has made more difficult the reasoned and dispassionate analysis of the Latin American objective.

In the brief time we have together this evening, I can only make one or two observations on where I as an individual believe these conflicting attitudes take us.

In the context of the region's preoccupation with expanding its industry and its exports, it is noteworthy that a very high proportion of Latin America's manufactured exports find their origin in subsidiaries owned by foreign companies. It is not often recognized that growth in value added and, in turn, in export capacity was the subject of a long, private running negotiation between companies and governments. Industrial companies which had originally come to these countries to serve the local, limited market behind high protective barriers eventually

found themselves engaged in what Ray Vernon has labeled the "Struggle over Rewards." Throughout this period, companies were under pressure to import less and purchase more from local sources and when substantial progress was achieved in this area, attention was shifted to export of their manufactured products. In most cases these companies being elements of worldwide marketing systems were able to respond. Indeed, foreign owned subsidiaries account for about 40 per cent of Latin American exports of manufactures. Perhaps in this light, it is understandable that these subsidiaries do not appear to be threatened in any way in a region where foreign ownership is a hot issue. Indeed new subsidiaries of these great multinational companies are being established in Latin America at higher rates than ever.

The pattern of interaction between those companies which genuinely identify with their host countries' objectives and continue, through well planned changes, to adjust to accommodate to changes in these aspirations and objectives supports the conclusion that ideology becomes secondary to such considerations as productivity, value added, jobs and exports. In contrast, companies which turn their back on the changes going on about them, and resist taking action necessary to accommodate these changes, eventually run the risk of falling prey to ideology especially when the technology they command becomes commonplace and more or less replaceable from national sources. I can think of no investment which will ever be free of pressure to accommodate in some way to the exigencies of changing national life.

Having offered these generalizations, I must hasten to qualify them. While I believe they stand as generalizations, it is nevertheless true that each country is different and will apply different definitions of what meets the national need. Each case will be subject to negotiation.

Throughout this evening, I have spoken of Latin America as if the needs of all countries of the region were similar. This is, of course, not the case. Certainly, the averages tend to blur the differences among the countries in terms of degree of industrialization and ability to compete in world markets for industrial goods. As a matter of fact, 90 per cent of industrial output of the region originates in only seven of the 24 countries of the region. For many of the latter countries there remains a long road ahead to develop industrial capacity equal to the challenge of world competitive forces. Continued and sustained efforts will be required of these countries not only to build infrastructure for industry, but also to improve agriculture which still employs the largest proportion of the economically active population of most countries. Moreover, there remains an unquestioned need for social development projects such as improved and expanded facilities for education and health. What this means is that the need for external financial resources remains as great as ever.

We, at the Inter-American Development Bank are acutely conscious of these disparities hidden within the statistical averages representing the region as if it were a single entity. For this reason, we have initiated new policies which distinguish our member countries according to their state of development and their needs. Thus, the relatively less developed countries of the region are given priority in the allocation of low interest resources; the relatively advanced countries receive financing with resources which the Bank borrows in the capital markets of the world at prevailing interest rates. This technique sharpens the focus on the problems facing the relatively less developed countries and distinguishes them from those facing the higher income countries entering the phase of rapid industrial development.

It is somewhat ironic that as we grow in our ability to forecast more precisely the

need for financial resources for development, the sources of these resources are becoming less disposed to provide them. At the present time, one can see in the United States a much lessened resolve to continue to appropriate public funds either for bilateral development programs or for contributions to multilateral agencies such as the Inter-American Development Bank. For the past two years, the Congress has refused to appropriate the funds necessary to fulfill the amounts previously committed to increase the low interest funds of the Bank. We remain hopeful that 1973 will bring more favorable results.

In recent months there has been discussion of new ways to provide financial resources for development, which would be less dependent on the uncertainties of action by individual national legislatures. One such proposal under consideration at this time is that referred to as the "SDR-LINK." Simply stated, this proposal would provide for some means of setting aside some portion of each creation of new Special Drawing Rights to finance projects in developing countries. In this way, some of the supply of development capital would be "linked" to new creations of international liquidity as represented by SDR's. At present this windfall of resources is distributed among the International Monetary Fund member countries according to their share of voting power in that Institution—a method which insures that a handful of the richest and most powerful countries get the lion's share. A number of detailed and complex proposals have been advanced to accomplish this "link"; one of these would provide that the SDR's set aside for development be channeled to international or regional development banks such as the Inter-American Development Bank. Such a scheme would seem to me to make great sense from the point of view of both the advanced as well as the developing countries. Both would be assured that the resources so provided would be allocated for high priority development projects.

I have spoken this evening of several issues which in my judgment as a Latin American will be determinants of the nature of the United States-Latin American economic relationship in the future. I am sure that during the remainder of this Conference other issues will emerge for treatment and discussion. However that may be, I take it to be a cause for optimism that such issues are being uncovered and debated by such responsible institutions as the University of Texas, and by scholars from all parts of the hemisphere.

For I remain hopeful that the attitudes of mutual cooperation and the specific recommendations that result from this Conference will find a place in the policymaking of the countries of the hemisphere.

FOREIGN AID IN TROUBLE

(By Jan Jarboe)

Unless President Nixon exhibits strong leadership, any would-be congressional foreign aid bill is in trouble, U.S. Rep. Henry B. Gonzalez said Saturday.

"At this time, the status of a foreign aid bill is that we haven't one," Gonzalez told the 27th annual convention of the San Antonio Archdiocesan National Council of Catholic Women at the Gunter Hotel.

The veteran lawmaker said one reason last year's foreign aid bill died in committee was that Nixon did not push for the bill.

Gonzalez, who is chairman of the subcommittee on International Finance, said "We have a responsibility that is inescapable" to provide foreign aid to developing countries, but he said opponents of foreign aid legislation have had their way in Congress to date.

During the convention proceedings, the question of the Supreme Court's ruling on the Texas and Georgia abortion law surfaced.

Gonzalez, who is a Catholic, said any attempt to promote a constitutional amend-

ment prohibiting abortions would be "impractical."

"You can do almost anything with a constitutional amendment—maybe even cure fallen arches—but I think the possibility of getting a constitutional amendment of this type is very remote," he said.

Gonzalez said he would advise opponents of the Supreme Court's abortion decision to concentrate their activity at the state level and perhaps "look into the Texas Constitutional Revision Committee."

Mrs. H. R. Giladof, president of the council, said, "I'm against abortion in any form and under any excuse given for it. I believe it is comparable to murder, and I feel that is the belief of most Catholic women."

The council has spearheaded a legislative group termed "Right to Life" which Mrs. Giladof said will actively lobby for reversal of the Supreme Court decision.

AIDING RUSSIAN EMIGRANTS

HON. ROBERT N. C. NIX

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. NIX. Mr. Speaker, responsible officials of the Department of State are presently conducting final negotiations with U.S. voluntary agencies for use of the \$50 million appropriated by Congress last year to help resettle Russian Jews in Israel.

I want to bring to the attention of all my colleagues who are concerned with the Jewish emigration from Russia that a sense of urgency now surrounds these negotiations. Last week the Soviet Union relented on severe emigration restrictions when it unofficially announced "suspension" of the decree requiring heavy exit fees from university-educated citizens emigrating to Israel or other non-Communist countries.

I say this suspension is unofficial for I have the trepidation its longevity may be directly related to the time when the Soviet Union consummates trade agreements with our own Government giving the U.S.S.R. most-favored-nation status. Once they have that agreement in hand I fear they may repeal the waiver of the exit tax.

Therefore, it behooves us to urge the Department of State to press ahead in its negotiations with voluntary agencies with all possible expedition. Since most of the migrants leaving Russia are destined for Israel, the principal voluntary agency concerned is the United Israel Appeal for which the Jewish Agency for Israel will conduct the program.

The Department of State informs me that areas to be supported with U.S. money include: enlargement of a transit center in Western Europe; maintenance of refugees in transit; transportation of refugees and their effects from Western Europe to Israel; construction of hostels; absorption centers and housing in Israel, and education and training assistance, including special youth care.

The Soviet's repressive restrictions on freedom and, specifically, the exit fee are, to me, chilling reminders of the despotism of the cold war era. We in the Congress should seek the abolishment of all such curbs of freedom. If necessary to accomplish this goal, we should line up

solidly against any and all concessions to the Soviet Union for trade preferences.

But in any event, we can be of assistance to those Jews in Russia who wish to migrate to Israel or other non-Communist countries by urging the State Department to conclude negotiations on the use of appropriated moneys—and do it while the suspension of the exit fee from Russia is still in effect.

SEARCH FOR THE TRUTH AT WOUNDED KNEE

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. ABDNOR. Mr. Speaker, because there seems to be so much controversy over the real facts about media reporting at Wounded Knee, S. Dak., I would like to take this opportunity to share with my colleagues in the House a recent article from the Birmingham News:

ON WOUNDED KNEE OCCUPATION: NEWS MEDIA
DO POOR JOB
(By James Free)

WASHINGTON.—The news media have done a mediocre job of reporting on the Indian occupation of Wounded Knee, S.D., and the broadcast media in particular.

This has been impressed on Washington observers not because they knew by long distance what was going on, but because they could not find out from the usual sources.

Who are the leaders of the occupying force? Were they elected by the local reservation Oglala Sioux tribe? Where did most of the "dissident" Indians come from? What do the Oglala Sioux think of all this? Do Indians elsewhere approve of the occupation tactics?

Adequate answers simply were not to be found in the dispatches and broadcasts from Wounded Knee.

The first authentic, comprehensive report to surface in the nation's capital came last Tuesday morning from Rep. James Abdnor, R.-S.D., whose district includes Wounded Knee.

At 10 a.m. Tuesday Abdnor released a two-page statement and held a press conference on Capitol Hill. Neither got much attention. In fact, none at all in the Washington Post and New York Times, and only brief mention in the Washington Star. If it was on the airways, few secrets have been better kept.

On Wednesday Abdnor, still hopeful of getting some Washington and national attention for the untold story—got "special order" time on the House floor and elaborated on his disclosures. This time 10 colleagues, nine Republicans and one Democrat, commended him for his forthright presentation.

Most of the 10, including two who also have Indians in their districts, backed up Abdnor's call for federal authorities to go in and return control to the locally elected Indian leaders.

Once again the Abdnor story about happenings in his constituency was ignored by the media, or at least by those having an outlet in Washington, D.C.

And what is the Abdnor story?

That only one of the AIM (American Indian Movement) occupation leaders "is even remotely connected with the Oglala Sioux Tribe."

Russell Means was born on the reservation (but has spent most of his life elsewhere, more recently in Cleveland, Ohio). Others are from out of the state with prior records of criminal acts.

Most of the occupying force is from outside not only the reservation but South Dakota.

The AIM demand for a referendum on removal of the elected Oglala Sioux leader, Richard Wilson, is a phony. Says Abdnor: "It only takes a petition signed by one-third of the voting members of the tribe to call for such a referendum." Wilson wants the insurrectionists removed, which is one reason why the AIM demands his ouster.

The dissidents have broken both tribal and federal law. They have, according to Abdnor, terrorized other citizens, destroyed private property, rustled and slaughtered cattle, ransacked the post office and abused its employees, closed the schools, vandalized properties on a project where 200 homes are being built for the Indians. They also have assaulted federal officers.

Abdnor and other congressmen made the point that the federal government cannot afford to yield to force and violence at Wounded Knee, particularly after yielding to force and destruction in the seizure of the Bureau of Indian Affairs Building in Washington last fall.

(In the seizure of the B.I.A. Building, the government went further. On directions from the White House, it paid leaders of the occupying force \$66,500 to leave Washington.)

Abdnor and other congressmen having Indian reservations in their districts warn that softness in dealing with the renegade leaders at Wounded Knee will encourage similar occupations on other reservations. Certainly the B.I.A. affair in Washington led by AIM, created a climate that made something like Wounded Knee almost inevitable.

HURTS OTHER INDIANS

Rep. John Melcher, D.-Mont., warns that "a second tragedy at Wounded Knee is possible if AIM activists continue to flaunt the law. The Indians have grievance aplenty. Some have been recognized and corrected. . . . Tribal officials elected through the democratic process on each reservation by each tribe should be the official spokesmen for each tribe. . . . The AIM activists are defying the wishes of the overwhelming majority of the Oglala Sioux people. Legitimate grievances of that tribe cannot be considered until order is restored."

Melcher concluded with the remark that "the situation is a sad commentary on our ability to run effective government as we should."

It also is a sad commentary on effective media coverage of events at Wounded Knee, and on the reports of Rep. Abdnor in the Congress.

LACK OF POLITICAL EDUCATION CAUSES RED CHINESE FOOD SHORTAGE

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. RARICK. Mr. Speaker, the recent reports from Red China would be passed off as mere propaganda if they were not so serious and did not directly implicate American taxpayers and American farmers.

The American news media is again churning out the heart-rending story of threatened food shortages in Red China because of unfavorable weather conditions. For some reason, the blame for food shortages never mentions the failure of collective farms or the lack of production incentive under the Communist system.

The recent Red China story blames last year's drought, but proceeds to disclose the real reason for any food shortage as the Communist economic system. The article states:

The Party Committee has announced plans to send 100,000 officials to the rural areas and basic level units.

Some Communist offices have reportedly been ordered to send up to two-thirds of their staff out to "the front-line of production." The job of these party bureaucrats is obviously not to pray for better weather or to help in planting, but, as reported, "to educate the peasants politically to make a bigger effort this year."

But as most Americans know, as our President has already announced, and as some national farm organizations have urged, communism does not need to work or to feed its people because our national leaders will give the Chinese people subsidized American food at cut-rate rates in the interest of peace and brotherhood.

Perhaps American agriculture would benefit greater if instead of sending our food to Red China, we sent some of our political bureaucrats to join their Chinese counterparts in educating the peasants. Plans may already be on the drawing board for such a program, in the interest of "normalizing relations" with China.

The more American food the Red Chinese can import from the United States, the greater the number of men relieved to serve the Red army. The more Chinese peasants freed to carry an AK-47 rifle rather than a hoe, the greater the threat to world peace.

[From the Washington Post, March 22, 1973]

WEATHER THREATENS CHINA'S CROPS FOR SECOND YEAR

(By John Gittings)

For the second year running, China's peasants are facing weather conditions that will require all their collective skill to overcome.

Many of the wheat-growing provinces in the west and north have reported a continuing drought, which hampers spring sowing. Party and government officials are being mobilized to get out into the fields to help, and a recent editorial in the People's Daily called for "the strengthening of party leadership in the countryside."

"In a big country like ours," the newspaper said, "natural calamities are not uncommon," and it called for "firm confidence that man can master nature" even in the face of serious calamities.

The experience of last year, when China faced a combination, at different critical times and places, of drought and floods shows that the job can be done.

According to Vice Premier Li Hsien-nien, the deficiency in China's 1972 harvest was limited to "a mere 2 million tons."

WORSE THAN LAST YEAR

But this year, with water tables already lower in the drought areas, and reserves of grain already depleted, is bound to be a greater trial.

In several provinces, teams of officials and other white-collar workers have been sent to help in the countryside.

In rice-growing Hunan, also hit by drought last year, the party committee has announced plans to send 100,000 officials to the rural areas "and basic-level units." From the provincial level downwards, all government offices are being asked to send up to two-

thirds of their staff out to "the front line of production."

In Szechwan Province, where it is said that anything grown in China can grow, teams of officials have been working in the countryside for two months. It is clear from the description that their job is not just to bring more hands to the fields, but to educate the peasants politically to make a bigger effort this year.

OLD TERM RETURNS

These teams are described as "rural work-teams," a term that has not been used since the Cultural Revolution when the former head of state, Liu Shao-chi, was criticized for the heavy-handed way the official work-teams he had sent out in previous years had behaved. They were said to have conducted a political witch-hunt against local peasant leaders, while covering up for mistaken agricultural policies of party bureaucrats.

Today's work-teams are also said to have a political objective; to "deal blows at the sabotage activities of class enemies" and struggle against "the revisionist line of swindlers like Liu Shao-chi."

In practical terms, current agricultural policy—which the work-teams will help to propagate, focuses on instilling moderate policies and stirring greater effort by the workers.

First, there is a more balanced emphasis on the need for local initiative in the countryside, while avoiding attempts—now called "ultra-Leftist"—to do too much too fast.

Collective effort is still regarded as crucial, but warnings are now voiced against "egalitarian" policies that deprive the peasant of legitimate material incentives. More work, more pay is not an inflexible rule, and all kinds of social and political considerations are taken into account when calculating each family's share in the collective income, but it is still the basic principle.

NO NEW "LEAP" SEEN

After several years of rapid investment in rural industry and irrigation, the emphasis is now being placed more on quality than quantity, more on consolidating the gains that have been made than on leaping further ahead.

The development of local industry, such as small-scale fertilizer plants, cement factories, and brick kilns, should, according to a recent report, be limited strictly "in scope and speed." It should concentrate on industries serving agriculture directly.

Similarly, in the construction of irrigation works, the top priority in many areas is to check and improve existing structures so that they will operate with maximum efficiency now, when they are most needed. Local plants making farm machinery are also asked to concentrate on providing proper service facilities.

The second theme of current rural policy calls for the peasants not to let the sweat dry on their brows. In Mao's words, they should "dig tunnels deep, store grain everywhere, and never seek hegemony. Hegemonic ambitions in the countryside may sound a bit remote, but the phrase is a warning against all forms of self-interest and individualism.

MASS TRANSIT

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. ZWACH. Mr. Speaker, most of the people in our rural Sixth Congressional District of Minnesota are deeply concerned over efforts to divert some of our highway trust funds to mass transit purposes.

The rural people, in general, oppose these efforts, while people in the metropolitan area, and I have some of them in my district also, in general favor it.

Editor O. B. Augustson of the West Central Daily Tribune in Willmar, recently dealt with this problem in an editorial, which, with your permission, I would like to insert in the CONGRESSIONAL RECORD.

As editor Augustson aptly points out, diverting highway trust funds to mass transit could lead to less and less road work in the countryside.

With railroad service deteriorating almost to the point of disappearance, it is essential that we have ample farm-to-market highways in countryside America if we are to keep urban America from going hungry.

The article follows:

MASS TRANSIT

About a week ago there was an important news story on the front page of this newspaper and perhaps many others. A vote held in the Congress about diverting highway funds for mass transit. Guess the policy has always been that federal monies given states should be used solely for highways. Such funds are derived from road-user taxes. In other words gas tax monies.

Efforts along the same line have been evident on the state level where similar proposals have been made. And such proposals have been largely opposed by the outstate and rural areas with the fear that such monies used for mass transit associated with the big cities could lead to less money and less road works in said outstate. As we understand it under the gas tax amendment these road-users monies are shared by the various units of government solely for highway building.

The change in the use of federal and state monies from the sources mentioned could be a threat or loss to the outstate which even now goes somewhat begging for highway improvements. Take our highway 12 for instance. Take the plans for a real thoroughfare of highway 71. The former a regular necessity and the latter a most desirable tourist route to the north. At times it looks as if the big cities of our metro area seem to favor only those highways which lead to them first in some manner.

So it is the same old story of the outstate and rural areas having to battle perhaps for their rightful share of this highway money and thru such funds have decent highways built out here. If the mass transit projects would tend to less highway construction and maintenance outstate then there is a problem here in the rest of the state. It seems that so much money is spent on the bottlenecks of the Twin Cities that in order to get needed funds for outstate use they have to increase the gas tax levies. It would seem that the mass transit problem is solely one that belongs to the metro complex—their home problem.

EXPLORE ROLES—EXTEND GOALS

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. NATCHER. Mr. Speaker, it is once again my very distinct privilege to pay tribute to the Future Homemakers of America who on April 1 will mark the beginning of their national week of celebration. The theme for 1973 National FHA Week "Explore Roles—Extend

Goals" is in itself a capsule definition and accurately describes the purpose and principles which inspired the establishment of this outstanding vocational education youth organization whose members, I can assure you, have established themselves as a vital and integral part of this Nation's youth community.

The Future Homemakers of America was founded on June 11, 1945, as a non-profit organization and I think it is gratifying to know that for nearly three decades, through its FHA and HERO—Home Economics Related Occupation—chapters, this organization has provided worthwhile experiences which have helped young men and women prepare for the important responsibilities of their future as parents and adult citizens.

FHA has a membership composed of half-a-million girls and boys, grades 7 through 12, in the United States, Puerto Rico, the Virgin Islands, and American schools overseas whose primary dedication is to the homemaker and to the preservation of the integrity of the family as a socioeconomic unit in addition to serving as a practical training ground for the application of knowledge, and expanding and projecting classroom work and experience into the lives and homes of each individual member. Indeed, in my opinion, the Future Homemakers clearly exemplify that tremendous strides have been made whereby this splendid organization has served as a bridge between the classrooms, the home and the community and is the key for developing the potential of each individual member for a productive life in our society.

Much has been accomplished by the Future Homemakers of America since their 28 years of existence in this country and I add with all due pride a two-fold reason for my interest in and affection for the Future Homemakers—first, I am privileged to hold a national honorary membership in the FHA and second, Kentucky's State association has the enviable distinction of being the first State organization to affiliate with the National Future Homemakers of America. At the present time, Kentucky's membership has progressed to 16,500 young men and women and naturally I am tremendously proud of the successful activities of the local junior and senior high school chapters in Kentucky, generally and in the Second Congressional District particularly.

Certainly there is no limit to the effectiveness of the numerous projects and activities sponsored by the Future Homemakers of America and during the forthcoming National FHA Week special observances will focus attention on exploration of the multiple roles of the individual in family, community and career life as well as what half-a-million teenagers are doing in a most constructive manner to seek the answers to many of our present-day problems in preparation for a better life in the future. I am confident that these young people are fully aware that they are the future of their country and that they are not only equipped but eager to meet the challenges that lie ahead, and this is evidenced by the creed of this organization which assures us of the concern and con-

sideration by these young men and women for their fellowman.

Mr. Speaker, the Future Homemakers of America has my wholehearted admiration and full support, and I want to take this opportunity to wish the entire membership a future filled with continued success.

CONSTITUTIONAL CRISIS NEARING RESOLUTION

HON. GERRY E. STUDDS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. STUDDS. Mr. Speaker, the House Rules Committee is currently holding hearings on legislation to resolve one of the most basic questions to come before this Nation: the clear constitutional mandate to the Congress and the Congress alone to raise and to set the priorities for spending the people's money. The present administration's unprecedented impoundment of funds authorized and appropriated for domestic programs has caused a flurry of legislative activity on this floor and in the other body which graphically points out the Congress' immediate desire to restore these funds to the uses for which Congress and the people intended.

As the distinguished chairman of the Rules Committee so succinctly stated yesterday at the opening of hearings to restore congressional control over funding:

The American public should know that since President Nixon was inaugurated over four years ago, approximately \$11 billion \$100 million of funds have been impounded which cover housing, education, health, transportation, anti-pollution, hospital construction, including the veterans' hospitals, small business loans, watershed and flood prevention, help for domestic farm labor, food stamp program, rural electrification loans, waste and sewer facilities, etc.

We, in the Congress, know what the death of these and other domestically oriented programs means to our districts and the people we represent. We are the recipients of letters imploring our immediate intervention to restore funds for this or that individual program—funds which the present administration has withheld in open defiance of the expressed intent of the drafters of our Constitution.

We should also recognize the implications of the President's usurpation of legislative authority. It is a radical departure from the American political tradition, presenting us with a grave constitutional crisis. The President's actions strike at the heart of our Constitution's peculiar genius—the system of checks and balances.

I have cosponsored legislation which would give the Congress 60 days to approve or deny a Presidential request to withhold appropriate funds. Identical legislation has been introduced in the other body and has gained the support of both Republicans and Democrats. I urge all of you to give your closest atten-

tion to this legislation and to work for its speedy passage by the Congress.

THE FRENCH CONNECTION IS ONLY TEMPORARILY OUT OF ORDER

HON. FRANK J. BRASCO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. BRASCO. Mr. Speaker, much has been said about the flow of hard drugs, mainly heroin, into this country. It is difficult to overstate the case, for we are practically awash in this poison. Today it is in virtually every high school of every major metropolitan area. Further, heroin is now common in many elementary schools. Few communities of size are immune to its ravages.

In the past, I have spoken on this subject, consistently hewing to the line that we know where it is coming from, who is bringing it, who distributes it and what the entire process involves, from where it is grown to the pusher on the corner.

The equation remains the same. Most of the joy we reap from close to 600,000 heroin addicts can be traced to our friends, the French, who look the other way as opium from the Middle East is processed in the laboratories of Marseilles.

We know the kingpins in this ongoing horror story are Corsican-French types, as typified by Auguste Joseph Ricorde, who, after running authorities a merry chase for some years, was finally brought to trial in this country. In passing, let it be noted that he was extradited from Paraguay, whose military dictator, Alfredo Stroessner, protected and shielded this man as he has protected so many others, including many Nazi war criminals.

The Government of the United States for once acted in a hard-headed manner, pressuring this man until he finally allowed Ricorde to be extradited for trial to this country. Let it also be noted that although much of the heroin may be moving to this country through Latin American and Caribbean routes, it still moves first through the processing and refining center of Marseilles.

What is particularly of note is that once we squeezed and pried this parasite loose from his protectors, we did as little to him as we could. His trial was a foregone conclusion from the start. This man was caught in a vise it was impossible to escape from. For years he has masterminded a ring that has smuggled tons of heroin to the United States.

Let it be clearly understood that Ricorde typifies the French Connection kingpin. If you have been robbed, mugged or beaten by someone connected with drugs, here is your man. If you have lost a loved one because of heroin, look to Ricorde. If you wonder about the streets of our cities and why they have become no-man's lands after dark, he is part of the answer. He is one of the men who have consistently guaranteed that every city will have its Needle Parks.

Why, then, in the name of all that is holy did he get off so easily? For he did

in fact come off easily. We had him in our grasp. He was prosecuted, convicted, and sentenced to the maximum. How, then, did he get away easily, is the next predictable question?

The maximum allowable sentence under Federal law is 20 years. He will be eligible for parole after completing one-third of the sentence, which comes to less than 7 years. By 1979, this assassin of uncounted Americans will presumably be free to resume his profitable activities.

I consider this to be devastating social injustice. In basic self-defense, society should insure that he never sees the outside of a prison again for the rest of his life.

In no way am I criticizing the prosecutor or judge in this case. What I do take issue with is the law as applied here. If ever a penal code required tightening, it is in this respect.

I have joined in sponsoring a measure, which would in fact accomplish this goal. It simply states that nonaddict adult druggushers would receive a mandatory life sentence. This means they would not be eligible for parole for at least 20 years.

There are many more Ricordes operating as we meet here today. Inevitably and inexorably no matter how many protectors they have, we shall tighten the noose around them in the future. I suspect that when we boast 1 million heroin addicts, and that should be rather soon at the rate we are progressing, we will be in the mood to sweep aside their protectors, fling down the gauntlet to the French and put some merciless heat on the entire system. When that time comes, and it is coming soon, we want to be ready for all the Auguste Ricordes we lay our hands on. Let us guarantee that society will grasp them firmly, try them, and if convicted, place them where they will never again get at our children. This bill is a necessary measure, and deserves the serious consideration of every Member of this House. I do not speak in any partisan sense. I truly believe that men like Ricorde will not stop until they have turned every one of our schools and streets into heroin-infested nightmares, complete with dead teenagers, degraded addicts and terrorized citizenry.

In our growing agony, we have no other choice but to defend ourselves. By passage of such a law, we serve notice on these unspeakable people that they continue this cumulative outrage at ultimate risk to their own lives.

MIKOLAJ KOPERNIK

HON. DOMINICK V. DANIELS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. DOMINICK V. DANIELS. Mr. Speaker, recently Mrs. C. Szmanko of Jersey City, N.J., was kind enough to forward a copy of a letter she has sent to President Nixon urging him to include the Polish form of the name of Nicolaus Copernicus—Mikolaj Kopernik—in his

proclamation of April 23, 1973, in announcing the issuance of a stamp in honor of the great Polish astronomer.

Mrs. Szmanko's point is very well taken and I would like to associate myself with her views. A copy of her letter to Mr. Nixon will appear following my remarks.

Mikolaj Kopernik means so much to the American Polish-descended community that this act by the President—an act which would cost nothing—would earn him the esteem of all of the millions of Americans whose ancestral roots are found in Poland. I urge all of my colleagues on both sides of the aisle to use all of the influence at their disposal to pay deserved honor to Kopernik and to Polonia.

Mrs. Szmanko's letter follows:

MARCH 21, 1973.

President R. M. NIXON,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Since you are being asked to make a proclamation for April 23, 1973, would you kindly include the Polish name before the Latin name for Mikolaj Kopernik (Nicolaus Copernicus) to celebrate the Quincentennial of his birth in his own name.

The United States of America, being a pluralistic society, ought to give proper recognition to a son of Poland who contributed to world knowledge, which was dominated by the Latins then, just for the sake of its citizens of Polish descent and in appreciation of their efforts in the existence of the U.S.A. present and past (Pulaski, Kosciuszko, Krzyzanowski and others in the American Revolution.)

It is unfortunate that the commemorative stamp will not evidence his proper name, Kopernik, because those who are the decision makers in this matter chose to ignore the many people who would have liked to have something to say about it one way or another. It is not fair.

This quincentennial is the most opportune time to re-educate all Americans about the nationality of this astronomer rather than to propagate his history as a Latin. Known for his celestial heliocentric theory, Kopernik should belong to the people of the world, not to the Church only for his religious position therein.

Since the Director of Philatelic Affairs could not help, I hope that you will use your Presidential authority to consider the people of Poland and Americans of Polish descent, not just the Church authority.

I thank you for all that you do to change the balance of power in this Kopernik matter to help the people gain a Polish Image for him.

Sincerely,

Mrs. C. SZMANKO.

PHILLIPS DOING WHAT HAS TO BE DONE

HON. DAVID C. TREEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. TREEN. Mr. Speaker, the Monroe Morning World of Monroe, La., recently published an editorial concerning the restructuring of OEO. The editorial states:

No doubt, OEO has done a great deal of good. It is an ill wind, indeed, that blows absolutely no good at all. But, evidenced by

Phillips' catalog of pure folly and misguided good intentions, there are degrees of good, and the amount of good delivered has come at too high a price.

I feel that this statement is the essence of the reason OEO has to go. Even if one forgets all the illegal activities, mismanagement of funds, and ill-advised legislative initiatives in which OEO agencies have become involved, the major question is whether the taxpayer has been paying too much for the services OEO has provided. A look at the record will give the obvious reply: This country can no longer spend large sums of money on programs which have proven to be failures.

I am inserting the following editorial in the RECORD:

OEO UNSPEAKABLE SPOKEN

A few short years ago, no one would have thought such words could come from the mouth of a government man. Yet, there was Howard Phillips, the nation's new anti-poverty chief, head of the Office of Economic Opportunity (OEO), saying them. His agency was built on the theory of treating the poor as a class. Phillips, at last, had spoken the unspeakable.

The new bureau chief says his agency has been involved too much in trying to change society.

The elimination of poverty—avowed purpose of OEO when it blew in with other Great Society programs in the '60s—naturally would change society, and what is wrong with that? Plenty. There are good changes and bad changes and Phillips has a firmer grip on that distinction than most 32-year-olds.

The OEO, he points out, has operated on the premise that people overcome poverty collectively, not individually, and that "only through politics can you overcome the so-called oppression of the government."

He goes on: "We've had the avowed purpose of adding dollars to the welfare costs of the states and adding people to the welfare rolls and to encourage people to challenge the traditional authority patterns of society."

And on: "I think too many of the underlying concepts were flawed—the concept that you have to have counter institutions and a counter culture and the whole class concept."

"Many of the lawyers in Legal Services think it's their job to change laws and social values. Some of them are getting involved in draft counseling. Some have been distributing radical literature in the prisons. I want to get them out of the business of organizing welfare rights chapters, and farm workers unions, and rent strikes, and politicizing the poor."

As eloquently true as that is, Phillips' summation gets an A-plus for aptness: "The whole thrust (of OEO) has gotten to be civil liberties rather than poverty."

Now, of course, there is nothing wrong with civil liberties, rightly petitioned and properly dispensed. But, as Phillips says, this has little to do with OEO's intended purpose. And he calls the rightness of the petitioning into realistic question, as an unwise mounting of a "widespread challenge to order"—which incidentally has been the most striking American social development in the present generation.

"We have been using money in this agency to change the law . . . to lobby . . . to demonstrate . . . to change public opinion and public policy . . . to draft legislation," says Phillips, adding this thought-provoking zinger: "That kind of activity going on without elected authority is a violation of every citizen's civil rights."

A Harvard graduate, founder of the conservative Young Americans for Freedom, Phillips seems like the right man for the job. He seems off to a right-headed, running

start toward dismantling the scattergun agency that OEO had come to be.

He will have to lop off 350 jobs before June 30, getting the agency down from 1,950 positions to the 1,500 which will be carried over to other departments.

This is a healthy development and directly in line with President Nixon's determination to streamline government and pare expenses to a level of effective functionalism.

No doubt, OEO has done a great deal of good. It is an ill wind, indeed, that blows absolutely no good at all. But, evidenced by Phillips' catalogue of pure folly and misguided good intentions, there are degrees of good, and the amount of good delivered has come at too high a price.

Phillips' job will be to see that what good exists is retained in the transfer of duties to other departments. It is a major challenge, but he seems to have the mental wherewith-all to handle it.

TO EXTEND THE COMMUNITY MENTAL HEALTH CENTERS ACT FOR 1 YEAR

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. SHRIVER. Mr. Speaker, I am introducing legislation today to extend the Community Mental Health Centers Act for 1 year.

As a member of the Labor-Health, Education and Welfare Appropriations Subcommittee, I have been impressed over the years by the overwhelming evidence in favor of continued investment in community mental health centers. A 1970 study showed that State mental hospitals that are served by these centers have an admission rate less than half the national average. Because of the centers, many persons can now receive outpatient assistance near their homes rather than costly inpatient care in a State institution which might be several hundred miles away.

Indeed, the administration's request to terminate this program is based on the success of the community mental health center concept. Since the worthiness of these centers has been proven, it is said, the Federal Government can now withdraw from the field. The local and State governments are now expected to step in and construct and staff the additional 1,000 centers which would be needed to make nearby care available to all Americans.

It may be that local and State interests would step in, but I do not believe this has been demonstrated conclusively by any of the testimony presented to our subcommittee. These centers were not built and staffed before Federal assistance became available for start-up costs. What evidence is there that these governments are now willing and able to do this?

Congress needs time to study whatever evidence the administration can present to support termination of Federal support in a way that will not halt or even reverse the momentum which has been generated by these centers. My bill is a simple 1-year extension of the provisions of the act which deal with con-

struction and staffing of centers, alcoholism programs, drug abuse control programs, and special children's mental health activities.

During this 1 year of continued authorization, Congress will have the responsibility to study the administration's proposal and to offer its own views regarding the Federal role in mental health programs. In the meantime, our subcommittee will recommend interim funding.

I realize that hearings are currently being held on more comprehensive legislation to extend several other programs for which termination of the Federal role has been proposed. Significant and worthwhile programs are involved in this larger bill, but I think we all know what the fate that bill will face if it reaches the President's desk.

Based on the past record of success and the continuing critical need in many areas of our country, I believe the Community Mental Health Centers Act should have top priority for extension. I urge serious consideration and prompt action on this bill.

MRS. BASS EXPRESSES THE VIEWS ON MANY WITH POEMS

HON. GENE TAYLOR

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. TAYLOR of Missouri. Mr. Speaker, Mrs. Angie Davidson Bass of Carthage, Mo. has gained considerable fame in southwest Missouri as a poet. Her writings have appeared in many of our newspapers and have been widely distributed and read.

With the heartwarming news that today our last prisoner of war is now on the way home, I would like to offer two poems by Mrs. Bass that I am certain express the views of many of the citizens of this Nation.

The poems follow:

AMNESTY?

(By Angie Bass)

Draft-dodgers ask for amnesty . . .
Do they expect a big brass band
To greet them at the station
With an olive branch in hand?

They didn't like the thought of war,
And took the cowardly way,
Fleeing to a safer place
To live in ease and play.

While men of worth and courage
Answered their Country's call,
To serve their nation long and well—
While many gave their all.

Some languished in dark prisons,
Half-starved and tortured too,
With dreams of home and loved ones,
Lonely, sad and blue.

Now that the war is over,
And peace attained with pride,
Draft dodgers yearn for freedom
For which men fought and died.

Should they be granted amnesty
At the end of this great war?
A country that's great to live in
Should be worth fighting for!

PATH OF PEACE

(By Angie Davidson Bass)

We love you for the way you took sore criticism,
When men were clamoring for "peace at any price."

When demonstrators wailed the chant of doom,
That all would not be worth the sacrifice.

We love you for the way you bore it all in silence,
When fellowmen harassed you day and night,

Because they, with their narrow vision
Could see no hope—nothing but doom in sight.

We love your insight into human nature—
That "badge of courage" you so proudly wore;

That opened wide to nations of the world,
A hope for peace you bravely dared explore.

We love you best of all for prisoners of war,
Who are returning to their homes today;
A ray of light at the end of war's dark tunnel—

To the greatest land in all the world—the U.S.A.

Mr. President, our faith in you was never shaken,
As you sought the path to peace with honor bright;

We knew you held the key to open prison doors,
And faith to hold aloft glad freedom's light.

THERE IS NO LIGHT IN THE UNIVERSITY OF CALIFORNIA BUDGET

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. LEGGETT. Mr. Speaker, the administration has started its counteroffensive against congressional criticism of the President's proposed budget. Listening to the administration spokesmen, one is left with the impression that there is no impounding of congressionally appropriated funds, and no cuts in some of our most vital social programs.

In order to dispel this talk, I would like to share with my colleagues an article from the California Monthly of March 1973, which points out that the cuts in Federal aid to the University of California threaten the continued existence of that institution as the premier public university in the Nation. The article follows:

THE UC BUDGET: LIGHT? WE CAN'T EVEN FIND A TUNNEL

Magritte might have put it this way, had he been a writer instead of a painter:

"This is not a story about the University of California's 1973-74 budget."

It's a casualty list.

Once again, Governor Ronald Reagan's budget proposal disappointed the University. And then UC administrators found out what President Richard Nixon had in mind.

If Nixon's budget goes through, says Chancellor Albert H. Bowker, the Berkeley campus could lose \$3 million. For the whole system, estimates President Charles J. Hitch, the federal cutback could reach \$80 million by 1975.

"Students are in danger of becoming the unwilling victims of the battle between the

President and Congress over federal support for education," Bowker warned in late February. "The debate in Washington is beginning to have an impact on the lives of the Berkeley students. The uncertainties about future federal grants and loans, the reduction of research opportunities, and the rising cost of education may force many to consider ending their studies."

The debate in Washington is over the Basic Opportunity Grant (BOG) program which would provide \$622 million nationally for the next academic year and almost \$1 billion for 1974-75. Congress likes the idea but wants BOG to supplement, not replace, other student aid programs. Along with his BOG allocation, President Nixon proposes to kill two major existing programs:

The Educational Opportunity Grant (EOG), through which 970 Berkeley students received nearly \$820,000 in grants this year; And the National Defense Student Loan program (NDSL), through which Berkeley students borrowed about \$2.4 million this year.

Nixon's proposal would provide loan money, but by guaranteeing commercial loans at the commercial interest rate, now seven percent.

"I am afraid that many undergraduate and graduate students will decide against continuing their education rather than incurring thousands of dollars in debts before the completion of their studies," Bowker said.

This was almost the good news. The federal cutback, the chancellor said, would further reduce the campus teaching staff, which went down by 110 positions in state budget slashes two years ago.

He predicted "irreparable damage" to the public health program, which would lose about \$800,000. In foreign languages, the federal reductions could cost Berkeley 12 teaching positions and courses which now enroll nearly 300 students.

"Moreover, language fellowships for almost 100 graduate students, totalling over \$300,000 annually, would be terminated."

Another fundamental threat was a proposed cut in basic research in favor of more immediately practical projects, an approach which has provoked a national outcry by scientists.

"While funding for basic research in the National Science Foundation budget is being augmented for next year, the increase is too slight even to compensate for inflation," Bowker said.

"At Berkeley, basic research has been the cornerstone of our research effort. But this is being threatened by the proposed budget . . . in the long run, this can prove to be a very costly strategy for the nation."

Aside from Bowker's statement, the irony in the so-called "impracticability" of basic research was highlighted by a federal cutback in support of Berkeley study of the ion.

Although no one is marketing ion products at present, the minute particle is basic mostly in the sense of being possibly fundamental to the health of every living creature. Research has linked it to the strange psychological and physical ailments which accompany such mysterious hot-wind storms as the Santa Ana, and in a Berkeley campus lab, rats which lived in an environment with a low negative ion charge had a markedly higher influenza rate than rats in an environment heavy with the negatively charged atmospheric particles. Ion research is at a basic stage, observed Cal Professor Albert Krueger, but could anyone call it impractical? If pollution reduces the ratio of ions in the air, and this in turn affects health, isn't this basically important if not immediately applicable knowledge?

At the February regents meeting, Hitch said the federal cuts could cost UC's medical schools \$18 million. This doesn't include

losses of \$1 million to the School of Nursing at San Francisco and \$500,000 to the Davis veterinary school.

U.S. Department of Agriculture cuts would reduce research and extension services by \$550,000. Hitch said. The new federal budget also would eliminate traineeships, scholarships, and grants which amounted to \$14 million for UC graduate students this year. This aid helps support almost one-fourth of Cal's graduate students.

Meanwhile, Berkeley expects a record number of graduate applications for 1973-74. By February 1, the campus received 10,569 graduate applications compared to 9,193 by the same date in 1972. At that rate, the final total could easily exceed the record 15,500 applications received for fall, 1970. Berkeley will have 3,000 graduate spaces open.

The list went on and on. The Lawrence Berkeley Laboratory announced that it would lose 211 positions, about 10 percent of its staff, most of the cuts coming in the high-energy physics program. A similar loss in jobs was announced at the Livermore Laboratory.

Child-care programs which served the children of 200 student parents prepared to close down.

All this didn't include the effects of devaluation, which will probably cost the Berkeley campus library \$50,000 in annual purchasing power. Statements about the library no longer sounded so much like warnings as like funeral orations. * * *

FOOD PROGRAMS NOT FARM PROGRAMS

HON. CHARLES THONE

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. THONE. Mr. Speaker, compared to other prices, food is still cheap. Food is still a bargain. Until the price advances that began last summer, the average American family spent only 16 percent of net disposable income on food. Even today, the average American housewife spends less of her family's income on food than the housewife in any other nation.

Cheap food has been the order of the day in the United States since the 1930's. The farm programs that began then have been more of a cheap food subsidy to American consumers than a subsidy to American farmers. Therefore, it is logical to refer to them as food programs rather than farm programs.

The March 3, 1973, edition of Farm Journal contained an editorial that expressed this idea extremely well. It has since been reprinted in the Farmers Union Herald and in many other publications interested in production of food. That editorial is reprinted below:

CALL THEM WHAT THEY ARE: FOOD PROGRAMS

While farm-state senators and representatives trip over each other in their mad rush to restore REAP funds and 2% REA loans, a fight far more important to you is taking place in the big-city press.

It's a concerted effort by long-time foes of farm programs to capitalize on consumer resentment against food prices. Their purpose: to kill off farm programs entirely—once and

for all. And unless your friends in Congress wake up, and soon, the city votes we must have to pass a new farm law this year will already be committed—against it!

Listen to what The New York Times said in an editorial on Feb. 5: "One constructive by-product of the steep rise in food prices is the pressure it has put on the Administration to start dismantling—we hope permanently—the expensive structure of farm subsidies."

What frightens us even more is the number of short-memory people in the high councils of government who seem to think the free-market millennium has arrived already. They talk expansively about Russia's long-range commitment to producing more meat and livestock products; about the poor crops shaping up this winter in the Southern Hemisphere nations; even about the great opportunities to sell food to China.

Such words recall still-painful memories of the mid-1960s when a drought in India triggered the phony "world food crisis". The wish for farm prosperity became the fact. Government leaders, farm machinery manufacturers—and farm magazines—began telling each other that happy days were here again: We could sell everything we produced overseas.

John A. Prestbo, a *Wall Street Journal* writer, gives a vivid account of what happened next: "The monsoons started raining on India again, and scientists came up with a bunch of peppy hybrids that were to spawn a 'Green Revolution'. While foreign demand withered, bigger supplies poured forth from other grain-growing countries.

"Two painful lessons emerged from the experience," Prestbo continues. "Don't build hard-to-change production plans on the fast-shifting sands of foreign demand; and don't make long-term changes in farm policy based on short-term factors."

We see signs of these mistakes in the current situation—maybe even in the 1973 farm program changes just announced (see page 25).

To justify their call for a 6 billion-bushel corn crop this year, government planners now say that domestic usage of corn is going up at the rate of 400 million bushels a year, which sounds high to us.

Perhaps the explanation came with the recent 10% devaluation of the dollar. This will have the effect of lowering the overseas prices of grains and other U.S. products by 10%. The likely result is that grain importers should end up buying even more corn than the 1 billion bushels we expect to export this year.

But what worries farmers is that all of this is very iffy. We keep hearing reports about poor crop conditions in South America and Australia, about another light snow cover in Russia's wheat area and about the need for more wheat in India and China. But somehow, we can't forget how suddenly these things can change, as with Russia's crop outlook last year.

Consumers call them "farm subsidies," but if we ever needed proof that commodity programs are designed to subsidize a lot of people other than farmers, the current situation certainly provides it:

Secretary Shultz had his back to the wall in the assault on the U.S. dollar overseas. With other American products priced out of the world market by high labor costs, your wheat, soybeans and corn were his best hope for stepping up exports and correcting our balance of payments.

With their current outcry, consumers have made it clear that they want an assured supply of cheap food. Well, if they're going to deny you the profits from an up market, then they must be willing to protect you from the losses of a down market. The makes it a food program—not a farm program.

A BILL TO AMEND THE TRUTH-IN-LENDING ACT

HON. HENRY B. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. GONZALEZ. Mr. Speaker, I am introducing today, a bill which would amend the Truth-in-Lending Act with respect to the disclosure of closing costs, and administrative enforcement of the act.

Presently, the act specifically provides that certain typical costs involved in closing a real estate loan transaction shall not be included in the finance charge. But, there is no requirement that such charges must be itemized and disclosed to the customer in order to be eligible for the exemption from the finance charge, as there is with certain other charges listed in the act—recording fees, taxes, licenses, and so forth. I see no reason for the exception which is applied for closing costs, and I believe that these costs should be disclosed to the customer along with the other disclosures.

Therefore, my bill would provide that the charges be itemized and disclosed to the customer in order to be eligible for the finance charge exemption. Though some of these charges may have to be estimated, such estimates are permitted by the regulation Z implementing the Truth-in-Lending Act. If the concept of early disclosure of real estate transactions is to be meaningful, then this amendment is essential.

It is also important for us to act on another amendment to the act, in order that the Congress intention be clarified. Pending before the Supreme Court is a challenge to one of the Federal Reserve Board's regulations dealing with the "more-than-four installment" rule. Its invalidation would seriously impair the effectiveness of the legislation in the eyes of the Board, and I agree that this Congress must act to prevent this abrogation of the act's impact. My amendment would remove any possible doubt that the act includes transactions payable in more than four installments where there is no identifiable finance charge.

Another question has arisen concerning another regulation section, and being challenged in the courts. The question involves the issue of whether or not the exemption for "extensions of credit" for business or commercial purposes in the act applies to the prohibition against the unsolicited issuance of credit cards and to the \$50 limit on liability for their unauthorized use. The Board amended the regulations to indicate that the business and commercial enterprises are indeed covered by the act's maximum liability limit for unauthorized use as well as the restrictions on unsolicited issuance. This would not affect the present business exemption in its application to the disclosure, rescission, and advertising requirements. Since the validity of the Board's interpretation has been chal-

lenced, I believe we should take steps to clarify the law.

And finally, my bill would remove the enforcement responsibility of the Interstate Commerce Commission as recommended by the Federal Reserve Board and the ICC, since they do not have any applicable situations.

The ICC requires that freight charges be prepaid or paid promptly, normally 4 days in the case of railroads and 7 days in the case of truckers. And carriers are not permitted to collect more or less than the applicable rates and charges as published in their tariffs. Since no common carriers are subject to the Truth in Lending Act or regulation Z, this section would merely delete the requirement for ICC's enforcement from the act.

I look forward to considering amendments to the Truth in Lending Act in this Congress. I believe that these proposals which I have made should be considered, as well as the overall impact of the act. I think we have to look at what we have accomplished in view of what our goals were when we enacted the act. Since I am still a member of the Consumer Affairs Subcommittee which has jurisdiction over this subject matter, you can be sure that these and other questions will be given thorough consideration under the able leadership of Congresswoman LEONOR SULLIVAN who chairs the subcommittee.

"ECONOMICS: AN INTRODUCTORY ANALYSIS" BY PROF. PAUL A. SAMUELSON

HON. CHARLES W. WHALEN, JR.
OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1973

Mr. WHALEN. Mr. Speaker, 6 years ago I left the classroom to assume my duties as a Member of the House of Representatives. For 14 years prior to coming to Congress I taught economics—and served as departmental chairman—at the University of Dayton. During this period one of my primary tools was Prof. Paul A. Samuelson's monumental work, "Economics: An Introductory Analysis."

According to the March 24 issue of Business Week, Mr. Samuelson's textbook still is the "bible" for many principles of economics students throughout the country. Its contents have been revised to keep the reader abreast of current economic thought. And, in line with present trends, the price, too, has changed—upward, of course.

As the Business Week article observes, the broad circulation of his book makes Samuelson "one of the most influential economists of the century, with a large segment of a whole generation educated by his presentation." Yet, Professor Samuelson's reputation as an economist, states Business Week, emanates more from his work in scientific analysis "that brought him the 1970 Nobel Memorial Prize."

For the information of my colleagues, I take this opportunity to insert the Business Week article in the RECORD:

SAMUELSON'S TEXT NEVER GROWS OLD

It all started modestly enough as a departmental assignment for the young associate professor at the Massachusetts Institute of Technology: Write an introductory economics textbook that would not put the school's bright engineering students to sleep. "MIT students had always hated economics," recalls Paul A. Samuelson. "My only requirement from the department chairman was to make the book interesting."

That was in 1945, and Samuelson found it no easy chore to turn the dry statistics and exotic abstractions of the dismal science into lively reading material. The original one-year, half-time task spread across almost three years, but by 1948, when McGraw-Hill Book Co. deemed the manuscript fit to print, "I knew I had something that would sell well," he says.

He was an astute prophet. Next week, 3-million copies later and several million dollars richer, Samuelson will mark the 25th birthday of *Economics: An Introductory Analysis* with the publication of the textbook's ninth edition, which the author calls "the most thoroughgoing revision of the last dozen years." It retains the basic structure of the first eight editions, but adds new material on the history and criticisms of mainstream economics and presents a new "quality of life" measurement as an alternative to the gross national product.

A PHENOMENON

Not that Samuelson has ever needed any special features to put his book across. In its quarter-century in print, *Economics* has become one of the phenomena of the publishing world, rivaled in exposure by nothing in its field except, perhaps, the compulsory Marxist texts of the Soviet Union. Including second-hand sales, it has probably reached more than 10-million readers in 26 languages (including Russian) with its clear, rigorous exposition of post-Keynesian economics.

The success of the textbook has spawned dozens of imitators and some 50 competitors for the lucrative book market in economic principles courses. The only close rival is another McGraw-Hill introductory text by Campbell R. McConnell, now in its fifth edition, which splits about 30% of the market with Samuelson's primer. But the MIT economist has become the standard expositor of the arcane ideas of economics to the general public.

Even Samuelson is surprised at the book's reception over the years. The first edition sold 50,000 copies, "but I would have sold out for the [rights to] 30,000," he says. "And I thought it would be good for only one or two years." He now can count on sales averaging 100,000 a year, with as many as 150,000 during the first year of a new edition. That means annual royalties well into six figures.

A "VINTAGE" REVISION

The ninth edition, a lavishly diagrammed, 42-chapter, four-color production selling for \$11.50, is far removed from the austere 1948 number, whose 27 chapters were illustrated sparsely in black and white and sold for just \$4.50. It is now the central feature of a marketing package that includes a study guide, programmed text, outside readings, instructor's manual, test bank, and transparency masters. But the big selling point for the new edition—and its main contribution, in the author's view—is the introduction of a life-quality indicator that he has dubbed "net economic welfare" or NEW.

Samuelson features the idea, which he adapted from research by William Nordhaus and James Tobin of Yale, in the first chart of the first chapter and treats it later in more detail. NEW, he says, corrects GNP for the benefits of leisure, for household work, for pollution and its abatement, for commuting costs, and for "the disamenities

of urban life," among other things. "You may have to trade off some conventional GNP growth to get more NEW growth," he says. "It's an absolutely overdue concept in economics, that people can trade off quantity of goods for quality of life." Whether or not his exact formulation of NEW catches on, he says, "the quality-of-life considerations that are involved in NEW will be in all the textbooks 10 years from now."

NEW is not the only new feature in the ninth edition, says Samuelson, who terms this a "vintage revision" comparable to the third edition in 1955 and the seventh in 1967. He has added a chapter on the evolution of economic doctrines, an appendix on Marxian economics, and more extended discussions of cost-push inflation, racial discrimination, poverty, the function of the pricing system, urban problems, and what he calls a "be-lated" treatment of women and sex discrimination. "I could kick myself that this wasn't in the eighth edition," he says. "My consciousness wasn't sufficiently elevated."

AREA OF INFLUENCE

The broad circulation of Samuelson's *Economics* has helped to make the tweedy, crew-cut father of six one of the most influential economists of the century, with a large segment of a whole generation educated by his presentation. But his reputation as an economist emanates more from the scientific work that brought him the 1970 Nobel Memorial Prize for doing "more than any other contemporary economist to raise the level of scientific analysis in economic theory." His 200-odd scientific articles have dealt, mainly in mathematical terms, with virtually every area of economic analysis.

Samuelson, 57, still regards his scientific work as his main concern. This term he is teaching graduate courses at MIT in welfare economics and mathematical economics, writing an article on "Karl Marx as a mathematical economist," and touring Japan and Australia for three weeks in March as a Lincoln lecturer under the Fulbright program. He regards the textbook as "another layer of fame," but points out that his name as an economic scientist had been assured before the first edition of the book appeared.

Nevertheless, Samuelson does not take the textbook lightly. "I've been working on the ninth edition day, night, and weekend since the first of June," he says. The final touch was a revision of data to account for last month's dollar devaluation. He even gets involved in the page display. "I look at every spread," he says. "I think of myself as a student looking at the book at 12 midnight. If a spread looks too heavy, I put in subheads and type variations, so you won't find even a single plain page."

The extra effort is becoming a necessity in an increasingly competitive market. "Samuelson's dominance won't continue indefinitely," says Charles R. Wade, marketing manager for McGraw-Hill's business and economics texts. "How long he can keep his book high on the charts depends upon how well he keeps up with the needs of the field."

LEHMAN INTRODUCES BILL TO COMBAT ALCOHOLISM

HON. WILLIAM LEHMAN
OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1973

Mr. LEHMAN. Mr. Speaker, today I have introduced legislation to inject new life into the Nation's attack on alcoholism.

My bill, the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treat-

ment, and Rehabilitation Act Amendments of 1973, extends the grant authority of the National Institute on Alcohol Abuse and Alcoholism for another 3 years. The bill provides contract and project grant authority of \$100 million for fiscal 1974 and \$120 million for each of the following 2 fiscal years.

In addition, my bill authorizes additional grants to those States who are delaying adopting the Uniform Alcoholism and Intoxication Treatment Act, because of the expense of setting up treatment facilities required by the act as an alternative to the criminal justice method of dealing with alcoholics and alcohol abusers. This section is aimed at encouraging the States to adopt the principle that alcoholism should be treated as a public health problem, not a criminal activity.

Alcohol is our greatest drug addiction problem. More lives are ruined by alcohol than all other forms of drugs combined.

What makes alcohol even more dangerous is its social acceptance.

I include at this point an editorial which appeared in the North Dade Journal some time ago:

BROTHER DIES, BROTHER CRIES: ALCOHOL STILL HARDEST DRUG

His inner agonies I never knew; I just shined his shoes and loved him.

In those days he smiled a lot, the skin wrinkling oddly over his oft-broken nose. He'd inspect his shoes, declaim vigorously upon my incompetency as a shoeshine boy, toss me a quarter and leave.

I'd have given an arm to have gone with him. But when you're 10, you stay at home, count your well-earned coins and dream of the day when you can be like your idol with his penchant for fast cars, pretty girls and the wilder kind of life.

But dreams do not tarry and when we wake we often find our idols have flown. I saw him only infrequently during the last 15 years; each time he had deteriorated further.

Things looked incredibly fine at first.

He married and quickly there were two sons, each more handsome than the other. But that marriage was wrecked, washed up on the rocks of a bourbon and soda.

Then there was another marriage and another beautiful son. But that marriage drowned also.

Then the physical decline began. A rough and rugged longshoreman became a bent and aging skeleton, alternately bloated and emaciated.

The doctors warned him; another wife watched over him; a mother (as she had for years) wept for him; and a former idolator chastized him.

But he never listened for very long.

Instead he assaulted his body with his particular drug: Sunday that body surrendered.

My brother died. At 40 he became another martyr to a drug culture that has flourished in this nation since the Revolution. He never touched heroin or cocaine or LSD.

He drank. And you may believe what you will, alcohol is still the hardest drug of all.

I believe that my bill speaks to the need for continuing the program of a health care approach to the problem of alcohol abuse.

The text of the bill, as well as a section-by-section analysis, can be found on page 6910 in the RECORD of March 8, 1973.

MASSACHUSETTS ANTIPOVERTY FUNDS TO BE ADMINISTERED THROUGH ELECTED OFFICIALS

HON. PAUL W. CRONIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. CRONIN. Mr. Speaker, the Boston Globe printed a story on March 21, 1973, which stated that a bill to have the State assume antipoverty funding, which had previously come from OEO, had been endorsed by a legislative committee and had been supported by the Governor. This funding would allow 24 Community Action Agencies to continue to operate after OEO funding ceases on June 30.

To restate President Nixon's position on Community Action Agencies, the decision to continue or not to continue these agencies should be a local decision and should not come from Washington. If the programs are continued and funding does come from local sources, then the local elected officials can be held accountable for the activities of each program and more efficient and well-managed programs will be developed.

The committee of the Massachusetts Legislature which voted to endorse local funding also voted to allow local decisions to be made by local officials who will be held accountable for the responsible expenditure of the antipoverty dollar.

The basic principle of local accountability has been lacking in the past and is one of the major reasons why so much of OEO funding has been misspent and misdirected.

I include the article to be printed in the RECORD. I hope that more communities will follow the principle of local accountability to elected officials which Massachusetts has initiated.

The article follows:

COMMITTEE BACKS MASSACHUSETTS BILL TO FOOT \$8 MILLION OEO COST

(By Joseph Rosenbloom)

Responding to the cutoff of Federal funds from the Office of Economic Opportunity (OEO), a legislative committee yesterday endorsed a proposal under which Massachusetts would assume the \$8 million cost of operating the state's community action programs.

The Social Welfare Committee also voted to report favorably a bill providing for cost-of-living increases greater than 3 percent for the 350,000 welfare recipients in the state now ineligible for them.

Several hundred persons attended the committee hearings on both measures in Gardner Auditorium of the State House.

Though dozens of proponents waited to testify, the committee terminated the hearings on both bills after less than two hours of testimony on each and voted unanimously in favor of them.

In each case, the heavily partisan crowd, including many welfare recipients and officials, applauded. Seven of the 19 committee members voted in each instance.

The bills now go to the House and Senate for further action.

Administrative heads under Gov. Francis W. Sargent said he supports both pieces of legislation.

Thomas I. Atkins, secretary of the state Office of Community Affairs, said the cutbacks in Federal OEO funds imperil the ex-

istence of the 24 community action agencies across the commonwealth.

"We cannot let their existence depend on the vagaries of national politics," he said.

The community action agencies last year received \$8.5 million in operating funds from OEO. The Nixon Administration has announced that it will discontinue this funding as of July 1.

The 24 agencies last year administered about \$53 million in money from local, state, Federal and private sources for a variety of programs, including day care, work training, drug counseling and family planning, among others.

Rep. Norman S. Weinberg (D-Brighton), who filed the bill, said it would be "cruel" to deprive the indigent "of these services at a time they are so vitally needed."

"We can't just turn our back and walk away from these programs," he said.

According to agency figures, the services, which OEO initiated in 1964, last year benefited 485,456 persons in the state.

In backing the cost-of-living adjustments, Welfare Comr. Steven A. Minter said failure to approve them would render welfare recipients "second class citizens."

The proposal would cover recipients of aid to families with dependent children, of general relief and of disability assistance. Some 57,000 persons who receive old age assistance already qualify for cost-of-living boosts.

The proposal means, for example, that a mother with three children receiving \$73.50 a week in welfare payments would collect an additional \$2.20 a week, assuming a three percent increase in the cost of living.

The bill also calls for proportional adjustments downwards, if the cost of living declines by 3 percent or more.

The committee heard other legislation which would direct the Public Welfare Dept. to issue identification cards for welfare recipients. Without the cards welfare recipients would be unable to cash a welfare check.

Opponents denounced the measure as a "totalitarian step." Several drew an analogy to South Africa, where under its apartheid laws blacks must carry special identification and passes.

Rep. Melvin H. King (D-Boston) said the costs of administering such a system would exceed the savings in the prevention of welfare fraud.

Sponsor of the bill is Rep. Arthur L. Desrocher (R-Nantucket).

GAO REPORT CRITICAL OF OEO

HON. BEN B. BLACKBURN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. BLACKBURN. Mr. Speaker, in an article released on March 17, 1973, Human Events reports that a report which will shortly be released by the General Accounting Office has found may OEO programs deficient in a number of areas. These deficiencies included inadequate controls over cash, payrolls, travel expenses, procurement, consultant services, and property.

In the interest of helping the poor and creating an antipoverty program which actually does work, I insert the following article at this point in the RECORD:

SECRET GAO REPORT SHOWS SCANDALOUS OEO WASTE

Freshman Sen. Jesse Helms (R-N.C.), who has been digging deeply into the antipoverty program, has uncovered a draft re-

port from the General Accounting Office that greatly bolsters the Administration's case for scrapping the Office of Economic Opportunity and its Community Action Programs (CAPs).

The confidential report, which will probably be released by Helms this week, is actually a revised version of an earlier draft put together by the congressional watchdog agency last June. Why a final report has never been released remains something of a mystery, but the November 30 document obtained by Helms is a devastating indictment of the OEO program.

The GAO found that in 63 per cent of the programs it reviewed there were "significant deficiencies" in the financial operations. These deficiencies included "inadequate controls over cash, payroll, travel expense, procurement, consultant services and property." In 8 per cent of the cases, misappropriations of funds had occurred which were directly traceable to improper management controls.

Moreover, the public accountants used by OEO agencies to audit individual programs were found to be sadly wanting by GAO. Some accountants, the GAO report stated, inexplicably failed to include known deficiencies in their formal audit reports. Much of the work "could not be accepted as adequate professional performance" and in several cases the accountants "did not prepare or retain work papers showing the nature and extent of the audit work done."

In many cases, said the GAO, the public accountants' performance "raises a question as to their independence and their ability to objectively express an opinion on the grantee's financial statements and accounting and internal control systems."

What is especially significant is that the GAO gathered this data from just a small sampling of the nearly 700 anti-poverty auditing reports issued in fiscal 1970 that originally indicated no critical deficiencies in program operations. (Some 300 reports showed important deficiencies.) Yet in examining only 27 programs receiving grants ranging from over \$200,000 to \$2 million, the GAO found that fully 17 of them had been improperly audited. Here, for instance, are just a few of the specific findings by GAO:

An anti-poverty agency in Iowa, whose certified public accountant had given it a clean bill of health, "had been operating with several serious deficiencies in controls over funds, personnel, travel and procurement practices." Blank checks were being stored in an unlocked desk drawer and there was no control over the facsimile signature check-signing machine.

These weaknesses, charges GAO, "enabled one employee to make unauthorized payments to himself amounting to \$7,035 during a seven-month period. Of this sum, \$6,565 was recorded as salary advances and \$470 as travel advances." About 17 months later—after pressure from the bookkeeper—all of the unauthorized advances had been recorded as recovered, but the GAO report suggests possible fraud here as well.

In reviewing the employee's restitution payments, says GAO, it found that \$760 of the amount recovered represented his refund of a payment (\$1,000 less payroll deductions) he had received for vacation leave but not taken. Yet there were no time and attendance or leave records available to substantiate the propriety of the leave payment. GAO's calculations based on the employee's length of service and his rate of pay indicated that "the employee could not have earned \$1,000 in vacation pay by the time payment was made, even if he had never taken a day of vacation leave."

Moreover, during and after he was making restitution of funds, the employee received two extra salary payments totaling \$705 in addition to his regular pay. But the records

did not show the basis for the extra pay, nor could OEO agency officials provide an adequate explanation for this. Even more curious, the CPA firm had been well aware of all these shenanigans, but had refused to put this information in the audit report because it might have caused the OEO in Washington to terminate the funding of the Iowa anti-poverty agency! Adds the GAO:

"In addition to the lack of time and attendance and leave records for some employees, we noted that: (1) employees were being granted compensatory time off in excess of the amount of leave that they had earned; (2) salary increases were being granted to employees in excess of the 20 per cent limitation in OEO regulations and without the required OEO waiver; (3) purchases were not properly controlled because purchase orders either were not prepared or were prepared after the purchase had been made; and (4) a significant number of travel payments were made which were not supported by travel vouchers. The public accountants were aware of but had not reported the above-noted weaknesses."

A certified public accountant firm's audit report on the operations of a grantee agency in Texas also reflected no significant weaknesses regarding control of financial operations, but the GAO found a number of serious deficiencies.

For instance, no time and attendance records were kept on salaried employees; no records were maintained on employees' leave earned or used; OEO's limitations on starting salaries were not complied with; written purchase orders were not prepared and vendor invoices were paid without evidence that the goods had been received.

In reviewing the few work papers that the public accountant prepared, the GAO found a reference to a case of forgery involving 16 checks totaling nearly \$1,000. But the public accountant had not mentioned this in the audit report, claiming the employee had returned the funds.

The CPA firm reporting on a grantee agency in California affirmed that the agency's controls were adequate. No deficiencies were reported and no costs were questioned in the audit report. Yet the GAO found over 13 serious deficiencies. Some of them:

About 20 per cent of the employees' record of leave earned and used was not being maintained on a current basis; no personnel records were maintained for part-time employees; the anti-poverty agency had not complied with Internal Revenue Code requirement that federal income and Social Security taxes be withheld from wages paid to employees. No records, furthermore, were maintained showing the basis for selecting a particular contractor or determining his fees, and contracts awarded by the agency were not specified as to the scope of the services to be provided or the payment terms.

After reviewing the operations of a different California anti-poverty agency, a licensed public accountant reported no significant weaknesses in the accounting system and only minor weaknesses in the area of personnel records. But the GAO found grave deficiencies, such as:

Two large checks (\$15,000 and \$7,942) were issued for the purpose of providing a camping experience for 1,000 Indian boys, but were made out to an individual in the organization providing services, rather than to the organization. In some cases, the disposition of funds from checks drawn to cash could not be determined. The grantee's executive director was being held liable by the grantee's board of directors for the personal use of \$768 which was entrusted to him to reimburse board members for travel.

Procedures were so loose that one individual who alleged the existence of a contract with the anti-poverty agency was paid \$972, even though a written contract did not exist

and even though the services were not desired by the agency. Travel costs, furthermore, were 40 per cent—or \$20,000—over the budget.

In the program year covered by the audit report, grant funds amounting to about \$4,500 were expended for an unauthorized trip by agency personnel to Alaska. In another instance, the lack of proper approval requirements allowed about \$470 of grant funds to be used to pay for an automobile rented for the personal use of an employee.

These examples, furthermore, are just a fraction of the millions of dollars in waste and unauthorized expenditures that the GAO investigators found in OEO's Community Action Programs. But they clearly point up the reason President Nixon and acting OEO Director Howard Phillips are now diligently trying to eliminate the Community Action Programs and terminate the entire OEO agency.

TENNECO, INC., TAX AVOIDER OF THE WEEK

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. WALDIE. Mr. Speaker, with the date for filing income taxes less than a month away, the average taxpayer in America is entitled to know and to be able to contemplate the amount of taxes that will not be paid by one of the largest and richest conglomerates in the country.

He is entitled to know because he will be making up the difference between what the large corporations ought to be paying in Federal corporate income taxes and what they actually will be paying.

Next month he will be, in effect, helping to subsidize some of the richest, strongest, most economically powerful and overgrown corporations in the country.

He is entitled to know the extent to which he is doing so—and to ask why he is expected to do so.

Therefore, in conjunction with the Tax Action Campaign of the New Populist Action group headed by Senator Fred R. Harris, I am today disclosing for the first time the percentage of Federal corporate income taxes paid in 1971 by one of the most massive of these conglomerates—one which boasts in its advertising that it "touches the life of every man, woman, and child in this land."

At the same time, I am announcing here in Washington the fourth award of the Tax Action Campaign to this particular conglomerate as the Tax Avoider of the Week.

This week's award goes to Tenneco, Inc.—a multi-loophole corporation which controls land holdings of nearly 2 million acres, or twice the size of the State of Rhode Island, and controls 149 subsidiary corporations scattered throughout the world.

It reported net income before Federal taxes in 1971 of \$245,220,000. Clearly Tenneco is no hardship welfare case.

Yet in 1971, Tenneco paid not the standard tax rate of 48 percent set by law on net income in excess of \$25,000—but

an effective tax rate of no more than 17.1 percent.

The award ought to go more appropriately perhaps to the army of corporate bookkeepers, lawyers, and accountants for Tenneco who accomplished their mission of tax avoidance with efficiency and dedication. The loophole in our tax laws as they exist which made that accomplishment possible deserves the anger and outrage of the average taxpayer.

Tenneco, indeed, "touches the life of every man, woman, and child in this land." It touches them for millions of dollars in what are, in effect, subsidies to the corporation borne by the average taxpayer and running into the millions of dollars.

Sometimes the subsidies are direct.

In 1970, Tenneco received the fifth largest farm payment in the country—\$1.3 million—to subsidize H. M. Tenneco agricultural operations in California, my own State.

Tenneco was further subsidized by the State income tax payers in California and specifically property tax payers in Kern and other counties to the tune of several thousand more dollars under the Williamson Act which was designed to keep land in farming by providing the incentive of tax breaks.

Tenneco is paid by Federal taxpayers, therefore, not to grow crops and by California taxpayers to maintain the land for farming.

In point of fact, there is no way at present to accurately tell how many loopholes are employed by Tenneco and to what extent in order to accomplish a lower tax rate on their Federal corporate taxes than the average taxpayer is permitted to enjoy.

But we do know there is a wide variety of choice which enables the discriminating corporate loophole shopper to find just the break he needs and at the right price.

There is scarcely an activity engaged in by Tenneco, with its 149 subsidiaries, ranging from shipbuilding to cattle ranching, to pistachio packaging which does not bring forth its own tax break.

Perhaps the most intriguing of the corporate activities pursued by Tenneco is in land—an activity which "touches" the lives of family farmers in my own State of California, and our small businessmen, property tax payers and all consumers in a manner which ought to disturb anyone at all concerned with the competitive preservation of any concern which is not a corporate giant.

The acquisition in California most notorious for its impact in this regard has been the acquisition by Tenneco of the Kern County Land Co. and subsequently the proliferation of absentee syndicate farming through the Tenneco marketing apparatus which promises to control agricultural production in California "from seedling to supermarket."

The irony is that the family farmer driven from the fields by Tenneco, the small California businessman forced to close his doors and the consumers who face higher prices from ultimate lack of competition are the same ones subsidizing the operation of Tenneco, Inc., by

being forced to pay higher taxes themselves.

Such tax practices as Tenneco and other conglomerates are now permitted to engage in quite clearly are long overdue for total revision.

The first step is to determine with precision the exact methods employed by Tenneco to achieve its tax avoidance of a fair and normal share of the overall tax burden.

Therefore, I join with others in calling on Tenneco to make this information public and in calling for tax reform to remove the tax inequities which result in average taxpayers subsidizing huge conglomerates.

EDITORIAL SUPPORT IN THE CLEVELAND NEWSPAPERS FOR THE URBAN EMPLOYMENT ACT

HON. JAMES V. STANTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. JAMES V. STANTON. Mr. Speaker, on March 19 I introduced the Urban Employment Act of 1973, which would, for the first time, provide Federal assistance to the large cities in their efforts to retain and strengthen their industrial base. Certainly the need for such legislation has been shown in recent years by the large number of plant closings in the cities, and the industrial migration to suburban and rural areas.

The Urban Employment Act addresses itself to the two major problems confronting industry in the cities: the need for land, and the need for capital. Grants and loans would be offered to cities for the acquisition and development of land, which could then be formed into new industrial parks, and offered to business at a competitive price. Low-cost, long-term loans would also be available to businesses for development of facilities in the cities.

I am extremely pleased that the day after the bill was introduced both of the daily newspapers in Cleveland, the Press and the Plain Dealer, expressed their support for this legislation and other such efforts. I would now like to commend these editorials to the attention of my colleagues:

[From the Plain Dealer, Mar. 20, 1973]

KEEPING JOBS IN CENTRAL CITY

Saving jobs in the central city has become a fierce struggle. Cleveland is striving to stem the outward movement of factories. One method used by other major cities is the "land bank," which offers good industrial sites to companies that might move away.

To bank any central-city land costs more than a city by itself can afford. Land banks have worked so far with the help of the federal Economic Development Administration (EDA). Its grants will be cut off unless Congress passes a pending bill to extend it a year.

Mayor Ralph J. Perk's proposed land bank is therefore in peril. Two area congressmen, Charles A. Vanik, D-22, and James V. Stanton, D-20, are acting to keep the EDA alive, and to revive support for urban employment from the federal level.

A City Planning Commission study recently showed that land bank land in a central-city industrial area would cost \$158,761 an acre. Out in Solon or Twinsburg similar land is priced at \$15,000 to \$20,000.

Without a subsidy it would be impossible to swing the central-city land bank at that spread of prices.

Rep. Stanton has introduced a bill which would lend a city 90% of the purchase price for the land. The money could also be used for demolition. Corporations, too, could borrow for construction or to buy equipment. His bill, the Urban Employment Act of 1973, was put together after meetings with Mayor Perk, labor, business and planning spokesmen here.

Without some such federal help central-city jobs can melt away, or be lured to other communities. Cleveland's unemployment hit 11.8% in 1971. That was the highest for the 20 largest U.S. cities. More than 45 manufacturing concerns and more than 25,000 jobs were lost by Cleveland in 10 years, according to Vanik.

Without the strong help of a federal program it will be impossible for Cleveland proper to hold on to the jobs now at stake in its innermost neighborhoods.

[From the Cleveland Press, Mar. 20, 1973]

PUTTING LAND IN BANK

The proposal to help big cities set up "land banks" with the help of federal dollars is an innovative way to protect jobs and keep industry from moving out of urban centers.

Legislation for this was introduced in Congress yesterday by Cong. James Stanton. His bill envisions "banks" of land bought by cities for resale to businesses that might otherwise move from the cities, putting employees out of work.

Stanton views this as attacking the problem of unemployment on another front. Noting that the Federal Government often trains workers for jobs that turn out to be nonexistent, the congressman proposes a measure to insure that businesses stay in big cities where the unemployment problem is most critical.

The City Plan Commission completed a study recently which showed that the high cost of land is jeopardizing Cleveland's efforts to start on its own a land bank for industry.

For instance, Cleveland would have to sell land in the Woodland area for more than \$150,000 an acre to recoup its investment. That is an outlandish price, considering industry could buy land in some suburbs for as little as \$20,000 an acre.

The Stanton plan would create a pool of \$450 million which cities could tap for 90% of the purchase price for land for industry. The city would develop the land and hold it for resale at prices which would compete with cheaper suburban acreage.

There has been a great deal of handwringing in recent years about the flight of industry from Cleveland, but there have not been many bright ideas about how to stem the exodus. Now Stanton has come up with one, and we hope his colleagues in the Congress lend their support to his proposal.

VIETNAMIZATION APPEARS TO BE SUCCEEDING AT LAST

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. LEGGETT. Mr. Speaker, our combat presence in Vietnam is, at long last,

at an end. This does not mean however, that we can turn our attention away from that area without fear of consequence. Now is the time when the fruits of Vietnamization, if there are to be such fruits, will begin to show.

A recent GAO report on the logistic aspects of Vietnamization indicates that there has been substantial progress in many areas of the Vietnamese military toward self-sufficiency. There are relatively few U.S. military technical advisers in Vietnam, and that number is steadily decreasing. The ARVN is now extremely well-equipped for almost any function it could conceivably be called upon to perform. Training is going forward rapidly and with success; GAO states that Vietnamese military personnel adapt and train well, and ever-increasing numbers of them are becoming proficient in such essential areas as automatic data processing. ARVN road transportation is rated by U.S. experts as thoroughly capable of performing their assigned tasks, and the roadbuilding program currently underway will provide Vietnam with over 3,000 miles of modern, high-speed highways linking all major population centers. The Vietnamese naval shipyard will also achieve complete self-sufficiency in the very near future.

All these are highly encouraging developments. They point, hopefully, to a time when the Vietnamese will be capable of defending themselves locally without our help. This is not to say, however, that all difficulties have been overcome.

While top Vietnamese management is capable and effective, it is spread very thin, and there is a severe shortage of trained middle managers; control over military material susceptible to black marketeering requires improvement; Vietnamese contractors capable of filling military needs are still scarce; the quality of some military maintenance is questionable, although some is demonstrably superior. None of these problems is so severe, however, that it cannot be overcome, and progress is good.

There remain two major problems that are not so easily solved as those previously mentioned. First, the Vietnamese military establishment is far too large for the Vietnamese economy to support. Admittedly, this is due almost exclusively to the fact that Vietnam has had war as its No. 1 priority for so long. We should hope, however, that the coming peace will be of such a nature that two things will happen: First, the Vietnamese economy will be able to recover to the point that it becomes strong enough to support a reasonable military force; and second, after elections have taken place, all military forces in Vietnam would be drastically reduced in size. These actions would be complementary, and certainly beneficial to all concerned. The unfortunate alternative is a Vietnamese economy so overburdened with the requirement to support a vast military force that it would require massive and constant aid to keep from collapsing.

The second major problem is that, in our munificence, we have given to the Vietnamese military items which there is

no conceivable way for them to support unaided. We do our allies no favors by creating in them appetites that they cannot afford, whether because of advanced technology or sheer expense. I would hope that we would be able to confine our assistance to the type of equipment that the recipients could reasonably be expected to support by themselves shortly after receiving it.

This report provides encouraging news at a time when it is sorely needed. No longer is aid on a massive scale required to promote stability in another part of the world, and that is most fortunate because aid is sorely needed for some of our own domestic problems. It is my hope that some of the same successes we can point to abroad will soon begin to appear here at home.

THE 25TH ANNIVERSARY OF NATIONAL ACADEMY OF TELEVISION ARTS AND SCIENCES

HON. THOMAS M. REES

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. REES. Mr. Speaker, the Hollywood Chapter of the National Academy of Television Arts and Sciences will celebrate the 25th anniversary of its founding on its annual local area Emmy Awards telecast to be aired in Los Angeles over KTLA, on April 28, 1973.

The Hollywood Chapter of the Academy is the founding chapter, expanded to include New York in 1957, and now including chapters in Chicago, Baltimore, Columbus, Phoenix, Washington, D.C., St. Louis, Seattle, San Francisco, and San Diego. In addition to bestowing the coveted Emmy Awards for outstanding achievement in television, the academy contributes to the development of talent in TV by awarding scholarships and fellowships each year to many promising students and professors in the communications arts.

In addition, the academy continually and tirelessly acquaints its membership with the latest technological developments in the industry, seeks and helps fledgling talent, provides monthly forums and seminars on pertinent topics of interest to all concerned with the growth of television, and stages viewings of foreign television shows for comparative and competitive purposes.

To assist in these functions, the academy maintains the vast and informative archival library of the industry at UCLA on the west coast, and at NYU in New York and American University in Washington, on the east coast, where are preserved films, tapes, kinescopes, scripts, and artifacts representing the development of the industry.

The academy is a truly definitive and unbiased spokesman for the industry because its membership includes the leadership of both management and labor. It is my feeling that the Congress should congratulate the Hollywood Chapter of the National Academy of Television Arts

and Sciences on its 25th anniversary of activity in developing television as a creative and provocative communications medium, and should encourage the academy to continue its many rewarding contributions to the industry.

IMPACT OF FEDERAL BUDGET ON THE UNIVERSITY OF CALIFORNIA: \$100 MILLION LOSS

Hon. Yvonne Brathwaite Burke

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mrs. BURKE of California. Mr. Speaker, Charles Hitch, president of the University of California, has made a comprehensive review of the impact of the proposed administration budget, and he estimates that the total cumulative impact on the university through the 1974-75 fiscal year would be approximately \$100 million.

The analysis of President Hitch, which follows below, discusses the specific impact on the university in the areas of student financial aid, graduate student assistance, health manpower, research, agriculture science, and regional medical and other public service programs:

IMPACT OF THE PROPOSED 1972-73 AND 1973-74 FEDERAL BUDGETS ON THE UNIVERSITY OF CALIFORNIA—A FOLLOW-UP REPORT

(By President Charles J. Hitch)

This report supplements my report of last month. It comments on some of the specific Federal programs listed in the attached table and discusses the impact of reductions on University programs and functions.

On February 15, I estimated the total cumulative impact on the University through the 1974-75 fiscal year would approximate \$80 million. Subsequent reports from the campuses caused me to reestimate that the gross reduction may be on the order of \$100 million over the next 27 months. As time passes, the figure continues to grow. The attached table estimates a \$37.9 million reduction in 1973-74 and a \$66.5 million reduction from the 1972-73 level in 1974-75, for a cumulative total of \$104 million during the next two years.

Let me point out that these Federal impact figures are gross rather than net figures, in that they reflect estimated reductions in those programs which will be reduced but do not take into account possible increases in other programs. There will be some offsets, but how much they will amount to is far from clear. For example, the new Basic Opportunity Grants program will benefit students directly and, thus, will not be reflected in University records, but they will replace to some extent reductions in institutionally administered financial aid. The same is true of the Federally Insured Student Loans made to students by banks. Also, increases are expected in research grants and contracts in certain areas, and we are receiving some Federal salary range adjustment funds. But the program reductions which have been identified and which I would now like to describe will be very real.

I am informed that the Nixon Administration is determined not to increase any Federal departmental budgets. However, the constituent agency budgets within the departments may be revised to reflect increases in certain programs and reductions in others. I will recommend to The Regents' Special

Committee on the Federal and State Budgets that we seek appointments with key Administration officials to explain the adverse impact of certain proposed funding levels and how they affect programs vital to the health, well-being, and future prosperity of the Nation and the State of California.

Let me now comment on some of the figures presented in the accompanying table.

STUDENT FINANCIAL AID

In the established category programs, there will be a dramatic shift from institutionally awarded and administered funds to those awarded through the BOG (Basic Opportunity Grants) program by an as yet undesignated agency. In Educational Opportunity Grants (now known as Supplemental Opportunity Grants) and National Direct Student Loans, University of California students will lose about \$9 million in financial aid in FY 1973-74. Although we know that our students will qualify for direct Basic Opportunity Grants, the program will not be fully funded, and we and students will not know before fall, at the earliest, the amounts to be paid. Some campuses estimate that BOG grants to their students may total only 25% of the terminated categorical aid programs. The consequence, if alternative fund sources are not developed, will be a serious setback in the University's concerted effort to improve access to disadvantaged students in both undergraduate, graduate, and professional levels. In the Work-Study program, the funding level in the Federal budget, as proposed, will remain the same but proprietary and vocational schools will become eligible to share in the allocation of available funds. The estimated impact on the University is a more than 25% reduction in this very worthwhile self-help program, over \$900,000.

GRADUATE STUDENT ASSISTANCE

Many graduate student traineeship, fellowship, and scholarship programs are being phased out. Although it is extremely difficult to obtain precise summary data because of the many Federal programs involved, the best estimate to date is that graduate student and related institutional support will drop from \$23.6 million in 1972-73 to \$13.7 million in 1973-74, another reduction of nearly \$10 million.

Many of these programs are in the health sciences, mental health, and biomedical fields, and a substantial proportion of these funds support instructional programs. One of the consequences of these reductions may be to force admissions committees to include as criteria a student's ability to support himself and not just academic criteria. Nothing could be less desirable than to become "elitist" in an economic, rather than an academic sense. Secondly, many of the fields involved include areas where there are manpower shortages. Society needs biomedical research scientists, mental health workers, specialists in areas of alcoholism, drug abuse, suicide prevention, and other contemporary problems. Thirdly, these reductions will make a serious dent in total Federal graduate financial resources. One campus reports that graduate assistance will drop 24% in 1973-74 alone and 15% in 1974-75. Finally, pre- and post-doctoral trainees have played an important role in both the research and instructional programs in our medical schools and general campus life science programs. Their disappearance would be a grave loss to our undergraduate students.

HEALTH MANPOWER

In 1970, the Federal government declared a crisis due to the shortage of health care personnel and challenged America's colleges and universities to train the desperately needed additional professionals and their as-

sistants. We have responded to that challenge by increasing our enrollments to qualify for Federal health capitation grants, and in November, 1972, the people of California approved the funds necessary to construct the facilities needed to train these students. We now find that this Federal support is not to continue in the vital areas of health sciences capitation grants or institutional assistance for nursing, veterinary medicine, pharmacy, optometry, public health, and allied health fields. In these areas, the prospects are as follows: 50% reductions in 1973-74 and termination in 1974-75 of capitation funds for veterinary medicine, pharmacy, nursing, and optometry; and complete elimination of federal funds for public health, nursing, and allied health instructional support in 1973-74. Losses will total \$1.6 million in 1973-74 and \$2.7 million by July 1, 1975. Capitation funds support 31% of the Berkeley School of Optometry instructional budget, 15% of the Davis School of Veterinary Medicine budget, and 40% of the San Francisco School of Nursing budget.

RESEARCH

The research picture is particularly unclear. Certain programs will be increased, for example, NIH's Cancer Research Grants. However, these programs are not reflected in the discussion below or in the table. It is impossible to guess to what extent the University of California will be affected. On an overall basis, expenditures are currently exceeding expectations, but there is ample evidence to indicate that the current bull market is about to turn bearish, and I don't think this bear will be golden. We have been advised by campuses that many Federal research programs will be reduced. These reductions are estimated to have a \$9.6 million impact on the University in 1973-74 and a \$23.2 million impact in 1974-75. On the other hand, there are increases in some categories of Federally supported research, and campuses are generally optimistic that our faculty can successfully compete for whatever resources are available.

A substantial proportion of the reduction is expected in the National Institutes of Health Competing Research Grants Program. Our campuses report their prospects for expenditures in 1973-74 amount to only \$23.9 million contrasted with some \$28.7 million awarded to them last year.

NIH General Research (and Biomedical Sciences) Support Grants are being phased out. Let me quote from Chancellor McElroy's report for the San Diego campus:

"General research support funds have been used over the years to support faculty in part, to initiate promising research, provide continuity in productive research projects, and meet a wide array of needs in the research program for which no other ready source of funds is available. Phased reduction to zero of the general research support grants over the next several years will seriously affect the vigor of the biomedical research efforts at UCSD School of Medicine as well as others. While the GRS funds are small in comparison with the total research funds coming to the institution, they are used in such a way as to have an effect on the research effort beyond that which would be immediately implied by the amount of the funds."

University-wide, we face losing \$2.3 million per year of very flexible research support funds which have added quality and depth to both general campus and health science research programs.

In addition, we face the reduction of National Science Foundation ship operation funds used in conjunction with our Department of Commerce Sea Grant funds. Research efforts of great importance to the marine resource program which have been built

up at the Scripps Institution of Oceanography and at other cooperating University and State University campuses will level off this year and then face reduction unless restorations are made in the Federal budget or we receive a State augmentation.

The NASA research budget is also reduced, but our campuses believe that they will compete successfully for those funds available, and perhaps be able to hold even in the year ahead.

At our four AEC-funded Laboratories, we have received preliminary reports that personnel reductions totaling some 475 scientists and support staff will be necessary. The programs at the Lawrence Berkeley and Lawrence Livermore Laboratories will be hardest hit. The dollar impact is in addition to the campus research reductions contained in the attached table.

FEDERAL APPROPRIATIONS—AGRICULTURE AND OTHER

The proposed Federal cut of \$550,000 in Hatch Act and other Federal appropriations in the Agricultural Sciences would eliminate 25 FTE Research Scientists. It is based on the notion that our efforts are "primarily of local concern" and therefore of "low national priority." This is incorrect, and in any event a short-sighted policy. California produces more than 90% of sixteen important agricultural commodities, and about one-quarter of the entire U.S. food supply.

These cuts would reduce efforts in such vital areas as the control of crop-destroying, disease bearing insects by non-chemical means—an approach largely developed at the University and now being copied throughout the world. Studies in solid waste disposal, poultry and cattle disease control, development of new high yield plant varieties, genetic improvement of livestock, and new methods of irrigation are developing information vital to California agriculture, but equally valuable beyond the State's borders. More than half of these funds are aimed at the problems of natural resources and people in such areas as: water, air, and soil pollution; erosion control; wild-fire prevention; wildlife protection and management; watershed improvement; improvement of employment opportunities for the rural disadvantaged; enhancement of rural community services; and improvements in human nutrition. Truly a kaleidoscope of concerns that are vital to the State and the Nation.

The benefits of all these endeavors are not restricted to farmers, but aid in sustaining a viable food and fiber industry and in the improvement of the economic and social welfare of rural and urban families. These funds must be replaced so that our faculty members may continue their important research without interruption.

In addition to the reductions in Federal appropriations in Agriculture, Bankhead-Jones funds are also being terminated. This \$363,000 appropriation always supported basic instruction costs and is virtually indispensable from State funds in its use. The reduction affects 30 FTE faculty in several disciplines, including agriculture, home economics, chemistry, and engineering.

REGIONAL MEDICAL AND OTHER PUBLIC SERVICE PROGRAMS

The discontinuance of Regional Medical Programs (from \$5.4 million in 1972-73 to zero in 1974-75) will remove an important catalytic agent between the University's health sciences faculty and their respective communities. Continuing education programs for community health personnel, programs which are stimulating the general improvement of health care and specialized treatment programs, will all suffer. Some student residency programs will also have to be discontinued, including a family practice resident program in Sonoma County.

UNIVERSITY OF CALIFORNIA, SUMMARY OF REDUCED FEDERAL PROGRAMS AND PROPOSED STATE AUGMENTATIONS, 1973-74

Federal programs	Estimated expenditures			1973-74 proposed special State augmentations				Financial aid and graduate traineeships
	1972-73	1973-74	1974-75	Instruction	Research	Public service		
1. Federal appropriations (Bankhead-Jones, Hatch Act, McIntire Stennis, etc.)	\$913,000	0	0	\$363,000	\$404,000	\$146,000		
2. Health manpower instructional support ¹ (capitation funds, Hill Rhodes, etc.)	3,139,000	\$1,566,000	\$400,000	1,683,000				
3. Graduate student assistance and related institutional support	23,618,000	13,722,000	3,542,000	3,000,000				\$3,000,000
4. Student financial assistance (grants, loans, work study)	14,755,000	4,802,000	4,079,000					\$908,000
5. Research ²	39,212,000	30,654,000	16,004,000		\$382,000			
6. Regional medical and other community service programs	9,215,000	2,221,000	270,000	\$211,000				
Total	90,852,000	52,965,000	24,295,000	5,257,000	786,000	146,000		3,908,000
Gross 1973-74 Federal reduction		-37,887,000						
Gross 1974-75 Federal reduction from 1972-73			-66,557,000					
Total State augmentations		10,097,000						

¹ Capitation funds include only programs which will be phased out.² Instructional support principally for NIH and NIMH traineeships and language and area centers.³ The regents' budget also contains a \$2,000,000,000 request for EOP. The \$500,000 is for work study.⁴ Federal programs which will be reduced.⁵ For marine sciences research only.⁶ Family practice residents program and nurse practitioner program.

WELCOME VETERANS OF VIETNAM

HON. FRANK E. DENHOLM

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. DENHOLM. Mr. Speaker, the cease-fire agreement in Vietnam, however delicate or fragile, was welcomed by all Americans weary of war. It was the end of despair—and this is a time of new hope—as the men and women who have served their country with honor come home to loved ones and a future of their own making.

The personal sacrifice of years of war was more than frustration and individual hardship—it was an endurance of national morale.

There is no easy way to say "thank you" to so many that have done so much but to all I ask that my humble words to a great American of my congressional district be printed as a message to each and particularly to those Americans held for years as prisoners of war for what they have done and for what they have sacrificed in the defense of freedom and liberty:

Capt. RONALD M. LEBERT, USAF
Watertown, S. Dak.

DEAR CAPTAIN LEBERT: May I join in humility and pride with your family, friends and a grateful American people in expressing to you my sincere gratitude for your personal sacrifice for all of us. I may never know—but I shall always appreciate a sense of your joy in coming home after years of courage and duty with honor for your country.

You are welcome by the fireside of your countrymen—warmed by the friendship of freedom and the love of all that believe in the Liberty that you have so ably defended for God and country.

Your honest reward is beyond the command of man and may your memories of comrades and country never be forgotten.

Thank you, Sir—Thank you very much.

Sincerely,

FRANK E. DENHOLM,
Member of Congress.

It is appropriate that on Saturday of this week, March 31, 1973, that a grateful America will demonstrate on the streets of New York a symbolic public expression of lasting gratitude and a welcome home to the American service

men and women from the battlefields of Indochina. Happiness, home and honor to men of good will—and to the hurt, injured, dead and missing should we give—our prayers forever. And may they never be forgotten.

A REMARKABLE SEASON

HON. DONALD D. CLANCY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. CLANCY. Mr. Speaker, in the 51 years of Ohio State basketball tournament history, no Cincinnati team had been able to win the big school division, class AAA.

It gives me great pleasure to report that Elder High School won the State AAA crown Saturday, thus, perhaps, setting a precedent for future Cincinnati teams.

The championship is particularly pleasurable to Elder High School, its students, officials, parents, and alumni, because Elder this year is celebrating the 50th anniversary of its founding. The championship adds luster to the birthday cake.

The Elder Panthers, coached by Paul Frey, are Steve Grote, who has won almost every accolade this school year for his basketball and football skills, Bill Earley, Rick Apke, Henry and George Miller who are twins, John Sharbill, Paul Niemeyer, Ken Brown, Jerry Voge, Dick Dedel, Donald Kuhn, Terry McCarthy, and Jim Stenger. The assistant coaches are Tom Bushman and Ray Bachus, and the athletic director is Father Edward Rudemiller. The student managers are Bob Wolfram, Mike Keys, Greg Ellison, Bob Meyer, John Duennes, and Joe Berkemeyer.

The team compiled a 22-4 season win-loss record, despite playing against consistently taller teams. The squad's biggest man is its center, Rick Apke, who is 6 feet 4 inches tall. The four lost games were in the early part of the season before Coach Frey merged teamwork and a zone defense with the players' natural hustle, quickness, and aggressiveness.

The unselfishness, the willingness to work together as a team and the desire to excel are a credit to the school, the city of Cincinnati and the State of Ohio. All citizens of the Greater Cincinnati area and the State of Ohio offer sincere congratulations to the basketball champions and Elder High School.

BYELORUSSIAN INDEPENDENCE DAY

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. HELSTOSKI. Mr. Speaker, on March 25, 1918, the Byelorussian people proclaimed their independence and established the Byelorussian National Republic as a free and independent nation.

I am greatly pleased to join my colleagues in the House of Representatives in paying tribute to the Byelorussian people on their day of national independence. This day is being celebrated by Byelorussians throughout the free world, and I am sure that their friends and relatives who remain in their homeland would greatly enjoy being able to join in the celebration.

Mr. Speaker, in population Byelorussia approximates 10 million. To this we can add about 4 million Byelorussians in the Federated Russian Republic and close to a million distributed among the People's Republic of Poland, the Lithuanian S.S.R., and the Latvian S.S.R. This makes Byelorussians in European U.S.S.R. the third largest nation after the Russians and the Ukrainians, and the majority of the Byelorussians live in the Byelorussian S.S.R. The present capital of the B.S.S.R. is Minsk.

In religion the overwhelming mass of the Byelorussians are Orthodox. There is a Roman Catholic minority in the western district which were on the Polish border and there are small numbered groups of Protestants, chiefly Baptists and Methodists.

During World War I, which had overthrown some governments and weakened

others, Byelorussia had awakened to state life. After 3½ centuries of slavery the Byelorussians proclaimed to the entire world that they were living and will live. The Great National All Byelorussian Congress of December 5-17, 1917, caring for the fate of the Byelorussian people, had established on their land a republican system. Carrying out the will of the Congress and protecting the state rights of the people, the executive committee of the Rada of the Congress and protecting the state rights of the people, the executive committee decreed on the state order of Byelorussia and the rights and freedoms of its inhabitants and peoples.

This relatively rapid evolution of the state ideology among the active Byelorussian political workers in Minsk was hastened by events which in the meantime were taking place in the political and cultural center of western Byelorussia, Vilnia, which was separated from the central and eastern areas of Byelorussia by the rigid line of the front and then, after the occupation of Minsk by the Germans, by a no less rigid frontier of the military administrative division.

A second constitutional decree established first the provisional form of the Byelorussian National Republic (B.N.R.) so as to create its complete independent statehood. The further action of the Rada and its executive committee was only the logical result of the situation created by the second constitutional decree. On March 19, 1918, the Rada of the All-Byelorussian Congress broadened its membership by taking in representatives of the cities and counties and became the Rada of the Byelorussian National Republic. Of the national minorities that entered into the Rada, there were seven Jews, four Poles, two Russians, one Ukrainian, and one Lithuanian. A presidium was set up consisting of Dr. I. Syerada, Y. Varonka, and K. Ezavita. On March 23, the Rada was joined by representatives of the Vilnia Byelorussian Rada.

Then, on March 25, 1918, the Rada of the Byelorussian National Republic solemnly proclaimed the independence of Byelorussia and established it as such through the publishing of the third constitutional decree which contained the official proclamation. All the Byelorussian political parties, representatives of the Jewish parties, Poalej Syon and Bund, and the representatives of the Polish Socialist Party headed by Prystor, the future Prime Minister of Poland, voted in support of this act. Votes opposed were cast by the Russian Constitutional Democrats—Kadets, and the Russian Socialist Revolutionists—Esers, who formed part of some delegations of a few cities and counties. These even withdrew from the Rada of the B.N.R.

The Byelorussian Government quickly set to work to expand its activity in all fields of national life, with the exception of the military. The Germans forbade this. In spite of great difficulties connected with the war and the devastation of the country, the government made significant advances in the fields of education, culture, social protection, et cetera.

It was also very active in the international field, trying to secure recognition

from other states and opening up diplomatic and consular offices in a series of countries. The Byelorussian National Republic was recognized de jure by Austria, Czechoslovakia, Estonia, Finland, Georgia, Latvia, Lithuania, Poland, and Ukraine. It was recognized de facto by Bulgaria, Denmark, France, and Yugoslavia.

After the occupation of Byelorussia in July 1944, Soviet Russia reestablished the B.S.S.R. with all its former details. The one thing new was the admission of the B.S.S.R. in the organization of the United Nations as an independent state and a founding member.

From the very beginning, the occupation by the Communists brought a bloody reprisal on the Byelorussian people. Everything which had a national character was wiped from the face of the Byelorussian land as a manifestation of "Byelorussian bourgeois nationalism." In the cities and towns they undertook mass deportations of Byelorussian national and cultural leaders. In Smolensk, Minsk, Vitebsk, Vialyka, and other cities there were public hangings of the artists of the Byelorussian theaters, teachers, officials of institutions, priests, workers in the relief, et cetera. Mass arrests, shootings, and deportations to concentration camps were carried on of peasants who had left the kolkhoz for individual agriculture.

In 1944, the male population of Byelorussia was taken into the Soviet army and without training sent to the front, where they perished in masses. In the B.S.S.R. the slave kolkhoz was quickly reintroduced, and this time all of rural Byelorussia was collectivized. The independent Byelorussian church was destroyed and in its place was set up the Russian church with its center in Moscow.

Mr. Speaker, I feel that the spirit of healthy nationalism is very strong in Byelorussia. I am sure that in every family in Byelorussia there was at least one member of the family who was destroyed or arrested for supporting the Byelorussian liberation movement.

On this day of national commemoration it is fitting, therefore, that we Americans pay tribute to the gallant Byelorussian peoples. It is also fitting that we take this occasion to reassert our own faith in the principles of democracy, for it is those principles in which we find strength to sustain ourselves as a nation in the trials of the present and future, and it is also in those principles that we find the greatest inspiration for all men who seek a better life.

It is my hope that on this 55th anniversary of Byelorussia's Declaration of Independence, that her spirit of freedom will emerge in triumph and that the liberty of her people will be restored.

"THE GODFATHER"

HON. ANGELO D. RONCALLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. RONCALLO of New York. Mr. Speaker, "The Godfather" which is on the way to becoming the biggest money

earner in the movie industry provided the vehicle for Marlon Brando to be awarded the Oscar as the best actor. His portrayal of the "Godfather" deprecates and casts a shadow on all Americans of Italian heritage by apparently convincing a great many of the people of this great land that the lifestyle of the "Godfather" is typical of all Americans of Italian heritage. Mr. Brando is a theatrical prostitute who seeks to captivate the imagination and accolades of one minority group at the expense of another. Mr. Brando is a man who fights for many causes—any cause; it is part of his theatrical mind. He deserves one other Oscar—the biggest phony of the year.

ECONOMIC OPPORTUNITY ACT AT WORK

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. CLAY. Mr. Speaker, we hear a lot of talk these days about the failure of programs operating under the Economic Opportunity Act. Many of us in Congress disagree with these accusations. We believe the Economic Opportunity Act has had a tremendous, positive impact on our communities.

One such program, funded under the Economic Opportunity Act is "Special Impact: or Title 1-D, which provides seed money to urban and rural communities to stimulate business potential and thereby help such communities to revitalize themselves economically."

The Union Sarah Economic Development Corp. in St. Louis, Mo. is a fine example of what special impact can accomplish. The program funded by a \$2.1 million grant from OEO is serving the St. Louis community in an extraordinary fashion.

The March issue of the St. Louis West End World has featured the Union Sarah Corp. and I commend this article to my colleagues.

The article follows:

UNION-SARAH ECONOMIC DEVELOPMENT CORP. WORKS FOR AREA IMPROVEMENT

Blight and the concomitant evils of crime and disease are on the increase in cities across the country. In St. Louis, as in most other major cities, the conditions under which many people live strains the credulity of even the most callous. And yet, many in our city have more and live better than their fathers ever dreamed. But these enclaves of relative well being become fewer each year while those of poverty increase. This article concerns one effort, that of the Union-Sarah economic Development Corporation (USEDC) to reclaim the city as a viable community for all who live within its boundaries.

For those not familiar with USEDC, it is a St. Louis-based community development corporation funded by a \$2.1 million grant from the Office of Economic Opportunity. It is a for-profit corporation dedicated to improve the economic conditions of its residents through creating new businesses and encouraging others to locate in the Union-Sarah area, and by assisting, financially and otherwise, existing business. To this end USEDC has established subsidiary corporations in real estate investment and development, manufacturing, and retail business,

and has assisted small contractors and businesses by providing low interest loans and technical help. It has been unsuccessful in attracting other new business, and is less than satisfied with its impact on area unemployment.

One of 42 community economic development corporations across the nation, USEDC faces those problems endemic to all efforts created to alleviate poverty; e.g., lack of technical assistance, insufficient community support, and a large dose of that deadly small business disease, economic Darwinism. USEDC has learned that although small business efforts are fine, and entrepreneurship has its value, effective economic development demands projects that are labor intensive. In short, employment is the name of the game. Also, the experience of community development corporations nation-wide indicates that efforts of this magnitude are possible only when those who control the markets, the large corporations, are involved.

In 1971, nine major St. Louis based corporations spent a total of \$510,836,000 in capital expenditures—i.e., new plants and additions. Of this amount, \$200,000 was spent in the city of St. Louis, none of which was labor generating. These same corporations enjoyed sales of almost \$11 billion and profits of over \$397 million. Recent news releases indicate that in the coming year the story will be the same, as one company has announced plans for new plant construction of nearly \$200 million and another company announced a projected expenditure of \$100 million, none of which is likely to be designated for the city of St. Louis. It seems reasonable to ask, why is this?

Are the corporations going to abandon the city of St. Louis, or will they recognize that they are public as well as private and that poverty, disease, and crime are their concern as well as the concern of each of us as individuals?

USEDC is asking that St. Louis corporations join with them in stemming the tide of unemployment and city blight by (1) Participating in joint ventures with USEDC to establish plants in the area, (2) Provide sub-contracts so that USEDC can create new manufacturing efforts, or, (3) Establish plants in the Union-Sarah area instead of Florida, Georgia, or wherever.

To west end residents, we appeal for support in our efforts to convince our major corporations that their welfare and best interests are tied not just to profits, but to the health and vitality of the total community.

REMARKS ON PROPOSED SOCIAL SERVICES REGULATIONS

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. LEHMAN. Mr. Speaker, on March 15, the Select Subcommittee on Education held hearings on the proposed social services regulations to the Social Security Act.

Although I did not offer prepared testimony at those hearings, I would like to include in the RECORD my remarks as a member of the subcommittee on these proposed regulations:

REMARKS OF CONGRESSMAN WILLIAM LEHMAN

Thank you for calling this meeting, Mr. Chairman. One of the best programs we have had in Florida is, of course, the day care centers. As you stated, it seems the big problem in this country today is not necessarily the welfare problem but the working poor problem. That is so much broader and so much greater, I think, than the smaller

welfare problem, and yet every single stumbling block possible seems to be thrown in the way of those who want to work.

The old work ethic thing has every possible stumbling block, whether it is the day care center problem or many other things that seem to be thrown into the way of the working poor people.

Perhaps these kinds of hearings should be extended, if the Chairman would consider that, into the areas where day care centers are functioning. There is something about the impact of being where it is happening that would be beneficial.

In a way, not only is the Administration seeming to me to be against work itself, but even against Christian charity, by prohibiting private grants.

THE LEGACY OF JEFFERSON AND JACKSON

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. WALDIE. Mr. Speaker, recently I attended a Jefferson-Jackson dinner in San Jose, Calif. At that dinner, I had the distinct pleasure of listening to a rather eloquent speech given by Dr. Samuel Bloom on the legacy that Thomas Jefferson and Andrew Jackson left for future Americans.

At this time Mr. Speaker, I would like to submit into the RECORD the text of Dr. Bloom's speech and urge that my fellow colleagues take a few minutes in the press of business to read the rather eloquent thoughts of Dr. Bloom and take note of their relevance to the business of the Congress in this day and age.

The text reads as follows:

THE LEGACY OF JEFFERSON AND JACKSON

(By Dr. Samuel B. Bloom)

When Jefferson took office as President in 1801, he said in his inaugural address that now we were all Federalists, all Republicans. This was supposed to usher in an era of good feelings. However, the era got off to a very bad start. Before Adams went to bed, the night before the inauguration, he stayed up until past midnight appointing judges and justices of the peace to the newly reformed federal judiciary. It was no surprise that all the commissions were for loyal Federalists. When Jefferson refused to deliver these commissions a series of events were initiated leading to the famous Marbury vs. Madison decision. This was the decision, I am sure you all know, establishing judicial review of legislative acts. John Marshall, chief justice and a most avid Federalist, knew that Adams had appointed these judges and justices hoping to stem the Republican tide with Federalist dams in the judiciary system just in case all other instruments of government did not. Marshall realized that there was no power in the Supreme Court to force the executive branch to deliver the commissions but he used the court as a podium for attacking Jefferson and his party, holding Jefferson up to public ridicule, hoping to persuade the general public that they had elected a man so sunken in sin, so depraved, so wicked that he could not be expected to fulfill his commitments to carry out the laws of the land honorably, for here he is unwilling to deliver signed and sealed commissions, merely a routine administrative procedure. Jefferson and Marshall were fellow Virginians, distantly related, for a time brought up together and both trained in the legal system. Political feelings and animosities kept these two great Americans apart

and enemies to such an extent that, although they lived and worked in the same city for more than thirty years, they never exchanged a word.

Politics then was a full-bodied way of life, rich with feeling, emotion, and prejudice. Does it violate your image of the Founding Fathers to hear that Jefferson attacked the party of Washington as "... an Anglican monarchical and aristocratical party ... whose avowed object is to draw over us the substance, as they have already done the form, of the British Government. ... It would give you a fever were I to name to you the apostates who have gone over to these heresies. Men who were Samsons in the field and Solomons in the council, but who have had their heads shorn by the harlot England". Stung, and recognizing himself as the object of the barbs, Washington wrote to Jefferson, "... I had no conception that parties would or even could go to the length I have been witness to ... that every act of my administration would be tortured, and the grossest and most insidious misrepresentation made of them ... and that too in such exaggerated and indecent terms as could scarcely be applied to a Nero, a notorious defaulter or even a common pick-pocket".

After Washington left office, the two never met or corresponded. The fundamental political principles Jefferson espoused which produced this reaction in President Washington and Justice Marshall is the legacy we honor tonight. The Jeffersonian creed included the faith that it is possible to improve the lot of common man through the instrument of political democracy; that the care of human life and happiness is the first and only legitimate object of good government; that responsive government, not stable government, is the first priority and to be responsive means to serve faithfully the majority will; and finally, a pragmatic notion that changing conditions call for new laws and new orders rather than worship of established law and order. This Jeffersonian legacy comes directly from our revolutionary roots and calls us to be faithful to our origin.

The legacy from Jackson may be summed up in a few words: if you want to get your political candidate elected, you had better have an organized party. This was the lesson political events taught Andrew Jackson.

When Jackson was denied the Presidency in the election of 1824, through the operation of cronyism, factionalism and King Caucus; when he saw more and more clearly as he stopped to talk with people on his way home from Washington after the action of Henry Clay swinging the Congressional vote to John Quincy Adams, and then when Adams appointed Clay his Secretary of State; when the general cry of outrage of the people he spoke to reached a great crescendo, Jackson yelled foul and vowed that this would not happen next time because there would be a political party dedicated to winning an election and not allowing Congress to decide. In organizing a political party that would reflect the popular choice for President, that would see to it that voting qualifications and election laws would allow the people to decide who the successful political candidates were to be, Jackson was reflecting and embodying the Jeffersonian idea that there must be a party of the people to counteract the conspiracies of privilege. Because of this, it has been charged that the Jacksonian Democratic party lacked any ideological principles, that the party harbored so many diverse groups and sectional interest that, indeed, the only thing they seemed to agree on was that Democrats must get elected. What is overlooked and ignored in this charge is that it does make a difference which party is successful in an election. The Whig politicians recognized this in Thurlow Weeds' statement in 1839 to the effect that anyone who believes that the Democrats should be

driven from office is a Whig, no matter by which name he has been called or is called. But is it also not true that such sentiment reflects a pragmatic concern in politics and exiles ideology to the cloistered halls of universities and debating clubs? Examine the aims and accomplishments of the Jackson administrations and we see the extent to which election laws were changed to make it possible for the previously disenfranchised voters to participate in elections, the liberalization of bankruptcy laws making it more difficult to persecute the poor for indebtedness, the protection of working men with new factory legislation and the fight against the national bank which, in the hands of financiers, had become an instrument for greater centralization and control of money in the hands of a few.

While the Whigs wooed the "better" part of society—meaning by "better" the rich, the aristocrat, the financier, the manufacturer, the banker, and the land speculator—the Democrats wooed the farmer, the workingman, the clerk, the disenfranchised and the poor. No doubt, to some extent, these were campaign slogans and necessities, but it also indicates the alignments sought by these parties and in the case of the Democratic party, it reflects the Jeffersonian view that in every society, by their very constitution, people are divided into two parties—those who fear and distrust the people and wish to draw all power from them into the hands of the higher classes, and those who identify themselves with the people, have confidence in them, cherish and consider them as the most honest and safe depository of the public interest.

Political partisanship is the legacy of Jefferson and Jackson. From Jefferson and Jackson, we have inherited a distrust of privilege and a reaffirmation of the revolutionary slogans of equality and democratic representation. And let us look at this legacy. Would we not prefer a Wilson to a Harding, a Roosevelt to a Hoover, a Truman to an Eisenhower, a Kennedy to a Nixon, and, yes, even a Johnson to a Nixon? It is over and over again a question of the prosperity of most of the people as against the well-being of the privileged.

The prosperity of a country is not defined by the extent or amount of corporate profit, the number of high-interest mortgages held by lending institutions, the indebtedness of the general public to the banks, nor by the few who have swollen incomes on which no or little income taxes are paid. A country is prosperous when the masses of the people are regularly employed at decent paying jobs, producing goods and services which contribute to a peaceful and easier life. When those who produce live in decent houses at fair rents and prices; when ordinary table fare at home is plentiful and wholesome and not taken from the earth through a process of rape and despoliation; when the oppressed, the aged, the infirm, orphaned and unfortunate are treated fairly, with compassion—not recorded, catalogued, numbered, fed into a computer, photographed, and given identity cards; when equality of quality education is generally available and when the opportunity to make something interesting out of your life through the exercise of your talents is encouraged, then, we may speak of a prosperous United States. This is the legacy of Jefferson and Jackson.

CITIZEN INVOLVEMENT WITH THE BUDGET

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. RANGEL. Mr. Speaker, the Community Council of Greater New York is

an organization dedicated to social service. The council is involved in such activities as consumer protection, family counselling, child care, employment referral, health services, and recreation planning.

A New York Post editorial of March 14 entitled, "Public Eyes" tells of another field that the community council is entering:

PUBLIC EYES

Official Washington is making a good deal lately of the virtues of "grass roots government" but that may be subject to change if it hears often enough from Americans who are tired of being clipped—and even mowed down.

In that connection, the Community Council of Greater New York has formed a special committee to keep track of the Nixon Administration's budgetary proposals and actions on social welfare funding, with a view toward interpreting them carefully and explaining to the public exactly what the extent of the damage is likely to be.

This would be an unusually responsible and helpful enterprise in any year, for which the Council and its president, Mrs. Leonard H. Bernheim, would be entitled to recognition. In this year of ruinous retrenchments by Washington, the new committee qualifies as an essential local resource. It may well be vital for Congress and the public to have continuing, thoroughly reliable analysis of the budget impact, since the Administration obviously plans nothing beyond assurances that urban life was never better.

The co-chairmen of the new committee are Mrs. Elinor Guggenheimer and Rev. M. Moran Watson, both identified with progressive social welfare activities here. Many New Yorkers will look forward to hearing from them and their colleagues.

CONGRESS MUST ASSERT WAR POWERS AUTHORITY

HON. JAMES C. CLEVELAND

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. CLEVELAND. Mr. Speaker, I have today joined in introducing legislation to assert the constitutional authority of the Congress over military actions of U.S. Armed Forces overseas.

I have done so in the conviction that the active sharing of constitutional authority will strengthen the ability of this Nation to conduct its defense policy on the basis of greater unity between the executive and legislative branches.

For too long, the executive branch has been the locus of power over the conduct of foreign military operations. This has subjected it to the legitimate criticism of those who deplore erosion of congressional responsibility. It has also led to partisan or misinformed congressional criticism, delivered with impunity resulting from the same de facto lack of responsibility in Congress.

I seek to focus accountability on the Congress as well, so that Members will share with the administration the full consequences of action—and inaction—by the Military Establishment of this Nation in response to varying degrees of threat to our security.

Before discussing its provisions, I wish to emphasize at this point that it in no way represents direct or indirect criticism

of the incumbent administration. My steadfast support of President Nixon in his efforts to achieve peace with honor has established my credentials in this respect. Furthermore, the legislation specifically exempts from its application "hostilities in which the Armed Forces of the United States are involved" on its effective date and abrogates no treaty responsibilities.

What it does provide is that, in the absence of a congressional declaration of war or attack on the United States, the President may not commit U.S. forces to actual or potential combat situations except in case of a Presidential declaration of emergency, and then under procedures for congressional oversight.

After making such a finding and committing troops, the President must within 24 hours inform Congress of the full circumstances surrounding his action—or 48 hours if Congress is not in session, in which case he must convene a special session and report within 48 hours.

The Congress must act affirmatively within 90 days to approve and authorize continuation of the action, or disapprove and order termination. No less often than every 6 months thereafter, in case of approval, the President must report to the Congress on the conduct of the hostilities, subject in each case to affirmative approval or disapproval within 30 days. Any failure by the Congress to act during the prescribed periods shall be interpreted as approval of the President's actions.

In the event of disapproval, the President must terminate involvement of our forces "as expeditiously as possible," with due regard for their safety and that of other Americans involved, due notice to allied and other friendly nations, and overall defense of U.S. territory, and possessions.

Mr. Speaker, this is a reasonable balance between the warmaking powers of the Congress and the authority of the President inherent in his role as Commander in Chief of our forces. While we recognize the President's role we must give equal recognition to the enumerated powers of the Congress under article 1, section 8 of the Constitution, which include authority "(t) o make rules for the Government and regulation of the land and naval forces," under which we have legislated in the past. These being in addition to powers to raise armies and declare war.

The effect may be to curb the President in future crises, in some cases, or alternatively to strengthen his hand by formal support of the Congress timely expressed.

I foresee additional benefits. Rather than lead to unwieldy congressional deliberations de novo at the time of crisis, this legislation should foster closer consultation between the administration and the Congress on a continuing basis. Clear vesting of this constitutional prerogative in the Congress in an era of potential brushfire conflicts should assure consultation on the evolving world scene long before the fact of a crisis reaching the point of hostilities.

In such an environment, I have no doubts concerning the capacity of Congress to act expeditiously and responsi-

bly in this role. The result will be a stronger and more unified Nation.

THE INDEPENDENT FOUNDATION

HON. BELLA S. ABZUG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Ms. ABZUG. Mr. Speaker, at a news conference here in Washington on March 12, Sargent Shriver, first Director of the Peace Corps and former Director of the Office of Economic Opportunity, announced the first stage of a national movement to mobilize the more than 75,000 former Peace Corps and VISTA volunteers for an assault on our Nation's social problems.

The movement will be directed by the Independent Foundation—"IF"—a non-profit organization which will raise funds for and offer technical assistance to the projects of these former volunteers throughout the United States. It will provide a vehicle through which former Peace Corps and VISTA people can effectively use their experience and talents. In addition, it may help take up some of the slack caused by the attempts of the administration to slash Federal funding for social programs.

Six major target cities have been chosen for initial projects in 1973.

Washington, D.C.: Anne Ternes, former Peace Corps volunteer—PCV—in the Dominican Republic, will lead a project of child development.

Los Angeles: Patrick Saccomandi, former PCV in Thailand, will coordinate a program of career education—cultural awareness in junior and senior high schools.

Pittsburgh: Bob Kambic, former PCV in Nepal, will lead projects to create a more livable environment.

Houston: Eric Nelson, former VISTA volunteer, who worked with Chicanos in Houston, will coordinate a consumer education and protection project.

Boston: Steve Cohen, former VISTA volunteer in Buffalo, will coordinate a volunteer technical assistance clearinghouse.

Cleveland: Roland Johnson, former PCV in Kenya, will lead in the establishment of a center to assist citizen groups to expand their participation in local government.

The executive director of the Independent Foundation is Grady Poulard, a former Shriver aide at OEO and an alumnus of the national urban fellows program. Mr. Poulard announced at the news conference that the initial funding for this new thrust of the foundation has been provided by the Irwin-Sweeney-Miller Foundation. He also explained that this new movement is not limited to ex-Peace Corps/VISTA volunteers. Its long range goal is to serve as a catalyst for the involvement of a host of people in many cities who are seriously concerned about the direction in which the Nation is heading. It is beginning with these for-

mer volunteers because they have demonstrated their willingness to work toward systemic social change, but it will expand as new funds are received.

Included at this point in the RECORD are several fact sheets on the project and the work of the Independent Foundation:

THE INDEPENDENT FOUNDATION MEMBERSHIP

The Independent Foundation is an organization of former Peace Corps and VISTA Volunteers. The Board of Trustees of the Foundation is composed entirely of former Volunteers. Ex-Volunteers can obtain full membership in the Foundation with a minimum annual contribution of ten dollars (\$10.00). Full membership enables members to be considered for candidacy to the Board of Trustees and also to vote in the Trustee elections. It is not necessary to be an ex-Volunteer to join IF. Anyone can receive the Newsletter who requests it.

Members are asked to stipulate the area in which they are interested in providing voluntary technical assistance. They are also requested to refer IF to other volunteers. IF is interested in groups of former Volunteers that are already operating and in programs that utilize many former Peace Corps or VISTA Volunteers. They are encouraged to let IF know about their activities.

JOBS

The Foundation receives numerous inquiries about jobs from former Volunteers. The few requests for people do not meet the demand for jobs. IF asks that members and friends inform the Foundation of any positions, both voluntary and paid, year-round and summer, that might interest former Volunteers.

ORGANIZING

Members in programs that might need a specific type of expertise may ask the Foundation if another volunteer in their area can supply it. If a member would like to get in touch with other volunteers in their area in order to begin or support a project, ask the Foundation for assistance. Other IF members might live in the area or IF can begin to identify and contact others, introducing them to IF members already in the area.

The Foundation requests that its members and friends refer other former Volunteers. IF is interested in the following information on its members:

Name, Address, Phone.
Peace Corps, VISTA or other and year terminated.
Primary field of expertise, other field of expertise.

Former and current Action staff is also encouraged to participate.

THE INDEPENDENT FOUNDATION

FACT SHEET: 1973 MOBILIZATION

Purpose of press conference—March 12, 1973.

To announce the first stage of a national movement to mobilize the more than 96,000 ex-Peace Corps/VISTA Volunteers for an assault on American social problems.

The Independent Foundation is the only organization which exists for the purpose of tapping the commitment and skills of these ex-Volunteers. It is also unique in that it is not "hung up" by any ideological differences at the national or the grassroots level.

Funding for the initial thrust has been provided by the Irwin-Sweeney-Miller Foundation (\$75,000 in 1973; \$25,000 in 1974).

There are six target cities in 1973. More will be added as the necessary funds are raised.

Target cities have been selected on the basis of the residency of Trustees in those

cities. They are currently serving as field coordinators, without salary.

Boston, Mass.: Volunteer Technical Assistance Clearing House.

Cleveland, Ohio: Study Center for Citizen Participation in Local Government.

Houston, Texas: Consumer Education and Protection.

Los Angeles, California: Volunteers in Public School Programs, emphasis on Career Education.

Pittsburgh, Pennsylvania: Support for Environment: Pittsburgh, an environmental improvement project.

Washington, D.C.: Technical Assistance to Day Care Programs in Anacostia.

Mass meetings are planned for each city by mid-spring.

"IF" seeks to work in cooperation and coalition with other volunteer organizations at both the national and local levels.

With reference to the listing of the Board of Trustees on the inside back cover of the brochure, Sam Carradine, Bob Kambic and Phil Jessup have been recently elected to the Board: Maria Cuadrado, Dave Dawley and William Southworth are no longer members on the Board.

Vernon Alden, President of the Boston Company, is a new Advisory Council member.

Staff of four, at the present time, is supplemented by the voluntary help of former Volunteers.

It is not necessary that one be an ex-Volunteer to join "IF". Other persons who are interested in "IF's" purpose are also welcome.

THE INDEPENDENT FOUNDATION BACKGROUND

A small group of former Peace Corps and VISTA Volunteers founded the Independent Foundation in December, 1969, seeking to create a vehicle for all former Volunteers to continue and deepen their social commitment. Despite severe funding limitations, IF has managed to attain a credible track record—evidence that, with adequate funding and staff, the Foundation could become a major force for constructive social change in America.

Since inception, the Foundation has: Recruited 700 members who provide voluntary services to community programs.

Provided volunteer and staff services worth more than \$40,000 to 150 community program requests submitted by former Volunteers.

Approved small grants totaling \$50,000 to ten community programs.

Assisted six community programs in developing access to major sources of funding resulting in grants and commitments of more than \$600,000, and

Performed referral, evaluative and administrative services contracts to various foundations and government agencies totaling more than \$64,000.

PURPOSE

The Independent Foundation (IF) is a national, tax-exempt, charitable organization seeking to assist more than 65,000 former Peace Corps and VISTA Volunteers to continue their involvement in the process of domestic social change. Former Volunteers represent over 100,000 man-years of specialized technical expertise—since their inception, the federal government has invested over one billion dollars in the Peace Corps and VISTA programs.

This investment, to a great extent, is being underutilized. Neither the public nor the private sector has seriously attempted to reap the dividend of the resettled Volunteer. In an era of ever-increasing domestic crises—of personal identities, of ethnic polarity, new awarenesses and old fears—The Independent Foundation represents a multi-ethnic co-

hesive force, a potential source for a constructive movement in America, by providing alternatives to "business as usual" or "dropping out and turning off".

The skills, sensitivity, and commitment of former Volunteers are ready to be put to work solving those problems which have been inadequately faced or overlooked in our own country—particularly the problems of the poor and oppressed. The Independent Foundation is presently the only existing vehicle for drawing together the skills and expertise of former Volunteers, for constructive social change in the domestic sphere.

GOALS

Organizing and assisting former Volunteers for local involvement with grassroots community projects is the overall goal of the Independent Foundation. Particular emphasis is placed on projects which have high merit, but low-visibility. By stimulating and coordinating the activities of former Volunteers, the Independent Foundation assists:

Former volunteers—by informing them of the manpower and funding needs of local community programs in which other Volunteers are involved, and by recruiting their services for these programs.

Community groups—by providing voluntary and permanent local staff services for developing program, writing proposals, identifying potential sources of funding, securing funds and managing programs.

Funding sources—by providing manpower to identify community projects worthy of support, evaluating existing or proposed programs and by administering select programs in which the unique experience of Volunteers can play a vital role.

TO FORMER VOLUNTEERS

Renew your commitment to constructive social change—through IF become and remain involved. Members volunteering a few hours a month have become involved by:

Organizing Former Volunteers—Anson Chong, RPCV—Nigeria, has organized HIVA (Hawaiian International Volunteer Association) an organization of 220 former Volunteers that support a variety of grassroots community action programs throughout Hawaii.

Developing Programs/Raising Funds Writing Proposals—Dave Dawley, RPCV—Honduras and IF Trustee has worked closely with inmate councils in Massachusetts' prisons to develop the Inmate Education Fund. His proposal writing and fund raising efforts have generated initial funding for the program.

Providing Management/Legal Support—A management consultant and former Peace Corps staff member, David Lynch has assisted an urban group with its bookkeeping and accounting system. Steve Lieberman, a lawyer and former Volunteer helped a rural community organization by providing legal assistance in the development of its program.

Developing Programs/Raising Funds Organizing—Marcia Lang, RPCV—Brazil, helped to establish the Prince George's Free Clinic. The clinic has been open since December 1970 serving the young in Prince George's County, Maryland. Her fundraising efforts were essential for the institution of this clinic.

If you would like to get involved in a similar capacity in community programs in your locale, contact us and let us know what skills you can offer. If you can afford a small contribution (\$10 or more annually), please enclose it and you will become a member of IF. If you can't afford the contribution, we still want your response—your commitment for involvement. Community programs need your skills and we will make certain you are properly linked and matched to the needs of local projects.

MEMBERSHIP

As a member you will be kept abreast of Foundation activities. You will be eligible to vote for the Board of Trustees, or to be elected a Trustee yourself. Trustees serve three year terms, rotating one-third of the Board at annual elections. In addition to being policy-makers, Trustees appoint the Advisory Council and the Executive Director.

The Independent Foundation can become your organization—giving focus and impact to your continuing efforts to improve the quality of American community life. If you desire to renew your involvement, as a member or by offering your skills, please return the enclosed post card.

TO COMMUNITY GROUPS

Former Volunteers involved in community projects are invited to use our staff and national network of Volunteers to provide manpower and funding assistance to local programs. The Foundation is endeavoring to expand its funding, staff and local organizational base so that it can respond more rapidly to the increasing number of requests. Given its current financial and manpower limits, the small Foundation staff responds to all requests and provides whatever assistance it has available. In addition to assisting individual community programs, the Independent Foundation is seeking funding for functional group programs through "community support systems". These support systems permit the Foundation to allocate Volunteers and funds to projects in a given technical area from a single fund, thus greatly increasing management efficiency and flexibility.

The Foundation's pilot project, Community Arts Support System, received funding from the National Endowment for the Arts and the Donner and Strong Foundations. Through this program, IF provides local Volunteers and seed grants to support community arts programs in various locations throughout the U.S. The Foundation is considering the development of support systems in a number of fields.

If you are involved with a program seeking voluntary assistance, bring your program's needs to the attention of the Independent Foundation for evaluation and response by returning the enclosed post card.

TO POTENTIAL SOURCES OF FUNDING

We invite you to review our capacity to use former Peace Corps and VISTA Volunteers to assist you in identifying, evaluating and administering community projects in which you or your organization may have specific programmatic interest. Currently, we provide other foundations, corporations, religious organizations, governmental agencies and individuals our evaluation of suggested programs within their target areas.

Direct assistance to funding sources for evaluation of previous or proposed program areas is also provided. For example, a former Volunteer recently completed a 181 page document for the Donner Foundation which thoroughly explored the possibility of private philanthropy in a new area being considered by some of that Foundation's Trustees.

The Independent Foundation has also successfully completed a series of nine contracts with the Office of H.E.W. Through these contracts, employing a number of former Volunteers and Peace Corps staff, the Foundation designed and administered a system for evaluating all funding request proposals submitted to the Environmental Education Division of the U.S. Office of Education.

Human resources and expertise are the primary assets of IF—it has no endowment funds for operations or grants. Therefore, it seeks from larger foundations, corporations, government agencies, religious organizations and private donors the financial resources necessary for harnessing its vast service potential for bringing about positive domestic social change.

Donors' contributions could be multiplied many times over, considering the more than 65,000 former Volunteers whose skills, energy and commitments are waiting to be channeled into constructive community action. The most immediate need is for funds to get beyond the initial task of organizing former Volunteers at the local level.

The Foundation staff stands ready to prepare and submit proposals for general organizing purposes, as well as brokerage proposals or "community support systems" which could deliver seed grants and technical assistance to over 150 worthy, low-visibility community projects in which former Volunteers throughout the country are involved.

The Independent Foundation has been chartered under District of Columbia law as a nonprofit corporation. Because the Foundation has received a tax-exempt ruling under section 501(C)(3) of the Internal Revenue Code, contributions to it are tax deductible. Additionally, IF has applied to IRS for "public" foundation status. A final ruling has not yet been made, but in the meantime under IRS regulations all contributions received are considered "public" foundation contributions.

If you are interested in providing assistance, or if you would like more information, please contact the Executive Director, Grady Poulard, at:

The Independent Foundation,
1028 Connecticut Avenue, N.W. Suite 509,
Washington, D.C. 20036 (202) 785-1730.

DONORS

Support for IF has come from more than 700 former Volunteer members, as well as individual contributors and foundations, corporations, religious organizations and government agencies.

BOARD OF TRUSTEES

Randolph Kinder, Chairman, Alfonso Gonzalez, Vice Chairman, Roberta Warren, Secretary, Kenneth Cole, Treasurer, Steve Cohen, Maria Coadrado, David Dawley, Irwin Dubinsky, Roland Johnson, Robert McLaughlin, Gloria Myklebust, Eric Nelson, Patrick Saccomandi, William Southworth, Anne Ternes.

STAFF

Grady Poulard, Executive Director.
Tamsin Taylor, Foundation Associate.
Webster Knight, Foundation Associate.
LaRue Ross, Administrative Assistant.

VOLUNTEER LEGAL COUNSEL

Anthony Essaye.

ADVISORY COUNCIL

Josiah Lee Auspitz, Hyman Bookbinder, Jane Cahill, James Cheek, Kay Halle, James Joseph, Glenn Ferguson, Patrick Flores, Coretta King, Jean Kintner, Frank Mankiewicz.

Nan Tucker McEvoy, Bill Moyers, Arnold Saltzman, Philip Schaefer, Sargent Shriver, Harold Sims, Franklin Williams, Curtin Winsor, Jr., Warren Wiggins, Harris Wofford.

MAN'S INHUMANITY TO MAN— HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. SCHERLE. Mr. Speaker, for more than 3 years, I have reminded my colleagues daily of the plight of our prisoners of war. Now, for most of us, the war is over. Yet despite the cease-fire agreement's provisions for the release of all prisoners, fewer than 600 of the more

than 1,900 men who were lost while on active duty in Southeast Asia have been identified by the enemy as alive and captive. The remaining 1,220 men are still missing in action.

A child asks: "Where is Daddy?" A mother asks: "How is my son?" A wife wonders: "Is my husband alive or dead?" How long?

Until those men are accounted for, their families will continue to undergo the special suffering reserved for the relatives of those who simply disappear without a trace, the living lost, the dead with graves unmarked. For their families, peace brings no respite from frustration, anxiety, and uncertainty. Some can look forward to a whole lifetime shadowed by grief.

We must make every effort to alleviate their anguish by redoubling our search for the missing servicemen. Of the incalculable debt owed to them and their families, we can at least pay that minimum. Until I am satisfied, therefore, that we are meeting our obligation, I will continue to ask, "How long?"

THE AMERICAN LEGION'S COMMUNITY ROLE

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. DERWINSKI. Mr. Speaker, I was especially pleased when an outstanding publication serving communities in my district, the Press Publications, serving west Cook County, Ill., saw fit to editorialize on the years of effective service that have been rendered by the American Legion.

The editorial very properly emphasizes the contribution of the Legion far beyond the service it renders to veterans. I believe it is a testimonial to a very effective, positive, respected organization.

The editorial follows:

OUR OBLIGATION

When the American Legion was founded in Paris 54 years ago the objective was not "peace in our time" as Chamberlain years later hopefully sought but "peace for all time."

Peace was a dream, a shattered dream but nevertheless a worthy objective for all men. Today The American Legion members still hope for peace, perhaps even more so than those who have never known warfare.

The shortcomings of mankind are never more evident than in the failure of human beings to get along with their neighbors.

Far too many persons today have to ask, "Who is my neighbor?" Those who think of American Legion members as "war veterans" tend to forget or never see the great amount of work the organization does in the community.

When the American Legion was founded the organization was dedicated not only to mutual helpfulness but also "to inculcate a sense of individual obligation to community, state, and nation."

The greatest chapter of the story of The American Legion is not in the military service of its members. As civilians they perpetuate the ideals of Democracy for which they served in uniform.

Through its many and varied contributions and services performed for the betterment of its respective communities, The American Legion has become identified as an organization good for any home town and for the nation.

During its 54th anniversary observance, The American Legion is emphasizing its theme for the year, "Reach Out-In Service For America."

There will never be a better world of tomorrow unless we all start with a sense of individual obligation to community, state, and nation.

INTERDEPENDENCE OF LIFE, LAND, AND WATER

HON. ORVAL HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. HANSEN of Idaho. Mr. Speaker, one of the most rewarding experiences of my service in Congress was my close association with former Senator Len B. Jordan, who retired from Congress last year after a quarter century of public service including 10 years as a U.S. Senator from Idaho.

One of our Nation's leading water authorities, Senator Jordan was responsible for numerous pieces of important legislation dealing with water resources. In a recent address before the Snake River regional studies program in Caldwell, Idaho, last month, he demonstrated his continuing concern and clear understanding of this priceless resource. As a part of my remarks I would like to include the text of the Senator's important remarks and commend his address to the attention of my colleagues in the House:

LEN B. JORDAN—TEXT OF REMARKS, COLLEGE OF IDAHO SNAKE RIVER REGIONAL STUDIES, CALDWELL, IDAHO, FEBRUARY 6, 1973

Except for the air we breathe, water is the most essential element in our lives. Most of us take water for granted, but long before life existed on this earth, God had to first provide a master plumbing system. In Ecclesiastes we read about the plan:

"All of the rivers run into the sea, yet the sea is not full. Unto the place from whence the rivers come, Thither they return again."

Here in a few words of simple, flowing rhetoric is described the complete hydrologic cycle which makes possible the existence of life on this planet. No one to this day can improve on that language.

From some vantage point in outermost space one might discern that the earth's water supply is fixed in amount, that it is indestructible and that it is constantly circulating and in the process it purifies itself. Each year about 80,000 cubic miles of moisture are evaporated by the sun upward into the atmosphere to return to earth again as rain, snow or dew. This drawing up and dropping down process is repeated in an unending hydrologic cycle. Differences in temperature, topography and winds influence the distribution of moisture laden air, causing precipitation on the earth to vary from one to more than one hundred inches per year. The result is that only a small percentage of the earth's surface receives enough rainfall to sustain human life. Throughout the ages the great civilizations have developed where the water is. One cannot fail to be remained over and over again of an

ageless verity—that is the interdependence of life, land, and water.

From this general proposition let us turn to the more specific example of the interrelationship and interdependence of life, land and water in our own modern day world. If I may be pardoned the personal approach, I think I can best describe and assess the importance of water resources by taking you back through the fifty years of my own involvement in water economics.

In 1923 I graduated from the University of Oregon. Dr. James Gilbert was then Dean of the School of Economics and after many consultations with him I decided to work toward a masters degree by exploring the feasibility of barge transportation on the Columbia and Snake rivers. At that time there was not a single dam on either of these rivers. I found that not many people were receptive to my plan. When I sought a loan to further my studies I was challenged on the impracticality of my proposal. Did I not know that navigation alone could not bear the cost of a series of navigation dams and locks that would be required to provide slack water navigation from the ocean to the Inland Empire? When I suggested that hydroelectric power might be the paying partner for navigation in such a venture, the question was then asked—"But who will buy all of that power?" So I gave up and abandoned the project but the idea still persisted.

In 1928 the Corps of Engineers was directed by the Congress to make detailed studies of the Columbia and its tributaries and report on the navigation, power, reclamation and the fish and wildlife potential of the entire river system. That report, published in 1932, was known as the 308 report. It provided the data for the first Columbia River dam at the Bonneville site, which was completed in 1938 and also for the construction of the great Grand Coulee project by the Bureau of Reclamation. Bonneville Power Administration was set up as the sole marketing agency to dispose of all power from federal projects. The power found a ready market with preference going to public entities for distribution.

In the early 1940's Congress instructed the Corps of Engineers to review the 308 Report with particular emphasis on a comprehensive plan of interrelated projects to provide the multipurpose benefits for the basin States. This review report was completed in 1948 which happened to be a year of devastating flood on the Columbia with a great loss of property and some lives in the Portland-Vancouver area. A flood of even greater dimension had occurred in 1894 when the flood flows reached a magnitude of more than one and a quarter million cubic feet per second at The Dalles. The report was indeed timely. It recommended a main control plan with enough headwater storage (including Libby dam) to reduce the 1894 flood flow to a tolerable limit of 800,000 cubic feet per second.

During World War II the Canadians had an acute manpower shortage and were unable to suppress many of their forest fires. The watershed of the Kootenai river in Canada burned out of control until snow put the fires out. Much of the watershed was destroyed. Floods came. In 1948, Kootenai Valley in Idaho was flooded. Water was door-knob high on the first floor of the Boundary County Courthouse at Bonners Ferry. In the early 1950's when I was Governor I called out the National Guard two different years for flood duty on the Kootenai. Regular army troops were assigned to flood duty also.

Heroic efforts by local residents, the army and the Idaho National Guard working round the clock saved Bonners Ferry, but thousands of acres of farmland were flooded when the ditches were breached. Libby dam will remove that flood hazard for Northern Idaho and assist in the main control plan downstream. But I am getting ahead of my story.

Based on data provided by this and earlier reports several multi-purpose projects were built in fairly even succession. Certain benefits such as navigation, flood control, fish and wildlife enhancement were classed as non-reimbursable because they filled an over all public need. Other identifiable benefits such as water for industrial, municipal or reclamation uses were classed as reimbursable, with the beneficiary paying a proper share of the costs with interest—except that reclamation paid no interest, only principal. In the event reclamation costs exceeded the ability of the water users to pay, sufficient power revenues were diverted to assist the payout. Thus was developed the basin account concept without which much of the land in the vast Columbia basin project could not have been developed.

In 1950 I was elected Governor of Idaho and in furtherance of my long time interest in water and land resources it seemed appropriate to suggest formation of a Columbia River Compact among the several States of the basin—this in lieu of a Columbia Valley Authority which had some dedicated sponsors and many detractors. The Compact idea, patterned after the Colorado River Compact (and others), seemed a better plan for the Northwest States and I thought everyone would agree. How wrong I was.

Now, 22 years later, we still have no Columbia River Compact, although on several occasions we came very close. I shall not go into detail here on the various issues that surfaced. To name a few: (1) public vs. private power, with the jealously guarded preference to public bodies that evolved from public development. (2) upstream vs. downstream claims regarding the proper allocation of power and water—principally water, insofar as Idaho is concerned.

Idaho, an upstream state with a vast acreage of potentially irrigable land, was determined to protect not only present consumptive use for irrigation but future consumptive use for new land yet to be developed. Montana, also an upstream state, has few irrigable acres but substantial headwater storage potential in Hungry Horse and Libby sites. Montana insisted on an allocation of power not only for power produced at Montana sites but for a share of power produced downstream by reason of storage projects in Montana. Wyoming, with a much smaller stake and already in compact with Idaho generally went along with Montana and Idaho in espousing what developed into the basin of origin concept—which stated simply, was a fair share in the allocation of water and power to upstream states whose watersheds provided most of the water.

As we shall see later the issues that resulted in a deadlocked compact were dealt with effectively in the Columbia Treaty. A climate of compromise on the international level seemed more conducive to success. The one point of solid agreement that did emerge from the Compact debates, however, was that there would be no diversion of water out of the Columbia basin. Unanimity on this issue was timely because it was to be fully tested in the years ahead.

After my term as Governor, I accepted a Presidential appointment as Chairman of the United States Section of the International Joint Commission. I reported for duty in January 1955. The IJC was established by treaty with Canada in 1908 as an international commission for arbitrating some international problems and, by reference from the two governments, making investigations of prospective development of international waters that either formed the boundary or crossed the boundary between the U.S. and Canada. Of special concern at that time were negotiations on the St. Lawrence Seaway and Power Project and on the Columbia Treaty.

In addition to my IJC duties I was summoned to the White House as advisor to a special cabinet level group charged with the

responsibility of developing a water resource policy for the Eisenhower administration. As finally approved, that policy embraced certain fundamentals, e.g.—“the primary responsibility for supplying the power needs of an area should rest with the people locally and not with the Federal government” and—“that all interests participate in the cost of projects in accordance with the measure of their benefits and that the federal government assume the cost of that part of projects where the benefits are widely dispersed and represent substantial contributions to the general economic growth of the country or region or to the national defense.”

That was a good water resource policy then and it is a good water resource policy now. One immediate effect it had then was to open the way for international cooperation, notably with Canada in joint venture development of international river resources.

The St. Lawrence Seaway and Power Project became a reality. This project had a two fold objective: a 27-foot navigation channel from the Atlantic ocean to the Great Lakes and the Barnhardt Island power project which is comparable to Grand Coulee in power output. This joint venture was built by two entities—Ontario Hydro for Canada and the Power Authority for the State of New York for the U.S. Power costs and benefits are shared equally. Navigation costs are borne by the country making the improvement.

In order to improve navigation and flood control the range of stage of the levels of Lake Ontario was compressed through regulated flows at Iroquois dam to 244 to 248 feet above mean sea level. In a state of nature the fluctuation had been between 242 and 250 feet. We conducted hearings on both sides of the boundary and I was surprised to hear the skepticism of people in both countries. They wanted assurance that legal redress was available to them in case of flood damage even though they might have built in the flood plain. We were able to give that assurance to Americans—that they could present a claim for alleged damage in any U.S. Federal Court of jurisdiction. The Canadian situation was different. I recall with some surprise that the very distinguished and dignified Counsel for Canada invoked the Doctrine of Sovereign Immunity. Said he, “The Queen does not wish to be sued.” So I learned about sovereign immunity then and there. In Canada that ended the argument.

About that time, at a White House conference, President Eisenhower turned to me and asked, “Governor, how are you getting along with the Canadians?” “Well, Mr. President,” I said, “sometimes I wonder. They are very tough bargainers. I wish you would instruct me—how far do you want me to go?” Ike smiled. “Go about 51% of the way—but remember you don’t have to sell your own country down the river.”

The Columbia Treaty presented some thorny problems. By asserting their right to divert 15 million acre feet of Columbia River water annually through the mountains by tunnel near Revelstoke and into the Frazier River drainage, the Canadians held a very potent bargaining advantage because such a diversion would have caused substantial power loss to the United States at all plants downstream from the point of diversion. Fortunately we were able to discourage this diversion but no doubt the threat got a better deal for Canada.

Finally a Columbia Treaty was consummated. It provided that the United States pay Canada immediately about \$256 million dollars in cash. Canada agreed to provide about ten and one half million acre feet of storage for flood control and power. Canada would retain all at site power produced and would receive one half of additional power developed at U.S. plants downstream made possible by releases from Canadian storage.

The U.S. was granted permission to build Libby dam with some 42 miles of the reservoir extending into Canada. The Treaty was subject to revision and renewal at the end of thirty years.

I mention the Canadian Treaty negotiations in some detail because the same issues were involved there as have plagued us in our efforts to achieve a Columbia River compact between the several states of the basin. It is interesting to note that the U.S. settled with Canada, the upstream country, on very generous terms—much more generous than the downstream states of the Columbia Basin were willing to concede to the upstream states of Idaho and Montana. The basin of origin concept was fully recognized in the Columbia Treaty.

Perhaps a revival of effort to achieve a Columbia Basin Compact would be in order now that the principles relating to river basin equities has been so painstakingly set forth in the Treaty.

I spent most of the summer of 1956 in Afghanistan on leave from my duties at IJC. I was leader of a survey team of engineers and economists charged with the task of evaluating the Helmand River Reclamation project consisting of two large storage reservoirs and a delivery system for irrigating several hundred thousand acres of land. The project was then under construction by Morrison-Knudsen Co. of Boise. As always, MK was doing a good job but the hundreds of years of abuse of the watershed made reclamation very difficult.

The once timbered foothills of the Hindu-Kush Mountains had long ago been denuded of trees followed by many years of overgrazing. The result was that the steep slopes of the watershed had been eroded to bedrock resulting in flash floods with each storm. There I saw masonry bridges standing stark and alone on the desert—sometimes miles away from the present river channel which changed courses across the flood plain with each devastating flood. Those bridges still haunt me as ghostly monuments to man’s abuse of nature and the destruction of his environment.

The year 1956 also marked a bold attempt by a consortium of Southwest Governors, Governor-elect McNichols of Colorado, Governor Simms of New Mexico, and Governor McFarland of Arizona—backed by the Colorado State Chamber of Commerce—to arouse interest in a proposal to divert 1.5 million acre feet of water from the Upper Snake River into the Colorado River basin via Green River. Their effort failed, but it did serve notice of the continuing interest in such diversion if and when the political climate might be favorable.

Because the threat cannot be brushed aside perhaps we should examine briefly the water situation in the Colorado Basin. Prior to 1928 the historic flows of the Colorado river had averaged between 17 and 18 million acre feet annually. A treaty with Mexico called for the delivery of 1.5 million acre feet annually at the Mexican border. Based on record flows, water supply seemed adequate to provide a Compact for the division of water as follows: 7.5 million acre feet annually to the upper basin states and a like amount to the lower basin states as recorded by a gauge at Lees Ferry which was accepted as the midpoint between the upper and lower basins.

The upper basin states thought they were taking care of their own situation by insisting that obligation to the lower basin be met by delivery of 7.5 million acre feet in the latest ten year period in order to average the flow between years of drought and years of abundance. This seemed like a safe precaution and would have been except that annual flows in the Colorado basin fell to an average of about 14 million acre feet which, of course, presented the acute problem of over commitment of the river’s flow.

Water planners in the Southwest were certain that imports to the Colorado from other river basins was the best solution. Hence their interest in the Snake and in the Columbia—but less so in the latter because the economics of interbasin transfer are much less favorable from that source.

This was the water climate in 1968 when the Central Arizona Project Act was passed in the Senate and in quite a different version passed the House also. The House passed bill was especially tough. It provided, among other things, that the Colorado River be relieved of the burden of supplying the Mexican Treaty water by making it a national obligation and furthermore that studies be started forthwith to find supplemental water to bring Colorado basin supplies up to Compact requirements.

The conference between the Senate and House was deadlocked for about 10 days. Except for the diversion language there was much in the bill that had merit. All of the conferees except one was a Westerner and we knew—deep down in our hearts—if we could not resolve our differences and go back to our respective bodies with an acceptable conference report the whole reclamation program would be in jeopardy. A stalled conference might signal the end of federal participation in resource development in the West.

As one of the conferees I felt that the deadlock must be broken. Accordingly, on the 10th day I suggested a compromise that would get the heat off the Northwest for a time at least—that a ten year moratorium on diversion studies to transfer water from the Northwest to the Southwest be written into law as a part of the agreed legislation. I bolstered my argument with data showing the Columbia basin states were busily engaged in conducting a thorough inventory of our own water needs—further that the Northwest was at least a generation behind the Southwest in such resource evaluation—that we would try to compress our work to a ten year period but that we insisted those ten years be free from harassment from the Southwest water planners.

The Jordan Compromise with the 10 year moratorium was adopted, the legislation became law. Time passes. It is hard to realize that by August of this year one half of our time will have expired.

Emerging from the battle of the Central Arizona Act in 1968 with ten years in which to get our own Northwest water affairs in order it seemed appropriate to provide the same period of time to inventory our Idaho water supplies and water needs for all purposes before making further permanent commitments in the Middle Snake.

Accordingly, I introduced with Senator Church as co-sponsor, a bill providing a ten year moratorium on dam construction in the Middle Snake. This bill passed the Senate unanimously only to die in the House. When the next congress convened we passed the moratorium bill again in the Senate—this time for 8 years—only to have the frustration of no action in the House.

The failure to enact a moratorium bill for the Middle Snake set the climate for what I regard as the greatest threat to Idaho's water in my many years of experience. This time the threat came from downstream. This was a proposal by Senator Packwood of Oregon to make the Middle Snake a National River. Information is rather sketchy on the definition of a National River, but we soon detected the inherent mischief in the proposal. At first glance, this bill seemed consonant with the great wave of environmental projects that filled the calendars of various committees of proper jurisdiction. However, when the hearings were held before the Senate Interior Committee it became apparent that the bill as written was totally unacceptable. Senator Packwood testified that

existing water rights would probably not be affected, but future upstream consumptive use would be curtailed. With the aid of testimony from several excellent witnesses from Idaho including Harold Nelson, Dr. Robert Lee, Vernon Ravenscroft and Keith Higginson we were able to stop the Packwood bill in committee. Thus Idaho was spared the disastrous effects of what I call the Idaho Water Export Act of 1971.

How long these upstream and downstream harassments will lie dormant is hard to conjecture. We must be eternally vigilant.

I come now to Idaho's stake in water resource development and I am willing to admit that I have been a long time getting here. But there is purpose to my apparent circumlocution. The fact is that no river or segment of river can be properly evaluated in isolation from the river system of which it is a part.

The first point I wish to emphasize is that more than any other tributary of the mighty Columbia river system the Snake is a working river. Its waters are the life blood of Southern and Eastern Idaho. The 3.5 million acres presently irrigated represent only about half of Idaho's irrigation potential. Back through the years leaders of both political parties have stood shoulder to shoulder to insure that this most precious water resource and the land of high potential for reclamation should never be alienated. So far this bipartisan effort has paid off, but we must be ever vigilant so that future generations will bless us for the prudence and foresight of our stewardship.

It is no coincidence that here in Idaho we speak proudly of the Treasure Valley and the Magic Valley. These valleys became treasures through the magic of applying life giving water to arid lands. To illustrate the importance of water to Idaho's economy I have frequently used this illustration. Suppose a major disaster such as a massive tornado or an earthquake reduced every home, every business building, every school, every hospital and church to a mass of rubble and ashes. As long as the Snake River continued to flow the towns and the cities would be rebuilt and revitalized. Like the Phoenix of ancient mythology new structures would rise from the ashes to house a new and thriving economy. But let some major disaster diminish or divert the flow of our Snake River and the towns and cities of the Snake River Valley would wither and die.

The earliest emigrants paid Idaho as little attention as possible. Billowing clouds of sage-scented dust marked the Oregon trail as the covered wagons toiled slowly and laboriously across the rutted plains of the Snake River Valley on their way to the lush meadows and tree clad hills of the Willamette Valley.

Most people do not realize that irrigation has flood control benefits too and they are substantial. This is how it comes about. The Snake River at Weiser contributes about 10% of the normal flow of the Columbia River at The Dalles but, due to the flood retarding effect of reclamation facilities upstream at high flood stage the Snake at Weiser contributes only 5% to the flood flows. Reclamation has tamed the floods by stabilizing the flow of the river. On the other hand the Clearwater and the Salmon and the Imnaha and the Grand Ronde which join the Snake below Weiser contribute about 14% of the normal flow of the Columbia at The Dalles but their contribution increases to nearly 30% of the flood flows.—These percentages are calculated prior to Libby and Canadian Storage which will reduce flood flows at The Dalles to a tolerable level but will have no effect whatever on flood flows in the Lewiston-Clarkston area.

I would point out to those in that area who want all dams below and no dams above that they are courting disaster. The hydrologic potential for a major flood disaster is en-

hanced by present development of 8 dams downstream which retard the outflow. Their value for power and navigation is unquestioned. In every study made by the Corps of Engineers and other Federal agencies these dams were intended to be operated with adequate upstream storage to retard the runoff for flood protection at the confluence of all these tributaries at Lewiston. When the Lower Granite dam is completed, downtown Lewiston will be protected by dikes.

The question is, will the dikes be adequate? I don't think they will. Modern technology enables us to calculate with great accuracy the amount of the runoff from any watershed. No one has yet devised a way to predict the vagaries of the weather which will determine when or how fast the runoff comes. From a flood control standpoint the eight power and navigation dams are on the wrong end of the river system. When the floods do come and downtown Lewiston is under water, the origin of those flood flows will be the watersheds of the wild and the untamed rivers upstream rather than from the comparatively docile Snake.

It is unfortunate that flood control facilities cannot be operated from the vantage point that hindsight would provide. Instead, they must be operated on a forecast basis. Who among us has the wisdom of a Solomon to decree, in a time of energy crisis, that certain generators must be idled in order to accommodate flood flows which may not come at all this year as nature cooperates and provides another season of orderly runoff.

Idaho has about 2.5 million acres of wilderness and primitive areas, most of it on the headwaters of our wild or our untamed rivers. Another 1.0 million acres of roadless areas are being studied for inclusion in the Wilderness System. Most of these additional areas are also on the headwaters of the same wild or untamed streams. These rivers all converge in the Lewiston-Clarkston area. Are we unwittingly setting the stage for a potential flood comparable to the Kootenai disasters of 1948 and 1954?

Some attention should be given in our College and University research programs to a study of the sequential relationship between wilderness, fires, wild rivers and floods. Here is a sequence that bears looking into if for no other reason than to allay the apprehensions of some of us who spend a lifetime trying to improve our stewardship of our land and water resources.

Turning now to another matter, I am more than a little concerned that those who propose legislation to determine a permanent classification of the Middle Snake area know so little about this great resource. The clamor for a National River may be temporarily stilled but what to do with the Middle Snake is still a lively issue. I am in total disagreement with those who would exercise the power of eminent domain to compel existing ranches to liquidate and allow those private lands to revert to wilderness. In the first place this procedure sets a very dangerous precedent. Secondly, livestock ranches, operating in full compliance with sound conservation practices, are wholly compatible with the Recreation Area concept. This is the policy we followed in setting up the Sawtooth National Recreation Area. We decided that operating ranches there enhanced the recreation potential of the area rather than to detract from it. The same is true of the Middle Snake.

If the ranches must go and those beautiful hayfields return to wilderness then we should go all the way and deny the use of power boats on the river as we do in a true wilderness where all of us are on equal terms. If the ranchers are forced out and the power boats remain, then the Middle Snake will become a rich man's recreation preserve with special privilege to those who can afford the deluxe jet boat service out of Lewiston

in conjunction with special use permits for upstream accommodations on public lands. I don't think that America can afford to dedicate a resource so precious to the use of so few.

And finally I am apprehensive about the effectiveness of "protective language." Sponsors of Recreation Area legislation now being prepared for the Middle Snake claim that language will be written into the bill which guarantees rights for future upstream consumptive use when more new lands are reclaimed for irrigation. Before officials of Idaho and Oregon cooperate in moves to give the Middle Snake a federal label whether it be for a National River, a Wild or Scenic River, or even a National Recreation Area in the belief that protective language asserting the supremacy of State water law, I think they should consider what has happened to such protective language on other rivers in other Western states. I shall not give details here but the record is available for examination.

In short, the record shows that no protective language, however specific it may be, has ever survived the challenge in later years by those who sought to disregard it. That is why I have grave concern about the ultimate effectiveness of any attempt to incorporate protective language for future upstream consumptive use under state law in any proposal that bears a national label and/or is set aside for a designated national purpose.

To those who are not familiar with the area, the name "Hells Canyon" is a vague but exciting place. Many people confuse the ranching area along the navigable portion of the Middle Snake as Hells Canyon. Having spent twelve years living in this area we speak with some degree of accuracy. In her book "Home Below Hell's Canyon" Grace Jordan took care to emphasize that the ranching area where we lived was many miles below the true Hell's Canyon, described as the deepest canyon in North America. That area lies roughly between the end of navigation upstream from Lewiston and the end of navigation downstream from Weiser. This distance of roughly twenty five river miles is indeed spectacular. No trails, no habitation, walls rising abruptly from the river to the Seven Devils on the Idaho side to the Wal-lowa Mountains on the Oregon side. That is Hells Canyon, impenetrable except by downstream floating—remote, inaccessible. No matter how you label it the gorge of the Hells Canyon proper is destined to remain unchanged unless it becomes the backwater of a high dam downstream on the Middle Snake.

The ranching area where present interest is focused is not much different than any number of western ranch areas. It is very similar to the Riggs, Whitebird area of the Salmon River. It is accessible by roads, by power boats and by many trails. Moreover it provides a continuing economic contribution to a region where most of the area is already publicly owned. I repeat the suggestion I mentioned earlier. Those who would change the regimen of a productive ranch country for all time should fortify their judgment by spending a week or two in the area at various seasons of the year. I offer my services as a tour guide for such a trip.

A distinguished Supreme Court Justice has declared that a river is more than an amenity—it is a treasure. The Middle Snake is truly Idaho's treasure. In volume alone it is greater than the Colorado River. In multipurpose potential it is unexcelled by any river in America. Some of its tributaries are already included in the National Wild Rivers System: The Lochsa, Selway, Middle Fork of the Clearwater and the Middle Fork of the Salmon contribute about half the mileage of the entire system. The Imnaha

and the Grand Ronde are natural wild rivers. But the main stem of the Snake from Wyoming to Weiser is very different.

I wish to re-emphasize the fact that the Snake is a working river—one of the most heavily used rivers in the country. Idaho's major industries—agriculture and food processing are directly dependent upon water from the Snake.

In spite of wishful thinking on the part of many of us, that Idaho should remain unchanged and unspoiled, our state is destined to increase in population. We had better prepare ourselves to manage the inevitable growth so as to retain the best of what we have and to accommodate growth and expansion of the right kind.

Along with our water resources planning we need a comprehensive statewide land use plan that is compatible with our long term objectives. As I said at the beginning of my remarks land and water and life are interdependent.

The best way that we in Idaho can improve the quality of life is to dedicate ourselves to improving the quality of our stewardship over the land and the water resources which are our heritage. Some people equate non-use with conservation—or conversely, use with exploitation. Neither is true. Wise and responsible use is the essence of true conservation. By using these resources wisely and well, we not only improve the quality of our own lives but we may take pride in passing our heritage on to future generations as good or better than it came to us.

WELFARE SCANDAL

HON. VERNON W. THOMSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. THOMSON of Wisconsin. Mr. Speaker, the mounting list of abuses of our Nation's welfare system demands urgent congressional attention. I am certain that the scandals uncovered by reporters of the Milwaukee Sentinel in the Milwaukee County Welfare Department can be found elsewhere in the country. Today I am inserting into the RECORD the fifth installment of the series by Miss Gene Cunningham and Stuart Wilk.

Opponents of the present slipshod welfare system have charged, often without proof, that much of the cash money allotted to meet food and shelter needs of welfare families is, instead, diverted to pay for unneeded consumer goods or for visits to neighborhood taverns. In this installment, the reporters document several such cases of welfare checks being mailed directly to taverns to pay bar bills for recipients. Certainly such abuses stretch common humanitarianism beyond legitimate bounds.

If the \$28 million allegedly wasted in Milwaukee County for welfare last year is even a roughly accurate figure for other jurisdictions, it means that we waste more money each year on welfare than we are spending to clean up our environment. If we truly want to reorder our priorities and control government spending, a top priority should be a top-to-bottom review and reform of our failing welfare system.

The article follows:

AID CHECKS GO DIRECT TO TAVERNS

(By Gene Cunningham and Stuart Wilk)

Some welfare recipients never see their welfare checks. Local taverns do.

In some cases, the checks are mailed to the taverns by the Milwaukee County Welfare Department, instead of to the recipients' homes, according to the tavern owners.

Some welfare checks—whether mailed to the taverns or not—are used to pay off the recipients' bar bills. The bulk of their checks goes to the taverns immediately after the recipients endorse them.

Sometimes they drink away their checks and "by the end of the month, they're living on apples," said Neal Burlant, owner of the Sixteen Hundred Bar, 1600 W. State St.

Burlant told reporters that as many as eight welfare checks had been sent in the past to his tavern each month. Until recently, he said, three recipients had their checks mailed there.

Checks are now being mailed to Curley's Tap, 1744 N. 3rd St., and Curley's West (formerly Hooligan's West), 2713 W. Fond du Lac Ave., according to Harvey Rotter, owner of both taverns.

Rotter said that four checks are sent each month to Curley's and "about a half dozen" to Curley's West.

The director of the welfare department insists that all checks are mailed to the client's home or are held at the department.

And an official in the State Department of Health and Social Services said that mailing checks to taverns "certainly wouldn't be very good practice."

Welfare checks are mailed "to the home address, or held in the department for an individual if we want to," said Arthur Silverman, welfare director. "In general, checks are mailed to the address."

"Welfare checks cannot be sent to other than the recipient's home or a designated payee," said Lowell D. Trewartha, director of the Bureau of Programs Planning and Development, Division of Family Services.

Trewartha said that if checks are being mailed to taverns, it is not "good practice."

"The implication (in state and federal guidelines) is very strong that checks should be sent to the address where the person is living, he said.

"I know I'll get my money when they (welfare recipients) cash their checks," Burlant told reporters.

TABS RUN HIGH

Some of the tabs at the Sixteen Hundred run as high as \$100, Burlant said.

If the bar bill exceeds the amount of the check, Burlant gives the recipient money for rent and carries the balance onto the next month's tab, he said.

Some of his customers "eat bologna sandwiches" all winter at churches that have programs to feed the needy, he said.

The Sixteen Hundred Bar caters to a large welfare clientele. With "35 cents a shot" as a drawing card, the tavern serves many of the blacks, whites and Indians who live in the area.

The 5th and 20th of each month is "Mother's Day" at the Sixteen Hundred, so named because those are the dates that checks come out for Aid to Families with Dependent Children.

The bar is teeming with customers from early in the morning until midnight on those occasions. Some welfare mothers spend a good portion of their checks at his tavern, Burlant said.

Conversation at the bar often revolves around the welfare system—and how to beat it.

METHODS EXCHANGED

One woman bragged to other customers how she defrauded the department of \$200 in one day, Burlant recalled. Other custom-

ers tell similar tales and trade schemes on how to get money out of the welfare department.

Rotter told a reporter that he does not give credit to persons who have checks mailed to Curley's and Curley's West.

"It's not that we want their checks so we can get a part of it," he said. "That fact is that the mailboxes don't lock and they can't protect their checks. . . . They know damn well that if their check comes here they're going to get it in their hands."

Silverman is not the only administrator who is confident that checks are mailed to the home and not to taverns or other commercial establishments.

"The postman will not leave the check unless he knows that client is living there," said Frank Pokorny, the department's financial assistance supervisor.

"That's an interagency agreement we have" with the post office, he said.

All checks, Pokorny said, are sent to the client's residence.

"It has to be sent to the residence," Pokorny repeated. "That check would come back to us because that postman knows that guy doesn't live there at that address."

OIL PRODUCERS' VIEWPOINT

HON. BILL ARCHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. ARCHER. Mr. Speaker, last month the Tulsa Daily World published an account of a recent statement concerning a national energy policy issued by the Mid-Continent Oil & Gas Association.

In view of the decreased availability of energy supplies and the controversy over pressure for rising prices, I especially commend the article to the attention of my colleagues:

STATEMENT PREPARED FROM PRODUCERS' VIEWPOINT: PRICE FREEDOM STRESSED IN MIDCO'S ENERGY POLICY

(By Riley W. Wilson)

Leaders from the basic segment of the petroleum industry—the men who find, drill and produce the oil and gas—Thursday gave their version of what a national energy policy should be.

Directors of the national Mid-Continent Oil & Gas Association, a unique union of production men from giant major to small independent companies, didn't contradict other industry groups.

But their policy statement bore down hard on some basic points and went into practical oil-country detail on others, with all points supporting the basic goal of a strong domestic producing industry.

And the point stressed most seemed to be the need for free-play price action, not only to spur supplies but also to curb demand.

Tax incentives, which "reward success," also should be strengthened for exploration and production, and private enterprise should be encouraged, it added.

By design, the Mid-Continent directors spoke as producers, not as representatives of major or independent companies, refiners or marketers.

A year ago, the directors set up a special committee to make sure the producer viewpoint was heard in national energy policy discussions by the numerous industry and government study groups.

Jack Abernathy, president of Big Chief Co. in Oklahoma City and former chairman of

the National Petroleum Council, pressed for the producer input action.

The result was a separate policy statement for the Mid-Continent itself.

James Sewell, Dallas Independent and past president of the Mid-Continent, headed the committee.

Retiring Midco chairman N. H. Wheless Jr. of Shreveport, La., was also active in the drafting.

Policy statements by other industry groups have discussed price and associations representing the small producer-explorers have pressed strongly for price increases for crude oil.

Groups covering all sizes of oil companies, however, have tended to couch their discussions of price in such terms as "incentives," except when talking about gas deregulation.

The American Petroleum Institute, representing all segments of the petroleum industry, also referred to "market forces of competitive economy" as a desirable thing and to the "cost of supplying energy."

The producers of the Mid-Continent, however, hit price firmly and often as the best way to handle supply, demand, and what forms of energy should be used where.

"Market price in the free-enterprise system is the most effective regulator of supply and demand and also the best allocator of resources," the Midco statement said in its early listing of policy principles.

Later, it added:

"In all economic ventures, the incentive for greater supply is centered on price, i.e., a higher price elicits an increase in supply and a lower price—lower supply."

Still further:

"End-use controls of energy resources, which would involve federal regulations to dictate priorities for each type of consumer to which a fuel could be sold, would be exceedingly complex to develop and administer. . . . A free marketplace, where the laws of supply and demand are permitted to function, is the best allocator of supply and regulator of demand."

Calling for continued quantitative limits on imports—limited to the difference between domestic supply and demand—the Midco statement also said only foreign crude should be allowed entry.

This would encourage the construction of domestic refineries.

It added:

"Without a strong domestic petroleum producing and refining industry, the United States would be at the mercy of foreign cartels."

"These cartels would be in a position to raise oil prices even more rapidly than they are already being raised today."

In calling for access to federal lands, particularly offshore areas, the Mid-Continent went further than most industry groups in giving specifics.

Instead of generalized statements about "more frequent" sales of offshore leases, the producers said:

"There should be a sufficient number of lease sales each year to support an annual leasing program of 3 million to 5 million acres per year."

The statement also rapped the government's practice of rejecting some bids because they did not "equal a figure held in secret" by the government.

All bids that meet a pre-announced minimum should be honored, the Mid-Continent said. Rejecting bids after disclosing the operator's evaluations is discriminatory and prejudicial and could destroy the bidders' competitive position in the future, he added.

Because future exploration will be in high-risk and difficult operating areas, the producers also said consideration should be given to lengthening the lease terms beyond the present 5-year awards, "at the option of the Secretary of Interior."

The statement also advocated a single, comprehensive environmental impact report to cover offshore leasing to prevent delays caused by such reports at each stage of development.

Other points made:

Government funding for research should be confined to "exploratory and early development stages," with private industry assuming the responsibility for commercial development.

Emergency supplies of crude should be stockpiled.

The states should continue in charge of conservation controls.

No federal oil company can be justified.

Natural gas prices should be freed of controls.

Environmental-energy balances must be developed.

The health and safety of the public and workers must be safeguarded.

MOST AMERICANS COMPREHEND PATRIOTISM, RESPECT OF POW'S

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. BOB WILSON. Mr. Speaker, while millions of Americans wept with joy over the return of our prisoners of war from Vietnam, the dissident few have attempted to cast doubt on the sincerity and true patriotism of these brave men, through charges of "orchestrated Americanism." The nonsense of this accusation has already become too apparent and I am sure many of my House colleagues will enjoy reading the following editorial published in the San Diego Evening Tribune on March 5:

MOST AMERICANS COMPREHEND PATRIOTISM, RESPECT OF POW'S

Old hatreds die hard.

We cannot be surprised then that the expressions of patriotism and pride from returning U.S. prisoners-of-war are treated with skepticism in those Iron Curtain nations where scorn of the United States is a way of life.

Despite the recent signals of civility between the Soviet Union and Washington, Moscow is not yet reconciled to the fact that some Americans like living under the capitalist system.

Izvestia, the government newspaper, deplored the "brain-washing" of POWs that made them nothing more than "pawns" of the Pentagon and the White House.

The newspaper described "Operation Homecoming" as a two-stage program carefully staged by the Pentagon.

"The Pentagon brain-washes the prisoners and prisoners brainwash the American public," Izvestia concluded.

We can shrug off the pronouncements of the Kremlin's house organ as predictable in a nation treading a diplomatic tightrope through a riven Communist world.

Less understandable, but equally predictable perhaps, are the echoes in our own country among those whose antiwar crusade flounders for want of an objective.

Newsweek's Shana Alexander, whose journalistic career blossomed during a lofty intellectual alliance with former Sen. Eugene McCarthy at the height of his abortive drive for the 1968 presidential nomination, agrees wholeheartedly with Izvestia.

Writing of the prisoners, she mourned ". . . the final irony . . . that after eight

cruel years as prisoners of war, they have now become hostages of propaganda, prisoners of peace with honor."

Unknowningly, perhaps, she parroted the Izvestia conviction that an apparent resurgence of American pride and dignity bears the touch of the "director's guiding hand."

"Stage-managed" was the Alexander term.

The force of the columnist's distrust of the POWs' "smart salutes, the recruiting-poster grins, the radiant wives, the... statements of gratitude" was blunted by her concession that the "commercial" must have been produced during a 20-hour plane ride.

The New York Times was similarly aghast at the manipulation of the prisoners by the detested Nixon administration.

The Times implied that the men were programmed like a computer, presumably for the glorification of the Commander-in-Chief and the Defense Department.

It is unfortunate that prejudice should be allowed to mar the joy of the prisoners in their freedom or to cast suspicion on their obvious sense of honor and purpose.

What Izvestia could not know—but what Shana Alexander and the New York Times should know—is that American respect for the qualities of patriotism, morality and self-discipline has not been swept away in a sea of permissiveness.

The contemptible effort to stamp the prisoners as puppets is made ludicrous by the simple mechanics of the homecoming procedure.

It ignores the reality that the majority of the returning POWs are career military men, intelligent, educated and dedicated to

the belief that they represent the finest country in the world.

It further fails to understand that the vast majority of the American people, regardless of their feelings toward a particular war, share that belief and find nothing incomprehensible in a public display of respect, loyalty and love.

ADMINISTRATION BUDGET POLICIES REFLECT SLOWDOWN AND STRETCHOUT OF PUBLIC WORKS PROJECTS THROUGHOUT NATION

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. EVINS of Tennessee. Mr. Speaker, our Subcommittee on Public Works and Atomic Energy Commission Appropriations has recently completed 3 weeks of hearings on the budget request of the U.S. Corps of Engineers for fiscal 1974.

In this connection I must advise the Members of the House that the budget recommends only five new construction starts and only eight planning starts and 10 surveys for the new year.

This represents the smallest recommendation of new starts in my memory as a member and chairman of this Sub-

committee on Public Works Appropriations.

This giant step backward in the Nation's public works construction program is a part of the general pattern in the budget of slowdowns, stretchouts, and delays.

The net result will be that the Nation will fall further behind in essential and necessary planning and construction of water resource and needed public works to provide vital and important services for our expanding population.

In addition, the unnecessary delays in public works which this budget envisions will increase the ultimate costs of public works projects when completed. The costs of construction materials and labor are increasing at an average rate of 15 percent annually.

In addition, the people will be denied—by slowdowns—the benefits of projects that could be brought on the line much earlier than the budget contemplates.

In this connection, because of the interest of my colleagues and the American people is a strong, viable, and continuing public works program in the national interest, I place in the RECORD herewith a table summarizing the total reductions for the Corps of Engineers of \$412,240,000, comparing the fiscal 1973 budget with the fiscal 1974 requests.

The information follows:

COMPARISON OF FISCAL YEAR 1974 BUDGET REQUEST TO FISCAL YEAR 1973 APPROPRIATION

	Fiscal year 1973 appropriation	Fiscal year 1974 appropriation request	General investigations	Advance engineering and design	Advance land acquisition	Construction	Major rehabilitation	Operation and maintenance	Total
Lower Mississippi Valley Division	\$155,115,900	\$124,593,000	-\$1,077,000	-\$1,624,000		-\$29,255,000		+\$1,433,100	-\$30,522,900
Missouri River Division	123,813,500	105,419,000	-2,000	-699,000	-2,000,000	-18,299,000	-200,000	+2,805,500	-18,394,500
New England Division	28,220,500	24,768,000	-575,000	-770,000		-2,423,000		+315,500	-3,452,500
North Atlantic Division	142,823,100	106,074,000	-1,888,000	-624,000		-35,459,000		1,221,900	-36,749,100
North-Central Division	122,376,300	90,864,000	-3,236,000	-870,000	+500,000	-17,799,000		-10,107,300	-31,512,300
North Pacific Division	298,397,300	246,405,000	-500,000	-1,125,000	-100,000	-54,861,000		+4,593,700	-51,992,300
Ohio River Division	261,356,100	209,831,000	+62,000	-2,458,000	-550,000	-50,355,000		+1,775,900	-51,525,100

CONSTITUENTS' COMPLAINTS ABOUT SOARING FOOD COSTS

HON. ELIZABETH HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Miss HOLTZMAN. Mr. Speaker, on a daily basis we are deluged with statistics about the soaring rise in food costs. We know that the typical American family must pay 2.5 percent more this week for its groceries than it paid last week. We also know that if the price of food continues to rise at the same rate, Americans will experience a 34-percent yearly increase in their food bills.

However, as startling as these statistics are, nothing has impressed me more about this problem than the articulate and forthright letters I have received from my constituents explaining their

daily battles with their own domestic budgets. Today I introduce into the the CONGRESSIONAL RECORD a typical letter which I have received on this subject. It was written by Mrs. Betty Lavin, a housewife and mother of six children. It portrays more dramatically the nature of the crisis we are confronting than any set of Government statistics.

It is my hope that letters of this nature will spur us to fill the void left by the President's inaction in this area:

Representative ELIZABETH HOLTZMAN,
House of Representatives,
Washington, D.C.

DEAR CONGRESSWOMAN HOLTZMAN: As an enraged housewife I am writing to you to protest against the ungodly inflation of food prices. Today's Daily News featured an article in which you were interviewed on this subject. The general comment of all the Congressmen interviewed was that people were not raising their voices via letters to protest. Allow me to aid in filling this void.

We are a family of eight of better than

the national average of means. We have never sought anything for nothing and thank God for what we do have. We have paid through the nose for everything in the manner which all New Yorkers accept as a way of life. We have seen our hard-earned dollars thrown to the winds of waste, destruction, deterioration, and sheer folly. This is New York. Somehow, we managed in spite of it.

But now my kitchen has been invaded. For the record, I won't go down without a fight. I won't go down, period. My family has to eat; farm subsidies, quotas, wheat deals, crime syndicates or anything or anyone else be damned.

You were quoted as favoring price roll-backs. I call on you to speak and act for these roll-backs in Congress. Who is getting the golden egg that last month's chicken laid at 39¢ per pound? That same chicken is now 69¢. Beef is ridiculous and veal is \$4.00 per pound.

What we need is immediate action in this "kitchen crisis". Let the agriculture bloc know that America's breadbasket will be a pretty sad sack if it doesn't have America's

back-bone, the long suffering middle class, to hang on. The farmer who gets paid not to raise crops is just as much a free-loader as the welfare recipient who is too lazy to work. I pay for both of them. Let the unions involved know that the American housewife will be heard above their screams for more, more. After all, what does the union man stand to gain from this inflation? He goes home every night to a disgruntled wife, too. She stands next to me at the checkout and winces as each item is rung up. Let them all know—from politician to peddler—that Ms. America is no damn fool.

Once again, I endorse your stand for roll-backs and urge you to push all the way no matter what it takes or who it hurts. My children are waiting for their dinner—with meat and enough of it. I am ready to pay for it at fair prices but I will pay tribute to no one, no way, for it.

Good luck to you, Congresswoman, and good hunting.

Sincerely and hopefully yours,
Mrs. THOMAS V. LAVIN.

PLIGHT OF SOVIET JEWS

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. LEHMAN. Mr. Speaker, another instance of Soviet harassment of Soviet Jews has been brought to our attention.

Mark Yampolsky, 25-year-old recent emigrant from the Soviet Union to Israel, began a hunger strike this morning in front of the Soviet Embassy. His purpose is to get the Soviet authorities to allow his wife's family to leave Russia. A similar hunger strike by the parents and sister of Mark's wife at the Central Telephone Station in Novosibirsk, Siberia, is now in its 6th day. Mark's wife Eleanora, is on a hunger strike in front of the Soviet Embassy in London.

Mark, who is from Kiev, and his wife Eleanora, from Novosibirsk, were granted permission several months ago to emigrate to Israel together with Eleanora's grandfather after considerable harassment from the Russian authorities. However, Eleanora's parents and sister, the Poltinnikovs, who also applied last year to leave Russia have had their emigration application denied.

Last Thursday, Eleanora's grandfather, who was recuperating in Switzerland prior to continuing his journey from Russia to Israel, died at the age of 84. The funeral is to take place April 6.

The Poltinnikovs began an immediate hunger strike in the emigration office of Novosibirsk to press the Russian authorities to allow them to attend the funeral in Switzerland and, subsequently, to emigrate to Israel. Mark and Eleanora decided to resort to hunger strikes when Eleanora was told 2 days ago by telephone by the Russian authorities that "your parents will never be allowed to emigrate."

Dr. Isaac Poltinnikov, 53, Mark's father-in-law, is an outstanding ophthalmologist who retired 2 years ago. Since applying to emigrate to Israel last summer, he has had his pension suspended. In addition, the family has been subjected to ceaseless ordeals and abuses, in-

cluding imprisonment of the wife and daughter—Eleanora's sister. The imprisonment was terminated when Mrs. Poltinnikov suffered a heart attack while in jail.

The harassment, loss of pension, and arbitrary imprisonment are common measures used by the Soviet Government to terrorize Jews who have applied to emigrate from Russia and to intimidate others from applying.

Mark Yampolsky will be located throughout his hunger strike across the street from the Russian Embassy in front of the building at 1126 16th Street NW.

WE NEED A LONG, HARD LOOK AT THE IMPOUNDMENT BILLS

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. LEGGETT. Mr. Speaker, the Rules Committee is currently holding hearings on the variety of bills which attempt to reassert congressional control over the President's impoundment of appropriated funds. While I intend to address the Rules Committee on this issue next week, I would like to outline for my colleagues here, my thinking on this important matter.

I will make my remarks as concise as possible. My interest in reasserting the power of the Congress as the first branch of Government dates from late last year when I addressed several communications to all Democrats of the House and Senate calling for reform, reasserting our powers rather than acting as a limp bunch of pumpkins thrashing around in a vacuum as we did in the 92d Congress looked at in retrospect. Considering the fact that the President by Executive fiat cloaked in authority of the 1921 Anti-deficiency Act has virtually totally frustrated Congress in summarily terminating impact education aid, regional medical programs, economic development, OEO, REAP, REA, medical research training grants, migrant labor camps were placed in jeopardy, and all housing programs of 235-236 and self-help were frozen and child care and certain other social program funds were placed out of reach by impossible regulations.

To get out of our box will not be easy—we did not get in easy. In a report to the Congress in response to a resolution and Public Law 92-599 the Federal Impoundment and Information Act, the President has advised the Congress through the OMB that there is impounded \$8.7 billion of fiscal 1973 funds—an amount roughly equal to the funds allocated for general revenue sharing at the close of the last Congress. These items are referred to in the DSG analysis of February 15 last, and the CONGRESSIONAL RECORD of February 5, 1973, at 3282.

I think to fully understand what we must do to get the power we must understand what has been done. On March 15 last at page 8295 in the RECORD I detailed a story on impoundments as pre-

pared by the Library of Congress—senior specialist on Government research—that details 1973 fiscal year impoundment of not \$8.7 billion, but in addition five other types of exclusions as follows:

First, \$6 billion of EPA contract authority for water sewage treatment excluded on the ground that this is not an appropriation, only contract authority. Whatever the merits of this technical argument, it is not applied consistently by OMB for other contract authority is included in its report.

Second, \$3 to \$4 billion in highway funds. In June 1972, OMB reported highway-aid impoundments at \$5.7 billion; half a year later the amount was down to \$2.4 billion. Was there a massive release of highway money? Has highway construction been accelerated? No. What happened was that because of its deadlock over the diversion of highway trust money to mass transit, the 92d Congress failed to adopt a new highway aid bill. Consequently, it was not possible to apportion the funds that would have been in the new legislation or to withhold any funds.

According to Department of Transportation officials, if the highway legislation had been enacted last year, the amount held in reserve would be at least as high as the June 1972 level.

The Bureau of the Budget has made no secret that they intend to impound \$2 to \$3 billion of any highway funds that are enacted and there is a projected surplus in the highway trust fund admitted in the budget in brief document of \$6.73 billion by the end of fiscal 1974. These funds now bask in Government bonds and there is no program in the administration to capture this surplus for its intended purpose.

Third, \$380 million in proposed rescissions of 1973 appropriations. In his 1974 budget, the President proposes to rescind \$382 million in 1973 appropriations, of which \$283 million is for manpower training programs. The OMB report claims that "these amounts have been apportioned to the agencies pending congressional action."

Nevertheless, the administration has taken steps to insure that the anticipated savings will be realized. Otherwise, the moneys might be obligated or spent by the agencies before Congress acts and it would be too late to rescind the appropriations.

Fourth, \$1.9 billion in HEW-DOL money appropriated via continuing resolution. No continuing resolution money was incorporated in the February 5 OMB report. It is now certain that HEW-DOL will have to make do with a continuing resolution for all of fiscal 1973. But the President has indicated that he intends to hold spending \$1.9 billion below the level authorized by Congress. For all practical purposes, he has decided to impound the funds added by Congress.

Though the House and Senate records are clear that the enacted continuing resolutions calling for funding at the 87 percent level for A and B impact aid children, the administration indicates that these funds will be applied only to military B children.

Fifth, \$1 billion plus held up by vari-

ous administration actions. These include the moratorium on subsidized housing, the cutoff of FHA emergency loans, the moratorium on manpower training enrollments, and the change in regulations for social service grants. While the exact amount cannot be determined, \$1 billion is a very conservative estimate.

When the figures suggested here are added to the \$3.7 reported by the administration, the level of impoundment reaches \$18 billion, far above the amounts withheld by any previous President.

Dollars tell only a portion of the story; another part relates to the purpose and duration of the impoundment. The common feature of all impoundments is that budget authority voted by Congress is withheld by OMB. But the historical evidence suggests that in the past normal reserves were established early in the fiscal year to regulate the flow of funds to agencies. This sensible management of the Government's finances was particularly necessary for long-lead time projects for which funds were appropriated on a no-year basis. When agency spending plans firmed, the funds were released by the Bureau of the Budget.

This limited use of impoundments was the avowed practice of the Nixon administration as late as May 1971. At that time, the impoundment report showed \$12.2 billion in reserve, two-thirds of which was scheduled for release within a year, with additional amounts held for contingencies. But the May 1971 report claimed that the impoundments were for routine administrative and financial purposes just the "continuous process of funds coming into the tank and funds going out."

However, the current impoundments are for the purpose of terminating or curtailing programs approved by Congress. The Federal Impoundment and Information Act—title IV, Public Law 92-599—requires the President to include in his report the period of time for which the funds are to be impounded. OMB's February 5, 1973, report skirts this requirement by stating that "the period of time during which funds are to be in reserve is dependent in all cases upon the results of such later review."

That report classifies programs according to the reasons for which the funds have been withheld. Significantly, almost \$6 billion of the reported \$8.7 billion are justified as needed to hold down spending or to maintain economic stability. This includes impoundments for which more than one reason is provided. Impoundments in more than 100 programs are justified on these broad and questionable grounds. These are the programs ticketed for elimination or curtailment. This is the use of impoundment power to override congressional will, to change national policies and priorities.

But not one penny is withheld from military programs for this reason. In the case of the military, all the impoundments are temporary—the routine deferment of construction and procurement spending until the funds are needed. The full brunt of the President's expansion of the impoundment power is delivered on civilian programs. This dual standard

suggests that the economy drive in which impoundment is a major weapon is more a strategy to kill social programs than to save taxpayers' dollars.

To retrieve the power a number of suggestions have been offered.

I would include in the RECORD at this point a contrast of the Ervin S. 373 approach and the Mahon H.R. 5193 approach as prepared by the Library of Congress and I will then comment on other solutions and suggest my own.

The main difference in MAHON and ERVIN is that the Senate version would terminate any impoundment unless it is approved by Congress, while the House bill would require the President to cease any impoundment disapproved by Congress. Both approaches have defects.

First, as originally drawn, it is not clear that both bills cover contract authority.

Second, the current bills are directed to Presidential impoundment and may not cover important actions of agency heads on their own initiative—to wit, the new HEW social service regulations, the 18-month freeze on subsidized housing, the cut of disaster loan assistance, the Labor current abatement on manpower training.

Third, in an effort to close all possible loopholes, the Mahon and Ervin bills define impoundment broadly and loosely. Neither takes cognizance of the Antideficiency Act of 1921 (31 U.S.C. 665) which authorizes the establishment of reserves for certain generally noncontroversial purposes. As a consequence, the impoundment review process in Congress must cover both the large number of routine actions for which congressional oversight may be unproductive as well as the smaller number of questionable actions which exceed the purposes of the Antideficiency Act.

While it may be a difficult task, consideration might be given to a definition of impoundment that distinguishes between normal reserves and other action. For this purpose, the language of the Antideficiency Act might be tightened to preclude its use for unspecified "other developments." With such a distinction, congressional review could be targeted to that class of actions that exceeds the strict intent of the Antideficiency Act.

Moreover, in covering "all withholding or delaying the expenditure or obligation of funds" the bills extend an elaborate notification and review procedure to actions that have little—if anything—in common with impoundments. The language probably includes the holding back of payments in contract disputes or in case of fraud, delays in the completion of work, the processing of grant applications, and the like. The problem is compounded by the fact that no minimum time is prescribed for "withholding" or "delaying." A literal reading of this legislation can lead to an inundation of Congress by thousands of trivial items.

It may be prudent for Congress to forgo a no-loopholes approach in favor of one that concentrates legislative attention on the few significant executive actions that warrant review.

Fourth, the House bill generally conforms to the Federal Impoundment and Information Act, Public Law 92-599, en-

acted last year as part of the debt limit extension and requires prompt reporting and reasons by the President on impoundments. The President's obfuscation and narrow construction of the so-called Humphrey amendment has been confounding.

An alternative to a prompt reporting to Congress of everything impounded or contract authority abated might be to require periodic quarterly reports to the Congress.

Even a 3-month delay, however, sometimes can destroy a program near the end of an appropriation or contract authority period.

The Library of Congress states, "possibly the only way to avoid both this outcome and a flood of impoundment actions in Congress is to distinguish—as was suggested earlier—between those which strictly conform to the Antideficiency Act and those of questionable validity. But this would have to be predicated on a redrawing of the Antideficiency Act and tying it directly to the new legislation."

I have suggested an amendment to the Library that would substantially gut the 1921 Antideficiency Act (31 U.S.C. 665).

I would strike the portion in brackets of the following authority in a composite type amendment to one of the President's choke point bills:

Subsection (c) (2) of the act provides: "In apportioning any appropriation, reserves may be established to provide for contingencies, or to effect savings whenever savings are made possible by or through changes in requirements, greater efficiency of operations [or other developments] subsequent to the date on which such appropriation was made available. Whenever it is determined by an officer designated in subsection (d) of this section to make apportionments and reapportionments that any amount so reserved will not be required to carry out the purposes of the appropriation concerned, he shall recommend the rescission of such amount in the manner provided in the Budget and Accounting Act, 1921, for estimates of appropriations."

Fifth, the committee actions called for by the House and Senate bills is somewhat confused. Both use the concurrent resolution form. The House bill confirms considerable authority to the President to impound, gives too much discretion to committee chairmen to bring up a resolution or partial disapproval which is unamendable. The Senate bill would allow an impoundment to be effective for 60 days as drafted and would automatically go directly to the floor without committee action so it would be difficult to appoint conferees to resolve differences.

The Library analysis states:

The 60-day period is designed to give Congress sufficient time to review the President's action. But the impoundment is in effect throughout this period, regardless of subsequent action, unlike the comparable reorganization procedure where the President's plan takes effect only at the conclusion of 60 days. The problem is less critical in the Mahon bill for Congress may vote a resolution of disapproval without waiting for expiration of the 60 days. However, the Ervin bill appears to put Congress in a helpless position regarding those impoundments which it does not approve. Inasmuch as such impoundments lapse after 60 days unless

approved by Congress, there is no mechanism for the expression of congressional intent prior to the end of that period. Thus what is intended to strengthen congressional control of impoundments may actually weaken the capability of Congress during the initial 60 days.

The issue is vital because Congress in this legislation is giving labor backing to Presidential impoundments, even in the absence of specific congressional authorization. The *de facto* exercise of Presidential power hereafter will be wrapped in *de jure* status. That this may not be the intention of the legislation does not detract from its effect.

Furthermore, the 60-day period can be used to thwart the will of Congress by terminating programs which lapse during the period. A case in point is the \$6 billion withheld by EPA on Presidential order from water treatment projects. OMB has taken the position that once the funds were not allotted to the states by the January 1 deadline specified in the 1972 Act, they automatically lapsed. For this reason, the \$6 billion are not included in OMB's official impoundment list.

Congress may wish to model its impoundment procedure after that used for executive reorganizations and provide that they take place after 60 days. But this would curb the capability of the President to establish prudent budget reserves under the Antideficiency Act. This is still another reason for exploring the possibility of distinguishing between ordinary reserves and other impoundments.

Sixth, both bills are silent on the power of the President to impound for 60 days again after congressional action of disapproval.

Is impoundment necessary? I think it is—first for prudent money management it is absolutely required, but we must differentiate between simple money management with which the Congress is not concerned and wholesale termination of programs thwarting congressional will.

Additionally, when a President submits a budget for fiscal 1974 that allegedly is a full employment \$11½ billion deficit budget, but in fact involves a \$15 billion diversion from the trust funds and an increase in debt at a minimum of \$32 billion—\$473 billion to \$505 billion—then spending must be kept within limits if we are not prepared to endlessly tax.

Ideally, and beyond the scope of the present legislation, the Congress should have a procedure much like the California Legislature where even though each bill has a fiscal review, nothing is really funded until in an omnibus budget procedure at the end of the year, the needs of the State are measured against required taxes and a document in balance is then submitted to the Governor.

It simply does not make good sense to assume that—

First. The debt is immaterial when we will pay \$26 billion in interest this year alone.

Second. That taxes are in concrete and inevitable regardless of the Nation's needs.

Third. That we should continue to endlessly raid the trust funds for general fund purposes—now \$140 billion.

Fourth. To presume that because Congress stacks appropriations on top of each other without regard for the total that the President should not have some motivation to act if the Congress does not.

We need to get our House in better order—a procedure has been suggested that a flat percentage be taken out of every program—this is the Danielson modified Bow approach which assumes equal importance of everything in the event the President wants to limit. I do not think this approach is optimum although it is a way to protect social programs that many times are scrapped to get funds for Vietnam or defense. The Danielson approach is particularly vulnerable since many times only 10 percent of an appropriation bill are obligated during the first year.

WHAT VEHICLE DO WE USE TO LIMIT THE PRESIDENT'S POWER?

The two so-called choke points that are available are:

First. Supplemental appropriation bill which usually contains the President's required goodies; and

Second. The debt limit bill that must extend the permanent debt limit of \$400 billion by next June 30. We would deal with the Appropriations Committee or the Ways and Means Committee. Democratic caucus action in support of an omnibus amendment attached to the original bill made in order by this committee would be the proper approach.

In summary, I think that the President is not going to voluntarily reestablish this branch of Government. We have to take the power back from him. We must make it imperative that he sign a bill. The 1921 antideficiency bill must be amended. We must be careful in giving the President power he does not currently possess unless we provide for a simple resolution procedure of either House without committee action to get the President and his Cabinet back in line with congressional intent.

The Mahon bill has been justified by a New York Times editorial on the basis that the President would veto any approach as drastic as ERVIN's amendment. I frankly think that if we are going to tailor a bill to survive a veto override we will be doing very little to recapture the Congress lost power.

At this point in the RECORD I would like to insert the full text of the comparison of the two major impoundment bills conducted by the Library of Congress. The study follows:

A COMPARISON OF S. 373 AND H.R. 5193 RELATING TO THE IMPOUNDMENT OF FUNDS

This comparison is based on the bills as originally submitted. S. 373 introduced by Senator Ervin currently is undergoing markup and substantial revision by the Senate Government Operations Committee. In the House, hearings will begin shortly on H.R. 5193, introduced by Mr. Mahon.

Both bills have the same general purpose; to require the President to notify Congress whenever he impounds funds and to provide a procedure for congressional review of the President's actions. The main difference is that the Senate version would terminate any impoundment unless it is approved by Congress while the House bill would require the President to cease any impoundment if it is disapproved by Congress.

DEFINITION OF IMPOUNDMENT

Both bills define impoundment broadly to cover "any type of executive action which effectively precludes the obligation or expenditure" of funds. There are slight differences in wording, but not in intent. To ensure that

non-appropriated funds are covered, H.R. 5193 encompasses "the creation of obligations by contract in advance of appropriations as specifically authorized by law." (The Ervin bill can be interpreted to include only appropriated funds, but the revision now being considered in committee would expand the definition to encompass other authorized funds as well.)

Comment

In an effort to close all possible loopholes, the Mahon and Ervin bills define impoundment broadly and loosely. Neither takes cognizance of the Antideficiency Act of 1921 (31 U.S.C. 665) which authorizes the establishment of reserves for certain generally noncontroversial purposes. As a consequence, the impoundment review process in Congress must cover both the large number of routine actions for which congressional oversight may be unproductive as well as the smaller number of questionable actions which exceed the purposes of the Antideficiency Act.

While it may be a difficult task, consideration might be given to a definition of impoundment that distinguishes between normal reserves and other actions. For this purpose, the language of the Antideficiency Act might be tightened to preclude its use for unspecified "other developments." With such a distinction, congressional review could be targeted to that class of actions that exceeds the strict intent of the Antideficiency Act.

Moreover, in covering "all withholding or delaying the expenditure or obligation of funds" the bills extend an elaborate notification and review process to actions that have little (if anything) in common with impoundments. The language probably includes the holding back of payments in contracts disputes or in case of fraud, delays in the completion of work, the processing of grant applications, and the like. The problem is compounded by the fact that no minimum time is prescribed for "withholding" or "delaying". A literal reading of this legislation can lead to an inundation of Congress by thousands of trivial items.

It may be prudent for Congress to forgo a no-loopholes approach in favor of one that concentrates legislative attention on the few significant executive actions that warrant review.

While they are diligent to close Presidential loopholes, the two bills may inadvertently open the doors to others. As presently drawn, only Presidentially ordered or approved impoundments are covered. But the procedure might not encompass actions taken by agency heads on their own initiative and without explicit Presidential approval. If this interpretation is correct, the President might not be required to notify Congress of actions similar to the 18-month freeze on subsidized housing by HUD, the Labor Department's halt on enrollments in its manpower training programs, or the cutoff of FHA and SBA declared disasters. To remedy this possibility, the bills might be broadened to cover all impoundments by agency heads responsible to the President.

MESSAGE OF THE PRESIDENT

Both bills provide that within ten days after any impoundment, the President shall transmit a special message to Congress specifying the amount of funds impounded and the reasons for the impoundment. The Mahon bill further requires the special message to notify Congress of the date on which the funds were impounded, the account or agency from which the funds were impounded, the period of time during which the funds are to be impounded, and to the maximum extent practicable, the estimated fiscal, economic, and budgetary effect of the impoundment.

The Ervin bill provides for publication of the impoundment message in the Federal Register as well for transmittal of a copy to the Comptroller General. It also provides

that in case any impoundment action reported in a special message is subsequently revised, the President shall promptly transmit to Congress a supplementary message. Finally, it requires the publication of a monthly impoundment list in the Congressional Record.

Comment

The additional reporting requirements contained in the house bill conform to the provisions of the Federal Impoundment and Information Act (Title IV, Public Law 92-599). The limited experience with that Act indicates that the Administration prefers to be reticent about the duration and impact of impoundments. Thus in its February 5, 1973 impoundment report OMB explains that "the period of time during which funds are to be in reserve is dependent in all cases upon the results of . . . late review."

The House bill allows for the inclusion of more than one impoundment in a special message but the Senate bill is unclear as to whether there must be a separate message for each impoundment. The question is of some importance for though the House bill allows partial disapproval of an impoundment, Senate action seems tied to the message itself rather than to any specific action reported therein. Moreover, the rules laid down in each bill for consideration of resolutions of approval or disapproval stipulate that no amendment to the resolution shall be in order.

An alternative to the approach embodied in both bills might be to designate the times during which periodic impoundments reports would have to be made by the President. As one possibility, the President might be required to report to Congress quarterly on the impoundments taken during the preceding three months. In this way, Congress would not be bombarded by a flow of impoundments reports with necessary followup action throughout its session. Furthermore, a quarterly system would conform to the time periods used by OMB for the establishment of budgetary reserves.

But in terms of congressional ability to override President impoundments a fixed reporting system has one formidable drawback. It would enable impoundments to be in effect as many as 100 days before Congress was notified and to remain in effect as much as 60 additional days without congressional action. This delay can be fatal for one-year appropriations from which funds are impounded in the fourth quarter. The funds would lapse before Congress had an opportunity to stake its own position.

Possibly the only way to avoid both this outcome and a flood of impoundment actions in Congress is to distinguish (as was suggested earlier) between those which strictly conform to the Antideficiency Act and those of questionable validity. But this would have to be predicated on a redrawing of the Antideficiency Act and tying it directly to the new legislation.

COMMITTEE ACTION

Once the impoundment message is received by Congress, there is considerable difference between the two bills regarding its handling in Congress. The Ervin bill provides that "a resolution introduced with respect to a special message shall not be referred to a committee and shall be privileged business for immediate consideration." The Mahon proposal, however, calls for referral of any such resolution to the Appropriations Committee. Each Appropriation Committee may determine, subject to the rules of each House, whether to report a resolution. In line with regular congressional procedure, the resolution may be considered by House or Senate only if it has been reported or if the committee has been discharged from its consideration.

Comment

The Ervin bill allows for none of the benefits of committee review and analysis. Once introduced, the impoundment resolution goes directly to the floor for immediate consideration. The Mahon bill, on the other hand, enables the Appropriations Committees to pigeon-hole a resolution and bar consideration by the House or Senate unless a discharge motion is approved.

One way out of these polar alternatives—no committee review versus the potential for killing the resolution in committee—would be to provide for referral of an impoundment resolution to committee subject to automatic discharge if the committee fails to report it within a prescribed period of time. In view of the 60-day periods contemplated in both bills for congressional action, the committees might be allowed 30-45 days after which they would be discharged from consideration.

One difficulty that might emerge from the Ervin bill's failure to provide for committee action would be the procedure for reconciling differing House and Senate resolutions. There would be no committee with special expertise in the area from which conferees may be drawn nor any committee with exclusive jurisdiction. Both the Appropriations Committees and the subject matter committees may claim jurisdiction.

ACTION BY EACH HOUSE

The primary difference between the two bills is that the Mahon bill would allow the impoundment to prevail unless it was disapproved within 60 days while the Ervin bill calls for the lapsing of any impoundment that has not been approved within 60 days. Both bills provide for congressional consideration by means of concurrent resolution rather than the simple resolution procedure used for congressional disapproval of Presidential reorganization plans.

Under both bills, the impoundment continues in force during the 60-day period, unless of course Congress takes earlier action. Both bills detail similar procedures for floor consideration of the concurrent resolution. A motion to proceed to consideration of a resolution is highly privileged and not debatable. Debate on the resolution itself is limited to two hours in the Mahon bill and ten hours in the Ervin proposal. No amendment or motion to recommit is in order. One difference between the two approaches is that the Ervin bill precludes more than one resolution with the same special message. As indicated earlier, the Mahon bill provides that "where a special message specifies more than one impoundment of funds, the resolution may relate to any one or more of such impoundments; and the resolution with respect to any impoundment may express the disapproval of the Congress of any amount thereof and may set forth the basis on which the impoundment is disapproved."

Comment

The 60-day period is designed to give Congress sufficient time to review the President's action. But the impoundment is in effect throughout this period, regardless of subsequent action, unlike the comparable reorganization procedure where the President's plan takes effect only at the conclusion of 60 days. The problem is less critical in the Mahon bill for Congress may vote a resolution of disapproval without waiting for expiration of the 60 days. However, the Ervin bill appears to put Congress in a helpless position regarding those impoundments which it does not approve. Inasmuch as such impoundments lapse after 60 days unless approved by Congress, there is no mechanism for the expression of congressional intent prior to the end of that period. Thus what is intended to strengthen congressional control of impoundments may actually weaken the capability of Congress during the initial 60 days.

The issue is vital because Congress in this legislation is giving legal backing to Presidential impoundments, even in the absence of specific authorization. The *de facto* exercise of Presidential power hereafter will be wrapped in *de jure* status. That this may not be the intention of the legislation does not detract from its effect.

Furthermore, the 60 day period can be used to thwart the will of Congress by terminating programs which lapse during the period. A case in point is the \$6 billion withheld by EPA on Presidential order from water treatment projects. OMB has taken the position that once the funds were not allotted to the states by the January 1, 1973 deadline specified in the 1972 Act, they automatically lapsed. For this reason, the \$6 billion are not included in OMB's official impoundment list.

Congress may wish to model its impoundment procedure after that used for executive reorganizations and provide that they take place after 60 days. But this would curb the capability of the President to establish prudent budget reserves under the Anti-Deficiency Act. This is still another reason for exploring the possibility of distinguishing between ordinary reserves and other impoundments.

There may be some value in an impoundment procedure that gives Congress an opportunity to express more than an all-or-nothing or yes-no verdict. For example, Congress may wish to allow continuation of the impoundment for a limited period of time or it may accede to an impoundment of a portion of the funds withheld by the President. Still another possibility is to fix conditions for the further withholding of funds. At any rate, the Mahon bill provides for more efficient handling of impoundment matters by allowing their consolidation and differentiation in a single resolution.

Both bills are silent as to whether the President can impound *de novo* when an identical previous action has been disapproved (or not approved) by Congress. Clearly the intent of the resolution is to disallow this practice, but some specific prohibition may be helpful.

JOINT ECONOMIC COMMITTEE'S STUDY

HON. MARJORIE S. HOLT

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mrs. HOLT. Mr. Speaker, I rise today to commend the Joint Economic Committee's study entitled "How Public Welfare Benefits Are Distributed in Low Income Areas."

My colleague, Mrs. GRIFFITHS has done a much needed and an outstanding job of chairing this committee and in presenting the results to the Congress. This subcommittee staff study clearly shows the need of congressional action to effect meaningful reform of our nation's welfare programs.

Every abuse associated with the bureaucracy can be found in the welfare system. Currently we have over 1,100 Federal, State, and local agencies administering over 100 different programs at an annual cost in excess of \$100 billion. This is clearly an administrator's nightmare.

This study has demonstrated that there is a huge overlap of programs, that there is a wide disparity in benefits re-

ceived by households in the same economic condition, that there is large disincentives to work created by adding one program on top of another and by individual program benefit regulations, and that much tax money is wasted by duplicated administrative tasks. Many of us have suspected these abuses, we now have documented facts to substantiate our position.

I fully agree with the subcommittee's conclusions that the present income maintenance programs are in a serious need of complete overhaul. We must view this system as a whole with the objective of combining the overlapping programs and refining or eliminating the ineffective ones. This will not be an easy task but it is one that should receive the top priority of Congress. It is my resolve that I will attempt to bring about these needed changes.

I strongly urge my colleagues to join in a bipartisan effort to effect meaningful reform in the welfare system.

AND THE BOMBING CONTINUES

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. FRASER. Mr. Speaker, there is growing concern about U.S. bombing in Cambodia. When administration spokesmen made appearances recently at House Foreign Affairs Committee hearings I asked them what authority the President has to order this bombing. The Boston Globe article I am introducing at the conclusion of these remarks indicates that our colleague LES ASPIN has asked Secretary of Defense Elliot Richardson the same question. Presidential spokesmen have failed to provide adequate responses to newsmen seeking this information. None of us has received a satisfactory answer. And the bombing of Cambodia continues.

Mr. Speaker, it is time we had an answer to this question. Our men held prisoner have been returned, our troops are out of South Vietnam and a ceasefire has been negotiated. Previous justifications for bombing Cambodia no longer are valid, if they ever were. Surely the President does not contend that he can bomb whenever and where ever he chooses simply because he has a request from a friendly government to bomb.

The article follows:

[From the Boston Globe, Mar. 23, 1973]

SOUTHEAST ASIA BOMBING ALMOST AS HEAVY AS BEFORE TRUCE

(By Thomas Oliphant)

WASHINGTON.—The intensity of U.S. bombing in Indochina decreased only slightly during the first month of the Vietnam "cease-fire," according to statistics on file at the Pentagon.

Despite the fact that there were two fewer countries to bomb (North and South Vietnam) after the agreement took effect Jan. 28, the tonnage dropped on Laos and Cambodia during February was similar to that dropped during several months of the war when all four nations were being bombed.

Last month's tonnage total was 70,002, according to the Defense Department.

That represents a decline from the 101,394 tons dropped in January, the last month before the cease-fire agreement was signed. However, in terms of the nine-year history of the air war it is a very typical figure.

For example, since the Pentagon began compiling monthly figures in 1966, the average tonnage over 86 months of bombing was about 84,200, just slightly more than the figure for February.

Moreover, last month's total is larger than the monthly average for the years 1966 and 1971, and is just slightly below the average for 1967.

No figures are available from the Pentagon for the years 1964 and 1965, but the February figure is clearly larger than anything that could have been produced in those early years of the war.

It is also a large figure in its own right. If bombing continued at last month's rate for a year, more tons would have fallen than during the Korean War.

The Pentagon provides no breakdown of the tonnage. However, it is known that Laos was bombed every day in February until a ceasefire agreement took effect on Feb. 22.

In addition, Cambodia was bombed for 15 days last month, and raids have continued every day this month.

In both cases, this bombing has had two purposes: to support troops of the Laotian and Cambodian governments against their Communist foes, but also to harass attempts to bring men and supplies into South Vietnam.

However, beyond the fact that bombing is continuing at a historically high level, very little is known.

Each day, the Pacific command in Honolulu puts out a one-sentence statement that simply announces that bombing has occurred "at the request" of the government of the country being bombed.

Moreover, since the Vietnam cease-fire agreement took effect the military has stopped releasing weekly figures on the number of missions being flown by various kinds of planes in Southeast Asia.

No reason has been given for this new restriction on information about the continuing air war.

Meanwhile, there are signs on Capitol Hill of a revival of congressional interest in what remains of American involvement in Indochina.

For example, this week, Rep. Les Aspin (D-Wis.), a dovish member of the House Armed Services Committee, sent a letter to Defense Secretary Elliot Richardson complaining about the secrecy surrounding the bombing of Cambodia.

"What's actually happening," Aspin said, "is that the Administration is conducting its own air war over there and no one seems to know anything about it. It's way past time that we found out who we're bombing, why, how much, and with what authority. It's not just the public that is being kept in the dark, but members of Congress, too."

BUDGET CEILING AT BEGINNING OF EACH FISCAL YEAR

HON. MARVIN L. ESCH

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. ESCH. Mr. Speaker, yesterday I indicated that I would be offering an amendment to the Mahon bill on impoundment to provide for Congress to

fix a budget ceiling at the beginning of each fiscal year. The following is the text of that amendment:

To amend Section 1 that (a) whenever the President, during any fiscal year for which a budget ceiling has been adopted and observed by Congress under Section 5, impounds any funds authorized for a specific purpose or project, or approves the impounding of such funds by an officer or employee of the United States, he shall, within ten days thereafter, transmit to the House of Representatives and the Senate a special message specifying—

And by adding Section 5. (a) The Congress shall fix by concurrent resolution no later than forty-five days of continuous session after the receipt of the budget message from the President as required by law, a budget ceiling with respect to the next fiscal year. In fixing such ceiling, the Congress shall consider relevant economic indicators, program goals, and any relatively uncontrollable outlays under then existing law, including open-ended programs, and fixed costs.

(b) The budget ceiling established under subsection (a) shall be observed by the Congress in appropriating funds as a limitation on the total amount of funds appropriated for the fiscal year with respect to which budget ceiling is adopted.

ADMINISTRATION'S SLASHES

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. MINISH. Mr. Speaker, the administration's slashes in various programs have aroused deep concern among citizens who are familiar with the benefit derived from them. All of us favor Federal retrenchment, but the question arises as to whether the technicians and economists of the Office of Management and Budget are really equipped to render these judgments that will form our future.

A constituent involved in a Neighborhood Youth project has written a letter that I feel is worthy of our colleagues' attention. My constituent, as is true of his counterparts in other programs, could easily find employment elsewhere so the charge of self-interest does not really enter into the picture. What does emerge, as he points out in his letter that follows, is the fact that the success of the program in which he is engaged illustrates the consequences of ruthlessness across the board slashing.

Because of its pertinence to the debate that is now being waged on this crucial issue, I am inserting the letter that I have received from Mr. John F. Mulvihill, Jr., of Bloomfield, N.J., in its entirety at this point in the RECORD:

BLOOMFIELD, N.J.,

March 13, 1973.

Rep. JOSEPH G. MINISH,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE MINISH: I write to express my deep concern over the apparent indiscriminate discontinuance of Federally funded social programs. I am particularly concerned with the proposed discontinuance of all Neighborhood Youth Corps programs.

As you know the Mount Carmel Guild of Newark, where I am employed, conducts a portion of the Newark city-wide N.Y.C. called "Youth Chance". I also know that you are aware of the success of this program in fulfilling the basic purpose of in-school N.Y.C., i.e., providing meaningful work experience, financial assistance and career development, and reducing the number of high school dropouts. It is because of my exposure to the success of this program through my affiliation with the Guild that I have strong feelings about any across-the-board cuts in Federal programs without considering them on an individual basis.

The Administration claims that there are waste, corruption and ineffectiveness in the programs that it plans to cut. If these claims are true, then the waste, corruption and ineffectiveness should be dealt with appropriately. But after seeing the success of the Youth Chance program I have to conclude that there is much good being accomplished by many of the anti-poverty programs, and any discontinuance should come only after a program-by-program review.

The President has referred quite frequently to the commitment our Government has made over the years to our friends abroad. The social legislation which has come about during the past 40 years and especially during the 1960's is a commitment which our Government has made to the people at home. We cannot hope to successfully meet any foreign commitments if we are going to shirk our domestic commitments.

I feel that there is a real challenge before the people of the United States and men like yourself, as elected representatives, are in the best position to express the response of the people you represent. I strongly urge you to raise your voice on behalf of the people who need the programs that are currently in jeopardy, and that you urge your fellow representatives to join with you in this effort.

Sincerely yours,

JOHN F. MULVIHILL, Jr.

REV. LEON TROY HONORED AS
WARREN, OHIO, MAN OF THE YEAR

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. CARNEY of Ohio. Mr. Speaker, on Saturday, March 10, 1973, the Second Baptist Church of Warren, Ohio, honored its pastor, the Reverend Leon Troy, on the eighth anniversary of his service to the church. A banquet was held in his honor with representatives of the clergy, schools, professional fields, local businesses, community service organizations, family, and friends in attendance.

This year, Reverend Troy was the first black man to receive the Warren Area Jaycees' Man of the Year award. The Jaycees selected Reverend Troy for the award because he is an articulate and dedicated spokesman for his people and a man who is greatly respected for his forthright and honest evaluation of problems. In addition to being selected as Warren's Man of the Year, Reverend Troy is the first member of his race to serve on the Warren Board of Education, where he is currently serving as presi-

dent. He is also serving as president of the Ohio Baptist General Association, treasurer of the Northern Ohio District Congress, vice president of the National Baptist Convention, and trustee of the Ohio Baptist Convention. Even with all of these responsibilities, Reverend Troy finds time to serve on many community and civic boards, including the Trumbull Branch of Kent State University, the YMCA, and the advisory committee of the Welfare Board.

Principal speaker for the occasion was Common Pleas Court Judge Robert Franklin of Toledo, who is a former classmate and longtime friend of the Troy family. In his praise of Reverend Troy, Judge Franklin noted that—

To every task he has undertaken, he has given his best with compassion for his fellow man. Mr. Troy's work has been done simply because he has wanted to lessen someone else's burden.

Mr. Robert L. Dawson, director of Urban Renewal, extended greetings from the city of Warren and commended Mr. Troy for his positive influence on the citizens of Warren. Speaking for the Trumbull County commissioners, Mr. Walter Pestrak commended Reverend Troy as a man who has served his community with distinction. Attorney Lynn B. Griffith, Jr., stated that Mr. Troy had earned the respect of the entire community for the good example he has set. Spokesman for Second Baptist Church was Mr. W. H. McLaughlin.

Plaques were presented to Reverend Troy by Councilman James Isom in recognition of a resolution of commendation passed by the Warren City Council on March 5, and by Mr. Henry Thompson in appreciation from the Second Baptist Congregation. Mr. Robert Tipton spoke on behalf of the congregation's youth. Dr. Richard Huston, director of elementary and secondary education in Warren, introduced the speaker.

Reverend Troy was accompanied by his wife, his four sons, Leon Jr., Keith, Adam, and Eric, his mother, Mrs. William Taylor of Toledo, and many other relatives, including: Kim Allen, Doris Allen, Adrienne Troy, Carolyn Smith, nieces; Mrs. C. P. Cobb, sister; Kent Allen, nephew; Mr. and Mrs. J. Frank Troy, brother and sister-in-law; Mrs. Arthur McBride, sister-in-law; Mrs. Edith Lowndes, grandmother of Mrs. J. Frank Troy; Emory Troy, brother.

Mr. Maron Sibley served as master of ceremonies, and the invocation was given by Rev. W. K. Richardson, pastor of Friendship Baptist Church, and the benediction was given by Rev. Robert Taylor, pastor of Howland Community Church, and music was provided by Mr. John Daniel and his group of vocalists.

In charge of arrangements for the event were: W. H. McLaughlin, deacon, Robert Tipton, youth department; Henry L. Thompson and Harrison Johnson, co-chairmen; Mrs. McLaughlin, Mrs. Thompson, and Mrs. Johnson.

Mr. Speaker, we are proud to have Rev. Leon Troy and his charming family as members of our community.

TRIBUTE TO MR. ELLIOT CURRY

HON. WILLIAM M. KETCHUM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. KETCHUM. Mr. Speaker, on the occasion of his retirement as a reporter on the San Luis Obispo County Telegram-Tribune newspaper, I would like to recognize an old friend and a dedicated citizen, Mr. Elliot Curry.

A recent article in the Telegram-Tribune gives an excellent account of his achievements. I would like to submit the following article to the House of Representatives as a tribute to an outstanding American journalist:

ELLIOT CURRY TO RETIRE FROM TELEGRAM-TRIBUNE

(By Warren Groshong)

It takes some imagination to visualize the Telegram-Tribune newsroom without Elliot Curry.

The tall, soft-spoken native of Meyers Falls, Wash., has been the paper's master of the elegant phrase since World War II. And it has always been baffling to other reporters how he has been able to make everything look so easy.

Curry, who just turned 70, has decided it is time to retire.

He will leave the Telegram-Tribune's editorial department on March 30 after 28 years here and 40 years in the news business.

Curry served as managing editor of the paper from 1944 to 1962 and from then on he was a general assignment reporter.

His role in recent years has been a pivotal one.

He is the man the news desk usually turns to when it needs a difficult story done quickly and accurately. He serves as sports editor every Tuesday and it is his job to see that all of the religion news gets written.

When the editor goes on vacation, the task of putting together the editorial page is almost always left to Elliot.

When the courthouse reporter or the city hall reporter can't make the scene, "Mr. Curry" usually wins the assignment.

Outside the office, he has been a lecturer in journalism at Cal Poly and a member of San Luis Obispo's Bicentennial Committee. Curry has never been one to talk much about himself and his background.

Few people—even in the newsroom—know that he once was postmaster in a small town in Washington.

Curry received his journalism degree from the University of Washington in 1926.

He put himself through the university by washing dishes and waiting tables at Rafferty's Family Style Restaurant on Seattle's skid row.

Fresh out of school in 1927, Curry got into the writing business at the Oroville, Wash. Gazette, circulation 1,000.

The staff at the small weekly paper, says Curry, was "myself and the printer." He was working in the town where he had been raised.

After a jump to another small publication in the apple country near Wenatchee, Curry landed a job on the Examiner at Colville, Wash., 80 miles north of Spokane.

Among other things, he covered the police and courts in Colville and this meant that he had the "bootlegging beat" during prohibition.

"Every so often I would go to the sheriff's office in the morning and the deputy would say, 'Let's go out and knock over a still.'"

So they did.

"And we never had to go far to find one either."

It was during these years in Colville that Curry met Claire Nugent. They now have been married 41 years.

Being a Democrat working for a Democratic paper eventually led the young newspaperman to a different kind of outlet for his talents.

It was 1936 and Franklin D. Roosevelt had been elected to his second term in the White House. Colville's postmaster was a Republican and his days were numbered.

"One day I wrote a story in the Examiner about the possibilities of applying for the postmastership. Then I thought about what I had written and I said to myself, 'I could be postmaster.'"

Off went an application to the area's congressman and two months later Curry won the appointment.

After eight years, he decided to get back into the newspaper game, going to work for the Riverside, Calif. Morning Enterprise. After a short stay in Riverside County, Curry was named managing editor of the Telegram-Tribune, a post he held for 18 years.

He came to San Luis Obispo in 1944 at the height of World War II. Camp San Luis Obispo was flourishing with troops brought there to develop divisions for overseas duty.

There were lots of men in uniform around, but Curry was the only man in the newsroom.

"I had a three-girl staff. One covered the courthouse. Another did the society page and covered the city council and the third one covered the police and wrote features.

George Brand, editor of the Telegram-Tribune said of Curry:

"In every phase of his work, whether it is reporting, writing or editing, he is completely professional. He is never superficial in his work.

"In his relations with the public and with fellow staffers Curry embodies the very best of what the term 'gentleman' connotes. When I came to the Telegram-Tribune, I discovered some of the staff members addressed him as 'Mr. Curry.' It indicated their attitude of complete respect for him and his work.

"I share that respect."

Curry and his wife have two sons. John, 39, is a reporter for the San Mateo Times, and Gene, 36, is a research engineer for the Ford Motor Co. in Detroit and part-time Episcopal clergyman.

What's in the offing for Curry in his retirement years? "Our plans are indefinite," he said.

TAX RELIEF FOR PUBLIC SERVICE EMPLOYEES

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. WALDIE. Mr. Speaker, I am today introducing a bill which would grant to State, local, and Federal Government employees tax exemption relief similar to that which has been available to social security and railroad retirement annuitants for many years. The simple fact is that if you are a Government retiree, you pay taxes on your entire pension, but if your check is coming from the social security or railroad retirement system, then your entire annuity is exempt from taxes.

This obvious inequity should not be allowed to continue. My bill would exempt from gross income for Federal income

tax purposes the first \$5,000 of aggregate income paid under both public and social security retirement systems. I take this action not in order to grant public service employees any preferential tax status, but rather in order to remedy the unfair and discriminatory hardship public employees now bear.

There are over 5,000 different retirement plans covering State, local, and Federal Government employees, and over 35 percent of the employees retiring under these plans are ineligible for any social security benefits. Statistics show that median pension income under private and public retirement programs is almost identical, when the retiree also receives social security benefits. However, the median pension income for public retirees, not receiving social security benefits, compares very unfavorably with private pension recipients. In view of the tax exempt status of social security benefit payments, the advantage of private over public pensioners becomes even more evident.

In order to understand the real hardship public retirees face in a system that taxes them at a greater rate than other retirees, I believe we must look at recent price increases in areas of the economy where both must allocate their income.

My home State of California provides telling examples of the "built-in" difficulties that any person who lives on a fixed income must face. In Los Angeles and San Francisco total food prices have increased 23.5 percent and 25 percent, respectively, over the last 5 years, while meat, poultry, and fish prices have increased 39 percent and 38 percent respectively, during the same time period. In addition, the general housing index has increased 26.3 percent in Los Angeles and 21.7 percent in San Francisco over the last 5 years.

To the difficulties of public service retirees trying to live in health and decency during these times, the Federal Government has imposed a greater burden of taxation upon governmental retirees than for social security and railroad retirees. In tax year 1968, over 2 million people paid tax on their pensions and annuities. The elderly made total tax payments in that year of \$7.6 billion which comes to payments of \$1,100 per return filed.

Mr. Speaker, it is not my intention to single out public employees in State, local, and Federal Governments and grant them special privilege available to no other citizens. The deduction prescribed in this bill would not grant those receiving both public pensions and social security benefits any advantage, but would rather grant an exemption for both public retirement and social security benefits roughly equal to the amount deductible under social security alone.

State, local, and Federal employees, having given their productive years to the betterment of Government service, deserve, at least, the same benefits Congress grants other retirement plan recipients. I, therefore, submit this bill for the careful consideration of the Members.

I include the full text of the bill in the RECORD:

H.R. 6399

A bill to amend the Internal Revenue Code of 1954 to exclude from gross income certain amounts of retirement benefits from public retirement systems

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part III of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to items specifically excluded from gross income) is amended by redesignating section 124 as 125 and by inserting after section 123 the following new section:

"Sec. 124. CERTAIN RETIREMENT BENEFITS FROM PUBLIC RETIREMENT SYSTEMS.

"(a) Exclusion From Gross Income.—Except as provided in subsection (b), gross income does not include any amount received as a pension, annuity, or other retirement benefit under a public retirement system.

"(b) Dollar Limitation.—The amount excluded under subsection (a) by any individual for any taxable year shall not exceed an amount equal to \$5,000, less any amount received by such individual during the taxable year as a monthly benefit under title II of the Social Security Act.

"(c) Definition of Public Retirement System.—For purposes of this section, the term 'public retirement system' means a pension, annuity, retirement, or similar fund or system established by the United States, a State, a possession of the United States, any political subdivision of any of the foregoing, or the District of Columbia."

(b) Section 37(j) of such Code (relating to cross reference) is amended to read as follows:

"(j) Cross References.—

"(1) For disallowance of credit where tax is computed by Secretary or his delegate, see section 6014(a).

"(2) For exclusion from gross income of certain benefits received under public retirement systems, see section 124."

(c) Section 72(p) of such Code (relating to cross reference) is amended to read as follows:

"(p) Cross References.—

"(1) For limitation on adjustments to basis of annuity contracts sold, see section 1021.

"(2) For exclusion from gross income of certain benefits received under public retirement system, see section 124."

(d) The table of sections for such part III is amended by striking out the last items and inserting in lieu thereof the following:

"Sec. 124. Certain retirement benefits from public retirement systems.

"Sec. 125. Cross references to other Acts."

Sec. 2. The amendments made by the first section of this Act shall apply only with respect to taxable years ending after the date of the enactment of this Act.

WOUNDED KNEE UPRISING

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. RARICK. Mr. Speaker, the great Wounded Knee uprising has certainly cooperated with the news media in creating headlines and further misunderstanding among our people.

The decent respectable Indians recognize the renegade AIM as an illegitimate scalping party out to undermine their image as full-blooded American citizens.

According to a report from Detroit, the renegade holdouts at Wounded Knee are a disgrace to all American Indians because their fracas has been financed by the white man through a so-called anti-poverty program.

The disgrace was further compounded by the report that the National Council of Churches, another semipoverty, tax-exempt religious front, was involved in the uprising.

Any American who wants to understand what is taking place at Wounded Knee owes it to himself to read the letter of Dick Wilson, president of the Oglala Sioux tribe, who indicates that the Wounded Knee affair was not intended to shame the great white father in Washington, so much as to embarrass the tribal government of the Oglala tribe. Apparently, the renegades fully understand, and have taken advantage of the depths to which the news media will sink to exploit an unfortunate local matter. Several newspaper clippings follow:

HALF AIM INDIANS SAID TO RECEIVE U.S. FUNDS

DETROIT, MICH., March 18.—The Detroit News reported today more than half the members of the American Indian Movement are employees of social welfare agencies financed primarily by federal grants.

The News story by John Peterson said the organization whose leaders were instrumental in the takeover of Wounded Knee, S.D., has received more than \$400,000 in federal funds since its founding in 1968 as an offshoot of a Minneapolis anti-poverty program. The News said AIM has 258 members.

The paper quoted an unnamed federal official as saying: "When AIM took over Wounded Knee three weeks ago, the Justice Department was all set to move in and make arrests."

"But then AIM leaders threatened to call a press conference and disclose exactly how much financing they've had from the federal government in recent months. That's when the Justice Department backed off."

Peterson's story said a two-week investigation disclosed that last June 21, AIM received a \$113,000 grant from the Office of Economic Opportunity. Of that amount, Peterson said, \$60,000 was for "survival" schools in Minneapolis, St. Paul and Milwaukee to "install American Indian culture" in grade school-age children.

[From the Washington Evening Star and Daily News, Mar. 17, 1973]

CHURCHMEN TOLD BY BIA TO LEAVE WOUNDED KNEE

WOUNDED KNEE, S. DAK.—Bureau of Indian Affairs police have ordered all National Council of Churches representatives off the Pine Ridge Indian reservation for aiding and abetting militant Indians entrenched at Wounded Knee.

Armed with a blanket summons issued by the Oglala Sioux Tribal Council, BIA police yesterday ordered about 20 NCC representatives to leave. The NCC volunteers, however, ignored a threat that they would be jailed and said they were staying.

BIA police exerted the power of the summons—which gives them authority to throw out nonresident "undesirables"—last night after a group of about 70 Indians, apparently non-Oglala, and whites seized a community hall in the nearby village of Porcupine.

Federal officers quickly ousted the group, which apparently was attempting to penetrate the cordon of marshals encircling Wounded Knee. There was no reports of violence.

TALKS EXPECTED TODAY

No negotiations to end the occupation of Wounded Knee were held yesterday because Asst. Atty. Gen. Harlington Wood was delayed in his return from Washington, where he was conferring with Justice and Interior Department officials.

Wood returned to Wounded Knee last night and negotiations were expected to be held today. Observers felt Wood had returned with a government offer to end the 18-day-old occupation by the American Indian Movement (AIM).

Dick Wilson, the Oglala Sioux tribal chairman who has been an outspoken critic of the AIM takeover, said the council declared a state of emergency and authorized the tribal court to issue the blanket summons. When informed NCC representatives planned to stay, he said, "If they do that, they will sit in our jail."

However, there was no immediate move to oust the NCC representatives, who have been serving as mediators between the government and the 200 militant occupants.

MORE FOOD

The NCC was playing a key role in setting up a program providing more food for the occupation force which a spokesman called the "Pine Ridge Reservation Disaster Fund."

The Rev. John Adams of Washington, D.C., said the NCC had pledges totaling more than \$6,000 and that \$1,200 of that had been allocated for groceries.

The NCC, with government approval, has taken in only two car trunk loads of food and medicine during the past two days.

American Indian Movement leader Russell Means said from inside the village that the occupation force is on a subsistence diet and the village has no fuel.

THE OGLALA SIOUX PRESIDENT ON INDIAN GOVERNMENT AND THE AIM MOVEMENT

During the last few days I have been reading what the white man's newspapers have been saying about the goings-on on our reservations. It has made me really wonder. Why don't the reporters try to find out what's going on before they start writing?

If you want to know what is going on at Wounded Knee now you have to understand what has been happening to our people for the last hundred years. After the United States army invaded our country and our warriors finally had to surrender in 1877, the United States set up an occupation government for us. We were run by the Bureau of Indian Affairs and on our reservation, the superintendent was the mayor, the city council, and the chief judge, all rolled in one. He really was a tin god. Yes, there were also some Indian spokesmen, but they were nothing but puppets.

Our occupation government lasted for a long time. More than 50 years passed before the first change came. Under the Indian Reorganization Act of 1934 we were finally given a chance to set up our own government. We did that by vote of the people in 1935. A majority of the people voted to set up our self government, but there was a strong minority against it. A lot of people were accustomed to being run by the Bureau of Indian Affairs and wanted to keep it that way. Our self government was set up by a vote of 1,348 for and 1,041 against. The opponents of self government, the people who preferred paternalism, have been agitating against our tribal government for a long, long time.

But our tribal self government has existed since 1935. The people elected a president and a tribal council in accordance with our tribal constitution. The council passes ordinances and the president and his staff have to carry them out.

The present council and I, as president, were elected by the voters of the Oglala

Sioux Tribe in the tribal election of December 1971. I received 1,554 votes and my opponent received 1,130 votes. We were the top two candidates in the primary, where there were six candidates. The councilmen were elected in the same election, each of them running from his district. We have no political parties in our tribe. Each candidate runs on his own.

Since we took office in 1972, the council and I have tried to run the affairs of the tribe to the best of our ability. It is a hard job. Our people have lots of problems and we sure need more help than we have been getting. But we have tried hard and we have tried to do our best. Everybody knows now who is in charge on this reservation. It is the tribal government, not the Bureau of Indian Affairs.

As I have said, there are some people who haven't liked the tribal government ever since it was set up and they still have supporters today. When they are agitating, they are not just agitating against me personally but against a tribal government that takes charge; they really don't want their own people to run the affairs of the reservation. They have more faith in being run by outsiders than in their own people they believe in paternalism.

I believe in tribal self government and Indian people speaking up for themselves. But I don't believe in taking hostages, in threatening lives. And I don't believe in disrupting government operations. I think that is plain stupid, it doesn't help a single Indian. It sure doesn't help my people. That's why I have been opposed to the AIM movement and have made no bones about saying how I feel. Because I spoke my mind, the AIM people have been against me and have made threats against me and my family.

It would really be funny, if it weren't so serious, that some of the paternalists on our reservation who want to abolish the tribal government and go back to being run by the superintendent have linked up with the same people who tore up the Bureau of Indian Affairs in Washington. But that is what has happened at Wounded Knee. Both sides have only one interest, to embarrass the tribal government of the Oglala Sioux Tribe.

But we are going to stick to our jobs. We are going to do what is right. We are going to see to it that we have law and order on our reservation and we are going to do our very best to give our people a better life. What we are asking the newspapers to do is to be fair to us. Is that too much?

DICK WILSON,
President of the Oglala Sioux Tribe.
PINE RIDGE, S. DAK.

FOREIGN TRADE AND AMERICAN JOBS

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. ANDERSON of Illinois. Mr. Speaker, the subject of foreign trade will receive increasing attention this year in view of the precarious international economic situation and expected congressional action this year on a major trade bill. My good friend and colleague from Ohio (Mr. WHALEN) recently addressed himself to this subject in a speech before the Association for Systems Management in Dayton, Ohio. In his address he cogently deals with the major issues involved in the trade question and various approaches to legislatively deal

with these. He has a persuasive manner, he explodes the myth that the only way to protect American jobs is to pass protectionist trade legislation. On the basis of a number of studies, Mr. Whalen concludes:

In fact, it has been established that United States foreign direct investments create, rather than destroy, American jobs.

At this point in the RECORD, Mr. Speaker, I include the full text of Congressman WHALEN's speech and commend it to the reading of my colleagues.

The speech follows:

FOREIGN TRADE AND AMERICAN JOBS

(Remarks by Congressman CHARLES W. WHALEN, JR., March 16, 1973, before the Association for Systems Management, Dayton, Ohio)

I—INTRODUCTION

For years foreign trade has been a neglected element of America's economy. This stems largely from the fact that United States' participation in international commerce has been small in relation to our total economic effort. Our export-import total, as a percentage of gross national product, has been substantially less than that of other major industrial nations. Yet, because of our size, we are the world's leading trading nation (see table 1).

During the past decade, however, there has developed a growing public concern regarding our foreign trade posture. Initial awareness was sparked in the 1960s by recurring balance of payments deficits. Then, in 1971, for the first time in this century, our country suffered a trade deficit (imports exceeded exports). Finally, as domestic unemployment mounted during 1970 and 1971, some began to question whether our international trade patterns might not have contributed to this dilemma.

The following analysis will focus on the last issue: namely, *what effect has United States' foreign trade had upon jobs?* Specifically, has it created jobs? Has it cost jobs? What is the overall result in terms of total jobs?

TABLE 1

	Merchandise exports (bill)	Merchandise imports (bill)	Total trade percent of GNP
U.S. foreign trade:			
1961.....	\$20.1	\$14.5	6.6
1971.....	43.5	45.6	8.4
Other industrial nations (1971):			
Great Britain.....	22.3	24.0	34.2
West Germany.....	39.0	34.5	33.8
Netherlands.....	13.8	15.4	80.0

II—INTERNATIONAL TRADE AND THE LOSS OF JOBS

Macroeconomists (those who study aggregates) tend to ignore microeconomic considerations. Thus, many who argue that tariffs, quotas, and other protective measures harm the total economy, fail to consider the plight of those individuals who might be adversely affected by foreign imports or by investment of American capital abroad. In so doing, these scholars fail to provide a constructive alternative to protectionism.

Indeed, there is substantial evidence that certain individual jobs have been eliminated by imports and foreign investment. Recently a distinguished Brookings Institution economist, Lawrence Krause, undertook a detailed study to measure the effects of foreign trade upon our society. As noted in the November, 1971, issue of *Fortune* magazine, Professor Krause concluded that "... the rise in imports and the decline in certain categories of exports wiped out 182,200 jobs."

The ramifications of this revelation were made clear to me in a very personal way. In 1968, a Dayton firm (in my Congressional District) producing printing machinery employed 655 persons. In that year its product was unchallenged in our country and had little competition abroad. Today two foreign-owned, Italian-based companies have captured almost all of the European market formerly dominated by the Dayton organization. The Italian producers also have made inroads domestically, now accounting for fifty percent of the printing machinery sales in the United States. To combat this competition, the Dayton company has shifted much of its production abroad. As a result, by mid-1972 employment in the Dayton factory had dropped to 185, a loss of 470 jobs in four years. The remaining positions soon will disappear when the firm ceases its Dayton operations.

III—THE ISSUE

Recognizing that importation of foreign-produced goods and exportation of American capital do cost jobs, a fundamental question arises: What can be done to assist the individual suffering the threat of, or the effects of, job elimination without, concurrently, harming the total economy?

IV—FAILURE OF PRESENT ASSISTANCE PROGRAMS

In 1962, at President Kennedy's behest, the Congress passed the Trade Expansion Act. This legislation armed the President's Special Trade Representative with the authority to negotiate mutual tariff reductions with other GATT (General Agreement on Trade and Tariff) member nations. The objective, of course, was to expand export opportunities for American producers.

Congress realized, however, that tariff reductions are a two-edged sword. Consequently, incorporated in the Trade Expansion Act of 1962 was a Trade Adjustment section. It was designed to cushion the shock of increased imports emanating from any agreement concluded by the President's trade negotiator.

Regrettably, this provision, in its implementation, has proved to be a dismal failure. Experience during the past ten years reveals that the Trade Adjustment clause contains three fundamental weaknesses.

First, the criteria for assistance are too rigid. In order to qualify for aid, the worker and his firm must prove that injury resulted in *major part* from trade concessions granted by the United States government. Substantiating this is a difficult (if not impossible) and time-consuming task.

Second, adjustment assistance applications, upon submission to federal authorities, face a long investigative process prior to certification.

Third, if the application ultimately is approved, assistance is received long after the problem arises. This fact was verified by James T. Lynn, Under Secretary of Commerce (now Secretary of Housing and Urban Development Department) during his May 10, 1972, appearance before the Foreign Economic Policy Subcommittee of the House Foreign Affairs Committee. Mr. Lynn noted that certification procedures are so lengthy that "many firms do not qualify until they have reached a point of virtual bankruptcy. Too often, then, assistance can become a case of giving blood transfusion to a corpse." Thus, Secretary Lynn conceded that "we can recognize and appreciate the widespread feeling that the present structure of trade adjustment assistance is defective in several important respects."

The results of these deficiencies were delineated by Laurence H. Silberman, Under Secretary of Labor, during the same session of the Foreign Economic Policy Subcommittee. Mr. Silberman testified: "For the first seven years after enactment, until almost

the end of 1969, no relief was provided to aggrieved workers or firms because they were not found by the Tariff Commission to meet the qualification standards of the program ... Since that time, the (Labor) Department has issued 57 certificates of eligibility of workers to apply for trade adjustment assistance under the TEA. The terms of these certificates, which identify workers laid off from a specific plant or section thereof and the impact date, cover approximately 24,000 individuals."

No wonder, then, that the AFL-CIO's 1971 pamphlet, "Needed: A Constructive Foreign Trade Policy," dismissed the adjustment assistance effort as a "hoax."

V. THE NEED—A NEW APPROACH TO THE PROBLEM OF FOREIGN TRADE-RELATED UNEMPLOYMENT

In view of the limitations inherent in present Adjustment Assistance statutes, a new approach to the problem of foreign trade-inspired unemployment obviously is required. Two avenues have been proposed.

First, a substantial majority of the witnesses participating in the Foreign Economic Policy Subcommittee's 1972 hearings advocated enactment of an expanded, more viable trade adjustment assistance program.

Second, several spokesmen representing organized labor urged legislation which would limit imports and restrict investment of United States capital abroad.

The Foreign Economic Policy Subcommittee opted for the first approach. In its report issued August 20, 1972, the Subcommittee concluded:

"In order to strengthen and solidify our domestic economy and our foreign economic policy, adjustment assistance should have the primary claim on policy attention as a far less disruptive alternative to import restrictions."

In conformance with this principle, the Subcommittee then outlined a series of specific proposals. A summary of the principal recommendations follows.

First, an early warning system should be devised to avert economic dislocations and unemployment before they occur.

Second, assistance criteria should be simplified and liberalized to lessen the degree of uncertainty and the time lag now extant in the petitioning process.

Third, there should be an increase in the amount and duration of adjustment assistance.

Fourth, the requirements concerning previous work and earnings should be liberalized so that there is broad qualification for those who have been separated from adversely affected employment.

Fifth, adjustment assistance should be made available to workers in separate units of multi-plant firms.

Sixth, older workers must receive more equitable and constructive assistance.

Seventh, the government should assume the responsibility for maintaining the eligibility of an adversely affected worker for family health insurance, social security, and unemployment benefits. Additionally, legislation should be adopted to provide a portability mechanism which would protect the pension rights and other benefits of workers who have changed jobs.

Eighth, the retraining period should be extended to permit completion of the extensive programs required for high skilled services and technologically advanced industries. Further, workers still on payrolls, but who are threatened by the loss of future employment, should be eligible for retraining programs.

Ninth, a national employment service should be created to undertake expanded job training and counseling efforts. With the aid of an early warning system and a nationwide computer complex, this manpower service should be able to match workers and jobs, reduce actual and antici-

pated critical skill vacancies, and help correct geographic imbalances by directing unemployed workers to areas where their skills are in short supply.

Tenth, more reasonable relocation assistance should be provided to all workers displaced because of foreign competition, not just heads of households.

Eleventh, administrative complexities should be reduced to accelerate certification and delivery of worker benefits.

Twelfth, a special package of benefits, such as extended readjustment allowance, payments, health coverage, and intensive job counseling, should be made available in those special situations where workers are unable to take advantage of regular adjustment programs.

Thirteenth, firms adversely affected by foreign imports should be provided more attractive types of financial assistance. These should include loans with more favorable terms than regular commercial credit and interim financing between approval and delivery of benefits.

Fourteenth, new emphasis should be placed on research and development assistance for projects which create new job opportunities.

Fifteenth, joint worker-firm-community petitions should be permitted. These could facilitate coordination of community development projects which are designed to assist the area to diversify its industrial base and to rehabilitate those injured by foreign competition.

Sixteenth, in cases where adjustment assistance would be an insufficient remedy, the government should have the authority to negotiate orderly marketing agreements.

These arrangements should be limited in time, with a specified termination date, designed, to facilitate, not deter, the adjustment process.

The annual cost estimate of this expanded Adjustment Assistance package ranges from \$300 million to \$500 million. Some may view this figure with alarm in the light of current budgetary constraints. Yet, the alternatives—protectionism or no action at all—would be considerably more costly to American taxpayers and consumers.

According to Mrs. Gall Bradley, First Vice President of the League of Women Voters of the United States, present trade restraints probably add "about \$200 to \$300 a year to the average family's budget." As will be explained later, further import restrictions most certainly would boost the cost of living for all Americans.

Totally ignoring trade-inspired unemployment also involves heavy financial burdens. Not only do families of the unemployed suffer economic deprivation, public expenditures will increase substantially to meet mounting welfare and unemployment compensation demands.

On October 14, 1972, I co-sponsored H.R. 17188 which encompassed most of the foregoing recommendations. Time constraints precluded its consideration in the Ninety-Second Congress.

On February 28, 1973, I re-submitted the Trade Adjustment Assistance Organization Act. In offering this bill, I believe it complies with the Subcommittee's consensus "that what is needed are practical and timely adjustment mechanisms to respond to trade-induced unemployment and non-competitive industries on a national basis."

In my opinion, this represents a more economically sensible approach to the problem than the suggested alternative—import and foreign investment restrictions—which I now shall analyze.

VI—ANALYSIS OF THE ALTERNATIVE APPROACH—TRADE AND INVESTMENT RESTRICTIONS

A. Background

The growth of United States-owned foreign assets, coupled with our deteriorating

trade balance, led AFL-CIO President George Meany to observe in a filmed speech, presented on June 3, 1972, that "900,000 job opportunities have been lost in the past five years to imports and overseas subsidiaries of U.S. companies." President Meany stated that "the flood of imports is drowning whole communities." He charged that multi-national corporations are making "higher profits by building plants in foreign countries that give industry huge tax breaks and by hiring low-wage workers." Mr. Meany concluded his filmed talk by urging enactment of the Burke-Hartke Bill, which he said is the "common sense" approach to foreign trade and investment.

B. The Burke-Hartke bill

On September 28, 1971, Representative James A. Burke (D-Massachusetts) introduced H.R. 10914—The Foreign Trade and Investment Act of 1972. On the same day a companion measure, S. 2592, was presented in the Senate by Senator Vance Hartke (D-Indiana). These bills were not considered in the 92nd Congress either by the House Ways and Means Committee or the Senate Finance Committee. Thus, the authors are co-sponsoring this legislation again in the 93rd Congress (H.R. 62 and S. 151).

The purpose of this proposal, as defined in its preamble, is "to promote and maintain a fully employed, innovative and diversified production base in the United States." To achieve this, it seeks to insure "that the production of goods which have historically been produced in the United States is continued and maintained" and "production of such goods . . . transferred abroad . . . be encouraged to return to the United States." Burke-Hartke would accomplish these aims in two ways: (1) *restrict imports*; and (2) *limit United States foreign investment*.

Specifically, the recently introduced Foreign Trade and Investment Act of 1973 imposes quotas on all imports not now subject to such provision. The bill provides that 1973 imports for each category of goods shall not exceed the average annual quantity which entered our country during calendar years 1965-1969. This would reduce import levels in 1973 by approximately 30 percent.

Further, Section 103 eliminates the present law which enables American corporations to claim as a full credit against their domestic tax liability those taxes paid to foreign nations on profits earned by subsidiaries operating in those countries.

This, of course, would subject the American firm to double taxation on profits earned abroad—taxes to the host country as well as our own. Burke-Hartke also requires that earnings and profits from foreign investments be reported in the year in which they are earned rather than when they are repatriated.

C. Fundamental questions relating to Burke-Hartke proposal

Any discussion of the Foreign Trade and Investment Act of 1973 should focus on two fundamental questions:

First, are its premises valid? Specifically, has the principal cause of our recent unemployment problem been increased by American imports and foreign investment?

Second, what economic effects would ensue from passage of Burke-Hartke?

How would the individual American family be affected? Would unemployment decrease or increase?

In the following paragraphs I shall examine each of these two issues.

D. Are premises valid?

(1) *Net effect of Trade (Exports-Imports) on Domestic Jobs.*

As already noted, imports do eliminate domestic jobs. Nevertheless, the question remains: Did imports contribute significantly to the 1970-72 level of unemployment? In the study to which I previously referred,

Professor Lawrence Krause concluded that between the first quarter, 1970, and the first quarter, 1971, very little of our unemployment was related to international trade. Professor Krause observed: "If unemployment had increased *only* because of trade dislocations, the unemployment rate would have risen from 4.16 percent at the beginning of the period to only 4.18 percent at the end, rather than to the actual 5.93 percent."

Recent employment statistics reinforce this conclusion. Our nation in 1971 and 1972 sustained, respectively, trade deficits of \$2.014 billion and \$6.347 billion. Yet, during these same twenty-four months total civilian employment (seasonally adjusted) rose 3,782,000 (from 83,485,000, as of December 31, 1970, to 87,267,000, as of December 31, 1972). Also, during this two-year period unemployment declined 571,000 (from 5,085,000 at the end of 1970 to 4,487,000 by December 31, 1972).

If foreign trade is not the culprit, what caused rising joblessness during 1970 and 1971? Actually, it is attributable to the inflationary crunch of the late 1960s. As prices rose in 1966, 1967, 1968, and 1969, the buying power of a growing number of segments of the economy declined. Let me cite four such areas.

First, those living on fixed incomes, such as pension recipients, witnessed a 16 percent drop in their purchasing capacity between December 31, 1965, and December 31, 1969.

Second, employees of firms operating in a highly competitive environment saw, during those years, their ability to buy dissipate. Their employers simply were unable to offset any cost increases by raising their prices; hence, wages lagged.

Third, certain of our foreign markets were lost during this four-year period. While American prices increased 16 percent, between the end of 1965 and December 31, 1969, the prices of our major foreign competitors rose more slowly. Consequently, potential foreign buyers began diverting their purchases to lower-priced non-American products of equal quality.

Fourth, even those who were protected by large unions saw their "real" wages decline during these same 48 months. For example, in December 1965, according to the Bureau of Labor Statistics, spendable average weekly earnings of manufacturing employees was \$104.42 (1967 dollars). Due to the erosive effects of inflation, the manufacturing employee's spendable average weekly earnings, as of December 31, 1969, had dropped to \$102.40. This represents a \$2.02 per week decline in labor's "real buying power" during the last four years of the past decade.

What lesson can be drawn from this? When consumers (domestic or foreign) suffer a reduction in their purchasing power, they buy less. Following this are cut-backs in production and employment levels. This is as inevitable as night following day. This is why Real Gross National Product declined by \$2.8 billion in 1970. This reduction in the total output of our nation's goods and services that year was accompanied by a concomitant decline in employment and a swelling unemployment percentage (6.2%).

The question recurs: Why have imports had so little impact on total unemployment? The answer lies in a simple economic fact. When one sells more of his wares, his income rises, thereby expanding his purchasing power. This principle applies equally to international commerce. By increasing their sales in this country, foreigners acquire *more dollars*. These additional dollars are used to obtain more American goods. Consequently, while increased imports in some instances have cost domestic jobs, this loss has been more than offset by the increased employment which expanded exports have sparked.

This conclusion is substantiated by Lawrence Krause's study. Professor Krause finds that: "While the rise in imports and the de-

cline in certain categories of exports (from the first quarter of 1970 through the first quarter of 1971) wiped out 182,200 jobs, the increase in other exports and the decline in a few categories of imports created 182,700."

Imports also affect the purchasing power of domestic consumers. When a United States citizen is able to purchase a foreign-made good more cheaply than its American counterpart, he has more money to spend for other domestic items. Let me illustrate. If retailers market an American-made item at \$5.00 and a similar German product at \$4.00, the buyer, in selecting the foreign commodity, has an additional dollar to spend. If, however, trade restrictions force him to "buy American," his purchasing power actually declines by one dollar. Efficient American producers thereby are penalized.

The thrust of the foregoing is simply this. Imports not only enable foreigners to buy American-made commodities, also, by generating lower domestic prices they expand the ability of our own citizens to purchase domestically-produced goods.

In summary, what has been the effect of foreign trade on American jobs?

First, imports do abolish certain domestic jobs.

Second, by increasing foreign purchasing power, imports help create jobs in American export industries.

Third, the "ability-to-buy" of the American consumer is enhanced when he can procure a more competitively priced import. This has a positive job effect in economically viable domestic industries.

Fourth, during the past three years our foreign trade has resulted in a slight gain in total domestic employment (not to mention the uncalculated job increase created by expanded domestic buying power).

(2) Net Effect of United States Foreign Investment Upon Domestic Jobs

In 1961, United States direct investment abroad totaled \$32 billion. A decade later it had risen to \$86 billion. AFL-CIO President George Meany has argued that this \$54 billion growth in American-held foreign assets represents an "export" of jobs, positions which otherwise would have been held by American workers had the investment been made in our country.

This assumption leads to a basic question: Why do United States companies build facilities in other countries? Professor Robert Stobaugh, Jr., of the Harvard Business School observes, "... such investment is primarily defensive, in the sense that the investor is trying to maintain his place in the world market. Given a choice, the U.S. enterprise had rather produce in the United States than go abroad. But in most cases it does not have this alternative—if it does not expand abroad, it would lose its markets to foreign companies, usually large ones from Europe or Japan. This applies to its U.S. markets that it serves from its foreign plants as well as to its foreign markets."

Professor Stobaugh further suggests that, "Over 90 percent of the output of the foreign plants of American firms is sold abroad. The amount imported into the United States is less than one-quarter of our total imports of manufactured goods, and a substantial portion of this quarter is a result of one special arrangement: the U.S. Canadian Agreement."

A recent Commerce Department study confirms Professor Stobaugh's findings. The Department's findings indicate that of goods manufactured abroad by American-owned subsidiaries: 78 percent is sold in the host country; 14 percent is sold to third countries; and 8 percent returns to compete in the United States (of which three-fourths is automobiles from Canada).

In fact, it has been established that United States foreign direct investments create, rather than destroy, American jobs. Profes-

sor Stobaugh recently completed a Harvard Business School-sponsored study which concludes that "foreign investment by U.S. enterprises have a positive effect on both U.S. employment and the U.S. balance of payments. We estimate that if there were no U.S. foreign direct investment, some 600,000 jobs in the United States would be lost; and continuing research indicates that 600,000 is a very conservative figure."

Other trade studies echo the Harvard Business School analysis. One conducted by the distinguished economist, Governor Andrew Brimmer of the Federal Reserve System, estimates, "the foreign trade sector of the United States economy may be generating more than 750,000 jobs, even after allowing for the number of jobs that might be displaced by competitive imports."

Why has investment abroad expanded employment opportunities in the United States? Because most American-owned foreign plants, in order to operate, depend upon domestically produced capital machinery, parts, and finished components.

From these facts emerge two conclusions regarding United States investment abroad.

First, with few exceptions, American-financed foreign facilities would not have been constructed in our own country. Therefore, since jobs created by direct investment abroad could not have existed in the United States, they were not "exported."

Second, by requiring American-produced machinery and parts, United States-owned foreign plants actually have increased total employment in this country by 600,000-750,000.

E. Economic effects of Burke-Hartke legislation

The Burke-Hartke proposal, as indicated previously, presents a dual thrust. Through the imposition of quotas, it would reduce imports approximately thirty percent. Simultaneously, by subjecting American-owned subsidiaries to double taxation (by the host country as well as by our own government), it would raise the effective tax rate on foreign operations to more than seventy percent. Since no major nation levies its own corporate taxes on top of those paid by its companies to foreign governments, this feature of the Burke-Hartke Bill would render American overseas operations substantially uncompetitive.

How would these trade restrictions affect our domestic economy?

First, passage of the Foreign Trade and Investment Act of 1973 undoubtedly would save some jobs in uncompetitive American firms.

Second, by losing thirty percent of their sales in the American market, foreigners will be less able to buy United States-produced goods. Thus, employment in our exporting industries will suffer.

Third, many of the two million Americans engaged in marketing foreign products will lose their jobs in the wake of a thirty percent import cutback. There will follow a commensurate decline in domestic purchasing power.

Fourth, retaliation by those countries adversely affected by United States quotas is bound to occur. This ultimately will generate further job losses among exporting firms.

Fifth, the American consumer will have to foot the bill for subsidizing inefficient domestic manufacturers. Thus, he will pay higher prices, just as he currently pays higher prices for fuel oil and other items protected by import quotas. Professor Stephen Magee, University of Chicago economist, estimates that Burke-Hartke would cost the United States \$1.1 billion a year for the first five years after passage, \$3.5 billion per year in the second five years, and \$7 billion annually in the third five year period.

Sixth, this quota-spawned inflation will inhibit the consumer's capacity to obtain do-

mestic commodities which, in the absence of higher prices, he would have been able to procure.

Seventh, if overseas operations are terminated due to the impact of double taxation, United States plants that supply components to foreign subsidiaries would sustain serious employment cut-backs.

In summary, it is evident that passage of the Burke-Hartke proposal would seriously degrade our nation's standard of living. It would spark severe price increases. It would cost more jobs than it would save. It could trigger another international trade war such as that which provoked the Depression of the 1930's.

VII—CONCLUSION

Our nation's balance of payments and balance of trade deficits are among the major concerns of federal policy makers. In the foregoing analysis I have not attempted to deal with the causes and cures of these twin problems. Their resolution, obviously, would require:

First, bringing the dollar into a more realistic relationship with other currencies (this was the objective of our December, 1971, and February, 1973, devaluation);

Second, reducing United States' military commitments in Western Europe and Southeast Asia;

Third, stimulating greater production efficiency on the part of American workers (productivity in the United States, incidentally, increased 4.3 percent in 1972);

Fourth, containing domestic prices (our performance—a 3.5 percent inflation rate during the past twelve months—surpassed that of our principal trading partners: United Kingdom, 7.8 percent; Italy, 7.3 percent; Switzerland, 6.8 percent; France, 6.6 percent; Germany, 6.4 percent; Japan, 5.5 percent);

Fifth, encouraging industry to pursue export markets more vigorously;

Sixth, seeking mutual reduction of non-tariff barriers which currently inhibit free movement of goods throughout the world (while this would help boost American exports, it also would raise our import levels since United States' policies, in most instances, match in their degree of protectionism those of our trading partners).

Rather, the preceding simply acknowledges and demonstrates that imports and foreign investments do, indeed, affect domestic jobs. It is this fact which prompted my reintroduction of the Trade Adjustment Assistance Organization Act. In my judgment this measure will ease the shock of changing international trade patterns by: (1) establishing an early-warning mechanism; (2) simplifying and expediting trade adjustment application procedures; (3) providing meaningful worker retraining programs; (4) maintaining displaced employees' incomes at reasonable levels during the re-training process. In so doing, it avoids the deleterious economic effects which protectionist legislation would precipitate.

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. HARRINGTON. Mr. Speaker, the problems facing transportation in the Northeast, particularly rail transportation, are reaching critical proportions. This is nothing new or surprising. It is

something we have all been hearing for quite some time.

We need innovative ideas to reverse the trend of deteriorating service. We need the financial support of the Federal Government to get the trains on a solid foundation again. What we get instead are tired clichés and minimal support.

The Boston Globe ran an editorial on March 28 addressing this very question in both a wise and timely fashion. I insert that editorial in the RECORD at this time:

ON A SLOW TRACK

It was probably inevitable that the Administration's proposed plan for preserving rail service in the northeast would be as fragmentary and unsatisfactory as it turned out, in various respects, to have been.

The order for the report, delivered to Congress by Transportation Secretary Claude Brinegar on Monday, had been issued only last Feb. 8 in connection with the resolution ending a one-day work stoppage on the bankrupt Penn Central. Brinegar had been on the job only a few weeks and his background as an oil man was perhaps not ideal preparation for the task. He delegated the work, of course, but along with the President must bear the responsibility for the ultimate form of rail service in the area crossed by the Penn Central and five other, smaller bankrupt lines.

Three features stand out in the proposal. First, the solution is to be "private" in the sense that the structure of any new railroad organization is to be the property of stockholders. Second, rules are to be changed allowing the new organization to move much more quickly in eliminating service it feels is unprofitable. And third, the organization is itself to be brand new.

Something clearly has to be done to put rail service in the northeast on a rational footing. The railroads are now for the most part able to meet their immediate cash requirements but they have at best very small reserves to maintain, much less upgrade their equipment and right of way. And there is little visible hope that they might be able to come to grips with their indebtedness.

Brinegar's solution appears to call for some kind of liquidation of the indebtedness of the lines so that they may become part of a conventional business organization, similar to profitable competing lines in the east like the Norfolk & Western and the Baltimore & Ohio-Chesapeake & Ohio. But, since the Federal government is to take a hand at all, one must ask whether this might not be the moment to investigate a much more active role for the Department of Transportation in operating railroads. Such an arrangement would make it easier to attempt new operating techniques. It might help break the impasse over labor rules that were the immediate cause of the current report. And it might allow easier direct subsidy to equipment experiments that would benefit not only the public in the broad sense of the word but the surviving private railroad companies as well. Europe's and Canada's mixed economies have had great success with government-owned lines.

There is a significant pitfall in the second of the suggestions. Brinegar and others who have said similar things about uneconomic rail lines may be perfectly correct in suggesting sharp curtailment of services. But he may also be dead wrong. The absolutely crucial element in any such reduction in service is the preservation of rights of way on lines that are dropped from service. We simply do not know in 1973 what kinds of technical developments may restore the economic possibilities of feeder lines at some point in the future, or whether other modes of transportation might make use of old

transportation corridors. It is a blithering shame to see old transportation routes in Greater Boston built up while we are all still at sixes and sevens about the nature of our transportation network. Encroaching on the path of the old connector between the New York Central at Cottage Farm and the Boston & Maine in Somerville is a classic example of the short-sighted foreclosure of alternatives in the name of immediate expediency.

As to the format of the new organization, Brinegar has suggested it might be similar to Amtrak, the government-created organization that now runs most long-distance passenger traffic on American railroads. It might have been much wiser simply to assign the task of reordering the lines to Amtrak itself. Amtrak, after all, has nearly two years of experience in operating its passenger trains and undoubtedly would have a better start than a new organization.

The eastern railroad mess demands some really fresh ideas. Secretary Brinegar's suggestions seem unhappily pedestrian.

INEFFECTIVE CAA'S

HON. ROGER H. ZION

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. ZION. Mr. Speaker, in a recent article published in the Indianapolis News, the results of a study of OEO-financed community action agencies were presented. The conclusions point out that most community action agencies have become another example of overstuffed bureaucracy and produce very few tangible services for the poor. I include the following article by Lou Hiner at this point in the RECORD:

[From the Indianapolis News, Mar. 6, 1973]

CAA'S ARE CRITICIZED IN REPORT

(By Lou Hiner, Jr.)

The Nation's poor "should rise up in anger" over the way the Community Action Agencies operate federally-funded programs, a Federal evaluation says.

The report was prepared by Morgan J. Doughton, acting associate director of the Office of Economic Opportunity in charge of program evaluation.

Doughton's study also indicates the nation's taxpayers should join the poor in rising up in anger because of the way their tax dollars are being spent.

"Community Action Agencies (CAA) overall have generated only 80 cents for each OEO Federal dollar," the study says, and Doughton describes the rate of return as "distressingly low."

To show what he considers a good rate of return on a dollar, Doughton used two private help programs in Indianapolis as examples. His report relates:

"In 1959, in Indianapolis, some 320 families in one poor neighborhood began working together in spare hours, contributing labor that became 'sweat equity' in new homes each family would own. . . .

"Foundations and businessmen provided a substantial revolving fund behind the mortgages; the banks agreed to accept the mortgages with the 'sweat equity' as the down payment. Beginning with \$50,000 this project triggered well over \$3 million in sweat, financing and other outputs. That is a \$60 to \$1 multiplier and far better than 80 cents to \$1, the CAA's report.

"In the mid-1960s, the Indianapolis business community underwrote a modest three-

person staff to coordinate volunteers from industry, each of whom, in turn, would intensively counsel one person seeking a job. For several years this initiative successfully placed 90 per cent of the thousands of people seeking help through it . . . representing perhaps \$1 million annually in volunteered time and contributed resources. The cost to businessmen was about \$60,000 annually, the multiplier was \$15 for every \$1. The contrast to the 80 cents for every dollar is staggering."

Doughton's report says that even most of the 80 cents actually was obtained through tax dollars. The CAA's "mobilized" \$1.3 billion over a four year period, but of that amount \$1.1 billion or 87 per cent involved grants to communities for specific local programs ranging from training, health, and community development to education.

"One can seriously question the degree to which CAA's rather than the electoral process itself 'mobilized' the \$1.1 billion governmental portion; doubtless, the CAA's were involved, but it can be inferred that without the involvement the funds still would have reached the community," the report adds.

Doughton believes it is hardly "praiseworthy" for the CAAs to brag of influencing over a four-year period some 1,743 institutions and 1,593 employers to change their policies toward helping the poor. Since there were nearly 600 CAA's in operation that figures out to each influencing three organizations and 2.5 employers in a span of four years.

The CAA's have not worked hard enough to attract private foundation moneys into their programs, the report says. The 591 organizations received \$165 million in private support which represents only 3 per cent of total U.S. private philanthropic dollars disbursed over the four years.

The report concludes: "The basic observation about this study is that it demonstrates that the CAA's have in no way proved to be dynamic engines for change in their communities, mobilizing and marshaling ever-increasing available resources.

"Rather, the study suggests that the CAA's have become yet another level of over-staffed bureaucracy engaged in the destructive game of competitive grantsmanship.

"It now properly rests with the states and cities to decide how best to utilize available funds on the local level where the problems exist."

BLACK HALL OF FAME FORMED IN SAN BERNARDINO

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. BROWN of California. Mr. Speaker, I rise today to bring to the attention of the Congress the accomplishments of a group of young people in my district who have come together to form a social action organization called Kutania, which in Swahili means "people helping others."

In the short period Kutania has been in existence, its impact on the local black community of San Bernardino, Calif., has been most positive. These young people—Chairman Wilbur Brown, Vice Chairman Wilmer Carter, and members Larry Blakely, Tony Blakely, Larry Culberson, Sonia Franklin, Theresa Franklin, Edward Johnson, Carolyn Perkins, Judy Rayes, Robert Rochelle, and Jenni-

fer Vaughn—have played a major role in organizing sickle cell anemia screening drives, educational and career development counseling for high school students, and various cultural events.

More recently they have joined the Sportsmen Athletic Club and its president, Leonard Jacks, in sponsoring a "Black Hall of Fame" which was formed to give proper recognition to local black high school and junior college athletes.

Mr. Claude Anderson, day sports editor for the San Bernardino Sun-Telegram, wrote of their recent activity in an article which appeared on Tuesday, March 6, and I take this opportunity to share that article with our colleagues as a way of commending Kutania and the Sportsmen Athletic Club for their recent success:

**BLACK HALL OF FAME FORMED IN
SAN BERNARDINO**

Black athletes have contributed greatly to the success of San Bernardino high school and junior college teams for many years.

In order to properly recognize their role, the Sportsmen Club and the Kutania Club founded the San Bernardino Black Hall of Fame.

The two clubs held their first annual banquet to honor those stars of the past at the Kola Shanah.

Robert Howard, former San Bernardino High and Valley College star and currently a defensive back for the San Diego Chargers, was named the first recipient of the Tom Hester Memorial Award. Hester was an SBHS track star in the early 1960's who died in an auto accident.

He joins such stars as Earnest McMurray, Andy Brown, Charles Tribble, Junior Howard, Atwood Grandberry and Homer Robertson from the pre-1963 period.

Other black athletes added to the "hall" were Ernie Powell and Sherman Sweeney, 1964; Edgar Delmon, 1965; Terry Hall, 1966; George Tribble and John Cain, 1967; Cliff Culbreath, 1968; Larry Jackson, 1969; Tom Cauley, 1970; Remel Diggs, 1971; and Rodney Hunn, 1972.

The selection committee was composed of three members each from Leonard Jacks' Sportsmen Club and President Wilbur Brown's Kutania Club, plus one member-at-large. Eddie Wilson was dinner chairman.

**EDWARD TELLER CENTER FOR
THE ADVANCEMENT OF SCIENCE,
TECHNOLOGY, AND POLITICS**

HON. RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. HANNA. Mr. Speaker, I wish to bring to the attention of my colleagues a recent development in relating technological advancements to human needs. The University of Colorado will be the site of the Edward Teller Center for the Advancement of Science, Technology, and Politics. The center honors Dr. Edward Teller, noted nuclear physicist and director of the University of California's Lawrence Radiation Laboratory. The center was initiated and made possible by a substantial gift from Mr. Arthur Spitzer, a Los Angeles businessman and philanthropist. The center will be fi-

nanced primarily by private sources. Edward Rozek, professor of political science at the University of Colorado, will be director of the Teller Center. The advisory board will be composed of Dr. J. R. Maxfield, Jr., Astronaut Walter Cunningham, Prof. Edward Rozek, Arthur Spitzer, and Gen. John Allison.

The main purposes of the center are to: First, organize summer programs in science, technology, and politics for high school and college teachers, school administrators, graduate students, and members of the media; second, conduct research in the fields of science, technology, and human welfare and to publish the results; third, organize annual conferences on various aspects of science, technology, and politics, and the relationship of these to human needs and aspirations.

Mr. Spitzer said his commitment to a project like the center was motivated by his regard for Dr. Edward Teller. Mr. Spitzer believes that Dr. Teller's scientific contributions, philosophy, and political realism have not adequately developed or expounded, and he hopes that the Teller Center will fulfill this need.

Mr. Spitzer, in commenting on the Teller Center, said:

Today you cannot separate applied sciences from politics, or science and politics from economy. It is science, politics and economy that shape and fulfill human needs. I hope that the Edward Teller Center will be a human breeding reactor where it will be possible to teach and shape for a strong and positive American way. It will be an important contributor to this country's future and the future of the world at large.

Mr. Speaker, I commend the efforts of Mr. Spitzer and the others involved with the Teller Center. It will provide a worthwhile and important forum for the blending of scientific and technological research and development with the social and economic needs of America. The contributions of such a combination would be of enormous value in the development of an improved way of life for Americans. I wish the Teller Center unbounded success in its endeavors.

**VOCATIONAL REHABILITATION
LEGISLATION**

HON. MARVIN L. ESCH

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. ESCH. Mr. Speaker, it is high time we take the concerns of the handicapped out of partisan political cross-fire. It is time that we realize that whether or not the President's veto is overridden or sustained—a cooperative agreement must be reached if we are to achieve our goals for the handicapped in this country. Therefore, it is essential that legislation be designed to allow the President to effectively run the program.

For this reason, I am today introducing new vocational rehabilitation legislation designed to upgrade and continue current vocational rehabilitation pro-

grams for the handicapped, but at a cost far less than the vetoed legislation.

My bill authorizes beginning with fiscal year 1974 a 3-year appropriation of \$2.6 billion, with \$800 million for fiscal year 1974; \$850 million for fiscal year 1975; and \$920 million for fiscal year 1976. In addition, language has been added authorizing funds for the remainder of fiscal year 1973 at the level of the administration's original budget request.

I believe that this is a funding level which can be easily worked into a reduced level of Federal expenditures, while at the same time providing for strengthened vocational rehabilitation programs, particularly in the area of research and training.

Substantively, my bill includes most all the provisions of title I of the vetoed bill, expanding the Federal-State grants program and establishing regional offices to assist the States and other groups in establishing rehabilitation programs. Title II of the vetoed bill is taken out, but it has been replaced by a special section "Studies of the Needs of the Severely Handicapped" in the new title II paragraph.

Title II also authorizes other special Federal responsibilities, but decategorizes much of the vetoed bill. As a result my bill does not discriminate among any handicapped group. It is my firm belief that the strength of my legislation is in this flexibility.

With minor changes, with the exception of title VII of the vetoed bill, the rest remains the same. In section VII, the bill further decategorizes the vetoed bill.

This bill emphasizes my strong commitment to the handicapped and to vocational rehabilitation programs across the country. It recognizes the fact that an improved program must be offered that the administration will not refuse to effectively administer. To summarize, my bill can serve as the vehicle for expanded and improved services to the Nation's disabled. I trust my colleagues will recognize the pressing need for enacting this legislation.

I am enclosing for the RECORD a fact sheet on my bill:

FACT SHEET ON THE ESCH-ERLENBORN BILL

Title I: Establishes basic federal-state grants for upgrading and expansion of state services to the handicapped. Calls for state plans and sets up regional offices to advise and assist states and other groups involved in programs to aid the handicapped.

Title II (Vetoed Bill): Title II in HR 17 and 57 is taken out. However, it is replaced by the addition of Section 204 which authorizes the Secretary of HEW to conduct experimental programs for, and study on the needs of the severely and minimally retrainable handicapped who are not presently eligible for services provided under the Act.

Title II (Esch Bill): Establishes special federal responsibilities in construction, vocational training, and in addition to Section 204, other special projects and demonstrations.

Title III: Grants for research and training.

Title IV: Administration and project evaluation.

Title V: Office of the Handicapped to advise, provide information and complete research data.

THE NEW FED WEARS TWO HATS—
AMERICAN AND INTERNATIONAL

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. RARICK. Mr. Speaker, the recently reported activities of the Federal Reserve Banking System during the dollar devaluation fiasco are most interesting.

Federal Reserve Board Chairman Arthur Burns has been caught wearing the hats of two financial institutions; that is, the Fed and the Committee on Interest and Dividends (CID), the Federal Reserve Bank has sold foreign money in the foreign exchange market; the Federal Reserve of New York is reportedly investing money in international institutions such as the World Bank and the International Monetary Fund, and Secretary of Treasury, George Shultz, who is also a member of CID, recently returned from Moscow where he met with the Communist Party bosses in the dual capacity of chairman of the Joint Commission for American-Soviet Commerce.

Time was when many Americans thought that American money and American gold and American credit was for the American people, not for international manipulations. The question is often asked: If our monetary programs are satisfactory, why is it that they aren't working? The only logical conclusion can be that when American financial operations are tailored to others and no longer serve Americans, something must give.

I include the related newsclippings at this point:

[From the Washington Post, Mar. 11, 1973]

ARTHUR BURNS WEARING TWO HATS

(By Joseph R. Slevin)

Federal Reserve Board Chairman Arthur Burns is trying to hold down some interest rates while he nudges others higher and he is succeeding remarkably well.

It is a controversial and somewhat confusing assignment because Burns is wearing two hats.

The canny central banker is nudging rates upward in his role as chairman of the Federal Reserve, the American-style central bank that regulates money and credit.

He is holding other rates down as the

presidentially appointed chairman of the Committee on Interest and Dividends, a potent seven-man group that includes Secretary of the Treasury George Shultz among its members.

It is a controversial operation because the main target of Burns' CID restraint efforts are the Nation's biggest commercial banks. They know the same head is inside both hats and that it belongs to the chief of an agency that has tremendous influence over their activities.

Some Federal Reserve purists fear, too, that the central bank's independence is being compromised by Burns' willingness to run a presidential committee. When the CID moves to check an interest rate rise, Burns speaks for the CID. Many people mistakenly think it is the Fed and not the CID that is acting.

But Burns sees no conflict and he has been emphasizing the point recently in Congressional testimony and in talking with visitors.

He accepted the CID chairmanship 16 months ago in the conviction that the best way to keep White House politicians from interfering with Federal Reserve monetary operations was to make certain no administration official would become CID chairman and muscle into the Fed's credit policy domain.

Burns had tangled repeatedly with John Connally, who then was secretary of the treasury. He feared President Nixon would name Connally to the CID chairmanship if he turned it down and that the hard-driving Texan would be more concerned about short-run political objectives than longer range economic and monetary policy goals.

One of the first moves Burns made in the CID was to get an agreement that the group would try to influence administered, institutional interest rates but would not interfere with free market rates. That decision was the key to the success Burns has had in curbing administered rates while raising others.

Market rates must move freely if the Federal Reserve is to control the growth of money and credit and the CID has kept its hands off the money markets.

One of its main targets has been the highly visible prime rate that banks nominally charge for loans to their best corporate customers. Burns, in his CID hat, recently forced four major banks to rescind a boost to 6½ per cent from 6 per cent. The CID subsequently allowed the increase but only after Philadelphia's Girard Bank had satisfied the group that cost increases justified a higher prime rate.

Other major CID-administered rate targets are mortgage interest charges and various consumer credit, small business and agricultural loan rates. In endorsing the Girard's prime rate boost, two weeks ago, the CID said it wants to see "special moderation" in these charges.

The prime rate has climbed from a low of 4½ per cent early last year to 6¼ per cent at present. Mortgage and consumer loan rates have changed hardly at all over the same period.

But the federal funds rate, the highly sensitive market rate that the Federal Reserve gears its operations to, has jumped from 3¼ per cent to more than 7 per cent during the same period. It has moved steadily higher along with commercial paper, bankers acceptance and other market rates as Burns and the Federal Reserve have tightened their credit faucet in an increasingly stern attempt to prevent an inflationary monetary explosion.

[From the Washington Post, Mar. 6, 1973]

OVERSEAS ASSETS HELD BY FED GAIN

The amount of assets held by the New York Federal Reserve Bank for foreign and international accounts rose \$10.1 billion last

year—the amount of the official deficit in the nation's balance of payments.

Most of the growth occurred in holdings of U.S. government securities, which rose \$8.1 billion to \$58.2 billion. Of the total \$10.1 billion increase, \$8.7 billion represented increased holdings by foreign central banks and governments, with the remaining \$1.4 billion for international institutions such as the World Bank and International Monetary Fund.

The total amount of assets managed by the New York Fed for foreign accounts stood at \$78.3 billion at the end of 1972. In 1971, when the U.S. balance of payments on an official settlements basis was \$29.8 billion, the amount of foreign assets held by the New York Fed rose \$29.9 billion.

Foreign central banks and governments who buy dollars to support the currency in their exchange markets usually prefer to invest those dollars in interest-bearing U.S. securities rather than let them lay dormant. Until the President closed the gold window in August 1971, these nations could also have traded the dollars in for gold, but because of the small U.S. gold reserves most refrained from doing so in the late 1960s.

U.S. gold reserves total about \$12 billion after the latest devaluation.

[From the Washington Post, Mar. 12, 1973]

FED SOLD \$318.6 MILLION IN MARKS

NEW YORK, March 11.—The federal Reserve Bank of New York sold \$318.6 million worth of West German marks in the foreign exchange market during January and February in response to developments in the international monetary crisis, a bank official reported today.

Charles A. Coombs, senior vice president of the New York bank and special manager of the system's open market account, said the New York Fed intervened for the first time Jan. 24 with efforts to slow the rise in the mark rate and maintain an orderly market.

It also sold \$20.4 million of Dutch guilders in early February when the guilder began rising in foreign exchange dealings, Coombs said.

His comments were made in a semiannual report on U.S. Treasury and Federal Reserve foreign exchange operations, which appears in the New York Fed's March monthly review. The New York Fed handles all foreign exchange operations for the two federal bodies.

A spokesman said the dollar values reported for the sales of the foreign currencies represented the total amount received in the series of transactions, which took place at varying exchange rates as currencies rose and fell.

Coombs said that of the marks sold in a cooperative effort with West German authorities, \$104.6 million were acquired in a swap drawing on the West German Federal Bank (Bundesbank); \$167.4 million were covered by Federal Reserve balances and \$46.6 million by Treasury balances.

The drawing on the Bundesbank was repaid soon after the Feb. 12 devaluation of the dollar, the report showed.

[From the Washington Post, Mar. 26, 1973]

BALANCE OF TRADE DEFICIT WORSENS

(By James L. Rowe, Jr.)

Although exports passed the \$5 billion mark last month for the first time, the nation's balance of trade deficit worsened for the first time since November.

The Commerce Department reported yesterday that on a seasonally adjusted basis, imports exceeded exports by \$476.2 million in February compared with \$303.8 million in January.

It was not clear how much the 10 per cent dollar devaluation of Feb. 12 affected

the import-export figures. Although the trade statistics are adjusted for seasonal variation, they are not adjusted for price changes.

While the long-run purpose of the dollar devaluation was to enhance the nation's competitiveness in the international marketplace by making U.S. goods relatively cheaper and imported products more expensive, most economists agree that the initial effect is "perverse." Because imports and exports do not change overnight, a devaluation's first effect is to worsen the balance of trade statistics by increasing the cost of imported goods.

The Commerce Department said that February's exports totaled \$5.065 billion, up from January's \$4.977 billion. Imports climbed to \$5.541 billion from \$5.281 billion. In 1972, the nation's trade deficit exceeded \$5 billion, by far the largest in the nation's history. The country ran its first trade deficit this century in 1971.

The department said that, for the four-month period from November through February, exports averaged \$4.769 billion a month 14 per cent above the previous four months which averaged \$4.187 billion.

Imports, meanwhile, averaged \$5.240 billion for the four months ended in February, 12 per cent higher than the \$4.658 billion during the preceding four months.

In February, 1972, the trade deficit was \$649.1 million on exports of \$3.824 billion and imports of \$4.473 billion.

[From the Washington Star and Daily News, Mar. 20, 1973]

SHULTZ IN MOSCOW

Between immersions in monetary negotiations with Western Europe, Treasury Secretary Shultz went to Moscow in his new capacity as our chairman on the joint commission for American-Soviet commerce. His three days of talks, capped by a session with Communist party chief Brezhnev, were followed by the predictable report of "constructive" exchanges and optimism about solving difficulties standing in the way of large-scale trade.

One of Shultz's jobs was explaining to the Kremlin leaders the main obstacle to implementing last year's comprehensive trade agreement with the Soviet Union. This is the move by a decisive bloc of congressmen to deny most-favored-nation status to the Soviets, under which Russian goods imported into this country would receive low-tariff treatment. The congressional opposition is aimed at pressuring Moscow into dropping the exorbitant exit fees it has put in the path of educated citizens trying to emigrate. The tax is seen as aimed at unhappy Soviet Jews who want to move to Israel.

Shultz assured the Russians of President Nixon's determination to clear the congressional hurdle to putting the trade agreement into effect. We hope this reported determination is matched soon by indications of how the administration plans to work its will on Congress in the matter, especially in the light of Mr. Nixon's all-out war with the legislators on a variety of other issues.

The congressmen should succumb to the logic of the situation, and the overriding interest of the United States in East-West détente, of which normal trade relations form a part.

The Communist practice of denying citizens the right of emigration is properly deplored by free men everywhere. But it would be inconceivable for the Russian leaders to accede openly to a specific condition laid down by American congressmen on what the Kremlin regards as an internal matter. A totalitarian regime concerned about restiveness in segments of its own and satellite populations dares not display such weakness. The Soviet leadership, on the other hand, has shown sensitivity to world opinion on the subject, and has eased restrictions on emigration to Israel. If America's good offices

can encourage a liberalization of Kremlin policy, it will be through quiet diplomacy rather than congressional oratory.

Mr. Nixon and his operatives apparently are getting along well with the Soviets on the question of mutually beneficial, peace-insuring trade. At the moment the more urgent missionary work remains to be done on Capitol Hill.

[From the U.S. News & World Report, Mar. 26, 1973]

SINCE MID-1971—DOWN, DOWN GOES THE DOLLAR'S VALUE ABROAD

Since May, 1971, a series of actions here and abroad—including devaluations of the dollar and removal of support of the dollar by some foreign governments—has sent the value of the U.S. currency tumbling all over the world—

NO GREATER LOVE

HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. GOLDWATER. Mr. Speaker, in the March 31, 1973, issue of Human Events, there is an article by Andrew C. Seaman about an organization called America's Sport Stars for the POW's—MIAs, encompassed in a group called No Greater Love. This is a moving tribute to a dedicated group who have tried to provide the children of our POW's and MIA's with activities that their fathers would have provided had they been here. We are all deeply grateful that our men are being returned to us, but many men might not be coming home—our MIA's—and No Greater Love has more work to do still. I commend this article to my colleague's attention:

"NO GREATER LOVE"—SPORTS STARS LEND HAND TO CHILDREN OF POW'S—MIAs

(By Andrew C. Seaman)

The return of U.S. servicemen and civilians from Vietnamese prisons and tiger cages has had tremendous impact on the American public. Patriotism, all but buried in recent years by left-wing activists and their assorted teams of cheerleaders, has been revived with unabashed statements of love for God and homeland by the ex-POW's (see Human Events, Feb. 24, 1973, page 3).

In return, the public has poured out praise for the returnees and their families to such extent that some of the ex-POW's loved ones have had to beg respite from overzealous, albeit sincere, well-wishers.

The men have been greeted at every stop on the road home with banners, flowers, gifts, cheers and welcoming kisses from young women. The feeling has been mutual. The men have shown profound, unashamed love for the nation and the people, especially the youth of America.

A common strain of concern for young Americans has come through loud and clear in most of the ex-POW's statements since the repatriations began in mid-February. In fact, three of the men from the first historic freedom flight visited Virgil I. Grissom Elementary School at Clark Air Force Base the day after they reached the Philippines.

Navy Capt. Jeremiah Denton, the first man off the plane from Hanoi, Air Force Capt. John Borling and Army Master Sgt. William A. Robinson went to the school to thank some 600 fourth-graders on behalf of the other ex-prisoners for Valentines, posters, welcome home signs and crayoned place mats the children had sent to greet the men at the hospital.

Denton, whose "God bless America" statement at planeside electrified the patriotism-starved nation and at the same time raised the hackles on liberal news writers, told the students: "We thought it was wonderful the other day [the airfield welcome], but I know John and Bill are as overwhelmed as I am for being here with little America today."

As the father of seven children, Denton knows what the youngsters mean to a returning serviceman. And for the ex-POW's children we can but imagine what it must be like finally having their fathers back after all these years.

But what of the thousands of youths whose fathers will not be coming home on the freedom planes? What of the families of the men listed as MIA—missing in action?

Over 1,300 Americans are unaccounted for. Their families still wait in painful vigil with nothing but dim hope of reconciliation. The stark reality is that most of them will never learn the fate of their men.

While this situation will be extremely difficult for wives, parents, brothers and sisters of the MIAs, it will be even worse for the children, those Capt. Denton lovingly calls "Little America."

MIAs' wives will, as have the POW's spouses, try valiantly to fill the void in these young lives that can only be filled by a father. Women's liberation to the contrary, most mothers are not capable of helping a youngster learn to bat a ball, steal a base, throw a pass or hook a worm.

Although no Big Brother organization exists for the MIAs' children, there is a group that comes close: No Greater Love.

No Greater Love began two years ago as an effort, conceived by a young White House staffer, Carmella LaSpada, to try to do something to ease the plight of the POW's and the MIAs.

Acting on her own, Carmella took a leave of absence without pay in April 1971 to organize America's Sports Stars for the POW's—MIAs.

Miss LaSpada won the support of four prominent athletes to get the idea started: then-Baltimore Colts quarterback Johnny Unitas, who since the beginning has performed yeoman service for No Greater Love, Baltimore Orioles third-baseman Brooks Robinson, Hall of Famer Ted Williams and Olympic swim champ Don Schollander. One of the athletes' first acts was to sign a letter to North Vietnamese Prime Minister Pham Van Dong asking permission to visit Hanoi as private citizens to discuss the POW's welfare. Naturally, this request and subsequent letters to the North Vietnamese athletes' association were ignored.

Foiled abroad, the sport stars' efforts were soon turned toward the United States as a result of a chance occurrence when some of the missing servicemen's children wrote to Unitas and Robinson to thank the men for

what they had done. Miss LaSpada and the athletes saw an opportunity to ease the loneliness of the youngsters.

With the aid of the National League of Families of Prisoners of War and Missing in Action, letters were sent to mothers of the POW-MIA's children, describing the organization and asking those who wished to participate to list their children's names and their favorite athletic teams or athletes.

By November 1971 over 600 names had been gathered. Without a budget and with only a handful of volunteers, Miss LaSpada began the task of contacting the kids' idols and favorite teams as a special Christmas project.

Within a few weeks the sports world had responded with autographed photos, posters, pennants and a wide assortment of other gifts. Still the volunteers faced the Herculean chore of wrapping and mailing the packages before Christmas, but they made it on time.

Since that initial project, the outpouring from U.S. athletes for these children has been phenomenal. Miss LaSpada said: "Not one athlete has ever turned down a request from No Greater Love."

Some examples of the response: The Houston Oilers and Philadelphia Eagles gave official National League footballs. Sports Illustrated magazine sent baseball and football games.

Unitas personally autographed over 100 photos with Brooks Robinson signing almost that many. Other stars sent out letters and photos, including Henry Aaron, Arthur Ashe, Wilt Chamberlain, Joe Frazier, Rod Gilbert, Billy Kidd, Al Kaline, Jerry Lucas, Bobby Mercer, Joe Namath, Arnold Palmer, Bart Starr, Roger Staubach, Ron Swoboda, Jerry West and Ted Williams. Some stars even telephoned youngsters.

Rep. Jack Kemp (R-N.Y.), a former Buffalo Bills quarterback, also joined in the effort.

Even former heavyweight champion Muhammad Ali, who fought against the draft in courts, chipped in by sending one child a watch.

The program has quite naturally resulted in some humorous and touching sidelights.

One youngster, who couldn't pinpoint a favorite athlete, chose the entire Cincinnati Bengals football team. He and his brother received individual photos from each Bengal player. In a letter to the team, the lad thanked the players, adding the postscript: "P.S. My mother didn't make me write this."

The Chicago Bears received the following poignant message from a young girl: "My daddy used to watch your team on TV and I did too. I was waiting for my daddy to come home from Vietnam, but I still watch your games."

Last year No Greater Love stepped up its efforts and added entertainers to its ranks. Brant Parker, cartoonist of the "Wizard of Id" comic strip, designed a special birthday card to be sent to each of the children on his or her birthday. With these distinctive cards went autographed photos of Dallas Cowboys quarterback Roger Staubach, an Annapolis graduate, and such stars as Flip Wilson and Carol Burnett.

Last Christmas the list of participating "Little Americans" had passed the 1,000 mark. Again the teams, the athletes and the show business people came through. Baseball teams sent autographed baseballs. The Philadelphia Phillies, in fact, with pitching star Steve Carlton in the vanguard, sent grab bags filled with baseballs, T-shirts, batting helmets and other gifts. Singer Bobby Sherman joined in with photos and record albums.

Washington area POW-MIA children were the guests of the Washington Redskins with a king-size Santa Claus, played by defensive end Ron McDole. Some of the Baltimore Colts visited with a group of area POW-MIA offspring in the home of one of the mothers.

With the Vietnam cease-fire, many people

might assume that No Greater Love is finished with its humanitarian effort. Not so. In fact, the program will have to be stepped up more than ever.

"People say the war is over," said Miss LaSpada. "They fail to realize that 1,300 fathers are still missing. We cannot forget these children. Actually, we want to expand the program to remember all children whose fathers were lost in Vietnam."

Expanding the program, though, is going to cost money. Unitas said: "We can't let these children down. It's going to take at least \$100,000 to expand the program and keep it going."

That the program has been able to continue as it has for the past two years is due largely to the efforts of a nucleus of key athletes and Miss LaSpada, who has used up her life savings to keep going without a pay check. Without an increase in contributions, however, No Greater Love may be forced to fade from existence. But anyone who knows Miss LaSpada doubts she will let this happen.

In fact, progress towards an accelerated fund drive has already been made. The Boston Globe has offered its help in publicizing the tax-exempt program, as has Washington's WMAL radio-TV station. Others are also expected to join in.

Mrs. Carolyn Cushman, whose husband Air Force Maj. Clifton Cushman has been missing since September 1966, summed up what No Greater Love has done for their seven-year-old son, Colin.

"Most boys are introduced to football by their fathers," said Mrs. Cushman "Colin hasn't been able to do this. But through the program he was introduced to football in a unique way. It's really enriched his life."

Colin recently announced that, as a result of getting signed photos from Staubach and Unitas, he intends to become an NFL football star when he grows up.

While not all of the children will grow up to be professional athletes, the program has had a positive psychological effect for the young people. They cannot boast, as their schoolmates do, of the things they do with their fathers on weekends and after school or about plans for Father's Day. By bringing in photos of personalities in the sports or entertainment field with a personalized signature, the MIA children are able to show they too are special in their own way. Many mothers have said this helps to some extent.

No Greater Love has also helped enrich the lives of those on the giving end. Former heavyweight champ Joe Frazier is an outspoken proponent of No Greater Love:

"I got five of my own [children], so I know what it means to have me around. I'm not home that often, but when I am it's like the star on a crown. With these kids, it's a thrill to know somebody cares for them."

One of the major drives among the anti-war activists since the POWs have begun to re-enter the country has been for amnesty for the draft-dodgers and military deserters. Army Special Forces Maj. James N. Rowe, who escaped from the Vietcong in 1968, said: "Amnesty cannot be considered until all missing in action are accounted for."

In essence, Rowe, who recounted his captivity in his book *Five Years to Freedom*, was saying there can never be an amnesty for the runaways, for the missing in action will never be fully accounted for.

Rather than worrying about amnesty for those who refused to serve the nation, it would be far better to turn our attention towards those who are left behind—the "Little Americans."

No Greater Love cannot rely on only famous sports or entertainment figures for the money to guarantee the program's continued existence. They must turn to the public.

Georgetown University in the Nation's Capital has given a special post office box to No Greater Love (P.O. Box 968, Hoya Station, Washington, D.C. 20007) Georgetown stu-

dents, led by 19-year-old Charles Fazio, have volunteered to help answer the mail. Here's hoping these young people are kept busy.

NIXON ADMINISTRATION'S BRAIN-WASHING ATTEMPT TO RE-WRITE HISTORY OF SO-CALLED EXECUTIVE PRIVILEGE

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, in recent weeks we have seen a blatant attempt by the administration to brainwash the public in the issue of so-called executive privilege. A Presidential statement issued March 12 vainly tries to make the "privilege" some sort of constitutional doctrine by rewriting history to claim that it dates back to President Washington's administration. This is a clearly demonstrated falsehood. It was totally disproven in testimony last year before the Foreign Operations and Government Information Subcommittee by Prof. Raoul Berger, the Charles Warren senior fellow at Harvard Law School, and the Nation's leading expert on the subject.

As shown in the recent study of "executive privilege," prepared for our subcommittee by the Congressional Research Service, Library of Congress, the claim of such dubious "privilege" dates back only to May 17, 1954—hardly any deep-rooted constitutional doctrine—RECORD, March 28, 1973, page 10078.

An excellent article by Mr. George Lardner, Jr., which discusses the historical fraud of so-called executive privilege, appeared in the Washington Post of March 25, 1973. I commend this thorough review of the history of this important subject to our colleagues and ask that the article be printed at this point in the RECORD:

[From the Washington Post, Mar. 25, 1973]

ONCE DOUBTFUL EXECUTIVE PRIVILEGE
EXPANDED IN SCOPE

(By George Lardner, Jr.)

For decades now, U.S. Presidents and their Attorneys General have been sprinkling holy water of constitutional authority on the doctrine of "executive privilege."

President Nixon expanded on the tradition of high-level secrecy this month with a formal statement declaring, as have his predecessors, that it all began with George Washington.

According to the nation's leading legal scholar on the subject, however, "we've been brainwashed." And, says Raoul Berger, the Charles Warren senior fellow at Harvard Law School, "history is being manufactured under our noses."

Faced with growing congressional demands for the testimony of White House aides about the Watergate conspiracy and the investigations stemming from it, Mr. Nixon extended the cover of confidentiality March 12 to all members of his personal staff, both past and present.

"The doctrine of executive privilege," he said, "is well established. It was first invoked by President Washington and it has been recognized and utilized by our Presidents for almost 200 years since that time. The doctrine is rooted in the Constitution . . ."

The fact is that George Washington never "invoked" the privilege at all.

JEFFERSON'S NOTES

The controversy dates back to March of 1792 when the House of Representatives ordered what appears to be the first congressional investigation of conduct within the executive branch. Alarmed by the defeat of Gen. Anthony St. Clair at the hands of some stubborn American Indians, the House assigned a select committee to look into the debacle and to "call for such persons, papers and records as may be necessary to assist their inquiries."

The committee, in turn, asked the Secretary of War for documents on the St. Clair expedition, a step that prompted Washington to call a meeting of his Cabinet, apparently to make sure that no untoward precedents were set.

The first session was inconclusive. Washington told his Cabinet he never "even doubted the propriety of what the House was doing," but, according to the informal notes of Secretary of State Thomas Jefferson, which surfaced years later, the President said he "could readily conceive there might be papers of so secret a nature that they ought not to be given up."

Coming back for a second meeting, Washington and his Cabinet then agreed that the "House was an inquest" and "might call for papers generally." They also felt, Jefferson recorded that "the Executive ought to communicate such papers as the public good would permit and ought to refuse those the disclosure of which would injure the public. Consequently were (sic) to exercise a discretion." But finally, "it was agreed in this case that there was not a paper which might not properly be produced."

Congress, however, was evidently never notified of the mental reservations involved. Instead, Washington simply instructed the Secretary of War on April 4, 1792, to hand over to the House "such papers from your Department as are requested by the enclosed resolution." According to one of Washington's biographers, "not even the ugliest line on the flight of the beaten troops was eliminated."

JAY TREATY

Despite all that, in a lengthy 1957-1958 series of memos that has come to be the modern-day bible for advocates of executive privilege, then Deputy Attorney General William P. Rogers cited the St. Clair episode as the first example of "refusals by our Presidents, and their heads of departments, to furnish information and papers."

By that same bible, Washington is also supposed to have invoked executive privilege in 1796 when he refused a demand by the House for correspondence, documents and instructions sent to John Jay in connection with a controversial treaty with England. But in rejecting the House resolution, Washington held only that the papers were not pertinent "to any purpose under the cognizance of the House."

The first President indicated that the House, in his view, would have had a right to the papers if it had passed a resolution on "an impeachment," but it had not. Only the Senate, the first President said, shared in the treaty-making power set out in the Constitution. And the Senate, he observed, had already been sent "all the papers affecting the negotiations."

Out of such quicksand, Berger and other critics of executive privilege protest, has the practice of withholding information from Congress and the courts been enshrined.

At most, the University of Chicago's Alan C. Swan told a Senate subcommittee in 1971, the so-called precedents from the early days of American history reflect "ambiguous action accompanied by brave words in which Congress never acquiesced."

M'CARTHY ERA

But if Congress has never acquiesced, neither has it ever forced a showdown. From the first to the 93d, no Congress has ever resorted to the courts to challenge a President's asserted right to keep it in the dark, nor has any Congress clapped any White House aides in the Capitol guardroom to stand prosecution. As Sen. Sam J. Ervin Jr. (D-N.C.) observed in an interview last week, the steady buildup of presidential power has been made easy, partly out of congressional laziness, partly out of congressional default.

"As somebody said," Ervin declared of Congress's shrinking role, "It's not altogether homicide. Some of it's suicide."

The modern-day exaltation of executive privilege, by the same token, was largely a response to the rampant investigations during the 1950s of the late Sen. Joseph McCarthy (R-Wis.).

It was not until then, says Sen. Charles McC. Mathias (R-Md.) that executive privilege was raised to "the level of an absolute unqualified power" that could be exercised not only by the President himself, but by subordinate officials who then began applying it "to almost any kind of information."

By 1957, as a consequence, Deputy Attorney General Rogers, now Mr. Nixon's Secretary of State, was unabashedly claiming "an uncontrolled discretion" for both the President and executive department heads "to withhold information and papers" from Congress "in the public interest."

Berger blames the Rogers memo—much of which Berger says was lifted word for word from the 1949 writings of "a lowly subordinate" in the Justice Department—for much of the mischief. The document, he protests, is loaded with "the most amazing contradictions and inconsistencies."

AIDE TESTIFIED

Among them, Berger has pointed out, is a claim on one page that "the courts have uniformly upheld" the uncontrolled-discretion claim and an admission on another that "the legal problems which are involved were never presented to the courts."

At still another point, Rogers acknowledged the existence of a 1789 law making it the "duty" of the Secretary of the Treasury to "give information to either branch of the legislature . . . respecting all matters referred to him by the Senate or House. . . ." The law, however, was evidently overlooked on another page where, the memo asserted, "Congress cannot, under the Constitution, compel heads of departments to give up papers and information, regardless of the public interest involved."

Despite the demolition work Berger aimed at the memo in a detailed 1965 study for the UCLA Law Review, the Harvard scholar said Friday, "It's still the bible," even for many in Congress. "It's pathetic how little they know."

As far as the Nixon administration is concerned in the field of executive privilege, the President began his first term by assuring the House Government Information Subcommittee that the privilege would not be asserted "without specific presidential approval" and issuing instructions throughout the executive branch to that effect.

But as Ervin, among others, has protested, this failed to stop the Pentagon, for example, from summarily denying Congress information on grounds like these: "Inappropriate to authorize release of these documents" (former Secretary of Defense Melvin Laird), and, "No useful purpose would be served by a public report on these materials" (Defense Department general counsel J. Fred Buzhardt).

On a White House level, counsel to the President John W. Dean III in a letter assured the Federation of American Scientists last year, in response to an FAS newsletter on the issue, that "the precedents in-

dicate that no recent President has ever claimed a 'blanket immunity' that would prevent his assistants from testifying before the Congress on any subject."

NIXON DECLINES

The letter was dated April 20, 1972, two days after the White House agreed to let presidential aide Peter Flanagan testify on limited aspects of the ITT controversy then standing in the way of Richard Kleindienst's confirmation as Attorney General.

This month, however, in the wake of congressional pressures for Dean's own testimony on the Watergate investigations, Mr. Nixon declared: "A member or former member of the President's staff shall follow the well-established precedent and decline a request for a formal appearance before a committee of the Congress."

The President said he would be willing to provide "all necessary and relevant information" in response to congressional inquiries but only through "informal contacts" that would give the White House the final say on what would be made available and what would be withheld.

"Under the doctrine of separation of powers, the manner in which the President personally exercises his assigned executive powers is not subject to questioning by another branch of government," Mr. Nixon asserted. "If the President is not subject to such questioning, it is equally appropriate that members of his staff not be so questioned, for their roles are in effect an extension of the presidency."

Court rulings on that score are not unanimous. In the famous case of Marbury vs. Madison, Chief Justice John Marshall recognized that certain Cabinet communications were privileged from any outside inquiry. He later said that "the principle decided (in that case) was communications from the President to the Secretary of State could not be extorted from him."

But Marshall, who presided at the treason trial of Aaron Burr, also saw fit, in 1807, to issue a subpoena duces tecum (to produce documents) to one Thomas Jefferson, then President of the United States. "If, in any court of the United States, it has ever been decided that a subpoena cannot issue to the President," Marshall held, "that decision is unknown to this court."

PRODUCED LETTER

Jefferson claimed that state secrets might be involved in some of the papers sought, but he did not claim immunity from subpoena, even offering to submit to a deposition.

In any event, Berger states, "he fully complied with the subpoena," forwarding a copy of the letter Burr wanted to the government prosecutor in Richmond. The prosecutor excised certain portions, but offered the entire letter to Justice Marshall so that the court—not the executive branch—could decide what should be suppressed.

The Rogers memo on executive privilege tries to dismiss that case as an aberration. But John Henry Wigmore gave it a higher rating in his classic treatise on Evidence in Trials at Common Law, an authority often cited by the Supreme Court. Quoting Marshall's ruling in the Burr case at length, Wigmore concluded, "there is no reason at all" to exclude the chief executive of a state from producing testimony needed to see justice done.

Wigmore allowed that a chief executive could be excused from actual attendance at a trial because of "the priority of his official duties," but he added: "It is less certain that a privilege exists for subordinate executive officials."

From his pronouncements on the issue, President Nixon is hardly likely to accept such a notion in the face of congressional subpoenas, at least not without a court test

which he has said he would "welcome." He has voiced no doubts that he would be upheld, a notion somewhat at variance with the views he expressed on the floor of the House 25 years ago as a freshman congressman from California.

The date was April 22, 1948; the occasion, a drive by the House Un-American Activities Committee for a House resolution demanding an FBI report on Dr. Edward U. Condon. A government physicist who had been associated with the development of the atomic bomb, Condon had been branded by a HUAC subcommittee as "one of the weakest links in our atomic security" despite his emphatic clearance by a loyalty review board.

President Truman responded on March 13 to the clamor for the document by issuing a directive forbidding compliance with any subpoenas or demands for FBI and other investigative reports on the loyalty of government employees.

During the next month's House debate on the Condon resolution, Mr. Nixon, a member of HUAC, took the floor with a tightly worded assault on the President's directive.

He argued that it was untenable "from a constitutional standpoint" and for a very simple reason. To let Mr. Truman maintain it against congressional investigations of alleged security risks. Rep. Nixon protested would mean that President could "arbitrarily" do the same thing in cases of corruption like "Teapot Dome."

Now, as President, Mr. Nixon has somewhat different recollections. Elaborating on his executive-privilege policy at a March 15 news conference, Mr. Nixon offered it as perfectly consistent with his views as a congressman back in the '40s.

Those were the days, he recalled, of congressional inquiries into espionage and Alger Hiss—cases. Mr. Nixon submitted, that should have had "complete cooperation" from the executive branch.

But the Watergate case, he said, was an entirely different matter. Congress, he maintained, "would have a far greater right and be on much stronger ground to ask the government to cooperate in a matter involving espionage against the government than in a matter like this, involving politics."

RESTRUCTURING OF OEO

HON. MARGARET M. HECKLER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mrs. HECKLER of Massachusetts. Mr. Speaker, last week a fellow citizen of Massachusetts, who is employed here in Washington at least until the end of the current fiscal year, returned to the "Cradle of Liberty" to deliver a speech regarding the "restructuring" of the Office of Economic Opportunity. He defended the administration's actions wholeheartedly in Boston.

While I am in substantial disagreement with a number of his points, I believe in open forums—and if for no other reason than recognition of his courage, I insert the remarks of Howard Phillips before the Middlesex Bar Association in the RECORD:

REMARKS OF HOWARD PHILLIPS, ACTING DIRECTOR, U.S. OFFICE OF ECONOMIC OPPORTUNITY

Distinguished head table guests, I am grateful for this opportunity to come home today to Massachusetts and honored to speak before this outstanding assemblage of men and women who represent the best in the public life of our great Commonwealth. At

times like these, I am reminded of a remark attributed to Winston Churchill on a similar occasion.

As the report goes, Mr. Churchill calmly surveyed the audience and then wisely noted "if the speaker of the evening were scheduled to be hanged, the crowd would likely be twice as great." Needless to say, this speaker is grateful that you were able to assemble so large an audience without the added attraction of having my neck in a noose.

Over the past several weeks, during which I have been serving as Acting Director of the Office of Economic Opportunity, a degree of fame—or at least notoriety—has come my way.

As an unsuccessful candidate for office from Essex County in 1970, I had a very difficult time gaining any attention from the Boston newspapers and electronic media, and it was, therefore, of interest to me when a family friend conveyed to my mother her congratulations about my increased recognition factor as a result of my new job. My mother replied that, after reading the various news accounts, she didn't recognize me at all.

Despite my recent lack of success in effectively communicating the facts and in rebutting the falsehoods regarding my assignment as portrayed through the media, one of my favorite people in Washington is a newsman, David Broder, with whom I have been privileged to have an intermittent conversational acquaintance for several years. In my opinion, Mr. Broder, whose column appears locally in the Boston Globe, is one of our most perceptive and astute observers of the national scene.

You may, for example, recall that in 1968, long before the fact, he stood virtually alone among journalists in forecasting the possibility that Richard Nixon might select Spiro T. Agnew to become his Vice-Presidential runningmate.

I do not always agree with Dave Broder's conclusions, but I was very impressed with another column he wrote shortly after the death of Lyndon Johnson. The column appeared on January 28, one day before President Nixon sent his Fiscal Year 1974 budget message to the Congress. Written from the perspective of one who is often an Administration critic, it analyzed the impact of Richard Nixon's Presidency in a broad historical context. Let me quote:

"It is an extraordinary coincidence that has brought within the compass of these few days the inauguration of the President, the death of his predecessor, the end of the Vietnam fighting and—with tomorrow's budget message—the start of a radical redesign of the domestic policies of the past four decades."

"Both ceremony and substance are telling us: One period has ended and now another begins."

"What is ending is an era of international politics shaped by a constant threat of conflict with totalitarian powers. What is ending is an era of domestic politics formed by a fierce struggle over the allocation of government benefits to rival claimant groups."

"The chief byproduct of the era was the creation in Washington of a huge governmental structure, whose existence and activities were premised on the belief that the American government could decide, in specifics, how the world order and the domestic society should be arranged."

The thrust of Broder's article was to argue that Richard Nixon, frequently discounted and almost always underestimated by his adversaries, would likely prove to be the most significant American President in a century.

"He is not the man", Broder observed, "one would have guessed would win a landslide election victory and he is not the President one would have guessed would shape a transition of historic dimensions. But we have underestimated the role history had in mind for him."

The columnist framed his argument by symbolically comparing the funeral of Lyndon Johnson in January, 1973, with that earlier, more tragic funeral in November, 1963, of President John F. Kennedy. In the days following the Kennedy funeral, over which Lyndon Johnson presided, the White House played host to a steady stream of potentates paying respect to the memory of the fallen leader, but also paying homage to the power of the new President.

Whether leaders of great foreign nations such as Charles de Gaulle, or spokesmen for influential domestic organizations, such as, for example, Walter Reuther, the mourners and their constituencies all had at least one thing in common:

They were all clients of a powerful Federal government in Washington and were, in no small measure, dependent on the whims and good wishes of one man—the President of the United States.

And, indeed, in the Johnson era, Presidential power was carried to its ultimate reach, with no problem, at home or abroad, regarded as being beyond the authority and proper concern of the Executive Branch, as led by Mr. Johnson.

Symbolically, there was no such parade of clients through the White House on the occasion of LBJ's state funeral, roughly four years into Richard Nixon's Presidency—And this resulted from no disrespect of Lyndon Johnson.

It was, rather, a consequence and recognition of the redefinition of Federal power and reassignment of responsibility which has gone forward under Richard Nixon.

For, despite all the talk about President Nixon assuming new power, the ironic and incontrovertible fact is the unprecedented extent to which he is seeking to reduce the concentration of authority in the Executive Branch and return power to institutions which are not only closer to the people, but also more accountable to them.

Look at the record. The principal heritage of our first four years is the reordering which has occurred in the structure and character of international relations. The Nixon Doctrine has encouraged an end to excessive dependency on American power, while fostering a climate of stability in which self-determination is possible for all nations.

Now, in his second term, we are witnessing the implementation of a domestic Nixon Doctrine. More generally known as the New Federalism, this doctrine will, in my view, prove even more consequential in the history of human liberty than his achievements in foreign policy.

I remarked in Washington last week that Richard Nixon's life embodied the victory of substance over style—a triumph of the content of things over the oftentimes distorted appearance of things. And, mark my words, just as the view from Massachusetts has perhaps at times cast a darker "current" view of Richard Nixon's foreign policy stewardship than a retrospective analysis of his achievements would warrant, so also, will historical fact cause us, years hence, to more kindly perceive his domestic accomplishment.

Like the Nixon Doctrine overseas, at home, the New Federalism seeks to help end dependency on our government in Washington while fostering a climate of stability in which the opportunity for individual and local self-determination is enhanced.

In his 1971 State of the Union message, popularly titled as "The New American Revolution" address, President Nixon outlined to the Nation his perception of the extent to which our institutions have failed to keep pace with the changes in our society and his vision of reform which would preserve American liberty as at least as much a reality 200 years hence as it is today.

The central issue in 1776 was self-determination. The patriots of Massachusetts said: "Don't Tread On Me." Allow us to shape the course of our own lives.

That remains the issue as we approach 1976—except the focus of excess power has moved from London to Washington. Our liberty is defined by the extent to which we can shape the forces and decisions which control our lives.

Let me quote Richard Nixon:

"... history... tells us that no great movement goes in the same direction forever. Nations change, they adapt, or they slowly die. The time has now come in America to reverse the flow of power and resources from the States and communities to Washington and start power and resources flowing back... to the people all across America."

"As everything seems to have grown bigger and more complex... as the forces that shape our lives seem to have grown more distant and more impersonal, a great feeling of frustration has crept across the land. Whether it is the workingman who feels neglected, the black man who feels oppressed, or the mother concerned about her children, there has been a growing feeling that 'things are in the saddle, and ride mankind.'"

"And so let us answer them... we hear you... we are going to provide more centers of power where what you do can make a difference..." For "the idea that a bureaucratic elite in Washington knows what is best for people everywhere and that you cannot trust local government is really a contention that you cannot trust people to govern themselves."

"The people, yes!"—that is Richard Nixon's theme, and that is the thrust of the work in which I am now engaged at OEO. We are not discounting our national commitment to fight poverty. We are giving it new life.

Simply announcing a "War on Poverty" and projecting the appearance of concern, cannot substitute for the substantive success. The rhetoric of compassion may psychically energize the well-to-do who dabble in poverty, but, without results, it does little to overcome the reality of poverty for those who endure it.

Nor does Federal subsidization of poverty professionals overcome poverty, except for those on the payroll.

We are reorganizing Federal anti-poverty activities, so that decisions concerning the use of available resources, are placed in the hands of people who can be held accountable for their success or failure.

Local programs are being returned to the control of local officials, on the dual theory that is easier for people to influence local officials and for local officials to understand the people's problems. OEO service programs in such areas as aid to the elderly and health care are being integrated and coordinated to maximize their effectiveness. Research activities are being reassigned to facilitate both planning and the utilization of results.

And, although we recognize that the simple expenditure of funds has not been demonstrated to be an effective panacea, it should be pointed out that we are spending more money of direct benefit to the poor than at any previous time in American history: \$30.3 billion in the upcoming Fiscal Year 1974, as compared with only \$7.9 billion in Fiscal Year 1964.

In reassigning program responsibility, we are proceeding within the context of established statutory authority, wherein OEO is empowered, as in the past, to delegate program management to other departments and agencies. This has been done before with respect to such programs as Head Start, Rural Loans, Follow Through, and others. After June 30, when the new fiscal year will begin, the recipient departments and agencies will continue to run the programs under existing legislative authority, with funding for them to continue at equivalent or higher levels of expenditure.

There are two programs for which new legislation is being sought: community economic development, for which we hope to assign responsibility to the Office of Minority

Business Enterprise and legal services, which we expect will be housed under the aegis of a Federal corporation.

Since this audience is largely comprised by members of the legal profession and, because your Lawyers Referral Service has done so much in providing high quality legal assistance to the indigent, I would like to discuss this subject in some detail. I am further eager to do so because of the widespread misunderstandings which exist concerning the present legal services program and our views of it.

Virtually all lawyers, indeed, virtually all Americans, can be assumed to share the conviction that no one should be denied access to our system of justice, because he lacks the funds to pay an attorney. Historically, both individually and through legal aid societies, attorneys have made themselves available to render professional assistance to needy individuals.

In 1966, Congress passed a law, incorporating into the Economic Opportunity Act a Federal role in assuring the availability of legal representation for the poor.

Over the years, funding has increased from an estimated \$5.4 million, largely private, for this activity in 1965, to more than \$71 million in Federal funds alone, this year.

During that time period, while the statute remained unchanged, and while the popular perception of the legal services program remained largely constant, the program grew in size. Yet more significantly, to a large extent by administrative regulation and grant authority, it went through some fairly important changes in character.

Today your Federal government directly subsidizes more than 250 projects with about 850 neighborhood offices across the country. There are national training programs and publications, recruitment programs and professional organizations, which at least indirectly are underwritten by the government. Employing in excess of 2200 lawyers, these programs, in many cases, do not merely represent clients. They have been encouraged by OEO to organize groups, publish newsletters, assist lobbying activities, and otherwise engage in advocacy on issues of public policy in ways which do not arise out of the representation of specific clients.

Some special programs have been organized around particular causes and issues such as busing, juvenile law, welfare rights, student rights, abortion, prisoners rights, and draft counseling, to mention only a few.

As the programs have come to rely on OEO officials in Washington for direction, as well as for funding, legal services has in many cases been less accountable to professional standards, as interpreted by the local bar, than was seemingly expected when the statute was drawn, and more accountable to what are essentially political standards, as defined by the program managers.

Thus, until very recently, the official goals of the program and the standards by which evaluators have been instructed to rate programs have included the following language:

"In the area of compulsory work programs, is the program working on... litigation of constitutional questions raised by compulsory work programs?"

"Record the number of groups advised or represented by the project and the kind of advice or representation given, such as... representation/advocacy (e.g., legal counsel) during rent strike, advice to welfare demonstrators."

"Are the attorneys in the program familiar with... the leadership of the local welfare rights organization (WRO)? Does the leadership work with the lawyers?... Legal issues which should be brought to the attention of the WRO as useful for organizing or of particular concern to an organization of poor people?"

"Are the program attorneys... assisting in the formation and development of local tenant organizations and tenant unions, in

order that the people may help improve their housing situations?"

It is imperative that the program be reformed in such a manner that state and local bar associations have a greater voice in assuring the maintenance of high professional standards—and it is imperative that funds intended to aid the poor not be diverted into political channels.

Law reform which grows out of the needs of a client is praiseworthy; but law reform which grows out of the non-client related agenda of an attorney is another matter. What causes me, and others concerned about this kind of law reform is that it aims at an essentially political result but expressly avoids the political process.

In saying these things, we do not deny the tremendous good which has been achieved through the legal services program, nor should the abuses of some be loosely expanded to characterize the conduct of all. Our concern is that public debate focus on the concepts which will govern the program, rather than on individual problems which may arise as the result of broad policies.

Thus, it is not correct to maintain that we oppose class actions or suits against the government or that we condone interference in properly established lawyer-client relationships. We do question exclusive reliance on a staff attorney system which allows priorities on the use of time to be established, less on the basis of client needs than attorney preference.

Similarly, we reject that notion of legal services which defines poverty as a political, rather than an economic problem, which argues that, after a certain point, it is inefficient to represent individual clients whose causes are not of concern to "poor people as a class" and which justifies the use of poverty funds to represent affluent clients because the issues are perceived as "class" issues.

We will shortly be submitting to the Congress legislation for a legal services corporation which will truly place the needs of the poor first, before the political objectives of program attorneys or elected officials. We believe it is a proposal which will stand the test of time, providing high quality legal assistance, no matter which national administration may be in power.

In this, as in all else that we do, our goal is not to enhance Federal power, but to disperse it; not to reduce the resources available to help people, but to give the people themselves greater control over their allocation.

We do not justify our social reforms on the basis of economy, although under the President's budget, tax increases will be avoided by keeping the growth of program expenditures in line with economic growth.

No the argument for the changes which are being made at OEO and across the Federal bureaucracy is that, in the final analysis, this is a people's government, whose authority and resources derive entirely from the people.

If this government is truly for the people, it must be accountable to the people. If the electoral process is to be meaningful, decisions must repose, not in the hands of bureaucrats with their own social priorities and values, but must be returned to the control of elected officials, who are periodically required to obtain popular ratification or rejection.

We agree, with the President, that we have arrived at what is surely a genuine turning point in our national history, where the way is opened to a New American Revolution:

"... a revolution as profound, as far-reaching, as exciting as the first revolution almost 200 years ago—and it can mean that... America will enter its third century as a young nation, new in spirit, with all the vigor and the freshness with which it began its first century."

BALANCING THE BUDGET AND INCREASED COST OF LIVING

HON. DAN DANIEL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. DAN DANIEL. Mr. Speaker, while we agonize over balancing the budget, and attempt to determine how much of our increased cost of living is attributable to the export of our own commodities; while efforts are made to bring in line our balance of payments and balance of trade; and, while a troubled world waits anxiously to see when—not if, but when—the North Vietnamese will resume fighting in earnest in the south; some people choose to ignore these problems and debate at length the amount of financial assistance we shall provide to North Vietnam.

These people base the necessity for provision of aid on two assumptions, and I believe this is a proper time to examine these assumptions, for in my view neither is sound.

The first assumption is that North Vietnam is a devastated land, and this devastation is the result—directly and completely—of American bombing. It would appear to me this is the first time in history a nation has emerged from a war declaring simultaneously that it had won the war, but was totally destroyed in the process by the loser.

For nowhere have I read where any North Vietnamese spokesman declared they had lost the war. And nowhere have I read or heard of any offer on the part of that country's government to allow inspection of the devastation reportedly caused by those who are expected to pay for restoration. Rather, there is mounting evidence that North Vietnam continues—indeed, has never stopped—sending the material of war into South Vietnam.

Now, this leaves us with two possible explanations. Either North Vietnam's industrial and agricultural potential have not been destroyed, or other nations are supplying war materials being shipped into the South.

The second assumption is this. Because we provided assistance for the rebuilding of Germany, Japan, and Italy following World War II, it naturally follows we have a like obligation toward North Vietnam.

This, my friends, is hogwash.

To begin with, there is no question that extensive damage was done to those nations during that war. If the aerial reconnaissance photographs we saw had not told the complete story, the reports from our Armies of Occupation surely did.

These nations did what North Vietnam has not done. They surrendered unconditionally, no reservations, no strings attached, to a superior military force. We could, at that time and under those circumstances, afford a certain magnanimity, and it is to our everlasting credit we displayed a charitableness not shown following any other war in recorded history. Not only did we not require or demand reparations—a demand historically made of the vanquished by the vic-

tor—we set to work, investing our best talents as well as our material resources, to help these people rebuild their lands. But there were two very considerable conditions, not tied to the surrender, but implicit to rebuilding.

The people of these nations repudiated the leadership which had led them into war. And the potential for further militaristic adventure was removed. Under their postwar constitutions, none of these nations may acquire the means to become military aggressors.

Now measure the demands of North Vietnam against the earlier period, and any justification for assistance melts away.

There is another reason why we should not consider sending your tax dollars to North Vietnam—now, or ever.

Already there are some 80 billion American dollars floating around outside the continental United States. Our primary consideration should be to repatriate these obligations—for that is what dollars are—at all deliberate speed. Evidence is mounting that much of the dollar's trouble abroad results from speculation on the part of large holders, and a lack of trust in America's worth, which has been due in large part to our continued deficit spending both at home and abroad.

There is one other point that ought to be made.

When one of our officials was questioned on assistance to North Vietnam by a committee of the Senate, he declared the funds would not come from domestic programs, but rather from defense funds. As a member of the Committee on Armed Services, I intend to take a hard look at any request for money from the Department of Defense. If indeed there are funds which can be shifted and shunted about so as to provide the billions of dollars discussed for North Vietnam, then the Defense Department budget ought to be reduced by that amount, and I intend to vote for such reductions.

THE IMPOUNDMENT PROBLEM AND SOLUTIONS

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. ANDERSON of Illinois. Mr. Speaker, yesterday and today the House Rules Committee, of which I am a member, has been holding hearings in the morning and afternoon, on the subject of impoundment. The focal point of these hearings has been H.R. 5193 as introduced by the distinguished chairman of the House Committee on Appropriations, Mr. MAHON, a bill which would require that the President submit a special message to the Congress anytime he delays or withholds funds which have been appropriated; the message would be referred to the appropriations committees of each house and, if within 60 days both houses pass resolutions of disapproval, the President could not proceed with those impoundments.

It has become apparent during the course of these hearings, that there is a wide diversity of views as to what specific procedures should be adopted to limit presidential impoundment authority. Some favor the Ervin approach which would bring these messages directly to the floor of each House and require that both Houses approve the impoundments or the President could not continue to impound funds beyond that 60-day-period. Others favor a procedure whereby the President would have to give prior notification of an intended impoundment and he could not initiate an impoundment unless the Congress give specific prior approval of it. Still others feel that the Congress should take no action to limit the President's impoundment authority and have questioned the constitutionality of nullifying an impoundment by a simple concurrent resolution which could not be vetoed by the President.

In testimony prepared for delivery before the Rules Committee today, I have suggested yet another alternative in my House Concurrent Resolution 165 which would authorize and direct the Joint Study Committee on Budget Control to report legislation to the Congress no later than June 1, 1973, providing for budgetary control machinery including procedures for the operation of an enforceable spending ceiling beginning with fiscal 1974 and procedures for limiting the impoundment authority of the President.

It seems to me this is the most logical and responsible approach to the problem which is not just impoundment but rather our own ability to manage the fiscal affairs of Government in the Congress, specifically, our ability to take an overview of the budget and to act more responsibly in the entire authorization and appropriations process. If we can succeed at this, we will have obviated the need for impoundments.

I think the approach incorporated in House Congressional Resolution 165 does present us with a sensible alternative to acting on any anti-impoundment bill at this time, for it recognizes the need to coordinate any anti-impoundment procedures with other budgetary control mechanisms which may be recommended by our Joint Committee. Without such a coordinated approach, we will be disciplining the President without first disciplining ourselves, and the results could be disastrous for our economy. My resolution is not an attempt to delay, defer or postpone congressional action in the area of impoundment indefinitely, for it requires that any bill brought to the Congress on June 1 of this year must include anti-impoundment language as well as provisions for an enforceable spending ceiling. Next week I will be circulating a "Dear Colleague" letter soliciting cosponsors for my resolution. I urge all members to give this alternative their most serious consideration. At this point in the RECORD, Mr. Speaker, I include the text of my impoundment testimony:

TESTIMONY OF THE HONORABLE JOHN B. ANDERSON BEFORE THE HOUSE COMMITTEE ON RULES IMPOUNDMENT HEARINGS, MARCH 29, 1973

Mr. Chairman and Members of the Committee:

I appreciate this opportunity to testify today on the important subject of impoundment legislation. As a member of this committee, I know what a high value you place on brevity which is supposed to be the soul of wit. So I shall attempt to be brief if not witty. I simply want to make a few important points about the impoundment problem and a couple of suggestions about proposed solutions. And these observations and proposals have been put forward in somewhat greater detail in the materials which I submitted to each of you yesterday.

First, I think it's extremely important that we put this impoundment problem in proper perspective. We hear and read a lot these days about an "impoundment crisis," and from some accounts you'd think President Nixon invented this whole process. The truth is that Presidents since Jefferson have resorted to one form of impoundment or another. In just the last 13 years since 1960, the annual average impoundment has been 5.6 percent of total budget outlays. In 1961, for example, President Kennedy withheld nearly 8 percent of his budget, and in 1967, President Johnson impounded 7 percent of his budget. By comparison, in this fiscal year President Nixon is holding only 3.5 percent of his budget in reserve, or 2 percentage points less than the annual average of the last 13 years. So, if what confronts us today is an "impoundment crisis," then where oh where was the Mahon bill when we had the "super-catastrophic crisis of impoundment" under President Kennedy and Johnson?

The second point I wish to make is that the lion's share of the impoundments do not come down on the human resource side of the budget, as popular myth would have it, but rather on the space-defense-public works side of the budget. To be specific, of the \$8.7 billion currently being withheld, 28 percent is from the highway trust fund, and another 25 percent from the Department of Defense; yet another six percent is from space research and technology, general government, and veterans' benefits and services. Thus, nearly 60 percent of all impoundments are being made not from the human resource side, but from these other areas. In addition, about 22 percent of impoundments are evenly divided between agriculture and rural development, and environment and natural resources; six percent is from housing and community development; and only 4 percent of the impoundments are in the areas of health, income security, education and manpower combined.

So, to those who would argue that impoundments have knocked our priorities out of whack, I would suggest they look back at the facts; and the facts are that the impoundments reflect the very priority preference espoused by those who squawk the loudest against impoundment.

In view of these facts, I find it a bit curious that an impoundment bill is now being rushed through the House with such great sense of urgency. There didn't seem to be any great urgency or concern about holding our Joint Study Committee on Budget Control to its legally mandated final deadline of Feb. 15 for recommending budgetary control procedures and machinery. No, they were given a quiet extension until December 31st, far too late to help us in fiscal 1974.

So, we have the paradox of impoundment control now, spending control later. You can fill in the gap with higher taxes or increased inflation or both. Put another way, we have here the irony of a bill which restrains the President from holding down spending, but does nothing about restraining the Congress from pushing up spending.

Mr. Chairman and Members of the Committee, isn't all this just getting a bit too foolish and ridiculous and irresponsible to even be considered good partisan politicking, posturing or point-making anymore? And, before you protest, let me add that I won't

deny for a moment that this is being done by both sides.

But we might all do well to re-read that Dave Broder column from last Sunday's Post. You will recall that he had just returned from a fiesta in a small Mexican town during which an historic mock battle was reenacted. And Broder drew the following analogy:

"To this returned traveler the three-month old battle between the President and Congress seems as full of clatter—an devoid of consequence—as that marathon mock-battle in that little Mexican village."

And Broder goes on to write:

"A fiesta of course is its own justification. It sure beats working in the fields. And a 'constitutional crisis' may serve the same function for Washington, relieving its politicians from the dreadful drudgery of governing."

Mr. Chairman, did you ever stop to think that it might not take the perspective of a Mexican holiday to see the Congress in that light? Did you ever stop to think that to the people of Gary, Indiana or Rockford, Illinois we might resemble those costumed soldiers engaged to mock battles full of clatter and devoid of consequence?

I would only suggest today that we take the issue before us quite seriously and in its proper perspective. There is work to be done in the fields—the dreadful drudgery of governing.

I think this Committee can distinguish itself in this midst of all this clatter by declaring a cease-fire in the battle of the budget between the President and Congress, and furthermore, can be instrumental in drafting a peace agreement that will hold down spending and impoundments.

I don't like impoundments anymore than the next person, but at the same time I realize that these have been necessitated because the Congress has been unwilling to face up to its own responsibilities in this area of holding spending within reasonable limits. But an impoundment bill alone is not the answer: it is only an antidote to neutralize another antidote which many Members of Congress find distasteful. But not only does this antidote not check the spreading poison of irresponsible spending and spiraling inflation which is infecting our system, in neutralizing the antidote being used by the President—his impoundment authority—we are only guaranteeing the further spread of that poison.

All I am urging in the amendment and substitute or companion bill I will be offering at the conclusion of these hearings is that we effectively check the spread of that poison by reasserting our own rights and responsibilities. Put quite simply, if we put a lid on impoundment, we must also put an airtight lid on spending. And if we are going to have an airtight lid on spending, we should have it in time for fiscal 1974, and that means mandating our Joint Budget Committee to produce that for us within the next two months. I therefore will urge adoption of the amendment as well as my companion or substitute resolution.

APPENDIX

Text of Anderson Amendment to H.R. 5193:
On page 5, after line 23, add a new Section 5 to read as follows:

"Sec. 5. (a) The provisions of this Act shall take effect in any fiscal year in which the Congress, by act of Congress or by concurrent resolution, fixes a ceiling on outlays for such year, and shall be suspended only when the Comptroller General of the United States makes a determination, and so reports to the Speaker of the House and the President of the Senate, that the Congress has exceeded or is expected to exceed such ceiling.

(b) Such suspension of the provisions of this Act shall remain in effect until the date that the Comptroller General makes a determination, and so reports to the Speaker of the

House and the President of the Senate, that appropriate action has been taken by the Congress to insure that outlays for the fiscal year will not exceed the total authorized pursuant to subsection (a) of this section.

Text of H. Con. Res. 165 introduced by Mr. Anderson of Illinois:

"Resolved by the House of Representatives (the Senate concurring), That the Joint Study Committee on Budget Control is authorized and directed to report to the Congress, by bill or resolution, no later than June 1, 1973, its final recommendations with respect to any matters covered under its jurisdiction, provided that such report shall include, but shall not be limited to (1) procedures for improving congressional control of budgetary outlay and receipt totals, including procedures for establishing and maintaining an overall views of each year's budgetary outlays which is fully coordinated with an overall views of the anticipated revenues for that year; (2) procedures for the operation of a limitation on expenditures and net lending commencing with the fiscal year beginning July 1, 1973; and (3) procedures for limiting the authority of the President to impound or otherwise withhold funds authorized and appropriated by the Congress."

EXPAND ACIR TO INCLUDE SCHOOL BOARD OFFICIALS

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. FASCELL. Mr. Speaker, I am today introducing legislation to expand the membership of the Advisory Commission on Intergovernmental Relations to include two elected school board officials.

Congress authorized the establishment of the Commission in 1959 to provide an ongoing review of intergovernmental programs and problems and to make recommendations for ways to improve the operation of our federal system of government.

A primary objective of the Commission was to encourage the coordination of all levels of government—Federal, State and local—and the general public. Membership on the Commission, determined by law, includes six Members of Congress, three from each body, three officers of the Federal executive branch, four Governors, three State legislators, four mayors, three county officials, and three private citizens. I feel this membership should be expanded to include elected school board officials as well.

Public education directly affects nearly every American home and every citizen. It involves an annual cost of \$47 billion, employs 5 million people and directly touches the future of 46 million children. School board officials responsible for public education are, in many cases, the elected official closest to the people. The effects of their actions are immediately visible. This immediacy puts them at the heart of our federal system.

The Advisory Commission has recently been charged by the President with suggesting the form which the "new finance" for education will take. The need for such a study is clear. However, the need for participation in such a study by those

persons most knowledgeable in this area and those most responsible, has been overlooked.

The case for school board official's participation in this instance is clear. In addition, almost every vital action of the Commission in some way affects schools.

The chairman of the Dade County School Board has written:

Since about one-half of the taxes of this country at the state and local levels go toward education, and an ever increasing percentage of federal monies is spent in this fashion, we feel that it's vitally important that our views and concerns are expressed as a working member of the Advisory Commission on Intergovernmental Relations."

Last year the Intergovernmental Relations Subcommittee of the House Government Operations Committee held hearings on proposals similar to the one I am introducing today. I hope that the subcommittee will continue its consideration of this issue in the near future, and urge favorable action.

LATIN AMERICA AND THE WHITE HOUSE

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. HAMILTON. Mr. Speaker, I would like to bring an article by Sol Linowitz, former U.S. Ambassador to the Organization of American States, to the attention of my colleagues.

The article, from the March 7, 1973, issue of *World* magazine, is entitled "Look, Mr. President, Latin America Is On the Map, Too." Ambassador Linowitz notes that:

The Nixon administration has seemed rudderless in this area, and Latin Americans speak bluntly of the Nixon "non-policy" toward Latin America.

The article follows:

[From the *World* magazine, Mar. 7, 1973]
LOOK, MR. PRESIDENT, LATIN AMERICA IS ON THE MAP, TOO
(By Sol M. Linowitz)

(NOTE.—Sol M. Linowitz, an attorney and former chairman of the Xerox Corporation, served from October 1966 until May 1969 as U.S. ambassador to the Organization of American States and U.S. representative to the Inter-American Committee of the Alliance for Progress.)

Not long ago the *Jornal do Brasil* (a not unfriendly Brazilian newspaper) ran a cartoon that shows President Nixon standing before a globe of the earth contemplating Europe, the United States, and Asia. In the next panel, Nixon, crouching down, peers in astonishment at South America and exclaims: "Look, there's a map on the underside, too!"

The cartoon's implications are painfully clear: To Latin Americans, President Nixon is the first U.S. President in this century who has prided himself on his mastery of world affairs, yet has had literally no policy for Latin America. Other presidents during the past seventy years, whether their goals were regarded as a constructive or jingoistic, at least seemed to have some clear idea of what they wanted to accomplish "south of the border." Theodore Roosevelt had his Big Stick and Gunboat policies, replete with ter-

ritorial-imperative chest pounding. FDR launched the well-meaning, paternalistic Good Neighbor policy. And John F. Kennedy created the Alliance for Progress, which was later furthered by Lyndon B. Johnson. But the Nixon administration has seemed rudderless in this area, and Latin Americans speak bluntly of the Nixon "non-policy" toward Latin America.

Ironically, the relationship between the United States and Latin America inherited by the Nixon administration was basically a healthy, cooperative one.

There were, of course, problems and quarrels. But under the Alliance for Progress, Latin America had managed to achieve an annual average of 2.4 percent real per capita growth. This was exactly one decimal point below target, but far better than might have been expected during the 1960s, when the area's terms of trade and income from export commodities suffered badly. During that decade the United States contributed over \$8 billion in bilateral aid and was responsible for much of the \$6.5 billion in loans from international institutions such as the World Bank and the Inter-American Development Bank. The Latin Americans themselves, moreover, put up at least 90 percent of the capital required to fuel development and built up a sizable infrastructure of public-works projects and social programs.

One of the Alliance's crowning achievements was in export expansion and diversification—which is the critical bone of contention between the United States and Latin America today. Under the Alliance, Latin America moved away from the wasteful import-substitution policy that had been its mainstay during the 1950s, and concentrated instead on diversifying its exports. However, toward the end of the decade, Latin American leaders realized that further success in this program would require the United States and other countries of the developed world to tear down the trade barriers to Latin American-manufactured exports. It was at this stage that President Nixon stepped onto the scene.

Then came two striking developments in U.S.-Latin American relations: the Rockefeller mission to Latin America and the Latin American meeting that produced the document called the consensus of *Vina del Mar*.

In late January 1969, Nixon announced that he was sending Gov. Nelson Rockefeller—a former Co-ordinator of Inter-American Affairs, long known for his deep interest in the area—on a fact-finding mission to a dozen Latin American capitals. Rockefeller surrounded himself with highly respected experts from a wide range of disciplines and embarked on a whirlwind tour of Latin America. Some skeptics asked whether still another study was in fact necessary, but when it came out, the Rockefeller report did demonstrate the importance of Latin America for the United States objectives, and recommended significant action. The President accepted the report, and Latin Americans waited to see whether he would act on it.

Meanwhile—at precisely the same time as the Rockefeller mission—there was a meeting of CECLA—the Special Coordinating Committee on Latin America, which consists of all OAS members except the United States. The purpose of the meeting was to coordinate the Latin American position within the Alliance, and the conferees agreed on a statement issued as the consensus of *Vina del Mar*.

The consensus covered a good deal of ground, ranging from international financing to the transfer of technology and the role of foreign direct investment; and from tariffs and quotas to the prices of commodities on the world markets.

Specifically, it asked that the United States eliminate tariff and non-tariff barriers on goods from the developing world and that it champion Latin exports by helping secure similar treatment for them in other

developed markets. The CECLA group also sought greater financial cooperation that would allow recipients of aid to set their own priorities with no strings attached to the foreign aid they received.

Few national leaders in their first year in office have had such clear guides as the consensus and the Rockefeller report by which to formulate a foreign policy for a region. Yet for some inexplicable reason, the President failed to respond. In his only major Latin American policy statement, on October 31, 1969, the President, indicated his awareness of the key problems, and then to the great disappointment of Latin Americans did very little about them.

The Nixon proposal for Latin America, as outlined in the October speech, was known as Action for Progress in the Americas; its ideas were meant to be the backbone of the Nixon policy for Latin America. On the face of it, the program seemed to offer highly positive concessions to Latin America in four key areas.

First, with respect to trade preferences, the statement said that the United States would urge other industrialized countries to agree on a uniform, nondiscriminatory system toward developing countries. The system would be very generous, with no ceiling on preferential products that Latin America felt it could sell to the United States; and the United States would be prepared to go ahead with preferences for Latin America on a number of products if Europe and Japan could not be persuaded to go along on a more general trade preference for all developing countries.

A second point was the untying of U.S. AID (Agency for International Development) loans. It was emphasized in the policy statement as a significant step forward. What was not underscored was the fact that while AID recipients would no longer be tied to U.S. sources alone, they would be free to purchase manufactured imports with AID funds only from sources within Latin America.

A third and slightly related point was the promise to move toward increased multilateralization of U.S. aid for Latin America.

The program's last key point concerned the need to "deal realistically with governments in the inter-American system as they are." The President conceded that each nation had a right to decide whether or not it wanted foreign private investment. Without threatening countries that might choose the path of expropriation, the President quietly warned that such action might seriously affect investor confidence.

Latin Americans accepted these key policy positions with a sense of hope, which has over the months turned to cynicism and disillusionment.

One major setback to Latin American confidence in the new program came on August 15, 1971, when the Nixon new economic game was announced. The plan placed a 10 percent surcharge on imports to protect the U.S. balance of payments, and Latin America found itself lumped in with the other exporting areas. Many commodities that make up the bulk of Latin American exports were excluded, and White House spokesmen pointed out that only 22 percent of Latin American exports would be affected by the surcharge. However, they missed two important points that did not escape Latin Americans: First, the exports affected were fast-growing manufactured products, which Latin producers had worked long years to be able to manufacture for successful marketing in the United States. Second, Latin America's dollar-trade deficit with the United States had exceeded a billion dollars the previous year; and Latin Americans understandably felt that they should not be penalized in the same category as the European, Japanese, and other exporters who had contributed to the balance of payments predicament of the United States.

Quite clearly, the President had missed an extraordinary opportunity. He could have said he recognized that Latin America was not a factor in U.S. economic problems and could have absolved the area from the added burden of the surtax. Having failed to do so, however, he could no longer blame a protectionist Congress (as his administration had been doing) for the failure to live up to his commitment on trade preferences for Latin America.

The predictable result was to unite Latin America firmly against the United States. Even such strange bedfellows as Brazil and Chile were able to get together with other Latin American countries in an emergency CECLA meeting in Buenos Aires that condemned the U.S. action and explored possible sanctions against the United States. A belated decision (made after the CECLA affair) to roll back the 10 percent AID cut failed to overcome the resentment and hostility that had been aroused.

The promised multilateralization of aid also proved to be a disappointment to the Latin Americans. At the beginning of last year, President Nixon issued a statement that appeared to increase politicization of multilateral aid channeled through the Inter-American Development Bank and the World Bank. He warned that all U.S. aid—including that funneled through multilateral institutions—would, in the absence of special circumstances, be cut off from countries that expropriated U.S. investments without prompt and adequate compensation.

Other statements exacerbated the situation. While still secretary of the treasury, John Connally stated in an interview: "The United States can afford to be tough with Latin Americans because we have no friends left there anymore." Later, as good-will ambassador to Latin America, Connally warned Venezuelans that "the United States has the power to export prosperity or poverty to any country in the world to which it chooses to do so."

Against this background it is quite clear that the Nixon non-policy toward Latin America has had one effect: It has united Latin America in opposition toward the United States and its surrogates—the hundreds of subsidiaries of U.S. corporations spread throughout the region. On other issues it has helped set Latin American leaders against each other in their efforts to vie for leadership of the region precisely at the time when the nations of Latin America should be working solidly together for development of the continent.

Neither the United States nor U.S. private investment in the area has benefited from this non-policy toward Latin America. Therefore, what we now need—and need badly—is a cohesive policy for Latin America that will take into account the hemisphere's special requirements and desires. And this challenge presents the new Nixon administration with an extraordinary opportunity at a pivotal moment.

What should be the ingredients of such a policy? Here are a few suggestions:

1. Define U.S. goals in the hemisphere, and spell out just as clearly what the United States expects of others. Then stick to these commitments.

There is no need of studies and analyses that make clear what our approach should be and how we should go about it. What we need—and desperately—is to recognize that clarity, like charity, must begin at home. To talk about "partnership" at a time when there is not even a constructive dialogue is neither realistic nor constructive. To be effective, a partnership must begin at the top—with the President. There must also be a genuine commitment on the part of the President, which in turn is reflected throughout the administration.

2. Move the Alliance for Progress toward a second stage, in which it would really be

directed on a multilateral basis, with goals mutually defined.

We have long since passed the time when the United States can attempt to direct the destiny of Latin America. It is now necessary for all sides to participate in setting up goals and guideposts. The consensus of Viena del Mar and the recommendations of the Rockefeller commission can be important guides in establishing common objectives. The United States should indicate its readiness to join in developing such common goals.

3. Use existing inter-American institutions to conduct as much of our governmental business with Latin America as possible.

The OAS and the Inter-American Development Bank are two established organizations in which the United States can place its trust in dealing with the area. Both are staffed with dedicated international civil servants who are seeking to develop the region and who can speak both the language of the United States and that of Latin America. We should make clear our confidence in, and respect for, such inter-American institutions.

4. Once the United States has agreed to the principle of multilateralism, we should assure that decisions with respect to multilateral aid are truly multilateral.

As is true with any corporate board of directors, the role of the board of a multinational institution is to set overall standards and leave everyday management to the professional managerial staff. The same should apply in the case of international lending institutions. It would be helpful in this regard if Japan, European countries, and others were to join such institutions as the Inter-American Development Bank in order to assure that they are truly multilateral and not dominated by the political influence, express or implied, of the United States.

5. Open up the U.S. market to Latin American products to the greatest extent possible and in a way that will truly benefit inter-hemispheric trade.

One idea worth exploration would be for the United States to allow Latin American products to come in free of all duties and quotas to the extent of the almost \$2 billion trade surplus it has with the region. There is no reason why a nation as powerful as the United States must make its mark at the expense of its developing neighbors. To make the formula more acceptable to Congress, the United States could insist that Latin nations reduce their barriers against U.S. exports to the degree they benefit from increased exports to the United States.

6. Help rekindle the fire of economic integration.

During the first eight or nine years, regional integration worked well, but it has since been stymied in its growth. Both LAFTA (Latin American Free Trade Association), which includes all of South America plus Mexico, and the Central American Common Market have run into difficult times. At the presidents' summit meeting in April 1967, a Latin American common market was the leading item on the agenda. The United States could help revive interest in it by offering to become a non-reciprocal member—which would open up its markets—but not insist on the same from Latin Americans. A major market outside the area could be the stimulus that regional integration needs to set its export goals high and to develop the way to reach them.

7. Make clear the nature of the relationship between the U.S. government and Latin American subsidiaries of U.S. parent companies.

If the U.S. government has a responsibility for helping American companies in conflict with foreign governments, then it must also be prepared to be responsible for companies that conduct themselves badly in a particular country. The United States could insist that

American companies follow a specific code of conduct of responsible international companies that would state what rights companies should be able to expect when dealing internationally, and what duties to the host country they have in return. If a U.S. company is wronged under such a code, then the U.S. government could, in good conscience, step in to make this known to an international tribunal, while avoiding any unilateral action.

8. Accept the idea that Latin American countries—like other countries of the world—have the freedom to determine their own political, social, and economic systems on behalf of Latin Americans and in a Latin American way.

The United States must learn to understand and accept the fact that differences exist among people and their ways of looking at things. And it must learn to adapt to these systems when they pose no intrinsic danger to the United States, and to avoid hostile knee-jerk reaction when disagreement occurs.

There is, of course, no guarantee that such policies will entirely abate hostility and tension. But they could begin to change the climate and move us back to a spirit of cooperation, rather than conflict. The need has never been greater, both in our own interest and in the interest of hemispheric progress and world peace.

NOT EASY TO VOTE

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. RANGEL. Mr. Speaker, in considering legislation concerning the reformation of our voter registration system, we would do well to look at the system administered in other nations. Compared to countries such as England and Canada, the U.S. system of registering eligible voters is antiquated and wholly ineffective. There is one major difference which accounts for so many Americans failing to register and nearly all Britons and Canadians being registered.

We, in this country, leave the initiative and burden of registering on the individual. In other countries, the burden is shouldered, as it should be, by the government. Until we reject the aristocratic notion that one has to prove himself worthy of voting by accomplishing the truly difficult task of registering, fewer and fewer Americans will be eligible to even enter polling places.

I submit for your attention and the attention of my colleagues, a Christian Science Monitor article of November 3, 1972, appropriately entitled "Not Easy To Vote."

I also refer my colleagues to page 19 of hearings before the Post Office and Civil Service Committee in the House, 92d Congress, 2d session, on the concept of national voter registration. Testimony is submitted by J. M. Hamel, Chief Electoral Officer of Canada.

The article follows:

NOT EASY TO VOTE

(By Richard L. Strout)

WASHINGTON.—The problem in Europe is to get yourself off the voter registration rolls.

When you reach voting age the thing somehow seems to happen automatically—the appropriate authorities move in and presto,

there your name is on the voting list, at government expense. Try and shake it off by moving—it is as hard as trying to leave no mail forwarding address. It's much the same in Canada, too.

Things are different in the United States. That's one reason the percentage of eligibles who vote in America always seems so melancholy. The burden is on the individual to make the first move, as the burden is on the male in a marriage proposal. Only here it is more difficult in a way because every time you change homes you must take the initiative again all over. Americans are the most mobile race on earth. Move from one suburb to another or to another state, and try to find the central registration point in an unfamiliar part of the metropolis: not too hard, maybe, for the highly-motivated, self-confident, well-established voter but far different for the poor and humble.

Canada had a national election last Monday and the United States has one next Tuesday. It is interesting to note the difference in their registration procedures.

Voting registration laws in the U.S. "constitute a major exception to the practice in most democracies of placing the responsibility for updating registration lists on the government rather than on the individual," remarks Penn Kimball in "The Disconnected" (paperback, Columbia University Press). Maybe that's the reason that the University of Michigan Survey Research Center finds that the proportion of nonvoters here is double that abroad.

In 1964, only 63 percent of America's eligible voters voted. In 1968, it was down to 61.4 percent. In 1972 —? This has been the most apathetic election of modern times; we shall be fortunate if the figure isn't below 60 percent. (The congressional election of 1966 brought out only 46.3 percent.)

Well, then, what does Canada do? Almost before the prime minister dissolved Parliament thousands of official enumerators were out ringing doorbells. It was like a census. They and their deputies printed lists of voters and posted them in public places, and anybody could check them for accuracy. There were no property or educational qualifications.

Canadian enumerators began enrolling voters 49 days before the election. They worked in teams of two for each polling district (roughly 250 to 300 voters) and they went to each residence together at least once during daylight hours. Suppose you or your wife weren't home? Well, they returned at least once during the evening. If they still didn't hit you they left word where they could be reached. There was no ducking them and few wanted to. The enumerators, incidentally, got \$32, plus 10 cents per head for each elector bagged on their final list. Spot checks in the past indicated 98 percent of all eligibles were registered.

There's been a drive in Washington to bring the U.S. abreast of Canada and other democracies by instituting universal enrollment laws. These would put the responsibility for registration on the government. It would cost something. The cost of enumeration in Canada is around \$13,500,000 or \$1.25 a voter. On a proportional basis of population the cost in the U.S. might be \$135,000,000. Some congressmen here think it could be done by postcard for \$50 million.

Groups like Common Cause, League of Women Voters, Committee for Economic Development and others urge Congress to adopt universal registration, and senators like Hubert Humphrey, Edward Kennedy and Daniel K. Inouye of Hawaii offer plans. It is an idea whose time "has almost come," say sponsors. Alas don't be too sure. How about gun control, no-fault insurance and ending the Electoral College? Washington often seems like a city of ideas whose time has come. And gone.

THE U.S. ENERGY OUTLOOK

HON. BILL ARCHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. ARCHER. Mr. Speaker, the House Ways and Means Committee heard testimony on February 26, relating to the U.S. energy crisis and its implications on our foreign and domestic policies in general and on our tax policies in particular.

One of the witnesses to testify before the committee was John M. McLean, chairman and chief executive officer of Continental Oil Co. Because of the great public interest in this issue, I believe it appropriate that all Members of Congress be advised of the content of Mr. McLean's statement. A summary of his testimony follows:

THE U.S. ENERGY OUTLOOK AND ITS POLICY IMPLICATIONS

(By John G. McLean)

Summary of testimony

I welcome this opportunity to speak about the U.S. energy outlook and its implications for our domestic and foreign policies in general, and our tax policies in particular. The trend of recent events provides persuasive evidence that energy problems, in all their many ramifications, will rank high on our list of national priorities for at least the next two decades.

I. THE U.S. ENERGY OUTLOOK

The essential facts with regard to the U.S. energy outlook may be summarized as follows:

First, the U.S. energy problem is a medium-term problem—not a long-term problem. We have potentially recoverable, oil, gas, coal, uranium, and shale oil sufficient to meet our energy requirements for at least 200 years, at present consumption rates. Long before the end of that period, advances in technology should bring us new energy sources, such as the breeder reactor, nuclear fusion, solar power, and geothermal power, which will greatly diminish the drain upon our natural energy materials and assure energy availability into the indefinite future. Our problem is to develop our potential resources fast enough to meet our growing requirements in the medium term—the 10-15 years immediately ahead.

Second, U.S. energy requirements will approximately double between now and the middle 1980's. Energy conservation programs, voluntary or mandatory, are not likely to alter the growth pattern in any major degree.

Third, to meet at least 90% of these requirements, we shall have to rely upon the four conventional fuels—oil, gas, coal, and nuclear power—which today supply about 95% of our requirements. Technological problems, together with the long lead times and massive capital inputs required for new plant construction, preclude any major contribution from the newer energy sources before the middle 1980's.

Fourth, the four conventional fuels are not likely to be developed fast enough to meet our energy needs in the period immediately ahead. Hence, we shall have to import a growing volume of oil and gas from overseas. Petroleum imports will run about 6 million B/D in 1973. In my judgment, they will rise to about 12 million B/D by the middle 1980's. This figure could be somewhat lower if the government promptly adopts strong policies aimed at restoring our near self-sufficiency in fuels.

II. ECONOMIC AND POLITICAL IMPLICATIONS

The economic and political implications of our future energy outlook are staggering.

First, as our imports of oil and gas grow, we shall become increasingly dependent upon foreign countries for a vital portion of our energy supplies. In 1970 we were obtaining about 26% of our oil and 12% of our total energy from overseas. By 1985, these percentages will approximately double. Our dependence will not be geographically dispersed; it will be highly concentrated. Most of the oil will have to come from the 11 OPEC countries (particularly Saudi Arabia and Iran) which today have 85% of the Free World crude oil reserves outside the United States and Canada and account for 90% of the oil exports moving into world markets.

Second, our growing requirements for oil and gas imports will provoke a large and growing deficit in the United States balance of trade in fuels. In 1970, this deficit was about \$2 billion; in 1973, it will be over \$4 billion, and by the early 1980's it could exceed \$20 billion. Our total exports of all goods and services are only about \$70 billion. Our goods and services account in 1972 was for the first time in deficit by about \$5 billion. A fuel deficit of some \$20 billion will impose a well-nigh intolerable burden on our trade position and make it increasingly difficult to maintain stability of the dollar in the world financial markets.

Third, our growing purchases of oil and gas, coupled with those of Western Europe and Japan, will create major new centers of financial power. We are on the brink of the most dramatic expansion of wealth and financial power by a small group of countries that the world has ever known. By 1985, the OPEC countries could be collecting oil revenues at an annual rate of almost \$45 billion, even without additional price increases after 1975. In the 15-year period 1970-1985, the total funds flowing to the OPEC countries could aggregate as much as half a trillion dollars—about nine times the amount they received in the prior 15-year period. Most of these countries are not yet ready to use internally new funds of this magnitude. A large portion of the oil tax revenues will thus move into the long- and short-term money markets of the Free World in ways, and with impacts, which are difficult to predict.

Fourth, as we move from a long period of abundance to a time of growing scarcity in energy materials, our economy will certainly experience rising energy costs. We have already exhausted a large share of our highest quality, most easily accessible and, therefore, cheapest energy materials; new indigenous supplies will necessarily come at higher prices. Higher prices will also be needed to invoke the large capital inputs required to meet our future needs. Higher prices will directly increase internal cash generation, and will increase the presently low rates of return to attract new outside capital. By 1985, energy costs could be 100% higher than they are today. These increases can be absorbed in our economy without serious disruptive effects. Our problem is one of adequacy and continuity of energy supplies—not one of energy costs.

III. GENERAL ENERGY POLICIES

The picture I have sketched of the U.S. energy outlook and its economic and political implications is not a pleasant one; it is profoundly disturbing. Clearly, we should promptly initiate domestic policies to ameliorate our energy problems to the extent we can and foreign policies to minimize the risks implicit in the whole situation.

The first absolutely essential step is to develop a comprehensive national energy policy and to establish a single, high-level agency in our own government to coordinate our national efforts on energy matters, both at home and abroad. I am not suggesting appointment of an "energy czar". I believe the job can best be done by a Cabinet-level Energy Committee, under a strong Chairman,

which would establish priorities and guidelines and be empowered to eliminate the delays, conflicts, and confusion which prevail among the many different federal, state, and municipal agencies presently involved in energy matters. The federal government should not seek to play a direct role in the discovery and development of natural resources; its task should be to create legislative, regulatory, and economic circumstances such that the task can be performed effectively by private enterprise.

Constructive action in the domestic field should be initiated along at least four general lines:

First, we should take all possible steps to stimulate the development of our indigenous energy resources. Among other things: We should accelerate the leasing of federal lands for resource development. We should permit the prices of all fuels, particularly natural gas, to reach competitive market levels. We should strengthen existing tax incentives for energy resource exploration and development. And we should maintain and improve fuel import controls to avoid precipitous dislocations in our balance of trade and discouragement of domestic resource development efforts.

Second, we should seek some reasonable modifications in the ecological restraints which are presently inhibiting the development and consumption of our indigenous fuels. Among other things: We should modify the Clean Air Act of 1970 to incorporate the California standards with respect to automotive emissions. We should approach our goals regarding the elimination of sulphur dioxide from power plant stack gases over a longer time period. We should revise the Federal Coal Mine Health and Safety Act of 1969 to eliminate features which impair productivity without making substantive contributions to the health and safety of miners. We should encourage the aggressive development of surface coal mines with strong, but reasonable, requirements for land reclamation. And we should simplify and expedite all procedures for the siting of nuclear power plants, refineries, and deep water terminals.

Third, we should initiate national programs to reduce waste in the consumption of energy. I am not suggesting curtailments which would have a negative impact on the growth of our economy. There are many areas, such as better insulation of houses and office buildings, in which we could conserve energy without impairing economic growth.

Fourth, we should begin work immediately on research and development programs to take care of our energy needs beyond 1985 and into the long-term future. Our objective should be to regain our historical position of near self-sufficiency in energy supplies as rapidly as possible. As clearly evident, national commitment to this objective will have an important constraining effect on the policies and price demands of the oil exporting countries. We have an adequate resource base. We could have been nearly self-sufficient in energy today if we had foreseen our problems and initiated corrective action some 10 or 15 years ago. We must act now to assure that we do not make the same mistake with regard to the period beyond 1985.

IV. ROLE OF TAXATION POLICY

In light of the foregoing facts regarding the U.S. energy outlook and the national policy imperatives implicit therein, I would next like to deal with certain major tax issues.

In my judgment, the rising costs and capital requirements involved in a national effort to regain our historical position of near self-sufficiency in energy supplies can best be met through a combination of tax incentives and price increases. An increase

in tax incentives will probably have a more direct and immediate influence than an increase in prices. A reduction in taxes leads to immediate increases in cash flows and rates of return on investment. Price changes are dependent on market forces, occur more gradually, and may be delayed until triggered by rising costs. Moreover, the affirmative investor response to an increase in tax incentives would be extremely important in provoking new capital inputs. Specific recommendations are as follows:

First, percentage depletion should be restored to the 27½% level and should be removed from the list of items subject to the tax on tax preferences. I am well aware that this recommendation will be unpopular in some quarters and regarded as politically naive in others. It would take great political courage for this Committee to sponsor such a move. Nevertheless, the exigencies of our national energy situation are such that this is the right course of action for our government to take.

Percentage depletion is a particularly effective incentive since it is success oriented, not effort oriented. Only those who discover energy resources, and thus help our energy situation, receive the benefit. Increased percentage depletion would increase cash flows and rates of return and make new investments in exploration and development more attractive.

Second, the right to deduct intangible drilling and development costs when incurred should be continued. This incentive is of vital importance to the petroleum industry. Its repeal would severely curtail the flow of capital into the search for sorely needed new supplies of oil and gas. It would also mean that many marginal producing properties would not be developed; many secondary recovery projects would not be undertaken; and tertiary oil recovery would be materially delayed.

Third, the present tax treatment of foreign operations should be preserved. Over the near term, we must depend to a substantial degree on foreign oil sources. The risk of this dependence is reduced if the sources are well-diversified geographically. The effective costs are also somewhat reduced if the operations are conducted by U.S. companies.

Our U.S. companies must compete abroad with agencies of foreign governments and/or with companies heavily subsidized by foreign governments. These organizations are not necessarily constrained by profit considerations. We cannot put our companies at a further disadvantage and hope to stay in the increasingly competitive race for foreign energy supplies.

United States companies have no special U.S. tax advantages for their overseas operations. They operate under the same tax rules that apply to their comparable domestic operations. They must pay the higher of the U.S. income tax or the foreign income tax on the profits derived from foreign operations. The foreign tax credit merely assures that they are not subjected to double taxation. The foreign tax credit cannot be used to reduce the United States tax on income earned within this country.

In sum, reduction of the petroleum industry's tax incentives in 1969 has exacerbated our energy problems. A return to the incentive levels of 1969 will greatly facilitate efforts to improve our national energy posture.

I know that the House Ways and Means Committee will give thoughtful attention to all aspects of our energy situation in its deliberations. Our problems are serious; they will grow worse. Strong corrective measures are urgently needed in our domestic and foreign programs with respect to energy matters. Tax policies will have an important bearing on the success of these efforts.

AID TO NORTH VIETNAM: OR, TREACHERY REWARDED

HON. ROBERT PRICE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. PRICE of Texas. Mr. Speaker, it is completely intolerable for this Congress to as much as consider the prospect of American aid; be it economic, monetary, military, or otherwise, for North Vietnam, an outlaw nation guilty of the worst type of aggression, terrorism, and utter disregard for international law and the value of human life.

Especially at the time when U.S. domestic programs are necessarily being cut back and internationally this Nation is faced with a critical balance-of-payments deficit, the idea of aiding this renegade regime is an insult to conscience and common sense.

The blood of 50,000 American men has been spilled to stop North Vietnamese aggression; the American people have sacrificed a king's treasure to prevent the darkness of the bamboo curtain from extending still further like a cancerous growth into the bowels of Southeast Asia. After 10 agonizing years of holding the line against North Vietnamese tyranny, without the assistance of most other Free World nations who, on the one hand, did not feel a personal threat to their security but, on the other, readily seek shelter under an American nuclear umbrella, are we now going to ask the American people to dip still further into their pockets to pay tribute to the North Vietnamese barbarians who have, during all this time, attempted to defeat and humiliate the United States?

Mr. Speaker, there can be no justification for aid to the Communist government of North Vietnam. It is true the United States provided assistance to Japan and Germany at the close of World War II, but that was after both Nations had given an unconditional surrender and after both militaristic regimes were deposed. There is no similarity to the situation today where the bandits in charge of the North Vietnamese Government still ride roughshod and impose an iron-fisted tyranny complete with secret police over the people of that unfortunate country.

To the North Vietnamese terror is a weapon that is utilitarian and openly advocated. Captured North Vietnamese documents, which substantiate the testimonies of hundreds of military men and journalists, list and graphically describe the types of terror used against the South Vietnamese and the Americans. For example, on September 1, 1968, doctors at the American Division's 27th Surgical Hospital reported two Montagnard women brought in for treatment for advanced anemia. It was determined that the North Vietnamese had been systematically draining them of blood for the purpose of treating their own wounded. On March 21, 1969, a Kontum Province refugee center was

attacked by PAVN B-40 rockets. Seventeen civilians were killed and 36 wounded, many of them women and children. A third of the center was destroyed. On October 27, 1969, Communists booby-trapped the body of a people's self-defense force member whom they had killed. When relatives came to retrieve the body the subsequent explosion killed four of them.

Terror, always the preferred method of the Communists, is illustrated by the description of the mass graves discovered at Hue which yielded the remains of over 3,000 South Vietnamese victims. Many had been shot with hands tied behind their backs, others were bludgeoned to death, others simply buried alive. None of these victims, moreover, were collaborationists or active anti-Communists.

Terrible as the Hue murders were, many of the worst atrocities of the North Vietnamese have been committed against American prisoners of war. Our POW's have been tortured, publicly paraded through the streets, pressured into making broadcasts of alleged confessions, and denied proper medical treatment. All of the above are in direct violation of the 1949 Geneva Convention relative to the treatment of prisoners of war, to which North Vietnam acceded in 1957.

Article 21 of the Geneva Convention requires that POW's "not be held in close confinement," yet many American POW's have been held in solitary confinement for years. Article 26 requires that prisoners be provided with sufficient food to prevent the loss of weight, yet American POW's were fed pig fat and most have suffered malnutrition. Article 122 requires the prompt listing of all prisoners held, yet North Vietnam for years refused to release an official or complete list. In fact, we may never receive a complete accounting of the men lost in action, and I am not at all convinced that the North Vietnamese have told us all they know or that they have released all of the men taken captive.

Furthermore, I believe we will be hearing further stories of North Vietnamese atrocities as time goes by.

In view of these shocking facts, we must ask, are the American people willing to rehabilitate the country of those who have treated our countrymen with such disdain? I think not.

When President Lyndon Johnson proposed aid to North Vietnam for rehabilitation in April of 1965, his offer was publicly rejected by the North Vietnamese who labeled Americans as "stupid pirates." Perhaps the North Vietnamese rejected President Johnson's offer of aid because they surmised that if, through the use of terror, the war could be escalated and prolonged the American offer of aid might be multiplied by billions later on. With dishonest accounts of military damage the North Vietnamese could extract from us a tremendous sum in "reparations."

There is nothing new with the proposal of aid to North Vietnam; this Nation has for the past 25 years and at a cost of \$140 billion attempted to buy friends and peace around the world. I need not recite the miserable facts—we have no peace, we have no security, and we have very few friends.

President Nixon is correct in seeking a dialog with other Nations, friend and foe, so that the chance for misunderstanding or underestimating the intentions of the United States can be reduced. But to ask working men and women in this Nation to dish out an additional \$2.5 billion to reward those who have imposed the darkest hour on this Nation since the Civil War, cannot be justified and must not be permitted under any circumstance or guise.

If we must spend, instead of giving the money or the aid to the Communists, why not use it at home for the benefit of the American people? Why should our people always receive the last consideration when aid programs are designed by our self-serving army of bureaucrats working in Government? How many new school classrooms could be built for American children with this money? How much sooner could we find a cure for cancer if this money were invested for research instead of being squandered upon the Communists? Why do not we help our American Indians here at home instead of those who have plotted against us? What about senior citizens in the United States? How much better would their lot be if this \$2½ billion were spent to make their retirement years more comfortable? These are our fathers, mothers, and grandparents—should not they be given a higher priority than foreign Communist aggressors?

The fact is, we cannot afford to squander this money. The contention that this \$2½ billion would be "squeezed" from the defense budget is absurd. We must spend whatever is necessary to assure the security of this Nation, and therefore if this \$2.5 billion is essential to our military posture, it cannot be spent for aiding the Communists. On the other hand, if this \$2.5 is not essential to our defense preparedness, then it should not have been incorporated into the defense budget in the first place.

Mr. Speaker, the time has come to say no. Not one more dime for foreign squandering under the catchy slogan of an "investment for peace." To accede to this preposterous scheme would be to demonstrate again the wisdom of Calvin Coolidge who once observed:

Nothing is easier than spending the public money. It does not appear to belong to anybody. The temptation is overwhelming to bestow it on somebody.

Mr. Speaker, I am today introducing legislation to prohibit economic assistance to North Vietnam. I call upon the Congress for prompt approval of my bill. Let us "Tell it to Hanoi" that the American people will sacrifice for the cause of freedom but will not pay tribute to a pack of criminals who are not worthy of recognition as a civilized government.

Senator Everett Dirksen once labeled the proposal to give aid to North Vietnam as "another case where American trumpets sound retreat." Like it or not, that is the choice before us, and I believe this Congress would insult the American people and repudiate our sacrifices of the past decade if approval of this scheme is given. Uncle Sam must stop playing the role of Uncle Sap.

DISCRIMINATION IN FACULTY HIRING

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. CRANE. Mr. Speaker, the Civil Rights Act of 1964 forbids discrimination based upon race, sex, or age in employment.

In recent days it has become clear that an agency of the U.S. Government itself, the Department of Health, Education, and Welfare, is asking all those colleges and universities which receive Federal funds to do precisely what the law forbids: practice racial, age, and sex discrimination.

Unless colleges and universities submit to such regulations, and have stated "quotas" of faculty members of different groups—men, women, whites, blacks, and so forth—they are threatened with the withdrawal of Government funds.

Congress has never passed any law calling for such quotas. In fact, the civil rights legislation it has passed would clearly forbid such quotas. The President himself has said that he opposes quotas. Despite these facts, bureaucrats at the Department of Health, Education, and Welfare are imposing them.

Consider a letter received from Dr. Tullio J. Pignani, chairman of the department of mathematics at East Carolina University by Dr. Paul T. Bateman, chairman of the department of mathematics at the University of Illinois.

Dr. Pignani states that his "reason for writing is to inquire if there is a person associated with your institution who meets the following qualifications." What are the qualifications? The person must be "black or Chicano." The person must be "retired, but of age less than 70."

The candidate for a position at East Carolina College must also have "Directed Ph.D. dissertations in Mathematical Sciences other than Modern Algebra and Topology, and must have a broad view of mathematics."

The possibility of finding a candidate who is black or Chicano, over 65 but under 70, with the particular qualifications set forth is highly unlikely.

Dr. Pignani also states on this letter that "East Carolina University is an Equal Opportunity Employer" and that "a negative answer as well as a positive one" is requested.

It appears that East Carolina University is making this illegal and discriminatory request simply to fulfill quotas set forth by the Department of Health, Education, and Welfare. Why else would a "negative" reply be requested if not to establish the fact that it had done its best to fill the available position in a discriminatory manner?

I wish to share the letter from Dr. Pignani to Dr. Bateman with my colleagues, as an indication of what is happening today on the Nation's campuses with regard to faculty hiring. If this is not racial and age discrimination, I do not know what is. Following is the letter in question:

EAST CAROLINA UNIVERSITY,
Greenville, N.C., February 5, 1973.
Dr. PAUL T. BATEMAN,
Chairman, Department of Mathematics, Uni-
versity of Illinois, Urbana, Ill.

DEAR DR. BATEMAN: My reason for writing is to inquire if there is a person associated with your institution who meets the following qualifications:

Ethnic Group: Black; Chicano.
Age: Retired, but of age less than 70.
Experience: Directed Ph.D. dissertations in Mathematical Sciences other than Modern Algebra and Topology, and must have a broad view of mathematics.
Health: Good.

Please use the enclosed form letter and envelope to supply me with names and addresses of persons who possess the above qualifications. Since East Carolina University is an Equal Opportunity Employer, I would appreciate a negative answer as well as a positive one.

In the past, the Department of Mathematics has maintained one position for the sole purpose of hiring retired mathematicians who have the necessary qualifications to fill our needs. Such a person among our young faculty gives the Department a proper balance. The sudden death of Dr. W. M. Whyburn last May created a vacancy that has not yet been filled.

Your attention and time in replying to my request is greatly appreciated.

Sincerely,

TULLIO J. PIGNANI,
Chairman, Department of Mathe-
matics.

MRS. SLAVIN'S STATEMENT ON RE- TAIL FOOD PRICE SURVEY

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. CLAY. Mr. Speaker, we have heard many lectures from the President regarding wise shopping.

We also have been given numerous reasons why we are being forced to pay such ridiculous prices for our food.

We also have been urging consumers to get involved and do their own thing to help keep down food prices.

I can proudly say, Mr. Speaker, we are fortunate to have in the First Congressional District of Missouri, Mrs. Alberta Slavin, a woman who has organized, fought for, and championed consumer interests.

As president of "Housewives Elect Lower Prices," she has often appeared before legislative bodies and Government agencies to appeal for commonsense.

Mrs. Slavin's most recent offering is a statement to the Federal Trade Commission regarding the proposed FTC retail food price survey. I commend this outstanding and informative statement to my colleagues. The statement follows:

CLAYTON, Mo.,
March 19, 1973.

ASSISTANT DIRECTOR,
Division of General Litigation, Bureau of
Consumer Protection, Federal Trade
Commission, Washington, D.C.

DEAR SIR: I welcome the opportunity to present my comments to the Federal Trade Commission on the proposed Protocol for the FTC retail food price survey. As President of Housewives Elect Lower Prices, an organi-

zation of volunteers who have been surveying retail food prices in the St. Louis Metropolitan area since October 1967. I feel qualified to offer my remarks with the hope that the Commission will give them due consideration.

Before dealing with the mechanics of the proposed Protocol, I feel it is necessary to give you a little background on the survey work we have been doing and the reasons for our continued involvement. Our initial survey was conducted by a group of 20 friends who were concerned about high prices and the overpromotion of food sales with trading stamps and games. Purely by chance, our first survey provided data on the subject of food price discrimination and served as testimony for Congressional hearings conducted in St. Louis by Representative Benjamin Rosenthal.

As a result of these hearings, our organization grew in numbers of volunteers and our work continued in conjunction with other community action organizations. Our first thrust was to correct any imbalance between prices in outlets of the same chain which were located in different neighborhoods. There is no question that this survey work was extremely successful in correcting an identifiable problem, but I question whether or not the long-term effect of this thrust was beneficial, a point I will elaborate on later in this statement.

Over the years our continued surveys have been extremely useful for a variety of reasons and have provided the information needed to give impetus to our various activities. For example, our surveys have:

Provided a backdrop for urging the elimination of trading stamps and games, promotional gimmicks which inflate food prices unnecessarily.

Contributed to a ruling by the FTC requiring availability of advertised specials.

Led to early revelation of the failure of Phase II in controlling the advance of food prices, particularly meat prices.

Showed that Phase III was an even greater failure than Phase II and formed the basis for calling for our "Meatless Thursday" program.

Without this backdrop of experience, I was shocked to see that the FTC was proposing to survey retail food prices with the limited goal of exposing fraudulent advertising claims. This proposal comes about five years too late. Very few consumers today are fooled by extravagant claims of "the lowest prices in town" or phrases of a similar nature. Competition in the area of prices has never been keener with large chains like A&P losing vast sums of money just to entice the shopper back into the store with genuinely low prices. As food prices soar, the retailer has been doing his level best to hold those increases within some family acceptable range to avoid the ire of the irate housewife.

For the FTC to undertake a price survey to expose fraudulent pricing practices is the sheerest of folly. What chain store today can withstand the negative publicity of information suggesting that inner city stores are charging higher prices than stores located in more affluent neighborhoods? Stores located in the inner city of St. Louis have been closing steadily for several years. It is even difficult to make such a comparison as a result of all the closings.

When Bettendorf-Rapp, a chain of Allied Supermarket, sold out to Schnucks, a local chain consisting of ten outlets, Schnucks chose not to open seven of the Bettendorf-Rapp outlets. Three of these were located in hard-pressed north St. Louis. Since that time, a National store on DeBolliviere (one block from a closed Bettendorfs) has closed. The Krogers store which served residents of Pruitt-Igoe, a large housing project, had closed less than one year after the hearings in St. Louis. Many independent stores have

also closed during this period of time to the detriment of the neighborhood they served. University City, a suburb directly to the west of north St. Louis, has experienced similar closings.

Now then the FTC proposes to conduct surveys to expose unfair pricing and advertising policies of chain stores with the stated goal of protecting the consumer. The consumer needs other help—he needs stores where he can shop, he needs the government to control inflationary food prices, he needs meaningful price controls, not platitudes, from a government that prefers to export vast quantities of food commodities to meet balance of trade deficits while blaming the American consumer for consuming too much food and driving prices higher.

If the FTC were surveying prices with the intent of reducing them, their goal would be a worthy one supported by all consumers. But if the FTC is going to survey prices to expose unfair claims and take a look at retail competition, this is another waste of the taxpayers' money.

With this lengthy introduction, I would like to direct my remarks now to the mechanics of the survey proposed. There are some basic flaws in approach, which if followed, would render the results of the survey almost worthless. The most glaring of these is to be found on page 5, Section B of the proposed Protocol. It states:

"Immediately after the data is collected a copy of the store's prices will be given to the manager of that particular store or his delegate to be reviewed at that time for surveyor error. The store's representatives must notify the Commission of any inaccurate prices before the surveyor leaves the store."

It would appear that the FTC surveyor will meet with the store manager, show him the survey results and have any "errors" corrected before the surveyor leaves. May I refer you to Representative Benjamin Rosenthal's hearings conducted in St. Louis in November 1967. At that time, Mr. White of Kroger's explained away 48 or 65 surveyed items which were higher in an inner city Kroger store than in other Kroger stores as the result of "human error in marking the prices." If an FTC surveyor had been surveying that store, we could assume that 48 corrections could have been made before the surveyor left the store.

The stated purpose of the FTC survey is to expose such differences. Yet, the machinery provides for correcting these differences before they are exposed. It is even possible that such differences will be corrected just on the possibility that the FTC is proposing to look for them. Stores are very sensitive to the possibility of negative publicity, and they work diligently to avoid it.

Several years ago our organization realized that the biggest problem facing consumers who live in depressed urban areas was in finding a place to shop. Unfortunately, I see nothing in this proposed Protocol which will help to resolve this problem. When the FTC undertook its study to determine the availability of advertised specials, it provided a service of great value to consumers. We cooperated in full with that study by undertaking a volunteer survey and submitting these results to the FTC. The subsequent ruling requiring stores to provide advertised specials in sufficient quantities or to offer substitutes or face punitive fines was an excellent ruling. The effect of that ruling has been extremely beneficial to consumers.

If the FTC has funds to conduct surveys or collect data, I suggest that it undertake a study to see what is needed in the way of federal assistance to encourage retail markets to make a commitment to economically depressed urban areas. Apparently the risks and the problems outweigh the profits, for chains are continuing to close these outlets whenever possible.

It would also be valuable to the consumer if the FTC took a close look at marketing practices engaged in by manufacturers and retail store owners. What kind of price incentives are offered to keep a name brand on the same shelf with a private label brand when the private label brand is exactly the same item in a different package? Why should consumers be tricked into thinking that Wonder Bread is worth more than the same exact item packaged and sold under a private label? Why can't the FTC expose the efforts of retail chain stores to kill the returnable beverage container by dictating to the bottler the kind of package he will permit on his shelves?

This is the kind of restraint of trade which should be thoroughly investigated by the FTC and which would be of great benefit to consumers. The consumer today is the unwitting victim of these "hidden" deals and pays dearly the cost of being brand-washed.

In conclusion, may I urge that the Commission send a representative to St. Louis to personally examine the problems existing in retail food marketing. I also urge our own Congressional representatives to join us in such an in-depth study of the problems which I have raised and can be documented by the living evidence of abandoned buildings.

Sincerely,

ALBERTA SLAVIN (Mrs. Raymond),
President, Housewives Elect Lower Prices.

OFFICE OF ECONOMIC OPPORTUNITY

HON. EARL F. LANDGREBE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. LANDGREBE. Mr. Speaker, Judge John J. Niblack, of the Marion Circuit Court, 19th Judicial Circuit, has been a judge in Indianapolis since 1941.

I am inserting Judge Niblack's report on the Office of Economic Opportunity in the RECORD:

EVALUATION OF THE INDIANAPOLIS, IND., LEGAL SERVICES ORGANIZATION OF THE OFFICE OF ECONOMIC OPPORTUNITY OF THE UNITED STATES OF AMERICA

(By John L. Niblack)

I was asked by the Office of Economic Opportunity to evaluate the Indianapolis Legal Services Organization. I have been a judge in this city since November 1941, and have two more years to go.

I believe the Legal Services Organization was founded with the best intentions to aid poverty stricken persons who could not afford to hire an attorney on their own. However, the organization has been running wild on activities other than contemplated in the beginning. Please bear in mind that all the attorneys hired by the LSO are also members of the Bar of the State of Indiana and officers of the Courts, including this Circuit Court.

I find that there is a prevalent attitude amongst the cadre of the LSO attorneys of antagonism toward the older established forms and branches of Government, especially the State Courts. However, I must include other branches of Government such as local schools wherein the local LSO has taken Technical High School authorities to Federal Court because they banned a filthy, underground publication by some students at that school, called "The Corn Cob Curtain." I was informed this was done without the consent of the parents of the students, and without appointment of next of friend,

Guardian ad litem or anything else. I do not believe it is a proper function of the LSO to represent school children who have parents who can hire their own attorneys and pay their own attorney fees. I am sure the tax payers of the country can find much better use for their money than in the "Corn Cob" case. Incredible as it may seem, the Honorable William Steckler, Chief Justice of our local Federal Court, allowed these children to act on their own as plaintiffs, and, worse yet, on behalf of 300,000 other school children as and for a class action.

I cite herewith some cases wherein the LSO has busied itself with attempts to thwart the State Courts from exercising their constitutional function or have made Judges defendants in frivolous law suits through appeals to the Federal Courts for injunctions in cases pending in the State Courts, to-wit:

No. 1. A prisoner being held in the Marion County jail applied to this Court verbally through the Sheriff's Department that he wanted to file a writ of habeas corpus under the Indiana statutes to fight extradition to another State. I contacted the Honorable George Sawyer, head of the local LSO, and told him I was appointing him as attorney for this prisoner as I regarded it a proper function for the LSO as the man had no attorney and no funds. Mr. Sawyer informed the Court that it was not his business, but the Court made an order directing him to file the writ of habeas corpus, which is in the nature of a civil action rather than criminal, or be held in contempt of Court. Mr. Sawyer complied with the order.

No. 2. There was an aged Negro who lived on the east side of Indianapolis who owned his own home. He was in trouble with the City Sanitation Department about hooking on to a private sewer which had been constructed along his street. At the same time the Health and Hospital Corporation cited him into this Court for not having a sewer. He showed the Court that he had paid a private contractor \$400.00 to install the sewer but the contractor had defaulted on the job. I decided I was not competent to defend him in such a complicated matter involving his liberty and property so I appointed the LSO to represent him as he had no funds except his Social Security and was aged and infirm. The LSO refused to enter an appearance until I ordered them to do so, whereupon, one attorney for the organization entered an appearance. However, he failed to put up any defense or file any pleadings and finally the Court fined him \$25.00 in cost for contempt of Court, and excused him from the case.

No. 3. In the case of Poole vs. Steele before Honorable Rufus Kuykendall, on December 16, 1970, Andrew Jacobs, Sr., a prominent attorney of this town, filed a possession suit on behalf of Robert E. Poole and Barbara J. Poole, his wife, against one Mary Steele, a tenant of the Poole's, alleging default on contract of \$100.00 a month payments for purchase of the real estate. The place had a mortgage on it in the amount of \$88.00 a month which had to be paid by the landlord Poole. The latter was a working man and had invested his savings in the rental house which was air-conditioned and in good shape.

Under the Indiana law, plaintiff filed an affidavit for immediate possession and bond was fixed in the amount of \$2,000.00. The defendant was notified she had five days to post said bond which she failed to do. Thereafter the Poole's filed a \$2,000.00 bond entitling them to immediate possession pending trial. On January 7, 1971, at 3:44 P.M., Mrs. Steele through the Legal Services Organization by Ronald Elberger and John T. Manning, filed a petition with Judge William Steckler, of the U.S. District Court here asking for an injunction against the Honorable Kuykendall and Lee Eads, Sheriff, and the Pooles from enforcing the writ. The LSO alleged an emergency although it was 22 days after suit was

filed. Sixteen minutes later, at 4:00 P.M. on said date, the Chief Judge of the Court, the Honorable Steckler issued a restraining order without notice or any attempt to notify the plaintiffs Poole, and the Sheriff desisted from his effort to serve the writ.

On January 11, the defendant Steele moved out taking with her an expensive bar from the recreation room in the basement of the property of the landlord and other property including wall to ceiling paneling, 3 accordion doors, two hanging lamps, curtain and drapery rods from the windows and locks from the inside doors, as well as carpet in the living room and quarter-round securing same. She also broke or removed plates on electric light outlets on the walls, tore down towel racks and tile soap dishes from the bathroom walls and committed other acts of waste too numerous to mention, all as set out in an affidavit furnished the Federal Court by attorney Jacobs.

On January 19, 1971, the Poole's filed their motion to dismiss the case in Federal Court which was taken under advisement by Judge Hugh Dillin until June 24, 1971, whereupon it was dismissed. The LSO attorneys appealed the dismissal to the 7th Circuit Court of Appeals in Chicago causing the Pooles to have further litigation. The appeal was denied. The LSO theory was that this lady defendant was being denied due process of law because she was not notified about the bond being posted. This has been the law for 150 years. The LSO could and should have entered an appearance in the case in Judge Kuykendall's Court and if not satisfied with the outcome, could have taken an appeal to the Indiana Supreme Court on any constitutional question and not bothered the already over-burdened Federal District Court and the Federal Circuit Court of Appeals. Our U.S. District judges constantly are crying that they are over-loaded. In many, many cases our Federal judges could and should tell applicants to file their suits in the Indiana courts, all of which have just as competent and fair judges as the Federal Bench.

No. 4. The case of J & L Realty Company versus Ray Passwater. This was a case in the Municipal Court One before the Honorable Joseph N. Myers. Allen Goldstein, the attorney for the company, filed a suit for possession on September 8, 1970, of a house rented to defendant Passwater, who was delinquent in his \$85.00 a month payment on contract of sale since January of 1970—being about ten months. On October 3, 1970, the LSO through its attorney Peter Wormser, instead of contesting the case in Judge Myers' Court, went straight to the United States Circuit Court of Appeals at Chicago and got a restraining order versus the plaintiff and Judge Myers from taking any action in the case and the Court sent the case down to Indianapolis for Judge Dillin to try. On October 12, 1970, the J & L Realty Company filed their motion in the United States District Court to vacate the suit and vacate the restraining order. Judge Dillin heard oral argument and said from the bench he would vacate the said order which he did five and a half months later on March 25, 1971. Whereupon the LSO filed notice of appeal to the 7th Circuit Court of Appeals. Nothing came of the appeal and in April of 1971, the LSO attorney filed an Answer in the Municipal Court Room One, which he should have done in the beginning and cut out the expense to tax payers in fooling around with appeals and expensive briefs in the Federal Court. After trial on the merits in May of 1971 in Municipal Court Room One, judgment for plaintiff was agreed to by the attorneys in the case on a stipulation of facts and in July of 1971 a writ of assistance by the Municipal Court Room One was issued and Mr. Passwater was finally evicted and the landlord given possession. The defendant Passwater had been in possession for 20 months with no payment while the landlord

had to pay the taxes on it at \$11.00 a hundred tax rate and keep up the insurance.

No. 5. Mrs. Artie Lindsey vs. Charlie R. Bryant and Virginia Bryant, his wife, is a suit for possession on delinquent payments on a contract of sale. Defendants were living in the house of Mrs. Artie Lindsey and agreed to pay \$70.00 a month. They were delinquent three months and in addition they were delinquent in taxes and the insurance in the amount of approximately \$1,000 which Mrs. Lindsey had to borrow to pay off. Mrs. Lindsey was a widow, age 72 years old, and had no other income beside Social Security, while the defendant was employed as a maintenance man at a tool and die company at \$100.00 a week. The LSO through its attorney, one Ronald Elberger, applied directly to the United States Court of Appeals for the 7th Circuit at Chicago, Illinois, a motion for an emergency temporary restraining order against the Court and plaintiff, Mrs. Lindsey. This was an extraordinary proceeding, if there ever was one.

The Circuit Court of Appeals denied the petition with a stinging rebuke to the Legal Organization, stating among other things, as follows: "As far as we can ascertain from the papers before us, no effort was made to secure injunctive relief from any of the numerous Marion County Courts until the day the motion was tendered for filing in this Court, to-wit: August 12, 1971, nearly a month after the issuance of the writ of possession. This court should not be abused by labeling 'emergency' that which is only so by virtue of lack of interim and reasonable diligence. The Bryants have failed to demonstrate any standing for proceedings in this Court. They admittedly have filed no complaint nor attempted to file a complaint in the appropriate court or in the District Court of Indiana."

As may be inferred, this was a profligate waste of taxpayers money in paying the expenses of said Elberger for a plane trip to Chicago and back and otherwise infringing on his time which he could have devoted to much better use on behalf of the poor. Possession was granted to the widow plaintiff in August after the defendant Bryant moved out. In my opinion the old woman should have been the one to receive the services of LSO instead of having to pay her own attorney.

This case is still pending with the Honorable Addison Dowling as Special Judge on complaint and cross-complaint by the LSO attorneys on behalf of Mr. Bryant. The cross complaint challenges the constitutionality of the Indiana statute about writs of possession, etc. Mr. John T. Manning is attorney for the defendants on behalf of Legal Services Organization and has filed a multitude of briefs and pleadings, including one brief of 89 pages, which must have cost the tax payer quite a bit of money. All of this could have been done by contesting the case in Superior Court in the beginning instead of running to the Federal Court in Chicago. Judge Dowling has the matter under advisement and I suppose if he finds against the defendants, there will be a large and expensive appeal on behalf of the Legal Services Organization to the Indiana Supreme Court in the matter, although their client, Mr. Bryant, has a new job which provides him ample salary and free housing at the Evangelistic Center on the south side of the city.

No. 6. The LSO attorneys Elberger and Manning took an appeal consolidating all the above cases to the 7th Court of Appeals which came to nothing but entailed large expenses to the tax payers.

No. 7. This week there appeared in a local newspaper "The Golden Sentinel", a publication or news letter of the Senior Citizens organization of Indianapolis, a combination of several federally funded groups. This ad, a large one, solicits Senior Citizens to draw

up a will and to have the LSO do the same. The LSO in the ad promises to furnish transportation for people to come down and have their wills drawn free of charge. It appears to me that if people have enough funds to make a will and bequeath their belongings to someone, they should have enough funds to pay \$10.00 or \$25.00 to some attorney who has to pay office rent and taxes, as well as support himself and his family instead of having the Legal Services Organization butting in and taking away his legitimate business. I would like to know from the Board of Directors of our Legal Services Organization and its parent body, the Office of Economic Opportunity, under just what theory they are proceeding in this matter of drawing up wills. It is against the Indiana Code of Ethics for private attorneys to advertise for business.

The above are specific examples of meddling and tampering with justice on behalf of the Legal Services Organization of this city which have come to my direct attention. No doubt, there are many others which I am not aware of. Recently I made an order in a case wherein the LSO attorney represented an indigent lady who wanted a divorce. I decreed that she could have a divorce, however, I added an order that neither she nor the husband could have a marriage license granted in this County without first paying the costs in the divorce case. It seemed to me it was only fair that the tax payer should be reimbursed for the divorce if she or the husband either one wanted to get married again and start the same old procedure over once more. Mr. Norman Metzger, head of LSO at the time, took violent exceptions to such a ruling, stating I was denying the lady's constitutional rights and her divorced husband's too, for that matter. Although in my opinion, the question was moot until either applied for a license. He filed a motion to correct errors and harrassed the Court with numerous interviews about such asininity on my part and started an appeal at the taxpayers expense.

I will say that Miss Judy Hamaker, one of the attorneys for LSO who handles most of their divorce cases, has been very respectful to the Courts and has done her best to cooperate with the Court in all things. I believe that if the LSO would get rid of some of the more belligerent, young, left-wing attorneys who are scornful of established institutions that we would all be better off and the tax payer would save a lot of money.

I might add, in Joint Session of all the Courts of Marion County, we adopted a resolution asking that the Marion County-City Council make an independent evaluation of the LSO in this city on behalf of the tax payers which we believe will be a valuable addition to any evaluation made by the organization of itself. Our council has to provide tax money for activities of the LSO.

I assume the LSO was established by Congress to assist the Courts in the administration of justice. The Indianapolis branch solicits law business, represents too many persons who are able to fee their own attorneys, stirs up litigation between class and class, and is adding immensely and needlessly to the burden of the already overburdened tax payers who pays his own legal fees. Although in theory the LSO is under a board of directors, the young law school graduates manning the trenches are a law unto themselves.

I believe the best solution for the LSO problem would be to dissolve it locally and turn the problem of legal aid to paupers or poor people over to the Legal Aid Society of the local Bar Association and let the Federal Government pay the funds into the Legal Aid Society. Maybe a new Board of Control for the Legal Aid Society could be devised with the Bar Association having the major voice, but with the OEO having a representative on the Board and the local judiciary likewise having a representative.

STATEMENT OF REPRESENTATIVE BOB WILSON

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. BOB WILSON. Mr. Speaker, I am happy to cosponsor legislation which is being introduced today with the gentleman from Georgia (Mr. BLACKBURN) and 26 cosponsors. This bill will allow use of industrialized construction techniques in federally assisted housing programs.

Due to rising construction costs, the family with an income of \$10,000 or less has been effectively forced out of the new housing market. Federal subsidy programs have helped. However, we in the Congress are becoming concerned about the steep increases in fund demands—which now are estimated to be heading for the level of \$7 billion a year by 1978. This is five times the current payout. The demand for low-income housing is huge. The Department of Housing and Urban Development has a backlog of 500,000 families who are seeking to get into public housing projects. If we are to meet the housing needs of our Nation today and in future years, we must change our ways of producing housing—right now.

A ready means to cut construction costs is by applying the new and exciting technology brought to us by the space age.

Unfortunately, antiquated building codes and restrictive union work rules are barriers to the use of this new technology in modernizing the housing industry. In an effort to correct this problem I introduced H.R. 18028 in the 91st Congress and H.R. 3679 in the 92d Congress, the latter cosponsored by 30 of my colleagues in the House. The legislation I cosponsor today is an improved version of these two bills. It will preclude local codes, laws, ordinances, or locally made labor agreements from restricting the use of new construction products and technology. I want to commend the gentleman from Georgia (Mr. BLACKBURN) for introducing this bill today. His efforts as a member of the Subcommittee on Housing to eliminate impediments to lower cost housing are well known. I was pleased to be of assistance to him in the preparation of this bill.

The bill's important provisions are:

First. Through a civil court action in a Federal or State court, any person, including a builder, a contractor, or a manufacturer may prevent the enforcement of any local code, law, ordinance, or work rule that restricts his use of new techniques or materials in a federally assisted housing program. In my prior bills, enforcement was left to overburdened Federal officials. In this bill, no action by a governmental agency is required or allowed. The remedy is placed in the hands of the parties who have the greatest direct interest—the manufacturers, contractors, and users.

Second. The remedy does not apply if the restrictive code or work practice is required to protect the health or safety of working or living conditions. However, the person invoking this exception must

show by a preponderance of the evidence: first, that the restraint is necessary to assure safe and healthful working conditions and, second, that the prefabricated product fails to provide this assurance. By placing the burden of proof on the person invoking the health and safety exception, we have modified my former bills. As a result, this new bill omits any concept of making HUD or any agency designated by HUD the arbiter of the safety and healthfulness of new products and techniques. Under the new bill HUD simply is not involved in standard setting or in enforcement. Thus, there is no way in which the bill could lead to the adoption of national building standards.

Third. The court may order equitable or preventive relief and damages, although damages may not be assessed against a local governmental body.

Fourth. The safety and health issue and all other questions under the bill will be decided by a State or Federal court in the locality.

I hope the Subcommittee on Housing will give this bill early consideration. Unless we can employ the newest and best technology in housing construction, we most certainly will fail as a Nation to achieve our national housing goals. And what is more important, we will fail the thousands who so desperately need low cost housing.

The text of the bill follows:

H.R. 6400

A bill to promote the utilization of improved technology in federally assisted housing projects and to increase productivity in order to meet our national housing goals, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) any provision or requirement in any building code or other local law or ordinance, or in any contract or agreement, or any practice or other restraint which interferes with or restricts the use of new or improved techniques, methods, or materials or the use of preassembled products in connection with any development, construction, rehabilitation, or maintenance activity assisted under any program administered by the Secretary of Housing and Urban Development shall be unlawful with respect to such activity: *Provided*, That nothing contained in this paragraph (a) shall be construed to make unlawful any such provision, requirement, practice or restraint if it is shown by a preponderance of the evidence (1) that such provision, requirement, practice or restraint is necessary to assure safe and healthful working or living conditions and (2) that such technique, method, material or product fails to assure such safe and healthful working or living conditions.

(b) Any person who is aggrieved because of any provision or requirement in any building code or other local law or ordinance, or because of any contract, agreement, practice, or other restraint unlawful under subsection (a) of this Act may bring a civil action in any appropriate United States district court notwithstanding any other provision of law and without regard to the amount in controversy, or in any appropriate State or local court of general jurisdiction to obtain equitable or preventive relief for violations of this section, or appropriate damages, and may request such relief, or enter a claim for such damages, in any court whenever relevant in connection with

a defense to, or counterclaim in, any suit or action brought against such person in that court, except that damages shall not be awarded where the person bringing the action under this section is aggrieved by reason of any provision of requirement in any building code or other local law or ordinance.

MASSACHUSETTS SENATORS SPEAK OUT

HON. MICHAEL HARRINGTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. HARRINGTON. Mr. Speaker, the Massachusetts Senate passed a resolution March 8 memorializing the President and the Congress to consider the plight of Soviet Jews before granting most-favored-nation status to the Soviet Union.

The Soviet Union has recently taken steps to ease the repressive restrictions on the emigration of Jews, but such actions cannot yet be interpreted as a major policy reversal. It is possible that the Soviet Government has responded to the pleas of most Americans and to the probability of congressional action to prevent granting most-favored-nation status until Soviet policy on emigration is changed.

This is possible, but until we are sure that the Soviet Union is, in fact, changing its policies, we should not fall silent. We should continue to speak out and make our position clear because silence can do nothing to impress the Soviets with the seriousness of our convictions.

For this reason, I would like at this time to insert in the RECORD a copy of the resolution of the Massachusetts Senate.

RESOLUTIONS MEMORIALIZING THE PRESIDENT AND THE CONGRESS OF THE UNITED STATES TO CONSIDER THE PLIGHT OF SOVIET JEWS PRIOR TO GRANTING FAVORED-NATION STATUS TO THE SOVIET UNION

Whereas, In the Soviet Union men and women are denied freedoms recognized as basic by all civilized countries of the world and indeed by the Soviet Constitution; and Whereas, Jews and other religious minorities in the Soviet Union are being denied the means to exercise their religion and sustain their identity; and

Whereas, The government of the Soviet Union is persecuting Jewish citizens by denying them the same rights and privileges accorded other recognized religions in the Soviet Union and by discrimination against Jews in cultural activities and access to higher education; and

Whereas, The right freely to emigrate, which is denied Soviet Jews who seek to maintain their identity by moving elsewhere, is a right affirmed by the United Nations Declaration of Human Rights, adopted unanimously by the General Assembly of the United Nations; and

Whereas, These infringements of human rights are an obstacle to the development of better understanding and better relations between the people of the United States and the people of the Soviet Union; now, therefore, be it

Resolved, That the Massachusetts Senate memorializes the President and the Congress of the United States to consider the plight of Soviet Jews when granting most favored nation status to the Soviet Union and to call

upon the Soviet government to end its persecution of the Jews and other minorities and to permit the free exercise of religion by all its citizens in accordance with the Soviet Constitution, to permit its citizens to emigrate from the Soviet Union to the countries of their choice as affirmed by the United Nations Declaration of Human Rights and to use all appropriate diplomatic means to engender the fullest support possible among other nations for such a request to the Soviet Union; and be it further

Resolved, That copies of these resolutions be transmitted by the Senate Clerk and Parliamentarian to the President, the Secretary of State of the United States, the presiding officer of each branch of the Congress of the United States and to each member thereof from the Commonwealth.

Senate, adopted, March 8, 1973.

MINORITY PEOPLES PROBLEM POSES UNITY QUESTION FOR U.S.S.R., SAYS MONITOR

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. DERWINSKI. Mr. Speaker, among the peoples who have been subject to unusual historic persecution are the Armenians. From the days when they were subject to an attempt by the Turks to eliminate the Armenian nation to the present day when Armenia remains one of the Captive Nations under Communist rule, the Armenian people in the free world have tenaciously maintained the pride, traditions, and culture of their homeland and have never lost confidence in the ultimate restoration of freedom for the Armenian people. The Thursday, March 22, Armenian Weekly, published in Boston, Mass., contained an article which expanded on an earlier story in the Christian Science Monitor.

I submit this item for the attention of the Members who are not consistently mindful of the nationality questions within the U.S.S.R.:

MINORITY PEOPLES PROBLEM POSES UNITY QUESTIONS FOR U.S.S.R., SAYS "MONITOR"

BOSTON, MASS.—Mr. Paul Wohl, writing in the Feb. 7, 1973 issue of The Christian Science Monitor, said in an article entitled "Minority Peoples Nag Russians—Population Growths and Nationalism Pose Unity Question for Soviet Leaders", that "The Kremlin is busy debating how quickly it can absorb the many non-Russian peoples of the Soviet Union into a single people of predominantly Russian language and tradition."

He said:

"The Soviet leaders have ground for concern. The Soviet Union is still basically the empire built by the Czars, in which Russians by and large have ultimate authority over a vast number of non-Russian peoples. Most—but not all of the latter—live in Asia. And among most of them, the birthrate is higher than that among Russians."

"At the last census in 1970, the Russians of the Soviet Union made up only just over one half of the country's entire population. If present trends continue, they are likely soon to be outnumbered."

(Some other authorities on Soviet demography hold that the "nationalities" content of the USSR already outnumbers the "Velko (Great) Russians" of the federated state.

They cite the present nationality break-down as about 100 million Russians as against about 120 non-Russians.—Ed.)

Mr. Wohl continued:

"For example Russians increased in number by a little less than 16 per cent between 1959 and 1970, while the Uzbeks increased by 53 per cent, Kazakhs by 46 per cent, and Azerbaijani and Kirgizians by 49 per cent. And beyond these statistics, the Soviet Communist Party is alarmed over nationalist stirrings in the 14 non-Russian republics and in several of the autonomous republics of Russia proper.

"In the most restive republics Moscow has reacted with party and government purges, arrests, and even capital punishment with the propaganda machine in favor of a united Soviet Union running full blast.

"In his report last December commemorating the first 50 years of the U.S.S.R. as a state General Secretary Leonid I. Brezhnev spoke of the 'further drawing together of the nations and peoples' of the Soviet Union. Their drawing together, according to Mr. Brezhnev, represents an objective meaning, an inexorable, a preordained process. In his report he adopted a position halfway between those who seek to accelerate the ultimate melting of the many nationalities into a single Soviet nation and the advocates of gradualism.

"Mr. Brezhnev referred to the common Soviet motherland (rodina), to the common fatherland (otchizna), but avoided speaking of a Soviet nation. Instead he used the term 'the Soviet people.'

"The terms 'rodina' and 'otchizna' have a Russian nationalist ring. They were currently used in the press of Czarist days and went hand in hand with Russification. Lenin never used these terms. Stalin unearthed them.

"The general trend of Mr. Brezhnev's address was against the gradualists: 'Any attempt to restrain the . . . drawing together of the nations, to create hindrances to it under one pretext or another, or artificially

to consolidate national isolation . . . (are) inadmissible."

"In the Jan. 1 issue of *Kommunist*, the Communist Party's theoretical magazine, Russian Premier and candidate member of the Politburo, Mikhail S. Solomentsev, went even further. Mr. Solomentsev hailed the 'monolithic unity of the Soviet people' who are 'children of the same fatherland.'

"There is evidence that the Soviet leaders are divided about the right approach to the nationality problem.

"*Pravda* in several articles published in December rejected the thesis of 'speeding up' the drawing together of the Soviet nations. But with the recent hardening of the Kremlin's domestic policy against dissidents of all kinds, the majority of the Politburo now seems to have shifted in favor of a faster and more energetic course.

"A political analyst of Radio Liberty has tabulated the respective use by the 15 republican speakers of the terms 'Soviet people' and 'Soviet peoples' in an interesting treatment of the nationality problem at the December celebration. The tabulation showed that those who spoke most frequently to 'the Soviet peoples,' thus indirectly stressing the national individuality of their respective republics, also were those who participated the least in what is now occasionally called 'the cult of Mr. Brezhnev's personality.'

"Among the deviationists from Mr. Brezhnev's line were the first secretaries of Armenia, Turkmenistan, Kirghizia, Latvia, Uzbekistan, Azerbaijan, and Lithuania, all republics that in one form or another have been 'delinquent' in the 'correct' solution of the nationality problem. The first secretaries of Azerbaijan and Lithuania avoided referring even once to 'the Soviet people' in contrast to Russian Premier Solomentsev who used this term 11 times.

"In the context of Mr. Solomentsev's recent article in *Kommunist* it now looks as if the majority of the leadership had come around to favoring monolithism as the basic principle of Soviet nationality policy, which would mean victory for Mr. Brezhnev over the gradualists."

LEGISLATION TO EXTEND THE AGRICULTURAL ACT OF 1970 FOR AN ADDITIONAL 5 YEARS

HON. EDWARD YOUNG

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. YOUNG of South Carolina. Mr. Speaker, I am in favor of extending the Agricultural Act of 1970 for an additional 5 years. I favor this extension because in my lifetime this present farm program has proven to be the most effective agricultural program this country has ever known.

It has not been our most costly farm program, but it has provided the most practical solution to our farm problems.

Gentlemen, the American farmer is the most efficient farmer in the world today. In this country 5 percent of the people remain on the farm and they meet the responsibility of feeding this Nation. In many countries it requires 50 percent of the population to produce the food they need.

It is essential that we continue a program that has proven so effective.

The American farmer today, with the help of this present farm program, realizes only about a 5 to 6 percent return on his investment. If this return is reduced, we can reasonably expect even more out-migration from the farms. This our Nation cannot afford to have happen.

Thus, I present to you our proposal to extend for 5 more years the expiring provisions of the Agricultural Act of 1970.

It is a program that is effective and that is working. We need to continue it.

SENATE—Monday, April 2, 1973

The Senate met at 12 o'clock meridian and was called to order by Hon. ROBERT C. BYRD, a Senator from the State of West Virginia.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Lord of all our years and of each new day, we lay before Thee the needs of our Nation, the needs which are obvious and the needs yet obscure, beseeching Thee to give us the strength, wisdom, and courage for their solution. Renew the dedication of all the people to spiritual values and submission to the transcendent moral law Thou hast revealed. As we pray for the Nation, so we pray for ourselves in this place, that to our own human efforts and finite wisdom Thou wouldst add Thy divine blessing and infinite wisdom.

We pray in Thy holy name. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the

CXIX—657—Part 8

Senate from the President pro tempore (Mr. EASTLAND).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., April 2, 1973.

To the Senate:

Being temporarily absent from the Senate on official duties, I appoint Hon. ROBERT C. BYRD, a Senator from the State of West Virginia, to perform the duties of the Chair during my absence.

JAMES O. EASTLAND,
President pro tempore.

Mr. ROBERT C. BYRD thereupon took the chair as Acting President pro tempore.

MESSAGES FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT

Under authority of the order of the Senate of March 29, 1973, the Secretary of the Senate, on March 30, 1973, received the following messages from the President of the United States:

REPORT UNDER FEDERAL COAL MINE HEALTH AND SAFETY ACT OF 1969—MESSAGE FROM THE PRESIDENT

The Secretary of the Senate, on March 30, 1973, received a message from the President of the United States, which, with the accompanying report was referred to the Committee on Labor and Public Welfare. The message is as follows:

To the Congress of the United States:

In accordance with section 511(a) of the Federal Coal Mine Health and Safety Act of 1969, Public Law 91-173, the Secretary of the Interior annually prepares a report to the Congress and to the Office of Science and Technology on progress made in administering the law.

It is my pleasure to transmit to you the report for Calendar Year 1971 and to commend it to the attention of the Congress.

RICHARD NIXON.
THE WHITE HOUSE, March 30, 1973.

EXECUTIVE MESSAGE REFERRED

The Secretary of the Senate, on March 30, 1973, received a message from the

President of the United States submitting the nomination of Graham A. Martin, of North Carolina, a Foreign Service officer of the class of career minister, to be Ambassador Extraordinary and Plenipotentiary to the Republic of Vietnam, which was referred to the Committee on Foreign Relations.

REPORTS OF COMMITTEES SUBMITTED DURING ADJOURNMENT

Under authority of the order of the Senate of March 29, 1973, Mr. WILLIAMS, from the Committee on Labor and Public Welfare, on March 30, 1973, submitted a special report entitled "Legislative Review During the 92d Congress by the Senate Committee on Labor and Public Welfare" (Rept. No. 93-96), which was printed.

Under authority of the order of the Senate of March 29, 1973, Mr. MAGNUSON, from the Committee on Commerce, on March 30, 1973, submitted a special report entitled "Committee on Commerce Oversight Report" (Rept. No. 93-97), which was printed.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Thursday, March 29, 1973, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT—APPROVAL OF A BILL

Messages in writing from the President of the United States were communicated to the Senate by Mr. Leonard, one of his secretaries, and he announced that on March 30, 1973, the President had approved and signed the act (S. 583) to promote the separation of constitutional powers by suspending the effectiveness of the Rules of Evidence for U.S. courts and magistrates, the amendments to the Federal Rules of Civil Procedure, and the amendments to the Federal Rules of Criminal Procedure transmitted to the Congress by the Chief Justice on February 5, 1973, until approved by act of Congress.

BUDGET OF THE DISTRICT OF COLUMBIA—MESSAGE FROM THE PRESIDENT

The ACTING PRESIDENT pro tempore (Mr. ROBERT C. BYRD) laid before the Senate a message from the President of the United States, which, with the accompanying document, was referred to the Committee on Appropriations. The message is as follows:

To the Congress of the United States:

I am today transmitting for your consideration the budget of the District of Columbia for fiscal year 1974, together with a supplementary budget request covering necessary additional expenses for fiscal year 1973.

These budget proposals reflect views expressed by citizens of the District of Columbia at City Council budget hear-

ings and have been examined by the Mayor and the City Council in accordance with their responsibilities under Reorganization Plan No. 3 of 1967. The Office of Management and Budget has also reviewed these proposals as specified in the District of Columbia Revenue Act of 1970.

As a result of prudent and effective fiscal management on the part of the municipal government, this 1974 budget will provide adequately for District needs during the coming year without requiring either additional Federal funds or increased city revenue. The fiscal year 1974 proposals call for the expenditure of \$841.2 million in operating funds and \$150 million in capital funds.

Timely Congressional action last year on the District's 1973 budget was of great assistance to city officials in planning and executing sound programs to serve the people of Washington. I urge the Congress again to act expeditiously on the District budget for 1974.

RICHARD NIXON.

THE WHITE HOUSE, April 2, 1973.

EXECUTIVE MESSAGE REFERRED

As in executive session, the Acting President pro tempore (Mr. ROBERT C. BYRD) laid before the Senate a message from the President of the United States submitting the nomination of Lt. Gen. Ormond R. Simpson, U.S. Marine Corps, when retired, to be placed on the retired list in the grade of lieutenant general, which was referred to the Committee on Armed Services.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Berry, one of its reading clerks, announced that the House had passed the following bill and joint resolutions, in which it requested the concurrence of the Senate:

H.R. 5293. An act authorizing additional appropriations for the Peace Corps;

H.J. Res. 337. Joint resolution authorizing and requesting the President to proclaim April 1973 as "National Check Your Vehicle Emissions Month"; and

H.J. Res. 437. Joint resolution to authorize the President to designate the period beginning April 15, 1973, as "National Clean Water Week".

HOUSE BILL AND JOINT RESOLUTIONS REFERRED

The following bill and joint resolutions were severally read twice by their titles and referred, as indicated:

H.R. 5293. An act authorizing additional appropriations for the Peace Corps; to the Committee on Foreign Relations.

H.J. Res. 337. Joint resolution authorizing and requesting the President to proclaim April 1973 as "National Check Your Vehicle Emissions Month"; and

H.J. Res. 437. Joint resolution to authorize the President to designate the period beginning April 15, 1973, as "National Clean Water Week"; to the Committee on the Judiciary.

WAIVER OF THE CALL OF THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the call of the

legislative calendar, under rule VIII, be dispensed with.
